The café was closed. “No Juice,” said a sign scrawled on the door. He needed to eat. There were pies in a case on the counter, bags of Fritos on a stand. He could drink raw eggs without a problem. Plus, the lock was simple. The problem was, if he got caught, there’d be a ridiculous hassle to deal with, and more trouble for him if those bodies had already been found.

He stood on the stoop of the café, looking for the bus. He didn’t know where it was coming from or where it was going. It didn’t really matter, though. Away from here, that was all that mattered.

He was stomping and blowing on his hands when it finally showed up at nine twenty. It was like an angelic apparition, the big, muddy, slab-sided Greyhound. It had been in a war with the elements, but it was here, rumbling and clattering and shaking, brown ice dripping along its windows, shadowy travelers within.

When he got on, he found it packed. Probably a lot of people were cold. Probably they were looking for shelter in Billings. Well, so was he.

He went to the back where there were still a few seats, and took one beside a huddled red parka.

With a hiss of air brakes and a rumble from the engine, the bus started off. A few minutes passed, and the red parka stirred. “How long to Montana?” its occupant asked as she raised her head.

“We’re in Montana,” he replied. He turned to her.

It was Diana, and he was too surprised to speak.

“Help me,” she said.

“Of course. I thought—”

“I don’t know how I escaped.” Her hand came toward his. He looked down at it. She withdrew it, entwining it with the other, twisting them together.

“What happened?”

She glanced toward the seat in front of them. “Not now.”

“I understand. Where are you going?”

“Billings. I’ve got to make a report and I want a secure line, not a cell phone.” She took a long breath. “This is unprecedented.” She returned to her previous hunched posture. “How did they do it?”

“That’s not my question to answer.” She’d sent three men to their deaths. How they had been killed or by whom were not the issue. The fact that they’d been exposed to the danger, that was the issue. Her issue.

She turned to him. “You don’t want to talk about it?”

“No.”

“But you would have handled things differently?”

“Yes.”

“You need to know more. Then you’ll understand more.”

“Who’s going to tell me?”

He felt her cold fingers brush his wrist. He did not react, but he also found that he did not move away. "I don't have that authority," she said.

"Then there's something wrong in your chain of command, lady. I'm what you got left on the front line, and you can't tell me my mission? That's poor."

"You're furious."

"Too goddamn much secrecy. Lives wasted. So, yeah."

"And I wasted them?"

"If I get to submit a report, that's part of what I'll say. You shouldn't be doing this work. Sorry."

She sucked in breath. There was anger in her eyes, a flush in her cheeks. Not used to criticism, that was clear. "I didn't know he had a tiger," she said. "Nobody could know that."

"It was a lion."

She whirled in her seat, eyes now flashing. "That was a Siberian tiger."

"Oh?"

"Gray with darker gray stripes. It was a Siberian tiger in its winter coat."

He thought about that. He hadn't seen the flanks. The face had been strange. She could be right. "If that's true, we might be able to use it to track him down."

"How?"

"A Siberian tiger is an endangered species. A zoo had to get a license to import it. If it was sold, that had to be approved. A rare animal like that, there's gonna be a paper trail, and it's gonna lead to our target, or damn close."

"What if it was born here?"

"Whatever, the animal has papers. This could be a break."

The bus wheezed along. Tough buggies, these Greyhounds. He

leaned his head back and closed his eyes. Not tired anymore. Ready for action, but sitting in a damn bus.

Once again, he went over in his mind the details of what had happened, the tiger, the helicopter, the carnage in the garage.

“After they entered the garage, what happened?”

“Mike went in. Then we heard him firing his pistol. Charlie was nearest, so he ran after him.” Her voice dropped to a near-whisper. “When nobody came out, I went in. The smell of blood was so strong that I knew they were dead before I saw them.” She fell silent.

He felt for her. This was a conscientious officer and she was suffering. You lose a man, you’re changed forever. You lose three, and you are left in an agony of self-doubt and self-blame. If you’re good, that is. Still, though, he couldn’t change his opinion, not only of her but also of whatever organization she belonged to. Bad planning, bullshit electronics, excessive secrecy—it was not a workable system.

The bus crossed the great American distance, crawling through the endless, featureless snowscape with its big engine roaring and its windshield wipers creating a hypnotic rhythm.

Diana sat in silence. From time to time she turned to the window. He assumed that she was crying. He said nothing.

“What about the Hoffmans?” she asked. “Do you know?”

“They’re gone. I checked the house. A helicopter took them. I saw its lights.”

“More traceable than an animal.”

“You’d be surprised. Radar coverage out here isn’t gonna go much below six thousand feet. Stay under it, then the FAA isn’t gonna find out jack about you.”

“Homeland Security, surely.”

“You come up off of one of these ranches, you stay low, you’re free and clear.”

“You heard it?”

“Yep. It did not sound like a helicopter. But that’s what it had to

be.”

The bus pulled into another small town. Nameless place. Flynn watched the comings and goings of the passengers. Two left, three got on. He wasn't expecting a problem, but the last of them seemed to check folks out a little more carefully than would be normal.

“You see that?”

“No.”

“The guy in the camouflage. He's got busy eyes.”

She lowered her head.

He pressed her. “What do you think?”

“I don't know. How would they know we were here?”

“That's not the right question. The right question is, ‘Do they want us dead?’ I think we both know the answer.”

The bus started off. From back here, Flynn couldn't see much of the other passengers. He flagged the guy in the camouflage, though. He was wearing a khaki cap with fur earflaps. When he took it off, his burr haircut was sprinkled with gray. Forty-five years old, maybe. Flynn watched the back of the head, which never moved. “That's a professional up there,” he said.

“What kind of a professional?”

“Don't know. But whatever he's doing, he's on duty.” Flynn took a breath and released it slowly. Contemplating. He needed to evaluate the situation, so he got up and went to back of the bus. As he stood, he got a chance to take a better look at the man, who was sitting two rows ahead of them. He could just see his profile. The man's eyes were closed but his body language said he was nowhere near asleep.

Flynn stepped into the toilet, waited a short time, then emerged. Returning to his seat, he nudged Diana, then pointed with his chin. Her only response was another slight touch to his wrist.

“We have to assume that he's a threat,” Flynn said.

“I agree.”

The bus rumbled on, the snowscape outside so total that Flynn could have easily believed they were on another planet.

The guy could be anybody, an insurance salesman, who knew? Except that was not what he was. Flynn had known such men, quiet like that, contained. You couldn't see him watching you, but you could feel it.

"He's here to kill," Flynn said.

"I know it."

You talk about a high-grade hit, what had gone down back at the Hoffmans' was that and more. It was certainly the most exotic hit he'd ever seen, and one of the most effective.

The bus pulled into a town called Waco like the town in Texas except this was in Montana. Waco was basically a cluster of hills of snow with an occasional neon sign sticking out. There was a grain elevator and a gas station. The gas station was the bus stop. There wasn't even a place to get a hamburger. Or no, there was. You could buy a microwave burger in the gas station.

The bus hung there for a minute. Nobody got off or on. Another minute. Still no action. The driver's hand went for the door lever. The air brakes hissed.

Flynn grabbed Diana by the wrist and pulled her down the aisle. "Sorry," he called out to the driver, "didn't recognize it."

They got off and the bus pulled out, and Flynn saw the face of the guy staring out at them, a face as blank as a tombstone.

"What are we doing," Diana said, "we can't stay here!"

"What we're doing is surviving. Buying time. We're clean now, for a while."

They went into the gas station. "When's the next bus through?" he asked the guy behind the counter, a lanky kid with the swift, unsure eyes of a dog that can't figure out why it gets kicked.

"Two hours, but it's going the other way. Next one through to Billings is gonna be tomorrow."

“We’re going the other way. Our car broke down. We flagged him and had him drop us here.”

“I got coffee. The meatball hero over there’s not gonna kill you, you’re hungry. Avoid the burger.”

“What about the Philly?”

“I wouldn’t eat it.”

The kid’s eyes flickered away, and Flynn turned, following them toward Diana.

Snapshot: Diana’s eyes, staring straight at him.

Snapshot: the guy from the bus coming in behind her. Camouflage. Professional movements. He’d gotten the driver to stop a second time. Flynn dropped his hand into his pocket, closed on the Glock. Behind Diana, the assassin’s hands came up toward his chest. He was going for a gun, going into action.

Flynn threw himself at Diana, hurling her to the floor with so little room to spare that he felt the heat of the bullet sear the back of his head as it passed. Maybe an eighth of an inch, maybe less.

He rolled, pushing over a shelf of candy, sending Snickers bars and Kit Kats and PayDays flying.

The killer was bracing his weapon, a big long-range pistol with a laser sight. A red dot appeared in Diana’s hair. Flynn pulled her into the heap of candy and shelving as the second round smashed into the floor where she’d been lying. Cement shrapnel ripped at them.

He got the Glock out, felt for the trigger, found it, and fired through the parka.

Then he had the guy. And the guy had him. Gun to gun, the guy with the Glock was going to have to be good. Real good.

Gun fighting is speed and math, but mostly math. Flynn was good at math. Instead of dropping his pistol, he changed his angle of attack. An iffy head shot became an easy heart shot.

The guy had done the same. Heart to heart. Impasse.

But then the guy backed off a step.

Flynn couldn't see Diana, but she had to be the reason. The clerk was hiding behind the counter hammering at the keypad of his cell phone. Not gonna work today, Flynn thought. Cell towers need power, too.

The assassin turned and ran. Flynn followed immediately.

"Stay together," Diana cried. "That's an order!"

The hell. He took off across the pump island and out into the highway. The guy was running hard, about fifty yards ahead. Flynn continued after him, letting the long hours of endurance training he'd done propel him forward despite the wind and the blowing snow. Ahead, the guy's back was visible as a dark smudge in the sea of snow.

"Stop! Police!" Except he wasn't the police, was he, not in Montana, and maybe not even in Texas if he'd pissed Eddie off enough to get himself fired.

The guy did not stop, of course, so he quit wasting breath. He could get off a shot, but there was no chance it was going to connect. He ran harder but did not gain. In fact, the smudge became more and more indistinct. Finally, it was gone. Flynn ran on for another minute, but in the end he did the only logical thing he could and stopped. He stood staring out into the gloom of the storm. He had maybe two hundred yards of visibility. Even as fast as he'd been running, the guy had continued to outstrip him.

Diana came up, her breath surging out of her nose in blasts of fog. "We gotta get out of here."

"How could he run like that? How could anybody?"

"I don't know."

He turned to her. He took her collars. He pulled her close to his face. "Yeah, you do. You've killed three men with this bullshit secrecy, so why don't you give me some kind of goddamn chance and come clean. Tell me what you know."

"What I know? That we're up against a team. That they have excellent equipment and skills."

“They have a helicopter with a silent rotor.”

“A silent rotor exists. It can be retrofitted to a number of different helicopters, including some general aviation models.”

“So they’ve been able to steal classified equipment. What about their victims? What’s the point of all this?”

“We don’t know where they take people. We don’t know why. The third sister was the closest we’ve ever gotten to one of their operations.” She gestured. “Obviously, we weren’t ready.”

They began walking back toward the gas station. “How many of them are there? What’s their maximum area of activity? US? Other countries as well?”

“Primarily US as far as we can tell. Concentrated in rural areas near urban population centers where there’s lots of turnover and lots of young, well-educated, healthy people. They favor low-density suburbs like you live in. Like we did, me and Steven.”

“Your husband?”

“Yes. But let’s not go there right now.”

“No.”

The cold was so intense that the sweat he’d generated running was now flaking off him like an icy powder.

“Okay, one useful face. We’ve got the Siberian tiger involved. That’s traceable.”

They had reached the gas station. The clerk had closed it down and gone home, so they stayed close to the front window, using the station to shelter them from the wind and the pumps to interrupt the sightlines of possible snipers. Flynn didn’t like it, but it was what they had.

“We’re way too vulnerable here,” he said, “so keep low and keep watch.” Then he asked her a question that had been troubling him. He already knew the answer, but he asked it anyway. “You’re not a field officer, are you?”

After a moment, she shook her head. “I come from the world of

probability theory. I'm an analyst."

"You couldn't find a pattern, but then the third sister came along and you grabbed a few pros and off you went."

"Don't, please. No more."

"He could've taken her any damn time, but he wanted to teach you a lesson. So he chose the night you were there."

A cold silence fell between them. An analyst. An ad-hoc team. Equipment that didn't work as advertised. Who the hell did the thinking?

The wind kept the snow blowing, reducing visibility. Flynn wondered what would come first, the bullet or the bus? Or maybe it would be the tiger.

He didn't like it when his choices were limited to just one, especially when it was bad. Worse, all this flurrying was going to play hell out on the highway. Buses were going to stop in towns and stay there until they could follow plows.

"We need to find shelter. We need to either break into this place or we need to find somebody to help us. We can't stay here."

"The bus is due in forty minutes."

He stood up. "Too long," he said. He gestured toward the highway. "Outside of town, flurries are sweeping that road. So any traffic is stopped wherever it happens to be, and that's where it's gonna stay until it gets plowed out."

"If we miss the bus—"

"You let the sun set on us, we do not survive the night. Period. If the cold doesn't take us, he will. He will not miss again."

She looked up at him. "It's my decision," she said.

He set off, intending to knock on doors until somebody let him in. Who knew, maybe they'd have a truck, maybe with chains.

She caught up with him. Good. He didn't want to see her killed. Whatever she did, though, he intended to survive and he intended to win. This bastard had done enough.

“He’s gonna die or I’m gonna die,” Flynn shouted into the wind. “But not here, not now. I want my shot at him and I haven’t got it. But I will, lady. I will get my shot, and I’m not stopping until I do.”

They moved slowly along, huddled shapes in a blowing, frozen haze. They couldn’t go far, so Flynn intended to get to the first inhabited house they could find.

Slowly, they passed a bank, its tan brick front encased in ice, its interior dark. Next came a bar, its neon out, its door padlocked.

“Hold on,” she said, “don’t leave me behind.”

He put an arm around her and drew her forward.

“You’re strong,” she said.

He said nothing. They might be moving slow, but the reality of their situation could not be more clear. They were running for their lives with death by cold close behind them, and closer yet an even more dangerous enemy, who they could not see, let alone fight.

Flynn might not be able to see him, but he was out there, no question, and he intended to end this, and soon.

CHAPTER TWELVE

The house was small and trim, with green shutters and gray siding. It had started life as a double-wide trailer and had been added to over the years. It was set north to south on its lot, so the wind surged down the porch, which was buried so deep in a rippling snowdrift that Flynn had to dig through it to reach the front door. He knocked.

Silence.

“It’s empty,” Diana said.

“Nope.” He pounded.

From inside there came a cry, “Clara! What’re you doin’ out there?”

The inner door swept open to reveal a man of about sixty in a wheelchair.

“We need shelter,” Flynn said. “We need a phone.”

“Where’s Clara? Where’s my wife?”

Flynn felt Diana tense. He said, “We need to get in out of this.”

The man rolled his chair back away from the entrance as they struggled in.

“Who the hell are you? You ain’t from around here.”

“We were waiting for the bus.”

“No, that’s not the answer. You DEA lookin’ for meth labs. Every other house has a meth lab out here. State don’t care. They let it go. They have to.” He whipped the chair around and rolled toward the back of the house. “Clara! Where in hell is she?”

Briefly, Diana’s hand squeezed Flynn’s. He was thinking the same thing: maybe the whole town had been raided. Maybe the old and infirm were the only ones left.

“She went out?”

“To the barn, see to the horses. The intercom’s down, the cell phones don’t work, the landline is down and she’s been out there more’n a hour.”

“We’re cops,” Flynn said, “but we’re not looking for your meth lab.”

“I told you, I ain’t got any damn meth lab! None! Natha! Find my girl, you two, you’re a damn gift from God.”

There was no time to get warm, they went directly out the back. Flynn pointed to the faint trench in the snow that led to the barn. Diana nodded.

“Guns,” he said.

“Guns.”

“Are you proficient, Diana?”

“I score okay.”

They pushed the door open together. “Clara,” Flynn called into the dark interior. “Clara!”

A horse whickered, that was all.

The barn was unheated, but the two horses in their stalls had been expertly blanketed. A couple of big electric heaters stood in the center of an area of the concrete slab that had been carefully swept of anything that might catch fire. Their cords led to an orange cable that hung from an overhead socket attached to a rafter. No power, though.

“Clara!” he said again, then, “Oh, shit.”

“What?”

“Smell that? That’s blood.” He looked into the darkness. “Over there.” He moved deeper.

A third horse was up against the back wall, deep in the shadows. It lay on its side.

He went to it. Looking down at the maimed animal, he wasn’t sure what to make of its condition.

“You ever see anything like this?” he asked Diana as she came up.

“Oh, no.”

The lips had been sheared off, the eyes cut out, the genitals removed. A large section of the exposed flank had been flayed down to the bone. Where the rectum had been, there was a neat round wound.

“So you have.”

“Only in pictures. Animals mutilated like this have been found for years. None in the context of the kind of disappearances we’re investigating, though, not as far as I am aware.”

“You know more about this whole damn mess than you’re telling me, and I’m getting to really not appreciate that.”

“I can’t—”

“Yeah, you can, and you will, and you’ll do it soon.”

Flynn had seen something like this before, too. Some case file. Then he remembered. It was a rural crime down near Alice, Texas. “I saw some of these. Cattle, not horses. A rancher got the hell knocked out of his herd. Two prize bulls and three breeder cows. Fifteen thousand dollars worth of prime beeves. Sheriff thought it was coyotes. We wrote it up as vandalism so the poor guy could collect on his insurance.”

He remembered that place. Alvis something-or-other had been leasing that property. He’d run it with Aussie cattle dogs. Good beasts, but not good enough to prevent the loss.

“I have a feeling that the help does most of the heavy work. The kidnappings. But this is him,” Flynn said. “Him personally. His help isn’t going to be cutting animals like this.” He looked toward the rafters, then reached back and pulled his night vision goggles from his backpack.

The upper reaches of the barn were empty. He took off the goggles. “Let’s go out the back,” he said.

“Three guys are down, remember that.”

He said nothing.

This door also slid on rollers, but wasn't as large as the one in the front. Similarly, it wasn't kept up, and it took Flynn an effort to get it to grind open. As he did so, ice showered down on him.

Behind the barn was a mostly bald hill, topped by a few twisted trees. Close in, he could see a faint indentation in the snow. Further out, it was deeper. "That's a buried track," he said, moving forward. He drew his gun.

The further up the hill they went, the deeper and clearer the track became.

"Why would she come out here?"

"She was running. She saw that horse, and when she did, she ran."

As they approached the trees, Flynn felt the same indefinable sense of menace that had saved him in deceptive situations before. "Let's take our time. We want to watch those trees pretty closely."

They were taller than they had appeared from the barn. The snow made distances seem longer, but the trees were under a hundred yards from this end of the barn, and he was soon among them. He was careful, though, never to lose sight of her. He didn't want to lose her, God no, but she wasn't only important as a human being and a fellow officer. Without her, he had no idea who he was working for because she was too secretive to tell him. Probably didn't even have the authority.

In among the trees there was less snow, but every movement brought a fall of the stuff off overhanging branches. It got in around his hood and dripped through his clothes in the form of freezing cold water.

Just beyond the stand of trees they found an area about thirty feet in diameter where the snow had been blown away right down to the grassy hillside.

"Something landed here," Diana said.

He estimated the grade of the hill at a good thirty degrees. "Wasn't a chopper," he said, "not on a slope this steep."

“It must have hovered.”

“The pilot is a real expert, then,” Flynn said. “Very well trained.”

“You think she was taken from this spot?”

“Maybe. Thing is, the snow was blown back from here well after these tracks were made. Hours. If they took her, they took her frozen solid.”

“We’ll need to tell him she’s lost in the snow.”

He had his doubts about that. “Maybe.”

Flynn turned and headed back through the trees. Diana stayed close.

As they walked, he said, “I don’t think we’re forming an accurate picture of what’s going on here. If you think about it, it just doesn’t make sense. Not a damn bit of sense. Some kind of cult group in possession of highly classified equipment, including an exotic aircraft? Hardly seems likely.”

“That’s what it looks like, though.”

They reached the back door. “It’s what you’ve been telling your team. It’s not what you know. Question is now, what do we tell this old guy?”

“His wife is lost in the snow. Won’t be found till the melt. If then.”

He entered the house. The old man sat in his wheelchair. He looked up with the dead eyes of a man who already knows that he’s defeated.

“We didn’t find her,” Flynn said.

“She’s dead. Froze by now.”

“We don’t know that. Could she have gone to a friend’s house?”

“She’s not in that barn, she’s froze.”

“There’s been predator action in the barn, sir,” Diana said.

“Oh, Lord.”

“One of the horses has been killed. Looks like coyotes.”

“The hell, it’s them damn wolves! The Fish and Wildlife owes me for that horse.” His face suddenly screwed up. Flynn knew the way tragedy can roll past you at first, then come back and hit you like a boulder dropping from the sky.

“She’s still breathing, mister,” he said. “Count on it.”

Diana glared at him.

“What’s she shaking her head for? Don’t hold out on me!”

Flynn heard noises on the front porch, the crunch of boots in snow. “She’s back,” he said.

Diana’s eyes widened.

A voice called through the door, “Hey, Lar, I got your thermos refilled, the Katz’s’re running their genny.” Then, “Get this door unlocked, you damn nut!”

Lar wheeled himself off into the front room. A moment later, a tall woman, Montana lean, came striding in on a blast of cold air, snow falling off her boots.

“Hi, where’d you folks stray in from on a day like this?”

“We’re police officers,” Diana began.

“Well, I got me a horse up in my barn got cut up by space aliens, so you better go up there.”

“We’ve been up there.”

“It was them wolves,” Lar said.

“Ha! That’s what you people told him? Why do cops lie? It’s space aliens. We all know it. Been goin’ on for years.”

“That damn yearling,” Lar said. “Too young and foolish to stay away from wolves. Probably didn’t even know what they were.”

“They took my Bill, you senile old fool. Left the two yearlings just fine. They ain’t even spooked.”

“What about Jenny?”

“*Your* horse? Nobody’s gonna take that ole bag a bones. You couldn’t even sell that thing to a glue factory. What’s ’is name down

the road, that weird beard, offered fifteen dollars. He wanted to make pillows outta the hair.” She swung away from her perch looming over her husband, and trained tight eyes on Flynn and Diana. “So what in hell are you doin’ invadin’ my home, officers? If I may be so bold?”

“Our vehicle failed,” Diana said, the very picture of smoothness. “We’re looking for a ride into Billings. We can pay.”

“You will pay. No question there. You must be feds.”

“DEAs lookin’ to bust up some meth labs,” her husband said.

“That ain’t hard to do around here. ’Cept the state police, you talked to them lately? ’Cause they don’t share their turf, not to put too fine a point on it.” She spread her hands. “I mean, this is not a threat. Far be it from me.”

“We’re not in drug enforcement.”

“Oh. Well, do you do something useful, then? ’Cause maybe then nobody’s gonna gut you and throw you out in the snow for your wolves to drag away.”

The threat was delivered with the kind of smile that said it had meaning. So this little ole couple were indeed involved in drug operations. He wondered where she had her lab. Probably one of the sheds he’d seen out there. Normally, he would’ve been interested, just automatically. No more.

“Look, how much is it gonna take to get us to FBI Headquarters in Billings?” he asked.

“Well, let’s see. If you tell me why you’re here, that’s one price. If you don’t, then it’s another. Which you ain’t gonna be able to afford. And, lady, will you please stop thinking about that ridiculous little pistol you got in the right pocket of your parka? In fact—” An impressively quick hand reached in and withdrew Diana’s pistol. “Man, who do you work for, you get crap like this as your issue gun? What shit.”

She was right about that. An officer carrying a Beretta without a tracking light was not well equipped.

Flynn said, “We’re working on a kidnapping. We were overtaken by the storm.”

“Who’d kidnap trailer trash? What’re they gonna get for ransom around here, twenty bucks and a pair of used boots? This whole town ain’t got enough cash to ransom a donkey.” She chuckled.

“We tracked the person of interest to Black Canyon City,” Diana said. “Then the storm hit, we lost contact with our vehicle and took the bus.”

“The wrong way. You’re toward Bozeman.”

“We were too cold to wait. We had to get on it.”

She was quiet for a good minute. She looked down at Diana’s gun. “First off, I know you’re not a cop, lady. This ain’t a cop pistol and here I am holding it and you ain’t pissing your pants, which means you ain’t gotta file a missing weapon report.” She looked at Diana. “Three hundred bucks and I’ll take you to Billings. Cash now.” She turned her head toward Flynn. “That’s apiece.”

Flynn could have taken the gun out of her hand and made her eat his own. But he said, “Pay the lady, Ossifer.”

A silently furious Diana produced a checkbook.

Clara barked out a mirthless laugh.

Diana put away the checkbook and counted out six one-hundred-dollar bills from what looked to be a narrow stash.

Clara was good at driving in snow, and so the truck clanked along at a steady thirty miles an hour. “Animals get cored out like that around here. Nobody but the poor rancher gives a shit. The cops lie. Insurance company probably pays ’em off, ’cause if it’s predator action or act of God, they don’t gotta pay, see.”

“Space aliens would be what?” Flynn asked.

“God only knows. Whatever, they ain’t gonna pay anyway. Bastards.”

There was a world of hurt in the way she spat that word. He didn’t want to hear the story of her life, though, so he remained silent.

The truck moved steadily along. Flynn watched the road, what he could see of it. He kept an eye on the sky, which was darkening again.

Time crawled. Flynn could almost feel the perp's frustration that they were getting away. Feel his bitter rage. With his trained animal and his fabulous chopper, he had to feel that a couple of dumb cops had no damn business escaping from him.

They arrived in the snow-choked city, finally reaching a recently plowed street where the going was a little better.

After a couple of turns, Clara pulled up in front of an office building, small, on the same scale as all the buildings around here. A small, trim city, the kind of place Flynn favored. Menard with snow.

When they got out, Clara sped off immediately.

"She's glad to be gone," Diana said.

"Probably with good reason."

They entered the building.

CHAPTER THIRTEEN

“Nobody will have heard of us,” Diana said as they went down the hall toward the FBI office.

“What’s that supposed to mean?”

She opened the door and went in, Flynn behind her. Two agents and a clerk were on duty, sitting at desks in a single, large room. Along a side wall there were three offices, all closed.

Diana walked up to the clerk and spoke quietly. She produced a small leather folio and laid it on the desk. Inside, Flynn could see a badge and an unfamiliar identification card with a pink sash across its surface.

The secretary stared down at them. “Bill,” she called, turning in her chair, “what is this?”

One of the two agents got up from his desk, a tall man in his fifties. He had a tightly neutral expression on his face, the habitual mask that many field officers wore.

Flynn had never gotten much support out of the FBI. Down in Menard, their office was such a revolving door that nobody ever really got to know the community. Menard was just a way station in the drug wars. The agents who were going somewhere in the organization were all further south along the border.

The first agent took Diana’s credential to the second.

“They never know what it is,” she said.

“So how does this help us?”

“Just wait.”

He watched as the agents, their faces sharp with suspicion, huddled

over a phone.

“Who’re they calling?”

“It’s a nonstandard ID. They’ve never seen one like it before.”

“Because of the secrecy bullshit?”

She nodded. “It’s not bullshit, Flynn.”

The second agent came striding over. “You can use office two,” he said. He handed Diana back her ID.

“That worked, at least,” Flynn said as they crossed the room.

“I’m sorry, Flynn, I’m going to need to do this alone.”

There were chairs along the wall, and Flynn took one of them. The plaster was thin enough to enable him to hear that she was talking to somebody, but he was unable to make out the words. Once or twice, she raised her voice. He still couldn’t discern specific words, but he could hear the emotion in them. She was reporting the deaths of her men.

Her voice stopped. He waited. The silence extended.

She came out. Her face was rigid, her lips compressed.

“You reported,” he said. “They were not happy.”

“They were not.”

“So what happens next?”

“Flynn, you’re still going to be with me, but very honestly I asked to have you relieved and was turned down on the theory that you’re all I have left. So my problem now is that you’re clueless and I don’t have the authority to bring you up to speed.” She glanced across the room at the agents. “We need transport,” she snapped.

One of the agents got up and sauntered over. “Yeah? Can I help you?”

“Get us out to Logan.”

“Call a cab.”

“There’s no time for a cab, Delta’s about to leave. We need to move right now.”

“We have motels. Not up to your standards, I’m sure, but you’ll live.”

“If you don’t want a complaint in your file, I’d advise you to stuff your ego up your ass and do what you’re told.”

Flynn was as surprised as the agent, who glared at her.

“Right now, Agent.”

He jerked his head toward a side door. They followed him down a couple of flights of interior stairs and out to a well-plowed parking lot.

There were two sedans parked in it and three black SUVs, immediately recognizable as federal cars.

“I wanta take my Subaru,” the agent said. “Better in the snow.”

Once they were in the car, a dense silence settled. Nevertheless, Flynn thought he would try asking the agent some questions that could be useful.

“What kind of crimes do you guys cover out here?”

“Us guys cover the waterfront.”

“I mean, specifically?”

“I know I don’t have any hotshot National Security clearance, but that’d be privileged information.”

An asshole for sure. He kept going anyway. “Any kidnapping cases?”

“Kidnapping? No. Is that what this is about?”

“I can’t answer that. My hotshot National Security clearance prevents me.”

This brought a slight chuckle. “We had a disappearance four months ago. Not a kidnapping case. The vic packed a bag.”

Diana glanced at Flynn, who said nothing.

They pulled up to the departure gates and the agent let them off and sped away.

“Are federal officials always so helpful to each other?” Flynn

couldn't resist asking, but he knew the answer.

"Yes."

"So where are we going?"

"Just stay with me."

The airport was small and intimate, a reminder to Flynn of another America, one that still clung to life, just barely, in little places like this and Menard. Steady, settled, and safe—assuming, of course, if you ignored things like the meth industry that drove lots of local economies in poor areas.

Security was no problem, just a single TSA agent with an old-fashioned X-ray device and nobody ahead in line. Not surprising, since Delta to Salt Lake was the last flight out to anywhere, and they had just a couple of minutes to go before the doors were closed. They showed their creds and got their guns passed for hold stowage without trouble. Unlike the FBI agents, the TSA worker accepted Diana's credential without question. He passed his Menard Police Department ID card with equal disinterest.

As they walked down the aisle, Flynn took careful note of the other passengers. He didn't want a repeat of what had happened on the bus, and he thought they should assume that this perpetrator was capable of almost anything.

He was surprised to identify a Federal Air Marshal three rows behind him. Normally, you found these guys on long-haul flights in big planes. So why was he here? He slid into his seat between a businessman and a kid sealed up in an iPod. The FAM was carrying, which is what had identified him. There was a pistol, small, probably a .38, under the left arm of his thick jacket.

The flight was hot and cramped and seemed longer than it had any right to be. Twice, Flynn went back to the john so that he could pass the FAM. Nothing out of the ordinary, except for the fact that he was there.

Toward the end of the flight, Flynn closed his eyes for a few minutes, waking up when the aircraft shuddered as it began to land.

On the way to the next flight, he commented, "There was a FAM a couple of rows behind me."

"Really?"

"No, I made it up."

"Well, don't."

"Odd that he was there."

"A coincidence, as far as I'm concerned."

"You're sure?"

She stopped. She turned to him. "We are alone, you and I. I know one other person, the individual I report to."

He continued walking easily. Inside though, he was dealing with a major shock. *Only her immediate superior officer?* What in holy hell was going on here?

Their next flight turned out to be to Chicago. They were seated in first class.

"I could get used to this," he said to her. The seat actually had room for him.

"Don't. These were the only seats left. The storm's headed east, and folks want to get in before it closes O'Hare. The flights are packed."

"Why are we going to Chicago? If I may be so bold."

She opened her mouth, seemed about to speak. Remained silent.

"We've got a choice of prime rib or mahi-mahi," the steward said after they took off.

As Flynn ate, he saw that silent tears were running down Diana's face. He said nothing. What was there to say, that it would be all right? It would not be all right, it would never be all right.

Maybe she was going to be relieved or disciplined. Maybe she already knew that. But what was most likely was that she was remembering the men she had lost, and feeling a torment of regret.

"You need to eat," he said.

Listlessly, she took a bite of her fish and chewed.

“Flynn,” she said. Then she stopped. He’d seen grief many times, the way it takes a while to hit. Hers had hit. “Flynn,” she said again, “you’re a good cop and you have some outstanding skills and a lot of investigative experience in our area of concern, but things have changed, Flynn. We’re going to need to take a different approach now.”

“I’m not leaving voluntarily, if that’s what you’re driving at.”

She closed her eyes and he saw the tears well again, and realized to his astonishment that she was crying not for her lost men, but for him. She leaned toward him. “It’s a trap,” she whispered. “It’s always been a trap and I’ve gotten you tangled up in it, too.”

He added this to the long list of things about this case that he did not understand.

“They feel that you’ve gotten too deep. You can’t be released.”

He waited, but she said no more. “Well that’s certainly damn mysterious.”

“Security is very, very tight and for good reason, Flynn, as you will find. The thing is, there’s no going back from this. It’s marriage with no divorce allowed. You didn’t get a chance to make a decision and that’s not fair.”

“I made my decision when I walked out on the Menard Police.”

She turned to the window. But not for long. Very suddenly she turned back and said to him, “You’re going to meet people different from any you’ve ever encountered.”

“And you can’t tell me one more thing.”

“I want you to prepare yourself for the unexpected. I don’t need you gaping like a hick and asking little boy questions.”

“Do I do that?”

“When you’re in there, you may. This is going to be the strangest experience you’ve ever had. Beyond imagination.”

“I have to admit, I’m curious.”

She said no more, and the flight continued uneventfully, a plane

swimming in featureless darkness.

Once they'd landed and collected their weapons and equipment, Flynn found that they had a rental car waiting. She drove, and he noticed that she didn't use a GPS. She'd been here before. A lot.

He watched the gray sky and the gray of Lake Michigan, and wondered if there was any way to prepare to face a total unknown.

They'd been on Lake Shore Drive for some time before he understood from reading road signs that their destination was Evanston, just north of Chicago itself.

"I think you need to talk more, Diana. I'm a pro but I'm not a psychic. Narrate this a little bit."

"We'll be there in ten minutes."

"Excessive secrecy and compartmentalization just killed three men. And yet you keep it up."

"I have orders, I follow my orders."

"Following orders is good. But what that means is making them work. Your orders were to stop a dangerous criminal. You didn't make those orders work, so whatever it was you thought you were doing, it wasn't following them."

After a few turns in Evanston, she drove down a street lined with big old houses that looked like they were worth a lot ... and Flynn became concerned. There were no official buildings around here.

They passed those houses and drove into a less grand neighborhood. Here, there were stark oaks lining the street, and the tall row houses were as dreary as the sky.

They pulled up in front of one of the houses. In the driveway there stood a Chrysler 300. Other than that, the place was silent, the windows dark.

"So where are we? Not your ancestral home, surely?"

"Police headquarters."

"Not a good answer."

He got out of the car when she did, and followed her up the front walk. The air was bitterly cold, tanged with the sharpness of chimney smoke, a gusty breeze coming off the lake.

When she pressed the doorbell button on the jamb, there issued from deep inside the house the faint bonging of an old-fashioned bell.

This was not a police headquarters of any kind, but there was certainly something unusual involved here, because as Flynn had stepped out of the car, he'd seen a flicker of movement from a window in the house across the street.

"Does it bother you that we're in gun sights?"

"You're very observant."

"Always been my problem."

She rang the bell again.

"What're they doing, sending our faces to Washington?"

She glance at him, frowning.

He continued, "There's a camera in the door. Another one between the bricks to the right. Whoever's in there has been able to watch us since we turned onto the block."

"I did not know that."

"Yet you've been here before."

"As I said, this is our headquarters."

He thought, "you look, but you don't see," but didn't comment further. No point. Noted, though, was the fact that her lack of practice as an observer was a liability that must never be overlooked.

The door swung open on a woman of perhaps thirty. She wore an orange jumpsuit and had a plastic net on her hair. Her skin gleamed and Flynn realized that her face was covered with a film like petroleum jelly. On her hands she wore latex gloves.

He was still trying to make sense of this when she stepped back and let them in. She ushered them into a living room with an old couch, a coffee table, and a couple of easy chairs. A gas log burned in the

fireplace.

“Sorry,” she said, “we’ve been working on him.”

“Anything?”

Whoever they were interrogating, her expression said it all: they were getting nowhere.

“Flynn, just try to be open. I can’t tell you anything about what’s going to happen because no explanation would do it justice. I can’t even answer any questions, because any question you would have would be unanswerable.”

“I know what it is.”

“I don’t believe that. Tell me what you think.”

Flynn said nothing.

CHAPTER FOURTEEN

Two more of the jumpsuits lay folded on the couch. On the coffee table was a silver canister about a foot tall.

“We need to put these suits on over our clothes,” Diana said. “And do this.” She dipped her hand in the canister and scooped out clear gel. “Put this on your face and neck. Make sure you’re well covered. Don’t forget your ears.”

“What is it?”

“Something that’s necessary.”

He wasn’t objecting. He was here to learn. He slathered the stuff on himself.

“First, you’re going to meet the person our agency has managing this case.” She paused. “This is a unique person.”

He pulled on the jumpsuit, which was supple and light and felt like paper. But it was a lot stronger than paper. Sort of like silk with a paper-like finish, he decided.

Diana slathered herself with the salve and put on an elastic cap of the silken material.

Flynn finished by putting on his own cap.

The woman reappeared. Flynn said, “Hi, we didn’t get introduced. I’m Flynn Carroll, Menard City Police, Menard, Texas.” He put out his gloved hand.

She looked down at it, then back up at him. Usually, people’s faces told him something. Not this time.

“Follow her,” Diana snapped.

Shuffling along in his baggy jumpsuit, his face covered with

Vaseline that smelled like cinnamon, he followed the woman down the central corridor of the old house, past an umbrella stand and a photograph of a family from about fifty years ago.

“Whose house is this, anyway?”

“A sublet,” Diana said. “We found it on Craigslist.”

“*Craigslist?*”

“We move a lot.”

The woman opened a big oak door at the end of the hall. He followed her into a large room that Flynn guessed must have once been a solarium. It was on the back of the house and full of tall windows, but as dark as a cave. The expansive windows were covered by curtains.

In the middle of the room there stood a man of significant height, six three at least. As they came in, he glared down at them out of eyes sunken so deep in his head that they were like craters. His hair was completely white.

“Sorry to be meeting under these tragic circumstances,” he said. “And I apologize for the—” He gestured, indicating the costumes. “I’m allergic to everything.” He sighed. “I can’t even leave the house.”

Slowly, then, he turned to Diana. Some kind of electricity passed between them, and Flynn thought that this was the person she had reported to from Montana. He also thought that they were more than coworkers.

“My name is Oltisis,” he said, and at that moment he walked into a shaft of light, and Flynn saw that he had compound eyes, many-lensed like the eyes of a fly.

He sucked breath, but instantly controlled it. Let it out slow. As he did, the face turned toward him. Unhurried. The eyes seemed blank. But they also told Flynn that this was an alien. Okay, that explained all the secrecy.

“I don’t surprise you?”

“You do.”

“You’re very contained, then.”

“As are you.”

“I’m a cop, Lieutenant Flynn.” Oltisis crossed the room in two sleek strides. Flynn saw more than cop in the way he moved, he saw military. Lethal military. This alien might or might not be a cop, but he was certainly a professional killer.

As he sat on a broad leather couch that almost fit him, he gestured toward two wing chairs.

Flynn could hardly tear his own eyes away from that face. The lips were narrow and precise, the skin was as slick and featureless as plastic, and the deep-set eyes gleamed in the thin yellow light that filled the room.

No question, this was not a disguise. He was face to face with a real alien. But he also had a case to deal with. Men were dead. He said, “We need more people, and we need them now. We need help.”

Oltisis looked toward Diana. “I put together a cleanup crew to go back to the Hoffman place. Air Police. They’re totally out of the loop.” His English was perfect. Not the slightest accent.

“Did they find any trace of Hoffman and the daughter?” Flynn asked.

“Doctor Hoffman was in a snowdrift two hundred yards from the house. Frozen to death. Looked exactly like he’d wandered away and gotten lost. Nice touch, he had a bag of garbage with him.” He made a gravelly sound that Flynn realized was laughter, but it was bitter, that was very clear. In fact, it sounded like defeat.

“We need to break this case,” Flynn said.

“Ah?”

“You look beaten. Sorry.”

“And you don’t, Flynn.”

“Am I a fool, then?”

Oltisis met his eyes with his own glittering jewels. “No,” he said carefully, “you are not. Flynn—may I call you Flynn—this is a new

kind of police operation. We've got a criminal element operating here and we can't move freely among you. Thus the liaison effort."

"You could surely devise some sort of disguise."

"The allergic response is too deep. We'd need to create human bodies for ourselves."

"So do it. You must be loaded with high tech."

"If one of us is to acquire a human body, one of you has to die."

"I see."

"Criminals steal bodies." He lowered his head. "That's what happened to your wife."

Flynn went silent inside. For the first time, he knew that she was dead. Believed it. Images of her raced through his mind, too fast to track, but of her in her happiness. He swallowed his thrashing sorrow. "Did she suffer?"

Oltis stared into Flynn's pain, his eyes as blank as a shark's. Flynn thought, "This alien has seen a lot of violence, a lot of death." He continued to question him. "How many other field units do you have? How many officers on your side of the fence?"

"We need more, I agree."

What the hell? Could this be true? "Don't tell me it's just the three of us."

Diana said, "If it gets out that this is happening and not even the aliens can put a stop to it—"

"Jesus Christ, you need a whole damn division on this! The FBI and Interpol, at the least!"

"This gets out, mankind panics and contact gets set back fifty years. No, Flynn, secrecy is essential."

Cops sure as hell couldn't keep secrets, that was true enough, and the public would sure as hell panic, no question there, either. "People need to be warned. Otherwise they have no chance."

"Help us get this cleaned up."

“My wife was kidnapped eight years ago! So how long is it going to take? There are hundreds of people dead. You’re wired into the government, you just moved around a unit of Air Police, so put some resources on this or I’m going public.” But even as he said it, he knew that it was hopeless. Nobody would believe him, not without this creature in tow, and that was obviously not going to happen.

“You signed a secrecy agreement, Flynn. Don’t forget that.”

“He’s fine,” Oltisis said. “He just figured it out.”

“But he said—”

“You’re on board, aren’t you, Flynn? You’ve seen the problem.”

Flynn nodded. Oltisis was so sharp, it was almost like having your mind read. “I understand the need for secrecy. But there have to be more resources.”

“Rebuild your team. I can do that.”

“Bigger. And top people. Delta Force operators. CIA field officers. The best of the best. And better equipment. Jesus, you people must have some incredible equipment, not crap like that MindRay.”

“That’s one of ours.”

“Is it a toy, because if that’s the best you can do, I have a real problem with your technology.”

Again, Oltisis laughed, and this time Flynn got it loud and clear, the cynical laughter of the cop who knows only one truth: every single piece of equipment he possesses is inferior to what the crooks have.

“What’re you, fifty years ahead of us? I expected aliens to be, like, a million years ahead of us. But you’ve got powerful crooks and shitty equipment just like we do.”

“Budgets are budgets, Flynn. And we’re about a thousand years ahead of you, if you want to know. Among other things, we can manipulate gravity and you can’t. But you will. We’re helping you speed up your development, because there needs to be an alliance between our species. We’re similar and that’s rare and valuable. It strange out there and it’s dangerous. We need a friend, and so do

you.”

Flynn said, “You use your connections to get us the best cops and the best operatives you can find, and I am with you.”

Oltisis said, “We’ve been doing that.”

“So you came up with a small-town police officer like me. I think I’m a good cop, but let’s face it, my skill set is limited because my department’s needs are limited. We don’t train up supercops in Menard, Texas.”

“You have an IQ of two twenty. Did you know that?”

“I did not.”

“And you’re also highly motivated. We are doing our job, Lieutenant.”

“So let’s get on with it.”

“We have someone in custody.”

He was stunned. Then he wasn’t. “But he’s not the perp we’re looking for?”

“No,” Diana interjected. “This is one of his customers. My unit got him.” She paused for a long moment. “My old unit.”

Oltisis said, “He was a thrill seeker. Among us, life is all too predictable. It’s one of the major reasons we explore as we do. In any case, he came here, bought a human body and just basically went wild, indulging his every fantasy, and he doesn’t have pretty fantasies.”

“I thought aliens would be—well, different.”

“There’s greed and self-indulgence everywhere.”

“And the crime committed?”

Oltisis looked steadily at Flynn. “He raped fifty-six of your women, killing forty of them in the process.”

“Jesus.”

“If he’s sent home with the evidence we have, he’s going to walk. We have a real problem on Earth gathering forensics to a level our

courts accept. In our system, a case cannot be presented until guilt is certain. The only judicial issue is the sentence. We need a confession out of him, Flynn.”

“Now, are you saying that this thing—being, excuse me—has *two* bodies, one human and one like you?”

“Let me explain a little further.”

“That would help.”

“Every living body contains an incredibly dense plasma that bears all its memories, even every detail of its physical form. It’s the template, and it’s effectively eternal. In our world, doctors can move this plasma from an aged body to a young one. It’s also possible to cross species, but it’s highly illegal. I could enter a human body. I could live among you. At home, I’m just another person. But here, with my knowledge and my power, I’d be a god.”

“So what about death? Do you die?”

“If you wish.”

“If you *wish*?”

“When a human dies, your soul will linger on Earth if you have unfinished business here. Eventually, a new body will come along—an infant—that fits it, and you’ll enter the new body and return to life. With us, the process is no longer natural. I have a stem cell packet that can be grown into a new body.” He gestured toward himself. “If this dies, I can simply move to a new version of myself.”

“Will you?”

The face—horrible and strange and yet somehow deeply human—took on an eerie, concealing expression. “You can’t have known this, but that’s as rude a question as one of us can be asked.”

“Rude? I don’t get it. Why rude?”

“Let’s move on, shall we? Body theft is a major crime, as you may imagine. And when it involves interfering with an alien species, especially a less advanced one like yours, it’s actually our most serious crime.”

“But the exterior identity—what we can track—that remains the same, am I right? So this guy has a human ID. A human past.”

“The process works like this. A person is kidnapped. Then the heart is stopped and the whole body transformed into stem cells, which are grown on a new template. The new body fits the purchaser’s soul, and he enters it. The new ‘person’ won’t look the same as the one who was used to construct him. He won’t have the same DNA signature, either.”

“You can do all that?”

“At home, by law your new body would need to be an exact replica of your old one. But here, well, you don’t have body switching yet. So no law and no local enforcement infrastructure. Which is why there’s a ring operating, selling my species human bodies so they can live on Earth.”

“That’s a motive?”

“For marginal types like would-be criminals, it is. They’re free here. The local authorities aren’t going to catch them on their own, and our police force is hamstrung, obviously.”

“So what can they do that’s so special?”

“As I said, live like gods. The last one we caught busted the bank at a casino in Vegas, then used predictive techniques you won’t discover for five generations to game your markets. Inside of a year, he was vastly rich.” He paused. His voice dropped an octave. “This guy wasn’t so interested in money, obviously.”

“When they’re finished, they can go home?”

“If they’re ever finished. The one in custody would probably have stayed here for a very long time, maybe across the span of more than one life. You can help us with him, Flynn.”

“And what do you want me to do?”

“If the body he’s in now were to die here on Earth without access to his dealer, he’d be in trouble. No new body, so his soul would be left to wander until it got drawn into a human fetus. He’d lose his

memory of himself entirely. Become, in effect, human. Trapped forever in a primitive species.”

“Turn him over to our courts. Let us threaten him with the needle.”

“He was careful not to commit any of his crimes in death penalty states.”

“Drop him in a supermax.”

“He’ll escape. But he wouldn’t want to be tried in Texas.”

Flynn thought about that. Understood what Oltisis was driving at. “Okay,” he said, “let me spend some time with him. What’s his name?”

“Roger Ormond is what it says on his driver’s license.”

Diana said, “The identity’s perfect. It’s been built from deep within the system.”

“Take me to Roger Ormond. We’ll need to chat for a couple of minutes.”

They left Oltisis to his dark office and whatever thoughts a creature like that must have, and have to live with.

“We can disrobe,” the assistant said. “Roger isn’t allergic.”

“What’re you going to do?” Diana asked as she pulled off her jumpsuit.

“What Oltisis asked me to do.”

“He didn’t ask you anything.”

Flynn looked at her. “Oh, yeah, he did.”

They descended into a cellar that smelled of dust and heating oil. There was an ancient black velvet painting of JFK against one wall, beside it a rusting bicycle. There was also an old portable record player, and in one corner a dust-covered electric wheelchair, its seat well worn. Whoever had lived in that thing was probably damn glad to leave this life.

Across the room, a man sat in a cage made not of bars, but of a sort of shadowy haze that, as Flynn went closer, proved to be a mesh of

fine wires. He was under a flood of glaring white light. His eyes were closed, his skin was flushed red, and he was covered with a sheen of sweat.

Flynn went into action immediately. “Mr. Ormond, I’m your attorney. We’re going to be getting you moving within the hour.”

“Excuse me.”

“You’ve been extradited to Texas.”

The face, which had been open and questioning, shut down tight. So he was scared. Good.

“I didn’t commit any crimes in Texas.”

Flynn remained affable. “Tell them that. I’ll stay with you as far as the airport, but after that you’re on your own. You’ll be assigned legal aid counsel at Huntsville.”

“A prison?”

“Guarded by cops like us. Who know the truth. You won’t escape. You’re gonna die in Texas, Mr. Ormond.”

He started to stand up. The cage around him glowed and sparked. He fell back into his seat. “I didn’t commit any crimes in Texas!”

“So, Michigan, Illinois, New York.”

“I avoided death penalty states.”

Bingo. There was the confession. He revealed nothing of the small triumph that he felt. “Well, take it up with your lawyer there. You’re moving in an hour.”

As he left, the man in the cage erupted, screaming and thrashing. The cage sparked and sizzled.

Oltis was waiting, his face filling the screen of an iPad.

“Will that do it in your legal system?”

“Oh yes, he’s confessed. We’ll start processing him off planet immediately. He’ll take the full hit.”

“Which is?”

Oltis broke the connection.

Diana said, “They take them out of the body and put them in a sort of trap, is the way I understand it. They don’t like to talk about it.”

“A trap?”

“It’s prison. In this one’s case, permanent prison. They’ll never let him out.”

Flynn thought about that. This plasma they were talking about was the soul. “Soul prison. That’s the worst thing I’ve ever heard of. To be dead, but still in jail.”

“I think their name for it says it all. They call their permanent prison ‘Dead Forever.’ ”

They left then, and Flynn could not remember ever feeling so happy to leave a place in his life. The world of Oltisis might be full of wonders, but it also sounded like a kind of hell. No mystery of life. No mystery of death. Imprisonment that could last for eternity. “What do you think of them, Diana?”

She was silent. “Let’s do our job, okay. Better to just put the whole thing out of your mind. Concentrate on the work.”

They got into the car. “I’ll tell you what I think.”

“No! I don’t want to hear it.”

“They’ve made themselves into monsters.”

She started the car and pulled away from the curb.

“Where are we going?”

“I got us a hotel. We’ll want to get cleaned up.”

“Then what?”

“Once they break it to Ormond that he’s been nailed, they’re expecting to get some more information for us about the perp. He’ll want to bargain, it’ll be his last hope. So we’ll get a call from Oltisis. There’ll be a second meet.”

“That’s good and bad. We need the information.”

“But you don’t want to go back there?”

“Nope.”

“Neither do I, Flynn. Neither do I.”

CHAPTER FIFTEEN

She'd gotten them a room at a hotel in the loop. They were traveling as man and wife, James and Diana Exeter. Flynn came out of the five minutes he'd actually allowed himself to wash off the oil and the itching that had come from being near the alien. He'd put on some fresh clothes in the bathroom. They were coworkers, not lovers.

He lay back on one of the beds, looking at the new identity pack he'd been given as they left the HQ. "This is well done."

"We're piggybacking on the Witness Protection Program."

He gazed up at her long neck, her full lips, her sad, dark eyes.

"Don't assume they're from another planet," she said. "Don't assume anything about them at all."

"Where would they be from, then?"

She was silent for a long time.

"Hello?"

"Yeah, well, it's damn mysterious, all of it."

"How much does the government know? What about UFOs? Is any of that real? And alien abductions—I mean, the kind where the people get brought back? There's websites, books, claims of millions of abductions."

"We just don't know."

At that moment, he saw something on the ceiling. A light. It moved down the wall ... toward Diana.

It trembled red on her forehead.

Leaping up, he threw her to the floor. As she screamed, recoiling from what she obviously assumed was an outburst of rage, he hauled

the curtains closed. “We’re leaving.”

“What? Why?”

“You just got painted with a laser.”

She started to stuff her backpack.

“No time for that. We’re outa here.” He confirmed that the hallway was empty, and left the room. After a moment, she was with him.

“Hey,” she said as he passed the elevator bank. When he didn’t respond, she kept on behind him.

He entered the stairwell and started up.

She stood watching him.

He pointed downward. “Death.” He pointed upward. “Life. You choose.”

Seconds counted now, so he took the stairs three at a time. After a brief pause, he heard her behind him once again.

He pushed his way onto the roof through a stiffly hinged door, then stepped behind its enclosure, keeping close to the wall as he did so.

“As much as possible, keep something between you and the view. If you have to expose yourself, stay below the level of the parapet. One flicker of infrared return from up here, and our evening is over.”

Somewhere there was going to be access to the elevator bank, there had to be. He could see the elevator’s roof structure, but no outline of a door.

By moving directly toward the back of the building he could keep the door enclosure between himself and the view, and still get a look at the hidden wall of the elevator bank’s roof structure.

Crouching, he ran to it—and soon found the opening he needed. He turned to motion to her to follow.

Once again, there was a laser on her. “Drop!”

She stared. He pulled her down. “I need somebody with field skills!” For an instant, the laser touched the wall of the building behind the hotel, and then was gone.

“Sorry!”

“Always do what I tell you. Always!”

“Okay!”

He got the hatch open. “We’re going to wait for an elevator to come up, then ride it down. They’re on their way to the roof but they won’t find us here, so it’ll be a near thing.”

“I screw everything up!”

“Everybody screws everything up. It’s the nature of cop work.”

An elevator came up, stopped three floors down, then continued its cycle. “That’ll be them,” he said. “When the car stops, get on it.”

“Jesus!”

“Don’t look down.”

With a loud click from above, the car halted. Flynn hopped on. Leaping carefully, Diana followed him.

“Now we’re going to wait until it passes below fourteen, then drop down into the cab. When we’re there, don’t touch any buttons.”

From this side, the roof hatch was easy to pull up, and they were soon inside the car. He didn’t bother to try to replace the hatch. Their pursuers would know what they’d done. Probably already did. This wasn’t about deceiving them, it was about getting just far enough ahead of them to escape.

She leaned against the wall of the descending car. “Thank God.”

“If we don’t encounter them in the lobby, we need to grab a cab to the nearest El station. We’ve put them maybe three minutes behind us. If we’re lucky.”

“And if we’re not?”

“We’ll need to try another casino.”

“Who are they? How did they find us?”

“It’s the perp. He undoubtedly followed his client when he was captured. He’s probably been watching that house for a while, waiting to see who was going to turn up.”

“We have to warn them.”

“If we live.”

The doors opened onto the ornate lobby.

He could see a second car just passing twelve, on its way down. “Here they come,” he said. He wished that he could get a look at them, but there were too many ways to lose control of that situation. He drew her toward the main doors.

He’d tracked people across the plains of north Texas, he’d chased them through the streets and alleys of Menard, and he was reasonable at both things. He could not recall a time, though, when he’d been the runner. The truth was, he had to fall back on spy novel stuff, and he didn’t like spy novels. Hadn’t read one in years.

“Okay, quick—” He grabbed her wrist and jumped into a taxi. “Water Tower Place,” he told the driver. It was the only name that came to mind. He had no idea what it was or where it was. Just something he happened to remember.

“Why Water Tower Place?” she asked.

“Why not?”

“You don’t even know what it is, do you?”

“I do not.”

“You don’t know Chicago at all, then?”

“I don’t.”

“Water Tower Place is a shopping center in the Loop. That’s downtown.”

Flynn fell silent. The perp had gone after them first because they were sure to go to ground as soon as Oltisis was taken out. “We need to get to a pay phone.”

The mall was enormous and filled with shops. It took a surprising amount of time, but they finally found a public phone.

She made a call and told whoever answered what had happened.

“Let me talk.”

She handed him the phone. "You're in immediate danger. You need to get out of there right now."

Oltis said, "I can't move that quickly. Something has to be prepared, and transport is complex."

"You don't have a fallback prepared?"

There was a pause. "I do not."

"I'd get out of there even if you have to be carried in a bag. There's an immediate threat."

"I'll do my best. I assume we won't be seeing you tonight."

"Have you questioned your suspect?"

"I've just begun. I know that your perpetrator has human helpers. Ormond's never seen him in person, so he says."

"And you're inclined to believe him?"

"He's ready to open up."

"Get out of there and take him with you. For God's sake don't lose him." Flynn hung up the phone. "Meeting's off, obviously." He looked out along a long, empty corridor. The mall wasn't closed but it was almost empty, and most of the stores were dark.

"We need to hunt up ATMs. We need all the cash we can get. And I assume you have a cell phone?"

"I do."

"Throw it away. First, take out the battery."

They ran the ATM cards until they each had around six thousand dollars in cash.

"Do they ever run out?"

"I don't know. Not soon."

"Too bad this is our last chance to use them."

"*Why?*"

"The cards will be made."

"Bank databases are well secured."

“No they aren’t.”

It was now pushing eleven p.m., so there was no point in going to an airport. Like it or not—and he didn’t like it at all—they’d have to stay in Chicago overnight.

Outside the building, they found long rows of cabs, and more of them at the entrance to the Ritz Carlton that soared above Water Tower Place. Flynn hailed one, and they got in.

“Days Inn,” Flynn said.

“Uh, Lincoln Park?”

“That’s the one.”

“I’ll get a reservation ahead,” Diana said.

“No cell phones.”

“They won’t see me.”

“How do you know?”

“I’m a hacker. It’s what I do.”

“A hacker? You have some useful skills, then.”

“I like to think so.”

As the cab negotiated the sparse traffic, Flynn watched behind them, using what he could see of the rearview mirror. He thought he was dealing with a team of about four individuals with some very good equipment. They had a long-range rifle scope with a state-of-the-art laser sight. The way they had followed their targets, the rifle had to be on a chopper, which had been hovering out over Lake Michigan. Not great marksmanship, though. A good sniper would not have missed.

They also had that animal. Would they be able to make use of it in a city? He didn’t see how. They hadn’t tried yet, at least.

The Days Inn was in an older building in a neighborhood that was active even at twelve thirty at night. Which was fine. Activity was good.

The cab pulled up and stopped. Diana started to get out, but a

gesture from Flynn stopped her. She didn't speak, she didn't turn to him. Good, she was getting the hang of it.

After he'd finished evaluating their surroundings, he said, "Let's go."

They exited into a driving wind. The air had grown noticeably colder. The storm that had paralyzed Montana was getting closer fast.

At the motel, Flynn paid cash. The clerk took the money and directed them to their room. He'd been doing this too long to bother to ask for ID and listen to the bullshit.

The room was stark but clean. Flynn was tired, too. Not a good time for it, though.

The bed was a double, too narrow to avoid the touch of bodies. Silently, she threw off her clothes. She kept nothing on. Her skin shimmered, her curves swept elegantly about as she moved. Steve Glass had been a lucky man.

They lay side by side, as still as two scared birds.

When he closed his eyes, he saw Oltisis, the thin face and deep, dead eyes.

Lights from outside glowed on the ceiling. The distant rumble of a great metropolis in its uneasy sleep lulled them.

Flynn slipped into one of those sleeps that comes so stealthily that they seem more like a state of altered awakening. Diana refocused as Abby, and the dreary hotel room became their old bedroom. The curtains swayed in the summer breeze, the leaves whispered, and Flynn became aware that they were not alone. He thought, oddly, that it was all right that the man was there, that he was slipping his arms under Abby's legs and shoulders, that he was lifting her like a leaf.

He saw the man's face in the moonlight, the intent eyes, the lips slightly parted, the chin a little pointed and yet a little heavy.

And then Abby sighed, and he turned to her but she was gone, and the breeze swept through the room, and a new kind of silence came

with it.

He leaped out of the bed.

“What’s the matter?”

“Abby!” He ran toward the window. “No!”

She shook his shoulder. And he was back in the bed in the motel room. He hadn’t jumped up at all.

“It’s a dream I’ve had before. I see the guy take her.”

“Did you?”

“Probably not. We did an Identi-Kit years ago. Posted the Wanted all over Texas. Nothing.”

They held each other in the dark ocean of the night, in the unknown. Eventually, they slept again, each clutching the other as a lifeline. Flynn woke before dawn and checked the hotel corridor. Empty and silent. He watched the street for a time, standing back from the window. An old woman in a black coat walked a Collie mix. A bus passed.

He looked back at Diana sprawled on the bed. Circumstances had thrown the two of them together, but he still belonged to Abby. He’d always belong to Abby. For the first time, he found himself imagining her death. Had she known what was happening? And what *did* happen? Was it slow, fast, painful? He should have asked Oltis. Or maybe not. No, best not.

Finally he sat in the room’s threadbare easy chair and turned on CNN, and watched the crawl on silent. A tanker had gone aground in the Azores. A movie star had gone berserk. Ford had a new computer system in its cars.

And *what the hell had just happened?* He was working with a cop from another damn planet, holy God. Secret as hell and the stakes were high. If the criminal elements could be stopped, there would be open contact. Open. Everybody would know. The world would change, and look at that Oltis, look at the way he was. That had to be the strangest and most wonderful person he’d ever met, and the

most sinister. They'd defeated death. What did that mean? Conscious plasmas—is that what we were?

Wonderful. The secret of the ages, and maybe the whole world was going to find out. Maybe we were going to defeat death.

Except for one problem. Small problem. It was that this whole damn thing was going south. Way south. And the worst part of it was, he had no clear idea of a next move. More than anything that had happened so far, that disturbed him.

He closed his eyes, but sleep didn't come, not really. At best, it was the uneasy sleep of the soldier who can see the flicker of artillery on the horizon. Or it was the sleep of the condemned, the mind searching for last dreams that did not come.

In its gradual, stately way, the light changed, dawn rolling in from the east. Diana snored softly. The minutes passed, one by one.

So he was a big genius. Wonderful, he was so glad. Too bad that he had run out of ideas.

CHAPTER SIXTEEN

The glow from the signs outside finally faded into the uniform ray light of a cloud-choked sunrise. When Flynn parted the curtain again, he saw flecks of snow tumbling past.

It was six twenty, meaning that they'd been here for over five hours. They would have to go soon, but she was still sleeping. Her fists were clenched, the blanket pulled tightly around her neck.

When he'd first met Diana, she'd seemed out of her depth and too arrogant to know it, but now she looked small and tragic, lying on the bed all clutched into herself.

"I'm not asleep," she said. She opened her eyes. "Did you sleep?"

"Some. Not a lot."

"Same here. Not a lot."

She got out of bed, indifferent to her nakedness. He was not indifferent to it. She crossed into the bathroom, lithe and perfect, a dancer.

The shower came on. He listened to it, but as he watched her shadow behind the curtain, he thought of Abby in the shower. She'd liked to sing, Abby. Her voice was a peal of bells.

The shower curtain flew back and Diana came out. "Yours," she said.

When he undressed, she took no notice.

He showered in silence. He was mapping out an exit strategy from Chicago. Keep it simple, make it quick. But where to go?

"I need a laptop," she told him as he dressed.

"We can do that at a Best Buy or a Staples."

“That’s numero uno. We also need disposable cell phones. Every time we use one, we need to bust it up and toss the remains. No more than twenty-second calls, and only if absolutely, absolutely necessary. NRO can pull down a cell call in about thirty seconds from anywhere in the world, and we need to assume that our guys are even better.”

“Okay, here’s my part of this. First, if our friend doesn’t get out of that house fast, he’s done. If it hasn’t already happened. The perp is ahead of him and way ahead of us, and the frank truth is, survival is the issue. So I’ve been thinking about transportation. What’s the safest way to run like hell? Planes are out. No way through security without showing some kind of ID. The train is better. They take cash and we can hide out in a compartment. But a compartment is also a trap, so that’s out. Obviously buses are too vulnerable. My bottom line: we buy a car off a lot for cash. There’ll be no record of the transaction until the title hits the state department of transportation. So we’ve got about two days to go as far as we can.”

“Then the car becomes identifiable.”

“If we’re still in Illinois it does. But that’s not where we’re gonna be, not unless the trail of that tiger leads here, which I very much doubt.”

“The trail of the tiger?”

“I think it’s our best shot. That animal has records. Where we’re gonna go is where it was last in the hands of its real owners. That’s our starting point.”

“Let me ask you this. What if we absolutely, completely and totally cannot find the tiger? What then?”

“We go to Plan B.”

“Which is?”

“I have no idea.”

“Jesus.”

“Ninety percent of detective work is having no idea, eight percent is being wrong, two percent is luck. You enter a crime scene, there’s a

dead guy. His wife, the usual suspect, is alibied and clueless. It feels like there's no next step. But you find one. You take it. Usually small, and usually a dead end. So you feel your way along until you locate another step, if there is one, which usually there is not. That's it. That's being a detective."

"But you solve your crimes?"

"We have a good closing rate in Menard. Better than a lot of places. Mostly you solve the crime because the perp is a moron, which is why this case is such a problem. Our guy is not only better equipped than we are, he's smarter."

Dressed, they went downstairs. In the elevator he said, "We walk in opposite directions on Diversey. You go north, I go south. Get on the first bus you see. I'll get on it, too, next stop. Do not sit together. We both get off at the El."

The doors opened, they entered the compact lobby and checked out. She left while he looked at leaflets. Then he left. He made no effort to case the street. If they were made, there was no point. Escape would not be possible, not a second time.

As he walked, he looked for a bus stop, found one, then waited. In a few minutes a bus pulled up. It was packed, which was all to the good. When he got on, for a moment he didn't see her. Then he did, standing toward the back, deep in the crowd. He grabbed a bar and stayed in the front. They traveled four stops to the El, then he got off, along with most of the other passengers.

He saw her again on the El platform. They didn't acknowledge each other. When the El came, they both entered the same car. Three other people did, too, a man in a gray overcoat with a fur cap on his head, a woman with a blanket-covered stroller, and a girl being led by a Seeing Eye dog. Ordinary people or hit squad?

Farther down in the car, Diana sat reading a paper. That was a nice touch, he hadn't thought of that.

Looking up at the route map, he decided to get off in Skokie. No idea why. It was just a random name. No plan was the best plan.

Stops came and went. All of the people who'd gotten on with them were now off, which was good. Hopeful. Unless they'd been cycled out, of course. Who knew what level of resources they were dealing with? Did the perp have ten confederates or fifty? No way to know.

When the train stopped in Skokie, he got off. She followed. Downstairs, there was a coffee shop. He took a seat at the counter. In a situation like this, it was always a mistake not to eat, so he ordered eggs, toast, and sausage. At the far end of the counter, she ate, too.

She'd probably seen the same dealership from the windows of the train that he had, but he left first anyway. If there was another one he hadn't spotted, he didn't want to take the chance that she'd go there instead.

It was a twenty-minute walk, and he didn't like the way it exposed them. Nothing to do about it, though.

As he pushed his way into the warm dealership showroom full of gleaming Chryslers, the only salesman in the place appeared, an Indian man with tired eyes and a cranked-up smile.

"I'm looking for something I can drive off."

The salesman sized him up. "Well, let me show you your car," he said. The plaster smile didn't change. The tiredness in the eyes maybe got a little deeper. This man was far from home with a blizzard on the way, and Flynn could see his wife and kids around him, needy ghosts. Most of the world was like this man, keeping on because what else were you going to do? Flynn knew that there would be no savior for Mr. Asnadi.

Mr. Asnadi tried to get him to look at some recent models.

"I got a budget, man. Two grand."

"We can do that. There's a Dynasty—"

"You can do better. What about that Shelby over there?"

There was a Mitsubishi V-6 in the Dodge Shelby, and it was turbocharged. A fast car if you needed it and he would need it, that he knew.

“This is a fine car. We’ve certified it, you can see. But there’s not much wiggle room.”

The sticker said three thousand one hundred dollars. There was wiggle room. The way the tires were sitting told Flynn that there was massive amounts of it. The car hadn’t rolled in at least six months, and you weren’t even going to get a kid to buy an old gray Shelby.

“I’ll give you two grand cash now. That’s my only offer.”

“For two grand, we have this Avenger—”

“The Shelby. Two grand. Or I walk right now.”

He sighed. “I have to clear it with my manager.”

“No you don’t. You’re the only guy here. You want to try sitting in a back room drinking coffee while I stew, then come out and bullshit me more? Ain’t gonna happen.”

“Let’s do the paperwork.”

Twenty minutes later, Flynn and Diana were driving away. “Beautiful,” she said, looking at the cracked dash.

“It’s fast and we might need that. Plus front-wheel drive and reasonable tires. It’s worth about eight hundred bucks, but I paid two grand to do the deal quickly.”

His instinct was to travel, but they went back into the Loop and spent an hour dipping more ATMs. Under no circumstances could they use plastic once they were outside of Chicago.

When they had sixteen grand between them, they headed out Eighty toward Fifty-Five. He wanted to get far away from here as fast as possible, and also out from under the storm, which was fast approaching.

In Joliet, they found a Best Buy. They picked up laptops. She also purchased a hardware firewall. “We leave the wireless connections turned off. When we take these online, it can only be with a wired Ethernet with the firewall between us and the connection.” They got a GPS. “We use it only if necessary.”

“It doesn’t emit a signal,” he said.

“Everything emits a signal. Our signals detection units routinely reproduce the images on GPS instruments being used by the Taliban. It’s one of the ways we aim our drones.”

“I’m an old-fashioned cop, don’t forget that. Gumshoeing around asking people questions. So don’t let this electronic crap trip me up.”

“That’s why I’m telling you.”

At a 7-Eleven, they got disposable cell phones.

Back in the car, she explained, “Any time we use any phone, the computers or the GPS, anything that connects us to the world electronically, we immediately move on. So don’t, like, decide to surf the net before bed or whatever.”

“Good enough.” When it came to computers and computer security, she was, thank God, clearly in control. “Now I have a question for you. It’s time to open up. We’re past the bullshit. I know the big secret. So now I want to know if there are any support personnel anywhere who could help us.”

“I don’t think there’s a single soul.”

“What about the stakeout team across the street?”

“Garden-variety FBI surveillance unit. Don’t know a thing.”

“Not very good, either, given that they let a hostile tail pick us up. What about your NSA supervisor? You’re not in the office. He must be aware of that.”

“Neither are you, and what does Captain Parker know?”

“Point taken.” He drove on southward under the deepening sky. Snow blew across the road in writhing ribbons. The car’s heater screamed. As he drove, he watched both the sky and the road behind them. The cloud cover looked to be at about two thousand feet, so any chopper that might be shadowing them would stay in the cloud. The road was a different story, the road he could see.

In an excess of caution, he pulled the car off suddenly, tires screaming.

“What’s happening?”

He said nothing. Ahead was a crossroad anchored by an Exxon Station, a Jack in the Box, and a Holiday Inn Express.

He pulled into the gas station.

“How about a warning once in a while? You scared the hell out of me.”

“We don’t need gas. I’m watching our back.”

For eleven minutes, nothing else came in off the interstate. Then an eighteen-wheeler appeared, air brakes hissing, and headed for the truck pumps.

“Okay, I think we’re clean and we’re in an isolated area. Now what we need to do is this. First, we’re gonna go online, both of us, and see if we can find any report anywhere of a lost or stolen Siberian tiger. At the same time that we do that, we’re gonna put these people in front of us where we can see them.”

“Put them in front of us?”

“We’re going online flying flags. Wifi. No firewall. Looking for a Siberian tiger.”

“They’ll find us.”

“What they’ll find is the motel. We’ll be backed off, watching. But first there’s another couple of chores.”

“Which are?”

“You’re going to learn some new driving techniques. A few moves, as much as I can get across in an hour. And you are damn well going to become proficient with that little popgun you’ve got.”

“I don’t like guns. But I’ll use it if I have to.”

“You will fall in love with it. Worship it. Because right now, Diana, our guns are our gods.”

CHAPTER SEVENTEEN

He'd taken them down a long country road and pulled off in a tree-choked dip just beyond a small bridge. "Let me explain this vehicle."

"I'm a good driver."

"This is a front-wheel-drive vehicle. Better for winter, but you're not going to be able to do certain maneuvers. Normally, rear-wheel drive is the way to go, but this has an advantage in bad weather. It's fast, but it also has a lightweight steering pump. This means that the fluid is going to foam if we do tight turns at high speed. Expect the steering to become extremely heavy. Also, rubber brake lines. They could expand and so you need to assume that you could lose your brakes, too."

"So it'll be unsteerable and it won't stop. You'd better drive."

"If I'm incapacitated, you'll have to. Or if I'm done."

"What do you mean 'done'?"

"You got a sixty-six percent casualty rate going so far, Diana."

"I'm sorry. I'm just—" She shook her head.

He changed seats with her, then taught her a few basics, such as how to find the apex of a turn and when to start accelerating out of one, and how to execute a reasonable 180.

On a quiet country road she was barely passable. Under pressure, she was going to forget everything. He didn't even mention the bootlegger's turn. If she needed to execute a maneuver like that, she was already caught, so what was the point?

He gave up on driving and went to handgun skills. They walked a short distance into a frozen field. "You ever fired your pistol? At all?"

“Yes. No. Once. One session.”

“The most important thing in pistol shooting is understanding just how inaccurate your weapon is. People are accurate with pistols from distance only in the movies.”

“How close do you need to be?”

“With the weapons we’re using, a few yards is the outside.”

“That’s *all*?”

“Targets will be in motion and so will we. You need to get in as close as you can, is the bottom line. A couple of feet, or even a contact shot, is best.”

“I did my shooting on a range. There was a trainer.”

“The range is a dream world. If you’re shooting, your mind is going to be too focused on the act to remember much of anything else. That’s what practice is about. When you’re under pressure, you’ll go on automatic pilot, not lose your head.”

“What’s the most important thing I need to know, then?”

“Avoid lifting the barrel as you pull the trigger. But you won’t, not entirely, so you need to aim for the largest part of your target that’s worth hitting. This is the chest just below the neck. The advantage of this shot is that it does anatomical damage that affects the arms. With a heart shot, your opponent can get off one, maybe two trigger pulls before he’s done. Not with this one.”

“What about the head? Just shoot him in the head.”

“You’re going to miss, and once you have missed, you are going to manage the weapon badly. That’s what happened to Mike.”

“He was highly trained.”

“So am I. That’s why I know what happened to him.”

He kept her shooting until she appeared to be comfortable with her PPK. “Who issued this gun to you?”

“I bought it at Wal Mart.”

“It’s an okay choice. Just remember exactly how many bullets you

have. Count as you shoot. Know, always, whether or not you've got one in the firing chamber. This is absolutely critical, because it is going to take you more than a second to fire if you don't. In an exchange of gunfire, close range, that extra half second is a lifetime—yours.”

She looked like she wanted to cry. As they returned to the nameless little cluster of franchises and gas stations, sunset was a dull red streak on the western horizon. Ahead, the black outline of the motel was now dotted with fitful lights. Flynn felt a familiar sadness rolling over him, the great, tragic surge of the human sea, and now, also, the greater sea of intelligent life of which mankind was only a part.

They got takeout at the Jack in the Box, then checked in to the Holiday Inn Express.

He tossed his backpack on the bed, then put the Best Buy bag down more carefully and pulled the computers out. He ate a chicken sandwich while he checked out one of the laptops.

“It works,” he said. He followed the instructions on the desk and was soon online with it. “I've got webcams in my house. I'll just go on my website and click through them all. Then I'm going to surf YouTube looking for video of Siberian tigers.”

“If they know what they're doing, you'll get noticed for certain.”

“Let's hope.”

“I don't quite get this. We're giving ourselves away.”

“We want them to come to us in a place of our choosing. We'll be standing off, watching from a distance. When they show up and don't find us, they'll leave. Then we'll be where we need to be—behind them. We'll start calling some shots.”

Once online, he stared into his own living room, dark and still. For him, home was the center of his heart, and his loneliness. He did their bedroom, then the kitchen. Finally, steeling himself, he moved to the Abby Room—and just sat there staring, for the moment too astonished to talk. When he found his voice again, he said, “The Abby Room's been torn apart.”

She came beside him and looked at the image. “My God.”

The walls had great gouges ripped in them, the furniture had been broken apart, the couch torn to pieces, all the photographs scattered. He felt kind of sick, looking at the violence of it.

“Can you rewind?”

He hit the reverse button, and the image began to flicker back. “I’ve got it set on thirty-second intervals, so it’s choppy. It goes back forty-eight hours.”

Twenty-one hours ago, there were blurred frames indicating movement. He clicked forward.

In the center of the room, there was a figure. The body was blurred almost to invisibility, but you could see that it was a man.

“It’s posed, you know. On purpose. You’re intended to see this.”

The man ripped down maps, tore up pictures. His fury was extraordinary.

He killed his browser. He couldn’t bear to see more. “That’s the perp,” he said. He tried to fight down the sick horror, but he could not. He choked back his emotions. “Goddamnit. Sorry.”

“Everybody in this cries.”

“Okay, fine. Siberian tigers. They can’t be imported, so the ones presently in the country are the only ones available.” He reopened his browser, being careful not to bring up his home security system again. “There is no national database of stolen property. The individual police departments each keep their own records.”

“So what do we do?”

“Look for break-ins at zoos and animal shelters that house these animals. The fact of the break-in will be recorded in the National Crime Information Center Database. Although, I don’t have a password.”

“Not a problem.” Her fingers flew. “We have a master access program. It can basically break into any password protected system there is. One with as many different passwords as this one has is

gonna be a piece of cake.”

He saw numbers flickering across the database’s access point. “Okay—one, two, three—”

The entry was allowed.

“That’s impressive.”

“Give me something hard. The Federal Reserve’s master password. Want a billion dollars? I could wire it into your account within fifteen minutes.”

“That might be a tad difficult to explain.” As much grief as was in her own heart, he was grateful that she was trying to lighten his mood.

She worked through the data. “Here’s an animal shelter in Austin, Texas, that was broken into last month. It’s reported as a case of vandalism. Chimpanzees were shot. You gotta ask why people do crap like that. And another one. Santa Barbara, California. A lion was killed with a high-powered rifle.”

“Nope, if we’re on the right track at all, it’s gonna be Austin.”

“You’re sure?”

“They have one of the worst burglary clearance records in the country. A criminal this smart is going to factor that in.”

“They logged the chimps as animal cruelty. There are pictures. Ugly. So nothing stolen.”

“Maybe and maybe not. Let me take a look.” He read aloud, “‘Fencing was breached in a large holding area that contained a Siberian tiger called Snow Mountain.’ ”

“It doesn’t say the tiger is missing.”

“Say you’re a cop. You investigate a break-in at an animal preserve. Of all the animals that are left unharmed, you mention only one in your report. Why?”

“I don’t know.”

“Neither do I. But I do know that Texas is full of wealthy ranchers

who love to stock their places with exotic wildlife. Texas being Texas, maybe you know that the tiger has been illegally taken by such a rancher or sold to one, and you know exactly who did all this—took the tiger and vandalized the facility as a cover—and because of who it is, you have no desire to pursue this individual.”

“Is it worth a trip, then?”

“You follow the leads you have.”

“I thought we were going to wait here. Try to induce a confrontation. I mean, by now they almost certainly know where we are. I mean, if they have the skill to watch for relevant searches.”

“I didn’t expect such a good lead. I think we need to run after it.”

They were close enough to St. Louis to reach the airport in a couple of hours.

They didn’t check out. Why leave behind any more information than you had to? What was the hotel going to do, send a bill?

They were south of the storm now, and the winter sky was vivid with stars. Cars passed now and again, not many though. People were getting their dinner, life was winding down for the night.

He watched the road behind them, but one set of headlights looks much like another, and distances are hard to gauge at night.

“What do you think will happen in Austin?” Diana asked.

“What will happen in Austin is the unexpected.”

“If the tiger is gone?”

“Then we’re close. The case starts giving up some gold.”

“Will they catch us this time?”

He thought about that. “If they don’t, it’ll be a miracle.”

CHAPTER EIGHTEEN

Using one of the throwaway cell phones, Diana had made some calls to airlines and determined that the next flight to Austin wasn't until five forty-five in the morning, so Flynn pulled into a Homewood Suites he happened to see near the St. Louis airport.

Once again, they checked in with cash. There was a stack of *USA Todays* on the counter, and he took one. He planned to look at the weather forecast. Big weather had a tendency to loop down over the country's midsection. If they were going to run into the storm again in Texas, he wanted to know that.

He went into the bedroom, tossed the paper on the bed, and turned on the TV. "Will it bother you?"

"I'm not sleepy."

He could feel a more intense electricity between them. She wanted to take another step, he could feel that. He said, "Outside of Menard, there's an area called the Staked Plain. When I was a boy, I used to ride there, and in the summer of my twelfth year a girl rode with me. Abby." He did not add that they had danced together naked in the grass.

"I'm here," Diana said.

His body went to her and his lips kissed hers, and then his heart kissed her. She was small in his grasp, surprisingly so for someone who occupied so much space in his life. They took their pleasure together then, two people who were tired and confused and afraid, but for this moment were able to find something like shelter in one another.

Then it was over, a memory flying back into the past. They lay side

by side in silence. Flynn felt gratitude. He wanted to thank her, but that seemed like another form of rejection. Abby haunted him.

Diana slipped quickly away into sleep. She was soon snoring softly. Flynn envied her the ability she had to drop off like that. For him, night was a prison. He dreaded the feeling of vulnerability that sleep brought. Since the incident, his doctor had explained to him that he was suffering from something called guarded sleep, which means that at some level, you're always awake.

He turned on the TV. For a while, he surfed, watching the Weather Channel, then CNN, then a Judge Judy rerun. Hitler strutted on the Military Channel. On Nick at Night, crazed cartoon figures cavorted.

His nakedness began to make him feel exposed and he put his clothes back on. Cradling his gun, he returned to the living room of the small suite.

For a time, he meditated. His gun lay in front of him, so he also closed his eyes. A few minutes vacation from it would be okay.

Abby whispered his name.

He gave up meditating and went into the bedroom and got the paper, which was lying on the floor beside the bed.

Back in the living room, he turned the pages, looking for the national weather. As he flipped through it, his eyes rested for a moment on the word "tiger."

He read the brief story, then stopped, too shocked for a moment to move.

He went into the bedroom, shook Diana and said, "Forget Texas, we're going to Vegas."

Diana stirred but didn't wake up.

"Look at this," he said, holding the paper out, then rattling it.

She moaned.

"Wake up, Diana, this is important."

She sighed, stretched, then started to turn over and go back to sleep.

“No, you need to see this.”

“What?”

“A tiger is on the loose in a casino in Las Vegas.”

For a moment she was absolutely still. Then she sat up. She grabbed the paper and read. “A coincidence?”

“This was yesterday. They’d lost us. My guess is that this is bait.”

“It doesn’t say anything about it being a Siberian.”

“It’s not a coincidence.”

“If you say so.”

“We need to catch the first flight out.”

“Flynn, I can understand investigating the place that lost the tiger. But the casino makes no sense. If it’s a coincidence, we’re wasting our time. If it’s not, they’ll be waiting for us.”

“I see a break in the case. Among other things, casinos are loaded with cameras. Think if we got the perp identified. Think of that.”

“It’s a trap, Flynn.”

“Of course it is, that’s the whole point. But we know that. We understand.”

They left the hotel and went on to Lambert, driving through the post-midnight world, past glowing fast-food restaurants and dark, silent strip malls.

“Once I watched a rat get cheese out of a trap,” he said.

“That’s impossible.”

“If you’re a smart rat it’s not. What he did was push the trap along the floor with his nose until it sprung. Then he ate the cheese. We need to approach this the same way, exploiting the unexpected vulnerability.”

“What is it?”

“It’s unexpected, so I don’t know. Yet.”

The earliest Vegas flight left just after six, so they spent a few more

hours in the next hotel, letting the night wear slowly into predawn. There was no trouble with tickets, and the plane wasn't crowded.

After taking off, it turned into the dark western sky. Flynn looked at Diana beside him. Was she capable? No.

Better question: was he?

Same answer.

CHAPTER NINETEEN

They pulled around the gigantic lion that guards the MGM Grand's porte cochere and got into the valet parking line. Nobody cared, of course, not about a couple of dismal little tourists in a rented Camry. Which was good. A noticeable detective is a bad detective.

He hadn't walked into this building in five years. As he approached the gleaming doors, the old itch came back. He fought it off. You don't start, that's how you control an addiction.

"What do we do now?"

"Find the tiger."

"If it's still here."

"It's gonna be a major production for them to get it out of the building. Security is all over the place, not to mention the press. This place is loaded with cameras, believe me. If security hasn't spotted the tiger being taken out, then odds are that it's still here."

"He could've used the helicopter to take it off the roof."

He thought about that. Then he said, "Possibly, but he still has to get it up there. Somewhere, some camera will have seen that."

This was the Grand, where the Skylofts had private butlers. How much would it take to convince his butler to help him get the tiger out? A couple hundred bucks would probably do it. Still, could a butler control the cameras?

They passed the huge golden lion in the lobby, heading for Skyloft check-in. They'd booked one, too, top floor.

He could hear the casino and smell the casino. From here, he couldn't see the blackjack tables, but he could imagine the dealers standing behind them, waiting. He'd known a couple of those guys.

They loved to see players burn, but they loved even more to see them win. Big wins meant big tips.

He slid the door back and entered the exclusive Skyloft check-in area.

“Reservation for James Carroll.”

“Yes, Mr. Carroll! Just a mo—.”

The receptionist’s smile turned to plaster.

“Get ready for company,” Flynn told Diana as the door behind them slid open and a howitzer shell in a black suit came in.

“Excuse me,” the shell said, his steel cranium gleaming.

“We’re here on official business,” Flynn responded. “No gambling.”

“Please come with me, Mr. Carroll. And you, too, Miss Glass.”

He looked at her in astonishment. “You’re booked, too?”

She did not reply.

As they headed toward security, the officer asked, “Are you two a team now?”

“Not really,” Diana said.

He led them into a familiar space, scuffed beige walls, no windows, a steel desk and a couple of wooden chairs. Not the sort of room you expect to see in the Grand. It was even more stark than the service areas and the maze of access tunnels that Flynn knew ran under the huge complex.

He thought he might recognize the security chief, but it was a new, short, stocky bullet-headed bald guy. The new howitzer shell said, “Diana Glass. Welcome back. Leaving, I presume?” He looked at Flynn. “And who’re you supposed to be, Mr. Carroll, Hecuba’s sidekick?”

“I’m a police officer,” Flynn said. He pulled out his badge. “Texas.”

“Doesn’t make a shit here, Mr. Carroll, this is Nevada. The message remains the same. Get out.”

“Look—”

“I’m lookin’ at a lot of losses between the two of you, now get off the premises or I’ll have to turn you over to some real cops, which will not amuse you.”

Unless there was a criminal charge, in cases like this the Vegas cops basically just yelled at you. It wasn’t against the law to win money from the casinos. It was just annoying to them.

“You have a tiger in here and I know this, and I know how to find it and get it out of the resort.”

He heard Diana suck in her breath.

“Your help isn’t needed,” the security chief said. “We’ve got eyes on every camera in the structure.”

“Why haven’t you evacuated?”

“Because we don’t think some eccentric high roller is gonna unleash his pet on the guests. We just want him quietly to leave. Like you.”

“What hasn’t been on the news is why you can’t find it, which I know you can’t. Or why we can. That hasn’t been on the news, either.” He flipped his badge wallet closed. “We’re not here to gamble.”

The security chief came closer to him. Flynn noted that he had a complete set of choppers. Not good with his fists, then.

“Wait here,” Choppers said. He left the room.

Flynn looked up at the camera and waved his fingers. “He’s gone to get the general manager.”

“I really didn’t want to come here.”

“Are you booked all over town, or just here?”

“Look, in a previous life I built illegal software, okay?”

“For the casinos?”

“Against the casinos.”

“All I did was count cards.”

“They don’t like that, either.”

“They do not.”

He looked at her with new eyes. From casino hacker to government super spy. “You’ve had an interesting career.”

She smiled a tight smile. “It has been interesting.”

The general manager came in. He was not smiling. “I’m told you won’t leave.”

“We’re not here to gamble. We’re here to help you with your tiger problem.”

“We don’t have a tiger problem.”

“You have a half-empty casino is what you have. Because of the bad publicity regarding said tiger. That’s a tiger problem.”

The guy was young, no more than five years older than Flynn, but he had the dead eyes of somebody who’d worked tables too long. Under the flinty, hostile surface was a deeper level of what Flynn sensed was real nastiness. So he had to be beaten about the head and shoulders a little. Not a problem. He said, “Okay, fine, we’re gonna leave. But we’re also going to let the press know that you refused our help.”

“A cop from the beautiful little town of Dead, Texas, and his hacker girlfriend? Nobody cares.” He turned his glare on Diana. “Why aren’t you in jail? You’re supposed to be serving time. Or dare I ask? ’Cause I can see you’re carrying heat, both of you. But then again”—he gestured toward a uniformed guard who had quietly entered the room—“so is he.”

“I’m not in jail because I cut a deal with Uncle Sam, Willard.”

“Willard?” Flynn asked.

“What kind of a deal would the feds cut with a sleazeball like you, Diana? You went down for four years.”

She pulled out her documentation. “When there’s only one person who can do a job, they’re gonna deal.”

He looked at her ID card. “As if this was real. Please don’t bore me. You either bribed your way out or fucked your way out or both. Or

you did something to their computers. Probably hacked your own release and just walked.”

“Look, Willard, we’ve been sent here by our bosses for reasons that we cannot tell you to do a job that you are not going to be able to do yourself.”

“We’ve got security patrolling every floor. We’ve entered and searched every guest room in the complex.”

“But you haven’t found the tiger or seen it leave the structure. Not on any camera. So what does that tell you?”

“LVPD SWAT are standing by.”

“Hordes of cops in black Darth Vader outfits. International media attention. That would not be good.”

“Whatever, I fail to see what a card shark and a jailbird hacker are gonna bring to the table.”

“Go the SWAT route. Or let us do our thing. Nice and private. You see the tiger, then you don’t.”

“Do we get an ID on the shithead who brought it in?”

“I guarantee the tiger. The shithead if we’re lucky.”

“And what does this cost?”

“Not a penny. We really do work for Uncle Sam.” He looked at Diana. “She’s been scared honest.”

“That would be false. So let me put it this way. If this fucks up in some way—if it turns out to be some sort of bass backwards scam, I’m not bothering with the cops. I’m gonna just go ahead and brass you two until your faces are but a memory.”

“You beat up ladies now?”

Willard focused on Diana. “I saw this ‘lady’ here toss an armed man twice her size fifteen feet into a glass wall.”

“I’ve only seen her geek side,” Flynn said.

Willard stared at her for a while. “That was her geek side. Don’t even get me started about her skill at ripping marks.”

Her face was scarlet. She did not reply.

A long sigh from Williard. "What do you need to get started?"

"Smart move," Flynn said.

"Nope, it's a case of curiosity killing the cat. Why would a big-time hacker team up with a small-time counter? I'm fascinated."

"Let's roll some videotape."

Willard took them to the security complex, which Flynn saw was fitted with state-of-the-art cameras watching the gaming area. Every corridor on every floor was also covered. "Any penetration into the rooms?"

"Not legal."

"Detectives, maybe? Police investigation?"

"It happens, but nothing's going down at present."

He introduced Scott Morris. Flynn saw a graying former cop, probably a retiree. Sincere, capable, dedicated. "Scott supervises the system. He'll give you what you need."

"I have all the incidents edited together," he said. "This is the first one that was noticed." He touched a button, which froze an image.

They were looking at a blur stretched along the floor line in one of the access tunnels. Diana said, "You can tell what that is?"

"I can tell that it isn't supposed to be there."

"Could be a big cat," Flynn said.

The security officer returned the camera to real time. The shadow was now gone.

"What was it then?" Flynn asked.

"Nobody could figure it out, so it got kicked up to me. I did a little work on the image, but it's unresolvable."

"What's the refresh rate on these things?"

"Eighteen fps."

"So whatever it is was moving really fast."

“Faster than a man can run.”

“Where’s that tunnel?”

“Right under us, actually. Access to the lion habitat is through there.”

The MGM Grand’s lions were a world-famous tourist attraction. When he was here gambling, Flynn had passed by the habitat often enough. Even the floors were glass, so it was going to be a hard place for a tiger to hide.

“Street access? Is that where they bring the lions in from the ranch?”

“Yeah, there’s access out onto Tropicana. A couple of hundred feet.”

“Let’s see the best image of the tiger that you have.”

“This is from the tower. Sixteenth floor. Three twenty this morning.”

The animal came down the hall, stopped, and looked up at the camera.

“My God,” Diana whispered.

Brilliant eyes sparked in a sea of gray-orange fur. The animal’s face seemed almost to smile. Then it slowly turned around and, switching its tail, ambled down the corridor and around a corner.

“Next camera?”

Scott Morris pushed another button. “This is all there is. A blur again.”

“It displayed itself intentionally,” he said. “And it’s still here. And not alone.” He asked Scott, “Do you cover the Mansion? With cameras?” This was an exclusive facility behind the Grand itself, reserved for high rollers and people willing to pony up \$5,000 a night for accommodation.

“We cover the whole facility.”

So there would be no reason for the perp to prefer the Mansion

over the Skylofts, and perhaps a good reason to favor the lofts, because he would have arrived the same way he'd arrived at the Hoffman's, from above, using that high-tech aircraft of his.

In any case, MGM was going to know a lot about the people who stayed in the Mansion. You didn't just walk in, you had to be invited.

"What about the roof of the tower?"

"There's time lapse video of all roof areas. We've examined every foot of it."

"How long is the delay?"

"Sixty seconds."

Easily time enough for someone to land, drop the animal and its support crew, and leave. Working at night, staying below FAA radars, using that soundless helicopter or whatever it was, it would have been easy.

"What we need to do is concentrate on the top floor of the tower, not the roof, the roof cameras are too slow. But I want to look at every inch of interior footage."

A few minutes later, Flynn was watching one camera, Diana the other. "You're looking for a blur," he said. "They know the frame speed of the cameras, so the animal is moving fast."

"It's that well trained? Tigers are hard to train." Morris said.

Flynn said nothing.

It took three hours, and during that time neither of them saw a single sign of anything unusual. Butlers and room service waiters came and went, guests came and went, but nothing else happened.

"Like I said, it's still here," Flynn said.

"Which surprises me," Diana replied. "If it's bait. Wouldn't they have exposed it, then pulled it out as soon as they could?"

"Gotta let the fish swallow the bait, then you can set the hook. That's what we're doing now. We're swallowing the bait. Next step, the hook will be set."

“How will it be done?”

Flynn thought about that. “We shall see.”

“Look, it’s not in this complex,” Morris repeated. “I’m sorry.”

“If it’s not anywhere you’ve looked, then it has to be somewhere you haven’t. I suggest we start at the point of entry and we move through every space where the animal has been observed.”

“And?”

“We shall see.”

“Flynn,” Diana said, “that’s just blatantly taking the bait.”

“A smart fish wants to get the fisherman to go home. So he plays a game with him. He wants to frustrate him. He takes the bait, but he’s careful. He’s not greedy. He nibbles. So the fisherman up there thinks, ‘have I got a bite or is it just the current?’ Finally, he hauls in his line and finds a clean hook. This happens a few times, and the fish is finally left in peace. Full, too.”

“So he leaves and we get nothing. Stalemate.”

“Oh, no, he’s gonna get something.”

“What?”

Flynn made a gun gesture. “The fish, in this case, is gonna follow the line right back to the fisherman in his little boat.”

“Flynn, you’ll get killed.”

“Somebody will, most likely.”

“Remember Montana. The animal is extremely dangerous, and whoever’s behind it is even more so.”

Flynn said nothing.

CHAPTER TWENTY

The lion habitat was immediately beside the security area, and it took them only a few moments to reach it with their latest minder, a young guy called Josh who apparently thought they were celebrity guests looking for an insider's tour.

He nattered away about the facility's history and its considerable prowess as one of the most popular exhibits in Las Vegas.

The walls and floors were clear glass, so it was easy to see the lions, but not entirely. There was a small area where they could stay out of view.

There was a crowd in front of the habitat, and a line full of kids formed up along the wall. It was a happy situation, calm and orderly. No problems here. There were cubs in the habitat, and the children were eager to have their pictures taken with them. Farther down the corridor, more people were filing into Studio 54. The casino was humming, too, and a show was letting out of the Cirque de Soleil's KÀ Theater.

This was a chess game with no board and more than one expert opponent. Or perhaps it was better to say it another way: a chess game with the perp and some other kind of game with the tiger, played by tiger rules, whatever they were.

He asked Scott, "Did you check the whole habitat?" He knew the answer, but he wanted to hear it from the man who had done the work.

"What's there to check? Six lions, two cubs, glass floors, end of story."

Obviously, Scott was not aware of how the habitat was laid out.

Flynn went to the door. "I need to enter the space," he told their minder.

The man blinked. His expression of surprise said that it wasn't a frequent request. Finally he said, "No."

"It's okay, Ricky," Scott said.

"Don't we need a release or something?"

"I need to do this right now."

Scott spoke into his radio, then listened. Willard, no doubt. Flynn waited. At a nod from Scott, Rickie unlocked the heavy door and stepped aside.

"Hey," the trainer who was handling the animals said, "You know what you're doing?"

"I need to see into the enclosed area."

"There's nobody in there. We're all out here."

This guy was tight with his lions, which was good. It meant that he could control them. Flynn was fast enough to deal with one lion, but six would be a definite problem, and lions weren't like tigers, they worked in packs.

The public was now aware of his presence in the enclosure and was watching him. He moved through the visible space, then took a few steps up into the hidden area.

It was exactly as he expected. He called out to the trainer, "There's another animal in here."

The trainer's head turned. "*What?*"

"Back in here. And I don't think it's a lion."

The man came to Flynn. "That's empty. It has to be."

Flynn moved a little deeper into the dimness. "Get security over here."

"This is impossible!"

"Look for yourself," Flynn said. "Carefully."

"Jesus, you're right. What is that?"

“We need somebody who’s able to work with tigers. And this one is very damn smart.”

The trainer had taken out a small LED flashlight. The yellow of the tiger’s eyes reflected back. “What the hell ... how did that get in here?”

“We need to get it contained.”

“There’s tigers at the Secret Garden in the Mirage. Is this one of their animals?”

“No. But they have experts, for sure.”

“Yeah, Siegfried and Roy. *The* experts.”

“Aren’t they retired?”

“If they’re in Vegas, they can advise. Plus, the Mirage has a good group of trainers. It’s a top-notch operation.”

One of the lions roared, then another. From outside there was excited babble, kids squealing.

“They’ve been restless as hell, and this is why. How long as that thing been in there?”

“That’s unclear.”

Behind them, Ricky opened the access door. “You guys okay?”

Immediately, there was a stirring from within the enclosure. “Close it,” the trainer shouted.

The lions erupted, roaring and striding, and at the same moment the tiger emerged. It was easily as big as two of the lions put together.

It fixed its stare on Flynn.

“It knows you. Is this your animal?”

Flynn said nothing.

The tiger came into view of the public, causing an immediate round of applause. The next second, it leaped, and Flynn had never seen anything quite like it. The movement was smooth and swift and covered a good fifteen feet.

As the tiger slammed into Ricky, he went down with a surprised

grunt.

“Holy God!” the trainer shouted.

From outside there came a confused babble, then an eruption of screams.

Perhaps because of pack instinct, but also due to curiosity, the lions followed the tiger through the door.

“Goddamnit!” the trainer shouted.

“Stay cool, we’ve got work to do,” Flynn said. He grabbed Scott’s radio. “The animals are in the casino,” he said on the emergency channel, “you need crowd control and all the wranglers you can get.”

He followed the trainer out into the broad hallway between Studio 54 and the casino. The lions were close together, moving down the center of the hall toward the casino, and the large crowds still exiting KÀ were parting like the Red Sea. But not all of them. An elderly lady who looked like a pile of bags with a face clapped her hands and confronted them, smiling happily. “Oh, how cute,” she gushed.

Another voice shouted, “It’s an act,” and there was a smattering of uneasy applause.

“Oh, God,” the trainer moaned.

Security was pouring into the corridor from both directions. Then a little boy with a toy ray gun burst through the crowd and took a firing stance. The next thing Flynn knew, he was spraying the lions with a super-soaker.

They remained silent and still, shaking their heads, annoyed by the water, unsure of themselves.

“It’s not gonna last,” the trainer shouted back at Flynn.

“I know it.”

A guard appeared with a gun.

The situation was three seconds from trample panic. “Don’t fire that,” Flynn shouted, “don’t let people see it!” The guard holstered it and stationed himself in front of the lions and spread his legs and arms, attempting to block their progress.

Now other people joined the old lady, attempting to attract the lions to them. One man succeeded in petting one of them.

“Lay off,” the trainer shouted, “don’t confuse them!”

“Folks,” Flynn said in his most commanding voice, “we need you to back out of here. Nobody run, just move out of the corridor, please. Stay away from the animals.”

The old lady was lifting the dewlaps of a lioness and shrilling at her husband to take a picture. Flynn’s warning did not stop her. Then a man with a cigar in his hand burst around the guard, roaring and thrusting it at the lions.

One of the them charged this sudden movement. The old woman was knocked over.

In three strides, Flynn moved among the lions, then past them. Quickly, he confronted the man with the cigar, lifted his arm and shook it out of his hand, and twisted the arm back behind him. Then he took the guy’s legs out from under him, whirled him around and pushed him away. He turned to the old woman and drew her to her feet. “Put her back together,” he said to another security guard who had just come up.

The lions, now afraid, began running. More screams erupted. Flynn’s trained ears counted ten sirens immediately outside the building, just beginning to wind down.

“Call your pros,” he shouted to Scott. “Right now!”

“It’s been done!”

Willard burst onto the scene. “SWAT’s deploying.”

Flynn took off after the lions.

They invaded the casino, moving fast. Their fear was escalating fast. At this point, they were highly likely to lash out at anybody who confronted them.

This was a huge space, and most of the patrons still weren’t aware of what was happening. But then one of the lions jumped up onto a blackjack table and roared. Nobody could mistake that sound, and

every head in the casino turned this way. Then the rest of them ran deeper into the room, and were lost to Flynn's view amid the high-roller slots. Roars and cries of terrified surprise followed immediately.

"Stay with this animal," Flynn shouted to two guards. "Send SWAT into the slots with nets, not guns. No guns, do you get that?"

"Yessir!"

He also ran toward the slots, vaulting the nearest row of them and landing in the lap of a spectacular young woman. Her chips scattered, mice on the run.

People were jumping up from their machines, shouting, flapping their hands at the lions, trying to leave the area.

Flynn knew about as much about lions as he did about tigers, which was just enough to know that they were efficient killers, but would only attack for food or in self-defense. For them, violence was a tool, and right now what he needed to do was to convince them not to use it.

"Clear the area," he shouted into the panicking crowd. "The police are on their way. Just take it easy, back out, don't make sudden movements." They slowed down, clustering, getting quiet. "That's it, that's right. Now just back out. Security will escort you to safety."

In moments, fully equipped SWATs appeared, and they had animal control nets. There was going to be some roaring and some resistance from the lions, but basically this was over.

Diana came up beside him. "This is what the perp's been waiting for. His tiger's going to take us out somehow, and right now."

"He's going to try. Listen, I need you out of here."

"No way."

"They must not take both of us. So you get out of here, you get in the car, and you drive, Diana. You drive far."

He spotted the tiger. It was making its way behind the high-roller slots, moving fast, staying low.

"The perp could be leaving the facility about now. You go out to

the front and make a note of every vehicle that pulls away.”

“He’ll use his chopper.”

“In broad daylight? He’s gotta have permits, he’s got to get clearance to use the helideck. No, he’ll use a car and this is a chance to see him or see somebody who works with him. Get some basic detective information.” The tiger disappeared from view. The animal was going somewhere. It would be picked up, and Flynn intended to still be alive when that happened, and to be there.

“You come with me,” Diana said.

“The tiger’s going somewhere to be picked up. If I’m there, I can call in support from the local cops. Maybe round up some of these people.”

“You will not survive this, Flynn.”

“Go!”

She turned.

“*Now!*”

She left.

Flynn trotted to where the animal had been, but there was nothing there. He looked ahead and saw an access panel. Loose. It must have gone through, and it must have been helped, otherwise the panel wouldn’t just be loose, it would be open. Smart as the damn thing was, the tiger didn’t have hands. Fortunately.

As he slid the panel aside, he reflected that he’d seen the tiger’s face more clearly this time. He’d had the uncanny sense that a person had been looking back at him through the eyes of an animal.

On the other side of the panel he found an access area that led to a forest of ductwork. It was a ventilation management shaft. The interior was unlit.

This was the moment when he needed to nibble the bait, not swallow it. The smart fish also had the discipline to defeat his own eagerness, and that was not easy, not when you were as hungry as he was.

CHAPTER TWENTY-ONE

He stood waiting for his eyes to get used to the dark. His night vision was decent, and this was always preferable to a flashlight. He could use his night vision equipment, which was still in his backpack, but it projected infrared and that would not be wise. For all he knew, tigers could see into the infrared, or this one could.

Soon, he was able to make out the shapes of ducts. There was light coming from his left. Also, on the floor, smears in the dust that could only be tracks. Instead of hiding, this tiger had gone toward the light, and that was very damn strange, especially because light changes the hormone mix in the human brain but not in the brains of predators. More visual information makes our other senses less acute. Could the tiger sense this, or somehow even know it? Or was it just a coincidence that it was going against its own instincts in such a way that gave it an advantage, but would look to most human pursuers like a mistake?

Flynn made his way under a long series of ducts, skirting the lighted area, moving as swiftly and silently as he could. He listened for any and every sound, and soon began to hear noises coming from the deeper dark. He stopped moving. Stopped breathing. Closed his eyes to concentrate on his hearing. Finally, he cupped his hands over his ears and turned slowly. As he did so, he was gradually able to make out a voice. Then that it was a female voice. Then that it was the voice of a child.

“Wee Willie Winkie runs through the town, upstairs and downstairs, in his nightgown ...”

Incredibly, what he was hearing was a little girl telling a Mother Goose story.

“Rapping at the window, crying through the lock, are the children in their beds ... are *you* in *your* bed, Jerry?”

He got his gun into his hand and went down on his stomach, drawing himself forward slowly enough so that the sliding sound was barely audible. As he moved ahead, the little girl’s voice grew steadily more distinct. Also, he began to see flickering light, very dim. A candle?

The voice continued, “Hush-a-bye, baby, mommy is near, hush-a-bye, daddy is near ...”

There came another voice, even smaller, hardly even articulate, whimpering.

“Hush ... hush.” The little girl was comforting an even smaller child.

Using the voices as a guide, he felt his way along, soon discovering an iron hatch that was standing open. As he felt the edge, he could detect neat slices in four heavy lock tongues. This door had been cut open, and not by any tiger, no matter how clever it was.

This was the work of the perpetrator or his people, the first overt sign of their presence he had found. So his instinct had been right. It wasn’t just the tiger under here. Somebody with a powerful tool was here, too, and not a blowtorch. The edge was absolutely smooth to the touch. A torch would have left a much more irregular surface. No, this had been cut by a very good blade—as a matter of fact, no blade Flynn had ever heard of.

Could this be their lair? Was that the real reason they were in Vegas? Maybe he’d overestimated their cunning, and blundered into their most secret place.

He told himself, no, don’t make that mistake, that’s nibbling the bait too hard. One more like that, and you taste the hook.

From the beginning, he had known that he would come to this point. Maybe the child wasn’t even real, and maybe something else was happening entirely. He was in a labyrinth, after all, a real one. Who could tell what the truth of such a place might be?

It was an easy step through the door, whisper quiet sneakers on hard concrete. As he stepped through, he felt the thickness of the wall. It was a good four or five inches of steel reinforced concrete. So this was an access hatch, not intended to be opened often, if at all. But what was it for? What was this space he was now in?

The little girl was now silent, but the candle still flickered. As he moved toward it, he became aware of dampness underfoot, and at once understood. He was in the city's storm drain system, and that hatch was not a hatch at all, it was a gigantic relief valve. An enormous structure like the Grand would be served by massive risers from the city water system. If one of them burst, this and other valves up and down this outer wall could be opened to let the water out into the drainage system.

But what in the world were children doing in a storm drain? Were they runaways?

Flynn had been born helpful. It was part of who he was and a big part of why he'd become a cop. Even as a kid, he'd rendered aid whenever the situation arose. When it came to putting bad people in jail, Flynn's motive was protective, not vindictive. He didn't care so much to punish wrongdoers as to keep innocent people safe.

He was in a tunnel perhaps fifteen feet high and twenty wide. The candle, guttering now, was a hundred yards further on. As he drew closer, he began to make out a bed, then a table against a wall, then what amounted to a small room built entirely inside the drainage tunnel.

People lived down here. They were raising children down here.

He walked into the tiny area. There was a mattress set on a rusty box spring, with two children sleeping on it. A tattered paperback of Mother Goose lay near the hand of an exquisite little girl, her blond hair a tangled mess, her face in sleep like something one might see through a keyhole into heaven. Cuddled beside her was a snatch of brown hair, all that could be seen of the smaller child she had been reading to.

Standing on the far side of the bed, just at the edge of the light, was the tiger. The eyes bored into him, but not with lust for the kill or even with hate. There was something like a frown there, not much of an expression really, but Flynn thought that it communicated clear meaning. The tiger's face was not angry. It was not murderous. The tiger's face was asking a question: "Who are you?"

Flynn had a shot—not much of one, but he could safely fire across the kids and maybe hit the animal. Moving as slow as oil, he raised the Glock. Quite calmly, the tiger watched it come up.

If he hit his target, the shot would be nothing short of a masterpiece. He breathed deep and set his feet.

The tiger disappeared as the shot blasted out, the noise rocking the tunnel, then echoing away in a series of thunderous slaps. Distantly, there were shouts, "shot fired, shot fired," then the thutter of feet running in the thin water that filmed the floor of the tunnel.

Other people lived down here, obviously a whole community. They were the kind of people who knew the sound of a gun when they heard it.

He had not hit the tiger. The tiger was gone.

The little girl lay with her eyes opened, her lips twisted back away from her teeth as if she was in pain. Her eyes were fixed on him. In the hand that had held the Mother Goose was a flying Taser. It was armed. The LED was glowing. A C2 like that could fire its electrodes twenty feet.

He realized that he had swallowed the bait, taken it deep into his gut. And now, in the form of a Taser in a child's hand, came the hook.

As he shifted and dropped, she fired. He felt one of the electrodes hook into the sleeve of his jacket, then the floor seemed to turn into the ceiling, and he knew that she'd hit her mark.

In training, he'd taken Taser hits. He knew to expect the confusion and the out-of-control muscle spasms that followed, also the way sounds became tinny and the world distant.

Somebody was there, a dark figure standing over him. "What you

doin' down here, topsider, you lookin' fer little girls." A blow hit his back. "That yo sweet, topsider?"

The effect wore off enough for Flynn to pull one of the hooks out of his clothes. He fought to respond to the voice, but could only manage a gobbling sound.

"You done good, Becky," the voice said. "Now we gonna kill us a topsider."

Flynn had been tricked into getting himself killed by a completely unconnected party for a reason that had nothing to do with anything.

"No," he managed to croak, "there's an animal down there." It came out as a series of gobbles.

"Zap him again, Becky." The man pulled a switchblade out of his pocket and snicked it open. "Gonna start with your balls, you piece a shit."

Flynn managed to suck a breath. "Animal in here! Dangerous!" He fought to get an arm up. Even though the little girl was standing on the trigger, there was no second pulse from the Taser.

"You're the goddamn animal."

Flynn pointed. "There's an animal back there in that tunnel!"

"What?"

"I'm a police officer. I was driving an animal away from your kids."

"You're a cop? Down here?"

Flynn had recovered himself enough to raise both hands. The Glock lay before him on the ground. "Swear."

"Shit a friggin brick, what the hell're you doin' down here? Cops don't come down here."

"To warn you ... an animal—big cat—escaped from the Grand. In the tunnels."

"Jesus. Becky, you seen it?"

She shook her head.

"She ain't seen it." The blade reappeared.

“She was asleep.”

At that moment, a light shone the tunnel, bright, a professional-quality flashlight. It moved closer, coming down the same shaft that Flynn had used.

“You’re a lucky man,” Diana said. “I thought I was gonna find meat.”

“What in fuck’s name is going on around here?”

“You watch your trap around those kids, buddy,” Diana said to the guy.

“My kids are my business.”

“Well, you better get ’em outa here until the SWATs track down that tiger.”

“You’re kidding.”

“You heard me. This officer probably saved their lives. ’Cause the animal went right through this tunnel.”

“I saw it,” Flynn said. He pointed. “Just there. Which is why I fired my weapon.”

“Come on,” Diana said. “SWAT’s coming down the tunnels and we have work to do.”

Flynn was perplexed. What had just happened here? Instead of the perpetrator’s goons, Diana had shown up. It wasn’t surprising that she’d ignored his request and followed him, but still, something was wrong.

As they made their way back toward the Grand, she said, “We misread this situation totally.”

“It looks like it.”

“This had nothing to do with us. They were on one of their missions.”

“Oh?”

“During the confusion, while the entire staff chased the tiger, which you can be assured will not be seen anywhere near here again, the

assistant manager of the resort disappeared from her office without a trace.”

Flynn did not reply. What could he say? What could either of them say?

When they had emerged back into the now-closed casino, she said, “There’s worse.”

“Hit me.”

“Flynn, there’s been a fire in Chicago, a bad one. A gas explosion leveled four row houses. Seventeen people were killed.”

He stopped. Looked at her. It was dark, but not so dark that he couldn’t see the shock in her face, or share her stunned horror.

“Oh my God, they got him.”

She nodded. “Flynn, we’re on our own.”

CHAPTER TWENTY-TWO

The assistant manager's office was neat as a pin, except for the exquisite antique snuff box the Las Vegas detectives had found, which turned out to contain cocaine. They had also discovered that her credit rating was through the floor and she had a long string of dismissed cases that the Grand wouldn't have been able to see on her record before she was hired. The publicly available part of it showed only a traffic conviction.

Flynn breathed the room. Felt it. He noticed a curtain that had been pulled abruptly, but that was all. It looked out onto a distant view, so it was unlikely that somebody had been concerned that the window was under incidental surveillance.

According to the available tapes, she'd left the office when she'd gotten the alarm about the problem with the animals. She had never arrived on the scene.

"What is it?" Diana asked.

"What it is, is nothing."

"You sense something."

"You know, I'm not really thinking about this office. I already know that we're never going to find Elizabeth Starnes or Gail Hoffman or Abby or your Steve or any of them. What I can't get out of my mind is that tiger. I saw its face again."

"And?"

"It was intelligent, Diana. Like a person. It was like seeing a person wearing the face of a tiger."

"You wondering the same thing I am?"

"A human mind put into the body of an animal. Yes I am. You

could see curiosity. Like it was wondering who I was.”

“Feline curiosity?”

“Like it was asking me if we really needed to be enemies.” He shook his head. “I think it’s part human, and I have to wonder if it would change sides.”

“We’ll never get close enough to it to find out. Especially with Chicago gone. We need help.”

“You gotta have contacts above that level. Who does Oltisis report to? Did?”

She shook her head.

“*What?*”

“I was seconded to Oltisis. Sent to him on an origin-blocked order.”

“What the fuck is that?”

“A legal order that comes from a code-protected source. You can verify the code, but not identify the source. Could’ve been anybody. Most likely some agency that’s so classified even I’ve never heard of it.” She paused. “Or them.”

“Why are they so damn secretive?”

“If the alien presence is revealed and the public goes nuts about the disappearances—”

“Yeah, yeah, but this goes deeper than that.”

She sighed. “I know it. Mirrors reflecting mirrors. No damn end to it.” She paused. “The thought has crossed my mind that the bad guys might be in control at home. It could be that the ones helping us aren’t the police at all. Maybe they’re dissidents or revolutionaries or something.”

For a moment they were both silent, each contemplating the enormous stakes involved, and the mysteries they faced, and the responsibility they bore.

“We have to just keep pushing,” Flynn said, “and hope whomever Oltisis reported to catches up with us.”

“That would be true.”

Flynn continued, “They did Miss Starnes during the day, so no helicopter.”

Willard had become more cooperative. The company very badly wanted to find and prosecute the people who had caused the mayhem. The LVPD already had a blizzard of warrants out for them, not to mention a massive hunt for the tiger. They weren’t looking for Elizabeth Starnes, though not very hard. Given cocaine use and the kind of police record that would belong to a clever junkie, the resort was just as glad to be rid of her. In any case, it looked more and more to the police as if she’d walked out on her job, not been abducted. In other words, the old story.

Flynn and Diana had been given a small office in the security area, and computers with access to the property’s floor plan, its registration records, even the casino information.

They both worked the records, looking for things that didn’t add up, and in the back of both of their minds there remained the same hollow thought: we’re alone.

Flynn traced Elizabeth Starnes’s movements, picking her up in a stairwell, then again in the main lobby. There, she met an elderly man. She greeted him with what looked like professional courtesy, then walked out with him.

“Go into her family history,” he said. “See if she has any older relatives.”

“Her father lives in Crescent Manor. Charles Starnes. He’s a slot machinist.”

“A picture?”

“DMV probably has one.” Her fingers flew across the keyboard. “Got it.”

“That was a couple of seconds.”

“Fast hands.”

“No wonder Oltis wanted you, you’re a friggin’ genius.”

“Always been my problem,” she said tightly. “Makes you think you can get away with any kind of shit. If that hack I did on the Grand had gone down the right way, I’d be in Tahiti now, not a worry in the world.”

“Tahiti’d get old, be my guess.”

“No older than catching car thieves and pushers.”

“Yeah, as screwed up as this is, it’s better.”

They laid the driver’s license photo side by side with a blowup of the face of the man Elizabeth had met in the lobby.

“It’s close,” she said.

“It’s a maybe. Let’s talk to the father.”

“We lose time.”

“A little.”

“What do we gain?”

“You never know.”

Leaving the Grand, Flynn thought that they were entering a new and far more dangerous world. How had the baddies ever taken out Chicago?

“You did warn them in that call?”

“Absolutely. Oltisis said he was aware of the problem and all over it.”

Flynn said nothing.

As they walked through the port cochere, past the line of parking valets, Vegas was gold with late sun, the neon just gaining definition against the blazing western sky. Looking toward the mountains to the west, blue now, he thought of the tiger on its strange journey, and what it had seen and what it knew.

They were alike, him and the tiger, two hunters. The only difference was in their choice of prey.

Diana sat beside him in the car, her hands folded in her lap, her face as pale as a cloud, her eyes hard and quick and scared. The eyes

of the hunted.

“Where were you in prison?”

“Lesbian Island.”

“But you’re not one.”

“I was put there, okay? End of subject. I do not wish to talk about old lives that are dead.”

“After I lost my wife, I left Menard. Couldn’t stop going. I’d dip in here to hit a few casinos for money.”

“You counted good enough to get booked. That’s impressive.”

“I have a trick memory.” His mind was a warehouse full of file cabinets, full of details that he could never escape. “I recall every hand I ever played. And not just cards. I can tell you about the breeze on the night of August 14, 1997. I can tell you about the T-shirt Abby wore on June 11, 2006. You name it, I’ve got the details.”

“Details suit a detective.”

He turned onto Thirtieth. “I guess. At least I don’t need a GPS. Saves a little money.”

“What if you’ve never been there before?”

“I’ve seen a map.”

The father lived in a single-family home on Langdon, a short street that dead-ended into a condo complex. They pulled up in front and got out of the car.

“It’s empty,” Flynn said.

“You’re a mind reader, too? Do you have a cape? Some kind of leotard?”

“Yeah, I have a leotard. Asshole Patrol.”

She knocked on the door. As he expected, there was no answer.

She said, “You’re sure this is going to be productive, because now we’ve got to look for him.”

“If it wasn’t him at the Grand, then we have a picture of a member of this group, so yeah, it’s going to help.”

“He’s not here and we’ll never find him.”

“Let’s go back to the car.”

“And go where?”

“Nowhere. Wait.”

“Wait?”

“What a detective does, mostly.”

They said little, and that was how he preferred it. You chatted during a stakeout, you missed things. It was all about focus.

The sun went down, the sky to the west raged with the light of the strip. Bats darted past the car. The air turned cool, then cold. Diana rolled up her window. “I hate the cold,” she said. Her hand went to her neck. He knew that she was remembering the Hoffman stakeout.

It was nine twenty when a man came walking slowly down the street.

“It’s him and don’t get out of the car until he enters the house and closes the door. If he’s gonna run, you want him to start from a confined space.”

“Why would he run?”

“No idea.”

He was old and stooped and used up. Whatever he’d had, Vegas had taken it. Flynn watched him go up the walk, enter the house, and close the door.

“Okay, now.”

They got out of the car and followed him. Flynn put his hand on his badge wallet. The big star on his badge was a giveaway for Texas, but if he flashed it fast, maybe the guy wouldn’t notice. Diana’s credential would likely work better.

He knocked, then again, then the door was drawn open. Mr. Starnes stood there in a black undershirt.

“Yeah?”

Flynn did his badge. “May we come in?”

“You’re cops so it’s about Lizzie. I’m finished with her. Whatever she’s done, she’s done. Not my problem.”

“When did you last see Elizabeth?”

“Dunno. Three years? Five? Last time she showed up high. Sick of it. Sick of her.”

Flynn thanked him and returned to the car, Diana following.

“You hardly asked him a thing. I think he knew something.”

“He knew nothing and he’s not the man she met in the lobby.”

“Oh. Is that good?”

“It’s good. Now we have a face. A real face, of somebody we know is involved, maybe the perp himself.”

She followed him to the car and they headed back to the Grand.

“With a face,” he added, “we have a shot at finding a name.”

“How would we do that?”

“The old-fashioned way. We get the picture fixed up as clear as the computer genius can make it, then we hand it out to the staff. We show it to maids, bellmen, valets, anybody who might be able to help.”

“What if he doesn’t have an identity?”

“There’ll be something somewhere. There always is.”

“You know that? Despite how careful they are.”

“I know it.”

They returned to their small office. Willard came in. “I’m getting my hotel fixed. Nobody can figure out how that hatch was cut. You guys got anything for us?”

“Not our lookout,” Flynn said.

“But you’re government. You’ve got resources.”

“Report the kidnap to the FBI. Get them involved.”

“No, thank you. I’ve got the LVPD to worry about already.”

“Then don’t ask.”

“Don’t ask? Fine. I got a front office that’s about to wring my neck and your only fucking response is *don’t ask?*”

Flynn sighed. “If we told you, we’d have to kill you.”

“That bullshit line. Is that from a movie?”

“No doubt. Look, tell your front office that it’s classified and it’s all under control and they will never hear from us or the asshole with the tiger again. Or the tiger.”

“I hate the government so much I’m even afraid to vote Republican,” Willard said.

“Get out.”

He left, slamming the door behind him.

“You were nice.”

“Thank you.”

As Diana passed the image through a software photo processor in her laptop, it became clearer and clearer.

“It’s a disguise.”

“How can you be sure?”

“The hairline’s too perfect. The face is too tan. Likely, it’s makeup.”

“One that you can see in a picture, but that Elizabeth Starnes bought from three feet away? I don’t think so.”

“For whatever reason, she wanted to buy it.”

“Well, it doesn’t help us, Flynn.”

“There’s more information out there.”

Parking valets at places like the Grand sometimes remember things, so their first stop was the port cochere.

The encounter in the lobby had taken place just after noon. He’d already looked at a list of the Grand’s shift patterns, and the shift that was on right now would have seen anyone who left at that time.

He said to Diana, “I need you to fade while I do this. Unless these guys think I’m a private dick, they’re going to clam up, and PIs don’t

roll with beautiful assistants.”

“And cops do?”

“Question marks do, and that’s what they don’t like.”

She stalked off down the port cochere. Traffic was light, so there were six valets waiting. He wasted no time, he knew the drill.

“I need some help,” he said, holding up the picture.

Eyes moved toward it. Brains calculated. Flynn knew the question that these guys were asking themselves: could this asshole be stripped of a c-note with a lie? He headed that one off at the pass. “I know the man’s name, that’s not the problem. What we need to know is if he was in a Hertz car.”

Interest dropped a little. Not a divorce case, so less money was going to be involved. But then again, Hertz was a big outfit.

“We don’t like our cars getting boosted,” he continued, “so anything you know.” He rubbed two fingers together.

One of the guys took the picture and looked at it. “This wasn’t a rental car,” he said.

“You closed it out?”

“I worked a double shift today. I opened it, too.”

Flynn watched the other guys. No trace of a suppressed smile anywhere. “So, okay, what’ve you got?”

“Nightlights Limo both directions. Two passengers inbound, three outbound.”

Another of the valets sighed as if he was a tire losing air. The fool had just given up the money.

“That’s one of them in the picture,” the fool added. Then he fell silent.

Not a fool, then. Pretty good at what he did, actually. “Okay, so give.”

Silence. Not a gesture, not a sound. He’d been doing this job for a while. Discreetly, Flynn showed a hundred-dollar bill. The guy rubbed

his cheek with three fingers. Was the Grand this strict about this kind of tipping? He hadn't thought a casino would be. Live and learn.

Flynn played the game, rubbing his own cheek with two fingers.

"See 'em," the guy said.

He took out two hundred-dollar bills. They changed hands.

"That's the second passenger in the picture. Obviously not the lead guy. The boss was wearing about five grand, one of those suits where the guy's name is woven into the pinstripe."

He fought down his excitement. "And the name was?"

"Morris. In the pinstripes."

"Morris looked how?"

"He looked rich is how."

"Give me a description. Hair, eye color, anything you remember."

"He stayed well back in the car. I'm guessing at five eleven, say. Full head of black hair. Suit and tie, unusual around here. You're looking at a film star, sort of, but old-fashioned. Am I helping you?"

"Names?"

"Morris in the pinstripe. And he might have said 'Jay.' Might have said that name."

"Like he was talking to somebody or about somebody?"

The valet shook his head.

"Anything more you can tell me?"

"Look, we're deep into this and obviously it has nothing to do with Hertz, so I'm gonna need another couple of memory sticks."

"Anybody else got anything, now's the time." He put his hand on his breast pocket where he kept his wallet.

Another of the men said, "I put number two back in the vehicle. One of our managers was with him."

"That we know."

It took a hundred-dollar bill to get him to go any further. "The guy

who went and got her was well dressed.”

“This was Jay?”

“I didn’t hear that. He thanked me for opening the door, that was it.”

“And your manager? How did she act?”

“Drunk. High. Couldn’t tell. Not walking the walk, that was for sure.”

That was all they knew, so Flynn walked out of the port cochere and back into the hotel. Diana caught up with him in the corridor.

“I have good descriptions of two persons of interest. And a couple of names. Last name of Morris. And Jay. Somebody named Jay was with him.”

“Can you find them?”

He considered that. He had descriptions. He had the name of the limo company they’d used. “Yeah,” he said, “I can find them.”

CHAPTER TWENTY-THREE

The least impressive vehicle Starlight Limos offered was a stretch Mercedes 300, and that's what Morris and company had used. It didn't take long to identify the driver, a part-timer called Ronald Brewster. The boss gave him up for twenty bucks. He lived in a weekly rate motel off the strip.

"On an approach like this, you need to follow procedures that I'm sure you aren't familiar with."

"What sort of procedures?"

"When a cop knocks on a door, anything can happen. So you stay behind me. Don't try to engage at all. Just stay out of it."

"I'm here to do my work, just like you are."

"Yeah, fine. This isn't your work. You're here because you're safer with me than alone. With me, you might live. Without me, you won't."

They walked around a swimming pool full of brown water that smelled of dead chemicals and drowned rats. A half-inflated Batman toy floated in it. The exotic orange mildew on the chaise lounges could have come from another planet.

It was dark now, and some of the rooms showed lights behind drawn curtains. Most did not.

He'd probably been in motels like this hundreds of times over the course of his career, sometimes to convince some guy not to push some girl through a wall, sometimes to arrest him for doing it. The Tara in Menard was the same sort of place, where sleazebag lawyers took their nooners and people went to live out their final acts.

He ran his eyes along the roofline, along the balconies, looking for

threats. It was possible that they'd finally broken through a significant barrier on the case. For the first time, they were actually investigating real, solid human beings. In all likelihood, they'd never been expected to get this far. So the strikeback, when it came, was going to be sudden and hard.

"Why are we standing here?"

"I'm looking for something."

"May I know what?"

"Danger."

That silenced her.

"You make a move in a place like this, everybody thinks you're coming for them, and they all generally have reason to think that. Knock on the wrong door, you're liable to get blown away for nothing."

"And the right door?"

"You're likely to get blown away for a reason. Let's go."

Brewster was downstairs, in room 103. The lights were on.

"Wouldn't it have been safer to call ahead?"

"Then the lights would be off, because Mr. Brewster would be gone." Here and there, Flynn saw a curtain part. Here and there, lights went out. There was a rasping click from two doors down. "Somebody in 121 racked a pistol," he said. "Be aware of this."

He knocked on Brewster's door.

Silence.

"Mr. Brewster, we're PIs. We need a little information."

Silence.

"I got a c-note for you, you open the door."

Nothing.

"Okay, I'll push it under the door. You still don't want to talk, you can keep it." Then, to Diana, "Gimme a hundred-dollar bill."

She handed him the cash. “I hope this is worth it,” she said.

He slid the bill under the door. “There’s more where this came from, buddy.”

“No,” she whispered.

“Five minutes, Mr. Brewster.”

The silence extended.

“Nobody there,” Flynn said.

“You’re sure?”

“The place isn’t breathing. Look, I’m gonna pop the lock, so stand away from the door. If there’s gonna be shooting, this is when.”

“But the man with the gun is two doors down.”

“Exactly.” He gave the door a slightly harder knock. “Come on, Mr. Brewster, there’s money out here, but it can’t wait forever.” With his free hand, he slid a credit card into the doorjamb. “They make these easy, so cops can pop them without damaging the premises.”

When Flynn opened the door, a cloud of smoke came out—crack smoke. “Not good,” he said. Then he saw the body. “We have a problem.”

The face was purple, the fists clenched against the throat.

“Is he ill?”

The man had been murdered, but this was no time to get into that. “Back out.”

“But—”

“Do it now!”

She remained rooted, staring. He took her by the shoulders and pulled her out. He pulled the door closed until the tongue of the lock clicked. There would be little evidence of their presence here, unless the next door decided to yap them to the locals. Hopefully it was some paranoid, not a cop-talker.

“Is he asleep?”

“Get to the car.”

They crossed the courtyard. Once they were in the car, he said to her, "The man was dead."

"My God."

"They made it look like he popped himself on crack. He didn't."

"You know that? How?"

"Trust me."

Unless they were very lucky, the two of them were made and this time they were going all the way down.

"What does it mean?"

"They were cleaning up a loose end. We're the other one."

"Why not just blow us away?"

As he drove, he glanced at her. "I like to think it's because we've been a little too slippery for them. But that guy hadn't been dead for fifteen minutes, so they're moving fast and we're their top priority, you can be sure."

"What do we do next? Do we need to get out of here?"

"Ever been to Phoenix?"

"No."

"You're going. Right now. Phoenix, Salt Lake, wherever we can get to fast."

He drove to shake a tail, but he doubted that it mattered. They'd have a box on the car, no question.

"What are you doing?"

"Driving fast. Hoping to live through the next few minutes."

"Is somebody following us? What's happening?"

He saw an underpass and headed for it. His chief concern was overhead surveillance.

"Why weren't we in this much danger an hour ago?"

"I think that the tiger was meant to kill us. Me, at least. For whatever reason, it didn't. Doing this guy was cleanup. He'd seen too

much and heard too much. Now they're probably frantic to get us. We've slipped through a few of their traps. No more. And we need to ditch this car right now. We're taking a bus."

"No buses!"

"A city bus like in Skokie. Couple of miles. So don't bark at me."

"I don't bark!"

"We're going to steal a car and find a small private airport and steal a plane."

"Come on."

"Or we're done. Understand, even though we can't see them, they are right on top of us and if we make a single wrong move we are dead. They haven't been baiting us or playing with us. They've been trying hard to get to us, but we've had a lot of luck. That has to run out. Maybe already has."

"We shouldn't have come to Vegas at all, then."

"We have a face. We have two names. It was worth it."

She fell silent, which was just as well, because he had to think.

He saw what he needed, a restaurant. "We're going in," he said. He repeated, "Stay close."

It was a seafood place, Christie's it was called, a low building looking like a mushroom in the middle of a sparsely occupied parking lot. A big neon trout danced in a pan on a tall sign near the building. They got out of the car into a faint scent of hot cooking oil. The sign buzzed and flickered.

"May we help you?" the hostess asked as they crossed the plant-filled entrance hall. It was late, close to closing time. Her plastic smile could no longer conceal the exhaustion in her eyes. How many jobs did she work, he wondered.

She guided them to a table amid a sea of tables. A waitress, Susan by her nametag, came and slid them menus.

"Go toward the ladies' room, the kitchen will be back there. Keep going through it, when you reach the parking lot, stay out of sight. I'll

be there in a couple of minutes in a vehicle.”

Without a word, she got up and headed to the back. In a moment, he followed her. As he exited into the lot, he saw her standing in shadows near the restaurant’s Dumpsters. He wondered how close this thing was actually cut at this point. If he kept her with him, would that slow him down enough to make capture certain? He couldn’t forget the way she’d frozen at Brewster’s place. On the other hand, she’d had the presence of mind and ability to follow him into the tunnel.

He decided that he didn’t care, he needed her. And it wasn’t just to work this case. He needed her for reasons he could not put into words. She had a right to live and be safe. He wanted to make sure that happened.

He spotted a Ford about ten years old. He went to it and quickly popped the door lock, then entered it and worked under the dashboard, feeling along the wiring harness for the right leads.

The car came to life and he drove around to Diana.

“This isn’t a good idea, Flynn, I have to tell you.”

“It’s the only idea. Everything else gets us killed.”

“If we get caught, we’re car thieves. Nobody has our backs. Remember that.”

“Use one of the throwaways to track down a small general aviation airport somewhere in the area, closed at night, big enough to have a few planes parked there.”

“Searchlight Airport,” she said immediately. “Seventy miles south off Ninety-Five.”

“You just happen to know this?”

“It’s in New Vegas. The videogame.”

“You play videogames?”

“I play with videogames. Crack them. Fool around with them.”

“There’ll be planes on this field? Flyable planes?”

“I have no idea, but I know it’s there.”

As they headed down Ninety-Three toward the turn onto Ninety-Five, he saw the Boulder City Municipal Airport. Plenty of planes, but it was also a busy facility, visibly active right now. The only way this was going to work was if they took a plane off an unmanned airport and stayed low and well outside of traffic patterns and radar coverage. Driving a hot car wasn’t going to work, because they were too likely to get stopped. If the Menard City Police had onboard computers that automatically ran every plate they saw, which they did, the Nevada State Police certainly did, not to mention the LVPD. A stolen plane, on the other hand, was even better than a stolen boat. It wasn’t expected. Homeland Security or not, there was little infrastructure to stop them. Plus, planes sat on general aviation fields for a long time. Until the pilot reported it, there wouldn’t even be anything in police files. Add to that the fact that they could manage some serious distance, and it was the best option, no question.

Once they were on Ninety-Five traffic thinned out. Soon, the nearest vehicle was miles behind them. The only lights overhead were stars. Not that this meant much. If you had a silent helicopter and kept it below the radar ceiling, you could turn out the lights and the FAA would never know. But he had gained some confidence in his ability to lose them. Between Chicago and Vegas, he was now convinced that they’d been further behind them than he’d thought.

Still, there were loose ends. There always were, and one of them was bothering him a good deal.

“Let me ask you this, Diana. You’re aware of bioactive tracking devices?”

“Sure. We put them in people like Rangers and pilots who’re flying into hostile territory. They’re injected under the skin. They’re the size of a grain of sand.”

“Were you ever given one?”

“Not to my knowledge.”

“But it could have been done without your knowledge?”

“During a physical or something, maybe.”

“How effective are they?”

“The signal has to be picked up by a satellite. You need the codes. If you know what you’re doing, you can basically pick one up from anywhere in the world.”

He did not like to hear that. “I don’t think an unknown cop like me would have one.”

“You’re hardly unknown. First off, you’re part of a classified database that contains every detail on record about every US citizen with an IQ over 190. You’ve been in that database since you took that IQ test in high school And we watched you for three months before we brought you in.”

“What the hell is a database like that used for?”

“We watch for math skills and logic skills. The intelligence community eats geniuses like candy. We’re addicted to them.”

“So now I know why you got recruited. But why not me? I’m reasonable at math.”

“The Abby Room stopped any recruitment track you might have been on.”

“I wanted to rescue my wife.”

“It was evidence of obsessive behavior, the curse of the very bright.”

“I am obsessive. Damn obsessive. And cursed, of course, or I wouldn’t be here doing this, I’d be in Menard and I’d still have Abby and be living the life I was born to live.”

“If she hadn’t been kidnapped and you hadn’t gone off the deep end, you’d be working at NSA or someplace like that right now, and you’d be very happy and very well paid like I was. Like me and Steve were.” She fell silent.

“You don’t have a Steve Room, but you think it’d be a good idea.”

“I will have a Steve Room. I like the idea of the Abby Room. Comforting.”

He thought about that. "The hell with it," he said, "sometimes I hate the world. I hate life."

"Join the damn club."

He wished he had some way to definitely tell if either or both of them was trackable. "What frequencies do implants operate on?"

"Ours are FM. High on the band."

"But addressable?"

"If you know what you're looking for, sure. An ordinary scanner held close to the body will pick up the signal."

"We'll stop at a Radio Shack tomorrow." He did not add, "if we live." "Would we be able to remove them?"

"Size of a grain of sand, usually lodged in deep tissue. We'd have to dig them out."

"Nice."

When they reached Searchlight, there was not much to see. A single casino, like a ship lost in a black ocean. Worse, they had to drive up and down the highway four times before they finally found the tiny, weathered sign that marked the airport.

He turned onto what proved to be a dirt track.

"I'm sorry," she said.

"No, it's good. As long as there's a plane, we're good."

"An airworthy plane."

"A flyable plane."

He didn't bother to tell her that it had been years since he'd flown anything. His license wasn't even up to date. And he hated landings.

There were no planes visible, but there was a large hangar.

"I wish we had that thing we flew into Oregon. What was that?"

"Provided. No idea except that it worked."

"It was a damn fine airplane." He got out of the car and approached the old hangar. A lizard rushed out from under his feet as he shuffled

through the sand.

“It’s locked up tight,” she said.

He didn’t bother to respond until he discovered that she was exactly right. The lock on the access door was a good one. Not only that, it was new.

“Drugs are probably moving through here,” he said as he examined the mechanism. “This is going to need brute force.” He returned to the car, opened the trunk, and took out the tire iron.

“What if it’s alarmed?”

“It’ll be a bell or siren so who’s going to hear it?”

“Maybe somebody lives nearby.”

“It’s your airport, Diana, you tell me.”

“Go to hell.”

As he worked the tire iron into the doorjamb, he said, “Sorry, that was uncalled for.”

“It was.”

He gave the tire iron a shove, hard, with his whole body.

He needed to be less harsh with her. She was out here for Steve the same way he was for Abby, and it was just as tough for her and it hurt just as much.

The door sprang back on its hinges. Warm air came out, sweet with the scent of aviation fuel.

“I was right,” he said.

“About?”

“It’s an active airport. There’s planes in here.” He stepped in. “Two of ’em.”

They both shone their flashlights into the cave-like blackness, revealing the fuselage of an elderly single-engine plane, with another standing in the deeper shadows.

“This one’s a Cessna 172,” he said. “No rear window, so it’s probably pushing fifty.”

“Fifty what?”

“Years old.”

“And the other one?”

“You don’t want to know. This is the one that might work. It can take us about seven hundred miles.”

“Is there any gas?”

“Oh, it’s ready to fly. They both are. These are drug planes. They move coke and hash, high-ticket stuff. Lightweight. They’ll have usable avionics. Though I wouldn’t try playing with an iPad while landing in a storm.”

He went over to the plane and shone his light in. “There’s a Garmin GPS in the dash, which is good.”

“It looks awfully run-down.”

“It’s junk. They stick a Garmin in these things and spend nothing else. These planes go in all the time, or get impounded by the DEA. So they’re expendable. So are the pilots. Let’s get the hangar door opened.”

He went over to the old wooden door and popped off the padlock with the tire iron. He handed the iron to her. “Keep this.”

“Sure. Why?”

“In case anybody shows up. Keep watch. Let me know if you see any lights. This is a drug stop, so there could be security. Silent alarm.” He got in the plane and switched on. The avionics lit up immediately and he began to not like this. He didn’t like things that were too easy. Always an angle somewhere, something not seen.

An old plane is even easier to wire than a car, but it has to be done from under the cowling. He didn’t need to, however. He found the key in the glove compartment.

The engine fired up immediately. This thing had been flown recently. It was probably scheduled to do so again, maybe even later tonight.

He called to her, “We’re in good shape, get in.”

She came over and clambered into the co-pilot's seat. She strapped herself in.

He throttled up until the plane rolled out onto the sand apron. Typical of the region, it was an east-west runway, sited to catch the prevailing winds. Not much of one, though, basically the desert floor denuded of weeds and cactus. He headed the plane into the wind. Once he took off, he'd turn east.

There was a car on the highway, moving fast, maybe heading here. He ran up the engine. The plane began to move forward. There were no lights. He was just guesstimating the position of the runway.

As they began to roll faster, plant life thudded against the wheels. The whole airframe shook. The speed crawled up, but not fast.

"Is it going to take off?" Diana yelled over the squall of the engine.

"I have no idea!"

CHAPTER TWENTY-FOUR

The drag of the sand slowed them down, and they kept trundling along, hitting cacti and slamming into tumbleweeds until it seemed as if they were going to go all the way to the Pacific without leaving the ground.

“Make it take off!”

“I’m trying!”

He watched the speed creep up to fifty-five knots, then sixty, then hang there, remaining maddeningly fifteen knots under rotation speed.

Without warning, the ground was gone, and he realized how this airport worked, which was really, really badly.

“What’s happening?”

“We just taxied over a cliff.”

“Oh God!”

“I agree.”

The stall horn started bleating. His only choice was to drop the nose into absolute darkness and hope that the ground was farther away than he thought.

“What’s going on now?”

“We’re either gonna die or we aren’t.”

The airspeed indicator shot up to sixty-five and he felt the wings begin to bite. At seventy, the stall horn stopped. At seventy-five, he pulled the stick back, rotating nicely into a clear night sky.

“We’ve lived,” he shouted to her over the rising blare of the engine.

“Barely.”

“That would be true.”

He'd taken off into the west and climbed to two thousand feet while getting the feel of the airplane. It had been a long time and he was more than unsure of himself. Worried that he might become disoriented, he kept his eyes on the instruments, not even glancing out the windshield. At least, at this hour and in this place, his chances of colliding with another airplane were too small to calculate.

He kept climbing, heading west. Eastward there were mountains, and he wanted plenty of altitude before he approached them.

At five thousand feet, he commenced a slow turn. Any higher, and he risked running into a monitored airway. He didn't have any idea of what the established flight paths might be, or where they were. He didn't want to blunder into approaches to larger airports, maybe at Bullhead City or Lake Havasu City.

“Where are we? Why do we keep turning?”

“We're heading into mountains. I'm gaining altitude.”

“Dear God.”

“You're a worse flyer than me.”

He was actually relaxing a little, at least for the moment. Unless their pursuers were able to track them personally, this was going to prove a decisive blow to them. It wasn't as good as getting behind them, but at least when he landed this airplane, he would know that they had lost him.

The Garmin showed the highest peaks below them at thirty-five hundred feet, so they were safe here, and safe, also, from the DEA, the Border Patrol, and Homeland Security. DEA was interested in night flights by small aircraft, but their primary concerns were movement northward from the Mexican border and low-altitude flight.

“Do we know if we're dealing with any exotic technology?”

“We know so little, Flynn. Almost nothing. For example, why did they send only one cop, and what are his capabilities? His

limitations?”

“One limitation we know.”

“What?”

“He got his ass killed.”

She turned to the window. “I’ve thought that he might be the only good guy. Their Dalai Lama or whatever. And the rest of them are all ... Christ, I don’t even want to think about it.”

He hoped that she wasn’t going to add a morale problem to her difficulties with field skills. Low morale was as lethal as a gun.

The tiny cabin shuddered, the engine howled, blue flames glowed in the exhausts. He kept them at cruise, a steady hundred and forty miles an hour. Two hours out, they were north of Seligman, Arizona, and he was not liking the feel of the air. To maintain his heading, he was having to crab the plane northward more and more. The wind was picking up. Worse, there was continuous lightning on the northern horizon, and it was getting more distinct.

The plane bucked like a frightened horse, the creaking of the airframe audible even above the engine and wind noise.

Diana was now slumped forward. Flynn knew what her problem was, but he didn’t see any airsickness bags.

“If you can, feel in the seat pocket behind you. There might be a bag back there.”

She did it and found one, and none too soon. In seconds, she was heaving into it. He opened the vents and cold air poured in, a mix of the scents of exhaust and desert night.

The heavy weather was bearing down on them fast, but he couldn’t turn south, not and expect to thread through the higher mountains around Flagstaff. He needed to stay between Flagstaff and the Grand Canyon, basically, or he was going to crash this airplane.

“There’s a light,” she said. “Below us.”

“What kind of a light? Is it moving?”

“Steady. Not a strobe. Moving, yes. Getting bigger. I think it’s

coming up.”

He doused his running lights, then dimmed the cockpit as deeply as he dared. At a minimum, he needed his artificial horizon and his compass.

“Where is it now?”

“Gone. It went out.”

“Went out? What’s that supposed to mean?”

“That it is *gone*, as in disappeared. Jesus Christ, why do I have to spell everything out?”

He pushed back a flare of anger. They were getting on each other’s nerves. “Let’s not fight,” he said.

“This is a goddamn nightmare!”

He flew on. There was nothing else to do.

When the light didn’t reappear and nothing else happened, he restored his instrument lighting but left the running lights off. They’d been in the air now for two hours, and he had another three hours of fuel left. Like so many of these drug wagons, this plane had been modified to fit larger tanks.

“We can make El Paso,” he said. “We’ll land at Sunrise Airport. I’ve flown in there.”

“We can’t rent a car without identifying ourselves.”

“That’s not the plan.”

“I don’t want to steal another one. It’s too risky.”

“That’s not the plan, either.”

“So we buy?”

“We can’t buy.”

“Then what? I don’t get it.”

He said nothing.

The storm now behind them, they flew into a gradually spreading dawn, and he was relieved to finally see the horizon. As the plane

began to feel like a more solid platform in the sky, the sense of disorientation that had dogged him from the moment he'd taken off faded.

The light that Diana had seen coming up was also gone. What it might have been they would never know. The sky is a big place.

The landing at Sunrise was surprisingly easy. He squawked their approach and got immediate clearance. They hit the runway with a single bounce, then Flynn throttled back.

"That worked well," Diana said. She sounded ready to kiss the ground.

"The Cessna is a forgiving airplane."

He pulled out one of the disposable cell phones and dialed a number.

"Hey, Miguel." He shifted into Spanish. Diana's face immediately reflected the predictable suspicion. "*Compadre*, I'm at Sunrise and I've got an airplane somebody on the West Coast probably wants back. It's on the apron in front of the old Bellanca hangar. The bogus on it is NT273, it's a Skyhawk."

"What're you up to? I thought you quit the cops."

"I did. Private enterprise now."

"Anything there for me?"

"An airplane."

Diana interrupted. "What are you saying? What's going on?"

He closed the phone, pulled out the battery and the chip, and crushed it between his hands. "A friend's going to pick us up," he said.

"That's off the reservation, damnit. *Way* off. And you know it."

"Nothing's off the reservation anymore. He will pick us up, he will take care of the plane, he will get us where we need to go."

"You can't have involved the El Paso police."

"No police."

“Then—oh, Christ, not a gangbanger?”

“He’s honest. A good guy.”

“You’ve tangled us up with the drug trade. Flynn, this is not a direction for us.” She opened her door. “Come on, we need to get out of here.”

He climbed out, also. They needed to get away from the plane anyway. The way it had been hidden, it could well be on some DEA list.

“Miguel and I went to grade school together. When we were six, he beat me to a pulp. Put me in the hospital. Last year, he did ten years on a case I worked. We’re good friends.”

“He did ten years last year?”

“He blew his way out.”

“Good Christ!”

“Not with explosives.”

“But he’s an escaped convict. You can’t get an escaped convict involved in this.”

They walked into the lobby. Flynn eyed the sandwich machine. He was definitely hungry.

“He got off for good behavior.”

“Who shaves nine years off a ten-year sentence for good behavior?”

“It was very good behavior. I thought you’d be comfortable with an ex-con.”

“Don’t throw that in my face, okay? I wasn’t guilty.”

“Neither was Miguel.” He put some money in the machine and got a ham and cheese sandwich. “Avoid the pimento,” he said.

“No food,” she muttered. “Later.”

“That’s right. Sorry.”

Miguel had gained so much weight that the only reason Flynn recognized him when he finally ambled in was that there was nobody else coming through the doors this early in the morning.

“Hey, buddy.”

“Thanks for the plane, man. That’s gonna be some useful hardware.”

“No problem. You better get a paint job on it, though, I think it’s probably on the list. Not to mention its former owner.”

“You movin’ stuff? You on the sweet side of the law at last?”

“I’m still honest.”

“The plane tagged?”

“Don’t know. Could be.”

“We’ll find anything like that.”

“I need clean transportation. Car or truck.”

“I got a Range Rover, good VIN, good plates, not a problem.”

“Done, let’s go get it. We’re on a schedule.”

He gave Diana a long look. “Man, I’d like to see her work a pole.”

“You would.”

“The truck’s gonna set you back. Not much.”

“Yeah, it’s gonna set me back one airplane.”

“You come in here with a hot airplane and expect a clean truck in return? Man, that ain’t right.”

“Neither is dealing in stolen goods.”

“You aren’t a cop anymore. You tell me that, it’s gonna stand up in court. I know the law.”

“Eddie is still a cop, and Eddie still doesn’t care for your ass.”

The negotiation was starting to take too long, but Flynn could not betray his urgency. He just wished he believed that he could get away from their opponent, but he did not believe that. Maybe they were out of his gunsights right now, but he doubted that it would last.

Finally, Miguel said, “The plane is a good trade.”

They headed for his house, where the Rover waited. Diana was silent, furious at Flynn for letting an outsider so close.

Flynn wondered how long it would be before the perp and his friends showed up in Miguel's life, and extracted from him every tiny bit of information he possessed.

"Where you goin'? Or should I ask?"

"See Mac."

"Mac? Ain't nobody shot him yet?"

"Mac dances too fast."

"Where's he keepin' himself these days?"

Flynn laughed. "That I'm not gonna tell you. The plane is worth four times the truck. That's enough for one day."

"I wouldn't sell Mac. Mac's my friend."

"Everybody's your friend, Miguel. That's why you have no friends."

Twenty minutes later, they were heading out of El Paso in the Rover. Across the Rio Grande stood the dirty hills of Juarez, a most dangerous city, but bright in the light of dawn.

Flynn thought it would be nice to be in Juarez right now, hiding in a small hotel somewhere, deep in the city's maze of streets.

Even there, though, it would just be a question of time, wouldn't it? From now on, it would always just be a question of time.

"Who's Mac?" Diana asked.

"MacAdoo Terrell. The worst person I know and one of my oldest friends. Maybe the worst person in Texas, which is saying a fair amount."

"MacAdoo Terrell and Errol Caroll?"

"Mac and Flynn. Our parents died before we were old enough to kill them. At least Eddie got a decent name. He was the third member of our gang."

"And why are we going to see the worst person in Texas?"

"Because we need a friend."

CHAPTER TWENTY-FIVE

Where the Rover had come from, Flynn hoped he would never know. It had the feel of death about it. Why he knew that, he couldn't really say, but he knew it. It was his cop sense, he supposed, which had been in overdrive for a while now.

They were a few miles west of the little town of Iraan, pronounced Eerie-Ann in West Texan.

"We'll turn north on Three Forty-Nine," Flynn said. "Mac's got fifteen thousand acres of hell and good hunting up there."

"What's so bad about this guy?"

"What isn't? He won't show himself right away, incidentally. When he does, it'll be a near thing for me. He's got any number of reasons to want me dead, and we don't have enough money on us to do more than get him to think about changing his mind."

"A lot of people don't like you, Flynn. Casinos. Your boss."

"Eddie Parker? We grew up together."

"Well, he seemed pretty sour on you. Why does this guy hate you?"

"First off, Eddie has been pretty sour since we were about five. Second, I put Mac's brother on death row."

"And he can't blow his way out?"

"Not so far."

"It strikes me as foolish to expose ourselves to more danger than we're already in."

He turned onto Mac's road. It went back three miles, and it rode like it hadn't been spread with gravel in a good long while.

"Shouldn't we get our guns ready? Mine's in my backpack."

“I know where your gun is.” He took his out of its shoulder holster and laid it carefully in a cup holder. “They won’t do us any good.”

“I just do not see why we’d come to some criminal lair or hideout or whatever it is.”

Flynn saw Mac’s shack huddled down in its draw, a ramshackle mess but topped by a very large, very clean American flag.

“See that? That’s why.”

She shook her head. “A crook wrapped in a flag is still a crook.”

He knew that Mac would already have the truck in the sights of one of his superb rifles.

“There are gonna be dogs,” he said. “Don’t get out until Mac calls them off. They’ll tear you to pieces.” He pulled a little closer to the shack and the dogs immediately swarmed out from under it. They were Mac’s own special breed, Weimaraner–Pit Bull mixes. Loyal, fast, lethal. If a bullet was going to stop one—and that was the only thing that could—then it was going to have to be well placed. Their wide heads, huge jaws, and yellow-gold Weimaraner eyes made them look the part of the hell-hounds that they were.

As soon as the truck stopped, they swarmed onto the hood and began clawing at the windshield and leaping against the doors and windows.

“My God, Flynn!”

“Just stay cool. They can’t get in.”

“How do you know that?”

“Armor glass. It’ll take two or three blasts from a ten-gauge shotgun to knock out one of these windows. Dog teeth can’t do it.”

Mac was on the porch, standing back in the shadows, so still he was hard to see. He had the same ability to remain motionless that his brother did, and his father had in his time.

Slowly, his cupped fist went up to his lips. In it, Flynn could see something silver. “He’s using his dog whistle.”

An instant later, the dogs scurried back under the porch. Flynn

rolled down his window.

“Hey, Mac.”

Mac walked toward the truck. “You got a shit of a lotta nerve comin’ out here, Carroll.”

“I need some help.”

“Oh, well, good. Allow me to accommodate you. Who’s my rape victim?” He leaned into the window and said to Diana, “After I blow this shitbag’s head off, we’re gonna party.”

“I didn’t drop the big one on Weezy,” Flynn said. “The jury did that.”

“You put him in the same courtroom with them. Chained to the fucking wall.”

“Your brother is obstreperous.”

“You want a cup of coffee, come on in.”

As they entered the shack, which was all gray boards, split shingles, and tin on the outside, a luxurious bachelor pad unfolded. The ample living room was paneled with exotic woods, a collection of stag, lion, rhino, and elk heads decorated the walls, and a brilliant black and yellow tiger skin lay before the big stone fireplace.

“Well, asshole, you came at the right time,” Mac said. “Cissy!”

Flynn held in his shock as Cissy Greene, Governor Greene’s oldest daughter, came sliding out of the kitchen. Cissy was not underage, not quite, and she was as ripe as a woman ever can get, her curves florid, her face glowing, her lips beckoning moistly. How in the world this very bad man had hooked up with her he could hardly imagine, but here she was, big as life and a lot prettier than her pictures.

“Cissy, this here is Asshole Flynn and his boyfriend. What’s your name, son?”

It was cruel and it wasn’t true, but Diana went red. “I’m actually a woman,” she muttered. “My name is Diana.”

“Oh, the goddess Diana herself, my goodness, I am honored! No wonder you appear so ferocious. Meet Actaeon up there.” He gestured

toward the magnificent stag head.

“I thought I had him torn apart by his own dogs,” Diana snarled.

“Hell no! He lived through that and came to Texas. Where else? I got that sucker from one mile. *One mile*, girl! Not my best shot, but decent.” He smiled. “The reason you-all are lucky is that Cissy here is a terrific coffeemaker. Just drop the grounds in her mouth, pour in boiling water and make her gargle. Personally, I can pack a bullet a lot better than I can make a cup of java.”

He gestured at them to sit, and Flynn and Diana dropped down onto the magnificently soft leather couch. It was light tan, and Flynn thought better of asking him what it was made of. The Nazis had done lampshades and gloves. Mexican drug lords were way past that.

“Is that a tattoo,” Diana asked, fingering a faint shadow in the surface of one of the couch pillows.

“Guy was a bandito. Low-grad South Texas bangers. Assholes.”

Diana jumped to her feet.

Mac directed a frank gaze at her. Flynn could see that he was taking in her beauty. “If I saw you naked, would you have me torn apart by my own dogs?”

“I’d whip your sorry ass myself.”

“Oh! Upon my word, Flynn my love, I see the attraction now. Coffeemaker can’t keep me in line, but I’ll bet goddess here keeps your ass good and red.”

“Mac, we’re not on a social visit. You’re the best gun I’ve ever known, and the only person I know who’s hunted tiger. I have a job for you.”

“And if I do it, you’ll get Weezy a reprieve?”

“No can do. You’ll get a hell of a tiger skin, though. Better than this scrawny tourist rug.”

“ ‘No can do?’ You worthless sack a shit. Sometimes I really wonder why I bother. I’m too damn affable, that’s my problem. So I’m tellin’ you right back, ‘no can do.’ But I am curious. Since we aren’t in India

or Siberia, what tiger?”

“We’ll get to that.”

“Not today we won’t. ’Cause you just decided to get the fuck out of my house.”

“Let me ask you this. Are you a patriot?”

“Shit, I knew that was gonna come up! Goddamnit, every cop who comes out here pulls that same card out of his hip pocket. Dubya has hunted this sliver of mine, my friend. A saint who got his ass handed to him by the negro.”

“This will be the most patriotic thing you have ever done, Mac. Because what is at stake here is America. Our land and our people as we are now. So, if that matters to you, now is the time to face the fact that Weezy killed all those nuns because he’s a total wacko and is best left to his fate.”

“Is that it?”

“That’s it. That’s my play. Except I know why you’ve latched onto Cissy Greene. Obviously.”

“Your boy has got fine card moves,” he said to Diana. “He won a lotta money out here at poker, before civilization set in. Jesus God, you put Mexicans in the sheriff’s office and whaddya get. Screwed is what!” He gave Flynn a long, sad look. Flynn knew that he was thinking about his poker game. When a wealthy rube sat down at his hallowed table, he soon discovered that he couldn’t get up until he lost. Then he was kicked on the ass and told to go home.

“You want some Blue Label?” he continued. “I got a coupla cases I could let you have. Finest scotch in the world.”

“Why offer me a bribe now?”

“Not a bribe. Sealin’ a deal. I feel good, ’cause I’m gonna do good. Although savin’ America and shootin’ a tiger surely can’t be played outa the same deck of cards.”

“The tiger’s just a first step. We have to get past it to get to what I really want.”

“Okay, mister police, so your idea is I start by killin’ an endangered species. Then what? Weezy leave some nuns behind?”

“You did it, didn’t you? Weezy’s taking a fall for you.”

The convent had been on land wanted by Reich Development. The Sisters of Mercy would not sell, and it was soon being rumored that Reich had put a bounty on them. At the time, Eddie had thought Manny the Torch was going to be coming over from Dallas, so that was who the department was watching for. Then Weezy had showed up and blown them all to kingdom come. He’d imploded the building, and very professionally.

Because he’d come across as a nut case, the suspicion that it was a contract killing had never been followed up. In the State of Texas, though, nobody could be crazy enough not to get the needle for detonating nuns.

As always with Mac, the waters ran deeper than they appeared. To understand him, you had to read the eddies and whirlpools.

His face, previously throwing off smiles like confetti, had grown careful, the lines around the eyes tightening. His physical stillness had also returned, and Flynn knew that this could still go south real fast. Way south. He thought about his gun out in the car. He imagined Diana trapped under this monster while Cissy squealed and hit at him with her curling iron.

“You’re a clever man, Flynn Carroll, I’ll give you that. Now what more do I have to do?”

So he was going to let it pass—for the while, anyway. “We’re gonna have to go on the hunt of a lifetime, you and me. At some point, we will be tracking the most incredible tiger on the planet. Not a half-starved tourist tiger concerned only about its mange. Eighteen feet of pure Siberian fury, and as smart as we are. At least.”

Mac’s mouth had dropped open. His eyes went kind of glazed. He said, “If you weren’t the straightest shooting cop in Texas, I’d tell you to your face that you’d lost your mind.”

“The tiger is only the front door. Behind that door is hell, Mac. The

real thing. Might as well be.”

“We’re gonna be tying a knot in the devil’s tail?”

“In a manner of speaking.”

“So what’s our next step, Detective Carroll?”

“Me and Diana, we’re in danger.”

“I don’t like this, Mackie!” Cissy shriled.

“Send her home, Mac, she doesn’t need to be here.”

“She can’t go home. Her daddy got caught in bed with the damn secretary of state again and the missus has cleared out of the Governor’s Mansion.”

The secretary of state was Charles Forte. A guy. “Well,” Flynn said, “boys will be boys. But at some point, we will have to go places where Cissy cannot follow.”

“She shoots pretty good.”

“I can outshoot you,” she said, her baby fat wobbling prettily.

Flynn would get back to that later. “We need to use your computers now, Mac.”

“My computers are off limits to the po-lice.”

“They’re also unhackable. The most anonymous damn computers I’ve ever encountered. Everything proof.”

“This I gotta see,” Diana muttered.

“You’re not gonna see much, son.”

“Quit calling me that!”

“I can let you open a browser. Nothing else.”

Flynn knew that Mac’s computers were vitally important to a big part of his business. The Texas Rangers had discovered that they were connected to a server farm he owned in Thailand, and were probably responsible for sending out billions of spam emails a day. His hackers in the Philippines used the system to do a brisk trade in government secrets, stealing from one country to sell to another. But never America, not Mac’s beloved America. Or probably not.

His favorite scam, though, was to wait until a big shipment of drugs was moving up through the region, then tip off the DEA for a reward. His going rate was ten percent of street value. It was a perfectly legal business, but risky—which was where the guns came in. As often as not, the DEA guys found all the mules and guards involved with the shipment dead, shot from a distance with a high-powered rifle.

“This is interesting,” Diana said, calling to Flynn from the computer room. She had begun to work, with Mac hanging over her like a morbidly fascinated vulture.

Flynn went in. “Where’s Cissy got to?” He didn’t like these people where he couldn’t see them.

“Coffeemaker’s making coffee,” Diana said.

“I have no secrets from my lover,” Mac said.

“Yeah, you do. Among them that she’s a hostage.”

“She can walk outa here anytime she wants.”

“She’s gonna walk into Iraan? Thirty miles? Cissy’s in your clutches so you can get a pardon for Weezy, am I right? Does she know she’s a hostage?”

“Maybe, but she doesn’t care. In fact, she starts coming as soon as the big bad evildoer just brushes past the subject of sex. She’s your classic con hag, rich, bored, and hot as oatmeal. There was a bunch of Tri-Delts out here from UT trying to outhunt their boyfriends. I cut her outa the herd.”

“There’s a Jay Elder on the board of directors of the Texas Animal Rescue League,” Diana said.

“Could be a hit. This is the place near Austin?”

She was silent, working. “Jay Elder is an attorney, in practice twenty-three years. He’s got property around Lake Travis west of Austin. He’s also got a Louis C. Morris on his client list.” She tapped a few more keys. “Interesting.”

“A Louis Charleton Morris died thirty-seven years ago. An infant. So we know that our guy is wearing an alias, and he’s fortyish. Fits the

picture.”

“Man, you are good with those suckers,” Mac said, “whatever the hell you’re doing.”

“I am good, son,” Diana replied. She clicked a couple more keys, and paper came out of the printer. “Jay Elder, Louis Morris, the animal group, and a satellite view of the facility.”

“I’d pay for your services,” Mac said. “A lot.”

“They’d cost more than you have. Whatever you have.” She turned off the laptop, then turned it over and examined the base. In a moment, she had a black oblong object in her hand. She swung it high overhead and smashed it to bits on the desk. Gouges of mahogany flew.

“Hey hey HEY, what the hell? What the hell did you just do?”

“Nonsecured computer used in a classified operation. Hard disk has to be destroyed. Legal thing, son. Sorry.”

“Damn you!” He came at her.

Flynn saw that the rage in his eyes was damn serious, and he stepped between them. “Hold off! Just hold off!”

Mac stopped, but that was going to last maybe five seconds.

“Jesus, Diana!” Flynn said.

“He’s got a backup system.”

“It doesn’t fucking work!” he shouted.

“I fixed it. All of your stuff is on it, none of mine. If I’d left traces, you’d draw federal interest. You don’t want that.”

“Anybody ever gets me, it ain’t gonna be a fed.”

“It’d be a drone strike.” She took out her credential. “Ever seen one of these?”

Mac looked at it. Now he shifted his eyes back to Flynn. “What kinda crowd are you running with, buddy?”

“It’s a long story. Suffice to say, if you help us, there will be credit earned. Significant credit.”

“Flynn, if it don’t involve saving Weezy’s life, it don’t mean a thing to me. That’s my little brother, man!”

“Don’t keep hitting me with that, you’ve got the governor’s daughter strapped into your guillotine and we both know why. Weezy will not take the needle.”

“As long as she stays by my side. But since when does a twenty-year-old do anything for more than a couple of long farts? Soon’s I run outa horse, she’s gone.”

“Mac, don’t reveal a crime to me.”

Mac spread his hands. “So, okay, let’s go tiger hunting.”

CHAPTER TWENTY-SIX

They'd taken a suite at the Four Seasons in Austin on Mac's dime. They were using one of his laptops and any calls were made over one of his cell phones. His security was the best.

Mac and Cissy had ordered up champagne and caviar, fried wontons, Snickers bars, the list was long. She was pleading to invite friends, and Flynn thought it wise to let that happen. With them would come grass and crack and X and coke, and for Cissy a useful oblivion. In anticipation of the fact that they would be separated, a friend of Mac's, Giorgio Budd, had appeared.

Cissy and Giorgio bickered in the living room. He was a masseur, but she didn't want a massage. Flynn could hear them from the bedroom he and Diana had made into an office.

"So come on," Giorgio wheedled. "I can do it through your clothes, it's nice. Daddy no see."

"Yeah, but daddy touch."

"No, no, no boobies, baby. Just let daddy do his thing."

She yelled, "You're too icky, okay! It'd be like being touched by the Pillsbury Dough Boy, get it? You need to meet my dad. He'd love you."

"He's a stinkin' Republican. I don't massage no stinkin' Republican."

"You could bite off his dick. You'll get the chance."

Mac sat in the window of the bedroom they'd made into an office.

Flynn said to him, "That's going well."

"If she bolts, Giorgio has orders to tie her up and stick her in a

closet.”

“Don’t tell me these things, damnit!”

Mac’s window overlooked the Colorado River and a sunny view of South Austin beyond. “I got a bad feeling,” he said. “I had a good feeling. Now I got a bad one.”

“It’s gonna be a piece of cake.”

“No, Flynn, it isn’t.”

Mac had good instincts, there was no question about that. Excellent. Flynn had not told him of the casualties so far, and he wondered why not. He should warn the guy, obviously. And yet he didn’t.

He liked Mac, who was, as he claimed, an affable man. But he was also an extraordinary engine of human suffering. That’s what crime is—the infliction of human suffering for financial or other gain. God only knew how many lives Mac’s scams ruined in a week, not to mention his more murderous activities. Of course the DEA and the Rangers let the shooting of drug mules and cartel gunmen happen. Scumbags killing scumbags, nice and convenient.

“I’ve got the whole area mapped out,” Diana said, “from the Animal Rescue to Jay Elder’s ranch compound near Lake Travis. There’s a house, a barn, a couple of outbuildings, a dog run and kennel. Active.”

“What took you so long?” Mac asked. “You coulda gotten that off Google Earth an hour ago. We need to get out there, get a feel for the land.”

“Mapped to three feet, in real time,” she continued. “Google Earth doesn’t do that.”

“You guys can recognize faces from space, can’t you? Read license plates?”

“Very yesterday, but yes.”

“What can you do now? Read minds?”

“Classified.”

“Cool word, son. Must make you feel important as hell.”

It was already pushing seven, and the sun was starting to set.

“There’s something strange,” Diana said abruptly.

On the screen of the laptop she was using was a wilderness area. Right in the middle of it was what appeared to be a small village, made of logs and expertly camouflaged.

“It’s in the middle of a wildlife preserve. Strange place for a village.”

“Any signs of life?”

“I can’t be sure. There are paths, obviously.”

“What the hell does this have to do with the price of bread?” Mac asked.

Diana said, “It’s two miles from Jay Elder’s ranch house. And look at the buildings—there’s been an effort to camouflage them. Quite skillful. You wouldn’t see this for what it was on a Google satellite map. And as for Google Earth, their trucks stick to roads.”

Mac peered at it. “Boy, I can even see individual branches in that camouflage. From way up there.”

“Mac, we can determine your rate of hair loss by watching your bald spot. Face it, if you weren’t useful, the feds would’ve crushed you like a bug a long time ago.”

“You’d be surprised at how good I am.”

“They’re better. Now, let me see. I can switch to another lens—here we go.”

The image changed to infrared. Nobody had to ask about the change. Both Flynn and Mac knew infrared very well.

“Hm,” Diana said. “No obvious heat signatures. Flock of deer, eleven does and a buck, about half a mile away. That glowing dot is probably a buzzard looking for supper. Nothing dead, though, not big enough to spot, anyway.”

“Corpses are cold,” Mac said.

“Rot is hot, son. This system is sensitive enough to pick up the heat of decay.”

Flynn said, “Maybe it’s an old hippie place. Commune. Austin was a major stop on the Hippie Highway.”

“Old paths would be more vague. These are sharply drawn. People use this, but I don’t think they’re there now. And they don’t have pets. No sign of any dogs or cats.”

“You wouldn’t happen to be able to spot a tiger with that thing, would you?” Mac asked.

“I would but I haven’t.”

“Shit, then, what am I supposed to hunt?”

“You don’t understand,” Flynn said. “The tiger isn’t where it’s supposed to be, penned at the Animal Rescue League. It’s the only Siberian tiger presently missing in the United States. It’s called Snow Mountain, it’s seven years old and it has had a number of legitimate exhibitor owners, specifically two zoos and a circus. Apparently it was sold along because it ate a hell of a lot. It’s about forty percent larger than what’s normal for the breed. It was collected by the Texas Fish and Wildlife from an abusive situation, so the record says. Of course, records lie.”

“And it’s here in Texas—specifically near Lake Travis? Or not?”

Diana said, “Jay Elder is here because he was at his law firm yesterday. But he’s just back, interestingly enough, from Vegas.”

“How do you find things like that out?”

“Classified, son.”

“Quit that, okay? I’m sorry I insulted you. Son.”

“You are sorry, son, I agree there. Now, take a look at the Elders place. Tell me what you think.” She shifted to another image, this one of a ranch house in a small compound of buildings. There were three trucks parked near the house, two of them Cadillac Escalades, and the third a van with blackened windows. The van’s side door was open, and it was possible—just—to see a bit of the interior.

“There aren’t any rear seats,” Flynn said.

“Nope, and look closely.” She blew the image up to a blur. “Isn’t that a barrier behind the front seats, like the kind you see in taxis? See that white there, across the top—you can just see the dashboard beyond it, so that’s clear. But below, it’s a featureless blackness. If you were transporting a large animal, you might use a van like that, especially if it had a touchy disposition.”

“He’s touchy all right,” Flynn said. But then he remembered the expression on the cat’s face in the storm drain, almost—was it kindness? A sort of kindness? “Touchy and complicated.”

“I have two images here. The van pulled up. Then this one, the van with the rear door opened. About seventy seconds between them. I’m hoping we can find some residual heat in the second image.”

Mac said, “Do the DEA boys have access to stuff like this?”

“Classified.”

“I think I might retire,” Mac said.

“Don’t do that, Mac,” Flynn said, “you’ll kill my dream.”

“Which is?”

“Collar of a lifetime.”

“Fuck you, Flynn.”

“Double back.”

They both chuckled, remembering their young days in the streets of Menard, getting up to no good together. “Fuck you” and “double back” was essential dialogue of their youth.

When they were ten, they’d been like three brothers, him and Mac and Eddie.

“Too long, Buddy,” he said.

From the living room came a peal of female laughter. “She’s discovered that Giorgio’s a eunuch,” Mac commented.

“Oh, come on,” Diana said. “There are no eunuchs.”

“He was cut by a sultan so he could be trusted to massage the

ladies of the harem.”

“Holy shit, who would consent to that?”

“I don’t think that ‘no’ was an available answer. He made some money, though.” Cissy laughed again, wonder in her voice. “When he can’t get what he wants, which is to touch their beautiful bodies, he does show and tell. Works the pity angle. She’ll be on his table shortly.”

“Guys, this has processed up nicely.”

Flynn saw the same image on the screen, except this time there were a few extra blurs. “What are we looking at here?”

She pointed to a ghostly smear. “That’s a man. The computer’s telling me he’s six two and fairly heavy. Likely a real bruiser. Now, here’s the interesting one. Right there by the open door. The computer doesn’t know what that is, but it’s definitely a valid infrared signature. A minute or so before this photo was taken, something warm moved through that space.”

“They just let a damn tiger out to roam the effing night?” Mac asked.

“Looks like it,” Diana said.

“It can’t be smart enough to risk that. What if it eats a kid?”

“It’ll go out and take a deer, be my guess. Stay out of sight, come home at dawn.”

“Damn hard to credit.”

“Mac, this hunt is gonna be the challenge of your life.”

Mac smiled, just a little, deep in his face. “You know, I think I’m gonna take my nice warm girl into the master and get myself prepped.”

“Don’t drink anything more. Don’t get fatigued.”

“First off, I’ve only had three bottles of that flat-assed Dom Perignon they sent up. Plus sex before a hunt helps my concentration.” He went off into the living room. “Girl! Get offa that thing, you’re gonna get your ass laid right now.” A moment’s silence,

then, “Come on, little man, you can quarterback.”

Chrissy, Mac, and Giorgio went into the bedroom, and soon what they used to call “sounds of revelry” in Flynn’s frat house at UT were heard. He wished he had Mac’s courage to still live as a boy, but he could never be as careless with lives—his own and others—as Mac was.

“Would you please go close that door?” Diana asked him.

Fine by him. Envyng Mac’s kind of freedom wasn’t healthy.

“I’ve picked up a couple more traces,” Diana said when he came back. “Here—” She pointed to what looked to Flynn like a slight white discoloration in the image. “And again.” The next discoloration was even fainter. “It was moving south-southeast.” She looked up from her work. “Flynn, I think the damn thing is on patrol around that house.”

“Ideal for Mac. If it’s following a set pattern, he’ll figure that out. The man could track a ghost in a snowstorm.”

“That’s going to work both ways.”

“There’ll be two of us, and neither one’s going to do what Snow Mountain expects, which is to assume he’s dumb.” He paused. “Diana, do you know anything about combining human and animal genes? Would that be the reason the damn thing is so smart?”

“You have to assume so. Or maybe it’s a mix of ours, tiger, and who knows what? Think about it. If they could be from anywhere, they could *bring* anything.”

“I’m wanting to give Mac some idea of what to expect. He understands that this is a real smart tiger, but how smart he doesn’t understand.”

“If he gets eaten, I have to tell you, I don’t personally have a problem with that. But that’s just me, of course.”

“Friend of my youth. Plus, I see a future for him on our new team.”

“How could he possibly survive a security check?”

Flynn said nothing.

The sun was well down now, the lights of the city glowing, the river a black ribbon. Flynn could even see a few stars, but that wouldn't last. The moon was rising in the east, full and fat, a big Texas moon.

He began methodically assembling his equipment, his own personal night-vision lenses, his new pistol—one of Mac's .357 Magnums—and his other essentials, a handheld GPS, a backup compass.

She slid his MindRay into the backpack.

“No.”

“You were using it under pressure in adverse field conditions.”

“All field conditions are adverse.”

“We can't leave this thing in a hotel room.”

That stopped him. Surely she didn't expect to come with them. “Diana—”

“I know what you're about to say, and don't even think about it. You absolutely need me in the area.”

“No.”

“I can operate a command post in the car. I'll be looking at satellite data as you work.”

“Do it from here. We both have cell phones.”

“It's too much of a risk and you know it. You'll be lucky to have an hour before they detect you. Maybe less. If cell phone calls are popping out there, way less.”

He couldn't deny the truth of that, nor the fact that the information she could provide would be extremely valuable, even essential.

“We can use the same radios we used in Montana. I've got yours, mine, and Mike's in my backpack. They are low power and the encryption technology makes them sound like backscatter. No scanner in the world will even identify our transmissions as signals.”

“In this world. Maybe we failed in Montana because alien technology was in use against us.”

She was silent for a moment. Then she said, “The value outweighs the risks. If you get detected, I’m going to see them coming. And what if I nail down the location of the tiger? That could happen.”

He looked at her. She glared back at him, the determination and defiance if anything increasing her attraction.

“Good enough,” he said, “let’s get Studley back in his pants and do some hunting.”

CHAPTER TWENTY-SEVEN

As Flynn and Mac headed off into the thick brush, Flynn looked back at the truck. They'd parked it off the road near a little place called Balcones Springs, where they'd pulled the truck up into a brushy area along a disused road, but one that was high enough to provide the low-power radios a useful platform. Nearby was the Balcones Canyonlands National Wildlife Preserve, as difficult an area to walk as the Texas Hill Country offered. It consisted of nearly forty square miles of steep-sided hills, gnarly ravines, cactus, and cedar. The only nearby water of any significance was in Lake Travis itself.

They were still two miles both from the strange little village and Jay Elder's ranch house, and about equidistant between them.

Flynn touched the "transmit" button on his radio's earpiece. A moment later, there was a brief burst of static, then another. Mac and Diana, acknowledging.

"That satellite stuff has me spooked. How does she gain access?"

"Dunno. It's not a password, that I do know. Something more esoteric."

"What if this guy Elders has access to the same feed?"

"He doesn't."

"You know that?"

"If he did, why would he be doing something as risky as using guard animals—the tiger, for example. Or the dogs."

"I get your drift. It's just that my bad feeling is getting worse, man." He looked down at his GPS. "The last place she picked up the tiger was eighteen hundred yards due north." He put the GPS in his pocket.

"Best turn it off."

“It goes off by itself.”

“Until it does, it radiates a signal. Not much of one, but it’s there. I know from experience with what we’re dealing with, we need to be real, real careful about signals.”

“What are we dealing with, Flynn?”

The question lay there, unanswered in the dark between them. “How much have you figured out?”

“That this is some kind of classified government deal. That this animal is really weird. What is it, something that escaped from a lab?”

“Something that was created in one, that we know. Whether it escaped or was sold on or exactly what happened isn’t clear.” He did not tell Mac why they were actually going after the tiger, to get at the extraordinary criminal behind it. It wasn’t that he didn’t want to. He didn’t know how.

They moved through the moonlit hills with the swift precision of men whose lives had unfolded in places like this. The land around Menard was much the same: dry, mean, and hard. It was the sort of land that looked inviting from a distance, but would give you maybe two days if you got lost in it—assuming that you didn’t get snakebit or slip and fall down a bluff. By the third day, you’d be too crazy with thirst and weak from struggling in the terrible land to do anything but stagger until you dropped. Observed from a porch on a high bluff on a summer evening, though, the land smiled like a saint.

“Guys, I have a new trace. A thousand yards north northwest of your position.”

Flynn pressed his transmit button to indicate that they’d heard her.

In flat land, it would have been a possible shot, but not in these cruel little hills, just high enough and steep enough to tax a strong man.

“We need to split up,” Mac said. “Let’s angle in, maybe five hundred yards apart. First one gets a shot, takes it.”

“Absolutely do not get out of sight of me. *Do not.*”

Mac frowned, shook his head. Beneath the rim of his Stetson, his face was in deep moon shadow.

“Come on, let’s move ahead. You see a shot, take it.”

Separated by fifty yards rather than five hundred, they slipped softly through the moonlight, each man concentrating on his own silence. The north wind grew stronger, hissing in the cedars and sighing in the live oaks, making the autumn grasses dance. There was that note of sadness in it that colors so much of nature. Far to the north, the same clouds that he and Diana had seen from the plane were putting on an electrical display as they rolled across the featureless plains of Texas.

They both carried Weatherby Mark V Deluxe rifles chambered for .300 Weatherby Magnum cartridges. The boat tail spire point bullets they were using were forged in Mac’s own shop, by a master bullet maker called Carlos Gons. Gons’s bullets were famous in West Texas for being the finest that money could buy—assuming you were friendly with Mac, of course.

A skilled sniper could use these rifles and these bullets to shoot extraordinary distances. But not in this terrain and not at night. Here, they were looking to get within three hundred yards of the quarry, and to do that they were going to need to surprise it.

Flynn had considered just going in to the ranch house with some serious ordnance, but he now needed to investigate that village, also, and that was not going to happen until the tiger was gone.

Mac stopped. He pressed his transmit button twice, looking for a report from Diana. A single flutter of static came back: “no joy.”

But Mac still didn’t move. He raised his night vision binoculars to his eyes. With this moonlight, you didn’t need night vision goggles, but the binoculars were useful for looking into shadows and pulling in distant detail.

There was a sound, then, soft but unmistakable. It was the chuffle of a tiger and it could not be more than fifty feet away—but not in

the direction Mac was looking.

They were about to take a hit.

“Back to back.”

“What? Why?”

He said to Mac, “Back to back.”

“What’s going on?”

“It’s here.” He touched his radio. “Diana, it’s within fifty feet of us. Do you see it?”

“I don’t—no ... standby—oh God, Flynn it’s in those cedars to your left. Flynn, it’s going to pounce right now!”

Flynn fought down the impulse to run. Unlike the situation when he’d faced it with the Glock, one of these rifles would bring it down immediately.

“You heard?”

“Oh, yes.” Mac examined the cedar thicket with his binoculars. “Where the hell is it? Ask her again.”

He pressed his transmit button. “We need coordinates.”

“It’s in motion away from your position. Flynn, something about the way it moves causes it to just leave traces. I can hardly track it. But it appears to be going south, toward the lake. Moving fast. Now it’s gone. No—stand by.” A pause. “Lost it.”

“Okay, take a breath. It’s trying to lead us, looks like.”

“Into a trap?”

“Away from the village. Away from the ranch.”

“So we ignore it.”

“If we do that, we fall into whatever trap’s been laid for us.”

“So let’s follow it.”

“Then we fall into a different trap. We’ve been outmaneuvered.”

“Man, I’m hunting a tiger, here, not a damn werewolf.”

He thought he now needed to tell Mac the truth. But how? This was

a man who had absolutely no idea about aliens, except for the illegals who worked his and every other ranch in swarms. Employers called them grad students.

Diana had said that the government didn't actually know what they were. And that was after sixty years of watching them. So how the hell did he explain them to Mac?

Maybe he didn't. Maybe what he needed to do was to just put Mac where he could do some damage and hope for the best.

"Let's head for that funny little village," he said.

"Not the ranch?"

"That's the head of this snake. I'm looking for the heart shot."

"Flynn, I'm always looking for the heart shot and the high card. But just before we go charging off, *where the fuck is my tiger?*"

Flynn hit his radio. "Anything?"

A burst of static was her only answer.

"Verbal, please."

She came back, "It's well south of you now, probably close to the lake."

"Then nowhere near the village?"

"No. No way."

He said to Mac, "We'll find it at the village."

"But she said—"

"Come on." Flynn began moving cautiously forward. Mac stayed close. They went down a long draw, then up onto higher ground, skirting one of the weathered limestone hills.

"What're we expecting?"

"No idea."

As they moved slowly ahead, the village came into view, in the form of a number of structures that appeared almost Polynesian in design, low buildings open at both ends, with peaked roofs and elaborately carved lentils.

“What the hell?” Mac muttered.

Diana sent a burst of static, then spoke. “It’s come out of no damn where and it’s heading directly toward you. I’ve got a clear view, it’s running fast. According to the computer, you have three minutes.”

“We could take cover in one of these,” Mac said. “Set up an ambush.”

Flynn went closer to the nearest one. The wood was dark, the carvings were hard to make out in the shadowy moonlight. Wind blew through the thing, which was open at both ends.

He thought maybe that it was an alien village, right here on earth. Was it the only one? Did anybody know? They were just so damn uninformed about the whole thing. Hopefully there was somebody somewhere with good information, because a village—Flynn was no expert, but to him this looked like some part of an invasion.

He risked a light, shining it into the interior.

“Empty, looks like,” Mac said.

They took a step in.

“My God, it stinks in here,” Mac said.

It was a milder version of the smell in Oltisis’s office.

Flynn took another step forward, moving deeper.

“Flynn?”

He turned around.

“Is there something behind me?” Mac asked.

Ten feet behind Mac, right in the center of the village, standing absolutely still, was the tiger. It had taken no more than a minute to get here.

Its eyes were on its prey. As in Montana, the animal had outmaneuvered them. Flynn could not get a shot off at it without hitting Mac, and it was so close to him that it could tear him to pieces before he even finished turning around. On the other hand, the moment the animal jumped onto Mac’s back, Flynn would have a kill

shot. So this wasn't a quite a checkmate for the tiger. It was a double check.

"Mac, come to me."

"Man, that smell—"

"Nice and easy. Do it now."

Mac's eyes became tight steel in the moonlight. His face closed down. As his finger slid over his trigger, he came a step closer. Silently, the tiger shifted, keeping Mac between itself and the gun. What an expert it was. It had thought at least five moves ahead.

Mac took another step, and the tiger remained behind him. But it knew that he could bolt at any second. So could it—and it did, just as Mac entered the structure.

"Where was it?"

Flynn did not answer him. He was watching in astonishment and growing horror as the darkness behind Mac continued to deepen. Silently and in some unknown manner, the apparently doorless opening was closing.

He ran past Mac, but it was already much too late. Where the rear opening had been was the blackness of a wall.

The tiger had not thought five moves ahead or eight, but ten, twenty, maybe more.

What it had done was elegantly lethal. It had coaxed them into a man trap.

CHAPTER TWENTY-EIGHT

Flynn reached up and touched his transmit button. “Diana? Come back.”

Silence.

Mac said, “That thing is smarter than me, Buddy.”

“It’s brilliant.”

“What is it, Flynn? It can’t be a tiger. It just looks like one.”

“I don’t know, Mac. I just don’t know.”

“My flashlight’s dead.”

“Mine, too.”

“And the radios. And my GPS.”

Flynn found his in his pocket and pulled it out. It had been off, but when he pressed the toggle, nothing happened. “Same here.”

None of the electronics worked.

“Goddamnit, what have you gotten me into, man?”

“I thought we could handle this.”

“Well we can’t.”

Suddenly Mac was in his face, his breath full of sour fear. “Flynn, for God’s sake, what in fuck is this about?”

There was nowhere to begin. “What I think is that maybe if we can make our way to the wall, we can get out of here.”

“The fuck, we’re trapped, man!” Mac fired his rifle, the report shattering in the confined space. He fired it again, straight up, and in the flash Flynn saw him, his eyes glassy, his face a glaring mask of fear. Again he fired, and again Flynn saw him. This time his lips were

pulled back, his eyes were glaring almost comically, but there was nothing funny about the transformation—the visible disintegration—of this man.

“*Mac!*”

Again he fired, and this time Flynn saw something behind him, a figure standing with its legs spread and its hands on its hips. Its mouth was an oval complication of spiked teeth.

Not an animal. Not like Oltisis. But not human either ... not quite.

“Cool it!”

Again Mac fired, and this time Flynn saw in the flash that there were figures all around him.

“Shit, they got my damn gun!”

Flynn tightened his grip on his own.

“We’re not gettin’ outa here, man!”

“Stay cool, there’s always a way.”

“Fuck, oh, *fuck!*”

“We’re not done,” Flynn said.

Mac began babbling and weeping. Anybody who gets scared enough reveals an inner asshole, was Flynn’s experience. Mac was no exception.

Slowly, Flynn turned around. Behind them, there had been another door, so maybe it was still possible to get over there.

Porting his rifle, he moved forward. There was the softest of flutters against his cheek. Lurching away, he cried out with surprise.

The rifle was gone from his grasp. Incredibly.

His first thought was to draw the Magnum, which was still under his shoulder. He stopped himself, though. Whoever had taken the rifle would surely take it, too.

“Fuck, they got my Mag, man!”

Flynn didn’t respond. He kept his arm tight against his shoulder holster.

There was a book of matches in his pocket, kept there for whatever emergency might require them. Would they still work? He had no idea, he'd been transferring them from pocket to pocket for months. Moving as slowly and quietly as he could, he reached in, felt his keys, some change, and then the matches. Crouching over them, he pushed the cover open, tore one out and struck it. There were sparks, but no light. Again he struck it, and this time it flared, sputtered blue, then caught, a tiny yellow flame.

In the light it gave, which was not much, he saw Mac, now lying on the floor. He was surprisingly close by. "Mac, get your ass up."

There was no response.

"Mac!"

His eyes were open but staring blankly. Flynn recognized this as a state of extreme shock, like a man lying on the roadside beside the twisted ruin of his car.

Just at the edge of the flickering pool of match light, there was movement.

The match went out.

Frantically, he fumbled another one between his fingers, struck it and held it up.

Standing over Mac was one of the creatures. It looked up at him with eyes so large that they were like great, plastic buttons, sky blue and swimming with tragedy.

The match went out. Flynn lit another.

Mac groaned. He lifted himself up on his elbows, he saw what was standing over him and started to roll away, and at once the thing began striking him with a nasty little sap, which caused him to throw up his arms in defense of his face, and to scream a gargled, quickly stifled scream.

Now Flynn did draw the Magnum, holding it in both hands, bracing it in front of him.

Another of the things jumped toward him.

The Magnum was gone, taken with such extraordinary quickness that Flynn had no chance to react. One instant, his hands were hard on the gun, then next they were empty.

He backed away, then he turned and blundered across the small interior space, in the process upending what felt like furniture and causing something to screech in anger—more than one something. In fact, the space seemed to be filled with these beings, five, ten, who knew how many?

This was their home.

He came to the back wall. Feeling along it, he attempted to understand what it was made of. From the outside, the building had looked like nothing more than a loose construction of dried branches. In here, though, it was slick and hard, cool like stone.

He kept feeling along the wall, seeking some kind of hinge or latch or some sort of opening.

Across the room, he could hear Mac screaming, and could hear the screams becoming more and more muffled, as if he was being enclosed in something.

Until he was also helpless, Flynn realized that they intended to contain him, not risk attempting to overpower him.

This told him that, while they were faster, he was stronger. Also, they either didn't want to kill him or didn't have effective weapons of their own.

Understanding that they were treating him like a rampaging animal gave him some room for maneuver. Not a lot, because, just as was true of a cop facing a knife-wielding drunk, there would be conditions that would force them to risk attempting to overpower him.

He mustn't try to fight them. He mustn't be destructive. He continued feeling along the wall, until he came to what seemed to be an intricate mass of twigs and branches woven together.

The Russian boar he caught on his place up in Tom Greene County never understood the trap. But he was human, surely he could understand.

Methodically now, he felt among the twigs. The structure had been wide open at both ends.

Twigs. Wood. He had matches. Could he set it on fire? No, they'd put a stop to that the same way he would if a drunk with a knife started trying to use it.

They were close around him now, but why didn't they get more violent? What were they waiting for?

In one of Mac's gun flashes, he had seen a beam about six feet up, and above it what appeared to be loose thatch. Thinking that he might be able to break out that way, he raised his hands upward and felt for purchase. Holding on with the tips of his fingers and pushing with his feet, he went up the wall faster than he had expected—or than they had, because there was an immediate rush of scurrying below him, and rough, guttural whispering. His fingers throbbed, but he kept climbing until he felt the beam.

Long, pealing cries rose, full of complicated, haunting undertones, like the wind on a winter's night, like somebody crying in the dark hills of childhood, like wolves howling.

What was really going on here? How were these people—or things—connected to Oltis? Could it be that there were two species of alien on Earth?

He swung out onto the beam, and immediately saw before him two of the creatures. In the next instant, the closer of them leaped at him, screaming and clawing.

As he pulled it off, the second one slammed a sap into the side of his head and he fell from the beam, forcing his arms up to protect his head as he fell. When he hit he rolled and bounded to his feet. One of the creatures was crushed and broken beneath him, writhing and screaming with a warbling banshee madness. Lightning-fast hands grabbed at him.

One after another, he pulled them off, but the pummeling saps kept coming until finally what felt like a sack of iron slammed him in the right temple.

Then the dark.

CHAPTER TWENTY-NINE

Something hit Flynn in the forehead so hard his eyes flashed. Still, though, he didn't wake up completely. He tried to turn over, but something else scraped his shoulder, preventing him

When he opened his eyes, it didn't help. This was absolute dark. Again he tried to sit up and again he slammed his head.

His lay still. His temple throbbed, his forehead ached, his shoulders were compressed and the air was thick.

Twisting, he raised his left hip until he could free his arm. He felt upward—and encountered a ceiling not even a foot above his face.

So this was no floor he was lying on. He'd thought himself in some sort of tight crib, but this was not a crib. The ceiling could only mean one thing: he was in a box.

For a moment, he was out of control. He kicked, he hammered at the lid, screams burst out of him.

No. Keep your head. Right now, your mind is the only weapon you've got.

This was what Abby had experienced. Steve. All of them.

Poor damn people, above all, poor *Abby*.

He pushed at the top of the thing. No give whatsoever. Steel? Thick wood? What did it matter, he wasn't going to break out, it was far too strong.

Panic hit him again, causing him to start gasping, causing his stomach to twist against itself and his heart to fly.

No, *no!* You *will* go silent inside. You *will* slow that heart rate. You *will* stop that gasping.

Okay, breathe evenly, let the heart rate drop, focus the mind. No matter how hard it is, do it.

He visualized an open space. Dark but open.

The air was thickening fast but still breathable. So far, no frantic waves of suffocation were overwhelming him. Yet.

Keep the breaths even but shallow, don't move unless absolutely necessary.

All right, let's get our bearings. You're in what appears to be a coffin or a box.

First thing you need to know is, have you been buried alive or are you still aboveground?

He had fallen to the floor, fallen on one of the creatures or aliens or whatever they were.

What he had to do now was change his situation or, if that wasn't possible, face it. If he'd been buried alive, he was going to die here. It wasn't pretty, but he'd damn well died in a good cause. On the other hand, if he was aboveground, maybe there was a way out.

The air was getting very bad very fast. He felt along the joint between the lid and the sides of the box. Seamless. Might as well be welded closed, and maybe it was.

Long ago, he had reconciled himself to the idea that death might come to him during the course of his work. But not now, not before he had gotten to the man who had killed Abby.

He inventoried himself for tools. He was still fully dressed, so maybe he still had some of his possessions.

The rifle and the pistol were gone, of course, but he could still feel his wallet. Only by raising his shoulders and wriggling his hips could he manage to push his hands down into his pockets.

Frantic surges of air hunger coursed up and down his body.

He got his right hand into the pocket, and to his surprise it closed around his pocket knife. It had been with him since high school, and contained a blade, a fingernail file, and a small scissors. As he

scrabbled at it, attempting to get it out, he tried to think what he might do with it.

It was then that he noticed that the air hunger was getting less. He was beginning to be able to breathe again.

That could mean one of two things—either his twisting and turning was opening a crack somewhere, or somebody on the outside was introducing oxygen into his air supply. He remembered something about the Chinese doing this during some distant war, perhaps Korea. The objective was to so terrorize the victim that he became open to brainwashing.

If this was torture, then they were out there watching and listening. They had a use for him and needed him to be so broken that he would follow their orders.

So what needed to happen in here to get them to open the lid?

The answer was clear: once they were sure that he had completely lost it, they would bring him out.

He began having trouble breathing again. His mouth opened, he gasped, but he also remained totally still.

Finally a surge of need went through his body that was so intense that it made him kick. His chest heaved, he sucked air through his open mouth. Tormenting urgency swept his body.

He cried out, he slapped the lid, he threw himself from side to side, he wailed.

And the anguish receded a little. His head cleared. He was still breathing frantically, his heart hammering, his chest pumping, but it was getting less.

He forced himself to calm down. So it wasn't that he was opening a crack somewhere in the box by pushing against it. Somebody was indeed out there, and they were intentionally torturing him.

His breathing was labored now, but no longer terminal.

Once he had completely panicked and completely despaired, he was going to be taken out.

Fine, he would deliver the panic they were looking for. It wouldn't be hard, he was nearly there already. He knew that what at first would be an act would quickly become actual terror, because his screaming would flood his body with adrenaline.

He uttered a groan.

Soon, the air was getting stale again.

Another groan, but this one turned into a scream, and that opened the subconscious gate that he'd been holding closed with all of the inner strength he possessed.

There came boiling up from his dark interior a gigantic, roaring explosion of sound. He hammered, he kicked, he raged, he bellowed.

No escape.

Tears came. He found himself sobbing like a child.

His idea that he was being tortured was a fantasy. There was nobody out there and the coffin was underground. He had been buried alive, and everything else was just rationalization and wishful thinking.

Another scream burst out of him, then another and another and another. He smashed his head against the lid until he was reeling with pain, he clawed and screamed until his nails bled and his voice broke. He collapsed into the suffocated, gasping sobs of a dying man.

He lay, spent but still panting and ever more frantically. He began to float away on a lurching, tormented sea.

Again the cries came, so hysterical that they sounded like somebody else, an unknown version of himself, possessed of vast rage and fear and a hunger for life that was stronger by a factor of a million than the strongest love or terror he had ever consciously known.

His lungs churned, his tongue lolled, his hands began to weaken, and the clawing turned to scrabbling and helpless slapping at the unyielding lid.

There came a ripping sound. Then a click. Then light flooded him

and air as pure as dew.

He writhed, he uttered choked sounds from a place in his mind so deep it had no words, he saw only the glare of the light and then, within it, a shape.

The shape focused.

A face stared down at him, softly intent, the eyes as pale as snow. "Hello, Flynn."

Flynn gasped, frantically sucking air, unable to stop himself. As relief washed through him, he realized that he'd been just moments from death in there. Much closer than he thought.

He recognized the face immediately. But the security camera had lied. The oddly plastic skin and the too-perfect hairline were not a disguise. This was not a human face, but something that had been made to look like one.

"You're Morris."

An arm like a piston thrust him back down into the box.

"Yeah," he said, "you can call me that. It's a name on a suit, put there to confuse the garbage." His lips lifted away from his teeth, as if in a smile. "I've got an offer for you, and I'll kill you slow if you don't do my little job for me. Is that understood?"

Flynn said nothing.

"All right, if that's the way you want it, fine." He put his hand on the lid.

"What's the job?"

"Too late, Flynn. You're done." He murmured something to somebody out of sight, but Flynn heard it: "Take him out and bury him."

With an earsplitting crash, the lid came down.

Flynn hammered at it, he couldn't stop himself. "Don't do this! Jesus, let's talk, come on!"

The box scraped and Flynn felt his weight shifting. He was being

moved.

“For God’s sake, give me a chance!”

He had thought that he had been broken. But now he discovered that he had not yet understood what that was.

As they maneuvered the box, he could hear grunting. Who was it? Not the creatures from the village, surely. No, there was a murmured word in Spanish. People, then. Henchmen.

He thought that you could not be more deeply a traitor, than to betray mankind itself.

The box lurched so far to one side that he rolled over, then was hurled back as it hit something with a dull, hard thud.

He’d been slid, then dropped into a grave.

“Listen to me! For God’s sake!”

And what will you do, little man, he asked himself? Will you, also, trade your species for your life?

There was a crash. Another. Then more and more. Dirt was being shoveled in. They were doing it for real this time, and the air was getting thick fast, and this time it would not be refreshed.

He bellowed, he kicked, he hammered at the lid, he rocked from side to side trying to break open the coffin.

The sound of dirt being shoveled in ceased to crash against the lid. As it got deeper, the sounds became more muffled.

This was it. He was now underground.

He went to another level of terror, one far beyond where he had been before, deeper yet, more raw than anything he had ever known. It was a savage, blind animal fear that caused him to scream like a desperate infant, slicing away layer after layer of toughness and strength and hard-won inner composure, leaving in its wake a panicked, shrieking rat.

Where had he gone wrong, what had he said or hadn’t? There had been no bargaining, no time.

“Give me a chance,” he screamed. He hammered on the lid, he kicked. “For God’s sake *what do you want me to do?*”

There was a sound.

He froze. What was that? He listened.

It went in and out, in and out, and he thought it was the whisper of breathing.

“*Please!*”

“I want you to do what’s needed, that’s all.”

The voice was in his ear, *right* in his ear, so close, so intimate that instinct made him attempt to turn toward it.

“Then tell them to dig me out! I’m smothering fast!”

“You will do the work I have for you.”

“They’re still filling the hole, tell them to stop!”

“I have work for you.”

It was a choice. *The* choice. Die here like this or do the monster’s work.

There could not be a traitor more profound. But if he died, there was no chance at all that Abby’s destruction would ever be avenged.

“All right!” he shouted, “I’ll do it!”

Nothing happened. He waited, sweating it out.

His heartbeat grew rapidly more irregular, his mouth lolled open, his tongue hung out, and his breaths came faster and faster, more and more uselessly. He was breathing his own breath.

“You will do this work?”

He tried to answer.

“I can’t hear you.”

A gasped whisper: “Open ... open ...”

The digging stopped.

“Open ...”

There was light all around him, and air flowing like grace into his

very soul. His body flushed with relief and his head swam as his blood reoxygenated.

He hadn't even been underground.

Morris chuckled. He reached down and drew Flynn to a sitting position.

Flynn looked at the box he had been confined in.

"Not a coffin," Morris said. He was a man of about six feet, dressed in jeans and a T-shirt, a weathered Stetson on his head. "Coulda been used as one, though." He lifted Flynn under his arms. "Still shaky?"

"No."

"You lie like a child."

Flynn took quick stock of his surroundings. He was in a barn, its big door open wide to a sunny morning.

"Come on, let's get you something to drink. I got Coors, Lone Star, Shiner."

"Just a cup of coffee."

"Nah, you want a Shiner." Morris snapped a finger at a man standing nearby, who Flynn recognized as Jay Elder. He sauntered over to a dark blue cooler and opened it. As he reached in, ice rattled.

"Sounds good, doesn't it?"

"I have to admit that it does." He estimated that he was forty feet from the door. He couldn't bolt, though, not yet, because Elder was coming back with a frosty longneck.

The animal in him wanted that beer in the worst way.

"Flynn, you gotta understand that you're all mixed up. We're the good guys here! That thing you met in Chicago, that was evil."

"Okay."

Elder arrived with the beer. "It's gonna be a new era for mankind," he said. If he thought that he wasn't evil, he was a fool.

He took the bottle. Shiner is a rich brew, and he could smell the sweetness of it, and practically taste the cold relief it would bring to

his throat.

“Go ahead,” Morris said. “You’ve earned it.”

He lifted it toward his lips, calculating carefully, moving slowly to buy time. A quarter-second delay, a wrong half-step, and he was going to end up back in that coffin, this time for good.

Using all the strength in his arm and shoulders, he reached back and swung the bottle into the side of Morris’s head.

The bottle exploded with a wet *crack* and foam and glass sprayed across Morris’s head and face.

He stood there staring. He didn’t even blink.

Flynn cried out in shocked surprise—under the coating of skin there must be steel or something.

Then Morris made a sound of his own, a low growl that reminded Flynn of the voice of the tiger.

He broke and ran. He was thirty feet from the door when Elder, thin and wiry and quick, leaped at him. He was light but fast as hell.

Not fast enough, though, to avoid a punch, a solid blow to the chin, which lifted him two feet and hurled him backward. He landed on the barn’s dusty floor.

Morris roared, and Flynn knew that he was hearing rage from another world.

What must it be like, to produce minds as fine as Morris’s, but so filled with rage? Or those things in the village—were they part human? Why were they so sad?

The universe is a dark place.

The last thing Flynn heard from Morris as he ran out the door into blazing morning sunlight was a roar—as it changed into laughter.

He had an inkling as to why. It was all part of breaking his will. They’d done it during the Inquisition, done it in Nazi Germany, done it in the Soviet Gulag. The technique was to let a prisoner think he had escaped, then, just as he touched freedom, drag him back.

So his aim was clear: he needed to go farther than they thought possible.

He ran across the barnyard and vaulted its weathered wooden fence. Without looking back, he knew from the silence that Elder and Morris were not following him. This meant only one thing: somebody else was. He thought it would not be the tiger, not in broad daylight, and not as close as this to the heavily developed shoreline of Lake Travis.

From somewhere nearby, there was a sudden burst of barking. An instant later it was silenced.

His heart seemed to twist against itself, his throat to twist against itself from sheer terror.

One of the outbuildings they'd seen had been a kennel.

Dogs were a problem. Big time.

Too bad he'd lost Mac, Mac knew dogs and knew them well. As he ran, he continued to listen, but the dogs were no longer giving voice.

So, were they also smart, maybe as smart as the tiger?

He had to force himself not to run wildly.

This was going to be hard. It was going to be very, very hard.

CHAPTER THIRTY

As he ran into deeper brush, Flynn inventoried. His only weapon was the pocket knife. He had no compass, no cell phone, and no GPS, only the knowledge that he was running in a generally southerly direction.

He did not hear the dogs, but he also did not believe for a moment that he was beyond the perimeter of the trap Morris and Elder had set for him.

He knew that he was leaving a scent trail. Worse, the harder he tried to get away the more he sweated, and the stronger it was getting. His effort to escape was making him easier to catch.

To break his trail, he needed to get to water. He needed the lake, but how far was it? More than a mile, certainly, and this shore was not developed, so he wasn't going to be stumbling across any roads.

They'd chosen their location with characteristic skill. Being near a large city and a population in constant flux around the lake gave them access to plenty of genetic material—if that was even what they were after—but they were also isolated enough for them to keep themselves well hidden.

He forced himself to move more slowly, to tend his track as best he could, to reduce his visual and scent signatures.

The sun was strong, and he was sweating ever more heavily. He was exhausted from his ordeal and so dehydrated that he was beginning to struggle with muscular control.

Then he heard something—a quick rustling sound to his right. The instinctive reaction was to turn away, but you can't escape a dog like that. He is going to be faster than you are, and you cannot hide from his nose.

Flynn's hands were good enough to give him a chance to stop maybe one of them, but probably not for more than a few moments. So he turned toward the sound, and charged into the cedar thicket that the animal was sliding through.

He screamed, he couldn't help it—a short, sharp cry, instantly stifled. The dog was black except for the face, which was long and lethal-looking, but as pink as human skin. The eyes were green. They were entirely human.

Immediately on seeing Flynn, the dog turned away, careful not to expose its nose to his fists.

His gut frothy with disgust, Flynn broke off the assault, leaped out of the thicket and continued running.

Behind him, he could hear complicated, guttural sounds as the dogs communicated among themselves. They were fanning out, preparing to outrun him and capture him in a pincers movement.

A steep hillside appeared ahead. Forty feet up, the limestone emerged as a cliff, and in that cliff there were a number of low openings. Caves.

Could be good.

But no, no way. They were deathtraps. Even if they were large—huge—the dogs would gain an unbeatable advantage. They didn't need light, he did. Worse, the damp air of a cave was an ideal carrier of scent.

So he continued following the terrain lower and lower, until at last he came to water—or rather, a dry creek bed. Still, though, it led downward toward his only hope.

It began to be possible to discern the voices of individual dogs, as they muttered and growled among themselves.

As he got closer to water, the plant life grew more dense, and the thickening stands of cedar were getting harder and harder to move through.

The voices of the dogs stopped.

He thought, “they’re coming in for the kill.” Maybe he should have gone for the caves. Maybe he should have done a lot of things, chief among them not moving ahead with this until contact with some sort of headquarters had been reestablished. He’d gotten Mac killed. God only knew what had become of Diana.

Now there was silence around him. But why? He turned around and around, wishing he could somehow pierce the glowering stands of cactus and the dark cedar thickets with his eyes. What was the holdup? He must have some advantage, but what could it be?

He looked up the long rise he’d just descended. Then he turned a half turn. Nothing there but cedar. Another half turn—and winking through the choking underbrush there was a metallic gleam.

Metal, hell, that was water. Of course, the dogs had already scented it. And he saw one of them, just for an instant, a black flank gleaming with tight fur. It was moving quickly, staying low behind a stand of cactus on his right.

He saw their problem: he had a better run to the water than they did. They’d stopped here in hope that he wouldn’t see it before they could maneuver in front of him.

No longer concerned with being detected—they knew where he was to the inch—he hurled himself wildly ahead, throwing himself into the foliage between him and whatever water was below him.

There came a chilling sound, the furious rattle of a snake. They were common in the Texas hill country, with its ample supply of small animals and the warm rocks that snakes needed to gather energy.

He knew the risk, but there was no time to stop and deal with it. He threw himself against his side of the stand of cactus, tumbling away from the fat, bristle-encrusted pears, feeling them piercing his shoulder and flank.

He was falling then, dropping through resisting, scraping masses of cedar, dropping further, stopping, clawing himself free and falling again.

Breaking free, he fell ten feet, maybe more, through clear air. Enough to shatter limbs if he hit wrong and he was completely out of control.

He landed on his back in clear, cold water and heard its silence as he sank, and saw above the sun dancing on its surface. He also saw the snake hit the water, a good eight feet of writhing fury.

Stretching himself out, blowing to reduce his buoyancy, he kicked his way deeper. Close by, the silence was profound, but he could hear a distant buzzing of engines. This wasn't a stream, it was the lake itself.

He heard splashes behind him, at least a dozen of them. The dogs had lost a small battle, but that had only sped them up. His one advantage was that he could hold his breath, which was not so easy for a dog. But they were going to be faster.

He'd been winded before he fell, though, so he had to surface right now.

The instant his head broke the water, he both gobbled air and turned and turned, trying to see what he was up against. A quick count revealed the hideous heads of twelve sleek animals speeding toward him from three of four possible directions.

Immediately in front of him, not three feet away, was the snake. Sweeping his arms, he backed himself away from it. It raised itself up, using water tension to force a good three feet of its length above the surface. It couldn't strike, at least. To inject its venom, it would need to be close enough to dig its fangs into his skin.

Sucking breath after breath, he twisted around and used the one ability that he had that none of these animals, not the snake or the dogs, could equal. He could hold his breath long enough to dive deep. And once he was underwater and too far from the dogs for them to see him, they weren't going to have any way of determining his location.

He swam as deep as he could, passing over a drowned tree, characteristic of Texas's many artificial lakes. He'd pulled more than

one drowning victim out of such trees on Lake Menard.

Even as he went to the surface for air, he could hear the tireless churning of the dogs getting louder. He didn't bother to turn and look at them when he broke the surface, that would eat a good second that he couldn't afford to lose.

Again he breathed, again and again, saturating his lungs with air even as the dogs got louder. Then he saw, turning out of an inlet about a quarter of a mile away, a power boat. It swung in a graceful arc, remaining up on plane, its wake spraying behind it. Nobody would come out under that much power unless they were on a mission.

Between the dogs and the boat, he had been very neatly trapped.

Again, he dove deep, but this time did not double back toward the dogs. They were smart enough to anticipate that. They would move from line abreast to a deeper formation, and surround him and tear him apart the moment he surfaced.

The sound of the oncoming boat got louder.

He had to surface, and when he did, he saw a figure on the front of the boat. It was Morris, and in his hand was a long-barreled pistol. Some kind of a target weapon, accurate at distance.

The boat was coming fast, its wake foaming white.

He dropped beneath the surface.

The trap was sprung. Here, he ran out of options. Here, they dragged him out of the water and took him back, a thoroughly broken man.

There would be more torture, until he'd been to death and back many more times.

But why? What was it that Morris wanted him to do?

Now the boat was circling above him. As soon as he surfaced, he was going to be within range of both the pistol and the dogs.

Looking up at the hull, he could see that the twin props were on shafts that extended out behind the craft, which appeared to be about

forty feet in length.

He swam upward and, as the boat swept over him, he resurfaced in its prop wash. As he sucked air, though, one of the dogs piled into him.

He went back down, leaving the snapping jaws and churning claws behind.

Then he felt something unexpected—a current of warmer water.

This could mean only one thing, an incoming stream. He swam toward it, keeping as best he could in its warmth. No matter what, he had to remain submerged until he was in the mouth of that stream. If he went up to grab even a single breath, he was caught.

To conserve his oxygen, he forced himself to do the opposite of what instinct was screaming for him to do. He forced himself to slow down.

Moving carefully, he began to be able to see the limestone bottom rising. He was swimming up a small canyon. With just inches to spare, he passed over the skeleton of another drowned tree, this one with the stark remains of what had been a stone house below it.

The bottom rushed up, and then he was swimming in three feet of water and there were flashes in his eyes, and he was going to take another breath, and it was going to be water.

He breathed. Breathed again, deeper. But it wasn't water, he had come up into the bed of a stream no more than ten feet wide and just three feet deep.

He lay flat on his back, letting its water sluice around him, allowing just his face to break the surface. He didn't want a single molecule of odor to reach those dogs, nor a single sound, and he didn't want his body heat to be detectable, much less his image.

He remained as still as possible, just pushing himself along with his heels, doing it inch by inch. Eventually, the stream would have a bend in it. Only when he was around that bend and invisible from the lake could he dare to move more quickly. Even then, he would stay with the water.

He came to a deeper pool, the water crystal, the limestone glowing tan. Around him, birds sang. He slid deeper, waiting there with just his face exposed, minimizing the chances that his scent would reach the dogs.

Finally he moved again, slipping around a turn in the narrow creek.

All was quiet. He hadn't even stopped the birds. He raised his head and listened. Distantly, the boat's engine screamed. Good, they were operating a search pattern.

Finally, carefully, listening to every sound and watching every shadow along the banks of the stream, he eased himself to his feet.

He froze, watching and listening. There was no sound of movement in the thick brush that surrounded the creek. He crossed to the far side, then climbed a bluff until he could see what turned out to be part of Lake Travis, a mirror of the sky dotted with sails. Small white clouds flew overhead. Nearer, the boat was now stopped. He could see the dogs on board, sitting in a group on the fantail. As they worked to gain scent, their heads turned first one way and then another.

Obviously, they weren't picking up his scent, but they did not stop trying. Then one of them went to the rail. It stood, nose to the wind. Another joined it.

His heartbeat increased, he barely breathed. It was time for this reconnaissance to end, so he moved back into the water, and then quickly up the creek, which was as shallow as a few inches on this side.

He went a hundred yards, then climbed the bank and pushed his way through the brush. The ridge he had descended was about five hundred yards ahead and perhaps a hundred and twenty feet high. Somewhere beyond it was the ranch headquarters where he'd started.

A single bark, low and shockingly close, told him that he'd made a fundamental mistake doing that reconnaissance, and the trap he'd entered was already closing.

Only two alternatives were left to him, either to do something that

they wouldn't expect, or something that they couldn't counter—or, for that matter, both.

One thing that might throw the dogs off would be if he backtracked along his own scent trail. He was wet now, leaving less odor behind. They might be tricked. They might lose him.

The only problem was that doing this would return him to the ranch.

Had that been the real plan all along, to induce him to go back to the compound and be captured where he'd started his escape?

He looked carefully along the ridge, then at the cactus and tufted grass below it.

Tracking is a skill that involves not only careful observation but also careful visualization. To keep a trail, you need to not only read sign, you need to be able to discipline your imagination to see the path as the person you are tracking must have seen it.

Doubling back along the lakeside, he returned to the bend. Beyond this point, he knew that it would not be safe to go. To reduce his scent further, he submerged himself completely. Then he left the water and went across toward the bluff, crossing his own trail about sixty steps later.

Turning, he looked back the way he had come. Not surprisingly, he had left a clear track.

He scanned the terrain ahead. Were they hidden somewhere, already aware of him, already waiting in ambush?

Backtracking as carefully as he could, he climbed the ridge. He would risk the dogs noticing the movement.

He could not do the safe thing, which was to keep going out to the road. He had to determine if there was any way to help Mac, assuming he was still alive. Or Diana, for that matter. If it had been him in the Rover, he would have come in to provide support as soon as communication failed. She would have done the same, and since she hadn't, he had to assume that she was in trouble, too.

They might both be trapped in boxes somewhere, or under some other type of torture, or slated to be broken down into component parts or whatever was being done to people.

Doubling back, he made for the ranch compound. If they'd left it unguarded, he might gain some useful intelligence. Who knew, maybe he'd even turn it into a win.

Still, he had to be damn near conservative. If he lost his life, who knew what would happen then? Maybe there wasn't anybody else left. Maybe the whole operation would fail. For sure, it would be a catastrophic setback.

Atop the ridge, his own sign was quite clear, a swathe through the tall grass that looked like it had been put down by an elephant. The dogs, all nine of them, had crossed the clearing line abreast. Their tracks were straight and light. They had worked to minimize their sign.

Moving ahead, but not so fast that he would raise his skin temperature and once again intensify his scent, he worked his way back. Soon he saw, through a thick stand of cedar, the shape of a building. He went closer, slipping deep into the cedar thicket, stopping when he came to its border.

The place was silent. No sign of movement. There was the barn, a new shed nearby, and the small rock ranch house. Under some live oaks fifty yards away was the kennel.

The barn doors were still open, the interior shadowy.

He watched some mourning doves pecking in the small patch of grass near the house. These were flocking birds that fed on the ground. They were sensitive to nearby movement and would fly up at the slightest sign of disturbance. He waited, but they continued to feed in peace.

Morris could not have left this place unguarded, so its empty appearance had to be a lie.

He stepped out of the cedar and strode quickly to the barn. On the floor toward the back stood a long silver box, open, the interior lined

with black plastic. His box. There was oxygen equipment nearby, a green canister lying on its side, some tubing disconnected from two nipples on one end.

He forced back the impulse to hammer the thing to bits.

Under the pecan tree by the house, the doves were still pecking at nuts.

Mac and Diana were not in the barn.

He stepped out and moved away from the structure. Turning slowly around, he listened for anything that might help him. His hearing was good and it was very quiet, but the silence was total. By now the dogs would be breathing heavily, but he didn't hear anything that suggested their approach. Fearing the tiger, he looked, also, along the rooflines.

He dared not go close to the house. The dogs would hear the doves rising from a long way off. They would know what it meant, too, no question.

He looked toward the shed. There was a padlock on the door, a new one. His picklocks were gone, of course.

No matter how carefully he listened, only the cooing of the doves disturbed the silence of the place.

Could they have actually left him an opening? Maybe they'd never considered the idea that he'd be so foolish as to return to the compound.

He went to the shed, moving carefully and methodically. The lock was a good one. He could not force it without tools. Behind the shed, though, he found a low roof with a trapdoor in it. A storm cellar. Not surprising, given that one of the most powerful tornadoes ever recorded had touched down a few miles north of here.

He bent down, grasped the rusted iron ring in the center of the trapdoor, and pulled it up.

It was dark and silent and it felt large. Hill Country ranches didn't have big underground chambers, just root cellars, and usually not

even that. So this could be something constructed by Morris.

He wanted to call out to Mac and Diana in the darkness below, but to raise his voice was far too dangerous. As he listened, he thought he heard a faint pulsation, like a big pot boiling.

He wanted to go down the ladder, but that was beyond the limit of responsibility. He was here to make best efforts, not throw himself away.

For a long time, he listened to that sound. Boiling, he thought, definitely. No voices, no sound of movement.

As he left the shed, he heard a sound coming from the direction of the ranch house, high and sharp, that certainly was not doves. But what was it? Not a voice ... or was it? Perhaps not a human voice.

And then he heard another sound, just the slightest edge of a yap, quickly stifled.

He saw movement at the house, a door opening.

Even so, the doves did not move, which meant only one thing: they were not normal doves. They were another deception, and a very clever one indeed.

At the same moment, one of the dogs appeared at the edge of the compound. It came across the field at a trot, its tongue lolling, its eyes intent on the house. It went up to somebody hidden just inside, and as it did the person crouched down to greet it.

It was one of the creatures from the village. In the sunlight, its skin was yellow-gray and its eyes seemed, if anything, more deeply sad than they had in the gloom of the structure. He could see a shadow of humanity there, but also something else. Was it a mix of a creature like Oltisis and a man?

Maybe, but it couldn't walk the streets, not by a long shot, not like Morris could.

The high-pitched sounds became a strange, musical cooing, joined by the dog's voice, a group of vocalizations more complex than any ordinary dog could make.

They were taking pleasure in one another, these two misbegotten creatures, a dog with a man's eyes and this ... thing. The dog licked the creature's hands and it smiled, its teeth jutting out of its mouth like blades.

More dogs appeared, and then the snarl of engines as two four-wheelers burst out of the brush.

Flynn faded back toward the far side of the compound, trying to keep the shed between himself and the danger.

When he was back in the brush and somewhat concealed, he turned and ran toward the road he and Diana and Mac had come in on.

As far as he was concerned, the secrecy was over. Without Diana and Oltis, he had no official recourse. So he needed to bring some level of policing authority into the situation, and damn the secrecy. Let the secret get out. Better that it did.

Problem was, he also knew that the cops wouldn't do anything serious unless they had evidence of a crime, and so far he couldn't offer much. Certainly not enough to enable, say, the Travis County Sheriff's Office to get a warrant to enter onto the ranch property. No judge was going to approve a warrant on the basis of what would sound like the ravings of a lunatic. The fact was that he wasn't going to get any police action out of a claim that there was a village full of aliens on some rancher's property—unless they tossed him into the state hospital over in Austin.

Even if by some miracle they did move, it would not happen overnight, and this needed to get done fast. The only thing that might work against the kind of power and intelligence he was seeing was speed.

There was only one answer: he had to come back here with serious firepower, and fast, and he needed to kill them all.

CHAPTER THIRTY-ONE

He sat hunched over a beer at one of his college haunts, a place called the Scholz Garten in central Austin. He'd come here because it was deep in the inner city, and Morris and Elder might be cautious in a populated area.

He sat at his old table in the far corner of the outdoor beer garden. Across from him was Abby's chair. It was late in the afternoon, the shadows were long, and the memories of her were as raw as blood.

Once he had reached the road, it hadn't taken him long to find the spot where the Rover had been. It was gone, but there was no sign of anything unusual, such as tire marks that might indicate a sudden departure. The truck had remained in place for some time. He had even been able to make out scorch marks left where the catalytic converter had touched some grass.

As he sipped beer, he searched gun classifieds in a local rag. He was looking for a very specific weapon, a Heckler and Koch MP5. If he could find a dealer with a Federal Firearms License and the weapon in his inventory, he was hoping he could obtain it and let the paperwork float along behind the transaction. To own a fully automatic machine gun in Texas, he'd need to get a sign-off from a local honcho of some kind, but he was figuring that could be accomplished with a donation.

He went to the pay phone, dropped in four quarters and phoned a guy called Joe Harris in a little town called Lost Mill, who advertised a selection of weapons. He had no HK in stock, but he thought he could get his hands on one pretty quickly.

"How fast?"

"Well, I could get it brought in here—let's see—how about seven?"

He would need to carry it around, so he wanted concealment. “Does it have the CIA case?” This was a briefcase with a trigger in the handle, a nice piece of equipment.

“No CIA case. Those things are hard to come by.”

“Don’t I know it. So I’ll be around at seven to take a look.”

After he’d reached the highway, he had hitched and walked until he got to a place called Four Points, where he’d found a bus and taken it into Austin.

When he’d rented the car he was now driving, the clerks at the Avis station had been concerned about his appearance. He looked like a tramp with an improbable amount of cash, and the cash was mysteriously damp. He’d used his real credential, and the police identification had reassured them, fortunately, just enough to get them to give him a car. The use of cash would keep the rental record at the station until the car was returned and the completed transaction processed.

He didn’t want to show the gun dealer his real pass, for fear of spooking him, and he couldn’t meet him looking like he was headed directly to the nearest 7-Eleven to commit mayhem, so he planned a first stop at a motel to clean up.

Everything was so very normal, the Texas sun starting to set behind tight little clouds, traffic passing on Congress Avenue, up the street the improbably immense state capitol building looming over the city. All was quiet—but Texas streets could be deceptive, as he well knew. There had been some notable crimes committed in this city, some textbook crimes. A classic story of police action against a sniper had unfolded at the summit of the University of Texas tower back years ago, which was still studied as a model of how to respond to such an emergency, and, for that matter, how not to. A cop had died investigating the sound of gunshots. The lesson: don’t expose yourself until you know where the shots are coming from.

He drove south on Congress, then took First Street to Interstate Thirty-Five. Harris was just the other side of the line in Hays County.

Between here and there was a Super Target, and not far away, a motel.

As he drove, he automatically kept his rear under surveillance. Once on Thirty-Five, he stayed well below the speed limit and far to the left, letting the traffic pass him like a river. Texans are not slow drivers, and nobody hung with him.

He knew that the gun was going to cost a lot. He would need to bring cash, which meant a visit to a bank. When he'd dipped the special ATM card earlier, though, it was dead. He visualized some bureaucrat deep in some Washington cubbyhole canceling the cards as soon as contact was lost with their holders. Nobody would ever stop to think that this might leave them in the wind. Budgets trumped lives, always.

Fortunately, there were Frost Bank branches here. This was his bank in Menard, an old Texas outfit, and he was going to need to make a substantial withdrawal from his personal savings. He had about thirty grand on deposit and he'd have to get it all. It was already a quarter to six. He watched for a branch.

As he drove south along the highway, he saw a Wells Fargo, and somewhat later a Frost Bank sign. He pulled off the next exit and doubled back.

The branch was small, but when he handed over his withdrawal slip, the clerk didn't react with any surprise. This was agricultural country south of Austin, full of farms and ranches and basic businesses like rock quarries. There were going to be a lot of illegals working, and that would mean cash payrolls.

"Hundreds, please," he said. Bigger bills were faster to count and took up less space. He carried the money out in a brown paper bag, got into the car and stashed it under the backseat.

His next stop was Target. His clothes were done, and in any case, they'd been touched by those creatures out there—God knows what they had done to him while he was unconscious—and he wanted them off his body. He wanted a long, thorough shower, lots of soap.

In the Target, he headed for men's clothing. He passed a mother with her two girls looking through racks, a clerk stocking a shelf with radios, a couple of guys searching for T-shirts, and he found himself at once loving them as he had never been aware of loving his fellow man before, and also feeling oddly distant from them.

He understood the origin of Diana's inner distance. It was having secret knowledge of a larger world that did it. They were innocent, he was not.

He found the camouflage sweats he needed, and then the black sneakers. A ski cap and mask were harder, but he eventually dug some up in a sale bin. He also got a white shirt and some slacks, and threw in a dark blue windbreaker, the thinnest one he could find. He planned to buy a pistol off Harris as well.

In the checkout line, he waited behind a family who was buying a gas grill and had a lot of questions about it. The wait was hard.

Finally, he left the store and crossed the parking lot to his car. The details of the world were in sharp focus, sounds, movements, the expressions on people's faces, even the feel of the asphalt beneath his feet. It was how he felt just before walking into a domestic dispute, which can so often turn out to be a more dangerous situation than it seems. More cops were injured and killed on domestics than on any other type of run.

Given his plan, he did not expect to survive his return to the compound, and, frankly, he was beyond caring. If there was an afterlife, he'd be with Abby. If not, then not. The only thing that mattered was that everybody at the compound also came out dead.

He reached the motel at six twenty. He checked in and went quickly to his room. This was a point of vulnerability. He was unarmed, so if they were following him, this was an ideal time to take him.

He threw his bag of clothes on the bed, stripped and showered with the curtain open. He was focusing down very tightly now, concentrating his thoughts on the unfolding mission, preparing his

mind and body for action.

Once he was cleaned up, he drove to Joe Harris's operation, which consisted of two double-wides on a bare lot in bleak scrubland south of Austin.

The first thing that came to his mind was that the setup wasn't straight. The double-wides had the barren look of crook places.

Harris had dogs behind a chain-link fence, which frantically announced themselves as Flynn walked up the uneven flagstones leading to the first trailer. This was about the point, when he was in a uniform, that he would've unsnapped his holster.

At least they were just ordinary dogs.

He knocked on the flimsy door.

"Yo."

"I'm Flynn Carroll, I called about the HK."

The door opened onto a man who looked like he'd been inflated and then rubbed with beet juice. Even a mustache that would've caused a sensation in Dodge City failed to hide train-wreck teeth when he smiled.

Flynn recognized it as meth mouth, the dentist's dream.

"Well, come on in," Harris said, his accent deceptively softened by the south. But this was not a soft man.

Flynn stepped into the dim, smoke-choked interior. An air conditioner screamed as if in its death throes, doing little more than jostle the sweaty air. The chrys smoke was almost dense enough to induce a transfer high, and, in fact, Flynn took a slight hit from it. Felt good, which was bad. Drugs and high-intensity action are mortal enemies. When quarter seconds count, as they would tonight, you need to be spotlessly clean.

An HK in pristine condition lay on the Formica table that filled half the kitchen area.

"I assume you can show the cash, 'cause she can't go outa here on no check or nothin'."

Flynn noted that there had been no mention of paperwork or identification. He also took note of the Diablos tattoo on Joe's arm, and of the fact that he was wearing a small pistol on his right ankle, maybe an AMG Backup. Not very accurate, but in a confined space like this, who cared?

"It's in my car," Flynn said. "How much're we lookin' at?"

"I'm thinkin' about twenty-two thousand dollars, sir."

"That's strong."

"You look at 'er. She got class, a lotta class. Plus this fella, it turned out he had—lemme get this here—" He brought up a black plastic briefcase. "This is just dead on for the CIA case."

It was a good briefcase, no question there, the trigger mechanism solidly constructed.

What he had in the car was exactly twenty-two thousand two hundred dollars. He decided to see just how crooked this crook was.

"I need to take the gun with me. Can we let the paperwork float?"

"You plannin' some kinda score?"

"I have a buyer. Kinda on the warm side."

"*Cucuracha?*" It was slang for a cartel enforcer.

"Big enough to cook and eat."

The guy looked into Flynn's eyes, looking for some kind of sting, no doubt. In Flynn's experience, guys like this always ended up trusting plainclothes cops more than they did their own damn mothers, they were that stupid.

"I'll tell you," Joe finally said, "I don't know if you noticed, but the governor's kinda stopped carin' who does fed paperwork and who don't. I mean, you ain't gonna go shoot up the capitol, I hope. 'Cause that would be embarrassing." He chuckled. His eyes never left Flynn's. "I see you in there, you little shit pussy. Your *cucuracha* ain't around here, is he? You're gonna sell this thing cros't the border, ain'tcha? Gonna get some Border Patrol killed, probably. I don't think I can do that."

It was an opening gambit. Soon, the price would be thirty grand. Flynn didn't really care, because he had decided that he wasn't going to be a buyer today. He was, however, leaving with the weapon.

"I'm not in the business," he said. "I don't bargain."

"What are you, then?"

"I don't want to lie to you. I'm gonna put you on your ass and take your gun."

"*Wh-a-at?*"

"I don't want to. But this HK is hot and I'm not gonna pay anything close to that kind of money for a hot gun. Anyway, I'm probably pretty hot myself, so I kinda think we were made for each other."

A hand meaty enough to be a filling meal started for the ankle holster. Flynn reached across the table and bumped Joe's ulnar nerve against his humerus. The hand flopped and Joe yelled.

Still without getting up, Flynn aimed a blow at the middle of his chin, thrusting upward as he connected. There was a crack and Joe's head pitched back. He fell over in his chair, crashing against the sink hard enough to bring more than a few filthy dishes down with him.

Flynn stood. One thing he had learned from watching bad guys screw up was never to waste time in a situation like this. Do what you have to do and get out.

He looked down at Joe. He'd be in slumberland for ten minutes, maybe a little less.

He laid the HK in the case and made sure all the magazines were full. There wasn't time to toss the place for more rounds, so what was in the three thirty-round magazines had to be enough.

As far as a carry weapon was concerned, he didn't see any pistols in view, so he contented himself with taking Joe's AMG. It was chambered for the .380 ACT round, which was good. This round gave it better stopping power than the more common version, which was chambered for a .22 round. There were also a few of these out there that could accept a .45 cartridge, but the accuracy was really poor.

The combination of the pistol's fixed barrel and the ACT round's low breech pressure offered an outstanding mix of accuracy and firepower for a compact pistol. Ole Joe did indeed know his guns.

Leaving the trailer, Flynn made it a point not to hurry. There were bound to be eyes on this meet, no question. He couldn't afford to raise suspicion, otherwise every cracker inside of three counties was going to be here in minutes. Forget the cops, these guys were way more dangerous than the law. You messed with Diablos, you dealt with Diablos, no police need apply.

His next step was clear. He would return to the Lake Travis area and await darkness. Then he would move on Morris and his people and his animals, and what would happen would happen.

A machine gun is a good weapon. Used correctly, of course, and he knew how to do that.

As he drove, he considered his chances. On balance, he thought that Morris had not expected him to return to the compound. It hadn't been a trap at all, but a mistake. So he could be outsmarted—once, anyway. Maybe, then, twice.

He had one objective and one objective only: waste Morris and all who were with him.

CHAPTER THIRTY-TWO

He had planned his return to the property as carefully as he could using Google maps and satellite views he examined on a computer at a copy shop. The house and the barn appeared on the satellite view, for example, but not the shed, the village, or the kennel. Diana's images had been real time, of course, but Google satellite photos averaged about two years old.

This meant that the dogs and the creatures in the village were all recent additions. Ominously, then, they were in the process of expanding their operations here. But it also meant that there had to be vulnerabilities. Something wasn't properly guarded. Some plan of defense was flawed. The question was, would he be able to find that flaw?

One thing was certain: the whole operation—compound, village, all of it—would be carefully guarded now, and in depth.

He had waited until nine before setting out. He wanted as much time as he could get prior to moonrise, which tonight was at eleven twenty-six. But he also didn't want to arrive any earlier than he had to. He'd used the time to find stores where he could put together a new rig.

In his backpack was a pair of fairly decent night vision binoculars with an infrared light source. In addition to the AMG backup and the HK, he was now carrying two Tasers and a good combat knife.

He had considered blowing the whole place to kingdom come, but you are not going to be able to buy the necessary explosive materials without tripping all kinds of alerts. It was one thing to get hold of a machine gun of a type used by the drug cartels and readily available on the black market, another to buy explosives that Homeland

Security took an interest in.

Before he left, he'd located on the map a new spot to leave the rental car, and as he drove down the main road, he ran his plan mentally, dwelling for a moment on each phase, making certain that everything was as well thought out as possible.

He'd worked the maps carefully, and took a different approach to the ranch. He didn't want to park anywhere near the place they'd left the Rover. For this reason he drove not past the ranch, but down to the little marina that was in an inlet about a mile away. He had hit upon the idea of playing two cards at once. He could conceal the car and also disable the boat, which was almost certainly kept there.

He parked in the marina's lot. There was a snack shack still open, and he strolled in and bought a Coke, then, as if he owned the place, ambled down to the single floating dock. It was not difficult to recognize Morris's boat, a forty-foot twin built for speed. He stepped aboard, then slipped in under the protective canvas. Wiring a boat with two engines to deal with would be an annoyance, but he didn't need to start it. He pulled up the engine cover of the port Chevy and quickly removed the distributor cap and tossed it overboard. For good measure, he ripped out the gas line. He repeated the performance with the starboard engine.

Bon voyage, bastards.

It would be a long trek up to the ranch compound, and it would take him closer to the village than he'd like, but the steepness also meant that getting back down here fast was going to be a lot easier.

Returning to his car, he opened the rear deck and methodically equipped himself. He wore the knife in a sheath on his left hip. Easier to reach with his right hand. He tucked the AMG into the ankle holster he'd taken off its owner. The night vision binoculars went around his neck, with the fully loaded magazines in two big fanny packs. He carried the HK naked. If he had occasion to carry the machine gun in population, he'd use the case, but there was no need here. Dressed as he was, any cop was going to see him as a threat anyway, so there was no real point in hiding it.

As long as he could, he kept to the road for ease of movement. Once he left it, though, he rolled on the ski mask. White skin was easy to see even on the darkest night. Of course, with night vision equipment, he would still be easy to spot. Not to mention the animals. The dogs' noses worked all the time, but the tiger's eyes were going to be a lot better in the dark.

He had bought some copper screen at Home Depot, and had fitted it into the crown of the dark blue cap he was wearing, so he wasn't worried about a MindRay. They might have something better, but there was nothing he could do about that, or any equipment of extremely advanced design, for that matter.

His assumption was that, one way or another, he was certain to be detected. The question was, how close could he go and how much destruction could he cause before they dropped him? And they would do that, no question. He was here to kill, and therefore also to die.

He thought he had at least an even chance against the tiger, as long as he could see it in time. With his armory, he could take the dogs, but any use of his guns would obviously end all surprise, so if they came out, he planned to fade back, then return later.

His pace was steady, the road empty. The eastern sky glowed faintly. The moon was on its way.

He reached the point where the road bent slightly to the right, and as he came around the curve, he heard a sound, low, not quite an engine noise, but also not natural. Not the tiger or the dogs, so probably a machine of some sort.

Barely breathing, he slid into a cedar thicket at the roadside. Slowly, the sound grew louder. It was a motor noise. Carefully, moving just as he would when he was stalking somebody very smart, he raised the binoculars to his eyes. He looked up the road. Nothing. And yet the sound was becoming more detailed. Something very quiet, and therefore probably closer than it seemed.

It was ratcheting now, like nothing so much as large insect wings.

Then he saw it, flying right up the center of the road as

methodically as if it was a miniature drone, a four-inch wasp, black with yellow stripes on its abdomen.

No wasp flew like this and no wasp was this big, not even in Texas.

Almost certainly, it was a drone. The Pentagon could make fake insects, he'd read about them being deployed as spy cameras in Afghanistan. But this was beyond that, this was an actual, living creature that was also a machine.

Continuing directly down the center of the road, it flew slowly past.

He remained still, not moving the binoculars, not moving anything.

The creature made a slow circle above the center of the road. It hovered, facing the thicket. Flynn stopped breathing. It was a calculated risk. His stillness would make it harder for the insect's compound eyes to detect him, a fact he remembered from high school biology. Assuming that it even had compound eyes. Who the hell knew, maybe it could see the head of a pin at ten miles.

It came closer, hovering, its yellow legs folded beneath its abdomen. As any country Texan would, he recognized it as a Cicada Killer, a big, normally benign wasp that was common in the region. Big, but not the size of a jumbo shrimp, which this thing was going to top by a good half inch.

As it examined the thicket, the head moved from side to side, but not with the mechanical seeking of an insect. No question, it was under intelligent control.

The thing maneuvered into the thicket, its head now jerking quickly from side to side. So it was indeed using compound eyes, and therefore it must be a genetically modified wasp, not a machine made to look like a wasp. It was, in effect, a living camera, and whoever was watching through those eyes was trying to overcome their limitations with rapid head motions. The result was a horrifyingly odd and unnatural spectacle, a wasp moving its head as if it was on a spring, all the while flying with bizarre deliberation.

It came closer. If he made the least motion, he was going to be seen. The operator was obviously already suspicious of the thing

wouldn't have stopped to examine this particular thicket. In any case, Flynn was soon going to have to move. In another thirty seconds, he'd have to release his breath, and when he did, he would be detected.

Slowly, its wings humming, the wasp drifted among the branches, moving more skillfully than any wasp should. It came closer to him. Its head vibrated. It came closer yet, so close that he could feel the air of its wings on his cheek.

Then it was silent. Where had it gone? He waited. Had it flown away?

A tickling began, first on his cheek, then on his temple, then a scratching on his eyeball. It was on his face, crawling there, and now not only could he not breathe, he could not blink, not once, not while the tiny claws tapped his watering eye and the head vibrated, buzzing more faintly than the wings had, and the mind behind those eyes, perhaps in the village, perhaps at the ranch, tried to understand what they were seeing.

Over his head, then, there came a sudden flutter, loud, then a great, rattling clatter and the Cicada Killer's wings snarled and it buzzed away. For an instant, Flynn was confused. Then he realized that the creature was chasing a cicada that its presence in the thicket had just disturbed.

Living machines had their limitations, it seemed, insofar as they remained true to their instincts.

Breathing again at last, he reached up and rubbed his tear-filled eye.

Then he thought, "Did the thing go off chasing the cicada, or did it make me and fly away for that reason?"

The ranch was another world, where technology had entered animals and changed their deepest natures. Not only the tiger and the dogs, but also that snake, he felt sure, had been altered. Also, the doves, which was why they hadn't flocked when there was movement in the house. They had been another trap, continuing to feed and express no alarm as the dogs silently approached. All the while,

though, someone had been watching through their eyes, and sending information back to the dogs.

He slipped out of the thicket and into the clearing behind it, which was now glowing with the light of the rising moon. He was moving way too slowly, he had to pick up his pace.

He remembered as a boy lying on the plains side by side with Abby, her hand slipping into his as the moon rose, and glowing above them, the cathedral of the Milky Way.

The mystery of the stars. The tragic face of the creatures in the village. Morris smiling like a doll smiles. The eyes of the dogs, green some and brown and blue—full of humanity and the savagery of animals.

The tiger, curious, sorrowful, and brutal.

By dead reckoning now, he moved toward the compound. He remembered telling Diana “Love your gun,” and it was truer now for him than it had ever been before. The metal of it vibrated under his hands with a secret life. The trigger longed to be pulled. The gun was a life changer, an engine of evolution. The gun was holy, it was god in metallic form. The gun was freedom.

A flashlight, maybe, flickered on the path ahead.

As he looked, he also listened to the rustlings of the night, seeking for the sighing movement of a new hunter slipping through the tall grass.

When would he see the tiger? When would he see the dogs? Or would another snake seek him out, a big copperhead, perhaps, as swift as a shadow?

Before him was a long rise, and beyond it a glow. The compound, it had to be. There was nothing else out here but the village, and it didn't show lights.

Binoculars or not, the house was just an indistinct shape. But there was more movement between it and the barn, people going back and forth. How many was he contending with, five or ten? More?

He wondered if the humans involved here were really traitors to their species, or were they themselves in some way under control?

If he thought he had a choice, he would not be here, not with all these unknowns involved, any one of which could destroy him.

In the corner of his left eye, there was the flicker of a swift shadow, but when he turned it was gone.

That was the only evidence he needed. That had been a dog and therefore he had run out of options. His plan had been simple. Rush the place, spraying it with machine-gun fire, all the while seeking to target Morris.

Now, getting to the house was going to require another approach. At some point, any rush was going to be stopped by the animals.

To his left was the long white bone of the caliche road that he had just left. To his right, a clearing full of stands of prickly pear cactus and cedar. Night-blooming flowers filled the air with fragrance.

Something caught his eye—not a movement, but a shape that did not fit the terrain.

In the clearing, standing so still that he almost hadn't seen it, was the tiger. Incredibly, it was not a hundred feet away, close to its ambush range. As always, it had stalked him with almost supernatural skill.

He didn't move. It didn't move.

Three seconds passed. Five.

He couldn't kill it, not without the noise of gunfire reaching the house.

Its long body was low to the ground, but he could see it clearly, almost flowing like a liquid as it edged closer to him.

Unlike at the Hoffman place, there were no trees here to use as a backstop, just these gnarled stands of cedar, and the cat would be at a definite advantage inside one, able to make its way among the branches much more easily than he could.

A nearby sigh drew his eye to the tiger again. Incredibly, it was

now less than ten feet away. It had come on him much faster than he had anticipated, even with his knowledge of its skills. Moving slowly, he slid the little AMG into his hand.

He could not see it anymore, but he could hear its breathing, deep and slow, completely calm, no tension in it at all. Still without moving a muscle, he attempted to determine the direction the breathing was coming from. Behind him? Possibly. Possibly also off to the left. In fact, since he was right-handed, his left rear would be his most vulnerable spot. Probably, it had even factored that in, it was that smart.

A nervous finger kept touching the trigger on the little pistol. Once again, they were at what was becoming a familiar impasse. His only survivable situation was if his first shot was a head shot. At night, with a fast-moving target and a small, short-nosed pistol like this, it would be almost all luck.

There was a faint sound, perhaps an intake of breath—and he realized that the tiger wasn't behind him anymore at all, but now concealed in the cedar directly ahead.

This time, it had outmaneuvered him. The battle of wits that had begun in Montana was over.

The tiger had won.

CHAPTER THIRTY-THREE

He braced the pistol. There was a streak of movement, the sound of big paws skidding in dirt—and then the frantic blowing cry of a deer.

The tiger had run right past Flynn, moving so suddenly and so quickly that he wouldn't have had a chance to get off even a single shot.

Flynn watched it as it busied itself devouring the deer it had just brought down. The creature had died at once, and the tiger now lay on the ground gobbling into its entrails.

There was no question in Flynn's mind but that the tiger had seen him and had definitely known that it had a chance to take him.

He recalled that moment in the storm drain, the curiosity in its face, and the sadness.

The tiger had self-awareness, and the tiger apparently did not like the situation it found itself in. "Slaves are dangerous, Mr. Morris," he thought to himself. Good.

He didn't plan to push his luck, though, so he left it to its kill, fading quickly back through the cedar thicket, then heading due east toward the highway. He was glad that he trained himself in the skills of orienteering and dead reckoning. He didn't need a compass to make sure that he didn't accidentally close the distance between himself and the house instead.

As he walked, the ground rose slowly, until he had a huge view of Lake Travis, dotted with the lights of boats. Very faintly, he could hear music echoing across the waters.

He had to win this battle this night, that music must never be silenced.

Now he was directly behind the house, and about half a mile out. He understood, though, that he was looking at an unknown world full of unknown creatures—insects that were really observation platforms, snakes infused with extreme aggression, human-dog mixes, the tiger, and who knew what else? What of the creatures from the village? Nothing would prevent them roaming these hills at night. They had overpowered him so easily that if he so much as spotted one from a distance, his only choice was going to be to blow his cover by killing it immediately.

Never standing to full height, slipping quickly from cedar thicket to cedar grove, he moved as quickly as he could.

When he once again reached the caliche road, he paused to see if he could gain any additional information from remaining entirely still for a time. He backed into a stand of cedar. It would somewhat cover his scent, should the dogs come around, or the tiger decide that he was, after all, to be attacked.

Using the binoculars, he reconnoitered up and down the pale strip. No animals in evidence except an armadillo about a hundred yards away, snuffling for grubs along the roadside. Or was it only that?

Armadillos gave dogs a wide berth, so maybe it was an indicator that they weren't nearby. More likely, though, it was like the doves, a subtle deception. So it probably meant that the dogs were indeed nearby.

There was another noise, but this time it was more rhythmic, not the hum of wings.

He stepped out into the road, hesitated, then reached down and felt the ground—and felt a vibration. He pushed the binoculars to his face, and saw, just nosing around a bend in the direction of the highway, the glittering grillwork of a car with its lights off.

It was too late for him to jump back and too late to move carefully enough to conceal his tracks. He leaped ahead and rolled into the brush. Then he froze. The car had a full view of him now, and movement attracts the human eye, especially in the dark. Even under

conditions where a man can't see a boulder ten feet ahead of him, he can pick up movement.

As the car approached, he remained absolutely still. He was looking at a GMC Acadia, black, moving slow enough to avoid kicking up dust in the dry roadway.

Was this another attacker? Some sort of outlying patrol?

A shaft of moonlight rested on the driver's face as the vehicle crept past. Flynn saw a woman's hair, some kind of a sweatshirt, and a face with a distinctive, immediately recognizable profile.

He lay there in the ditch, his mind racing. *Diana?*

But no, it was impossible. She had recruited them all, she had created the team. But it was a very special team, wasn't it, consisting exclusively of the few police officers who had complained to the FBI that the abductions were real.

They had all been slaughtered, all but one.

Had it been another deception, designed to silence the few people who had realized what was happening and were equipped to do something about it?

Still puzzling it out, he rose from the ditch and faded back onto the far side of the road, into the land that belonged to the state wildlife refuge.

From his experience as a detective, he knew not to draw conclusions until the facts came into focus, and they weren't in focus now. In fact, they had just gone out of focus—way out of focus.

He had never known that it was possible to feel this isolated and alone.

He also knew from the bitter anger that he felt that he had begun to love Diana—not that she had replaced Abby, but that, as this ordeal went on, he had been finding a place in his heart for her.

But who did she love? Who was she, really? Cut away all the promises and all the claims, and what was left was an ID that she admitted was false.

He put some distance between himself and the ranch, crossing a limestone hill, stopping only when he reached a bluff. Far below was the lake. This was the bluff where he'd seen the caves. Were they of any use to him now? Maybe, but the chance of getting trapped was too great.

He had definitely been observed by the tiger and possibly in other ways, so he could not risk remaining on this side of the ranch. Also, he needed to regain his pace. The moon was already well risen, the land flooded with its glow. The more he hesitated, the more his danger increased.

Even so, this whole side of the property was now compromised. He had no choice but to descend the bluff, go back across the road near the marina, and climb up to the ranch from the other direction.

If he was fast, this might work.

He clambered down, intending to double back and make his way along the lakeside until he reached the stream, then cut through it and return in his earlier scent trail.

When he was about halfway down, there was a flash from below. It wasn't bright but it was followed by a familiar electric crackle that surprised him so much that he almost lost his grip. Struggling not to fall, he turned to look down—and saw, incredibly, that the entire clearing at the foot of the bluff was filled with the creatures of the village with their great, stricken eyes. Four of them had Tasers, and a fifth had something that from this distance was far more dangerous. This was a rifle, probably one that he or Mac had brought into the village.

Laden with the machine gun, the heavy magazines, and his other equipment, Flynn nevertheless had only one maneuver. He had to climb back the way he had come.

Immediately, a rifle shot rang out. It was wide to the left, perhaps fifteen feet away and low. Knowing as much as he did about shooting, Flynn knew to move toward the impact point, not away from it. And indeed, this caused the shooter to miss again, this time by five feet to

the right.

If he was lucky, this would work one more time, maybe two. The shooter was small, therefore clumsy with the rifle. But with unknown capabilities. He increased his speed.

Another shot struck the limestone, this one close enough for him to feel a spray of shattered stone against his cheek. The shooter was either brilliant or very poor, to be trying for a head shot.

Another shot, and this time Flynn felt the heat of it. Limestone fragments from the bluff stung his neck.

The next shot would make it.

He reached the lip of the bluff.

Pulling himself up with all his strength, he rolled onto the top as two shots in quick succession slammed into the limestone just below him.

The shooter had found his target, but an instant too late.

They were racing up the bluff with the ease of creatures made to climb.

He ran, speeding toward the road. He was desperate now and he knew it. His only hope was to make it back to the marina and get to the car. But they could flank him easily, and there were the dogs and there was the tiger, and Diana out there, who could be extremely dangerous, as much as she knew about the way he thought.

The car. Now. His last chance.

CHAPTER THIRTY-FOUR

He stayed off the road itself, leaping stands of cactus, darting around cedar thickets, stumbling when he came upon a concealed draw, then picking himself up and continuing on.

He ran hard and far, passing through the silent countryside with the swiftness of a deer, quick but vulnerable.

He couldn't hear a sound behind him or around him. It was as if he was entirely alone. And now he had to add a new concern, which was the silent helicopter. Now that they were certain he was here but no longer sure of his location, it might well become involved.

He reached the marina, which was closed and dark. He rejected the idea of taking one of the boats. Even if he had time to wire it, they would then know where he would appear next, somewhere along the lake.

His car was the only one left in the hard-dirt parking area. He ran to it and got in. As he inserted the key in and started it, he looked up and down the road, seeing no movement.

An explosion shattered the air, and for an instant he thought the car had been bombed. But it was a rifle bullet. It had shattered the windshield. The shooter was in the brush fifty feet away.

He threw the car into gear and floored it. As he accelerated, the little car fishtailed wildly in the dirt of the parking area. Fighting to regain control, he pressed the gas pedal and it leaped ahead.

Dust churned up behind him as he sped along the marina road. His plan was now to violate all the rules. Instead of running from this impossible situation, he intended to rush the house and just shoot until they got him.

But the moment he turned into the ranch's road itself, the black GMC that Diana had been driving appeared, blocking his progress.

Hauling on the steering wheel, he turned into the pasture and went slamming through a mass of cactus so large that his tires spun in the pulp.

A second later, the truck was behind him, its grill filling his rear window.

As he maneuvered through the pasture, he fumbled the backpack open and worked the machine gun into his hand. To stop the vehicle chasing him, he needed a perfect burst. He levered the gun to semi-automatic mode.

Was he about to kill Diana?

He put the thought firmly aside. This was work, feelings came later.

The truck kept close, so close that he couldn't see the windshield. The driver wasn't a fool, he probably knew that if Flynn got a shot at it, he was a dead man, and also that Flynn wasn't going to waste bullets firing into the radiator.

A series of cracks, nicely measured, resulted in his own rear window being blown away. A powerful round was in use, sounded like a .308, probably a NATO round. Blow his head right off.

He swerved around some cedar, then skidded into more cactus, then plunged down into a draw. Behind him, the GMC blasted through the brush, pushing dense cedar aside like it was grass.

Again there was gunfire, and this time Flynn felt the whole car tremble as it took the shock of a round penetrating the trunk.

So they were going for the gas tank. Smart enough. He still had no shot.

Something had to be done, or he was going to lose this thing right here and right now. He drove on, unable to determine a productive course of action.

Then he saw water, then again, ahead and to the right, the lake, its surface far down another bluff.

Okay, here was a maneuver for him. He got the HK into the backpack and opened his door. Now he was driving fast along the bluff's edge, doing forty, fifty, the car shaking itself almost to pieces. Outside his door, the cliff fell away.

This was going to be a very damn close thing. Very close. He didn't often bother God with his crap, but he bothered God now. A lot.

He spun the wheel to the left, causing the Cruze to literally go into tumbling flight. As it did, he dropped out of the open door and onto the cliff's edge.

The car went spinning into the lake.

He let himself fall and keep falling, breaking his plunge as best he could. Finally, he was sliding, then some roots and a loose boulder temporarily stopped him.

Far below, the car struck the water. Nothing left but a red trunk, then the night blue of the lake, the car gone forever.

He looked up, and saw five feet above him another of the caves. Yesterday's deathtrap was today's refuge.

As the truck snarled back and forth on the ledge, Flynn clambered into the cave. How well did they know him? If Diana was involved, they would be certain that he hadn't been in that car when it struck the water.

A moment later, he had his answer. It came in the form of gravel dropping down past the mouth of the cave.

So they knew their man.

The air coming out of the cave was cool—too cool, in fact, for this to be a small place. Back there somewhere was a very large cave indeed. Limestone tends to cave out over time, and this was old country.

He took his binoculars out of his pocket and saw, stretching away behind him, a substantial cavern. Its ceilings were cracked, there was rubble everywhere, and the only access to deeper areas was through a series of openings that looked like real traps, the kind of places that

would never let you find your way out.

No time to lose, though. As somebody dropped down outside the mouth of the cave, he plunged into the opening with the strongest breeze, and found himself squeezed tight as he forced his way along.

Confined spaces were never pleasant, and he had been sensitized by that damn coffin, but he kept pushing, dragging the backpack behind him, one of its straps around his left ankle.

He came out into a larger space—and saw all around him huge, glaring eyes. His heart practically exploded out of his mouth, but he choked back the scream as he realized that these were not living creatures but paintings of the gods of some forgotten tribe of Indians. They were beautiful, tall, staring balefully, their arms pointing toward the ceiling—where, when he raised his head—he saw a magnificent representation of the night sky.

Scraping echoed through the cave as his pursuers started down the shaft he'd just come through.

He headed deeper, walking, stooping, running when he could, not really keeping track of his movements. He could get lost in here, no question. But no matter what kind of twists and turns he took, he always heard behind him the scrape of their footsteps, and their quiet grunting as they negotiated the next narrow passage.

No more than one or two of them, he thought.

He smelled dry grass—just a whiff of it, but it was there. That bit of air had come from the surface. So there was another entrance ahead.

Sucking air, painting the way ahead with infrared, he was soon moving steadily upward.

Behind him, the sound of their scrabbling had grown louder.

A glow ahead, then a faint voice from behind shouting at him to stop. He did not stop. Then there came the crack of a shot. The bullet was wide, but not very. He ran away from the sound and toward the glow—and found himself clawing his way out through a big stand of cactus, clawing and pulling at it, and forcing his body out to the surface.

Ignoring the torture of a thousand needles, he came up through the cactus—and saw, not fifty yards away, the truck. As he trotted toward it, he could hear that its engine was still running. He didn't wait, he ran toward the vehicle, putting every single bit of strength he still possessed into the sprint.

The truck was empty, so he now had two choices. He could take the truck and head back to the highway and get the hell out of there. Or he could rush the ranch compound with it.

He turned the truck toward the house. His job. His battle.

He did not see the two figures in the road behind him, did not see one of them yank an old Stetson off his head and hurl it to the ground in frustration.

CHAPTER THIRTY-FIVE

He stopped just out of view of the ranch to check his weapons a last time.

The HK was in good shape, and you wouldn't expect a weapon this durable to have any problem with a little fall down a cliff. All the magazines were there.

He stuffed the AMG into the pocket of his jeans and transferred the extra machine-gun magazines to his belt. Not the most secure way to carry them, but it was what he had. His most critical moments would be during exchanges. He'd trained with an HK and knew that he could pull and set two magazines in just under three seconds. Good time, but maybe not good enough.

He pulled the vehicle forward until he could see the compound. The house appeared quiet, the lights out. Beyond it, the barn was also dark. To every appearance, the place had been abandoned.

He took deep breaths, cleared his mind, and concentrated his attention on the world around him. He saw, just for an instant, some camouflage in motion about two hundred yards away. Somebody was in among a stand of mesquite, using the mottled shade as cover against the moonlight.

If he'd seen them, they could see him. He put the truck in gear and began moving toward the house. He drove quickly. There was no way for him to know whether or not they had realized it was him in the truck. He also didn't know how many people here were capable of putting up a defense, let alone what form their weaponry might take, except that it would be exotic and it would be devastating.

He took the HK in his left hand and steered with his right. He passed the house, heading toward the area beside the shed that

covered the entrance to the underground chamber.

Methodically, as he prepared himself, he tried once again to put aside his policeman's confrontation training. He could not announce himself. He had to just do this.

He got out of the truck and held the HK ready.

As he'd driven across the compound, there had been no movement from either the house or the barn.

Something hit him in the right shoulder with such force that it spun him around. A flash of pain shot down his chest and up his neck, but he regained his balance, turning to face the direction the blow had come from.

There was no nearby cover. He looked farther, and there, in the shadows of a cedar thicket, he saw a darker area that a careful observer could see had a human outline. He must be using some sort of stun weapon.

Just briefly, Flynn squeezed the HK's trigger. It blared out a burst and the figure sank. Just that quick. That impersonal.

Four shots, so twelve still in the magazine.

He moved closer to the shed, preparing for a reaction to his burst of machine-gun fire. But nobody moved in from the perimeter and the house and barn remained quiet.

He considered going down the ladder into the storm cellar, but decided to explore the shed first.

The door was unlocked, so he pushed it open.

This was probably an old well house. Before entering, he looked up at the grandeur of the sky. This was probably the last he would see of the world. He hoped that there was some sort of afterlife. That was all, hoped.

He entered the shed. Again, absolute quiet. There was an old stove pushed against one wall and a wooden trapdoor in the floor. Beneath it, there had to be opposition. That was fine by him. Just as long as he got to Morris, he didn't care whether he survived or not.

He lifted the ring, then hefted the door slightly. It wasn't barred from below. No, this was obviously the path they wanted him to take. The guy in the thicket had probably been out there to incapacitate him with the stun gun and carry him down.

When he pulled it up, the door made no sound. Well-oiled hinges, lots of use.

He climbed down the old ladder to what had once been the root cellar, then took a narrow spiral staircase, much newer, that led deep.

The closer he got to the bottom of the narrow space, the stronger the odor became of blood and burned flesh, of burned hair and another stench that cops come to know. It doesn't have a name, but it's the smell of things that have gone horribly wrong, that clings to places where violence has taken place. It's made up of sweat and blood and shattered lives, mixed together as the odor of fear.

The room glowed with soft fleshy light that came from the walls themselves. It was not a normal room, not a human room. Like the village, like all the rest of this place, it was an outpost of another world.

There was also a sheen of blood on the floor, and the stink of the place was so powerful that he had to fight hard not to gag.

Again, he heard the distant pulsation. He began moving toward it.

Machine gun at the ready, he went deeper. The pulsation became more and more distinct. Now it didn't sound so much like a boiling pot as a thumping assembly line.

Ahead there was a figure, short, quick, dressed in black, opening a box of a familiar kind.

A moment later, something that looked like a glowing fireball sizzled into existence immediately above the body inside the box, which was a young woman, very pregnant. She was motionless but she did not look dead or even asleep.

Certain insects, he recalled, paralyze their prey so it will remain fresh for use later.

Her face was in shadow, but when he saw it clearly, he was confronted by such beauty that he gasped.

Immediately, the creature in attendance turned toward him, its movements snapping fast, like those of a quick snake.

There was a flash and for an instant Flynn saw in black outline the skeleton of the young woman and the skeleton of the baby inside her. The fetus moved its hands toward its face in surprise.

The light filled the room with a brightness like thick, glowing milk.

An instant later, the light was gone and his eyes were dazzled, and someone was standing in front of him. He felt hands on the machine gun and knew that in a moment it would be gone.

He didn't wait for his eyes to recover. He didn't wait for anything. He pulled off a burst and the creature flew backward, its arms flailing, its mouth and eyes wide with surprise.

Four more shots. The magazine was now half empty.

He stepped into the fight, moving quickly to aim the gun at a second creature. Had it been fully human, its face would have been the sort that cops see late at night, a whore's face, worn and tired and profoundly lonely. As it was, the great blue eyes were not only sad, they were tired. Also uncaring. He thought that it didn't care whether it lived or died.

Flynn did two shots, no more needed, and the figure flew backward into the wall, then slid to the floor.

He went to the young woman, whose eyes were now so glazed that he feared the worst for her. Working quickly, he performed CPR, but he couldn't get a pulse.

Light glared from behind him. As he threw himself to the floor, he turned into its glare.

"It's over," Jay Elder said.

If you have a gun, best to let it do your talking. Flynn depressed his trigger and the last burst on this magazine brought a brief shout, then Jay Elder disintegrated.

Replacing the magazine as he rolled, Flynn pushed the table over, creating a shelter for himself behind it.

Immediately, a stun weapon smacked the table, causing it to jerk back into his face. Four more of the creatures from the village rushed him. Another burst took them out.

Silence fell. The air was thick with the sickly stink of cordite, the powerful reek of blood, and a strange odor, the same cross between sulfur and cinnamon that had filled Oltisis's space.

When there was no more fire directed at him, he took out his small, powerful LED flashlight and aimed it around the darkened room.

Elder was on the floor, his chest a mass of blood. Lying against the spiral stairs was one of the creatures from the village, also dead. In front of him there were the remains of at least six more of the creatures.

Flynn pulled out the empty magazine.

There was a whisper of movement in the dark.

A light came on, and suddenly he was face to face with the narrow, gleaming face of Morris. "Don't reload, Flynn," he said, "this is finished."

Flynn said nothing.

"You've cost me," he continued. "I can still make some use of her, but not much. And the infant is already sold along, so that means a refund. I don't like to do refunds, Flynn."

"What in hell does that mean, sold along?"

"I'm just a businessman trying to make something work in an out-of-the-way place that happens to contain some nice genetic material. This is a mean little planet and it's dying. I want to get some of what it has to offer before you're all gone. That's all."

"But it's a crime where you come from, doing this. That's why your cops are after you."

"In some parts of our world, it's a crime. Not in all."

"You've turned yourself into something that can live freely on

Earth. And you're struggling making more. That's why your helpers look like that."

"They aren't 'helpers.' That's a work gang, nothing more. When they're used up, they'll be terminated."

They were slaves, as Flynn had suspected. He realized why they'd been made to appear so strange. It was so they couldn't walk the streets and therefore couldn't escape.

The ability to manipulate life had created a whole new type of crime.

"What are you, Morris? You're not like Oltisis, are you? Not the same species?"

"Consider this a living costume. It's not pleasant and, thankfully, it's temporary. But to answer your question, I've been a lot of things in a lot of places." He gestured at the carnage around them. "This is costly. You're going to have to pay."

"What happened to my wife?"

"Your wife?" He looked over toward the dead woman. "That's your wife?"

The realization that he had not the slightest memory of Abby made Flynn's anger flare.

"You will go where she has gone," Morris continued. "Or you will die right here, right now." As he spoke, he slipped a rod into his hand, blunt and black and thick. Its end glowed like a coal. He waved it toward Flynn.

Searing agony. The machine gun flew from his hands as he grabbed at his chest, tearing the cloth away from his burning skin.

But he wasn't on fire.

The HK clattered to the floor.

"If I put a charge in you, you'll feel that pain for hours, until you die of exhaustion. Or you can come with me." He sighed, and Flynn knew it as a player's sound of satisfaction, a sound that comes when the trump is laid down or the queen trapped.

CHAPTER THIRTY-SIX

Inside himself, Flynn fought for balance. He had to restore his mission, so he had to get past this checkmate, and he would. The only checkmate he would accept was death.

Morris said smoothly, “It’s not going to happen your way, Flynn. It’s going to happen my way.”

Flynn eased his foot toward the machine gun on the floor.

Morris kicked it away. “You need to understand that you’ve never come unhooked from my line.” He gestured vaguely. “The life you have known is over.”

Flynn still had the pistol in his shoulder holster.

“The pistol, too. You can’t win, Flynn, I’m sorry. I’m smarter than you are.” He glanced around the room. “I oughta just burn you, you bastard.” The stout little device in his hand hissed and its spark grew brighter. Morris smiled. “Fascinating, isn’t it? Come on, we’re going over to my factory.”

Morris directed him to ascend the stairs. He was caught, no question, but he concentrated on every detail as it unfolded. He needed not only to get an opening, but to see it. He’d watched many a fugitive miss a wide-open path to safety.

Outside, moonlight silvered the world.

“Get in,” Morris said, gesturing with his weapon toward the GMC. “Elder was a good man. Making off-the-scale money. I can pay at that level, you know. Gold. You join me in this little, insignificant business I have going here, Flynn, and you’ll be a billionaire in a year.”

Flynn said nothing.

“I’m just sayin’, Flynn, the money is serious.”

As they entered the vehicle, Morris was careful with his weapon, keeping it constantly ready. “At home,” he said as he started the car, “the equipment is better.”

“Where is home?”

Morris didn’t answer for a moment. He began driving across the grounds, heading out into the brush. “You know, I don’t think I can explain that to you. It’d be like explaining this car to a chimpanzee. Can’t be done.”

Flynn thought, “So the truth is, it’s somehow vulnerable.” He would not forget Morris’s inadvertent admission. If he lived.

They drove along a rough pasture track to the village.

From this perspective, the structures were really amazingly well camouflaged. They appeared to be a few piles of brush, the sort of thing left behind when cedar is cleared. Only from overhead could you see that it was organized around a central path.

Flynn had been watching Morris carefully, looking for an opening. So far, there had been none.

“Now, what’s going to happen to you in there is that the contents of your mind—all of your experiences—are going to be taken out for sale to people who don’t have the rich opportunities that life on Earth offers.”

It probably wasn’t bullshit, but he couldn’t say that he understood it.

“Your body will be dissolved and reduced to recoverable stem cells, which will be sold on the black market.” He laughed a little, and in that laugh Flynn heard a very human sound, the glee of a psychopath. He regarded Flynn with wide, avid eyes.

“Why are you telling me this?”

“You’ve caused me extraordinary trouble. I won’t deny it.” He smiled his soft, haunted smile. “I just want you to know how it’s done. What was done to your wife.”

A searing flash exploded into the car and, absolutely without

warning, half the village burst into flames. Instinct caused Morris to whirl away from the blast, in the process dropping his weapon.

Instantly, Flynn reached out and grabbed it, and by the time Morris had looked back, it was pointed at him.

Morris's face told his story. He was horrified and he had no idea what was going on. Neither did Flynn. Opening the door with his free hand, he backed out of the vehicle—and found himself three feet from the tiger. From inside the truck, there came a sharp burst of laughter. Morris began to get out the other side.

Flynn's problem was that he had no idea how to use this weapon. It was a featureless black cylinder, and the end was no longer glowing.

In the firelight, the tiger's eyes flickered. The face was not angry, it was not cruel. Instead, he was seeing that same questioning expression. Very softly, he said, "Help me."

Morris came around the car. Another of the weapons was in his hand, and the tip of this one was glowing.

Frantically, Flynn shook his, twisted it, squeezed it until his fingers went numb.

Morris held his at arm's length.

Flynn stared helplessly at the red tip.

He was hurled backward, falling against the tiger.

But the tiger backed away. Then Morris was on top of him, slamming his face with the fury of the mad. He'd seen it before, he'd felt it before. Guys on angel dust fought like this. Crazyies.

From above, there came a powerful wind, sweeping up clouds of dust and causing the tiger to crouch, then turn away.

There was a snap and a deafening roar and the other half of the village burst into flames.

Snarling, Morris leaped to his feet. He raised his weapon. The red went to white, then to iridescent blue. But he didn't point it at Flynn, he pointed it overhead.

Flynn looked up to see a shape not fifty feet above them. It didn't

make a sound, but it was visible in the firelight. It was the silent helicopter.

The weapon glowed brighter. The base of the helicopter began also to glow. It swerved away. Morris followed it. The helicopter began to smoke.

Flynn was getting to his feet, but then the tiger finally decided to charge, and he was forced to roll aside, throwing up his arms to defend his face.

The tiger went right past him, its immense bulk flying through the air with startling ease.

It hit Morris directly in the chest, causing him to plunge fifty feet across the compound and crash to the ground. His weapon flew off into the night. But he was immediately back on his feet. "Snow Mountain," he said, "do *not!*"

The tiger stared at him.

Overhead, the helicopter began to work its way lower. The remains of the village burned furiously, ringing the scene with dancing flames and casting terrific heat.

Wobbling, the chopper reached eye level. A voice called out, "We can't figure out how to land this damn thing!"

It was Mac. Sitting beside him was Diana.

The chopper went up, disappearing into the night sky.

Flynn saw that Morris was on his feet. Snow Mountain was close to him. He wasn't attacking, but he wasn't doing anything else, either.

Flynn dodged into some shadows, trying to minimize his exposure to Morris.

The wind from above returned. Got stronger. The chopper appeared in front of him, wobbling uneasily at eye level.

Diana peered out. "Flynn, you're a pilot, what do we do?"

"Draw the cyclic toward you!"

Mac yanked it into his stomach and they lurched away into the

dark, then came rocking back.

Mac yelled, "That didn't work!"

"Reduce power!"

"Got it!"

"Move the cyclic back, *barely!*"

They were hovering now.

"Reduce power more."

They dropped to an altitude of about four feet. He could reach out and touch them. The chopper wobbled, began drifting into a slow spin.

In seconds, they would lose it. He saw the truck moving. Morris was getting away.

"Jump," he shouted, "do it now!"

But the chopper shot up into the sky. The truck was quickly disappearing into the dark. Then the helicopter reappeared, nose down, dropping fast. Not the right attitude for a chopper, not this close to the ground. But Flynn could do nothing. They were going to pile the damn thing in.

At the last moment, it lurched. It spun on its axis. Once again, it hovered at an altitude of ten feet.

"See, the bastard won't land! It's got a fuckin' mind of its own."

It did, Flynn knew. Somewhere in there, a sophisticated crash avoidance system didn't like Mac's piloting.

"Jump or die, damnit, both of you! Do it NOW!"

Something dropped out. Flynn recognized it by its shape: it was a shoulder launched urban assault weapon.

Where in the world had Mac come up with a thing like that?

He'd probably never know.

The chopper was still at about five feet. Shielding his eyes with his forearm from the hurricane of dust it was producing, he ran forward.

“It’ll take off again,” he yelled, “*jump!*”

First, Diana leaped out. She tried to roll off the kinetic energy but did it like she’d seen in movies, not the way that worked.

Mac dropped down, rolled expertly, and danced to his feet.

As he came out, Flynn dove into the cockpit and pushed the collective all the way to the floor, causing the rotor blades to lose lift. The chopper dropped to the ground. He turned off the ignition switch and the engine quit.

“That sucker’s alive,” Mac said. “And it don’t like me.” He was caked with dust.

Flynn could no longer see the truck.

Diana hobbled to her feet. The dirt in her hair made her appear to have gone gray.

“Sprain?”

“I’m fine!”

Mac produced a Magnum. Diana had one, too. Good.

Diana dug another Magnum and an iPhone out of her backpack. “Take these.”

Flynn took them. “Safe to use the phone, I wonder?”

“Right now,” Diana said, “all he has is that truck. His money, my friend, is gone. His life is gone.”

“You hacked him?”

“To the bone. If he has cash in his pocket, that’s what he has.”

At that moment, the ground shook. Soon, more flames could be seen flickering through the trees.

“He just did the compound,” Flynn said.

“Then he’s a total bum with nothing but a busted car. ’Cause he ain’t even got any insurance policies. Somebody canceled ’em. And his deeds. They’re gone from the county record office. Plus the electronic backups. Sometime later tonight, that truck’s gonna run out of gas and he’s gonna be walking. That’ll be what he has. Feet.”

The hell with that, he had his life, which was not acceptable.
Flynn ran toward the helicopter.

CHAPTER THIRTY-SEVEN

Gathering up the UAW, he told Diana and Mac, “You two stay here, get away from the village, do back-to-back defense. Shoot at any and all movement and expect that tiger to come around at any time. But don’t drop it unless it charges you. The tiger is conflicted, and that might be valuable down the road.”

He got into the pilot’s seat and restarted the engine. As soon as it ran up, he loaded the rotor with lift and rose into the sky.

The lights of structures that lined the lake shot past as he worked the foot pedals to bring the chopper’s yaw under control. At the same time, he looked toward the ranch, hoping to spot the truck in the glow of the fires burning there.

No joy. The truck wasn’t near the compound, and beyond fire light, the land was dead black.

He took the chopper into an uneasy hover, then leaned out of the open door with the UAW on his shoulder. Its sight was light-sensitive, and he soon spotted the truck bouncing through the brush, heading cross-country toward the main road, rather than going anywhere near the ranch’s driveway or the smaller road that served both it and the marina.

He began working the helicopter closer. He was no expert with its controls, though, and it was a struggle.

The UAW had just one rocket in it, so his first shot would be the one he got. The Magnum wouldn’t be useful, just noisy, so the rocket was his chance.

Working the cyclic and the collective, he dropped down and moved closer to the truck at the same time. It was invisible to the naked eye,

but easy to see in the sight, and the closer he got, the more the crosshairs converged. But then he would overcontrol the chopper or undercontrol it and the whole process would need to be repeated.

He had just two hours training on helicopters. He hadn't even soloed. Still, this commercial-military hybrid was relatively easy to fly, and he was beginning to be able to close in nicely when the whole airframe started shuddering, the collective came up on its own and the engine went to full throttle.

The chopper went up so fast it was like being in a high-speed elevator. Flynn was normally almost silent, but this caused him to cry out with surprise.

The autopilot had taken over. It was probably controlled by Morris down in the truck.

The altimeter was winding up at breakneck speed. As he watched, he went through two thousand feet.

Okay, think. He was not going to overcome this situation using manual control. At best, the battle that would ensue between him and Morris and the autopilot would crash the chopper. He surveyed the instrument panel. No obvious autopilot override.

There was one thing he could do that had to work. Also, though, it might kill him.

He took the UAW up and sighted in the speeding truck, but the sight didn't even activate. Far out of range.

So this was it. He was down to one choice, and it was a really bad one.

He checked his straps, then reached down and twisted the fuel shutoff valve, stopping the engine. The warning horn sounded as the wing went into autorotation and the ascent stopped. The autopilot was still controlling it, though, and as soon as Morris realized what he'd done, he would try to crash it, no question.

Working quickly, he flipped circuit breakers, hoping to kill something crucial, like the autopilot's telemetry. Turning off its power supply wouldn't matter. Autopilots have backup batteries.

As he flipped more and more switches, the instrument lights went dark, then the instruments themselves ceased functioning.

He was now on straight visual in a dead black night, with only the distant lights along the shore, and those of the various fires below, to orient him.

Once again, he brought the UAW back to his shoulder. As the chopper lost altitude in uncanny silence, he searched for the truck.

It was moving at breakneck speed, not a hundred yards shy of the main road. Flynn didn't care whether this bastard's bank accounts had been hacked or not, or what had happened to him. He needed killing.

As the chopper continued to descend, the truck grew in the UAW's sight, until finally the crosshairs began flashing yellow.

A few more feet. He dropped the chopper's nose. Maybe they would die together. Fine, he didn't care.

The crosshairs moved closer and closer together. Then, very suddenly, they were red, and in the center of their cross was the truck.

He fired the rocket, which left the tube with a ferocious roar and a kick.

He tossed the tube behind him out of the way and concentrated on piloting the chopper, which was now rapidly losing altitude.

A blinding flash of white fire announced the end of the truck, and Flynn roared, "Abby, baby, Abby baby, I love you!"

He couldn't bring her back, but this was the end for the evil bastard who had destroyed her, and that felt damn wonderful.

Police procedures didn't matter. Morris was not human, therefore the only law that applied was the law of jungle, and Flynn did that kind of law as well as any of the criminals he so despised.

Using the cyclic, he got the chopper aimed straight toward the dying fires of the village. As he came in, he heard both Magnums being discharged.

Adjusting the collective to decrease lift on the rotor, he dropped down as fast as he dared, hitting the ground approximately a hundred yards from the village.

His jaw snapped, a flash went past his eyes.

The helicopter became still. His ears rang from the shock of the impact.

Before moving, he checked himself: hands okay, arms, feet, legs. If he was going to go into a firefight with impact injuries, he wanted to know where he was impaired, and what it would do to his effectiveness.

He jumped out of the chopper and approached the village. To the west, huge flames still gushed up from the ranch compound. Further south, a smaller glow marked the position of the truck.

Diana and Mac came out of the underbrush.

“I thought you crashed,” she said.

“No. What were you two firing at?”

“The tiger’s out there.”

“Has it charged?”

“You can’t ask us to take a chance like that!”

She was right, but he was also relieved when, very suddenly and in absolute silence, Snow Mountain appeared. His stripes were such perfect camouflage in the flickering firelight that it almost seemed as if he had materialized out of clear air rather than walked out of the shadows.

He came closer. Mac readied himself to shoot again.

“No,” Flynn said.

Broken only by the crackle of flames, the silence the tiger brought with him was as strange as a cry from a distant world.

Flynn reached out and laid his hand on the lion’s head—a small human hand lost in the fur of the immense animal.

“You could sell that thing for a damn fortune,” Mac said.

“Don’t even think about it.”

The tiger looked off into the dark.

Flynn was relieved that Diana wasn’t the traitor he had thought her to be. “We’re a good team,” he said.

Snow Mountain turned and slipped into the darkness.

Mac ran after him. “Hey!”

“Leave him be, Mac.”

“I don’t get my skin or to sell him to a zoo or nothin’. Shit!”

“He’s got his own demons to deal with, that one does.”

“He’s part human, isn’t he?” Diana asked.

“Be my guess. And who knows what else?”

“What’ll happen to him?”

“He’ll roam the land, make some kind of a life for himself.” He looked off in the direction he had gone. “That’s the loneliest creature in the world.”

A cathedral silence settled, as they all contemplated together the plight of Snow Mountain. In the distance, a dull explosion echoed from the direction of the compound.

“How did you ever get out?” Flynn asked Mac.

“I had to do a good bit of killin,’ tell the truth. Is that murder, doin’ those little gooks?”

“There’s no law to cover killing aliens, if that’s what they are. There will be, but not now.”

“Well anyways, it was self-defense.”

He thought of what had been happening at the compound, of the fate of the captured. “It sure was. I thought you were a goner.”

“I was acting.”

Flynn recalled that he’d been a terrific Dracula in junior year at Menard High.

But for the crackle of fires, everything was quiet.

Mac looked from one of them to the other. Slowly, a smile came into his face. "Have we won?"

Flynn noticed that Diana's hand had slipped into Mac's. For a moment, he felt shock. Disappointment. Then he forced it back inside. He'd been lonely for a while, so he'd stay that way. Fine. Abby was with him and she had no plans to take up with some damn crook.

He reflected that whole worlds can change in a moment on the battlefield, and that had happened here.

He smiled back at the two of them. "Right now, we've won."

Above the sirens, because it was so close, there was a sound that made Flynn freeze. "Back to back, brace the pistols!"

Dogs came leaping and snarling in at them from every direction at once, their bodies speeding like liquid fire, their teeth flashing, their human eyes filled with human hate.

With the care and expertise of a man, one of them grabbed Flynn's throat with its long claws. Its mouth opened and it was slashing with its teeth when he blew it in half. For a moment, the jaws continued snapping with shark-like fury, then, its blood gone, it dropped away like a stone.

Behind him Diana's shot went wild. As she screamed and another dog leaped on his back, he turned and blew off the head of the one attacking her, then killed two more at her feet.

All the while others piled on him, until their weight staggered him and he fell forward between Mac and Diana, then forced himself to turn into the ravening pack that was on his back, and fired four more times, taking all of them out, leaving them in pieces on the ground around him.

Then they were gone.

Mac hung his head.

Diana sat on the ground covered with blood and sobbing.

Flynn said, "There are eighteen. We did twelve. The others won't try again."

Diana dropped her pistol into her backpack.

“Unless we disarm ourselves. You love your gun, remember.”

“It’s too hot to hold.”

“It’ll cool off. Mac, you okay?”

“I’m alive.”

“We’re done here,” he said. He could hear pumpers churning over at the compound, but great masses of smoke were still pouring skyward, lit by the fires in the underground chambers.

“Those guys gotta be wondering what the hell was going on out there,” Mac said.

“Probably think it was some kinda drug factory. Probably figure it belonged to you.”

“Me? I don’t have any penetration into Travis County. I’m way west of here, buddy.”

“It’s time for us to go on down the road,” Flynn said. “Morris and his operation are done.”

As the three of them walked out to the highway, Flynn saw that Mac and Diana were still hand in hand. In silence, Flynn walked on ahead.

Once they were on the road, Mac directed them to the parking lot of a closed strip mall. The Range Rover was there, pulled up behind a dry cleaners.

“Backup transportation,” Mac said. “We stationed it here last night.”

Last night seemed like a thousand years ago.

Moths and bats swarmed around the floods that lit the parking area. In the far shadows, a young couple necked in a convertible. Music echoed in the distance.

“I thought we’d go on over to the Oasis, knock back a few,” Mac said. “Sounds like there’s a band goin’.”

On the far distance, Flynn heard country music, the wail of a violin,

the frantic twitter of a mandolin.

He preferred blues to bluegrass.

They drove to the bar, which overlooked the lake. In the parking lot, though, Flynn hung back. He'd seen a taxi rank, cabbies trolling for kids too drunk to drive, and smart enough not to.

He watched Diana and Mac disappear into the lights and the crowd. He'd thought she was his, and it was going to take him time to get easy with the truth.

This battle had been won, but there was a war going on, and they needed to be prepared for whatever might come. They needed a bigger operation, more and better-trained personnel, more equipment. More of everything, and better.

He got into one of the cabs. "Take me into town. Motel 6 be fine," he said.

The driver worked in silence, which was good. To Flynn, silence was home.

The cell phone buzzed. He looked at the number, did not recognize it.

"Yeah?"

"Flynn, where are you?"

"Kicking back," he replied. "Catch up soon."

"You don't want to celebrate?"

"I'm good."

"Flynn—"

"Diana, you be careful. I know Mac well. He's a professional criminal and he breaks hearts for fun."

"Flynn, I love you."

"I love you."

Silence fell. Extended.

Finally, Flynn added, "But you want him."

“He wants me.”

Pretty as she was, she was too hard along the edges to have been wanted very much in her life. Mac went for powerful women, though. He enjoyed demolishing them.

“I’m here,” he said, “and you’re gonna want a shoulder in the end.”

“Mac is a lovely man, Flynn, that’s what you can’t see.”

“If you say so, Diana.”

He hung up as the driver pulled up in front of the Motel 6’s tiny lobby.

He checked in with his own credit card, a small but sweet satisfaction. In the room, he flipped through the channels. Nazis, cartoons, girls, the usual late-night stuff. Still, he left it on in the background. The mutter of artificial excitement relaxed him.

Toward three, he decided that sleep was not in the cards for him tonight.

He pulled on his jeans and a sweatshirt and went out into the parking area, then up onto the shoulder of the empty highway.

He walked, listening to the rhythmic whisper of his shoes on the tarmac. When an eighteen-wheeler thundered by he didn’t vary his pace or even glance at the drama of its passing, so deep had he gone into his thoughts.

His memories of this extraordinary experience followed him as shadows in the wind. Whatever happened, he was going to stay with this thing. In the end, whatever these creatures were, he would banish the bad ones from Earth, and create conditions that would enable the others to share the richness of their minds openly with mankind.

Flynn Carroll walked as he henceforth always would, with his secrets buried in his silence. He walked his own path, but not alone. Abby was there by his side. He chose to believe in the prevalence of the soul, and that she was, as are all decent people, part of the essential goodness of creation, of which he was soldier, servant, and

ally.

In the silence of his heart, he embraced the people he had loved, and those he had lost. The moon had set, and the Milky Way in its majesty spread across the great vault of the sky.

He paused, looking up into the vibrant beauty of it all, and imagined other eyes and other minds perhaps returning his gaze, and thought on the richness of the weave of good and evil he had touched, and what dark secrets must still be undisclosed. Had Morris been the only criminal of his kind? Were there more, as yet unsuspected, or would there be? And what of the alien police? If there was more crime to fight here, would they be willing, this time, to send enough support? And if not, then how would he proceed on his own?

He walked on down the dark highway, alone and content to be alone. His battle was won, and that was good. A good feeling.

A meteor flashed in the sky, then descended in blazing grandeur.

Or was it a meteor? He stared along the horizon where it had fallen, looking for some new glow or some other hint that it had been, perhaps, a conveyance from the deep beyond.

Nothing glowed, though, and no more meteors appeared.

Fine, then he would go on down the road, and see what might develop. The questions, however, of who these creatures were and where they had come from and what their true motives might be—these questions had not been fully answered, not in his opinion. He had wrecked the enterprise of one of their criminals. But the greater mystery that they represented had not been solved.

But that was tomorrow's problem. Today's had been solved. Whoever they were, their good guys now knew they had a friend here on Earth, and their criminals that Flynn Carroll was somebody to be reckoned with.

CHAPTER ONE

As he did every morning, Flynn Carroll was going through police reports on his iPad, reading them quickly. Then he stopped. He flipped back a page. As he re-read, his eyes grew careful.

He didn't look the part of a careful man. His appearance—ancient chinos and a threadbare tee—was anything but. Duct tape repaired one of his sneakers. His hair was sort of combed; his beard was sort of shaved. But the stone gray eyes now stared with a hunter's penetrating gaze.

In two respects, the report was right in line with the others that were of interest to Flynn. A man had disappeared, in this case two days ago. This morning he was discovered murdered in a characteristically brutal and bizarre manner. What was different was that the body had been found very quickly. Usually, corpses were located days or weeks after the murders.

Not only was this a case for him, it represented a rare chance. The killers would generally do two or three or more victims over a period of a few days. The first body would rarely be found until at least two or three more killings had been done. There had been no other disappearances or characteristic murders reported anywhere in the area. If this was the first in a new series, it represented both a major change and perhaps a major opportunity.

The change was that this victim wasn't an anonymous homeless person picked up off the street. This was a citizen with an identity and people and a place in the world. The opportunity was that the killers might still be operating in the area, and Flynn might have a chance to get them.

He unfolded his lean frame and got to his feet, striding off between

the rows of consoles and neatly dressed technicians who manned the command center.

As he passed one of the linguists, he asked, “Got any new messages?”

“This week? Two lines.”

He stopped. “And?”

“A complaint, we think. They seem to be saying that you’re too brutal.”

“Me? Me personally?”

He laughed. “All their messages are about you.”

They’d been asking their counterparts on the other side for six months for more information about these killers. All they had been told was that it was a single, rogue band. From the amount of activity Flynn guessed that it consisted of about seven individuals.

Another of the techs sat before a strangely rounded device, beautiful in its gleaming darkness, but also somehow threatening, a glassy black orb that seemed to open into infinity.

Flynn went over to him.

“Jake? Got a second?”

The man was intent on his work, peering into the blackness. Within this small, very secret working group hidden deep in the basement of CIA headquarters in Virginia, this device was known as “the wire.” It provided communication with their counterpart police force. This other police force was headquartered on a planet our experts had decided was called Aeon, the government of which was eager for open contact with mankind. Supposedly.

The problem was—again, supposedly—that they weren’t entirely in control of their own people. Aeon, our experts had decided, had evolved into a single, gigantic state, but it was free, and so, like any free country, it had its share of criminals.

Flynn’s take: let’s see this place before we decide what it’s like. Nobody had ever been to Aeon—unless, of course, the people who

had not been killed, but had instead disappeared without a trace ... like his wife, Abby.

“Let Aeon know we’ve got another murder.”

“Yessir.”

“And if there’s any response, anything at all, get it translated on an extreme priority basis.”

As far as Flynn knew, only one alien—a creature that looked human—was responsible for the original crimes, which had been the disappearances. These new crimes—all killings—were being done by things that looked, frankly, alien. They weren’t the “grays” of popular imagination, with their huge eyes and secretive ways. Flynn had never encountered one of those creatures. Apparently they weren’t from Aeon. With such a big universe, so incredibly ancient and complicated, who knew what they really were or where they were from?

The ones he was trying to take off the map were wiry creatures with narrow faces and blank shark eyes. They had four supple fingers and long, straight claws that could also be used as knives or daggers. They were biological but not alive, he didn’t think, in the same way that human beings are. Their rigid determination and ritualistic, unvarying murder techniques suggested to him that they must be robotic.

He did not hate them. His objective was to clean up the alien criminal element on Earth so that the public could safely be informed that contact was unfolding. To the depths of his soul, Flynn wanted open contact.

There was one exception to his dislike of killing them. The first alien criminal known to have arrived on Earth had called himself Louis Charlton Morris. He used a highly sophisticated disguise that gave him human features that were regular and spare. His hair was brown, his lips narrow but not cruel. His expression was open, even friendly. If you encountered him in a dark alley, you wouldn’t think you had a problem. You’d also be just as wrong as a person could be,

because Louis Charlton Morris could do far worse than kill you. He could take you into the unknown and do to you there whatever he had done to Abby and so many others.

There had been a police officer here from Aeon, until he was killed. He had two legs and two arms, and a face with lips that were somewhat human, but the eyes were those of a fly. He could not expose himself to our atmosphere, and had worked out of a hermetically sealed office in Chicago.

Disguising oneself as Morris did was, it seemed, so illegal that not even a cop could get a clearance to do it. Since Oltisis's murder, though, they had apparently changed that policy. No replacements had showed up, however.

Flynn's theory was that the killers belonged to Morris. They were something he had created and were being used to get revenge.

Flynn's previous life as a detective on the police force of the city of Menard, Texas, had hardly prepared him for this work. Have your wife taken right out of your marriage bed in the middle of the night, though, and you're going to change, and change a lot. You will go on a quest to find her, or find out what happened to her. To serve that quest, you will learn whatever you need to learn, and do whatever you need to do. You will push yourself hard. You will not stop.

He walked across the room to a door marked only with a plastic slide-in sign: "Director." On the other side there were more desks, more computing equipment, more quiet, intense men and women. Saying nothing, moving with the supple energy of a leopard, he went through into the inner office.

"I've got one I want to move on right now."

Operations Director Diana Glass said, "Okay, what are we looking at?"

"Town in Pennsylvania. Guy disappeared yesterday. He's been found. First report from the area."

"They could still be there."

"That's what I'm hoping. There's a strange kicker, though. He's a

neurologist. Doctor Daniel Miller.”

She raised her eyebrows in question.

“It gets more interesting. He worked at Deer Island.”

“On the cadavers?”

“Possibly. There’s a neurobiology unit there.” He paused. “So maybe he hit on something somebody would rather we didn’t know.”

“Official Aeon would never do this.”

“You sure?”

“Maybe it has to do with his work, but I also think a citizen was involved to make sure you’d come. It could be an ambush, Flynn.”

“Probably is.”

“How did it go down?”

“He went out on a mountain bike. When he didn’t return at sundown, his wife called for help. The bike was located at dawn. The cops brought hounds, but his scent was only on the bike.”

“But they found the body anyway?”

“In a wetland a few hundred feet from his house. Same condition as the derelicts. Lips cut off, genitals and eyes dissected out, drowned.” So far, more than twenty homeless people had been taken off the streets, mostly in the northeastern US, brutally and bizarrely mutilated, then drowned in the Atlantic and returned to locations near where they’d been picked up.

“We need some advice from Aeon.”

“And how are we going to get that?”

“The two police forces, working together—”

“Don’t even start. There’s one police force. Us. Ever since Oltisis, Aeon’s side has been all smoke and mirrors.”

“For God’s sake, don’t do any more killing.”

He locked eyes with her.

She looked away. “The other side objects more strenuously every

time you kill another one, Flynn. They want them back.”

He said nothing.

“They have laws just like we do! They want these creatures back for trial and punishment.”

“No they don’t. They’re not creatures.”

“That’s a matter for debate.”

“You haven’t fought them. I know when I’m dealing with a machine, believe me. No matter how high-end its brain is.”

“They don’t want them killed. Bottom line.”

“If they want them back, tell them to damn well come and get them.”

“If you’re wrong about what they are, you’re committing murder.”

“We’re disabling machines, not killing people. Anyway, this is our planet. So, our laws.”

“Which don’t include blowing away perps like—” She hesitated, unsure of how to continue.

Flynn knew exactly how. He said, “Like they’re broken machines and cannot be stopped in any other way.”

“Aeon is far in advance of us technologically, Flynn. Far more powerful. When they complain, we need to listen.”

“ ‘Aeon’ consists of messages translated from a language we barely understand, coming from some place we can’t even find, that will not send a replacement for the one policeman they did give us, or even explain what they think happened to him.”

“Oltisis was killed in Chicago, not on Aeon.”

“And what about a replacement? Or, God forbid, even two. Or fifty? Why don’t they send us a whole team of detectives and a nice chunk of SWAT? Seems the logical thing to do.”

“They regard this as a small problem. One we can handle ourselves. They haven’t sent support out of respect for us.”

“Have you ever told them the truth?”

“What truth?”

“That only one person is able to even get near these critters? I need support, Diana. The risk is just incredible.”

“We have messages that specifically forbid you to kill, as you know. You’ve got to promise me you’ll abide by them.”

“So what do I do? Bag them up? Drag them off to a supermax?”

She sighed. She knew perfectly well that they could not be contained.

“Over the past nine months, I’ve done four. If Aeon’s telling the truth and this is a rogue band, maybe I can wrap the problem up on this mission. Finish the thing.”

She leaned far back in her chair, her long blond hair falling behind her, her green eyes, so deceptively soft, filling with uneasy calculation. Her face, an almost perfect oval, took on an expression that Flynn knew all too well. When she was twenty, it must have been a soft face, sweet with invitation. Her journey to thirty had been a hard one, though, during which she’d seen death and done some killing. Her face still said angel, but now it also said soldier. Hidden behind that cloud of Chanel was a woman with a tragic secret, which was that the blood of some of her own cops was on her hands. He knew she was as haunted by members of their original team who had been killed by Morris and his group as he was by Abby’s disappearance.

“Losing you would be a phenomenal disaster. In fact, we can’t afford that risk at all anymore, not until we’ve trained up a bigger unit. Which gets me to something I haven’t wanted to bring up, but I’m going to have to order you to stand down on this one.”

For a little while in the dangerous period when they were tracking Morris, the two of them been together twenty-four hours a day, sleeping in the same room for mutual protection, and they’d gotten to be a thing—sort of, anyway. They had wanted each other, but he had not been able to dismiss Abby’s ghost. Their affair had been an act of desperation, which had faded when the threat had become less. With

her sitting in the boss's chair and him married to a ghost, he considered it entirely over.

"Time, Diana. I've gotta move."

"You heard me."

As he walked out, he called transportation and told the operator, "I want to be in Mountainville, PA, in best time."

Diana came up behind him.

He walked faster.

"Flynn, at least wear the rig."

The rig was designed to record his moves, to be used in a training film. "Nope."

"Unless you wear it, we can't hope to teach others. You can't work alone forever, Flynn."

"Fine. Hire Mac." Mac Terrell was an old friend from Texas. He'd worked the Morris case with them. He was among the best sniper shots in the world, if not the best, and Flynn could use a sniper in this.

"You know I can't."

"No rig. Forget the rig."

She hurried along, working to keep up as he strode out of the command center.

"Flynn, please!"

He stopped. "The rig contains electronics. As I have previously explained, when I wear it, the electronics will be detected, and therefore, I will fail to engage the perpetrators. Of course, they may well engage me, in which case, I'm done."

"Do not go out there."

"I could end this!"

"Flynn, it's a trap and you're completely buying into it. I don't get why you don't you see this."

"If you know you're entering a trap, it's not a trap, it's a mistake on

the part of your enemy. So I'm gonna walk into their mistake and they don't make many, and I will not lose this chance."

"Flynn, will you grant me one favor? A small one?"

"I'm not gonna wear the rig, but yeah, something else."

"Come back alive."

"Fine. Done. Good-bye."

This time, she stayed behind. He passed through the two departments that concealed the command center, went to the transport hub, and got in the waiting SUV.

The driver was silent. Flynn was silent. Usual routine. He spent the drive to Dulles looking at satellite views of Mountainville. Frustrated by what he was seeing, he texted Logistics, "Throw me something better than Google Maps."

'That's all we have. Not a strategic location.'

He punched in the tech's phone number.

The answer was immediate. "Sir?"

"Get to the Pennsy Department of Geology or whatever they call it over there. You want a map that details any isolated watercourses within two miles of the house. Mountain streams, that type of thing. Any that are spring fed and absolutely pure. And any caves, crevasses, rocky areas, especially near the good water. You want a map that shows all of that. You got it, you call me. Make it fast, it's as urgent as they come."

He put down his phone, then returned to the Google map. Steep hills, lots of cliffs, which meant exposed climbing. For them, the best terrain. For him, the worst.

The car dropped him at general aviation and he strode quickly through to the waiting plane.

As he entered the cabin, he asked the pilot only one question: "How long?"

"An hour and sixteen minutes."

“Get me there in an hour.” If this had any chance of working, he had to be ready by sunset. Maybe the aliens would be there one more night. Not two, though. Never happen.

“Sir?”

“I know the plane. It can do it.”

“It’ll risk the engines.”

“Do it.”

Once they were airborne, he called the unit’s FBI liaison officer. “Flynn here. Get the body out of the hands of the locals immediate. Standard procedure, autopsy and record, then freeze. Provide the family with stock ashes in an urn. The local cops are to be told that this is a terrorism matter. If they talk they’re gonna be spending the rest of their lives inside. Obviously, make certain there’s no press.”

“Got it,” the liaison officer said.

The engines howled. The pilot was running them as ordered.

Flynn watched the land slide past far below, the trees tinged with autumn, little towns nestled in among them, America in its quiet majesty, her people in their innocence.

He wanted things to be right for them. He hadn’t been able to protect Abby, but he could protect them, at least a little, at least for a while.

As always at such moments, he wished he had Mac with him. They’d grown up together but gone down opposite paths. Mac was a criminal, more or less, so tangled up in being a DEA informant and massaging the drug cartels, you couldn’t tell at any given time which side of the law he was on.

If Flynn missed anybody besides Abby, it was Mac. He’d helped wreck Morris’s operation just like he lived his generally illegal life, with skill, ease, and pleasure.

His extensive criminal record made him a security risk. So no clearance, which meant no job despite the fact that he’d been effective and, unlike most of the others who had worked on that case,

lived. Morris had been running his operations out of a ranch near Austin, Texas, complete with bizarre intelligence-enhanced animals and human accomplices.

Flynn slid his hand over the butt of his pistol. What success he'd had—the killing of four of the things so far—came from one central fact: he had become very, very fast with his weapons. None of the trainees he'd been given so far had been able to come even close.

It wasn't too surprising, given that a man could practice for a lifetime and never learn to shoot a pistol as fast as Flynn could. He'd always been good with a gun, but in the past few months, he had reached a level of proficiency that was, frankly, difficult even for him to understand.

The engine note changed, dropping. The plane shuddered, headed down. Flynn looked at his watch. Fifty-four minutes.

He hit the intercom. "Thank you."

The reply was a burst of static. The pilot was probably thinking about who he'd have to deal with if he'd blown his engines.

From the air, Mountainville appeared to be little more than a few stores and some houses tucked in among a twisting range of dark hills. The single-strip airfield wasn't manned. The plane could land, though, and that's all that mattered.

The place looked the picture of peace, but Flynn knew different. Somewhere down there, a man had endured what was probably the worst death a human being could know.

Also down there, he had reason to hope, would be his quarry.

The plane bounced onto the runway and trundled to a stop, its engines still roaring. He got out and crossed the tarmac to the car that had been left for him. As per established procedure, the vehicle had been dropped off by the regional FBI office. Nobody was to meet him. What Flynn did, he did alone.

He tossed his backpack into the trunk, then got behind the wheel. For a moment he sat silently preparing himself for whatever might come. Then he started the engine.

The hunter was as ready as he could be. He headed off toward Mountainville, and whatever might linger there.

Learn more of Flynn Carroll's past in

They Did Not Know

A never-before-seen short story by

WHITLEY STRIEBER

On the night that all of their hopes and the lives they thought lay before them began to unravel, Flynn Carroll and his wife, Abby, decided to go horseback riding in the moonlight. But in the weave of things, perhaps it wasn't really a decision at all. More a call. An order, even, at least for him.

Abby mounted Serena, floating up into the saddle in a flash of jeans, one elaborately decorated boot gleaming in the last glow of the sun. She and Flynn had cracked a Lone Star in the kitchen of his parents' ranch house, passing it back and forth as they walked over to the barn and saddled Serena and War Chief.

As they rode out, Flynn's father arrived from branding, in his pickup. He got out and came hurrying over to the barn, head down, gray distinguished hair flying in the south wind that sweeps Texas on summer nights.

"Son, you don't want to night ride."

He was right. It would be dead dark on the prairie.

"We'll walk 'em, Dad. It won't be a problem."

"Flynn—"

His father still thought of him as a teenager. Flynn was thirty, married now two years. "Dad, it won't be a problem."

"You come back with a broke-leg horse—"

"We won't." Flynn mounted, looked down at his father. "We won't," he repeated.

"Why do it on a hellion like War Chief?"

"He's here."

"Well, yeah, none of the hands are gonna ride him unless they have to."

"I like WC."

"I guess I see that. You're both so damn stubborn."

Flynn didn't like coming out here. Being rich had always set him apart, and the Two Bar was very rich. He and Abby lived in a small house in Menard. He had joined the police force. But tonight—well, he knew exactly why he wanted to come. They had made a decision, the two of them, and it was right that they come here to fulfill it.

“Come on over to the house, I'll show you the branding log. Pretty good day, son.”

“When we get back, Dad.”

His father's reply was a silence that Flynn knew was filled with sadness. They had argued fiercely over his decision to leave the Two Bar. His mother had begged him. There had been tears, there had been bitter anger. Still, his father never stopped trying to interest him in the ranch. It was among the last of the great Texas ranches, two hundred thousand acres of ranchland, farmland, and oil rigs. The family's wealth was fantastic. Flynn made \$36,800 a year as a recently promoted detective in the Menard City Police Department and was very happy. His dad was worth at least a billion dollars, maybe more, and was not very happy at all.

Of course it was all crazy. What Flynn was doing. Was it rebellion? A desire to find something of himself that didn't belong to the Two Bar? That's what Abby thought.

Now, as they walked their horses into the deepening evening and their long shadows stretched out behind them, he saw her smile at him out of the edges of her eyes.

“You be careful on WC,” Flynn's father called. “He'll throw your ass, he gets half a chance.” They had left the corral and were heading out into a vast natural prairie, this time of year studded with flowers and rich with their perfume.

“WC can't throw me.”

“The hell, that horse could throw Jesus Christ and the twelve goddamn apostles. Shit. Sorry, Abigail! Sorry!”

“Eleven goddamn apostles,” Abby called back. “Remember Judas was a Judas.” Her father was a hard-shell Baptist who'd brought his

family out from Abilene ten years ago because of a schism in their church. Abby had left his rigorous beliefs behind, but Harry Carroll didn't really grasp that. He still saw the tightly pious little girl who Flynn had fallen in love with when they were thirteen. In fact, she had strayed so far from her childhood beliefs that she was barely welcome in her father's house.

They rode on.

As it became obvious that they were definitely heading out, War Chief whickered angrily and tossed his head. Outbound, he'd sidle along snorting. He'd try to nip Flynn or scrape him off on one of the scrubby trees. But on the way back, they'd thunder across the land, a lurching giant on a flying horse.

"Let's go up the north way, get over that draw where the flowers're so thick."

She laughed a little. "Why go way up there?"

"Well, why don't you just hazard a guess."

She laughed more. They'd kissed for the first time on one of those long hills this time of year. They'd been fourteen, dating for a year. She'd had eyes like the sky, lips like roses light as air, skin as pale as a cloud.

Now, things were different. Their mission was more serious than a kiss. Now, it was the right time of month. Once she was pregnant, they would not ride again, not for a long time.

He wanted the baby conceived here, on the Two Bar. He wanted to do it lying on the land, embraced by the earth of it, by the life of it.

Once their child was born, he thought he'd probably return to ranching. He just needed to find out first if there was anything else in him.

When they were about half a mile out, Abby called out, "Race you!"

Flynn made WC rear, the horse's one trick. If anybody but Flynn tried it, WC would tumble them out of the saddle and head for the

barn.

Abby took off, Serena's hooves spattering dirt as she soared away into the lingering evening.

"Darn, no fair," Flynn shouted. He snapped his reins. WC picked up his pace, working into his gut-pounding trot. Flynn had first sat on a horse at age three, but WC knew how to cause even a good rider pain.

A quarter horse like Serena takes off like a Ferrari in heat, and she was three lengths ahead of WC inside of half a minute.

"You go, girl," Flynn shouted.

"Eat dust, dude!" Serena and Abby plunged ahead, surging into the last whisper of light. Bouncing along behind her, Flynn just laughed. He knew his horses, and he knew that Serena would tire soon. Once that happened, she could not be forced, not if you respected your animal, which Abby certainly did.

WC was now sort of sidestepping. Slithering.

"Your horse trying to put out a campfire?"

"My horse is trying to neuter me!"

"He better not!"

He finally got WC going and they were off again, but this time Serena didn't take off like she had at first. She was past that quarter-horse burst. WC had become aware of the competition and was finally thinking about galloping.

The wind rushed past, the first stars wheeled above, the Big Dipper and the Great Bear. Scorpio ranged across the firmament. The western horizon was deepest red, blood on the edge of the world.

They swept across the night, young and in love and in the fertile dark. And were watched.

They could never have imagined, in their excitement and the running night, that they were being observed by somebody at once as far away as eternity and as close as a breath.

Or perhaps that wasn't entirely true. Perhaps he should have realized it, for nothing about Flynn Carroll was as it seemed. First,

that wasn't his name. Second, he was already married, although not under the law of this land.

The watcher measured the flashing patterns in their brains, listened to their tumbling blood, comparing what it saw to patterns that had been etched in secrets deeper than man may know.

The watcher was aware that they would sense the danger that it brought, and so stayed well downwind of them. Humans can smell danger, they just don't know it.

Flynn reined in WC. "Evening star," he said, pointing to the strip of green that had replaced the blood in the deep west. A jewel lay there, silver against the last glow.

"Venus," Abby said, "Venus this time of year."

He dismounted. She was a lithe girl, graceful and cheerful and as mysterious to him as the sky, and as grand. The elegant logic of her curves made him long to hold her, to reenter the balance that was their delight.

She looked like something you'd see in heaven. She smelled like sea foam. As she swung gracefully off her mount, her hair floated around her.

He said, "Know where we are?"

"The ridge. The flowers."

"Exactly where."

"I can't see a thing."

"Yes you can. You see those boulders over there?"

She drew close to him. "What did you bring me here for, you naughty man?"

Gently, he leaned down and kissed her on the neck. He drew her down into the mat of flowers. They swam in their perfume. The air shimmered with the music of crickets.

"Flynn, we're out in the open."

"The horses won't care."

“What if your dad rides out?”

He turned her face to his and kissed her. For a moment, she was stiffly unwelcoming, her churchly modesty causing her to push at his chest. When the kiss went deeper, she finally sank into it.

Venus rode low in the west, chasing the sun. The gibbous moon was rising in the east. Somewhere in the dark, coyotes called to one another.

They lay back, side by side. He would have her naked, but he would take his time.

“What’re those?” she asked, pointing to a triangle of stars.

“I don’t know. Not a constellation.”

The watcher was now close enough to feel their heat and smell their breath. It saw not only their young bodies but also the dark fates that had already been written for them, part of the mystery to which all belong.

Flynn said, “I was going to spout that poem you love, but I forgot it all.”

“ ‘I went out to a hazel wood because a fire was in my head, and cut and peeled a hazel wand and hooked a berry to a thread.’ ”

“I can’t memorize worth a damn.”

She sighed. “It’s so pretty here,” she said.

She took his hand and laid it on her chest. He felt the sweet softness curving under the cotton of her blouse. “Squeeze that,” she whispered. “I like that.”

Instead, he lifted himself up and began unbuttoning the blouse. He opened it and, recalling their backseat days, reached around to unsnap her bra.

“They’re moving,” she said.

“What?”

She sat up and pointed. “Those three stars. They’re moving.”

The watcher stopped. Drew back. They must not become afraid,

they must not leave, not now. Time was of the essence, and if it ran out, then this complex effort would all have to be repeated. The watcher was not alive, but it was intelligent, and it would do whatever it must to fulfill its mission.

“I want you,” Flynn said.

“I’ve never done it outside.”

“Abby ... ” He kissed the cream of her naked breasts. His hands went to the button on her jeans.

She laughed again. “You are so dirty.”

“This is beautiful. It’s pure.”

He drew down her jeans and she lay naked in the night, an angel glowing in the flowers.

He raised himself on his elbow. His heart was bounding, his whole body opened to every detail of the moment. He was aware, with sudden clarity, of the world around them, the sleepy horses grazing nearby, the night wind filling the air with the scent of the flowers, the nearby snuffling of some night creature, the heat of her and the scent of her, musk and gardenias and sweat.

He looked down into the gravity of her face, seeing in it the religion of life, and then he laid his lips upon hers again and was at once lost in the taste of her and the tentative flicking of her tongue and the rising of his heat, his member now a sword, questing ferociously, making his own jeans into a drum skin.

Then her eyes were looking past him. In passion, he thought, but her breath shuddered and her throat worked, and then she tore away from him. In his fright and surprise, he leaped to his feet.

“Sorry,” he shouted. “Sorry!”

Then, and to his complete amazement, she screamed. She grabbed her temples. Her eyes were white terrified pools in the dark. He stared down, watching her, not understanding.

“Abby, I’m sorry! I’m so—”

She took another breath, opened her mouth, and started to scream

again. He clapped a hand across it.

“Abby, it’s okay, we’ll go home, we’ll do it at home.” He glared into her face, willing her to come back to herself.

Her nostrils dilated, her eyes bulged—and he understood that something was strange here. He could see her face too clearly. But why, when it was so very dark?

He whirled and looked up into the strangest thing he had ever seen.

To the west there were three bright stars in a row, stars that were not present in any constellation. Overhead, instead of the soft glow of the Milky Way, there was a riot of stars in a million colors, a sweeping massive horde of them, gold and yellow, blue and red, silver and green, more stars by far than he had ever seen before, so bright that they lit up the land brighter than the moon.

Where there had been grass bobbing with flowers, there were long creepers, thick masses of them. Their leaves were pale and feathery.

He leaped to his feet. They were in a vast field of waving plants, long tendrils in the night wind, which brought a sweet scent that pierced Flynn’s heart with an entirely unexpected nostalgia, but also gripped his blood with icy claws.

On the ground, Abby gasped and sobbed, choking. He went down to her and put his hands under her arms and lifted her. She trembled in a way that reminded him of some gentle little animal, a quail desperate in his hands that he had caught in an Indian snare as a child.

Then, above the whipping ocean of leaves, he saw a figure. It was a stocky darkness, little more than a shadow. But it was there, and now it was moving, edging toward them. It was the careful stalk of a hunter.

The lives they had been living a second ago had become, in the tiny drop of time it had taken for this change to occur, something that belonged to deep memory and the emptiness of ages.

The way she huddled against him, his dear little bird, he knew that she felt it, too.

The figure was now quickly coming closer, and Flynn somehow knew that it was coming for Abby. In an effort to conceal her, he drew her down, but she stiffened, frozen like a mouse under the gaze of a snake. He whispered, barely a breath but full of wild intensity, “*Down!*”

She came with him and they were two rabbits crouching.

Something was buzzing now, the sound of a fly, but enormous, close, then torn away by the wind.

Then it was there, right in front of them, its cobalt-blue work clothes gleaming in the strange starlight, its face that of a pinched frog, its eyes two bulging, expressionless domes of insectoid lenses.

It was a fly the size of a child.

Abby fell to her knees, spread her arms, and looked up to that mad sky.

“Abby?”

“That’s a demon, this is hell!”

A female voice said, “Not really, sweetie.”

Flynn turned toward the new—and so familiar—voice.

“Flynn, come with me.”

The voice was indeed familiar, but the face was in shadow. Not only the voice, but the place. “Don’t look so damn confused. You’re where your soul was born.”

Abby was still on her knees, her hands now clutched together, her head bowed. She was praying hard.

“Listen to her calling on her gods,” the other woman said. She came closer. She was beautiful in the night, with dark, flowing hair and skin like cream.

“Who are you?” Flynn asked, and was instantly washed with the most powerful sense of loss that he had ever known. It struck him and lifted him like a great wave into its surging grip.

Her face was ... so very, very dear. And this place, the shimmering,

waving fronds, the three stars—he loved this place terribly, with his blood, with his soul, which now felt as much a part of his body as his skin and his humming heart.

“You tell me who I am.”

“I—I’m sorry.”

“Tell me!”

He looked down toward Abby. “She’s naked. Don’t leave her like that.”

“You took her clothes off.”

Flynn was at a loss. He did not know this place, and yet he loved it. He did not know this woman, but her face was palely familiar, and her dark hair as it flowed in the wind was a lovely and haunting thing to see. Desire, until a few moments ago wrapped up in Abby, scalded him with unexpected intensity.

“Flynn,” came a tiny voice from below. “What’s going on? Where is this place?”

“Don’t you dare tell her,” the woman hissed.

“But I—”

“You’re under orders just like the rest of us.” She gestured with a slim arm toward the crouching Abby. “This is so dangerous, this whole situation.”

And then came a great thunder in him, the crashing roar of recognition. Memory flooded in, memory so strong and so complete—but so entirely unexpected—that he gasped from it and reeled away.

Then he locked eyes with her, in the wind and the shadows of a racing little moon. He reached a trembling hand toward her. She did not move.

“Something’s wrong, Diana.”

“You can say that again. And thank you for remembering my name.”

She took his wrist and drew him away. Hearing the rustle of their

departure, Abby shrieked and leaped to her feet. She came bounding after them, leaping through the rough fronds.

Diana, who he knew now was his wife—his real wife—threw back her head and laughed, the sound at once as raucous as the voice of a crow and as dear as the giggle of a lover.

Abby flung herself at Flynn, her hands grasping frantically. Flynn watched, all his passion gone. She was just an instrument, part of his mission. Or so he told himself. When dark blue figure carried Abby away, her shrieking became an awful, despairing cry.

“Don’t hurt her,” he said to Diana. “I’m the one you should be angry at.”

“I’m not angry, I’m jealous.”

“Don’t hurt her.”

He watched Abby disappear into the darkness, struggling and crying out, tearing helplessly at the thing that gripped her in its thickly gloved hands.

Diana kept moving.

Finally, he followed her. He didn’t see a choice. As they went up a long rise, Abby’s cries faded into the nasty, hissing wind. The closer they came to the crest of the hill, the brighter the sky became, until, as they mounted it, a view exploded into Flynn’s consciousness that swept everything else away: his fear for Abby, his confusion at what was happening, his questions about Diana—all of it—in a tide of memory as keen as a cold blade and as sweet as a summer song.

Before him there spread a vision of lights, and he at once knew that this was the great city of his birth and his upbringing and his soul’s deep home. This was the Aerie, known across the land of Aeon as the City where the Truth Is Known.

Home.

She had stopped. She had turned to him. She stood with her arms tentatively open, a tall silhouette against the blazing lights of Aerie and the magnificent drama of Aeon’s sky.

He went to her in silence, and in silence they embraced. He felt the warmth and soft scent of her, this woman who was so many things more to him than any woman on Earth is to any man. Still, though, Abby was there in his heart, dear.

Arm in arm now, they went along a familiar path, to their home and office, Social Police Division 211, the headquarters of the Police Protective Unit that was tasked with keeping criminal elements from exploiting Earth.

He was an officer. He was on mission and had been recalled.

He did not have a good feeling about this.

He followed Diana through the contemplative quiet of the central office. As he did so, the faint, dry-straw scent of the air, so familiar, the sounds of quiet conversation between man and machine, the soft footsteps as officers went from one station to another—all of it combined to induce a flood of memories.

He'd become a policeman on Earth because he was a policeman here. He'd taken form in the Carroll family because he would one day need a great deal of money. His childhood was in the record of the state of Texas and in the memories of his earthly parents and friends, but he had actually come in just two Earth years ago.

Earth was in terrible danger. His job: protect them.

In this work, you could not take such memories with you, but you could take your orders, so deeply encoded that only a few police specialists could extract them from your unconscious.

“Have I gone off mission, Diana?”

She walked faster. He saw her fists clench.

He passed the Earth Unit, where operators at observation stations watched for smugglers attempting to reach the planet. Outside, he knew, there were forty more such stations, each dedicated to another primitive planet, to preventing it giving up its wealth of genes and souls to criminals intent on selling them to underground scientists, slavers, wealthy thrill seekers, and whomever else might want them, whether for experimentation or entertainment, or to build them into

brilliant robots.

“I don’t want you to give her a baby.”

“I thought—”

She turned on him. “Remember who reads you.” Her voice was quiet, but her eyes were stunned with hurt. “Your feelings for her are agonizing to me.”

His heart opened to Diana, the real love of his life.

“You know it’s on mission. The baby is on mission.”

They turned a corner and headed for Diana’s private suite—their suite—where their marriage had been consummated, where they had chosen Earth work, where they had embraced for the last time before he began his tour.

In the middle of the large, comfortable room, Abby floated in an Isolate, her open eyes empty. The flickering lights of medical analysis touched her smooth skin.

Diana walked up to her. Gazing at her, she put her hands on her hips. “Incredible,” she said. “She looks like an angel.”

“A baby would endanger her? Is that why we’re here?”

As she floated there in perfect nakedness, shimmering with the blue light of the device that held her, he could almost believe that her soul, incredibly pure, had appeared on the surface of her body.

“She’s perfect,” Diana whispered.

“Then you understand.”

“It’s starting. On Earth.”

He felt an awful sinking of the heart, and yet with it came excitement. This was his work, why he was a policeman here and a policeman there.

“We’re married. We want a baby.”

She came to him and stood before him. Her face was flushed, her eyes fixed with anger. She drew back her right hand and slapped him hard.

Instinct almost caused him to strike back, but training stopped him—training and love. She turned away, plunged to her desk, and dropped down behind it. “I’m so sorry.” She shook her head. “Pardon my lack of professionalism.”

Diana didn’t have a baby with him; of course she was jealous. He felt it, too, the hollow cold truth that he might not come back. That his real wife might never bear their child.

“When I’m there,” he said carefully, “you know ... ” He gestured vaguely. They could not take memories of Aeon with them. Undercover cops like him lived and worked in total amnesia. If they remembered themselves, they were vulnerable to an enemy that could read the mind.

She stood again and came to him.

He took her in his arms and felt as she pressed herself against him a rush of memory and a rush of love.

“You want the child?” she asked. Then, very softly, her voice a burr of misery. “With her?”

He held her more tightly. “I want our child.”

“No,” she said sharply. “Violation of the mission.” She gazed at him. “What’s it like?”

“When I’m there, I’m Flynn Carroll, wondering why the hell I’m giving up a billion-dollar ranch for a little, tiny police job.”

“Billion what? I’m sorry, I’m not tracking.”

“Their measure of wealth. The obscure corner of earthly life I happened to enter turned out to be incredibly wealthy.”

“I did not know that. So your life there must be very pleasant.”

“I gave it all up to be a cop. Nobody can figure me out. Frankly, neither can I. Not when I’m on Earth.”

She came to him, and when she drew close he felt in her embrace a haunting, beloved memory of Abby. He would never tell her this, though. Never.

“Love, do your best. I’ll have to watch every detail, remember

that.”

He kissed her and felt her vulnerability and her anguish, and shared it.

She broke away then and went to the window. Sunrise was not far off, and the eastern sky was a strip of pink, one of the moons hanging there like a pearl.

“The Moon of Love,” she said. Then, bitterly, “Can a moon mock you?” She whirled around. “She’s a cover, nothing more. Which you seem to want to forget.”

“As I must. As you know.”

“She could be in danger.”

“I know it.”

“And the child.”

He knew that, too, and it made his guts crawl. What was worse, back on station, all of this would be forgotten. “What would you have me do, love?”

She went back to her desk, her place of authority. She had brought him here to warn him. Were there also orders? Her hands, fisted, lay before her. “Mission Control regards them as expendable.”

As far as the police department was concerned, Abby and the baby she and Flynn were going to have were a cover. They were bait.

“They will be taken,” she whispered. “Inevitably.”

Agony. Agony in his heart. But the whole human species and its chance to evolve and join the chorus of conscious species in the universe depended on this mission, and therefore on such sacrifices. He said, “I know.”

“I’m sorry I brought you here. I apologize.”

“You had to. We both know the regs. If I’m going operational, this is the only way to tell me.” His consciousness would forget, but not his deeper self. There, the hard, quick, brilliant police captain would remain hidden, waiting to take the lash to whatever smugglers presented themselves.

Hand in hand, they walked down to the transport, a formation known on Earth as a wormhole. Diana pressed their code into the heavy door and they entered the confined space of the transition chamber. The transport position shimmered before them, a darkness beyond the end of darkness. In this universe, there are many walls and many openings in those walls. On Earth, places that are closer than a hair seem more distant than the farthest star. Here, where the truth was known, such a traverse as this was just a short step, nothing more, but through a system that had taken a thousand years to create, a truly extraordinary triumph of the mind.

“Has she been sent?”

“She’s back. They’ve got her lying right where they found her. She’s just about to awaken.”

“I love you, my wife.”

Diana squeezed his hand.

He took a breath. He stepped forth, into the strange, empty coldness of the transport. There was the familiar hollow rush, then he staggered out into the night and the flowers of the Texas prairie.

She lay there, as pale as a cloud in the sea of white dots that covered the night prairie. Far to the east, Earth’s own moon was just rising.

He lay down beside her and gazed up at the strangely empty sky. Earth was an outlier, orbiting a star at the extreme edge of this galaxy.

As his memory faded, he clung for a last sorrowing moment to Diana. Then he turned to Abby. Her eyes were open, gazing into the sky.

His last memory of home winked out.

Abby said, “Flynn? Are you awake.”

“Mm?”

“It’s three. *Three*, Flynn!”

“How can it be three?” he said. He thought, *We’ve been here half the*

night and I never did it.

“We must’ve been tired. Plus, WC took off. We’ve gotta double on Serena now.”

“Forget the horses.”

“We need to get home; what’ll your folks think?”

“That we’re out here being bad. Which we are.” He drew her to him ... but as he felt her warmth and the curves of her, he also felt from deep in his heart something he did not expect and could not explain, which was a cold, gripping sorrow. It seemed like an echo from a long ago time, some tragedy that he had long forgotten, but that now returned to him, in this moment when new life was about to be made.

“You’re shivering,” she said.

He kissed her, and as he did, he entered her. “I was cold. Now I’m not.”

Their bodies crossed a bridge of stars, the stars of hope, the stars of new life, the stars of the miracle that is mankind.

When they were done, they lay back side by side. He raised her hand to his lips and kissed it. She turned and clung to him.

“Aren’t you cold?”

“I love being naked with you like this.”

“Well, I’m cold.”

He got his windbreaker, which lay beside them, and put it over her. He stared up into the stars.

“I wonder if there’s anybody up there,” he said.

“God, I guess. Somewhere.” She took his hand and laid it on her belly. “Somebody in here,” she said.

“We can’t be sure.”

“I felt it. I felt the exact moment.”

He lay there in wonder not only at the beauty of his wife amid the stars and the flowers, but at the mystery of life itself, and the new life that she seemed so sure now lay within her.

As the moon cleared the eastern horizon, they mounted Serena, Flynn sitting behind Abby and holding her around the waist. He leaned against her, inhaling the straw-sweet scent of her hair, pressing tight against her softness and her warmth. Gently, quickly, he kissed her neck. She giggled, a happy music.

Something inside him seemed to call to him, the voice of some unknown observer, stern and deeply sad. "*Danger*," the voice said, and was gone.

But there was no danger, not here in this familiar place.

They let the horse walk as slowly as she wanted, through the bright moon shadows.

On this perfect night, the world was wonderful.

"I'm happy," he said.

"Then why do you sound sad?"

"I'm not. Far from it."

As they rode, Flynn became aware of tears drifting down his cheeks. Drifting at first, then pouring. It was as if somebody he could not see, who lived inside him, was experiencing this lovely night as a tragedy. They rode on toward the distant lights of the house, and the whispered warning faded, and then the sadness.

Flynn kissed her neck again, and she arched her head and reached back and laid a hand on his cheek.

They unsaddled Serena and WC, who they found predictably standing at the barn door. Hand in hand, they crossed to the silent house and crept up the back stairs to Flynn's boyhood room. On the way, Abby tickled him and they stifled laughter, and in his own he heard once again that mysterious note of sadness.

The night passed, stepping softly into dawn, and they came downstairs to a sizzling ranch breakfast. Flynn's mother and father twinkled at them, but nothing was said of the late hour of their return.

On distant Aeon, Diana wept for the man she loved, working

tirelessly to protect him and his earthly wife and their coming child.

Or was she protecting them from Mission Control's plan, which was to use them as bait? Other eyes saw, other, darker minds wondered just who this seemingly innocent man might really be, and drew closer, and looked closer.

And then they knew.

Another deep-cover cop had been exposed—or rather, a subtle trap in which he and his earthly wife were the bait had been sprung. Soon the criminal band that was now evaluating Earth would conclude that he was indeed a policeman from Aeon and take steps to neutralize him.

By so doing, they would reveal themselves, the long game would grow shorter, and, if all went well, they'd be mopped up and the people of Earth would be left alone for a little while longer.

Over the next weeks and months, the movements of Abby and Flynn were observed, their associations researched, their every breath and every heartbeat recorded, along with the heartbeat of the infant sleeping within.

In a world so far away its home star could not even be seen from Earth, Abby and her infant came up for sale in an auction room that somebody from Earth would have seen as a sort of heaven, palatial and blue.

It was not a heaven. It was a place where souls were bartered, as evil a place as exists.

Figures watched her terror, just as butchers on Earth watch the terror of cattle, and with as little emotion. Others discussed her genes and the baby's rich stem cells.

The bidding was quick, just a gesture here, a nod there. In the end, the two of them went for a sum large enough to satisfy even the greediest smuggler.

They would be broken up for their DNA. Probably.

On the day that she was sold, Abby, all unawares, made Flynn a

chocolate pie. On her belly, there was a mark, red and hardly sore at all, where a long needle had been inserted. The infant, rich with new cells, was now labeled, as was the mother.

They were free Americans on one planet, property on another.

All was done, then, but for the waiting.

Late some nights, a car would drift past the house. Far away, Diana would watch it and wonder. Who was in it? Why were they there? Was it from Mission Control, perhaps some part of it she did not have access to? Or was it something else entirely—a sign, perhaps, that the trap was working?

The car was followed, but went nowhere important. Abby and Flynn lived their lives and slept their sleep, and the world rolled on.

Not forever, though, and not for long. Their life together soon would end, and his life alone would begin, and with it the quest that would come to define him, to find the woman he loved, to rescue her, to return her to their house of perfect love.

Diana would watch and weep inside for the husband who had forgotten her, but she would continue to serve the mission, duty before love.

In the great vastness of the universe, worlds begin and end every day. Somewhere eyes are being raised to the sky for the first time and somewhere for the last time, always. But in the heart, in the house of love, tiny events are enormous events, such as the loss of the one you love.

Flynn lost Abby and Diana lost Flynn, and the universe went its heedless way. But not for them, for them the losses were so vast that they were almost unimaginable.

Duty kept Diana loyal to the mission, and she tried not to hate the man she loved, watching him search for this other woman, this simple human creature who, after all, had been nothing but a bit of bait. That, and her own husband's new and eternal love.

Praise

“Excellent storytelling will keep readers guessing until the very end.”

—*RT Book Reviews*

“Pulse-pounding action and a perplexing puzzle but most of all *Hunters* has real feeling—a heart as big as the Ritz.”

—Douglas Preston, *New York Times* bestselling author of *The Kraken Project*

“*Hunters* engages you immediately and then surprises you on every page, taking the story to places I could never anticipate.... Strieber’s skills at creating complicated, interesting characters have never been better displayed.”

—Larry Bond, *New York Times* bestselling author of *Lash-Up*

“[Whitley Strieber](#) knows how to scare us. Now he’s taken his own frightening experiences documented in his bestseller *Communion* and built them into a compelling, must-read cops-and-aliens detective series.”

—William J. Birnes, coauthor of the *New York Times* bestseller *The Day After Roswell*

“If Stephen King teamed up with Lee Child, they couldn’t write a novel to match *Hunters*. Filled with high-tension suspense, blood-tingling chills and sizzling passion, *Hunters* is more than just a novel—it is the story Strieber was born to write.”

—David Hagberg, *New York Times* bestselling author of *The Fourth Horseman*

“Scary, suspenseful, shocking, thrilling ... Strieber’s a master of suspense and the undisputed master of the we-are-not-alone thriller, and in *Hunters* he proves it yet again.”

—William Martin, *New York Times* bestselling author of *The Lincoln Letter*

The Last Vampire

ONE

The Conclave

Everyone knew the sins of Miriam Blaylock.

Her crime, and it was an unforgivable one, was to enjoy human beings as friends and lovers, rather than to simply exploit them. She could kiss them and find it sweet, have sex with them and afterward sleep like a contented tiger. To her own kind, this was perversion, like a man with a sheep.

The fact that this prejudice was nonsense did not make what she was doing now any easier. She pressed herself back against the seat of the pedicab, instinctively keeping her face hidden, not only from man, but from her own kind. The *samlor* moved swiftly down the wet street, splattering through puddles left by the last storm. From the shadows of the passenger compartment, she watched a concealing fog rising from the moat that surrounded the ancient Thai city of Chiang Mai.

How could she ever do this impossible thing? How could she ever face her own kind?

Some theorized that she must have human blood in her family. The idea that there could be interbreeding was absurd, of course — nothing but an old husband's tale. She despised the narrowness of her kind, hated what, in recent centuries, their lives had become. They had once been princes, but now they lived behind walls, kept to the shadows, appeared in the human world only to hunt. They had opted out of man's technological society. They knew human breeding, but human technology was simply too intimidating for them.

Miriam owned a thriving nightclub in New York and had bookkeepers and assistants and bartenders, all humans. She had computers to run her accounts. She could access her stock portfolios using her PalmPilot, and she made money on the markets, plenty of it. She had a cell phone and GPS in her car.

They didn't even have cars. Once the buggy no longer bounced along behind the horse, they had simply stopped riding. The same with sails. When ships lost their sails, her kind stopped traveling the world. And airplanes — well, some of them probably weren't yet aware that they existed.

The other rulers of the world were now just shadows hiding in dens, their numbers slowly declining due to accidents. They called themselves the Keepers, but what did that mean nowadays? Gone was the time when they were the secret masters of humankind, keeping man as man keeps cattle.

Truth be told, the Keepers were in general decline, but they were far too proud to realize it. Conclaves were held every hundred years, and at the last ones Miriam had seen a change — Keepers she had known a thousand years had followed her mother and father into death. Nobody had brought a child, nobody had courted.

Despite their failure, Miriam valued her kind. She valued herself. The Keepers were essential to the justice and meaning of the world. That was why she had come here, why she had tempted the humiliation and even the possible danger involved: she wanted to continue her species. Miriam wanted a baby.

The last of the four eggs that nature gave a Keeper woman would soon leave her body unless she found a man to fertilize it. For all that she had — riches, honor, power, and beauty — her essential meaning was unfulfilled without a baby. She was here for her last-chance child.

She gazed across the gleaming back of the *samlor* driver at the busy night streets of the bustling little city. How the world was changing. She had chosen a *samlor* out of love for the past, which she most certainly shared with the rest of her kind. She remembered Chiang Mai as a small community of wooden houses with *theps* carved on the pediments of their soaring, peaked roofs, and golden temple spires rising above lush stands of trees. Now, the narrow old streets resounded with the shrill clatter of *tuk-tuks*, which were so rapidly replacing the pedal-driven *samlor*. The traffic wasn't quite yet the hell on earth of Bangkok, but it was certainly going in that direction.

She longed to be home, in her beautiful house, surrounded by her beloved

people, faithful Sarah and sweet young Leonore, just now learning her ways.

Just like the black, miserable dens of the other Keepers, her house was full of beautiful things. But hers were treasures of the heart, not the jade and silver and gold pieces her peers collected with total indifference, selling them later just because they'd become "antiques" among the humans. They didn't enjoy their priceless jade Buddhas or their Rembrandt drawings or their Egyptian gold. They just used them. She had a gold Buddha a thousand years old, before which she meditated, and twin Rembrandts of herself and her beloved mother. He had captured the sure gleam of their essence, she thought. She gazed often at her mother's wide, almost innocent eyes, at the subtle humor in her lips.

Over the millennia, Miriam had lost both parents and her husband. Her keepsakes of them were at the center of her life.

Rembrandt had known that there was something unusual about the two women who had commissioned him, a sense of independence and self-possession that human women in those days did not have. He had captured it in the proud, yet easy stance of the figures he had drawn, humming to himself as he made tiny pen strokes and smoked a long clay pipe. He had kissed Miriam's hand and said, "You are cold . . . so cold."

Not only did she enjoy human beings, she took pleasure in human things — painting and sculpture, writing and music. She had been an opera buff from the beginning of the genre. She had been at the opening night of a dozen great operas, had been transported by everyone from Adelina Patti to Maria Callas to Kiri Te Kanawa. She remembered the haunting voices of the *castrati* echoing in the palaces of the Old World.

The other Keepers looked upon humans as animals. Miriam thought that they had souls, that you could feel something leaving their bodies just as they died. It happened while you were all curled up around them, while you were comfortably absorbing their life. A sort of electric charge would seem to come out of them. Only after that would their eyes be totally empty.

They said it was the nervous system shorting out because of the fluid loss. Miriam hoped so. But what if the reality was that men had the souls, not us?

If we were the brilliant animals, they the dim angels? That would be an irony, that an animal had created an angel.

When she meditated before her Buddha, she asked these questions: Why do we live so long? Is it because we have been denied a soul? If so, could I trade? And why, O God, if you are there, why are we cold . . . so cold?

The rest of her kind lived to eat. She ate to live. She spent heavily, just as her family always had. She consumed money without thought, like so much candy or caviar. Her club, the Veils, was the most exclusive in New York. In a strong month, and most of its months were very strong, drugs and liquor would bring in a half-million-dollar profit. There was no cover charge, of course. If you were important enough to enter the Veils at all, you certainly weren't the sort of person who would be expected to pay a cover.

Miriam had been the friend of kings for two thousand years. She had seen their generations rise and fall. She loved them in their pride and momentary lives. She loved their finest things, the jewels and whispering silks, the attention paid to the very rich.

When the wallets of her peers opened, you could practically hear creaking. She had fun; they had their careful customs and their dreary, conservative habits. She wanted meaning from life, they wanted only to keep breathing.

But now, for all their rejecting ways, she needed them. Her plan was to travel to all of the current conclaves, at once charming and, hopefully, seducing a man.

Deep in memory's mist, she'd had a baby. She still remembered the moment of conception as if it were yesterday. For women of her kind, conception was the most exquisite pleasure they could know. At the moment a man's semen fertilized one of your eggs, your whole body reacted with an unforgettable explosion of nerve-tingling delight. Even after all this time, part of her being remained focused on that stunning moment.

They always knew the sex of the baby within them, and she and Eumenes named their boy and fell in love with him from that first, joy-filled night. Then had come the pregnancy, a year of gestation . . . and the pain and the

loss she'd felt as the silent, blue form of her dead infant was laid on her belly. Soon after, her beloved husband also died. Practically nothing could kill them — they never got sick, they couldn't. But he had weakened and wasted, and no one knew why. All her love, all her care, was not enough to save her dear Eumenes, not after he stopped eating.

He had grown as narrow and cold as a mummy, but his eyes had continued to glow . . . as if death had some special meaning, as if hunger had become for him a state of transcendence. She had begged him to eat, had tempted him, had tried, at the last, to force her own blood into his veins.

Was it grief that had killed him, or some greater despair? Like her, he respected the mind of man. Like her, he was unsure about whether or not humankind had ascended to a point that made it evil to prey on them.

Was it evil to be a Keeper? Was taking conscious prey murder? She thought that her husband had starved himself over these questions . . . and over the blue, hopeless baby he had so gently deposited upon her breast.

The dead may die to the world, but they do not die in the heart. Miriam's side of their love affair had continued on for whole cycles of years. But eventually his memory faded like the encaustic of his face that she'd had painted by Eratosthenes, that hurried little genius, in Alexandria.

Old Alexandria . . . redolent with the scents of myrrh and cardamom, whispering by night, singing by day. She remembered Cleopatra's hollow palace, and the Academia with its great library. She read all 123 of Sophocles' plays there, and she saw thirty of them performed. How many had survived? Seven, she thought, only seven.

Over all the intervening years, she had not been able to find a man of her own kind to replace Eumenes. Part of the reason was that conclaves only happened once in a hundred years, and *they* did not court except during conclave. For somebody who lived for the moment, that kind of planning just did not work.

Now she was at the end of her choices. Either she would find someone or she would never, ever give another Keeper to the world.

Keeper children learned in school that humans were bred to appear similar to us on the surface so that Keepers could go among them more freely. In the beginning, they did not look at all similar and were not at all smart. They were little apes with lots of hair and huge teeth. We Keepers have always been as we are, beautiful beyond compare.

Miriam had drifted into the habit of taking human lovers because she was lonely and they were satisfying and the emotional commitment was not great. You found a cute male or a sweet, sensual female — the sex mattered not to Miriam, both had their charms — and you seduced, softly, gently, with the caressing eye and the slow hand. Then you put them to sleep with hypnosis and opened their veins and filled them full of your blood, and magic happened: They stayed young for years and years. You told them you'd made them immortal, and they followed you like foolish little puppies. Like the dear creature who now kept her home and business in New York, who warmed her bed and hunted with her . . . the dear creature, so lovely and brilliant and torn by her silly human conflicts. She had almost lost Sarah a few years ago, but had brought her back. The girl should be grateful and compliant, but that was not always the case. Sarah made mistakes. Sarah lived much too dangerously. She was haunted by what she had endured, and Miriam could not blame her. Indeed, she could hardly imagine what it would be like to lie in a coffin like that, slowly deteriorating but unable to die.

Sarah knew that one day the torment would certainly come again. She strove to save herself, using all of her considerable knowledge of medicine to attempt to defeat the process of aging that must slowly consume her, despite the fact that Miriam's blood now flowed in her veins.

To live, Sarah had to prey on man. She was even more tormented by this than Miriam's other lovers had been. Her Hippocratic oath haunted her, poor creature.

Miriam stopped herself. Best not go down that path again. She was always troubled by the tormented lives and horrible deaths of her lovers. The delicious little things were her guilt, her pain.

But not now, not on this nervous, excited night, the opening night of the Asian conclave. At least a proper lover would never die as the human ones

did, pleading for deliverance even as their flesh became dust. But she would have to submit to him, obey him, live in his cold cell . . . at least, for a time.

Her body was her life — its rich senses, its wild desires, the way it felt when strong hands or sweet hands traveled her shivery skin.

There would be none of that in her future, not when she was part of one of *their* households, as she would be expected to be, at least for the duration of her pregnancy. Long, silent days, careful, creeping nights — that would be her life behind the walls of their world.

But that was how it had to be. She could almost feel that little body in her belly, could imagine hugging it after it came out, while it was still flushed and coal-hot. Only a newborn or a freshly fed Keeper was ever that warm.

The *samlor* glided along Moon Muang Road, heading for the Tapae Gate and the temple district beyond, moving through the murky, soaked night. How did the Asians stand this wretched climate? And yet, the heat was also nice. She enjoyed sweaty beds and long, druggy nights doing every decadent thing she could imagine.

The others shunned drugs. *They* said that they would rather die than become addicted for the thousands of years of their lives. She hadn't had that experience at all. Your blood protected you from all disease and weakness. *They* were just prejudiced against drugs, which were a human pleasure and therefore assumed to be trivial. But they had never done hash in ginger-scented Tangiers, or opium here in pillow-soft Chiang Mai, the last place in Asia where a good pipe of well-aged opium could be found. They had never smoked lying on silk beneath a hypnotic fan. When the nights were hot and the air was still, she was drawn back to the brilliant oblivion of the pipe. Drugs were less dangerous to enjoy here than in the States. No blustery, narrow-eyed policemen were apt to show up, waving guns and yelling. She'd had to race up too many walls to escape from those annoying creatures.

Well, all that was going to change. She was going to become a proper wife, and she certainly didn't need drugs for that. She wasn't addicted, so it wouldn't be a problem.

She could imagine her man, tall and silent, his face narrow, his skin as pale as a shadow. She could feel him, muscles like mean springs, long, curving fingers that could crush a human's bones or caress her plump breasts. She took a deep breath. These thoughts made her feel as if she were drowning and being rescued at the same time.

The wind rose, sweeping through the dark trees, sending ripples shivering across the puddles that were like lakes in the street. Much lower now, the clouds raced and tumbled. Voices rose from a little market, two girls singing some popular song, oblivious to the *samlor* that whispered past and to the being within, who was carefully listening to the patter of their heartbeats from a thousand feet away.

Her interest in them told her that the hunger was rising within her. She felt it now, a faint gnawing in her belly, a hint of ice in her veins.

This was bad news. Most of her kind could detect their hunger coming for days, and they could prepare carefully to do a hunt. She'd never been able to prepare. One second she was fine, the next it was starting.

Buddha said it was good to live in the moment. In the Vedas, she'd read that there was only the moment. Her species had no holy books, just records of their possessions. Her mother had told her, "Humans have holy books because they've journeyed closer to God than we have."

She noticed that the smell of the *samlor* driver was washing over her, blown back by the breeze. She took a deep drag on her strong Thai cigarette, attempting to blot out the delicious scent.

It did not work. Okay, she thought, I'll go with it. She looked at the driver's sweating back. A thirty-second struggle and she'd be fed for another couple of weeks. The thing was, the hotel had written down her destination in Thai for him. He would not deviate from the route. She needed to get him to go down some darker side street. "Speak English?"

He did not respond. So she'd have to jump him right out here if she wanted him, and that would never do. You did your kills in private, and you destroyed all trace of the corpse. Even Miriam Blaylock followed those two

essential rules.

The driver's skin rippled, his muscles surged. Mentally, she stripped him of his black shorts and T-shirt. She imagined laying him down upon a wonderful big bed, his penis like a cute little tree branch. She would kiss him all over and hold him closer and tighter, filling her mouth with his salt sweat and her nose with his every intimate smell. Her mouth would anesthetize his skin as the feeding began and in a few delightful moments, his blood would be sweeping down her throat.

She closed her eyes, arching her back and stretching, forcing his smell out of her nose with a rush of air. Think about opium, she told herself, not blood. Later, she would smoke to relieve this damned hunger. She needed to get back to familiar territory before she fed. It wasn't safe to do it in an unknown place.

Too bad her flight to Paris, where the European conclave was held, didn't leave until tomorrow evening.

This Asian conclave would end with dawn, and she'd have liked to have gone straight on to Europe. She could feed easily in Paris; she knew the city well. She'd hunted there recently — no more than fifty or so years ago, when it was swarming with Germans.

Of course, she might meet a man here in Chiang Mai. If she did, her new husband would attend to her need for prey during the pregnancy. If she wasn't leaving tomorrow, she'd be staying in Asia a long time.

If she was still alone after this conclave, she'd make her way along Samian Road, then cut into the welter of little streets that concealed a hole-in-the-wall she'd discovered called the Moonlight Bar. Down in the cellar a tiny old woman waited with pipes. Once, there had been thousands of opium dens in Asia. Now only Chiang Mai was left, with two or three small establishments.

At home, she kept her two-hundred-year-old opium in clay pots sealed with beeswax. Her ancient pipes delivered the vapor cool and easy, and Sarah was beautifully trained in the art of preparation and lighting.

She gazed up at the racing moon, thought of New York. It was about noon at home, so the cleaning crew would be at work in the club. Sarah and Leo would be asleep at home, probably in one another's arms . . . probably in Miriam's own bed, a curtained, canopied heaven made for Nellie Salter, cane-mistress to Sir Francis Bacon, and William Shakespeare's Dark Lady. She'd drunk too much before she died, had Nellie. She'd made Miriam positively giddy.

Maybe the thing to do would be to convince her husband to come back with her. Or, if that proved to be impossible, maybe she would break even that taboo, and bear the child without a male's protection.

Suddenly, a positively sumptuous girl appeared on the sidewalk, her features carved as if by a master, her skin as soft as mist.

"Speak English?" Miriam called to her. No answer.

"*Parlez-vous français?*" The girl hurried off, disappearing into a doorway. Miriam knew that she appeared enormous and intimidating to these people, an improbable apparition with ash-gray eyes and improbably elegant clothes.

Chanel sent her a *couturier* and staff each year, and she bought a new ensemble. Still, she was told it was all much too conservative.

It was true enough that her kind had trouble with fashion. Fifty years would pass in a blink, and suddenly you would find yourself wearing the last bustle in the world or the last top hat. That's why the few even slightly accurate stories about them so often portrayed them in antique clothes. Bram Stoker, she thought, must have known a little something about the real thing. How else could he have known to portray his Dracula as such a stodgy dresser?

An odor struck Miriam with the force of a slap. Involuntarily, she hissed. The driver's head snapped around, his eyes wide and white. The scent of human blood had invaded her nostrils, raw and still very much alive. Then she saw why: there was an accident ahead.

A powerful instinct urged her to leap out of the cab and suck the bodies dry

while the life force was still there to consume. But this was another instinct that had to be stifled.

As they passed the site, she held her breath. She could not trust herself with the scent of raw blood, not when the hunger was spreading through her body. Her skin was already cooling, making her feel heavy and slow. She'd be as pale as ashes when she got to the conclave. They'd all think, *Look at her, she can't even feed herself.*

The moon burst out from behind furious clouds. Lightning flickered on the spire of Wat Chedi Luang. The temple spires here in Chiang Mai were so lovely and exotic. She was used to the canyons of Manhattan.

Again the smell of the driver reached her nostrils. This time her body started to prepare to eat, her muscles growing tight for the assault, her mouth swimming in the mucus that would anesthetize her prey.

She took a long, last drag on the cigarette. If you pulled their blood into your gut with sufficient strength, your feed ended with delicious dregs.

“Be sure and get the organ juice, dear,” her mother would admonish her. “It makes for strong bones.”

Mother Lamia was hard to remember and hard to forget. When Miriam needed to fall out of love with a human, she would use her memory of what humans had done to her mother to help her along. It had come as a great surprise, the capture. When Keepers slept, their bodies reached a state near death. They were entirely helpless. So sleep was carried out in deep hiding, or — in those days — in great and protected palaces.

A man they had thought a friend had betrayed Lamia. He had been a faithful partner at cards, had been the Graf von Holbein. But it evolved that he was not a petty count but a powerful priest, and his name was not Holbein but Muenster, Father Deitrich Muenster.

Miriam had escaped across the roofs of the little town where they were living. She had not been able to take her comatose mother, nor to hide her. Miriam had expected to remove her from their prison either by bribery or by

brute force.

But they had not tried her. They had not even imprisoned her. They had wasted no time. Mother Lamia had awakened already chained to her stake. She realized instantly what was happening. But all of her struggles and strength did not break the chains or topple the stake.

Mother Lamia had stood proud on the pyre they had made for her, her hair flaring sparks into the night. She had stood there for a long, long time, because Keepers could only die when their blood stopped completely.

They had laughed when she screamed, and when they realized that she was dying so unusually slowly, they were even more delighted. Mother had been burned for a witch in 1761, in a village near Dresden. She had been the most alive, the best person Miriam had ever known. She had a fabulous sense of humor. She loved to have adventures, and she loved to dance. Mother introduced Miriam to music — sackbuts, violas . . . her beloved viola da gamba. Miriam had been taught to sing, to read and speak many human languages, so many that she'd lost count. The languages of the ancient world had been works of art, Sumerian and Egyptian and Zolor, among many others. They had been supplanted by Greek, with its sublime verbs, and Latin, which was too rigidly constructed . . . somehow crude. English was a practical tongue. Of the modern languages, Miriam thought that French and Mandarin Chinese stood out as being the most satisfying to speak.

Unfortunately, she had never learned Thai, so she was at a disadvantage here. “Will you hurry, you stupid creature,” she growled at the driver in English. He sped up. Her tone needed no common language to make itself understood.

The spires of the temple district rose all around her now. The district bore an ancient enchantment, for it was sacred to her kind, too. Here in the deep eons they had met, ten thousand years ago, fifteen thousand . . . when the world had been their toy and man a mute race of cattle. Look at the pavements left by her kind, still perfect after all this time. Look at the foundations of Wat Phra Singh and Wat Chedi Chet Yot — no human engineer could fashion such precision in stone. Stars curse what had happened among her kind, to make them vagrants in their own world. Give

me opium, let me smoke. Let me forget.

She touched the golden key that lay at the bottom of her new purse, the key that would let her into the sanctum in the cellar of the Moonlight Bar. The purse was a Gucci bought at the local night market for 2500 baht. It was a luxurious item and finely made. She didn't need another purse, but she loved to shop and she'd been unable to resist. Every Keeper loved exquisite leather, and calfskin was deliciously close to human . . . which was *very* taboo to wear outside the home. The prey might notice something — the remains of a tattoo or a human birthmark on your gloves or your pocketbook. Personally, she never wore leather from human skin. They might be prey, but they were sensitive, conscious beings and that had to be respected. But their skins tanned *très* softly, they flayed off a smooth back or buttock.

The *samlor* driver hunched forward as if some deep instinct was drawing him away from her. The thought again crossed her mind to just jump him. She'd ride him like a little bullock. He would shriek and buck, and it would be a thrill.

His living scent stung the flower-sweet air. Then he turned the *samlor*, going down a narrow street. It was little more than a passageway, very quiet.

She shoved another cigarette into her mouth and lit it. Closer they came to the ancient temple of Wat Chiang Man, the *chedi* within it buttressed to the four corners of the world by four gilded elephants.

The *samlor* stopped. Beneath the *chedi*, in a cellar no human being had ever entered, was the ancient *ho trai* of the Asian clans, a place founded before Siddhartha was Buddha, indeed before Siddhartha was born. "Stay," Miriam said. "Wait."

An eye took her in. The slightest of nods. She knew that this temple had a reputation among the ghost-conscious Thai. He sat with his head bowed and his feet clicking his pedals.

Her heels clattering on the wet paving stones, she crossed the short distance to the temple, then entered the *chedi*. Here, it was suddenly quiet. There was a scent of sandalwood and smoke from the single guttering lantern

that hung from a rafter, shining on the great Buddha that reclined in the center of the ornate chamber.

She paid respect to the Buddha, drawing her hands together and bowing. Had any of her peers seen her, they would have scorned her utterly.

She ran her fingers along the cunning mortise work, then tapped softly three times, causing the concealed mechanism to give way with a soft click. It was a little surprising, the way the mechanism felt. It was almost as if the lock were sprung. She thought she might have been able to open it just with a push. You'd never find this kind of carelessness in Europe or America.

She went down the steep, curving steps. She didn't need illumination, of course. There was a nocturnal species . . . miserably enough in this electric era. How her father had moped when the humans had discovered electricity. "We should have kept it from them," he'd said.

Keeper men and women did not live together except during pregnancy and, to some extent, child-rearing. But the love between them could be great, and he had never recovered from the loss of his Lamia. "I find myself searching the world for her," he would say. He'd persisted in doing dangerous things — climbing mountains, dueling, and traveling, endlessly traveling. It was death he sought, when he sought the far hills.

Her father had died in the explosion of the Hindenburg in 1937 — taken like his Lamia by fire. He saved human beings from the flames, and those he helped can be seen in the newsreel film scrambling from the windows as the ship descends. He comes out last, and his form disappears in the fire.

Over and over and over again, she watched that film, longing for one more rolling murmur of his voice, one more touch from his kindly hand.

She stopped on the fourth step. There was sound down below, definitely. Good, the conclave was in session. For most of the Keepers down there, this would be the first contact in a century with any of their own kind. Lovers met in sweet battle, and mothers lived with their children. But for the most part, they were a species as solitary as the spider.

A little farther along, she stopped again. Something she was hearing below did not seem quite right. Her people didn't laugh. She'd never heard anybody laugh except her mother and herself. Not even her dad had done it.

She went a little farther — and then she saw something incredible. On the dark wall there was a figure drawn. Or no, it was painted — spray-painted. She had to raise her head to see the whole of it. When she did, she saw that it was a crudely sprayed painting of a human penis in full erection.

Graffiti?

Farther along yet, there were paper cartons from a restaurant, still smelling of pepper and garlic. Nobody ate human food. They had no way to digest it. Inside, they were not made like humans at all. Liquor, however, was a different story. They could get drunk, fortunately. The others disdained alcohol, of course, but Miriam enjoyed fine wines and adored every form of distilled liquor from Armagnac to Jim Beam.

She moved a few more steps down, getting past the odor of the cartons. Her nostrils sought scent ahead.

Then she stopped. Fear did not come easily to her kind, so she was not frightened by what she smelled, only confused. She smelled humans — the dense odor of men, the sweet-sharp scent of boys.

A shock went through her as powerful as one of the lightning bolts that had been tearing through the clouds. She saw, suddenly and with absolute clarity, that the reason for all the odd signs was that there were human beings in this secret place. She was so surprised that she uttered an involuntary cry. The sound shuddered the walls, the moaning, forsaken howl of a tiger at bay.

From below there came a rush of voices, then the wild flicker of flash-lights. Footsteps pummeled the stairs, and suddenly two Occidental men and three Thai boys came racing past her, cursing and pulling on their clothes.

Behind them they left a greasy silence, interrupted after a few moments by the scuttle of roaches and the stealthy sniffing of rats. Treading as if her feet were touching sewage, Miriam descended into the sanctum. She growled low,

striding about in the filth and ruins.

They must have moved the sanctuary. But why hadn't they told anybody? Keepers might be a solitary lot, but ancient custom dictated that everybody be informed of something so basic as this. Unless — was she really *that* shunned, that they would move a place of conclave and keep only her in the dark?

Surely not. They were far too conservative to alter an ancient convention. So maybe there had been an emergency. Maybe the sanctuary had been discovered and they'd had to move it suddenly.

That must be it. She hadn't gotten the message because there'd been no time.

But then she saw, lying in a corner beneath the ruins of a shattered bookcase, a familiar red shape. She caught her breath, because what she was seeing was impossible. Her skin grew taut, her muscles stirred — the predator sensed danger.

She picked up the red-leather book cover and held it in reverent, shaking hands. From the time their eyes came open, Keepers were taught that the Books of Names were sacred. By these books, a whole species knew itself, all who lived and had died, and all its works and days.

That red leather was unmistakable, as was the inscription in the beloved glyphs of their own tongue, glyphs that no human knew. *The Names of the Keepers and the Keepings*.

They called themselves Keepers because they kept herds. If the rest of the book had been here, there would have been descriptions of the various territories that belonged to the different Asian Keepers and who had the right to use which human herd.

She ran her fingers over the heavy leather. It had been cured from the skin of a human when they were still coarse, primitive creatures. These books were begun thirty thousand years ago — a long time, even in the world of the Keepers. But not all *that* long. Her great-great-grandfather, for example, had

been able to imitate the cries of the Neanderthals. Buried in the Prime Keep in Egypt were careful wax paintings of the human figure going back to the beginning.

She crouched to the crumbled mass of paper, tried to smooth it, to somehow make it right. When she touched the pages, roaches sped away. She spread a crumpled page to see if any useful information remained.

The roaches had eaten the ink, what hadn't been smeared by the vile uses to which the paper had apparently been put. She laid the page down on the dirty floor, laid it down as she might lay to rest the body of a beloved friend.

She made another circuit of the chamber, looking into its recesses and crannies, but not a page remained.

She was face-to-face with what was without a doubt the greatest astonishment of her life. Some of the richest and most ancient Keepers were Asian. There had been — oh, easily a hundred of them.

She slumped against a wall. Had man somehow done this, simple, weak little *man*?

Keepers could be hurt by man — witness her mother and father — but they couldn't be destroyed by man, not this way. They *owned* man!

She looked from empty wall to empty wall and fully grasped the fact that the Asian Keepers must have been destroyed. If even one was left alive, this book would be safe.

When she grasped this enormous reality, something so rare happened to Miriam that she lifted her long, tapering fingers to her cheeks in amazement.

Far below the crazy streets, in the fetid ruin of this holy place, a vampire wept.

TWO

Blood Nocturne

The *samlor* moved with what now felt like maddening slowness through the sighing showers of rain, down the empty streets, while Miriam listened to the tremble of her own heart and smelled the air for danger.

What odor did she seek? The acid stink of a dead Keeper, perhaps, or the oil of a policeman's gun?

How could a human policeman kill one of them? The idea was absurd.

Yet the book had been destroyed. No battle among the Keepers, no matter how violent, would have resulted in the destruction of a Book of Names. Keepers fought for love and herds, but only occasionally, and never *that* hard. Not even in their days in the sun.

Miriam longed now to spend the night beneath the whirling fan, sucking deeply on her pipe, but thousands of years of hunting brilliant and dangerous prey made her too wary now even to consider such repose.

"Airport," she'd told the *samlor* driver. She'd pulled the plastic curtain across the front of the cabin and sat in the stuffy interior smoking and watching the rain pelt the driver's back, trying not to dwell on the scent of his blood.

The ride to the airport was a long one, and toward the end the creature had slowed to a slumped, struggling walk. If this had been another time, she would have whipped him.

She might be a rebel, but just now she felt an absolute, burning loyalty to her own kind. They had a right to life, just like any other creature. More of a right — this whole earth and every single creature living on it was their

property, and much of it — including man — was their creation.

They had given man everything — his form, his mind, his life itself. It was the Keepers who had originally bred the crops that man had been taught to cultivate, the grains and the fruits of the land, and the dumb beasts that he had been given to eat.

Her own great-granduncle had given the northern herds the apple, breeding the plants carefully through a hundred generations, then planting them where human tribes would discover the apparently wild orchards. This had been done as a solution to a nutritional problem. Humans needed fruit or they became constipated. It was most unpleasant to feed on a constipated human.

The *samlor* came to a stop before the shambling Chiang Mai airport, which proved to be empty in the predawn. Flights, it seemed, did not begin early here. She certainly couldn't sit alone in the lobby, not and invite the curiosity of security guards by being the only passenger present.

Nearby there was an area of warehouses, lit only by a few overhead lights. As the driver walked down a ramp to an area where others of his kind slept beneath plastic sheets, she slipped into the shadows at the edge of the main terminal building. A few yards away there was a chain-link fence with a locked gate. She twisted the lock off and moved toward the nearest warehouse, slipping in through a side door.

The black interior smelled of cotton and turned out to be full of T-shirts intended for the western market. "Grateful Dead," "Adolf Hitler, European Tour 1939–1945," "I Am a Teenage Werewolf."

She knew a great deal about fear, as something that her prey experienced. It was interesting to watch, in an abstract sort of way. She never felt it herself unless she got careless or unlucky. After all, humans couldn't do anything to a Keeper. Being killed by man was regarded as a freak accident, about as likely as being caught in an avalanche. Or, that used to be the case. Since about the time of her mother's death, things had been changing. The Keepers had responded by becoming more and more wary and reclusive.

Keepers were ten times as strong; they could climb sheer walls and leap

long distances. They were far more intelligent. But were they faster than a bullet or a warning cell-phone call? Had they the skill to outwit investigators armed with the tools of forensic science?

She had been surprised to see the shadow of man in that ruined holy place. But she realized, now, that she should not have been.

Given the destruction of the Asian Book of Names, she had to assume that there were human beings who knew of their Keepers and were efficient enough to have destroyed a whole conclave.

The question was, how much had they actually understood of that book? If man had learned to read Prime, the ancient Keeper language, then a terrible doom might be upon all the Keepers. That book not only contained records of the locations and property of all the Keepers in Asia, but also all of their familial and fiscal relationships to every other Keeper in the world. It told the locations and times of the other centennial conclaves that would be held this month.

Miriam had to warn her kind.

An hour after dawn, workers were coming to open the warehouse, and the airport was slowly returning to life. As Miriam went among the crowd in the terminal, she found herself coping with strange urges, ferocious urges. She wanted to grab a few of them and tear their heads off and drink their spouting necks with the savagery of the ancients.

Perhaps she *was* afraid. A predator experiences fear as an urge to attack. It was why her mother had roared and gnashed her teeth back when — but she didn't want to brood on that again, not now.

Her hunger was starting to actually make her bones ache, and her skin was turning whiter and whiter. The dry, corpse-like coldness that marked a hungry Keeper's skin was stealing her usual girlish flush.

“Bangkok,” she said to the ticket clerk, producing a Visa card in the name of the traveling alias Sarah had set up for this trip. A French national called “Marie Tallman” had entered Thailand from the U.S. and would leave for

Paris. Miriam Blaylock, a U.S. citizen, would return to New York.

She went to the surprisingly ornate first-class lounge. A hostess came up. Miriam ordered sour lemonade, then sat down and lit a cigarette. She contemplated what had become the problem of her hunger.

She'd ignored it for too long, and now she was going to have to feed before she left Thailand. Why hadn't she noticed this back in New York? She could have sent Sarah down to the Veils to bring back some wanderer. At home, she had reduced the hunt to a simple, safe procedure that delivered her prey right into her arms. Sarah found appropriate victims and lured them to the Veils. Miriam consumed them in a basement room built for the purpose, or she took them home and dined there.

She gave them a lovely time. They died in ecstasy.

She sucked a cigarette hard, blasted the smoke out of her nose. If she didn't feed soon, she would slow down, she would lose her edge. Then she'd have to find some weak human and do a thin feed. This would only stave the hunger off for a few days, no more. So there would be a second hunt in Paris, and more danger.

She ought to race straight back to New York and the hell with the rest of the Keepers. They probably wouldn't appreciate her efforts anyway.

But she couldn't, not when the greatest disaster she had ever known had befallen an entire continent. Of all the Keepers, how could it ever have been the Asians who would be attacked by man? Many of them were true ancients, more than ten thousand years old. Immensely wise, extraordinarily careful, not moving so much as an inch except to feed, they would stay in their black lairs, shadows with gleaming eyes and slow, slow breath, amusing themselves for months by gazing at a bit of intricately woven cloth or some subtly reflective gem.

When these Keepers walked among their herds, the humans would stir in their sleep, sighing with the sighing wind, clinging to one another without knowing why.

They had seen vast ages of man pass, empires rise and fall and be forgotten, thousands of human generations go to dust. More effectively than any other group in the world, the Asians had managed their herds, inducing migrations in order to evoke new strains, breeding their stock for beauty and intelligence and succulence. Humans called it famine and war and migration. Keepers called it stock management.

The more she thought about it, the more uneasy she became. How much of the secret of their Keepers had the humans involved understood, and who were these creatures? How could cattle enjoying the riches and ease of the feedlot ever realize the truth about their lives? Especially when not one in a hundred thousand of them would ever come into contact with a Keeper. But human beings were not cattle, and it was a mistake to think so.

Somehow, they had used their clever little brains to discover a secret that was larger than they were. They had used their damned science. They never should have been given the wheel, let alone electricity and — God forbid — flight.

But they had been. They were fun to watch, damned things. Also, as their population had risen out of control, they themselves had taken their science to greater and greater heights, seeking to make more food, to move faster, to create room for more and more of themselves on the groaning planet.

She'd had a brush with human science herself back twenty or so years ago. It was hard to believe, now, just how much trouble dear Dr. Sarah Roberts had caused her back then. She'd taken samples of her own blood into a laboratory. She'd damned well discovered the secret of the Keepers, that smart little vixen.

Miriam had eaten her cohort and seduced her. She'd flooded Sarah's body with her own blood, but Sarah had fought the transformation. She had refused to eat, claiming that her medical oath was stronger than her love of life. So she had spent a little time among the undead, her soul trapped in her slowly decaying body.

Meanwhile, Miriam had read Sarah's scientific papers and gained new insights from them about the synergy between Keeper blood and human

blood. She had managed to resuscitate Sarah.

In doing so, she had gained a complex and fascinating companion. Sarah had honor, and so could be trusted. But she did not like to feed. She considered it murder.

Miriam had lured Sarah into finding buried parts of herself that loved the soft skin and the considered touch of another woman. When they lay together, Miriam would draw her to climax again and again, with the pressure of the finger or the exploratory flutter of the tongue.

“Passengers for Thai Airways Flight Two-Twenty-three to Bangkok may now board through Gate Eleven.”

She began to file toward the gate that led to the plane. Normally, she minded travel far less than other Keepers. For a woman of their kind, travel was limited to courtship during her four fertilities and, of course, attending the centennial conclaves.

Defying convention, Miriam had traveled all over the world. She had tasted it and enjoyed it and watched it change across time, had walked in the grand alleys of ancient Rome and the perfumed halls of the Sun King.

She had lived a long time in the cellars of the House of the Caesars on the Quirinal Hill, had heard mad Caligula screeching and fed on the blood of his slaves, who were fat from their constant stealing of his peacock breasts and zebra haunches, and were too numerous to be missed.

Despite all her journeying, she detested small spaces. During the eastern European crisis of the nineteenth century, when local humans had briefly learned to recognize their masters, Keepers in the Balkans had been forced to hide in graves. Miriam had gone there to see firsthand what had gone wrong. She ended up spending a week hiding in a coffin, an experience that still haunted her dreams. It had taken almost all of her strength to dig herself out of the grave. Their use of this particular hiding place was how the legend that Keepers were somehow undead had begun.

It was some time before anybody understood why simple Transylvanian

peasants had come to understand that they were property. Not until the publication of *Dracula* did the Keepers realize that out-of-date clothing could give you away in a world where fashions had begun to change more than once in a human generation. The Romans had worn togas for a thousand years. In the Middle Ages, fashion had changed perhaps twice in a century.

In the nineteenth century, it began to change every fifteen years or so. Isolated in the Carpathians, the Keepers who lived there had failed to notice that powdered wigs and buckle shoes had ceased to be worn by humans. The peasants soon realized that every time one of these bewigged oddities was seen in the night streets, somebody disappeared. Twenty-six Keepers died during the Balkan troubles, the largest number by far ever to be destroyed at one time by man.

But there had been sixty or more here in Asia. *Sixty*. What if they were captured, starving in prison, or being tracked like foxes? Or worse, already dead.

They *were* dead. She sensed this. There was something missing in the air . . . a sort of silence where there had been music.

She strode toward the far back of the fetid tube full of seats. The only place she would sit on most flights was the very last row. If something went wrong, her great strength might give her an edge, for she would be perfectly capable of ripping a hole in the fuselage in order to escape, if escape was possible. The impact of a jet slamming into the ground at four hundred miles an hour would reduce even a Keeper to pulp.

The damn plane was going to be full, she realized. The wretched creatures were just piling on, and her belly was churning. She had to feed, and soon. She had to do it in Bangkok, and never mind the urgency of the situation or the danger of just being in Asia.

The plane was an A-310 Airbus, a type that particularly troubled her because it was too easy to fly. Pilots got careless in this airplane. Worse, it had only two engines, and she knew from her hobby of reading technical manuals that one of them was not enough to keep it aloft forever.

The Thai were smoking and chattering and eating human fodder: bits of pork and mushroom and pepper wrapped in what looked like edible plastic. Various of her human lovers had tried to introduce her to the pleasures of sweets and such, but she had not been able to digest any of it. She watched human food evolve steadily for thousands of years — until recently, that is, when continued population pressure had caused an increase in quantity and a corresponding decline in quality.

Herd tending was not her specialty, so she wasn't particularly concerned with what the creatures ate. Her parents had been breeders and practiced the art of inducing particular humans to breed with each other, so that babies with preferred characteristics would be born.

Her father and mother had bred a new race among the Egyptians, seeking to make a smarter human. They had eventually caused the birth a brilliant child called Ham-abyra, who is known to history not by his Egyptian name, but by the Hebrew inversion, Abyra-ham. He had been cut out of the Egyptian herd and sent to found a new one in another part of North Africa.

The herd of Abyra-ham were great survivors because they were so clever, but their blood had a bitter aftertaste, unfortunately. You ate a Jew, her father always said, you remembered it for a week.

Originally, there had been good reasons for wanting humans to be smart. The brighter they were, the better their survival skills, and the cheaper they were to manage. Also, the blood of the brilliant usually offered more complex, interesting bouquets. Keepers bred humans for blood the way humans bred grapes for wine.

The engines of the airplane began to whine. She hated to fly as much as or more than she had hated to sail, but she did it anyway, just as she'd always traveled. Her thirst for knowledge had made her take the spring galley from Rome to Alexandria to read in the library, and the summer galleon from Spain to Mexico to plumb the secrets of the Maya.

There was a problem, though. She'd often ended up eating every single soul on those slow old sailing ships. She never meant to do it, but it was just so tempting, all alone in close quarters with a gaggle of sweet-blooded

humans for weeks and weeks. She'd do one and then another of them, starting with the low slaves and working her way up. She'd create the impression that they'd jumped or fallen overboard. Come a storm and she'd do five or six, gobbling them like bonbons.

Ships she took would arrive empty . . . except for one seriously overweight Keeper well hidden in the bilges. One of her most particularly self-indulgent trips had been aboard a Dutch East Indies spice trader. She'd consumed a crew of fifty and all six of their passengers in just two months. She was so packed with blood she feared that she must look like a big blue tick. She'd come into Surabaya at night on the ship's sailing dinghy. As for the ship, it had sailed on alone for years, still a legend among humans, the *Flying Dutchman*.

Shuddering, the jet rose into the air. Fog, touched golden by the sun, hung over the ancient Thai city below. Miriam gazed down at the temple district, at spires just visible through the billowing fog, and wondered.

The hunger was beginning to claw at her belly. Her muscles were tensing, instinctually getting ready for a kill. Her mouth was filling with the sour flavor of need. The scent of people swept through her with every breath.

She turned on the air nozzle above her head to full force, but there was no escaping the succulent odor of her fellow travelers, not packed into this tin can.

You certainly couldn't feed on a jet. If you stuffed the remnant down the toilet, it would be found later in the plane's holding tank. Remnants had to be completely destroyed — ground up and burned, usually. Humans had found just a very few of them over the generations, generally taken for mummies. In fact, she'd once wrapped a news hawker in tape and put him in a mummy case in the basement of the British Museum. That had been when — oh, a few hundred years ago. He was probably still there, her old hawker. It had been the *St. James's Gazette* that he'd been selling. Pretty good paper in its day.

Look at the humans around her, she thought, all happy and fluttery and unconcerned about the thirty-thousand-foot maw of death beneath their feet.

How could anybody be as careless of their lives as humans were? They flew all the time; they raced around in automobiles; they went on roller coasters and fought wars. Miriam's theory was that humans did indeed have souls, and inwardly they knew it. That was why they came to her for sex, thrilled by the danger they sensed. They weren't really afraid of death, the humans. For them, it was nothing more than another thrill ride.

For the Keepers, death meant leaving the cosmos forever.

The plane leveled off. Miriam knew by its motion and sound exactly what it was doing at every moment of the flight. Actually, she could have flown it herself. She'd trained herself on her PC with a flight simulator, just in case some pilot died from the airline food or something. If some fool were to attempt to hijack the thing, she'd hypnotize him immediately and simply sit him right back down. They'd have to try to figure it out later.

Two shy children peeked at her over the seat ahead. They gazed steadily at the European, but it wasn't only curiosity in their eyes. She knew that the longer the flight, the more uneasy she would make her seat-mates. The presence of a Keeper evoked instincts that humans, being so near the top of the food chain, were as unfamiliar with as she was with fear. What a human felt in the presence of a Keeper was what a mouse felt in the presence of a snake — a sort of horrible question.

They would grow unaccountably suspicious of her, be strangely drawn to her, grow sick in her presence, and if they slept, they would have nightmares about her, every single soul in this airplane.

The stewardess came, her smile fading as she laid eyes on Miriam. She had a cart full of boxed food and piles of plastic chopsticks. She stood close, handing food to the people jammed in the nearby seats.

Her blood had a soft, plain scent, like Beaujolais from an uninteresting year. Even so, it would be smooth and warm and wonderful as it went down. Miriam kept her eyes closed, barely breathing.

Never guessing that Miriam could see through her own eyelids, the stewardess took the opportunity to look long at the tall European in the old

suit. Miriam worried that her makeup was too light. By now, her skin would be terrifying to a human. She'd appear as pale as a corpse. But she was also thirsty, so she had to interact with the girl, risk a moment of the creature's attention. "Excuse me."

The stewardess stopped. She organized her face into a carefully professional smile. "Yis," she said, uttering what was probably one of her few English words. *Yis. Nah. Okeh.*

"Water," Miriam said, pointing to a bottle with blue Thai writing on it.

The girl gave her the water and moved off nervously. The plane shuddered, the tone of the engines changing. Miriam fumbled with her water bottle. She knew that the sounds weren't abnormal, but they still made her uneasy.

Again, the plane shuddered. It was heading down, definitely. Surely there wasn't a situation. The engines were fine; she could hear that. But what if they were having control problems?

She took in breath, prepared to tighten the muscles that might be needed if she had to tear her way out of a crumpled fuselage.

But no, the plane *was* landing. Or more accurately, beginning its descent. She fumbled her itinerary out of her purse. Yes, the flight was forty minutes, and running exactly on schedule.

The flaps went down, making a terrific racket. Her startle reflex made her suck her water bottle so hard that it became involved with her teeth, and she accidentally shredded it. Water gushed down her front. Wiping her breast, she stuffed the ruined bottle down into the space between the seats.

She sat facing straight ahead, ignoring her accident. They didn't notice, anyway. They were too preoccupied with their snacks.

The plane was so thick with the smell of human blood that she would have liked to have gone into some sort of feeding frenzy like a shark. Total indulgence.

She'd never been on an airplane while this hungry before, and she resolved never to do it again. She should have eaten that *samlor* driver. She closed her eyes. Time passed, one minute, then another. She found herself inhaling the smell of her seatmate. He was a plump little thing, just popping with sweet blood. *Délicieux*. The odor of his skin was lively. This was a tasty morsel, sitting here. She sucked in more scent.

She began to imagine how she'd take him. She'd pretend to be one of those European whores who did such a lively trade in Asia. They'd get off the plane together, and then — well, sooner or later the moment always presented itself.

She could get a very nice feed out of this creature. He had noticed her glances and was scanning her. She could smell the spicy scent of his interest.

“Lovely flight,” she said.

“Oh, yes,” he answered. His English was good, which was a nice convenience.

She gave him a smile, very slight, a bit arch.

He squirmed in his seat, his eyes flickering between her folded hands and her face. Male victims always felt as if the strange woman who had taken notice of them was the most beautiful, most desirable creature on earth. Females found her personable and engaging. They never knew that they'd been bred to react this way to interest from their Keepers.

He crossed and uncrossed his legs, tossed his head, then leaned a little forward. “You spending some time in Bangkok?” So, he was available for consumption. She considered. She might miss her flight to Paris, and the rest of the world had to be warned about what had happened here, and at all speed. But by the moon and the stars, she was *so hungry!*

“Perhaps,” she said softly.

His smile widened to reveal a gold-capped tooth. She glanced down at his fingers, at the shimmering of his wedding ring. There would be a

complication right there — a disappearing husband.

He followed her glance, shrugged.

Her gut hummed.

The pitch of the engines changed again. She evaluated the sound, concluded that all was still normal.

She lifted her fingers, poised them above the back of his hand. To touch him now was an ancient act of possession, by which the Keepers had claimed their prey from time immemorial.

She lowered the cool tips of her fingers until they came into contact with his skin. “I’m staying in Bangkok for a few days.” She laughed, a musical trill. “At the Royal Orchid,” she added, drawing the name of the hotel from somewhere in her memory. She knew only that it was a very fine place.

“As it happens, I’m staying at the Royal Orchid, also, miss.” He smiled from ear to ear.

She hoped they had a room. She had no reservation. Doubtless he didn’t, either.

A moment later the plane hit the runway, then went jolting along the much-patched tarmac. Despite Miriam’s grim worries, it slowed steadily. Still, she was tense, waiting for the damned thing to get off the runway. For an unspeakably long moment, it hesitated. Were the pilots lost? Had the surface traffic controllers made some stupid mistake?

She pictured a 747 landing on top of them, its entire flight crew dead asleep. Years ago, two Keepers had been killed in a catastrophic runway accident in the Canary Islands. But the engines revved up again and the plane moved forward. A few twists and turns and it came to a halt. The seat-belt chime rang.

Immediately, Miriam’s mind focused on her victim. Now she must ignore him a bit, play the coquette, the Occidental woman who was just a little

indifferent to the Oriental man.

As they filed out of the plane, she stayed behind him, evaluating moment by moment every subtle change in his manner. A musty smell flowed from between his legs, a sharper odor of sweat billowed off his skin.

There was something just a little odd in these odors. He should have smelled far more of sex and less of . . . well, it seemed that he was afraid. Probably, it was because they'd been in proximity too long. You wanted to move quickly when you hunted, not sit cheek-by-jowl with the prey for an hour before proceeding.

In the airport, they were hit by the wall of filthy air that enclosed and defined life in Bangkok.

No matter his perversion, here the wanderer could find satisfaction. The Thai had originally been bred by luxury-loving Keepers, and they preserved the remarkable zest for pleasure that had been bred into them. But then, every herd in the world bore the mark of its Keepers. You could see the stark love of order and the obsessiveness of the northern Keepers in the Germanic peoples they had created, and the passion and subtlety of the southern Europeans in the French, the Spanish, and the Italians. She loved the wild mix of the Americas, never knowing exactly what to expect from that mongrel herd.

As Miriam and her victim moved out into the main hall of the airport, she laid her hand on his shoulder, the second time she had touched him. Each time she did it, she felt more of a sense of possession.

She felt not the rippling whisper of desire in his muscles, but the tense vibration of fear. This was going to take a great deal of care and attention. This man must be very sensitive indeed to feel as he did now. Perhaps she should turn back.

He plunged into the chaotic cab rank, a mass of bills in his fist, and they were soon in a taxi.

She disliked being driven by others in motorized vehicles, and this driver

was typical of these wild folk. In addition, he would certainly remember a run with a Thai man and a European woman.

Her victim sat rigidly, gripping the handhold above his door. When he offered her a cigarette, she did not like what she saw in his eyes. Did not like, did not quite understand. Their instinct was to be drawn to the predator, to be fascinated.

She let him light her cigarette, inhaled deeply. Cigarettes didn't matter to Keepers. Their immune systems swept cancer cells away like crumbs.

An impulse told her to give his cheek a sudden kiss. "Asia," she whispered, "Asia is such a mystery."

"I'm in outsourcing technology. No mystery there."

"Your accent isn't Thai."

"My father was a diplomat. I grew up in London and then Burma."

She remembered the days of the British in Burma, when they used to grow opium poppies on huge Crown estates. They had looked upon their laborers in much the same way that Keepers looked on humans. You could go out into those opium plantations and chew seed and take one picker after another, like an ape gobbling fruit. And then you could engage in the social life of the planters with their whites and their billiard rooms and their gin and tonics. Sometimes, you could even take one of them, for there were still tigers in Burma then and the corpse could be left suitably mauled.

Sweet nostalgia.

They arrived at the Royal Orchid, the cab at sea in an ocean of limousines. She went forward into the broad, echoing lobby. Women stared in open amazement as the fabulous clothes strode toward the check-in desk.

"I'd like a suite please." She presented her — or rather, Marie Tallman's — Visa card. The clerk ran it and gave her a keycard, his polite glance moving toward the next customer in line.

She had made no effort as yet to seduce her victim away from his uneasiness. He needed more subtle handling, and she had to accept that this might not be a successful hunt. She'd be damn mad if it failed, though, and the long journey to Paris would be hell.

She held out her hand to her victim. As sweetly, as innocently as she could, she smiled at him. He looked down at her hand. In it was a keycard. "Twenty-five-oh-seven," she said.

When they were alone in the lift, he finally smiled up at her. His odor had not really changed, though. He was not happy to be here. He was acting.

She kissed him on the forehead. Now that she was committed to what was probably a very foolish kill, she decided that she might as well enjoy herself thoroughly. She would take him slowly and drain him to the very last drop. She gave him a stern look. "How much am I worth to you?"

"How much do you want?"

"A thousand dollars."

His eyes widened, he reared back as if astonished. The lift came to a stop on the twenty-fifth floor. "Two hundred, miss. H.K. dollar."

They got out. She would not bargain all that hard, but also she must not raise his suspicions. "Three hundred, U.S." she said as they walked down the wide hallway.

"Five hundred, H.K."

"It isn't enough to cover my expenses, handsome."

"You'll do twenty men before the night's out."

She slid her keycard into the lock. Here she was, as magnificent a beauty as the earth might know, and this greedy little roach actually believed that she was going to give herself to him for the equivalent of about sixty U.S. dollars. He'd been afraid of her price, that was all. Wretched thing.

Sunlight poured in from the wall of windows that faced the door. There was a couch upholstered in yellow chintz and a huge vase of exotic flowers on the coffee table.

Far below, the wide Chao Phraya River shimmered in sunlight that shafted down between great banks of clouds. Tiny river taxis and long-tails wove the river with their wakes. Up the bank, she could see the spires of distant temples, Wat Phrathukhongka and, just visible along the Klong Phadung, Wat Trimitr, the temple of the Golden Buddha. Farther away, awash in glowing air pollution, were the graceful tile roofs of the Grand Palace and the pencil-narrow spire of Wat Po.

The two of them gazed in silence, both awed for different reasons. He no doubt thought it glorious; she was horrified and fascinated, as always, when she saw how vast were the works of man.

She sat down on the bed, drew her prey down beside her. Too bad she had to eat and run. Normally, she would have gone into the sleep that followed feeding, but this time she'd have to load herself up with amphetamines and do her sleeping on the plane. She'd book a first-class seat for this twelve-hour journey, no matter that the seats were in the most dangerous part of the plane. Still, the idea of entering helpless sleep amid a mass of humans was not pleasant.

She caressed her victim. He stirred, his clothes rustling. A moment passed, another. He had become still in the way human beings did when they were subconsciously aware of danger.

They were sitting on the foot of the bed. She took his chin in her hand and turned his face to hers. She looked into his eyes, looked deep.

What did the gleam in those human eyes mean? She always wondered that, right before she fed.

“Kiss me,” she said to the creature. He smiled a drawn smile, then lifted his face to hers, his lips going slack, his eyelids fluttering down. She laid her lips upon his, careful to keep the anatomy of her mouth concealed. Their tongues met, and she felt his muscles stiffen a little as he detected that hers

was as rough as a cat's. If he bolted, she would be ready. She was ten times stronger than the strongest human being, ten times faster.

A cat worries its prey because pain flushes muscles with hormones that season the meat. This was true also of her kind, and some of them were casually cruel to their victims.

Stroking his head and purring, she laid him against the pillows and opened up his pants with her deft hands. She took his member out, smiled, then kissed it.

Then she stood before him. She removed her blue silk jacket, twirled, then unbuttoned her blouse. He watched with steady concentration, a slight smile on his face.

Instinct made her sway into the death dance, her arms undulating, her hips moving gracefully. Each time she twirled, her body became tighter and harder, more and more ready. As she danced, she threw off her clothes.

She stood before him naked, like a wound spring, her hands ready to grab him. There was in his eye a sort of curiosity, for she was very pale indeed, as pale as a ghost and as slick as glass, more like a statue than a being of flesh and blood.

He would soon discover that she was also cold, very cold. She sat down beside him and kissed him. But something was not right. As she had kissed him, he had returned himself to his pants.

No matter, she was sexually excited now herself. That was part of her reality and what made her so very different from the others of her kind: humans excited her. She liked their bodies, the way they tasted and smelled, the way they looked, the curves of the females, the pert rods of the men. Perhaps this was because she had discovered that she was capable of taking them to states of pleasure that Keepers could not reach with one another. Sex between species could be a stunning aphrodisiac, if executed with skill.

She lay down upon her little man, snuggled him into her. He seemed to be struggling with himself, fighting an inner battle. She reached into his pants, to

see if she could resolve the conflict for him. A few deft strokes, and he was ready.

The human male was not blessed with a large penis, and it probably felt strangely lost in her vagina. He would also be noticing the cold. In fact, she could hear him making little exclamations in his throat. He was becoming aware that something was wrong.

“There, baby,” she cooed, “little baby boy, all is well.”

He started heaving. He wanted out from under her. She was, of course, far heavier than she had appeared. She tightened her vaginal muscles, over which she had exquisite control. When she began undulating them, he yelped with surprised pleasure. He’d probably never felt anything like it before, not even in Asia.

Her mouth was pressed against his neck, her mucus flooding his skin with anesthetic. Her sharp teeth parted the skin so easily that he probably felt nothing at all. There was a bit of resistance from the wall of the vein. She made love furiously as she exhaled, made herself ready for the ferocious sucking motion that would consume his life.

His muscles worked, he twisted and turned. He would be feeling both the pain of penetration and the pleasure of sex. He grimaced, his eyes shut tight.

She stayed like that for a while, making love at first fast and then slow, bringing him close, letting him relax. She left her mouth wide open to the wound, letting the blood tick past, tasting it just a little, enjoying herself.

When he began to really squirm, trying to reduce what must be by now a quite noticeable pain deep in his throat, she pinned his arms to his sides and enclosed his legs in her own. Her strength was so great that it felt to her human lovers as if they were being encased in iron, or so they had always told her.

The penis, on the other hand, would feel as if it were being massaged by thousands of tiny, careful fingers. One man described it as the most divine sensation he had ever known. He begged her for it, even while he was dying.

She worked him to the edge twice more. His body was a roaring furnace; his blood was singing. She was deep in him, her drinking beginning to kill him. It was now, at this moment, that she was sure that she felt his soul.

She sucked massively and fast, the sound of it roaring through the silent, sunny room. He did not even have a chance to cry out. As he died, the pumping of his loins became disorganized, then stopped.

The blood came into her like living fire, like a flower opening in her gut. Then came the bittersweet flavor that followed the blood, that meant that the organs had also given up their fluids.

She got off him, sat on the bedside and lit one of his cigarettes. Taking a long drag, she enjoyed the sensation of absorbing his life. The males and females felt quite different. After consuming a woman, you had a ferocious sort of an energy in you. You felt as if you could tear the world in half. A man left the flavor of his strength. You got a heady, hard-edged high from testosterone.

She got up and strode to the window. The healthier they were, the more you got from them, and this creature had been very healthy. Her face got hot, her body flushed warm and pink.

She went over to the mirror and touched the reflection of her face. She had been a woman before; now she was a girl, fresh as dew, her eyes sparkling and innocent.

Still enjoying the taste of blood that lingered in her mouth, she rifled through the man's clothing. She'd get his money, then dispose of the remnant and go straight to the airport. She could still make her Paris flight. The European clan was not as big as the Asian, but it was wise and ancient, not like the adventurous Americans. Europe had fixed the Transylvania situation by transforming true vampire lore into myths and stories. Europe would know what to do.

She drew a fat brown wallet out of his hip pocket and tossed it open. Poor wife, smiling so desperately, will you miss this man or feel relief that he has gone? And here were children — damn!

She was furious with herself for looking at the pictures. She never looked at the damn pictures! She held the weathered print of the kids, wondering how old they were, poor little things. She stuffed it back into the wallet, pressing it deep into one of the pockets.

It was then that she noticed a rather strange card. At first, she thought that it might be a Thai driving permit, but when she looked more closely, she found that it was very far from that.

Lying in her hand was an identification card. She stared at it, reading it carefully. It was in French, English, and Chinese, not Thai at all.

The sunken husk lying on that bed over there, now nothing but forty pounds of bones and drum-tight skin lost in a pile of sheets, was no innocent Thai businessman. Lying there were the remains of Kiew Narawat, police inspector with Interpol.

Her breath came short, her skin grew hot and dry. She felt dizzy, her bowels threatened to let go. She threw on her clothes, settled her wig on her head, and applied a smear of lipstick to reduce the glow of her fire-red lips. Going deep into her purse, she pulled out three yellow-and-black bennies and threw them down her gullet. Sleep would drag at her now, but she must not let it come, not until she was in her plane in her seat and covered with a blanket.

Forgetting the remnant lying on the bed in full view, forgetting everything except escape at any and all cost, Miriam Blaylock made a mistake of spectacular proportions, one that she had not made in three thousand years upon the earth. Indeed, it was a mistake so rare that it could bring a Keeper the penalty of confiscation of property.

So distressed was she by the events of the past few hours — the discovery of the disaster in Chiang Mai, and now this horrible discovery, so loaded with dreadful implications — that she left the remnant where it lay.

There was only one thought in her mind: Get out of here. She hurried into her clothes, barely even stopping to see if she had left any of her possessions behind, and took a taxi straight to the airport.

THREE

Hunter of Hunters

When Paul Ward had first realized what the confused Interpol e-mail was about, he'd felt as if the entire Petronas Towers complex were about to topple into the streets of Kuala Lumpur. But the towers were fine. Only his program had collapsed.

Jesus God, he screamed silently, they were like roaches. He had cleared them out of the whole continent, sanitized it. And now, instead of cleaning out his office in Kuala, preparing for departure to the States and the start of the endgame against them, he was racing through the streets of Bangkok in this clanking old embassy Caddy.

Paul Ward was dealing with one smart breed of animal. How smart, he had just plain not understood, not until now.

He pressed himself against the seat of the limo, instinctively keeping his face in shadow. It was always possible that they knew him, he thought, that they would recognize him. He watched the people thronging the streets and wondered if Bangkok, or any city, would look the same if its inhabitants knew that predators a thousand times more dangerous than the tiger or the shark might be walking just behind them.

The damned thing of it was, he'd even run his traditional victory celebration, with all the traditional goodies, stolen in all the innovative ways that his crew could come up with. There had been a couple of cases of Veuve Clicquot borrowed from the Sûreté outpost in Ho Chi Minh City, a couple of cases of beluga borrowed from the KGB in New Delhi, and a whole bunch of dancing girls who came to the crinkle of the dollar — counterfeits made in Myanmar and borrowed from Pakistani intelligence by the redoubtable Joe P. Lo, who could steal venom from a cobra.

They'd been saying good-bye to the General East Asia Pest Control Company. Good-bye and good riddance to their ironically named front organization. This had been a miserable, exacting, assignment, and an extremely dangerous one. Will Kennert, Addie St. John, Lee Hong Quo, Al Sanchez — these were just a few who'd died fighting the vampires.

If he hadn't needed to be totally and completely centered for the task ahead, he would have told the driver to stop at a bar. He'd go in and suck sacred Stolichnaya like a Russki at the nipple of his still. He'd get a massage that lasted all night. Masseur in relays. Every sin he could think of and — thanks to being in good old Bang-yer-cock — some he probably couldn't.

“Goddamnit!” he suddenly said aloud.

“Sir!”

The driver didn't know that he talked to himself. Why would he? People didn't know Paul Ward, not even embassy people. They weren't supposed to. “Sorry, son.”

The flight from Kuala had exhausted him — just sitting in that damn seat, waiting through what seemed an eternity. He'd tried the phone, but it hadn't worked. The Gulf of Thailand was still an empty corner of the world. He hated empty places, dark places. He hated small places even more. Recurring nightmare: he comes awake, starts to sit up in bed, and *wham*, his forehead hits something with such force that he sees stars. Then he realizes that the air is heavy with his own breath and he can't sit up without braining himself. He knows, then, that he is in a coffin.

He knew a CIA guy called Richie Jones, who'd run afoul of the Khmer Rouge and been buried alive. Somebody who'd been in that prison compound had reported that you could hear him screaming for about half an hour. From Ohio State to a lonely hole in the jungles of Cambo. Had Mr. President ever been told about Richie? Had Mr. Director of Central Intelligence known or cared? Weep a tear for the Buckeye state, for it has lost a son.

To die the way covert ops died in the field, damn hard and damn alone — Jesus God, pass the bottle. And to do what he and his crew were doing, to

live the way they were living, chasing these monsters in the sewage and the filth of some of the world's most terrible cities, getting yourself eaten if you weren't careful — Jesus God, pass the bottle again.

He was tired. They were all tired. It had been a hard operation, soaked in the blood of fine men and women. And what a death. It'd be better to be buried alive by a bunch of twelve-year-old Khmers with AK-47s and dead eyes, than to be stung in the neck by one of those filthy things.

Long before he'd been forced to come back, Asia had been a place he wanted to put behind him. Vietnam, Laos, Cambodia, 1971 to 1973. In those days, life had less value than dirt out here, especially American life, and most especially the life of a clean-cut CIA virgin with a buzz haircut and wire-framed glasses. He had made it through the Parrot's Beak massacre when Danny Moore had been pulled apart between two backfiring tractors. He had lived through six weeks in a bamboo cell with nothing but roaches and rats for food, while Betty Chang was methodically raped to death and George Moorhouse starved. He had survived because he was too ugly to rape and so cussed that he could crack rats and drink 'em, blood, guts, and all.

He fumbled in the little cabinet that was supposed to be stocked with booze. "Got any vodka in this thing?"

"No, sir."

Of course not. A CIA officer didn't rate booze in his car. This was the U.S. Government. The foreign service kid driving this thing outranked him by a damn country mile. The kid and the limo had appeared at the airport only because there hadn't been time to find a conveyance shitty enough for a CIA field officer. Had he been from State, there would have been booze and ice both.

"The goddamn bastards."

"Sir?"

"Nothing."

Paul wished they'd sent a girl driver. He wanted the scent of a woman in this car. He wanted, he thought, what all men want. He wanted deliverance.

He closed his eyes. Instantly, he saw an old and hated vision, the prairie grass dancing in the moonlight. He opened them again. He could not go there, no. Better to stay with the wartime memories or the memories of sterilizing those filthy dens with acid. How in hell was it that these things looked so much like people? How had they evolved? Had God gone nuts?

The prairie grass dancing in the moonlight, his curtains billowing with moon wind, and in the distance, the most beautiful voice singing: that was the beginning of a life woven from nightmares.

Paul slapped his breast pocket. Pillbox in position. He'd take two tonight, maybe three. Black sleep, please.

"Shit," he said softly, and then, "Shit!" louder.

"Sir?"

This kid would chatter that he'd had to drive a muttering old crazy man to the Royal Orchid Hotel, and then he'd try to find out just who this VIP third class was.

He would not find out.

The State Department could not tell anyone about Paul Ward because they could not tell anyone about the vampire project. If they did that, they would also have to explain that humans are not at the top of the food chain, that we are prey, legitimate prey, just as nature intended. What is worse, they'd have to explain that the predator is damn clever and has evolved some very remarkable camouflage. The predator, you see, looks just like you. Except that his skin is as pale the light of an October moon, and he will sing to you and dance for you, and comfort you in his arms while he kills you. As far as looks are concerned, you can't tell the difference between a vampire and your postman or your doctor, or your own damn brother.

No involved division of any involved government had questioned the

secrecy of this operation.

He stared balefully at the back of a stopped truck. Was it parked, or what?

“Can’t you hurry?”

“Sir, this is Bangkok.”

“Mind if I drive?”

“You want to drive, sir?”

“I need to get there before dark, for Chrissakes.”

“Look at the street!”

“Son, excuse me, but get me there now!”

The car shot forward, slamming up onto the sidewalk. An enraged pedestrian hammered the window as they smashed through a food cart.

“You damn fool! That was that guy’s rice bowl!”

“You told me to!”

“I didn’t tell you to hurt people.” Above all things in the world, Paul hated to hurt. He would put a fly out the window rather than swat it. He would watch quietly as a mosquito gorged on his blood, then brush it off when he thought it was getting greedy.

Ironic, in a man who had killed so much. When he slept at night, his legions of dead would steal near: the kids who’d died in the dark corners of Vietnam, the victims of the vampires, the crew members who had not returned. They would call to him; they would stroke him with their cool hands; they would beg him to return them their lives.

He would wake up awash in sweat and choking with terror and regret. He would go to the brutal light of the bathroom as to an altar afire with candles, and gulp the pills of oblivion. Black sleep.

Asia had made him love certain very bad things, chief among them opium. Better than hash, better than grass, better than coke or any of the new designer drugs, far better than the brute high you got off horse. Opium was a deep pleasure, something wonderful that connected earth and soul. It made you feel at peace with the eternal world. He loved the mechanisms of an opium high: the long pipes, the sweet vapor, even the tickly lice in the greasy old sheets of today's few real opium dens.

Paul Ward had sunk deep and sinned hard. Why not, my friends? Tomorrow we die.

Well, that was what they'd thought back in the seventies, listening to Kissinger on Armed Forces Radio. It had seemed hard then, before he knew about vampires, but it had really been easy.

The Jungle Jamboree. No way could you do opium then. He who tripped died.

Still true now, at least for him and his crew. Killing vampires was horribly dangerous. They were quick, so quick that they could throw a knife at nearly the speed of a bullet.

They could not be killed with normal gunfire. You could empty the biggest, most evil weapon in your arsenal right into one of the damn things and it would just stare at you with its deceptively calm eyes, waiting for your bullets to run out. You had to destroy the head.

If you cut them open after they'd fed, they would gush blood like exploded ticks.

The Book of Names had identified twenty-six vampires in Asia. He and his crew had burned out or poisoned or dismembered twenty-four vampires in Asia, and found the remains of two ruined lairs, creatures that had lost their lives on their own.

Accidents happened even to vampires. They weren't perfect. Statistically, if you live long enough, you will meet with some sort of accident. That was their disease — statistics.

That's why vampires did not travel. They were highly territorial and obsessed with accidents. So the trick was to kill them all in a given area as quickly as you could, then move on before the others realized that they were gone.

Paul's next target was going to be Europe. There were many references to Paris in the Book of Names. He'd been looking forward to working out of Paris. Not that he disliked Kuala, but he could use a little less humidity and a little more familiar beauty around him. The Musée Marmottan with its magnificent collection of Monet water lilies was a favorite. He considered Monet to be one of the most evolved of all human beings, on a par with the D. T. Suzukis and Foucaults of the world. From those paintings, a man could obtain the true balm of peace. The light that shone in from the garden at the Marmottan, that light was holy.

"God help me!" he cried out loud.

"Yessir!"

"Please, son, be quiet. And stop running people down."

"I didn't run anybody down. I just got around that truck."

"You need to go back there later. Give that guy some dough for his cart."

"Sir?"

"Without the cart, he and his wife will starve. Their children become prostitutes. Do you understand that?"

"Sir, I hardly think —"

"Do you understand that?"

"Sir, yes, sir!"

Could this be a marine out of uniform? No, look at the hair. Foreign service all the way. He was just yanking Paul's chain with his military lip. He'd be sneering later with his State Department buddies about the old CIA

asshole he'd driven around.

With his cart wrecked, that fruit vendor might as well open his veins, and Paul knew this kid would *not* go back, he would not give the guy the twenty bucks it would take to put his life back together again.

Funnily enough, Paul was in his work because he liked people. He'd seen the CIA take such incredible shit over the years and save so many damn lives. The Company could not defend herself, not without giving away secrets she was bound to keep. So she just took it. He'd seen the effects of all the Company bashing in his own life. There'd been a time when the merest hint of a Company connection brought women swarming like darling honeybees. Not anymore.

The car swung around another corner, and the Royal Orchid Hotel finally appeared down the smog-hazed street.

What the hell was he about to find? This would be the first actual victim they had ever had a chance to study. The vampires were obsessive about destroying remains. Except, apparently, this time.

Still, there was something very bad about all this. He could smell it, but he couldn't quite see it. A place is wrapped up, finished. Then, suddenly, it ain't finished.

Okay, think. Think it out, Paul: All of a sudden, they leave evidence in a hotel. The hotel is on a continent that has just been sterilized of their presence.

It was not like them to taunt you. They were too shy, too careful for that. Their lives were incredibly precious to them, because this life was all they had, at least in Paul's opinion. In his opinion, nature had given them immortal lives — potentially, if they were very damn careful — but they had not been given souls. They were damn animals and they knew it.

So if this wasn't a declaration or a taunt, then it must be something else. The thing was, when the National Security Administration had cracked the language in the Book of Names, the whole vampire world had been opened

up to Paul and his crew. He returned to the States to become head of a whole new division that would be devoted to eradicating the menace. There were to be units operating on every continent, using the methods that Paul and his group had evolved.

One of the reasons that he was racing back to the States so soon after completing his work in Asia was to deal with a stupid but potentially serious problem: The director of the CIA had been asking legal questions. Specifically, were these creatures to be regarded as animal or human? If they were human, then they were committing crimes, not killing prey.

Declaring that the creatures were human meant that a whole different approach would be necessary. There would have to be due process and trials and prison sentences, and the vampire would like nothing better than this type of leverage. The vampire was powerful and quick and so damn smart. It could get away from prison.

They were almost unkillable. Something about their blood gave them extraordinary powers of recovery. You had to blow that head apart, then burn the creatures to ash, to be absolutely certain they were dead. Then the lair had to be washed in acid.

How could you ever call anything that lived in a filthy hole like a vampire lair human?

But he couldn't stop the wheels of the bureaucracy from turning as they turned. "What is this bunch of agents doing out in Asia killing people?" "Who are these 'vampires,' a terrorist group? A secret society? What in hell is going on here?"

Some Thai were passing the car, banging gongs and chanting. Funerals made Paul physically ill. He had to drown out that sound, and *not* with a Thai radio station because the Asians, God love 'em, had not figured music out yet, not in any way whatsoever. "Are there any CDs in this car?"

"Destiny's Child, Santana, Johnny Mathis. Some kind of opera."

"Put in the opera, turn it up to full volume."

“Yes, sir.” The boy sounded crestfallen. Which one would the kid have preferred? Destiny’s Child, no doubt.

“Full volume! I want my ears to bleed! You got any cigars?” Paul was a creature of appetites. Fine wines, lots of them. The best vodka in the world, lots of it. The strongest opium, the most exotic, the sweetest, the most delicious of whatever the world had to offer. One of his great regrets was the failure of either the Company to assassinate Castro or, better, of the U.S. to just come to terms with him. The loss of the Cuban cigar had been a blow.

Well, good god damn, that was *Callas!*

“Louder!”

“It’s as loud as it gets!”

He reached forward, turned the knob all the way up.

Oh, God, *Lakmé*. Oh, God, the “Bell Song.” That she had lived, this goddess Maria Callas, was proof that human beings were of interest to the good Lord. Nothing so fabulous could have come about by accident. “Hey, kid!”

No answer.

“KID!”

“Yessir!”

“That *goddess* is called Maria Callas. You ever worshipped a woman?”

“Sir?”

“It is a very special pleasure, I assure you. To worship something so gentle, so soft, so willing as a good woman.”

“Okay.”

He’d worshipped at the altar of the female all of his life. Three marriages,

six mistresses, and whores enough to populate a small army were testament to that fact. Jesus, but she could sing. “Death, be not proud!”

“Yessir!”

“Do you fear death?”

“Yessir!”

“The goddamn Pathet Lao stuck an electric cattle prod up my ass and left it on so long steam came outa my nose. You know what I told them?”

“Name, rank, and serial number?”

“I told them, if they filled out the forms, they could get Visa cards from the Thai Farmer’s Bank. The deal was, let me go and I would help them fill out those forms. When they got their credit cards, that was the end of that Pathet Lao cell. Who wants to run around in the jungle covered with leeches when you could be sipping a Singapore Sling at the Poontang Hilton, am I right?”
“I guess so, sir.”

He could see the kid’s eyes rolling in the rearview mirror. Well, let ’em roll.

Let the DCIA and the president whine about whether or not the damn vampires had human rights or whatever. Paul decided that he’d like to *taste* vampire. Probably like — not chicken, no, they’d taste like something else. Snake maybe, except he’d eaten snake in Cambo, and it *did* taste like chicken. They made dynamite snake curry in Kuala backstreets. Little pieces of sour asp meat marinated with asafetida and fried in ghee. Oh, that is good.

They reached the hotel at long living last. It was a pretty place, luxurious. What was a vampire doing in a place like this? Vampires didn’t go to hotels. They didn’t sleep in beds. They were *animals*, God for damn it! The thing must have been crawling around in the ducts or something.

The problem he was here to solve was twofold: First, he had to get a line on the whereabouts of this animal. Second, he had to contain the curiosity of

the local cops, who had a corpse on their hands they could not understand at all. They also wanted to know why an Interpol officer was operating in their country without their knowledge. Of course, the problem there was that he was on CIA's payroll.

Kiew Narawat was a precise, solemn man from Sri Lanka, an excellent operative and a profound friend of the United States. But Narawat wasn't a member of Paul's team, just a garden variety asset who had been detailed to observe any nocturnal comings and goings at a certain temple in Chiang Mai.

Paul went into the hotel.

If they hadn't messed up the corpse somehow, that would be one good outcome from this tragedy. Not only would there be a useful forensic and medical yield, the condition of the body would help him make his case that the vampire killings should not be declared crimes. "This was the act of an animal," he could hear himself saying. "This man was not murdered, he was fed upon."

If they could just get a little more vampire DNA, that would be it. The discovery of the vampires had taken place in 1989, when the Japanese government had asked for help with a very strange murder. They had the attack on videotape from a traffic control point. It was three in the morning and the streets were empty.

An old man was struggling along the sidewalk. He was the only person in the area. Then this strange creature came loping along, and grabbed the man. It had put its mouth on his neck and suddenly the entire body had withered, disappearing into its own clothing. The creature had stuffed it into a satchel and walked off.

The man was unattached, very poor, and normally wouldn't have been missed even in that very careful country. But the police made an effort, because what they had seen was so disturbing. They identified the old man. They went to the spot where the crime had taken place and took careful samples of everything. A hair had appeared in the debris they vacuumed up from the sidewalk that was not human, and not from a known animal.

It had taken years for the mystery to percolate into CIA's pot. Paul got it because he was an old Asia hand and had his own father's mysterious death in his file. The way the old man looked after his blood had apparently been sucked out of him and the way Paul's dad had looked when he'd been discovered had been strangely similar.

They gave it to him because they thought he'd be interested. Well, he wasn't. And damn them for dredging up his father's memory like that.

Nothing more was done, not until 1998, when a crime reporter, Ellen Wunderling, had disappeared in New York while innocently doing research for a Halloween spoof about vampires. She had delved too deep into the gothic underground, an eerie, subtly murderous subculture that would be an ideal place for real vampires to conceal themselves. He'd begun his own investigation of the disappearance, but then came Tokyo and an opportunity to take immediate and direct action. He had been finding and killing vampires ever since.

Paul got into the elevator. He hated riding elevators. It opened on a wide corridor, with rooms open here and there. The management had cleared the whole floor. In front of one of the open rooms, a small crowd of Thai police, medical personnel, and plainclothes officers came and went.

The instant Paul entered the room, the smell hit him. What was it? A human odor, maybe. But so strange — salty, dry, distressingly organic. He looked down at the yellow flowered sheet with the angular lump under it.

"Thailand will expect extradition of the perpetrator, if he is found elsewhere, Mr. Ward," the colonel inspector said in his heavy, careful English.

Paul grunted, wishing that the man could be made to go away.

Kiew Narawat had been ordered to report if he saw anybody enter the temple. So why had he ended up in this room like this, instead? Paul took the sheet and pulled it back.

He actually had to stifle a scream. This was the most spectacularly

destroyed human body he had seen in his adult life. But not in his whole life, and that was what made it so terrible for him.

He was twelve again. He was awakened by a sound like the last water getting sucked down an eager drain.

The sleepy-eyed boy looked out the window, gazing into the glowing dark. The prairie grass was dancing in the moonlight, and there was a dark figure moving through the field with a burden of some kind on its shoulder.

Paulie stared. Who was that out there? But Big Boy wasn't barking and Big Boy was a hair-trigger watchdog.

The figure disappeared off into the woods. Tomorrow, Paulie would get Dad and go down there, see what had happened.

And then came the terror of the next morning and of the haunted life of Paul Ward: Where's Dad? he had asked his mom. I don't know honey, she had said. When is he coming back? I don't know! I don't know!

Flash forward four years: Paul is walking along the stream beside their pear orchard when he sees something strange down among the roots of a tree. Again, Big Boy notices nothing.

Now, Paul knows why. He knows that they secrete a blocking pheromone that makes it impossible for animals to pick up their scent. The remains of their victims are covered with it.

When he saw the skeleton of his father in a casement of dry and disintegrating skin just like this, he had run back to the house screaming in terrified agony, Big Boy gamboling beside him.

The dental records had been definitive. It was Dad. But Dr. Ford, their local medical examiner, could not figure out what had happened to him. The state police couldn't figure it out. The FBI finally issued a report: death by misadventure unknown.

Little Paulie had become obsessed with secrets. What had killed Daddy?

An animal? Space aliens? Nobody knew. Daddy had been strong and big and good, so why had he ended up like that down in the roots of a tree?

Some years later, Paul had awakened to see a woman standing at the foot of his bed, a woman dressed all in black, with golden hair and an angelic face. She looked at him out of sweet eyes, eyes that made the heart melt. But when he sat up, when he called out to her, she faded like a dream.

“The woman in here with him was French,” the policeman said, breaking Paul’s reverie. “We have determined that her name was Marie Tallman. She took the Air France flight to Paris. She will be detained there when she gets off the plane.”

“It was a female?” Paul responded. “You’re sure?”

“A woman, yes,” the Thai said, his voice gone sharp with surprise at Paul’s odd use of the word “it.” But Paul couldn’t help himself. Paul hated these animals whether God had made them or not, and he was damned if he would dignify them with personal pronouns.

“Under no circumstances is she to be detained.”

“Excuse me, but that is a violation of our sovereignty. I am sorry.”

Paul really noticed the officer for the first time. “Ask the French to photograph her and follow her. But *not* to detain her.” The Thai smiled. Paul could only hope that they would cooperate. He could not push the matter further, not and risk an inquiry to the embassy about the nature of his activities. The Thai were hair-trigger friends. They did not like CIA operations taking place on their soil without their knowledge.

At high levels in the government, he was golden. But these cops were strictly low-level, and they didn’t know one damn thing about Paul’s secret brief and his secret powers.

He gazed down at the remains, almost willing them to speak. But they said nothing. The face was stretched so tight against the skull that it looked like something you might buy for Halloween.

“Turn him over,” he said. “I want to look at the back.”

Two of the cops obliged. Paul knew that the vampires used human skin for articles of clothing — gloves and such — because you found such things in their lairs. He’d thought maybe the back of this man would be as neatly skinned as his own father’s had been.

He’d held some of those gloves and purses in his hands for a long, long time. He’d wondered which of the creatures had worn garments made from his dad. Whenever he and his crew found these things, they collected them with reverence and they blessed them and they cremated them and made a little ritual of scattering the ashes.

Melodramatic? You could say so. Sentimental. Sure. But his crew were united on two things: Any human remains they located would be respected, and no vampire would be left alive. Scorched-earth policy. Absolute.

Think if they had to read Miranda warnings. Think if the vampires were allowed legal defense, say, in India, where the prisons leaked and it could take years before a case came to trial? What if they claimed murder as their natural right, and proved that they were created by God to prey upon the human being? Presumably, laws would then have to be written allowing them to take a certain number of humans as prey each year, much as we allow ourselves to take whales.

And what about the endangered-species acts in various countries, most especially Europe and the U.S.? If the vampire was declared an endangered species — and it was conceivable, given their comparative rarity — then Paul and his crew would be out of business altogether. Governments would end up in the business of encouraging the vampire to breed and protecting its habitat — the ghetto, the teeming slum, the homeless shelter.

A man with glasses approached Paul. “We understand that you will be able to inform us of the manner of death.”

“Death by misadventure.”

“Excuse me?”

“The man had a bad adventure, obviously. So that’s the conclusion — death by misadventure.”

“You are coming all the way from KL to tell us this — this nothing?”

“The corpse is U.S. property,” Paul said. “I’m going to remove it to the States.” He needed it. He needed any trace of nonhuman DNA he could find. The hair from Tokyo wasn’t enough. But two samples — that would end the human-animal controversy.

“Now, wait,” the colonel inspector said, “now —”

“It’s a done deal.” He pulled the fax he’d gotten from the Thai foreign office before he left KL. He unfolded it. “ ‘You will deliver the remains to Mr. Paul Ward of the United States Embassy.’ That is what it says.”

The man nodded, reading the letter. Then his eyes met Paul’s. His eyes pleaded. “Please tell me in confidence what has happened.”

“He met with a misadventure.”

You rarely saw anger in the Thai. They were a reserved and very polite people. But the inspector’s eyes grew hard and small, and Paul knew that there was fury seething within him. Thailand had never been colonized for a reason. The Thai might be polite, but they would fight for their independence quite literally to the last man. No deals. “I would like to know, then, if I may, whether or not we are likely to see any more such murders.”

Paul gestured toward the yellow, sticklike corpse. “I’m a scientist. I’m trying to figure it out.”

“Is it, then, a disease?”

“No, no, he was killed. You can count on that.”

The room was full of police and forensics experts. Bangkok was not happy with this bizarre situation. Interpol was not happy, and asking all sorts of questions about who the hell had been running around with forged ID of that quality in his wallet, while at the same time pretending to Thailand that they

knew who the guy was. Lots of secret handshakes being traded all around.

Somebody was going to have to tell the widow and her three kids, too, and Paul suspected that he would be elected.

“I am Dr. Ramanujan,” a compact man said, jostling up, gesturing with his sterile gloves. “What has done this? Do you know what has done this, because I do not know?”

Paul hated to lie, and he did not lie now. He kept his secret and revealed it at the same time. “A killer did it, using a very special and unusual method of fluid extraction.”

“And where are the body fluids? The blood, for example?”

“The fluids are gone.”

“Gone?” “We will not find the fluids.”

Ramanujan grinned, shaking his head. “Riddles, sir, riddles instead of answers.”

They bagged the body for him and delivered all their forensic gleanings in a series of plastic pouches, each neatly labeled in Thai and English.

On the way down, the colonel inspector said, “Would you care to have a drink with me?”

Paul would have loved a drink right now. Twenty drinks. But he had an urgent mission halfway around the world. As fast as humanly possible, he and his crew had to follow “Marie Tallman” to Paris. And not on tomorrow’s flights, either.

“I’ll take a raincheck. I need to get to Paris as quickly as possible.”

“There are no more flights from Bangkok to Paris today.”

“There’s one.”

“I know the schedules very well, I am sorry.”

“This is off the schedule.”

“The American embassy has its own flights?”

Paul thought of the cramped USAF Falcon Jet that would carry them to gay Paree. “Just this one.”

“Then that’s good for you.”

He wondered. He had the sense that Paris was going to be a ferocious confrontation. For the first time, they would be facing vampires who expected them.

The question was stark: Without the advantage of surprise, did he and his people — his brave people — have any chance at all?

FOUR

The Castle of the White Queen

Miriam had been moving effortlessly through human society since before mankind had invented the arch, and she considered herself entirely capable of handling their customs, from the letters testament of the Imperial Roman Curia to the passports of the American Department of State. So she was surprised when the customs officer said, “Please come this way, Madame Tallman.”

She stared at him so hard that he blinked and took an involuntary step back. Shaking his head, he glanced again at her passport, then up to her face. “Come, please.”

“Is there something wrong?”

“You will talk to the prefect.”

The prefect? That sounded ominous. As Miriam followed along behind the customs official, she considered that they must have found the body. They had traced Marie Tallman; it was that simple.

As she walked, she felt somebody fall in behind her. She could smell the gun the man was carrying, just as she could smell the polish on his brass and the wax on his shoes. She knew he was a policeman, in full uniform. His breath was young and steady, powerful. He was also quite close to her, alert for any attempt at escape.

They thought, therefore, that she would be aware of why she was being detained. Ahead of her, the customs officer had hunched his shoulders. He feared that she might attempt to harm him.

These men did not think that they had apprehended some poor soul caught up in a fiasco of identity confusion. They believed that they were escorting a criminal who knew very well that she was in serious trouble.

These thoughts passed through Miriam's mind in a flash. The next instant, she was looking for a means of escape. She was a master of the human being, smarter, stronger, and quicker. It would be nothing for her to overpower both of these men. The gun was a trivial problem. Before his hand had even started to reach for it, both creatures could be knocked senseless.

The problem was the surroundings. There were other people going up and down the hallway. The customs area they had just left teemed with dozens more. The offices, most of which had glass walls, were also full of people.

So Miriam kept walking, hoping that she would be in a private situation for the few seconds she needed, before they locked her away. They would lock her away; she had no doubt of it.

It had been extraordinarily foolish to abandon that remnant. It was drilled into them from childhood: Never let man see the results of your feeding. Humans are cattle, but they are bright cattle and they must not be made aware of their true situation. The entire species could, in effect, stampede.

As appeared to be happening — in effect. There simply wasn't anything left to think. The Asians had already been swept away in the onslaught, and now she had endangered herself in a foolish, heedless moment of panic, and possibly many others of her kind as well. Because of what she had done, she was in the process of being captured by human beings. A Keeper!

They came to a door. The customs officer said, "Enter, please." She could feel the young policeman's breath on her neck. There was no more time. She had to act, and no matter the crowd.

She stepped away from the door and into the center of the corridor. This left the two men facing each other, their eyes widening in surprise at the speed of her movement. To them, she would have seemed to temporarily disappear. Keepers had bred humans to be slow, for convenience. That way they could be outrun, outjumped, and outmaneuvered. Prey should be easy to

herd.

Before the two men could turn to face her, she had slipped her hands behind their heads and pressed them together sharply. They dropped like sacks.

A secretary rushed out of an office two doors down. She looked at Miriam. She could not associate a young girl in an elegant suit with two unconscious men. “What has happened?”

“Gas,” Miriam cried. “The corridor is full of gas!” She turned and went striding on toward the emergency exit at the far end. A moment later, a horn started hooting. The terrified secretary had pulled the fire alarm and then rushed out into the customs area shouting, “Gas!” as she ran.

Opening the emergency exit, Miriam looked about for a way back into the main part of the terminal. Once out of the customs area, she would be able to go into Paris. She’d have to get Sarah to work up a new identity and FedEx her the passport. She certainly could not use the Tallman identity, and dared not risk her own.

Others were coming out behind her, so she climbed some concrete steps, then went down a long, empty passageway. Behind her, a man shouted that she was going the wrong way. She noticed his American-sounding voice, then glimpsed a narrow, dark figure starting to run toward her. She did not look back again.

She soon found herself in a bustling staging area for the assembly of airline meals. There were shelves full of little trays and plastic cutlery, and a wall lined with institutional refrigerators. Workers stood at tables putting the meals together on trays. Others covered them with plastic wrap. Others still packed them in steel shelves, ready to be wheeled out to the waiting planes.

There were aluminum double doors at the far end of the room. Striding with the confidence of a person who belonged exactly where she was, Miriam went to these doors.

Behind her there was a cry, “*Halte!*”

Miriam ran. She ran as hard and as fast as she could, speeding along the corridor and into a locker room. This was where the various workers changed into their uniforms.

“Halte Halte!”

A new man had burst into the room at the far end. Her throat tightened; she felt a sudden surge of rage. The reason was that this creature had appeared ahead of her. They knew exactly where she was. They must be using radios to surround her. She looked around for doors other than the ones she and the gendarme had entered.

She slipped through one, found herself in a shower room. The door had nothing but a handle lock, which she twisted. At once, he began to shake it violently from the other side. She threw open a window. There was a drop of about three stories to an area of tarmac crowded with baggage lorries. As the door burst open behind her, she went to the window and jumped.

Her teeth clashed together and her ankles shot pain up her legs from the impact. The palms of her hands burned when they slapped against the pavement. Immediately, she rolled under the overhang of the building, making herself impossible to see from above.

The shock had damaged the heel of one of her shoes. She struggled away, moving among the speeding baggage lorries. Stopping for a moment, she pulled off her shoes. The heel was not usable.

This dim, booming space was extremely alien. She'd never been inside a factory, never seen the raw side of human engineering and architecture. She'd preferred to live her life in an older, more familiar aesthetic. Her home in Manhattan was a hundred and fifteen years old; she stayed almost exclusively in old, familiar hotels when she traveled. She could handle the human world, but she'd never seen a place like this before, never imagined that the hidden parts of the human world were this mechanical.

Ahead of her she saw a passageway. The floor was dark and marked by white and yellow lines. The passage curved up and to the right. This appeared to lead away from the customs enclosure, so she began walking along it. It

was lighted by fluorescent tubes, some of them flickering and some completely out. The effect was eerie, and made more so by a high-pitched whining sound coming from ahead. She stopped to listen and tried to place this sound, but she could not.

The farther into the passage she went, the louder it became. She stopped again. It would rise and fall, then rise again. Then it almost faded entirely. She resumed walking, passing the endless, black-scuffed walls, moving beneath the flickering lights.

The sound screamed out right in her face, and her entire field of vision was filled with glaring lights. A horn began sounding.

There was no room to lie down, the oncoming machine was too low. She looked up — and there, where the lights were, she could grab hold. She leaped, missed by inches. The machine got closer, the lights growing as big as saucers, the glare blinding her and pinning her like the stunned animal that she was. The horn blared and blared. She crouched.

Like most animals', the backs of a Keeper's eyes were reflective. When she looked directly into those lights, the driver would have seen a flare as if from the eyes of a deer or a tiger. Human night vision had been bred away. Better that they sleep at night, giving the Keepers time to tend herd and feed.

There were only seconds left now. The machine would tear her to shreds. She would die from that — actually die. It was an oblivion that had haunted her all her life. She did not think that Keepers persisted in the memory of nature. She did not want to cease to be.

She sprang up from her crouching position and reached toward the light fixtures. She grabbed the edge and drew herself up, hooking one leg along the lip of the long fixture and pressing the rest of her body against the ceiling.

With a hot blast of air the machine went shrieking past, not an inch below her breast. It seemed to take forever, and she soon felt her fingers and toes slipping. She was going to fall onto the roof of the thing.

And then it was gone, and she fell instead to the floor, which she knew

now was really a subterranean road. Would another machine come? Of course. Would the driver have radioed her position back to her pursuers? Of course.

She knew, now, that she was in an extremely serious situation. Man had changed. Man was now effective and efficient. She remembered the Paris of fifty years ago, a compact, intricate city traveled by tiny automobiles and herds of bicycles. Only the Métropolitain sped the way this thing had. But it had been on rails.

Ahead, the screaming sound had started again. Another of the machines was coming. She saw, perhaps two hundred yards farther on, a ladder inset into the wall. It led to a service hatch of some kind.

The machine was coming, getting louder. There was a wind blowing in her face, getting steadily harder. This must be a subway system that served just the airport. But how could that be? Paris had a compact air-field, as she recalled, albeit a busy one.

It had grown huge, that was the answer, and she was thinking that maybe her brothers and sisters were at least somewhat right. Maybe she needed to stick closer to home, too, because this situation was getting out of hand, *way* out of hand. She sprinted, moving easily twice as fast as the fastest human runner — but what did that matter in a world where the machines hurtled along at phenomenal velocity? Even the strength of a Keeper was nothing against fifty tons of speeding steel.

As she reached the ladder, the lights of the train appeared. Immediately, the horn started blaring. Worse, a screaming sound began and the train started to slow dramatically. This time, the driver had seen her and put on his brakes. The last thing she needed was a confrontation in this damned tunnel. That would be the end. She'd be trapped then.

She bolted up the ladder, only to find that the steel hatch was battened down tight. Her great strength enabled her to push it until it bent and popped open.

The train came to a stop about ten feet from her. It stood there, invisible

behind its lights, its horn honking and honking. Back where she had come from, voices rose, people shouting in French not to move . . . French, and also that one American voice.

She clambered up through the hatch. Now she was in an access tunnel, and not far away there was a door. She didn't think it would make any sense to go along this tunnel, even though it was obviously meant for pedestrians and not trains. Tunnels were damned traps. She went through the door.

Light flared in her face; a roar assailed her. She staggered, and a voice said, "*Pardon.*" She had stumbled into a man in a taxi queue. He reached out, took her waist. "*Madame?*" he said, his voice rising in question.

"Sorry," she babbled in English, then, in French, "*Pardon, je suis confuse.*"

He looked her up and down. The other people in the queue were staring.

"I have broken my shoe," she added, smiling weakly. Then she crept to the back of the line. She had escaped the horrors of the police and the dangers of the maze. Somehow, she had reached the outside world.

She must get a hotel room, she thought, then seek out Martin Soule. He had been a friend of her mother's back in the days of powdered wigs. She'd seen him fifty years ago. Martin was very ancient and wise, very careful. He was also stylish, powerful and daring. Like Miriam, he was a wine enthusiast, and had even desensitized himself to some of their fodder, because it was so difficult to move in French society without eating. Once, he'd made her laugh by drinking the blood of an enormous fish. But then his preparation of it according to human cooking principles had revolted her. She still remembered the ghastly odor of the hot, dense flesh when it came steaming out of the poacher.

She was still well back in the queue when she noticed the policeman with a radio to his lips, staring at her as he talked. Her heart sank. At home, she dealt easily with the police. The police were her friends. She had the Sixth Precinct, where her club was located, well paid off. But she could not pay these cops off.

The policeman came striding toward the queue. He had his hand on the butt of his pistol. She thought to run, but there were two more of them coming from the opposite direction. Her only choice was to leap out into traffic and trust to her speed and dexterity to get through the cars that shot past just beyond the taxi stand. But even that would lead only to a wall.

When she realized that there was no escape, she let out an involuntary growl that made the woman standing ahead of her whip round, her face pale, her eyes practically popping out. Miriam's whole instinct now was to kill. Had she not applied her powerful will, she might have torn the creature's throat out.

Quelling her damned instincts, she forced a smile onto her face. She'd play her last card — give them her emergency Cheryl Blackmore driver's license and claim to have lost her passport. Maybe before they discovered that Cheryl Blackmore was a long-dead resident of Nebraska and most certainly did not rate a passport, she would have found some means of escape.

The three policemen arrived — and began chatting together. They were laughing, completely at their ease, taking no notice whatsoever of her. They'd been talking on their radios merely to arrange their coffee break.

Now, she thought, laughing to herself, there was the old mankind, the gentle, sloppy, genial humanity that the Keepers had so carefully bred.

As she slipped into her taxi, she was filled with a sort of glee. It was delicious to have escaped, delicious and lovely and joyous. And damn, damn lucky.

Her mouth began to dry out, her muscles to relax. The waves of hate stopped crashing in her heart. The taxi moved up a long ramp into the sunlight, and Miriam relaxed back against the seat.

“Votre destination, madame?”

“The Ritz,” she said. She'd take a huge suite. The Ritz would mean silk sheets like the ones at home, and a long call to Sarah to say how lonely she was and how far away she felt . . . and to tell her to get that new passport over

here fast.

In the cab, she pressed her shoe together as best she could, rearranged her hair, freshened her face, and tried to smooth the wrinkles in her suit. Her suitcase was gone forever, of course, and so she would have to buy new clothes, and there would be no time for proper tailoring at Chanel. That would make Sarah happy. They were both extremely fashionable, of course, but Sarah thought Miriam much too conservative.

So much of the Paris whizzing past was unfamiliar. The huge roads, the endless blocks of buildings that had grown like monstrous cliffs beyond the Périphérique distressed and confused her.

It was remade, entirely remade, and in just these few years! But then the taxi swung off the flying roadway and went down into territory that was, thankfully, more familiar. They were on the Rue de Vaugirard, where Philippe Vendôme had lived. She'd been fascinated by his alchemical studies, had stayed with him a few years while she was recovering from the grief of her mother's destruction. She'd adored him, with his wonderful, sophisticated manner and his passable skill at whist. Miriam loved games, but finding humans who could be effective opponents was not easy.

She had given Philippe of her blood, and turned back the years for him. He had become a searcher after the secrets of the Keepers. Useless, that, in the early eighteenth century. But he had been a pleasant companion, her entire pleasure for a while, until she'd met Lord Hadley's son John.

"Philippe," she murmured, thinking of that lovely house of his. In 1956 it had been something of a ruin. She had walked silent halls where she had laughed and loved with him, and reflected on the brief lives of men. Now she could only glimpse it, the once-proud estate little more than a front on a huge building. The street the taxi bounced along had been laid over part of the elegant park. Here, she and he had come and fed his swans.

Now they went underground, into a roaring tunnel full of autos and lorries, speeding along at a deadly clip. And here, quite suddenly, was the Champs Élysées. They had come by a new high-speed route.

It was all so familiar and all so dear. She remembered it from fifty years ago, even a hundred — the same marvelous width, the same trees, the same grand ambiance. Yes, this was just as it had been since Louis Philippe had commissioned Haussmann to reconstruct the intricate, ancient spaghetti-bowl that had been the Paris of the last age.

They were soon passing along the Rue St. Honoré, lined with luscious shops, in the windows of which she glimpsed the strangely simple clothing of this era, clothing that increasingly emphasized anything that was male about the female. The ideal form for human women was becoming that of the boy. She preferred elegance.

Then, here was the Place Vendôme. The Ritz was *exact*. Lovely and beloved! She had first come to this place on a rainswept evening back before the motor. What trip had that been? Perhaps 1900, when she and John Blaylock had come here in search of the luxury that was just then gaining the hotel its grand reputation.

Getting down from the taxi — or up, actually, out of this tiny modern sardine tin — she found herself face-to-face with a doorman in the hotel's familiar green livery, even his coat reminiscent of more gentle days.

She went into the lobby, passing across the thick carpet to reception. No face was familiar, of course. Fifty years and all the humans would have changed. They came and went like so much foam on a restless wave. Well, at least she had Sarah free and clear for another century, perhaps two . . . unless, of course, the dear found some clever scientific way to last longer. Sarah knew the ugly secret of her own artificial longevity. Such knowledge would have driven a lesser human mad, but Sarah was often at her test tubes, poor thing.

“I’m afraid I have no reservation,” Miriam said to the clerk, who managed to appear affable and also a little concerned at the same time. A blink of his eyes as she approached had told her that he knew exactly how old her suit was. She was travel-weary and hobbling from the broken shoe. Altogether, she could not look to him as if she belonged here. She dared not throw the names of fifty years ago around to impress him, either. Coming from what appeared to be a girl of twenty-five dressed in her grandmother’s old clothes,

such an attempt to impress would instead seem like the babbling of a madwoman.

“I am so sorry,” he began.

“I would like a suite. I prefer the fourth floor front, if you don’t mind.” These were among the best rooms in the hotel, and the only ones she would even consider using.

He asked for her credit card. She gave him Sarah’s Visa. It annoyed Sarah for her to use this card, but there was at present no choice. Using her own card was a serious risk, and Marie Tallman was retired forever. She waited while he made a phone call.

“I’m sorry, madame, this is declined.”

Must be crowding its credit limit, she thought. Just like Sarah to have a card like this. Too bad she didn’t have a copy of Sarah’s American Express card, but the only one of those in her possession was her own.

“Perhaps it’s defective, madame. If you have another —”

She turned and faced the doors. She had no desire to push this, even to remain here for another minute. She had to call Sarah. She started to open her cell phone, then hesitated. The call would not be secure.

“Is there a public telephone?”

“But of course, madame.” He directed her to a call box. She took out her AT&T card, which was in Sarah’s name, and dialed the call straight through to their emergency number. This only rang if it was absolutely urgent, so she could be sure that Sarah would pick up right away.

She did not pick up. It was five hours earlier in New York, making it eight o’clock in the morning. Sarah would be home, surely. She tried the other number, the regular one. Only the answering machine came on.

She tried the club. No answer there, not at this hour. Damn the woman, where was she when she was needed?

Maybe she'd fed. Maybe she was in Sleep. Yes, that was it. Of course, that must be it . . . must be. She put the phone down.

She thought matters over. She was effectively broke. But she was never broke; she'd had scads of money, always.

Perhaps she could try another hotel, some lesser place. There must be some credit left on the Visa card. Then she thought — how could she get into any hotel, this one included, without giving them a passport? The answer was that she couldn't, and the smaller and sleazier the hotel, the more obsessive it would be about identification. The Tallman passport needed to be burned; that's all it was good for.

She saw that she was still in mortal danger. They would have a description of her, and she hadn't even a change of clothes. They'd be searching the hotels, of course. It was logical.

She had to go to the Castle of the White Queen. Fifty years ago, Martin had been there. Maybe he still was, and maybe he could help her. Of course he could. He'd been a more worldly sort than Lamia, or even Miriam herself.

She began walking, soon coming into the Place de l'Opéra. She headed for the Métro. On the way, she stopped at a small *bureau de change* and turned her Thai baht into euros. She got forty of them. As well, she had two hundred U.S. dollars in cash. Not much, not much at all. But she never traveled with cash; she didn't need to. Being limitlessly wealthy made her sudden poverty especially difficult. She didn't know how to function.

She went down the steps into the clanging world of the Métro. She remembered it from her last visit, but she'd only used it once, and that was to get around a traffic accident when she'd been hurrying to the opera. There was difficulty with the change booth, then confusion about which *direction* she wanted. The hurrying crowds made it no easier. But, in the end, she found herself primly seated in a car going in the correct direction.

The Castle of the White Queen had been built on land that the Keepers had reserved for themselves from time immemorial. It was on the Rue des

Gobelins, and parts of it had been rented to the Gobelins family and fitted out by them as a tannery. At night, after Gobelins and his people went home; the hides tanned there were not necessarily bovine. The Keepers lived in the upper reaches of the building.

Locally, there were many legends about why it was called the Castle of the White Queen. Some said that Blanche de Castille had built it, others that it had belonged to Blanche de Navarre. The real builder was Miriam's dear mother, who had been known among her peers as the White Queen, for her grandeur, her splendid pallor, and the fact that their family had come out of the white sands of the North African desert.

The scent of man that filled the Métro did not make Miriam's jaws spread, let alone fill. As troubling as all this was, at least she was full, and very satisfactorily so. That had been a healthy little thing she'd eaten. She could easily bear this swim in a sea of food.

An accordionist began to play, and Miriam closed her eyes to listen. Certain things about Paris were almost timeless, it seemed. When she and her mother had been here, the humans had been making similar music, but with different instruments. The music was rougher and wilder then, but they were wilder also, the humans, in times past.

In those days, feeding in a place like Paris had been so easy that some Keepers had overfed, gorging until they bled out through their pores, and their orifices ran with the blood of their victims. The human population had been a seething, helpless, ignorant mass, living in the streets, under the bridges, anywhere there was a bit of shelter. The old cities had been full of nameless, aimless wanderers who could be plucked up like fruits fallen to the ground.

She missed Gobelins and left the Métro at d'Italie instead. Coming up to the street, she looked around her. She experienced a sense of satisfaction: things were really unchanged here.

She quickened her step, eager to get a sight of the castle. If the Keepers had been driven off — well, she'd deal with that problem when she had to.

Ahead was the tiny Rue des Gobelins, hardly an alleyway running off the much wider avenue. She turned into it — and stopped, staring struck with wonder. The Castle of the White Queen was *exact*, just like the Ritz. Worn, but so precisely the same that she thought it must still be in the hands of Keepers.

Until this moment, she had not realized how afraid she had actually been. She needed her kind now. And she needed, also, to warn them. In the hurly-burly of the past few hours, she had all but lost sight of why she was here and not back in New York.

Ironic indeed that the strongest, most intelligent species on the planet, the very pinnacle of the food chain, was in the same predicament as the frog and the gorilla.

It had crept up on them so easily, the result of a long series of what had, at the time, seemed like brilliant breeding maneuvers.

Back thirty thousand years ago, they had almost lost the entire human stock to a plague. They'd rotted where they stood, the poor things. It had been determined that overeager breeding had been the culprit. Generations of them had been bred for their nutritional value, which meant an imbalance of red over white blood cells. The result? They'd become prone to all sorts of diseases.

To ensure that they would survive and still remain the delicious food source that they'd been made to be, the Keepers had decided in conclave to increase the human population. To accomplish this, sexual seasonality had been bred out of the species entirely. This had been done by breeding for high levels of sexual hormones. As a result, the creatures had bloomed into bizarre sexual parodies of normal animals. Their genitals had moved to the front of their bodies, the penises and mammarys becoming huge. Their body hair had disappeared. They had become sexually obsessed, the females much more retiring than other mammals, and the males far more aggressive.

She moved toward the old castle. The last time she had entered this portal, it had been hand-in-hand with her mom. The building had been new then, smelling of beeswax and freshly hewn stone. Inside, the great rooms had

glowed with candlelight. Lovely bedchambers had been built high in the structure, behind small windows so that Keepers could linger over their kills, and the cries of pleasure and anguish could not be heard from the streets below.

Just under that garret there, behind the little, arched window was a sumptuous chamber where a Keeper could make sport with his kill for as long as he cared to, flushing it with fear again and again, then calming it and delivering bursts of incapacitating pleasure to it. This would bring the flavor of its blood to an incredibly delicious richness, sweet and sour, reflecting the secret harmonies that sounded between agony and ecstasy.

She had not fed like that in a very long time. Mother Lamia always did. Sometimes her feedings would last for days. But Miriam's human lovers had not cared for it and had felt awful for the victims when she did it.

Sarah, for example, could only bear to see Miriam do the quickest of kills. She herself struggled to live without killing, taking her nourishment from blood bank goop and pleading with Miriam for frequent transfusions that left both of them dizzy and bitchy.

Miriam went to the door. The way she felt now, she'd like to take a big, blood-packed human straight up to that chamber. Full or not, she'd spend a couple of days on it, using all of mother's old techniques.

They were the Keepers, not the kept. No matter how brilliant, how numerous, or how violent, mankind remained first and foremost, their damned *property!*

She pushed at the door. Locked. She shook it three times, making the very precise movements that were designed to dislodge the tumblers, in the event you had no key. Keepers did not have private property. All belonged to all.

It opened. She stepped in, treading softly in the footsteps of her lost past. A profound silence fell, a Keeper silence. Overhead, the great beams that had been so rich a brown in mother's day now were glowing black, as if they had turned into iron. The tanning vats were empty.

She went across the echoing floor of the factory to the narrow stair. Mother had hauled their victims up these very treads, Miriam following along to watch and learn.

How silent it was here, more silent than any human place. This was still a lair, oh, yes. But where was its inhabitant? Would he not be at least a little curious about the stealthy noises down below, the unmistakable sounds of another Keeper entering the sanctum?

“Hello,” she said, her voice uttering the sibilant, infinitely subtle sound of Prime for the first time in many a long year.

He was much smaller than she remembered, and as dirty as a coal-scuttle, a creature that had not bathed since the French court had filled its tubs with milk. His eyes were tiny and narrow, and he had the pinched face of a bat. He came forward wearing the tattered remains of a hundred-year-old frock coat, otherwise as naked as at his ancient birth. He was hungry, hissing hungry, as shadowy and insubstantial as a ghost.

A wound opened in his ghastly face, bright red and dripping. He uttered a sound, horribly eager, and she realized that he thought her human. She was so radically different looking from other Keepers that he believed her one of the kept.

His skeletal hands snatched her wrists, enclosed them in a Keeper’s iron grip. Then his eyes met hers. The bright glow of eagerness flickered, faded. He had realized his mistake.

He dropped his hands to his sides, then slumped at her feet. “*M’aidez*,” he whispered, not in Prime but in French.

As she looked down at this filthy, groveling, helpless creature, she stuffed her fist in her mouth. But he was not deceived. He knew that he revolted her. Because he laughed, bitterly, angrily, laughed to cover her screams.

FIVE

The Skylights of Paris

Paul had missed the traveler by ten seconds. He'd glimpsed the creature — tall, wearing normal clothes (an old-fashioned-looking woman's suit), a blond spray of hair, that was all he'd seen.

Rain roared against the skylight; thunder echoed across the roofs of Paris. He shouted into the phone, "Your people lost her. You and the French."

He listened to Sam Mazur's whining, complicated reply. He was CIA station chief at the U.S. embassy. Cupping his hand over the mouthpiece, Paul whispered to Becky Driver, "That's a paper cup. I said *bucket*."

"A paper cup is what we have."

Sam continued whining away about how the French had not cooperated and were not going to cooperate, that unless they knew chapter and verse exactly what the operation was about, it would absolutely not unfold on French soil.

"Tell me this, Sam. I'm curious. Why the hardening of the heart? I mean, the French don't like U.S. intelligence. But we aren't the enemy. They've always recognized that in the past."

"Cold War's over, my friend. Europe is sick of us, and France is sickest of all. They hate the way we and the Brits use the Echelon system to spy on them electronically. U.S. intelligence has had it here, man. Time to pack up our silencers and go home."

The paper cup into which the entire thunderstorm appeared to be dripping had filled up. "Becky, do you think you could empty this? These are Burmese shoes. I can't risk getting them wet."

She cast her big brown eyes down toward his feet. “You got those in Myanmar?”

“Had them made. I’m suspicious that there’s cardboard involved.”

“They look like funeral shoes.”

“What the hell are ‘funeral shoes’?”

“The kind guys wear to funerals. Shiny, black, and from about 1974.”

Charlie Frater snickered. Paul glared at them both. He’d brought dumpy, bespeckled Charlie and lithe, lovely Becky because they were the most ferocious close-in workers he had. Charlie was one of those people who just did not stop, not ever. He walked into danger like a priest walking into his church. The wonder of it was he looked like a guy who lived behind a desk deep in some civil service nowhere.

Becky, on the other hand, fancied herself a lady spy from the movies. She cultivated the effect with her dark, flowing hair and her long coats. She was only twenty-three, but she was the most cheerful and fearless warrior he had. And quick. So breathtakingly quick.

Not a man on the team hadn’t thought about Becky, probably dreamed about her. Paul had. But she kept to herself emotionally. Paul didn’t pry.

The rest of the team would assemble in the States. Paul’s highest priority was to eradicate the vampires there, always had been. Asia had been done first because it was available. Now he had to stop this traveler, lest she get to the U.S. and organize opposition. He had to stop her here.

He returned to Sam. “Bottom line is this: We lost that damn thing and it is now running around Paris telling all of it’s fuckin’ friends that somebody’s onto them. I regard that as your fault. I’m sorry.”

“May I hang up?”

“You may not.”

“Cause I have something to do. Important. Secret.”

“Tell me, does a ritual chewing out *always* make you need to take a dump?”

“Yes, it does.”

Paul carefully replaced the receiver in the cradle.

Becky and Charlie were staring at him.

“What?”

“What do you mean, what? What the hell did he say?”

“He’s a CIA bureaucrat. He said nothing.”

The skylight was now leaking in five places. As night fell, the immense skyscraper across the street began to light up. Whatever slight sense of privacy the room might have afforded was gone. Worse, there was no way to curtain off the skylight. At least two thousand office workers could look directly down into what was supposed to be a secret CIA safe house.

Paul stared up at the office building. “Let’s put together some dance numbers,” he said.

Charlie, who was, for some reason, practicing rolling cigarettes with a little machine, responded. “Stick a hat up there and maybe they’ll throw change.”

“Goddamnit, how are we gonna use this sty? Do either of you have a room that has a little privacy for us to work in, at least?”

“They’re way too small, boss,” Becky responded.

“Bullshit. We can manage.”

“More than one person in my cell and the zipper gets stuck.”

Paul thought, *sounds like fun*. He said, “Goddamnit!”

“Is this the cheapest hotel in Paris?” Charlie asked.

“Our employer is not in the habit of billeting its personnel in the cheapest anything. The *Sans Douche* is the cheapest inconveniently located piece-of-shit hotel in Paris. It’s conceivable, although just barely, that there exists another hotel with a marginally lower price. But it will not be as bad as the dear ol’ S.D. Would you care for some cat hair?” He slapped the bed, which was making him break out. “I’ve got plenty more than I need.”

“What we need is a plan of action,” Becky said, stating what was painfully obvious.

“What we need is a way to prevent the minister of the interior from calling in the ambassador and asking him why there are CIA personnel in Paris searching for the goddamn Bride of Dracula!”

“There was no Bride of Dracula, boss.”

“There damn well was a Bride of Dracula.”

“No, I don’t believe there was, actually.” Becky clicked the keys on her laptop a few times. “Nope. No *Bride of Dracula*, says the Internet Movie Database.”

“Take a letter. Steven Spielberg: ‘Stevie! Have I got an idea for you. It’s Dracula, except she’s a woman!’ Ladies and gentlemen, I will now retire.”

“Thing is, boss, how’re we gonna find her?”

“To fuck around with the French or not to fuck around with the French, that is the question.”

Charlie began to shuffle along beneath the skylight. “The problem is, we need to get this done.” He started singing, and that was terribly sad.

“ ’Cause she’s spreadin’ the news, she’s doin’ it today, ’cause she wants to be a part of it — ”

“Don’t they test for people like you anymore, Charles? I mean, when we

signed on, the first thing they gave us was a test to see if we were ass-holes. In my generation.”

“Cold War’s over, boss. They’re putting the old assholes out to pasture, not hiring new ones.” The phone rang. It was Sam, back again for more punishment.

“Hey, bro.” They’d been in Cambodia together, in Laos. Paul Ward and Sam Mazur were allies of the blood and soul.

“Tell me something. Where’s a good place to get sick on the food in — where are we, again, Beck?”

“Montparnasse.”

“Montpissoir.”

“There’s thousands of restaurants out there.”

“Good.”

“Very.”

“Cheap.”

“Not very.”

“McDonald’s?” “What’re you doing in Montparnasse, anyway?”

“We’re billeted in one of the shitty little hotels.”

“God, you’re low. You’re so low that it worries me even talking to you. I have ambition. I want to be a big-timer back at Langley. Got my sights set on the Lesotho/Chad/Botswana desk. Can’t swing something like that if people realize I’m tangled up with a liability like you.”

“The French said Mrs. Tallman was believed to have taken a taxi into the city. They give you any details?”

“Well, actually, yes.”

Paul tried not to hope, but did.

“The taxi is believed to have been French.”

Had he not hated the vampires so much and been so obsessed with them, he would have been ready with a comeback. All he could do was plead. “I need French cooperation, Sam. You gotta get it.”

“Whatever this is, they think it’s some kind of crazy American bull-shit, or maybe we’re trying to make assholes outa them or whatever. What’s that noise, anyway?”

“The rain.”

“Really!”

“Really.”

“’Cause it’s beautiful here.”

“Oh, shut up. Something’s bothering me, and lemme tell you what it is.”

“I’m all ears.”

“Well, this should look to the French like an Interpol operation. So why are they being so damn shirty?”

“Because they know it isn’t.”

“And why would they know that?”

“Because Interpol told them.”

“Clever boys. Okay, Sam — and guys, both of you listen up. Because I do have a suggestion. I think that we ought to detail a fluent French speaker to liaise with the police on the pretext that we have a missing national —”

“All hell will break loose.”

“No, listen to me. Tell them it’s a matter of the heart. We just need to search around a bit — very discreetly — because this lady has run away from home, and it’s politically sensitive. The French will buy this. It’s the kind of thing they understand.”

“The French will buy. They will not understand. They’ll want the name, rank, and serial number; then they’ll tell you whether she’s d.o.a. or not. That’ll be the extent of their cooperation.”

“What we need — look, Charlie, quit fucking with that — what is that?”

“A cigarette maker I bought in Bangyercock. It’s neat.”

“Bangkok, you sexist bitch,” Becky said.

“Put the toy away. What we need — are you still there, Sam?”

“Patiently waiting.”

“What we need, and I am talking about right now, the next few minutes, is we need to find the vampires she has come to see. We’ve lost her. No description except what looked like a Chanel suit circa about 1975 and real blond hair that was probably a damn wig. With no cooperation from the locals, we gotta shift gears. We use the same basic technique we’ve been using since Tokyo.”

“Which is?”

“We cull police records for patterns of disappearance. My guess is that they’ll cluster around the lairs, just like everywhere else we’ve been. Here in Paris, we’ll be able to get good maps — sewer lines, wire conduits, building plans, drainage pipes, all of it. It’ll be easier than Singapore. A hell of a lot easier than Shanghai.”

“Boss?”

“Yeah, Beck?”

“Ask him, who keeps crime records here? Is there a missing persons bureau?”

Paul found a button on the phone next to a grill that was hidden on the side. When he pressed the button, he discovered that he had a decent speakerphone.

“Sam? You’re on speaker.”

“Hey.”

Becky asked her question again.

“Prefecture of Police, Hall of Records,” Sam replied. “There are going to be ordinary murders and disappearances mixed in,” he continued.

“Meaning?”

“You’re gonna have to read the description of each crime to find out if it started as a disappearance. You read French?”

“I read French,” Charlie said.

“Sam,” Becky asked, “when is a missing person declared dead in this country? If there’s no presumption of foul play, say.”

“Nine years.”

“Are those records held separately?”

“I don’t truthfully know. We’ll need to ask the French.”

“Shit,” Becky said carefully.

“What if we tell them it’s a historical survey,” Paul suggested. “Becky’s a student from Harvard. She’s got a powerful daddy, and the embassy’s been asked to help her do research for her thesis.”

“That’ll work,” Sam said. “I can have her in the Hall of Records within the

week.”

“Tomorrow, Sam, first thing.”

“There’s bureaucracy, man. This is France.”

“Do it, Sam.”

“Is this stuff computerized?” Becky asked.

“You’ll be looking at everything from the best databases you ever saw in your life to big black books that weigh forty pounds and make you sneeze.” It was agreed that they’d meet at a bar called Le Lapin Robuste on Rue du Sommerard tomorrow at noon. By then Sam would know exactly how the records were organized. From there, they’d go to the Prefecture of Police, which was nearby, and see how far they could get.

As soon as the conference call ended, Charlie and Becky began looking through a Paris Zagat’s guide for a restaurant for dinner. Paul watched them. He felt once again the awful, frantic feeling that had been coming over him from time to time ever since he’d seen the grotesque remains of poor Kiew Narawat.

For a while, the knowledge that vampires were real had depressed the hell out of him. He’d tried to find some special meaning in the fact that it had happened to his father, but all he’d found was special hate.

There was something ghastly about discovering that you weren’t at the top of the food chain. It was like discovering that you had a hidden and fatal disease. You were left feeling horribly out of control. It entered your dreams . . . it was a cancer of the mind.

“Uncle Paul,” Becky said, “since there’s nothing we can do tonight, could me and Charlie please, oh please, take you out to some cheap-jack hole-in-the-wall for some onion soup and wine?” That snapped the twig that had been about to snap ever since he’d lost track of the damn vampire. He looked at them — two kids made arrogant by too many easy victories.

“Do you think we’ve won? Is that why you’re so damn smug, with your goddamn toys —” He swept the cigarette making machine out of Charlie’s hands. Charlie, who was wound tight by training and had a hair trigger, just barely managed to restrain himself, stopping his flying fist with a sudden jerk of effort. Paul looked at him. “Do it,” he said with an easy smile that he did not feel, “and I’ll lay you out.”

“Paul?”

“And as for you —” He grabbed her purse, which had been on the floor beside a chair. He held it up to the desk lamp. “What the fuck is this made out of?” He knew damn well. They all had this stuff — purses and wallets and belts, God only knew what else. The skin of the vampire was more delicate even than calfskin . . . probably than human, for that matter.

He emptied the purse on the desk and stuffed the damn thing into the trash can. “If they saw this skin, God only knows what they’d do.”

“I’m not exactly planning to take it with me into some fucking lair. I’m not *that* stupid.”

“Don’t you understand? Even yet?” He looked from one surprised face to the other. “No. You don’t. So you listen up, children, and you listen close. Something has changed. Big time. We’ve been dealing with something that’s very old and very slow to react, and so far it’s been easy. Like killing big bugs. You surprised ’em all, didn’t you? Token resistance — gnashing teeth, hissing. It was fun! It got to be, anyway. The professionals. Fuck! Fuck us, we’re assholes.”

“Not me,” Charlie said. His face was burning up. His eyes were beads. He was not trained to take abuse, and he did not take it well.

“Not you, little boy. Little, innocent boy. Lemme see your wallet.”

“What the hell for?”

“Lemme see the goddamn thing!”

Charlie held it out. “They use human skin,” he muttered.

Paul emptied it and threw it away with the purse. “Belts, shoes, anything?”

“That stuff is valuable!”

“If they see you with their goddamn *skins* in your hands, they’re gonna know exactly who you are.”

“They are not going to see us.”

“Listen to me. One of them has gone up to the fifth floor of a hotel, killed one of your peers, and then flown from Bangkok to Paris on a god-for-damned *airplane!* I’ve seen it and it looked like some damn lady. *Very* human! So they don’t all spend all their time hiding in lairs, do they? We’re up against something new! Something we know not one damn thing about! They may be as old as damn Methuselah and they may be slow to respond, but they’ve taken a blow to the gut, and they are now responding! So you better watch your backs, because they are strong and they are smart and *now they know!*”

In the silence that followed, he became acutely aware of the humming of the little electric clock that stood on the table beside the bed. Charlie went to the window. Becky sat staring at her hands. Then she looked up. He saw tears gleaming in the edges of her eyes. He saw, also, that they were not tears of pain or embarrassment, but tears of rage. That was good. He liked that. Let her burn.

Dad was calling him from the back porch, “Paulie, Paulie let’s make ice cream!” Dad smelled of the raw earth that was his livelihood. He smelled of the leaves of summer.

After Dad had disappeared, Paulie had walked on his knees all the way down the pasture road to the river and all the way back. He had done that while begging God that if Dad was found, he would never stop praying forever.

Mom had worked the farm until her bones stuck out, and been scared all

the time, because if she did not get her crop in, she said, this family was gonna hit the road. There was no bank in North Carolina, and probably not anywhere, that would give her a crop loan.

“What’re we supposed to do?” Becky asked.

“Your jobs!”

“I mean right now, Paul. Right this goddamn *second*, Paul! Because I don’t see one damn thing we can do. We got a vague description of a woman who apparently looks nothing — not one thing — like the creatures we’ve been killing. I mean, I wouldn’t make a damn handbag outa some *lady*. I saw little, shriveled monsters coated with dirt. I didn’t see anything that looked even remotely like a tall, blond woman.”

“We’ve known about these creatures for just a few years. They’ve been around for centuries and centuries. They’ve had a lotta time to think up a lotta things —”

“Not my point. My point is, you’re having a goddamn hissy fit because Charlie and I — who happen to have been risking our lives in a filthy, horrible, and completely thankless job for three hellish years — wanted to sneak a couple of hours of downtime when there wasn’t another goddamn thing we *could* do!” She folded her arms. “Explain yourself.”

“Simple. I’m a field supervisor and you’re not.”

“So, what do we do, boss? Right now?” Charlie was trying to put his smashed cigarette machine back together.

“Whatever you damn well please. Go to Tour d’Argent and blow a month’s pay. Moulin Rouge. The Slow Bar. Paint the goddamn town red, that’s what Paris is for.”

“I just want a good bouillabaisse.”

“I’d like a nice *steak frites*.”

Charlie and Becky went out into the rain. Paul listened to it hammering the

damn skylight for about five minutes. And he began to think that maybe he should've gone with them. Maybe he could find a liquor store open somewhere; who the hell knew? He'd buy himself a quart of Stoli and toast himself into a stupor. Do him a world of good to wake up tomorrow with a hangover.

He went down in the tiny elevator, jammed his hat over his head, and set out into what might as well become an all night bar crawl. Maybe he'd even break up the tedium with a few fights. He loved to use his fists, always had. Just loved it. Probably be pretty easy to pick a fight with a frog. Hopefully, he'd find somebody with good enough moves to make it fun. Guys who liked to fight, they could spot each other in a bar. There were signals — some heavysset asshole glares at you for no damn reason, that's an invitation. Practiced bar fighters lived in their own secret world, and he was very much part of it. Nothing like beating the shit out of each other to make a couple of guys friends for life.

He set out along the Boulevard Montparnasse. There were lots of theaters, more than he remembered from when he was last here. Too bad it was night; he could have slipped over to the Orangerie and seen some fuckin' Monets.

Maybe the thing to do was go to a movie and brush up on his French. But there were also lots of bars. He went into one. Fulla damn tourists, wouldn't you know. Nervous Arabs sipping glasses of wine; Americans loudly demanding martinis.

There were a few Frenchies at the bar huddling over drinks or coffee. He slid up and managed, with some effort, to get a Stoli.

It was small and overpriced, but it worked okay, so he ordered another. He wondered if the whores around here were as overpriced as the liquor. He'd been spoiled by the Asians, who worked their asses off for a few bucks, massaging, blowing, sucking, fucking, combing, tickling, licking, and then handing you off to the social director for another round with a fresh face.

He said to nobody in particular, "You know why the predator is always smarter than the prey?" Nobody answered.

“He has to be. The prey lives by work — crop the grass, till the field, whatever. The predator lives by his wits. That’s why the gazelle hardly ever sees the lion. It’s why the damn deer doesn’t see us.” He paused, then raised his glass. The barkeep did him. He knocked it back.

He’d come in here to fight, let’s face it. But he was damn forty-eight years old; what was he gonna do? Also, you couldn’t insult people who didn’t understand your goddamn lingo.

He left. Rain hit him in the face. Striding along, he wished to God he had something to do that mattered. Why hadn’t anybody taken a picture of the woman? Why hadn’t they confiscated the damn passport? You couldn’t even dagnet for her!

He was going so fast that he was practically running. The rain came down in sheets, in torrents. He watched the droplets sailing through the streetlights out of a low, rushing sky. He realized that he was running because he was scared. How must it feel to be eaten alive that way? They were parasites. Big, filthy suckerfish.

How *the fuck* had she eluded them? You don’t sneak past customs when they have you caught. You can’t! But she had.

Intelligence, of course. She was brilliant, obviously. So what did that mean? How many steps ahead was she? Ten? Fifty? A thousand? “Goddamnit!”

Then he thought, what if she knows about me? He couldn’t see how, but he didn’t have any two hundred and fifty IQ, either. She could be three feet away right now and he would have no way of knowing.

He found a little shop where they had some wine stuck in the window along with the displays of Orange Crush and Evian water. There was what looked like it might be a nice muscatel for about nine bucks. He shelled out and took it home under his arm.

Back in the hotel, he realized that he had no corkscrew. So he busted the neck and lay back on the bed drinking out of the jagged hole and staring up at

the office building. All those dark windows and not a single human figure anywhere.

It wasn't muscatel, not by a long shot, but the wine did him okay, especially on top of the vodka. Maybe toward dawn he slept, and maybe not.

He awoke to gray, sad light and music coming up from the street — some kind of wild Arabic tune. The office building towered like a monster ghost above his skylight. He got up, wanted a cigarette, and went through the goddamn motions with the goddamn gum. He chewed it brutally, stuffed in another piece, and bore down until his jaws hummed.

He'd been rough on the kids last night. But that was nothing new. They'd gotten their frogs' legs anyway. Thing was, he loved his kids. He wanted them to get their fucking frogs' legs whenever they could.

The phone went *brrrt-brrrt brrrt-brrrt*. Neat sound, he thought.

“Yeah?”

“We got three places, boss. Three *arrondissements*.”

“Beck?”

“Yeah, boss.”

“Where are you?”

“Prefecture of Police Department of Records.”

“Am I wrong, or is it six-fifteen in the morning?”

“Shit, they're gonna be opening this place up in an hour. We gotta get moving.”

“But how the hell did you get in there? That's what I want to know.”

“They got a lotta skylights in this town.”

SIX

Martin Soule

Miriam had done her screaming and her weeping, and now sat in a little café seeking with increasing urgency for a victim for Martin. She had called Sarah again and again, and still had not gotten an answer. But she could not let this problem, as disturbing as it was becoming, intrude on her urgent mission. She did not know exactly what had happened to Martin, except that he was starving, and it was the most horrible thing she had ever seen.

Patience was essential on the hunt, no matter whether you were in a hurry or not. The trouble was, you could not easily imagine the prey to be dangerous, and in an emergency like this, your instincts screamed at you to just grab one, drag it off by the hair, and give it to the poor sufferer immediately.

She forced herself to sit still, to appear seductive. The waiter was admiring her and so were some of the male customers. But nobody moved, nobody *did* anything.

She sucked in warm smoke from her cigarette, drew it deep into her lungs, then blew it out with a carefully manufactured seductive pout. At least they had reasonably good cigarettes here. This Gitanes reminded her of a Bon-Ton. American cigarettes were awful now.

Why were these stupid men ignoring her? Had customs changed so much? When she had last taken a victim in Europe, everything had been different. There had been an immediate flirting response, a quick seduction. That had happened on a quiet day in Clichy, in a little bar full of bums and Americans.

She was contacting men's eyes, but they wouldn't take it farther. She did not intend to let Martin starve, or any Keeper she could help, for that matter. As to why this had happened to him, she did not yet know. She could well

imagine, though — something awful that had to do with human oppression of the Keeper. She sucked the cigarette hard, blew out a furious stream of smoke.

The temptation was growing ever stronger to just go off down the street and do what instinct urged. To some Keepers, the finest of all meals came from a sudden, spontaneous impulse to just snatch a victim, tear it open, and drink. That was her instinct, always. She'd been drawn to America in the first place by the easy, rambling life it offered her kind. She'd guzzled her way across the wild frontier. You could go a few miles on horseback and pluck your fruit along the trail without the slightest worry. People disappeared out there all the time.

She'd finished her cigarette and was just starting another when she realized that a young male was heading her way. She said in French, "Can you help me? May I have a light?"

He moved past her toward the loo. Could this be a homosexual bar? No. Clearly not. Owning a club in New York as she did, she could tell the sexual orientation of a place at a glance.

From the bar, another man said, "You speak the French of Voltaire, lady. All those 'thees' and 'thous.'" He raised his voice, mocking her, " 'Cans't thou render me assistance? Mays't I take a flame?' We call it a 'match,' now. New word! Where are you from?"

"The past," she snapped. She got to her feet. To hell with the French, if they were no longer interested in a pretty girl.

"Oh, mademoiselle, please, I am just making conversation! Don't be so quick. You must be an American. You learned your French in school. Well, you had an old teacher. Damned old, I'd say! But that can't be held against you."

He was plump. The back of his hands revealed the telltale blue streaks that suggested that the drinking veins would be nice and big. The flow of the carotid would be delightfully powerful.

She gave him a slow, careful smile, the kind that made the males pant. She had practiced smiling for years, and she considered herself an artiste. As soon as she showed her rows of perfectly believable but entirely artificial human teeth, he came to her table.

Finally. She responded with practiced indifference. Smile too eagerly, and he would back off . . . at least, that used to be their way.

“You are not telling me to go?”

She shrugged.

In a lower voice, he asked, “Is this going to cost me?”

“A little.” Meaning everything you value the most — your breath, your blood, your very life.

“Then you’re for real — a whore staking out the rear table in a café. It’s so — I don’t know — *charmant*. So ‘old Paris!’ And that language and the ancient suit. You *are* from the past. Look, I don’t mean to spoil the effect, but I have only a couple hundred francs.”

“How sad.”

“Do you take credit cards?”

How could he ask something so profoundly stupid? A whore who took credit cards, indeed. She sucked in smoke, let it drift slowly out.

“I wish you wouldn’t do that.”

“Excuse me, my sir?”

“I gave it up. Bad for the chest.” He tapped his breast, expanded his lungs, let the breath out. “Bet you couldn’t manage that.”

She could hold her breath for an hour. Keepers could drown, but it was not an easy death. For them, in fact, there were no easy deaths. The very body, every bone and sinew, was fanatically devoted to life. Man had the immortal

soul, not his Keepers. Man could afford to die. Keepers had to stay alive forever, if possible.

Miriam put out her cigarette.

“You have the loveliest hands,” he said, watching her.

She lifted a hand, bending her wrist delicately. When he kissed it, somebody over at the bar went, “Oh, my.”

“Be quiet, you fucking gorilla!” the victim roared. “Never mind him, he has the manners of an animal.”

She lowered her hand, touching his with the tips of her fingers: possession. “Good sir, I cannot stop with you the day long.”

“Your French is advancing. Now you sound like somebody from about 1896.”

“I have a pleasant room, and two hundred francs will be a good price.”

She strolled with him down the Rue de Bobbilo, then crossed the Place d’Italie into the Avenue des Gobelins. It was raining, and she leaned in toward him to be under his umbrella. As they crossed the street, she stumbled against him. He glanced at her out of the corner of his eye, frowning slightly.

It had been a costly slip: he’d noticed her weight. Keepers had dense bones and muscles like rock. Inch for inch, they were twice as heavy as the prey.

The smallest slip would sometimes be all it took to spook a victim. Like most predators, Keepers were successful only about a third of the time. The myth of the vampire as a creeping, unstoppable supernatural force was just that, a myth.

They were passing a small hotel. He started in.

“No, not here.”

“Where the hell is it, then? This is the only hotel around here.”

“Just a little farther, good sir.”

His pace slowed. She could feel him glancing at her again. Archaic language, excessive weight for her shape and size — he was not understanding, and that was making him nervous. She had to brush up on her damn French. Back in 1956, nobody had commented. But then, she hadn’t fed here, either, only gone to Chanel for a thorough reoutfitting. She’d spent thousands. They would never have commented on her French.

She gave him a carefully rehearsed look — eyebrows raised, gray eyes gleaming — that was meant to disarm him with a combination of girlish sweetness and womanly experience. This look had worked since she had first developed it, back in the days when one’s only mirror was a pond.

He went, “*hmpf*,” like a slightly shocked horse. Then he grew silent. His tread became determined, even dogged.

She had him, by heaven! That was a wonderfully effective look. It had set the hook along the Via Appia and Watling Street, in Ur and Athens, in Venezia and ancient Granada.

“This isn’t — oh, Christ — what the hell do you want to go in here for?”

“You’ll see.”

“Not for two hundred francs I won’t. A blanket on the floor of an old wreck like this rates no more than fifty, sweetheart. No way you’re gonna cheat Jean-Jacques. No damn way at all.”

If she accepted his offer, he’d decide that she was probably diseased and that would be that. She had to waste time bargaining.

“Upstairs is very nice. You must pay a hundred and fifty.” “The hell —”

“But only when I conduct you to the chamber, and if you are pleased.” She lowered her eyes.

“If I ain’t pleased?”

“Then I am desolated. I will do it for your fifty, and fulfill your pleasure, for one hour of the clock.”

“Now we’re back to the ancien régime. Your French is fascinating.” He looked up at Mother Lamia’s old palace, the gray limestone, the sharp peak of the roof, the tiny windows in the tower. She knew what he was thinking: *Dare I go in there with such a strange woman?*

“I have my domicile within. It isn’t as it appears.”

He smirked, but followed her through the door into the cavernous space. He stopped, looked up into the high shadows. “My God, what a place!”

“Come with me.” She moved deeper within, toward the stairs at the back of the enormous, dark room.

“That stairway’s a deathtrap!”

She thought, *Don’t make it hard, not when I am so frantic!* She said, “But, my sir, this is the way to my chamber.” She moved toward the stairs, swinging her hips.

“‘My sir!’ ‘My chamber!’ you’re weird, and I’m not going up there with you no matter how pretty you are. Anyway, you probably taste like a damn ashtray, you smoke so much.”

Then the damn thing turned and strode toward the door. She sucked in her breath, turned also.

It had moved fast. It put its hand in the ring, started pulling it. She leaped with all her might across the space between them. At the last instant, it saw her, raised a hand. For the split of a second, their eyes met. She fisted the crown of its head, doing it in precisely the right place and with the exact force necessary to knock the thing senseless. It dropped with a sodden thud.

“Martin,” she said. “My dear, look what I’ve brought you.” He’d been watching from behind one of the old tanning vats. He came out, moving with the slow, dragging gait of a very weak Keeper. He smelled like dry, old flesh

and rotted blood. His eyes were glimmers inside their sunken sockets.

She watched him lay his long gray form upon the cushioning body of his prey, watched him stretch like a lounging panther. Some of the old Martin could be seen in those easy movements, his grace, even a little of his power.

He laid his jaws on the neck, in the traditional spot. Keepers sometimes took their food from under the leg, or even, if they were particularly hungry and had really strong suction, from the main artery itself, which could be reached by a ferocious penetration of the small of the back.

It was decadent and cruel to take the blood from a small vein, but this was done as well. The victim knew, then, for it would remain conscious for most of the feeding. Awful, mad fun that was. Children did it, and Miriam could remember a few Egyptians she'd tormented that way, when she was still a little slip of a thing. She and that boy Sothis, the son of Amma, had experimented with all sorts of ghastly and peculiar ways of consuming their prey. Playing the role of child prostitutes in the seedy backstreets of Thebes, they'd often sucked their customers dry right through their erect penises, leaving nothing but a skeleton tented by skin ready for the tanner. Children can be so awful.

Martin's body began to undulate. His esophageal peristalsis was quite strong. The prey woke up and shouted out something, "Oh, shit," or some such thing. He began to toss and turn, and Martin, who was far from a normal weight and strength, started to slip off.

He needed all the nutrition he could get, so she most certainly could not kill the prey to prevent it struggling. Dead blood made a poor meal.

The thing heaved. There was a pop and a gooey, declining hiss. Martin's suction had broken. It heaved again, and this time he slid completely off. The creature sat up. Its neck was red, but there was no blood flowing. Miriam had the awful thought that Martin might be too weak to feed.

"What in the name of God is this?" The creature looked down at Martin, who was sliding across the floor, looking very much like a great beetle. "What in the name of *God!*" It scrambled to its feet.

Martin grabbed an ankle. The creature shrieked, its eyes practically popping out of its head. It kicked him away.

“Jesus in heaven, what’s the matter with that guy?”

This creature was surprisingly self-possessed. Miriam did not like this. She stepped forward, grabbed one of its wrists.

It kicked upward with its knee, directing the blow expertly toward her forearm. That was well done; that would have shattered a human bone. She didn’t know what she had here. Stars forbid it was another damn cop.

Its free fist came plunging straight toward her face. She caught it, stopping its forward motion so suddenly that the animal’s jaws snapped with the shock. She began to squeeze the wrists. It writhed and kicked again, this time getting her right in the midriff. Her muscles were far too hard for the blow to be painful, but it pushed her off her feet, forcing her to let go her grip. Instantly the creature recoiled from her.

“What are you?” it shrieked. “Aliens?”

That again. That was a recent bit of human myth that the Keepers ought to start using. They hadn’t been aliens to the earth for fifty thousand years.

Martin had risen to a sitting position, was ineffectually dusting his tattered waistcoat. When she looked back to the human, it was already starting to make once again for the outside door. With a quick leap, she put herself in its way.

“God in heaven! That’s three meters!” It showed its teeth, displayed the palms of its hands. “Look, we can work this out. I’m a family man. I can’t go to Pluto or whatever it is you want.”

Pluto was the human name for Nisu, the farthest of the planets. Beyond that was only Niburu, the wanderer.

“Child, you must give up your life. You cannot escape us.”

That would get the mind racing, the blood speeding.

“Don’t be absurd. That would be murder! And look at you; why, you’re just a baby in your mother’s old clothes! You mustn’t do something so terrible. You’ll regret it forever, *child*.”

Behind him, Martin had come to his feet. He began to stagger toward the victim, his shoulders slumped, his jaw gaping. The sound of his shuffling caused the creature to turn around. And now a moment occurred that did not happen often: a human being saw a Keeper naked of disguise, as he really looked.

It drew in its breath. Then silence. Then a burst of wild, panicked shrieking. But it stood rooted, mesmerized for the same reason that the mouse is mesmerized by the snake.

The deepest unconscious of the human being, the depth of the soul, knew the truth. It bore an imprint of that face from the days when Keepers kept them in cages. They had been pure animals then, without any conscious mind. So the terror they had felt had been imprinted on the unconscious and passed from generation to generation as raw instinct.

Too bad that the free-range human had made so much nicer a meal than the caged variety. Inevitably, they’d begun to run them in packs, then in herds, letting them make their own cities, have their own history. Inevitably, the Keepers had taken to living in the cities, and what fun *that* had been. Still would be, if they hadn’t all gone into hiding.

It was so unnecessary. Miriam had probably done a thousand kills in New York City since the creation of its police department, and she hadn’t had a bit of trouble there. In fact, she’d had almost no trouble at all, not until this last little lapse.

There’d been the Ellen Wunderling affair, when Sarah had panicked and eaten a reporter who had gotten too close to Miriam. But that had blown over.

The truth was, it was not hard to get away with killing humans if you were just a little careful, and the other Keepers should not have become so fearful. Caution was appropriate, of course. But this business of hiding in holes the

way they were doing — they were nothing now but parasites. She was the last of her kind, the last true Keeper, the last vampire.

Well, she had to rehabilitate them, starting with Martin. She would feed him and nurse him back to his grandeur, teach him to live in the modern world. She'd teach them all. Then she'd have a beautiful baby, and he would be a prince among them and lead them back into the sunlight.

The creature began to move away, but Miriam was quicker. She embraced it from behind.

It let out a terrific bellow and began to fling its head back and forth, attempting to slam its skull into her forehead. It connected, too. The blow mattered not, wouldn't even leave a bruise.

She tightened her grip. The creature struggled to draw her hands away. She could feel the ribs start to compress. The carefully orchestrated attempt to break her grip degenerated into hammering. Finally, the breath whooshed out.

Martin's jaw opened, and he fell against the prey. It wriggled, flounced, shook its head wildly. Martin fell away, then regained his balance. Miriam crushed out the last of the breath. Martin locked his jaw against the neck once again. The creature's legs, which had been kicking wildly, now began to slow down. Miriam squeezed tighter. She smelled hot urine, heard it sluicing out.

Martin's suction finally took, and the creature's body weight began to decline, slowly at first, then more noticeably. Martin, by contrast, began to flush red through his curtain of dirt. She felt the life go out of the human. The body became limp. A moment later, Martin let go.

"There's more," she said.

He slumped. "I cannot." He found a chair, fell into it. At least he wasn't crawling anymore. That was an improvement.

The blood and fluids that were left had to be taken. The remnant could not be left to rot. She carried it across the room and sat also, on the foot of the stairs. She laid the body out on her lap, bent down and sucked it until there

was nothing left to take, just the dry, cream-colored skin tight across the bones.

“Is there acid in any of the vats?”

He shook his head. “That’s all finished. No more tannery.”

Too bad. It had been a great convenience in the old days, because the remnants could simply be dissolved. It had been Mom’s charming idea to let the tanners come in.

“What do you do?”

He looked at her. “Miriam — it is you, isn’t it?”

“Yes, Martin.”

“I haven’t eaten in a year.”

Her mouth opened, but she did not speak, could not. She’d heard of Keepers going hungry for six months, even more — but how could he ever have survived this? How could he still live?

“Martin —”

“I begged for death, many times. But it did not come. Would not come.” He smiled a little. “I was turning into one of those . . . those things that *you* make.”

He was referring to her humans, to what happened to them when her blood in their veins stopped keeping them young. Keepers might not communicate with each other much, but it seemed that everybody knew of Miriam and her humans.

“It’s nothing like that. You would have died in the end.”

He nodded. “No doubt.” He raised his eyes to hers. She looked deep into the burning, black pools. Martin was thousands of years older than she.

“We are coming to our end, Miriam,” he said.

“We aren’t!”

He nodded slowly, not as if he was agreeing with her, but more as if he was humoring her. “You need to find a way to destroy that,” he said. “They’ll miss that man soon, and they’re bound to come here searching.”

“Why here? We’ve always been safe here. This is my mother’s house.”

“The City of Paris owns this structure. There are plans to make it part of the Musée des Gobelins, starting next year.” He made a dismissive gesture with his hands, a gesture that expressed vast defeat, vast sorrow. “They’ll clear all this rubbish out.”

“Martin, you were thriving just — well, just a few years ago.”

His face, which had filled out and now bore a smeared, filthy resemblance to the narrow-lipped elegance she remembered from the past, opened into a smile. The smile quickly turned bitter and ugly. “During the war, the Resistance built a secret headquarters in the Denfert-Rochereau ossuary. They heard us, deeper down, in the old labyrinth.”

This had been the traditional shelter of the Paris vampires, a honeycomb of tunnels that wound beneath the city, from which its stone had been quarried since the time of the Romans.

“They noticed us. They thought that we were spies working for the Germans, and they pursued us.”

“But . . . how?”

“With sound! They have those little tins full of carbon black —”

“Microphones.”

“Yes, those things. They put them about, and our voices were conducted to their ears through them.”

“But they can’t hear our speech.”

“Ah, Prime is such a trial, isn’t it? So complex, so many words needed for the simplest expression.” He shook his head. “We spoke French, which requires the central register of tones.”

“You’re speaking Prime now.”

“Am I? Yes, I am. How lovely. I’ll try to keep it up. Anyway, they did not really do anything at first. They were perplexed. But you know the French, they are a careful and patient lot. They did not give up on the strange stories collected by the Resistance, of a band of *hommes sauvages* living in the catacombs. When you were last here, we knew nothing of this. But they were working, you see. Always watching, always working. There began to be deputations from the Service Sociale going through the catacombs calling, ‘come out, come out, we are here to help you.’ Then a stupid fool, that idiot Emeus —”

“He and I grew up together. He was with the Thebes gang, me and Sothis out of Amma, Tayna of Tothen, that crowd.”

“Tothen now calls himself Monsieur Gamon. He is here. The others, the wind has taken.”

“Tayna was in Shanghai, living as a Mr. Lee.” Destroyed, now, Miriam supposed. She did not say it.

“Emeus ate one of the damned Service Sociale people. The hell that resulted has not stopped.”

So humans knew, also, here in France. “How much do they understand?”

“I don’t know what they know. How they find us. Only that I could not safely feed these years past.” He gave her a look that she had never seen from a Keeper before, almost of despair. It made her most uneasy to see such a weak and human expression in the eyes of one of her own kind.

“Why did you have to stop? What exactly did they do?”

“They came! I had just fed — in the Twelfth, coming up out of the labyrinth. The usual method.”

“When you say ‘They came,’ what do you mean?”

“I had chosen a very nice one, smelled great, skin tone said it was first class all the way. I took it into a — oh, some little covered place, a toilet, as I recall. I ate it and put the remnant in my little case that I carry, and suddenly — there they were, the police! Running after me. Coming in autos. Jumping out of doorways. It was phenomenal. I only escaped by leaping a wall, then to the sewers.” She pulled out her cigarettes, lit one. How tired she suddenly felt. She sensed that more had happened to him than he had as yet said, and she wanted to hear it all.

“Go on, Martin.”

“You look so beautiful.”

She thought, *I don't want to bear the child of a weak creature like this. I need the strongest blood now.* She said, “But you haven't finished your story.”

“Miriam, I have been captured.”

The words vibrated into Miriam's shocked silence.

“They examined me, Miriam. They opened my jaw, they weighed me, they extracted fluids!”

“But you escaped?”

“They tried to make me think I had. It was a silly business, though — unlocked doors and such. I knew they had let me go.”

She could feel her heat beginning to rise. Her blood was flowing faster. If he had been let go, then there was danger here.

“What happened next?”

“I waited months — a full season of moons. Then I took something — a rat of a thing, half-starved, living under a bridge in the trackless neighborhoods beyond the Périphérique. I had not even opened a vein before they were there, falling on me from the roadway above, rushing up in automobiles — it was horrifying. I ran. All I could do.”

“But you must have been terribly hungry.”

“I tried again a few days later. This time I took the RER to the outskirts, to an area where live the brown ones that they call *ratons*. Again, I singled one out, cut it out of a little herd in a cinema, then started to have my dinner.”

“They appeared again.”

“Dozens of them! All around! This time I barely escaped. I came back here. I have remained within these walls ever since.”

“But, Martin, how could you have not eaten for — what — at least a year? It’s impossible.”

“ ‘Nothing is impossible when you must,’ that is the motto of my family. Miriam, I have drunk the feral cats, the mice, the rats. I have eaten the very flies that are spit by the air!”

No wonder he stank so. A Keeper could not live on such blood, or could barely live. She did not want to pity one of her own kind, especially not one she remembered with such respect. He had been a charming lover in his day. She remembered him in the flashing brocades of the last age, a powdered wig upon his head and a gold-knobbed stick in his hand. He knew the fashions of the age; he dallied with duchesses and played cards at the table of the king. Among the Keepers, he was known as an expert on the ways of man.

“You and I have always been kindred souls, Martin.”

“I have thought of you often, child. You still live among them?”

“I have a club in New York that is quite *façonnable*. And a human lover called Sarah.”

“That business of yours.”

“A human to serve you is most useful.” Or could be, if only she would answer the damned phone.

“I don’t even know the names of those who pursue me.”

They had left him alone for these years, interrupting him only when he was — according to their idea — about to “murder” one of their own. There could only be one reason why he had been left like this: He was bait, and the house was a trap.

They must even now be rushing to this place. For they had undoubtedly bugged the entire building. God only knew, maybe there were even cameras. They could make cameras the size of a fingertip, microphones no bigger than specs of dust. Sarah used such things in the club’s security system.

“We have to leave here,” she said.

“But I — where?”

She stood up. “Is there any fuel?”

“What sort of fuel?”

“To make a fire! Chemicals! Petrol!”

He gestured toward some steel drums.

She went to them, ripped off the soft metal cover. It was some sort of chemical, but it didn’t smell flammable. Another was the same stuff.

But a third stank gloriously of the esters of earth-oil. It had been sent through their great retorts until it was a volatile. “This makes the auto go,” she said.

“I know what petrol is.”

She threw the barrel into the middle of the room. “Is the hidden route the

same?” Every Keep had one, usually more than one. There were escapes for fire, escapes for attack, escapes for everything.

“The same.”

The petrol had finished gushing out, and now stood in a puddle on the floor. Miriam took the empty drum and rolled it back and forth over the remnant until it was nothing but a sack of powdered bone. Then she tossed it into the petrol, making sure that it was thoroughly soaked.

At that moment, she heard a sound, the creak of pressure being applied against the door. She took Martin’s shoulders, leaned against his ear. “They’re just outside,” she said. “About to burst in the door and all the windows at once.”

His lips twisted back in an ugly rictus. He really, really despised them, this hunted creature. Taking his still ice-cold hand, she led him to the far wall, where once the waste from the tannery had poured into the little river Bievre, long since covered over. She counted one, two, three stones up from the floor. Now she pressed the one that was under her hand.

A brutal shaft of sunlight shattered the darkness. The doorway was a white blaze filled with darting shadows. Martin screamed, the shuddering ululation of a Keeper in absolute fury. So rarely had she heard it that Miriam screamed, too, throwing back her head and howling to the rafters.

“Essence!”

The human cry stopped her. They came out across the great room. They had nets, nets and guns. She felt tears of anger streaming down her cheeks. She was almost immobilized, such was her rage at being threatened by them. She did not let herself succumb to these feelings, though. No, she must not. Instead, she drew a book of matches from her pocket.

“Madame, si’l vous plaît!”

Lady, please, indeed! She struck one and lit the others and threw the whole flaming book. Instantly, fire roared up everywhere. The men began to shriek.

They leaped and jerked in the flames, as her mother had leaped and twisted in her pyre.

Miriam pressed the stone that would open their route into the sewers of Paris.

Nothing happened.

SEVEN

Deathtrap

Paul called Becky's cell phone for the fifth time in an hour. Her recording came back for the fifth time in an hour. He'd already requested that Communications in Langley track both officers, but their cell phones were off or the signals were blocked, so the GPS system could not find them. Just for the hell of it, he tried Charlie again, also. Same shit.

It was now ten A.M. By his estimation they were two hours overdue, maybe more. He thrust another stick of gum in his mouth and chomped on it. Thank God he hated French cigarettes.

The cell phone rang. He grabbed for it. "Ward here."

"Paul, this is Justin."

What in hell was Justin Turk calling him for now? It was five A.M. in Virginia. "Yeah?"

"I'm getting back to you."

"Look, man, I gotta have more support personnel."

"Shit."

"One of the damn creatures escaped from my net. I've followed it to Paris and lost it. I need more people and more equipment real fast."

"How fast is real fast?"

"Yesterday would've been good. I need at least five more field ops."

“I can’t just put people in this thing. You know the kind of problems we’re having. The discussions.”

“I’m losing a vampire. One that *travels*, for Chrissakes!”

“It takes weeks to clear people for you. A whole new background check, all kinds of shit. Even when I don’t have the director on my ass. Which I obviously do.”

“At least authorize the people I’ve still got in Kuala to follow me.”

“That’s a no-go.”

“Come on, man, help me, here.”

“This whole operation is under study. Until I have fresh orders, you’re all frozen in place.”

That sure was shitty news. “I need those people, man. This thing is going south fast.”

“I’ll work on it.”

“Don’t sound so convincing.”

The conversation ended there, with muttered good-byes. Justin was a sort of a friend. That is to say, he’d be there for Paul as long as Paul wasn’t a liability.

One thing was quite clear: There would be no new people, not with international human rights questions beginning to hang over the operation.

He saw somebody getting dropped down a shaft, and that somebody was him.

He hammered Becky’s number into his cell phone, then Charlie’s. Same results as before. “I’m in trouble,” he muttered to himself.

Still, it was possible that the kids were okay. He just wished that they’d

followed procedure with this break-in. There would be a hell of a stink if the French found out that CIA personnel had invaded the records office of their security service. He'd be recalled, of course. He'd have to explain what he was doing in France, and why he'd gotten here by commandeering an Air Force general's private jet.

He sat and stared up at the blank, sunlit wall of the office tower and listened to the water drip in the sink. He looked at his watch. "Ten-fifty," he muttered to himself. "Damn and *god* damn."

And he decided to use the time well. A situation like this could burst into flames at any second. He was as prepared as he could be for the Sûreté and the White House. What he needed to do was to get ready for the really hard ones — the vampires. And there was actually something he could do right now, something damn useful.

Becky had mentioned two areas of Paris: the Ninth and Thirteenth Arrondissements. He opened his laptop and went to the CIA's database. The site didn't offer any magical insights into the workings of the world, just some very good information and lots of detail. You could find practically anybody here, and at his level of clearance, he could input requests for Echelon searches on keywords of concern to any operation approved for the system. Echelon would then look for those keywords amid the billions of phone conversations, e-mails, radio transmissions, and faxes that it monitored.

Problem was, you had to be damn specific to get anything useful. What words might the traveler use on the telephone — what special, unique words? He didn't know who she might call or where she might go, or even if Paris was her final destination.

The CIA database also had a wealth of maps, better ones than could be bought in any store, including maps of Paris that had been drawn by the German military during World War II. Originally intended to be used in house-to-house warfare, they included detailed floor plans and plans of the sewer system that offered information down to which tunnels and pipes were big enough to admit a man.

The Germans had done this for most of the large cities in Europe. Many of the maps were outmoded, of course, and many like Paul had knowledge that the disastrous bombing of the Chinese embassy during the Kosovo conflict in 1999 had been caused by reliance on an improperly updated Wehrmacht street plan of Belgrade. Since then, all maps in the CIA database been clearly marked with the last year of update.

He saw that the Ninth Arrondissement had not been touched since 1944. The map legends and street names were still in German, which wasn't very reassuring. By contrast, the Thirteenth had been revised by the French in 1998, and there were annotations that it had been updated yearly since.

He settled down to stare at the screen. He had to memorize every street, every sewer pipe, every building plan.

The vampire would know its world down to the tiniest corner. It would be able to pick every lock, use every shadow, climb all the walls and cross all the roofs. It would use the sewer system like a railroad. It would be able to navigate the ductwork, the window ledges, the eaves.

Paul hadn't believed how smart and capable the vampire was, at least not at first. He hadn't believed it when he first saw one staring back at him with dark, still eyes, looking small and helpless. There had been a slight smile on its face, a drifting little smile that communicated a sort of casual amusement. Jack Dodge said, "Hey," and stepped toward it — and a knife shot out and sliced Jack's head from his body like a blossom from a stem.

Paul could still hear the sounds: the rip of Jack's skin, the crackle of his bones, then the *shuss* of the fountain of blood that pumped out of the stump.

Those sounds came to Paul in his sleep, in the whine of the jets he took through the night, in the whispering of the wind in the ancient cities where he worked.

The creatures drifted through the cracks and corners of their world, leading him on an infinitely careful chase. They played a kind of chess with him, appearing here and there, slipping away, only to reappear somewhere else.

His pursuit of them had taught him how brilliant they were. They always stayed ahead of him. His only useful weapons were surprise and technology. Brilliance and speed were their tools, but they had no technology. They had been neatly outclassed by a computer database and infrared sight.

The death of the vampire was appalling. It haunted Paul, and he knew it haunted his people. The vampire fought harder for its life than it was possible for a human being to imagine. They hid like rats, because their lives were just so damn precious to them. When you saw their death struggles, you could almost, at moments, sympathize. The vampire died hard. “Real hard,” he said aloud.

He sat staring at the map of the Thirteenth Arrondissement’s sewer system. There had been structural changes made as recently as a year ago. He tracked his finger along a tunnel that had been blocked up. Probably something to do with containing old waste from the tanneries and dye factories that used to be in the area.

No doubt that was why this map was so carefully kept up. The French had a problem with contaminated water and soils in the area, and they were cleaning it up.

The hotel phone rang. He grabbed it instantly.

“Two of your people were caught in the Department of Records of the Prefecture of Police at six-thirty this morning.” It was Sam Mazur at the embassy.

“Oh, Christ.”

“The French had them on video from the second they climbed down into the damn room, Paul! Come on, this is amateur night, here!”

“Are they being —”

“They’re being released under diplomatic immunity. But the frogs are gonna take ’em straight to the airport and put ’em on the first plane to Washington. They’re totally, completely, and thoroughly blown. I’ll tell you

another thing — the reason that they got to stay so long in that very secure facility was so that the Sûreté could record every damn keystroke they made as they hacked their way into the database. They know how they did it, what they found — everything.”

“I’m on my way.”

He didn’t know the Métro well, but he did know that it was the fastest way around Paris in midday traffic. He got in the train at Montparnasse. It moved off at what seemed to him to be a maddeningly leisurely pace. His mind clicked methodically from possibility to possibility as he tried to devise a new way of saving Becky and Charlie and his whole operation.

In less than fifteen minutes he was trotting up the steps into the Place de la Concorde.

The American embassy was beautiful and very well guarded. It was also quiet, unlike many of its counterparts around the world. The crowds of visa seekers and unhappy citizens reporting lost passports were at the consulate a few blocks away. His own diplomatic passport got him straight past the French guards and the marines.

He entered through a metal detector, declaring and checking the gun that his false Interpol ID allowed him to carry. Well, *false* was maybe too strong a word. The Interpol papers his team used were the result of an accommodation between the CIA and the international police agency.

Sam’s office was halfway down a wide corridor that looked as if it belonged in a palace. As indeed, it did. This building had been one before it became the U.S. embassy. He went in, and the atmosphere changed at once. Here there were computer screens and filing cabinets and a dropped ceiling. The outer office blazed with fluorescent light.

“I’m Paul Ward,” he said to a receptionist who, to his surprise, turned out to be French. What a local national was doing working in a clearance-required job he did not know. Times had changed.

Sam sat at a steel desk. His venetian blinds were firmly shut on what was

probably a view of an air shaft. The rumble of air-conditioning equipment shook the floor, but this office, itself, was not air-conditioned. It was just near the equipment.

“Paul, you old asshole, I thought you’d be arrested on your way here.”

“What about my people?”

“Business class on Air France. Not too bad.”

Until they reached Langley. This was not over, no way, not for any of them. It was a major screwup, and it was going to take a lot of time to fix it. If that was even possible. The White House had started asking its damn questions at just the wrong time.

“Are they in the air yet?”

“They’re being signed out of the hoosegow as we speak. The Frenchies don’t like people getting into their secure areas, *especially* not us.”

“Sam, you’re gonna hate me for this. But you gotta find a way to keep my people in country. I need them urgently, right now.”

He shook his head. “It’s over. So over.”

“Call in favors. Do anything.”

“Nothin’ I can do. They’re toast.”

“Then I need an immediate appointment with the ambassador.”

Sam blinked. “You’re kidding. You’d bring the politicos in on something like this? A jerk like you couldn’t possibly have a congressional sugar daddy.”

Paul tried using what he hoped might be a trump card. “It’s terrorism, Sam. I’m in the middle of a heavy operation that involves France only because we happened to follow an international terrorist onto French soil. If we lose this woman, innocent people are gonna die.”

Sam picked up the phone. “You don’t need the ambassador.” He spoke in rapid-fire French. Paul couldn’t follow it precisely, but he could tell that he was going up the ladder to somebody very senior somewhere, and this senior individual was being asked for urgent and immediate intervention.

Sam hung up. “The chief of the Division of Internal Security of the Sûreté will see us in ten minutes.”

This time they had an embassy Citroën with a driver, so it was a lot easier to get around. “You’re out there in the middle of nowhere without any support staff, the three of you,” Sam said. “Bound to be a problem, an operation that’s being run that far outside of guidelines, that thinly staffed.”

“We’re effective. That’s the bottom line.”

“I don’t want to intrude, Paul. But I gotta tell you, you look like hell. In fact, I’d give road kill a better rating. Whatever it is you’re doing that you’re so effective at, it’s taking you apart.”

He and Sam had learned to strangle people with piano wire and plant microphones under the skin of pet cats together. They’d been in Cambodia together, where none of their training applied and nothing they did worked. They had fought the silent war together when it really was a war.

“It’s just another shitty op, my friend. You look great, by the by. Tennised, golfed, and swum.”

“Also pokered every Tuesday night with the Brits. It’s a good life here, as long as you don’t get yourself in the kind of trouble your two goons are in.”

If only the French customs agents hadn’t made such a mess of things at de Gaulle. If only he hadn’t had to screen the operation through Interpol. The way he saw it, they should have disabled the creature with a shot as soon as it reached customs, then dropped it in a vat of sulfuric acid, or cremated it. Instead, they took it to an airport brig. It escaped before they even got it in the cell. Of course it did.

“I wish I could tell you what it is I’m doing,” Paul said. “It’d be a lot easier

if every damn security officer and cop on the planet knew. But there would be huge problems. It'd be the most unpredictable goddamn thing you could imagine."

"Well, that explains that. You gonna get yourself wasted, old buddy, on this thing. Your politics are all used up, way I hear it."

They pulled up in front of the long, impressively French Victorian building that housed the Sûreté. Paul expected a lot of bureaucracy and a long wait, but they were soon in a very quiet, very ornate office facing an extremely fastidious midget.

"I am Colonel Bocage," he said.

"Where's Henri-Georges?" Sam asked.

"You will interview with me."

Paul said in French, "*J'voudrais mon peuple, monsieur. Tout de suite.*"

Colonel Bocage laughed. "Mr. Mazur, this is the man in charge, that you promised us to meet?"

Sam nodded. "I made that promise to Henri-Georges Bordelon."

"And he transmitted it to me." "I need my people," Paul said. "We're saving lives." "You speak French. You should think in French. It's more civilized . . ." "I can't think in French."

". . . because we have so many ways of expressing concepts of good and evil." He smiled again, and Paul thought he looked, for a moment, like a very hard man. "Mr. Mazur, could you step out for a moment? I am sorry."

This wasn't the usual drill when you went to beg to keep your spies in place. But Paul was in no position to ask what was going on. When Sam had left, the colonel went to his window, which looked out over a lovely park. There was a difference between being a high official in the Sûreté and a lowly intelligence officer like Sam.

Colonel Bocage closed a manila folder he'd been appearing to review. It was only a pose, a tension builder. Paul had done it himself a thousand times, to a thousand nervous supplicants in ten different countries. "So," the colonel said at last, "you are here investigating *les sauvages*. Tell me, what do you Americans call them?"

Paul Ward had not had the sensation of his heart skipping a beat since the moment he had looked upon his father's remains. No matter how violent or how dangerous his situation, he always remained icy calm . . . until this second. His heart was skipping a whole lot of beats. He parted his lips, but nothing came out.

The colonel raised an eyebrow and with it one corner of his mouth. "I am your counterpart," he said, "your French counterpart."

Paul wiped his face clean of expression. Tell him nothing.

"You are surprised, I see," Colonel Bocage said. "Genuinely surprised. Tell me, how long have the Americans been working on this?"

Paul reminded himself never to play poker with Colonel Bocage. "A few years," he said dryly.

"My friend, we have been struggling with this problem for fifty years."

"We cleared Asia."

"Cleared?"

"We killed them, all of them."

"Except for Mrs. Tallman."

"Except for her."

"*Elle est une sauvage, aussi?*"

"You call them savages?"

“To keep the record clean. We know what they are. But you come from Asia, where we know you have been working very hard. Why not start in America, where the lives are more important to you?”

“Our first solid lead was in Tokyo.”

At that moment, Charlie and Becky were brought in.

“Ah,” Colonel Bocage said, “your colleagues. Now, please, we shall all sit together.”

“You guys okay?”

“Fine,” Becky said. She looked wonderful when she was angry — her eyes full of sparks, her cheeks flushed, her lips set in a line that was at once grim and somehow suggestive.

Beside her, Charlie played with the damn cigarette machine. His style under this kind of pressure was sullen defiance.

There was a silence. Paul was trying to remember if he had ever felt quite this embarrassed and uncomfortable before. He decided that the answer was no.

“This matter has the very highest level of secrecy attached to it in France,” Bocage said. “Government does not care to inform the population of such matters.” He paused. “You have concluded the same.”

“All governments that we’ve been to have concluded the same.”

“Given that we cannot protect our people, there seems little choice but to hide this until matters are resolved.”

Bocage rested his eyes on Becky, so frankly that she looked away. Paul was fascinated. Becky was the very essence of self-possession, and Becky did not look away.

“You obtained what you needed, I trust,” he said to her.

“Yes.”

He strolled over to his desk. “We used a computer spying program to watch your keystrokes,” he said, his voice rippling with self-satisfaction. There were few things more pleasant in the life of an intelligence agent than getting the drop on a colleague from a friendly country. Paul knew, he’d done it. “If you’d like a copy of your work —” He held a file folder toward Becky and Charlie. “In the interest of friendly cooperation.”

“It’d be friendlier,” Paul said, “if you shared something with us that we didn’t already have.”

“With pleasure, Mr. Ward,” he said. Then his mouth snapped closed, as if he had caught himself in a moment of indiscretion.

Paul saw that the man’s carefully relaxed appearance was concealing a state of extraordinary emotional tension. Paul’s experience as a wartime interrogator told him that this man was about to address something that he considered extremely terrible.

“Go ahead, Colonel,” Charlie said, no doubt reading the same signs.

“We have had one of these creatures under observation in a house in —”

“Let us tell you that,” Becky said. “Thirteenth Arrondissement. Rue des Gobelins.”

“Very good. Do you know which house? Or exactly what has happened there?” The colonel was sweating now.

“Tell us,” Paul said. He decided that the colonel was a man who habitually exploded in the face of his own staff, but in this situation had to contain the energy.

“We have had *une sauvage* trapped in a house in the Rue des Gobelins for over a year. It hasn’t eaten for twelve months, but it still lives.”

“So why not go in? If you got the thing trapped, kill it.”

“We were hoping that it would attract some response from its peers — curiosity, compassion, something that would draw them to it. But it did not, and now — well, it’s too late.”

Something had gone terribly wrong, which explained the ominous lowering of the colonel’s voice.

“What’s the trouble, Colonel?”

“The house is at this moment burning to the ground. In it, there are two vampires that we know of.” He stopped again. He rubbed his cheek, as if hunting for stubble. “There are six of my own people.”

“God save them,” Paul said. He knew, now, why the map of the Thirteenth Arrondissement was so up-to-date, and also why the sewer system had been altered. They had cut off access from the vampire’s lair. Exactly the approach Paul would have taken.

“But I do have some good news for you. This ‘Mrs. Tallman’ of yours was in the house.”

“That’s goddamn good news, Colonel!” Maybe she hadn’t had time to spread her warning. Maybe now she would never have time. “Do you know how long she’s been there?”

“She appeared yesterday afternoon at about six. That we know.”

“Yesterday afternoon?”

He nodded. “The taxi brought her from a hotel.”

“It’s possible that she didn’t reach any of the others.”

“It is. But they are aware that something is wrong, the Paris vampires.”

Paul had assumed that there would be resistance if they realized they were under attack.

“Only very recently,” the colonel continued, “have we been able to deal

with them. Only since we understood the difficulties involved in — the difficulties with the blood —”

“How do you kill ’em?”

“We shoot them to incapacitate them with a gun that has been especially designed for the purpose, then we burn them to ash.”

“That’ll work.”

He bared his teeth, sucked in air with a hiss. Paul thought, *This is one tough bastard. I like this guy.* Bocage stuck out his jaw. “We made many kills over the years. But the numbers, they still went up. Slowly, but always *up!* My God!”

“It’s been hard for us, too.”

“We would shoot them in the chest, then bury them. They would come out, but carefully, so we would not notice the disturbance to the grave. We thought we were eradicating them, but we were accomplishing nothing. Eventually, even we could see that the pattern of killing went on. But we could not track it because they come up out of mines under the city. All sorts of places. No pattern, you see.”

“What about the Ninth and the Thirteenth,” Becky asked.

“We eventually tracked one of the creatures back to the Thirteenth. To Nineteen Rue des Gobelins, to be precise. The only one in Paris living above-ground. The rest of them — dear God, those mines are a horrible place.” He fell silent for a moment. “We have a seventy percent casualty rate down there.”

Paul said nothing. Of the seven people who had started with him, he’d lost four. He and Justin had thought over fifty percent was monstrous.

The telephone rang. Colonel Bocage went around his desk and answered it. He spoke in French at some length, then put it down abruptly. He stood, silent. Paul knew what had happened without even asking.

“Another casualty report. The whole team that entered Nineteen Rue Gobelins was lost. Six men.”

“Shit!” Charlie said.

In the distance, a church bell sounded.

“There is good news. Of one *sauvage*, bones were found. They are being taken out to be burned.”

“And the other one?”

“Mrs. Tallman was reduced to ash.”

“Then we’re done,” Becky said. “Back home to find out if my fiancé remembers my name.”

“We are going to attempt to isolate and sterilize the mines,” Bocage said with that carefully practiced mildness of his. “We’re short six essential personnel. It’ll take us months to find and train replacements.” He raised his eyebrows. “I think that our two countries have some secrets to share.”

Langley would be as nervous about this as an old maiden aunt about a slumber party. There were protocols to create, careful integration procedures so that the secrecy laws of both countries could be followed during the operation. He ought to go back and make a full report up supervisory channels. On the other hand, he could just stuff the whole damn process straight up Langley’s ass, and do it without telling them.

“May I take it that you’re on board,” Colonel Bocage asked.

He didn’t even need to look at Becky and Charlie. Their answer would be the same as his. “You bet.”

EIGHT

Flicker of Fire

If she did not have blood immediately — absolutely fresh blood — she would die. Where she lay, trapped, helpless, and in agony, there could be no blood. Here in this dank place, with pain radiating through her body as if an army with burning coals for heels were marching up and down her, Miriam saw that she was coming to the final edge of life.

She had ended up here for one reason only: She had been surprised by the disaster in Chiang Mai and running like a desperate rat ever since. No planning, no forethought, simply a wild race across the world.

The humans had blocked the escape tunnel with concrete and reinforced it with bars of iron. She'd taken to the stairs, running up to the top of the house, to the ancient rooms where Lamia had lived. The old brocades still hung on the walls, rotting and falling though they were. And there was the bed she had used, where Miriam had cuddled with her, and where they had so happily shared kills. But the flames had come, marching like soldiers, and Miriam had been forced to the roof. She'd looked from the edges of the house; the streets had been filled with dozens of police and firemen. She could not climb down the wall into that, not in broad daylight. She could not jump to another building, not quite. She'd found a way, though. She always found a way. She had climbed down inside the chimney, down into the hearths in the basement, below the level of the fire. As she crawled out, covered with ash, the floor above had begun to cave in. Fire had swept over her, fire and the agony of fire.

There had been a tiny space at the back of the fireplace, where they had pushed the ashes. She'd pulled bricks out and made her way into a brick pipe not more than eighteen inches in diameter, forcing her body into the space until her joints ground.

She lay with her eyes closed, willing herself not to cry out with the agony of it. If she opened her eyes, all she saw was wet, moldering brick a few bare inches above her face. The whole time she was struggling through the crack, she'd heard Martin screaming and screaming. The only thing the food she'd brought him had done was give him enough energy to die slowly.

They were gaining control over the fire, and above her she could now hear human voices. Water cascaded down.

She heard a sound, very distinct, and very different from the water, or the popping of Martin's hot bones. This sound she heard was breathing — *snick snick, snick snick* — quick breathing, very light.

A rat was coming along the tunnel she was in, interested, no doubt, in the scent of raw, bleeding flesh. Or perhaps it was a devotee of cooked food. A French rat might be expected to be a sophisticate.

This rat represented a chance — a small one, admittedly, but its presence changed the odds from nonexistent to . . . well, a little bit better than nothing.

Here, little one, come here, little fruit. "The closer they are genetically to man, the better they are for you. The rats, the apes, the cows, all may be consumed to benefit." So had said the Master Tutomon, her childhood tutor, with his lessons in geometry and languages and survival.

The rat hesitated. She could not see it, but the sound of its breathing and the patter of its feet were clear. It was on her left side, just parallel with her foot. To encourage it to come closer to her hand, she began to wriggle her fingers.

She needed to open her eyes, and she prepared herself as best she could. The space might be entirely dark by now, and that would be better. The light was much less, but she saw the bricks, so close that they were blurred to her vision. An involuntary gasp came out of her. The rat scuttled away.

She raised her head until it was pressed against the top of the pipe, then looked along her arm. The creature came back. She could just see its interested little face as it went *snick-snick, snick-snick* against her fingertips.

She stretched her arm, opening her fingers, letting the rat venture closer to the center of the trap. But it came no closer.

The indifferent trickle of water that had been slipping around her body was becoming a steady stream. If this pipe backed up, they would notice. They would send a crew down to unblock it. They would drag her out, even if it tore her to pieces. There would be no mercy. There was never any mercy; that had become quite apparent.

Now, the rat was returning. The rat, in fact, was very close to her fingers. Her exquisite nerves communicated the sensation as it sniffed their tips. Finally, it decided to stop sniffing and try a bite of the cool, still flesh that had drawn its curiosity. Instantly, it was in Miriam's hand. It was wriggling and screaming its rat screams — *ree-ree-ree*. She sucked in her breath and moved her arm, drawing the creature closer to her mouth. She had to drag it against her naked breast, and as she did its needlelike teeth slashed the pale skin.

Then the creature was at her mouth. She bit off the shrieking head and drank the body dry, crumbling the remains, which were no more substantial than a little leaf.

The blood of the rat tasted surprisingly good. She could feel it spilling through her. It was going to be useful. But would it be enough for the task that lay ahead?

To continue the motion that her exhaustion had stopped, she had to work her arms over her head and press hard against the edges with her feet. In time, her bones would compress a little more, and she would move a few inches. However, if the pipe got any more narrow, she could be trapped.

Now that she was moving again, the water was sluicing around her, bringing with it bits of spent coal and ash. She pushed, felt more pressure, waited. Nothing.

If she was trapped — her heart began going faster. Harder she pushed, harder and harder. Still nothing. She felt her tongue swelling from the effort. Her bones ground and creaked. Her tongue began to push past the rows of

cartilage that filled her mouth, that provided the seal when she sucked blood.

Still nothing, nothing, *nothing!* And then — worse — louder voices. Yes, the humans were in the basement, speaking about the slowness of the drain. They must unclog it, of course. They would find within it this strange, distorted being that would slowly return to its previous form, and they would know another secret of the Keepers, that vampires' bones that were not brittle like their own, but pliant.

How would they kill her? Burn her until she was ash, as they had done to her mother? Hammer a stake into her heart until her blood stopped, then let her die over however long it took in a coffin — years, or even whole cycles of years? Or explode her head and dissolve her in acid?

There was a sound, and immediately a dagger of pain shot straight up her spine. The next instant, she slid along the pipe a substantial distance. She could have howled with the sheer joy of it, the wonderful sensation of release from the terrible compression.

The water she had been stopping came behind her, a gushing torrent that swept her down a wider sluiceway. Where she was now, there was considerably more light. It was coming from slits near the ceiling, that appeared at regular intervals. The space was high enough to stand up in, and she could peer through these slits.

She rose to a sitting position. She was exhausted. A rat was not worth much to her body, and she soon must feed again. She needed a human being.

She drew herself up and up, fighting the great blasts of pain from her tormented body. Finally, she was crouching. To see out, she would have to straighten herself, and she could not until her bones had spread again. She forced herself to try, to hasten the process as much as she could. Agony ran up and down her spine, causing her toes to curl and her lips to twist back. She hissed with it, she stifled the screams that tried to burst out of her throat.

Minutes passed. The water, which had been gushing past her knees, subsided to a milder flow. Its acrid stench was replaced by a surprising odor — the scent of a fresh spring. Her kind needed a lot of water and loved fresh

water. She was smelling a clean, limestone spring beneath the streets of Paris, in the very sewer. She turned herself toward it and began slowly placing one foot in front of another, walking toward the source. Now she could see that the arched space widened. To her left and right there were muddy banks. In the water, there swam tiny fish, sweeping along before her like little schools of pale starlight.

This wonderful, entirely unexpected place must be the ancient River Bièvre. The rumbling overhead was a street. And indeed, when she finally managed to peer out one of the slits, she saw passing tires. As she moved along, the water became better and better. No sewage here at all, just the stream still dancing in its ancient bed of stones.

She began to look for a spring. There was certainly one nearby. She could smell its wonderful, stony freshness. Ten steps along, twenty, and she found it, its water bubbling cheerfully out of the ground. Above it, somebody in the long-ago had made a little grotto and set a cross, which now stood encrusted with rust. She lay herself down in the water and let it flow over her, let it kiss her wounds with its clean coldness.

The pain grew somewhat less. The cold was helping to heal the burns, the clean water to reduce the need of her blood to ward off infection. If the process was to speed up to a normal rate, though, she had to have food.

She lay in the pouring spring, twisting and turning slowly, allowing the water to clean every part of her, to sweep away the ashen skin and the burned flesh, and the debris that had collected in the wounds. The thick stink of it all washed away with it, leaving behind only the smell of the water and the smell of her.

Finally, when those two odors had not changed for a long time, she rose from the stream. She began moving along the riverbank, a naked, burned creature, svelte and, she supposed, pale. She was looking for a manhole, some means of getting up into the city again, to the food supply that swarmed in its streets.

What she found instead was a door. It was steel and set high up in the wall, at the top of a series of iron rungs. The door was half the normal height and

had a lever rather than a handle. She climbed the rungs, pulled the lever, which dropped down with a thud. She drew the door open and found herself looking into a dark room full of humming machinery.

She climbed into the room. In contrast with the wet cold that had surrounded her for hours, it was warm and dry. It felt fiercely hot, although she knew that this was only the effect of the sudden change.

Her nostrils had been seared, but her sense of smell seemed unimpaired. She smelled machine oil, the fumes of burning, and the scent of lots of electricity. This was a furnace room. She knew boilers and furnaces well. She had special uses for them. This one reminded her of the Ehler that she had in her house, a good, hot system with an ample firebox.

Beyond the furnace, she saw stairs. She mounted them, stopping at the top to listen and catch her breath. She laid her ear against the door that was there. On the other side, she heard the tap of footsteps. They moved slowly about, *tip-tap, tip-tap*, pausing here and there, then moving on. Suddenly a voice began to speak, using English. It spoke about the manufacture of tapestries.

This work had been going on when she was last here. Across the street from her mother's house there had been a manufactory of tapestry. So it was still in operation, but there were also observers now, people from the English-speaking world being taken on tours of the works.

She turned the handle of the door. Locked. This was of little consequence. They had not learned the art of the lock, the humans. Shaking it a few times, she dislodged the tumblers. She knew exactly what she sought: a female creature of about her own size, preferably alone.

The tour group consisted of about twenty people being led about among the tapestries, which hung on large looms. She stepped out onto the gloomy area before the door, then slipped behind the nearest loom. On the other side, the weaver worked, stepping on her treadle and sliding thread through her beater.

Beneath the smock, the girl wore dark clothing of some sort; Miriam could not see exactly what it was. The casual dress of the modern age. She peered

at the creature. It was intent on its work. She listened to the talk of the guide. The tourists drifted closer. In another moment, they would see this person, observe her working at her loom.

Miriam stepped into the girl's view. She didn't notice, such was her concentration. Miriam moved closer. Now, the girl stopped working and glanced her way, then looked harder. Her mouth dropped open. She looked the naked apparition up and down. An expression of pity crossed her face, mixing with horror as she realized that the woman she was seeing was severely burned.

Miriam stepped toward her. She swayed as if falling, causing the girl to instinctively move forward to help her. Miriam enclosed her in her arms and drew her behind the loom, then opened her mouth against the neck and pulled the fluids in fairly easily, requiring two great gulps to fin-ish the process.

Her whole flesh seemed to leap with joy; it was as if she were going to fly up to the sky. She fought against crying out, such was the pleasure. Her body from the top of her head to the tips of her toes filled with an electric tickling as her newly refreshed blood raced to repair her wounds.

The shuddering, tickling sensations were so overwhelming that she was dropped like a stone to her knees. She pitched forward, gasping, her body deliciously racked with a sensation very like climax. Again it came, again and again, and the voices came closer, and the tip-tapping of the shoes.

She grabbed the remnant, invisible in its heap of clothes, and pulled it behind the loom. As she untangled the dry, emaciated remains from the clothing, she heard a ripple of laughter. The tour guide had said something that amused her audience. The click of other looms went on. Quickly, quickly, Miriam put the clothes on — black jeans, a black turtle-neck, shoes that fit her, unfortunately, quite badly. Then the blue smock. No hat, and that was not good because her hair would take time to regrow. She needed a wig, but that could not be had here. She stood up.

“Noelle?”

It was the guide, curious about why she was not at her loom. They would

know each other perfectly, of course.

“Noelle, what are you doing? Why are you back there?”

She could not speak. She had no idea what Noelle’s voice sounded like. If the woman came around the loom, she would see something impossible — a skeleton covered with skin, and standing over it, a hairless and eyebrowless creature, its skin flushed bright pink. The burns were probably still very much in evidence as well, making her the stars knew only how grotesque. She picked up the remnant and crushed it. The cracking, splintering sounds were appalling.

“Noelle!”

“I’m fixing it!”

“Who is that?”

“It’s me, please.”

The guide began her spiel again, but her uneasy tone told Miriam that she was not satisfied with what she had heard, just unable to understand what was going on. She’d send a guard around in a moment, almost certainly.

Staying behind the looms, trying to avoid being glimpsed by the workers or the tour group, she went quickly back to the door. She slipped through and down into the basement. She went to the furnace and opened the grate, stuffing the remnant inside. Never again would she be so foolish as to leave one of these little calling cards behind. In this new world of aggressive, smart human beings, one more mistake like that would be her last.

She looked around for a doorway to the outside, saw one marked *Sortie*, with a red light above it. She went out, finding herself in an alleyway. In one direction, there was a blank wall, in the other, an entrance into a rather quiet street. It was early evening now, and the shadows were growing long.

She immediately noticed a curious flickering effect against the walls and roofs of the street ahead. Each time the flickering got brighter, there would be

an accompanying roar.

She moved forward cautiously, knowing that she had to go out into that street in order to escape. The closer she got to the opening of the alley, the brighter the flickering became, the louder the roaring. Now she could also hear crackling and smell a smell of burning petrol. The flicker-ing reflected against her black clothing. She held out her hands, looking down at them, at the orange light dancing on them. Then she stepped forward and immediately looked to the left, toward the source of the light.

The first thing she saw was the gutted ruin of her mother's house. The Castle of the White Queen was streaked with soot, its every window black and dark, its roof collapsed into the shell of the building.

Before it there were dozens of police and fire vehicles and milling gendarmes. The light was not coming from their vehicles, though, it was coming from a bonfire in the middle of the street, which was being fed by men with flamethrowers. At the mouth of the Rue des Gobelins a high barrier had been erected. No member of the public could see over it. She did not think that she could easily get around it. In fact, going out into the street would cause an immediate reaction, given all the police and the care with which they were preventing sight of this place.

In the center of the fire, she saw black bones and bones glowing red. It was Martin, of course. Obviously, the humans knew enough about the Keepers to take extreme care that they were really dead. A gendarme glanced at her, made a clear gesture: *stop there, come no closer*. His glance lingered for a moment, then he turned away.

The ring of people around the bones were different from the gendarmes. They were dressed casually; they looked brutal. Nearer, stood a small knot of others whom she took to be the supervisors. These people around the fire, making sure that the very bones of their quarry were reduced to ash, were the killers of the Keepers.

It was possible, if she listened intently, to make out snatches of conversation — a gendarme muttering about overtime, one of the murderers saying something about the temperature of the fire. Then the voice of a tall

supervisor boomed out. “Fine ash,” it said, “then hose down the street.” That was to be the fate of her kind, then, to be reduced to ash and sent down the sewer.

Silence fell. More orders were given and one of the *pompes* was started up. Soon, water was pouring from its hoses and sluicing along the street. She watched it come toward her feet, watched as it reached the drain. It carried floating bits of burned material and chips of bone. A button came tumbling and bobbing along, and she saw that it was her own button, from the suit she’d had to leave behind in order to squeeze down the pipe that had saved her.

“*Excusez-moi, mademoiselle.*”

One of the gendarmes was coming toward her. He smiled slightly, then took her arm, but quite gently. “I will conduct you out.” He drew her forward. He blinked, seeing her bald head.

“What has happened?” she asked, trying to deflect his concern.

“Vagrants set fire to the White Palace. There were deaths.”

“Why were they burning the bodies?”

He shook his head. “It’s what the authorities said. Who knows why.”

She let the gendarme conduct her along. His body was loose, his breathing soft, his expression indifferent. Obviously he knew nothing of the Keepers and only assumed that she was a rather unusual looking woman. Her eyes were on the men who knew.

Closer she came to them, marching beside her policeman. They were engaged in intent conversation. She passed just behind the two supervisors. Then she saw one, a female, suddenly turn and face her. The creature was beautiful, with swaying blond hair. But its eyes, almost black, appeared as hard as chips of obsidian. “Excuse me,” it said in American-accented English.

As instinct prepared Miriam to fight, her body became tight beneath the

restricting clothes. There were still many burned and injured areas, especially in her limbs, and the pain tormented her like the persistent hacking of slow, dull blades.

The creature followed her a few steps. "*Pardonnez-moi,*" it said, now in French. This creature was concerned and it was curious. It was not sure, though, of what to do. So it could not be certain of what she was.

Then the gendarme was letting her out onto the street. He asked her if she felt well enough to keep on. Instead of answering, she slipped into and quickly through the sparse crowd of onlookers. She did not look back, did not want to delay another moment her escape from the deathtrap.

Now that she had fed, her body wanted to sleep. She knew that it would be the deep, deep sleep of her kind, and that she had to find a place in which to lie safely for the helpless hours it would bring. But she could not afford it. She had an urgent mission to perform. The French Keepers must be warned, their Book of Names protected.

She walked quickly along the busy Avenue des Gobelins. She would go to a hotel somewhere, using the credit cards in this woman's pocketbook. Or no, there was a better idea. She would go to the woman's flat. It was a risk, of course, but she had the keys and the driving license with the address.

A little farther down the street, she saw a taxi at a stand. She hailed it with the same sort of casual gesture she had seen others using. She would also update her language as best she could. Any fool would remember a passenger who spoke like Voltaire.

As she got into the taxi, she opened the pocketbook. Noelle Halff, 13 Rue Léon Maurice de Nordmann. "Treize Rue L. M. Nordmann," she muttered, slurring her words like a modern Parisian.

The driver made a strange sort of a face, then drove on. He rounded the corner into Boulevard Arago, and then they were there. It had been idiotic to take a taxi. The place was barely a quarter of a mile away. "I injured my foot," she said as he stopped in front of a lovely artist's atelier.

“Too bad,” he responded as he took her money. She seemed to have done perfectly well. He hadn’t noticed anything about her. Perhaps baldness was not unknown among women in Paris. Some *outré* fashion, perhaps.

She went through the bag, looking for keys, soon finding a set. There were four of them, and rather than tumble the lock, she found the correct one. She let herself in, then turned the timer that lit the foyer. As it hummed through its few minutes, she located the next key and entered the atelier itself.

The room was furnished with another Gobelins loom and more tapestries, medieval reproductions that the woman must have been selling in the tourist market.

“Hello,” she said. There was no answer. She went across the studio to its small kitchen, and beyond it into an equally tiny *salle de bains* and *toilette*. For sleep, a *couchette* had been installed at one end of the studio.

She searched the *salle de bains*, looking for makeup, but also trying to determine if more than one person lived here. The results were ambiguous. There was a man’s razor, also two toothbrushes.

Somebody moved. She glimpsed in the shadows a strange, dark creature. She reeled back out of the tiny room, raising her arms, preparing to defend herself.

But nobody came leaping after her. The only sound was her own breathing, that and a trickle of water from the toilet.

She turned on the light and saw in the mirror a Miriam Blaylock so profoundly changed that she’d thought herself a stranger. The head was bald, the face sunken, the eyes black sockets. She raised a finger to her cheek, felt the skin. It ought to be pink and soft right now, glowing with the life she had just consumed. But it revealed another surprise. She was not sallow, but covered with fine gray ash. The outer layer of her skin seemed to have been carbonized, at least on her face.

She splashed some water on it, then dried it with a serviette. It came up muddy white. The sink was full of gray. She stripped off her clothes and

looked down at herself. She had sustained tremendous damage, more than she had realized. There were great rifts in her skin, filled with raw, angry flesh. Her hips were scraped almost to the bone. In one place, she could see actually see some bone.

She drew a bath, watching as the wonderful, steaming water gushed into the big tub. When she sat in it, the ash clinging to her body soon turned the water dark gray, tinged pink with the blood of her wounds.

Soon her whole body was tickling as her blood raced to repair the damage. She closed her eyes. How lovely. How much she needed to sleep. So easy it would be, so warm was the water.

No! No, she had to find stimulants — coffee, pills, anything — and she had to locate the woman's passport, call an airline, and buy a ticket to New York, go to the mines, warn the other Keepers.

She rose from the tub and threw open the medicine chest. There were three bottles of pills — vitamins, an herbal remedy for colds, nothing of any use. The poor young creature had been healthy and clean of even simple drugs. Miriam could not avoid a sense of waste when she destroyed a vital, young life like this. The girl had been not unlike her Sarah.

She had given up telephoning Sarah. All that mattered now was getting home. She was afraid that the disaster had already crossed the Atlantic and that was why Sarah couldn't respond. Would she find her beautiful home in Manhattan a ruin, just like the Castle of the White Queen, and Sarah's very bones burned to ashes? There was no way to know that. It was not given to her.

She peered into the mirror. Actually, her face wasn't so bad. A little makeup here, a little there, a bit of lip gloss, and she would be a girl again. She would be —

She stopped. Like the fall of evening or a black cloak dropping over her, a shroud, a sorrow so great fell upon her heart that it inspired not the usual gnashing anger, but a deep questioning of her own value as a creature, and indeed of the worth of the Keepers as a species upon the earth.

Look around you, she thought, at the complex life that had been unfolding in this atelier, at the wonders in the looms, their colors glowing in the faint light that came in from the street. Look at the book beside the bed, thumbed, earmarked, a book of poems with which Noelle Halff had put herself to sleep at night. *Les Fleurs du Mal* — “The Flowers of Evil.” Miriam knew the poems, appreciated them as well.

The girl might not have any pills in her cabinet, but she kept lip gloss and other cosmetics of the very highest quality. Miriam started to make up her face, to return to it an approximation of the endless youth that lay beneath her wounds.

She felt the weight of sleep urging at her brain, at her exhausted muscles, increasing the weight of her bones. She tossed her head, her eyes gleaming with a kind of fury. Even without drugs, she would not sleep. She could not, must not.

For she knew without question, if she lay down in this atelier — if she slept — they would certainly catch her.

NINE

Lady of the Knife

The lower condyles of human femurs lined the walls, joint-end out. Above them were stacked skulls. Paul had known about the Denfert-Rochereau ossuary, but only vaguely, as the sort of grotesque that tourists of a certain kind — fans of horror movies, say — might visit. For ten francs you could spend as much time as you wanted to with the bones of seven million Parisians.

“What’s that smell?” Becky asked.

“Maybe there’s a fresh corpse.”

“Thank you, Charles.”

“No bodies were ever buried here. Just skeletons,” Colonel Bocage said.

Still, there was a certain smell, and smells were important to this work. Paul inhaled carefully. They all knew the fetors of the vampire — the sour, dry odor of their unwashed skin and the appalling stink of their latrines. Their waste was dead human plasma.

Colonel Bocage and Lieutenants Raynard and Des Roches walked ahead. The two lieutenants had interesting histories. Raynard was not French but Algerian. He had been a Foreign Legionnaire. Des Roches, a solemn-looking man with a quick sense of humor and what looked to Paul like a whole lot of physical power, had been a GIGN officer. The Groupe d’Intervention de la Gendarmerie Nationale was France’s elite terrorist intervention unit. These were the guys who stormed planes being held by madmen. These were also the guys who were sent in when the government didn’t want prisoners, only bodies.

Because of the catastrophe that had just occurred, these were the last two men Bocage had. Signing people on was just as difficult for him as it was for Paul. They had to be excellent, they had to be clearable to a high level, and it was just damn hard to find people like that.

As they moved forward, everybody was quiet. The French were grieving over the decimation of their team, and everybody was well aware of how this hole had chewed up people in the past. Theirs was brutal, extremely dangerous work. Vampires died, but it cost. God, it cost.

They were passing rows and rows of bones, an incredible sight. They were still in the ossuary itself.

“No teeth,” Charlie observed, “no lower jaws.”

Des Roches said, “The teeth were sold to button makers to help finance the ossuary.”

“Was that legal?”

“Perhaps, at the time,” Colonel Bocage replied, “although not politically correct, I am embarrassed to say. But old France — it was not politically correct.”

“Madame de Pompadour,” Becky said, pointing to a sign.

“Who was?” Charlie asked.

“She was the executive secretary of King Louis XV,” Raynard said.

“And the mistress,” Bocage added, “of course.”

“How’d she end up down here?”

“After the revolution, the bones of aristocrats were no longer held sacred.” The tone of Raynard’s voice suggested that he did not entirely approve of the revolution. Like many men engaged in extremely difficult military pursuits, he was ultraconservative.

“Stop, please.” Des Roches consulted his PalmPilot, which contained a map not only of the ossuary, but of the entire system of mines beneath the streets of Paris. The mines were more extensive even than the legendary Paris sewer system. The map, provided by the Inspectorate General of Quarries, covered the two hundred plus miles of tunnels and shafts that were interconnected. This was estimated to be roughly three-quarters of the total. The rest of it, among the most ancient of the shafts, were either completely detached from the main body, or connected only by openings too small for a human to enter.

Given the danger of entering the tunnels, ground-based radars and sonars had been used to complete the maps, so they were not nearly as accurate as the hunters would have liked. Paul had spent the night with Charlie and Becky studying them. Each had committed a section of the complex to memory. They had quizzed one another on twists and turns, blind alleys and unexpected crossings, until dawn.

They reached a dead end in the ossuary, which was blocked by a gate and marked with a sign, *Entrée Interdite*. Over the past hundred years, the Prefecture of Police had recorded sixty disappearances from the ossuary. It wasn't many, but the points at which these people had last been seen were all closest to this particular connection with the abandoned labyrinth of mines. It was here that Bocage's teams had entered in the past.

“Regard,” Bocage said, “beyond this point, we must assume that we are, at all times, in peril of our lives.”

Raynard opened an aluminum case that he carried. He distributed lightweight Kevlar body armor. “Remember that they are experts with knives. They can throw a knife almost with the speed of a bullet, because of the arm strength.”

Paul remembered the Sinha Vampire. It had killed Len Carter with a knife thrown so hard it went completely through his body and struck Becky, who was standing ten feet behind him. She'd taken thirty stitches in her neck. Had she not been turned slightly away from him at that instant, her carotid artery would have been severed.

Bocage gave out pistols, weapons unlike anything Paul had seen before. “This pistol will fire five of the fifteen special rounds that it carries with a single pull of the trigger. There is no sight because laser sights are useless. They see it and they are too fast. The bullets are designed to fracture into millions of tiny bits of shrapnel. A burst will pulverize everything in a five-meter square. Remember please, to assume that the creature, no matter how badly damaged it appears, is only stunned. Do not get near the mouth, and bind the hands immediately with your plastic cuffs. Is this clear?”

They all knew the drill by heart. But they all listened as if they’d never heard it before in their lives. A professional never ignores a chance to get an edge. Maybe hearing it again just now would speed up reaction time by a hundredth of a second. Maybe that would save a life. Miriam paid her ten francs and passed through the entrance to the catacombs. She’d spent an hour at the Galeries-Lafayette buying casual clothes and a wig, so the person who came into this place did not appear much like the one who had passed the Castle of the White Queen yesterday evening. All that remained of her ordeal were angry red areas on various parts of her body. Her right hip was still somewhat stiff, as well. But this gum-chewing teenager with black, close-cut hair bore almost no resemblance to the pallid, sunken horror of twelve hours ago. She was soft, her pale eyes sparkling with the eager innocence of eighteen or twenty sheltered years. Any man would want to protect her, even to cherish her. The little gold cross around her neck suggested religiosity. A man, managing somehow to penetrate the mysteries of this sweet child, would not be surprised to hear her murmur, “But I’m a virgin.”

Moving as swiftly and carefully as a cat, she descended the spiral stair that led into the crypt. The touristic map she had gotten with her ticket covered only the ossuary itself, but she knew the ancient signs that would indicate the route from the public area to the lairs and, above all, to the Keep where would be stored the Book of Names and whatever other things the French Keepers owned collectively.

Her intention was to warn the other Keepers if she could, but without fail to take their Book of Names with her. She could not risk leaving it here, no matter how they felt about that. If they resisted, she would fight.

There were two sightseers at the foot of the stairs. She shifted her body

language, becoming a casual girl, a little nervous. The tourists were German, plump and smelling of their recent lunch of ham. The man had ugly, narrow veins. She loved the woman's carotid. A charming nibble, she would be.

She sniffed the faint wind coming out of the corridor. None of the lovely, infinitely subtle scents of other Keepers. Each Keeper had his own particular scent, mixed of skin and the dust of ages. Miriam longed to smell the skin of a robust male Keeper just after he had fed, when he was warm and moist, his muscles like flowing iron, his odor overlaid by the creamy, intricate scent of fresh human blood.

The rankness of the couple was strong, mixed with the rather sandy, musty odor of the bones. Again, she inhaled, flaring her nostrils. Yes, there were other human beings within, also, all stinking of their foods and perfumes and the orifices they had secretly neglected. She smelled the damp biscuit odor of little boys, the soft cheese fragrance of girl children, and a bit of an older woman's perfume. A class of mixed sex between the ages of six and ten was a short distance ahead, with their female teacher, who was thirty, no younger, and healthy. Miriam tested the air for new odors, filter-ing out those she had already identified. Some sort of exotic foodstuff came to her, spices of the East mixed with the odors of skin and spent cigarettes — a couple from Asia.

She entered the corridor. Her glance at the map had left her with a memory of precisely the number of steps she would have to go in every passage in the ossuary. In childhood, every Keeper was trained to use measured gaits, so she knew exactly how many inches she traversed with every step she took, no matter how fast her stride.

The entrance to the ossuary was marked by a group of thick, square columns painted white with black borders. She passed them, entering the earliest of the crypts. The most recent bones, quite naturally, were deepest. By human terms, they were ancient, but she remembered Paris perfectly clearly when there had been no catacomb full of bones and gawking tourists. In those days, the Keepers had the entire system of mines to themselves. One could ascend by an unknown stair into the street, take a victim down, and enjoy it at leisure, then have a nice sleep in the safety of the depths. The Paris Keepers had a pleasant life then.

She moved forward cautiously, seeking a certain spot that led from the ossuary into the deep shafts. There were other entrances, but this one was what you took if you knew what you were doing. Anyone coming down another tunnel would be assumed to be human.

The entrance was signaled, she knew, by a great cross. It would not be difficult to find. But to know its true meaning — that would be very difficult indeed . . . if you weren't a Keeper. When she was certain that she was alone, she sprinted along the galleries. Here was Madame du Pompadour — that hideous old crank who reeked of sour milk and had somehow captured the heart of one of the later Louises, a prancing unwise fellow who blew farts and stank horribly himself from a fungal infection of the skin. Madame de Pompadour, indeed. Her real name was Jeanne Poisson — Jenny Fish. Well, so much for that marble tomb of hers. This was far more appropriate. Philippe Vendôme had made fervid, ratlike love to her, hadn't he? Miriam recalled watching some sort of entertainment like that.

She'd been down here in the early eighteenth century with — which one — was it Lollie? Yes, poor Lollia, she'd been on her last legs then, frantically trying on powdered wigs and loading her face with leaded creams. No use, any of it.

Now another turn — and there was the great cross. But would the entrance still be behind it? Had the French found it and walled it up, also? She looked at the cross, refocusing her vision so that the glyphs that were invisible to the human eye stood out clearly. There was a word to utter in Prime, according to the instructions, that would open the wall. It would also alert the Keepers inside that she was there. She was instructed, as well, to append her name. She drew a deep breath, expanded her lungs, and released the call. It vibrated against the stone, its echo fluttering off down the corridors. Now, the instructions told her, press thrice the upper corner of the left tine of the cross.

The hidden door swung inward. Beyond was absolute dark. From within there came the odor of many lairs.

“Halte!” Everybody froze. “Do not move,” Colonel Bocage said. “Listen.”

It came again, a sound so deep that it was more a sensation than a noise.

“Could it be the Métro?” Becky asked. “Are we under a tunnel?”

Des Roches laid his arm around her neck, drew her close, uttered a breathy, almost-silent whisper. “That was a vampire.”

The French were in some ways far advanced in their knowledge. Becky and Charlie and Paul had been down many a dark tunnel, but they had never had to face anything this elaborate.

The place stank of wet stone and the musk of bats. The group had stopped its march and was clustering together in a low gallery. Becky shone her light on a stone where graffiti had been carved. “*Merci à Dieu, m —*” and there it stopped, as if the carver had run out of strength or light or time. The letters were formed in an old script, perhaps from the last century or the one before.

“Listen — again,” Charlie said.

It was eerie, that sound — so deep that you wouldn’t notice it unless you were trained to. Paul had heard it echoing off the walls of the night in Beijing, in Osaka, in Bangkok. As a boy, he had heard it mixing with the sullen hoot of the owl and the barking of the fox.

After some moments, there was no sound but their breathing and the busy scuttle of rats. The roar of the great city above them was a bare whisper. Water dripped, echoing as if somewhere deeper there might be a hidden pool or even a small lake.

“Lights out,” Paul said. “We go to light-amplification goggles.” Their equipment packs rattled as they put the night-vision goggles on.

You could see perhaps fifty feet. Beyond that was the haze of a darkness so deep not even the goggles could gather enough light to be of use.

“Do you wish to go to infrared,” Bocage asked his men, his voice, in its softness, sounding curiously as if he’d meant to utter words of love.

“Let’s do it,” Raynard said. He and Des Roches clicked on the infrared floods.

A hand grabbed Paul's shoulder, the fingers digging in. Becky was staring down the long, sloping corridor.

There had been something there, most certainly. "Vampire," Bocage murmured.

Paul had seen what might have passed for a tall, elegant man, tall and very quick of step. The moment the infrared flood had turned on, it had gone.

The Keepers were calling to one another that human beings had penetrated the barrier. Their voices were calm, which made her throat turn sour and her mind race — *don't you understand, don't you realize even yet?*

She had the map of the ossuary, but there was no map of the labyrinth beyond. She had to go by scent and hearing and what little sight was available.

She had not moved ten steps before the darkness completely enclosed her. Now she had to walk blind, on faith only, trusting in her nose and ears for direction.

Behind her, she could hear the breathing of tourists in the ossuary and their occasional murmured conversations. There was something about the place that kept them quiet, as if the spirits of the dead demanded it.

Along a low side tunnel that angled sharply down came a faint reddish-purple glow. For a moment she did not know what it was. But then she saw a Keeper, dressed all in black, standing not fifty feet away from her. His back was to her. He was watching the glow, which was bouncing, waxing and waning, as it slid along a far tunnel.

When his odor touched her nostrils — powerful, richly masculine — a thrill trembled through her. He stood tall. His absolute stillness made him seem so very noble.

She murmured low, in Prime, "I, Miriam out of Lamia, greet you." His back did not move. Then, very suddenly, he turned round.

He faced her now, the glow waxing and waning behind him. "I, Uriel from Enoch, now called Henri, greet you." He inclined his head.

She bowed deep at the waist, as was the formality for a Keeper entering from outside a given Keep. He came close to her and laid his long fingers under her chin and raised her.

"I come to present myself before the conclave," she added, still speaking in the measured, formal cadences of Prime.

He switched to French. "You want a kid, Miriam? Or a husband?"

"Both," she replied.

He smiled, then. "You still live in that house, I presume, with your wonderful little pets."

He did not sound too disapproving. Dared she hope? "Yes," she said carefully. She lowered her eyes to him, as manners required.

"How can you bear the smell?" His tone slapped her. He was as contemptuous of her as the rest.

She tried not to reveal her disappointment. But she raised her eyes. Damned if she would show respect to a man who had contempt for her. "What is that glow," she asked. It was getting distinctly brighter, so much so that she could now see the walls of this tunnel clearly, and even Henri's narrow, solemn face.

"It's trivial."

She dropped the manners and looked directly at him. Martin Soule had been in such terrible condition that he had presented no appeal. Henri, by contrast, was not hideous. He was dirty and poorly dressed, but his body was gorgeous. She could sense his strength, and the thought of being held in his arms was not without appeal.

He seemed indifferent to the light. "It's getting brighter."

He was looking at her with the attention a jeweler might pay a gem. “It’s true, then,” he said.

“What is true?”

“Your beauty is the greatest in the world.” He reached toward her, a tentative, caressing touch. As his fingers shivered along the edge of her lips, she tasted of their flat salt. Desire flamed in her. She imagined herself lying beneath him, absolutely, wonderfully helpless as he came roaring into her like an inflamed lion. She would receive him, an open flower, an open wound. She would be a slave to him then, hold his cup and kneel before him. She would let herself be possessed, and in turn she would possess him.

The glow flared, and now she heard a steady tread of — she listened — twelve feet. They sounded to her like human feet. “That light — it’s the humans, isn’t it?”

“It’s nothing. Ignore it.”

“Is it human?”

He gazed at her. “You are a forward creature, just as they say.”

“Humans are dangerous.”

“Don’t be absurd.”

“You knew Martin Soule, of course.”

He nodded. “He went to live in that house your mother so foolishly built.”

“He died there.”

“Did he?” His voice took on a note of question. “Why would he elect to do that?”

“They burned him! As they intend to burn us all!”

“I remember your mother’s misfortune. But that should not — ”

The lights appeared like ghostly eyes, six of them, all glaring straight down this tunnel. Henri was trapped in the purple glow. He turned to face it, smiling slightly. “Stop,” he said in flawless modern French, “you have no business here.”

Paul’s breath whooshed out of him when he saw it. He’d never laid eyes on one like this, so large, so strong looking. In Asia, they’d been smaller, and they’d hidden at the back of their lairs.

“There are two,” Bocage said laconically.

Then he saw, behind the towering male in its fusty suit from fifty years ago, a female. It drew back into the shadows, but it also had a human appearance . . . just like the traveler. Had he seen blond hair? He couldn’t be sure. The creature had moved with the speed and grace of a panther.

“*Mon Dieu*,” Des Roches said.

“You saw that female?”

“The face — it was . . . so strange.”

Paul had not seen the face. But he didn’t care about that now. It wasn’t the traveler, the traveler was dead. He raised his gun and fired, and so did all the others.

The noise was shattering; a gust of wind blasted back into his face, as the narrow tunnel compressed the expanding air. The screaming thunder of it was accompanied by a dazzling flare of green light, and followed by hollow, zipping echoes as bullet fragments tore along the walls.

Silence. A distant howl, growing louder. Charlie tore off his night-vision equipment and went for his flashlight. He flicked the switch. The beam shone like a white laser into the murk of dust that now filled the tunnel.

“*Non!*” Bocage screamed.

There was a flicker in the air, no more. Out of the dust had come a knife, thrown with the vampire's bizarre force, moving so fast that it was only a flash of light.

The beam of the flashlight wavered, then went crazy, then dropped to the floor. It rolled toward the vampires, and in a second nothing could be seen but a dim yellow glow in the murk of dust. This glow was pointing straight at them, away from the vampires. So they were visible, but they could not see.

Charlie began to make a sound, one that was almost comically like the whistle of a toy train. It changed to gurgling and splashing and the clatter of a body in seizure. He fell back, his head striking the ground with a crack like a breaking egg.

Des Roches went down beside him. Becky, stifling a scream, pushed close. Her hands touched the knife as if it was blazing hot. She made little, choked sounds in her throat, awful sounds. Her fingers fluttered around the handle. The sounds had a sense of question in them, but it was a question that nobody could answer. There was no answer. How do you extract a knife that is embedded up to its hilt in a man's face?

There was another blast, this one from Raynard's gun. Then Bocage fired twice more. Paul probably should have been terrified, but he felt the same calm, clear sense of inner control that always came to him at moments like this. His heart was sinking because of Charlie's death. But he did not stop fighting, not for an instant, no matter his breaking heart. He watched that dust, looking for shadowy movement.

Another knife appeared, headed straight for Becky. He saw it gliding as gently as a leaf on the sea, gliding toward her neck. He felt her hair under his hand, and then he pressed with lightning speed and she slammed flat, and the knife went clanging and clattering up the tunnel.

From off in the yellow gloom he heard a faint sound, an unmistakable sound: it could only have been a gasp of surprise.

Wild emotions sped through Miriam — horror to see a Keeper blown to pieces, fear that the next blast would kill her, and then, above all, amazement at what she had seen that man do, and amazement at how she felt about him.

That man — only a human — had moved as fast as a Keeper. She knew the human genome intimately. There was nothing in their makeup that could enable them to do this. Their physical limitations were bred into them. But not into this one, no indeed.

Then there was the way he affected her when he pulled off his ridiculous goggles and she saw his chiseled, complex face. Her body responded to this human as if he were a Keeper. This was not the attraction she felt normally to human prettiness, but powerful, shivering, blood-pounding desire. She wanted him not under her but over her; she sweated and lusted for him; she wanted him to possess her and fill her with a startling, frenetic hardness. Her body was begging her; it was pleading as if he were the strongest, finest male Keeper in the weave of the world.

She backed away, as horrified at these feelings as she was at the power of the weapons that were being raised against her.

She dashed to the end of the corridor, took a turning, another, then flattened herself against the wall. She listened — the ever-present dripping, the scuttle of rats, the deep fluttering of Keeper voices as they called back and forth, in mixtures of French and Prime, inquiring of one another: “What was it?” “Is there reason for concern?”

There were a lot of them here. They had indeed been assembling for their conclave. She knew, after seeing that man, that there would be no conclave. He was going to go through this labyrinth like the red shadow of death, like the hand of an angry god. None would survive him, not with his exploding bullets and his team and his eerie personal speed.

Off behind her, another blast of fire echoed, followed by the awful thudding of another Keeper body being ripped to pieces.

They were going to lose their battle. Therefore, she had to do what was necessary to protect the rest of the Keepers. She had to go to the heart of this

Keep and secure their Book of Names. To find it, she must be careful to make certain that every step she took was downward. Turning here, there, she went farther and deeper. Soon the dripping was general, water was running in rivulets, and she was concerned that the center of the Keep might be awash.

Every few minutes, there would be an awful roar behind her, followed by a series of weaker explosions. The humans — led by that eerie, beautiful monster — were clearing out the Keepers, moving with careful method. For their part, the Keepers, who had no call of alarm and no real way to react to an assault like this, were responding piecemeal, although with growing anger and ferocity. One after another, they would attack the human group. Then would come the roaring of the guns, and the distant, liquid thuds of bodies being torn apart.

She was moving fast, head down, when she suddenly sensed a change around her. She was in a much larger space, and not only that, she could see a little.

This was not a manmade tunnel, but something very much more ancient. The precise lines of its walls, the low, graceful arch of its ceiling, suggested that a far more careful hand than human had been at work here. Stalagmites rose from the ground. It looked like a forest on an alien world.

“I am Miriam out of Lamia, come seeking entry to your conclave.”

At first, there was silence. Then the light wavered and, with the softest of sounds, a shadow emerged. “I am Julia out of Helene who was Nef-ta-tu.”

She had not seen Julia since the days of splendor, when their kind had ruled Egypt, walking as princes among their human herds.

Julia had been as sweet then as a roe, as tender as an apple from the bough. What came to Miriam was a dark creature, so crusted with eons of dirt that only her eyes seemed alive.

Julia had the Book of Names with her, tucked under her arm as casually as some novel. “There is a human band in these caves,” she said, her voice mild.

“They are killing us.”

She gave Miriam a careful look. “How is that?”

“With guns.”

“We are faster than their hands. We can step out of the way before they pull the trigger. I’ve done it myself now and again.”

“These guns leave you no place to go. They spread a mass of tiny bullets. Keepers up there are being torn apart. The humans are coming for that book.” She smiled. “Let me take it.”

“I will not. You’re a pervert, Miriam. You’re unclean.”

“If they get your book, our whole world will be in danger.”

“They will not get our book.”

“They will be here in minutes. And they will get it.”

“There have been three hundred conclaves in this place. My grandfather built it when the humans were covered with hair.”

“May those days live in memory.”

“They were sour. The new ones now are much sweeter.”

Horribly close, there came the roar of gunfire. It was so close that the flash was faintly visible.

“We have to get out. We cannot waste another minute.”

“What is a minute or a hundred years? You have fallen from your nobility, Miriam. Everybody says it. I remember you in linen, how tall you were, your limbs like gold.”

“That memory is three thousand years old, Julia! This is now, and the humans are not armed with bronze daggers. Don’t you understand that

they're tearing the Keepers apart with their guns?"

"They will become lost. The labyrinth is more cunning than their minds can understand."

"That was true a hundred years ago. But now they have sonar and digital maps and handheld locators. And they're trained to kill us. They have killed all of Asia, and they have their Book of Names."

"Asia is far away."

"It's an airplane flight! I was in Bangkok a few days ago."

"You have the restless soul of a human, always traipsing about."

Miriam heard human voices. They would be here in moments. "Do you not think it strange that you alone are here at the appointed time? Where are the others? Can you explain it?"

"Don't cross-question me. All will unfold in its course."

"Then why hasn't it? What's wrong?"

"What has changed to prevent the conclave? Nothing."

"Everything has changed."

"A few humans cannot change the course of the world."

Miriam saw the humans creeping among the shadows ahead, four of them.

"It's lit," the tall, powerful one said. He walked into the gray glow from the ancient batteries. Humans had found some of the Keepers' batteries in the Valley of the Euphrates some years ago. They were still trying to understand how the ancients could have had electricity.

"Lookit — a power line!"

Discreetly, Miriam drew Julia into a pool of shadow. The humans were

now at the far end of the chamber, perhaps a hundred yards away.

“How do you work the lights?” she whispered to Julia.

“They’re always on during conclave. That’s the rule.”

“Julia, there is no conclave. We’re all being killed. Turn out the lights.”

Julia broke away from her, strode out into the center of the chamber. For a moment, the humans froze. They drew closer together.

“Julia!”

“Miriam, they’re only —”

There came clicking noises, ominous, echoing. Only seconds remained. “Julia, run!”

Julia turned to her. Her smile said that she found her friend of old times pitiful.

The tall human raised his weapon, followed by the others. Miriam watched his face, the careful sculpture of it, the hard fury of the eyes.

The guns blasted — and Miriam herself felt a hot slash of pain along her exposed hip. Just a few shots had filled the entire space with bullets — all this huge area!

Then she saw Julia, who still stood, who still held the all-important book. Julia, pouring blood, placed the book beside her on the ground. She sat then, a dark and bloody Venus beside a still-ringing stalagmite. Again the guns rang out, and this time her head went bouncing off her neck. On its face Miriam saw an expression of mild curiosity, nothing more than that.

“There’s another one,” a voice said. “Over there — that shadow behind the stalagmite. That’s a vampire.”

Miriam must not waste another instant. But the book — it was lying beside the torn ruins of Julia. It was only a few cubits away, but right in their line of

fire.

It was deep brown, its cover an ancient, profoundly aged human skin. On its cover was the Keeper's ancient symbol of balanced nature and balanced rule, known to humans as the ankh. The humans looked toward it, too.

She had to reach it, she had to get it. But first, she must turn off these damn lights. The copper wires were set on insulators a few feet above her head. She knew that these batteries were very, very different from what the humans had, that they drew their energy from the earth itself, and they were powerful.

To kill the lights, she had to stand up in full view, reach overhead, and yank a wire loose. The electricity would jolt her. If she wasn't fast enough, or could not let go of the power line, she would be burned inside — an injury that would take weeks to mend. In moments they would be upon her, though, and she would end up in their sights.

She was well up behind one of the stalagmites, but they nevertheless fired, all together, the roar of their guns causing the chamber to resound like the interior of a bell. She felt no injury.

The leader said, "Spread out," in a resonant, icy voice.

They came closer to her, led by their monster. His face was so determined, so truly terrible in the hate that was written across it, that she was compelled to think that his emotions were almost full-circle. This human loathed the Keepers so much that he nearly loved them. She would not forget this.

"We need to angle off that wall," he said, "it's pressed itself against the back of the stalagmite."

He spoke with detachment. Well, she also was professional. She reached up to the humming wire. Her fingers paused, hesitating. But this was no act of ritual possession. She curled them, closing them on the wire.

There was a buzzing sound and a choked, sizzling cry, and the lights went

out. “Shit,” Bocage said.

Paul went down on his hands and knees. “The book,” he whispered.

“Forget the damn book; get some light in here,” Becky hissed.

“Get the goggles — ” Des Roches said.

There was no time, and Paul knew it. “Cover me,” he said as he moved off toward the book.

“How?” Bocage asked.

He crawled two, three feet, then five, then ten. He could hear them putting on their goggles. They mustn’t use the infrared floods. Vampires could see into the infrared.

Then he felt it. He felt the book’s smooth surface and grasped it. But then he knew that other hands also had it, another hand was grasping it, too.

She was there, face-to-face with him, but he could see nothing. He could smell her, though — not the stink of the vampire but a scent unlike any he had ever smelled before, rich and complicated and sexy as hell.

When she growled — as vampires did — he thought that it was the gentlest and yet most lethal sound he had ever heard. She was stronger, he knew that, but he didn’t intend to let go of that book. “I know you can understand me,” he said.

There was only breathing in reply, breathing like the soft and edgy flutter of a swarm of butterflies. He thought, *She’s scared, too — a vampire that knows how to be afraid.*

She yanked the book right out of his hands. Instantly, he dove at her, slammed into her, felt the book clatter to the ground. Again she growled, this time with a mixture of surprise and raw fury that made him think that he would shortly die.

He tried to get his fingers around her neck, to choke her, to try to close off

that crucial blood flow.

He sensed somebody coming up from behind. Then Becky was with him, grabbing at the creature's arms, trying to throw it off balance.

The vampire's neck felt like steel. He couldn't manage to throttle the creature, and his hands were strong. He struggled, getting closer, seeing the face before him, a glowing moon in the darkness, smelling the sweat of a woman and — perfume. Yes, it was perfumed, this one. What in damn hell was going on here.

“Get a light! A light!”

In the split of an instant, the vampire was gone. Des Roches and Bocage appeared. As Paul looked across the empty cave floor, a wave of rage and frustration swept through him. He'd lost the damn book! This meant years more work, hundreds of lives.

Then Becky's hand came into his, her cool hand. A flashlight glowed, and he saw in that glow her shining, triumphant eyes. She gave him the book.

“Goddamn,” he said, “good god damn.”

She moved toward him, her lips parting, her eyes steady and strong.

There was no time — not here, not now. “We can get it,” he said, breaking away.

“It's gone,” Bocage said.

Paul could not accept that. He turned; he went a few steps into the deadly blackness.

“Paul! Paul, no!”

He went on.

TEN

The Traveler

As he ran along a low, narrow corridor, he flashed his light from time to time, making sure that he hadn't passed any side entrances and that he wasn't about to hit a wall. He did not think about the fact that he was a man alone penetrating into a lair that was crawling with the creatures. That female — he had never encountered anything like that. It had been clean and perfumed. It had felt soft and smooth, if immensely strong. He had not seen the face, but he knew that there had been beauty, perhaps great beauty. Its scent still lingered: Arpège and womanhood. Its touch had inflamed him even as it had made his flesh crawl. He wanted to bathe, to get its smell off him . . . and he wanted never to bathe again.

Was it the traveler, still alive after all?

He knew that the safety of the book was everything, but he also had to kill this vampire. He had never wanted to kill a vampire so much, not in all the years he'd been at it. This thing could walk the streets without a problem. The idea of vampires that could function in the human world was horrifying.

He came to a T — blank wall ahead, a passage to the right sloping up, another to the left sloping down.

He stopped, shone his flashlight first in one direction and then the other. Far away he heard Becky. “Paul! *Paul!*”

He heard something in her voice that was tender. But she was a professional killer, for God's sake. What man could romance a woman like that?

“*Paaaaul!*”

Her fear for him was heartrending. But he could not answer, dared not. They would have to do their best to follow. Waiting for them to catch up would cost at least two minutes, and there were no minutes available at all just now.

He listened ahead, closing his eyes and cupping his hands behind his ears. The rising passage was silent. But not the descending — down there he heard all sorts of noises — murmurs, scuffling sounds, the low thutter of vampire calls.

He hesitated only long enough to make certain that his gun had a fresh clip and there were still more in the rucksack that Raynard had given him. Three more, to be exact.

It was a lovely gun, the way it tore the things apart. His hand on its comforting butt, he stepped into the downward passage. The descent was steep. Soon, his flashlight was revealing carved inscriptions in Latin here and there on the walls. This tunnel must be very old indeed. The Arènes de Lutèce, where the Romans had held bearbaiting contests, could not be far overhead. Maybe they had quarried the stone for it here. But he did not think so. There was something too perfect about the way these walls were made. As old as it all appeared, every line was dead straight.

He was in a vampire place, something made by them in some uncountably ancient time. When this place was made, mankind must have been — well, maybe still living in caves.

What did it mean?

If they had been advanced enough to make this, they must have ruled the world then, in the deep long ago. The implications for human life were chilling. Anything could be true — they could even have bred us the same way that we breed cattle.

Fear kept rising, and he kept pushing it down. But what if he couldn't win? What if they had reserves of power that he had never imagined?

He tried to be philosophical. If he died here, he died here. At least he'd

take some of them with him.

And then — was that somebody breathing?

He stopped, listened. No, it was nothing, just the wind in the halls, or far-off street noise. He started off again.

One of them appeared ahead of him, leaping, screaming, a blur of darkness and fury. He fired, then fired again and again, until it exploded along the corridor with a series of wet splats.

He flicked on his light. He'd expected to see a mass of carnage, a flowing river of blood. But there wasn't all that much blood. And then he saw a bit of fur, gray, and he realized that the light had played a trick on him. He'd shot at the looming shadow of a rat.

“Goddamnit!”

He went on, deeper still, closer to the murmuring, to the whispering movement.

Then he heard a totally unexpected sound. A voice. A child's voice. “Sir?” His heart started hammering — not only because the voice was there, but because it was behind him.

Dare he turn? Dare he?

“Sir?”

Boy or girl, he could not tell. It sounded about ten, perhaps a little older. His finger slipped around the trigger. He felt sick, he did not think he could do this. But he whirled round, dropping to the floor as he did, firing.

There was nobody.

They were tricking him. The rat had also been a trick, he realized. No rat would cast such a big shadow. Somehow, they'd done it. They were tricking him, in order to get him to use up his bullets. They were probably counting his shots.

He looked out into the darkness, could see nothing. He listened, could hear nothing. Only his own breathing disturbed the silence. He was a strong man; he had learned that over the years of his life. But he had also learned that all strength has its limits. He had seen the Khmer Rouge bury a man alive, and listened to that man go mad in his hole. Paul himself had wept with fear, thinking he would be next.

The vampires knew the human mind. They knew his mind. They knew his limits. And that was why, when he heard the creaking, coming slowly closer, it was so very hard not to use his light or fire his gun. It was so hard. But he could not, because he knew that no matter how sure he was, this, also, would be a wasted shot.

As quietly as was possible for a large man, he moved so that his back was pressed against the wall. To give his ears whatever tiny extra edge that might be gained, he closed his eyes. Even though there was no light, doing this would direct his brain a little more toward hearing than sight.

He stuffed the book into his pants and cupped his free hand behind his ear. He listened in one direction. There was the creaking, just over there. But it was not a living sound, and no closer. In the other direction, though, there was another sound, more complex, far harder to hear.

It was, he thought, a living sound. It was the sound of breath being drawn, in his opinion. He would have to lower his hand, grab his light and shine it, then instantly fire if something was there.

But what if it was that child? They had known that he would be unable to fire at a child. They had known that he would take the split of an instant to be certain. That would be *their* time.

It was a duel, and they had rigged it for him to lose the instant he disclosed his position. The only way to win would be to fire into the dark and risk a child . . . theirs, but still a child.

The breathing was close now. He would have to act and instantly. He did not go for his light. Instead, he reached out. He caught a sleeve. It was yanked away but he was fast; he'd always been damned fast. He found

himself grasping a large, powerful, cold hand. The fingers closed around his wrist, closed and began to tighten.

There came laughter, soft and entirely relaxed. Foolishly so, he thought. He fired into the sound. In the flash, he saw a male face, powerful, dark, with a long, sharp nose and deep gleaming eyes.

There was a cry, deep, abruptly cut off.

Then he was deaf, as you always were deaf after that blast. When he could hear again, there was a high noise, the most terrible of noises, shaking the walls, echoing as it pealed again and again through the limestone chambers, the screaming of a woman in molten agony.

Now he used his light. It appeared, a female vampire, with beaded hair and a long dress on, dark blue silk, white collar, and the mouth fully open, a broad O filled with teeth. They had awful mouths, filthy and stinking of the blood in their guts, mouths that were made for sucking. They looked okay — a little thin-lipped was all — until they opened those wet, stinking maws of theirs. If you kissed a vampire, he thought, it might suck your insides right out of you.

The agony of grief was great for them, greater even than for a human being, as he had seen in Asia. She came maddened by it, her arms straight out ahead of her, her fingers long, lethal claws. He knew that she wanted to tear him to pieces. He knew that she wanted to feel his gristle break.

He pulled the trigger. In the flash, he saw her dress billow as if lifted by a funhouse blast. Her face folded in on itself, and her cry joined the cry of the gun and was gone.

Her body hit the wall behind her with a slapping thud, and she slid down a slide of her own thick, black blood.

They lay side by side, and he was amazed at what he saw. The male wore slacks and a black sweater, and a leather jacket so supple that Paul hardly dared touch it. The female beside him was equally passable.

These European vampires were not like the Asians, things that moved only in the shadows. These things could go anywhere they pleased, any time they pleased. But how modern were they? Was there anything to prevent them from getting on the phone, calling their friends in the States?

Of course there wasn't. Paul had to admit to himself that he'd been lucky in Asia. But that level of surprise was over now. The only thing he had on his side was speed.

Every single creature in this hole had to be killed, and it had to be done right now, today. Otherwise, there were going to be phone calls, God knew, maybe even e-mails, to vampires in America, in Africa — wherever they were as modern and technologically capable as he had to assume these creatures were.

Either he and his cohorts cleared the place out immediately or they lost any and all chance of surprising others.

A long shape like a gigantic spider came striding toward him from along the corridor, its shadow briefly visible in his light. He turned it out.

He listened to the steps, one, two, coming up the tunnel. He could hear its breathing now, slow, almost soulful, like a man in love. Closer it came, until it seemed as if it were directly before him. But tunnels deceive, and he knew that there was more time yet to wait. It seemed to slide along, as if it wore silken shoes or moved like a snake.

He held his gun straight out. He waited.

The footsteps stopped. The breathing became soft and low. Where was it? He was uncertain.

He turned on the light, and there were eyes glaring at him from three inches away. The face was sallow, gray, not a face from the world of the sun. He fired into the dark crystal hate in those eyes. The body took the whole force of the bullets and went sailing backward fifty feet, bouncing against the walls as it broke up. A leg went tumbling on down the steep incline into the dark.

The head was not severed. The eyes revealed shock, not death. He had to fire again, and he hated it, to waste a shot, but then there would be nothing further to worry about from this vampire.

He aimed, squeezed the trigger, felt the familiar satisfaction that came when they blew apart.

He went on down the passage. He was spattered with vampire blood, and he could smell its rankness. He could feel it in his shoes, slick between his toes. The blood could invade your body. If you had a cut, it could make you damned sick. He'd seen it, they all had — the fevers, the monstrous, weird hungers, the slow recovery.

As he went deeper, he felt his adult personality slipping into its own past. The love of wine, the love of music, the long days spent in elegant places — all that was going. There remained only a hurt, furious little boy looking for the killer of his father.

On he went, deeper into the secret heart of the ancient nest, deeper still. He was below the meeting hall now, down where no human being would or could ever go, down in narrow corridors painted with glyphs, walls and ceilings and floors forged by the perfect hand of the vampire.

This was the great secret of the world, that places like this existed hidden and embedded in the planet, where terrible minds had orchestrated with terrible cunning the bloody history of mankind.

He knew, suddenly, that he was in a larger space. He knew, also, that there was a new smell here. When he turned on his light, and he would have to do that, he feared that he would find himself face to face with hundreds of them.

He put his thumb on the switch. He pressed.

At first, he did not understand what had appeared in the beam. The place was so large that his light faded before the room ended. There were long brown lines of round objects arrayed in two rows facing a narrow aisle, and it took him a long moment to understand that they were skulls tightly encased in their own skin. Some had hair, and it hung in tufts like something left on

totems.

He thought that there might be a million skeletons here. No rat came for them, no maggot, for they were too dry even to attract vermin — only little running things, nameless beetles of some kind, that were slowly turning them to dust.

As he walked slowly along shining his light, he became aware that this place was easily half a mile long. Face after face stared out at him, each with its goggled eyesockets and bucked teeth. They were stacked twenty high.

Here was where lay the *real* dead of Paris, the anonymous, the disappeared, the forgotten. Ironic that this other, more terrible ossuary would lie deep beneath the Denfert-Rochereau, almost as if its human builders had known by some kind of race memory, or the whispered intelligence of the dead, that somewhere beneath their feet, there lay an even greater grave.

How many of these people had left weeping lovers behind, people who never knew whether to mourn them for dying or despise them for running away?

Such an anger filled Paul now that he trod steadily, uncaring of his own life, forgetful even of the vital importance of the book he had with him, marching like a soldier bent only on victory, going step by step toward his next kill.

In all this time, there had not been one more turning, not one place to hide. So all the vampires in this place must be ahead of him.

He had two shots left in his clip. He pulled it out, reached back and dropped it into the rucksack, grabbing a fresh one and jamming it in. If it came down to it, he would use the two shots left in that clip to blast the damn book to bits and then kill himself. He might not get it out of here, but they damned well wouldn't get it back, either.

The idea of being sucked dry like these poor people made a taste rise in his throat so vile that he had to choke back his own vomit. He would never, ever die like that, with the lips of a vampire pressed against his neck.

He had to get out of here. The air was sickening. The place was claustrophobic. The bodies were twisted in a hundred postures of struggle and suffering, the faces still radiating horror, agony, and surprise.

Eventually, he saw a door ahead. He hurried to it, looked for a knob. There was a silver ring. When he pulled it, the door slid smoothly back on perfect hinges.

There had never been any place like this in Asia. At least, they had never uncovered such a place. But they had been on a killing spree, hadn't they, compared to the subtle, expert French? He was good at dealing death, not at the cat-and-mouse game that Bocage was playing with these very much more dangerous vampires of his.

His light played on the walls — and he saw a human face staring at him. He gasped, momentarily disoriented by the eyes that looked back at him ... from the incredibly distant past. No human being had ever before looked upon what this must be, a vividly lifelike portrait of a Neanderthal, appearing as if it had been painted yesterday.

The picture was painted on what looked like a slab of highly polished stone, maybe using some sort of wax process. But when he looked closer, he realized that this was not a painting at all but an incredibly fine mosaic. It was constructed of bits and slivers of stone so tiny that to his wondering fingers the surface appeared absolutely smooth.

What a very fine hand had made this, and so long, long ago. Beside it there was another mosaic, this one of something he thought must be some sort of genetic map — incredibly intricate, incredibly detailed.

Was he was looking at a Neanderthal with its genetic map beside it? If so, then what was this room? What had been done here? All around the walls were more such images, some of even more ancient creatures, in which the shadow of man was dominated by the staring savagery of the ape. If you looked from first to last, there was a logical succession from a small ape with frightened eyes all the way to modern people. There were at least fifty of the pictures. They went on until they ended with a woman so beautiful that she seemed to have been born of the angels.

This looked like some sort of record of the evolution of man . . . or our creation. Quite frankly, it looked like a record of creation, the way one form followed another in close succession, each with its genetic plan beside it. For years, humankind had been sifting the dirt of Africa and searching the caves of France for its past. But we had never been able to find ourselves, had we? Never quite.

He went to the last figure. Even her green eyes were rendered to the tiniest nuance. Her face was so alive that she might as well have talked to him. She was a girl, maybe twenty, with dusty blond hair and an expression on her face of a sort of delight . . . as if she were beholding everything new. Maybe, he thought, he should call her Eve.

The vampires must be very much older than he had imagined. If this place was what it looked like, then they were also very much more important to us. In which case, we had not evolved through the accidents and ideas of God, but rather had been maneuvered out of the apes by another and terrible hand.

He was not a man who often felt like crying. He'd done a lifetime's worth of crying when he'd lost his dad. But tears came now, rolling down his hard, silent face.

Why had they done it? Why not leave us as we must have been — helpless, two-legged cattle? One day, the secrets of the vampires would all be known. Only then, he suspected, would mankind truly come to understand itself.

He had the chilling thought that maybe they were our creators. He'd known that they lived a long time, but this was totally unexpected.

He went on, deeper into this cave of secrets. Now the chambers he found were rough, and here also the hidden past disclosed a story. This was human work, full of gouge marks. In some incredibly distant time, human beings had dug to this very room, to the center of the secret. Had they died here, in some forgotten effort to throw off our slavery?

There were no records of other vampire hunters in history. He and his team had read volumes of old histories, attempting to see if organizations like the

Knights Templar or the Egyptian priesthoods might have known something. But they didn't.

He moved through the rubble of the human tunnel — and, very suddenly, he found a lot of vampires. They were moving quickly, just disappearing around a corner ahead of him when he saw them.

They were running. He'd never seen that before. But there were a lot of things about the Paris vampires that were new to him. He sped up, jumped into the corridor they had gone down and fired. He ran, fired again, waited. Scuffling ahead. He fired. Sounds — gabbling, gasping noises. And then a vampire loomed out of the dust. Its chest was open like a cabinet. It came for him, but buckled, its lips working, its mouth sucking air. Another was behind it, and another. He fired. He fired again.

There was one bullet in the clip. He had to reload. He backed up — and tripped, falling onto the one he had just killed. He fell hard, and heard the clips clatter off behind him. As he was scrambling up, a hand grabbed his flashlight . . . and crushed it. The dying vampire's last act had left him completely helpless.

He scrambled to his feet, then kicked into the dark, kicked at the softness of the creature's wrecked body. He heard hissing and bubbling. The damn thing wasn't dead, despite its wounds. He backed away, lest it regain its strength and attack him. Then he squatted, sweeping the floor for his lost clips, finding nothing. And then he heard before him:

“Come here, child.”

Was there another of their kids here? He backed up again, trying to get a wall behind him, to gain some kind of defensive advantage.

“Your end has come, child.”

He would have turned his last bullet on himself, but that would leave the book. He'd have to destroy it and just suffer the damn sucking death he loathed.

The one that had spoken was coming closer; he could hear it. Should he shoot it? Was it the monster, the queen? Was this her lair? No, he thought not. That voice had been low and musical, but male, very definitely.

He'd lost his gamble, then. He held the book before him and pressed the barrel of the gun up against it.

But before he could shoot, light burst out around him. He saw a crowd of vampires, all watching him with their grave, strangely empty eyes. He saw them in jeans, in tattered clothes from olden times, in dresses and the shorts of tourists. Their faces, though, were filled with hate, and they were not human faces. Down here, they didn't need to bother with makeup and disguise. All the lips were narrow; all the eyes were deep; all the expressions were the same: calm, intractable hate.

Becky was suddenly beside him, her gun flaring. He fired, too, his last bullet.

As he reached around for another clip, a flaming pain shot through his left side. The arm that held the book went limp, and the book thudded to the floor. He saw why — the handle of a knife was protruding from his shoulder.

From the crowd of vampires there came shots. These had some guns — another surprise for Paul. He heard a grunt behind him, saw Des Roches crumple. He and Bocage had come up behind Becky.

The guns fired again, from both sides. Becky moved to protect him with her own body. "Fall back," she snapped as she shot again and again.

Then there was silence. She said, in a quavering, incredibly tender voice, "You're hurt."

That was a lover's tone, and it touched his heart unexpectedly deeply. "I'll be okay."

Her finger quivered along the protruding handle of the knife. "Oh, Paul, oh, God." She kissed his cheek, and his heart seemed to turn over within him. Thrumming through his pain, he felt a kind of contentment. He could see her

rich eyes in the dark, full of tender concern. And he had to admit, it felt damn, damn good.

The beam of Bocage's flashlight played across the room. In the smoke and the haze of blood, there were easily a dozen dead or damaged vampires, all heaped against the far wall. "It's good," Bocage muttered. Then he went down to his man. Des Roches was pale, his face frozen. He was in agony and trying hard to suppress it. Paul was in exactly the same situation.

The question wasn't whether they could go out and regroup, then do what needed to be done, which was to get back down here to spray these creatures with acid. The question was whether anybody was going to live long enough to get out in the first place.

"Bocage, are we all hurt?"

He shrugged. "I'll live." His right leg was sheeted with blood.

"Becky?"

"I'm good."

"We must get out," Bocage said. "Des Roches is going into shock."

Becky was playing her light across the broken mass of vampires. "Eight," she said. "That's a total of seventeen in this action."

"We killed a conclave," Paul said. "Half of Europe, maybe."

"The Germans are doing the same in Berlin," Bocage said.

"The Germans! Why don't we Americans get told anything any-more?" Paul asked.

"You have Echelon," Bocage replied. "It's supposed to put the rest of us in a fishbowl."

"Apparently it doesn't."

Bocage smiled a careful smile. “No, it doesn’t.”

Paul was beginning to feel the shuddering cold that came with shock. He took deep breaths, trying to stave it off.

Becky went over to the vampires. “Bocage,” she said, “we need to blow their heads off. In case we can’t come back and sterilize.”

They rounded up his lost clips, and Bocage and Becky went among them, blasting first one and then the next. Paul wondered what it would be like with a woman who could do that.

The knife was beginning to hurt a great deal. A wound that penetrated a bone into its marrow, which this one certainly did, was exceptionally painful. On his side he had the fact that he was an exceptionally fast healer. But that came later. Now, there was only the pain and danger of the wound.

“We’ve gotta get moving,” he said.

The little band of them ascended slowly, everybody trying to keep their suffering from everybody else.

Despite the waves of searing pain that swept his whole body every time he took a step, Paul felt like laughing. The damn queen of the vampires, or the traveler, or whatever she was — was somewhere in that pile of broken bodies. No more perfumed innocence walking the streets.

Between this and what the Germans were doing, Europe was likely to be free of the pest. And the book under his arm would soon free the Americas — if they acted fast enough.

He coughed long and hard, experiencing such great agony as he did so that Becky had to hold him up. “There’s blood aspirating into the lung,” he said as she helped him to the car.

All the way to the hospital, she held him tight to her, so that the bumps would cause him as little pain as possible. It was still a lot. But he didn’t mind all that much. This was not a bad place to be, not at all.

ELEVEN

Queen of the Night

In the hours since she had first looked into the haunted eyes of Miriam Blaylock, Sarah Roberts had become more and more afraid. Now she held Miriam's hand; Miriam lay against her friend's shoulder.

Sarah had never seen her like this and so far had not been able to find out what was wrong.

Incredibly, they were using the Concorde, a plane Miriam had vowed she'd never fly again. Groaning and thudding came from under the floor where the four engines lay embedded in the wings close to the fuselage. For the first ten minutes of the flight, the cabin smelled of jet fuel. They'd taken this plane for years, believing it to be safe. Then had come the crash and a morbidly careful period of evaluation on Miriam's part. She'd gone over every detail a thousand times, imagined herself in the cabin of a plane she took often, looking out the window at the fire, hearing the awful roaring, feeling the vibration and then the sickening moment of free fall.

For the human beings in it, death would have been instantaneous. Miriam would have lost consciousness only slowly, as she was inch by inch consumed by the flames.

She'd had Sarah get every document there was about the refit. Despite all that had been done, she was still in a fright over flying on it. But she had insisted, absolutely.

Sarah thought perhaps the other Keepers had assaulted her. If so, it would be an anecdote for the book she'd been secretly writing about the Keepers for these twenty years of her captivity.

Sarah could tell that Miriam was awake. She was always awake unless

she'd fed or done opium in extraordinary quantities. Miriam's hand was soft and cool. Sarah lifted it to her lips, enjoying the heft of it, the taste of the skin, the softness against her lips. She inhaled the sweet smell of her friend's skin. Miriam sighed and laid her lips upon Sarah's neck, sucking until it almost hurt.

Sarah closed her eyes, listening to the howl of the engines, feeling the great soul beside her, loving her deeply and dearly . . . and feeling the evil of her at the same time.

Sarah told herself that a wolf might kill a deer, but never would it be murder. She told herself that. As a doctor, though, she was committed to human welfare, and that certainly did not include killing. The creature beside her had eaten children and fathers and mothers — had *eaten* them. As had she herself . . . in the shame of her secret life.

And yet, this was the agony of it: nature uses predators to ensure balance. One reason that human overpopulation was destroying the world was that the Keepers had failed in their natural mission. There were not enough of them to make a difference.

Miriam called herself part of the justice of the earth. And Sarah could not deny that. She had looked into the teary eyes of victims, seen them fade as she did her own clumsy sucking. She had known what it was to be engorged with human blood. Afterward, you felt as light as air. Any small imperfection disappeared. You became supple. Your skin regained a girl's flush and milk. And your heart — it beat with a happiness that seemed founded in something that was deeply right. You had dared the abyss, to do the bidding of nature. What an addiction it was, the addiction to death.

Sarah knew that she was using her strange new relationship to the laws of nature to justify herself. But she had not been given a choice. Miriam had fallen in love with her and had infused her own blood into Sarah's veins without her permission, putting her to sleep to do it. Sarah had awakened exhausted, aching in every bone, not knowing what had happened.

There had begun an awful struggle. She had tried to live on blood bought from commercial blood banks. She had tried to live on animal blood. Then

she had refused to live at all. She had actually died and been put in a coffin and slid in among Miriam's other expended lovers in her attic.

But Miriam had used Sarah's own research to bring her back. Sarah had eaten, then. She had not been strong enough to return to the terror of the coffin. Because, when Keeper blood flowed in human veins, you could live for centuries, but you could never really die.

Sarah had experienced the silent, trapped sensation of being unable to move, to breathe, to so much as flutter an eyelid in that coffin. She had been aware of the dark around her, of the lid above her, of the rustle of insects along her skin and the murmur of street traffic outside.

She'd heard Miriam playing her viola, had heard jets passing overhead, had heard the lapping mutinies of the East River and the hiss of the FDR Drive. She gone mad a hundred times, mad in the locked-up remains of her body. All around her, there had been other such coffins, some of them thousands of years old, that contained other trapped souls.

Then she had heard the tap of heels on the wide attic boards, and light had swept in, and her vague eyes had seen a smooth shadow, and life, *life*, had come marching up her arm like a grand orchestra pounding a grand tarantella.

Miriam had read Sarah's studies and her papers, and devised an experiment that had worked. For the first time in two thousand years of trying, she'd brought a lover back. She'd tried with the others, too, but it had been too late even for the most recent one, John Blaylock.

Alive again, Sarah had wandered the streets of a new world. She could be entranced by the play of sunlight on the edge of a spoon. A child's rude singing sounded the carillons of heaven. Each breath that swept her freshened lungs felt like the caress of an angel. She had learned to live in the cathedral of the moment, for the supple touch of fine leather and the sweet of morning air, for the fluttering of a bird in the birdbath or the drip of water in the kitchen sink. She had given away her doubts and her fears with her lost past (where there had even been a lover and a little apartment and a spreading career). She had given away her terror of the coffins upstairs, to the extent that she would sometimes go and lie in her own and draw the lid down and

stay there until the rigors of asphyxiation thrilled her throbbing sex and made her frantic. It was sick, she knew that. Miriam's love had transformed her from a healthy young physician into a decadent, murdering libertine with a sick and sorrowing soul. But it was so beautiful . . . or it had been, until this awful thing happened, whatever it was.

When, just after being resurrected, Sarah had looked upon her savior for the first time, she had spontaneously dropped to her knees. She was Lazarus, was Dr. Sarah Roberts, enslaved by gratitude to she who had returned her to life. To try and find some sense in the servility that she now felt, she had read long and carefully in the literature of sexual enslavement and finally into the lore of zombies. She worked hard to free herself, even going to Haiti to interview a man who had been killed in a zombie ritual and brought back by a witch doctor. He, also, was mysteriously bound to the man who had dug him up and resurrected him by rubbing him with a foam made from the blood of rats. The moment this man's teary, passive eyes had met her own, she had known that they were kin.

Miriam drew back from her, whispered to her, "I ought to really punish you, you devil."

Sarah turned to her, looked into her amazing eyes, with their child's fresh intensity. You would think she was just a girl, to look at those eyes. There was not the slightest trace that this was an ancient being. If you were observant, you would see that the lipstick was painted on a strangely narrow mouth, and you might suspect that some inner thing had been done to fill out the cheeks. But that would take a very acute observer. To most people, Miriam appeared to be a ravishing, wonderfully dressed, wonderfully affluent young woman, still dewy from girlhood.

Miriam sighed, her breath's heavy sourness filling Sarah's nostrils. "Bring me vodka," she said.

Sarah got up from her seat, moved down the aisle toward the steward, who was serving meals in the second cabin. "Oui, mademoiselle?"

"Madame in Seven-A wishes vodka, very cold, served without ice."

“Oui, mademoiselle, a moment.”

“Immediately, please.”

The steward understood her tone and poured the drink, a large one. Sarah took it to Miriam, who emptied it in an instant.

It was clear that Miriam had been through absolute hell over these past days. Sarah had suspected that her odyssey to the conclaves would be a disappointment, but whatever had happened was far worse than that.

“Another?”

“Perhaps in a few minutes.”

“I know how you hate this thing.”

“I just wonder if the repairs are satisfactory.”

“We have to hope.”

“Another vodka. Bring the bottle.”

Sarah went back to the steward. “She wants the bottle.”

“A service of caviar, perhaps?”

“No, only the vodka.”

“Mademoiselle, is madame afraid? Would she like the pilot to come and speak to her?”

“That I cannot ask her.”

“I understand,” the steward said. He had concluded that Sarah was a personal servant, and that madame would be taking all her service from her, and gave her the vodka on a small tray. “Will you want me to call you for her meal?”

“Madame will not be taking a meal.”

“Very well.” He returned to his passengers. The service in the three cabins of the Concorde was exactly the same, but by tradition the third cabin was for tourists, the second for business people, and the first for personages. Air France might not know just how distinguished this particular passenger was, but Sarah had made sure, as always, that Miriam was treated with the greatest respect.

The fact that Sarah was not privately reconciled to Miriam’s way of life and even doubted her right to her prey did not mean that she did not respect her. Miriam was a creature of God, also, and a triumph of nature. To a scientist, which Sarah most certainly was, her blood was one of nature’s truly remarkable organs. It had six different cell types, including one that Sarah had watched under the electron microscope trapping and destroying virus particles, transforming them back into the chemicals out of which they were constructed.

The blood sometimes seemed almost intelligent, the way it laid traps for bacteria. And the cells were remarkable, too. Unlike human cells, they did not scavenge for free radicals with mechanisms that grew stiff and unresponsive with age. Instead, the blood converted them into nutrient components, actually changing their atomic structure.

Sarah had allowed herself to imagine that Miriam *was* her blood, that the body was only a receptacle for this brilliant organ.

She had watched it as it worked in her own veins, how after a period of acclimatization, it had adapted itself to her needs, preserving those parts of her own blood that were essential to her life and adding most of its strengths as well.

It could not change the structure of her cells, though, which continued to try to destroy free radicals. What Miriam’s blood did in Sarah’s veins was to destroy so many of them that little more was necessary. Still, Sarah aged. Just very, very slowly.

Sometimes, she would go to the attic and whisper to the others, “John, I’m

coming, Lollia, I will be here soon.” She would tell them of Miriam’s doings. She would tell them of her own work, trying to find a way to bring them back to life. How it must be in those coffins, she could scarcely imagine. To have been like that for even a few days had been so extremely awful that she still had nightmares about it. But Lollie had been there for three hundred years. And there were others who were little more than teeth and long strings of hair, who had worshiped at Miriam’s feet when she was pharaoh’s daughter.

The selfishness of Miriam’s making herself gifts of these “lovers” had crossed Sarah’s mind. This was an unambiguous evil, and for a time she’d believed that she could find in herself moral ground to sabotage Miriam, on this basis.

But the nights in that bed of theirs, the *nights* . . . and living Miriam’s exquisite life with her, playing their violas together and going to the club, and seeing the world through a Keeper’s eyes, as if everything were always new-washed with rain — she did not have the strength to say no.

She wanted Miriam right now. To lie naked in her steel-strong arms, to taste of the kisses of a mouth that killed — for her it was an ecstasy more appealing, she suspected, than that of being lifted in the arms of God.

The truth was that she revered this creature, whom she ought to hate. She had not the moral strength to hate the pleasures of being Miriam’s possession. Had she been the maid of Hera or Proserpine’s sotted girl, it would not have been different. A human being had fallen in love with a terrible god.

When Miriam traveled, Sarah made all the arrangements. Normally, she stayed beside her lady, making certain that everything was perfect, that all was as she desired and deserved. It filled her heart with a deliciously awful joy to serve Miriam. She understood her history and her significance to mankind. Miriam’s family had invented Egyptian civilization. Her own father had moved the Israelites into Canaan. As far as he was concerned, he was only expanding his holdings, but the significance to human history was, of course, remarkable. Miriam herself had created and nurtured dozens of different aspects of western civilization. Her image haunted our literature. She was the Shulamite maiden, she was Beatrice, she was Abelard’s Heloise and Don Quixote’s Dulcinea — or more accurately, she had once sung a song

for a hopelessly smitten Miguel de Cervantes, and become the model for his character.

She wasn't Shakespeare's Dark Lady, but she had known the girl. The story of her mother, Lamia, had inspired Greek mythology. It had emerged in the seventeenth-century *Anatomy of Melancholy* and the whispered legends of Lamia had inspired John Keats's *Lamia and Other Poems* in 1820.

There were many Keepers, but Miriam and her parents had been more influential in human affairs than any of the others.

And now she was the friend and lover of a humble doctor from Queens, whose highest ambition should probably be to make her happy and keep her safe. Instead, Sarah was caught in an eerie web, unable to believe that Miriam had the right to kill, but also unable to do anything but serve her.

In a year, a Keeper took perhaps twenty lives. Sarah herself took ten . . . and each squirming, weeping victim consumed part of her heart. After a murder, she would weep for days. She would resolve to quit. She would renew her efforts to find a way of feeding on blood-bank blood.

Sarah returned with the vodka and served Miriam a second drink. "I wish I could comfort you," she murmured. "I know something's wrong, something more than just the flight. Please tell me what it is."

Miriam knocked back the drink. "Five thousand dollars a seat and still I cannot smoke."

"You can in the car." She glanced up at the map that was set into the bulkhead. They were traveling at Mach 2, just passing over the Irish coast. "Just two more hours, madame."

"Why are you calling me that?"

"Because you seem so regal today."

Miriam took her chin and turned her head until they were sitting like two intimate girls, face-to-face, their noses almost touching. "I have been through

unbelievable hell. And I am angry, Sarah. I am angry at you.”

“I know you are.” She’d gone to spend a few days in the Berkshires, away from the club, away from Miriam’s demands. She had not taken her cell phone.

“Love, if I can’t count on you, who can I count on?”

Sarah felt her cheeks grow hot, as they had in the hotel room when she’d been bathing Miriam and had seen the rough areas and angry blushing of her skin. That was healing trauma. Because Sarah knew the power of Keeper blood to overcome injury, she was aware that Miriam had suffered fearsome damage.

“Tell me what happened, love.”

Miriam turned her face to the window.

Sarah touched the black silk arm of her blouse, but Miriam said nothing more.

Very well. Sarah had learned to accept Miriam’s moods. “You look so extraordinary in those clothes,” she offered, gently flattering her, hoping to win a more full response. There was none.

Whatever had happened in Paris, at least it had brought those archaic Chaneles to an end. They had gone to Maria Luisa and gotten some delicious Eric Bergère designs. Miriam had been extremely compliant at the shop, spending twenty thousand dollars without complaint, and revealing truly wonderful taste and an extraordinary awareness of what might flat-ter her the most.

Sarah gazed at her. She was so splendid that you never got tired of looking at her, and in that fabulous black blouse of sheer silk with a bloodred satin body shirt beneath — well, the effect was almost perfect. The way it held her breasts high and suggested her curves was marvelous. This ensemble had been created by a hand that loved and understood the female form.

“I was nearly killed.”

Sarah leaned close to her, kissed her cold cheek, laid her lips there a long time, until she felt her body tickling within itself, lusting for the quick finger, the deep tongue. “Don’t say that if it isn’t true.”

Miriam bridled at the statement. “How dare you!”

“I’m sorry! I — just — please forgive me.”

Miriam leaned back, closed her eyes. “Is the passport going to be all right?”

“Perfect.”

“Why so?”

She had asked this about the passport ten times. It was a perfect passport because it belonged to a real person. “Leonore is a master of disguise,” Sarah said.

“Leonore,” she said. “Do you think she would be a good meal?”

“Miriam, you know I don’t find that sort of thing funny.”

“Maybe she’ll replace you, then, and you’ll be the meal.” She smiled that slight, fetching smile that looked so innocent and concealed such danger. “That might be best.”

She was truly a mistress of verbal torture. “I would open my own veins for you,” Sarah said.

“I suppose so.” Miriam’s voice was leached of emotion. “You’re certain of the passport?”

“Look at it. It’s you.”

The instant Sarah had understood that Miriam was without a passport, she’d gone down to the Veils, where Leonore was supervising the cleaning crew, and gotten her to make herself up to resemble Miriam. A slightly fuzzy

passport photo had been taken to an expeditor with a two-hundred-dollar fee and a thousand-dollar bribe. Miriam's new passport — in the name of Leonore Patton — was in Sarah's hand by five that afternoon. The next morning, Sarah had come over on the Concorde to rescue their distressed lady. That was yesterday.

Word had passed through the upper echelons of New York society that something untoward had happened to Miriam in Paris.

The whole club was in vigil, CEOs, aristocrats, celebrities, the brilliant and the beautiful. There would be a hundred of the most fashionable people in New York waiting to greet the queen when her plane landed.

“Please tell me what happened.”

Miriam's eyes met hers. Sarah forced herself not to look away, but Miriam was certainly furious. “In good time,” she said.

“I wish you could be at peace.”

“I cannot be at peace.”

Miriam's hand came into hers. Her eyes became like penetrating needles. “You remember I have spoken of Martin Soule,” she said slowly, evaluating Sarah, trying to look into her mind.

“He inspired Baroness Orczy. He was the real Scarlet Pimpernel.”

Quick as a flash, Miriam's iron fingers were crushing Sarah's wrist. “You're not sad,” she snarled.

“I'm scared! What's happening?”

“I ought to put you back in the attic with the others, you ungrateful *bitch!*”

“Miriam?”

Miriam released her wrist, tossing it away from her with a contemptuous gesture.

“Miriam, please tell me what’s wrong!”

“My French has become archaic,” she snapped. “I want a teacher standing before me at ten tomorrow morning. Ten exactly.”

“Yes,” Sarah said, aware that her voice was shaking badly, “a teacher at ten.”

There was a silence, during which the jet shuddered slightly. “I needed you, Sarah, and you weren’t there for me.”

Sarah closed her eyes. Tears swam out beneath the lids.

“You weep for me?”

Sarah nodded. “You’re the love of my life.”

“And yet you ignore the emergency number. You love me, but you want me dead, Sarah. That’s the truth of it.”

“I don’t want you dead.”

“You’ve hated me ever since I gave you my blood.” Her lips curled. “The gift of eternal life!”

“You ought to have asked me.”

“You’re an idiot, Sarah.” Then, unexpectedly, she smiled. “But I do enjoy you. You’re such a scientist!”

“You’re a murderer, Miriam.”

“Don’t be ridiculous.”

“And I love you, too.”

Miriam said, “The vodka’s warm.”

Sarah got up like a robot and moved down the aisle. The faces of the other

passengers seemed vividly alive, their cheeks rich with blood. Sarah knew that this was an early sign of her own hunger. In a week, she would need to feed again. She'd try to stave it off, as she always did, with the blood she bought from the little blood bank on Thirtieth Street.

"I need a colder bottle," she said to the steward.

"Of course, mademoiselle." He drew a new one out of the refrigeration unit in his cart, put the old one in.

She took it back to their seats and poured Miriam another drink, then sat down. "I want to help you," she said.

"You're dangerously incompetent."

"I'm the best you've got!"

"For the while," Miriam said, her voice almost indifferent, as if the subject was no more than dull.

A shock passed through Sarah. "If you'd tell me what I've done —"

"I called you and called you."

"You've told me that fifty times! But you have to tell me what happened. Why did you need me? Why are we running like this? Miriam, for the love of God, what's happening?"

The pitch of the engines changed, followed by the angle of approach. "Finally," Miriam said, "you agree that you've proved yourself hopelessly incompetent."

Sarah nodded.

"So you agree that I can't take the risk of relying on you."

Sarah nodded again, and this time tears sprayed her breast. "Miriam, no matter what you decide —"

“It’s decided.”

“At a time like this, you need me. Whatever it is, I can help. I can correct my mistakes and do better.”

“Yes, indeed.”

“You’re being chased. We’ve got to get you out of the house. Hide you.”

“Do we?”

The plane roared, made a steep turn into its final approach. “It’s all right,” Sarah said automatically, “everything’s fine.”

The steward reminded them to place their seat backs upright and fasten their seat belts. He came past and collected the vodka. “Will Madame be wanting a wheelchair?” he asked.

“Mademoiselle will not,” Miriam said.

A short time later, the plane was drawing up to the gate. The moment it stopped, Sarah stepped into the aisle in order to prevent any passengers behind them from pushing past Miriam or impeding her way.

As far as the world knew, two resplendently beautiful young women stepped off the plane, one discreetly attentive to her companion, who walked with her cool gray eyes fixed to the middle distance, emeralds and gold glowing around her neck, a wide-brimmed Philippe Model hat on her head. The other girl might have been a friend, slightly less wealthy, or even an indulged secretary or servant. Indulged, because she was so well kept herself, with her superbly tailored green *peau de soie* suit and her fashionably tousled hair.

They passed through customs with the easy indifference of people so powerful that such things did not matter to them. The officers were quick, discreet. “Welcome home, Dr. Roberts; welcome back, Miss Patton.”

When they appeared in the Concorde Lounge, there was a discreet spatter of applause. Miriam slowed, then stopped, then turned. She raised a gloved

hand, smiled. Nobody who did not know the truth could possibly have imagined, not for an instant, that she was anything but a girl — a girl with wise eyes, but still a girl.

She stepped forward into the richly dressed crowd.

They surrounded her, kissing her cheeks, touching her as children do a mother they have not seen in a very long time. In each pair of eyes was the same regard, the same awe. Sarah watched this with the dispassion of a captive. Most of them probably thought of her only as the sparkling mistress of the most exclusive club in all of the Americas, a secret, exquisite club, a place where the most powerful of people could express their true selves without shame or restraint, where there were no restrictions . . . once you had passed the door. Some few knew part of the truth, the whispered reality of Miriam.

Only Leonore Patton was entirely certain of the truth. Leonore was being brought along. She was being educated. Sarah knew that Miriam planned to infuse Leo with her blood. Now she wondered if she herself would be killed or set adrift on her own?

People murmured around them, expressing happiness to see Miriam — some familiar faces, others less so — while Sarah anguished inside over what was taking place.

Some were staring with the mixture of fascination and horror that the true insiders shared, the ones who knew to be thrilled but also terrified when she swept them into some dark corner of the Veils, and kissed their necks in a moment of tipsy excess.

Miriam went to a young Latino — a kid she had marked as an upcoming star — and kissed him, brushing his cheek with the rough tip of her tongue. Miriam was never wrong about such things as stars. Carlos Rivera would certainly become one. So, for that matter, would Kirsten Miller who stood beside him, her careful, beautiful face radiating intelligence.

Then Miriam was finished with them, speeding out with Sarah behind her. Luis, their driver, came up to take the bags that others had conducted through

customs. Inner New York, secret New York, had been waiting for nothing but her return. Now the delicious terror could continue. Was she going to feed? Would it be some forgotten soul, ready for death? Or someone who deserved it — one she had judged in her correct and careful way? If so, would it be one they knew, perhaps some garish magnate who had tried to lie his way past the Veils? If it was, then who must they carefully fail to notice was missing, who next?

“One of my shorts paid off,” Sarah said after Luis had pulled into traffic and Miriam had settled back with a cigarette.

“How much?”

“It was BMC Software. We made thirty-three percent.”

“On what?”

“Six hundred thousand.”

Miriam smoked, gazed out the window. Sarah had heard the little grunt of approval that the awareness that she had made nearly two hundred thousand dollars had drawn from her.

Suddenly she snatched off the big hat, which she had been wearing since Paris. Then she said, “My head is warm.” She inclined it toward Sarah, who set about removing the wig. Even when Sarah had bathed her in the enormous tub at the Crillon, she had not allowed this wig to be taken off.

“Are you ready for this, Luis,” Miriam called, her voice tart with angry irony.

The silky blond strands of hair that had waved in the wind like fronds in the sea were gone. The effect was so disturbing that Sarah drew back. Miriam smiled, her face looking utterly false and improbably small on her strange, long head. In Egypt, they had concealed their heads beneath tall headdresses. Raise the crown from Nefertiti, and you would see Miriam’s mother with the same long head. She was called Lamia only among her own kind, and in myth. In the nations she had ruled, she had been many queens.

Miriam's eyes were wet. The baldness embarrassed her, even before Sarah, who knew every intimate stroke of her being.

“Oh, my love! My love, what — what — ”

“They tried to burn me to death,” she said.

“The other Keepers? My dear God!”

Miriam's eyes bored into Sarah's. In that moment, she seemed more profoundly alien than ever before. They were the eyes of a goddess . . . or a predatory insect. Glassy, cruel, and way too quick, the way they flickered about.

Sarah's heart broke for her. Lamia had died by fire, and Miriam had spent many a Sleep with her head in Sarah's lap, crying out as she helplessly relived the horror of that day.

Sarah threw her arms around Miriam. “Miri,” she whispered, “Miri, I will never let that happen to you, *never!*”

“We're in terrible trouble, child.”

“I know it, oh, God, I know it.”

Miriam came close to her, took her hand. They remained like that — both silent, Sarah weeping — on the long, traffic-choked drive home.

TWELVE

Sourball Express

Paul watched Justin Turk fool with his pipe. You weren't supposed to light up inside the building. Langley was a nonsmoking facility. Justin lit up. "You know," he said, "you're a good ten grades away from the use of exclusive air transport."

"What the hell are you talking about?"

"You requisitioned a Falcon Jet assigned to General Ham Ratling and took it from Bangkok to Paris on a noncontracted run. Meaning that we got a forty-eight-thousand-dollar bill from the Air Force, plus a letter from Secretary Leisenring. A very pissed-off letter. The general and his wife and kids all ended up in first class on Thai Airways, and we got a bill for that, too."

"It was a hot pursuit, Justin. For Chrissakes."

"A hot pursuit." He pulled a yellow pad out of his desk. "So how do I write this up? Give me words, buddy."

"Agents were in hot pursuit of a female vampire —"

Justin held up his hand. "Say something else."

"Terrorist."

"A terrorist contact incident has to be written up on one of those — lemme see here — Candy!"

Candy Terrell, his assistant, came in.

“I need a TCI form,” he told her.

“What the hell is a TCI form?”

“Terrorist Contact Incident. Every field op who thinks he’s encountered a terrorist, whether known or unknown, has to fill one out and file it within six hours. It’s been days in this case, of course. But nobody expects less from our boy.”

Candy left the room.

“We’ll return to the plane issue later. I thought you were injured.”

“It healed.”

“In two days? The police report said you had a knife wound in your left shoulder that took eighteen stitches. Why isn’t your arm in a sling?”

“I heal fast. Always have.”

Justin cleared his throat and shuffled some papers. Paul was perplexed. He had healed fast — incredibly fast. He should have been in a sling. He should have had a cast.

Why wasn’t Justin curious about that? Paul sure as hell was.

“You also have a body coming back. Was it on the transport with you?”

“The French flew it from Villacoublay to Ramstein. It oughta be in Santa Clara tomorrow. It’s being delivered directly to the family.”

“You’ve written a letter?”

Paul had not written a letter. He couldn’t do that, as Justin well knew. “It has to come out of the pool.” Next of kin were handled out of a central office when agents died or were injured in the course of secret operations.

“You do it. Let the pool send it.”

“Okay.”

“Because I want you to feel it.”

Paul sucked in breath. He really did not want to deck Justin Turk, his only ally at Langley, but Paul’s tendency was to go physical when he felt threatened, and an insult like that was damned threatening. He was sitting here, and getting this. “I took a hit, too,” he said. “We had a terrible time in there. Just awful.”

“You couldn’t have stayed out of harm’s way? I mean, given the French presence on French soil?”

“We couldn’t.” What else was there to say? Just let it go. The desks never understood operational issues, never had, never would.

Justin was watching him carefully. Paul realized that the needle had been inserted on purpose. Justin was probably trying to make him feel vulnerable, to throw him off-balance.

This meant only one thing: this was not a conversation. It was not a report. It was an interrogation and he was in trouble. The question was, what the hell kind?

“Well, Paul?”

“Justin, I don’t know what to say. I don’t like your drift. ‘Want me to feel it’ — what the hell is that supposed to mean?”

“You lose agents!”

“I’m fighting a war!”

“You and Don Quixote. We’re not sure about your war.”

“The White House is bothering the director, and you’re taking heat. Is that it?”

Justin did not reply, confirming the accuracy of Paul’s diagnosis.

“Tell ’em they have no need to know. Like the alien business.”

“The alien business! We don’t exactly have a directive from another world enforcing the secrecy in this particular case, Paul. All we have is you.”

“Thing is, how did the White House find out in the first place?”

“The French have a program. The Germans have a program. For all I know, everybody has a program. This is a secret that’s about to come out. And they are scared, because when that press conference has to be called, they will have to explain you and your killing spree, and they don’t know how to do that.”

“I’ve done my job. The French have done theirs. No doubt the others have, too. We’ve been effective. End of story.”

“Yeah, the French have a casualty rate of seventy percent. You’ve lost four out of eleven people in two years. That’s very effective, but not in the way we want, Paulie Paul.”

“Everybody loses personnel. I saw the French clean out dozens of vampires when I was there.”

“We prefer to call them differently blooded persons. DBPs.”

He did not like the drift of that. “Who decided this?”

“The Human Rights Directorate.” Justin shuffled more paper. “I printed out their memo for you.”

“I didn’t know we had a Human Rights Directorate.”

“It’s attached to the Office of the General Counsel. It was mandated under PD 1482 a year ago.”

Presidential Directive 1482 had established humane practices guidelines for the Directorate of Operations. Since Paul was not dealing with human beings, humane practices, he had assumed, were not relevant to his work.

Justin held the paper out to him. “We’ve been instructed to use these guidelines as the basis for a policy recommendation. We’re assembling facts for the Directorate of Intelligence now.”

Paul took the sheet of paper. “Who wrote this?”

Justin did not answer directly. “Read it.”

We must determine if these alleged vampires are human. These are the questions that should be asked in making this determination: Do they have language? Do they plan? Do they experience emotion? Have they enough basic intelligence to perform human activities? If all of these things, or most of them, are true, then it must be assumed that they are human or humanlike creatures, and should be afforded all the protection of the law.

Further, if indeed they must consume human flesh as a natural condition of their lives, then it is not clear that they can be identified as murderers or terrorists, any more than any predator species can be considered the murderer of its prey.

At the same time, there is nothing that prevents us from warning our citizenry about them and providing, for example, survival guidelines. The right of the prey to attempt to thwart the predator would seem to be as fundamental as the right of the predator to kill. However, their status as conscious creatures would preclude simply destroying them to relieve the threat.

Additionally, their relative rarity may identify them as an endangered species and, on that basis, mandate a level of protection of their habitats and limits on killing them.

In summary, the existence of these creatures should be made public, along with guidelines about how to avoid capture by them. Their lives would be protected under the International Human Rights Convention and possibly by endangered species acts in various countries. Their right to kill to eat must not be interfered with, except insofar as to aid legitimate attempts to avoid them.

Paul continued to stare at the document, not because he was still reading it, but because he was literally paralyzed with amazement. Had all of his blood descended into his feet? Is that why he felt this sense of having totally lost contact with reality? Or was it the piece of paper in his hand?

“Justin, could you tell me something? Could you tell me if Franz Kafka is still alive?”

“He’s dead. What’s the point?”

“Oh, I just thought he might have written this — you know — as a sort of kafkaesque joke.”

“Paul, I’m required to inform you that an investigation of your activities has been instituted. As there is a possibility that criminal charges could be levied against you, it is our official recommendation to you that you retain counsel. If you don’t have a lawyer of your own —”

“I haven’t got a damn lawyer!”

“Then you can apply to the Office of General Counsel for a referral to a legal representative who has an appropriate clearance match with you, so that you can discuss your situation with him freely. If you cannot afford to pay your lawyer, you can be referred to a legal aid lawyer with a clearance.”

Paul thought, *Just sit, keep breathing, don’t turn white, don’t turn red, don’t hit anybody or break anything.*

“Paul?”

“Just a minute. I’m trying to decide if I should laugh or cry. What’s your thought? Tears?”

“I didn’t write it, Paul.”

“Damn it, Justin, don’t you see what this is?”

“It’s an attempt to recognize the human rights of an alien species.”

“It’s a license for the vampires to hunt and kill human beings. Jesus Christ, I lost my father to these things! A little boy waits, and a wife, she waits and waits, and Dad just never comes home. You go on for years wondering, ‘Did he die or get killed, or did he walk out on us?’ It eats away at your heart and makes you hard, and gradually, it kills your heart. In my case, I found my dad. Most people never find a damn thing.”

“The government has decided that the differently blooded are part of nature.”

“Justin, pardon my stupidity, but aren’t we out there trying to protect people? I mean, isn’t that the fundamental promise of government? If a rancher gets his cattle killed by coyotes, you know what happens? He goes out and he damn well shoots the buggers or traps ’em. Nature made the coyote to eat cattle. But that doesn’t mean the rancher’s just gonna let it happen.”

“You’re under investigation for suborning your orders, Paul.”

Suborning was an ugly word. It meant misusing your orders or intentionally misinterpreting them. It was the kind of word you heard in trials. “That’s the criminal route.”

“I told you to get a lawyer. This is a serious situation, buddy. You could be looking at a count of murder for every single creature you’ve killed.”

“Justin, for the love of God, help me!”

Justin stared at him like he was something in a damn zoo.

“This is coming from the White House.”

“A bunch of college kids with no experience of life. Look, this is about people being killed. You know — mothers and sons, fathers and daughters.”

Justin worked at his pipe. “I’m only the messenger.”

“Why don’t you tell Mr. President something for me — for this stupid grunt nobody who just happens to value human life above all things. A

couple of days ago in Paris, I was in a room — deep underground — where I saw maybe half a million dead people stacked in rows . . . long, long rows. Every one of them was a tragedy. Every one of them was a broken family, or a broken heart, or at least a life stolen from somebody to whom it was precious.”

“People will have the right to defend themselves.”

“From something that can move so fast you can’t see it, that’s four times as strong as you are and twice as smart? I don’t think so.”

“The state will protect them.”

“Only one way to do that. Kill the vampires.”

“Paul, a stupid rancher does the environmentally unsound thing when he traps and poisons the coyotes on his place. A smart one plans so that his herd is never in jeopardy. The state’s simply gonna be the smart rancher.”

“But they’ll get through. They’ll find ways!”

“Some people will be killed. But it’s been like that for all of history, hasn’t it?”

“Let me pose you a hypothetical. You wake up some night, and one of these things is drilling into your neck. What do you do — I mean, personally?”

“This isn’t going to happen to me.”

“Hypothetically. Do you call Nine-one-one? Come on, be real, here! Christ!”

“The good rancher uses various appropriate and effective means to chase off the coyotes. We’ll be proactive in the same way.”

Paul got to his feet. “I’m in the middle of a mopping up operation in Paris. Gotta get back.”

“We are not going to continue with this barbaric exercise of yours. It’s over, Paul. Totally and completely *over!* Okay? And there are some people you need to meet.”

Danger always tapped on Paul’s shoulder before most people realized that it had entered the picture. Something about Justin’s tone of voice suggested that these people were going to give him a whole lot of trouble.

The U.S. had secret prisons for people who had broken the law in the course of classified activities. The law in those facilities was a strange, surrealistic version of the law on the outside. You had rights — just not the right to leave. Administrative prisons, that was what they called them.

Well, he still had the right to leave at the moment, or at least the ability, so he damn well walked out the door. He went through the outer office and into the corridor. There were two men coming toward the office. He went the other way.

Behind him, he heard their footsteps get quicker and louder. Goddamn, he didn’t want this. He’d been part of this organization all of his adult life. He had stood before the Memorial Wall and wept a tear for fallen comrades. He had loved CIA and stood by CIA and been absolutely loyal to CIA, no matter how dumb he thought the latest director was or how misguided the latest policy.

He got the hell out of the building, hurrying out the new entrance to the west lot where he’d parked. As he got into the pretty little Saab that had been waiting in his garage for the past two years, he wondered if he would be fast enough to pass the gate or if Justin had already called them and told them to detain him.

He pulled up to the guardhouse, showed his ID card, waited. The guard looked at it, made a notation, and opened the barrier. He drove out and was soon headed for the freeway. It was a sunny summer afternoon, and once he was out of Reston, the world came to appear innocent again, even sweet. He loved the people in the cars, felt their hopes and loves with the special empathy that only a person who has killed in the line of duty can ever know. There is something about the taking of human life that makes human life

seem incredibly precious. Even if killing somebody is necessary, the fact is that your dead remain with you all the rest of your days. Not your dead vampires, though. Only the people.

What if people knew that they were liable to be hunted down and killed, and it wasn't against the law? The very notion was absurd.

On this deceptively peaceful afternoon, he knew that he had to act with the utmost professionalism and speed, or he was going to be hunted down himself. Right this minute, there was an urgent meeting taking place somewhere in the building — probably in Justin's office — covering the issue of Paul Ward. He'd become what was known as a "runner," an agent who, when his actions were challenged, had immediately taken off. To CIA, this response was *prima facie* evidence of guilt. The Company was very skilled at hunting such people down.

What he needed to do was clear: he needed to kill as many vampires as he possibly could between now and the time they did manage to catch up with him.

He took 495 to 95, thinking that he'd go to Baltimore, park the car somewhere, and take mass transit to the Amtrak station.

According to what little he knew about the vampire in America, he needed to go first to New York. The reporter Ellen Wunderling had disappeared there researching the gothic subculture. In Paul's opinion, it was possible that she had stumbled across a real vampire, discovered too much, and been eaten.

So he'd go back to the plan of looking for her. She had disappeared in New York, so that would be his first destination.

He was a man who carried a lot of cash, always, so he'd be able to put some space between himself and his pursuers.

What a hell of a thing that he'd sacrificed lives for the French Book of Names and now he couldn't use it. He couldn't read a word of it himself, and he certainly couldn't stop by NSA and ask them to help him with the translation.

When he reached the exit for Route 32, he decided to make it interesting for whoever would be coming after him. He took 32 up to Columbia, which was a big enough town to have both a bus system and a taxi company.

He went to the Columbia Mall and parked in the covered parking, where his car would be harder to spot. He turned on his cell phone and strolled into the mall. It was so nice, so damn American. He went into the Sears, strolling easily, looking at the washing machines, the clothes. He bought a couple of shirts, a pair of pants, a blue blazer and some black sneakers. When he came out of the men's room, he looked like the same guy in different clothes. He knew that you weren't going to be able to disguise Paul Ward, but every little bit helped.

He dropped his phone in a lady's shopping bag. They'd follow that, for sure, probably track it down in about an hour. There was going to be some excitement in her sweet life.

He went outside and hailed a cab, which he took to the campus of St. John's College in Annapolis. A thousand years ago, he'd been a St. Johnnie for a couple of semesters. The school followed a great-books curriculum, starting with Homer and ending with Freud and Einstein. He'd read the *Iliad* and the *Odyssey* under Professor Klein, who'd had his fingers broken by the Nazis for playing the piano better than an Aryan. Still, as much as it hurt, he had played of an evening, Debussy and Chopin and Satie . . . He hadn't weaned young Paul away from doo-wop, but the playing had been awesome.

Paul had been the only kid in the whole school who'd favored the war in Vietnam, and also been dumb enough to put a statement up on the bulletin board about it. As a result, he'd soon found himself being recruited by CIA, and thus had begun the rest of his life. Old George Hauser, of blessed memory, had sat with him on that bench right over there under the great oak and spoken to him of what it meant to be an operations officer, how hard it really was, and just how disappointing it could be . . . and how much it mattered.

He went up the brick walk toward McDowell Hall, the administration building and meeting hall, where the choir had met. The young voices returned, calling to him from the quiet that he entered when he entered the

building. Downstairs was the coffee shop, and there also was the bulletin board where his current life had begun.

There were people here and there, but the campus was quiet in midsummer. He went through the basement of McDowell and out into the little quad. There was Randall Hall, where he had lived — given a single room even though he was only a freshman, largely because they could not imagine anybody who had written an entrance essay like his successfully living in close proximity to another person. He'd written on Saint Thomas Aquinas, the *Summa Theologica*. In those days, he had been a fiercely ardent Catholic. How long ago that was, the days of the skinny kid with the close-cropped hair and the delicate wire glasses.

He wondered why he had come here. Was it because he was dying, and the inner man knew it? He'd seen many an operational death that started with just this kind of official abandonment. *I will not go to prison*, he told himself as his eyes counted windows to his old room. How small Randall Hall looked now. He remembered it as a grand place. But look at it, you could almost jump over the damn thing. A vampire probably could, or come close.

He'd gotten to this place on the back of a hell of a scholarship, the Stephens Piper Award for Scholastic Diligence. Full tuition to the college of his choice.

He thought to himself, *How do I kill vampires, now that I am alone? Dare I assemble my people? No, they'd all be stopped at their ports of entry.*

He'd signal Becky not to come back — stop at the college library, see if they had a public computer. He'd send her an e-mail, using the team's own emergency code. She could share it with the ones still in Kuala. He went over to the library, which was wide open and, typical of St. John's rather tangential approach to organization, totally unmanned.

He booted up the computer behind the librarian's counter. No password needed, of course. St. John's was still St. John's. It wasn't that they were especially trusting. It was details — they avoided them. Was it the best college in the United States? Not by all standards, but by any standard at all, it was the most intellectually healthy.

His opinion. He opened up Outlook Express and logged onto their server. One code he'd never expected to use was "sourball express." It meant the unthinkable, that CIA had turned against the operation and everybody needed to go to ground immediately, wherever they happened to be.

When she saw it, she would go into meltdown, but she would do her duty. He typed the words. Then he added, "Go to B." There was a guaranteed job, given his recent casualties. Bocage understood American intelligence very well. He'd give her a good home.

He sighed. It was likely that he would never see Becky again, never hear from her, never know how her life played itself out. Well, hell, that was the nature of this game. You worked in total darkness. Sometimes there were other figures beside you, sometimes you were alone. He could have loved that kid, though. He could have loved her.

He sent the e-letter from the name of the person who used the computer, then immediately shut it down. There was no point in encrypting it. All of their encryption was backdoored to CIA. The point was not to write anything that would make an Echelon search possible. He hadn't done that, he was quite sure. Pretty sure. Somewhat sure.

He went out, hurrying down toward the playing field and the bridge with its bus stop. There was the tree under which he had kissed Connie Bell. Even all these years later, he remembered just how sweet she had tasted, Connie Bell. She was the loveliest woman he had ever known, even to this day.

He recognized, abstractly, that he was crying. At least, his eyes were wet. What a damn asshole he could be. Fortunate that he was alone. He was crying for his lost career, for his despised honor, but more for Connie Bell and lost youth . . . and for Becky Driver, whom he had never gotten an opportunity to kiss.

He crossed the playing fields and came to the bridge and the bus stop. He'd take the bus into Baltimore, to Penn Station.

His pursuers would spend their time looking for cell phone usage and credit card usage and ATM usage. Nobody would take to the streets, nobody

would try to think as he thought, try to follow him in the old-fashioned way, by following his mind.

He did not intend to stop killing vampires simply because he'd lost his backing. To hell with the CIA; he was going to do this thing. Maybe he'd rid the United States of the creatures before his employers caught him, who knew? Let Justin stuff that in his damn pipe. Endangered species, hell. If he rendered the damn things extinct before they could be protected, what would those White House pantywaists do — apologize to the world for allowing such a terrible thing to happen?

They were totally out of touch with the situation. If the vampires were free to hunt openly — if they had rights and legal status — oh, God, how awful that would be. Inside of a decade, they would rule the world again.

The bus came, and he paid his fare and took a seat. He leaned back, closed his eyes. “Should've graduated from St. John's, asshole,” he told himself. He could've become a professor of classical languages, a doctor of philosophy. He could have led a quiet life, tasted of love and marriage. Except if you went through a childhood like his you were — well, you were scarred. He was a strong man. Tough guy.

But why? What motivated him to get so good with a gun, to learn the art of killing, to live in the shadows?

He knew. Hell yes, he did. This particular mystery man had himself figured out. When his dad disappeared, the world changed for him. It became a place where anything could happen and nobody was safe. He was as he was for a very simple reason: he lived in deep inner terror, and it never, ever went away.

What if his kids disappeared? Or his wife, or him? He was too insecure to be able to enjoy real love.

In his lifetime, he'd killed at least fifty men, some of them with his bare hands. He'd tortured people, done it sadly and methodically, but with the same determination that drove him now. He could see beyond the immediate tragedy to the greater reward. He had wired up the gonads of Cambodian kids

to get information that would save American lives. Would the mothers and wives whose lovers and sons he'd sent home alive tell him he'd done wrong?

He transferred to another bus line and rode this one to the station. He went to the newsstand and picked up some magazines, then bought a club ticket for the 4:35 Metroliner.

There was always the possibility that the station was being watched, so he went to the men's room and sat in one of the stalls reading. Guys came and went, toilets flushed around him. He read about elk hunting, then paged through the classifieds. *Field and Stream* always reminded him of the last time he had hunted, which had been with his dad. They gone up along the Chattaminimi Ridge, and just at sunrise had seen a buck to stop your heart. That had been about two weeks before Dad was killed. The vampire would have been watching him by then, for sure. It was probably only a few feet away during that walk, pacing them, waiting, doing its research on its victim. "What's that smell?" young Paul had asked. "Bats," Dad had said. "There's a lotta bat caves up this way." It had not been bats.

He waited until four-thirty-two, then left the john and hurried across the station. This would cause a sudden redeployment of officers, if there was anybody there. He knew how to flush a tail.

There was no tail, and he also nearly missed the damn train. But he did not miss it. He got in the club car and found his seat, dropped down and opened another magazine, *Newsweek*. He stared at it, while actually evaluating his surroundings and all the other passengers. There was a woman with two little girls, some businessmen, a couple of tourists, maybe from eastern Europe. Any of these people could be tails preset on the train. He was especially interested in the mom. That'd be a clever twist, the kind of thing they might use when a pro was the target.

Still, he didn't think they were on him, or anywhere near him. He thought he'd have a good week before they decided to put him on wanted posters. Probably call him a serial child killer or something. Be sure to get police attention all over the damn country that way.

He gazed out the window. This was his America he was passing through,

this America of rolling hills and tidy suburbs, and rusty old factories clinging to the rail line. He remembered a very long time ago when this was still the New York Central Railroad, and the cars had been painted olive drab. He'd made his first trip to New York on this line, emerging in Penn Station with saucer eyes and fifteen wadded up dollar bills in his pocket. He'd stayed at the Taft Hotel on Seventh Avenue, with three other guys from the college.

It was on that trip that he had seen his first truly great painting, Van Gogh's *Starry Night* in the Museum of Modern Art. It was also on that trip that he had gone to his first opera, *Turandot*, about a cruel princess in a moonlit palace of long ago.

He had been a person, then — a young person, just awakening to the world around him. Fresh as the dew, drinking his first drink, smoking his first cigarette, lying in bed at night with Connie Bell on his mind.

He was a killing machine now, was Paul Ward. He'd lost his ability to love women. He could still have sex, and he did that whenever it was convenient, either with whores or casual pickups. But love? No. That part of his heart had gone out like a spent old coal.

It did not seem as though two and a half hours had passed, but they were entering the Pennsy Tunnel, sure enough.

New York. It probably wouldn't be where matters ended, because he intended to follow this path to the last vampire in the country. He probably should have started here. But nobody they were aware of had ever even seen a vampire in those days, so Tokyo looked like found money. Too bad the Europeans had kept their programs to themselves.

He left the train last, walked up the platform alone. Nobody was watching him. He crossed Penn Station. Nobody here, either. He went out, up the stairs to Eighth Avenue.

Cabs roared past, people swarmed the sidewalks. He was tired, bone tired, and he wanted a major drink. A whole lot of 'em. He'd really love to have found some bar fighters, but he was too deep in cover for that now. First chance he got, he planned to spend some time smashing his fists into a

goddamn wall.

You burned down your house, fella. Just jumped up and ran out of there. What the hell did you know? Maybe those two guys were gonna give you a decoration.

He stuffed his hands in his pockets and started up the avenue. He wasn't going anywhere in particular — just away from here. He needed a place to crash, for sure. The flight from Paris to Dulles had been lousy — a middle seat, a kid with massive quantities of popcorn on one side of him, the King of Sweat on the other. Then touchdown and straight to Langley, and the shit spitting through the fan.

He was so fucking tired; he didn't think he'd ever been this tired. Tired or not, though, he was a man obsessed, and his obsession kept him going. He was here to find and kill the parasites that had taken his dad away from him, and he was going to do it. He slogged off down the street — and soon found himself passing the Theater at Madison Square Garden. Lou Reed was giving a concert tonight, which might actually make him feel a little less miserable. Also, dipping into a crowd never hurt. He'd use it to strip tails, then find a room later. He turned the corner and went up to the ticket booth, asked for one on the aisle anywhere in the auditorium.

“Sold out.”

“What're they scalping for?”

“Eight hundred up. Guy on the corner, black jacket, he's got a few.”

The hell with that. He couldn't afford anything nice, never had been able to. Intelligence work was not a comfortable life, especially not in the field. James Bond was a cruel fantasy.

He decided to hunt up a fleabag that would sell him a few hours sleep for cash. Then he would start his investigation, and he would find the parasites in their holes, and kill them all.

THIRTEEN

All Through the Night

Across the sour reaches of an uneasy day, Sarah had waited and Miriam had remained silent. At the last moment, Miriam decided not to go to Lou's concert, saying that she was too tired. But that wasn't it. Miriam was never tired. The truth was obvious to Sarah: she was too scared.

Whoever she was running from was obviously extremely dangerous. But who could be dangerous to her? The other Keepers might not like her, but they weren't going to terrorize her. Could it be a human being? That seemed impossible.

Miriam's world had gathered her in, shielding her behind its walls of money and power. Only a few of her admirers *really* knew — or, if they had been told, actually believed — how she sustained her life. They preferred to view the *frisson* of danger that clung to her as part of her extraordinary personal style — an intoxicating mixture of sin and savagery and high culture. Had they known for certain that the whispers were true, most of them would have abandoned her to the police. Or so they told themselves.

During the watchful, uneasy night, Sarah's hunger had increased. Miriam did not offer Sarah the comfort and support she was used to getting from her. Instead, Leo was given the responsibility of attending to Sarah's suffering, giving her aspirin, then preparing a pipe for her. Leo's presence, since they had returned from England, had obviously become more important to Miriam, and Sarah found this disturbing. She did not like Leo. She did not want her in their lives.

Sarah smoked in the library while Miriam paced and consulted an old Keeper tome. She seemed to be looking for something in her books, paging carefully through their heavily illuminated pages. Sarah had been unable to crack the incredibly intricate hieroglyphics, and when she asked to be taught

the language, Miriam had said, “Your species isn’t intelligent enough to learn it. I might possibly be able to teach you to read a list, but who wants to do that?”

Of course, all of the important information about the Keepers was recorded in long lists in the Books of Names. If Sarah was ever to complete her own book, she needed to know that language. But she would need professional linguists and cryptographers to help her, if Miriam would not.

Miriam was now wearing one of her many wigs, a darling bobbed affair, pert and blond, that made her seem even younger. In it, she appeared her usual resplendent self. But she had been *burned*. Who would have done that? Even if it had been Keepers, why was she still afraid? Keepers didn’t hunt each other down. They argued and fought, on occasion, but their battles were never to the death.

Could it have been a human being? If so, then what manner of human could have managed it?

Near dawn, Sarah had awakened from a sleep made gaudy by opium. She felt awful, her stomach full of acid, her body aching, her heart hammering. She knew the symptoms perfectly well: Miriam’s blood — that strange otherness within her — was literally devouring her in its hunger.

The symptoms were not unlike those of a severe bacterial infection, as her immune system fought the part of her that was turning against her own flesh. Soon, she would be feverish. Then later, she would grow delirious. In the end would come death. Sarah had to feed. She had to do it now.

She was surprised to hear more than two voices coming from the direction of the kitchen. At this hour — about six in the morning — it was most unusual for there to be a stranger in the house.

Sarah hurried toward the kitchen. She found Miriam and Leo attending to the needs of a shabby, heavy woman who wore a tattered coat and scarf and smelled of ammonia and sweat. Sarah the doctor saw immediately that she ate badly and drank — was, in fact, somewhat drunk right now — had untreated skin cancer, and, from the droopy look of her right eye, an

undiagnosed stroke.

Beneath her feet Sarah could feel the rumble of the big furnace, which was used to incinerate remnants.

She continued to look upon her — perhaps sixty, obviously a street person, eating a piece of Leo’s rhubarb pie. Leo could bake. She could make fried chicken. Now, her sleeves were rolled up. There were handcuffs in the hip pocket of her jeans.

Sarah was appalled. Leo was being allowed to participate in this. Leo! Had Miriam lost her mind? This sort of business was for the Keepers and the blooded only. Never should Leo have been involved.

“Hi,” Leo said brightly. “I got you what you need.”

Sarah looked at Miriam, who leaned against the drainboard, watching with those crystal eyes of hers. She murmured, “Do it now.”

Leo said to the woman, “More milk?”

She replied, “Sure, lady.”

“Miri,” Sarah said. She nodded toward Leo. You didn’t feed in front of one of those. No way!

Leo went behind her as if to go to the refrigerator. As she pulled open the door, she also drew a sock stuffed with ball bearings out of her tight jeans pocket. She positioned herself behind the busily eating woman.

Miriam had obviously instructed her. She had *instructed* an ordinary human in this terrible secret. What if Leo went to the police, tried blackmail — there would be no way to stop her unless she was imprisoned like Sarah, in the bondage of Keeper blood.

Leo hit the woman. It was a gingerly, inexpert blow. She barked with surprise, pie flying out of her mouth.

“Again,” Miriam said. She was completely at her ease.

The woman started to her feet, her eyes bulging with surprise. Leo struck her again, but she was in motion now and the blow was even less effective. She stumbled forward against the table. She said something, perhaps in Russian.

Miriam answered her in a harsh voice, in the same language. The woman shoved the table aside, began to run toward Sarah and the doorway behind her.

“Keep after her, Leo,” Miriam barked.

This blow came down right on top of the cranium — not well placed, but there was plenty of travel in it and the woman went down like a bag of lard. Her forehead hit the granite tile floor with a jarring crack.

“Now,” Miriam said, “Sarah will prepare her with a little bleeding knife, won’t you, Sarah? Get your kit to show Leo.”

Sarah looked at the body, the slow rise and fall of the chest, the strange repose on the face.

“It’s in my office,” she said.

“Then get it. But be quick.”

She went up to the bedroom, through it, and up the narrow stairs to the tiny space that was her own. Its window looked out on a wall, but it had a lovely skylight. On fine days, she would sometimes lean back in her chair and let her thoughts wander in the sky that unfolded overhead.

Her desk was stacked with papers, and a frame from a statistical analysis program she’d been using glowed on her computer screen. She had been analyzing the effect of a new plasma solution made from Miriam’s blood on the decayed cells of her former lovers’ bodies. So far, the results were ambiguous at best.

She knew she shouldn’t, but she sat down. Her hunger was calling to her, screaming to her. But she still sat down; she still looked at her figures,

thought a little about the deliverance she was working on.

A life was about to be wasted, and this was comfort, because somewhere in these statistics and the cellular structures they reflected, there was a way to eject Miriam's blood from your body . . . maybe even a way to rescue those who had faltered while it still flowed in their veins. Faltered, but not died . . .

She clicked her mouse a few times, and a photo appeared on the screen of somebody who had most certainly died. This picture had been strictly forbidden by Miriam, not allowed anywhere in the house.

She gazed into it, into the smiling face of her beloved Tom. She and Tom Haver had discovered Miriam together. It had been a heady time for them at Riverside Hospital, uncovering together the fact that this was a new species of intelligent creature, sharing the earth with mankind.

In the picture, Tom was smiling. It had been their last carefree moment together. In fact, the last carefree moment of Sarah Roberts's life.

Behind him was the South Street Seaport Maritime Museum, in the days before all the new restaurants and attractions. They'd just come down off one of the old sailing ships. It had been a sunny autumn afternoon. He was wearing a windbreaker.

She knew every detail of how he had been when she had snapped that picture, remembered even his aftershave. It had been something called Jade East. They had walked hand in hand up South Street, bought some oysters at the Fulton Fish Market, gone home and eaten them on the tiny deck of their apartment. They were so in love.

Eleven days later she had killed him. She had killed Tom, and now his soul rested within her. She never spoke of him, hardly dared think of him because sometimes it seemed as if Miri could read thoughts. But he was part of her, and it was to him she would go, if ever her soul was released from the prison of this life.

Working quickly, she returned the picture to its hidden file. Miriam never touched the computer. But she might, and she was certainly smart enough to

understand it. Sarah could not imagine what would happen if she discovered the picture.

If Miriam understood the depth of Sarah's rebellion, she might be returned to the attic.

She looked toward the small door in the side wall. It led up.

She knew that she should get her fleam from the desk drawer and take it down immediately, that she was already overdue, but instead she gazed at that door.

It did her soul good to go up there. But it was hard to do it, to see them . . . and to see the other thing that was there.

She laid her hand on the knob, twisted it. The dark stairs rose steeply. She mounted them, hesitated, then walked quickly up.

Before her was a room dimly lit by small oval windows. There was something almost noble about the wide space with its sweep of gray floor. The attic ran the length of this large house, and thus was its largest room.

Bats roosted in the upper timbers. Ancient brass lanterns hung from crossbeams. This room had never been electrified.

Here were the coffins and boxes that represented her mistress's incredible greed, her invincible belief in her own rights over the rights of others. Here, also, was a humble coffin made of gray steel, still looking quite new.

Sarah went to it. She drew it open. It was here that Miriam had laid her after she had attempted to destroy herself. She ran her fingers along the white satin facing, touched the little pillow where her head had rested.

Here she had passed through death and here been brought back. This coffin, she felt, was her true home. This was the center of her reality and her being. It was where she must one day return. And she did return, when Miri was deep in the dead sleep that followed her feedings or — as now — otherwise occupied. Sarah would get in and draw down the lid, remaining

until the air ran out and she finally had to open it to breathe.

There was a deep, profound satisfaction involved in doing this. When she pulled that lid down, it was as if fresh water was soothing her burning, tortured soul.

She wanted to right now — especially now — so very badly. But she had to get back. She had to take the fleam. Her victim was waiting to be robbed of her life.

Through tearing eyes, she looked along the far wall, to the coffin that Miri so frequently came to see. This was John Blaylock. What Miri did not know was that Sarah would sometimes open this coffin . . . as she was going to do now.

She went to it, unlocked it, raised the lid. A familiar dry, spicy scent came out — the potpourri that Miriam kept there. The corpse was narrow, dressed in a tail suit with a wing collar. The neck had grown thin, and the face was distorted by the profound necrosis of a body dead and from drying out for twenty years.

The lips had slid back from the teeth, and the cartilage in the nose had dried out. The corpse was grimacing. But there was something about the grimace — some, strange living essence that made it hard to look upon for long. For this was no ordinary corpse. This was a living corpse.

She laid her hand lightly in the corpse's delicate hand. Then she leaned into the coffin and touched her lips to the dry, rotted cheek. She whispered, "I'm making progress, John. A little at a time. But it's there, John. It's there." With the slowness of an hour hand, the fingers of the corpse were closing. If she had an hour or two or three, John Blaylock would gradually grip her hand with an appalling grip. His fingers would feel like corded steel. His nails would dig as if seeking to break through to her blood.

But now, there was only the subtlest of changes — a slight tickling of a bony finger in a soft palm, the sighing pressure of a long, hard nail upon the tender inner edge of one of her fingers.

She drew away from him. In his eyes, she could see fire. See it — but was it there? Then she heard the sound of the corpse — for it made a sound when she came. It was moving — dry muscles, dead skin, every part of it. This created a rustle no more than the whisper of falling leaves, but it was unmistakably a sound of life.

In her clear, gentle voice, as soft as the tender airs of the night, she sang to him a song that was familiar to all of Miriam's people:

*“Sleep my child and peace attend thee,
All through the night. . . .”*

With that she left him. Miriam would not be pleased with this delay. But Sarah had a relationship with John and the others. One day, she would either bring them back to life or give them the release of true death. One day.

Her research had proceeded much farther than she had told Miriam. In fact, she was probably farther along in understanding the physics of the soul than anybody else in the world. This was because science rejected its existence. But she had *been* a soul, one trapped in its own corpse. So she knew that the soul existed. She had discovered that this rich electromagnetic being was accessible to technology, for it was part of the physical world, not some strange supernatural essence. The soul was a living plasma composed of trillions of electrons, each one cast with a slightly different spin, and each spin expressing a tiny part of the harmony and memory of the whole incredibly detailed being.

There must even be a medicine of the soul, she felt, for it could be sick and it could suffer. Oh, yes, it could suffer.

As she crossed the attic, the rustling grew faint, fading on an unmistakable note of dejection.

She drew her spotless sliver fleam out of its case of human leather and hurried downstairs.

They had cuffed the victim, who was laid out on the white enamel kitchen table.

“Pull up a chair,” Miriam said to Leo. “It’s quite a spectacle.” She glared at Sarah, but made no other comment on her slowness.

Sarah tried to control her shaking hand as she felt the pulse. With her doctor’s precise knowledge, she could determine exactly which neck artery would offer the best flow.

“What is that instrument?”

Sarah looked at Leo, who was sitting with her chin in her hands, watching from two feet away. She was going to watch an innocent human being die, and all she could bring to it was this ugly fascination. Sarah went from disliking Leo to despising her. She was actually tempted to go after her with the damned fleam.

When she did not answer Leo’s question, Miriam said, “It’s an antique surgical instrument, from when they used to let blood. That hooked end nicks into the vein, then the blade opens it. It’s very neat.”

“You don’t use one, though.”

With a dry sound, Miriam opened her mouth. Leo gasped at the funneled cavern with the pointed, black tongue at its center. “I don’t need one,” Miriam said, chuckling.

“Fleams were used by vets to bleed horses,” Sarah said. “It’s a brutal tool.”

“It looks beautiful.”

“That’s because she keeps her instruments so clean. She’s a doctor, remember.”

“How does this make you feel?”

“How does it make me *feel*?”

“Hurry up, Sarah,” Miriam said quickly.

Her throat was closing, her eyes tearing. But she tried to be proud, to do

well what she must do to survive. She was weak; she should let herself die. But she couldn't stay in that coffin of hers, no more than you can kill yourself by holding your breath.

“Aren't you going to wake her up for it?” Leo asked.

Miriam burst out laughing. “She likes them out cold! She has no taste!”

What Miriam meant was that the blood of a suffering victim tasted better. The adrenaline gave it a delectable piquancy.

Sarah hooked the fleam into the carotid on the right side. Leo came around the table so she could see the sucking process up close. Sarah's cheeks were hot with embarrassment; her soul was wretched with shame. But the blood that dripped out — oh, God, oh, it smelled so *damn good!*

There was a small struggle. The woman shifted on the table, moaning dryly.

“Do I hit her again?” Leo asked Miri.

“Please,” Sarah gasped.

Leo hesitated, looking at Miriam.

The woman stirred again.

“Leo, *please!*”

Miriam stayed Leo's hand.

The victim's eyes opened. Sarah glared at Miriam. “Miri!”

“Leo, don't you move!”

The woman said, “What the heck?” She started to sit up. Sarah pushed her down, nicked again with the fleam and locked her lips to the dirt-ringed neck. The woman said, “The *fuck!*” Then she rattled along in her own language, obviously cursing. She squirmed; she tried to free her hands.

Sarah forced every iota of air out of her lungs. She distended her belly. She locked her lips tight to the neck, making the best seal she could. The woman flounced and struggled, but Miri held her head and made Leo lie across her midriff. The woman made rasping sounds — desperate attempts to scream.

Sarah sucked. The artery wall resisted, then gave way, spurting a flood of fresh, hot, salty blood straight down Sarah's gullet. The effect was a thousand times more powerful than a hit of the purest heroin ever made. From her toes to her head, her skin rippled and shivered. An orgasm came, spreading through her until her whole body was a single, pulsing, vibrating dynamo of sexual genius. Somewhere far away, she could hear Leo laughing and crying at the same time, and Miri's voice comforting her, saying soft things that she did not mean.

She sucked and she sucked, and the old voice went down to a growling babble. She sucked and the old heart came to a stop. And then the body went slack, and the flow went down.

Sarah drew back. Blood, very black, dribbled onto the table.

Leo was standing at the far end of the room, her eyes round, her face covered with tears. Miriam said, "Come here to me."

Leo shook her head.

Miri went to her and drew her by the wrist. "*Watch!*"

With one huge drag, Miriam did what no human being could ever do, no matter how evolved their technique. She emptied the woman of every trace of fluid that was in her. The skin sank back against the skull, drew tight, crackling as it turned to dry parchment. The eyeballs withered, the clothes went slack around the body. And then Miriam came up, the corpse still popping and crackling as cartilage snapped and muscles twisted themselves into hard, narrow ropes.

Leo put her hands to her cheeks and screamed. Her eyes wild, she turned to run out the door.

Miriam was on her in an instant. She grabbed her collar, gave her a slap that snapped her head aside. “Shut up! You *watch!*” She glared toward Sarah, who was feeling the gorgeous postprandial levitation that came when you fed really well. Moral guilt had its limits. Now all was right with the world. Like an addict who has ridden the horse and lost, she was content with herself, made so by the charm of the drug that had seduced her.

“Sarah,” Miri said, “take Leo down and show her how to do a proper burn. And I expect to see no ash, do you hear me?”

“Yes, Miri.”

“I’m sorry, Miri!” Leo babbled, rubbing her cheek. “I panicked.” Leo went to the remnant, touched the skin that tented the face. “This is incredible!”

“It’s a small penalty to pay for eternal life, my dear. An occasional hobo goes to the Big Rock Candy Mountain.”

Leo frowned. “The what?”

“Gets released from the toils of a miserable life,” Sarah explained. Slang tended to enter Miriam’s vocabulary with a fifty to hundred year lag time.

Leo would not touch the remnant, so Sarah threw it over her shoulder and took it down. In the basement, Sarah said, “Having fun?”

“That’s not appropriate,” Leo said officiously. “A woman had to give her life.”

“For me? Maybe I ought to kill myself.”

“No, you have a right! Nature made you this way.”

“Miriam Blaylock made me this way. And she’s going to do it to you, too.”

“Miriam Blaylock *is* nature. And if she bloods me, it’s going to be the biggest privilege of my life.” They burned the remnant in a fire kept blue by Sarah’s careful attendance at the controls.

As they were starting to ascend the stairs, Miriam said, “Come into the infirmary, please.”

Sarah turned, surprised to find her down here. She was even more shocked when she saw that she was naked and all trace of makeup was removed. Her hair was coming back, a blond fuzz on her otherwise bald head.

Leo gasped. Sarah took her hand. “Don’t be afraid,” she said.

“But she’s — ”

“She’s not a human being, Leo.” Sarah was stirred by the long, lean body, the deep, dark eyes. This was a being she loved, who had covered her with wild kisses, who had expressed every shading of passion upon her quivering, delighted body. No matter how much Sarah hated Miriam, she also loved her, and loved the fact that Miriam took pleasure in her. “You’re my beautiful one,” she would say, and kiss every part of her body, her lips, her eyes, her moist pudenda. “You pretty little angel, you dear, soft baby.”

Leo made a terrified sound in her throat as the tall creature with the bright red eyes and wire-thin lips strode into the light. She took Leo’s hand. Sarah knew that Leo was now trapped. Nothing the girl could do — no matter how hard she struggled and fought — would release her from that seemingly gentle grasp.

Sarah was horrified at what was happening — at how swiftly Miriam was acting, so that the girl had no time to consider her situation. But she was also fascinated because she had wondered about the scientific issues involved in the transfer process. She welcomed a chance to observe it clinically.

Miriam drew Leo into the infirmary, a superbly equipped laboratory designed by Sarah, who followed obediently along.

She was already being buoyed by the effects of her feeding. In an hour or so, the Sleep would come and she would take to bed, and Miri, as was traditional between them, would sing her a lullaby. The Sleep would take her, and as it did, she would deliver herself body and soul into the protective custody of her beloved and despised mistress.

Miriam had tamed Sarah, after a fashion. But so also, Sarah had tamed Miriam . . . after a fashion. Thus does a love affair between species proceed — wild creatures finding what is universal between them, sensual delight and what abides in the heart, that love can cross any boundary and flourish anywhere.

The bleeding instrument — a black hose fitted with a small hand pump and two large silver needles — was already dangling from Miriam’s arm, one enormous needle a gray shadow in the flesh above the crook of her elbow.

Leo was staring at it, her eyes practically popping out of her head. Stumbling, she followed Miriam into the small hospital room. Miriam patted the examination table. Leo sat.

“Get the ice packs,” Miriam said.

“What ice packs?” Leo asked.

“We use ice packs in the procedure,” Miriam said. “Now strip.” She clapped her hands. “Chop chop!”

Leo threw off her clothes. She lay down on the table, arms rigidly at her sides. Miriam looked at Leo’s arms. “Set it,” she said to Sarah.

“I don’t like needles,” Leo said as Sarah stroked up a vein. How Sarah hated her now, the poor, scared little cow with her drippy nose and her big brown eyes.

Now this kid would get what she wanted. Later today, Sarah would take her to the attic, let her listen to the rustling, introduce her to who lay there.

“You will now be delivered of the blood of your eternal Keepers,” she said. “You will become part of me and I of you. Do you understand this?”

Leo said in a tiny voice, “I think so.”

“You will be given eternal life.”

“Miri!”

Miriam cast a glance at Sarah so terrible that her jaw snapped shut.

“Eternal life! But you will be bonded to me by an unbreakable bond. You will be expected to serve me in every way, without question. There will never be an end to it. Do you understand this?”

Leo turned her tear-streaked face to Sarah, and Sarah saw there a call for rescue from the very depth of this human creature. A soul was being lost, and it knew that it was being lost. But she said nothing.

“Set the needle.”

“N-no,” Sarah said. “No!”

“You do it!”

“Leo, this is wrong!”

She tried to meet Leo’s eyes, but Leo would not look at her. Miriam grabbed the needle and jammed it into Leo’s arm. Leo cried out.

Sarah reset it properly, secured it with tape.

“You are free to go, Leo,” Miriam said. “I haven’t started yet.”

“It hurts!”

“Again I say to you, you are free to go.”

Leo began to cry.

Sarah was awed at what she was seeing. She had a sudden, electrifying insight into who the Keepers were, into what Miriam was. They were indeed a force of nature, and she thought that they might be killed, but they would never die. No matter who hunted the Keepers, the Keepers would always in one way or another wander the world, seeking the ruin of souls.

Miriam grasped the pump in her long, narrow fingers and crushed the bulb smartly. Leo flounced on the table, giving a loud cry. Again, Miriam pumped,

and again. Leo's upper arm turned fiery red. She began to sweat.

"How does it feel?" Sarah asked.

"My arm's on fire!"

"Do you feel faint? Woozy?"

"I see an ancient city!"

Hallucinations. Interesting.

Sarah touched the skin of the neck. Pulse very rapid. She laid her hand on the forehead. Hot, dry. She got the ice packs and laid them along Leo's sides. Leo began to shiver.

Miriam pumped, waited, pumped again. Leo's eyes fluttered back into her head.

"Slow down," Sarah said, "she's seizing."

Leo's bowels let go.

"Clean it up," Miriam snapped, and Sarah went to work with towel, sponges, and bedpan.

Leo cried and moaned. Sarah had to hold her arms so that she wouldn't tear the needle out. She arched her back and writhed; she shook her head from side to side.

Sweat, blushed pink, began to bead on her upper lip and forehead. Her epidermal capillaries were hemorrhaging.

Sarah took her blood pressure — 270 over 140. Pulse rate 132. Temperature 106 degrees. She had perhaps half an hour to live, fifteen minutes before brain damage or a stroke. Sarah got more ice, put a pack behind her neck, another between her legs. The temperature dropped to 104 degrees.

Over ten slow minutes, Miriam pumped five more times. Leo came to and looked from one of them to the other out of agonized eyes.

“How do you feel?” Sarah asked.

“Water, please . . .”

Miriam withdrew the needles. Sarah took alcohol and iodine and cleaned Leo’s wound and stopped the leakage of blood with a small pressure bandage. She didn’t need to do anything for Miriam. Her wound healed itself inside of a minute.

“How did you know when to stop?”

“Her skin told me.”

Miriam’s people could diagnose practically anything in human beings by merely observing their skin tone. It was quite remarkable.

“What would have happened if you’d kept on?”

“I would have wasted blood. She would have died.”

Miriam took Leo in her arms and went out with her, saying nothing to Sarah. She was more alien right now, less human, than Sarah had ever seen her. She realized that Miriam’s whole personality was a sort of act. Seeing her like this, you realized that she was light years away from being human.

Sarah followed Miriam up to their bedroom. Miriam laid the girl, whose whole body was now flaming red, in the center of their bed. The Sleep was coming heavily onto Sarah, and she longed to lie down, too. But Miriam went to bed with Leo, enclosing her in her arms.

Sarah was left to the daybed. As she drifted into the dreams she would share with the victim whose life flowed yet within her, she heard her Miri singing to her new captive,

“Sleep my child and peace attend thee,

*All through the night.
Guardian angels God will send thee,
All through the night ”*

She cried herself to sleep, Sarah did, but when sleep came, it took her into a golden ship that sailed a windswept sea. In the purest blue sky she had ever seen, white seagulls wheeled and dove and cried. They came down and flew among the sails of her ship, and called to her with their harsh, haunting voices.

She knew that they were the birds of God's careless and unquenchable love, calling to her and to Leo, and even to Miri, as indeed they do to all.

FOURTEEN

The Veils

Sarah awoke when the afternoon sun, glaring in the tall bedroom windows, turned the inside of her eyelids bloodred. Leo was there instantly, kissing her, embracing her. “Oh, Sarah, I’m so glad you’re awake! I’ve been missing you like crazy!” “You — you’re not sick?” She should have been hanging between life and death.

“Oh, I was,” Leo said. “I was *so sick*.”

“You slept for two days,” Miriam said. She came down out of the light like a descending angel. She was dressed in bright white silk. Her hair was nearly grown back, and flowing golden blond across her milky shoulders. She was perfectly made up, looking absolutely ravishing. Her eyes were their usual ashy gray.

“We’re going to play this afternoon,” she said. “You’ll want to call your musical friends.”

Sarah took Leo’s hands. “Leonore, do you know what’s happened to you? Do you understand anything about this at all?”

“Look at my skin!”

How well Sarah remembered that miraculous discovery. A woman loves a pure skin, more than most realize — until she suddenly has something she never dreamed possible.

Leo shook her head. “And my hair!”

It was as pretty as Sarah’s, almost as pretty as Miri’s.

Perfection had transformed a pretty girl into a shockingly beautiful one. Leo smiled down at her. “I threw up all yesterday, but I’m better.”

“I used up all the antinausea stuff,” Miriam said. “She took to it more easily than you.”

“But now I feel — ” Leo shivered her shoulders. “I feel *fabulous!*”

As Sarah went about the duties of her life, showering and washing her hair, Leo chattered away about herself. When should she feed? Should they hunt together or was that wise? On and on. It was utterly grotesque.

“Leo,” she finally said when she was dressing, “I usually take this time in my office.”

It was a lie and Leo knew it. But she understood and withdrew at last.

When Sarah arrived downstairs, Leo was sitting cross-legged on the floor of the library looking at Keeper books she’d never been allowed to so much as touch. She tossed one of the ancient volumes aside and rushed up to kiss Sarah, chattering about yet more sensations and symptoms.

Sarah picked up the book and replaced it in its box. “These are very fragile,” she said.

“Yeah, they’re in Egyptian! Are they from Egypt?”

“They aren’t in Egyptian. They’re in the Keeper language, which is called Prime. The book you were paging through is thirty thousand years old. It is made entirely of human parchment and is also the finest illustrated medical text on the planet. If it had a value, Leo, it would be, very simply, the most costly artifact in the world.”

Leo had the hangdog expression of a surprised hound. But then she tossed her coltish hair and asked, “What are the first signs of hunger? I don’t actually know.”

“You feel cold. Your skin starts to get cold. Then you become a bit less energetic. That’s how it begins.”

“Should I get my own fleam?”

She sounded very like a bride planning her trousseau, or a pregnant girl deciding the furnishings of the nursery.

“Use a fishhook.”

“*Afishhook!*”

“A shark hook works quite well. I used one for years. The fleam belonged to my predecessor. Miriam just gave it to me recently.”

“Your . . . what do you mean, ‘predecessor’?”

“Oh, didn’t Miri tell you? We last about two hundred years. Unless there’s an accident, of course.”

“We die?”

“Oh, no. That we cannot do. We end up in the attic.” She smiled. “Like cast-off overcoats.”

Leo glanced toward the stairs.

“Miri didn’t tell you?”

“No, she didn’t.”

She took Leo’s hand and led her upstairs.

Miriam was at the head of the stairs. “I thought you were going to make an arrangement, Sarah.”

“An arrangement?”

“Flowers. For our guests.”

“I — yes. I was.”

“Miri, do we die?”

“You do not die.”

“But she said — ”

“The contents of the attic are my affair. As are those books. You girls do not *ever* touch Keeper things without my permission!”

“I thought — ”

“You thought you had the run of my house just because you’re blooded? You go downstairs and get things ready, both of you. And, Sarah?”

“Yes, Miri?”

“Be careful. Be very careful.”

As Sarah was arranging the flowers that would stand on the piano during the musicale, Leo chattered away about the kinds of people she preferred to “do.”

Finally Sarah snarled at her, “You’ve become a serial killer.”

Leo went silent.

Sarah turned on her. “You have! During the hundreds of years you now have before you, you’ll take thousands of lives! Men, women, children, every one of them wanting life and deserving life, and you will take their lives — steal their lives — because you’re a greedy, self-involved little monster!”

“Sa-rah!”

“You’re not worth the warts on one of their fingers! Not one! But in your arrogance, you think you’ve gained some natural right to kill them! Miriam has such a right — maybe! But you certainly do not.”

“Then neither do you!”

“I had this done to me. I didn’t ask for it. You did, Leo. You knew what it meant and yet you asked for it!”

Miriam strode in. “Miri,” Leo wailed, “she’s — ”

“I can hear,” Miriam growled. She looked from one to the other. “Two canaries in the same cage,” she said. “You’d better learn to get along, because you won’t be let out. I’m in trouble and I need you, both of you. Hell, I need ten of you! Fifty! But I do *not* need any bickering or moralizing or bitching. You’ll work together as a team or suffer the consequences.” She glared at Sarah. “Severe consequences.” She looked at the flowers. “That’s quite nice,” she said. Then, to Leo, “You are not her equal. You will learn from her and take her advice and, in my absence, her orders. Is that understood?”

“Yes, Miri.”

“Miriam to you, child.” She went out.

“Wow,” Leo said.

As the sun slanted across the floor, Sarah got out their violas da gamba, and she and Leo set the chairs. Among musical circles in New York, Miriam’s talent was well known. Far more had heard descriptions of her playing than had actually been privileged to listen, however, for she never gave public concerts. In fact, she didn’t perform at all. This would be, as far as she was concerned, merely an hour’s casual entertainment.

Leo greeted the guests, watching to see if they noticed how beautiful she looked. They noticed, all right — especially the women, who were always more aware than men of the details of beauty, the grace of the hands, the taper of the neck.

Sarah and Miriam had been working together on LeSieur de Malchy’s splendid “Fifth Suite for Two Violas da Gamba” for a few weeks before Miriam went to Thailand.

Maria Sturdevandt came and said hello to Sarah and Miriam. She would sing Madama Butterfly tonight at the Metropolitan Opera. With her was her

companion Charlie Gorman. Bootsie Ferguson, the wife of Henry Ferguson, CEO of Goldman, Sachs was there.

Miriam could play most instruments simply by picking them up, but she had practiced on the piano, the viola, and the flute, and on these she was masterful. Sarah had not been much involved in music before meeting her. But her own viola was now one of the loves of her life.

As she played, she gazed from one member of their small audience to another. She watched Falstaff Rosenkrantz, editor of *Vanity Fair*, searching his pockets for what turned out to be a Chap Stick. His powerful shoulders and narrow waist suggested good-sucking veins. She imagined how he would taste, all salt and wine.

As she watched Miriam's long, splendid hands manipulate her bow with the lightness of a breeze, she drew her own notes as best she could.

Sarah felt rotten about feeding and about Leo, and Miriam was distracted by her crisis, but the listeners, by their expressions, obviously felt as if they were in the presence not simply of musicians, but of masters of music. The suite proceeded from its dancing allemande to the saraband and finally the subtle, generous minuet. They sat side by side, Miriam in a summer dress of the lightest blue silk, Sarah in jeans and a black turtle-neck.

Standing open on the piano was a bottle of claret, a Latour nearly a hundred years old. There were glasses about and another, identical bottle beside it. A half-filled crystal carafe, shaped for use in ice, stood on an extraordinary little table. This wine was a white, but its color — a pale, rich gold — suggested that it, also, must be very fine. In fact, it was a freezing cold, exquisitely sweet Yquem, just now, at forty years, coming into its maturity. When guests sipped these wines, they would close their eyes.

The furnishings, also, were extraordinary. The chairs upon which the guests sat were Directoire pieces, some of them. It is to be remembered, though, that the designs of that period were inspired by classical models, and some of the other chairs were originals, carried from hearth to hearth in Miriam's baggage for millennia. Their wood, having been lovingly cared for by Sarah and all of her predecessors, was as rich as when it had been cut in

the now-vanished forests of Greece and Italy and the Levant.

Miriam remembered when this piece had first been played. It fit the moment so well because it had been composed out of pain, and this was a time of pain.

LeSieur de Malchy had fallen in love with Lamia, and Lamia had amused herself by leading him on, letting him kiss her alabaster limbs and gaze into her proud and laughing eyes. She had drawn him into deep, true love, as she was so very expert at doing, with the intention of then abandoning him to his music. She didn't want a man. She wanted a composition.

Out of his anguish had emerged music fit to satisfy the ancient heart of the Keeper. Among humans, it had never been all that popular, but when Keepers joined to play, LeSieur was inevitably among the choices.

The instruments that Miriam and Sarah used had belonged to LeSieur, made by Barak Norman, of London, for him.

Miriam, as she played, well recalled LeSieur and her mother playing the piece together.

The room had been small and close with candle smoke, but finished in gold, with scenes of forest walks painted on its walls. The music, Miriam remembered, had captured, as if in a living amber, the passion that this man felt for the woman who sat with him in her tall wig and splendid white gown.

Only Miriam had been their audience, as she was audience to every moment of her adored mother's life. As Sarah served her now, she had once served Lamia.

The music came to its end. There was no applause. They had learned long ago, her friends, that such displays were not wanted. She poured herself some wine. It was the least refined alcohol she could tolerate, wine. But the soul of the grape, captured, gave her spirit enough pleasure that she had collected wine through the years. She'd drunk Falernian in Rome, for she had been intimately involved with the lives of the old emperors.

Most of these men had not died by assassination as history recorded, but as vestal sacrifices. Rome had been secretly ruled by a concealed religion. The emperors were only seasonal kings, doomed to serve the state until the priestesses of Vesta decreed that it was time for them to die. They learned of this little condition only after they achieved the purple. It was no wonder that so many of them went mad.

Some had been throat-slitted or smothered or strangled, but others had been delivered to certain dark villas, rich, strange places whose graceful inhabitants spoke a tongue like thunder. The Vestas were a conclave of Keepers.

She put the glass down and walked out, never thinking to excuse herself from her guests. This house was run according to very ancient principles. It was an extremely exclusive place but, like an ancient palace, wide open to all who had the right to enter.

Whatever happened in here, they were free to come and watch . . . or at least, so it was meant to appear. They did so, full of nervous excitement over their attendance at what they perceived as extremely private moments — Miriam at her toilette, Miriam making love.

This was the way the aristocrats of history had conducted their lives. Their privacy consisted of being surrounded by their people, and Miriam could be comfortable no other way.

Or so it seemed. Miriam's ancient life was, of course, far more complex than it appeared. There were secrets within secrets. For, as Sarah and now Leo knew, this splendid house was also a place of murder, where innocent blood was guzzled like cheap champagne.

Paul was pushing a cockroach to the edge of the shower stall with his toe when he noticed something very odd about his feet.

He squatted, then got out of the shower and looked more closely.

It was the vampire blood that had made his skin so pale and smooth. Back in the ossuary, his shoes had been flooded with it. He rubbed his shoulder. Had it also sped his healing even more than usual?

He went back into the shower and washed and washed, using the cheap sliver of soap that had come with this cheap sliver of a hotel room. He stood in the small oblivion of the drumming water, watching the suds go down the drain.

It felt as if he were washing off a whole lot of his past in this lousy shower. Down the drain went his loyalty to his agency. Down the drain went his expectations about his own future: the successful end to his career, the honored retirement. He'd been a priest of death, and down the drain went this celibate life. Freud had said that all men want the same things: honor, riches, power, fame, and the love of women.

Well, he'd lost it all, hadn't he? — except maybe the love of a woman. But what woman would want a burned-out guy who couldn't even tell her what his life had been?

Becky, damnit, was the only woman he really wanted to talk to, and he hadn't realized it until too late. Probably all she'd ever felt for him anyway was a little compassion, maybe. Women didn't fall in love with him. They sensed all the damn violence, was his theory. He scared them. Or maybe it was all the traveling, the lack of time in one place.

He'd taken care of sex almost clinically, using whores like toys . . . or machines. Soon he wouldn't even be able to afford to do that.

Lying on the bed in his tiny room, he concentrated on his immediate course of action. He had eight grand. That would last a couple of months. But he didn't intend to spend anything like that much time here.

He lay paging through his well-thumbed copy of *New York by Night*, looking for the names of clubs, then calling information and asking for the numbers. Things in the world of Goths and Vampyres changed fast, and what had been au courant six months ago was way past its time now. None of the clubs mentioned had numbers. Probably they were all closed or transformed

into more trendy incarnations.

So maybe the thing to do was to go downtown and just walk the streets. He'd pass the locations of the old clubs. Who knew what he'd find.

On the other hand, maybe this approach was total bullshit, just an excuse for a bar crawl. In his heart of hearts, what he wanted to do was to get seriously fucked up, then find some whore to suck him off. That would put a decent end, at least, to a real bad few of days. He'd arrived in the Big Apple almost hallucinatory with lack of sleep and jet lag and the spiritual exhaustion that comes after you've been doing a lot of killing. And he'd arrived on the run. He'd holed up here, phoning a sandwich shop for food and newspapers. The room had no TV, so he'd slept a lot. At least one thing: the shoulder was doing lots better. Still hurt, but hell, by all rights he probably ought to still be in the hospital.

He had to get a gun. If he was going to blow the shit out of vampires, he sure as hell was going to need one. Too bad he couldn't get hold of one of those fancy French jobs. Now, that had been a weapon. Hadn't that baby *worked!* He'd settle for a good old .357, though. It had done good service for him in Asia, and it'd work fine here. You got close, aimed at the head. It was effective. Blew their noggins into meat and ketchup.

Problem was, where did you get a gun in Nueva York without triggering some stoolie network? Guys in the illegal gun trade made money two ways — off their customers and off the cops they tipped. Of course, they wouldn't tip on a real customer, but some jerk coming off the street, he'd get fingered for sure. His full description would arrive at the nearest precinct in ten minutes tops. Gun raps were a good collar in this town. Looked nice in a cop's paper.

First things first. Locate the vampires. If the club scene didn't do it, then go to public records, work the pattern-of-disappearances angle. What worried him about that was that a whole lot of people evaporated in this town. It wasn't like Beijing or Singapore or Tokyo, where a disappearance was news. Hell, most missing persons didn't even make the back pages in this wild old burg. So okay, he'd work the club angle to death.

They were on their way to the club, the Bentley rolling down Fifty-seventh Street toward Fifth Avenue. Miriam and Sarah sat side by side. Leo was on one of the tiny jump seats facing them.

Miriam said, “A man may show up tonight asking after Ellen Wunderling. It’s about time for him to find us. I want to be informed the moment it happens.”

The bottom dropped out of Sarah’s gut.

Leo asked, “Who’s Ellen Wunderling?”

“One of our dear princess’s little follies,” Miriam said, playfully kissing Sarah’s cheek.

Ellen Wunderling had been Sarah’s worst mistake until the Paris emergency debacle. But why would anybody still be investigating that case? The police had closed it.

Sarah wasn’t like a Keeper. She would not be able to escape from prison. If she went, she would die there, horribly, of hunger. What would happen to somebody like her, buried in a prison graveyard?

“What man?” she asked carefully, worried that Miriam would say no more. Since Paris, Miriam had obviously lost a great deal of trust in her.

Miriam reached up and opened the car’s sunroof. They were now speeding down Fifth Avenue. The spires of St. Patrick’s Cathedral swept past one side of the Bentley, Rockefeller Center the other.

Sarah curled up to her. “Miri, I’m so sorry I did her!”

“Don’t start apologizing again. We’re past that. Anyway, it turns out to be useful.” She stroked Sarah’s head. “Ellen is our little tar baby.” She smiled softly.

Sarah didn’t quite understand. She knew, however, that questioning would do no good.

“I hope Rudi’s there early,” Leo said. “I want to do all kinds of stuff tonight! I want to see how it feels now. Does it feel different, Sarah?”

“No crashes, no hangovers,” Sarah said. She gave her a false smile. “But the only drug that really matters — ” She glanced toward the intercom button. It was off. “ — is blood.”

“You’re hungry, dear,” Miriam said to Leo. “You just don’t realize it. We’ll need to find you a victim.”

Leo kissed Miriam’s neck. “Give me more of your blood. I want to be more like you.”

“You’re as much like me as you’ll ever be.”

“You’re a fool, Leo,” Sarah said.

Miriam gave her a shy sort of a smile. “Twenty years of love, and that’s all the loyalty you can offer.”

Sarah smiled right back. “ ‘Into whatever houses I enter, I will go into them for the benefit of the sick, and will abstain from every voluntary act of mischief and corruption.’ I violate my Hippocratic Oath by the very nature of my life.”

“Take off your clothes,” Miriam said.

“*What?*”

They were crossing Thirty-fourth Street. The Empire State Building swept past above, visible through the open sunroof.

“Do it.”

Sarah didn’t want to, not here, not in front of Leo.

Leo said, “I’ll help you.”

“Sarah.” There was a clear warning in the tone.

A few contortions between her and Leo, and Sarah was naked. She felt herself blushing. She covered her breasts with her arm.

Pushing her arm aside, Miriam took one of her nipples between her fingers and pinched it, watching Sarah's face. At first, Sarah tried to conceal her agony, but she finally cried out; she couldn't help it, the pain was so intense.

Leo watched, her eyes going nervously from Sarah's contorted face to Miriam's impassive one. "What's going on? Why are you hurting her?"

Miriam turned on the intercom. "Luis, take us on a tour. Fourteenth, down Broadway, give us half an hour." She released Sarah, who clutched her agonized breast.

Miriam took Sarah's face in her hands, gazed into her eyes. After a moment, she kissed her, pressing her tongue against Sarah's lips until she opened her mouth.

No matter how often they kissed, Sarah was always shocked by the sensation of those narrow teeth and that rough tiger's tongue. Miriam's mouth had a faint, meaty sourness that was at once sickening and delicious. Then Miriam broke away, spread Sarah's legs, and slipped to the floor.

Sarah could not have been more amazed. She looked at Leo and shook her head, to communicate her total confusion.

While Manhattan slid by above them and the Broadway crowds shuffled up and down outside the tinted windows, Miriam buried her face in Sarah's lap.

Never had Miriam taken such a posture. This was Sarah's place with Miri, not the other way around.

But — oh, my. Oh, *my!* Sarah thrust herself at Miri's face, her hands moving to guide her head, to press her mouth more tightly against her.

Miriam knew how to restore the bondage of a rebellious slave; she had done it thousands of times over the eons. She injected her tongue deep into

Sarah's vagina. The powerful organ stretched the membranes as tight as drumskins. When there was resistance, Miriam pressed harder. Sarah writhed. Miriam moved her head back and forth, but slowly, pumping carefully. Sarah held Miriam's temples with shaking hands and glared down at her, crying and laughing, then threw her head back and grimaced through a fusillade of explosive climaxes. When they finally stopped, Miriam slowly withdrew, dragging her roughness along Sarah's clitoris. When she raised herself, Sarah embraced her, clung to her, kissing her face and neck, then knelt on the floor of the limousine and kissed her hands and feet.

Sarah lay at Miriam's feet, her head in her lap, weeping softly. *And so, Miriam thought, the little creature has come back to me.*

"Hey," Luis said over the intercom, "you're drivin' me crazy up here. I'm gonna come in my pants."

"Leonore'll do you at the club," Miriam said to him as she lit a cigarette. She drew Sarah up beside her, took her head down to her shoulder. "You're my girl?" she said, her tone kindly.

"Yes."

She looked at Leo. "Hot?"

"Oh, my."

"Take it out on Luis."

"I don't want to make love to Luis."

"I'll expect him to report that you were sensational. Incidentally, you're going to feed tonight, so what do you want?"

Leo barely whispered the words. "A man like my father."

"Ah. And your father was?"

"Powerful."

Miriam smiled slightly, parting her lips just a little.

“When you do that,” Sarah said, “you look ten and ten thousand at the same time.”

Miriam burst out laughing. “It’s one of my *best* smiles!” The laughter was brittle and harsh, and Sarah was glad when it ended. “Stand up,” Miriam said suddenly. They had never closed the sunroof.

“I’m naked!”

Miriam gave her a familiar look out of the corner of her eye. Immediately, Sarah rose to her feet.

Miriam thought, *Good. She does not think, she obeys. She’s come back at last.*

The slipstream roared in her face, sending her hair flying back. They were going down Houston Street toward the Hudson. Crowds on both sides of the street started cheering and applauding.

Sarah threw back her head and raised her arms high and screamed and screamed and screamed.

New York wasn’t exactly the most dangerous city in the world, but the screams that Paul was hearing made him think that a woman was being killed. He looked up West Broadway toward the sound — and saw a black Bentley pass, going west on Houston Street. Some idiot girl was standing up in the open sunroof bellowing her head off, that was all.

She’d scared the hell out of him, damned rich bitch. He’d’ve liked to have given her a piece of his mind. Probably some damn tripper, that was why the screams were so bloodcurdling.

New York was one giant drugstore. Everybody was young, everybody had money, and every damn thing was definitely for sale. Ecstasy, crystal meth, crack, coke, hash, grass, horse, even old-fashioned shit like his beloved

opium. God knew, you could probably buy laudanum somewhere. You could get ten percent absinthe, for sure, *hecho en Mexico*. He liked getting drunk on absinthe. There was a poet in him, and the wormwood brought him out. Last time he'd done a bottle of good absinthe, it had been on the terrace at Las Brisas in Acapulco, one of the most beautiful places in the world to do serious drinking. The mountains, the city lights below, the sun setting over the Pacific — the view was unequalled. He'd gone back to his room afterward and written a thirty-page epic poem about the death of Nebuchadnezzar. Next morning, he'd had to go on the Internet to find out who the hell Nebuchadnezzar was. Some ancient king.

A couple came toward him, dressed all in black. The girl's long, loose dress suggested possible gothic overtones. "Excuse me, I'm looking for a club called Shadowcat. Is there a place called Shadowcat around here?" The couple stopped. The girl was a heartbreaker, round face, merry brown eyes, and one of those smiles that says *I know what you want*. She had a cute rack, too, a couple of sweet little apples. She said, "The things you're staring at are called breasts," and the two of them walked off laughing.

Was he losing his touch, or what? Then he saw a bookstore. Maybe they had some kind of SoHo guide that was more up-to-date than his copy of *New York by Night*.

He loved to read, and he hadn't been in an English language bookstore this big in years. Hundreds of titles, everything very colorful and appealing, all sorts of stuff. A dozen SoHo guidebooks, all brand-new. He opened one, *SoHo Unbound*. Under the heading, "Deep Dark Deadly," was a list of spots with appropriately strange names — The Marrow Room, Bottomley Topps, Dragged to Death.

He sure as hell felt dragged to death, but he decided to try The Marrow Room instead, because it had a more vampirish sort of a ring to it. Actually, none of them sounded much like they had anything to do with gothic play-acting. But one could always hope.

The Marrow Room turned out to be a lavish nightclub full of what looked to him like little kids. There was music blasting, strobes and lasers flashing. Wonderful little bubblegum girls kept dancing up to him and waving their

mermaid locks. He smiled and nodded, forcing himself not to so much as glance down. It wouldn't have mattered, anyway — the whole damn place was full of jailbait.

He went to the bar. “Stoli on the rocks,” he said.

The bartender looked at him. “Parents room in the back, mister. But it’s BYOB.”

He didn’t really know what the hell kind of place he’d blundered into, but there was no damn point in finding out, that was for sure. When had rock clubs for children come in?

He left. A clutch of what looked like eight-year-olds clustered under a nearby stoop smoking and muttering together. This was different from Asia? How?

Then he saw a storefront with a black cat discreetly painted in one corner as the only indication that it wasn’t altogether abandoned. A black cat was promising. He pushed the door open.

There were skulls. His stomach gave a turn. He never wanted to be in an ossuary again. But the skulls contained candles. There was music, very bad rock of some indeterminate kind, and here and there a few people in vaguely gothic costume sitting at tables. A couple danced mechanically under purple light on a small dance floor. The place smelled like cigarettes and sour beer. The bar had a rack on it with bags of potato chips.

“Stoli on the rocks,” Paul said.

The bartender, a listless woman of about sixty wearing a black dress, poured something clear out of a bottle with no label into a glass with a whole lot of ice. She brought it over. Her face was painted white, her lips dark, dark red. She was wearing plastic teeth.

“I’m looking for Ellen Wunderling,” Paul said.

“You a cop?”

“Not.”

“Wanna bj? Fifteen bucks.”

Paul was beginning to think of a whole lot of reasons to throw up. He was homesick. He wanted to go to one of those Bangkok barbershops where a cloud of comely maidens massaged you, cut your hair, did your nails, *and* gave you a blow job for fifteen damn bucks.

“I’m doing research on Ellen Wunderling.”

“Never came in here.” She turned away, busied herself pulling a beer — for whom it wasn’t clear.

“Any other place I could go? I’m new here, and I don’t know the scene.”

“Well, the first thing to do is not dress like a bus driver trying to pawn himself off as another bus driver. That horror show isn’t gonna get you in anywhere.”

“These are new clothes.”

“Go over to Shambles on Prince Street. You can get all kinds of stuff there. Get a hat, some blacks, some fingernails.” She cackled. “Get pierced, officer, then we’ll all just *love* you!”

“I’ll pierce you,” a voice called.

“Oh, shit,” another voice murmured.

Paul went over to the table. He wasn’t absolutely sure if he was talking to a man and a woman, two women, or two men. But he sat down anyway. He wasn’t planning to get in bed with them. Or get pierced. “I’m looking for Ellen Wunderling,” he said.

“Mistah Wunderling, he dead,” the most likely to be male said. His mouth was full of potato chips.

“Miss Wunderling.”

“You gotta go deep into the jungle, man — real deep. Try Hexion or the Hellfire Club — ” The girl — and Paul was now sure she was a for-real female and that underneath all that Vampirella makeup, she was your basic Queens chick — shook her head. “Hexion is a cannibal place,” the girl said. “They serve brain soup.”

“It’s not *real* brains.”

“What’s the Hellfire Club?”

“A Catholic hangout. Run by former nuns.”

“Any Ellen Wunderling connection?”

“He should go to the Veils.”

“Him and the Count of Monte Cristo.”

“What’s the Veils?”

“Just the most exclusive club in Manhattan.”

“The world.”

“Same difference. But it was the last place Ellen was seen alive.”

FIFTEEN

Scorpion Dance

Normally Leo was not much interested in the lesbian stuff that went on between Miriam and Sarah, but watching them this close, with Sarah going wild like that right in her face, was thrilling. When Miriam had kissed her before, she'd been polite about it and pretended, but it hadn't really been a turn-on. This had been the most amazingly intimate, beautiful thing.

She'd been a lonely little rich girl before she came to the Veils, her main claim to fame being that she was the daughter of, like, the second cousin once removed of General Patton. She had a co-op loft in SoHo in an artist building that was full of lawyers. She had a Maserati and a little pocket yacht called the *Y'All Come*, but Y'all generally didn't.

At, like, four o'clock one morning when she was so fabulously wasted, Miriam had said to her, "Come and follow me." They'd laughed. But she'd been totally in wonder because she was not exactly the kind of super cool person who'd be invited into Miriam's *house*.

Next thing she knew, she'd been given a little bedroom with cute curtains and a high brass bed. She'd had pretty much the run of this, like, amazing house. Gradually, she'd realized what Miriam did, Miriam and Sarah. They were lovers, but they also — well, wow, she was one of them now.

She squeezed her toes in her shoes. It was totally incredible to suddenly have this ultimate power. She'd never had any power at all. But now she sure did. She could point to somebody and say, "I want that one," and that person would undergo the most important experience of his or her life.

She wanted to feed for the first time. Even if she didn't have all that much hunger. She wanted this to happen.

It was unimaginable that she would live a really long time. But Miriam had stuff that was, like, Egyptian that was still in use. They had some three-thousand-year-old chairs in there. Leo had researched it. She'd priced it. A chair like the one Miriam had been sitting on during their viola drag would go on at Sotheby's easily for one million bucks.

She was going to see, like, the future. Spaceships. Aliens. Whatever the hell. Unless the world ended. Global warming, was that for real? Miriam said, "What happens happens." That was the way to approach it.

They were coming up to the club. Great. She was already high. She'd been awful sick at first, but since this morning, she'd started to feel better and better and better, and now she felt completely damn wonderful. She didn't have any aches or pains at all.

The Bentley stopped. "Okay," Leo said, popping the door.

But Sarah grabbed Miriam's wrist. "Don't do this!"

"It's safe enough."

"You can't be certain."

Leo watched them bicker. They'd both been real scared lately. For sure; Leo was no fool — she could see it. This guy was bad news.

Miriam started to get out again.

"The front of the club's too public. Go in the back."

Miriam stroked Sarah's head. "There's going to be a confrontation, child. And the club is where it's going to happen."

Leo watched her go in. Then she helped Sarah dress. "That was so cool. I feel like I really know you now, Sarah." Nervously, she kissed her cheek. Maybe Sarah would do something sexy with her. She'd love to find out how it felt. Or Miriam — but that was too, too awesome.

"You know me," Sarah said. She followed Miriam, and Leo hurried after

her. As usual, the club was dark, entirely invisible from the street. There was never a crowd outside the Veils. Ordinary people couldn't find the place. They weren't supposed to — only those who knew. And now Leo was, like, at the top of the food chain. She knew the truth behind all the rumors about Miriam Blaylock and Sarah Roberts. Sarah'd had a lover whom Miriam had killed, that was the main rumor. Another doctor. *That* they never talked about.

Miriam intended to capture the monster that was tracking her and feed off him, maybe even feed him to Leo; she wasn't sure. That depended on Leo. She was a tiresome little thing, truth to tell, but pleasant to have around and very eager.

Sarah, by contrast, was that most dangerous of slaves — one who did not understand the real meaning of servitude. An evil old Roman emperor, Septimius Severus, had once asked Lamia, “As all the world is my slave, why is it that only I am not free?”

Contained in those words was the ironic essence of the relationship between slaves and masters. Sarah was a poor slave because she thought of herself as a captive. Leo would be a good one because she would always look upon her accession to the blood as an achievement, not an imposition. This was why Miriam had been so careful to let her make a clear choice.

As Luis opened the door to the club, Miriam gave a tweak to the little rod in his pants. “Leonore,” she said, “will go to you in the Pump Room.”

“Yes, ma'am.”

“I really gotta do him?” Leo whispered.

“Leo, I've serviced Luis dozens of times myself. You'll enjoy it.”

“But I'm not a whore, Miriam. I'm . . . one of you.”

“And we are objective about sex. It's a commodity just like booze and

drugs. Sex is part of this business. Leave your emotions out of it, and your ego. Sex isn't the sort of Blue Broadway that the average Jill imagines, my dear."

Sarah laughed. Miriam wondered what she found funny, let it go. She strode across the glittering bar that was the club's first and most public room, calling out, "The front's to be open tonight, Bill."

"You want the sign up, ma'am?"

"I want the sign."

Sarah came hurrying along behind her. It was only ten, so there were few people here. "That's a bad idea," she hissed.

Miriam stopped, turned to her, put her hands on her shoulders. She had not understood the notion of the tar baby. "He's going to find us. But he must do it on his own, and the sooner the better."

She went to Bill, who was digging behind the bar for the small brass sign that said on it only, "Veils." This sign was placed on the door. Beyond that, they never went. "William, love, there's a good chance that a man will come in looking for Ellen Wunderling."

"That again! Don't they ever give up?"

"He's not a cop. I want him drugged a little. Offer him a drink. Lace it with — I don't know — something that'll relax him, make him a little hallucinatory, perhaps. Ask Rudi. But be careful with him."

"Oh, yeah, you bet."

"What's the crash so far?"

"Nobody upstairs. Dungeon's active, though. Seth's on the horse, and that bishop is back. Upstairs is gonna get jammed later. We got DJ Bones tonight."

"Make him a regular." His sound had incredible drive, but there was an

elegance to it that fit this club very well.

“Twenty thousand dollars a night.”

“Do it.”

So that her early guests would see her and be able to tell the later ones that she was indeed here, she went to her customary table at the rear of the bar. Also, she was most interested in watching who might come in that door. He'd had three days to find the place, and he was far from stupid. He'd be here.

At first glance, this room appeared to be the extent of the Veils. But the point of the name of the club was that there were many levels, many layers to pass through. Beyond this room, there were eight others, but many more than eight different ways to sin.

Rudi came up to her. “I got great meth,” he said, “plus them new Hi-Los and some dig hash. The hash was cheap.”

“Push it hard,” she said, looking past him. “I’m probably going to do a pipe later with a friend.” She had a room in the basement that was locked using Keeper techniques. Not even Sarah could enter it unless invited. Sometimes, when the club was crowded and some target was available, Miriam might take it down there. Hidden in the room’s floor was an entrance to a short tunnel that led into the boiler room of an adjacent building. The boiler there had a very good firebox, where Miriam could dispose of remnants quite easily. She would crush them to jagged bits, and they’d burn with a sparkle and a hiss when she threw them in. If the tunnel was ever found, it would appear to be nothing but an old, disused drainage line.

Miriam liked her room. She enjoyed the absolute privacy, the absolute secrecy. Being that it was entirely hidden, she had done some extremely wicked things there, so wicked that not even Sarah could know.

She intended to be very, very wicked to the hunter, more wicked than she'd been to any human being in hundreds of years. If he brought his little gang of helpers, so much the better. She would take them all, gorging herself in the fashion of old, tormenting them so terribly that the ones who had to

watch would be sick all over themselves before their turns came.

“Cigarette me,” she said to Leo, who was hovering.

The girl lit a cigarette, handed it to her. “Um, can I go down with Seth after I do Luis? They’ve got that Presbyterian bishop in the cage.”

“Play your heart out, baby.”

Sarah leaned close to her, whispered. “Thank you so much for what you did. I’m still singing inside.”

Miriam smiled up at her, then watched her carefully as she disappeared into the back of the club. She was watching the way the shoulders were held, and the head. A slave’s posture was very subtly different from that of a free man. Not that they were bowed, but there was in the way they moved the aimlessness of somebody who has not planned their own actions. Sarah walked with decision.

Miriam sighed. Sarah was perhaps too much in love to be a good slave. A lover sought constantly to remake the beloved in the image of her dream. A slave accepted mastery.

“Sarah,” she said.

Sarah turned back. Miriam noticed that there were tears in the edges of her eyes. “Yes, Miri?”

“Turn on the veils, dear!”

“God, I forgot!”

Sarah turned the doorway on, causing the back of the club to disappear behind what appeared to be a dark mirror.

Doug Henning had designed the doorways for her, using his unique skills with light and mirrors. People seemed to disappear into a shimmering black haze when they left one room of the club, and come into view just as uncannily in the next. Thus the Veils.

She sat smoking and waiting. Miriam could wait well. She could wait for days, weeks.

She wondered if the hunter had as yet done any of his evil work in the United States. At the last conclave, held in January of 1900, there had been nine Keepers in America. Perhaps a few more had come over the past century, but probably not. They were not a migratory people. They had divided the corners of the world when they first arrived here, and nobody had wanted the Americas — there had been no indigenous population to work with there.

Two American Keepers had been killed in the airplane collision at Tenerife Airport in 1977. It was thus possible that there were only seven Americans left, including herself. It was also possible, if the murderers had already been here, that she was alone.

Even alone in all the world. That was possible, too.

She was contemplating this eerie thought when she heard a male voice, pleasantly strong, say, “I wonder if you’ve ever heard of Ellen Wunderling?”

He stood at the bar, a tall man with penetrating eyes, smiling at Bill with a detective’s careful eyes.

Miriam’s heart never beat with excitement. At least, it hadn’t in so many years that she could not remember the last time. It was humming now.

“That’s him,” Leo hissed excitedly, “that’s *him!*”

“Have you done Luis?” “Miriam, do I *have* to?”

“Go! Now!”

The girl left. Miriam could now concentrate on the hunter. Look at those eyes, that face, the rippling power of the muscles beneath the cheap clothes. He was damned beautiful, this one. She felt herself getting wet for him . . . which was quite odd, but not entirely surprising. Humans could amuse her, but they did not cause spontaneous sexual arousal. Even as her sex came

trembling to life, her mouth filled, for another part of her was threatened and preparing to fight.

Look at him there, in his rumpled clothes, with that fearsome face of his. Did anybody else find him so ferocious looking? They had no idea what he was. They had no idea where he had been or what he had done.

Look at the cast of his jaw, the line of his nose, his darkly glowing skin. And his eyes, look at the way they flicked here and there, like the eyes of a nervous fox.

Almost, it was not a human face. Almost, it was the face of some sort of exotic animal.

The outline of his suit told her that was carrying, and the gun was big — a magnum, maybe worse.

She was well back in the shadows, but she wondered now if it had been wise to get even so close as this. If he recognized her — but that was absurd. He was, after all, only human. But look at his movements, the grace, the precision — *was* he only human?

Well, of course he was. She was losing her grip, actually panicking. And yet . . . it wasn't panic. It was desire, damnit, real, live desire. She wanted to be with this man.

What had she done to herself, playing around with human beings? This *was* perverse, to want to lie beneath a human male. She'd had a little of this with John Blaylock, which was why she'd switched back to females after he faltered. The females could give you real pleasure, and they were also better servants. Sarah, with all her conflicts, was fun. Interesting. Leo was going to be a hungry little animal. Miriam had all sorts of delicious wickedness planned for that one . . . beginning with Mr. Hunter, here, who was to be her first human meal. The warrior was going to die a lingering, humiliated death at the hands of a rather stupid girl. That would be most fitting.

She watched him sipping a vodka on the rocks. He'd ordered Stoli, then asked Bill a question that she had not heard. Bill had said very little to him,

but she knew what it had been: “That’s the owner over there. Ask her.” So he was fortifying himself. She watched him throw the drink back. He turned toward her.

This was the moment. If he recognized her, she was going to be blown apart.

He met her eyes and came toward her.

“You’re a Stoli man,” she said as he approached. “You ought to try Charodei.”

Paul was so stunned when he looked at her that he almost lost his balance. In all his nearly fifty years on this earth, he had never beheld a woman who affected him more powerfully. She was a vision, just a damn vision. He loved noses, and she had one of those graceful, sweet noses with a tip that begged to be kissed. He loved complexion, and her skin was like frozen cream, a rich, deep white, perfectly smooth. He loved lips, and hers were exquisite, and they had in them the kind of small, amused smile that suggested a good personality. And eyes — her eyes were so calm, so gentle, so fresh-looking that he thought she couldn’t be a day over twenty. She was wearing dark blue silk that looked as if it cost a few bucks. And she owned this fabulous little place. It was small, but it was class.

“Please,” she said in a voice that would put the angels to shame, “have a seat.” She glanced away from him. “Bring him a Charodei, Billy.”

When she met his eyes, he found himself unable to look away. God, her eyes were frank. God, she was confident. He loved that in a woman.

“I want to see if you like it. It’s my little test.” Her smile — it was incredibly kind. That was the thing; this was a hell of a sexy woman, with those fabulous, beautifully proportioned breasts and that angelic face — but she was *kind*. You could see it in the gentle ease of the smile, hear it in the melody of the voice. In a place like this, he would have thought “pretty, but hard.” He knew special when he saw special, and this lady was *real* special.

But Paul was also a very single-minded human being. He was here to kill vampires, not to fuck-talk some kid into bed. He said, “I’m doing research on Ellen Wunderling,” but in his mind he was saying, “If I leave here without your phone number, I’ll kill myself.” Her smile turned, he thought, a little sad. “I didn’t catch your name, mister.”

“Ward, Paul Ward. I’m a journalist.”

“May I see your press credentials? I’m sorry to ask, but we’re almost a tourist attraction because of that story. It’s ironic, because we aren’t even involved in the Goth scene.”

“No, this looks like a very nice place. I wonder if you could tell me — ”

“Sir, I really think you should ask at the precinct. Detective Lieutenant Timothy Kennerly. They questioned every employee in this place at least three times.”

“Nothing ever came of it?”

“I saw her. We all did. She came in and got a Coke. She was sweaty; she’d been running or something. She seemed totally at ease. Not a problem. That was it.”

Paul realized that he was going to have to leave in a minute, as soon as she demanded the press credentials again. He had no credentials. In his wallet were driver’s licenses in five names from three different countries, and half a dozen credit cards, some of which might be good, all of which would flash red lights from Langley to Foggy Bottom the instant they were used.

Miriam saw that he was getting ready to stand up, and realized he was about to go. If he did that, she’d have to have him followed, but there was nobody here capable of doing it except Sarah. She did not want use Sarah that way; it was just too dangerous.

Ward himself was her key. He seemed so straight, though, that she didn’t know quite how to seduce him, or even if it was possible. She would do it by acting the young, innocent girl. Given the panting-dog expression presently

on his face, it was a type he liked.

“Listen,” he said, “I’m working real hard on this. I think it’s a huge thing. There’s something incredible behind it — what happened to her. Almost certainly. And I’d like to enlist your help. What I want to know is, do I have any chance at all?”

“Try me.”

He knocked back the drink. Miriam pointed to his glass, and Bill brought another. At that moment, a crowd came in. Among them she saw Jewel and a rather nervous Ben Stiller. Good faces for the club. It would be a good night.

Paul watched the people disappear one after another into the back wall. It told him that there was a lot more to this place than he’d initially thought. He wondered what would happen if he suddenly got up and went through. This little girl sure wouldn’t stop him. When he’d first sat down, he put her at about thirty-two. Now he was wondering if she could even damn well legally drink the liquor she sold. Christ, though, she was lovely.

She also knew a little something about Ellen Wunderling that she hadn’t disclosed. A flicker in the edges of the eyes had been his tipoff. He wished that he could interrogate her freely. She was an innocent little thing. You wouldn’t even need a rubber hose to get her going. A light slap would set this powder puff to babbling.

He wanted to get in her pants, and it was distracting him. This damn town had to be full of vampires, ripe for the killing, and if this bitch was holding back about Ellen, maybe she was also holding back information that would lead him to them.

“Let me ask you this,” he said. “In the *New York Times* story — do you know it?”

“Of course.”

“It suggests that there are people who think they’re vampires. Who actually drink blood. If I said, maybe such people drank Ellen’s blood — how

do you react to that?”

“The vampire scene is dead.”

“Not for these assholes. They think they’re getting something from the blood — besides AIDS, I mean. Some kind of life force. The soul, I guess.” As he spoke, she thought of how he looked behind a gun. She remembered the hate in his eyes, the eager spark as he killed. This creature *loved* his work, damn him. When she let Leo feed on him — and she would certainly do that in the end — she would make her go very, very slowly.

“Soul eaters,” she said. “Wow, that’s heavy.”

“I know it’s heavy, but it’s true — I mean, in the sense that it’s what they believe. Of course, it’s all bullshit — ”

“Of course.”

“But they believe it, that’s what’s important. You look at the stats. A lot of people disappear without trace, don’t they?”

“I don’t know.”

“In the U.S. in a year, over three hundred thousand.”

“You’re kidding . . . walking out on their debts, or a spouse they don’t like, that’d be most of it, I’d think.”

“There’s plenty of foul play, Miss — what’s your name?” Beautiful, he was. Gracious, not. “Miriam Blaylock.” “Miss Blaylock.” He paused. His eyes were searching hers. How hungry he was. She realized that he was an innocent. Incredibly, his sexual curiosity was that of a boy.

She said, “You look like a soldier.”

“Is that good?”

She laughed, raised her eyebrows, delivered a slowly developing smile. “Is it?”

His left hand came into view as he brushed his cheek with the tips of his fingers. *For God's sake*, he thought, *let her see there's no ring*. She was talking to him like a person, here. She was being nice to him. He was beginning to think to himself, maybe he should lay off work for a little while. Lie low here in Manhattan. Let some personal life develop for once. He'd been married to the damn Company for too damn long. He was ready for a little real life.

He tried an opening line. "So, how long have you been in the club game?"

She took out another cigarette, offered him one. She lit them both with a lighter that looked as if it belonged on the *Titanic*. It was tiny, gold, and complicated. He wouldn't have been surprised if it had blown up in her face.

"Lemme see that."

She handed it to him.

"How old is this?"

"I bought it in a shop. I thought it was cute."

"Well, it could be dangerous."

She tried to recall how long she'd had the damn thing. Seventy, eighty years, at least. She'd never had occasion to get a new one. She took the lighter back. "It's fine."

"I'm gonna get you a real lighter."

"It's fine!"

"No, I'd like to. I'd really like to." He'd go to Bloomingdale's, spend fifty bucks. This lady had to be impressed. He could not let her slip through his fingers.

She looked at him out of lowered eyelids. There was even a little hint of Asia in her miraculous face. He loved the way Asian women looked; they were just so damn beautiful. She was more beautiful.

He just plain wanted to kiss her. But how did he get there? Maybe she'd drink with him. He said, "Listen, lemme buy you one a these Cordiers — what are they — hey, this is great vodka. And coming from me, that's high praise."

How pathetic he was. For the moment, his attraction to her was pushing his fanaticism aside. If she kissed him, she wondered, would it draw him closer or scare him away?

"What do you actually do for a living?"

What was this, he wondered. Was she evaluating him? What if he told her he was CIA? Sometimes that was a major turn-on; sometimes they hated it. Usually, they thought you were a complete asshole.

"What I really do is — I'm a — well, I'm not a reporter."

"I know you're not a reporter, and I'm getting kind of pissed off, since you won't show me any kind of credentials and I'm still waiting."

"You're waiting, and I'm gonna — well, this is not kosher at all. This is really against regs — " "You are a cop. I thought you were."

"No, no." He pulled out his wallet, opened it to his ID card.

Miriam took the wallet, looked at the card. She thought that it appeared entirely legitimate, and it was certainly not a good piece of news. Her opposition was apparently governmental.

She memorized the card, and the information on the driver's license, and the number on the one credit card that was visible.

"Are you offended?"

"I'm curious. I mean, this is — it's so weird. What the hell was Ellen Wunderling really up to, that she rates attention from you people?" She motioned to Bill, who gave him a fresh drink — lots of vodka, less ice. "I mean, this vampire thing seems like something pretty stupid for the CIA to take an interest in."

“What if I told you it wasn’t stupid at all?”

“I wouldn’t know what to say. But I wouldn’t be real interested, either.”

Paul found that a very unexpected reaction. He sat back and regarded her. Given the past few minutes of conversation, he decided to revise his opinion about little Merry Blaylock. He’d bet thirty years in clandestine service that this kid did not know a single useful thing about Ellen Wunderling or vampires or anything connected with them. But the way she was looking back at him, with that dee-licious little smile — well, her innocence told him that conversation should go in another direction entirely.

The smile widened a little, played very fetchingly in her eyes. He could practically see her deciding that she thought his being CIA was kind of cool. The damn tag had worked for once. Damned amazing.

“Would you like to see my club?”

“They say it’s the most exclusive club in New York.”

She reached over, touched the back of his hand with the tips of her fingers. Then she laughed, a deliciously suggestive little bell-note, one of her favorites. “Oh, it is. Very, very exclusive. But if I like you, then you can come in. Welcome to the Veils.”

SIXTEEN

Demon Lovers

It looks like a wall — I mean, *just* like a wall.” Paul extended a large hand toward the entrance.

“Doug Henning was a master.”

“Isn’t he the one who died? Kinda young, wasn’t he?”

“Yes, he was.” He’d been a delicious young man.

She took his hand and stepped through with him.

Techno music hit him like an avalanche — one made of pure sound. The space was dark, milky with smoke. Lasers played in time with the very fast music, revealing random slices of a whole lot of dancers. On a small stage, its floor glistening like a mirror, was a shadow capering behind the most complex set of control panels and turntables he’d ever seen in a club. The dj was faceless, even his head was covered. He appeared to be as thin as his bones, but that was probably some sort of an illusion.

The intensity of the music was completely beyond anything in Paul’s experience. For a few seconds, he was virtually unconscious, reeling through a fog of reefer and crack and crys so thick he felt himself getting high on his second gasp for air. The next thing he knew, the music swept him up, seeming to yank his soul right out of his body and levitate him across the floor. He cried out, he knew it, he could feel it. But the music was so loud, the beat so intoxicating, the rhythm so danceable that his consciousness lost control of the primitive parts of the brain and his body began to move of its own accord. He thought voodoo, the shaking of priests, the trance of the gods.

He was dancing, and he could not do anything but dance. He was helpless to stop himself. The lasers showed sweating faces all around him, beautiful faces, goddesses, gods, and he thought he'd gone to some Olympian mountain. He thought he had risen above the ocean of life into the air of life. He was so happy, his heart was exploding with happiness, and it rushed through him as if fire had replaced the blood in his veins.

It was sorcery, he thought, it was magic. Satan's hooves were trampling him, but Satan's soft hands were also stroking him. He saw the girl — Miriam — standing there beside the stage with two other young women — both lovelies as well. Then a guy came out and began racing around the room like he was in some kind of a major seizure. He was wearing a magician's coat, black with red sequins and green sequins in the shape of a pentacle on it, and he ran in a jerky, unnatural way, striking dancers with a sparking wand and making them cry out.

Then Paul saw that most of the dancers were stark naked and there was a girl shooting a huge syringe straight into a guy's mouth, the needle penetrating under his tongue, and his eyes were flickering like a dying sign. There was sweat in the air with the smoke. There were pills rolling on the floor. The drugs were more plentiful here than anything he had seen in Paris or Bangkok.

It was hell, it was heaven, he was happy, he was scared to death, and he felt as if Satan were right there in this god-for-damned room and he was being butt-fucked by that NVR interrogator again in Muang Sing. Jesus wept, why had they done shit like that to him? The music got louder still and tighter still, driving, driving, crushing through his heart, burning through his brain, and then the magus struck him with the wand and the blow felt like an incoming mortar round.

The lights changed from lasers to white slits, and huge shadows swept over the dancers. When he looked up, he saw into a tremendous sky full of cloud towers and in them there was the Hindenburg exploding and burning, and from its belly there fell sparks that were people.

His whole self was torn away and torn out of him — his name went, his sense of being, the presence of and pain over his father, his place where his

mom lived in him and said, “You’re a good boy, a good boy” — all of his innermost self was torn out of him and swept away in the sea of smoke and the goddamnest best, most exciting, genius-level rock and roll he had ever heard in his life.

Then there was a girl there, one of the lovelies who’d been with Miss Blaylock. She had dark bangs and the kind of shape you wanted to put your hands around. She came dancing up to him and started undressing him, dancing with him and pulling off his clothes. He thought, *You know what I’m doing? — I am letting this happen, because this is the most fun I have ever had or known about.* He helped this exquisite girl with the light brown brush get every stitch of his clothes off and toss them down on the floor.

Nobody gave a shit, nobody stopped, he was dancing in a wonderful ocean of vibrating pricks and sailing boobs, and all the faces of all the gods and goddesses of the dance were smiling on him.

He yelled out, “I’m blown away! I am just plain *blown away!*” Then he remembered that he’d been carrying. The gun — had it been in his pocket or where did it go? Well, it wasn’t his lookout anymore, and anyway, who gave a damn? He was not hunting vampires now.

This was not like any kind of damn club he’d ever heard of before. This was some kind of magic shamanic demon hole, this was.

Cool!

The room changed again, and this time he screamed bloody murder because he could not help it, he could not even think about stopping it; he screamed and he stumbled forward because the floor had disappeared and he was standing a thousand feet *above* Manhattan, and down there the traffic was racing as fast as the music, and little puff clouds were shooting past beneath his feet. The illusion was so perfect — man, it was so perfect! — you did not believe that you were standing on anything. That music, that wonderful, driving, animal-perfect, jungle machine music just totally blew out his nerve endings, so he was not a body with weight and age but an eternal light-being flying over the city.

Somebody knelt in front of him and started blowing him, and for the first time in his life, he just enjoyed it without worrying about who was there. He didn't care if it was a girl or a guy or a damn gorilla; he just loved; he loved with all his blood and his hammering, crashing heart, and the little light in the middle that was him.

Then he did look down and he saw the naked woman from the limo on Houston Street. She was giving him a hard-sucking blow job in the middle of the goddamn dance floor, and it was the best damn blow job he'd ever had.

The pleasure was so intense that he could not stand, his knees started to give way. Somebody held him up, somebody strong as shit, so he just let himself go limp. The hands were long and thin and cold against his skin, but the arms were as steady as steel rods. No way was he gonna get dropped. The pleasure swept up and down him, crashing like great waves from the top of his head to the singing tips of his toes.

He closed his eyes, and in his mind he saw not the woman blowing him, but Miriam Blaylock. How could she be that beautiful? How was it possible? With this club, she was some kind of magician, some kind of demon, but God love her, she was so beautiful.

Then he noticed that he wasn't being blown anymore. Hell, that was tough, that was intense to leave him with his gob half down the chute. "Shit!" he yelled aloud.

The music snatched him up like a wave. His balls were aching from him being hard too long with nothing happening but the *music*; the music just did not stop, did it? He was dancing again, they were all dancing again. When he looked over at the stage, he saw six women and six men dancing in front of the consoles, and behind them the dj had his hood off. Paul noticed that his eyes were yellow.

Miriam Blaylock was dancing, too; he saw her. She saw him and her eyes sparkled; then she saw he was naked and she cocked her head and gave him a mock-angry look and wagged her finger at him. Oh, she was just the cutest little girl he had ever seen. God love her for letting him into this wonderful place where he was dancing with the beautiful. She must actually like him.

She must be impressed. Actually. He'd tell her he was the damn CIA director, if he had to. He never wanted to leave this place as long as he lived.

Then it was total dark, total silence. He stumbled, almost fell again, but nobody else moved. Everybody else just stayed still. He couldn't hear a damn thing, not after that music.

The lights came on, and all of a sudden the magical beings were just people. They were boys and girls in their teens, mostly. Some older ones. There were famous faces here and there, not people whose names he knew, but the kind of faces you recognized from TV or the movies but you didn't know exactly who. He'd never been in the same room with famous people before.

A guy came onto the stage. The dj. There was a faint sound like rustling leaves, and Paul applauded, too. Had the music fucked up his hearing or what? He'd listened to plenty of loud rock in his life, but this had been something more. This had been music that blew you so far out of yourself that he now felt as though some sort of internal reset button had been pushed. He felt blank, a deprogrammed soul.

In the light he could see people were getting dressed, and they were still doing drugs, right out in the middle of everything. Some of them were even still making love. Guys were still hard, thinking nothing of it. Some of these kids were not even teens. They were, like, teenyboppers. There were friggin' children in this place, drinking and doing drugs, naked with naked adults. It was total, amazing, awful sin.

"Hell," he said to two of them standing nearby, "this place almost got Bangkok beat!"

Waiters came through two big doors and started laying out food and wine. They brought it in on huge gold trays, in golden bowls and crystal bowls, and the utensils and the plates were all gold, too.

"Christ," he said to another couple, "those pots must be worth a million bucks!"

He hadn't noticed that he was the only one making any noise until a guy held his finger over his lips.

"Be quiet?"

The kid nodded.

Hell, he didn't want to be quiet. He wanted to talk dirty to some frail. He wanted to get finished getting blown. But, hell, he was okay with it; this was what they wanted to do. He was the damn newbie, looked like.

Sarah watched Leo pull Miriam away from the dj's stage and heard her say, "Miri, that *man!* He's utterly dreadful!"

Very quietly, Miriam said, "He's also utterly alone."

Leo seemed not to comprehend. "Well, just get him out of here, please. He's pissing everybody off."

Sarah marched over to her and said, "We don't talk to Miriam like that."

"What? About him? She was an idiot to bring him in. He even had a gun!"

Quickly, Sarah took Leonore out of the room. The hard lights of the kitchen were a better setting for this discussion. "Listen, Leo. Do not *ever* make demands of her. What's been done to you doesn't give you the right. In fact, it does the opposite. Before, you were her friend. Now, you're her possession."

"You know something, Sarah? You're a complete asshole." Leo flounced off through the doors.

Sarah was amazed at how angry she felt, watching those doors swing behind that arrogant little ass. It was a calm, dispassionate sort of anger, a deep anger. The idea that she would have to live years and years with Leo interfering between her and Miri was just plain awful.

Before Leo, she had not been loyal enough. She had been unable to shake the scruples she'd brought from her old life. Miri had stolen her from herself. But because she was not a volunteer but a captive, something else was also true. Miri was responsible for her. Miri, also, belonged to her. She had rights in this relationship. She had her place, and did not intend to be dislodged.

She went down to the office and stood at the one-way mirror, where she could see the dance floor. Everybody was eating, gobbling away at the braces of honey-dipped sparrows and other exotic foods that Vincent had prepared at Miriam's instruction. Miriam had little interest in human food, but it wasn't as if she didn't know about it. Her recipes spanned three thousand years. Honey-dipped sparrows had been the hot dogs of Elizabethan England.

Sarah watched the man. He was, in a way, beautiful — huge, muscular, his eyes extremely intelligent. She'd gone out on the floor and sucked him for a little while. She imagined that his ample organ would feel really nice inside her.

"You're drooling," Miri said as she came in. "And get your clothes on, you're the only one still naked except for that big slab of ham you're drooling over. Want to eat him?"

"What's the deal with him?"

Miriam sat down behind her desk. She tossed a small suitcase on it, clapped her hands. "Chop chop."

"The count, already? It's only two, Miri."

"Rudi's bag got too full. You'll have two counts tonight."

"I thought it was gonna be good."

"You want to know what the deal is with him?"

"Yeah." Sarah was sorting, preparing the pile for the count. It was over a hundred grand, though; she could already tell that. Money came to Miriam like metal shavings to a magnet. Ancient Keeper magic, Sarah thought. "So,

what is it?”

“I don’t know if I should tell you.”

“Please trust me, Miri. It’s agony for me when you don’t.”

“It’s agony for me when you forget your place, child.”

Sarah sorted bills into neat stacks of fifties, hundreds, a few twenties.

“I’ve been thinking about that. I want to ask your forgiveness. I want you to know that you’ve got my absolute loyalty.”

“Now that there’s a replacement threatening, yes. I wish you’d come to me before I blooded her.”

“Why did you? We’ve got to endure her now forever and ever! And she’s — oh, Miri, she’s tacky and she’s quite stupid.”

Miriam shrugged. “You want to do pipe later, child?”

“I thought you were mad at me.”

“I’m not mad now. In fact, I’m going to do celebration pipe. The two-hundred-year-old opium.”

“What possible occasion could there be now?”

“I’m going to take that man downstairs with you and me and Leo, and we are going to spend a very long time with him. We’re to feed Leo with him. Her first pabulum. Do you think she can handle it, Doctor?”

She was instantly excited, instantly appalled. A “very long time” would mean hell for the poor man. “Miri, I hate for them to suffer.”

“What if I told you that he’s the one who assaulted me?”

She stopped counting. In fact, lost the count. “You mean — ”

Miri smiled slow. “I snared him, Sarah, in my very fine net. Anticipated his moves correctly. He is, at present, our prisoner.”

“He’s the one from Paris?”

“Yes.”

Sarah looked at him again. “If we kill him, is that it? You’re out of danger?”

“They’ll be set back, because that man out there is a very powerful weapon. That man is the reason they win.”

“Who, Miri?”

“There are people killing the Keepers, Sarah. Making carnage of us all over the world.”

“*People?*”

“And that man is their leader.”

Sarah found a chair. “And we’re going to feed him to Leo?”

“She needs to eat, dear, just like us. She has a right to her food, too.”

Paul wanted his clothes. Everybody else was already dressed. This was becoming not fun. “Excuse me,” he said again, “I think that’s my — ” But it wasn’t his. Nothing was his. “Look, hey, I’m missing a wallet, here.” He really didn’t need to lose *that*, for Chrissakes. There was six hundred bucks in there. The rest was safe enough inside the springs of the bed at the Terminal Hotel, except for the three c’s he’d spent on the also-gone magnum.

“Hey, ladies!” he called out to no one in particular. “I got no clothes, here! Is there somebody in charge?”

They were purposely ignoring him, all of them. That was obvious. It was

some kind of joke, apparently. He was now the only person naked. The lights were so bright they might as well be on a beach. Goddamnit, this was like one of those dreams — you're naked in a department store or something.

He spotted some guy giving him the eye and flopped his dick at him. "Like to look at it, doncha?"

"It's pretty."

Oh, Jesus, and he'd been having so damn much fun. Normally, he had very little fun. Getting blown and then sick drunk in whorehouses was not fun; it was a job, servicing your urges.

The management was undoubtedly back there watching the New York sophisticates having their vicious fun at his expense. *Lemme put one of you turds in a vampire lair sometime, he thought, see if you find that fun.*

He glared around him. Female laughter bubbled up from somewhere in the crowd, was instantly extinguished.

He went over to the food table. Little dead eyes stared at him. But there was also caviar, and his guess was that this was the most expensive thing on the menu. So he cupped his hands and got a great big glob of it, causing all the cognoscenti to gasp. Then he threw the caviar at the damn one-way mirror.

"Gimme my damn clothes," he said quietly. "Or I'm gonna tear this place apart." He spoke with the kind of gentle intensity that suggested that immediate compliance was essential.

Leo, who had had enough of this jerk for this evening and the rest of what might be a very long life if things went her way, said, "I'll get your clothes."

"Wise girl."

The delay was because Miriam had decided that she didn't want him to get back into his rags. She wanted him properly dressed, so she had sent Luis up to the house to get some of John's clothes. He had just reappeared with a

black silk Donna Karan suit and a bloodred shirt, also of silk. Miriam would not allow John's things to be put into storage, not even yet. Maybe Sarah would come up with some new process someday, that would work for him. His body was still fairly intact, after all. So his things waited for him.

"It's crazy to have this guy here," Leo said.

Sarah, who was counting again and could not interrupt herself, did no more than glare. Now that she shared a secret with Miri that the bitch wasn't party to, she felt better, less threatened.

Miriam put Paul's wallet in the breast pocket of the superb jacket. The magnum, which was on her desk under some piles of money, stayed there.

"You're to bring him to my room," Miriam told Leo.

Leo knew that people who went in there did not come out. "Am I invited?"

"You are indeed," Sarah said.

A chair hit the one-way mirror, bouncing off with a distant thud. He was getting physical about his nudity.

Miriam shook her head. "My, my."

"He's out there naked in a fully dressed crowd," Sarah said. "I'd be pissed off, too."

Miriam chuckled. "Show him the club, Leo. Let him play with you a little. But don't you dare fuck him dry. Is that a promise?"

Leo came around behind the desk and kissed Miriam's cheek. Sarah couldn't watch it. She stared down at the magnum. She picked it up and pointed it at Leo. "Remember this," she said. "He's dangerous."

Another chair thudded into the window.

"Arrange to be at the door to my room with him in half an hour," Miriam said as Leo hurried out. Then she turned to Sarah, "Don't point guns at her."

“She’s rude to you.”

“She’s as she is. Accept her.”

“You want her instead of me!”

Miriam went close to Sarah, cradled her face in her hands. “Control yourself,” she said, pressing harder, compressing the jaw and cheeks until the eyes almost popped out of the head. “Will you?”

Sarah nodded. She could not speak.

Miriam could crush a human skull. She pressed harder. “Are you certain?”

Sarah nodded again. Mucus began dribbling from her nose. Her feet stomped and scuffled, her hands came up and fluttered along Miriam’s arms.

Miriam let her go. Sarah gagged, sucked air, pitched forward out of her chair. Then she came to her feet. Her cheeks were flaming.

“No jealousy,” Miriam said.

Tears pouring from her eyes, Sarah threw herself against Miriam. “Please don’t abandon me!”

Miriam had heard that cry from every one of them, and it went straight to her heart. They were tragic beings, her humans. She was ashamed of them. But she enjoyed them a great deal, and that, ultimately, was what mattered to her. Keepers caused human suffering. That was simply the nature of nature.

She kissed Sarah. “Better?”

“I’m sorry, Miri. It’s just that you’re so precious to me. I can’t live without you.”

“My love, I have a task of great importance that I need you to do.” She held out a brass key. “This is the key to his hotel room.” She tossed it onto the desk, told Sarah the address. “Go up there, take Bill or somebody with you. Go through the room, take every trace of him out with you. And

especially, if you find a small, black book, very old — ”

“He has a Book of Names?”

“If we’re lucky.”

Sarah was shocked. “What use would it be to him?”

“They can read Prime. Some of it.”

Sarah was truly amazed. She had counted a hundred and eighty different symbols in a single glyph. It was the most complex written language by a factor of a thousand. Who could possibly manage to crack a code like that?

“You’re sure of this?”

“I imagine they used National Security Agency cryptographers.”

Sarah felt a coldness within her, as if her heart had been pierced with a knife of ice. “Your name is there. Your holdings. Oh, Miri!”

The Keepers were in terrible trouble if these people were able to read such records. “Where would he get a Book of Names? How?”

“When you get the book — if you do — bring it straight here.”

“And if I don’t?”

“Then we’ll just have to get him to tell us where it is, won’t we, dear?”

Sarah managed a smile. Sometimes Miri made them scream, which Sarah normally hated. She would not hate it if this man screamed.

“We’ll make him tell us,” she said. She put her arms around Miri. “Thank you for trusting me again.”

“Now go, child. Go like the wind.”

Paul pulled on the pants, got them sort of closed. “This guy must be thin as a rail,” he said. He managed to get into the shoes, too, which were of leather so soft it made his skin crawl. Could these people have somehow gotten something from a vampire? From what he’d seen in Paris, the vampires were much more capable of mixing with humans than he’d believed. His sense of it was that the Asians were more ancient than the Europeans and far less able to be seen on the streets. Maybe the Americans were younger and more humanlike still. Hell, maybe they would even fit into a hip crowd like this.

He looked more carefully at the shoe. Gucci sure as hell didn’t make them out of human skin, so that theory was out.

The clothes actually fit pretty well, although they seemed decades out of date. The jacket had a wide collar, and the trousers were subtly flared. They belonged to a man with big shoulders like Paul’s, a tall man and a strong man. But a slimmer one.

He regarded himself in the mirror. “Jesus,” he said, “I look like a million bucks.”

Leo decided that she utterly loathed him. “You look just fabulous,” she lied.

“Whose clothes are these, anyway?”

“A friend of ours. Listen, I’ve got an idea. The next set doesn’t come up until after dinner. Want to see the rest of the club?”

A guided tour from this babe? “You better believe it.”

She walked through another wall. Expecting to be blasted by music again, he followed her. But he was not blasted. In fact, he wasn’t in a room at all. He was in a Japanese garden, outside — at least it seemed like outside. The sky was velvet swarming with stars, a sickle moon just turning yellow as it slid toward the horizon. Bamboo chimes made restful sounds; water hurried over stones. Crickets chirped; a bat whispered past his face. Here and there in the dark, he could see pale bodies. There were at least a dozen people here, all covered by black cloaks, lounging on benches or on the grass. A guy with

glasses and an old-fashioned doctor's kit went among them like a waiter, discussing in quiet tones, then ministering to them out of his case.

Paul smelled opium . . . real good opium. He was already contact high and passive-smoke high, and maybe high on something he'd ingested in the food or those damn drinks he'd been given a million years ago. But he really loved opium, and it was one hard drug to come by these days. It took him back to quiet times in the Cambodian jungle, those magical times when they were more-or-less safe, and they could sweetly indulge.

They weren't outside, of course, not really. They were under a deep country "sky," and this was the middle of Manhattan. Leo took his hand, led him around the edge of the garden.

"Hey, wait, I could do some pipe."

"Um, if you stay in here, it's a thousand dollars an hour."

You could probably drop ten grand on this place in a single goddamn night. "Let's see the rest of it."

"This next room is rather unusual. But please remember, our credo is no limits and no restrictions."

"Sounds like fun." Paul followed her through another veil and into a completely mirrored foyer. There was a tunnel entrance. He hesitated. "Where does that go?"

"Just downstairs. And it only looks like a tunnel. There's a stairway when you get past the veil."

It was not easy to walk into what looked exactly like one of the Paris tunnels, but he followed her. He found himself in a stairway, dimly lit with recessed bulbs, its walls and ceiling black. The rubber treads on the steps gave it an institutional feel. He thought that it must be like this in certain prisons.

There was a thick iron door here. "What is this place?"

“We call it Foggy Bottom,” she said with a laugh. “It’s full of politicians.” She drew the door open.

The first thing he saw was a red butt. Leonore went in, giving it a spank as she passed. “Thank you,” a male voice said.

Paul followed her. “Should I? A guy?”

“He doesn’t care.”

Paul gave him a whack, and not a light one.

“Thank you, sir!”

Paul looked down, trying to see the face of the guy who was trussed up there.

“No, honey, we don’t pry. Not in here.”

But he had seen, and he knew the face. “Um, are these people all from Washington?”

“Washington, the Kremlin, Downing Street, the Vatican. You name it.”

Not all the whipees were men. There was a woman hanging naked from the ceiling, with what looked like heavy chains hooked to her nipples. “Ouch!” Paul said to Leonore, who kept walking. Another woman was encased in spectacular bondage, tied up like some kind of a ball, with what looked like a pair of underpants stuffed in her mouth.

“My God, who’s that?”

“A publishing executive on a guilt trip.”

There was a guy tied to a pole being whipped by two other guys with thick, black paddles.

“More publishers?”

“Two congressmen kissing a senator’s ass. They’ll be taking their turns on the post later.”

“You ever get a president in here?”

“What country?”

“U.S.”

“Which one?”

“Well, how about Bush?”

“Which one?”

Okay, that question was answered. “How much for this room?”

“Oh, you can do this room on my nickel. I’ll top you.”

“In your dreams, sweetie. Not my *schtick*.”

She shrugged. “You’d be surprised what it’s like, getting topped really well. Your ego is, like, imploded. This whole club is about blowing the ego away. Every room does it, but differently.”

“The Japanese garden?”

“The right kind of high, and you’ll feel very close to heaven there.”

“High is high.”

“No way. Our dealer is an MD who not only deals, he designs. He’s given all our customers physicals, he knows exactly what makes them tick. He’s doing blood tests, prescribing, adjusting, all during the course of the evening. They are being taken so high they’re gonna forget even their damn names.”

“And then the music blows you wide open.”

“You can get very close to God in here, mister. This place is sacred.”

Hell called *sacred* — that was something he never thought he'd hear. “Can we go somewhere else?” This was not the part of the club for him. He wanted to do some pipe, or at least get another drink. There wasn't much second-hand smoke down here, and he was crashing.

This time they went up in an elevator so small that they were touching. He sprang up instantly. When the doors opened, he stayed like that, because this was a ballroom full of beautiful beds, and there were people openly making love on them.

A pair of singers, a lovely, tall girl and a young man who was even taller, stood together singing in voices so filled with gentleness that they might have been saints. He recognized “All Through the Night.”

*“O'er thy spirit gently stealing,
Visions of delight revealing,
Breathes a pure and holy feeling . . .”*

There was a solemnity to this place that seemed at odds with what appeared to be an orgy in progress. Paul was a smart man, and he was well able to see the careful thought that had been put into all this. This room, for example, was about disconnecting sex from sin. No more need to hide.

Once in a while, he'd hit a house in Vientiane or Phnom Penh with a bunch of guys, and it would develop into pretty much of an orgy. It was fun but it was ugly, and you felt dirty afterward. In this room the lack of shame brought with it a sense of purity. Thirty or forty human beings were enjoying one another in all kinds of intimate ways, doing everything you could imagine with each other. Their faces glowed with lust, they sweated. But it was all so joyous.

Maybe Leo was right, maybe there was something kind of sacred here.

Seeing all these bodies entwined, he was starting to look at Leo real hard.

But she probably outclassed him like everybody else in this place . . . except for the morons in the dungeon. They were pols, and that was sorta his

world. But he could not relate to getting whipped. He got punished plenty without any assistance. The knife wound was still healing good, for example, but he sure as hell knew it was there if he tried to raise the arm too high.

Leo was terrific looking — clean as a whistle and sexy as hell. He could get into her in a second, way into her. His equipment had been considered pretty sensational by some. Maybe she'd like a little taste.

He decided to give it a try. “Look, I'd like — ” She rested her eyes on him, which instantly shut him up. “Let's go downstairs,” he said, his voice husky with embarrassment. He couldn't proposition her in here, for Chrissakes. He was no damn angel; he needed his privacy.

She strolled out into the foyer. He wasn't quite sure where she was coming from, and he didn't want to insult anybody. But he had to get it on somehow. He was human. He couldn't just be left to Sally Five himself in his hotel room, not after all he'd seen and felt here tonight. He wanted to be loved, too. But since that didn't seem likely to happen to him, maybe she'd just give him a break, here.

“I think you're really — I mean, I could sure as hell give you a nice time. If you need a tip — if that's the drill — ”

“I want to show you a very special space now,” she said. She took his hand.

How anything could possibly top what he had seen so far, he could not imagine. This wasn't just a place of pleasure. It was a whole new approach to pleasure, as something that did not need to be hidden and wasn't a sin. Even the ones in the dungeon were learning that lesson, in their own peculiar way.

The people who could come here were immensely privileged. All of his life, he had thought that the social barriers by which we live were a tragedy. Miriam Blaylock, whom he viewed now as something of a young genius, was challenging those barriers here, and he was beginning to decide that she was succeeding.

They went down a back stairway, steel stairs in a fluorescent-lit well.

There were doors with Exit signs all over the place and a hose station on every landing. He'd also noticed that the place was sprinklered and smoke-alarmed. "I've never seen so much safety equipment."

"We're very careful. You don't want the least feeling of danger."

"I've never felt so safe in my life."

She squeezed his hand.

"Look," he said, "I'm sorry if I embarrassed you. Or insulted. I just — I find you, you know, really, really attractive."

"I'm flattered."

They came to the bottom of the stairs, where there was a door with a breakaway bar that looked as if it must lead into an alley. A horrible thought crossed his mind. "I'm not getting the boot, here, I hope?"

She opened the door. There was a tiny chamber entirely made of mirrors. When he went in, there were Pauls staring at him from every direction, all of them disappearing into an infinity of repetitions. It was a sort of visual echo. "Hey, this is — "

"Have a fabulous time." She slammed the door, and he found himself alone in the small space. He turned around immediately, but saw only more mirrors and could not find the door.

Above all things, he hated confinement. But this was a place of pleasure. He was getting the ride of a lifetime for a poor bastard like him. He was not going to ruin it by freaking out.

So he wouldn't freak out, but the guy looking back at him out of all these mirrors, he looked like he would. Look at the eyes, look at all that pain. Then he thought he saw another face. He saw — Jesus God, he'd been a fool to come here! It was one of them, watching him through the damn mirror. He went for the gun that wasn't there, then lashed out. His fist smashed into the mirror. The room shook, he felt a blast of pain up his hurt arm . . . but the

mirror did not crack.

There was a voice then, very soft, “Turn right and walk toward me.”

He turned right. There was nobody to walk toward but his own reflection.

“Come on.”

He took a step, feeling ahead — and felt air. This mirror was another one of the veils.

Was he walking into whatever had swallowed Ellen Wunderling? Some kind of damn superexclusive vampire lair? Oh, hell, if he was, he’d at least take a few with him.

He stepped into the most palatial bedroom he had ever seen. On the bed sat Miriam. She was playing the flute, and doing it with exquisite skill. He gaped at her, at the tall bed she was in, at the phenomenal tapestries on the walls.

There was a window, and outside he could see smiling green fields with people working in them, men with brown tunics and caps. A horseman rode along a path, a man dressed in the fabulous clothes of the distant past.

She stopped playing long enough to say, “It’s a TV screen.”

But it was very well done. The image was so clear that it looked more like a window than a window.

There was a chair across from the bed, big, carved, almost a throne. He sat in it. He watched Miriam Blaylock play, watched and listened. This was one talented lady. What the Veils was about was limitless wealth and the power of human genius. If you had the cash, the Veils could rebuild your soul.

Or if you were a damn dogface on a lucky streak, like yours truly.

Miriam was wearing a white nightgown cinched just under her breasts with a pink ribbon. He thought, *I have never been in such a wonderful place with such a wonderful person before, and I think I’m about to get laid.*

Christ almighty. Now, he had to prepare himself. When she was finished with that sweet prelude, she was going to raise her eyes, and he was going to see once again her angelic and spectacularly sexy face. He was already as hard as iron. The issue was, how did he do it, if indeed he was to be afforded that privilege, without wadding her on stroke two?

The music came to an end. She put down the flute.

When he applauded softly, she laughed. "I was just fooling around."

"You fooled around with the *Prelude to the Afternoon of a Faun* better than anybody I've ever heard. Better than Galway."

"I adore James."

"You know him?"

"We've played together."

"Okay."

Silence fell. He didn't know what to do next, what to say. He was way out of his class; that was the truth of it. He looked up at the ceiling, which was painted with a night sky, dark blue with gold-leaf stars and a moon that looked more like it had a snake in it than a man. The constellations were strangely off, too.

"That's an antique ceiling. Do you like it?"

"Oh, yeah. How old is it?"

She got off the bed and came over and sat on the arm of the chair. "It's from Atlantis."

"Okay," he said again, and instantly felt like a total jerk. What was he, a stroke victim, here? Couldn't he come up with something a little funny at least, in response to a funny remark from her?

"Okay what?"

“Sorry, I’m just — well — I gotta be honest. I’m just totally overwhelmed, here. Your club — I mean, Jesus. I admit to feeling just a little outclassed.”

She leaned down and grasped him through the silk pants. There was no underwear involved in this outfit, so it was a pretty intimate contact. The pleasure was intense.

“You need to cool down a little,” she said.

“I need to cool down,” he repeated.

She got up and went over to a big chest. It was made of dark wood, carved with writhing snakes. She opened it and he was amazed to see her bring out an opium rig with two of the most magnificent ivory pipes he’d ever seen. “You said you’d like a pipe. I think it’ll help a lot.” She stopped, though, then cocked her head, as if considering something that was a little new to her. “We’re not against drugs, are we, Mr. CIA man?”

“Nah, the Company’s a big importer. Anyway, I been doin’ shit since ’Nam. I’m in an extreme business. You can’t handle it without extreme relaxation. You gotta compensate.”

She gave him a pipe, started to prepare it for him.

“There’s that antique lighter again. Lady, you gotta ditch that thing; you’re gonna burn up.”

She glanced at him in a way that kind of shook him up. Was it a cold glance? Or hate? Jesus, if —

But then she smiled, and it was just so sweet that he could not believe that she was anything except very charmed by him.

He took a long pull and in a second was rewarded with good vapor. It seeped through him like blood in a sponge. It was very good vapor.

She lit her own pipe, then went to the bed and lay back, cradling it. He did the same, lying face-to-face with her. As he smoked, he felt his erection calming down. That was good. The opium would make the evening last.

She kissed him on the neck, just a peck, then giggled. He kissed her back, right on the mouth, hard and long.

After that she didn't giggle again.

SEVENTEEN

Blood Child

Miriam was careful with his kiss. She was not sure how much Keeper anatomy he knew, and until she was, she would take no chances touching his tongue with her own. Afterward, he gazed at her with what she thought were the saddest eyes she had ever seen.

Now, they were smoking together. She was handling the pipes.

He was still devouring her with his eyes, and there was in the back of her mind the thought that he might have some level of recognition.

She gave him a smile calculated to seem shy, a little surprised. He sighed, smoked, closed his eyes.

She removed the pipes after a few more minutes. She wanted him calm, but not in a stupor. Two pipes of this opium would put a human being in one, no matter how strong he was.

“Nobody’s interested in opium anymore,” he said, lounging back on the bed. “I mean, I picked up on it in the jungles of Cambodia. Primitive place.”

“My opium is grown on a Crown estate in Myanmar, processed in a facility built for the CIA in 1952. Some say it’s the very best pipe on earth. Did you know Maurice McClellan? He was in charge of that operation for CIA.”

“I knew Maurice.”

Then he was suddenly watching her with eyes as hard and cold as black diamonds. She was surprised — stunned, in fact — to realize that she’d just now made a mistake. If she were really in her early twenties, Maurice would

have died when she was just a child.

“He was a friend of my father’s,” she said, rolling over on her back and putting her hands behind her head to telegraph how complete was her ease. “He introduced him to Prince Philip.”

“Yeah, that’d be Maurice. He traveled in pretty rarefied circles.”

“You know what we should do?” she said.

“What?”

“We should get you more comfortable.”

“This is a boss suit. I like the way it feels.”

“It’s club wear. When somebody comes in — ”

“Dressed like a bum, like me.”

“You were confusing my guests. They thought you were some kind of a cop.”

“Do you get cops around here?”

“Sure. The precinct’s just around the corner.”

“I noticed.”

“It’s not a problem.” Not when fifty thousand dollars a week was being sent over there and half the powerful people in the city were making sure that this particular block just plain was not patrolled.

She slid her hands under his shirt. He blinked his eyes. He got so hard so fast that there was a hissing sound as his organ slid against the silk of his trousers. As she unbuttoned the shirt, she wondered how much blood he could lose without dying. He was very strong. He’d probably last and last.

Once he was well trussed up, her plan was to remove all her makeup, to let

him know that he had been captured by a Keeper. Then she would prick a tiny hole in his neck and use him as a teaching tool, letting Leo take him by small sips.

She ran her hands along his shoulders, pushed back the shirt. “You’re so *strong*,” she breathed.

“I work out.”

“What do you press?”

“Oh, two hundred. Two-twenty if I’m healthy.”

“You’re unhealthy?”

“I tend to get wasted.” He nodded toward the pipes. “That, booze, girls. I’ve lived in Asia too long, done too much — too much work.”

“What is your work?”

“Classified.”

She laid her head against his chest, drew herself, catlike, close to him. “That’s exciting.”

“What do you think I do? What’s your guess?”

“You — let me see — you’re *very* strong. But you’re also smart.” She whispered. “You’re a government assassin.”

He chuckled. “You kept my gun.”

“You can’t bring a gun in here. It’s against the law.”

“I thought the law didn’t apply to you.”

“My law.”

“How did you get so rich?”

“My great-great-great-great — let’s see, five greats — one more — great-grandfather was Lord Baltimore. He owned Maryland.”

“That’ll do it. But I still want my gun back.”

“When you leave.”

For a moment, he looked, she thought, kind of like a wild animal. He was hair-trigger; she knew that. Up close like this, he seemed even more dangerous.

She stretched, lying half in his lap and half on the bed. When she stopped, the edge of her hand was lying against his erection. She said, “Uh-oh.” Then, “Can I be a bad girl?”

“Be a bad girl.”

Very lightly, she touched it. Then she snatched her hand away. “Oh, it’s *huge!*”

He swallowed. He was trembling a little.

She felt more intimately. “It can’t be as big as it feels.” “Have a look,” he whispered.

“Shall I?”

He was too big around the waist for the pants, so they were only three-quarters zipped. She opened them. He came out, bobbing, the glans gleaming in the soft light.

He *was* huge. She pressed into the tender glans with a fingernail, then held the enormous thing in both of her hands. She drew off the pants. He shuffled out of the shirt.

She had not seen a male so beautiful in years. His muscles were fabulous, his skin lustrous. His face was purest masculine poetry, chiseled and hard, but with the complex, haunted eyes of somebody who had led a dangerous and uncertain life.

Whatever, he was a lovely specimen and he was going to make a sumptuous meal. She was actually a little jealous of Leo. What a great first supper!

A few minutes before he was brought in, she had gone down and checked the furnace next door. All was in order. Under the bed was the black overnight case that she would carry his remnant in.

But all that was for later. Until Sarah returned, she would continue to play with him. She needed that book. If Sarah did not find it, then this creature would discover that Foggy Bottom could be used for more than just games. There were some very serious implements there, and she knew just exactly how to apply them.

She stroked his chest, made a ring around one of his nipples with her finger. She touched the puckered wound on his shoulder. “This hurt?”

“A little. It’s healing.”

She remembered how good it had felt, seeing that knife dig in. If there had been a little more room for her backhand, she would have sliced the arm off.

“What happened?”

“A client became upset.”

“Very upset.”

“Very.”

She kissed the corner of his mouth, but drew aside when he tried to kiss her back.

“You know, Miriam, I have to be honest with you. This is the nicest night of my life.” He looked her up and down. She was still wearing her sheer nightgown. “You are — oh, gosh — so much more than you seem. I mean, please don’t take this wrong, but you’re just a kid, and this place is really deep, here. That girl that took me around — she said it was sacred and I thought she was a complete moron at first. But I started realizing what you

were doing. And I want you to know this — I agree with it.”

“Thank you.”

“You came up with the whole concept?”

“Yes.” She took his hands to her bodice, put the ribbons in his fingers. Then she drew his hands slowly apart. As she did so, the ribbon came away and the gown fell down her shoulders like drifting smoke.

“Oh, my,” he said. Her breasts were gracefully full, curved just right to fit the cup of the hand. He raised his hands. But he dared not touch. They were like some kind of perfect art, a porcelain dream.

She took his hands to them. When they lay in his rough palms, the nipples became erect. Gooseflesh dusted the pink areolas.

“Oh, Lord,” he said, watching this. He bent to her, laid his lips on that sweet skin of hers. Up close it had the texture of a child’s, absolutely smooth, as if life had not yet touched it.

Christ, he ought to ask for her driver’s license. But he wouldn’t, because if this was a minor, then God had made this kid to boogie and he was sorry, but she was gonna boogie tonight.

Her lips hung slack in a way that said she was real interested and real ready. He kissed her, which was awful nice. But he was careful, because he had a thing about him that had not always gone down with women, although the whores pretended to love it, of course. His tongue was kind of — well, rough. No other way to put it. He had a cat tongue. He went deeper, though. Couldn’t help it. The kiss itself was luring him, so sweet was her mouth. He just loved kissing this woman. Oh, wasn’t she a *woman*? Nice!

He wanted to touch his tongue to hers, but she didn’t seem to have one. It was way back in there. ’Course it was. She was probably scared to death.

But then he did, and when he did, she arched her back and cried out so loud it broke the kiss.

“Sorry!”

She threw her arms around him and latched onto him with her legs. She kissed him and kissed him, and he thrust his tongue into her mouth and her groaning and crying made him wild for her. She loved it; she loved the way he was.

She was haunted by how much he reminded her of Eumenes, who had been not only her husband, but her only Keeper lover. Power like this was something she had not tasted in eons. He was like the roaring oceans of the world, the flames of the stars, a tornado, a typhoon.

She locked her lips to his and opened her mouth to him, and he thrust in and rested in the kiss. Even though he had not yet entered her, she came to climax, came again and again beneath his sweating, eager body.

She looked at him, drinking him with her eyes. Never had there been a man so beautiful, never so filled with raging sexuality, never so — so — there were no words to describe it. No words.

They rolled and he was under her. The opium had done perfectly: he was ready, but he wasn't going to explode.

He let her sit on him, felt her take his penis in her two hands. Her cheeks flushed as she stroked it, loved it, kissed it, and licked it. It wasn't human, it couldn't be — because it was going to fit her and they did not fit her. They were wasted, small creatures in their sex, not like a real man, a Keeper man.

He was — but this was impossible. They didn't interbreed. She put that stupid idea right out of her head. He was a lucky accident, is what he was and that was *all* he was.

She wanted to taste of him. She wanted to know his every intimate truth. He excited her, truly, despite the hate that flapped in her heart.

“Hey,” he said, lifting his head and kissing her hard. “You've got a tongue like mine. We're two cats.”

It was true, and this was getting very strange very fast. “We’re made for each other,” she said carefully.

He slid to come from beneath her. She knew what he wanted and responded instantly, with delight. She was *never* on the bottom, but with him yes. Yes. She belonged under him. It felt meant to be. She shifted her weight.

His huge form dominated her. Gazing into his eyes, she spread her legs.

“Okay, baby,” he said, “this one belongs to *me*.” On that word he pushed into her.

The world turned black. Then a dam burst. Thunder rumbled in her head. Thrusting at him, she screamed out his name, “*Paul, Paul, Paul!*” as he pumped deep and withdrew, pumped deeper and harder, lingered then drew back, thrust and pumped, thrust and pumped.

It was as if she had become a single, blazing point of pure pleasure that was racing out through the universe at a million times the speed of light.

Then he rested upon her, and the feel of his surprisingly great weight on her body was the most wonderfully natural feeling in the world. He felt so much like Eumenes it almost broke her heart.

His loins surged, and the pleasure became a fiery comet that went straight through her. He slid himself almost all the way out, then plunged in again. He held her down, and she enjoyed the illusion of being helpless — oh, for the first time in years and years and years — and it was just so damned awfully wonderful. It wasn’t scary — or it was, but that was part of the enjoyment. He was slow with her, and precise with her, sliding in and out, in and out while she shook her head from side to side and arched her back and yammered his lovely name.

It was *just* like being under Eumenes, having all her power stripped away by his greater power, and being free in bondage to him at last.

While he thrust, Paul drank her with his eyes. Not only did she look wonderful and taste fabulous and feel great to touch and hold, she had a very

special instrument down there. This lady could use those muscles, yes, she could, to kiss the shaft and compress the tip in ways that not even the most skilled whores of Bangkok or Seoul or H.K. could even dream about.

Oh, my stars and bars, thank God for that pipe, he thought, or I would've come and been done in the middle of stroke one.

As it was, he went slow and careful while she kissed his chest and bit his hairs and licked his nipples. She cried out, she trembled like a branch in a storm, she pumped while he pumped, faster now, yelling, grasping his buttocks, pulling and pushing him. He was riding this filly, for sure; he was bigger than he'd ever been, and it felt better than it ever had.

Miriam was screaming, her eyes frantic and amazed.

She shrieked; she bellowed.

This was a damned thing, a very damned, damned thing! Because she was feeling a fire blazing inside her, and she knew what that fire was.

No Keeper woman who had felt it ever forgot it, the alarming, painful, delicious heat that told her she was about to conceive. But her egg wouldn't drop for a human! And it mustn't!

No, no that must not — not —

But the process went on, and she went helpless with it, a speck of a woman lost in a restless, living ocean. He was the storms above; he was the lightning striking her tortured waves.

The lightning, it seemed to her, was alive. And if so, then — well, then he was fertile!

Oh, stars, what was happening?

She had never dreamed that any human male would trigger this response in her body. It was her egg, her last egg, and it was moving within her, she could feel the searing delight of its journey.

She had not had a Keeper man in millennia, but she had wanted one always, and now suddenly this enormous body surging above her — that dear, powerful face, those driven eyes — this was a Keeper!

Paul was pouring with sweat, his thighs working, his every muscle singing with the amazing pleasure of this long, long session. Every thrust touched the shivery edge of climax; then as he pulled back, she loosened her muscles and they started again.

He'd never been in a state of pleasure this intense for this long, and things were happening to him that had never happened before. His heart was thundering harder than he could ever remember. Even his skin was tingling with pleasure, especially where it was in contact with her. Electricity — real, humming juice — seemed to be passing between them.

Again he thrust into her. Then he paused, drinking in her perfect flower of a face, her lustrous, joyous eyes.

She screamed. She had screamed a lot for Paul, but she *really* screamed now. She could feel the egg. Definitely. It hung in her, touching the mother lode of nerve endings, and where that egg touched that womb, a million dancing needles of sheer, tickling, joy sent their prickles marching out through her every sizzling nerve.

Paul was on fire with the sweet fire of the angels. Look at her pure, dear face — she *was* an angel! Oh, look at those eyes, those gray pools of innocence — she was the maid of Solomon's fancy. He pressed himself hard against her, thrust harder, and then as if molten gold were speeding in his shaft, he came roaring and yelling and laughing; he came as he had never come before or thought you ever could come. He came in pleasure and in love, in dear *love*, which had caught his soul afire.

She felt his semen speeding into her like a great flaming fire, a sweet sun — and she knew that it washed the egg, and it went screaming through the wall of the egg and sped down to the center, where slept the waiting shadow.

She threw her pelvis forward and arched her back, and they hammered at each other, squeezing the last demanded juice of the pomegranate, the last

starry flower.

A burning wave snatched Miriam up and away, filling her with wonderful fire, shocking her more than she had been shocked since the pyramids reflected the sun, since she had opened her eyes to the eyes of her Eumenes and managed to murmur to him, “It feels like a boy.”

Paul collapsed onto her chest, and they both burst into tears like two scared schoolkids.

Miriam Blaylock and Paul Ward had just conceived.

She was crying for the little baby that lay now within her, its cells already waking up. She was crying for she had no idea what that baby would *be* — Keeper, human, alive, dead, deformed — only that it was her second and it was her last.

“I love you,” he said, “oh, my God in heaven, I love you!”

She looked scared, and he touched her dear eyes to wipe away the tears.

“Miriam,” he said. He suddenly felt awful. “Please never make me leave you.”

She gazed at him, her eyes slow and contented. “I adore you,” she said, and there was such reverence in her tone that he wanted to cry. Maybe somebody would want a broke-down old CIA officer after all. And maybe that somebody would be this wonderful, special girl.

Miriam slid out from under him and drew his head down into her lap. With loving eyes, she gazed at him. Then she bent closer, kissing the tip of his nose and then his lips, and then the pulsing vein in the curve of his neck. She lay her mouth there for a moment, then withdrew.

Paul felt her sucking his skin a little. It was a nice sensation.

Suddenly he jumped away from her.

There, across the room, stood the woman from the limo, the woman who

had blown him on the dance floor.

Miriam got up, went to her, and took her hands. Sarah nodded her head, and Miriam burst out laughing. Her laughter peeled out again and again, and it was so pretty and so full of fun that he started laughing, too.

“How long have you been in here?” Paul asked her.

“Since you started.”

“You sure got an eyeful.”

Sarah shrugged.

“May I know your name?”

“Sarah.” She nodded toward Miriam. “I do her books.”

“You let your accountant in here when you’re — ” He chuckled. “To each his own, I guess.”

“It was lovely,” Sarah said. “You’re a very lovely man.”

The look in her eyes, though, did not suggest that she was pleased with what she had seen. In fact, there was something real on edge about this lady.

Then another one came in through the wall.

“Oh, hey,” Paul said as the girl who’d shown him the club appeared. He got his pants on. Not that one more naked male would matter to this crew.

Then he saw that she was blushing like a tomato. She had a funny little silver thing in her hand. A strange knife.

“What’s that?”

It disappeared into her jeans. “Sorry, Miriam!”

Miriam went to her. “This is Leo. The three of us run this club together.

Leo's the granddaughter of General Patton."

"He was my mother's cousin."

He threw on the shirt, started buttoning it. "General Patton, Lord Baltimore, Morrie McClellan, and Prince Philip. Not to mention Ben Stiller, who was in your place earlier. Lotta names to drop."

"Lord who?" Sarah asked.

Miriam smiled at her in a way that told Paul she was being made to shut up. Which meant that Miriam's story about Lord Baltimore was a lie. Which meant that she felt a need to conceal the origin of her wealth. Interesting.

"We're going home," Miriam said, her voice rippling.

"We are?" Leo's eyes flickered toward Paul.

"I'm in love," Miriam shouted. She raced back to the bed, threw herself at Paul, kissed him hard, then flounced back on the bed, pulling him with her. She said, "He's the best lover in the world." Then she was convulsed with laughter, peeking out from beside his big chest at Sarah and Leo. "Am I being naughty?" she chirped.

"Naughty is not the word," Sarah purred.

"What do I do?" Leo asked.

Paul said, "I think we fell in love."

Sarah suddenly smiled. "I'm so glad." Then she said to Miriam, "Miri, it's four. Can I let the staff go?"

"Is the house clear?"

"Ready for the nighthawks."

Miriam lay back in his lap, her hands folded behind her head. "Leo, tell Luis to get the car ready." She gazed up at Paul. "I'm bringin' my baby back

home.”

The two women went out without a word.

“They seem kind of upset.”

“Pets don’t like surprises.”

“Am I a pet?”

“You, my dear, are a great big beautiful *man!*”

They got dressed and went out of the little room, then through the kitchen to the rear of the club. The Bentley limousine he’d seen on Houston Street stood there gleaming in the predawn glow.

He got in, settling into the plush cushions.

“Want a drink?” Miriam asked brightly.

Sarah and Leo came in.

“You know what I’d like? Have you got a good cigar? After lovemaking like that, nothing in the world would be as nice as a really fine cigar.”

Leo grunted with barely concealed disgust.

“We have some Cohiba Piramides in the club,” Sarah said in a dull voice. “But it’s awfully confined for you to smoke a cigar here.”

“Luis,” Miriam called, “go back in and get my lover some cigars.”

Luis brought them out and held open the humidor.

“I was looking for a Macanudo, maybe,” Paul said.

“Cohibas are a bit better,” Leo replied, unable to conceal a sneer.

“We’ll all smoke,” Miriam snapped, handing cigars to Sarah and Leo.

“Self-defense, Sarah! Let me get my hand grenade — Paul says my lighter is dangerous, did I tell you? Hadn’t that ever occurred to you, Sarah?”

“I’m sorry, Miri, it hadn’t.”

“Well, he’s going to get me a new one. He says we wouldn’t want my pretty face to get burned, would we?” She cut and lit a cigar and handed it to Paul.

Paul took a drag of a smoke that was hard but incredibly rich, and he knew that it was true, that this cigar was better than a Macanudo. Way better, in fact.

Miriam offered one to Sarah, who waved it away. She pressed it on her.

“Look,” Sarah said, “I don’t want to!”

“Smoke!”

Paul was fascinated. What kind of accountant took orders like that? Miriam treated Sarah more like some kind of a slave.

Sarah took the cigar. Leo lit up in a hurry. In the front, Luis lit up. Only Miriam didn’t smoke. She sat glaring at Sarah. Whatever was going on between those two, Paul thought, they were absolutely furious with each other.

There was some cognac in the car, and Paul had a snifter with his cigar. It was as soft as a pillow, this brandy, but full of flavor. He didn’t bother to ask how old it was. Probably came straight out of Napoleon’s hip flask.

He allowed himself to imagine that what had come between him and Miriam might be serious.

“Where is home, by the way?”

“I have a beautiful home. You’re going to just love it. And if you *don’t*, then we are going to change it so you do. Isn’t that right, girls?”

“Yes, Miri,” Sarah said, tears in the corners of her eyes. Paul felt sorry for her. Knowing Miriam, she’d been bedding this sweet little thing. They could have been serious lovers. And then all of a sudden, here comes this guy, and bang, Sarah’s strictly backseat.

Paul wanted to kiss Miriam again. He wanted to be in her again, to go in there and just live in there. That was his damn wheelhouse from now on, that fabulous twat of hers. What a creature. What a damn night.

It got quiet in the car. Leo and Sarah were staring daggers at Miriam. They looked as if they wanted to beat her up, as a matter of fact.

Well, let 'em try, Paul thought. She was his girl now and nothing anybody could say, nothing they could do, could change that. Except — he was aware that it was a little dangerous to say you’d fallen in love forever because of a single great roll in the hay.

But, hey, there was something *there*, something damned wonderful and serious. It had happened. It damn well *had*.

He watched Sarah puff a little on her cigar, then closed his eyes and sipped some more cognac.

This was the life, despite the fact that all the exercise had made his shoulder start to sing. He’d like a couple of naproxen or something. No more opium. He’d done his share of drugs for the night.

He thought of his seven grand at the Terminal Hotel. If he didn’t show up sometime tomorrow, they’d be sure to toss the room. Probably they already had. That would mean the Book of Names was gone. Also the seven grand. Everybody knew to toss the bedsprings if you were tossing a room.

So, what did that mean to him, now that he was on the lam? Loss of the seven grand would be tragic. As for the Book of Names, he wasn’t sure if he was going to continue in that line. Maybe he’d done enough killing. He could write a pretty decent report, so maybe he’d interview at *The New York Times*. They hired out of CIA all the time . . . but mostly from the analytical divisions, not from the tough guys.

They arrived on no less than Sutton Place and pulled up — guess where — in front of the prettiest house on the whole block.

“Man,” Paul said as he got out. This was way far away from his side of the tracks. He looked up at the imposing façade. It looked damn old, but it was perfectly kept.

Miriam hurried up the steps and threw the door open. Paul joined her. “I oughta pick you up and carry you across the threshold,” he said.

“Welcome to my abode. Girls, he wants some breakfast! Caviar and eggs! Champers!”

Sarah and Leonore marched off into the back of the house.

“I don’t think they like me too much.”

“They’ll get used to you. In fact, I have a prediction. Sarah is going to totally change her opinion of you.”

Paul had big plans for bedtime, which came after a breakfast where Miriam picked and drank champagne, and he thought he must have consumed sixteen eggs at least. Sarah served table, and Leonore cooked. Sarah was awful pretty when she was mad.

Paul smoked another of the cigars in the big library. He saw all kinds of amazing books. There were also locked bookcases with really ancient looking black books in them, their spines unmarked. There were even scroll boxes, smelling of beeswax. He drew a scroll partly out, but it was real old and he was afraid to unroll it for fear he’d crack the parchment and cost her a cool million or something.

He would not have been surprised to find a Gutenberg Bible in here. What he did discover was to him equally amazing — a portfolio containing an original collection of opera libretti. These were not simply early printed copies. They were the manuscript scores.

Here was *Rigoletto* in what was apparently Verdi’s own hurried scrawl.

Reverently, he drew the score out. Miriam came up behind him so quietly that he was startled.

She laid a delicate hand on his shoulder. “You take an interest in opera?”

“A great interest.”

She took the score and walked through to another wonderful room. The wide parquet floor was covered with a Persian rug — the real thing, undoubtedly. But Paul’s attention was taken by the Steinway, a concert grand set in an alcove all its own. The windows that framed it appeared to be Tiffany stained-glass.

The sun was rising, spreading golden light across the rich mahogany top of the piano. On it stood a vase that was probably an ancient Greek original. Sarah was quietly filling it with flowers from a garden that could be seen beyond the windows, just beginning to glow with the light of morning.

Miriam opened the piano. She toyed with the keys for a moment, then riffled in the score. “Sarah,” she said, “would you?”

Sarah sat down at the piano. Suddenly she looked up at Paul. She held out her hands. “These belong to a surgeon,” she said.

What was she getting at?

She trilled up and down the scales, shaking her head in the shafts of sunlight, so that her locks shot red-brown sparks.

Miriam set the score before her, and Sarah began to play, and quite well. It took Paul a moment to recognize “Caro Nome,” and then Miriam was singing it, one of the greatest homages to the female soul that had ever been written. That she was singing it directly from the hand of its author made the experience all the more haunting.

Leo came in and listened, wiping her hands on her apron and blowing a curl out of her eyes.

When the song came to an end, Paul wanted to hold Miriam, to let her

know again how he felt. They had just had profound sex together, and he was in profound love. It sounded stupid, he knew that, and he couldn't actually say it. He'd only known her for a few hours, for the love of Christ.

She threw back her head and sang at the top of her lungs, "I'm in love, I'm in love, I'm in love with a wonderful guy!" She danced him round and round the room.

At noon she was still showing him her collections, her poetry — she had the original folio manuscript of John Keats's "Lamia," and Tennyson's "Tithonus," among many other wonders.

Paul struggled to show interest, but he had been asleep in the chair where he sat for at least a full minute when she shook his shoulder.

"Come on," she whispered in his ear, "you need a cuddle."

She took him upstairs, then, and they stripped in the sumptuous bedroom. She dropped her clothes to the floor for Leo to run around picking up. He was afraid to do the same, and put his on the edge of a little daybed.

Sarah drew them a bath in a huge onyx tub that must have, in itself, cost a million dollars. In fact, it was the damndest tub he'd ever seen — beautiful, glowing stone embedded with gold nymphs and satyrs and sea creatures.

It reminded him of something you might find in a palace. It had an ancient Roman look to it. The only place he had ever seen anything carved with such perfection, however, was in the King's Chamber of the Great Pyramid. The sarcophagus there looked a little like this tub.

Sarah wore a green dress with a maid's cap and a white apron. Between her soft good looks and Miriam's wondrous, long-legged nudity, Paul was damn well ready to go again. Sarah gave him a playful tweak as he stepped into the tub.

"Don't misfire his cannon." Miriam laughed as she joined him. Sarah washed their hair and their backs with fragrant soap. She washed his face, which was an incredibly intimate experience. Being naked with Miriam

would mean being naked with her friends, apparently. Hell, the more the merrier.

Here in this bathtub with these amazing people around him, he definitely decided that his past was no longer his problem. He told himself that this decision was now and forever. The world had survived a long time with vampires hiding in its shadows.

From this moment on, he had a new job: getting Miriam to marry him.

He lounged back, eyes closed, as Sarah's fingers delicately massaged his cheeks and softly caressed his forehead. Miriam's toes appeared between his legs, pressing and touching.

Yeah, it was heaven. The crusty old tough guy had found one hell of a pasture, looked like. He thought — hoped — that he was presently feeling the tiredness and disappointment of a lifetime, and maybe even its many, many sins, slipping away into the past and welcome forgetfulness, being cleansed away by the ministry of angels.

Then he noticed Leo. She had come in quietly. She sat on the john with her legs crossed, smoking and watching him. He saw the strange little knife again. It was outlined in the pocket of her very tight jeans.

Their eyes met. She smiled.

EIGHTEEN

Careless Love

Miriam and Sarah stood hand in hand looking at the magnificent human specimen lying asleep on the bed.

“He’s in hog heaven,” Sarah said.

“He is.”

Leo took out the fleam. She moved toward the bed, then looked to Miriam, her face questioning.

“Leo, we’re not going to do him.”

“But I feel — ” She shuddered. “We have to.”

“She’s right, Miri. Think what he’s seen. Think who he is!”

Paul stirred, throwing a large hand out from under the covers. “Miri . . .”

Miriam went to the bedside and knelt and kissed the hand. “I’m here, my love.”

The hand reached out, stroked her cheek. “Mmm . . .”

She slid in beside him.

When Sarah saw the tenderness in Miriam’s eyes, she was horrified. What had happened to her? Had she gone insane? This was the most foolhardy thing she had ever done.

“Leo,” Sarah said, “do it.”

Leo looked at the fleam. “H-how?”

Miriam’s head came out of the covers. She raised herself up. She whispered, her mouth close to Sarah’s ear. “I think I’m pregnant.”

Sarah stepped back, for a moment too surprised even to respond. She was a scientist and doctor who’d had twenty years to study every aspect of Miri’s body. A limitless budget had made the lab in the basement a wonder of science, equipped with every conceivable instrument, including many that Sarah had designed herself and had built by the finest medical engineering establishments in the world.

Sarah knew, therefore, that this “pregnancy” was a tragic fantasy. It must mean — could only mean — that Miri’s last egg had dropped. She was not pregnant; she just wanted to be. She could not become pregnant by a human being. All that had really happened was that Miriam Blaylock had lost her last chance to bear a child.

Sarah rushed into her and Miri’s sunroom, where they had their private little place together. Miri sewed for a hobby, using the intricate stitches taught her by her mother, producing the exquisite leatherwork of the Keepers. On the floor where Sarah had laid it, beside a couple of ancient half-opened scrolls, was the Book of Names that so much blood, human and Keeper, had been shed over in Paris.

Sarah threw herself down on her daybed and let the bitterness and the sorrow that had built up over the last terrible hours flood out of her in the form of huge, gasping sobs. Sometimes Sarah hated Miri, but mostly she loved her, and especially when she was suffering and vulnerable, as she most certainly was now.

It would fall to Sarah to examine her in the stirrups, as she had done so often, and to give her the news that would break her heart. In the end, Miri would come back to her, turning as always to Sarah’s enfolding arms for comfort. Sarah would give her what comfort she could, but how can you relieve the sorrow of a woman who has just learned that she has lost her last chance for a baby?

And worse, by so doing she had exposed herself and her household to mortal danger. She was in there alone with that evil creature — how could she *be* so heedless?

There were tender sounds coming from the bedroom, sounds of love-making. Sarah went to the door and signaled Leo, who was standing by helplessly and self-consciously.

“Sarah, I feel dreadful!”

“I know, dear.” As much as she detested this foolish girl, she could only sympathize with her now. She had lived this suffering.

“I’ve got to have blood.” She gave Sarah a desperate glance. “I tried to eat some of the omelet I made him, but it was revolting, it tasted like wet paper.” She threw her arms around Sarah. “He smells good. He smells like — like —”

“Food.”

“What have I done, Sarah, what have I done to myself?” Sarah could not answer her. There were no words to describe the ruin of a soul. But she held her, she kissed her soft hair. “We’ll hunt you up a meal. Like that old woman. A nice meal.”

Leo looked at her out of awful, stricken eyes. “I don’t want to kill anybody.”

“You made a choice.”

“I don’t want to!”

Sarah moved quickly to close the bedroom door. He mustn’t overhear this.

“Leo, I’m going to tell you something about that man in there. I don’t want you to be frightened. It’s all going to come right. I hope it is.”

She went across to the graceful New Kingdom table that stood beneath the wide window. Paul’s magnum pistol lay there. The table had been a gift to

Miri from Thutmose IV, “in exchange,” as she put it, “for some girlish indiscretions that he found very enjoyable.”

“This is going to come as a surprise, I know. That man in there is a killer of the Keepers. A professional.”

Leo’s eyes went to the closed door. “I didn’t think anybody knew about them.”

“There are people who know. He’s one of them. He’s murdered hundreds of them.” She said nothing of how that made her feel — the combination of relief and cold terror.

“Oh, my God. But why is she — ”

“Leo, something happened tonight that I still don’t fully understand. She apparently enjoyed that man immoderately. She thinks, for whatever reason, that he fertilized her egg.”

“Only another Keeper can. Isn’t that true?”

Sarah nodded. “It’s a fantasy, nothing more. A tragic fantasy.”

“She can make a mistake like that?”

“Miriam — a Keeper woman — has only four eggs in her lifetime. This is her last one.”

“Does she have any children?”

“No. Apparently she’s lost her last egg, and — well, she seems to have had a bit of a breakdown.”

“Can’t you give her anything? I mean, you’re a doctor and all.”

“What we need to do is to give her a pregnancy test. When it comes up negative, my hope is that she’ll come to her senses.”

“And I’ll get — I’ll get to . . .” She lowered her eyes. Her face burned with

shame. “I hate this!”

“You bought it,” Sarah said. “Wear it.”

“I don’t want to do any more killing! Not ever, Sarah.”

“Join the club.”

“But I have to, don’t I?”

“Join the club.”

Leo began to weep. The hopelessness in the small, defeated sobs was familiar from Sarah’s own private moments. Sarah embraced her, and Leo held on tight. “It hurts, Sarah. It hurts terribly!”

“Blood will fix that.”

Leo grew pale. “I’ll kill myself,” she said.

Sarah was silent. Leo hadn’t yet seen the attic. Better to put that off for a few days.

“What do I do, Sarah?”

“Leo, that man in there is a monster. He’s killed hundreds of Keepers, and he’ll kill Miri the instant he discovers what she is.”

“She won’t let him.”

“In bed together for hours, exploring each other naked, and him being familiar with Keepers and how they look — it could happen at any moment.” She gestured toward the magnum. “That thing is loaded with explosive bullets. They’ll blow your brains right out of your head, your heart out of your chest. The only thing that Miriam’s body can’t survive is the failure of blood flow. Given an intact circulatory system, she’ll heal. Always. He knows this. He knows exactly how to kill a Keeper.”

“I had a nice life. I had my loft and my little boat and my friends — a few

friends — and I was collecting cool artists like the Starn brothers and John Currin . . . but I spent most of my nights at home, or going to clubs by myself, trying to look like the group I wanted to be part of. But nobody wanted me. I was a washout . . . until all of a sudden *Miriam Blaylock* starts taking an interest. In me! I was totally impressed, Sarah.” She choked back a sob.

To her credit, she did not break down, which is what Sarah had thought was going to happen. She raised her head, stuck out her chin, and said, “What we have to do is pretty damn simple.”

“It is indeed.”

She took out the fleam, handed it to Sarah. “You know how to use this; I don’t.”

Sarah opened it. “You hook the end in behind the vessel, then jerk it toward you. The blood’ll come out in a stream. You get your mouth over it and just keep swallowing as fast as you can.”

“What if I throw up?”

“You won’t. You’re carrying around a pint of Miri’s blood in your veins. It’ll be like taking the most intense drug you’ve ever known. It makes the most powerful horse ever sold seem like aspirin.”

“He’ll go nuts when he gets stuck. I mean, he’s gonna feel it, Sarah.”

“I’ll do the incision. All you have to do is cover the wound with your mouth and suck as hard as you possibly can.”

“He’ll fight.”

“It’s not like that if you’re fast. They lose consciousness in a couple of seconds.”

“You better do it.”

“You need to eat! If you don’t, her blood’s going to start destroying yours.”

You'll go into shock."

"I'll die?" She actually sounded hopeful, as if she thought it might be a welcome release. Sarah thought of what was in the attic.

"Feeding draws the blood right out of the brain. He won't even get a chance to yell."

Leo looked to her with the gaze of a little sister, and Sarah realized that her feelings toward this kid were changing. She squeezed Leo's hand, trying to reassure her. "You're going to be perfect. The hard part is the incision, and I'm doing that." "It's quiet," Leo said, looking toward the closed door of Miriam's bedroom.

"He's sleeping."

"But she isn't?"

"No."

Miri only slept after she fed. Since she hadn't, she would be completely conscious the whole time.

"You stay at the door, Leo. Come in at my signal."

Sarah went into the bedroom, her fleam concealed in her blouse. Paul was as comatose as a mouse-stuffed snake. Miri was cuddled up to him like a schoolgirl with her first lover.

She looked so happy, eyes closed, face blissful. She was nuzzling his chest hair.

When Miri saw Sarah, she gave her a secret, delighted smile. Sarah went to her and stroked her hair, which was twice as full as it had been even a few hours ago. The Keeper body was astonishing in its ability to regenerate and restore itself. Sarah had been fascinated to find out how it all worked. Some nature somewhere had evolved this wonderfully regenerative organism, but it had not been earthly nature. Miriam had never told Sarah where they had come from, only that it was the stars. Why they had appeared here, as

colonists or refugees, or — as Sarah suspected — on some far more exotic mission involving the evolution of species, she would not discuss, and perhaps did not know.

Sarah went around the far side of the bed from Miri. She hated so to hurt her, but this had to be done, and there was no time to waste. Poor Miri could be foolish in love. It was her one failing. Sarah had been the victim of some of that foolishness, but also the beneficiary of its indulgence, for which she was profoundly grateful. Miri's love also lasted. In the past twenty years, she had probably spent ten million dollars on Sarah's scientific efforts, even indulging her struggle to see if she could remove the Keeper blood that Miri herself had put in her veins.

Sarah slipped into the bed. Paul's back was to her, his form concealing her from Miri's vision. She stretched out against him.

“Isn't he wonderful?” Miri whispered.

“He's certainly big.”

Sarah brought out the fleam, then drew the narrow silver blade with the hooked end out of its ivory sheath. Using the delicate tips of her surgeon's fingers, she found his jugular.

The pulse was excellent. He was going to be an extraordinary first meal for Leo. In fact, there'd be plenty for Sarah, too. She could top off that weak old woman and maybe get a month more time before she needed to feed again.

This was one kill that she wasn't going to mind. How strange her heart was, to want to kill an enemy of Miri's who had literally stolen her from herself. But she loved Miri at least as much as she hated her. She didn't think of herself as a lesbian — she had no interest in Leo, for example — but what Miri had done for her in the car on the way to the club had been wonderful beyond words, so fulfilling that it seemed to literally feed the soul. Not even with Tom had it been like it was with Miri.

This love across the border of species was deeply awful, yes, but somehow also deeply sacred. For all of her anger and all of her striving to escape her

fate, Sarah knew that she would always be here, always in the end choosing her Miri over freedom, over death, over everything.

She rose into a sitting position. Now she could see Miri, whose eyes were closed, whose lips reflected deep happiness — deep and pitiful.

She motioned to Leo, who came quickly to her side. Sarah gestured toward the sleeping man, then toward Leo's mouth. Leo nodded. On her face was a child's expression of fascination.

With the quickness of long practice, Sarah slit the vein. Blood spurted, and she pressed Leo's head against the wound.

She did surprisingly well, sucking with ferocious energy.

"He's out," Sarah said, as Paul's body sagged.

But then a shock like an explosion went through the huge body. Sarah heard air rush into the lungs. Leo was sucking hard, but he was most certainly not out.

On the contrary, he roared out his pain and surprise. Miri screamed, too, and leaped back away from them.

Still roaring, with Leo stuck to him like a stubborn leech, Paul lumbered up off the bed and started pulling at her, trying to rip her off him. She was not going to be pulled off, though. She sucked, he screamed, he staggered, Miri screamed.

Obviously, this man was not like ordinary men. Somehow, this man had remained conscious through a sudden and total loss of intercranial blood pressure. Somehow, this rather easy kill had become a disaster.

He lurched across the room, trying to peel Leo off. Her eyes were wide and she remained stuck tight. It was the blood, Sarah knew, the incredible effect of the blood. Her first taste had driven her almost mad with pleasure, and she would fight off the devil before she would stop sucking it out of him.

Sarah also knew that this monster was not going to be killed. She raced out

of the bedroom.

Leo was hardly even aware of what was happening. This blood — it was a miracle, it tasted like sunlight, like heaven. Every gulp of it went gushing into her starved cells, filling her with energy and power and buzzing thrills.

Then strong arms — really strong arms — came around her and yanked her off. Paul dropped to his knees, his neck spurting. He was gasping, he was swaying — and then he reached out and grabbed Leo's wrist and drew her down to him. He tried to speak but nothing came out. But the look of hatred on his face was something phenomenal, something unnatural. He was like some kind of hell creature, this man.

Miri grabbed her away from him and screamed directly in her face, a banshee wail. "He's of my kind," she shrieked. "Of *my* kind!"

A high-voltage shock of total surprise flashed through Sarah, who had returned to the bedside. She was saying that this man . . . was a Keeper? *This* man?

He rose up, his eyes blazing. He tore a newel post off the bed and swung it. It whistled past Leo, nearly hitting her. Then he swung it at Miri, who ducked easily. It shattered instead against the wall with such force that the whole house shook.

He leaped on Miri. His hands tightened like a vise around her neck. Leo grabbed his arms, but he could not be dislodged. No matter the blood he had lost and was still losing, he was as strong as iron.

"He's killing her," she screamed. She beat on his back. Miri's eyes came bulging out of her head. Leo screamed, she cried, she hauled at the iron arms. Miri's face was disintegrating, her mouth returning to its natural shape, the prosthetics that altered her appearance popping out. Then the compression of her throat forced her tongue between her lips. It appeared, black and pointed, gorged with blood. His own blood was still spraying out of his neck, spattering her with a red shower.

Leo hit him and hit him, but he was totally fixed on this; he was like a

robot programmed to kill.

Suddenly there was a terrific, blinding blast and he dropped like a stone. Leo threw herself between him and Miri, who went to her feet coughing and rubbing her neck.

Sarah stood quietly, the magnum in her hands.

Miri staggered. Then she threw herself on him; she turned him over, tried to stop his bleeding. "Help us," she screamed.

"Miri, let her feed! Let her take him!"

"You're a doctor! Help us!"

"Miri, he's dangerous! He's got to be killed, come on!"

"Save him, Sarah! *Please!*"

"Miri, no! Leo, take him!"

Miriam leaped up, and before Sarah could stop her, she had tossed Leo across the room like a rag doll. Then she yanked the magnum out of Sarah's hands.

Sarah prepared to die.

But Miriam stuck the gun in her own mouth. She screwed her eyes shut.

This would not kill her, but it would leave her too damaged to recover. In the end, Sarah would have to stop her heart.

"Miri, *no!*"

"Then help him."

Sarah knelt to the unconscious form, stemmed the bleeding from his jugular with a finger. His eyes were fully rolled back, and he was seizing from blood loss and shock. He had probably five minutes, maybe less.

“We’ve got to get him downstairs,” Miri said. She tossed the gun aside.

Miriam carried his shoulders, Sarah his feet. They took him to the lift in the front hall, squeezed in with him while Leo raced ahead on the stairs. She had the examination table dressed with a sheet by the time they reached the surgery.

He was in deep shock now. “This is going to be a problem,” Sarah said. She slapped a pressure bandage on his neck. The flow had dropped by two-thirds. His blood pressure must be almost nothing. “I’m losing him.”

Miriam burst into tears, threw herself on him.

“Get her off,” Sarah said to Leo.

But when Leo touched her, she threw back her head and howled with an agony beyond anything Sarah had heard from her or anybody ever. She’d never seen her like this, crazy with grief, her emotions like an exploding volcano.

“Leo, have you ever assisted in a surgery?”

“God no.”

Sarah took Miri’s shoulders. “Miri, can you hear me? Miri!”

Slowly, by what looked like tormented inches, a more sane expression returned to her face. “You did not have the right to take him.” Her eyes flashed with a ruler’s pride. “*You did not have the right!*”

“Please forgive me,” Sarah said.

“Then save him! Save him!”

Sarah stabilized the neck wound, then got them to turn him over on his stomach. The entry point of the bullet was below the heart. If the artery was intact, he might have a chance. She couldn’t type his blood, there was no time, so she had to go with O+. She told Leo, “Get me six pints of blood from the fridge. Miri, set him up.” While they worked, she went to the cupboard

and took out her instruments. She had a complete surgery here, even an extractor for bullets. She had once promised Miri, “If I can get you here, I can fix it, no matter what may befall you.”

There was an X-ray machine, but there was no way they could move him to the table now. There was no time. “Scalpel,” Sarah said as she swabbed the entry wound with Betadine. A glance told her that Miri had set the blood properly.

If he was really a Keeper of some unknown kind, she was flying almost totally blind. In Sarah’s own veins, Miriam’s blood functioned like a separate organ. It flowed with Sarah’s natural blood, but did not mix with it. It could not. Sarah could not even begin to guess what was going on in this man.

She dissected around the entry wound, opening it wider and wider, snapping orders. “Spreaders!” she called when she reached the rib cage. “Clamp!” she said when she found torn blood vessels.

She could not entirely save the lung, but she managed to isolate the bleeding enough to resect. Time disappeared for her. She concentrated totally, remembering her training and her work experience from so many years ago. Her fingers worked sometimes almost by magic, but for the most part it was her careful training that saw her through this terribly challenging procedure without — she hoped — a serious error.

When she could at last close him up, his blood pressure had risen to 80 over 50 and his pulse was 160. A temperature of just 99 suggested that he was tolerating the transfused blood well. She put him on an electrolyte drip, then got her prescription pad. She wrote for some time, then handed it to Leo. “They’ll have all this in the drugstore at Riverside Hospital.” “What’s the situation?” Miriam asked. Her blood-spattered robe still hung off her naked body. Her face was hollow, her skin gray.

“He’s hanging on.”

Miriam’s face twisted, and she threw herself sobbing into Sarah’s arms.

“Oh, baby,” Sarah said, “baby, I’m so sorry. I didn’t understand. I didn’t

know . . .”

“There was an attempt to cross the species, recorded in the Books ten conclaves ago. Keepers trying to escape from the need to eat human blood. The result wasn’t good. We’d created human beings with the speed and power of Keepers. So we destroyed all the family lines, except one. We found a last survivor about forty years ago. He was destroyed. Apparently he had a son.”

“I don’t think this is true, Miri. There’s no way we could interbreed. We’re as different as tigers and cattle, except on the surface.”

“You have no idea what our science was capable of — when we had a science.”

“What happened to your science?”

Miriam regarded her. She laughed a little, and Sarah sensed a whole hidden history in that laughter, a history of secrets that would never be told. “It was so good to be with him; it was like going back to the one time in all my life that I was truly and deeply happy. Oh, Sarah, I love him so!”

Sarah found herself hoping that the pregnancy was real. Because if this was true, and it was a healthy fetus, then maybe the great hope of Miriam’s life was being realized.

But still Sarah saw Paul to be mortal danger, and Leo was stationed to watch his monitors.

“How about your hunger?” Miriam asked her.

“I got some blood,” she said. But Leo’s hollow expression told them both that it had not been enough.

Sarah took Miriam back upstairs, to their private room. They turned on the video system so she could watch the infirmary every moment.

She lay back on the little sofa where she so often read and worked. Sarah knelt beside it. “Please forgive me, Miri.”

Miriam gazed at her. “I forgive you, child,” she said. “But you must help me with this.”

“Miri, he hates you. And he’s a killing machine.”

“He has a heart, Sarah, a huge heart. I want my chance to try to reach his heart.”

“When he wakes up, Miri, God knows what’ll happen.”

“I want you to help me. Both of you.”

“Of course we will. That goes without saying.”

Miriam went over and picked up the encaustic painting of her lost Eumenes. “I left my happiness in another world.”

“We have happiness.”

She smiled a little. “I’m the last of my kind, you know — the last Keeper.”

“There are others.”

Miriam looked at her. “Living in holes? That’s not being a Keeper — a true ruler of mankind.” She gazed at the portrait of the handsome young man in his white toga. “I’m lost in time.” She put it down and came back to Sarah. “But I have a baby. I have hope.”

Sarah did not know what Miriam had in her belly, and she wasn’t sure she wanted to find out. If this much-shattered heart took another blow, it was even possible that Miriam would join her peers in the shadows, living like an animal and waiting — no doubt hoping — to die.

“I want a pregnancy test.”

Sarah played for time. “As soon as Paul recovers.”

“No, no,” Miriam said. “You’ll do it immediately.”

“I need the resources of the infirmary for him.”

Miriam came to her. “You can do the test and we both know it.”

Sarah took her in her arms.

“I have to know,” Miriam whispered. Sarah hugged her tight.

They stayed like that, in the declining light of the afternoon.

Leo paced to the wall and back to the door, and she remembered chocolate icebox pie and blinis and blintzes and beluga. She went to the back windows and wiped off her sweat and remembered Mommy’s chicken fricasee and Aunt Madeline’s molasses cookies. She slapped the wall and hugged herself and sweated rivers and remembered rib eyes at Sparks and smoked salmon at Petrossian.

But all that really mattered was the raw, delicious taste in her mouth and the smell in her nose of blood, blood, blood.

When she’d drunk his blood, she’d drunk his soul, and she was drunk on it and she had to have more of it.

Her jeans were soaked with pee, her underarms and hair were awash, and she felt as if she couldn’t breathe and couldn’t think because she needed more, she wasn’t finished — she wanted a lovely bowl of cherry cobbler, but she needed blood.

She went to the black front door, put her hand on the gleaming brass handle, and she pushed out into the flaring evening. The city was its ordinary self, humming its indifferent hum, traveling down its million uncaring roads.

She was a hunter now, off to the hills. She ranged down the turning street and to the secret steps that led down to FDR Drive.

A car screamed past three feet away, then another and another. Leo darted out into the roadway. Two more cars came speeding toward her. She leaped

forward just as one almost grazed her back. Then she was on the far side of FDR Drive, climbing the iron railing and going along the narrow promenade.

A full moon hung over the surging East River, its glow touching the black, uneasy waves.

She was absolutely frantic; she'd never felt anything remotely like this. By light-years, this clawing, flaming inner agony was the most intense sensation she had ever felt in her life. She ached the way people ache when they can't get enough air.

She dashed along, searching for a derelict like a pig snuffling for truf-fles. She was strung worse than she'd ever known anybody to be strung. This made you wild; it made you want to run and never stop; it seethed like ants under your skin; it pumped pure desperation straight into your brain.

As she ran, she thought of home, the imposing house in Greenwich, her taffeta-and-lace bedroom, her daddy probably right now watching Monday night football, her mom reading.

Home was lost to her, home and all she had known of the peace of life. Her feet throbbed; her heart raced; her skin felt as if it were being sandpapered. The taste of Paul's blood lingered in her mouth, its scent in her nostrils. All she could think about was blood, the way it tasted, the way it felt going down, the way it had cooled the fire that was consuming her from within.

Then she saw a clump of shadow on a moonlit bench. She went up to it. Just a mass of rags. Good. Man or woman? Man — not so good, they were stronger.

She sat on the end of the bench nearest the head. Her hands almost shook too much, but she managed to get a cigarette lit. She'd quit two months ago, but that was before she met Miriam. Miriam smoked all the time. She didn't care. Why should she? Keepers were immune to cancer.

She dragged hard, wishing that the smoke was stronger. You could get a nice hit smoking horse in a cigarette, but she didn't have any horse. She had to calm down on her own.

She had the fleam and she had the victim. All she needed now was the guts. She looked down at a shock of dark, oily, lice-ridden hair. She knew he was dirty and that he probably stank to high heaven, but all she could smell was the blood, which was so good that she kept sucking in air and leaning closer.

She took the fleam out, fumbled the blade open — giving herself a nasty little nick in the process. Before she had even sucked it, the wound closed.

A damn miracle.

Stealthily, she shuffled the rags aside. There was the neck. Not an old neck. She knew she was supposed to take them back to the house, burn the remnant in the furnace and all. But how could she get some drunk back across FDR Drive and up the narrow steps that led to their property? The business with the lady, whom she'd found on Fifty-fifth Street and First Avenue, had been difficult enough.

She held the fleam close to the neck. She couldn't see any veins. She dared not touch the guy. She tightened her grip on the instrument. Then she plunged it down. There was resistance; then it went sliding in — way deeper than it should. In fact, she almost plunged it all the way in.

She was snatching for it as he rose screaming through clenched teeth out of his pile of newspapers and rags. He was face-to-face with her, his teeth bared.

He was a kid. Maybe younger than she was. He had long eyelashes, and the moonlight shone in his dark eyes. His hands went to his neck, his head cocked — and a flood of blood came out of his mouth.

Instinct made Leo go for it, but it was all over the ground already, splattering and splashing like spilled milk on the kitchen floor. He went to his feet, still screaming behind his clenched teeth, and began jerking and staggering, his bloody fingers slipping on the bloody hilt of the fleam.

And then, incredibly, she recognized him. Not from the club, not from her present life at all. She recognized him from prep school, from Andover. It was Benno Jones. He'd been a performance artist. His family was wealthy

but very conservative. Obviously, there'd been an estrangement.

She was confused. But also now, desperate. She lunged at him; she got her fingers around the fleam and yanked it as hard as she could. It came partially out, dragging red gristle, followed by a gurgling black flow of blood.

She latched on like a starving jungle leech. The blood seemed to flow into her almost automatically, pouring down her throat into her belly. Benno staggered along, his back bent, his hands made into fists, his barely-remembered acquaintance inexplicably sucking the life out of him.

He went down like a staggered bull, to his knees. She pushed him over and dragged his head into her lap, bending the neck to give herself the best possible angle. Then she put her lips around the bubbling gouge and sucked as hard as it was possible for her to suck. She got lots more blood, and from his lips a gentle question, "Leo?"

She did it again and it worked again. A third time and it worked, but less well. The fourth time, it hardly worked at all.

But he wasn't getting any thinner or lighter. He was still normal looking, except he was very dead. She tried again, sucking with all her might.

Nothing happened. She sat back on her haunches. Only Miriam could dry them out. He was way too heavy to carry. He felt like a sack of lead.

Then she saw, some distance down the promenade, a man walking about ten dogs. They were coming toward her and the dogs were going completely berserk. You couldn't hear the man, but you could see him yelling at them. Their voices were a riot of barking and howling, and they were struggling so furiously to reach the kill that their paws were digging dust up off the pavement. They looked as if they had exhaust.

She managed to get Benno to the railing and, with a massive, grunting effort, to roll him over and into the East River. Then she ran like hell, and as she ran, she began also to feel wonderful.

Behind her, the dogs quickly consumed any small trace of Benno that she

had left behind. She could hear the dog walker now, still screaming himself hoarse.

Her body seemed almost ready to lift off. She could run and run without even getting tired. Incredibly, it felt as if there were somebody inside her, a living presence that was not her but was friendly to her and part of her. It was a grand way to feel as if you had your own angel in you.

She did not see the solitary figure on the high cliff that separated Miriam's neighborhood from the Drive, who had been watching her from the beginning. She did not see it put a small instrument away, perhaps a set of binoculars, perhaps a camera.

She did not see it as it got into a car, nor did she see the car drive swiftly away.

NINETEEN

Trapped

Miriam raced through the house screaming for Leo, her voice shrill and shattering. Sarah was terrified. She'd never seen her like this. She was crazed with fury; there was no other way to describe her. Then those awful, inhuman eyes were suddenly glaring at Sarah.

“Miri, calm down. Please, Miri!”

Miriam shot across the sitting room and grabbed her and slammed her against the wall. “Where in hell were you?”

“I was with you, Miri!”

“You let her out, goddamn you! You careless, foolish — ”

She slapped Sarah so hard she went flying. Then Miriam was on her again, shaking her, screaming and smashing her head again and again into the floor. Sarah saw stars; the world reeled; she screamed, screamed again.

Miriam went to her feet, lithe and quick, glaring down at her. Then she was back again, her eyes glowing, her narrow lips twisted in some expression so alien that Sarah couldn't even begin to interpret it.

She kissed Sarah. Then she lifted her and helped her to a chair. She knelt before her and kissed her hands. “I'm sorry. Sorry. I'm just — ” She made a small sound, the snarl of a hurt tiger. “I'm feeling things I've never felt before.” She laid her head in Sarah's lap. Now she was weeping. “When I last had a baby in me, I was so protected. We owned Egypt! We lived in walled compounds. The wealth, the power — you can't even begin to imagine! But now — I've got my last baby and I need to feel safe and I don't!”

Sarah stroked her hair. She looked down at the lithe, powerful body in the magnificent butterfly robe, a garment made in China six hundred years ago, of thousands of individual bits of silk sewed together with tiny stitches. It was like a cloud of butterflies, this robe. Miri wore it casually, but that did not change the fact that it could easily be the most beautiful garment presently on earth.

Sarah had always been a lonely sort of a soul, but Miriam was *really* alone. Her baby had been her hope — Sarah realized that now — her one hope to relieve the despair that lay concealed behind the elegance and the headlong decadence that filled her time.

When she found out that this baby was a fata morgana, a mirage, she was going to be absolutely devastated.

Paul knew he was alive because of the pain. From his waist to his neck, he was a mass of sheer agony. His breath was coming in light little gulps, but he felt no air hunger, so he knew there was oxygen running.

He inventoried his body, working from training and long experience. He could wiggle his toes and hands, and lift his arms. That was good. He was too weak to lift his legs. That was not good. The left side of his neck ached. That must be a healing wound where that bitch had tried to suck his blood. His chest was gunshot real bad. There was bubbling when he inhaled, which meant that his lung capacity was dangerously low.

He was looking up, at least, into the ceiling of a hospital room. He could hear monitors beeping, and he could see an IV.

How the hell he had ever gotten himself to a hospital, he could not for the life of him imagine, but he damn well had. His self-evaluation told him that he had been shot in the left lung, which had resulted in aspiration pneumonia, caused by blood and debris. There wasn't any fever, so whatever antibiotics were in that drip were clearly doing their job. Also, the pain was diffuse, not concentrating on a certain spot the way it did when you had a bullet in you. Okay, so he'd been operated on. How much of the lung was left in there he

had no idea. Maybe none, the way it felt.

Altogether, he had been in worse shape than this and come out of it okay. So, great, he was going to have himself a killing spree as soon as he recuperated . . . unless, of course, his presence in this intensive care ward meant that he was back in the hands of the Company.

After a long five minutes, Miriam came up off Sarah's lap. The red eyes glared up at her. Instinct made Sarah cringe back away from her. Miriam sucked in breath. Sarah realized what was happening: she was hearing something.

"Is it Paul Ward?" But a glance at one of the monitors that had been set up in every room said that he wasn't the issue. He was stirring from the woozy state induced by his Valium drip, but he came in and out of consciousness three or four times a day. His lung capacity was too low to allow him to be fully awake.

Miriam came to her feet, catlike. In an instant, she was at the front door, listening against the thick mahogany. Then she rushed across the foyer into the music room, sat down at the piano, and — of all things — began to play Beethoven's *Moonlight Sonata*. The vision of the cloud of butterflies floating around that narrow, incredibly graceful being was heart-stopping. She played with a touch as soft as a dusting of snow.

Sarah watched the great front door. The lock clicked. The handle moved. Leo's face appeared. From its flush, Sarah knew at once that she had fed. Hearing the music, seeing Sarah sitting with her head back against her chair, Leo's nervous face smoothed. All seemed well to her, all at peace.

Sarah could not imagine the reason for the false tableau. It was as if Miri didn't believe that Leo would come in unless she was lured by an artificial appearance of serenity. Perhaps Miriam overestimated Leo's intelligence, because she was entirely deceived.

She came strolling in, smiling a conspiratorial smile at Sarah. There was

blood on her blue T-shirt, more on her jeans.

“Where’s the remnant?” Sarah hissed. Leo tried to go around her. Sarah grabbed her collar. “Where is it?”

“Leave me alone!”

“Leo, *where the hell is it?*”

Miriam played on, seemingly oblivious.

“None of your business,” Leo sneered.

“Did you leave it on the street — for God’s sake, answer me!”

“If you must know, it’s in the East River. And so is that stupid toy of yours.”

Sarah felt a nervous twinge in her left eye. “What toy?”

“Oh, that thing — that stupid thing went all the way in his neck.”

“You left my fleam in your victim?”

“I couldn’t get it out!”

“Jesus!”

Leo tried again to go around her.

That damn bunch of vampires had been smart, real smart. They’d played him like a piano. God only knew how many of the parasites infected that filthy club. And the house — this vampire was a rich bitch, wasn’t she? She was light-years beyond the others. Kill this one, and you got the queen bee. Just like that really human looking one in Paris. Just like Mrs. Tallman.

Holy Shit — maybe they were one and the same. And maybe, if it was in

any way still in his power, he was going to really strike a blow when he destroyed the damn creature. It had fooled him totally. Even making love to it had felt great, better than making love to a real woman. A fucking animal had tricked him into screwing it, and that made him even angrier.

His throat had the metallic taste that you get when you're having electrolytes pumped through your body. He wanted water and food.

“Nurse?” he called.

He listened. Whatever hospital he was in, it was as quiet as a damn tomb. Probably an isolation ward for cases with classified material. He felt around for a call button, found one attached to the headboard.

Thing was, when he pressed it, who was going to come through the door — a sweet little nurse or Justin Turk? His money was on Turk. They'd been on his tail, for sure. Whenever he'd gotten into trouble before, the Company had very kindly rescued him.

So maybe he wouldn't be free to kill the filth. Goddamnit, maybe he ought to get up and bust out of here before it was too late. Unless it was already too damn late.

He actually started to raise himself, thinking to pull out the IV and take off. He felt pretty strong, except for his breathing. But if he tried this, he'd violate a rule that had kept him alive over his entire career: Never attack into the unknown. If all you knew was who was there, or supposed to be there, that was enough. But if you knew nothing, then you had to wait.

So he'd get the lay of things, build up his strength. Right now, what he wanted was a big rib eye, but a cup of broth would do. He pressed the button again. Nothing happened. Typical, probably meant this was some VA hole. He pressed it again, harder.

Sarah watched the monitor. Faintly, she heard the buzzing as Ward struggled to get some attention. He was more awake now than he'd been since the

surgery five days ago. She thought, *He's healing*. She could not help but feel a little professional pride. She'd brought a man back who should be dead.

The music stopped. Miriam got up. She turned and came toward them, the butterfly robe billowing behind her, a cigarette fuming between her narrow lips, her eyes flashing. "Where the hell were you?" she snarled.

"Me?"

Miriam's eyes met Sarah's. "The remnant's exposed," Sarah said. "My fleam was left in the neck."

Miriam went up to Leo. Long fingers grabbed her throat. "This is how you repay me?"

Leo pulled away from her. "I threw the guy in the fucking East River. He's gone."

"A body is never gone unless it's burned," Miriam shouted.

Once or twice, she'd alluded to the fact that she had done away with human companions who hadn't worked out. Sarah thought for a moment that she was going to finish Leo right now, right here on the marble floor of the foyer.

But then Miriam threw back her head and laughed. It was strange laughter, almost silent. "Come with me," she told Leo.

"Come where?"

Miriam grabbed her wrist and dragged her off up the stairs. Sarah got up to follow. Miriam stopped her. "My husband is calling," she said. "Can't you hear him?"

Paul heard a sound beyond the room's closed door. He'd punched the call button about fifty times. He shifted in the bed. "Nurse," he said. The single word ran him out of breath, and he sank back against his pillow sucking

oxygen.

When Sarah Roberts's face came into his view, he was so surprised that he delivered a croaking "Oh, shit!"

She was a vision of absolute beauty, her eyes glittering like coals. He tried to lift his arms, to strike out at her, but something stopped him.

He was cuffed to the bed. "Christ!"

"You're healing," Sarah said.

He inventoried his situation. Both wrists were cuffed to a length of chain fastened to the bed, along with both ankles. He had about two feet of travel, which was why he hadn't noticed until he began trying to move.

"Where the hell am I?"

"In my infirmary." She came over to him. He got ready to grab for her. "I'm a doctor, you know."

"Yeah, that's believable."

"You've survived a lung wound from a three-fifty-seven with an exploding tip. I think it oughta be damn believable."

"You kill people for food. How can you be a doctor?"

Sarah came closer to him. "I need to examine the wound," she said. Her tone, which had been carefully neutral, now seemed sullen — or no, sad. It seemed sad.

He prepared to make a grab for her. He didn't know what he'd do next. All he knew was this: he was in the worst situation he'd ever been in, and he had to do whatever he could to get out of it.

She tossed back the sheet, barely glancing at his nakedness. She drew back the dressing that covered the left half of his chest.

As she gazed at the wound, a sound came through the open door. Somebody out there was screaming, and horribly. Even as he lay here, somewhere else in the house, the vampires were killing.

His speed was not up to its usual standard, but he managed to grab Sarah's arm. Bandages flew from her hand as he yanked her to him.

He found himself staring down the barrel of his own damn pistol.

“God damn you,” he said.

“God damn you! If it wasn't for her, you'd be dead, you vicious bastard!”

She reached up to his IV, opened the cock. His attention wandered. She seemed to sway, then to float above him like a madonna ascending to heaven.

The screams rose and fell like a terrible wind in a winter tree. Sarah Roberts's eyes bored into him — cold, indifferent, murderous. Despite his pounding, relentless hate, his anguished hunger to rise from the bed, knock that gun aside, and physically rip her head from her body, he sank into sleep. The awful screams wove themselves into a dark and nameless nightmare that the drugs in the IV soon transformed into an empty, aimless void.

Miriam held Leo's wrist and would not let go, not even as the slow, dry hand came and closed around her fingers. Leo felt the strange, dry strength of the corpse; she saw the spark of life in the withered eyes.

She couldn't look at it. She couldn't bear its touch. But she also couldn't understand what this awful place was, and above all, what was the matter here.

“Open your eyes!” Miriam said. “Look at it!”

“I am! But what — why — ”

“You stupid little cow — didn't you think there'd be something — some price to pay?”

“Make it let me go! Let me go!”

Miriam dragged her away from John’s coffin. His clinging fingers caused the corpse to rise up, then, as its grip failed, to fall back with a dusty thud. Miriam slammed the lid.

“But he’s not dead! We have to help him!”

“How compassionate you are.” She marched her over to Sarah’s coffin. “This is where your friend came from.”

“What friend?”

“Sarah. That dreary zombie.”

“Zombie?”

“After I blooded her, she cut her own wrists. But she’s clever. She left me the knowledge I needed to bring her back.” She gazed toward John Blaylock’s coffin. “Too bad it was too late for him.”

“But they — I don’t get it!”

“Now that my blood is in your veins, Leonore, you cannot die. You’re not like us. We don’t have souls. But you do have one, and my blood has bound it forever to your body.” She glanced around the room, tossed her head. “This is your fate.”

Leo stood up. She backed away from Miriam. She had to get out of this awful place; she had to find a cure for herself. This was — it was unimaginable. And she had to kill — to stop this from happening to her, she had to kill and kill for the rest of her . . . time.

“Sarah’s become servile. She’s not an independent soul. She’s boring and I hate to be bored. I hate it!”

“Bored?”

“You have no fucking idea! This isn’t life, always hiding, creeping in the

shadows. I'm a princess, not a damned sneak thief! I want the philosophers, the kings about me, not the sleazy gaggle of decadents I attract now."

Leo had never known a thought this strange, this subtle, but her mind at last grasped the terror of her situation. "You've stolen me from myself," she said. She felt wonder at the evil, the cunning of it. "I'm a slave."

"No! *No!* Not like her, you aren't. When I resurrected her, her will was gone. She knows it, but there's nothing she can do about it. She even went to Haiti, to try to learn about zombies, to understand her predicament." She laughed a little. "By all the stars in heaven, she's *boring!*" She yanked Leo's hand. "You're going to be great. You've got a mind of your own. You went out there and fed, against my specific rule. You did it *your* way. You know how that makes me feel?" She grasped Leo's hand, glanced back toward John's coffin. "Ever since he died, I've been alone. Now I'm not."

"What about Sarah?"

"You are foolish, though. But never mind, you've got excellent basic intelligence. I will educate you. Do you know what you're going to be? Why I've taken you into my home?"

"God that I did."

"You're going to be governess to my son."

"Husband," the vampire said, "you're awake at last. Welcome, welcome back!"

He didn't have any idea how to react to that particular gambit. But you never knew what an animal as smart as these things might come up with.

The vampire took his hand in the same slim fingers that he had kissed. He felt his gut wobbling at the thought that he had ever touched his lips to its skin . . . let alone the other things he had done. It pressed his hand against its belly.

“Do you feel him?”

He looked up at it. It was all aglow, like a real woman asking you to feel a real baby.

“He’s kicking, he’s *very* strong. And Sarah says he’s robust. That’s the word she uses — *robust*. We’re going to have a son, Paul!” What bullshit. You couldn’t make a baby with a creature that wasn’t human. “You’re a liar,” he said, barely disguising his contempt.

They left, then, all except Leo, who stayed watching him. She had the gun, Paul could see it stuck casually into her belt. This was a tough kid, this Leo. She looked like a cross between a punk rocker and a schoolgirl. She was stationed right in front of the door.

Even if he hadn’t been shackled, he was probably too weak to do anything at the moment. But he wasn’t real concerned. He’d get his ass out of here soon enough. He looked at Leo, and she looked back at him.

Here was a question: Was this pretty kid, this Leo, a vampire or not? You really could not tell with these creatures. They were that good. He needed to know because he needed to know what kind of physical abilities he was dealing with. His instinct was that Leo was not a vampire. She was a hanger-on who knew the score. A very sick puppy, this Leo.

Paul tried an indirect approach, an interrogation technique he’d used a thousand times. Let the subject assume you know more than you do.

“So, Leo, what’re you in it for? Drugs? Dough?”

Leo looked at him.

“Love.”

“Oh, yeah, that. You love the monster. You ever fuck it?”

“Shut up.”

“You know, I don’t get you people. I mean, you’re not a vampire, but you

tolerate it. You go along with it.”

“Miriam is a beautiful and ancient being. She deserves our support.”

“Oh, I *see!* I guess Ellen Wunderling would agree with you. Hell, yes!”

“Sarah took her, not Miriam.”

He stopped. He thought about it. Sarah had come after him with some kind of an instrument, not her sucker mouth.

Could it be that she didn’t have a sucker mouth, but that she still fed on blood? If so, was there more than one species of vampire? Meaning, more vampires than he thought?

“Ellen wasn’t the right kind of food for Miriam’s species, or what?”

“We’re blooded. Miriam gives us her blood, and — it’s a miracle. You stop aging. You get incredibly healthy. You live for — well, a very long time.”

Paul stared up at the ceiling. Now it develops that Miriam can make ordinary people into vampires. Jesus *wept!*

Then Paul had another, equally chilling thought. Maybe this baby bullshit was not bullshit. If this bleeding thing was real, maybe the two species were closer than anybody thought. If he’d given a vampire a baby —

He uttered a carefully contrived chuckle. “I can’t believe that I knocked her up. Like, I’m human!”

Leo came over to the bed. She had the gun down at her side, hanging there in her hand. One step closer, and he could reach it. “You’re not human,” she said. “You’re a Keeper — or half a Keeper.”

It hurt, but he laughed. He really got a good laugh out of it. She was quite a bullshit artist.

“Okay. So, when do I feed on my fellow man? When I’m asleep?”

“You’re something that isn’t supposed to exist. They were trying to create a line that would live forever like they do, but not have to eat human blood. A better version of themselves.”

He remembered them in their lairs, their sneering, contemptuous faces. “They have utter disdain for the human species,” he said. “They don’t care whether they eat our blood or not.”

“They only hate those who kill them!”

“You’re a liar.”

“They do what they have to, to live. But there’s no hate in it. Just hunger.”

“You’re lying through your teeth! They hate us and they love to kill!”

“You think so? You remember when your dad died? The way he just suddenly disappeared?”

The words seemed to come from a very long way away — echoing, strange words, terrifying words. Because there was no way she could have known about that unless —

Bellowing like a stuck bull, he rose up out of his IVs and his monitoring cuffs and his oxygen line. She backed away, but he lunged at her — and collapsed against the shackles. He was a helpless pile of rags.

She stood over him, the gun expertly braced. Somebody had taught this lady how to make a mag work exactly right.

“Don’t you fucking move,” she screamed. “Don’t you fucking *breathe!*”

He stared up at her. “You lying bitch.” But he knew she was not lying. She knew something, all right. He hadn’t ever told any of these people about his dad.

“Your father was killed because he was a part of a failed mutant bloodline. We think you must have been overlooked. Unfortunately, because now you’ve gotten Miri pregnant with God only knows what.”

“The baby’s okay?”

“The first ultrasound’s in two weeks.”

During his outburst, she’d obviously tripped a silent alarm, because Miriam and Sarah came blasting in. They all had magnums. This place was hatching guns.

They got him rearranged in the bed.

So, Paul thought, *I guess this is a setback.*

Over the next few days, Dr. Sarah Roberts methodically showed him things about himself that he had never even dreamed. She took his blood and showed it to him under a microscope. He could see the strange cells that had been in the past attributed to a benign deformation. Then she drew blood from Miriam before his eyes and showed him the two samples side by side.

He was not blind, but he still did not want to believe. He clung to the idea — which in his heart he knew to be ridiculous — that this whole thing was a coincidence. Because he could *not* — no damn way! — have their blood running in his veins.

Sarah created a chromosomal map and showed him how his own nineteenth chromosome differed from that of a normal human being in the area known as 19a22.1. She showed him smaller differences in sixteen of his twenty-three chromosomes. Then she showed him Miriam’s chromosomal map. It was different in every single place that his was different, as well as in three more places.

Those three places represented the need to consume human blood, the great brilliance, and life eternal.

Paul’s grandfather had lived to a hundred and eleven. The whole family was like that. Supposedly there had been a Ward back a couple of centuries ago who’d made it to a hundred and nineteen.

She demonstrated to him that, because of the chromosomal differences, he would probably never be able to have a child with a human mother, but that he could indeed fertilize Miriam.

Finally, he had to face it. *He* was one of *them*. He wanted to crawl out of his own skin. If he'd been able, he would have put one of their damn guns in his mouth.

His dreams became nightmares. He hungered for death; he begged God to kill him. But he did not die. Instead, he kept getting stronger and stronger, throwing off the injuries the way he always did. Only now he knew why. It was because of his damned, accursed, evil *blood!*

Often, he would awaken and find Miriam gazing at him. She changed his dressings and cared for his bedpan, brought him his food and asked after his pain. Once in the morning and once at night, Sarah would examine him. Always she was cool and detached. Often, when they were alone, she would threaten him: "If you hurt her, if you break her heart, I will kill you with acid, I will rip your living heart out of your body."

His response was always the same: "Same to you, bitch."

He came to loathe himself. He'd fallen for Miriam because he was *one of them*. As the days passed, he got lots better. He also began to lay precise plans for the destruction of this household. He had to win their trust, first. It would not be easy, but Miriam — dear Miri — was totally smitten by him. That would be his opening.

So when Miriam came to him and sat gazing at him, he started to play little coy games with his eyes.

Miriam would twirl through the house singing "Caro Nome," and laughing, all the while feeling the baby within her. They took a year to gestate, and giving birth was very hard. But the baby — the baby was fine! "No indication of a problem," Sarah kept saying.

She really didn't know. She didn't even know for certain that Miriam was pregnant. She'd given her a urine test, but who knew if chorionic gonadotropin levels in a Keeper would be the same as in a human female. Probably not, in fact. Maybe their placental tissue produced another hormone altogether.

Unspoken in the household was the fact that the date of the first ultrasound was approaching. They would know then for sure, then and only then.

Miriam sang to her baby, she sang to her friends, and when Paul started smiling at her again, she sang to all the world.

Miriam had never before been so happy. Her household was thriving. Her body was glowing with health. She sensed that the baby was growing beautifully. And her new husband was slowly coming round.

"You know, Paul, I think you need to see it from our viewpoint, morally."

"Try me."

"We didn't make ourselves. Nature made us."

"That's what the CIA says."

She was quite interested in this. He'd never referred to what his employers might think of her before. "How so?"

"You're not murderers; you're predators. You have a right to kill us, and we have a right to defend ourselves. That's the basis of a policy statement they're working on." "Well, that's exactly my point." She just ached to kiss him, he was so luscious. But he had not so far been willing to do that again.

Tomorrow, she was going to surprise him. He was finished with the infirmary. Her hope was that he would return to the marriage bed. She was going to be as sweet and as tempting as she knew how.

She got Sarah alone and said to her, "It's time to take off his cuffs."

"It'll never be time for that."

“Do it.”

“Miri, it’s crazy!”

“Do it.”

Sarah went to him. She locked the door behind her, then produced her key.

“Hey,” he said.

As she unlocked first the ankle cuffs, then the wrists, he watched her. She did not like his eyes, hadn’t liked them from the beginning.

“Well,” he said as he rubbed his wrists, “that feels a whole lot better.”

She backed away from him as she would from a spreading cobra, with care and sick fear.

He smiled.

She had been made what she was by Miriam. She was thus weak and vulnerable, the victim of inevitable imperfections. But he had been made by nature, and there was something she did not trust about nature. Perhaps it was because of something she had seen in her scientific work, that nature did not appear to be blind. The wildness of nature, the ruthlessness, was the outcome of thought.

Because of this, no matter how tame he seemed, how compliant, how much at ease, she would fear him and hate him. She knew a secret about nature, and she sensed that Paul Ward was an outcome of this secret. Nature, she knew, had a great and terrible mind.

TWENTY

The Love Child

The vampire was partial to him, so he would use that. Every hour that passed, he was closer to the moment when he could kill them all.

She loved him, but they were damn careful anyway. They watched him on video cameras, every move he made, and they kept the infirmary locked. His approach was to go along with it. He didn't even try to get out. He sat up in his bed reading *War and Peace* and listening to endless opera CDs.

He ate lots of rare steak, which had always been his comfort food. Sometimes he asked for Thai cuisine. Everything he was given was beautifully cooked. He wondered if it was also drugged. With the steaks would routinely come bottles of wine worth thousands of dollars. Château Lafite-Rothschild 1945, Château Latour 1936.

He smiled at his captors. He was affable. When Miriam came in, shining and beautiful, he let her kiss him, as much as he could bear. When she put his hand on her belly, which she imagined even now to be a little distended, he would smile at her.

“As much as he hates the Keepers,” Sarah said to Miriam, “when he found out what he was, you'd think there would have been more of a reaction.”

“Sarah, the man is in love. He's realized that he's one of us. He sees the moral situation. Even his agency sees it. His hate is dying. That's why he's so quiet. It's a very thoughtful time in his life.”

“I just think you need to be very damn cautious when you let him out of there.”

“Oh, come on. You’re too careful.”

“I thought you were the one who was too careful, Miri.”

“He’s my husband and I want him in my bed. I want to have him in me again, Sarah.”

“That’s unwise. This whole thing is unwise.”

“What do you think, Leo?”

“I think he’s a really cool looking guy.”

On the afternoon of the release, they came down with a cake. They made a party of it with a thirty-year-old Yquem and the Lane cake, made after a sumptuous eighteenth-century recipe, with macerated fruits and cognac. Miriam joked by carrying a cherry to Paul in her mouth. He took it with his teeth and chewed it sensuously.

Miriam gave him the run of the house, all except the attic.

Sarah waited and watched. She tried to enlist Leo, but Leo was little more concerned than Miriam. Leo was a young fool, in Sarah’s opinion. Sarah noticed a subtle change in her own personality. A certain realization came upon Sarah that was similar, she thought, to the kind of assumption that comes to dominate a man’s mind in a terrible battle. It was the assumption that there would be no escape, that what Miriam was doing was so foolish that it could not lead to anything but destruction.

How could it be, though, that somebody who had clawed their way through so much life and so much danger to have a baby would, upon becoming pregnant, put at risk both her own life and that of the child?

Miri was a dear and familiar friend. Sarah knew her every mood, the meaning of every expression that flickered in her eyes, had lived with her in deepest intimacy for two decades and more. She knew Miri’s fears and her joys, had drawn her to extremes of sexual intensity and observed her with a lover’s fascinated dispassion as she lost herself in pleasures. She provided

friendship and love and loyalty. But Sarah thought now that they had come to an extreme edge, a strange country of the Keeper mind into which her understanding could not penetrate.

There was only one conclusion to be drawn from her actions: Deeply, profoundly, Miriam wanted to be destroyed as much as the rest of her race did. They had a death wish, otherwise why would beings so brilliant and wise be so easy to kill? The Keepers might not know human science, but they knew the human soul, and that was the key knowledge, what was required to defend yourself.

That they did not defend themselves was, as far as Sarah was concerned, an act of willful self-immolation. They must have recognized this in themselves eons ago, probably as soon as man became intelligent. This was when they began to experiment with melding the two species. They had been trying to escape from their own nature.

Miriam looked forward to feeding, though. She relished her kills, especially the ones that put up an interesting fight.

Every time Miriam stood close to Paul, Sarah waited, her insides cringing, for the end to come. Didn't she see what he was — a loaded gun, a trap ready to spring?

Eventually, Sarah and Miriam had to feed, and nothing she said could convince Miriam to make her meal of Paul Ward.

So they did it at the Veils. There must be absolutely no chance that Paul would see. At least Miriam agreed to that. So far she had not allowed him back to the club. That, also, meant that she had not yet become a complete fool.

They left Leo with him. Privately, Sarah instructed her to carry the gun, and to never get closer than twenty-five feet to him. If she saw the least sign of his trying to leave the house, or if he tried to come too close to her, or even to use the telephone, she was to blow his brains out.

Sarah hoped that it would happen. They would deal with Miriam's fury.

But Miriam threatened Leo — if you kill him, I will kill you. Wound him if you must, but do not kill.

When they came back after taking two Korean businessmen, they had to sleep their deep and helpless sleep.

Sarah told Leo, “If he makes the slightest move toward our bedroom, kill him. No matter what she says.”

“But — ” “I’ll deal with her! You’ll be in no danger.” “Sarah, can you think of any reason *not* to kill him?” “No.”

“What about the fact that Miri loves him?”

“She doesn’t know her own mind right now — and her name is Miriam, not Miri.”

“You call her Miri.”

“And you don’t.”

Despite the many tensions, life in the household had returned to something approaching its normal pattern, at least on the surface.

Sarah and Leo managed the Veils. Miriam went occasionally. Paul kept asking to go, and every time he did, Miri was a little more tempted, and Sarah trusted him even less.

She and Miri played their music. Miri began teaching Leo piano, then took her on as a student in a way Sarah had always wanted but had never gotten.

Leo began to receive a classical Keeper education. It began with the Ennead of Ra, the first tier of the Egyptian pantheon of Gods. She started to learn spoken Prime. Sarah doubted Leo’s ability to learn the written language, but Miriam was optimistic.

Sarah was surprised that Leo was such a good student. If Miri had wanted a tabula rasa who did not need reeducation because she had nothing to unlearn, she had chosen well. What was amazing to Sarah was that Leo

turned out to be a very quick learner. She was actually quite brilliant.

Miriam had picked her out one night at the club with a mere glance. They had been looking for somebody else to blood. They needed more personnel to keep ahead of the burgeoning of their business affairs. Sarah had assumed that they would take a man. But then, almost as an afterthought, Miriam said, “That one.” Leo had been in the Japanese garden with some friends, calling on Rudi’s skills to get them really, really high.

Slowly, Leo had left her old life behind. Now, all that remained of it was an occasional nervous visit to her parents, and soon even that would end.

Sarah knew that she was being prepared for something, and she came to think that it probably involved her own eventual removal from grace.

So Sarah was waiting for the coming of Leo. She was also waiting for Paul Ward to take whatever action he was planning. She was waiting, in other words, for the end of her world.

* * *

When she had been with Eumenes, Miriam had been too young to understand the rarity of happiness. She treasured it now. The overriding reality was that she had a baby in her, her very own baby after all these long years. The trouble was, her husband was turned against himself — a Keeper who had come to hate his own kind. True, he didn’t have life eternal and he didn’t feed on blood, but he was still a Keeper, and she was still working on him. She longed to draw him into the magic ring of her joy, and she thought that she could. What she was planning was a seduction. Back in the old days, Keeper men had found her hard to resist. She had lost none of her ability to seduce.

But that was all for later. First, there was a door she had to pass through, an essential door. As the days had passed, she had grown steadily more uneasy about it. She’d wanted to roll back the days, to prevent them from dawning. But they did dawn, one and then another, and her baby grew.

Now, Sarah told her, the baby would be sufficiently developed to see. In

the way of Keeper mothers, she already knew that she had a son. But what was his condition? It could be that he was deformed. Nobody could be sure what would happen when a Keeper was fertilized by one of these exotics like Paul.

At noon on the appointed day, Sarah came to her. She was in the library teaching Leo. Sarah said, "It's ready." She smiled down at her. These days Sarah was very warm and very grave. There was about her a sadness that Miriam found distressing to be near. Sarah thought that their life together had come to its burnt-out end.

She thought wrong, of course. She must midwife, then become a pediatrician and gynecologist for another species. Sarah thought that Leo was replacing her. She could not understand that Miriam's needs were expanding.

The group of them went down to the infirmary together.

Sarah had bought the very finest new ultrasound machine, so the baby would appear almost as clear as a photograph.

Miriam got up on the examination table. Sarah started the machine, which made a high, whining sound.

"Is it radioactive?" Miriam asked nervously.

"Not at all. It sends out sound waves, then reads the reflections. It's entirely benign, but just to be safe, we'll only use it for a couple of minutes."

Miriam lay waiting, her eyes closed, her body trembling. If it was bad news, she did not think that she had the emotional reserves to bear it. She did not think she could live past the loss of this child, but she didn't know how to die.

She felt the cool instrument sliding on her stomach, which was ever so slightly larger now . . . or was that her imagination?

She put her hand out and Paul took it. They had kissed a few times recently, but he was still being very cool. He wasn't dangerous to her,

though, not since he'd understood that he was partly a Keeper. At least, this was her opinion.

“Miri, look.”

There on the screen was a ghost. It had a small mouth and tiny, still-unformed hands.

She opened her eyes. She stared at the image on the screen. She always had trouble decoding pictures generated by machines, and at first all she saw were red smears.

“There are the hands,” Sarah said, pointing to a slightly less smeary part of the screen.

“Oh, hey,” Paul said, “that’s my boy.”

Miriam still didn’t see . . . and then she did. A tiny face swam into focus. “He’s — oh, he’s *beautiful*.”

Paul asked, “Does he have teeth?”

“His mouth is human,” Sarah said.

Miriam felt a tingle of concern. “How will he feed, Sarah?”

“Not like you do.” Sarah had tested the blood of the fetus. He was ninety percent Keeper.

“Won’t he starve?”

“Miri, he has what look like normal human organs and something close to pure Keeper blood. He’s going to live — well, maybe forever.”

“As a predator,” Paul said.

“I don’t see any evidence of that,” Sarah replied. “This child has an entirely human mouth and organs.”

“How can you tell? It’s a tiny embryo.”

“I can tell because I’m trained to tell.”

“You’re a gynecologist?”

“I’m a gerontologist. But you’re talking basic medicine.”

Paul’s face went white. He sucked his cheeks in, a sign in a human being of great rage. Miriam watched him, her heart on a shivering edge. She wanted so to love him, but if he threatened her baby, well, she would have to do what she had to do.

When he spoke, his words were knives. “It’s important to me, Sarah.”

“I see a human embryo.”

“Damned, damned *important!*” Miriam tried to conceal her smile. In that instant, she had understood something new about Paul Ward.

Leo, fearing his tone, dragged her ever-present pistol out of her belt. “Okay,” she said, her gum cracking. She didn’t like Paul any more than Sarah did. She wasn’t afraid for Miriam, though, not like Sarah was. Her concern was that Paul was a rival for Miriam’s interest and affection.

Paul looked at the gun. “Thank you,” he said.

Sarah, who had been examining the embryo, was the first to see an extraordinary phenomenon. For some moments, she watched, her attention captured by what she was seeing. She moved her hand back and forth in front of the monitor. She found it difficult to believe what she was seeing.

Sarah was a scientist. She didn’t believe in the supernatural. She only half believed in the human soul that Miri was always talking about. “You have souls, we don’t.” Uh-huh. “You humans are the true immortals.” Okay.

But this was something very extraordinary. This was a genuine miracle, unfolding before her scientist’s eyes. “Look,” she said, her voice gone soft with awe.

Miriam immediately saw that the tiny, unformed eyes, little more than blanks to which the art of seeing had not yet come, were somehow looking straight out of the monitor. It was as if the fetus were staring at them.

“Can he see us? Is that possible?”

“Miriam, I don’t know.”

Then the eyes flickered again, and they were looking at Paul.

“It’s an optical illusion,” he said.

But the eyes did not look away. Paul said, “My God.” Then he, also, fell silent beneath their eerie gaze.

Miriam’s heart seemed to her to open in her chest like a flower. “Our baby is a miracle, Paul,” she said.

He smiled the way he always smiled, and that made her sad. Why wasn’t he the beaming father he should be? He had a magnificent son. He should be so proud that he could hardly bear it.

Sarah brought the ultrasound examination to a close. Then she presented Miri with her first picture of her child. “His face is aware,” Sarah said laconically. “It’s impossible, but there it is.”

They all gathered around. The photo was detailed. The soft, half-formed face with its black eyes and its slight smile was just luminous.

Miriam drank in the picture. She felt the presence in her belly. Her heart beat with love, her blood flowed with love. And he wouldn’t be like her, he wouldn’t have to suffer the curse of being a predator. Her son would be great, but he would also be free.

She was not a weeper, but she wept now. Sarah noticed the tears and laid her arm around her shoulder. Miriam did not respond. She wanted Paul to hold her. She wanted him to embrace her and cry and laugh with her, and ask for a copy of the picture for his wallet, to treasure just as she would treasure hers.

Still, he made appropriate noises of admiration, and maybe that was a beginning.

“Let’s go upstairs,” Miriam said. She took Paul’s hand. “I think I’d like us to be alone together.”

“Me, too,” Paul agreed.

She led Paul into the music room, closed the door. “Do you like my playing?”

“I love your playing.”

“Then I’d like to play for you. You know this piece?”

“You’ve been working on it for weeks.”

“Sarah’s working. I’ve known it for three hundred years.”

He laughed a little. “It sounds so strange when you say something like that.”

She shrugged. “I’m just me.” She got her viola out of its case. She set her bow, tuned the instrument for a moment, then began to play.

Miriam was not completely surprised when Paul launched himself at her.

To see that *thing* grinning at him over the health of the monster in its belly was more than Paul could handle. He knew as he flew toward it that he had snapped, that this was wrong, that he was making a huge mistake.

He slammed into the creature, certain only that he had to stop it from making a sound or the others would come in and he would die. Even though they were human, the other two wanted to kill him a lot more than the vampire did; he was certain of that. They would blow him to pieces without hesitation.

It was smaller than he was. But for all its grace and beauty, it had even denser bones. So it was the heavier of the two. It staggered with his weight, but absorbed the blow.

He clapped his hand over its mouth. Its steel-strong arm came up and grabbed his wrist. They fought a silent battle, strength against strength.

He locked his elbow, tightened his muscles. The two of them twisted and turned, falling against the piano, then against the chair where it had been sitting. Its viola crunched and twanged beneath their slow dance. Paul caught the instrument with his shoe, purposely driving his heel into its body, making certain that what the creature loved was destroyed.

Its free hand came between his legs. It got a grip on his balls and began crushing them. They compressed harder and harder, until his deep guts were awash in pain. He used breathing techniques he'd learned in the war to try to control the pain. But he could not control the pain; the pain was astounding.

He started to lose the use of his legs, began to buckle.

Then he got his teeth into the flesh of its neck — its own favorite place. Too bad he couldn't suck its blood. He bit, grinding down with all his might, his incisors ripping into the hard muscles.

Check.

They broke away.

He waited for it to call to its people. He waited to die.

It stared at him. He stared back. It did not call anybody. They began to circle, and while they circled, he wondered why not . . . and because he did not know, he began to get scared.

It turned its head to one side, lowered it, and looked at him out of the side of its eyes. He knew that it was made up, that it didn't really have those perfect lips or those beautiful, soft eyes, but he could not help reacting to it as if it were the most wonderful woman he'd ever known.

Why didn't it call out? Was it here to die, or what?

He leaped at it again. He grabbed its throat, preparing to give it the most fearsome uppercut he could manage. He would stun it; then he would take the shattered neck of the viola and rip out its throat with it.

It stopped the uppercut in the palm of an iron hand. Then, very suddenly, his own hands were trapped at his sides. It was riding him, using its knees to pin his arms. It smashed its fists into his chest, using him like a punching bag. He toppled back, his chest wound making him cough hard.

It lay on him full length. He felt its weight, felt its vagina pressing hard against his penis. He fought to free his arms, but he couldn't. This was a death grip.

Its head came up; its lips contacted his neck. He threw himself from side to side, but it was no use. The creature's mouth locked onto his neck.

He could feel the tongue then, probing against his skin. At the same time, its wriggling, squirming body brought him to sexual life. His erection grew until it felt as though it would rip out of his pants. Faster it rubbed back and forth, harder it drove into his neck.

This was the death they gave their victims — an evil sexual charge and then the penetration — and he felt it — the cold, slim needle that was normally enclosed deep inside the tongue — as it came out and pricked delicately against his skin, seeking the vibration of the humming artery.

As it penetrated, the delicate, persistent pain made him gargle miserably. He was as stiff as a steel rod, its haunches were pumping, but he could also feel his blood sliding out of his neck, leaving him breathless and faint.

This was death by vampire, what his father had known.

And then, suddenly, it was on its feet. The lens was gone from one of its eyes, and it glared at him out of one red eye and one ash-gray one. Its face was smeared, the prosthetics gone from one sunken cheek. Along its lips was a foam of blood — his blood.

He was too exhausted to move a muscle. He could only watch as it opened his pants and sat on him. He felt himself being inserted into its vagina, and he struggled to prevent that, but he could not prevent it.

The creature raped him. There was no other way to describe what was done. What was worse — more humiliating, more angering — was that the sensation was not like the dull, empty horror of a true rape. There was something else there, another emotion, one that he did not want but could not deny.

It wasn't only that she was incredibly beautiful, even without her makeup — maybe more so without it. It was that she just *felt so right*. That was the reality of it. In her makeup or out of her makeup, she was the most wonderful woman he had ever been with.

He realized that he had been tricked into making his move. This was no battle to the death. It was a damn seduction!

And, oh, my, but it was a good one — so smart, so deeply knowledgeable of Paul Ward. It made his very soul ache to see her trying so hard to win him and to love him through his hate, to draw him to her side and the side of their son.

She stopped. He realized that he had climaxed, but also that she had taken a lot of blood out of him, so much that he was surprised that he was still conscious, let alone capable of coitus. But she knew the human body with incredible precision. The borderland between life and death was where she was most comfortable.

“So,” she said as she got off him, “what do we call him? I think it ought to be Paul. Paul Ward, Jr.” She smiled the smile of a sultry Venus, the most amazing expression in the most amazing face he had ever seen. “Agreed?”

She lifted him to his shuffling feet and led him through the house in triumph. They had to help him, but he went upstairs. He went into her bedroom — their bedroom — and fell upon their bed.

“It’s only a quart,” she said. He’d tasted lovely. It had been hard to stop. “You’re not *that* weak.”

His eyes almost twinkled, and he seemed to revive himself. “Okay,” he said, “maybe you’re right. So let’s finish this in bed.”

She was heavy, just like him, and lean and strong . . . but also soft, soft in wonderful ways that seemed to fit him just about perfectly.

She lay in his arms, gazing at him with such adoration that he almost wanted to laugh from the pleasure it gave him. All the love and tenderness that he had been trying to suppress, that were part of his nature and one with their bonded spirits, now blossomed forth in him.

“I never will leave you,” he said.

“I never will leave you.”

This, he felt, was their marriage vow. “You’re my wife,” he said.

“My husband.”

Leo and Sarah, who had come with them, now withdrew from the room. “I think she made it,” Leo said.

Sarah just shook her head.

When they had been in bed together for a little time, however, she felt it her duty to be sure that they were entirely comfortable . . . and that all was indeed well.

Miriam gave her a very large smile, her lovely face almost buried beneath Paul’s big, plunging back.

Sarah laid her hand on Paul’s shoulder. Then she went softly out and closed the door.

Paul finished, a second time within just a few minutes and with a lot of blood lost. He sank down upon her, then slid into the softness of the bed.

What had he done? He'd capitulated. Maybe it was the damn blood loss, maybe it was the brilliance of her seduction by violence, maybe it was the staring eyes of the baby — but one thing was certain: He was not going to kill this vampire.

She lay beside him as still as still water, her eyes closed, upon her face a narrow smile. He slipped his hand into hers, and she made a startlingly catlike purring sound.

It was while she was purring that he heard another sound, very soft indeed. Curious as to the origin of this very slight thud, he turned his head and looked toward Sarah's office.

As if by magic, the door came slowly open. First he saw a blond head, then a pale face in the gloom of the curtained bedroom. A small figure came in, moving quickly, almost as catlike as Miriam herself.

What the hell? It looked like Peter Pan. As much as his mind wanted to believe that it was part of a dream, he had to face the fact that it was real. He stared. It came, catlike, closer to the bed.

It was small but it seemed extremely dangerous. Paul's struggling heart started to struggle harder. He did not understand. There was nobody else in the house, and they were incredibly careful about that.

When the figure reached the bedside, he almost leaped out of his skin with surprise. It was Becky. Cocking her head, she gave him a look that said, *Naughty boy*, and the slightest of smiles traveled across her face.

In that instant — seeing her so unexpectedly — Paul came back to himself. It was a homecoming to see her. His very soul rejoiced. She reached out and touched his cheek, and he was so incredibly glad that he would have cried if he hadn't been such a tough sonofabitch.

She smiled, then, more broadly. She pointed a finger at the vampire and mouthed, "Bang bang."

Paul nodded.

Miriam burst out of the bed, leaping almost to the ceiling. She came flying across Paul and tackled Becky, who was sent crashing all the way back into the office, where her rope still hung from the open skylight.

Paul wasn't as fast, but Becky recovered herself. She dragged out a pistol — and it wasn't a damned magnum. It was one of the French babies. Good! This thing was going to be decided at last.

Miriam snarled when she saw it. She snarled, and then she backed away. In two lithe steps, she was beside him. “Shoot us,” she said. She knew damn well how it worked. It was meant to clear a room. Becky could not kill Miriam without killing Paul.

“Hey, Beck,” Paul said aloud.

“I thought we were a thing, you prick!”

The natural goodness of a love like that was fresh water in a desert that Paul had not even realized was dry. “Becky,” he said, “oh, Christ — ”

“Men. They're all the same,” Miriam said. She had that little smile on her face that was always there when she felt in control of a situation.

“She's an ugly cuss, Paul! Jesus, you must be drugged or something, man!”

“Becky, I thought you were with Bocage. I thought — ”

“We're here for you, Paul. All of us that are left.”

“What about Justin?”

“Screw him. And screw the Company.”

“They take an enlightened approach, it would seem,” Miriam said.

Why in hell was she so calm? What did she know? “Be careful, Becky.”

“Oh, yeah. Look, Mrs. Blaylock, we've got this place surrounded.

We've got video of one of your little helpers committing a murder. And we've got you."

"You won't kill Paul."

Becky's face changed. It grew as hard as stone. Nothing needed to be said. Miriam took Paul by the arm and began to back out of the room.

Becky stalked forward, bracing the gun. "Shoot, girl," Paul said.

Miriam backed them up another step. Becky came forward. "I love you, Paul," she said.

"Me too, baby." And his heart told him — it's true, it's always been true. He wanted her. He wanted normal human love, and that was what she had to offer. By the God in heaven, he wanted her.

She closed her eyes. He saw tears. He knew that he was about to die at the hands of the only normal human woman who had ever loved him, before he had even damn well kissed her.

So he made a move. Why the hell not? Might as well attempt the impossible. What he did was to leap toward Becky, hoping that Miriam wouldn't expect that.

He was free, falling toward her. Becky danced aside. And suddenly he was behind her.

The two women faced each other. Miriam covered her belly with her hands. Miriam screamed. It was the most terrible, bloodcurdling wail of despair Paul had ever heard.

The bedroom door burst open, and Sarah and Leo piled in behind her, both of them bracing Magnums. Paul recognized a standoff. He also recognized a situation that wasn't going to last more than a few seconds.

"We're gonna get 'em all," he murmured to Becky.

In the same instant that she squeezed the trigger, a desperate Miriam used

her great speed to leap into her face. Instinct made her raise the weapon — and the blast went crashing into the trompe l’oeil ceiling, which came crashing down in sky-painted chunks, filling the room with dust.

Becky was hurled all the way back against the far wall of the office. She hit the wall with a resounding slap. But she was Becky, she was no ordinary girl, and she came back immediately.

Paul had the gun. Behind Miriam, Sarah and Leo were getting ready to open fire. He started to squeeze off the shot that would reduce them all to pulp.

Then his finger stopped squeezing. He stood, agonizing. “Pull it,” Becky shouted, “*pull the damn trigger!*”

The clock ticked. Sarah Roberts began moving slowly to the left, sliding like a shadow. He saw her plan: she was going to throw herself between them, try to absorb the shot.

“*Pull it!*”

“Please, Paul,” Miriam said.

He stood there like a pillar, and pillars cannot move, they cannot pull triggers. He saw not Miriam, but his baby, the little half-made child who had maybe looked at him.

In all his years of killing, he had never killed a baby, and now he found that this was his limit. This was the one murder he could not commit.

His mind searched for a way to let his heart win. And his mind spoke to him in the voice of his father . . . or maybe it was his father’s real spirit there, giving his son the guidance that he needed: “If you kill that child,” his father’s voice said to him, “my life and my death and all the suffering of our family will have been for nothing.”

All those thousands of years of struggle on the earth — the slow evolution of the apes, the coming of the Keepers with their breeding and their feeding

and their tremendous acceleration of human evolution — all of it had led to this moment, to the burning, unanswerable moral question of the mother, and to the baby.

“Gimme that gun,” Becky said.

He did it. He gave it to her. As he did so, Sarah Roberts came forward. Her face was white, her eyes were huge. She loomed up, pointing her own weapon. With the clarity that comes to men at moments of great extreme, Paul saw a tear come out of her left eye and start down her cheek. And then her magnum roared and Becky’s pistol roared, and the room was choked with dust and debris.

Silence followed, and in it the improbable bonging of a distant clock. Before them lay the shattered remains of Sarah Roberts.

Becky looked down, then stepped quickly across the blood-soaked corpse.

The other two were nowhere to be seen. Paul and Becky followed them out and downstairs, saw them as they were disappearing into a pantry.

There was a brick tunnel leading deep. “Know where it goes?”

“Nope.”

“Shit. And there’s no map?”

“No map.”

“Then we’ve lost it.”

“Temporarily. It ain’t over till it’s over, girl.”

She dropped her gun to her side. “That one really got to you,” she said.

He looked down the dark tunnel where the monster that carried his son had taken him. “Or ever the silver cord be loosed, or the golden bowl be broken . . . then the dust shall return to the earth as it was.”

“Okay.”

They were silent together. Paul could feel the cord that linked him to his boy, feel it unwinding into the void.

“That’s the last one,” Becky said.

“The last vampire? Are you sure?”

“They’re cleaned out. All of them.”

“Even here in the U.S?”

She nodded. “Bocage is almost as good as you.”

He felt her hand in his, her strong, good hand. “Becky?”

“Yeah?”

“How the hell did you get in here?”

“They got a lotta skylights in this dump, boss.”

He threw his arms around her. When he kissed her at last, he immediately found what he’d lost hope of ever finding, which was his heart’s true happiness. This was where he belonged, in the arms of this wonderful, normal, completely human woman.

They left the house, leaving the maggots or the police to deal with the corpse upstairs. As far as the vampire and its helper were concerned, they would be found. Their time would come.

But not until his son was born, no way. Not until then.

“What’s your opinion on kids?”

“Kids’re okay.”

“You could raise a kid?”

She looked at him. “Married to you I could.”

“Married to me.”

ACKNOWLEDGMENTS

I would like to acknowledge the kind assistance of Stanton Friedman, William L. Moore, Jaime Shandera, Walter Haut, Dr Jessie Marcel, Jr., and Anne M. Strieber for their advice in the preparation of this novel.

It is a work of fiction that is based on fact. I have used the names of historical figures, and invented all others.

Newspaper stories quoted are entirely authentic except for the use of this convention. Insofar as it reflects the truth, this book is the outcome of the patience of those who have helped me. Any errors are my own.

This book is dedicated to the memory of Colonel Jesse Marcel, an unknown hero.

Through official secrecy and ridicule, many citizens are led to believe that unidentified flying objects are nonsense. To hide the facts the Air Force has silenced its personnel.

- Admiral Hosco H. Hillenkoetter,
First Director of the Central Intelligence Agency
From the *New York Times*, February 28, 1960

Introduction

It was my misfortune to have some really good luck.

If I'd had the good sense to go along with it, I would have left this story alone. It's the scoop of the century, but it has almost certainly ruined my career. And I was about to escape my job with a dreary suburban weekly and go to work for a semiofficial urban daily. Now I'll never report for the Washington Post. I'll never enter the fabled halls of the New York Times, unless it is with somebody else's sandwiches in my hands.

So what is this thing that has ruined me?

I won't hide the fact that I was researching an April Fool's piece for my paper—or rather, my former paper—the Bethesda Express. We were going to get a good laugh out of an obvious absurdity that is believed by at least half the population.

I wasn't fired because I failed to turn in this story. That wasn't exactly it. What got me canned was that I found out it was all true. What I wrote struck my editor as being a joke on him.

He did not think this was funny.

Like the whole community of journalists, he was convinced that the subject is nonsense.

I have met the man who did this to us. Insofar as it is about any one person, this book is about that man.

His name is Wilfred Stone and he lives here in Bethesda, along with a few thousand other Washington retirees. For most of the past year he's been sitting in his backyard quietly dying of lung cancer. During the last six months he and I have been collaborators. As much as I can stand to be his friend, I am that.

At first Will was almost ashamed to tell his story. Secrets like his are their own very ugly pornography, and it was terribly painful to him to reveal them.

But he got used to it, finally became passionate about it. What started as sparse muttering ended in a torrent of searing human anguish, a howl for forgiveness from the edge of the grave.

I have viewed my role in our collaboration as that of facilitator. This book is Will Stone's confession. My job has been to support his effort, to fill in backgrounds, to do what legwork was necessary, and to provide my vision of this desperately troubled man.

I met Will because he sent the Express a response to a nasty review I'd published. I trashed a book written by what I assumed to be an obvious charlatan.

This is not a big town, and his letter was the only response in support of the professional liar.

In my own defense I can only repeat that I was also one of Will's victims.

When it came time to do the April Fool's story and I needed a sucker, he looked like a strong contender.

Will acted like he'd been waiting for a call from someone like me—which I suppose he had. Everything he does is structured in terms of bait and hook.

He is a subtle man, too subtle to just walk into my office with an armload of the most extraordinary and terrible secrets that the United States of America possesses.

Considering just how much he has wanted to tell his story, and how little time he has, waiting for me to take the bait must have been very hard.

He lives in a dark old house on a street that was fashionable thirty years ago. I went there to connect with my victim.

And became his.

He sounded like an old freight train as he huffed slowly down the hall to answer my knock at his door. After he opened it he leaned against the jamb to catch his breath. Then he straightened up and a huge, complex smile came into his face. I say complex because it was not a smile like yours or mine.

It was the saddest expression I have ever seen.

He took me into his grim living room with its grim furniture and thick, silent carpet. The curtains alone added cheer. They were odd—white oilcloth or parchment with yellow flowers pressed between the layers.

We sat down. I didn't know what to expect, even what sort of questions to ask.

He pushed his big, wobbly face into mine and said without preamble, "The damn thing is real and I can prove it." I thought, oh boy, paydirt.

"What damn thing?"

"The whole damn thing." He pulled himself to his feet and rolled out of the room. A moment later he was back with a cardboard box full of documents, photographs and cans of movie film.

At first I thought it would be the usual sort of junk, fake pictures, news clippings, nutty tracts.

The first thing I saw was a clear color photograph of what appeared to be a dead alien. It was attached to the autopsy reports that appear later in this book.

The authenticity of the photo was so obvious that it affected me like a blow on the head. The blood drained from my face; I literally reeled.

Every tiny detail seemed true, the pale skin, the injuries, the oozing fluid, the black, sunken eyes.

The documents went on for pages and pages. I have reproduced the most critical ones in this book. But there were thousands of others, and God knows how many more are hidden even from Wilfred Stone.

I sat there in that dim room reading, looking at picture after picture, all of it stamped with things like CLASSIFIED—ULTRA and TOP SECRET—MAJIC.

It became clear to me that nobody could have faked this, not all of this, not with the detail and perfection of it.

For me the world crumbled. Everything I believed was called into question. All my expectations, my understanding of the way things were, all of it was shattered.

When he heard a droplet of sweat snap against the memo I was reading he put his hand on my shoulder. "I want to get the story out before I die."

I just looked at him. I could only think that I'd been living in a false world with a false history.

Everything important was secret. I looked down at the documents spread around me on the floor. They were terrifying, both for their contents and for their ominous-looking secrecy stamps. I was seeing levels of classification I hadn't known existed.

His possession of these documents was clearly illegal. If I assisted him in any way I was headed for jail.

This was when good sense and good luck came into conflict. This story

had things like joblessness and jail and disgrace written all over it.

"People have a right to know. They had a right to know forty years ago."

He sat there, the slightest of smiles on his face. Was he trying to look pleasant, to win me over? Will does not smile well. This time words like "snake" came to mind.

But, dammit, I couldn't take my eyes off the stuff he was showing me! The most incredible story in history.

And it was literally lying in my lap.

The truth was in the hands of a sick, helpless old man.

And he was putting himself in mine.

Overnight I thought about what was obviously an offer.

To publish this story would be mad.

And yet At about four in the morning I decided the hell with it and finally went to sleep.

When I got up I grabbed the phone and called an old friend of mine, Jeb Strode. We'd roomed together two years at American University. He went on to law. I bought a cheap Sony tape recorder and became a reporter.

Now he pulled down a couple of hundred thousand a year keeping lobbyists out of jail. I figured he could afford the ten minutes it would take to answer my question.

"I'm crazy," I said. "I slept on this and decided to forget all about it."

"So you called a lawyer while he was still under a pile of housecats with his eyes closed."

"How could I reveal highly classified information and stay out of Danbury?"

"Danbury is the nice federal jail. That isn't where they would put you. I see lots of steel doors and guards with Gila monster eyes."

"What's a Gila monster?"

"Something unpleasant. Don't even think about it, Nicky."

"I have to."

"We never had this conversation. But if you really want to do this, your only hope is to publish your book as fiction. They'll figure if they hit you, it'll tell the world it's all true. You might make it."

So this is fiction. Everything in it—all the documents, the briefing papers, the interviews—is fiction. The story is fiction. Will is fiction and so am I.

Only the newspaper stories and Admiral Hillenkoetter's statement are real. You can easily check them, so what's the point?

Even if I don't go to jail, I have become a martyr to my issue. My career is dead.

But it's worth it, because the issue is enormous: what is at stake is the whole future of mankind. The coming of the visitors is as pivotal an event as the original spawning of the human race.

It is incredible that this event has been kept secret.

As director of the Majestic Agency for nearly forty years, Wilfred Stone is the man most responsible for that secrecy.

Let him try to explain himself. I cannot. And I thank God that I don't have to face his conscience in the night, or when he goes to his dying.

- Nicholas A. Duke March 15, 1989

Foreword by Wilfred Stone

I was among the architects of one of the worst mistakes that has ever been made, and this is my final throw, my magic bullet, my effort to make it right.

In the end it is going to be up to you; my generation has already cast itself upon the rocks. We who fought World War Two and the Communist menace have only one legacy beyond the armed and furious world we have given you.

In 1947 somebody from outside this world attempted to form a relationship with mankind. First contact fell to the United States government. Fresh from victory and full of pride, our generation failed the test. We made a horrible mess of it. We did not understand the subtle and terrifying—the magnificent—thing that they were.

We made the simplistic assumption that they were something like us—but from another planet. We failed to see the truth. Failed utterly.

If I may, let me begin with an explanation.

Do you know the word empath? It is the invention of a writer, but it is a true word, a fine word. An empath is somebody who so completely identifies with the nature of another that they assume that nature. If you met a perfect empath, or a whole city or nation of perfect empaths, and you introduced them to a vicious psychopath, the empaths would become monsters.

Because they lack experience, children are empaths. They are blank and clean. At my age it is clear that the whole of adulthood is an attempt to recover that innocence. History is also such a journey, an attempt to return to the forest.

These others—who appeared to us as aliens—are empaths, but not because they lack experience. They have returned to the forest; they are not men, they are beyond that. Like very young children, they are empty of knowledge: they have become conscious animals. And that is a beautiful thing. In the sight of God they are almost angels.

They came here to help us find our own version of this wise innocence. We who faced them did not even begin to understand. We did not understand the awesome portent of Walt Whitman's lines: There was a child went forth everyday,

And the first object he looked upon,
that object he became . . .

And so when we called them terrible, that is what they became. "Be as little children." What did He mean?

Why did He say it? We have become lost on our long journey back to the woods. When we detonated atomic bombs over Hiroshima and Nagasaki we distorted history, setting ourselves on a path that leads not to the forest but to extinction.

We achieved absolute terror, a darkness so deep it could not be penetrated, not even by light so bright that it vaporized the eyes. Wise innocents that they are, the others saw our predicament and came to rescue us.

"Regard the lilies of the field," He said. Why, we who are naked in the rain? If we surrender to the wind and the rain they will be our saviors; the flowers will be our deliverance. We do not need economies, nations, churches. We need only one another—and the ability to give and bear true love.

This is the message of the others. They thus represent absolute and total change, the collapse of economic civilization and the end of days. They are freedom; the soul in the open sky. Because they stand for such radical change we in the government saw them as a threat to the United States.

Instead of proclaiming their arrival up and down the land as we should have, I participated with a group of men who hid it behind a curtain of denial and ridicule. We posted guardians at the gates and spread a net of rumors and lies to protect our secret knowledge.

We have with our lies created the impression that an excursion of the pure is an invasion by monsters from the depths of our own psyche.

In the Bible when a man looks upon the face of an angel he will often cry out, "Woe is me," or, "I have sinned," or other such words. This is because he sees in those dark angelic eyes a clear reflection of what he truly is.

In the eyes of the others we who met them saw ourselves.

And there were demons there.

Part One

THE FIELD OF BONES

*We can only know
what is out there
from an animal's features
for we make even infants
turn and look back
at the way things are shaped
not toward the open
that lies so deep
in an animal's face.*

- Rainer Maria Rilke Eighth Elegy, Duino Elegies

Chapter One

Will enthralled and horrified me. While his complete authenticity was obvious, I nevertheless felt that I had to do some basic research.

He claimed that the story had begun in Roswell, New Mexico, in July of 1947. He named names, dates, places, showed me news clippings and memoranda.

Fine, I would see for myself. I took a week off (I was still being fed by the Express) and got a super-saver to Albuquerque, rented a Vega and drove the hundred-odd miles south to Roswell.

It took me about ten minutes to fall in love with the town. Roswell is American perfect, a middle-sized city at peace with itself. It's an agricultural community with a smattering of light industry. The streets mix fifties modern with older architecture. Everywhere I went—the motel, the radio and television stations, the local newspaper—I was struck by the fact that this place was populated by decent people. Honest people.

At the Roswell Daily Record they were frank about the story. Everybody in town knew about it. The fact that something real had happened in July of 1947 and been covered up turned out to be an open secret across most of southern New Mexico.

Will tells me that I won't feel so much anger when I get older, but I felt anger now, interviewing people, walking the site of the crash near Maricopa, viewing the ruins of the old ranch on which the disk fell.

I was choked with bitterness. I'd dismissed the whole UFO question with a laugh and I'd been a dupe!

My ego was involved and I thought I'd never get over hating Will.

One of the most annoying things about him is how wise he is. He knew that I wouldn't always despise him.

I wish I could comfort that old man somehow, but he is beyond words, beyond touch, beyond everything.

South of Roswell stand the empty remains of the Roswell Army Air Field, now being transformed into an industrial park.

I walked that crooked tarmac on a warm spring day, and let the ghosts of the past rise up around me. There was no feeling of elegy or remembrance. I was angry, and the ghosts were angry, too.

At least two of those ghosts, and possibly a third, were not human. I wondered if they looked back also, and if they did not remember the night that they arrived, and died.

Through the ten o'clock dark they came, silent and slow, watching the streets of Roswell unfold below them.

More carefully they were watching the flight line, counting the planes, counting the bombs.

At that moment the 509th Strategic Bomber Wing stationed at Roswell was the only atomic bomber force in the world.

Perhaps they came to warn us, or perhaps theirs was a more subtle mission. But Roswell could not have been chosen by accident. Will explained to me that they have a definite tendency to appear right in the middle of our most sensitive, most dangerous, most heavily guarded military installations.

This was one of the things that caused the hostilities. "Be as little children," Will says. Indeed, innocence does not know secrets and it does not know fear. But mankind is not the only earthly creation that fears death. Everything fears it. And when there is resurrection every living thing will be delivered, from the crawlers in the mud to the high bishops, and fear will be swept from the earth forever. When they came, everything was afraid.

Birds awoke as they passed over, and fluttered nervously. Coons and bobcats screamed, opossums hissed.

Babies shrieked in the night.

When they came it was midnight in Washington. Will Stone was a young man then, struggling to create a postwar career for himself in the Central Intelligence Group, soon to become the C.I.A. He knew nothing of what was happening in distant New Mexico.

His memory of what he was doing that night is nevertheless vivid. This shouldn't be surprising; we tend to recall exactly where we were at moments of great crisis.

A familiar wartime question: "What were you doing when you heard about Pearl Harbor?" Will Stone remembered: he was standing in a department store looking at some ties. "Where were you when the Japs surrendered?" He was drunk in Algiers. What was he doing on the night of July 2, 1947? He was lying in bed in his apartment worrying about the fact that he was having political problems at the office. Instead of working on the Russian desk he was off in a backwater, helping the Algerians put an end to French colonialism.

Betty and Sam White were sitting on their porch in Roswell sipping lemonade and watching the sky. It was a beautiful night, with storms off to the west and stars overhead.

I know just what they said, just how they acted. I've read their files—and all the other files that Will has - many times over.

I've tried and tried to see where Will and the others went wrong, to understand if there is anything in God's world that might help us now.

"What's that," Sam asked his wife back on that lost night. "I'm not real sure," she replied in her twangy voice.

"I'm gonna call the sheriff." He got up from his chair with a creak of porch boards and a grunt.

The object was round and brightly lit—glowing, in fact. It made no sound as it swept northwestward across Roswell.

Beneath its thin blue light people went about their business. Except for the Whites, nobody noticed a thing.

At the Army Air Field the radar operators did not glance up from their glowing screens. The lookout on the tower was facing the other way, and never broke the imaginary monologue he was delivering to Dorothy Lamour.

Bob Ungar, on his ranch seventy miles northwest of Roswell, watched the storms with a critical and uneasy eye. He was totally unaware of what was approaching from the direction of town. Bob's concern was the dimmed clouds.

They could drop hail us big us a sheep's eye. Hail like that could knot a man's skull or butter his animals until they were crazy. He'd also found his share of sheep braised by lightning, lying stiff in the scrub.

The worst part was the way they'd bunch up on the fences during a bad storm, frightened by the thunder and trying to shelter from the rain. You'd find them in heaps, and the ones at the bottom would be smothered.

Bob pitied the poor, dumb things. I know he did, because I know exactly what kind of a man he was. I admire him unabashedly.

He died in the sixties, old and dried to straw by the desert.

Walking the path of Will Stone I spoke to Bob's wife, Ellie, now a very old woman. She lives in an adobe cottage—really little more than a hut. Of course she's been wracked by time, but there is within her a light such as you don't often see. I spoke to her of her husband, and their old house that is in ruins now, and a long time ago.

I can imagine Bob standing on his back porch on that night, squinting into the dark west.

A long, cool gust swirled out of the dark. The air grew eerie. The last five nights he'd saddled up his horse, Sadie, and gone out to help the sheep. It hadn't made a lick of difference. They'd gotten themselves killed anyway.

You'd think sheep had been going through thunderstorms for a long time. But this bunch, they got all worked up over a little sheet lightning, forget the thunder and wind and the hail.

He heard the sheep faintly, far off now, moaning and bleating.

Meanwhile the glowing object left the outskirts of Roswell and the Whites lost it in the darkness.

Cats that had leaped into bookshelves looked out. Dogs that had run under houses scrambled back to their master's sides. Babies that had been screaming began to snuffle and coo. Children sighed in their beds, their half-formed nightmares subsiding.

Lightning flared across the west, and the Ungars' radio crackled. ". .. tornado five miles south of Caprock ..."

Then the static returned.

"Oh, Lord," Bob said.

"That's way away from here." Ellie reached toward him, then withdrew her hand.

"A hundred miles isn't nothin,' not s'far as these storms are concerned."

"We'll get through," she said.

"I moved the sheep up that draw. They got a little shelter in there."

"I worry about the water comin' down there."

"Don't you worry now."

Some dance music came out of the radio. Fox-trot music. "Where is your gingham dress?" "In the cedar chest." "Will you put it on for me?"

She smiled the strong, accepting smile that he loved, and went into their bedroom. When she returned she was wearing the dress. She swayed to the music. He took his work-thin wife in his arms, and danced with her as the lightning flashes flickered.

"Oh, Lordy," she said, "do you remember the night we decided to get married? The conga line?"

How they had danced! "Old Joe really got that conga goin'." "Bobby, I think that was the happiest dance of my life." He closed his eyes and bent his head to her woman-smelling hair, and saw the black window float past.

At that moment there was a crack of thunder and the rising roar of wind. The radio was drowned out. He turned it off; no use in wasting the battery.

The wind came sweeping around the house, shaking the boards, screaming in the eaves, bringing with it the perfume of the range, sweet flowers, sage, dust. He imagined his animals out there in the storm. They'd be milling, nervous, ready to stampede all the way to the wire if lightning struck nearby.

He wondered how it could help but strike them. Looking at it, he realized that he'd never seen another storm quite like it, not in all of his years on this New Mexico land. He doused the lamp. "Ellie, come look." They went out onto the porch together. The storm was a huge, glowing wall of clouds. It seemed to ride on a forest of lightning bolts. "I've never seen so much lightning," Ellie said.

"If it comes over the house—"

"Look at the way they strike."

"Yeah. 'Lightning never strikes twice in the same place.' So much for that idea." He turned away. "God help the small rancher," he said bitterly.

They went to their bedroom. He took off his clothes and sat on the bed rolling a last cigarette. They lay back together, sharing drags. After a while she put her hand on his chest.

And then they slept.

His father came to him, his face lit as if by the light of a lantern. Astonished, he stared. He was aware that this was a dream, but amazed at how real it was. There was Dad, his lean, hard features, his dark eyes, his grim-set mouth. "Dad," Bob said. "Dad!" His father didn't say anything, but Bob felt like some kind of a warning had been given. He woke up feeling very afraid. A lot of time had passed; he'd been asleep for hours.

Ellie beside him was snoring.

Long thoughts started whispering through his mind. He wondered why he lived like this. His poor ranch couldn't last. But then what the hell would happen to him? He worked this place. "I'm a sheepman." He could say those honorable and proud words.

He noticed, through his dark reverie, that there was an awful lot of light in the room. He opened his eyes, thinking for an instant that he'd overslept and it was daylight.

The room was full of soft, blue light. He sat up. A fire? There was nothing to burn. They had a wood cookstove but it was just embers now. And

the lanterns were out. His nostrils dilated, but he smelled no smoke.

Not the barn! He vaulted out of bed, burst through the house and into the restless night.

The barn was fine, but there was some kind of lightning in the sky the likes of which he had never seen before. It looked like a huge star floating around below the clouds. It was so big and so close that he stifled a shout of surprise and jerked back against the screen door.

He stared up. The thing was sliding and floating in the air, and it was hissing. A sort of shock went through him. He was all covered with tingling. His heart started thundering.

It must be a burning plane. Oh, Lord, coming down on the I house! It got closer and closer, practically blinding him with its flight.

"Ellie, God, Ellie!"

There was an answering murmur from the house.

"Ellie!"

The thing was hissing and buzzing, and there was a buzzing in the middle of his head. He grabbed his temples.

High-pitched children's screams mixed with the buzzing, and then Ellie came urging the kids along, her own voice all shaky. He went toward her, turning his back on the thing, which was now almost on top of him. As he ran toward them the buzzing got so loud that he almost couldn't bear it. The world seemed to go round and round and he felt himself falling. For a second it seemed as if he was floating upward, but then he hit the ground with a thud.

Ellie and the children were already out the backdoor. The thing went buzzing and skipping and jerking through the air above them. Then it was skimming the hill, then it was a glow behind the hill.

He heard the most god-awful sound he had ever heard in his life: an explosion to beat all. It was a huge clap of a sound, it winded him, it shook the back windows right out of their frames, it made Sadie scream in the barn and the chickens start squawking in the coop. Ellie and the kids were screaming, and Bob heard his own voice too, rising against the echoes of the blast.

And then, quite suddenly, there was silence. And the night returned.

And that's how it began, pretty much. In the secrecy of that late hour, thus did our innocence perish.

From the Roswell Daily Record, July 8, 1947:

ROSWELL HARDWARE MAN AND WIFE REPORT DISK SEEN

Mr. and Mrs. Sam White apparently were the only persons in Roswell who have seen what they thought was a flying disk. They were sitting on their porch at 105 North Foster last Wednesday night at about ten minutes before ten o'clock when a large glowing object zoomed out of the sky from the southeast, going in a northwesterly direction at a high rate of speed.

White called Mrs. White's attention to it and both ran down into the yard to watch. It was in sight less than a minute, perhaps forty or fifty seconds, White estimated.

White said that it appeared to him to be about 1,500 feet high and going fast. He estimated between 400 and 500 miles per hour.

In appearance it looked oval in shape like two inverted saucers faced mouth to mouth, or two old-type washbowls placed together in the same fashion. The entire body glowed as though light were showing through from inside, though not like it would be if a light were merely underneath.

From where he stood White said that the object looked to be about 15 feet in size and making allowance for the distance it was from town he figured that it must have been 15 or 20 feet in diameter, though this was just a guess.

The object came into view from the southeast and disappeared over the treetops in the general vicinity of Six-Mile Hill.

White, who is one of the most respected and reliable citizens in town, kept the story to himself hoping that someone else would come out and tell about having seen one, but finally today decided that he would go ahead and tell about seeing it.

Chapter Two

Even after all these years I could see the terror in Ellie's face as she told me her story. I sat across from her in her home, and listened to her remarkable tale.

Hers was a humble place, with a cigarette-marked Formica table in the kitchen, a couple of chairs and an enormous television dominating the tiny living room. As we talked and sipped coffee from big mugs,

"Jeopardy" rollicked along in the background.

"I remember that noise was real loud, Mr. Duke." . It took some little time for their ears to adjust to smaller sounds. When they could hear again, they realized that the sheep were actually shrieking. Ellie thought the plane had hit right on top of them.

"One of them big bomber planes crashed," she said to Bob. "Lord, woman, I know it."

"Go out there! Saddle up Sadie and go out there!" He pulled on jeans and boots and threw his slicker over his T-shirt. Grabbing a hat, he dashed out to the barn to get the horse.

She was skittish, rolling her eyes back at him as he worked. " 'S all right, baby doll," he murmured, " 's all right, babe." He got the saddle thrown and cinched and led her out of the barn. She snorted when the sheets of rain hit her, and she looked at him like she thought he was absolutely crazy.

The night was filthy black and he hadn't brought a lantern. He made it up the hill behind the house by using lightning flashes. Sadie couldn't help him, she had no way to know where she was going.

I can see him now, his hard, stoic form in the lightning flashes, a shadow on a horse beneath the streaming brim of an old hat.

Being with his widow, surrounded by the shabby objects of their lives, looking at the stern, deeply humorous photograph she has of him, I chose him unreservedly as the man I would want to represent me to a higher world.

Human society and government being what they are, Bob Ungar never saw more of our visitors than a little wreckage. Instead their first encounters were with the likes of Will Stone.

If Bob Ungar had met them living and vital on that night, everything would surely have been different.

Once he reached the top of the hill the screaming of the sheep was louder, reaching his ears clearly through the peals of thunder and the souging of the wind.

Then he heard another noise, something completely new. It was a terrible, ragged wailing. Sadie flared her nostrils and tossed her head and stomped.

What was that? It was the strangest, most savage noise he'd ever heard. Nothing made a sound like that, not a fox, not a coyote, not a bobcat being soaked by a storm.

I suspect that at least one of the unknown beings was on the ground at that time, probably blown out of the craft by what was later found to have been an explosion that hadn't destroyed the whole thing.

Wilfred and his associates later found three bodies, but they were miles from the Ungar ranch. I don't think anybody ever found the fourth one, who fell on the ranch.

And who probably lived a little while.

If so, then we came very close to having Bob Ungar be the first person to meet the visitors in full consciousness and in the flesh.

But for a horse . . .

With no warning Sadie bucked. It was the last thing he was expecting out of his docile old lady horse and he found himself rising into the air before he really knew what had happened.

He came down sideways in the saddle and she bucked again. This time he ended up in the mud. He hit so heavily his jaw snapped and he saw stars. Before he could get up Sadie was heading back to the barn at full gallop. Her hooves rattled off into the dark.

The screaming of the sheep mixed with that savage noise. "God," Bob said, "oh, God."

He turned and went back down the hill hobbling and slipping along after his horse.

Half an hour later he slammed through the screen door into the kitchen and pulled his 12-gauge out of the gun cabinet. He tucked a couple of lead solid shots into the chambers. Ellie grabbed his shoulder. "Bob!"

"Somethin's out there, honey!" "What? A coyote?"

"It scared that old horse so bad she bucked me off!" "Bucked you off?"

"Come on, Ellie, wake up! Somethin's out there!" "A cougar?"

"No cougar ever sounded like that."

Then there was a lull in the storm and they both heard it. Ellie I grabbed

Bob as the children came rushing out of their room I bawling. The family huddled together in the kitchen. When lightning flickered the shotgun shone blue and mean, and gave them all comfort.

The sound was full of agony and incredible sorrow. "Is it a man?" Ellie whispered. "I don't rightly know." He held her tighter. "They found us," Billy said. His voice was so solemn and quiet and firm that both of his parents looked at him with surprise in their faces. But he said no more.

When Billy grew up he joined the Navy and told all who cared to listen just exactly what had happened on the Ungar ranch. About a year after he had finished his tour his car was found abandoned on a road in northern California, and that was the end of him.

I asked Will Stone whether or not he had been responsible for the death of this talkative young man. His reply had an eerie resonance. "People go with them," he said. He would say no more.

The gaps that Ellie had left in her interview with me were filled in by Will, working from the yellowing transcripts of old interviews with the family.

"I hope it's not some poor flier burned in the crash," she remembered telling Bob. She did not ask him to go back out and he didn't move. He felt guilty. He thought, "I am probably letting some poor soul die."

Over the next hour the storm raged and the cries slowly died away. The more he heard them the more Bob became convinced that they weren't human noises. No human being could make a sound like that, not even a man burned and in agony.

It had to be an animal, he thought. Some poor, hurt animal.

He was surprised by dawn. It didn't seem like he'd been asleep, and here it was pushing six. He stirred himself, sat up from the couch and stretched his neck. He still had his boots on and his legs were stiff. When he straightened them his knees cracked and he felt better. Ellie and the kids slept huddled together, their faces as soft as dew. Compared to them he was like a big old mesquite tree, all bark and thorns. He went into the kitchen and opened the breadbox, cut off a slab of bread and spread it with grape jelly. He pumped up some water and drank it in deep, grateful draughts. He would have liked coffee, but he was in a hurry to see what had happened last night.

He felt guilty. A plane had crashed and he hadn't gone out to help the poor bastards. A howling animal had scared him away. By the thin light of morning he was just plain ashamed of himself.

I know this because he admitted it to Joe Rose, the man who interrogated him while he was being held in the brig at Roswell Army Air Force Base.

He was even more ashamed when he went into the barn and found Sadie standing there still in her saddle and bridle. She gave him a sad, accusing look. How could any man who worked with animals ever leave a horse saddled half the night?

He would have unsaddled her immediately, but he couldn't do that. He had to use her right now.

As he mounted her he mumbled that he was sorry. Then he headed up to the pastures to see what he could see. She trotted right along; she was a faithful animal.

He went first to his sheep. In spite of himself he pressed Sadie to a canter. It was his expectation that he was going to find that a plane had crashed into his flock.

The morning was as quiet as the night had been noisy, and he didn't like that. Were they all dead? Was it that bad?

Sadie cantered smartly. Her ears were cocked forward as if she, also, was listening for the sheep.

Then he saw them bunched up in the shallow draw. There was no crashed plane, in fact no sign of damage at all. He couldn't see any carcasses. The sheep were grazing, some of them milling.

He made a little sound of relief in his throat. They were all right, and putting them here had been a good idea.

They'd stayed away from the fences.

Sadie suddenly reared up. She whinnied then came down hard, stomping at what Bob thought was a sizable snake. He knew better than to interfere with a horse killing a rattlesnake, and let her have her way until he realized that the thing she was trampling into the muddy ground was no reptile.

He backed her off and peered down. Her chest was heaving, and she was extremely skittish.

What he saw down in the mud appeared to him like a thick belt of black webbing. He didn't know what to make of it.

After looking a moment longer to be certain that it wasn't a rattler, he dismounted his horse.

She pawed and snorted. He held the reins tightly; it was a long walk back to the house.

He bent down and with his free hand drew the black strap out

of the mud.

Where were you when the hand of man first touched a thing of angels? I know where I was: unborn in 1947.¹

was produced later, in the last, disillusioned years of the baby boom. I wasn't exactly an unwanted child, but I suspect that my dad, at least, would have preferred a new Pontiac.

It looked like burned plastic, but it was floppy. Sadie's eyes rolled and she stomped. She tossed her head, nearly pulling the reins out of his grasp. Holding her tightly, he remounted with the stuff in his free hand.

She began craning her head around. What the hell was the horse so fired up about? It was obviously some burned scrap from the plane.

One thing about the webbing that fascinated Bob was its weightlessness. He squeezed it. You'd think you could just tear something this flimsy to pieces. He pulled at it. The stuff was tough.

Finally he tied it on behind him—and nearly got dehorned for the second time in as many days. The instant it touched her skin Sadie reacted as if he'd hit her with a hot branding iron. She screamed and bolted forward, straight into the outer edges of the flock.

Her fear infected the sheep at once, and they started running. He'd have a damned stampede on his hands if he didn't watch out. He reined Sadie back hard and clicked his tongue at her. But it was to no avail. The horse was in a first-class panic.

What the hell. He pulled the piece of junk off her back and threw it as far as he could.

She calmed down then. But now the sheep were desperately rearranging themselves to avoid the thing. He sat open-mouthed watching this display of animal craziness.

Rather than get himself into trouble with Sadie, he resolved to wait until the ground dried a little and bring out his old Jeep to get the damned thing.

After inspecting his animals he rode up to the head of the little draw and looked around. There was nothing in the immediate area, but in a distant pasture there seemed to be an awful lot of rubble. Little bits of stuff shining in the morning sun, thousands upon thousands of them.

It was a good thirty-minute ride over there, which meant he wouldn't make it back for breakfast until nine. He wanted some decent food in his belly before he approached that mess. He could have used some whiskey, too, but he didn't hold with drink during the morning. Coffee, though. Ellie's

coffee.

At the meal he said nothing about the wreck. He ate a couple of eggs and some Spam, and drank two big mugs of coffee. The kids drank milk and ate Post Toasties. As usual Ellie had coffee and a cigarette. She sang while she was cooking, "It was a long time ago, long time ago. ..." He didn't know the song.

"You see the plane, Dad," Billy asked.

"A lot of little pieces."

"Can we go?"

Ellie turned from the stove. "No."

"Well," Bob said.

"Bob, there might be—"

He thought of that sound. "Your ma says no," Bob said. "Momma, please." Mary's voice was intense. "We all oughta go. Not just Dad."

"If there's a man hurt he might need help." Billy was, as always, a matter-of-fact kid.

Bob looked into his coffee. He should have gone out there last night. Somebody might have died because of him.

"Go on, kids," Ellie said. "But you stay away from dead men. You don't want nightmares."

Bob drove to the sheep, his kids sitting silently beside him. Ellie stayed behind.

The sheep still wouldn't come within fifty feet of the black plastic. Bob got out and went to it, the mud sucking at his boots as he walked through the mire created a while ago by all the stomping hoofs. He picked up the plastic. You closed your eyes, you could feel its texture, but it definitely had very little weight. No weight. And yet when he tossed it into the back of the Jeep, it fell normally. It ought to float in air, like a feather or like smoke.

"What is it, Dad?" Mary touched it gingerly. "I'm not real sure. A piece of the plane." They got in the truck and he drove carefully out of the draw. They bounced and rattled along the sandy borders of a wash, then turned and headed up toward the pasture he'd seen from horseback. Soon he could see the wreckage again, still lying scattered along a low rise, glittering in the sun.

He drove up to the edge of it, then stopped the engine. They all climbed out. It looked just like somebody had taken the tinfoil from a thousand cigarette packs, torn it up and scattered it over tens of acres. The rubble was spread in a long sort of fan, as if whatever had created it had come sliding

into the ground out of the southeast. He picked up a piece of the foil. It was strange stuff. Tough. You couldn't even think about tearing it. And it was light, too. Like the webbed belt it had no weight at all.

"This isn't pieces of a plane," Billy said. He held some of the stuff in his cupped hands. When he let it go, it fell like a handful of dry leaves.

"Look," Mary said. She bunched up a piece of the foil until it was no bigger than a pill. Then she let it go.

Instantly it bounced back into its former shape.

"Damn," Bob said. He did it. The same thing happened. Again he tried tearing it. Nothing.

Billy put some of it on a stone and beat it with another stone. It didn't even scratch.

How anything as tough as this stuff could ever have gotten torn up like this just beat all, as far as Bob was concerned. Must have been a whale of an explosion. The stuff was stronger than metal and yet thinner than cellophane. And blown all to hell.

Then he saw a gleam of violet coming from under a largish sheet of the foil. He lifted the sheet, tossing the two-foot square over his shoulder. The way it fluttered in the air reminded him of the flickering wing of a butterfly.

What he saw on the ground confused him even further than he was already confused. There lay a T-shaped object a couple of inches long, made of what looked for all the world like balsa wood, with violet glyphs covering it. He looked at it for a long time. He did not touch it. Others were I-shaped.

There were also pieces of what appeared to be waxed paper, and on these had been painted rows of little figures that Bob surmised were numbers.

Mary picked up a piece that hadn't been written on and held it up to the sun. "Look, Daddy."

Bob saw the faint outlines of yellow flowers. He took the sheet in his own hand. It was as if there was a subtle design, or maybe even real flowers pressed between the layers. They were beautiful, like yellow primroses. Evening Primroses.

You couldn't do anything to the paper, either. It didn't burn or tear. It was as tough as the foil.

Bob surveyed the field of rubble. The sun shone down, but no birds sang. A creepy sensation overcame him, and he wished he hadn't brought his kids.

The only sound was their own rustling breath. His big, familiar pasture seemed strange and dangerous and full of mystery. He did not like this, did

not like it at all.

Where were the birds? There had always been plenty of birds around here. What devilment had gone on last night?

"Were there bobcats crying out in the storm?" Billy asked. Bob did not answer. He could imagine the devil screaming like that. Then, with a toss of his head, he dismissed the thought.

"Somebody gotta clean this place up," he said. "Who's gonna do it?"

"It'd take ten loads in the Jeep."

"I'd say more like a hundred, son. We'd be at it for a month."

He surveyed the mess, and felt hopeless. There was so darned much of that tinfoil and other junk he could hardly believe his eyes.

Who the hell would do it? He couldn't haul all this crap out in his Jeep, not in a month of work. And what about the gasoline? A man had to think about the cost. At a dime a gallon, ten dollars' worth of gas at least.

He walked around, turning over pieces of the rubble with his toe, trying to see if he could find some insignia, something more than the little violet squiggles. But there was nothing, not a number, not a name.

"Hell." This wasn't what he wanted to see. He couldn't expect the AAF to deal with this mess unless it was theirs. But this didn't look like any sort of military stuff he'd ever heard of.

Maybe it was secret. Secret stuff. Them and their damned secrets, they'd really made a mess of one man's pasture.

He reached down and picked up one of the pieces with the violet writing on it. The thing was balsa wood, but it was so hard he couldn't dent it with his fingernail. It looked like balsa, he could see the grain. It was at least as light as balsa. But how could it be so damn hard?

The letters were inlaid into the gray surface. What did they say? He couldn't make out a bit of it. Was it Jap?

Maybe that was it: the Air Force was testing some kind of Jap secret weapon they'd captured from old Tojo.

"Banzai," he muttered. Then he tossed the little piece of wood aside.

He strode forward, moving steadily up a long rise. Now he could see signs of fire. Some of the pieces of foil were melted, others showed signs of scorching.

He listened to the silence. It made him want even more urgently to get his kids out of here. What kind of thing was it that terrified dumb sheep and horses and made birds fly away? Whatever bothered the animals about this

stuff probably ought to bother him, too.

Then he realized that there weren't even any insects buzzing around here.

The place was totally silent, and he knew that even the little things, the insignificant things, had been frightened away.

He whirled around, sure that somebody was coming up behind him. But there was only the kids standing in the sun, their skin golden, their faces solemn.

"Come on, y'all. Lets get some of this stuff picked up and put in the back."

Each of them dumped an armload of the wreckage into the Jeep. Then they got in. Bob pulled the choke, then hit the starter. She ground and gasped and finally chugged to life. He put her in gear and she went lurching off, tires spinning and whining in the wet, sandy dirt.

"Move," he growled, whipping the wheel around and gunning the motor to get out of an especially bad area.

Then he was on dry stone and doing twenty. She rattled like a can of marbles, but she got them home three times as fast as horses, and for that he was grateful.

Ellie had heard them come rattling down the hill, and was waiting at the kitchen door. He stopped the truck and turned it off, then got out.

His wife looked small and fragile, just pretending all that strength of hers.

He gathered her in his arms.

"Is it bad?" she asked.

"There's somethin' funny."

"Are all the men dead?"

"There weren't any men, Mom," Billy said.

"There was wax paper, like, with yellow flowers pressed in it."

"It's all about like this." Bob showed her the back of the Jeep.

She was a practical woman, and because it didn't make sense she didn't comment. She gave them all beans and potatoes for lunch. Bob ate in silence. Afterward he said, "Don't you kids go back up there without me."

"Should you tell the sheriff?"

"As soon as I get to town I'll do it."

She was silent after that, going about her work. How slim she was, this woman who had been swayed by his love. He listened to her movements, the shuffle of her slippered feet, the occasional sigh.

That afternoon he got a frozen-up windmill gear and had to spend a

couple of hours working on it. Before he knew it the sun was heading toward the horizon and it was time to knock off. He thought no more about the field of rubble and the sheriff. Maybe it was some kind of test glider. That would explain the seeming lack of victims. After he finished work he sat at the table drinking coffee and smoking.

In the back of his mind he'd been thinking that the Army Air Force might show up on its own, but as evening fell he had to conclude that they were not coming today.

Late that night he was awakened by light outside brighter than the moon. He pulled on his boots and went out. A blue searchlight was darting down from a huge, dark object that hung soundlessly in the sky, blackening out the stars.

The searchlight went on and off in the dark, darting down now and again. It moved toward the pasture where the wreckage lay.

Perhaps the fourth being was rescued on that night. I think not, though, because it was heard again. Bob expected the Air Force to show up the next morning, but they didn't. He waited a few days. Still nothing.

Finally, on July 7, he got in his Jeep and went rattling off toward Maricopa. He told the sheriff's deputy to tell the Air Force to get out to his place and claim its own.

When the sheriff called the Army Air Field in Roswell, they had no idea what he was talking about, but they went out anyway, to see what had so upset one of the region's stolid ranching men.

Chapter Three

The Chronicle of Wilfred Stone

It would soon be the responsibility of my friend Joe Rose to get Ungar under control. He would do it with the same ferocious subtlety that appeared when we were fishing for trout, and that he had used on former Gestapo agents when he interrogated them.

Now I dislike fishing, but in those days I was young and full of murder, and loved the game of it and the kill. I inherited the sport of fly-fishing from my father, and many of the other gentlemen in CIG had done the same.

Back in July of 1947 I was—God, let me see—I was thirty-four years old. I'd just had my birthday. I was born on Friday, June 13, 1913. I walk under ladders and seek out black cats.

Thirty-four. I was healthy from my years in the Office of Special Services. Now I am bent and flabby and cancerous from my years in MAJIC. The wages of sin.

But what delicious secrets I know. I am so terribly afraid . . . and that, too, is delicious.

Don't let me pretend to be a hero. I am no hero. Spies are not glamorous. We gather and protect secrets, which are power. We control your lives and you don't know it.

When the history of this era is written, it must certainly be called the Age of Secrets. I will state the matter simply: Everything important is classified.

Everything.

Public knowledge has degenerated to a form of entertainment. I should know. The control of the public mind has been my lifelong profession and horrible fascination.

Official secrets are the snare of modern life. If you don't know them, you're helpless. If you do, you're trapped.

July 6, 1947: The previous week I had been roped into a peculiar sort of a project. The Board of National Estimates had asked the Central Intelligence Group what it would mean if the rash of "flying disks" being reported nationwide resulted in contact with spacemen. We did not yet know of what

had happened in Roswell, but there had been so many other sightings reported in the last few months that our interest was piqued—at least officially.

Because I'd made no secret of the fact that I was unhappy on the French desk, I was given this bit of silliness to amuse myself.

I was in the process of completing the intelligence summary that would answer the BNE request. What, if anything, did we know about these spacemen, if they even existed? Why were they here? Were they hostile?

Communistic? I worked diligently away in my dingy office at 2430 E Street, the headquarters of the CIG.

My official employer was still the OSS. The military was battling the President over the establishment of the CIA, and the National Security Act was at that time under debate in Congress.

The best friend of the Central Intelligence idea in those days was General Hoyt Vandenberg, soon to become commanding general of the United States Air Force. But he wanted the CIA on his own terms, as a military toy, not as an independent civilian agency.

An old Socialist and gentleman named Norman Thomas once said, "Where the secrets start, the republic stops." We were ignorant and proud men and we did not believe that. Had he known what he was helping to create, Vandenberg would never have done it. He was a great man, and I love him still.

The Central Intelligence Group was populated from three or four different directions. OSS people. FBI people.

Military intelligence people. A prescription for chaos, but it worked fairly well. We were united in our desire to turn back communism. Well, perhaps a few of us were a little more cynical—but for the most part, we were united.

Flying disks were the merest diversion, and my intelligence estimate was expected to be the work of an afternoon. The disks had started appearing in numbers only in June, and nobody viewed the matter very seriously.

During the war a little work on the question had been done by the Army Air Force. So we already had a dossier of unsolved mysteries and unusual phenomena, collected on an ad hoc basis when Army Air Force Intelligence was assessing the "foo-fighter" phenomenon toward the end of the war. We had concluded in 1946 that the "foo-fighters" were some sort of unknown phenomenon "possibly under intelligent control."

They represented a form of chaos, the intrusion of a powerful and

provocative unknown into human affairs. I will not lie about it: The AAF was telling us that there was something going on, but they had no idea what to make of it.

I had worked through the July Fourth holiday, which I viewed as a minor sort of a tragedy.

I would have enjoyed spending my Fourth banging around the Snake Pit at the Mayflower Hotel looking for unescorted chorines, or crawling the Statler-Carlton circuit in search of a party.

Since the war I'd been uncomfortable with anything but the most casual relationships. I had nightmares about a French operative named Sophie, and about the North African I also lost, Jamshid, who was little more than a child. Often I would wake up in tears, but be unable to remember which of them had broken my sleep.

I disliked myself pretty thoroughly, because I thought I had been a less than brilliant spymaster, and I had wasted their lives.

I assumed that Admiral Hillenkoetter, who had just replaced Vandenberg as CIG director, realized these things about me. He knew that I felt useless on the French desk even though French politics was what I knew best.

As I worked on my intelligence estimate I found a peculiar pattern hidden in the old reports, and I did not like that pattern at all. If I was right about it, then the disks were far more dangerous than we had ever imagined.

So much for a few days' lark: the facts began to bother me.

What the hell was going on? Were they Russian, or some sort of Nazi or Jap secret weapon hidden until now?

They certainly appeared to be damned dangerous.

As the nights wore on, my olive-drab gooseneck lump would attract more than its share of June bugs, moths and mosquitoes, until I would be sitting there at midnight in a cloud of darting insects and billowing cigarette smoke.

It was immediately clear that there would be no purpose served in repeating the assessment that the Army Air Force's intelligence unit had already provided about the "foo-fighters." We needed to go deeper than to simply say that they might be under intelligent control.

If my suspicions were even directionally correct, we had to find out what was going on and find out fast, because we were at war. We were being invaded.

My method of gathering information was much less simple and straightforward than what the AAF had done, which was to view gun-camera

photography of "foo-fighters" and interview pilots who had seen them.

I was looking for possible earlier instances of contact that might tell us more about the motives and intentions of our strangers.

1947: We were the victors. We had telephones and radar and DC-4's, with DC-6's just beginning to appear.

We had Good Humor bars and weather balloons. We had captured German V-2 rockets. We had Albert Einstein and J. Robert Oppenheimer. We had the atomic bomb, and there were bigger bombs on the way.

We were lost in the dark and didn't know it.

The world went on, swathed in that beauty you can never quite touch, the beauty of a radio's voice drifting through the evening, of a woman waiting in a bed, the smell of bourbon at three A.M., of swimming in a dark pool, of watching children sleep. . . .

But there was also something else. There was that field near the tiny hamlet of Maricopa, New Mexico, and what was in that field.

It was there that the others waited. And not for some abstraction like mankind or the nation. They waited for each one of us individually—for me, for you, and for each trembling child.

In time each of us, every one, will face them.

In due time.

July 8, 1947

National Board of Estimate INTELLIGENCE ESTIMATE ON FLYING DISK MOTIVES

Prepared by Office of Research and Analysis, Central Intelligence Group
Copy 1

of 2

Purpose

The purpose of this estimate is to assess the motives of possible nonhuman beings piloting so-called "flying disks ."

Background

From June 1947 there has been a dramatic increase in the sighting of "flying disks" in the United States, primarily in the Western states. On 24 June Mr.

Kenneth Arnold, a fire-appliance salesman, took off from Chehalis Airport in Washington State to assist in the search for a Marine Air Transport C-46 that had disappeared in the Cascade Mountains. Mr. Arnold observed nine disk-shaped objects "skipping" through the air at a relatively high

velocity. Over subsequent weeks there have been a large number of similar sightings, the best documented of which took place on July 4 . A United Airlines DC-3

passenger-type aircraft was passed by nine disks while flying over Idaho on a flight to Seattle, Washington. Both pilots and nineteen passengers observed the disks, which were described as being larger than the aircraft.

These and other sightings may possibly be related to the sightings that have been reported consistently since 1946 by B-29 crew on transarctic missions.

Photographs have been made, usually with gun cameras or ground reconnaissance cameras that suggest an intention on the part of the pilots of the devices to allow observation and/or photography to take place. Other objects are weather balloons distorted by a combination of wind and pressure effects at high altitude, flocks of birds reflecting the sun from their wings while flying in close formation, and clouds smoothed by wind.

Because of the substantial number of confirmed sightings and photographs, this estimate of the possible intentions of the craft occupants has been prepared.

Summary

It is possible that there is a relationship between a number of unsolved cases of disappearance and possible flying-disk activity, and that the flying disks could represent an extremely provocative and quite unusual phenomenon involving the permanent abduction of citizens into unknown conditions in a subterranean, undersea or outer space context. Should the occupants of the disks increase their level of activity, as it now seems apparent that they will, it is probable that the population will be terrorized, should large-scale disappearances occur and become known. The revelation that the government is helpless to act would then lead to public panic and a permanent loss of governmental credibility.

Detailed Analysis

This analysis will cover a number of cases of an unusual nature that appear to be related to the presence of strange nocturnal lights and/or flying-disk activity.

At 3 :15 on the morning of 4 October 1871, an undertaker named William Robert Loosley awoke and took a walk in his garden in the town of High Wycombe, Buckinghamshire, England. Mr. Loosley recorded subsequent events in a manuscript that was locked away until 1941. The ms. has been

authenticated by British antiquarians. It probably represents an example of a "probe" from some sort of nonhuman intelligence.

When he went outside, Mr. Loosley observed a light like a star move across the sky. He then heard a clap of thunder, which, in view of the fact that the sky was clear, struck him as strange. The lighted object flew lower, stopped, then dropped in a "falling leaf" pattern into some nearby woods. This pattern of motion is also characteristic of modern flying disks.

The next morning Mr. Loosley went into those woods and observed something metallic in a pile of leaves. He soon uncovered a strange metal container approximately 18 inches long and covered with knobs.

The thing moved and, making a sound like a lock clicking, opened what appeared to be an eye behind a glass lens. Then another eye opened and emitted a beam of purple light. A third eye extended a thin rod.

At this point Loosley decided to vacate the area, and began to move away

-
running, no doubt. To his considerable consternation the machine followed, leaving a trail of three small ruts. He observed that similar ruts crisscrossed a nearby clearing.

The metal box shot a claw out into the brush and grabbed a rat, which it killed with a flash of purple light. It then deposited the carcass in a panel that opened in the side of the machine.

The device then rushed after Mr. Loosley, who ran off in a panic, only to find himself being herded toward a larger machine, which appeared from a nearby clearing. He observed a "moon-like" device in the sky which seemed to be signaling with lights. He managed to escape from the machines and return home.

The next night he observed a light come down from the sky, then rise up again and disappear into the clouds.

The fact that this account was written in 1871 greatly diminishes the likelihood of hoax. Robots of the sort described are only just now being speculated about in circles considering methods we might employ to explore planets such as Mars and Venus. It may be that Mr. Loosley observed a robot on a reconnaissance mission, and that it has now been followed by a larger expedition. If so, we can anticipate that it will be exploratory in nature as well, and that it will almost certainly center on analysis of the human species, which would have been the most interesting discovery made by the earlier reconnaissance.

It may be that human beings have since been successfully taken by strange machines.

The first seemingly related case of disappearance in U. S . history took place on 23 September 1880 near the town of Gallatin, Tennessee. At approximately three-thirty on that sunny afternoon, Mr. David Lang, a farmer, dematerialized in front of five witnesses, including his wife , his two children, his brother-in-law and a local judge.

The brother-in-law and the judge had just pulled up in a carriage. Mr. Lang moved toward them across a field, followed by his family. Without warning, he simply ceased to exist. There was no cry, no sign of distress. Mrs. Lang, distraught, rushed up and pounded the ground where he had been walking. All that afternoon and into the night the field was searched. Subsequently the county surveyor determined that there were no hidden caves or sinkholes in the area of the disappearance .

The subsequent April, seven months later, the children heard their father crying distantly underneath the field. He seemed desperate and tortured , and was begging for help. His voice gradually died away and was not heard again.

Where he had last been seen, there was a circle of withered yellow grass twenty feet in diameter.

The family moved away from the farm.

It can be surmised that Mr. Lang was not removed above ground, but rather was taken into the earth and kept alive there for some months, judging from the cries that were heard the next April. What the poor man suffered during that time, and what finally put him out of his misery, can scarcely be imagined. It may be possible that another robot machine was sent, which waylaid this man from underneath the earth, in view of the fact that the device sent in 1871

had failed to capture a human being by more straightforward means.

In 1909 a child of eleven, Oliver Thomas, disappeared upon walking out of a Christmas Eve party at his home in Wales. Other partygoers heard a scream that seemed to come from the air above the house. No trace of the child was ever found. Was this an example of ambush from above?

In 1924 two British pilots crashed in the desert not far from Baghdad. Their craft was located shortly thereafter, and footsteps were discovered leading away from it. The footsteps stopped in the sand. There were no signs of a skirmish. No trace of the pilots was ever located. In view of the fact that

there were bandits in the area where this disappearance took place, it is possible that the pilots met with foul play. However, British colonial authorities investigated the case thoroughly over a period of months, and found absolutely no trace of the men. None of their equipment or personal effects ever appeared for sale in the souks . British authorities have not yet closed the case.

In the winter of 1930 a profoundly disturbing incident took place in Canada.

Trapper Arnaud Laurent and his son observed a strange light crossing the northern sky. It appeared to be headed for the Lake Anjikuni area. The two trappers describe it as being alternately bullet-shaped and cylinder-shaped.

It can be assumed from this that it was an object of irregular configuration that was tumbling as it moved.

Another trapper named Joe Labelle had snow-shoed into the village of the Lake Anjikuni people, and been chilled to discover that the normally bustling community was silent, and not a soul was moving in the streets. Even the sled dogs, which would normally have bayed welcome, were silent.

The shanties were choked with snow, and not a chimney showed smoke.

The trapper found the village ' s kayaks tied up on the shore of the lake.

Inside the shanties the trapper found a further surprise: there were meals left hanging over fires, long grown old and moldy, apparently abandoned as they were being cooked. The men's rifles were still standing by the doors.

This really frightened the trapper, because he knew that these people would never leave their precious weapons behind.

He reported his discovery to the Royal Canadian Mounted Police, who investigated further. They discovered that the town's dogs had died of hunger, chained beneath a tree and covered by a snowdrift. More disturbingly, the town graveyard had been emptied. The graves were now yawning pits. Despite the frozen ground, the graves had been opened and the dead removed.

The RCMP continues the case opened to this day. A check with their records department indicated that the matter remains unsolved, and despite a search of the whole of Canada and inquiries throughout the world, not a trace of the missing twelve hundred men, women and children has ever been found.

There are many other cases of disappearance in the air and at sea, but this small group appears to be the most unusual and the most likely to be related

to an otherworldly presence.

Unfortunately we know nothing of the fate of most of these people . Only in the case of Mr. Lang can we even speculate. He was apparently left to languish in some sort of subterranean prison, presumably dying when his food and water ran out. Were the hardy Eskimos moved to some other world, to plant the human seed among the stars? Was Mr. Lang examined, tested and then abandoned to his fate? And what of the little boy, and the two pilots? Did they end up in machines similar to the one that menaced Mr. Loosley?

It is possible that we are observing the outcome of a scientific study of the human species that uses stealth to accomplish its end of obtaining human specimens.

The fact that human specimens are gathered at all indicates that the beings doing the study consider us animals. That they are not returned reveals that our lives are of limited value to the nonhuman beings, if that is what they are. That the whole process takes place only in secret indicates that the beings realize that we would resist if we knew the truth. In other words, they are doing this despite the fact that they know we are sentient creatures.

It is likely that the public will initially greet the appearance of aliens with welcome and delight. Should arbitrary abductions take place, however, the cheering will shortly become a collective scream of horror.

People will then demand protection, looking to the government—and specifically the Army Air Force—to provide it. Given our present lack of knowledge, the Air Force will in all probability fail to do so. This will result in a loss of faith on the part of the American public at least as great as that experienced by the Third Reich in the last quarter of 1944, when even the most propagandized population groups finally understood that Germany would lose the war.

Thus we will be faced with a dispirited and hostile public on the one hand, and cruel and all-powerful aliens on the other.

Conclusion

If these cases of disappearance are indeed related to the flying disks, the conclusion can be drawn that the strangers are interested in us but do not have any regard for us . This is obviously a dangerous and highly undesirable state of affairs, and steps should be taken to correct it at once.

Recommendations

1. The public should be insulated from any certain knowledge that the disks are real until such time as we have a clear understanding of the nature

and motives of their occupants, and can effectively maintain control over our own land and airspace, offering the public the protection that it mandates .

2. Every effort should be made to obtain samples of a flying disk as soon as possible, barring only hostile military action. This should be viewed by the AAF as its number one worldwide priority.

3. Because of the extremely disturbing nature of the phenomenon—and our helplessness—the whole affair should be given the highest classification rating that we possess, and should also be the subject of a rigorous propaganda campaign centered on denial. This campaign should be socially pervasive, so that it will continue to be effective even if a considerable number of disappearances take place.

4 . Under no circumstances whatsoever must the public be allowed to become aware of the probable seriousness of this situation, and of our impotence to act. The only way to be certain that they will remain ignorant is to impose the highest level of security ever achieved. If we are to maintain the impression that the government can provide essential security, this must be done at any and all cost. Should a disk land, or any debris be left behind, extreme efforts must be made to obscure the real meaning of the event. The fact that the strangers are real must not be revealed to the public until we understand their motives , and have gained effective control of their activities within the sovereign territory of the United States of America.

Chapter Four

In 1947 the most dangerous thing in the world consisted of twenty-four B-36 bombers polished to a high degree of shine. I have photographs of them standing along the flight line, back when Roswell Army Air Field had some meat on its bones.

Will Stone gave me the pictures, of course. He handled them with the excessive caution of the very old.

When he looked at them there was hunger in his eyes. "The times were dangerous," he said. And he smiled that shattering smile of his.

Our tradition of stalemate has made the use of atomic weapons seem improbable. But in July of 1947 it had been just twenty-four months since the U.S. had used such weapons against Japan, and the prospect of those good machines taking wing for Moscow was an immediate and fascinating possibility.

What the hell were those bombers doing in New Mexico, the chiefs of staff asked. Move them to Europe, give them a straight shot at the Kremlin.

One thing was certain, and that was that the 509th was ready. Every pilot had thousands of bomber hours.

Every one was a combat veteran, many from both the European and Pacific theaters. Everybody had clearances, even the cooks and janitors. The intelligence group was superb, the best air intelligence officers in the Army Air Force. Arguably theirs was the most sensitive command of its kind in the Army, and maybe in the world.

When I met some of those pilots I did not particularly like them. I doubt if there are twenty of them left; the ones I met ferried the debris found on the Ungar ranch to Eighth Air Force HQ in Fort Worth.

They would not allow me to use their names. One of them wouldn't even admit what he'd seen. "It was a crashed saucer," the other told me.

Their fear was remarkable. Later, I would find out the extraordinary reason that the cover-up has been so effective, the reason that so many people are so afraid to reveal what they know.

I must not promote the notion that a bunch of brainless military oafs were responsible for what went wrong.

They were good men, all of them.

Perhaps their situation was simply a hopeless one. Maybe Will Stone and his generation were bound to fail.

When he speaks of those days Will actually becomes queasy, so urgent is his wish to undo basic mistakes

. . . and yet there is something so poignant and so profoundly human about why they failed.

July 8, 1947, was a hot, still afternoon over most of the country. It got up to a hundred and two in Roswell, up to eighty-six in Washington. While Will worked on his Flying Disk Estimate in his stifling hole, the Maricopa sheriffs office got into contact with the Roswell AAF.

At Roswell Army Air Field the Intelligence staff killed time in its office on the base.

Major Donald Gray was reading Plato's *Ion*, to the amusement of the soldiers in his command. Lieutenant Peter Hesseltine was delighted by Gray's taste for the classics. For his birthday he'd given the major a copy of *Be Glad You're Neurotic*. Hesseltine had meant it as a commentary on Gray's literary obsession, but the major had been grateful. He'd obviously enjoyed the book, quoting from it at length. The lieutenant came to feel he'd wasted his two dollars.

He wanted to needle the major about the Plato, but he was no longer sure quite how to do it.

"You've got sex on the brain," he said by way of experiment.

"Yep."

"I'll bet that book's full of it."

"Nope. There's a bit of sex in Plato. Not a lot. You might be interested in it though. Your kind of thing." "All sex is my kind of thing, Major." Gray put the book down and looked at Hesseltine with an innocence that the younger man had come to fear. "Then the fact that it concerns the ethics of men becoming involved with boys won't put you off." He returned to his book.

Hesseltine hadn't been expecting this and was silenced by it.

An airman came into their office with a message. Far away in Washington a completely unsuspecting Wilfred Stone was in that moment snared in a thin and impregnable web. He scribbled away at his desk, filling sheets of legal paper that I have held in my hands. His original draft of the first "disk estimate" is now brittle and edged with rot. Will's hand is firm, full of young and very American confidence.

While Will wrote, events in Roswell continued to unfold. "A rancher

reports debris in his pasture," the airman said aloud.

"Beer bottles? Condoms?" asked Hesseltine. He was drinking a Coke, and had a technical manual open on his desk before him. He had been memorizing the ranges of various Russian radars, and before the Plato episode had been in a self-congratulatory mood. The massive Soviet installations had ridiculously poor abilities, ranges like eight and ten and twenty miles.

Try two hundred miles. And in a few years, five hundred.

Major Gray did not answer Hesseltine directly. The major's sense of humor ran to formal jokes, which he would tell to generals' wives. Later, if they remembered him, they might say to their husbands, "Who was that young officer who told the joke about the pot roast?" And their husbands would laugh the sad, interior laugh of generals.

"The ranch is a hundred and twenty miles northwest of Roswell."

Hesseltine stood up and went to a large, black shade that covered something on one wall of the room. On this shade were stenciled the words, secret. authorized personnel only.

"Lock us down, please, Winters," he said to their clerk-typist who was sitting at a typewriter pecking out an order in triplicate for three more reams of onionskin.

PFC Winters got up and pulled a similar shade down on the door to the office, and locked that door. Then he went to each of the three windows and pulled a more ordinary brown shade. The room was now dim and yellow.

"Secure, sir," Winters said. He turned on the overhead lights, which came alive with a pale, fluorescent flutter.

Hesseltine raised the large shade. It revealed a wall map of New Mexico. There were various colored pins in this map, representing the presence of radar installations and air bases. A large section marked off by black dotted lines was labeled, "Proving Grounds." This area, which would become the White Sands Missile Range, was where the captured German V-2 rockets were being tested.

Hesseltine pulled down a parallel ruler that was attached to the map and maneuvered it until one side was in the middle of the dot that represented Roswell.

"A hundred and twenty miles north-northwest? That isn't anywhere. No installations nearby."

"What about a stray from the proving ground?" There was always a

possibility that a rocket had gone off course.

"No problems since last month. And that baby got found two weeks ago."

Gray now walked over to the map. "Private aircraft?" "It's a restricted flyover area. There would have been an intrusion alert."

Gray stared at the map. "That's flat, miserable country. What does the man run?"

Hesseltine, from a suburb of Philadelphia, hadn't the least idea what ranchers raised in godforsaken deserts.

"Dunno," he said, "maybe lizards."

"There wouldn't be any money in that."

"Why, sure there would," Hesseltine said eagerly, realizing that Gray had taken his absurd remark at face value. "Plenty of money. Lizardskin wallets."

"It's not very likely, Hesseltine."

"A stray private flier was forced down in a storm. It's a matter for the civilian authorities," Hesseltine said. He covered the map. "Raise the blinds, Winters."

"Yes, sir."

"Not yet, Mr. Winters," Gray said. He put his finger on the map. "The flier was well within restricted airspace when he was forced down. We're required to examine the wreckage." He picked up a telephone and called the sheriff's office in Maricopa. "This is Major Gray at Roswell." "Yeah?"

"I just read your report on the plane that went down on the Ungar place."

"He came in this morning. Says it's a big mess. A bunch of tinfoil that you can't tear. I guess you guys know all about it."

"We'd like to take a look at the wreckage. Can you give us driving instructions?"

"Bob can do that himself. He's down in Roswell. You'll find him at Wooten's on North Main."

"I know the place."

"You get your directions from Bob. We haven't been out there. No call for us to go, not if you guys are going."

It's way the hell out in the middle of nothin', where that plane went down."

Gray hung up the phone. "Looks like this could be an all-nighter. We gotta go find the rancher. He's apparently buying ranching paraphernalia at Wooten's."

Only Major Gray would use a word like that in ordinary conversation.

Paraphernalia.

"You mean reins and scabbards and whatnot?"

"I guess. We'd better get going if we expect to get out there before dark."

Hesseltine glanced at his watch. It was past three. When Gray got rolling, he was perfectly capable of continuing all night if the matter seemed important enough to him. "Why not first thing in the morning,"

Hesseltine asked briskly.

As he had feared, Gray had other ideas. "I think that we should go out there immediately, Lieutenant. And take Walters of CIC."

There was no point in arguing. Hesseltine called Counterintelligence. Walters wisely decided to come in his own Jeep.

Hesseltine would have liked to take a Jeep, too, but he knew that Gray preferred his staff car. Hesseltine kind of enjoyed getting in Jeeps and putting on his dark glasses and sitting with his foot up on the dash like a pilot being ferried out to the flight line. He had washed out of pilot training due to his tendency to become sick during maneuvers such as taking off, landing, and flying through smooth, clear air.

Hesseltine was convinced that he was second-rate. As far as he was concerned every officer in the Army Air Force who was not a flight officer had failed.

That Gray did not share his feelings was incomprehensible to Hesseltine. The best men flew fighters, as Gray himself had during the war. Second-best were on bombers and other aircraft. The rest were nowhere.

He was so humiliated by his failure that he would obsessively deadhead on bombers, taking the tail-gunner position. Nobody ever knew that his flight bag contained dozens of neatly folded canvas airsickness containers . . . nobody but Will Stone, who must at some time have ferreted it out of him. It is obvious from reading his meticulous notes and diaries that Will was obsessed with details like that, almost as if they might somehow provide the tiny, critical bit of information that would explain why things went so wrong.

Gray had once caused Hesseltine to run to the can with his cheeks puffed out by simply saying the word

"tailspin" and whirling him around a couple of times in his chair.

Gray was one of those men who viewed such miseries as the will of God. "The Almighty made you quick to get an upset stomach," he had said earnestly as Hesseltine came staggering back from the men's room.

Gray was also the man who had floored a viciously drunk captain from

another bomber wing with a single, appalling left uppercut that had lifted this two-hundred-pound monster off the floor of the Lackland Army Air Force Base Officer's Club in Texas.

It was one of many reasons that Hesseltine resented Gray, and found it interesting to needle him. Now that there was no war to fight, the fact that the mild and methodical Gray could sometimes be enraged was about the most fascinating thing left in Hesseltine's life.

As I write, I try to imagine those two men as they were then. Strength. Promise. A little arrogance, perhaps.

Now they are both dead, Gray after a long and distinguished career.

Six months after the Roswell incident Pete Hesseltine began to hit the bottle so hard that he became pretty much of a professional at it. He died alone in a walkup in Sacramento, California, in September of 1955. He was not yet forty years old.

But on this day they were both young and at least somewhat happy, two victorious soldiers looking forward to glowing careers in the finest military organization in the world.

They went down the long, plywood corridor that led from their office to the front of the building and out into the blazing parking lot. As they crossed it soft tar stuck to the bottoms of their shoes. Gray seemed almost to prance as he moved along. He was a spit-and-polish dresser.

"Gonna have to stay up half the night polishing the bottoms of our goddamn shoes," Hesseltine said.

"Why polish the bottoms of our shoes?"

"You can't eat off floors that have tar on them."

"Is that an example of your wit?"

"Maybe it's wit. Or maybe I'm just crazy."

"I think the former." Gray stepped into an especially soft spot and lifted his right foot out with a loud smack.

The concrete apron of the runway started just the other side of a chain-link fence. On it were six jeeps lined up in a neat row, waiting to ferry crew to the planes, which stood in the distance shimmering with heat. There were no flights planned for this afternoon, and the line was quiet.

Hesseltine fitted his aviation glasses to his face and looked longingly toward the rows of planes. Slowly he walked toward the car. In his mind he was, no doubt, running down a checklist, starting motors.

The car was hot to touch, hotter to sit in. With a long sigh he started it and

nosed it out of the lot.

Walters's Jeep pulled in behind them, driven by a grim-faced PFC Winters, who had been dragooned into the job.

Once they were on the two-lane blacktop that led over to Roswell, Hesseltine lit a cigarette and tuned in a radio station. A show called Sundown Roundup was on, and they listened in silence. He knew that Gray didn't particularly like country music, and also that he was too polite to twist the dial if Hesseltine appeared to be enjoying himself. Hesseltine snapped his fingers in time to the thin caterwauling of a lonesome cowboy.

He hated the goddamn West. He would gladly have given an entire paycheck for a hoagie.

They drove through the town, past the restaurants, the bars, the general stores, the offices of the Daily Record. Hesseltine glanced back with longing as they left the last of the bars behind. He was a man for a tall, cool one. He had a possibility of a date tonight, and he was damned if he was going to waste time out on some godforsaken ranch with Gray and Walters when he could be dancing with a WAAF at the Nixon Bar.

He nosed the Chevy wagon to the sidewalk in front of Wooten's. The Jeep came in beside them. Gray got out of the wagon and trotted into the store.

Hesseltine sat staring after him. Soon Walters came up to the car and leaned his head in. "Whaddaya think?"

"Wild goose chase. Some private plane went down in a storm."

"Funny place for a private plane to be. Middle of nowhere." "Flying Albuquerque-Roswell. Blown off course a few miles. Makes perfect sense."

Walters regarded him, nodding slowly. Compared to Walters, Gray was a real card. "Could be Russian," he said in dark tones. "Up from Mexico, or even from the coast. A recce plane launched from a sub. After a look at the 509th." "Didn't make it."

"How do we know? Maybe it had a good look and radioed everything back to the sub."

It struck Hesseltine as damned unlikely and he said so. "Well, Lieutenant, you may be right. But look at the stakes. Stalin wants, more than anything else in the world, to know exactly where the 509th is located, and its immediate orders." "But he can't get here. Surely not, Mr. Walters." "That isn't a CIC problem. You S-2s are supposed to be savvy in that department."

Major Gray came out of the store. "That's a good man, that Bob Ungar. I

like men like him. Honest as the day is long. Friendly as hell." He held up a hand-drawn map. "He can't lead us out, he's got too much to do here in town. But he gave me very explicit instructions to his house. His wife and kids are there."

The tiny convoy started up again. A thought crossed Hesselstine's mind. "What kind of kids?"

"Daughter, he mentioned. Son he has with him." "Daughter?"

"A kid, Lieutenant. Twelve years old."

Hesselstine got quiet.

Beyond the clutch of Mexican shacks that ended the town Hesselstine picked up speed. Unable to stand any more of the whining music he spun the dial. A bad dance band pounded away at "Begin the Beguine." Father Coughlin screamed over waves of static. A woman explained that certain cactuses were edible. Somebody talked about how the DuBarry Success Course could bring more dates, more fun. You followed at home the same methods used at the Richard Hudnut Salon in New York.

Hesselstine spoke longingly about a girl in a pale gray suit tapping along in heels. He wanted that sweet and anonymous image with an ache that made him fall silent.

"They take the money of innocent kids," Gray intoned. "Nobody around here is ever going to look like she got within fifty miles of Richard Hudnut."

"Give me one of those Fifth Avenue dames. I'd take her up to the Rainbow Room and dance her until she dropped. These New Mexico girls have sand between their teeth."

"I wouldn't know. Jennine—"

"Jennine, I dream of Lilac Time—' "

"Please, Lieutenant."

"I thought it was your song. You and Jennine."

"The way you sing it, it's nobody's song."

They swept off the blacktop onto a dirt road. The Jeep dropped way back to avoid their dust cloud.

They drove at a steady forty-five miles an hour, for three hot and dismal hours. When they stopped the shadows were long and the katydids were already singing.

They were in Maricopa, a town that consisted of ten houses strung along the roadside, a store, a bar and a gas station.

Everybody got down from the vehicles. Walters stretched his back, took

off his sunglasses and began cleaning them with his handkerchief. His PFC driver whapped at his own uniform, bringing up clouds of dust.

"I'll bet that bar is full of cold beer," Hesselstine said. Nobody acknowledged him, but I have no doubt that PFC

Winter's eyes rolled.

"I'll go in and confirm these instructions," Gray announced. Walters went with him.

"You want a beer, Private?"

"Yes, sir."

"Our commanding officer will fail to realize this."

"Yes, sir."

"End of story, Private."

"Yes, sir."

Gray and Walters came hurrying back like men about to miss a train. "The road is about half a mile back toward Roswell," Gray said. "Then another thirty miles to the man's house. It's just a track."

It was far worse than that. Hesselstine waited for the Chevy to break an axle.

Amazingly, it didn't happen. This may have been because of the number of gates they had to open and close was so great that they never managed to get past twenty before they had to slow down again.

"The cattleguard hasn't been invented yet in New Mexico."

"Apparently not, Lieutenant."

"This is gate number sixteen."

"I haven't been counting."

Soon they arrived at a miserable hovel that was distinguished only by a tiny flower garden in the front yard.

The garden had sunflowers in it, and a few fat little cactuses with yellow flowers on them. Two kids, shy and afraid, cowered by the side of the house.

"Look out," Hesselstine muttered to Gray. "They might be commie dwarfs disguised as scared kids."

To Hesselstine's surprise, Gray stomped his foot against the floorboard of the car. He glared a moment at his junior officer.

"Close your window, Lieutenant," he snapped as he wound up his own. "Breaches of security are always a serious business, especially in a sensitive area like Roswell. For all we know, those kids are Commies and ready to report our least move to their cell leader. The fact that we're here on this

ranch could be common knowledge in Moscow inside of an hour!"

Hesseltine was so taken aback by this outburst that he guffawed before he could stop himself. Gray glared at him. "You've got to take this seriously, Hesseltine."

"I'm sorry, sir. It's just that I've blown a date, and—"

"I understand perfectly. But we have to do this. And do it right."

"I agree, sir."

The porch had an old couch on it that was covered with a piece of canvas. The couch was sprung and there were places where animals had torn at the stuffing.

Gray was not a large man, but he felt huge in this little adobe-brick house. He knocked, the sound echoing flatly in the dark room beyond the rusty screen door.

Soon a shadow appeared moving forward from the back of the house, a woman gliding swiftly and crookedly along. She appeared behind the door, hesitant, her face clouding at the sight of the uniforms. She had a cigarette between her lips, which she took into her fingers. "Can I help you?" she asked, her voice soft.

Gray felt pity for her until he saw the flashing strength in her eyes. As he had many times before, he thought now that he did not understand these tough New Mexico people. "I'm Major Gray of the Roswell Army Air Force. This is Lieutenant Hesseltine and Mr. Walters." He did not introduce PFC Winters. The soldier, in any case, was lingering out by the Jeep.

"Come on in," Ellie replied, opening the door. The two children, who had been standing on the steps, now crowded past to be with their mother. "Go back outside, now," she said, "you let these men be. They're important Army men and they don't need kids to bother them." She herded them toward the back of the house. "They've never seen Army men so close," she added. As she spoke she smiled, and Gray was surprised without understanding why at how her smile made him feel.

For all his self-assurance Gray was an uneasy and open-hearted child of America. Her poverty spoke to him of his childhood seeing Okies on the road and hoboes in the back alley behind the white bungalow where he ate meals of collard and steak and cornbread. He had bounced along in the backseat of a clean little Essex, and heard his father say things like, "God has blessed us among the cursed millions, and we must never forget to thank Him."

One afternoon his father sat beneath the blooming wisteria in the

backyard with tears streaming down his face. After that things had slowly gotten harder and harder. The Essex went, the refrigerator became an ice box again, the radio broke and was not repaired, and the leaves of autumn rolled down the street.

But there were also pennants won and comic books read and Baby Ruths eaten, and the sonorous majesty of Latin Club declamation contests. "In partem gloriae venio," and all the rest of it, Virgil and Cicero and the compressed fury of Seneca's plays.

The Grays had been a raft of neat, diminished pride in the shabby Midwestern ocean. These people were even worse off, and that scared him and made him hate them a little, and also feel tender toward them. Two generations ago most of the New Mexico settlers had set off westward from the ruins of Virginia, leaving their silk collars and magnolia evenings forever behind. They had slipped from grace and tumbled down into poverty's labyrinth of musty, rugless rooms and chipped white bowls on the dinner table.

"My husband's out back. I'll get him to come up." She left the living room, and in a moment her voice came again, low and hard and shockingly loud, "The Air Force is here!"

Hesseltine fidgeted with a bit of frayed cloth on the arm of the easy chair in which he was sitting. Gray stood nervously contemplating the large picture of Christ on the cross that hung over the mantel of the ancient, blackened fireplace. On the mantel there was also a picture of a lean, young man and a girl beside him.

"Would you like coffee," the woman said in her murmuring, prayerful way. Gray imagined the family before its picture of Jesus, praying against their frayed lives and the dry, hot desert where they made their living. He could not have been more wrong, of course. The Jesus was there for the colors, which Ellie thought matched the chair. And it was good for the kids.

Although all three men had declined coffee, the woman was making it anyway when her husband came banging into the house. He loomed through to the living room like a great caricature of Abraham Lincoln, stooping under the door and crossing directly to Gray. Walters and Hesseltine jumped to their feet.

"How in the world did you beat us," Gray asked.

"There's a road in that passes north of Arabela. Cuts off fifty miles."

"Oh."

"I thought I told you about it."

"We'd better get out to the crash."

"We can't."

"Can't?"

"It'll be dark before we get there. No use goin' until mornin'."

Gray could see by the looks on Hesseltine's and Walters's faces that they were just as appalled as he was.

"We got you each a plate of beans," the rancher said affably. "And coffee."

Gray managed to smile. Walters was impassive. Hesseltine looked like he was thinking about going AWOL.

Winters had come to the door and stood there hesitantly. "Bring in that half of bourbon," Walters growled.

The PFC produced a well-sucked half-pint of Old Granddad, which Walters handed to each man in turn.

Gray drank a swallow to be sociable. Hesseltine, he noticed, knocked back a couple of long pulls.

"That hit the spot," the lieutenant said. "Pardon me for drowning my sorrows. As of fifteen minutes from now I'm standing up the best-looking WAAF captain in Roswell."

"You better hope she doesn't put you on report."

"I like your sense of humor, Major Gray."

"Thank you, Lieutenant."

The rancher's wife called them into the kitchen, where they hulked around the table. When Gray saw how sparse the meals were, he knew that the woman had stretched four helpings of beans to eight. Even so, each plate had a little scrap of fat back on it along with the beans, and the coffee smelled rich and good.

They sat down to the crowded table. "This is some of that stuff," the rancher said. He put a couple of small pieces of tinfoil on the table.

Gray felt a flush of anger: he recognized it as foil from a burst weather balloon. He picked up the scrap of material. "Did you see the plane?"

"Lights. Heard the explosion. Then the next night y'all's blimp came over with the searchlights, but it missed the wreckage."

Gray frowned. "Blimp?"

"Sure. That big gray blimp."

Walters looked at Gray, took the foil from him. He held the stuff in his

hand, staring down at it. Abruptly he crushed the foil to a tiny ball, then put it on the table.

To Gray's amazement, it sprang back to its original shape.

"You can't burn it or tear it," the rancher said as he spooned up the last of his beans. "I don't wonder, you couldn't put a bullet through it, either."

Gray met Walters's eyes. The CIC man's face was literally drained of color. "Let's go out to the Jeep," he said evenly. "Get those maps."

Outside, it was immediately obvious that Walters wasn't looking for any maps. "What the hell is going on here," he asked.

"I don't know."

"What is that stuff?"

"Frank, I've never seen anything like it before in my life."

"And a blimp!"

"Experimental aircraft, maybe."

"Something you wouldn't know about?"

Gray didn't like to think that experimental aircraft would be tested in the squadron area without his knowledge, but it was possible. "Could be," he answered.

"I don't like it. There isn't a hangar in New Mexico that can hold a blimp."

"Texas, then. Blimps can fly long range."

"Real long range. Like from Russia. If you ask me, this could be some kind of new goldbeater's skin.

Incredibly tough. Suitable for a long-range spy blimp, or even a bomber."

Both men knew what a bomber could do to the 509th if it struck while there were atomic devices on the flight line.

"Hiroshima'd look like a picnic," Gray said. He tried to imagine the scope of the disaster, but his mind rejected it.

"Two blimps. One of them blows up in a thunderstorm. The other one comes searching for the remains."

"They have a hell of a big radar signature." "They can also fly low and slow, Don."

"Low and slow all the way from Russia. Damn, that's scary."

They went back inside to find that the rancher and his family were already going to bed.

As he passed the couple's bedroom door, Gray glimpsed an old iron bed with yellow sheets and a dresser with a half-empty bottle of Trushay hand cream on top. He felt a pang of loneliness; Jennine used Trushay.

He wished that he'd called her before he came out here. Suddenly he was facing Russians in the night, and he was uneasy.

"I think we'd better hang watches," he said when the four soldiers were alone together in the living room.

"I agree," Walters said.

"What're we worried about, coyotes?" Hesselstine sounded disgusted.

Gray explained to him. "Russians. This stuff is most probably some kind of goldbeater's skin, used to cover a blimp. The rancher saw another blimp last night. Long-range Russian blimps after the 509th."

That stopped even Hesselstine. The PFC's eyes were wide.

"I'm armed," Walters said. He produced a police special from under his jacket. "The man on watch carries it in his belt."

"Is it a regulation weapon?" Gray asked. "I didn't think civilians could carry weapons on base."

"Consider me a cop. That's what counterintelligence is, kid. Police work."

Gray didn't know Walters all that well, but he'd always had a lot of respect for the man. His background as a police detective combined with his toughness and brains made him one of the best counterintelligence men that Gray had ever met. With communist fifth columnists, fellow travelers and spies said to be everywhere, good men were needed to protect the 509th.

He lay on his back with a couch cushion for a pillow. First PFC Winters went on watch, then Hesselstine.

Gray had decided that the postmidnight hours were the most dangerous, and assigned them to himself and Walters. There would be four two-hour watches from nine P.M., then reveille along with the rancher, who ordinarily got up at five.

He must have slept a little, because Hesselstine's place was empty and the PFC was snoring peacefully when he opened his eyes again. Walters had been sawing Z's from the second they'd snuffed the oil lamp. Gray lit a cigarette.

He could easily imagine Russians sneaking around out here. He thought of the goldbeater's skin. How the hell had they done it? He'd never seen anything even remotely like it. Incredibly tough. Incredibly light.

Suddenly Hesselstine was whispering in his ear. "Your turn, boss."

Gray looked at his radium-dial watch. "You've got it, Mr. Hesselstine." He stubbed out his cigarette in the ashtray he'd brought down to the floor. "Any sign of anything?"

"It's been quiet, except for the porcupines, badgers, ferrets, owls, coons and coyotes. Not to mention the things that scream."

There was nothing screaming now. As a matter of fact it was absolutely quiet, absolutely dark and about as lonely a place as Gray had ever been in. The Milky Way came right down to both horizons. Even a tiny constellation like Lyra stood out clearly. The only way you could tell where the land started was that there were no stars there.

Gray wished he had another cigarette, but you didn't carry lights on watch. He stood in front of the house beside the bulk of his staff car. It would have been nice to see if he could pick up some dance music, but he supposed that all the radio stations would be shut down by now.

One-fifteen. As his eyes slowly adjusted to the dark he took a walk around the house. He moved up toward the barn, which was small and ramshackle. There was a horse snorting inside, and he could hear sheep bleating somewhere off in the distance. There were rustles and shuffling sounds and occasional low growls in the brush.

Once he was startled to see what he thought might have been a glow on the horizon, but it disappeared and he didn't see it again.

An hour passed.

Then he heard a noise unlike any he had heard before. It cut through him like a white-hot blade.

Walters and the rancher and Hesseltine came pouring out the kitchen door. PFC Winters stood behind them.

"What the hell was it," Walters breathed.

"Damned if I know," Gray said. The scream was still echoing in his head. "What about it, Mr. Ungar?"

The rancher was standing very still, staring into the black night. "I heard it right after the crash. I lived here all my life, and I never heard anything like it before."

Gray's fingers closed around the piece of foil in his pocket. In his mind there had formed a question, but he did not yet know how to put it into words.

"Goddamn," Hesseltine said softly.

The rancher backed up against his screen door.

From inside the house a child keened, and Mrs. Ungar offered comfort in a shaking voice.

Ungar whispered, "The other night when I heard it, I thought nothing could sound like that but the devil."

"It's real," Walters said. "We all heard it."

They were silent, then, and so was the night.

Chapter Five

In part I have written this in an attempt to understand why Will Stone and the others did what they did. Why did they choose to decide that these others were dangerous?

One of the things that I originally understood the least was the mind of Will Stone and by extension all the other Will Stones that choke the bureaucracies of the world.

I can read his diaries, listen to him talk, read assessments of him, sit across from him and watch him slowly choking on his cancer, and never actually see him. The moment I leave him, it is as if he has never existed.

The curse of living with too many secrets is that a man's own meaning also becomes a secret. He loses himself in the machinery of his knowledge.

I keep thinking that, if only I understood exactly what was so strangely unformed about the man I would also know why he failed so dismally to grasp the sublime aim of the others. Somehow he translated their offer of help into a deadly challenge.

I suppose it was an offer of help. Surely it must have been. What would happen to us, I wonder, if we were attacked by an army whose weapons were so subtle that we could not understand even that we were at war?

I am fascinated by the contrast between Stone and Bob Ungar. The one is alive and yet more indistinct than a shadow. The other—long dead—is vivid with meaning and sense and even grace.

I can imagine the morning that he took the military party to the crash site. Major Gray's report reveals nothing of the emotions, of the sinew and color of the experience. But I can imagine.

Dawn at the Ungar ranch would be marked by quiet kitchen bustle and the smell of strong coffee. Judging from the uneasiness he reports feeling, Don Gray would have been sleeping fitfully.

Perhaps the clink of dishes made him open his eyes. It was still pitch dark, but the entire Ungar family was already at breakfast. Walters was with them, slopping down coffee and chewing on a big piece of bread.

Gray woke up the others, tucked in his shirt and went to the table. The meal consisted of coffee and bread spread with a thin coating of grape jelly. He thought of steak and eggs at the officer's club. Roswell AAF was a good

life. Challenging to be an intelligence officer in a place where it really mattered. A good outfit.

Excellent facilities.

Coffee and bread. Not even a glass of water to wash it down, let alone milk or juice. They couldn't have drunk the water even if it had been offered. These people used cisterns. The Air Force warned you to drink only from approved water supplies as soon as you set foot on base. And stay away from animals that might have fleas: New Mexico had fifty to a hundred cases of bubonic plague a year. Not to mention astronomical polio statistics and a substantial amount of TB in the Mexican population.

Don was just as glad that the coffee was well boiled.

Ungar wiped his mouth against the back of his hand. "Let's get on out there. I've got a lotta other stuff to do today."

He pulled his ancient Jeep up to the house. His daughter and son got in with him. The four soldiers rode in Walters's much newer Jeep. Gray and Hesseltine sat in the back, deciding that it was best to leave the staff car behind.

They bounced over the desolate land for about half an hour. Gray could see a mountain ahead, but it never seemed to get any closer. The land undulated in great, shallow waves. Spanish daggers and chorro cactus dragged along the sides of the Jeep. Tough clumps of dry grass waved in the morning breeze. Out where the land was flat tumbleweeds bounded along.

They came to the top of a rise and he saw the crash site. His practiced eye told him at once that something had blown up as it was traveling in a westerly direction. Debris had funned out from a point about a hundred yards below the base of a hill. The wreckage covered an area about a quarter of a mile long. They stopped the Jeeps. "No large debris," Hesseltine said immediately.

"What was it?" Walters asked.

Gray spoke. "The lack of large debris does suggest a balloon or some such thing."

The rancher walked into the mess. "I want y'all to take a look at something." He pointed at the ground.

"Those things."

Gray saw some small balsa beams, some shaped like the letter I and others like a T. He picked one up. It was marked by violet hieroglyphics.

"Cyrillic?" Hesseltine asked.

"No," Walters said as he examined it.

"Jap?"

Gray looked at the writing. It was vaguely reminiscent of Egyptian, but there were no familiar animal shapes.

"I've never seen anything like it before."

The little girl held up a piece of what seemed to Gray to be parchment. There were rows of little squiggles on it. They were pink and purple, and Gray couldn't make anything out of them at all.

"Maybe they're numbers," Hesselstine said. "The way they're in columns like that."

The little girl held another piece of the parchment up to the sun, the disk of which had just cleared the horizon. "You can see yellow flowers inside. Its real pretty."

The torn pieces of parchment were abundant, and all four soldiers picked them up and held them to the sun.

"Cornflowers," Gray said.

Walters grunted. "Primroses. Cornflowers are blue."

"You can't burn it, bend it, tear it or nothin'," the rancher said. "Just like the tinfoil."

PFC Winters spoke. "What I think you all have here," he said in his drawl, "is the pieces of one of them flying disks like folks've been seeing."

Nobody replied. Suddenly Walters grabbed a large piece of foil and begun struggling furiously with it. He pulled it, ripped at it, stood on it and tried to stretch it. Nothing.

Finally he took out his pistol. "Okay, folks, we'll see just how strong this stuff really is." He laid the three-foot-square piece of material out on the ground and fired into it.

There was a blast from the gun, and the foil swarmed into the ground behind the bullet. "That tore it," the PFC

said. He and Walters pulled it out of the ground.

The flattened bullet was lying in the middle of the foil, which was completely unmarred.

"You sure that's not Cyrillic on that paper," Walters asked again.

The bullet just lay there, flattened. The foil shone in the sun. Gray took out his Old Golds and with shaking hands pulled the foil from around the few cigarettes that remained in the pack. He took a piece of the strange metal in one hand and the cigarette wrapping in the other.

The metal was thinner by a considerable margin. He was a methodical man, and not quick to make decisions. He carefully returned the cigarette wrapping to the pack and put his cigarettes in his pocket. He then picked up a piece of the parchment and attempted to burn it with his lighter. It would not burn.

"Nothin' burns," the rancher said. "And the wood doesn't break."

Walters grabbed a piece of the wood. It bent like rubber. No matter how he twisted it around he could not make it snap. Finally he threw it to the ground. "What the hell is it?"

Gray looked at the PFC. "I think you're absolutely right, soldier. I think what we have here is the remains of an exploded flying disk."

"Oh, Lord," Walters said. "What are they doing here? What are they up to?"

"Maybe just looking around," Hesseltine replied.

"By dark of night? In secret? I hardly think that's all they're doing." Walters looked grim. He had taken his pistol from his shoulder holster and stuck it in his belt.

"We don't know what they're doing," Gray said. There was annoyance in his voice. He didn't like loose speculation. They weren't equipped even to think about things like intent. "What we need to do is gather up as much of this stuff as we can, and get it back to the field pronto." "We ought to recce the whole site,"

Hesseltine said. The four of them walked it, making rough measurements and kicking under the sheets of foil, the wooden beams, the parchment, looking for any large objects.

It took them about an hour to examine the area and fill the jeeps with as much debris as they could conveniently carry.

When they returned to the house they transferred some of the material to the rear of Gray's wagon. Then they headed back to the field. The rest of the stuff remained with Walters. Don Gray was now excited, even elated.

He had forgotten the cries in the night, and was now thinking only of the incredible thing they had found. It was one of the most momentous discoveries in history, and he had made it. Just absolutely incredible. "We are going to have a hell of a lot of work to do on this," he said to Hesseltine.

"What work? This is gonna be Eighth Air Force business. Pentagon business. We've done our work. You'll see. The brass is gonna be all over this thing." "Maybe and maybe not."

I believe that this was the moment that Donald Gray became a hero. To his own considerable surprise, he found that he had formed a powerful conviction about this. It was not going to be a military secret.

"What about the threat to the 509th? I mean, why are they out here in this godforsaken place, anyway? Could be because it's close to the squadron." Hesselstine's hands gripped the wheel. "The A-bomb is a big thing.

Maybe even big enough to be of concern to people on other planets." Now that he had seen the danger, his sense of duty was finally aroused.

After that they were both silent for a long time, trying to absorb the import of his statement. Soon Hesselstine turned on the radio and picked up the ten A.M. news out of Albuquerque. Then there was a soap opera, Young Doctor Malone. Gray listened without interest to the complications of the doctor's life. It was nearly one when they finally reached the outskirts of Roswell. "Let's stop at my house for lunch," Gray said. "I want my son to see this stuff."

"You sure about that?"

"I'm certain."

"It's gonna be classified."

"Well, it's not classified now, and I want my boy to see it and hold it in his hands. It'll be something to tell his grandchildren."

"He's twelve. Say he has grandchildren when he's fifty. That'll be, let's see, nineteen-eighty-five. By then everybody will know all about this. There'll probably be aliens living down the block. And the fact that he saw a few pieces of a wrecked disk in 1947 won't amount to a hill of beans."

"Well, Jennine still makes a better ham sandwich than you'll find in the officer's club."

"I could use a whole ham. A couple of hams. Those poor devils live on beans and bread."

"And I've got a six-pack of White Label beer."

"Trommers? Where the hell did you get that?"

"Three hundred ninetieth Air Service at your service. Some of the guys brought it back on a run from D.C."

"Does Jennine know how to make a hoagie?"

"Which is?"

"It's real food from Philly."

They dumped some of the stuff on the kitchen table. Gray called Don Jr., who was in his room struggling with a balsa model of a Zero.

Don Jr. is now a doctor living in Southern California. His office bustles with patients; he is a successful man and honored in his community.

I asked him to please tell me if this really happened. He looked me square in the eye and said, "Mr. Duke, it did." And he proceeded to relate the story of how his father had showed him the debris.

"Identify it," the major had told his son.

The boy looked at it, touched it. "Private plane?"

"See the balsa parts."

"Is that Egyptian writing?"

"Nope."

"What is it, then, Dad?"

Jennine took out a box of Cut-Rite and compared the wax paper to the parchment. "It certainly isn't normal wax paper," she said.

"Donnie, I'll give you a dime if you guess correctly. The debris comes from something that crashed up near Maricopa."

"Not a balloon, not a plane." He looked at his father, smiled. "Flying disk?"

"Smart," Hesseltine said.

"Don't be silly, Don," his mother told him. "Your dad wants you to learn these things."

"Jennine, the boy has just won a dime. He's exactly right. Our opinion is that this material came from a flying disk like the ones they've been reporting in the papers."

Donnie was awed, and the awe remains with him to this day. Gingerly, he touched some of the wooden beams. He looked at his dad. "What happened to the pilot?"

Don's mind went back to that wild, awful howling. "There wasn't a sign of a pilot."

He thought of the poor rancher with his wife and kids. Tonight and every night, they would be out there alone with whatever had done that howling.

He bit into the sandwich that Jennine had made for him, and ate with the gusto of the survivor.

Chapter Six

The Chronicle of Wilfred Stone

It is curious that distant memories become so vivid in old age. I first noticed this perhaps ten years ago; I remember my father commenting on it when he was in his seventies. When I was fifty my recollections of early childhood were little more than shadows. Now I can remember the lace collar I wore, and how Momma tied it behind my neck, and the smell of the lucifers they used to light the gas.

I remember other things too, oh, I certainly do. They are most appalling things, and I don't know how to cope with them.

Are they real, or is my mind beginning to mix memory and imagination?

That would be fatal to understanding, of course, and I cannot know if it has happened.

However, I do know that what I am about to describe has been done to many children of this generation. The Children's Circles that the others formed in the fifties and sixties were part of this phenomenon.

I should know all about that: I personally agreed to let them enter the lives of fifty of those children. They submitted a list.

I did not allow myself to suspect that they would use my agreement as an excuse to affect thousands more.

But they did, of course. I told myself, only fifty. A small price.

Were they doing it as far back as 1916, and did they do it to me? The question makes me sorrow and makes me ache. It is so important to my understanding of what has happened to me—and to us all—and so impenetrable.

All I can do is focus myself on those days, and repeat the recollections that age has returned to the forefront of my mind.

Once again it is early July, but this is the year 1916 and the location is Westchester County.

This is not the suburban glut of today, but another place entirely, a land of rolling hills and comfortable, elegant homes. There are farms in the valleys, and wagons are more common than trucks and cars. Where great malls will

spread across the land there are now apple orchards, and the trees show promise of a rich harvest in the fall.

One of these houses in particular is of interest to us. In July of 1916 the house was owned by Herbert Stone, a man skilled in the application of law to the problems of the corporation. Among his clients are the National Biscuit Company and the Hill Coffee empire.

He was there with his wife, Janet, and their two children, Monica and Wilfred.

Monica was four, and I was three.

Before God, I wish I could go back with a warning.

The children are playing, the parents sipping scotch and water. The katydids are arguing, the butterflies fluttering. Westchester smiles.

Like his father, Herbert is a lawyer. He loves us with the kind of simplicity that I value so much and do not myself possess. My work has denied me peace in these aged years. Instead I live like an anguished ghost.

They were the last family I had, mother and father and my dead sister. I have been cursed to outlive my generation, and to do so without the comfort of a family.

When this young journalist appeared, attracted like a little trout to the bait of my letter to his paper, he found me as I am now, and as I will no doubt be when I finally expire.

If I ever do. Two years ago my doctor told me that my disease would kill me in six months. My death is as hesitant as were my loves.

I am sitting in my garden here in Bethesda, smoking and watching the weeds grow, and scribbling in what young Duke calls "my dense and careful hand" on a yellow legal pad.

He has never met any of the young men from the agency, and so he does not know what they call me.

I am the T.O.M. The Terrible Old Man. They think that I am infected with alienness, that I am not really human anymore. Overexposed, they say.

Deep in the night I sometimes awaken and feel a sense of passing presence, and I must admit that I long to join the drift in the sky.

Some say that they eat souls. That is not true. What they do is more profound, more private, more final.

"Don't let him catch your eye," the young men say. "They'll see you, and they'll get you, too."

I wore my lace collar and my Fauntleroy's and was washed in Pear's soap.

My voice was high and happy when I was three.

This is what I remember.

When they came I was rolling a red fire truck up and down across the board floor of the porch, causing a rattling that reminded me of an engine.

I have established the time as approximately five-thirty. My father had just driven up from New York, arriving perhaps half an hour before. He was still wearing his black broadcloth suit, tie and waistcoat. He had come from a meeting with Vincent Carney, a developer of office buildings. Mr. Carney had entered into an agreement to construct the new National Biscuit Building, and Herbert Stone, Esq., had made ten thousand dollars in an afternoon.

Father was sitting in a big wooden chair with his feet up on a stool.

He leaned his head back, imagining that he was lying in the castles of summer cloud that were passing by.

Janet also closed her eyes.

As far as they were concerned they were innocently drowsing on a summer afternoon. Neither of them imagined that somebody very strange and very close was generating a sound that was causing their drowsiness.

Or that they were being watched by careful eyes.

Only we children remained active. Monica played with a doll she had named Ricardo, and I with my beloved red fire engine.

What my father had seen as a cloud in the sky was something very, very different. It was gray and tremendous and slow, this thing that had come over the house. Had he seen it as it really was, my father might have thought it an organic thing, something like a gigantic wasp's nest Boating in the sky.

And what watched from within, with great, black eyes and spindly limbs—what would he have called them in their thousands? Giant hornets? He would have understood the fierceness, but never the intelligence.

Afternoon became evening, and cowbells began to sound lazily across the valley below. A woman's voice rose, calling the cows to their barn.

This voice was dampened by a sound that could almost be heard, a deep buzzing that seemed to pulsate in the gut and chest, to caress the heart and slow the blood.

The voice faded away. The cowbells stopped. Birds stopped, katydids and cicadas stopped. A snake paused in its patient stalking of a rabbit, and its nictitating membranes slipped over its eyes. The rabbit paused in its chewing and fell to its side. Still we children played. "Rum-m-m," I said, "clang, clang, clang!" "Ricardo, are you ever going to get married? Only to you, my

dear. I love you. You need a wipe. Okay . . ."

Nobody saw the line of dots that were coming from the gray thing, saw them twisting and turning in the sky, moving as gracefully as a column of geese, slipping quickly down from the land of the clouds to the land of the stones.

These appalling things stepped lightly into the yard, into the soft, hot grass, and they began to move forward in lockstep, closer and closer to the porch where our parents slept and we played.

They were small and fragile, as gray and spindly as insects. Their heads were huge and had the texture of something that had been inflated. Their prominent eyes glittered in the afternoon sun. As they moved their heads bobbed.

Every few moments there would be an angry buzz and they would sail a few feet through the air.

"Ricardo, I love you!"

"Rum-m-m—clang!"

They came closer. Someone watching might have thought that these creatures were engaged in some sort of ritual. In addition to their lockstep and their gliding jumps, they were making a whole host of other gestures, moving their thin arms, chattering their mouths, turning their heads first left, then right, then toward the sun.

Again they stepped, jumped, juted out their hips, twisted their arms together, then turned their black eyes toward the sun.

"Rum-m-m! Clangclangclang!"

"Ricardo is sleeping! He is a man like daddy and he is sleeping in my arms."

"Brum-m-m-m!"

"Please don't wake him up, Wilfred."

Three steps forward. Monica wrinkled her nose. There was an overpowering odor coming with the dancers, a stink of molten sulfur.

Abruptly the adults stood up. They began walking like robots. Down the porch they went and into the living room. They stood staring at the floor like tongue-lashed children.

"Mother and Father are marching," Monica said happily. But as her parents passed her she fell silent. She was not afraid, just confused. Why was everybody marching into the living room?

When she got up to follow, carefully cradling Ricardo, she found herself

looking into a pair of huge, black eyes.

She experienced a burst of extreme dizziness and reeled back, twisting as if a bullet had hit her in the face.

She lay still, her doll beside her. There was a movement too rapid even to perceive and the being had twined its arms and legs around her.

She knew it too. It must be understood that she was totally conscious during this ordeal. Her mind was not in any way altered. She felt, heard, saw everything that happened to her. And she suffered. It was the first of the secret, stifled memories that would in the end destroy Monica Stone.

With a loud, droning buzz she was taken off into the sky.

I had stopped running my toy firetruck and was staring at the creatures that now stood around me. I was completely calm. It had not occurred to my three-year-old mind to be afraid.

"Monkeys," I said brightly. I suppose that I smiled.

And then there was somebody else there, somebody very much more graceful than the men with the bobbing heads. One instant this person arrived on the porch, a fleeting shadow. The next she was standing before me.

She was perhaps five feet tall, with a long, narrow face and slim arms and legs. Her skin was the texture of baby-leather, even more fine than that of children.

"My mamma went inside," I said.

"Come with me."

She embraced me. I remember next a whirl of roof and clouds and sky.

Then I saw gray. There were buzzings and scrabbling noises and the frequent rush of wings. I did not know where I was and for the first time I felt fear.

I saw Monica staggering, being hit by flashes of light so bright that I thought they were knives. She screamed and jerked when the light hit her.

I tried to help her but the thin lady held me back. I fought the frail arms but they were as hard as steel, and I remember how she breathed with a hissing burr. Monica was being hurt! Her screams were terrible to hear, so loud they hurt my ears. In my young life I had never heard anything like it before.

The light would hit her and she would throw up her hands and bellow and try to run away. Then it would hit her again from another direction and she would turn and run. On and on it went.

Something was jammed down on my head, ground into my temples. It

hurt terribly, I had to get it off but she was holding me and hissing and then I saw a vivid image of my mother when I was very young, reaching down as if from heaven and lifting me with hands that made my whole body tingle with delight, and all was gold.

Monica shrieked. I saw her in a blaze of light and smelled burning hair and burning cloth.

In 1977 my sister died in a bedroom fire. A sleeping pill worked faster than she had expected and her last cigarette of the day dropped from her fingers into the sheets. Or perhaps it was more than one sleeping pill.

We were returned to the porch amid a great clamor of buzzing wings. They sat me in my father's chair and poured out his glass of whiskey in the grass. Monica they returned to her doll.

A moment later they were gone, and the gray object had become nothing but a glittering white dot, and then nothing at all.

The farmer's wife let fly with a boisterous "Oooooooooo!" The cows mooed and went trotting up the path to their barn. Monica said, "Now, Ricardo, what woke you up?" Birds began to sing, katydids and cicadas to chatter, and the snake got its rabbit. Trout and sunnys fluttered again in the clear streams.

Nobody noticed that fifteen minutes had been stolen from their evening. Why should they? They had gone inside and discussed the news. What news? Well, wasn't that funny, they couldn't remember.

But that was quickly forgotten, because a problem presented itself as soon as they returned to the porch.

I had apparently swallowed my father's highball and gotten drunk.

"I seed de moon comin' up over de bally," I said. "Them monkeys come show Willy—"

"Oh, Herb, you left your highball!" Our mother was amused and annoyed at the same time.

"You could call Dr. Hovermanns, darling, but I think he'll just tell you to let him sleep it off."

That night we had a dinner of ham and sweet potatoes and green beans, and afterward Father read to us for a while. Nobody seemed to notice that I was not, in fact, drunk.

After we kids were in bed Mother and Father sat out under the stars and listened to the Victrola.

To the strains of Beethoven's Sixth Symphony, the "Pastorale," they

counted shooting stars.

Monica was sick in the night, but it soon passed and by morning all was well.

Chapter Seven

As I read Will's narrative, I wondered if he was deluding himself, misleading me or telling the frank truth. One glance at his face told me that this was, in his opinion, an authentic record.

He was terribly distressed. Being touched by them so early meant that he might all along have been nothing but a pawn. I asked him about it. "I wish it was true," he said. "It'd be a relief to find out that they were responsible for my actions." He looked at me with that sudden, sharp way of his that so effectively compelled frankness. "Do you think I'm a high-level robot of some kind?"

I shook my head. "I'm afraid I don't."

"No, you wouldn't. Otherwise you couldn't place blame, could you? Yours is a punitive generation."

"That's a bit of a generalization. But I do think you're responsible for your own actions."

A bottle of Pinch stood on a table beside his summer chair. Sometimes there would be empty sardine cans there, too. I think whiskey and sardines were his whole diet. He went for the bottle, poured a substantial drink into his glass and knocked it back. He lit another Camel.

"Every man has to be responsible for his actions, Nick. Otherwise you're not a man. You wouldn't be human, except physically." He gave me a helpless, haunted look and returned to the bottle.

His childhood memory was full of disturbing implications. Had the others implanted him as they apparently have so many? If so, did it mean that his entire life was lived under their influence?

Perhaps it will never be possible to resolve that question. All I can do is redouble my efforts to be clear, to tell this story as perfectly as I can. To do that I must return to the central narrative, but this time with the knowledge that the visitors probably had Will to a degree under their influence. I do not wish to suggest that he wasn't making his own choices; I prefer to think that he was.

They were watching him, had been since he was a child. He was their man in Central Intelligence, picked from an early age to do their work. But to do it as he saw fit.

This understood, it is appropriate to address once again the events that were taking place in Roswell in July of 1947. These enormous events.

The Gray file lies on my desk. I pick it up, turn to page twenty-three of his careful narrative.

"I returned to RAAF with my detail at approximately 1330 hours on the afternoon of July 8, 1947. We parked behind Hangar B-2 and commenced unloading the debris that had been collected on the Ungar ranch."

Major Gray was a sensitive man, and seeing the pitiful mess that was being laid out made him consider the courage of whoever had flown in it.

"They came a long way," he said.

Hesseltine nodded, lighting a cigarette. "Yep. And they're not going back." Everybody fell silent, looking at the debris. "I guess we'd better inform Colonel Blanchard," Walters said at last.

"Which is going to be very interesting." "You think there'll be a problem?"

I doubt if Gray answered. He says only that "Walters suggested we inform the colonel." What he does not add is what must already have been going through his mind. He must have known that there were going to be a number of serious problems. He would have done his thinking on the way back from the ranch.

If he understood Air Force brass at all, and I think it is obvious that he did, he undoubtedly felt that they would try to classify the hell out of this.

Gray had most certainly established his own very private set of priorities, and he intended to fulfill them.

He had observed that most military officers were earnest and patriotic. They were not, however, deep thinkers. They did not see things in long perspectives.

What he intended to do was probably going to make a lot of people very mad, and he had to be careful or he could very certainly ruin his career. He was carrying out his duties as he saw fit.

"Mr. Hesseltine, why don't you three try to piece some of this stuff together while I get the colonel? Maybe there's enough here to get an idea what this thing looked like."

Hesseltine touched the debris with his foot. "It looks hopeless."

"Blanchard'll expect to see it in the best order we can manage."

Soon Walters and Hesseltine and PFC Winters were moving pieces around on the floor.

Gray went back to the administration building. On his way up the hall to the colonel's office he stopped by to see the base press officer, Lieutenant Jack Hope. He liked Jack, and he knew that he would do his job well.

The key thing here was to be as casual and offhand as possible.

Hope remembers the moment vividly. I met him at his small, tidy home in Roswell. He was frank with me. I found that his story fit what was in both his file and Don Gray's.

There is only one element of it that I question. He and Gray both very specifically claim that he never saw the debris. I find that hard to believe. It would have been so natural to go over to the hangar, if only to satisfy his curiosity.

Nevertheless, I have recorded this as if he didn't go to the hangar, as if he cannot confirm the appearance of the debris.

"You need to interview me," Gray said to him. "I've got something that the papers'll be interested in."

Hearing the major's promise, Hope smiled. He had his frustrations, working for a unit that dealt with so many top secrets. Most of the really interesting things that happened at Roswell Army Air Field were classified and couldn't even be mentioned. On the day that an atomic bomb got stuck in the bay of a B-29 and created a harrowing two-hour emergency, Jack Hope had spent his time trying to place a story about the fact that the Bill Cornell Band was going to play at the officer's club on Saturday night.

Gray told Hope his story, about how they had found the rubble, and what it meant. Hope scribbled frantically.

He was delighted. This was a fine story. "I'll get some good play with this one."

He read his notes back to Gray. "If you work fast, you can get it on the radio tonight."

"Yeah. Y'know Don, I want to thank you. This is a real good piece. I appreciate it."

"Buy me a beer manana"

"Will do!"

As Gray left, he heard the music of Hope's typewriter. Now the story would be out before anybody made any decisions about classification. And that was right. None of the others understood that this was the largest event in human history. It was something that every single human creature had an absolute and inalienable right to know. As Don Gray must have seen it, his

obligation to the American people and to mankind superseded every other consideration.

Well, he had informed the people. Now he would tell the brass. He entered Blanchard's sanctum. The clerk let him through immediately.

The colonel was affable and smart. He had been an extremely successful officer, and he was next in line to take Eighth Air Force. Although he was a West Point man, the colonel seemed much more Air Force than Army. His command style was informal and consultative. Mostly, he was pleasant, although small problems could cause outbursts of temper. One morning he had chewed Hope out for tying up the base telephone lines. A few minutes later, though, he was laughing about it.

He was a heavily decorated officer. He had the Legion of Merit, the Silver Star, the Distinguished Flying Cross with an oak-leaf cluster, the Bronze Star, the Air Medal with a cluster, and the Presidential Unit Citation for his work as operations officer of the Twentieth Air Force that had been responsible for bombing Japan.

Gray had a simple relationship with him. He respected the colonel and made that clear. In return, Blanchard trusted his intelligence assessments. As he approached the inner sanctum, Gray wondered how the old man was going to take what he was about to say.

Blanchard looked up at him, his eyebrows raised, a question in his face.

There was only one way to handle the situation. Just come right out with it. "Colonel, we found the debris from a flying disk this morning."

Blanchard stared a moment, then his eyes crinkled into a smile. "I thought Hesseltine was the practical joker," he said. "If you guys are looking for suckers I suggest you try another colonel."

Gray looked straight into his eyes, trying to communicate the high seriousness that he felt. "Sir, I'm not kidding."

He watched a series of expressions cross Blanchard's face. The smile became a more wary expression, then a long stare. "Was there any hostile action?" "None."

"You have wreckage? An accident?" "Apparently."

Blanchard pressed his intercom. "Get Payne in here," he said. He was always a man to involve his deputy. A moment later Lieutenant Colonel Payne Jennings appeared. He was a compact, intense man, a polished officer. Even though he wasn't a West Point graduate, he projected the formality and to a degree the rigidity of traditional army. Still, people liked him because he

was fair and always willing to push for you with the colonel if he felt you had a good argument.

"Don found a crashed flying disk," he said to Payne. The deputy reared back, his eyes widening. Then he burst out laughing.

"Let's see if we can get General Ramey to buy into that when he comes down." He looked from the colonel to the major, saw they weren't laughing and pursed his lips. "This is for real?"

"Yes, sir," Gray said. "Ray Walters and Hesselstine have the wreckage over in B-2. They're trying to piece it together."

Without another word Blanchard and Jennings headed out to the hangar.

Very little headway had been made putting the pieces together. "The nearest we can tell, what we have here is a part of a larger device." Hesselstine sounded very professional, and Gray was pleased.

Blanchard picked up a piece of the parchment, ran his fingers down the columns of squiggles. "Gentlemen, I have to say that I'm a little awed."

"I thought it was a historic occasion," Gray said. "That's what I told Lieutenant Hope." Blanchard and Jennings nodded absently. That was a hurdle jumped. They'd just agreed that this story would be given to the public. Gray was proud of them.

Blanchard held some of the parchment up to the light. "It's like wallpaper. You wouldn't have wallpaper in a military vehicle."

"We can't know that," Walters said. "I don't think we can assume anything."

"This is just a pile of tinfoil and wallpaper. What I'd like to see is the rest of the thing."

"If this was a mortal wound." Gray had thought about it, and he had his doubts. If he'd been piloting the disk and it had sustained damage, the first thing he'd have done would have been to get it into outer space where there was no gravity. Then he could make repairs at his leisure, without fear of crashing.

"Well," Blanchard said, "if there's anything out in that desert, we can find it."

Jennings picked up one of the wooden I-beams. "What about the Russians?"

"A Russian blimp coming after the 509th," Gray said. "We considered that possibility."

"And?"

"It's a no-go, in my opinion. First, the material's just too strong. We don't have anything remotely like it, and I doubt that they do either. Second, none of the writing is in any known language. Third, that wood you're holding is too light and too hard to have come from earth. It isn't from an earth tree."

"You're certain about all this, Major? You've done your homework?"

Gray was quite certain. "Yes, sir."

"Where is the object it came from?" asked Jennings.

"We don't have knowledge of any other debris," Gray replied.

"You looked?"

"It's a big desert, Colonel."

"True enough," Blanchard said. He glanced at Jennings. "You think an air search is warranted, Payne?"

"Yes, sir."

"I agree."

Jennings started toward the door he had just entered. "I'll get it up right away. The 830th Search and Rescue Group. They're our highest-scoring search mission unit." Jennings left the hangar.

"Private," the colonel said to PFC Winters, "get this stuff into my office on the double."

"Yes, sir!" The PFC began gathering up the pieces.

Gray met the colonel's eyes. His expression of sardonic good humor was gone, replaced by a grave look.

Gray wondered if that was what Colonel Blanchard looked like when he was afraid.

Blanchard turned and headed back to the office block. As they passed Hope's office the publicist started toward the colonel with a piece of paper in his hand. Gray intercepted him. "Not now," he said. "We're sending up a search mission. The colonel thinks we might find the rest of the disk."

"Wow."

"Wait a while before you release anything. I'll call you." Hope nodded and took a step back.

"Don't leave me sitting on this, Don," Hope said. Gray thought he sounded rather desperate.

"Wait for my call." Now Hope looked forlorn. Gray smiled. "You aren't going to lose the story. It's just that, if we find the disk, it'll be really big."

"Big isn't the word. I'd get both papers and play on every radio station in town."

Gray clapped him on the shoulder and left the office. If he realized just how big this really was he'd probably freeze up. He followed Blanchard and the other officers into the 830th's briefing room. Captain Gilman was ready to brief. Three helicopters and a Stinson reconnaissance plane equipped with cameras were being prepared to go to the Maricopa area. As the navigation officer began to speak, Gray glanced at his watch.

They'd had six minutes to prepare the mission, from the time they had been given the order. That was an impressive performance.

"The site is sixteen miles east-southeast of Maricopa," Gilman said. Hesseltine had already prebriefed. The officer pulled down a map of New Mexico—the same one that was in Gray's office, except the details of the White Sands Proving Ground and the high energy radar areas were simply marked "restricted airspace."

"Lieutenant Hesseltine, will you please pinpoint the location?" Captain Gilman stepped aside.

Hesseltine went up to the map. Together he and the navigation officer worked with the compass and protractor. "This is the approximate position of the Ungar house," Hesseltine said. "The wreckage is two miles west of that location. It fell in a fan pattern, indicating that the device was moving due west when the explosion took place."

"So we search west from the impact site," the navigation

"What's the appearance of the debris," one of the pilots asked.

"From the air what we saw will probably look like about a thousand square feet of torn-up tinfoil and paper.

You'll see glints. The stuff is shiny. We didn't pick much up. Maybe less than one percent. It's a pretty big debris field."

The pilots and observers filed out, some of them still adjusting their parachute straps. One of them stopped.

He turned around and addressed the squadron exec. "Sir," he said, "why weren't we told what we're looking for? What kind of device?"

Blanchard answered. "Anything out in that goddamn desert that looks like its made of metal."

"Yes, sir! Does that include windmills and tin roofs, sir?"

"Get going!"

The search party headed for the flight line. Gray followed them. As intelligence officer, he felt that he had to participate in this part of the mission as well. If a disk was located, it would be his job to examine it. He got issued

a chute and climbed into one of the helicopters. They were uncomfortable, noisy and slow, but they were truly amazing machines, the very latest in aircraft.

He knew about the incredible speed of the new jets that were under development, and was duly impressed, but these astonishing little craft would always seem like miracles to him.

The pilot introduced himself. "I'm Lieutenant Kephart," he said. He reached across and shook Gray's hand.

Gray nodded. "Let's go," he said.

The pilot flipped a switch and the helicopter's engine wheezed to life. A moment later they rose into the air, the nose pointing downward as the rotors grabbed for speed and lift. It was a strange way to take off, watching the apron spread out below you instead of fall away behind like in a normal plane.

It was now fifteen-thirty hours. It would take an hour to reach the crash site. The slowness and short range of the helicopters meant that there would be no more than another hour of search time before they would have to return to base. Gray watched the hot, empty New Mexico countryside pass by beneath them. Every so often they would see a house so dusty it looked like it was part of the land, a lump of mud and wood.

The three copters were at an altitude of fifteen hundred feet, and caused a good deal of notice below. People came out of their houses and waved, and observers waved back. Pilots concentrated on flying their cantankerous ships. To keep one of them in the air required continuous concentration. Gray didn't even want to think about their crash rate, which was horribly high.

They flew along Highway 370 to Picacho or Sunset, Gray wasn't sure which, then turned north, keeping the red dirt road to Maricopa and the looming peak of El Capitan to their left.

It was not long before they were in the crash area. One of the other observers, more trained in visual search techniques than Gray, was the first to spot the wreckage. From the air the fan shape of it was clear. The explosion had scattered debris widely, and bits and pieces had continued to fall from the craft as it moved west. "Take us in an absolutely straight line from where the debris field forms that point," Gray said. The pilot radioed this instruction to the others, and the three helicopters formed a line abreast with a thousand yards of separation.

The navigator aboard the Stinson reported the exact location of the debris

field to Roswell.

The helicopters dropped to a few hundred feet and proceeded in formation. Above them, at a thousand, the Stinson took detailed pictures of the route of flight, even though nothing was being spotted. Wartime experience had taught the AAF that objects missed by airborne observers could often be found by experts examining photographs.

They flew for thirty minutes without seeing anything. The land was absolutely flat, but it was rising and there were hills ahead, and a mesa to the north. Searching hills was going to be a lot harder.

They'd come about sixty miles from the debris field. The farther they went the less likely they were to find something, in Gray's estimation. The absence of a crash site this far out meant that the craft must still have been under power. The pilot could have maneuvered, maybe even returned his ship to the safety of outer space.

Searching the empty land, Gray's mind turned toward that magical notion, outer space. What did it mean?

And what worlds hid in its folds of darkness? Could the craft have come from Mars or Venus? Who was to know? Gray had a feeling, though, that it was from farther away, from another star. There were no trees on Mars, and wood and paper had been involved in the construction of this craft. Of course, Venus was covered by cloud. Was it a teeming jungle underneath? Nobody knew. But Gray doubted it. He had observed that the most vital civilizations arose in temperate areas. At best Venus was something like equatorial Africa, a gigantic hellhole seething with mosquitoes the size of rump steaks and snakes big enough to swallow a mule.

"This is one-two-one. I observe a glint of metal two o'clock approximately one thousand yards out," a voice said in the earphones.

"Change course zero-three-zero, drop to two hundred," came the reply from the Stinson.

A moment later the second copter spotted it. "We have gleaming metal eight hundred yards out dead ahead," the observer stated.

Gray didn't see a thing. The earphones were alive now, as observers and pilots coordinated their observations.

"We see an object," said the Stinson. "It is a metal disk. Repeat, a metal disk."

Gray peered ahead, feeling helpless.

Then he saw it, just ahead of the copter, seemingly so close that he could touch it. The disk was on the ground at the end of a swath of broken soil. It was the color of burnished aluminum. How these men had managed to spot gleams of sunlight off its dull surface he could not imagine.

They went down to approximately fifty feet, each helicopter in turn circling the craft so that the observer could get a close look. Then they cleared out and the Stinson made a series of low-level photographic passes.

Don Gray said nothing, but he literally ached to get out there and have a closer look at that thing. He'd deliberated asking the pilot to let him go down the rescue rope and remain with the device overnight, but he found that he was quite uneasy about being out here in the dark. More important, it seemed too radical a departure from procedure, and he'd already done enough rule-stretching for one day.

They flew back to base, arriving just after eighteen hundred. Blanchard and Jennings were waiting on the apron with Hesseltine and Walters. As Gray dismounted the copter, he saw the observer trotting off to the photo unit with his film for processing.

"What was it like," Blanchard asked Gray. "A featureless disk. It had torn up a lot of dirt on impact."

Blanchard ordered everybody into Operations for debriefing. Each observer reported what he had seen. Gray was surprised to learn that they had observed pieces of wreckage in the broken soil behind the craft. He'd seen nothing.

Then the photo unit reported. Lieutenant Baker himself came in with the portfolio of pictures. He took his time setting up ten crucial shots on the map board, while everybody in the room squirmed. He had to be allowed his moment of drama; the photo unit had prepared the pictures in record time.

Since he'd gotten back Don Gray had smoked up the rest of his Old Golds and was working on Hesseltine's Luckies. His mouth tasted dry and his head was still roaring with the noise of the chopper.

When Baker started to talk, however, all feelings of fatigue left the major.

"We have here a disk approximately thirty feet in diameter, of unknown thickness, content and construction.

There are a hundred and sixty-five observed fragments in the impact area, most of them located in the soil that the object traversed as it slid into the hillside. There is also this." He pointed to a blurry enlargement.

Total silence.

"Is it a body?" Colonel Blanchard asked. His voice was gentle.

"An apparent cadaver approximately three feet long, in a distended posture, showing some signs of predator action. If you observe carefully, you will see that the cadaver appears to have a deformed head, unless the skull has somehow exploded."

"Are we looking at an alien, Lieutenant?" Jennings snapped.

"I wouldn't know. We are looking at a small cadaver that has a deformed head, and reveals signs of having been damaged by predators, like coyotes. That's all I can say."

Blanchard was so excited that he had gotten to his feet. "I want a full recovery party on that crash site as soon after dawn as practicable," he said.

"Yes, sir," said his exec.

"This is the goddamnedest thing I've ever encountered in my career, gentlemen. I want every man to realize how important this is. This is an alien spacecraft, for God's sake. We cannot even build such a craft at this time. This is going to be of the greatest interest to Washington."

"Sir, what do we do on site?"

"Obtain all visible debris and the craft itself if possible, and bring the material back to this base." He looked at Jennings. "Let's have a powwow, buddy. Gray, tag along." He turned and left the operations room.

Gray allowed his two superior officers to get a little ahead of him. He paused at Lieutenant Hope's office and got a rather desperate smile. "The piece is written, sir."

"Here's a change. You can say that the disk was recovered intact and brought to this base for transfer to higher headquarters." He thought a moment. "No, say it was loaned higher headquarters. Got that—loaned."

"I have just one question, Don. When can I circulate this baby?"

Blanchard was about to call Eighth Air Force. "Do it," Gray said.

"Yes, sir."

When Gray entered the colonel's office he was leaning far back in his chair. A cigar was clenched between his teeth. Jennings was standing at the window, staring out at the flight line. Walters was there, slumped against the wall. Hesseltine sat more or less stiffly, nervous to be with so much brass in the absence of his own boss.

"I thought you'd gone home," Blanchard said acidly to Gray. He hated to wait.

"I had to tilt a kidney." Was his quite intentional failure to mention his

stop at Hope's office a breach of duty?

No, he'd made it clear to Blanchard and Jennings both that there was a release being prepared. He didn't have to do more.

"We've got to tell Ramey," Blanchard said. "I want you to get on the horn with us, Don. He's gonna be pretty damn sure his leg's being pulled and I want you to make it clear to him that we're being straight with him."

Gray made a play for time. "Sir, I think we ought to wait until we have men on the scene and are in radio communication with them before we report this up the chain." "Why so?"

"Well, I'm sure that we have an alien vessel, and so are you. But how is the Commander of the Eighth Air Force going to react from the far end of a telephone line? He could order the base sealed. Forbid us to touch the wreckage. Send a team of white coats to net us and ship us off to the funny farm. Any damn thing."

"I've got to tell the man. It's my duty. Not only that there are regulations involved. This clearly qualifies as an unknown event. The way I understand my mission, I'm required to report such an occurrence to higher headquarters. This is a sensitive installation, remember."

"We need to be able to tell him that we've examined the craft."

Payne Jennings unexpectedly spoke up. "I think Don has a good point, Bill. We've got to be able to say to Ramey clearly and in no uncertain terms that we are not dealing with some sort of Soviet device. Also, there's another thing—if it's ours."

There was a silence. Nobody had thought of that. Gray was a little disappointed in himself for not considering it. Then he thought of the hieroglyphics and the strange foil and the rows of numbers. No. No way it was ours.

He couldn't say that though. "We need to cover all our bases."

"Okay, guys. But if he starts hacking and slashing, I'm going to tell him it was a staff recommendation."

"Can't do that," Jennings said. "Makes you look weak."

Blanchard laughed, loud and hard. He looked around the room. "I think I can let you guys go home, if we're putting off the report till morning." He looked at Gray. "I want you out on that flight line at dawn, you and Walters both. I want both intelligence commands covered."

Walters spoke up. "Is this still considered a counterintelligence problem? It's pretty obvious there's no commie involvement—"

"Somebody flew that thing. And they did it for a reason. That reason is a counter-intelligence problem, Mr.

Walters."

"Yeah, I can see that, Bill." A sort of half smile crossed his face. "I can see that as kind of a big counterintelligence problem."

As the meeting broke up, Major Gray hurried back to Lieutenant Hope's office. "You released it yet?"

"Well, sir—"

"We're going to do some final confirmation in the morning. What say you release it at ten hundred?"

"You tell me, Major."

"Ten o'clock tomorrow morning, you tell the world."

Without a backward glance Major Gray left the office. He went out to the parking lot and got into his car and drove home, eager for a good supper and a clean bed.

Late that night he awoke very suddenly. For a moment he thought there was somebody in the house. So clear had this impression been that he got up and checked around. They didn't lock doors in Roswell in those days, but on this night Donald Gray dropped the latches. He listened to the night wind rushing in from the desert. There were faint sounds, very faint, the cries of the things that lived in the dark land.

A car passed in the street. From behind some black window a woman sighed. He laid his hand on his wife's breast and also slept.

And the stars crossed the sky.

From the Roswell Daily Record, July 8, 1947:

ARMY AIR FORCE CAPTURES FLYING DISK IN ROSWELL REGION

No Details of Flying Disk are Revealed

The intelligence office of the 509th Bombardment Group at Roswell Army Air Force Base announced at noon today that the field has come into possession of a flying saucer.

According to information released by the department, over authority of Maj.

D. O. Gray, intelligence officer, the disk was recovered on a ranch in the Roswell vicinity, after an unidentified rancher had notified Sheriff Geo.

Wilcox, here, that he had found the instrument on his premises.

Major Gray and a detail from his department went to the ranch and

recovered the disk, it was stated.

After the intelligence office here had inspected the instrument it was loaned to "higher headquarters."

The intelligence office stated that no details of the saucer's construction or its appearance had been revealed.

Chapter Eight

The Chronicle of Wilfred Stone

Washington, D.C., July 8, 1947. Time: 7:40 A.M. My condition: standing naked before a mirror. I have a slight paunch, noticeable and a little upsetting to me. It is composed largely of beer, steak, Hershey bars, champagne, sweet rolls and whiskey. It is there because I have been trying to eat my way out of my war nightmares.

A boy called Jamshid was still dying in my mind, in those days, still dying at the hands of the Surete, his genitals tied off, his belly bloated with wine. I remember the Surete and the Gestapo men as extremely clean, eating huge Arab meals in nameless backrooms in the souk of Algiers, their voices melodic with confidence, softened by self-importance. They cherished the secret knowledge that great pain takes any man to his truth.

If a human being reaches a sufficient depth of agony even his attempts at deceit will contain useful information.

Another of the truisms of tradecraft: torture always works. Human beings, it seems, cannot lie. If we do not say the truth then we indicate it another way. It's an endearing trait.

Jamshid worked for me because I paid him a dollar a week. In his family he was therefore more important than his own father. He was twelve and quick of eye. He was full of humor and bitter hatred for the French and the Germans.

He would slip from house to house with messages, helping me to forge a network of agents provocateurs that later served Franz Fanon so well. And then one night while I lay beneath my ceiling fan naked and slick with heat, my belly dotted by festering fly-bites, a woman came and murmured like a ghost that Jamshid was in the custody of the police.

First they scraped the skin of his buttocks raw with metal files, then sat him in a bath of acid. They raped him, they forced themselves on him, shattering his innocence and causing him in his torment to cleave to them. He became the slave of his tormenters. They used the Roman whip on him, an instrument of punishment known in that place from the time of the Third

Augusta, the Roman occupation army. This whip has twelve cords of leather, and into the end of each is knotted a little hook.

I can remember him lying in the sun, and I thought grandly of the innocence of the child, and the weighty sophistication of my own twenty-eight years. I smoked, he was too young. I tied one on now and then. His Moslem eyes widened in horror and amazement at the sight of a liquor bottle. I relaxed in the carpeted fastness of Madame Jouet's while he squatted on the porch and heard the sharp voices of the French girls inside reciting exhausted amours.

There was an orange tree in the courtyard, and I cannot remember a time when it was not in bloom.

He screamed names, dates, everything he knew.

My agents were rounded up, tortured in their turn, and I became a hunted man, creeping through the back streets like some movie spy, being followed by men in tailored suits who soaked their bullets in garlic and habitually aimed at the stomach. I was hiding in my room, half drunk, down to my last bottle when the Allies came marching into the city and it was over.

Those of my agents who were still alive were released.

In Washington I was growing fat on the fruits of victory, plotting the ruin of the French colonial empire and eating every night at places like Harvey's and the Occidental. Broiled sea trout at Harvey's one night, Hoover two tables away eating the same; a steak the next night at the Occidental, and then midnight and the whip cutting Jamshid's back like butter.

I would wake up shaking and pour myself a glass of Pinch, drink it and listen to records on my Victrola:

"Deep Purple," from the days that I was dating Rose deMornay, "Sweet Leilani" from Waikiki Wedding, one of those fluffy prewar movies. They were enchanted days in America, the late thirties. The depression was pretty well over, and Hitler was kind of funny and the Japs . . . well, they were awfully far away. "Whudduyu say to them Tokyo babes—I wanna nip on nese!" Tokyo Rose . . . there is to terror a pure romance. We fox-trotted our way from Waikiki Wedding to Pearl Harbor.

Now I would wake myself up by crying in my sleep. Then came the Alien Estimate. I regarded it all as rather amusing, like a scary movie. I had not the faintest idea that it had electrified the Joint Chiefs, and scared General Vandenberg so badly that he'd spent a good bit of time literally staring at a wall. For me it was empty of reality. I was still ignorant of events in

Rosewell. I wouldn't be for long.

I drove over to the office that morning, parking the Chevy as usual on E Street, relying on my license number to keep the officer of the watch from writing me a summons. When I got into my office there was a message from Vandenberg. Please call as soon as convenient.

As per standing orders, I informed our new boss, Admiral Hillenkoetter. He called me in and told me that I was free to see General Vandenberg as long as I didn't sell the agency to him. We were all afraid that CIG

would be absorbed and dismembered by the Joint Chiefs, something that they had been trying to do since the war ended. Our new boss viewed any contact from his predecessor as a reconnaissance in strength. I went over to the Pentagon in one of our staff cars, driven by the sort of clean, hard young man we liked to hire, most of whom we later expended in the Soviet Union. "Moscow rules" were written by such young men.

I'll tell you another thing about "Moscow rules," which consist of planting messages in hollow trees, not using real names or telephones and doing a great deal more sneaking around than usual: they don't work. What works are the right implements, the leather cord, the naked electric lead, the soldering iron in the anus. Insert it, turn it on, then ask your questions. You will have the correct answers. We had a tough outlook, those of us who were left over from the war. Want a woman to talk? Grab her lower lip and slap her until it starts to tear off. Women have a horror of disfigurement; she'll talk. Women believe in their faces.

"Goddamn it, Willy, what the hell is this?" Vandenberg blurted as soon as I walked into his office. He snatched up the estimate and tossed it at me.

"I think it's accurate, sir."

"It's no joke?"

I saw the fear in his eyes, and grew instantly wary. It has been my unfailing experience that men of power are randomly dangerous when they are afraid.

"No, sir."

"We called the Mounties." He produced a thick folder. "They damn well investigated that situation up in the Northwest Territories. The bastards stole an entire village! Holy God, Willy, what if the S.O.B.'s steal Peoria?"

What in God's name does the Air Force do about it?"

I did not expect that my estimate would cause this much upset. "I think we ought to develop some cases around it, General."

"You're damn right we will! But tell me what these disks can do in the air. We've developed our own data, but we haven't got much. All we know is that they're fast, and some of them are big. Are they armed? Will my cannons work against them? What the hell do I do, Willy?"

"You've prepared your own background paper?"

"S-2 pulled something together. You can read it in this office. Eyes only. Two copies. The other one is at the White House."

I didn't like the drift of this conversation. Admiral Hillenkoetter wasn't going to be happy to hear that Van had already involved the President. "I think we need to present all of this stuff to the board—"

"No, sir! This is an Air Force matter, as of this moment! You are ordered to withdraw this estimate. No board meeting!"

"General, Hilly's gonna raise a stink."

"The hell he is. I called Truman at seven o'clock this morning and told him that he either gives this thing lock, stock and barrel to the Air Force or I'm out. I gave Harry an ultimatum!" Van was serving notice to me that this was of absolutely paramount importance to him. You did not threaten Harry Truman unless you were genuinely prepared to resign. Van cleared his throat, sucked his cigar hard. "He listened to me and then he says, 'Okay, Van, you take it. It's your baby.' " Vandenberg laughed bitterly. "I am not about to sit down in any NBK meeting and say to those men that my opinion is that the Air Force is completely helpless, impotent to prevent the mass kidnapping of Americans by monsters from outer space!" He glared at me, chewed the roaring cigar. "Goddamn it!"

"I realize the problem."

"You and your fancy suits and your shot cuffs and your goddamn Aqua-Velva! Why don't you ever get upset, Willy!"

"Would it help?"

Vandenberg glared at me. "Of course not. You're here because you don't get upset. We've built this magnificent Air Force and more-or-less survived the most stupidly conceived demobilization in the history of armed conflict—and now I find that it cannot fulfill its basic mission right here at home. You don't have to get upset, Willy. But I do. And I am."

"Okay, Van. I understand your position perfectly. If I was to put a reliability number on that estimate, I would give it about a seventy. Seven out of ten chances it is correct. What else could have happened to the Canadian villagers?"

"They even took the goddamn dead out of the graves! It implies that they were taken somewhere—some other place and planted there, like you say. Somewhere those villagers are living, with their dead in new graves.

God. Willy, I looked up at the stars last night, and I have to tell you, I felt for those poor Eskimos."

"We can surmise a few things about the matter. First, the dead were taken. They were Inuit people, and their ancestors were vitally important to them. Meaning? They were not simply murdered or enslaved. Their beliefs were respected."

"They were taken somewhere. Intact."

"Exactly."

"What happened to the others? The boy that disappeared into the sky? And the poor man that went underground, Willy? I just—my blood ran cold!"

"Van, maybe—" He looked at me. I hesitated, unwilling to finish my sentence. I had been about to soften the stand I took in the estimate. But I thought better of it at once. If there was the remotest possibility that I was right, the position I had taken was the correct one. "Maybe we'll find out it isn't as bad as it looks," I concluded rather lamely.

Vandenberg stared at the ash on his cigar. "Should I bother to ask what Hilly thinks?"

"Hilly's still getting into the job. He's going to be fine." Vandenberg raised his eyebrows. "He's concerned about this, naturally. He said that he felt we should wait for events to unfold a little further."

"I think that we should get aggressive. I think we should attempt to shoot down one of the disks."

"Hilly won't agree."

"It's a decision for the Air Force, the Defense Department and the President." He paused. "Truman is interested in this. He's read your estimate, as well as ours."

I concealed my amazement. This was not being handled according to established procedures. The National Board of Estimate should have read my paper, questioned and revised it, then transmitted it to the Defense and State departments. Then it would have come to the attention of the White House, and only if a presidential decision was needed. "Secretary Forrestal?"

"He'll be informed in due course."

Van looked at me. At last, I thought, he's coming to the point. Van could be very subtle. The blustery, tough exterior was there at once to confuse his

enemies and make them imagine that he was vulnerable. He was a master bureaucratic infighter, and a brutal one. "I have a copy of a report from the 509th Bomber Wing in Roswell, New Mexico to Eighth Air Force headquarters." He handed me a piece of carbon paper.

I still remember the feeling of the blood rushing from my head as I stood there looking down at the laconic message from Colonel Blanchard to General Ramey, the commanding general of the Eighth Air Force.

"We have this day obtained debris from a flying disk of unknown origin and have located the remains of the object intact by photo recce. Please advise how we should proceed."

"The pictures are being flown here right now."

"Manna from heaven," I said quietly. I tried not to reveal my fear. Were we about to find people disappearing from New Mexico? Empty towns? Graveyards full of holes? "You realize that this is at present the most sensitive secret that the United States possesses. Even more sensitive than the formula for the atomic bomb."

Vandenberg did not reply directly, and I realized that I had just condescended to a man who had bypassed his own chain of command and mine in order to restrict knowledge of this secret. He obviously understood the level of sensitivity involved.

"Hilly has to know," I added.

"I think we should convene a meeting with the President as soon as we get the photographs. You, me, Hilly and the secretary. We'll decide what to do from there."

"I'll brief Hilly."

"We can get the President one-fifteen to one forty-five."

"The pictures?"

"Barring weather delays, the plane will land at Andrews at twelve-forty."

"You need to think about containment. Ramey knows. The 509th's Colonel knows. Presumably his staff knows. Was the debris found by a member of the public?"

Vandenburg nodded.

"I'll tell you, Van, I think we should be damn sure that none of these people will say a damn word. And any of them we can't be sure of—well, this is a very sensitive matter. If we have to take extreme steps, I don't think we should hesitate."

How safe we felt, plotting our strategies deep in that Pentagon office. We

were already doing the work of the others, playing into their hands, doing it their way.

If only we had understood, but we did not understand. Sometimes wars are fought without battles, won without weapons. The best strategist conceals his attack behind a shield of confusion. The best strategist can make even an invasion seem like an accident.

The others understood that fantastically powerful principle of warfare.
We did not.

Chapter Nine

That was not the only principle of strategy that our government didn't understand. It is fascinating and rather infuriating to me that Will literally cannot think about our relationship with the others except in terms of conflict. Strategies. Battles. Subterfuges. His war years have so warped his perception of the world around him that everyone is an adversary and every action a stratagem.

Understandably, the one thing he won't fight is death itself. It's obvious that he welcomes his cancer. The only reason he resists at all is to get this book finished. The closer we get to the end, the more he smokes and the harder he hits the bottle.

I have cried because of this man.

As much as I feel that he misperceived the others, he was in a sense right that they had a strategy. It would probably be more appropriate to call it a plan. A simple, staggeringly deceptive plan.

I like to think that I discovered its outlines on my own. Will missed it, precisely because of its simplicity.

While Washington stumbled the others were acting with decision. The government seems to have perceived the others as being rather ineffectual—which was no doubt exactly how they intended themselves to appear.

They had advanced ships, yes, but they'd crashed one. Washington fell into the trap of viewing the event in Roswell as a failed attempt to scout unfamiliar terrain.

Meanwhile, the others were capturing the night. Obviously they knew that an unbalanced government would be easiest for them to control. They began to achieve this control by taking an action that was calculated to cause panic in high places. They did this out in far West Texas, on the vast and dreary reserve known paradoxically as Fort Bliss.

Second Squad, 4th Platoon, Company D, 53rd Infantry dropped their weapons to the hard West Texas ground arid watched the sun go down. They were recruits just out of basic, attending infantry school while they awaited orders to occupation duty. They were involved in a war-game maneuver and wishing they were almost anywhere else.

I have reconstructed what happened over the next twelve hours from the

reports contained in Will's files.

These start in 1947 and end in 1956, when all the members of 2nd Squad were hypnotized to uncover hidden memories. That was the year Dr. Steven Reich discovered that the amnesia induced by the visitors could to a degree be broken by this process.

It is interesting to me that Will never allowed himself to be hypnotized, even though his agency routinely required that all other personnel exposed to direct alien contact undergo the process.

According to a report prepared by the Fort Bliss MP's who investigated the events that transpired that night, the squad was on a practice combat patrol. They had been assigned an area far from any expected

"aggressor" activity, and I suspect that they anticipated a quiet night.

The squad leader, Corporal Jim Collins, would have put the men at ease when they reached their destination.

He himself sat down heavily, and pulled off his pack. After a moment he signaled to his radioman, who came trotting over with his antenna bobbing. "You working, Lucas?"

"Yes, sir." Lucas bent his back and Collins pulled the handset out of its cradle and turned the radio on. He waited for the "ready" light, then made a brief transmission to Platoon.

"This is Baker Delta Mike at Checkpoint zero-two-two-Harvey-eight. Out."

The radio crackled. "Acknowledged," came the laconic reply. "Order: Rockabye."

Collins flipped off the radio. "We got an order to bed down for the night," he said. There were a few groans of relief.

No fires were allowed; they ate cold C rations. According to a typical C ration chow manifest from the period, supper could easily have been Vienna sausages, peas, processed cheese and rice pudding. There was no bread, and water was the only drink. No lights were allowed, which meant no cigarettes, and many of them wanted a smoke right now more than they wanted a woman.

There were ten of them, plus Collins. The oldest was twenty-two. That was Mastic, who had a tattoo of a long-stemmed red rose on his chest.

The youngest was a boy from Lufkin, Texas, called Sweet Charlie. Charlie Burlson.

Officially, this monster was eighteen years old. According to his birth

certificate as recorded on November 7, 1931, in Austin, Texas, he was actually sixteen.

For some reason nobody had bothered to check his age when he enlisted. It could have been his looks: Sweet Charlie was also known as "Bullhog."

His great hope was to become a member of the Army boxing team and go professional after his tour was up.

His hands were as big as most men's heads, and I believe that he had the disposition of somebody who'd swallowed a razor blade.

This kid was scraping grease out of the bottom of a Vienna sausage can and staring off across the darkening landscape when he saw something strange. "What the fuck they throwin' at us," he muttered.

The whole squad looked where he was pointing.

"Goddamn."

"That's them Marfa Lights. I know what that is."

"We're way the fuck away from Marfa, boy. You ain't got no goddamn sense. That's some kinda aggressor flare."

Collins looked at the glow. It rose a little distance from the surface of the desert and hung in the air, a round, yellow ball about the size of the full moon.

"Lucas, get HQ on the horn."

After a moment the radiotelephone burped. HQ sounded a million miles away. "Permission to transmit in the clear."

"Granted."

"We are observing a stationary yellow flare south-southeast our position at approximately nine o'clock. Advise please."

There was a fairly long silence, during which Collins watched the flare. "This is Lieutenant Ford, repeat that location."

"South-southeast our position, approximately nine o'clock."

"That is off the game board, Corporal. Assume it's unconnected activity."

"Yes, sir. Over and out." He put the receiver back into the unit. "That flare is unconnected activity," he said aloud. "HQ says to disregard."

The men hardly heard him. They were watching the flare, which was now moving about in the sky, fluttering from side to side like a leaf. For a long time nobody said anything.

The disappearance of the thing was as sudden as a light being turned off.

The men remained still and silent. Finally Mastic farted, which brought a snort of derision from Sweet Charlie.

"Season the fuckin' bivouac, right Mastic?"

"The more you eat, the more you toot."

"Vienna sausages ain't beans."

"All C rations are beans. See the numbers on these cans? This means they were made in June of 1944.

That's three years ago."

"Hell, they're new. I hearda guys openin' these cans and findin' hardtack and molasses. The U.S. Army ain't issued rations like that since the Civil War."

"What the fuck war is that?"

"You don't know about the fuckin' Civil War, Sweetie? You must be some kind of moron."

"Who're you callin' a moron, Mastic, you corn-holin' homo."

"Fuck you, you big puff! Them cigar butts is just a act."

"Knock it off, you guys."

The men settled down.

The night returned to its rustlings.

The light reappeared directly above them, covering the central three-quarters of the sky. The squad was caught in its glow. At this point they came under the direct influence of the others—in fact, entered their control.

As elsewhere in this book, I have constructed the interactions between ourselves and the others on the basis of the secret psychological studies I have read, as well as my own interviews with witnesses and astute UFO

investigators. Will has contributed virtually all of what understanding I can claim. Always I have adhered to his admonitions, "This is about the soul, the body is secondary," and, "The others are so old that they have rediscovered innocence. That is what makes them terrible."

I have also watched about a thousand feet of eight-millimeter film that Will says was made by the others at the request of the United States government, of a group of people they had taken into their possession.

In this strange, pale environment the people look like great, fleshy bags. The others flit around, fragile and almost invisible on the film. People scream, they pound their fists on the walls, they try to dig through the floor. The fear and terror are impossible to describe. Every so often a pair of those black alien eyes will glare into the camera.

Is it rage or fear I see there, or desperation?

In addition, in the case of the 2nd Squad I had the advantage of reading

transcripts of the hypnosis sessions of Corporal Collins, PFC Lucas and Private Mastic.

On that night back in 1947 the men looked up at the huge object that was now directly above them. They saw the faint lines and rivets of the underside of the great ship. There would have been sobs, muttered prayers.

Some probably went to their knees.

Jim Collins called the radio operator, who sat frozen, staring. "Lucas!"

"Momma says no."

"What the fuck!"

"Momma said no turn on radio."

"What the hell is this?" Collins stood up. His men were lying on their sides or hunched or kneeling. "Hey you guys!"

As is typical of the others' methods, a human being they had contacted before remained in a more-or-less normal state. Only later would his memory be affected.

Under hypnosis Collins recalled seeing three children in white suits hanging back at the edge of the light, watching him. "We won't hurt you, Jimmy," a voice said. Collins stared hard at them. How had they done that? The voice sounded like it was inside his head.

"Hey," he said. "You kids." In reply there was a sneering giggle, also inside his head. "This is a military area.

You kids aren't supposed to be playing around here." "Come with us, Jimmy. We won't hurt you."

"Who are you?"

One of the "kids" pointed upward toward the object. Collins had never heard of foo-fighters, flying disks or aliens, and had only the sketchiest knowledge of outer space. His first thought was: a blimp. Immediately the voice answered, "No." Then what is it, Collins thought.

He began to receive instructions subliminally. They sounded to him like somebody whispering in his ear. He cocked his head to listen, but couldn't quite understand.

He was aware that a group of about half a dozen of the children in white had just floated down out of the craft and were touching the foreheads of his men with little sticks.

A shaft of blue light hit him and in a moment he was completely changed. He was no longer the dumb creature he had been, a dull kid leading a bunch of other dull kids. Another, extremely secret life had returned to memory. He

knew these people, knew them well.

Why it would be like this it is difficult to know. Apparently certain people are leading double lives, unknown even to themselves. They are the facilitators, the ones who help the others with the rest of us, who are much wilder and more difficult to handle.

"I remember," he said.

"It's been a long time, Jimmy. You were a baby. Now look at you!" The voice that spoke was old—ancient -

and came from the night wind. And it was feminine. "I grew up, ma'am."
"Yes. You are a strong boy."

She came close to him, and he looked into her dark, dark eyes. "I am preparing these soldiers. They belong to me now, Jimmy. They are part of the Good Army."

These words filled Collins with a happiness he could not contain. He smiled from ear to ear and clapped his hands like an excited infant.

In response he was flooded with love. Meanwhile the ones in white went about their work. The ship came slowly down until it was no more than five feet above the group. One by one the 2nd Squad was lifted onto stretchers, which then floated up to the ship's softly glowing surface and disappeared.

She put a thin arm around Jim's shoulders.

"They will receive insertions like the one you got when you were a boy."

Together the two of them rose on a stream of light.

Jim went to the familiar cabinet at the end of the room and took out the tiny gray boxes he knew would be there. He knew exactly what to do—he'd seen it done it before and he remembered every detail.

He removed a long needle from the first box and inserted it into Sweet Charlie's brain. "Not him," she said softly. "Withdraw the implement." He pulled out the needle.

She did not interrupt him again, remaining silent until he had completed the operation on each squad member. "Now I will test them," she said. One by one the squad members opened their eyes and sat up.

Then they slumped over, rendered once again unconscious.

"You have done your work well."

When she spoke in his mind it was like melody. "You will be married soon, Jimmy. The union will be with your childhood mate Kathy. Together you will conceive five new ones. The last two of them will be for you, the first three for me. Is this understood?"

He nodded.

"These soldiers are from the nation that has used the atomic bomb?"

"Yes."

"The earth grows heavy with her burden of men. She calls out to me to midwife her. She tells me that her yuni is opening to the stars."

"Yes."

"Do men want to go among the stars, Jimmy?"

"We don't think about that."

"You will raise the children I give you. That is your primary task. Now take those little ones back to their encampment, and be mindful that they have all suffered this night."

"Yes."

She sent them all back, all except the one she had not implanted. This one was suitable for another purpose, and she gave him over to the ones who wanted him.

"We love you, Sweet Charlie," they said. It sounded to him like a group of children speaking in rough chorus.

Their faces were pale and soft. They looked as pretty as babies.

- Smile, Charlie.

- I don't want to.

- Smile!

- I ain't got no reason!

Charlie decided that it was time to get out of here. He thought he'd gotten up, but his body didn't work. It just didn't do anything.

He struggled, pulled, tried to stand. He didn't move an inch. Now his breath came in gasps. His throat practically closed. He couldn't breathe. They were watching him, drawing close, leering at him.

Why did it seem so right? Was it somehow connected with the life he had lived? He wanted another chance.

Then he saw Clara. "I was carrying the baby for them," she told him.

How was this possible? Clara was dead! He knew because he'd killed her.

She'd let him knock her up, she'd goddamn well known she was doing it, she was trying to hang him on a fucking meathook! "They would have taken the baby before it was even born."

And then he was in the woods, deep in the pines and Sweet Charlie had that little shotgun and he was hunting Clara down, and he caught himself that lyin' little vixen while she was gathering pinecones.

To decorate her Christmas tree.

- I was drunk.

- You can repay your debt to Clara by helping us. Charlie saw something horrible, something he did not want to face, to think about, ever ever to see. There are mirrors that reflect the soul. There are mirrors in which we see ourselves as we are.

- Momma, help me, Momma!

The other squad members were gone, only Jim was here. Jim also saw Sweet Charlie, saw the black, knotted ugliness that was the very essence of him.

"We can help you." The voice was as sweet as spring wind.

Charlie had understood that he was seeing his own soul. "Please, please . . ."

They took him then into the darker depths of their ship.

A moment later the screams started and they were wretched with a despair unlike anything Jim Collins had ever imagined. He was made to hear them for only a moment. Then somebody closed a door.

A girl came, walking toward him across the broad room. She was wearing a thin summer nightgown with yellow flowers down the front and a lace collar. With her she brought a beautiful scent, the odor of gardenias, and there was a gardenia in her hair.

Tears of recognition sprang to Jim's eyes. "Kathy," he said, "Kathy O'Mally!"

Then darkness filtered down into him, and with it the forgetfulness of deep, deep sleep.

The next thing Jim knew he was hearing the birds. He opened his eyes, stared up into a pink and fragile dawn. He was cold, his face covered with dew. He coughed, then slipped out of his bedroll.

He felt incredible. The world around him, the sweep of land, the distant hills, the deep morning sky—never in his life had he seen such beauty.

What had they done last night? He remembered voices, laughter, excitement.

A party?

No, something else. Something incredibly beautiful. They'd seen a flare and then turned in and he'd dreamed.

Yes, a dream.

Some sort of justice had been done in his dream. He remembered a judge

telling him about Sweet Charlie, that creep, and saying he was free, he had paid his debt.

Collins looked around him. Where was the big lug, anyway? Well, he'd turn up. He moved off toward the latrine area.

There he thumped himself to get rid of an oddly persistent erection. He was so damn excited he could barely stand it. His knees were weak. He wanted a woman. In fact, it was a specific woman: Kathy O'Mally from back home. Kathy of the sandy blond hair. Kathy of the soft voice, of the laughter in the dark, of the welcoming arms.

He was feeling waves of longing for Kathy so great that he could barely endure them. And here he was out in the middle of West Texas thousands of miles from her. But, God, she was a wonderful girl. He had to write her more letters, to let her know how much he cared for her.

God forbid she wouldn't realize and she would get married before he came back. Once he had kissed her at Emmeneger's Drugstore. She'd presented her cheek and laughed.

Her laughter echoed. Had he dreamed about her last night? No. He'd had a nightmare about an owl, a huge owl carrying him off into the dark. He shuddered to remember it. A creepy sort of a dream. And then Charlie - what had Charlie had to do with it?

Nightmare or not, he knew one thing. Somehow in his sleep he had made a final and absolute decision. He was going to marry Kathy O'Mally.

When he got back from the latrine he called his men out of the sack.

Sweet Charlie had gone AWOL in the night. "We'll find him back at the goddamn mess gobbling steaks,"

Lucas said.

"I'll put him on report," Jim Collins replied. He didn't like that mean cracker any more than the others.

He was listed AWOL.

By the next afternoon an entire company was searching for him. But Sweet Charlie was never seen again.

Chapter Ten

The Chronicle of Wilfred Stone

The President was uneasy, I could hear it in his voice. Had I been interrogating him instead of participating in a meeting, I would have thought it time to make my move.

Before him on an easel sat six excellent aerial photographs of a debris field, a crashed disk some sixty miles from it, and two small bodies near the disk. One was clearly visible; the other hardly more than a shadow.

"I don't see any relationship between this crashed object and disappearing people," the President said. There was the snap of challenge in his voice, and beneath it the quavering disquiet. More accurately, he should have said that he didn't want to see any relationship between the object and the earlier disappearances.

General Vandenberg knew Truman well, far better than I did. He sat on a couch across from the President, his knees comically high, a cigar stuffed into the corner of his mouth. Even sunken into that ridiculous couch, Van was an imposing man. He also admired Harry Truman, for which reason I did not like the look he sent me as the President spoke. It was almost a plea, as if he was asking me to somehow soften the blow of my estimate, and not to be too hard on his hero.

Did he fear that Truman would crack? Surely not the man who had dropped the bomb.

Admiral Hillenkoetter was standing at the windows overlooking the rose garden. Some of Bess's roses were still blooming, and the windows were thrown open to the fragrant summer air. Now he committed himself and CIG.

"I'm a hundred percent behind the intelligence estimate." "This is crashed hardware and bodies. It isn't disappearing people. I want evidence of a direct relationship. Otherwise where the hell do I stand with this thing, Hilly?"

If the President appeared uneasy, Secretary of Defense Forrestal was absolutely appalled. He sat staring at the pictures like a man looking into the face of death. From time to time he would sip noisily from a cup of cold coffee. "Of course there's a relationship," he said. "That's the whole point."

"Goddamn it, nothing's proven! It's speculation." The secretary glared at the President. "There is no question in my mind but that we should shoot one of these devilish things down forthwith."

Van leaned forward. "I concur, Mr. President." Hilly still stared out the window. "I think it's too soon for that,"

he said. The President looked toward him, his eyes flashing behind the famous glasses.

"Hilly's right. We don't need to shoot one down. We've got one, plus the little fellas that drove it."

"Mr. President, it would be a show of force. I think it's vital that we come on strong in this. These people must possess tremendous power. God knows what they might do." "Exactly my point, Van," Hilly said softly.

Vandenberg chewed the cigar. Forrestal sighed. He knew when a point had been won or lost with Truman.

"Any order to take aggressive action comes from me," the President said. "Is that clearly understood, Van?"

"Yes, sir."

"For now I want all AAF orders of the day to include a statement that there will be no hostile action taken against any unidentified flying craft entering or being found within U.S.-controlled airspace anywhere in the world, until such time as said craft is specifically identified as enemy aircraft or acts in an overtly hostile manner, which means shooting first."

My own obsession with secrecy alerted me to the flaw in this order. "Say aircraft, Mr. President. We don't want to draw any attention to our level of concern over this."

"Yeah, okay. Just bleed it into the standard orders. Nothing unusual. Aircraft."

"It's dented," Forrestal said. He had taken up the magnifying glass and was peering at the object.

We waited, expecting him to make a point. At that moment Blanche Deisinger came in with a note for the President. He looked at it and then at Van.

"The AAF base at Roswell has issued a press release about the disk."

Secretary Forrestal's face drained of color. He dropped the magnifying glass on the President's desk and bowed his head. He reminded me of a mourner at a funeral.

Van just sat there, obviously too shocked to speak.

There was a small, ironic smile on the President's face. He took off his glasses and rubbed his eyes, leaning far back in his chair. He seemed swallowed by his office.

Hilly broke the silence. "We'll correct this problem forthwith." His voice sounded calm, almost indifferent. I knew what that meant, though: he was feeling off-balance. When he got a really bad shock was when he appeared most calm.

"I think it's obviously my baby," Van said.

"Yes," Forrestal agreed. "Your damn problem. There's never been enough discipline among those airmen of yours! My God, the things they get away with, cutting up the way they do. Van, this is outrageous!" He looked toward the President for approval.

Truman was simply listening. His eyebrows were raised. He was expectant, waiting for the suggestion that would solve the problem.

"I'll issue orders to silence them," Van said. It sounded weak, and it was. You can't silence the press with orders.

"They must be pleased as punch out there," the President said. "Think of it! They've put their goddamn base on the map." He laughed mirthlessly, in a way that told me heads were going to roll. God, Truman was a frightening man.

"To control the press, you're either going to have to use me or Hoover," Hilly said.

"Oh, brother, not him," Forrestal muttered.

Hilly smiled. "I'll agree that I'm the best of two evils, Jim."

"For God's sake, Harry, don't bring that old pansy in on this," Van said.

"Is he really a pansy?" Forrestal asked.

Truman's eyes twinkled. "I pity the President who doesn't know Hoover's weakness. Thank God FDR told me.

kindest thing he ever did." He laughed. "But if I ever get beaten by that goddamn Tom Dewey I'm taking the Hoover file home with me."

Forrestal snorted. "I don't like Hoover either, but the man runs a goddamn good department."

"As long as you have his balls in your hand," Truman said mildly. We all laughed. Truman's remark meant that Roscoe Hillenkoetter had just been given control of what would become the largest, most important and most secret activity in the history of the United States or any other human nation. Vandenburg didn't realize what Hilly had accomplished, but Hilly did. He

flushed so red that he turned to the window. I wanted to clap the man on the back, but Truman suddenly eyed me and my blood went cold.

"He's heading this thing up, Hilly?"

"Yes, sir," I replied softly. A crucial moment was upon me. All Hilly had to do was cough, and I was dead. If he but remained silent this incredible command would be mine, and the Central Intelligence Group would be established over the Air Force's S-2 Intelligence unit in control of the whole alien project.

"I think that Will Stone has guts to spare," Hilly announced. He turned around. His face had returned to its usual pallor. "He's also a damn good thinker."

"He writes a good intelligence estimate," Van added.

"Scared the shit out of me," the President said. "If the goddamn thing is right."

"I believe it is, sir," I said.

"You better, kid! Unless you want me to kick your boss's head in. So tell us what we should do."

Typical of his style. Demand the goods.

I started to reply, but Van interrupted. "First I gotta pull that press release back," he said.

I parried for control. "We'll do more than that, of course."

"Of course," Van snapped. He had no choice but to agree even though it meant CIG management.

Silence followed. They settled back to listen to what I would propose. All I could hear on that distant summer day was the pottering of a lawn mower, that and the soft crinkling sound as Van sucked his cigar. I spoke my piece. "The press is going to go wild when they see the release. The 509th Bomber Wing is big news already. The only operational atomic bomber wing in the world. As far as the press is concerned, that release was generated by the hottest soldiers in the Air Force. They're going to believe it."

"And they've got it? The thing's been sent out?" The fear had returned to the President's voice.

Hilly gave me support. "Will Stone will get the dimensions of the thing sorted out immediately, Mr. President.

General Vandenberg, I'd appreciate it if he had the cooperation of S-2 Intelligence and AAF Security."

Van went to the President's desk and picked up the phone. He spoke for a

few minutes, talking to General Nathan Calkins, commander of the intelligence division. He handed me the telephone. I mustered all the authority I could, consciously lowering my voice. As I spoke, I could see the slightest of smiles in Truman's eyes. A young man asserting himself. It must have amused this master of authority.

"General, this is Wilfred Stone of CIG. I'm going to be in command of this for CIG. We'd like to know immediately how many news organizations have received the press release, who wrote it and who put their name on it."

I received a muttered reply that he would get back to me, then put the telephone down. "Gentlemen, I think that we must realize that this situation could be very far out of control at this point. We have a crashed disk, and the bodies of aliens. We have a press release. These two things add up to a spectacular press affair.

They're going to be very excited. The story of the century, of the ages. Bigger than the bomb. We have to act instantly. I want a team to get out to Roswell with me. Small. People who are ultimately trustworthy. The minimum number needed." I went on, thinking fast. "I want to arrange to control all wire service activity in and out of Roswell. Remember that the news has to travel by wire. Also, all local radio broadcasts."

"You can use AAF Communications out of the proving grounds," Van said. "They'll have the capability you need. And there are Counterintelligence Corps officers out there who can make any personal visits needed, to set the radio stations straight."

"Gentlemen," Truman said, "keep me informed. I want you all to realize that I consider this the number one event of my administration. Beyond winning World War Two. Beyond dropping the bomb. I want to make one thing abundantly clear. There could be interservice rivalry between Air Force Intelligence and CIG, or with the FBI when they become involved. As far as I'm concerned, rivalries in a situation like this are treasonous. They will be dealt with as such. Is that understood?"

"How about Hoover?" Hilly asked.

The President sighed. "I'll deal with Hoover."

A moment later the meeting was concluded. Hilly, Van, Forrestal and I stood together waiting for our cars to be brought around. "I expect to be giving the President reports three or four times a day," Forrestal said. Now it was his turn to assert his command position. Neither Van nor the admiral, of course, wanted a single thing to do with him.

"That's a good idea," Hilly said. "I think we'd all be wise to do the same."

"We don't want to flood him with paper," Forrestal said. "I think we'd be best off sticking to the chain of command on this one."

"Except if it's an emergency," Vandenberg added. The general and the admiral were jockeying furiously with Forrestal. Officially Hilly probably had a better case in bypassing the secretary. But Van was stuck and he knew it.

Forrestal firmed his position. "If it's an emergency, Van, I'd expect to be informed immediately." The secretary's voice was acid. As his car pulled up he stepped away from us. "I'm going home to dinner with the French military charge. We'll confer on logistics at eight." He looked at Van. "I'll expect your call. I want you to tell me how you're going to turn that press release into a joke."

With that bitter offhand comment Jim Forrestal unwittingly hit upon the ingenious essence of the cover-up that has remained intact for nearly fifty years. Ridicule. It still works, even today.

9JLY47

TOP SECRET

ARMY AIR FORCE

S-2 INTELLIGENCE ESTIMATE

Over the past half century there have been a number of incidents of qualified observers reporting unusual aerial objects. The March 1904 edition of the Monthly Weather Review indicates that Lt. F. H. Schofield, Cdr., USS

Supply, reported observation of three large luminous objects moving in formation across the sky at 2300 hrs. This observation took place in mid-Atlantic. The largest of the objects was estimated to have a diameter six times that of the sun. Their size was not known as distance/altitude could not be computed.

The March 1913 issue of the Journal of the Royal Astronomical Society carried a report by Canadian astronomer R. Chant indicating that numerous objects consisting of "three or four parts with a tail to each part" passed across the sky. Thirty-two objects were observed over the course of an hour, moving in formations of various kinds.

An analysis of reports indicates that large luminous objects have been recorded in the night skies by qualified professional observers at a rate of two to ten per annum since immediately before the turn of the century.

The first official investigation of such objects began on December 28,

1933, when the 4th Swedish Flying Corps commenced a study of "ghost aeroplanes"

which had been observed flying in impossible weather conditions and often shining powerful lights on the ground. The investigation concluded on 30

April 1934 with a statement by Major General Lars Reuterswaerd, Commanding General, Upper Norrland Aerial Sector. General Reuterswaerd stated, "There can be no doubt about illegal air traffic over our secret military areas. .

. . The question is, who and what are they?"

Ghost aircraft continued to be sighted over Finland, Sweden and Norway, and caused extensive local forces recce, to no firm result. It is now known that no nation then had aircraft capable of operating in the areas and manner in which the ghost craft were observed to operate. Interestingly, 35% of Scandinavian sightings took place during severe weather conditions.

25 February 1942 saw unidentified aircraft appearing over Los Angeles. 1,430

rounds of antiaircraft were expended in an attempt to bring down these apparent Japanese planes. Shelling commenced at 0316 and continued until 0414 by 37th Coast Arty Bgde using 12.8 lb HE shells. Three persons were killed by the barrage. A large oval-shaped object was targeted in lights and struck by at least fifty rounds over a period of twelve minutes . The object then proceeded southward at a slow rate of speed. Chief of Staff Gen. George C. Marshall informed the President of the incident on 26 February 1942. GHQ

officially denied that the incident had occurred.

In recent years so-called "foo-fighters" were observed by both Allied and Axis airmen during aerial maneuvers . These objects often appeared to maneuver in context with aircraft and were sometimes fired upon, but never with any visible effect. The British set up the Massy Project under Lt. Gen.

Hugh R. S . Massy, ret. , which studied the phenomenon in 1943, to no result. Similarly the Luftwaffe created Sonderburo 13 under Prof. Georg Hamper. U.S. 8th Army investigated similarly, also with no outcome.

During 1946 numerous apparent rockets were observed over northern and central Sweden, Finland, Norway and Denmark. A total of 2,000 sightings were officially logged. Our own intelligence indicates that these were not Soviet-generated, and their source remains a mystery. 11 July 1946 U.S.

embassy Stockholm cabled "one landed on beach near Stockholm without causing any damage and according to press fragments are now being studied by military authorities . " 12 October 1946 the Swedish government announced that 200 objects had been detected by radar and

could not be attributed to known celestial phenomena, hallucinations or airplanes. Subsequently the Greek government investigated many reports of such objects in their territory, but once again there were no conclusive results regarding nature and origin. The objects were not Soviet missiles , because they were observed to outrange any Soviet device .

The objects observed may be controlled by some intelligent agency, whether it is a human government, a clandestine private group in possession of powerful technology, or another as yet unknown source. End.

Part Two

THE LOST SHIP

Take wings to climb the zenith,
Or sleep in Fields of Peace;
By day the Sun shall keep thee,
By night the rising Star.

—The Egyptian Book Of The Dead Translated by Robert Hillyer

10JLY47

MOST SECRET

FROM: ROSCOE HILLENKOETTER, DIR. CIG

TO: STONE, WILFRED

EYES ONLY

COPY ONE OF (ONE) COPIES

1. You will proceed to Roswell New Mexico at 2200 this day aboard State Department Aircraft 003 and proceed to the site of an apparent crashed alien disk and commandeer this disk and all related material and objects connected with this disk.

2 . You will convey this material to the Los Alamos National Laboratory Complex and expedite its study by a blue ribbon panel of scientists now being assembled. This group will complete analysis of all material obtained.

You will operate in an observer/adviser capacity with this group, reporting daily to me on its proceedings .

3 . You will contain any leaks of information and end the present free access that the press has to information about this material. You will use flat, blanket denial as your primary means of covering the truth, and will orchestrate a program of ridicule against any individual who makes public statements. You are officially authorized to use all necessary means to insure absolute and continuing silence from witnesses. The use of extreme or final means must be approved by this office .

Chapter Eleven

Ridicule certainly proved to be the right tool for the job Will Stone wanted done. Forrestal may have counseled its use, but it was Will who formed the idea into policy. I envy Will the brilliance of his youth. In 1947 he was hobnobbing with the President. In 1989 I'm fighting the Bethesda Express over the validity of my unemployment insurance claim.

Will wasn't alone. The Central Intelligence Group in the late forties was one of those unlikely bubbles of talent that on rare occasions rise to the surface of the federal bureaucracy. Hilly chose two of the best of them to go with Will to New Mexico. Like him, they were former OSS types originally brought into intelligence work by

"Wild" Bill Donovan.

Donovan had found some remarkable people to spy on the Nazis for Uncle Sam.

Joe Rose was in the Russian Division of CIG and was set for big things when it became the Central Intelligence Agency and acquired a believable budget.

Joe's background was pretty extraordinary, even as the backgrounds of such men go. He'd graduated Yale Law in '33—at the age of 15. He was a large, rather somber man whose hobby, of all things, was the study of medieval secret societies. His German was excellent.

When he died Joe left Will his library. I have looked through it, searching, of course, for the man. I found a first edition of Harold Bayley's classic, *The Lost Language of Symbolism*, a marvelous treatise on the hidden meaning of watermarks in medieval papers. The book does not identify any secret societies per se but by its incredibly detailed analysis of thousands of symbols suggests that the whole of the Middle Ages must have been run by them. And they seem to have conducted their affairs in a hidden language of watermarks.

Joe was not simply amused by secrecy; he obviously studied it as an implement of government: *Martin Philippon, Ein Ministerium unter Philipp II*, essentially a book about the network of spies created by this notorious Spanish monarch; books on the Cathars, the great heretics of southern France, on the Knights Templar, on the Order of Our Lady of Mysteries.

During the war Joe had functioned as a deep-cover assassin in Germany, murdering targeted Gestapo agents in order to interrupt investigations when they got too close to Allied spy networks.

According to Will, Joe's genius was that he had made the Gestapo itself his chief ally. How? He gave them assistance in their work against the Reds. Thus the Gestapo was in the position of trading the lives of its own operatives for information about Stalin's Red Choir.

How he managed all this and still maintained "deep cover" Will did not say. Maybe Will's love for his old friend has combined with time's notorious corrosion of memory to enhance his stature a bit.

Even if that is so, the man's books do suggest that he was remarkable.

After the war Joe had become known as one of the best interrogators we possessed. He cut his teeth on the very Gestapo officers who had helped him during the war, and after that shifted to work with home-front communists. (Will still calls them "commies.") He was a master of persuasion, moving with the greatest care from one level of tension to the next, until his subject finally broke. He worked only with words, having like Will acquired a dislike of violence during the war.

Then they had Sally Darby. Every once in a while I fall in love with Sally Darby, looking at the pictures of her Will keeps around. She had a complex, distracted expression and the darting pace of a sparrow.

Did Will love her? Of course he did.

She had graduated Smith with honors, and she could if she wished fulfill the image of the Smith girl. This is how she came to CIG.

In 1938 she moved to Paris and met Janet Planner and William Carruthers. Even after the fall of France she stayed on, so certain she was that the United States would remain neutral.

When occupation shortages became annoying she took a vacation in Geneva, where she met Bill Donovan.

Or rather, as an American resident of occupied France, he sought her out.

She returned to Paris as a newly recruited OSS agent—and was trapped there when Germany declared war on us. Her friendship with Countess Eva Rollentz meant that her German social connections were excellent.

She specialized in going to parties with generals and field marshals, then wrote richly insightful essays about them that ended up in Washington. My guess is that she must have slept with them, but it was never mentioned and I certainly never brought it up with Will. I don't think he ever slept with her.

It must have been idealism that kept this wealthy and well-connected woman with CIG, or it may have had something to do with the grudging love that certain people develop for their organizations.

Even bureaucracies have their patriots.

The three of them were a strike team. Will says, "We thought we were generals, but we were really front-line soldiers, dogfaces, poor bloody infantry."

They were sent to Roswell by the fastest possible means, which turned out to be the secretary of defense's personal airplane.

This must have added to their hubris. It is important to remember at all times that Washington felt as if it would be able to control the situation. The spaceship had crashed, for God's sake.

To hear Will talk about Forrestal's airplane, it was a sort of flying Yale Club with cigar humidors and fine brandy and Persian stretches on the floor.

I have done some research, and it's true that the plane was exceptional. It was more than nice enough to make three smart young strivers feel very, very important.

In addition to the pilots there was a communications officer with a radio shack up front. He was capable of reaching the telephone operator, and there were ordinary phones throughout the plane. You could call anywhere in the world from the craft, as you could on some of the more extravagant ocean liners.

As soon as they were airborne the threesome had a meeting. Joe Rose smoked one of the secretary's superb Havanas and Will indulged in old cognac. Sally sipped a Prior's.

Will reported their conversation to me as if he remembered it verbatim. Given his prodigious memory and his ability to call on pretty extensive notes and diaries, it might be verbatim. If so, it was so pompous that, given the circumstances, it was rather poignant.

"Is Van going to shoot one of them down?" Sally asked. To his face she would certainly have referred to him as General Vandenberg.

"Harry nixed it," Will replied. I imagine that he sniffed the bouquet of his cognac, perhaps even took a sip.

"We discussed it this afternoon in the Oval Office."

Joe examined his cigar. "We'll have to get compliance from any civilians involved." He blew a reflective stream of smoke from his mouth. "I can manage that, I suppose."

"The civilians?" Sally lit a cigarette. "They'll object." "They didn't object in Frankfurt, Sally." "The law—"

"Moves slowly."

Joe was looking out a window, staring long at the passing blackness. "I can see a few stars. Quite a few, actually." "Any of them moving?" "What if there were, Willy boy?" "We might be in danger."

Will insists that he said those words. I wonder. Had he been genuinely afraid, I think he might have actually been more open to the others. He would have bargained with them, then, or recommended that the President attempt to do so.

Will reports that the three of them spent some hours discussing how they would handle matters in New Mexico. It was decided that Sally would proceed to Los Alamos and start groundwork there, preparing a secure area to receive whatever Will managed to send her for analysis, as well as finding housing for the scientists they were expecting CIG in Washington to locate and make available.

Joe was to open an office in Roswell and comb the airfield and the countryside for people who knew something about what had happened. His mission was to spread silence.

They slept from about two-thirty in the morning. Will was awake for a short time at four, Washington time, and found that his stateroom was filled with blue light. His immediate impression was that an engine was burning.

Even now he doesn't know the meaning of the blue light. He is aware that it is associated with the near presence of the others. When I brought up that blue light is in folklore connected with the presence of ghosts, he gave me a sidelong look and said, "If they have developed a technology that enables them to control the soul, they might have some sort of contact with the dead."

He has worried that the world of the dead might be the primary human reality, and that the others have invaded more on that level than on this.

For my part, I wonder if the dead exist.

The changing pitch of the props woke Will for good about half an hour before they were due to land. He called for coffee and lit a cigarette. The right side of his head hurt, just behind the ear. One of the stewardesses said it looked like a spider bite.

One of the many signs of close contact with the others is a painful red mark on the temple, just like that. Did they revisit Will while he was on his way to Roswell, perhaps renewing whatever they had implanted into him

when he was a boy?

I don't doubt that they did. He hated the idea of it, and refused even to speculate.

The radio operator appeared with a message from Hilly, which he and Sally decoded. In those days they used a code book and a sheet of paper. The codes were kept secure by frequent changes. Now of course codes change constantly and everything is done by computer. I suppose in 1947 it was still conceivable that a spy might carry his codes in the heel of his shoe.

The message explained that AAF Intelligence had contained the press leaks by intercepting all wire-service copy leaving New Mexico and sending agents to every radio station that had picked up the story.

That must have been reassuring, but they still had an enormous problem. The news release was now appearing in places like the San Francisco Chronicle and the London Times.

They landed in Roswell and prepared to meet the Army Air Force officers who had found the disk and so irresponsibly announced this fact to the public.

They were waiting on the apron, and Will recalls them as an impressive-looking group of soldiers. Colonel William Blanchard was flanked by two men he recognized from their file photos. One was Lieutenant Peter Hesseltine and the other was Major Donald Gray. Even then Don Gray was considered one of the best Intelligence officers in the Army Air Force. Will admires him tremendously. In 1979 Don Gray admitted before television cameras that the debris of an alien craft had been located in Roswell. It is a testament to the effectiveness of Will Stone's work that the press still considers the whole thing a fraud, even after that.

Gray, Blanchard and Hesseltine were obviously wary of the three CIG officers. Blanchard was motionless, his legs spread apart, his hands on his hips. Will recalls that Gray stood at attention, perhaps awed by the impressive Defense Department plane. Hesseltine fidgeted, his fingers drifting like nervous ghosts to the knot in his tie.

Like so many soldiers they had a boyish quality to them.

Men like Blanchard, who had flown in long-range bombers in the Pacific, were a singularly untroubled group.

They had done more killing than anybody else in the war. But they did it from such a height and in such safety that it remained quite abstract to them. They read paperback thrillers on their long journeys to Japan, then spent a

few minutes blowing women and children to pieces. On the way home they returned to their books.

Men like Blanchard looked as they felt: invulnerable.

By comparison, the CIG officers were tense and obviously uneasy. They were squinting, troubled by the blasting desert sun.

The first one out of the plane was Will Stone—a pale young man in what was probably the most expensive suit any of them had ever seen. The way Colonel Blanchard looked at him, Will thought that he was sizing him up as a pansy.

During the war years, Will had acquired the ability to read lips, meaning that he was able to tell what the three officers were saying to each other before he got into earshot. The conversation he reports is most revealing.

"The second one's the hired killer," Blanchard said softly.

"He looks like he could break you in half with his breath," Hesselstine added.

"Shut up, Hesselstine," the colonel muttered.

When Sally appeared the soldiers reacted again. "Wow," said Hesselstine, "I could stand to nibble that sandwich."

"Don't worry yourself, boy. Gals like that don't eat Army meat."

"Yes sir, Colonel."

"You'd be lucky to get her to bed the Duke of Windsor."

"Hell, Colonel, try the Pope."

"Saint goddamn Francis of Asskissi."

The irreverent Hesselstine laughed at Colonel Blanchard.

"You'd blister your lips on that hot little ass," the colonel said in reply to the sneer.

Major Gray, most proper, was disgusted with them. "You gentlemen are sick."

"I've got it figured," Lieutenant Hesselstine said in an insincere twang.

"These palookas are the team that pulled down Al Capone."

"Those were T-men."

"Hell, Colonel, I'm not talking about the team that arrested him. I'm talking about the team that gave him syphilis."

"Not the Virgin Mary? Don't shatter my dreams."

"Hell no. The pansy dancing up the front. The way they did it, the guy danced up and breathed on old Al.

Presto, one case of drippy dickie."

Now even the Colonel was disgusted. "I'm going to have you up on charges for language like that before breakfast." "Yes, sir!"

As the CIG party approached, Blanchard locked eyes with Will. "Look at him," he said under his breath. "My opinion has changed. Fancy-pants is the gunman. The other guy's a toughie with a heart of lead. And that lady's probably some kind of whiz kid. Nobody's ever managed to get in her pants. That's as good as law."

There were introductions all round, and then they moved to a bacon-and-eggs breakfast at the officer's club, which was a barracks full of surplus furniture and steam tables. In lieu of air conditioning there was tinfoil on the windows to reflect the heat.

Will recalls being surprised to find that the food was more than passable. No powdered eggs here, no Spam.

He made an immediate frontal assault. "I propose that we go to the site at once," he said around a mouthful of sausage.

Colonel Blanchard responded nervously. "We've got to have confirmation on that from Eighth Air Force."

It was as Will expected. Those words meant to him that Vandenberg was going to try to keep the whole affair under his own authority. Will would perhaps have preferred to play a more cunning game, but he had no time.

He decided to use his strongest card at once. "We should have brought a doctor's note," he said to Blanchard. "'Dear Colonel, Please let these children do what they have to do.' Signed, Dr. Harry Truman."

Blanchard was the hottest colonel in the AAF. He didn't want any waves that might disturb his shot at becoming commanding general of Eighth Air Force. Undoubtedly Will was right to threaten him with serious waves.

He capitulated, at least partially. "Okay, fair enough," he said. "Hesseltine here will take care of it."

"Very well." Will relaxed. He thought he'd won his point.

Major Gray got up from the table. "I'm afraid I've got to leave you folks in capable hands. I'm off to Wright Field with the debris we collected."

Will was furious. "We expected to see that material!"

Gray glanced at Colonel Blanchard. The colonel spoke quickly. "It's already loaded aboard a B-29. General Ramey's going to press conference the stuff at five this afternoon. My own second is flying it up to Forth Worth and Major Gray is going with him."

Joe was charged with the practical task of keeping things quiet. He

exploded. "Press conference! That's just what we need."

"We're saying it's a mistake. A rawinsonde. That's a type of radar target." Will was uneasy about Major Gray.

He told me that he would have "taken care" of the major in short order. In Will Stone hate and envy are essentially the same emotion. "In the end Don told the truth," he says. "It took him thirty-two years, but he did it." His tone is curt because of his envy for the man's moral clarity. Not that the statement helped. Don Gray's words collided with the brick wall of Will Stone's cover-up and quite simply died.

Now Joe went to work on the colonel. "We want air transport," he said. "Mr. Stone wants to be on site within the hour. And we want full support. CIG intends to stay physically with the disk and the bodies until they are delivered to Los Alamos."

"I understood they were following the other debris to Wright Field."

Legally, the AAF had jurisdiction at Wright. Los Alamos had just shifted to Atomic Energy Commission control and was thus no longer within the reach of the Joint Chiefs, specifically Van. That was the main reason that Hillenkoetter had decided to park the disk there. Smoothly, Joe made his case. "The best scientists in the world are located at Los Alamos, and it's only a few hundred miles away."

"Washington already set it all up," Sally added.

Colonel Blanchard raised his eyebrows. "I don't know if we have the whirlybirds available to take you to the site."

"You have them," Joe said. "I counted six on the apron as we landed."

"I meant unassigned."

Once again Will played his high card. "Reassign them. Surely you can do that for the President."

Blanchard gave Hesseltine a curt nod, and the young officer went, off to arrange matters. The CIG group finished breakfast and went over to the colonel's office to wait. On the way Will picked up a copy of the Roswell Daily Record. The headline made him furious.

RAAF CAPTURES FLYING SAUCER IN ROSWELL REGION

Will was so enraged that he was afraid to speak lest he jeopardize their tenuous rapport with the colonel.

Once in his office they looked at more photographs of the disk. These were copies of the aerials they had seen at the White House. "What is the status of these pictures," Sally asked.

"Restricted."

"I'm officially changing them to Top Secret. Take them off the walls and place them under covers, please, Colonel." She had no legal right to change the classification level of anything, but her action was typical of the way these people regarded themselves.

Blanchard and Hesseltine fell all over each other to get the pictures off the walls. They stacked them backside up on the colonel's steel desk, and covered them with pink sheets of paper stamped top secret in block letters.

Joe, as liaison with Air Force Intelligence, made a call to S-2 at White Sands to confirm that all wire-service output from the area was still being intercepted. Given the headline that had just appeared, it was probable that reporters by the hundreds would be on their way to this place within a matter of hours.

Will was leaving for the helicopter port when he received word that Hilly was on the line from Washington.

He took the call in an empty office he later found out belonged to the base press officer who had issued the offending press release. Hillenkoetter was abrupt. "What's it look like?"

"Well, Admiral, I'm not sure. We only arrived here an hour ago. They didn't have any transport prepared. Then they wanted to send me in convoy. Now I'm in a whirlybird. It's a struggle dealing with them. And they've hijacked the debris they've already collected. It's on its way up to Wright via Eighth Air Force in Fort Worth.

Ramey's going to hold a press conference claiming the debris is a crashed radar target."

"Don't get your back up. The President approved that last night. By the way, Blanchard doesn't know it yet, but he's going on leave this afternoon. His second's gonna take the heat. Van wants to make sure nobody throws up on his favorite boy's pretty blue uniform."

"I want support from Van. So far it looks like I'm getting anything but."

"I'll have to go through Forrestal."

"Van will totally ignore you."

"Forrestal is too weak a weapon, Truman too strong."

"Meaning that I'm on my own."

"Get out there and get that disk. And the bodies. Especially the bodies."

Bodies. Disks. Debris. Huge newspaper headlines. Will experienced a moment of despair. How were they ever going to hide this thing? "I've got to

tell you that I don't think the radar-target story will work. The press'll never buy it."

"They will, old son."

"But it's absolute, obvious crap. Admiral—"

"You add together all the reporters west of the Mississippi and you still haven't got enough smarts to tune a radio. They'll buy it. Anyway, I read reporters as frustrated egos. They don't want to hear anything about superior aliens when they're already suffering from the sneaking suspicion that they're nothing but pieces of shit themselves."

"You're being briefed by the headshrinkers again, Hilly. And you're believing it." "No—"

"Remember what happened last time? When we tried to psychoanalyze Stalin and we predicted—"

"Never mind that. Truman forgave me."

"Good luck with your radar targets, Admiral. You and Van and Ramey are going to need it."

Will said nothing of this disturbing turn of events to Sally and Joe as he hurried through the beating sun to where the helicopters were firing up. His two associates would remain at the base to begin setting up a field office.

Will had never flown in a helicopter before. As a matter of fact, none of them had. In those days they were quite a new technology. Will was strapped into a miserable plastic seat and given a helmet that was not sized for him. It stank of the sweat of many heads.

The machine rose into its own cloud of dust. A moment later Roswell AAF was swinging away below. The pilot soon set a course to the north and west.

On the way the machines seemed to make dozens of banks, all of them very steep. Will held tightly to the edge of his seat and the lip of the windshield. He vividly remembers the feeling that he was going to fall out at any moment.

"Want to listen to the radio? We can pick up KGFL in Roswell."

Radio. What more could a man want? "Yeah, fine." Will tried to sound enthusiastic. Unfortunately the station did not offer dance music, at least not at nine-fifteen A.M. Instead, he was forced to listen to something called Trading Post. A rancher called in wanting to trade a "black shoat" for a set of golf clubs. A beauty salon owner would trade a Toni Professional Permanent for three nights of baby-sitting with her two sons.

And Will was on his way to view the bodies of beings who had been born in another world.

The sun was already high, pouring through the cockpit, burning against everything that it touched. Hot, exhaust-filled wind swirled in the sides. The stink of gasoline mixed with the stink of two sweaty men.

Roswell sank away behind them. They were alone now between the sky and the land. It was so big, so empty.

When Will saw the disk he almost choked with excitement. They swept around it in a long circle, and it gleamed in the sun. It gleamed and glimmered, and beside it he saw two khaki tarps.

They landed in an area that had been roughly marked with some cloth tape. Here the brush had been hacked away, but not enough to make much difference.

A hundred feet away lay the most extraordinary object on the surface of the earth. Will had appropriately large thoughts: the pyramids, the Acropolis, the Colosseum at Rome, the Eiffel Tower, the Empire State Building, all the works of man. Among them there was no such work as this.

Our history, too: clambering up from the muck, making the first fire and the first pot, building our cities and our empires, the dreams of sultans and kings, the hoarse chorus of the modern democracies—in all of those thousands of days, there was no such day as this.

And Wilfred Stone was here.

CARSWELL ARMY AIR FORCE BASE PRESS OFFICE PRESS CONFERENCE REPORT

8Jly47

LOCATION: HQ 8AF Ft. Worth Tx.

PARTICIPANTS: Brig. Gen. Roger M. Ramey, CinC 8th AF; Major Donald Gray, S-2, RAAF; Warrant O. Vinton Yancey, Base Weather Officer, Carswell AAF.

Various newspaper reporters identified herein as "QUESTIONERS."

General Ramey and officer specialists met with members of the press on the evening of July 8 to discuss the misidentification of a rawinsonde (type ML-306) as a so-called "alien flying disk."

GENERAL RAMEY: Thank you, gentlemen, for coming to this conference. I trust that we can rectify some pretty exciting reports that have been circulating about the pile of debris I have here. [Points to debris on desk and floor of office.] With me I have Major Donald Gray who is the expert

intelligence officer who originally recovered the material, and Warrant Officer Vinton Yancey of our weather office, who can make a positive identification of the material. Now I'd like to open it up to questions.

QUESTIONER: So this is all it is? A pile of tinfoil?

GENERAL RAMEY: That is correct. Perhaps Warrant Officer Yancey can explain.

W. O. YANCEY: This debris is from a so-called radiosonde. A rawinsonde-type device. It is very familiar to me. We release these sondes as target devices for airborne and land-based radar. It is one of the primary things we do here at Carswell.

GENERAL RAMEY: Radar practice is one of the fundamental training functions of the AAF. They also do it at Roswell, don't they, Major Gray?

MAJ. GRAY: Yes, sir.

QUESTIONER: Major Gray, aren't you an intelligence officer?

MAJ. GRAY: Yes, sir. That is correct.

QUESTIONER: And yet you thought this was a flying saucer? This is just tinfoil.

MAJ. GRAY: The misidentification was a result of a series of miscommunications.

QUESTIONER: Didn't you personally gather this debris in a field near Roswell?

And personally identify it as a crashed disk?

GENERAL RAMEY: There are misidentifications of one object for another all the time. This was a case of mistaken identity. This is a complicated business, identification of one object or another.

QUESTIONER: This rawinsonde is a weather balloon? Can we say that?

W.O. YANCEY: No, sir, this is -

GENERAL RAMEY: Say that. That's fine. It's close. You can tell the way the wind is blowing looking at these things. A mistaken identification of a weather balloon. As far as I can see, there is nothing to get excited about.

Would you concur, Major Gray?

MAJ. GRAY: Absolutely nothing here to get excited about. What we have here is a common device in use in the Air Force.

GENERAL RAMEY: Thank you very much, gentlemen.

Chapter Thirteen

Describing his first moments on site, Will leaned back and coughed a long, productive cough and closed his eyes. "It was like being in heaven," he said. "It was the highest of high adventure."

Will was a romantic, and as such a dangerous man. Romanticism rejects the ordinary, seeks the impossible and demands death for failure. The ultimate romantic was the Waffen-SS officer standing in the turret of his Tiger tank, battling the cold plains and blood of Russia.

I am not a romantic.

As the helicopters wheezed into silence Will strode up to the disk. So far nobody had entered it, nobody had even come this close.

A breeze brought an unusual smell, a sort of sulfurousness mixed with decay. It was coming from beneath the two tarps that covered the bodies of the pilots. Flies buzzed around them. Death was death, the flies knew.

To Will's absolute astonishment a civilian came strolling out from behind the disk. "Hiya," he said congenially, "I'm Barney Barnett."

"Who?"

"Barnett. I'm with the survey."

Will was thunderstruck. Surely nobody had been so remarkably stupid as to assign a civilian survey team to this site. "You're surveying this crash?"

He laughed. "Nah, not this. The mapping survey."

The man had blundered into the most secret place in the country. His unexpected appearance reminded Will that things were in a profound state of disorder. It went deeper than a simple lack of security, and it arose from a number of factors.

At this moment in history the government was undergoing intense change. The Air Force was being split off from the Army; the Department of Defense was being formed out of the Old War Department; the CIG was becoming the CIA; the American war machine was being dismantled and the Cold War was just starting.

The U.S. had no agency in place to meet the aliens, no properly positioned personnel, and no organization at all. Will felt as if he was being rolled in a wave.

"Mr. Barnett, go sit over there," he said, pointing to where the copters had

landed.

"Is this a flying saucer?"

"We're just examining it."

"Because I had a look at those bodies before you guys got here, and they surely aren't human beings. No, sir."

"All right."

One of the enlisted men escorted the surveyor away. Will returned to the business at hand.

The device was about thirty feet in diameter, dented and collapsed in the front. You could see where it had skidded across the ground, making a track about sixty feet long. He walked around it, looking for an entrance.

Given the circumstances, his approach was admirably straightforward. One would have thought that considerably more caution was in order.

There was an opening on the bottom. When he bent down he could see a small chamber inside, but the hatchway was too tight for him. At that point he considered looking for a more lightly built volunteer, but the thought of not being the first to enter the craft was unacceptable to him.

Then he found the place where the blast had occurred. It was a tear about eight feet long toward the rear of the craft. Inside he could see shreds of what looked like wax paper and bits of tinfoil. This was a much more promising point of entry.

He called to Lieutenant Hesseltine, who—still green from the flight—came reeling up with a flashlight and -
absurdly—a pair of pliers.

"I'm going in, Lieutenant."

"Is that wise?"

"There's nothing left alive around here."

"I mean—what you might encounter. Booby traps."

"I doubt if they had time to set traps."

"I gotta tell you, I'll back you up but I don't like this." As they talked Will examined the wound in the disk. The debris found on the Ungar ranch had obviously come from this area. He looked inside, shining the flashlight around. Then he leaned into the opening.

His head was in a small room that had been badly damaged by the explosion. The gray floor had collapsed into the base of the craft. The walls had been made of sheets of wax paper with yellow flowers pressed between them. He recalls the cheerful shambles as seeming very sad.

He wanted to get into the room. The trouble was finding a handhold. Everything was torn, bent or broken and it all looked extremely fragile. Experimentally he pulled at a shred of the paper. It proved to be as tough as the soldiers had claimed it was, and as it turned out he had no difficulty using it to pull himself up into the craft.

Beyond the damaged room the machine seemed to be largely intact. It was gloomy and he had to use the flashlight. He went deeper into the ship.

He told me about this in such matter-of-fact tones that I must surmise that it never occurred to him to be afraid. It would have occurred to me, I can tell you.

In 1947, of course, they barely considered issues like the danger of alien bacteria and viruses. Were such a craft to appear for the first time now we would immediately take steps to isolate it from the environment, and would approach it only with the most carefully prepared personnel and the greatest caution.

In those days, though, a vaguely briefed young man seemed completely adequate to the task at hand.

He must have been mad. That was the most dangerous place on earth, the interior of the disk, and it was being penetrated by an ignorant kid in shirtsleeves. His only equipment was a flashlight that kept going out.

He called back to Hesseltine, "Looks okay."

"See any controls? Equipment?" Children in the cookie jar.

"Not yet," he reported. He had expected to find a flight deck complete with rows and rows of dials, sticks for the pilots and perhaps a couple of jumpseats for deadheading buddies.

To move forward he almost had to crawl.

Then he arrived in a round central room, and there had his first taste of what he had come here to find, the deep unknown.

The floor below him was black and shiny and curved. It looked and felt as if he was standing on the top of an enormous bowling ball. To his left and right were two more of the wax-paper doors. They were really just wooden frames with the paper glued to them. It all looked delicate and oriental. Had it been a few years earlier, they would have been suspicious that this was a Japanese secret weapon.

The black curved surface he was standing on was extremely slippery, and he fell forward when he shifted his weight. He hit the wall, which was made of a gray substance as thin as the wax paper that formed the doors behind

him. It wrinkled but snapped back into place as he regained his balance.

He thought he heard something on the other side of the wall.

He shone his light but it seemed dim, and the outside world was far away. Not only was the interior of the ship extremely dark, it was incredibly quiet.

Behind him he could see Hesseltine's head and shoulders as he squinted into the craft. There was a strange effect, as if the man was underwater.

Nobody then understood the significance of the black object Will had walked across. He has told me that they eventually decided it was a gravity motor, and still operating at very low power. It was distorting space and time. Without knowing or understanding, Will was feeling the effects.

He called Hesseltine, but the man simply stared. He hadn't heard a thing.

"Hesseltine?" The lieutenant was no more than eight feet away. "Hesseltine!"

He frowned. "Are you there, Mr. Stone?"

"I'm here."

"Where?"

"Right in front of you!" Will stepped across the black object into the destroyed room.

"I couldn't see you."

"I'm going to go through into the front. Time me. Fifteen minutes. If I don't call or come out, come in and get me."

I asked Will if at that point he was afraid. He stared at me for a moment, then continued his narrative.

Again he crossed the slippery black object. This time he shone his flashlight into the darkness beyond the door. The room was empty. He proceeded.

Where was he now? Surely he should be up against the front of the craft. But there appeared to be more rooms beyond this one. This seemed completely impossible. He shone the light around, finally hitting on another hatch like the one he had just come through. He wriggled through it also, and finally found himself at the front. Here the ceiling was dented, corresponding to the damage that could be seen on the outside of the ship.

There were three tiny seats before a small, disappointingly simple control panel. It consisted only of a thick black rod with a round knob on top, protruding from the center of a console in front of one of the chairs.

That was all there was in the way of controls. Beyond the console were two half-moon-shaped windows in the lower part of the nose. They were

embedded in the dirt, which he could see when he shone his light on them.

The shape of the windows, like two slitted, glowering eyes, made Will distinctly uneasy. They seemed familiar—or perhaps simply right—and that unsettled him. It was as if he was being affected by a powerful unknown beauty or horror, he could not tell which.

At this point things began to happen to him that the scientists he has worked with all these years still cannot explain. It was things like this that first made Will aware of the fact that the others had something to do with the life of the soul. As with so many people, merely being close to these high artifacts drew him toward his soul's denied truth.

Suddenly a scene swam up before his eyes, a terrible scene from early in the war. In 1940 he was working in France, before his transfer to Algeria, which had taken place after the United States entered the war.

He was in Marseilles developing contacts with the infant French Resistance, building an investment against future hardship, as it were.

He had just met Sophie Tuttle.

Never in all the time I spent with Will did he so much as allude to having a sexual relationship with a woman.

Sometimes he would mention Sophie, though, and stare long into space or take a hit from his bottle.

Now her face seemed to come looming up out of the dimness of the room. He describes himself as profoundly shocked. It seemed to him that time had been erased, that Sophie was back, real and alive.

He even smelled her perfume, L'Heure Bleu. She'd had a bottle of it. She'd worn it when they met for the last time, in Marseilles. He heard her sigh, heard the rustle of her dress. A snatch of song from the war,

"Radio-Paris ment," to the tune of "La Cucaracha." Radio Paris lies. Children would sing it, "Radio Paris lies, Radio Paris lies, Radio Paris is German." Sophie would also sing it.

He lost her the same way he lost the others, because the Gestapo was an excellent organization and he was a confused, underfinanced, frightened man alone in an enemy land.

His feelings were extremely intense. He was crying, and amazed at his own tears. It was as if she was just as wonderful and alive as she had been when their sun shone.

Then he snapped back, aware that he was not sitting in a cafe listening to old Jacques Reynard relate the manner of her death. Werner Roetter's

triumph.

He told me that he had been friendly with the Gestapo chief—in a distant way. They had strolled together along the waterfront while Will knew that Roetter's underlings were boring holes in his lover's teeth. The strategy was to break her by disfiguring her.

After the war Werner Roetter joined West German intelligence and had a fine career. A sudden heart attack took him in 1977, and Will had sent a note to his wife, Hildegard. From time to time over the years they'd exchanged Christmas cards. "Why not? You get tired of hate, and Sophie is dead." My God, I'm glad I've never fought in a war. The sun in wartime, the songs of the birds, the rattle of children shoes on the cobblestones, sudden rain, it all came back to him.

I don't think that he ever truly forgot Sophie, and I feel sure that she was his only real love.

He remembered that first time in the ship as a confrontation with deep personal truths. "I recalled the way a forty-five feels in your hand, kind of ugly and kind of beautiful at the same time. Then you fire it and the top of a man's head flies off. Against the red blood the brains look white, and his skullcap and hair make a slap when they hit the wall. His arms fly akimbo and he drops. The face of a man suddenly dead captures all the sweetness life offers—if the bastard didn't suffer."

His friend Reynard told him that Sophie tucked in her chin before they hauled up the rope. Even at the end she was trying to live, hoping against hope that the noose would slip and give her a few more minutes.

It was like Will to have kept up with Sophie's murderer but to have lost track of the man who tried to save her.

Will claimed that he'd lost track of Jacques, but I discovered that he had been a Resistance hero and had not died until 1983. He was well known in Marseilles.

To see Jacques again Will would of course have had to face the pain of his love.

He told me, "I had the feeling I was being examined, as if my soul was being evaluated."

The room was tiny and hot and it stank, something he had not noticed at first. He described the smell as being a mixture of sulfur and Sophie's perfume.

He began to touch things. It was almost compulsive, as if some part of

him was trying to hold reality that way. He ran his fingers along the little seats, the console, the black control stick, the ugly, squinting windows.

And then he saw the boy.

He screamed—finally. I would have done it a long time before. In his surprise he dropped his light, which rolled across the floor, making wild shadows on the walls and ceiling.

But for its dismal glow, now coming from beneath one of the chairs, the room was dark. He tried to fumble for it but he had entered a state of fear so deep that he could not coordinate his actions. He jerked and twisted, then sank to his knees.

He was helpless, sinking down, crouching, his head touching the cool, soft floor. And the being was there before him, a figure no larger than a child, grown in his mind to the proportions of a giant.

From the San Francisco Chronicle, July H, 1947:

DISK SOLUTION COLLAPSES

"Flying Saucer" Find Turns Out to Be a Weather Balloon

A platter-puzzled nation thought it was about to get the answer to the mystery of the "flying disks" yesterday.

A press relations officer at the Roswell Army Air Force Base in New Mexico announced without qualification that the 509th Bomber Group had picked up a flying disk on a nearby ranch last week.

There was immediately much telephoning from the Pentagon in Washington, and then Brigadier General Roger M. Ramey, commanding the Eighth Air Force at Fort Worth, said the object had been identified as the wreckage of a high-altitude weather observation device.

Originally, he said, it consisted of a box-kite and a balloon.

"The wreckage is in my office right now and as far as I can see there is nothing to get excited about," he said.

General Ramey later made a radio broadcast further to deflate the excitement caused by the first announcement.

The device, a star-shaped tinfoil target designed to reflect radar, is incapable of speeds higher than the wind.

The mysterious flying disks, which have been "seen" all over the nation (except Kansas, which is dry), have been described as traveling at speeds up to 1,200 miles an hour.

Chapter Fourteen

The Chronicle of Wilfred Stone

The small figure started to move forward. I could see its shadow coming quickly down toward me. I reared up and, shrieking like an animal, slapped at the thing.

It fell lightly against me and all of a sudden I was holding a dead child in my arms.

He felt almost like nothing. He was only a shadow in my arms, but he was so dead. It seemed to me that I was in the presence of an overwhelming tragedy or sacrifice. This was no "alien" disk, it was a thing of God's and I was holding a dead angel.

I cradled him in my arms. He was amazingly light; I doubt if he weighed more than ten pounds. I turned toward the entrance and started to carry him out. But it was too dark. I had to put him down on the floor and get the flashlight. Going down into the more intimate darkness of the floor I scabbled around as if I was in my own kitchen hunting for a dropped matchbook in the night. I could feel dust there and the slight indentations made by many steps and sharp heels, and the base of one of the seats stuck down with glue.

There was such a feeling of something being alive in that room that I was almost unable to remain there when I finally grasped my flashlight. I shook it and got some dim light out of the stubborn battery.

I shone it into the dead face. There was an absolutely immediate and stunning sense of recognition.

He was—I remembered him.

I was confused. What did these reactions mean? I could not understand them and decided that they must stem from the sheer strangeness of the situation. Obviously this being could not be familiar to me—not him.

At that time I never imagined I'd seen the aliens before. Never dreamed it.

In fact this specific being had carried me in his arms in 1916, and now had given up his life for me and for mankind. I did not understand this until quite recently.

Roswell was playacting of the most serious kind. The crash was intentional, the deaths were intentional—and it was all done to present our deepest souls with a clear choice. I am sorry to say that we chose fear.

The being's skin was as white as chalk, his lips were thin and his nose was small. His eyes were sunken into his head, black pools. The most notable thing about him was that his head was large, almost grotesquely so.

Had I seen him on a streetcorner I would have assumed that he was a child with water on the brain.

But he was beautiful. Incredibly beautiful. His skin shone in the light, as delicate, as pure as the wings of a moth. Beside him I was big and ugly and coarse. My hand came up and I felt the wonder that a dog must feel close to the thin and glowing skin of his master.

He smelled of sulfur I thought at first, but then I noticed something else familiar about the odor.

In the terror of his death he had soiled himself. If you have never been in war that might surprise you. But I have seen situations where every man present has done it.

What was he? I cradled him and felt again that he was as light as a cloud. Had he been alive I wouldn't have been surprised to see him turn into a gas, or just disappear. I carried him through the strange central area, slipping across the curved black floor as I hurried toward the light of the familiar sky.

I pushed my way out through the shredded paper room and stepped into the welcoming familiarity of the desert.

The light made me squint, but as my eyes got used to it I was shocked to my depths by what I saw. There were people here, about a dozen of them, sitting around smoking and chatting about the disk. Hesseltine darted around among them like a nervous fly.

Cradling the body I turned away from the bland, staring faces. It seemed to me that I was protecting something sacred.

"Get them out of here!"

"They won't move! They're from the University of Pennsylvania, and—"

"We're out here in the middle of nowhere and we might as well be in a bus station." I glared at the obstinate, curious people. They seemed ugly, vicious, as if they were heartlessly intruding on my private grief. "Get out of here or I'll have you arrested!"

They stirred a little. "We're archaeologists," one of them said, "we'd like to know the age of this artifact."

The arrogance did it. "Can't you see you're not wanted here!" I was actually screaming. "This is a restricted zone! It's against the law for you to be here."

"Maybe we need a new law," one of them said.

"The hell we do, we need new people, if you're any example!" They were the enemy.

"I think our Congressmen are going to hear about this."

"Draw your gun, Hesseltine."

"Look, I—"

"Draw the goddamn weapon!"

"I haven't got a gun. Sorry. We didn't have armory orders."

I stared at the civilians. "You're moving out. Or I'm filing charges of spying with treasonous intent." This seemed to make them uneasy.

Long sun was shining on my burden, a perfect child in a silver suit, the most beautiful person I had ever seen.

If God's angels must meet death, then surely they looked like this.

The ground quaked and rolled. Then somebody was pulling at my shoulder. "Mr. Stone!"

I realized that I had fallen forward into Hesseltine's arms. The little being was between us. Hesseltine took him and laid him beneath the shadow of his craft.

Seeing this the civilians grew visibly uneasy. They began moving away in uncertain little clumps.

"My God, that thing is ugly."

I looked down at it, confused by Hesseltine's comment. My heart was full of tenderness, reproach rising in my voice. And then I saw it in the light of the setting sun.

How I could ever have viewed this thing as beautiful I did not know. It was worse than ugly, it was something from the depths of hell.

The skin was like wet, white paper. The eyes were black slits, the nose as sharp as a blade. Even in death the lips seemed to be twisted into a sneer.

I became aware that the thing had leaked fluid all over my bare arms. I wiped them, trying to get it off.

Quite abruptly, his face completely expressionless, Hesseltine leaned forward at the waist and vomited.

When he straightened up he commented only that he hadn't eaten all day.

For the first time I realized that it was late, and I had entered the disk

early in the morning. "What time is it?"

"Six-twenty."

"How can that be?"

"Well, you were in there all day."

I was astonished, and then angry. "Why didn't you come in and get me!"

His face hardened. He swallowed. There was a mirthless laugh. "I must have asked you to come out fifty times—"

"And I never answered and you—"

"You told me and told me to leave you alone! And frankly I didn't like your tone. I'm an officer and I expect the same minimal respect from civilians that I get from the enlisted men. And that stands even if you are some kind of goon from CIG."

"I didn't say a word to you. And I was only in there ten minutes at most."

He turned away. I watched him moving in the pale light, looked toward the civilians now bunched in nervous little knots, at the enlisted men leaning up against the truck that had arrived during the day.

"Hesseltine." I drew him a short distance into the desert, out of the others' hearing. "Let's try to talk coherently about this."

"Sure. Coherently. I'll make a note of that."

"Listen, we're out here alone with this thing, and I think we ought to at least try to be on the same side.

You're Air Force and I'm not and that makes me suspect. I realize that and I accept it. But you've got to work with me because I'm who the President sent down here."

"I can't be faulted for my performance, if that's what you're driving at."

How was I going to reach him? "You've performed excellently. You're a top man in a crack outfit and it shows."

"Well, good."

"Look, I don't know what the hell happened here today. It felt like I was in there ten minutes scouting around and bringing out that body. End of story."

"You didn't talk to me?"

"Not to my knowledge."

He lit a cigarette, took a long puff and faced into the sunset. "You were in there for approximately nine hours and we spoke every fifteen or twenty minutes. You refused water and food and threatened me with arrest if I

entered the disk."

The young man stood with his feet apart, wearing his lightweight summer uniform, his cigarette between his fingers and an expression of hatred on his face. During his day at the door of the disk, he had come to dislike me intensely.

"It's obvious that there's a lot more going on here than we can as yet even begin to understand. We need to proceed with ultimate caution."

"I just don't want to hear any more threats from you."

"Lieutenant, just scratch them from the record. I don't remember them. As far as I'm concerned they won't happen again."

He had stopped listening to me and was watching the desert. I followed his eyes. There was a light out there, winking on and off, moving slowly closer. It seemed to drift first to the left and then the right, then disappear for a few moments, only to pop up closer.

Hesseltine seemed transfixed.

"Hesseltine?"

"Yeah."

"Shouldn't we take some steps?"

"Oh, yeah." He trotted over to the site. "Okay, guys, get ready for chow. We'll be doing guard duty two by two all night so they'll have sent a couple of vats of Java. Chow's from the officer's mess if you can handle food that good."

The light was boring down on us, glaring malevolently through the evening.

Fear literally rolled over me, transforming me in an instant from a competent if slightly uneasy CIG officer into a terrified little boy.

One moment I was standing there and the next I was racing through the underbrush. I had no clear thoughts.

I just wanted to get away from that light. I was drowning in the ocean of desert.

The light was boring into my back, I could feel it. Terrible, as if it was cutting right through to my soul. It was huge behind me now, and I could hear it snarling and grinding and roaring as it came down upon us like a runaway train from the beyond. And then it rumbled past me, an ordinary ten-ton army truck. I tried to change my wild flight into more of a trot, but everybody had seen me capering in the headlights. The men looked at me as I strode into the light of their gasoline lanterns. I tried to manage a dignified

appearance.

My obvious vulnerability must have been reassuring to Hesseltine, because he seemed less inclined to hostility. "We figured you'd seen a snake," he said. "No. I thought—"

"That they were coming to get back their own? Not yet. It was only the supply wagon. Since we're obviously staying the night."

"Good thinking," I muttered.

The arrival of another truck meant that we could finally strip the area of unwanted civilians. Hesseltine's men had efficiently gotten identification from all of them. I put the sheet of names and addresses in my briefcase.

As soon as the food and field kitchen were unloaded the civilians, docile from an afternoon's barrage of threats, were put aboard the trucks for the trip back to their base camp near Lincoln.

I intend now to confess everything that happened on that hot July evening. A Wednesday night my yellow diary tells me. It says, "Stars. A late moon. Toward morning clouds racing from the south. Didn't drop below seventy-five."

That is all it says, just those few words to describe the night on which my soul was wrapped with chains.

Some were chains of love. And some were chains of death.

Chapter Fifteen

The Chronicle of Wilfred Stone

The trucks pulled out at seven-thirty, and I made a note to address the issue of FBI coverage on the civilian witnesses in my next contact with Hillenkoetter. The civilians took all the color and chatter with them when they left. The atmosphere of the camp became charged with order. Airmen talked quietly together, busying themselves with tent erection and food preparation. Soon the smell of spaghetti and meatballs filled the camp.

Once the sun set an impenetrable darkness seemed to rise up out of the land itself. But for the interior of a cave, I had never been in a place so dark. The moon was past its last quarter and not due up until after midnight, so there was nothing but starlight and the gas lanterns of the camp.

The evening star was Mercury, and I found that I could make it out quite easily on the western horizon until nearly nine o'clock. Its light was a pure, heartbreaking green. When it finally followed the sun it carried with it our last link to the day.

The disk reflected the yellow-white light of the lanterns, all except the tear in its side, which was absolutely black.

The meal was served off the back of the field kitchen by the cooks. It would have been nice to have some beer, but only ice tea and Cokes were offered. I set myself up in front of my tent and dug into my rations.

Hesseltine followed me. He pulled his camp stool over and sat down.

"Look, I'm sorry about earlier. It was a rough day."

"Forget it. Instantly. You were out there for nine hours waiting for me, for God's sake. You had every right to be angry."

We ate in silence, two men in a wavering pool of light. "We're in radio contact every half hour," he said.

I watched an enormous moth lurch into view. It was so big I thought at first that it was a bat. It seemed like something from a time of giants.

The smell of the alien bodies drifted through the camp. I lit a cigarette, defending myself. "When'll they be bagged up?"

"They are, unfortunately. But they need cold storage. Even rubberized

canvas can only hold in so much stink." Hesseltine gazed at the disk. "You sure you don't know what happened in there?"

"I haven't got the faintest idea."

"You're sure you weren't knocked out? But then how the hell did you keep answering me. I mean, we talked."

"I can account for ten minutes, maybe fifteen."

Something howled out on the desert. As it died away it was answered by the low, uneasy laughter of the men. "Coyote," Hesseltine shouted.

One of the noncoms waived the animal a reply.

"The men'd be more comfortable out here if there was more of a moon," Hesseltine said.

"All we have to do is wait it out until morning, then we'll get transport instructions from Los Alamos."

"Probably gonna be a long time to morning."

The cooks had brought a portable radio, and they set it up in the middle of the camp. At nine-fifteen a program called Musical Showcase was broadcast from KGFL in Roswell.

The men sat around smoking and talking softly while Texas Joe Turner's voice echoed into the desert night: Love, oh, careless love,

You see what careless love has done to me. . . .

As one grows older even the hardest parts of the past acquire beauty. Days I tried to forget now return to me transformed, Algiers balanced in evening light, the rains of winter sweeping old Marseilles, that black camp night with the disk and the bodies.

The last of evening slipped into the sky and Hesseltine went to his own tent. I hadn't brought my bags, not so much as a razor, so there was little I could do but lie back on my cot. When I'd set out this morning, I had no idea that I wasn't going to come back tonight.

I was still suffering from the lack of depth in our planning. What I had to do was to concentrate on my immediate objective, which was not to let the bodies and the disk out of my sight until they were safely inside a facility controlled by the Central Intelligence Group. I could only trust that Sally was preparing that facility and sending me the transport I needed to reach it with the disk.

I coughed, realizing that my mouth was dry and filthy with soot from the chain-smoking I'd been doing since I got out of the craft. In those days I don't think there were filter cigarettes. If there were, they certainly didn't work the

same way they do now. I recall cigarettes that could really give you a hit. It was wonderful to smoke in complete innocence, unaware of the dangers and oblivious to the discomfort of the few nonsmokers. I don't think that we could have made it through World War Two without cigarettes. Smoking was practically the only relief.

I gave Sophie a Pall Mall when I first met her, and she threw herself back in her chair, making great clouds of smoke and laughing. "Do not smoke any more of these," she announced. "Cigarettes this good can be traded for lives."

The radio station went off the air at ten-thirty and the camp settled down. It was reassuring that there would be sentries on duty through the night. I could not have slept at all without that.

It seemed to me that I'd just closed my eyes when I suddenly found myself wide awake. It was extremely quiet. I sat up on the cot. The air in my tent was thick and stifling. I was thirsty. My head was pounding.

A child was standing in my doorway.

I practically leaped through the back of the tent.

Then he was gone. I took a couple of deep breaths. Hallucination? Walking corpse? I was prepared to believe anything.

I told myself that I must have been having a nightmare which had mixed with some real event, perhaps a sentry passing my tent.

I felt for my shoes, found them and carefully knocked them against the ground as Hesseltine had advised.

Scorpions were a constant problem in the desert. I put them on and stepped into the night, guiding myself with my flashlight. By the radium dial on my watch it was three-fifteen A.M. I was at once exhausted and unable to sleep.

I went to the field kitchen to try to find some water. There was a big canvas bag sweating on the side of the truck. I drank from the aluminum cup attached. The water was on the warm side and tasted strongly of the rubberized canvas of the bag. I almost gagged, thinking of the rubberized stink of the body bags that held the aliens.

The moon was now a yellow sickle on the eastern horizon. Despite its presence the desert sky was so clear that I could see the firmament in detail. The Milky Way stretched from horizon to horizon. Color was clearly distinguishable among the stars.

As I watched I began to notice a curious phenomenon. One by one the stars were winking out. Now what did that mean? As I looked I discerned a

line almost halfway across the sky. Ahead of that line there were stars.

Behind it, none. And it was moving in our direction.

I assumed that it was a cloud. It had been a clear night. Where there had been a breeze earlier it was now still. I watched the cloud continuing to cover the stars. The night was also extraordinarily quiet, so quiet that I could hear the hiss of the match as a sentry lit a cigarette all the way on the other side of the compound.

In the brief glow of his match I saw a large owl standing right behind the man. I was quite surprised. I'd not been aware that owls got that big, nor that they walked on the ground. "Hey," I said softly in his direction.

"Look behind you."

He pulled out his flashlight and turned around. The bird's eyes shone. It didn't move or blink. Fascinated, I began walking closer. I'd forgotten all about the disk.

We kept it in our beams as we walked forward. One moment it would look like an owl and then next there would be the flash of something else. The sentry was beginning to breathe hard.

"It's an owl," I said. My voice sounded thick, as if the two of us were shut together in a closet.

"No, sir."

The creature made an abrupt move, causing the sentry to jerk back. His light tumbled away into the brush.

I gasped in a breath and forced myself to a state of control. I told the sentry to be calm.

The next instant there was an echoing shriek above us. I looked up into absolute blackness. There was nothing, not a star, not a glimmer of reflected light, not a cloud.

Then from high, high up there came pitiful cries.

"What the hell is that?"

There was no reply. I shined my light around.

No sentry. No owl.

The dark was clutching at me. I turned around, thinking to go back to the camp and get the others.

I heard something moving in front of me, as if the creature we'd had in our lights was coming closer. When I turned back I saw nothing.

Events began unfolding with the mysterious grace of tragedy. I heard the sentry babbling and whining—but he was close now.

He kept saying something—"Oh, no, oh, no"—over and over. As his voice died to whimpers I tried to call for help.

I felt a curious, soft, deep blow to my belly and wound up on my back on the ground. I was winded and my flashlight was gone.

When I tried to sit up I felt strong hands against my shoulders.

"Oh, God."

"Why do you call on your gods? We're the only ones here." The voice was swift and breathless and tough and far from human.

"We have the bodies," I said. "We can give you the bodies."

The reply was a snicker, then another sentence also delivered in that curiously breathless, mechanical tone:

"We're gonna take you for a ride."

I remember next a wild jumble of dark images: cactuses, shrubs, running animals, then grass and sheep and suddenly rushing up a mountainside and flying off into midair. I was kicking and grabbing at things, totally disoriented.

And then I was high in the sky. As I passed over the summit of a mountain I saw the twinkling lights of a city arrayed before me. It was beauty so extreme that I wanted to somehow link myself to it, to melt into it.

When I was a boy I used to lie on the roof of our house watching the sunset, and sometimes when it was orange and red beyond the hills, I would wish that I could somehow let the beauty fill every molecule of my being.

I was free in the empty sky, slipping like a night bird through the air. Before me were those living diamond lights. There was something so wonderfully perfect about it, so very right that it seemed like a part of heaven.

Beyond the vision but emerging from it there was a sense of what I can best describe as something a religious person might call purity.

I went down close to the silent streets, passing the Plains Theatre with its darkened marquee for Cheyenne, looking into the window of a shop called Mode O'Day. Even the mannequins in their frocks seemed incredibly beautiful.

And then the street ends and there are great hangars around me and lights buzzing with June bugs and moths and the huge planes of the 509th with their atomic babies in their bellies and I am rolling, floating, swimming in the air.

I saw a soldier walking along the tarmac with a rifle slung on his shoulder. Closer and closer I drifted, until I was just above him. I grabbed the hat off his head.

He looked up but I was pulled into the sky before he could see me. Then he searched the empty tarmac around him. "Well, shit," came his echoing shout.

I had that hat clasped in my hand and no intention of letting go. It was damned important and I knew it. If this fantastic thing was really happening the hat would be proof. I watched the world race and swoop past. There was a measure of control, and I found that I could to a degree influence my height and direction by twisting and turning.

I was feeling grand and alone in the sky when I turned onto my back and found myself face to face with a wall of dull gray metal. It looked like the same substance as the disk.

The thing must have been there all along. But how could it have been so silent, so stealthy? The base had obviously failed to detect its presence and it was huge, far larger than the little ship that had crashed.

A question flashed through my mind: Why hadn't they simply picked up their machine? They must have the means to do practically anything.

The metal was no more than two feet away from me. I stretched out my hand but it moved away, remaining an inch or so out of reach.

I heard a buzzing in my head. It got rapidly so loud that it hurt. Involuntarily I clapped my hands to my temples but the sound was inside. I couldn't protect myself from it. It began to shriek like a desperately straining motor.

I dropped about fifteen feet. Then the buzzing got low and I felt as if I was swimming in butter. There was a smell like burning rubber.

Was this magnificent device breaking down the moment I thought it invincible?

I fell another thirty feet, a truly sickening lurch. I tried to turn over, to see how close I was to the ground. No luck. Couldn't do it. The burning rubber smell was strong now. A dusting of what appeared to be warm ash was drifting down onto me from above. The buzzing changed to a noise like continuously shattering glass, a crashing that went on and on and on.

Again I fell, this time it seemed for miles. My muscles knotted against the feeling that the land was going to slam into my back any second. I kicked and screamed and grabbed air. So much for self-control.

Then I stopped falling. It was so abrupt it hurt. I drifted a little in one direction and then another. Throwing myself from side to side I tried to turn over, somehow to get my bearings. More of the ash sifted down.

I seemed to stabilize. Better. Now I was regaining a measure of stability, even moving forward. They must have fixed it, thank the good Lord

It was like the bottom dropped out of the world. Again I raced downward, the wind screaming in my ears.

Above me I saw all the stars of the sky.

The disk was gone! They'd left me here in midair and I was dying.

Crying, my throat aching with grief and dread, beyond panic, I fell to my final end.

Then I realized that I wasn't moving anymore. It took a long moment to understand that the absolute lack of motion meant that I had landed.

I felt around beside me. Dirt. Weeds. I was on the ground! I sat up. Incredible. Out in the middle of the desert.

When I stood up I found that I was pretty weak at the knee, but otherwise I seemed well enough.

Very suddenly a wave of nausea overwhelmed me. I staggered, but it subsided without developing into anything.

I took stock of myself. Physically undamaged. Badly shaken, though. Alone in the middle of nowhere. The stars above me, the empty land around—I could be hundreds of miles from the camp.

There was little point in walking. In this darkness it might even be dangerous. I thought I might at least try to get my bearings, though, and began trying to locate Polaris. First-I searched the sky before me. Then I turned carefully around, making certain that I was in exactly the opposite position.

I found myself staring at the camp, which was ten yards away.

For a moment I thought it might be a mirage. Then I walked forward. No, it was quite real.

One of our sentries challenged me.

"Wilfred Stone."

"Oh. Couldn't sleep?"

I walked into the gleam of his flashlight. I fought back my panic, my wild disorientation. "Actually, I was thirsty, but I got a little sidetracked." My voice shuddered toward a calm I did not feel.

"I wouldn't leave the perimeter again. We've got a guy lost already."

"Really?" It was as if cold fingers were compressing my heart.

"A PFC name of Flaherty. Sentry on the last watch. Nobody can find him."

I remembered him screaming in the sky. But I—hadn't that all been a nightmare? I'd been getting some water, then I realized I was carrying an overseas cap. I held it up, looking stupidly at it. The sentry looked at it too.

"You find that in the desert?"

What could I say? "In the desert." The lie was essential, and not just to protect my reputation. It defended my sanity.

He took the cap, looked at the name in the band. "It's his all right," he said. He trotted off toward Hesselstine's tent, which was lit and active, no doubt because of the missing man.

I walked into the center of the group of tents and vehicles. The disk still glowed in the lantern light.

I at last understood that I wasn't looking at an accidental crash.

This disk hadn't crashed at all. It had been put here, and the bodies along with it.

It was bait. And we had taken it, and were wriggling on the line.

In some murky place our struggles must be ringing a bell. Somebody had heard the sound and grasped the line and set the hook.

And now they were going to reel us in.

TRANSCRIPT: INTERROGATION OF ROBERT UNGAR
LOCATION: ROSWELL ARMY AIR FORCE BASE, HRKJ
INTERROGATOR: JOSEPH P. ROSE, SPECIAL OFFICER,
CENTRAL INTELLIGENCE GROUP
1ST INTERROGATION SESSION

JPR: Let's get names clear. You are Robert Ungar?

RU : Bob.

JPR: I should call you Bob?

RU : I've been Bob so long I ain't gonna hear you, you say Robert.

JPR: Bob. Age forty-seven?

RU : Yes, that is my age. Sir, why have I been brought here?

JPR: Informally. A few questions.

RU : This is a room with barred windows. I would like to know if there are charges against me.

JPR: Well?

RU : Because I am going home if there ain't. I can go home. That's the law.

JPR: You are in a special federal compound.

RU : I am returning home.

JPR: Yes, that's right. And so please before you go answer me a couple of questions.

RU : No! Hell, no!

JPR: For your country, sir.

RU : Oh, Lord.

JPR: Did these alien beings say anything to you?

RU : I—I—they—who?

JPR: What did you see?

RU : There was a big blast in the sky the night of the second. There had been a hell of a thunderstorm out in the desert. Strange. We looked at it. The lightning was striking the same places over and over again. I was worried my sheep was gonna bunch against a fence. I went out there first thing in the mornin' and my daughter and son and I picked up a lot of junk. We thought it was a crashed plane so we told the sheriff -

JPR: Right away?

RU : Naw. A few days, maybe—when I got to town. Ain't got the telephone out there.

JPR: Did you see any of these alien beings?

RU : What the hell are you asking me? I saw some wreckage that a military officer told me was from a spaceship. I didn't see none of these beings you talk about.

JPR: But you stated to the papers that you had seen this crashed disk. But in fact you saw no such thing.

RU : I saw what I said! Now look, are you trying to twist my words, or something? I didn't see no alien beings, sir. I saw what I said I saw.

MR. ROSE CONCLUDED THE FIRST INTERROGATION SESSION.
THE PRISONER WAS KEPT IN

ISOLATION UNDER CLOSE GUARD FOR TWENTY-FOUR
HOURS.

2ND INTERROGATION SESSION

JPR: Good morning, Bob.

RU : I have committed no crime but I can't even get to a telephone. I want a lawyer now.

JPR: Let's just finish these couple of questions and you can go.

RU : Go home?

JPR: Yes, sir.

RU : Well, what is it now? I still ain't done anything. They had me in a

cell in a brig. They fed me pancakes and water and coffee.

JPR: Would you like a cigarette?

RU : I sure would. What are those?

JPR: Medallions. A fine cigarette.

RU : [Lights up.] It tastes like hot air.

JPR: Sir, you are going to have to change your story for the press. You are going to have to tell the truth.

RU : I did that! I ain't never done nothing else in my life, fella!

JPR: We know that it's fun to get in the papers with a big story. But you have to tell the truth.

RU : The whole story was from them officers! The bum; wrote it! I am hardly even mentioned.

JPR: You have to tell the truth. And the truth is you found a weather balloon and pretended it was a flying disk, and you did that for the fun of gaining publicity.

RU : Oh, Lord. You are twisting—changing—why don't you put them officers in jail?

JPR: We have to do this. They have to say this. For the country, Bob. For America.

RU : (Long silence.)

JPR: How many kids do you have?

RU : Two living at home and one married up in Albuquerque.

JPR: Kids are a beautiful thing. Do you hunt and fish with your boy?

RU : And with my girls. My oldest is an excellent shot.

JPR: Yes. Now, what you are going to do is to tell the papers that you found the weather balloon and called it a flying disk as a practical joke.

RU : I told the truth!

MR. ROSE CONCLUDED THE SECOND INTERROGATION SESSION. THE PRISONER WAS KEPT IN

ISOLATION UNDER CLOSE GUARD FOR ANOTHER TWENTY-FOUR HOURS. THE PRISONER WAS

STRIPPED AND THE FURNITURE WAS REMOVED FROM THE ISOLATION CELL. THE PRISONER WAS

GIVEN ONLY WATER.

3RD INTERROGATION SESSION

JPR: Good morning, Bob.

RU : I am in a lot of trouble.

JPR: You certainly are. Your country needs your help and you aren't helping. America needs you and you are saying, "No, not me, America. I am sticking by my story so I will look good."

RU : How can I get myself out of this mess?

JPR: Say what we need you to say. You were telling a tall story. There was no flying disk. Only a weather balloon.

RU : The officers said it! I didn't! Make them say the truth!

JPR: They gave a press conference in Fort Worth with the commanding general of the Eighth Air Force, and the officer that said it, Major Gray, he has taken it back. He is doing this for America. Because he loves his country even more than his own reputation.

RU : I love my country, but what am I doing in a cell without even my clothes! This is not what I call America.

JPR: But you love your country.

RU : I sure do.

JPR: Well, that's progress.

MR. ROSE CONCLUDED THE THIRD INTERROGATION SESSION.
THE PRISONER WAS RETURNED TO

CLOSE SECURITY, BUT HE WAS ALLOWED A WALK IN
ROSWELL IN THE COMPANY OF OFFICERS.

HE WAS FED A LARGE MEAL AND ALLOWED TO SLEEP IN A
BED IN A ROOM IN THE VISITING
OFFICER'S BILLET.

4TH INTERROGATION SESSION

JPR: Good morning, Bob.

RU : Hiya. I want to go home. Are there any charges against me?

JPR: You can help your country. We cannot let it be known that this disk is real. We are just not ready.

RU : Why not!

JPR: Look, Bob. I hesitate even to tell you, but I will. I will tell you as long as you promise me on your honor -

and I know how important that is to you—promise me that you will go to your grave with this secret.

RU : Yes, sir, I will do that.

JPR: Well, the truth is that we have reason to believe that these aliens have stolen a number of people. Men, women, children.

RU : Oh, my Lord.

JPR: We cannot allow the people to know this until we can defend ourselves. Bob, America is being invaded by an alien force. And they are doing strange, awful things that we do not understand. That is what is secret.

RU : May the Lord be with us.

JPR: I agree. America has a need for you to say it's a weather balloon, so the people won't panic. For the sake of the country. Uncle Sam needs you.

RU : Not to lie, he don't.

JPR: Oh, Bob. There must be something.

RU : I don't lie. I ain't never done it.

JPR: Then what will you say?

RU : I want to help my country. Damn right I do. But not with a lie. I found what I found and I know it. I will say that I am sorry the whole thing happened. I'll say that and you can make it look like what you want.

JPR: I have your word of honor? You will say in a press conference we call that you are sorry you ever reported you'd found this? And we will imply that you were wrong about what you found.

RU : I will not lie, but I cannot stop you from doing it if that is what you feel you gotta do.

JPR: We all have to make sacrifices. You say you are sorry in a press conference and we will handle the rest.

From the Roswell Daily Record, August 1, 1947:

HARASSED RANCHER WHO LOCATED "SAUCER-SORRY HE TOLD ABOUT IT

Robert Ungar, 47, Lincoln County rancher living 30 miles southeast of Maricopa today told his story of finding what the Army at first described as a flying disk, but the publicity which attended his find caused him to add that if he ever found anything else short of a bomb he sure wasn't going to say anything about it.

Ungar related that he and an 8-year-old son Bob Jr. were about 7 or 8 miles from the ranch house of J. H. Foster, which he operates, when they came upon a large area of bright wreckage made up of rubber strips, tinfoil, a rather tough paper and sticks.

On July 3 he, his son, Bob Jr., and daughter, Mary, age 12, went back to the spot and gathered up quite a bit of the debris. There was no sign of any metal in the area which might have been used for an engine and no sign of propellers of any kind, although at least one paper fin had been glued to some of the tinfoil.

There were no words to be found anywhere on the instrument, although there were letters on some of the parts. Considerable Scotch tape and some tape with flowers printed on it had been used in the construction. Ungar said that he had previously found two weather observation balloons on the ranch, but that what he found this time did not in any way resemble either of these. "I am sure what I found was not any weather observation balloon," he said, "but if I find anything else besides a bomb they are going to have a hard time getting me to say anything about it."

Chapter Sixteen

I had been eager to follow up on the story of Corporal Jim Collins. What had happened to him? Had he married Kathy? And what of their children?

Will agreed that we might find out a great deal if we contacted them. I wondered, for example, why the visitors had been so intent that he marry Kathy, and what had been meant when they said that the first three children out of the marriage would be theirs.

Like everything the visitors seem to do, what happened that night at Fort Bliss had significance on many different levels.

Fortunately it wasn't hard to locate Jim and Kathy. Because of his visitor contact, Jim has been quietly monitored by the government for most of his life.

The Collinses live in Everly, New Jersey, a small town near the Pennsylvania border. As I drove up from Maryland I expected to enter a devastation of refineries. I found farms and trees budding with spring, and a town of big old houses and wide porches.

Jim is now sixty-one, Kathy sixty.

They live in one of the big houses, and there is a swing on their wide porch. Kathy cultivates a wonderful garden and they make their own wine from the grapes grown on an arbor in the back. On the walls of their living room are large framed photographs of their children, and they have a friendly old dog named Horace. I found it all very annoying.

They were at first extremely suspicious of me. I gave them the cover story that Will had recommended, that I was a new caseworker with the Agency and I just wanted to reconfirm some details. Given what I already knew about them, having read Jim's hypnosis and all the secret memoranda about the incident at Fort Bliss, I was entirely convincing.

Once they were sure that I was genuine, they became warm, friendly and open.

The Jim Collins who had never heard of any aliens and thought that flying saucers were "crazy" was transformed into a knowledgeable individual with considerable information about the visitors. His wife claimed ongoing contact, and suggested that some of their children were involved.

What I wanted to know was whether or not Kathy had ever given a baby

to the visitors. When I asked her, she grew furtive. I didn't quite understand, then. But I do now.

Although shocked by my question, Jim and Kathy were fascinated that I wanted to know more about their personal relationship with the visitors. In all the years that they had been in contact with MAJIC, the secret group that controls human/alien affairs, they had never once been interviewed about this aspect. All of the other interviews had centered around the design and function of devices Jim had seen and touched. When he was lifted by the blue light, did he feel a tingling sensation? How hard had it been to insert the needles into the heads of his fellow soldiers? That sort of thing. MAJIC wanted to know how things worked, not what was being done with them.

Typical shortsightedness, in my opinion. The problem with keeping things like this secret is that they are removed from the free market of ideas, and understanding proceeds at a much slower pace.

I wanted to concentrate on Kathy's childbearing years. Why would the visitors want human children?

I went to Everly expecting answers to some very weighty questions.

I got Jim and Kathy. Even though their happy marriage and successful lives put me out a bit, I also found them a winning, charming couple. They were intelligent and full of humor.

And they told me this story.

Jim knew exactly what he wanted to do when his squad was granted compassionate leave just after the disappearance of Sweet Charlie.

Obedient to the subliminal instructions of the others he rushed straight into the arms of Katherine O'Mally.

He took the train to New Jersey with the explicit intention of asking Kathy to marry him. Since the night he'd fallen in love he'd been writing her a letter every couple of days.

By the time he arrived home he had just three days left before he had to report to his new unit in Pennsylvania.

He beat his most recent letters, so nobody knew he was coming. His own home was dark when the night train let him off. He went to Kathy's house and stood under the porch light nervously twirling his hat in his hands. Finally he gathered the nerve to ring the doorbell.

And there she was, her hair up, her robe fluttering about her, her face shiny with night cream. He gaped, he couldn't help it. She was more beautiful than anybody he had ever seen in his life. She was even more beautiful than

she herself had been when he last saw her.

"Oh. My. God. Jim." Her voice was like a touch of air in the summer leaves.

"Hey."

"I'm a mess!"

"Nah."

"J-Jim—oh! Come in, come in!" She swept the door open. "Mom! Dad! Jim is here. Jim is here at home!"

He entered the house, feeling huge. Everything seemed too delicate, chairs that you could sit right through, pictures that would fall off the wall if you so much as brushed them. A vase of white flowers on the hall table might wilt if you breathed your beery breath upon them.

And it was so quiet! He was used to Army places now, green and gray and hard, full of loud guys who didn't know how to talk without dropping "fuckin' " or "cocksucker" at least three times into every sentence.

The flowers were gardenias. He looked hard at them, as if trying to consume them with his eyes. Though he couldn't say it or even think it very clearly, the obscure hurt that filled his heart when their scent reached him was a dirge for all the Army had taken from him.

Uncle Sam had stifled the little bit of poetry in him, but he didn't know that. He only knew that the gardenias were real nice.

There were greetings then, Seamus O'Mally and his wife Angela meeting him halfway down the hall, and the embrace of his pipe-smelling and her Lanvin bodies. Then there was a lot of laughter and Kathy disappeared to put on a new face.

"What about your folks?"

"They—I'll—do you want me to come back later?"

"No, son, but your mom would be glad to see you."

He recalled his own dark front porch. "I think they're at the movies. That's what I think."

"They didn't know you were coming?"

"I just got leave—I guess I got here ahead of my letters."

"Kathy didn't get a letter, she would have been singing the house down."

He laughed nervously. He was no good at these conversations with the parents. All he wanted to do was talk about her. Kathy looks real nice. Kathy smiled when she saw me. Was she surprised!

But he couldn't do that. That would be so incredibly embarrassing. He

slid his hands along the tops of his legs. Seamus O'Mally lit his big Kaywoodie.

"I think the Dutch are falling apart in the Far East," he said.

Jim thought vaguely about the little boy who put his finger in the dike. The Dutch were in the Far East?

Where? "Yeah," he said, to cover his ignorance.

"The only empire that will survive the war is the British. The sun never sets on the British Empire. Except for India, sadly enough."

"India," Jim said. "Gandhi. He's—I like him." He thought of the little Indian man in the newsreels. Jim knew a good man. "He's got a lot of good things to say."

Seamus O'Mally stared at him, puffing slowly. Angie sipped her coffee, and he had the feeling that he'd just dropped his pants, somehow.

And then all of a sudden here came Kathy. Lord, she was pretty! Her skin was glowing. He'd never seen such a glow. And the smoothness of her skin. He prayed to God to let him touch his lips to her skin and he said God, if you will help me to kiss her lips.

He felt smiles in the air.

She laughed. "Emmeneger's is open till ten now."

"I thought they closed after supper."

"Not anymore. You've been away too long. Everly is a big town now."

"We got a Chevy dealership," Mr. O'Mally said. "Modern times have come to Everly."

"Cab Calloway came to Newark," Kathy said. "I didn't go, but Jane Krebs said he would put his handkerchief to his nose. They weren't supposed to know what he was doing, but they all knew."

"Hi-de-ho," Jim said.

"What was he doing?" asked Mrs. O'Mally.

"He was clearing his nose," her daughter replied.

Jim realized that he was desperate. Never had he had intimate dealings with a girl. Never had he asked a virginal, pure American girl -

His body was now thinking for him. "Let's go to the soda fountain, Kathy."

She smiled. "I'd like to very much, Jim."

"Don't forget your own folks," Mrs. O'Mally called after him.

"I won't, ma'am. We won't be long."

As they passed through the front hall Kathy took one of the gardenias

from the vase and put it in her hair.

They went out together, running in order to avoid Seamus O'Mally's sprinkler.

They had been raised in the American middle class with its puritan traditions very much intact. You didn't make advances, let alone kiss a girl, except after a number of dates and a declaration of intent. You never

"took advantage" by touching her in intimate places. And certainly you never, ever did that thing.

Kathy and Jim went down to the end of the block, walking in the intoxicating scent of the gardenia.

The odor calmed Jim and made Kathy seem familiar and accessible. They had a choice of walking around a small park or going through it. Jim didn't even ask; he led Kathy into the park. They passed up the first two benches, then found one in a more-or-less secluded corner. It was backed by a hedge, so that it could not be seen from the street. It overlooked the small pond at the center of the park.

"Remember ice-skating," Jim said, "last winter?"

"It seems so long ago."

"My tour of duty is up—"

"Don't say it. I don't want to think about all those months!"

She remembered the strange dream she'd had of him. "I dreamed about you," she said. She did not say how real it had seemed, how she'd waked up thinking she'd really seen him ...

"I dreamed about you, too. I'm not good at puttin' stuff in letters, though."

"I got your letters."

"What did you think?"

She leaned her head against his shoulder. His hand stole into hers. She squeezed encouragingly and he gave her a kiss on the cheek.

The other fellows' talk about their sexual exploits had amazed him. He would never talk about Kathy, but he wanted her more than ever. He understood his longing more clearly than he would have before his exposure to Army talk.

He remembered the night he had fallen in love with her. It was the same night that Sweet Charlie had disappeared. He'd waken up that morning and realized that he loved the woman who now sat beside him.

"I love you, Kath."

There. It was said and so be it.

"Oh, Jimmy, I love you too."

He felt himself tremble all over and suddenly he had her in his arms and her lips were touching his. Then her lips opened and she let him into the secret contact of her mouth. Never before had he kissed a girl in this manner.

It crossed his mind that he might be going too fast. Dutifully, he broke away. "Sorry."

She sighed. "Last night I had another dream," she said. "I wasn't in my bed, I was somewhere else." She giggled a little. "I don't know if I should tell you this, but in my dream I was naked. Are you ever naked in your dreams?"

He was almost unable to speak his reply. As soon as she had said the word "naked" his body had gone on fire. He had a boner so huge she must see it in his pants, even in the dark. "Y-yeah. I have been."

"A beautiful child came to me in my dream. He was dressed all in white."

A deep and distant chord sounded in Jim's mind. He felt vaguely sick.

"This little boy had a wand. He waved it over me and dust came down on my body. Fairy dust. It was so beautiful and so clear, like it really happened. So I woke up thinking something good was going to happen today."

"Did anything?"

"Anything what?"

"Did anything good happen today?"

She laughed. "You came home."

"Will you do what I said in my letter, Kat?"

"Say it to me, Jimmy."

"Marry me?"

A flush entered her cheeks and her whole body became covered with dampness. This dampness melted certain particles that had been dusted on her in the night, and they released chemicals of subtle concoction, which reacted with her skin.

She began to smell of an ancient and pure essence. Jim could not perceive this odor consciously but it affected his deepest self. He became almost mad with desire.

He kissed her again, this time pushing against her, seeking to drive himself into her. "Oh, Jimmy," she gasped. "Jimmy, I will!"

Kathy was frantic. She'd never felt like this before. She knew he had an erection. It took an intense effort not to reach out, to grasp it as if she was grabbing a lifeline. The earth seemed to be heaving beneath the bench, the grass, the hedges, and the trees to be sighing with their passion.

Then she had an absolutely delicious, crazy idea. It would let her behold him, drink in the nakedness of him, at least that. "Let's go swimming in the pond," she whispered. And she thought: I'm crazy. I have gone crazy.

He shuddered and she could not help brushing her wrist against him. Even that slight touch made him recoil as if slapped. He was so hard in there! They really got very hard!

"We can't do that. It's—"

"I did it years ago."

"But we're not kids anymore." He crossed his legs.

She planted a kiss on his lips. For a moment he resisted, then he could not resist. She was mysterious wine and she made him drunk with her sweetness.

"We can undress in the hedge," he said.

He could hardly believe what was happening. She was as hot as he was. Hotter. He got up, stiff-legged, and moved into the hedge behind the bench.

Should he undress her? And what if they got caught. It wasn't even ten. People might come through the park.

She turned away from him and dropped her head, presenting him the zipper of her blue frock.

He unzipped it and it fell away from her pale skin, and from the workings of her brassiere. "Unhook it," she whispered. In the dark he couldn't see. He'd never encountered a hook and eye before.

She reached back and unhooked it and it all fell away and suddenly she was naked above her waist. She turned around. He was awed, she could not be this beautiful. It was as if the very glow of life came out of her skin. She smelled like a rose, an angel, a baby. He drew near to her, hovering like a hawk above the leaping body of the mouse.

She laughed a little. "These are buttons!" She was touching his pants.

"GI issue. No zippers when buttons will do."

She did not fumble with them. Her hands were deft. He almost collapsed when she pressed her fingers against him to gain purchase on the buttons. Rockets of sheer delight shot from the places where her fingers were in contact with him. She was touching it! Touching it!

And then his pants were open. She unhooked his belt and they dropped to the ground. "Even the underpants are olive-drab." She giggled.

"They look clean longer."

"Look!" She knelt before him and kissed him, a little peck on the GI-issue boxers. But in just the right place.

"Come on, be brave," she said, "gentlemen first."

A part of her told her quite calmly and rationally that she had gone mad. She was undressing a man in a public park! It could not be this way. She wasn't doing this. Not Katherine O'Mally, recently vice-president of the senior class at Our Lady of Sorrows. No, not Katherine O'Mally, the snow-pure daughter of Seumus and Angela O'Mally of Dexter Street in Everly, New Jersey. She had gotten her embossed Sunday missal for being the best religion student, and she was president of Sodality.

She imagined her next confession, "Bless me father for I have sinned, it has been one week since my last confession. I committed the mortal sin of lust and went on a naked swim with a boy in Town Pond." What would happen on the other side of the confessional? The sound of poor Father Dougherty having a heart attack?

With a wild laugh that was so strange it scared her a little she pulled Jimmy's drawers down. His penis caught in the elastic and got tangled. Never mind. She grasped the shaft and pulled it free. Then she slipped the pants down and there he was just like that.

She knew at last what they looked like, those bulges that appeared in their pants.

"Kath." He was weak at the knees. No girl in his life had ever seen him like this. No man had, not in this state. The night air touching him intensified the feeling of nakedness. She pulled off her dress and panties and stood before him, her hands hesitantly covering breast and pubis. Then she raised her chin and looked him straight in the eye. With a little flourish she dropped her hands to her sides and stood with the palms open in a familiar posture. "Our Lady of Sorrows," she said.

The sharpness of her laughter made him hesitate, but only for a moment. He took off his shirt and held out his arms. She came close and he felt himself tight against her naked flesh.

The night was warm and the world seemed full of a kindness that he had not known about. He kissed her lips and then her cheeks, and then her breasts, crouching and cupping them in his hands. Gently she pressed his shoulders, and he knelt and kissed the soft tangle between her legs. It smelled very strong there. She pressed against him for a moment and he got on his lips the sensation of a warm clam. He drew back, confused. He had no clear idea of what a woman's genitals were like. He didn't quite know what he had contacted hiding there in that thatch of hair. He looked up at her.

"Do you really want to swim?"

"Oh, I don't know. It's so crazy. We're in the park!" He wanted to. He wanted to very badly. "It'll be warm. The water is warm in July."

Hand in hand they stepped through the hedge. The asphalt walk was almost hot against their feet. Jim could feel the stones pressing, tickling. He was aware of his penis bobbing before him. Kathy was too, because she took it in her hand and led him toward the water.

He stumbled. "God, Kath." He was looking around for other people. But the park appeared empty.

Warm or not the water shocked them. The mud of the bottom squirmed up between their toes. They didn't care; their bodies were free. Their secret intoxication took them far beyond their capacity for caution. All the careful repressions of their lives fell away and they were animals in the water.

Jim gave a shout that echoed across the pond, returning flatly from the houses that stood guard on all four sides of the tiny park. The delight in his voice startled people, and one or two porch lights went on.

Kath spread her arms wide and twirled round and round laughing.

More lights went on, and figures came out onto a couple of porches. The O'Mallys, living as they did at the far end of the block, heard nothing.

Jim splashed down into the water and rolled around. It was at its deepest about three feet, so he couldn't exactly hide. Kath fell on top of him and they rolled over and over, each acutely aware of the sexual presence of the other. Jim became knowledgeable about the extraordinary beauty of a woman's skin in the wet and dark. He slipped his hands again and again down her breasts, rubbing the nut-hard nipples with his palms.

They sat in the shallows like two babies playing with each other. They splashed and giggled and squirmed at one another's tickles and most intimate invasions. He came to know by feel the clam within her pudendal thatch, and she stroked the rod of him and hefted his scrotum again and again, playing with his balls, rolling them between her babyfat fingers.

Red light reflected on the pond. First it brought Kath to her senses. She was horrified: There was a radio car at the curb with its lights flashing. A policeman with a flashlight was hurrying along the bank toward them. He was followed by a small crowd of citizens.

They had cavorted their way almost to the middle of the pond. The crowd was going to come between them and their clothes. "It's naked kids," shouted a voice as tight as wire.

That was what collapsed the fairy-fort of their dreams.

They stood up.

"Run, Kath!"

They could not go toward their clothes. There was no choice but to get out of the pond on the far side.

Leaping like dolphins they surged from their water, their young limbs carrying them across the pond much faster than the bulging cop and his tow of inquisitors could make it around.

The hedges and shrubs afforded some protection. But they dared not go back in the direction of their clothes lest the garments be discovered before they could put them on.

Kathy was scared but she was also still excited. She was beyond concepts like fear. A creature of the night had emerged from the depths of her soul, an ancient maenad, the mystical being at her core.

Jim was just plain scared. As he ran along, hopping in the thistles and briars, he kept thumping his penis and making little whistles of pain.

"Why are you doing that?"

"Gotta get it down, man! I don't want to go to jail like this!"

They ran then like the wind. They fairly sailed out of the hedges and onto the wide meadow that surrounded the bandstand. Wind swept past their bodies and rushed in their hair; they flew as the witches must once have flown and suddenly they were in the street.

A car caught them in its lights but the driver was so startled that he killed his engine. As they sailed down Dexter Street they could hear behind them the rattle of his starter turning over.

"The oak! Follow me!"

Kathy clambered up an oak, managing to get to the bottom most branch. Jim saw her plan: they could cross its branches and get onto her roof that way. The window to her room was right there.

The car had started. It turned on two wheels and came roaring down Dexter. "Hurry, Kath!"

"Help me!"

They were whispering as best they could. The O'Mallys were right in the front room listening to The Hour of Charm.

He put his palms against her buttocks and shoved. She was so light, dear Kath! Then he came up behind her. One of his legs was caught square in the lights of the car. It screeched to a stop at the end of the walk.

A man in suit and hat got out and came marching into the yard. Behind him in the car a woman could be heard bawling hysterically.

"Get down out of that tree! What do you mean running around like that, you kids! How dare you!"

The Hour of Charm turned off. Kath slipped into the open window of her room. Jim froze against the trunk of the tree. He prayed, "Dear blessed Virgin Mary I will offer up ten rosaries if you let me get away with this."

Seamus O'Mally came onto his front porch. "What gives?" he said in his mellow brogue.

The driver's attention was diverted for just a moment. It was all Jim needed. He crossed to the roof and was in the window in an instant.

Kath was there. She pulled him into her closet and closed the door behind them.

"Thank you," Jim breathed. Ten rosaries it would be. After a hell of a confession, of course.

"Don't even breathe. Oh, Jimmy, what about our clothes? They'll find our stuff."

"We'll say something, some lie. We were robbed and we got scared."

"And took off all our clothes?"

"People do crazy things when they get scared."

"I've got it. They made us take off all our clothes! The robbers!"

"Don't whisper so loud, somebody's coming!"

Angie O'Mally's voice drifted up from below. "Be sure and check the attic. Don't forget the attic." Jim found his hand touching her breast again. It was just so beautiful!

"It was a naked man! Possibly two naked men!"

Her fingers squeezed the tip of his penis. She barely breathed, "I don't think I like that man."

Seamus O'Mally's voice drifted up. "An odd thing. You're sure you saw this? And they climbed my tree?"

Jim put his finger into her thatch, driving it deep. She groaned.

Light burst in under the door. Jim gritted his teeth. Kath held her breath. He probed deeper and she tickled and they both almost fainted with the pleasure of it all. "Nobody in here," Seamus said.

The light went out. Kath kissed Jim. She smashed into him and forced his lips open and jammed her tongue into his mouth. He felt as if he had become an electric fire of nerve endings.

And then they were coupled together. "Oh it hurts," she breathed.

"Sorry!"

"No, it hurts and feels good at the same time!"

Distantly they heard voices in the street and then the grinding of a starter. That was the signal they needed.

They leaped to one another and their bodies pounded like two pile drivers, thundering against the floor.

Downstairs there was absolute consternation. The Hour of Charm went off again and both elder O'Mallys looked in horror at their living-room ceiling.

The chandelier was swaying, the plaster was thundering as if somebody was literally leaping up and down on it.

"Burglars," Angie shouted.

"The devil! It's squirrels, woman!"

"The naked burglars, and they're in our baby's room!"

"There ain't any naked burglars. Couldn't you see that man was daft? It's squirrels or it's rats!" Seamus went clumping back up the stairs, his pipe between his teeth.

He got a tiny .410 shotgun out of his closet and went into his daughter's room to dispatch the varmints that had gained entry.

The closet door was shaking like the boiler in the machine shop where he was foreman. "Must be a 'coon,"

he muttered as he snapped a shell into the gun.

He threw the door open. ,

At first he did not understand what he was seeing. Wallowing like savages in a heap of dresses were two completely naked human beings. They were obviously doing what he always referred to as "their business" together.

"The hell, that loony was right!"

Such was the extremity of their passion that they moved in a blur. It never even occurred to him that his beloved daughter lay abnegated before him, not until they expended themselves and became suddenly as quiet as thieves.

"Katherine O'Mally, oh Lord! And you, you Army tramp!"

Jim couldn't think. So mad had been his pleasure, he had almost forgotten his own name. It took him a long time to notice that there were lights on. He burrowed up to the surface of clothes, pushing a girdle and a couple of slips away from his face.

"Mr. O'Mally," he said in what sounded to him like the voice of a twelve-year-old, "I can explain."

"Explain! Get out of my house, you home wrecker! How dare you sully my only daughter! Oh, Katie Kate, are you hurt, my dearest?"

Mrs. O'Mally came in behind her husband. Jim had leaped to his feet. Now he grabbed the brassiere that had been tangled around his head and held it to conceal his still rigid penis. Why wouldn't the thing go down, anyway? Wasn't it supposed to, now?

Mr. O'Mally had knelt down, seeking toward his daughter, who was barely visible in the pile of clothes. "My baby, has he hurt you, precious? Shall I kill him for you, beloved?"

"Oh, Daddy," she gasped. "Daddy." He reached his huge hands into the clothes and lifted her out. She swooned in his lap. Her eyes opened, and she looked up at Jim. "Oh Daddy, I like to fuck!"

That was enough for Seamus O'Mally. He fell back in a dead faint, dropping his daughter as he toppled.

"We're getting married tomorrow," Jim shouted.

"Yes! Oh, yes! And we're going to make love forever!"

Angie O'Mally began keening. She knelt to her husband. "Oh, why did you die?" she moaned. One eye opened. He lifted his head. Very methodically, as if he hadn't fainted at all, he picked up his shotgun. "Young man, get out of this house. Katherine O'Mally, go and bring me my razor strap!"

Jim heard the smack of the strap as he climbed down to the lawn. Twenty or not, she was getting it. He was furious but he was also helpless. He stole back to the park and found their clothes. By the time he had dressed he'd come more or less to his senses. Rather than appear again at the O'Mallys' door, he stuffed Katherine's things in their mailbox.

He then went home to his own family.

The next morning a very perplexed postman found the clothes.

James Thomas Collins and Katherine Mary O'Mally were driven by their parents to Maryland where there was no waiting period, and married before a justice of the peace on July 14, 1947.

The issue of their first night together miscarried exactly three months later, and I got another piece of this most extraordinary puzzle.

I do not believe that the baby died. My strong suspicion is that it was taken from the mother, most probably by three fragile creatures in the dark-

blue coveralls they tend to wear on night missions to populated areas.

Undoubtedly they did their work with precision, following a tradition many hundreds of years old. I have found records of this sort of activity in the folklore of many human cultures. The women of Northern Mexico call them campeches and welcome their coming.

Why would they be doing this, and why would it take so long? To more than one witness they have described themselves as "God's workers."

It takes many generations to create the gold of a new species out of the clay of the old.

The tiny spark of a child was delivered up a shaft of golden light to the one who would be its mother.

She was a superb surgeon, and she operated immediately on the eyes and the skull. The rest of the child she did not touch, but bathed it rather in a pink fluid made from the blood of its natural mother.

It prospered and lived and grew in a few months to its strange maturity.

Katherine O'Mally Collins called it in her secret heart Seamus, and in tears she told me that she knew that it lived, and whispers love to it still when the night wind might carry her words to heaven.

From the very heart of the mystery I believe—I hope—that her child listens.

His encounter with the others had put Will Stone in a very awkward situation. The problem was that his experience was spectacularly strange, even irrational. It was no doubt intended by them to challenge his comfortable model of reality, to communicate the notion that they were not what he assumed.

But all it really did was serve the psychosis of suspicion that underlay his personality.

He said to me, "How could I possibly tell what I remembered—flying through the air and such? It was so totally absurd. I I'd have lost the most extraordinary job in the world." For a 'romantic and an adventurer, Will Stone was surprisingly cautious.

The others' actions must have seemed spectacularly irrational, but I think rather that they were the result of very large-format thinking of a kind we have not yet developed.

That possibility never occurred to Will. How could it have? He simply did not have sufficient intellectual scope.

As far as he was concerned, the possibility that the "aliens" were working

according to an irrational plan left him feeling very vulnerable indeed.

Did it mean that reason was so flawed that they didn't use it? If so, then reason was actually irrational, and people who used it could never hope to outwit those who had surpassed it.

If only Will had possessed the courage to sit the others down and say the truth: We do not understand.

They were wedded to the straightforward assumption that the so-called aliens had a scout ship and that the larger body of aliens would be along soon. And yet Will's original intelligence estimate indicated that they had been here for at least sixty years prior to 1947. A search of folklore and legend would have turned up suggestions that their presence was much older.

So the Roswell crash might not have been a scout ship from another planet on an initial reconnaissance mission. For the same reason that Will wouldn't admit the strangeness of his own experience, none of them would address that possibility.

They preferred to pretend that they knew what they were dealing with, and invasion was something they could understand.

In his own defense Will told me that he was too frightened to think clearly, that the screams of the poor sentry who disappeared into the sky were echoing day and night in his head. And that sneering voice: "We're gonna take you for a ride."

Had they ever! There is something so wonderful about the idea of that dignified, serious man gliding over the streets of Roswell with an overseas cap in his hand—and then finding, to his horror, that the cap he'd taken to prove to himself that the incident had really happened had somehow come from the head of the very sentry who was missing!

He has never thought that the others have a sense of humor. Of course not: victims never think that practical jokes are funny.

There was also the sad side of it, the terrible side.

They had searched what remained of the night for their lost comrade. The base sent up six helicopters with powerful searchlights and they crisscrossed the desert for miles around. Will watched them like stars gliding in the dark, and then saw the silver light of first sun on their Plexiglas cockpits.

"No joy," the radio would crackle, "no joy, no joy."

They organized themselves and set out on foot. Men linked arms and scuffled through the brush trying to find a button, a bit of cloth, anything more than his cap to tell them that PFC Flaherty had existed.

No joy.

By nine it had become obvious that they weren't going to find him.

Even so the entire MP company turned out to search, and began bouncing off in all directions in their jeeps.

Right on schedule at nine hundred hours the flatbed truck Sally Darby had sent down from Los Alamos arrived. It was huge and extremely well built, used for transporting experimental atomic weapons.

Will noticed a profound change in the men of the detachment. They were sullen and silent. He was glad that the disk and bodies would be removed today. It was not clear to him that the AAF would let its men remain another night out here.

They set about getting the disk onto the flatbed.

The thing was so light that thirty men standing around the edges could with effort lift it off the ground. Their problem was that they couldn't move it more than a few feet, much less haul it onto the flatbed.

Will was worried that they were going to have to bring in a crane and waste at least another forty-eight hours.

He was considering bringing a CIG crew down from Washington to guard the disk if the Air Force withdrew its personnel.

Then a very odd accident took place.

The men had the disk and were moving slowly toward the truck. Lieutenant Hesseltine was calling out like a rowing master. "Step! Step! Step!" Each time the men would all make their prescribed movement, some stepping backward, others sideways, others forward, depending on their position around the circle. It was almost as if the disk had a gyroscope running somewhere inside. Every time they moved the thing it would resist and heave.

Again Hesseltine shouted, "Step." Two of the men who were supposed to go forward went backward instead.

They lost their grip on the underside of the smooth surface. One of them toppled back and fell.

In an instant ten men were down and the disk was sliding out of the hands of the others. The fallen ones scrambled to get out from under.

The disk did not drop like a rock. To their amazement it settled softly to the ground—a result of the semifunctional gravity motor. They soon learned to take advantage of the thing's subtle resistance to gravity.

They would lift it and push it a distance.

It would slide to the ground a few feet from where they had started. In this way they got it to the huge flatbed.

As the men worked to lash it down, Will and the lieutenant turned their attention to the three alien bodies.

They'd had chests of ice brought, but in those days they didn't possess decent insulation and nothing but slush had survived the desert heat.

They opened the bag containing the freshest body, intending to check it before icing it down as best they could.

The smell was dreadful. But more disturbing by far to Will was the degree of deterioration that had set in overnight. The flesh was sunken, the eyes shriveled and collapsed. There was a considerable amount of thick, maroon liquid in the bottom of the bag.

"We've got to get this embalmed," Hesseltine said.

Will looked at it in horror and amazement. Unless he did something fast there wasn't going to be anything left for the scientists. And this one—this body was the strangest of the three. The other two were obviously alien.

But this one: Unless he missed his bet this was something very close to a human child.

He acted with his characteristic decision and commandeered a helicopter, his objective being to get the body to Los Alamos as soon as he could.

He gave Hesseltine instructions to wait with the disk, and then radioed Joe Rose to come up from Roswell and take command of the loading and transport process.

They resealed the body in its rubberized bag and got it strapped onto the runner platform of the chopper. He got in beside the pilot and in a moment was on his way back to the base. Leaving the disk made him nervous, but he saw no alternative. He was by then deeply mired in the absurd and wasteful interservice rivalry that characterized the MAJIC project all through the forties and fifties. The Air Force had already created its Blue Team to organize recoveries of crashed disks, bodies and debris. Air Force and CIA would work in competition along parallel tracks for years. Unfettered by any congressional oversight, they lavished their energies on wasteful competition while the others—as always—proceeded with clear direction and careful method.

At that moment, though, the only thing on Will's mind was his now desperate effort to get this body where it belonged before it was reduced to gristle and liquid.

He realized that Van had strengthened his position on the base by sending Colonel Blanchard on enforced leave and placing the much more rule-conscious Jennings in command.

He did have one hope, and that involved Jennings. The man was so bound by the chain of command that he was likely to report first and await orders rather than do anything overt when Will arrived on base with the body.

Will's fear was that the Air Force would commandeer it. Admiral Hillenkoetter was obviously in no position to prevent this. In return for his support in other matters, the President was likely to continue to side with General Vandenberg.

As they bounced along toward Roswell Will tried to find the view he had seen last night. Sure enough they swept across a small range and there it was, the town now washed by morning sun. He had been here, flying on wings of dream.

He shuddered, remembering the freedom and the fear. Two feet away from him the strange body rode in its canvas shroud. Given the incredible pressures of the situation, I find it remarkable that Wilfred Stone was functioning at all. But he was functioning, and well. As a matter of fact he was acting with considerable intelligence and decision.

The others had very intentionally shattered his model of reality. He no longer knew what to think about them or what they were doing.

Still, he acted. He tried.

They landed on a round helicopter target, and two medics trotted over to take charge of the corpse.

"What are your orders?" Will asked, as if only mildly curious.

"Place the object in the meat locker pending transport."

That sounded extremely suspicious. "Transport to where?"

"Unknown, sir. You'll have to ask the exec."

Jennings was moving with unexpected swiftness.

Will accompanied the bundle to the kitchen of the officer's mess, where it was placed in a walk-in freezer. He then went to the HQ building and called on the lieutenant colonel. He was annoyed to find that he had communicated with Ramey and already had orders to transport the bodies and everything else immediately and under guard to Eighth Air Force HQ in Fort Worth.

He was a tight, intense man and he obviously intended to exert the authority he had been given. "I have a direct, written order," he told Will. "I don't even know your credentials."

"You know I'm CIG, and I obviously report to Admiral Hillenkoetter."

"Then the admiral will appreciate the way we do things in the Air Force."

What Will did at this point was completely outrageous.

Without another word he went directly down the hall to the intelligence offices. Joe Rose had his setup there, a cubicle with phone and a typewriter.

There was a set of keys to Rose's rented Chevy hanging on the wall, left there according to standard station procedure. Will picked up the keys and went over to the officer's club.

There was no guard on the meat locker in the kitchen. They weren't expecting him to turn into a body snatcher.

But that is just what this audacious man did. It's too bad that he had to use his best qualities, his quick intelligence and decisiveness, to outsmart the Air Force instead of understand the others.

When the odor from inside the locker hit him he almost passed out.

He drove into the town with the bundle on the back seat. It was already a hot day and the inside of the car was sweltering.

He went up Main Street to the Gawter Funeral Home, chosen because it was the first one he found.

"I'd like to see Mr. Gawter," he said to the young woman at the reception desk.

"Who?"

"The owner."

"Mr. Steinman. Mr. Gawter died three years ago." She made a call, glanced up. "Is this in reference to a bereavement?"

"Yes." In a sense, it was.

"I'm so sorry for you. Mr. Steinman will meet you in the Contemplation Room. He'll show you our memorials and explain the different plans that we offer here at Gawter. Is your dear one still at the hospital?"

"No," Will replied evenly, "he's in a bag in the backseat of the car." Macabre though it is, Will Stone has a very definite sense of humor.

She blinked very rapidly for a moment. Then without a further word she conducted him to the "Contemplation Room," which turned out to be a showroom where coffins were lined up like late-model Buicks. A man of about fifty in a dark-blue suit approached. He was wearing a sad smile.

Will introduced himself and showed him his CIG credentials.

"This is a national emergency," he said. "I'm commandeering your place of business and your services forthwith. You are to close your doors at once

for the duration of the time I am here. And if you ever speak to anybody concerning what you are about to witness you will be committing high treason and will be punished accordingly. Do you understand me?"

Steinman's lips opened with a dry rasp. In those days nobody would dream of impeding a government official in pursuit of his duties.

"I want you to send all your workers home until one o'clock this afternoon. Tell them that I am a federal mortuary inspector."

"Yes. Please come with me to my office."

They were soon watching the last of his six employees hurry out of the back of the building. Will got the bundle from the car.

He'd never been backstage in a funeral home before. There were three porcelain embalming tables in the preparation area, which was air-conditioned with an evaporative cooler. The result was that the air was warm and damp instead of hot and dry.

Each table had a drain in one corner, and was so angled that any fluids would flow right into it.

"Where do the drains go?"

"City sewer."

"I want every bit of fluid from this body saved."

"I'll get a bucket."

Will put the bundle on the table. It was so carefully tied that he had to cut the knots with his penknife. When Steinman came back he was confronted with the little man.

The odor was overpowering. Steinman handed Will a tube of Baume Ben-Gay. "Put a dab under your nose,"

he said. Will informs me that it didn't help.

Steinman opened a glass-fronted cabinet which contained trochars and rubber gloves and packages of Rock-Hard Cavity Fluid.

He put on some rubber gloves and lifted one of the arms. It was then that he noticed something very wrong.

No doubt it was the extreme lightness of the limb. He gasped and looked at Will in consternation. "What happened here?"

Will did not answer directly. How could he? "What can you do to slow down decomposition?"

"Embalm him or freeze him."

"I have to take him somewhere. Is there a freezer truck?"

"No truck can maintain temperature low enough to stop decay in a

cadaver this far gone. It has to be frozen solid."

Will had no choice but to go for embalming. He saw that he would have to drive the thing up to Los Alamos himself.

"Sir, is this—may I ask—a child?"

"This is the body of a soldier."

Steinman peered at the face, then looked at Will. His eyes were stricken. "What happened to this man?"

Will tried for a believable answer. "An atomic accident. The rest is classified."

"Lord, Lord. What hath God wrought?"

Will had to get out of that room. The odor was just too much. He stood for a moment in the hall, gasping for breath. But he didn't dare leave Steinman alone with the body so he soon went back in.

"It's a mistake to leave the room when you have a stinker on the table," Steinman said casually. "Got to get used to it twice."

Will describes the humid, sultry atmosphere of the preparation room as feeling like rotted grease. He slopped too much Baume Ben-Gay under his nose, inhaled some of it and went into a sneezing attack so violent he was afraid it was going to turn into a virtual epileptic fit. The powdered eggs he'd swallowed earlier for breakfast threatened to come up while he was still trying to control the sneezing.

Then he saw the mortician start trying to open the little man's coverall. It was silver with dozens of pockets and flaps and buttons on it.

While he fumbled around in complete confusion Will finally brought himself under control.

"Where's the zipper on this thing, anyhow?"

They couldn't find a zipper. There were no buttons, except on the pockets and the flaps. The little man was like a cheap doll that had been sewn into its dress.

"We'll cut it," Will announced. Steinman brought scissors, which were hopeless. Then he got a surgical scalpel. It didn't work either.

He looked hard at Will. "Mister, I want to know what's going on here. What is this?" He gestured at the corpse.

"I told you. A soldier—"

"Who got himself shrunken in some kind of atomic accident? And his coverall is made of cloth that won't cut and he looks like a cross between an angel and a troll? Mister, I want to know what all of this is about or I think

that I am leaving this area. Why aren't you in some government facility? The Roswell Base is a mile from here. And there is the national laboratory in Los Alamos."

"The deterioration is happening far faster than we anticipated. You have the best facility in southern New Mexico."

"Is it some sort of spaceman? Is that what you are bringing in I here?"

"I don't know what in the world you're talking about," Will tried to butter his voice with scorn. "That nonsense belongs in the back pages of the newspapers. I have a dead man here, and he has a family that loves him."

"Which reminds me of the matter of payment."

"You'll be paid five hundred dollars."

"Well, that is good."

"So let's figure out how to get this damn coverall open and get on with it before we both suffocate."

Inch by inch they examined the garment. There were no seams anywhere. When Will touched it he could feel the slight, bony skin beneath and his flesh crawled.

"I found it! Damn, this is a cunning thing." Steinman had made a small opening in the cloth. As he pulled it got wider. It made a curious ripping sound, but he wasn't tearing anything. The two sides of the open seam were covered with strips of what looked to Will like stiff fur. It was composed of tiny hooked hairs that tangled when they were pressed together. The seam they made was almost invisible.

I don't know whether mankind invented Velcro independently, or if MAJIC secretly leaked the technology to the rest of us.

They opened the garment and lifted it off the body.

And it was a perfect body. Heartbreakingly perfect. The size of a boy of about ten. The skin was gray-white and completely hairless. The genitals were about as formed as those of a three-year-old. But they were there, uncircumcised. There was no belly button.

"My God, this is a little boy!"

"I told you—"

"You told me there was an accident. A soldier—shrunk I thought. Somehow."

"A boy soldier. Doing a very brave work for the good of his country."

"You people have gotten to killing children with your damn atomic shenanigans? For shame!"

"For America!"

"Let me tell you something, Mr. Government. You people forgot what America was a long time ago. This boy in this here uniform—there isn't anything in the world important enough to bring his young life to an end like this. And what did you do to his face? Operate on his eyes? Why, he's no more'n a human guinea pig."

Will made a note that Joe Rose was to work on this man, make certain he kept his lip buttoned.

"Embalm this cadaver, Mr. Steinman."

"I'll do it, but I need a death certificate. I want to know where the parents are and where to ship this child.

There's no way this little fella is leaving here in the back of a Chevrolet!"

After Steinman had made his incision a brownish-red fluid drained out into the bucket Will had put under the table. He collected the fluid in a jar.

Steinman brought out a syringe and a large bottle of embalming fluid. As a test Will had him swab some on the skin. When there was no reaction he let him fill the body with the fluid.

"I'm going to get a pine box," Steinman said. "It's all I have available for a child. I'd have to order a nicer coffin from San Antonio or somewhere." He gave me a sad, lost look. "We don't get many dead children in here."

The moment he left Will wrapped the body in the rubber sheet that covered the table. Bundling the uniform, carrying the specimen jar and the body, Will took everything out to the Chevy and drove off.

As he left he saw Steinman standing on the front steps of the Gawter Funeral Home, looking angry.

Steinman never revealed what he knew, and Will has no record of what may have happened to him.

My supposition is that Joe Rose did his work well, and the funeral director took the story of the government man and the strange little child with him to his grave when at length he became one of his own corpses.

July 12, 1947

CLASSIFICATION TOP SECRET ULTRA

Central Intelligence Group

EMERGENCY REPORT ON MISSING MILITARY PERSONNEL

Prepared by Field Headquarters Unit, Los Alamos

Central Intelligence Group

Copy 1 of 1

FOR IMMEDIATE TRANSMISSION

Circulation: The President; the Secretary of Defense; Joint Chiefs of Staff; Director, Federal Bureau of Investigation; Director, Central Intelligence Group

To be passed by hand and destroyed on return to CIG

Purpose

The purpose of this report is to assess the significance of the disappearance of two military personnel in connection with extraterrestrial alien activity within the borders of the Continental United States.

Background

1. Burleson, Charles, PFC 0998721943, USA, 53rd Inf. Sta. Ft. Bliss. Disappeared during nighttime maneuvers on Fort Bliss 7/8/47.
2. Flaherty, Michael, PFC 549112174, 1395th MP Company, RAAFB. Disappeared while on sentry duty at the site of a crashed alien disk in southern New Mexico at approximately 0335 on the night of 7/10/47 .

Detailed Analysis

1. PFC Burleson

PFC Burleson disappeared during or after a night of unusual flare or light activity reported during field training maneuvers by a detached squad of 4

Platoon, D Company. There was no indication of any morale problem. Private Burleson was absent at squad muster at 0.600 hours 7/9/47. A search was made of the squad bivouac area without results. The search was extended by the squad to nearby ravines and gullies , also without results . As there were no roads out of the area it was assumed that the soldier had met with a mishap. No trace of this soldier has been found.

2. PFC Flaherty

PFC Flaherty was detached for sentry and guard duty at the site of an alien object crash near Maricopa, New Mexico. He was part of a six-man unit under the command of S/Sgt. Peter Dickson . PFC Flaherty had four years experience as an MP and had a series of highly successful evaluations. He had a K-Type Security Clearance and was cleared to serve posted guard duty at nuclear weapons depots and in secured armed nuclear weapons storage locations. PFC

Flaherty had no charges or negative comments in file, had never been AWOL or on charges of any kind. He was a bachelor age 23 . He did not drink or smoke

. He had received a high school diploma and had plans to study civil

engineering after his period of service. He was on his second tour of duty.

On the night of 7/10/47 PFC Flaherty disappeared, apparently into the night sky. Despite a wide air and ground search over a 72-hour period no trace at all has been found of PFC Flaherty.

Conclusion

We conclude that both of these disappearances were the probable result of unknown alien activity. This conclusion is based on their known habit of causing bizarre disappearances, as per "Intelligence Estimate on Flying Disk Motives" prepared for limited Top Secret distribution 7/8/47. In both cases, there was apparent alien activity in the area.

Recommendation

It is urgently recommended that the following actions be taken: 1. No nighttime military maneuvers to be conducted in areas where flying disk activity is being observed by the military or reported by the public.

2. All nighttime guard duties throughout all military commands to be placed on War Alert status until further notice, all sentries to be briefed and armed and to move in squad formation only.

Chapter Eighteen

The Chronicle of Wilfred Stone

I drove north into a fierce afternoon. As long as the car was in motion I had the wind, so the fact that the car stank of formaldehyde and rot wasn't unendurable. The merest whiff of it bothered me, however. My impulse was to light a cigarette but I was already half sick from too much tobacco and coffee.

It was just me and this road and the thing in the backseat. The previous night obsessed my thoughts. What had happened out on that desert? I remembered the enormous, glaring eyes of that owl, the impossible flight - I was hit by a bout of shaking worse than a malarial ague.

It was all I could do to get my foot onto the brake and get the car pulled over to the edge of the road. Mike Flaherty's screams were thrashing me.

All of a sudden I was just so afraid.

And I couldn't talk to a soul about it. By doing such odd things to me the aliens had isolated me from my peers.

They were breaking me, and I knew it. The devils were out to destroy my mind.

The minute the car stopped the stink became overwhelming.

I jumped out and went a little into the desert. The heat almost took my breath away. It was as if the sun was actually squeezing me. I crouched down, instinctively covering my head. The smell was in my clothes, clinging to my skin, making my insides crawl with disgust.

To the east Haystack Mountain rode in sunlight. On another day I would have enjoyed a view like this, but today its empty silence was oppressive.

There was no movement at all, no sound except the lazy rasping of grasshoppers. Away from the car the air smelled of hot, dry grass. I imagined cowboys riding this range, silent in the heat, restless for booze and poker. Fifty years ago that had been the norm. Fifty years, barely a generation. And here I was in a car and carrying an alien corpse in the backseat. What would they have thought? Would they even have begun to comprehend?

A sound startled me—echoing in the silence, carrying from far away. It

rose, desperate, a woman's scream.

Sophie.

No. A rabbit being attacked by a hawk.

Then there came a buzzing, low at first and insistent, the kind of thing you felt in your chest rather than heard with your ears. I searched the skies, expecting to spot a small plane swimming from horizon to horizon.

When I saw that the sky was empty I had my first twinge of fear.

The sound got louder. I tried to identify it as something familiar. If not a plane, then what? Oh, God. I didn't want this to be happening. I wasn't going to be able to handle this.

Instinctively I clapped my hands to my head and ran for the car. What if they were coming after their fallen soldier? God help me. I was alone out here in the middle of nowhere. Who the hell knew how they regarded their dead.

How stupid I'd been to just take the thing and come out here like this. I was miles from Roswell and there wasn't another soul around.

The buzzing got louder, began to pulse in my ears. I grabbed at the car door, fought my way in. When I fumbled for the keys they seemed to hop out of the ignition on their own.

They jangled down under the seat. I bent, trying to force myself to be calm. The buzzing got louder and louder as I scrabbled. I sobbed and shook, fighting to control myself, to somehow grab—and then I had them. I had the keys.

All right, calmly now, put them in the ignition.

The buzzing became an angry whine.

Turn on the engine.

Now it was a roar, shattering, massive. Something huge was landing right on top of me.

The engine turned over once and then just plain died.

I screamed into the hell of noise as a huge shadow obscured the sun.

And a trailer truck loaded with sheep rumbled past, leaving the Chevy rocking in its wake.

A man can slip so easily over the edge.

I wished to God for talk. Just casual conversation. "How about Dewey? Think he's gonna announce?"

An SS officer had once said under interrogation, "You learned not to get near them when they were dying. A human being will do anything if he is

dying. Once a girl was being hanged in the women's section. The bindings came loose. A female officer reached up to tighten them. Before anybody could stop her, the girl had torn the woman's arm off."

Where had that man been stationed? Was it Sobibor? Belsen? I can't remember if we hanged him or promoted him. I can't ever remember. What is justice?

The man's fate came to seem very, very important. I thought of his boots, of his black uniform, of the excessive politeness that marked him in my eyes as a killer.

I was hanging over the steering wheel with tears tickling my face. The car was a prison cell in an infinity of light.

Finally I sat up, took a deep breath, re-started the car. I could hear the engine nattering to itself, could hear the grasshoppers again, could hear my own breathing. I lit a cigarette and returned to the road. I flipped on the radio.

The first thing I heard was the Vaughn Monroe song "Ghost Riders in the Sky." I turned the damn thing off.

I started singing to myself like I had in Algiers and Marseilles when the Gestapo was breaking my networks. I would walk in the back streets and sing under my breath in English a song from childhood, "Oh, slow up, dogies, quit roaming around, you have wandered and trampled all over the ground. Oh, move slow, dogies, move slow."

My father seemed to be in the car with me, singing again on an early summer night. I was small and lying upon his lap and the whippoorwills were calling.

I had been safe then and, oh, how I longed for it now. I knew that somebody was talking to me as I drove. I had known it for some time. I just hadn't been ready to look at the fact that I was alone in a car with a dead body and someone was talking to me.

I remembered hide-and-seek in our enormous yard, laughter in the night, cool and mysterious, and where I hid somebody else hid, too. . . They touched me with cool hands, cool and little and white. I drove on and on, the tires pounding on the pavement. I was in a white world. My body was tingling. Some part of me told me that I was nowhere, not in the desert, not in the car. And yet I heard the engine throbbing, throbbing. . . .

Suddenly the shadows were long.

I'd driven all day and hardly noticed it. Where had the time gone?

I stepped on the gas. Fifty, sixty, beating toward Santa Fe and Los

Alamos beyond. Los Alamos. It was Spanish for "the Cottonwoods," known to locals simply as "the Hill." A bastion of science and power hidden atop a mesa. It was my City of God, the place where the truth would be discovered. Why was this road so long?

I did not want to be out here in the dark, not with the thing in the backseat and the memory of what had happened last night still fresh.

I felt such an overwhelming poignance, as if in some secret part of myself I had touched my ancient childhood.

Evening became night and the road seemed to stretch ever longer. Soon my world was a glowing dashboard and a smear of light on the highway.

Outside the desert seemed to sigh, restless in the dark. It appears peaceful, the desert, but it is actually a place of endless terror. There is fierce competition in the desert, all the time. The snake stalks the mouse and the mouse captures the roach. And everything is always a little thirsty.

It is man alone who brings light to this world. Nature is dark, brooding and cruel. What compassion there is in the earth flows from the sterling heart of man.

Slit a man's throat and his dog will lap up the blood. Slit the dog's throat and the man will save him if he can.

What did we do with that SS officer?

I was hungry and thirsty. In fact I was so hungry and thirsty that I was shaking like a leaf.

There had been somebody in the car with me, somebody sitting right there on the seat beside me. A woman.

She was little and pale and I think in that moment I loved her enough to sweat blood. She'd been so sad!

A horrible thought crossed my mind, but when I pulled over and checked the bundle I found that everything was perfectly in order. My precious cargo hadn't been taken from me by some cunning deceit.

Still, I felt that the aliens had been with me. I knew they had. But when? Didn't my thoughts stretch back unbroken to morning. A long, hot day of driving . . .

There were lights down the road. Distances are deceiving, though, on a desert night, and it was another half hour before I reached the town of White Lakes.

There was a gas station and thank God a little place warmly lit that had a sign in the window, CAFE.

I pulled the Chevy up beside a couple of Fords and went inside. There were a few tables covered with checkered oilcloth and a counter. The place smelled of hamburgers and cigarettes and coffee.

"Burger basket, and gimme a Coke. Cherry pie and coffee after."

I was surprised at how crowded the place was, considering that it was nearly nine P.M. I had to take an end stool at the counter and I was lucky to get that. I'd already ordered my burger when I noticed the intense buzz of conversation around me.

"It was silver. Shiny."

"You seen it closer than me, then. I just saw a big disk."

"It was a blimp. One of them German airships like they had before the war."

Had I heard that right? "What's the stir?" I asked the man beside me.

"We seen one of them flying disks, that's what's the stir!"

"Really?"

A woman at one of the tables chimed in. "It was unearthly!"

"Godless," her husband muttered.

"Big! It came up the highway not ten minutes ago. You musta seen it."

I knew my blood was draining from my face.

"You seen it, traveler?" a man called out. He had a Stetson on the back of his head. The homey country voices were getting mean.

I clung to my damp glass of Coca-Cola. It was a handle on the familiar world. Dark waters were engulfing me.

The cafe, the people, all began to slip away.

Had there been someone in the car with me? I thought—a woman. Yes . . . but I couldn't remember clearly.

My head was whirling, my ears ringing.

"Hey, traveler, you seen it? You were right out there on the road."

"I had—had—car trouble. I'm running late and flat-out tired. I don't think I could see fifty feet."

"Well, everybody in this town saw it. Yes, sir! It was as big as one of them blimps."

A blimp. My mind raced. Weren't they all in mothballs? I grasped at a straw. "Maybe that's what it was."

"Hell, this thing went up so fast you wouldn'ta believed it." The man who spoke wore a sloppy uniform. A local sheriff's deputy, I thought.

A woman spoke up. "I was lookin' at it outa my pickup, mister. I saw that

car of yours. I saw you drivin' right under it."

The whole room became silent. Even the cook at the grill turned to look at me.

"Like I say, maybe it was there. I just didn't notice! I mean, who expects a thing like that!"

The woman from the pickup was regarding me with eyes like pins. "That Chevy of yours looked like it came down outa the thing."

Oh dear God, surely that couldn't be! If my car—no. It would mean that I was nothing more than a little trout being played on a line, played until I was tired.

"Maybe we oughtta have a look at that Chevy of yours, mister."

I had to get out of there.

I drank down my Coke and cranked up what was probably a pretty bad smile, "I didn't realize the time. I've really gotta be going!"

The cook glanced at one of his checks. "You got a hamburger comin'. I'm just gonna put it together."

"Oh, I'll pay."

The woman was like a snake. "He came outa that thing," she murmured to the deputy, who nodded. His hand was on his gun.

I put a dollar down on the counter. "Will this cover it? Keep the change!"

"You spend two bits and you leave a simoleon. That's real generous, mister. You take your burger basket with you." He laughed. "And you can keep the basket!"

I edged toward the door. In a moment I was outside. I started to open my car. The deputy had the movements of a jackal. He grabbed my wrist with a hard, thin hand. My fingers let go of the car door.

"Yes, Officer?"

"We all saw it. We saw your car come out of it. It came right out of the bottom and the thing flew away. I want to know what the hell you are, mister. What the hell was that thing? You like to scared us half to death!"

"I'm a federal officer," I said. I flashed my wallet at him, hoping that he'd be satisfied with a glimpse of a Washington, D.C., driver's license. "You saw secret military activity. You keep your mouth shut, and tell the rest of those folks to do the same."

He leaned back on his heels. "The hell."

"That was it!" I tried to get in the car.

"You're—"

"Let me go! You can't hold me like this!"

"Mister, I want to search this car."

"No! You have no cause."

"What's that smell, then? What stinks like that—you got something in there—what is it?" He peered into the backseat. "What's rolled up in that bag?"

I took the moment to jump into the car. Frantically I inserted the key and hit the starter. He grabbed into the window, clutched my shoulder. "You're under arrest!"

"I'm a federal officer!"

"Get out that thing."

I slammed it into reverse and jammed the gas pedal down so hard his strong grip was instantly broken.

I slurred into the highway and stepped on it.

For a long time I saw a flashing red light behind me, but he couldn't overtake me/Mobile radios hadn't penetrated to small New Mexico sheriffs' departments in those days, so he wasn't able to call for help.

But he was tenacious as hell and he drove well. No matter how fast I went he kept getting gradually closer.

And he knew every slight bend in the road.

I couldn't arrive at the Hill with an infuriated hick sheriff on my tail.

In desperation I cut my lights. We were entering the mountains south of Santa Fe and the road was beginning to twist and turn a good bit. I jammed the gas pedal to the floor and started taking bends on two wheels.

Finally I found what I was looking for—a dirt road leading off the main highway. I turned hard, sliding into it amid a cloud of dust.

Then I backed right out into the highway and tore off around the next bend.

It was a trick I'd learned during the war. He saw the dust I'd left and took off down the side road.

I almost wept as I pulled up an hour later to the main gate at Los Alamos. I had never in my life been so glad to see armed men and lights and to hear my credentials questioned.

I was reassured to see that the guards were wearing snappy new Atomic Energy Commission uniforms, blue like cops rather than khaki soldiers' things.

I had challenged the night and won, or so it seemed to me. Actually, I was

more like an ant who finds the poison the housewife has laid. Delighted with its sweetness he carries a piece of it deep into his nest.

Because it is so good he hides it away at the back of the food tunnels.

That way only the best and brightest ants may feast on the treasure.

Part Three

CONGRESS OF LIES

*They know not, neither will they understand;
they walk on in darkness: all the foundations
of the earth are out of course.*

- psalm 82

Chapter Nineteen

The same night that Will arrived at Los Alamos, Roscoe Hillenkoetter seems to have become personally involved with the others. Nobody, least of all Hilly, realized that anything like this had happened until 1960, when the old man, retired now, suddenly threw caution aside and called for a congressional investigation into unidentified flying objects.

It was a direct attack on Will and his agency—an agency that Hillenkoetter had literally created during a midnight session with Truman.

By 1960 Hilly was long retired. After making his statement he very publicly joined a group called the National Investigations Committee on Aerial Phenomena. Will says that he was forced to infiltrate it, take it over and ultimately destroy it.

In order to get Hillenkoetter to back down Will finally briefed him. He saw at once their predicament and left NICAP, commenting quite correctly that the government had revealed all it could and it was up to the "aliens" to tell the rest of the story.

During that time MAJIC interviewed the former CIA director. When he was placed under hypnosis the first thing he remembered was the remarkable night that he conceived of the new agency.

Hilly's encounter was not simply a matter of a flying disk landing in his backyard. Like all the most profound encounters with the others, it was also an encounter with a powerful aspect of self.

Roscoe Hillenkoetter was not sleeping well on that night. His dreams were troubled by familiar storms. He was having a ship nightmare of a kind that had dogged him since he'd gone through Pearl. This time he was on the bridge of a tired old cruiser somewhere in the South China Sea. She burned coal and every seam sweated. The wind was screaming and there were Jap subs about. He didn't like the flying whitecaps or the evil green sky. He listened to the distant laboring of the engines and gave an order to come about into the wind.

Then he noticed that the steersman was a twelve-year-old. He was shocked beyond words. How the hell had a kid like that gotten into the Navy!

He shouted for his first officer. A high, piping voice replied. This one was ten! Then he saw babies crawling on the deck, hundreds of them, and women

in the rigging, little girls on watch without lifejackets!

They were singing sea shanties while the typhoon came down on them. Nurses, babies, children. An elderly couple covered with coal dust helped each other up from the engine room, looking for a breath of air.

His ship was crewed by the innocent and the old. And then he saw three white torpedo tracks dissolving in the crest of a wave. "Hard a-starboard," he screamed, "flank speed!" As the ship heeled a box of pickup sticks fell to the floor of the bridge and went scattering reds and greens and yellows down the ladder.

Then the ship took the first torpedo. A geyser of water burst up, and in the rocking, plunging aftermath all the hatches flew open and screaming crowds of children poured up from below like a desperate horde of ants.

She took the second fish and he felt the shuddering snap of the keel and knew she was going down.

He was half out of bed and running for the pumps when he finally came awake.

"Lord God almighty!"

He dropped back onto the bed. What a hell of a nightmare. Damn the war that it left a man with dreams.

He turned over and plumped his pillow, then closed his eyes and tried to fall back to sleep. He was shaking.

He deliberated about waking his wife. But he was too old to admit even to her that he'd been frightened by a dream.

He was methodically calming himself down when he began to get the feeling that there was somebody in the room.

He opened his eyes but didn't move. A prowler? Surely not. But then who? He wasn't a man given to flights of fancy. There was damn well somebody here. He could hear them breathing right over by the closet door. In and out, in and out. Breathing as regularly as a damn machine.

He kept a .38 Special in his bedside table. If he was quick he could probably get his hand on it before they moved, but I he'd be bound to take at least a couple of shots before he could bring his own weapon to bear.

Hell.

Moving his head very slowly he tried to look across the room.

A woman was standing there, big as life. As on a stage she was lit from above.

He sat up. She was young, and so beautiful he all but cried out from the

pain of seeing her. There was recognition, shocked, confusing. He loved this woman as if he had always known her—as indeed he had. She was mother, daughter, lover, the betrayed woman within us all. She was the one in whose lap we lie when we are babies and when we die.

When a boy on the battlefield calls for his mother, it is she who comes. She is why we make love so often.

No matter how deeply we penetrate the bodies of our lovers we never reach her. Our eternal striving for her has brought the whole human race out of our loins. With the softest of smiles on her lips she rose into the air and went right through the ceiling, disappearing in a swirl of flimsy blue skirts.

The synopsis of his hypnosis states dryly that he cried when he described her departure. And now in Will's garden, with the traffic hissing beyond the wall and a child singing next door, now I am also betrayed by the old man's traitorous tears.

His unease, on that distant night, finally got the better of the admiral. He woke his wife. "I'm having trouble sleeping," was all he cared to tell her.

"Would you like me to make some hot toddy?"

"That would be a sainted act."

She stretched and kissed his cheek and slipped from the bed.

The admiral got out of bed and went to the divan under the window. From here he could see the moon's low sickle riding the oak tree that stood in the side yard.

She brought the toddy and he sat sipping it. His mind went back to the dream, and he reflected that an old man running an organization like CIG really was playing with the futures of hundreds of young people.

He knocked back the drink and returned to bed with his wife. He entered what was for him an unusual state between waking and sleep. The transcript of his hypnosis revealed a very strange encounter.

A beam of blue light came down from the ceiling and began to move slowly back and forth in the room. Hilly was paralyzed. Finally it found the bed. It moved up the sheets, then up Hillenkoetter's cheeks, until it rested just between his eyes.

The center of his forehead glowed white.

And the beautiful lady walked into his dream. She was young, no more than twenty, and wearing a light-blue summer dress. He thought that she was the prettiest girl he'd ever laid eyes on. She had a piece of chalk in her hand.

She turned to the blackboard (he seemed to be in a schoolroom) and

wrote a single word in block letters.

"MAJESTIC."

Then she lectured. Even under hypnosis he was so taken by her beauty that he could not remember her words. That was the cunning part of it, of course. They were probably standing right around his bed with their big bobbing heads, pulling that girl out of his unconscious and making her their tool, their way into his deep mind. Their weapon.

She laughed and tossed a curl from her eyes. And there his hypnotized narrative ended, as he recalled waking up. His ordinary file contained the rest of the story.

He remembered being filled with a sense of malignant, creeping evil. Something awful was about to happen, some slouching horror to come through the dark window.

Damned if he was going back to sleep now. Anyway, he'd had an idea. Really a hell of an idea. He put on his robe and slippers and went down to his study.

There he wrote out the organizational plan that remains to this day the basis of majic. He created an agency that would oversee every detail of our relationship with the aliens, and designed it in such a way that it has kept itself almost perfectly secret.

When he was finished he looked over the sheets of legal paper. He was excited.

As he worked he had become more and more aware of just how urgent this really was. He saw that he also had a chance to make a lightning strike against Vandenberg and close this thing up now and forever as a CIG/CIA project.

His sense of urgency was so great that he began to think that he ought to bypass everybody, Van, even Forrestal, and go to the President right this second.

He'd also figured out something else. Once the initial leaks were fixed, this business of the aliens was going to stay secret forever.

He knew exactly how to accomplish that goal. The secret would be permanent and it would be total.

He had not only this night created the Majestic Agency for Joint Intelligence (MAJIC), but also conceived of this foolproof method of entombing it behind an impenetrable wall.

It was twelve-thirty. A hell of a nervy time to call the President.

He looked at the phone.

Roscoe Hillenkoetter was not close to Harry Truman and right now that was a problem.

He had not often before availed himself of the private number in the apartment at the White House. But he didn't want to go through the staff. He wanted to reach out to Truman man to man. There wasn't any other way to do something as sensitive as this.

He dialed the number. A woman's voice answered on the second ring.

"Mrs. Truman?"

"No. This is the night maid."

"This is Roscoe Hillenkoetter. May I speak to the President?"

"I will give you Mrs. Truman. She's up reading. The President is asleep."

Bess Truman came on the line immediately.

"Oh, hello, Hilly. Just a minute." He heard her waking him up, then a brief exchange as she identified his caller. Then the President's distinct "What does that old shoe want?"

"What's the matter, Hilly. Can't sleep?"

"No, sir."

"Urgent?"

"Yes, sir."

"I'm up for it, if you don't mind pajamas and a robe."

"I'll be there shortly."

Hillenkoetter replaced the instrument. He went upstairs and dressed as quietly as he could. Then he kissed his wife's cheek and slipped out of the room.

He took with him in his briefcase the report on the two missing soldiers, which he had received that afternoon, his handwritten outline of the Majestic agency and another couple of documents that would be relevant to the meeting.

It was a muggy Washington night; he went to the garage and pulled out his car.

He drove almost automatically, staring out the windshield, trying to frame his proposition in such a way that the President would accept it. Above all, he did not want to frighten Harry Truman. That was the trouble with this whole business: it was so full of scary implications that it made sound judgment almost impossible.

Despite the late hour there were, of course, plenty of lights at the White

House. The west entrance was actively guarded. He pulled up and got out of his car. He was taken through the dim public rooms to the private elevator. He was taken up to the apartment.

Now things changed. Suddenly he was in the Truman home, a family's private sanctum.

The President was in the sitting room. He wore the promised pajamas and robe. There was a smell of freshly brewed coffee. Harry Truman stood up and took the admiral's hand. "Hello, Hilly. We'll have coffee in a minute."

"Thanks for seeing me, Mr. President."

"Glad to. Since you've never before called me out of bed, I'm expecting something special." His eyes narrowed. "What happened? Stalin shave his mustache?"

"My news isn't that big."

"Then maybe it's something we can handle."

"You've read this?" He handed the President the staff report on the two disappeared soldiers.

"God, yes. It makes my blood boil. These bastards are kidnapping our boys."

"Yes. And look at this." He brought out one of the other documents, this one from the FBI. It was a synopsis of the annual report on crime statistics for the period 1944-1946. "A substantial jump in missing persons."

"A man comes home from the war. Finds out he doesn't really like his old life, decides to start all over. One more missing person. A lot of men have been coming home from the war just recently."

"What if that's not what it means?"

"Hilly, it's a horrible thing to contemplate."

"It seems possible."

The President looked steadily at him. "I wish I had something more than provocative speculations. These aliens or whatever they are could be entirely innocent."

"Not entirely. The boy who disappeared at the crash site. That is certain. They took him."

"Look, Hilly, what are we supposed to do?"

"Well," Hillenkoetter replied, "first I want to point out to you that we're taking the disk and the bodies to Los Alamos for analysis."

"Van made a case for taking the disk to Wright Field."

"I know that!"

"You and Van are fighting like a couple of tomcats in heat over this thing."

"More like a couple of crazed weasels, Mr. President."

Truman laughed. "You're an honest old bastard for a spy, Hilly. And I'm not unaware of the fact that the Hill is now under control of the AEC. And that the new administrator is a Navy man. Admiral."

"Aye-aye, sir."

They both laughed, this time. "You've got your disk unless Van stages some kind of a raid or Hoover commandeers it as state's evidence."

Hillenkoetter went white. "I hadn't thought of that!"

"Don't worry, Hoover hasn't either. So far all he's done is phone me and whine about the Joint Chiefs. He thinks it's Van's show. The question is, Hilly, how do we prevent this squabbling from messing up our project?"

Hilly jumped at the opening. "That's why I came here so urgently, Mr. President. I would like to propose the immediate creation of a secret agency to handle this. It would be a sort of clandestine Defense Department."

"A big agency?"

"As big as necessary."

"Big is hard to hide. Especially if it has to stay hidden for years."

"I've thought of that." He took a deep breath. The woman of his dream swam into vision. He pushed the memory aside. "We tell each man we involve that the aliens themselves are the architects of the secrecy, and that they will destroy the nation if we reveal the secret."

Truman threw back his head. He made a short sound like a bark in his throat. "Goddamn. That'll sure as hell do it. That'll bury this thing deeper than King Tut's tomb." Suddenly the public face was there, bright and cheerful and reassuringly tough. "That's a hell of an idea, Hilly. A real motivator!"

The public face collapsed, and Truman was Truman again. The fighter, and quick. He took a cigarette out of a silver box on the coffee table.

As he was lighting it the night maid brought the coffee in. She placed the silver service on the table and poured. Hilly took his black, and found that even White House coffee could be overboiled.

"Okay," Truman snapped as the maid withdrew, "you've had your pregnant pause. Get on with it."

"I see the agency as having sealed compartments, sharing secrets on 'need-to-know' basis only. All reporting to a single administrator."

"Tried and true structure for a secret operation."

"It kept the bomb secret."

"What're you going to call your baby?"

"Majestic."

"What a horrible name."

"Why do you say that?"

"It sounds like the King of England had a hand in it."

"Well, something to identify it as awesome."

"Majesty. Magic. The Magic Group."

"There was a Majestic Group at one point. It would be a bit of a diversion if there's ever any digging."

"Fine, then. Do what you want."

"Yes, sir. We'll call it Majestic."

Hilly saw Truman's eyes literally glaze over. It was as if he'd been turned off by some hidden switch. "I'll read your proposal and get back to you in the morning with any comments."

"I'm sorry to do this in the middle of the night, sir."

"You and me both, Hilly. Now do you think you can sleep?"

"I wonder what happened to those boys."

"We have about four thousand unknown soldiers. Now four thousand and two. Missing in action and presumed killed. It happens to soldiers. That's why they get their dogface pay."

Hillenkoetter was surprised by the depth of emotion in the President's voice, the tenderness and deep anger behind the hard words. He could see why this man had dropped the bomb.

He took his leave of Truman.

What happened next isn't quite conjecture on my part, but Will does not possess a written record. He knows that Vandenberg visited the President shortly after Hilly left. What exactly was said we don't know, but I think we have the gist of it.

The moment Hilly walked out the door the President called Van.

Before he arrived Truman read Hilly's rough proposal a number of times, thinking matters over. He was forced to agree that secrecy should be maintained until we knew more. But it wasn't right and he knew it. The public should be told at the first possible moment.

If he waited too long he would never be able to tell, because he would never be able to explain the reason for the delay.

The first essential step was guaranteeing U.S. airspace against the

intruders.

He had worked himself into a state of considerable agitation by the time Van arrived in full uniform.

"Why the hell'd you waste time putting on all those duds, Van? I've been waiting."

"Sir, I'm ten minutes from a dead sleep."

"Well, that's not too bad considering the brace of medals you've got to hoist. I've got a brilliant proposal from Hilly and I'm going to go ahead with it tomorrow morning. I'm setting up a new agency within the purview of Central Intelligence to handle this alien business."

"Sir, the Air Force—"

"I'll tell you what the Air Force is going to do!"

Vandenberg looked shocked.

"Sorry, Van. I'm on edge. Disappearing soldiers. Kids. That bothers me like the dickens."

"What can I do to help, sir?"

"You have full and complete authority to take immediate hostile action the next time one of these disks shows up within shooting distance of any gun in the possession of the Air Force! And you take that as an order!"

"Mr. President—"

"Look at this damn FBI report. Disappearances doubled between 1944 and 1946. Is that related? These two soldiers—you've seen Hilly's report?"

"Yeah."

"Van, we are under attack and I want action! I want *response!*"

"Mr. President, you will get armed response from the Air Force."

"You tell your pilots to *shoot down* anything that looks like those gun-camera photos you have."

The visitors had very cleverly left him without choices. Tell the public they might be kidnapped by aliens and the government was helpless? Hilly was dead right. You had to bury this in a tomb.

"Mr. President, it's possible that I will be unable to shoot the craft down."

"Then get the capability! If you can't shoot one down then I'll declare a project bigger than the Manhattan Project on this. We've got to regain control of our airspace, General!"

Vandenberg's eyes hardened. "We will, sir."

Truman dismissed him. For a few minutes he sat smoking and thinking, shuffling Hilly's papers. But he was not a reflective man. Shaking off his

upset he returned to the bedroom. He tossed his robe on a chair.

Bess half woke. "Is it all right?" she asked.

"Hell no," he said as he got into bed, "it's not all right. Not by a long shot."

Being Harry Truman, he then turned over and slept like a baby until morning.

**July 12, 1947 TOP SECRET/MAJIC
EXECUTIVE ORDER**

**SUBJECT: ESTABLISHMENT OF MAJESTIC AGENCY FOR
JOINT INTELLIGENCE (MAJIC) Copy 2 of 1 2**

The purpose of this agency will be to coordinate all United States activities connected in any way with nonhuman alien presence, including the management of the Majestic Scientific Group, military BLUE TEAM activities and FBI/CIA(G) surveillance activities designed to establish and maintain all MAJIC-related operations at the highest level of security obtainable.

The TOP SECRET/MAJIC classification is now the highest level of classification.

MAJIC Initial Organizational Structure—MJ-1

MAJIC is a coordinating and management group, reflecting the same centralization concept contained in recent legislation establishing the Central Intelligence Agency. MAJIC will be overseen by the Director of Central Intelligence, who will report on all MAJIC activities to the President as appropriate and advisable. DCIA will receive the MAJIC

Designation MJ-1. Admiral Hillenkoetter is appointed MJ-1(1) by order of the President. Positions MJ-2-4 are MAJIC administrative positions. Should project SIGMA (referenced below) succeed, MJ-1 will institute project PLATO, seeking to establish ongoing communications of a diplomatic or negotiational nature with the aliens. The first objective of this project will be to attempt to control alien incursions into US airspace and alien contact with US citizens.

MJ-2 Position

MJ-2 is the designation for director, MAJIC Operations. Mr. Wilfred Stone is appointed Director, MAJIC Operations, MJ-2, by order of the President. Further appointments within the Operational Group to follow. The primary responsibilities of the MJ-2 position will be two. The first will be administrative and collational, gathering and synthesizing all output from all

other MAJIC positions and transmitting them in an orderly manner to MJ-1. The second will be diplomatic. MJ-2 will create an office (Designation: SIGMA) that will seek means of communicating with the aliens.

MJ-3 Position

The MJ-3 position is the Civilian Operations Coordinator responsible for propaganda and maintenance of public ignorance in the face of extensive and obvious alien activities, which include substantial and publicly visible flyovers of Unidentified Flying Objects (UFOs) and Identified Alien Craft (IACs). They also apparently include the abduction of civilians as well as military personnel for unknown reasons. The primary MJ-3 mission is to guard the fact that government cannot prevent these activities and does not know their purpose. MJ-3 will operate a program of denial and ridicule. The natural skepticism of journalists will be enlisted by total, absolute and blanket denial of any and all sightings, disappearances, observations of landed craft, etc. This program will be carried out no matter how obvious the truth of a given report. It is *essential* that NO sighting no matter how obvious be explained as an "unknown." Such explanation may lead to difficult questions and journalistic demands and *will threaten this program*. Further, MJ-3 will orchestrate the ridicule of civilians who come forward with witness accounts. If they are persistent, such civilians will be methodically discredited. Persons associated with scientific institutions and universities who are too interested in this subject will be warned away.

Should they persist strong measures will be taken as appropriate. The atmosphere of denial and ridicule is intended to curtail public understanding, and frighten non-MAJIC-associated scientists into ignoring the whole area. MJ-3 will also be responsible for the infiltration of "flying saucer" study groups now springing up as a by-product of recent radio and newspaper attention. All cover operations will be coordinated by MJ-3.

MJ-4 Position

The MJ-4 Position is Coordinator of Military Activities. The Army Air Force BLUE TEAM set up to retrieve alien objects and remains will advise MJ-4 of all its activities. All MAJIC-related military operations will be coordinated by this office, including those carried out after the impending transfer of BLUE TEAM to Air Materiel Command from its present S-2

Intelligence status. MJ-4 will manage Project REDLIGHT in cooperation with AFMC and AFOC with the mission of flying any intact alien craft that may be recovered. A civilian-based National Reconnaissance Organization

will be established to provide site security for all activities relating to alien craft, their movements and attempts to fly them.

MJ-5 Position

The MJ-5 Position is Coordinator of Security. All incoming personnel must receive MAJIC clearance. This clearance can only be granted to persons able to pass the most stringent tests of background and loyalty. MAJIC clearance will be given only after stringent FBI clearance investigation. Should a situation develop where MAJIC clearance cannot be extended to a given elected individual above the MJ-1 level, that individual will be isolated from all knowledge of MAJIC for the duration of his term of office. MAJIC clearance procedures apply to *all* persons exposed to any MAJIC information, no matter how trivial, and will be applied to elected as well as appointed officials.

MJ-6 Position

The MJ-6 position is an internal executive position. MJ-6 is responsible for all record-keeping and isolation of MAJIC-related files within the Library of Congress and related collection centers such as military document centers. This position will maintain not only a record-keeping division but also a research division that will be devoted to the discovery and classification of related isolates from other branches, such as FBI or Air Force documents that incidentally refer to MAJIC, MAJESTIC or related activities. It will coordinate all activities with MJ-9.

MJ-7 Position

MJ-7 is Coordinator of Allied Relations. MJ-7 will develop liaison with presently forming Allied alien activities organizations. MJ-7(A) will provide civilian liaison to these organizations, and MJ-7(B) will provide military liaison.

MJ-8 Position

MJ-8 is Coordinator of Soviet Bloc Relations. MJ-8 will attempt to create an atmosphere of complete and open sharing of information, in view of the apparently hostile nature of the alien incursion and the obvious need to cooperate at the highest levels in order to achieve a meaningful and effective human response to the possible arrival of massive alien force.

MJ-9 Position

MJ-9 is Project Historian. The historical mission is twofold. First, historians shall be enlisted to attempt to determine the extent of alien activity prior to the present time. Second, a MAJIC Historical Bureau shall receive *all*

documents from all units and prepare and maintain a large-scale historical resource for use in briefing and as a source of reference.

MJ-10 to MJ-12 Positions

These are scientific positions.

MJ-10 Position

MJ-10 is Coordinator for the Physical Sciences. Subgroups will include Astrophysics, Propulsion, Electromagnetics, Particle and Atomic Physics and other areas to be added as needed. The primary mission of the MJ-10 position is to collect data and provide meaningful answers regarding the science behind the amazing alien craft and their apparent mastery of such forces as gravity, and the nature, capabilities, and limitations of their weapons.

MJ-11 Position

MJ-11 is Coordinator for Biological and Behavioral Sciences. The mission of the MJ-11 position is to collect information as to the nature of alien biology, brain function and behavior. It is especially important it be determined if any viruses, bacteria, gases, chemicals or radioactive elements might be effective as weapons.

MJ-12 Position

MJ-12 is overall Coordinator of Scientific Activities. Under MJ-12 will be two subsidiary positions, MJ-12(A) and MJ-12(B). MJ-12(A) will be coordinator of defense-related scientific activities, with priority on the development of weapons/ strategies which will provide the US with an effective deterrent where none whatsoever now exists. MJ-12(B) will be coordinator of other scientific activities, with priority on the understanding of the physical nature of the aliens and their motives/objectives.

Chapter Twenty

While Hillenkoetter was meeting with the President, Will Stone was having a deeply shocking personal experience, one which I believe was intended either to lead him to deep inner understanding, or to shatter him.

When he had arrived at Los Alamos he had found that things had been magnificently organized by the talented Sally Darby. Her timetable, however, did not allow for what he really wanted to do, which was sleep for about twenty hours.

Sally now had a team of six CIG personnel working with her, and they were getting the full cooperation of ZIA, the private company that arranged all the Hill's logistics, supplies and construction. Will could detect the hand of the White House in all this; he allowed himself to hope that Hilly had gained ground with Truman.

While Sally got the cadaver into cold storage he called Washington to report to Hilly. It was one o'clock in the morning Mountain time. That made it three A.M. in Washington.

The director had just returned from the White House. Will was informed that the President would probably approve Hilly's plan for a new agency. If he did, Will was going to be its head.

It was a tremendous vote of confidence for a young man still reeking of formaldehyde and covered with road dust.

He hung up the telephone and tried to take a little time for himself in the room that had been provided for him at Fuller Lodge, the Hill's hostel for visiting dignitaries.

After a fitful ten minutes trying to nap he had a shower and a shave. He was surprised to find GI soap in the bathroom. It reminded him that, until literally a few days ago, Los Alamos had been a military city.

When he finished his shower there was a message from Sally under the door. As he dressed again he looked wistfully at the bed.

He went to her office in the Big House a short distance from Fuller. Both buildings had been part of the boys'

school that had been here before the government moved in, and as a result they were fairly well constructed.

The rest of the Hill's residential area was a mass of Quonset huts, prefabs

and trailers.

There were people everywhere; the place was a hive of activity even at one o'clock in the morning. Lights blazed along the perimeter fence and all through the Tech area.

His obsession with secrecy made Will dislike the small-town feeling, the frank and curious looks that he got as he walked down the street. Even though everyone here was cleared—and many of them at a very high level

- few really accepted the "need-to-know" concept that was beginning to redefine American secrecy. Nobody, no matter how exalted their clearance, had a right to know everything, not even the President. Knowledge was only to be shared as required by very specifically defined need. Will could see these people gossiping among themselves, confident that their clearances made it legal.

He did not like Los Alamos for another and more curious reason. That was its exposure to the sky. He would rather have gone underground with the disk than take it up onto the top of a mesa like this.

The sky was like an open door. If a car could be taken off a road and the driver not even know it, they were going to lose this thing flat. That was too much power, too much capability.

Will simply refused to believe that the people of White Lakes had actually seen his car coming out of a huge disk. Because he remembers nothing more about what happened, it is impossible to be certain. Maybe all he encountered in White Lakes was a little hysteria.

He himself was close to that point. Every innocent stranger seemed full of hostile intentions. If he'd been armed he thinks now that he might have shot somebody. It took everything he had not to dive for the shadows and make his way to the Dig House as though he were back in Algiers.

The building wasn't designed for offices. There was no receptionist, no phone and it was the middle of the night. He didn't know where to find Sally. He was so exhausted that this simple problem actually choked him up.

He surveyed the large, silent room. There were books everywhere. Despite the lateness of the hour people crowded the library, browsing, reading, all reflecting the tremendous intellectual energy of this place.

Finally Will spotted a staircase at the far end of the room and mounted it, passing through the haze of pipe and cigarette smoke.

When he had opened the door every head in the room had turned toward him. And every eye followed him as he went to the staircase.

Of course it wasn't hard to find Sally. Her office was the only lighted room on the second floor.

"Will," she said, "congratulations!" She looked absolutely glorious. She was glowing. He had seen her as a pale, effective woman haunted by her own vulnerabilities. Now he understood why Hilly had chosen her.

Pressure was obviously her milieu. Confidence, competence, effectiveness poured from her.

He tells me now that Sally Darby should have been MJ-2, the leader of MAJIC. I can't pass judgment.

"How in the world did you know? Hilly only told me a few minutes ago."

"I talk to Hilly, too. He called here half an hour ago looking for you. And he asked me if I thought you could do the job."

"Thank you for your support."

"Hell, I told him I could do it better."

"Will you second me?"

"Maybe, MJ-2. Assuming your appropriation is big enough."

"I want the disk guarded. Heavily."

"We have tanks and antiaircraft guns at our disposal."

"This place has tanks?"

"A company."

"Get them deployed. I want the whole place on full alert status against attack from the air."

She picked up her telephone. A moment later Drew Shelburne came into the office. He had been a bright counterintelligence expert in the British Division.

"Hello, Drew."

"My Lord, Will, when did you die?"

"I've been on the road for eleven hours. Why do you look like a flower at one A.M.? Both of you."

"I guess we're just too enthusiastic to get tired," Drew replied.

Sally gave him instructions to relay to the guard units.

When Drew left Will dropped into a hard chair, the only spare one in the office. "I'm an exhausted man in a place where nobody ever sleeps. Have you got any headache powders, dear?"

"Bromo-Seltzer."

He poured the stuff directly into his mouth and swallowed it before it foamed up too much. Sally brought him water from somewhere and he

washed the residue down. "I feel like hell and I'm scared to sleep alone."

She raised her eyebrows.

"It's not a proposition. But they come in the night. Last night, that sentry—my God."

"Look," she said, "I hate to tell you this but you have a meeting with the scientific group at seven in the morning. The pathologist wants to get to work as quickly as possible. He's the only one from off the Hill. The other three are locals. A physicist, an electromagnetic expert and an aerodynamicist to examine the disk."

"Tell me about this pathologist."

"Gene Edwards. University of California at Berkeley. Working on a top secret radiation pathology project.

Married, two children. Prominent New Dealer during the thirties. Flirted with the Party in '33-34."

"A Communist? You got me a Communist?"

"His security clearance is his bread and butter. We promised to erase his record in return for absolute secrecy."

"Don't actually do it."

"Of course not. The point is, he can be blackmailed if necessary."

"Good. And the others?"

"Straight-arrows, nothing to hold over them. One of them once had a mistress." "Big deal."

"Exactly. We just have to rely on them being good, loyal Americans."

Will recalls that he took her hand. She seemed beautiful and desirable to him at that moment. Had she reacted differently it probably would have been the beginning of the only love in his life.

"You're tired and scared and you need a friend."

"Hello, friend."

"I'm a colleague, Will."

"And I'm just a scared hick kid from upper Westchester. I think I need a lap to put my head in."

Her response was to call the security service and ask them to post a guard outside his room.

She accompanied him back to Fuller and helped him get settled. "Everything you own stinks," she commented offhandedly.

"Call the laundry."

"They have a laundromat."

"I thought I was in a hotel."

"With GI soap? I'll hire a day laborer to get you clean. Maybe if we soaked your clothes in Oxydol for a couple of hours."

"Find me fresh clothes. My suitcase is still in Roswell, anyway."

"We can manage a suit by morning, I expect."

"I'm a forty-two long. Remember that. I don't want to be forced to wear a bag."

That was the last thing he remembered until he woke up abruptly at three-thirty A.M.

The room was dark except for a line of light coming in under the door. Will felt reassured; a faint smell of cigarette smoke told him that his guard was at hand, no more than twenty feet away.

In the next instant he discovered how very far twenty feet can be.

There was somebody crouched on the foot of his bed.

At first he thought it was a shadow, but as his eyes adjusted to the light he could see that the form was solid and very much alive.

He called to the guard—and all that came out was a puff of air. His next thought was to turn on the reading light that was clipped to the head of the bed.

A small man sat there as solid and real as any living person. Will called out again but there was only more hissing.

Will cannot describe the man in detail but his impression is distinct that this was a human being. He had the disquieting impression that it was a child, a boy with a huge, bobbing head.

Will threw back the bedsheets and started for the door. A hand pressed against his chest, delivering what felt like an electric jolt. The man's arm was clad in silver cloth.

Will remembers vividly how startled he was by the effect the touch had on him. Blackness came around his eyes.

"It's all right, Willy, it's all right," the creature said. His voice was ugly and low and rattling as if his lungs had given out. "We're going to capture you, Willy."

It took him an hour to mutter the rest of this story. Will is terrifically reticent about sex, and even after all these years the embarrassment of talking about what next took place was painful to witness.

First he felt a terrific blast of pleasure in his groin. Then fingers were touching him intimately and their strange electricity was pouring waves of

pleasure into him. In the shadows he could see the head come forward, closer and closer. He thought that he saw the face of a demented child. The lips smacked wetly.

Will toppled back into the pillows, swooning with terror and pleasure. An instant later his body gave a spasm and he experienced a terrific blast of sexual release. "It's all right," the thing repeated, "it's all right, Willy."

My heart went out to Will as he described enduring an intimate and protracted exploration that he was helpless to prevent. All the while it continued the voice kept repeating that it was all right.

As far as Will was concerned, it was very far from all right. At last the strange creature withdrew his hand.

The bed springs creaked as he jumped down to the floor.

He took a few steps toward the window and the next thing Will remembers the creature was gone and he was screaming. This sound the guard heard. He responded instantly. The door swung open.

Will managed to quiet himself down. He could not tell the man what had happened. Finally he croaked that he'd had a nightmare. He apologized to the guard.

He could not tell anybody that he had just been, in effect, raped. It was a secret he kept for forty-two years, until yesterday.

In his day homosexuality was the darkest of secrets, a deep personal shame for any man. Had he been able to gain access to his own sexuality, I suspect that he might have discovered that he was somewhat attracted to men.

As the guard left he called out, "Get me a pot of black coffee. And if I fall asleep wake me up." "Yes, sir."

He lay down to wait for the coffee. It was a long moment before he was aware that somebody was stroking his cheek. "Sleep, little one," said the voice of the strange man. Will's eyes flew open.

He was alone.

He buried his head in the pillow. "Stop," he shouted, "for the love of Mike stop!"

A sweet voice sang in response. "Sleep and rest, sleep and rest, mother will come to thee soon."

"God help me! Stop them! Stop them, God, stop them!" Then the world faded to black and he slept. The guard said in the morning that he tried to rouse him but couldn't.

He had slept their sleep, perfect sleep, the sleep of babies and old men.

They had given him a gift, I think, the chance to see himself as he was. I cannot blame him for passing it up. It takes great courage to love one's true self.

The next morning Will ached with disgust. He loathed what had happened to him. And yet... there was also something else.

He didn't only feel attacked and raped and captured. He felt loved as he had not since he was a boy.

Cherished, even.

This did not reassure him, and for a rather odd reason.

As son of a master fisher of trout, he knew the secret of the stream, that the man who takes the best fish is the one who loves them truly, and feels a genuine compassion as he drags them exhausted from the water and drops them to suffocate in his creel.

He was just like that, Wilfred Stone, a fish being loved to exhaustion.

And he was just about out of fight.

Chapter Twenty-one

His forty-eight hours of grappling with the others had reduced him to a furtive, huddling creature aching with secrets he dared not tell. He was closer to a complete breakdown, I think, than he realizes even now.

It was in this state that he held his first meeting with the scientific team that became the nucleus of the group that formed under MJ-12.

Three of the four scientists were bursting with confidence and good fellowship. Two weeks ago he would have craved the company of such men and counted them as critical assets to the team he was assembling. Now he had no more faith in them than a tired commissar might in the latest rabble of slaves from Moscow's dungeons.

There was Walt Roediger with his churchwarden pipe and academic demeanor. And paunchy, fluffy Dick Toole, the electromagnetics whiz who had been working until two days ago on the linear accelerator project.

The two of them stood up and advanced on Will as silently as ghosts when he arrived in the cramped conference room of Tech 21, the building Sally had commandeered to house the project. It had once been a massive generator room. Now it was mostly damp cavernous space, smelling faintly of machine oil.

The communist pathologist Gene Edwards was what Will described in his old-fashioned manner as "a real Arrow Shirt man." Tall, youthful, strong, he reacted to Will's arrival only by putting down his Los Alamos Times with a considerable amount of paper rattling. His body language spoke resentment. This was understandable, in view of the fact that he had been coerced into coming here.

They did not feel that they could risk telling anyone anything until the individual was on site and under their control. One word to the newspapers that the government was looking for scientists to study alien artifacts and the desperate and fragile cover-up would fall apart.

So he'd been forced to cooperate by a threat to his clearance. Without it he could not work on the program to which he was assigned at the University of California, which sought to understand and mediate the effects of radiation poisoning.

Edwards was the most serious security risk and his area of expertise was

the most vulnerable to disclosure.

The group's last member was costumed rather than dressed, in what Will assumed was his own carefully considered notion of intellectual disarray.

According to Sally he was more than just brilliant like the others, he was something of a genius. He was an astronomer by profession. He had been chosen for Majestic because of his combination of backgrounds. Not only did he have a degree in astrophysics and an outstanding record of discoveries and achievements, he'd also worked during the war as a propagandist. He had been damned good at that, too.

Privately they would work Gerald Benning the astrophysicist to the bone. His public role would be a propaganda function. As an astronomer of significant academic standing he would explain every sighting that came to Air Force attention, taking the position that they were all bunk.

To make the group's chief astrophysicist also its chief propagandist was a stroke of cunning. It minimized

"need to know" while it also meant that the propaganda would be fine-tuned to hide the real situation.

I have read some of Benning's books, *Flying Disks* and *The Saucer Enigma*, and they are indeed masterpieces of the propagandist's art, making utterly insupportable and absurd claims that the disks can be explained by things like nonexistent atmospheric "lensing" effects.

Benning truly was a genius and he must have been a man of courage as well, a moral man. While keeping the public calm with his debunking books he secretly fought to understand the others. And he knew that he would be publicly discredited when and if his secret labors bore fruit.

Was CIG lucky, or was their real insight at work when these scientists were picked? I have a feeling that Roscoe Hillenkoetter was a far more extraordinary man than history yet realizes.

Will made an opening speech which was designed to disarm his small audience as much as possible. "Good morning, gentlemen," he said, "I'm your resident bureaucrat here to interfere with your work in annoying ways."

"Thank you," Edwards replied in a surprisingly pleasant voice. Will had expected a file like his to whine.

"I realize that none of you know exactly why you're here."

"But we're damn interested," Benning said. "I just gave up a week's telescope time at Palomar, so this had better be good."

"Gentlemen, this is probably the single most important thing that has ever

happened."

"Tom Dewey's decided to get off his duff and whip Harry Truman," said Walt Roediger around his pipe.

Edwards looked disgusted. "This is supposed to be important. That excludes both Dewey and Truman."

"Gentlemen," Will said, "we've captured a flying disk and three of its occupants and we would like you to participate in a program of greater potential impact than the Manhattan Project—"

"Hold it," shouted the hitherto silent Toole, "did you say a flying disk?"

"I did."

He burst out: "Poppycock!"

He would not be the first to submerge fear beneath a shout of derision. Will quickly learned to use that tendency of the intellectually arrogant as a tool in maintaining secrecy. A man proud of his own intellectual attainments does not want to believe in superior aliens, not when their mere existence threatens the validity of his knowledge and therefore his self-integrity. I believe that this is the reason that scientists such as Carl Sagan continue to delude themselves about the reality of the disks.

Will decided that the best way of responding to Toole's outburst was to ignore it for the moment. "You must understand that we have a need for absolute secrecy. There is substantial evidence that our alien visitors are extremely hostile."

Edwards shook his head sadly. "Of course. The only motive strong enough to bring intelligent life across the universe turns out to be conquest."

Out of exhaustion and nervousness Will downed an entire cup of coffee, almost gagging with the heat of it.

There were sweet rolls and he began gobbling one.

Roediger stared at him. "Mr. Bureaucrat, this is about the most unnerving pause for refreshment I have ever endured. Will you get on with it, if you can stand to stop feeding."

"These sweet rolls would be good if they had more than the single raisin among them."

"Hostile aliens! Talk!"

"Yes."

Toole's eyes twinkled. "I'd want proof. Absolute proof in the form of a corpus delicti to autopsy."

"Dr. Edwards will be starting his autopsy in fifteen minutes."

"I'm beginning to suspect that you aren't kidding."

Sally pointed to the large double doors at the far end of the room. "The disk is through there. The bodies are in cold storage next door in T-22."

"I'm going to autopsy these things?" Edwards had gone pale. Roediger gave Will a frank look.

"There's physical material? This disk is what—I remember the papers saying something about debris being recovered."

"A rawinsonde. It was a rawinsonde that was recovered. I think that was the official verdict." Dr. Toole folded his arms.

"Gentlemen, we ought to begin. First, this project is going to be tightly compartmentalized. That means that every research team reports only to its own supervisor."

"No cross-fertilization?"

Will wondered if Toole rather than Edwards was going to prove the more difficult.

"Initially there will be. But when we begin to gain some perspective we will divide according to subject area.

At that point cross-fertilization will stop and need-to-know will replace it."

"Stupid, but predictable," Toole said.

"I would like to begin with a walk-around of the disk. Then we will observe Dr. Edwards's first approach to our most intact body." I went to the doors and pulled them open.

There was absolute silence. Then Toole spoke. "It looks a bit like something from a movie. Is it a prop?"

"No, Doctor, it is not." Roediger walked up to the disk.

"I'd like to go inside. Is it safe?"

"It may be partially operational. Personnel entering it have experienced extreme time disorientation. We don't know why."

"Time," Dr. Toole said. "In what sense?"

"A man subjectively perceived himself as being inside for a few minutes. He was actually gone for nine hours."

Benning was examining the damaged area. He reached his arm in and waved it up and down. "I wonder if we have a time machine here."

"Could such a thing exist—I mean, as a frankly physical object?" Roediger touched the edge of the disk as he spoke.

"Has it been tested for radioactive output? Are there disease factors

possibly involved?"

"The AAF men who found it put a Geiger counter on it," Sally said.
"There is no radiation."

"What about X-rays? Neutrons?"

"Doctor Benning, the main reason we're here is to develop a program. To make a beginning."

"Mr. Stone."

"Yes, Dr. Toole?"

"This temporal effect interests me. Is there a written report? Were any measurements taken, data gathered?"

"The man went on a brief reconnaissance into the vehicle, carrying only a flashlight. Nobody can account for the fact that nine hours passed, least of all the man himself."

Edwards regarded me. "Were you the individual who entered the craft?"

"Why do you ask that?"

"Just answer the question."

"Yes is the short answer."

"Then I have another question."

Will managed a smile. A weak one, I suspect. Edwards had a quick and challenging mind.

"My second question is, why do you look like that?"

"Like what?"

"Like you haven't slept in days, like you've just lost a great deal of weight. Did being inside the vehicle affect your health?"

"I went in, located and retrieved the best-preserved of the three bodies, then exited the craft. I apparently kept telling the people waiting for me outside that I was fine, and not to come in after me. They questioned me every fifteen minutes for the full nine hours. I don't remember saying a thing to them."

Dr. Roediger got a flashlight from the box of equipment Sally had arranged. He peered into the craft. "This is obviously living quarters. Wrecked by an explosion."

"The thing came down during a thunderstorm," Sally said.

"How odd," Edwards commented.

"Why odd?"

"That somebody this advanced would still have trouble with thunderstorms."

Roediger spoke. "Obviously they wouldn't. I think that we can safely assume that this thing was intentionally crashed. It's a plant."

"Complete with dead crew?" Benning said. "I hardly think so."

"Maybe the crew was supposed to eject. Maybe they don't care about things like dead crew." Roediger pulled himself up into the device.

"Doctor, don't do that." Will's voice revealed his fear.

"I won't go any farther in. I just want to get the feel of it."

"Gentlemen," Sally reminded them, "the first order of business today is the autopsy."

Edwards flared. "This is ridiculous. You want me to autopsy the bodies of apparent alien beings with no preparation, no prior knowledge of the anatomy—nothing at all to go on."

"It's deteriorating too rapidly. We can't wait," Will said.

"It was X-rayed last night," Sally added. "The whole body. The films will be there to use as a guide."

Will was relieved when Roediger emerged from the disk,

"There's decorative work in the paper screens," he said. "Flowers. Yellow primroses, I believe."

"Yes, we noticed that."

"And purple writing on the walls."

"Calculations, I thought."

"I wonder if it isn't poetry? Things written by men far from home." Roediger worked with his pipe.

"You probably shouldn't smoke in here," Sally said.

"Of course."

They were like bees in a flower garden, the way they circled and danced about the disk. They examined its skin, measured it with tape measures, took notes on the clipboards she had provided.

The scene from the night before kept replaying itself in Will's mind. He could still feel those clammy fingers on him. As a matter of fact, he feels them to this day. He said to me, "I'd been taken to one hell of an ugly place in myself."

Rape is more than an act of violence against the body, it is an assault on the soul. Worse for Will, though, must have been the fact that he had felt such a strong response.

"It's all right, Willy." Had he accepted those words, he would have been a free man. Even if he had still died alone, he would have been able to look

back on a life with some love in it. I feel sorry for the man, never having been loved, never except when he was a tiny boy.

"Gentlemen," Sally said, "we have to get to the autopsy right now."

"We have three cadavers," Will added.

"And one middle-level pathologist," Edwards said. Will was worried by the bitterness in his voice. Was he going to let them down?

"You have adequate credentials," Sally said.

"Adequate! You need the best man in the world for this. What about Rowland or Dowling? Why me, plucked out of a pretty average sort of a career? Arguably, this is the most important autopsy that has ever been done. Why me?"

"And what about the rest of us? We're all good, I'll agree to that. But where's Fermi or Oppenheimer or John Von Neumann? Frankly, Miss Durby, why any of us? Where are the great men?" Benning's eyes flashed.

"I'll tell you why people like that aren't here," Toole said. "People like that can't be coerced. They also can't be fooled."

"You're all good men," Sally replied. Her voice was smooth, as if she hadn't heard Toole's implications. "We don't want people who might attract press attention simply by their movements. We had to find excellent men who weren't publicly visible."

Edwards was looking more and more unhappy. "Which brings us to the issue of secrecy. You are obviously desperate to hide this whole business, even from a security-cleared community like Los Alamos. I think it's fair to ask your reasons."

"We're still just feeling our way. There have been incidents that suggested hostility. But we aren't sure of anything. Until we are sure, I think you'll agree that things should be kept under wraps."

"I can accept that," Roediger said quickly.

"The people have a right to know." Edwards.

"I think it's all damn good fun," said Toole. "It's probably some kind of psychological test—"

Will was fascinated by the man's stubbornness. "You still don't believe the disk is real."

"It's made of paper and tinfoil, and the ribbing is dark-brown wood. Wood! I'll say I don't think it's real. I think it was made in Hollywood."

"The tinfoil, as you call it, cannot be damaged in any way by any means we have yet applied. It's incredibly tough."

"What kind of testing has been done? Are there reports we can read?"

"Dr. Toole, the testing was ad hoc, in the field. We fired bullets into a piece of the foil. Tried to burn the paper, break and saw the wood. We couldn't."

"They came in a ship of tinfoil and paper." Absently, Roediger tapped his pipe against his leg.

"Extraordinary."

"What's extraordinary is that the rest of you apparently believe this."

"Of course I do, Dr. Toole," replied Roediger. "If it was less than extremely strange, I would have my doubts."

Toole gave Will such a long searching look that he felt he should add something. "You can reserve judgment until you see the bodies."

"Actually, I believe you now," Toole said. "Not because of this ridiculous disk. My reason is simple, Mr.

Stone. I believe you because you are so incredibly scared."

Will could hear something dripping in the depths of the room. "I think that you should all witness the autopsy," he said. "If Dr. Edwards will agree."

They all followed Edwards into the autopsy room.

COPY ONE OF THREE

INITIAL FINDINGS UPON EXAMINATION
AND AUTOPSY OF THE BODY OF AN
APPARENT ALIEN CREATURE

1. External Appearance

This body was observed to be in a state of significant deterioration. It had been preserved with formaldehyde solution but not otherwise dissected.

The cadaver was 44 inches long with a weight of 27 pounds when the preservative solution had been drained.

The external appearance of this cadaver was of a human embryo with an enlarged cranium. Hands and feet were normal. Finger- and toe-nails had been pared. Fingerprints of a swirl-left pattern were observed and taken. All ten fingers and toes were apparent. There was some vestigial webbing between first and second fingers and toes .

Sexual organs appeared to be those of a male. They were in an embryonic state and revealed no evidence of pubescence.

Ears were partially formed, and showed some evidence of surgical intervention. Folds of skin had been drawn out from the surface of the scalp in an apparent attempt to create the impression of a more fully developed ear than was actually present.

Lips were vestigial and the mouth contained no erupted teeth. The nose was also in an incomplete state of growth and had also received surgical intervention, resulting in what appeared to be a very thin and delicate organ.

Eyes were distinguished by extensive surgical intervention. They were almond-shaped and by far the most prominent facial feature. The eyeballs were not matured and appeared to have been sutured with artificial lenses of an unknown type. Because of their extremely unusual condition, dissection of these eyes was not attempted.

2. Dissection

An incision was made from the thorax to the scrotum. The skin was first extended from the fascia and the fascia was observed to be consistent with the appearance of an immature human male. The fascia were then dissected and the internal organs were observed. The position of the heart was observed to be vertical, as would be consistent with a very early fetus, prior to the fourth month. The organ was prominent and was weighed to be 1/70 th of the mass of the body. When the organ was dissected it was found that there was direct communication between the two auricles through the foramen ovale. The Eustachian valve was observed to be large. A ductus arteriosus was observed to communicate between the pulmonary artery and the descending aorta. This ductus opened into the descending aorta just below the origin of the left subclavian artery.

Alterations in the structure of the circulatory system suggested that this body had been surgically corrected to detach it from placental dependence in an artificial manner. The stomach was opened and found to be free of any food substances. The cardiac orifice was apparently atrophied, although the deterioration of the corpus made this difficult to determine. It is possible that this individual did not eat.

The liver was prominent and it was clear that the blood of the umbilical vein would traverse it before entering the inferior cava. The umbilical vein itself had been severed of its placental crown and returned to the circulatory system by a means that was beyond the scope of this dissection to establish. The lungs were not developed. There were lateral pouches on either side of the central diverticulum, open through into the pharynx.

The larynx was somewhat cartilaginous and the trachea was developed. It is probable that this individual did not breathe any more than he ate .

The means of sustaining life is unknown, if he was ever alive in any practical sense .

The cranium was dissected and it was found that the skull was formed of exceptionally thin and pliant cartilaginous material, appearing to be bone precursor that had been affected in some manner, making it more than usually thin and delicate. The brain itself was extensively and surprisingly formed.

There was an unknown cortex superimposed on the forebrain and extending as far back as the fissure of Rolando.

Because of this extraordinary formation it was decided not to pursue dissection of the brain at this time. The organ was extracted and placed in fluid preservation pending further study.

Overall, this corpus presented the appearance of a human embryo of three or four months duration that had been the subject of considerable alteration and modification, some of it obviously surgical. Other modifications , such as that of the brain, were harder to understand. In addition to the alterations, there was the matter of the size of the body and the relatively mature condition of the epidermis and nails. It would appear that this fetus was separated from its mother and brought to a semifunctional state by artificial means.

3. Conclusion

This is a human male fetus that has been subjected to forced maturation without normal gestation. Its degree of functionality while living—if it ever was alive—is unknown.

TOP SECRET—MAJIC

SUBJECT: AUTOPSY REPORT # 2

DATE: 7/14/47

COPY ONE OF THREE

INITIAL FINDINGS UPON EXAMINATION
AND AUTOPSY OF THE BODY OF AN
APPARENT ALIEN CREATURE

1. External Appearance

This body was observed to be in a state of profound deterioration. It had not been preserved but was delivered in a container of rubberized canvas, to which some of the tissue had adhered. The cadaver was 36 inches long with a weight of 8 pounds. The external appearance of this cadaver was not of a

human type.

The skin appeared smooth and a dark bluish-gray in color. There was no clothing on the body. There were no genitals and no way of determining sex, if any. The nose consisted of two slits, the mouth was a small opening that did not appear to be supported by an articulated jaw, and there were holes in the position of ears. The cranium was round and large in proportion to the body and the eyes were almond-shaped. The eyes were closed and could not be opened without damaging structures, due to condition of decaying tissue.

Arms and wrists were very thin. The hands displayed a three-digit arrangement without thumb. The arms extended to approximately three inches above the knee. The three fingers extended directly from the wrist, with no palm.

2 . Dissection

The body was opened from crotch to chin. A green liquid emerged from the incision. The skin was not backed by fascia, and the bone structure appeared to be a cartilaginous substance of light green-blue color. Internal organs were observed but their function

was unclear. The thoracic and peritoneal cavities communicated and there appeared to be no respiratory system and no stomach. The esophagus was vestigial and dissipated before reaching another organ. There appeared to be two multichambered hearts and it was surmised that body fluid could be pumped rapidly. There was an extensive circulatory system that involved three different types of vein. Some material was extracted from one of these systems and suggested possible waste, leading to the notion that waste may have been exuded through the skin.

The fluid removed from the body was analyzed under the microscope and found to be a vegetable substance, chlorophyll-based. It is possible that photosynthesis was the means of obtaining energy.

The cranium was dissected and it was observed that a ridge of cartilage separated the brain into two completely isolated components . The brain was severely deteriorated, but appeared to be extensively fissured and divided into numerous lobes. Because of the deterioration the degree of bilateralism of the two halves could not be determined with any accuracy. This cadaver exuded an unusually foul odor.

3. Conclusion

This is not a cadaver of a kind previously observed by or known to this pathologist. It appears to be a form of creature utilizing elements of both the

animal and the vegetable.

Chapter Twenty-two

An hour after Hillenkoetter got the autopsy reports Will received an urgent telex: return to Washington soonest. He flew by light plane to Denver and connected with the United Main-liner, scheduled to land at Washington National Airport at eleven P.M.

He'd had only fitful sleep for three consecutive nights, and had been operating under numerous incredible pressures, ranging from the efforts of the Air Force to take over the project to the repeated personal assaults from the visitors.

The least thing could unsettle him, and he found himself wanting to weep over the simplest problem, like whether or not it would be impolite to remove his shoes on the plane.

He kept trying to tell himself that the episodes he'd had might have been dreams, and yet he knew that they weren't. They were physical experiences—horrible and impossible, but entirely real.

Every time he dozed off the image of the little man with the bobbing head would reappear and he would wake up pouring sweat. It would take him fifteen minutes just to control the nausea, and sometimes he could not.

He was running entirely on coffee and cigarettes. He sat smoking and staring out the window, trying to think of someone in whom he could confide.

A psychiatrist was obviously out. He had all the symptoms of what was then called dementia praecox and would be so diagnosed. When they landed at Washington National it was past eleven, closer to twelve.

A fog was rising from the Potomac. But for the lights and bustle associated with Will's flight the airport was empty. He was met by a young CIG man with a sign, "W. Stone."

This cheerful kid took his bag and conducted him to a black Chrysler. He assumed that he was on his way home to a bath, clean pajamas and blessed sleep.

They were turning onto Pennsylvania Avenue when he realized that their destination was the White House.

For a moment he was furious, but on reflection he realized that this was inevitable.

The fact that he was being driven this hard is a testament to the level of concern felt by the President.

Nobody had ever even questioned the basic assumption that this was an invasion by aliens with military ambitions.

Will was led into the Cabinet Room by a White House guard in full uniform and looking at midnight like he'd just been boiled clean and pressed to a razor crease.

The room was jammed with people, hazy with smoke and blazing with lights. Huge color pictures of the disk and the aliens were on every wall. The President was sitting at the far end of the table with a pot of coffee in front of him. Hilly and Forrestal were beside him. Van sat along one side of the table with the other Joint Chiefs. Eisenhower was there, looking extremely grim. There were a number of civilians present whom Will did not know.

When he appeared all conversation ceased, every head turned to face him. The silence was absolute.

He barely managed to keep on his feet, such was his fatigue.

"Mr. Stone," the President said, "I'm glad your plane was nearly on time." Was he expected to make a presentation?

"May I see the agenda," he asked.

"There is no agenda, young man," one of the strangers said in a thick Middle European accent. "There is only you." Will fantasized stepping through a window and racing across the lawn, escaping into the night streets.

Vandenberg tossed a photo of the most startling of the visitors down the table. "We are given to understand that this is a deformed human child," Van said quietly. "Could you explain that a little further?"

"Well, that's what the pathologist found." "But look at it," Eisenhower said. "Does it look human to you?"

"I don't think I'm ready to say. All I can do is point to the fact that it has perfectly ordinary fingers and hands, and that the pathologist is a good one. His finding was that it was a surgically altered baby that had stopped maturing at about five months gestation. The fingers were even manicured."

"Young man," said one of the older gentlemen there, "I am Dr. Kenneth Rhodes of the Ringer Clinic."

Hilly spoke up. "Dr. Rhodes is one of the leading embryologists in the country."

"To take an embryo of that maturity and somehow cause it to grow larger without maturing further—that's a complete impossibility. As the cells grow

they also mature. This is—well, this is in the nature of things."

"I don't think that creature is in the nature of anything, Doctor. We saw all sorts of signs of surgical intervention. God only knows what else was done—drugs, electricity. Could be anything. If that creature lived it was human. We found it in the company of two obvious aliens. According to Dr. Edwards none of these creatures could have lived long, if they ever lived at all. But nevertheless, they are what we found."

The President suddenly slapped his hand down on the cabinet table. "I want to know what the hell's going on here and what I'm supposed to do about it. If that thing is human, where did it come from? Whose baby was it?"

"Mr. President—"

"Not you, young man. I've got five of the leading scientists in the world here. Gentlemen, tell us where that baby came from."

"And what about the 'hivelike' living quarters," Forrestal asked. "Does that mean communist?"

Despite the President's admonition, Will spoke up. "I don't know what it means. Who said the living quarters were a hive?"

"We got a telex from Darby while you were en route," Hilly said. "They've begun making a blueprint of the interior of the disk."

"Hivelike," Will repeated.

"Are they communists?"

"I don't have any idea, General Eisenhower!"

Forrestal's eyes were almost popping out of his head. "Aliens in advance of us and they're communists. We must hide this at all costs."

"I can see Pravda now," the President said. "We have seen the future and it is communist."

A deep silence followed. Finally Van filled it. "We need to decide on a response. I think that we must prove to these people that we are sovereign in our own territory, land, sea and air."

"I agree," Truman said.

Eisenhower gave Will a challenging look. "How? Do you have any thoughts?"

"We have to face the fact that they're far ahead of us."

"How far?"

"Terribly far."

"Examples?"

"The condition of the fetus is an example. To us it is a human fetus—or

was one. But somehow it was almost certainly functioning. The thing lived, breathed, thought. We do not know how that could be."

"I'll tell you what I think," the President said. "I think this damn infant was stolen from some family and monkeyed with by those—what are they, anyway? What was that stuff about vegetable material in the autopsy report?"

"The truly alien ones were more vegetable than animal. That was the key finding."

"Little green men," Eisenhower said. "Literally."

"More bluish-gray, actually."

"I think this is a kidnapped child," said the President. "That's my concern. And that's the reason for the order I have issued to the Army Air Force. Van?"

"The Air Force has orders to seek, engage and destroy the enemy. We will fire on these disks, gentlemen, and we will bring them down."

"Citizens are having their babies kidnapped," the President added.

Absolute silence filled the room. The President alone remained animated, looking from face to face with a strange half smile on his face. He must have looked like that at the moment he told his cabinet he was going to drop the bomb.

The decision was absolutely characteristic of Western civilization, the American government and Harry Truman himself. It was in its essence highly conservative. But ours is at core a very conservative civilization.

This is why it has survived so long, and why it has absorbed so many changes without altering its essential form.

Will also held his tongue. Unquestionably, it was a moment when he should have spoken out. I want to blame him for not doing so, but I cannot. He was at his very lowest ebb, he had just endured too much. Above all, I blame the visitors for his silence. Had they not put him under almost impossible pressure he might have had the psychic energy to intervene.

But that was probably their purpose: to test him, Truman, all of them, to the absolute limit and see then what they brought forth of themselves, peace or war.

Eisenhower was the first to speak. "I'd think a lot of questions would be answerable before you did that," he said. "A thing like that could have unpredictable importance."

In later years Eisenhower would become almost completely impossible to understand, but his locutions in the late forties required no more than a

moment's extra thought.

"Unpredictable consequences," Truman snapped. "Do we have any ideas on that?"

"It's too early for us to make a cultural evaluation," Dr. Rhodes said.

"I want ideas!"

Van responded. "Mr. President, we have a five-hundred-mile-an-hour airplane on the drawing boards."

Hearing this, the President seemed to become suddenly exhausted. "Look, this thing first appeared over Roswell. In other words, over Roswell Army Air Field where our atomic bombers are located."

Van offered more disturbing information. "From May twenty-seventh to June thirteenth the 509th demonstrated its capability to deliver nuclear warheads to targets at intercontinental distance during maneuvers out of Wendover Field. This weapons system works, and that is the first time we demonstrated it.

Two weeks later the aliens started nosing around and getting in our hair."

The President continued. "Then we had soldiers go missing. And that estimate you wrote, Mr. Stone, and the missing persons reports for '44 to '46 suggest that people in the civilian population may be affected. And now this—this—I don't know what to call it—"

"An artificially deformed baby," one of the scientists offered.

"—living in a communistic hive," Forrestal said.

"Look, I've got a feeling we're going to have a war with these people and I don't know a goddamn thing! Not a goddamn thing!" Truman was actually ranting. Will saw his weakness and he was horrified.

"There are certain things that we do know." The scientist with the Middle European accent looked around the table. "First, they do not wish to annihilate us or they would already have done so—"

"Unless they're bringing up the big guns right now!"

"Well—"

"Well, nothing, Dr. Rosensweig! I'm telling you there could be an invasion coming. And as far as this communist business is concerned, maybe that's why we were singled out and they weren't—they don't need to be invaded because they're already communist."

Dr. Rosensweig spoke gently, trying to calm Truman down. "What 'they,' sir?"

"The Russians, man! They aren't getting treated to this or they'd be

screaming in my face right this damn minute, you can bet your britches! Maybe they're being ignored because they're already communists."

"We know so little."

"Hell, they live in a hive! A hive! My blood runs cold."

"Yes, Mr. President, but the fact remains that they have not yet harmed us. Another thing we know is that their craft are vulnerable to thunderstorms. Meaning high-intensity electrical discharges applied in a random manner. Lightning."

"So what? How does that help me regain control of my airspace?"

"There is the beginning of a weapon in that idea, if we must have a weapon."

The President slammed his open hand on the table. "I need weapons now! Give me aircraft cannons with atomic bullets! Give me something that will damn well work right this minute!"

Eisenhower spoke again. "Within the joint mission capabilities, Mr. President, there are capacities that we have that we can apply in this case workably."

"And get this man a translator!"

"He means that we have joint mission capabilities that can be useful now," one of the other brass hats said quickly. Eisenhower flushed purple, obviously furious at Truman's jibe.

"We have substantial forces worldwide," Eisenhower said. "These forces can be raised to a higher level of alertness, with an increase in ground security and air patrols. It is a matter of casting your net, and you will get your fish."

Truman set his jaw. "I don't want to fail. I don't want to see a situation where we shoot and miss."

Van responded. "Mr. President, we will shoot and miss. But we will also shoot and hit."

"The metal is strong," Dr. Rosensweig cautioned.

"The things are made out of tinfoil, sticks and paper," Van said. "This is what they have. The foil is formed out of millions of tiny, absolutely uniform welds, according to Darby's telex. Amazing. They have good tinfoil, good sticks, good paper. But we have bullets that travel a thousand miles an hour and are made of hot lead.

We will have some success."

"I want to know generally if you are opposed to armed action or for it,"

Truman asked.

Forrestal replied, "I'm very uneasy, frankly. If it wasn't for this communist thing—"

"Yes or no!"

"Well, yes, given the situation. But proceed with caution."

"Hilly?"

"We must show that we are in control."

Will's heart sank. He knew that he should be speaking out. He knew that the President was making a terrible mistake. But he still remained silent.

"Dr. Rosensweig, what does your committee think?"

"Gentlemen," Rosensweig said as he looked around him, "does any scientist here want to shoot?"

The other scientists were silent. The President shuffled his notes.

"As you requested, sir, we discussed this at length before we came here," Rosensweig continued. "We feel that you should wait for developments. An effort should be made to make contact before shooting. There are those among us who believe that certain factors of human history would repeat themselves elsewhere.

Throughout history we have been getting more ethical. We think that this will also prove to be the case with our visitors."

Truman leaned far back in his chair. "More ethical? Now you've really scared me. I fear men who don't know history. Auschwitz is more ethical than something we did before? I would say that we are getting less ethical.

If they are more advanced than us, I can make a case that they will be monsters."

He looked from man to man in the room. The depth of his cynicism amazed Will. How did he go on, thinking as he did? And yet his eyes twinkled. No matter how serious the situation, Truman was always bursting with good humor. A complex man.

"Gentlemen, I am ordering armed confrontation. And I want a service coordinated response along the lines that General Eisenhower appears to have suggested. Worldwide, every U.S. base is to be alerted that they will rise to meet any and all unusual aircraft, and they will shoot first. Now, it's late and young Mr. Stone is obviously dead on his feet. Thank you."

He abruptly left the room. Will stood there blinking, surprised, confused. It was over. We were going to shoot.

And fail. Of course we would fail.

There was a low buzz of conversation as papers were gathered and briefcases snapped shut. One of Van's men began pulling the photographs off the easels and putting them in a large portfolio.

Van came over to Hilly, motioning Will to join them. "The President wanted me to tell you that the disk is being moved to Muroc in California for military analysis. We've got to find the weak points."

"What about MJ-12, the scientific group," Hilly asked.

"That'll have to wait. Everything is military right now. Until we regain control of our airspace."

Will thought then that we were never going to regain control of the skies—or of the dark night, or even of our own minds.

He had the feeling that we had just made a catastrophic mistake, and were lost.

Headquarters, USAAF

Top Secret Eyes Only!

7/13/47

ARMY AIR FORCE

ORDER NO. 677833

SUBJECT: UNCONVENTIONAL AIRCRAFT

TO: All Operational Commands, Continental US, Generals Commanding.

1. Sightings or reports of unconventional aircraft such as glowing objects, flying disks or airships will receive immediate scramble emergency response.
2. Such aircraft will be attacked and shot down without warning.
3. Gun cameras are to be turned on during encounters.
4. Combat flight rules are the order of the day.
5. There will be a report to higher command the moment any sighting takes place.
6. No public announcements are to be made without authorization from higher command.

Chapter Twenty-three

It was not long before the Air Force had its first engagement with a flying disk. Subsequently there were a number of such engagements, the most famous of which took place near Godman Air Force Base on January 7, 1948. In this incident Captain Thomas Mantell was killed after flying toward what he described as "a metallic object. . . tremendous in size." There are substantial public indications that Captain Mantell's body was never found.

In February 1948 Brigadier General Cabell, chief of the Air Intelligence Requirements Division, asked that each air base in the U.S. be provided with one interceptor on a continuous alert basis, to be equipped with

"such armament as deemed advisable."

Will told me that no disk was ever shot down, and the program was abandoned in the early fifties because of the high casualty rate and the zero success level.

The first engagement took place in July of 1947, barely a week after the "shoot to kill" order had been issued.

This incident occurred over central Kansas.

Tech Sergeant Eddie McConnell was almost but not quite napping over his radar screen at approximately three-thirty A.M. when his half-closed eyes detected a blip and he heard a beep as the antenna of his radar swept through 160 degrees. He hit his mike and announced, "Traffic incoming one-sixty."

"Incoming one-sixty," the traffic controller replied.

Neither man was particularly excited. The American Airlines Skysleeper sometimes passed overhead at this hour. Or it could be a private aircraft.

The radar operator watched his screen. "Traffic at flight level five approximate. Speed seven-sixty."

Now the controller sat up in his chair. "Verify that speed, please, sir."

"Seven-six-zero."

The controller was aware of order to engage unusual craft, they all were.

He thought that he might have a scramble situation here, and so informed the officer in charge. "We have a bogey three o'clock at level five incoming seven-six-zero."

The officer jumped up from behind his desk in operations and vaulted up the steps to the tower. "Lookout, what do you see at three o'clock," he yelled

as he ran.

"A star, sir."

"Give me those binocs," he said. "Get radar."

The voice of the radar operator came through the loud-speaker. "Radar here, sir."

"Is it exactly one hundred and sixty-two degrees at this moment?"

"Yes, sir, speed now seven-eighty."

One of the men in the tower whistled. Everybody was watching the star now. "I'm calling a scramble," the operations officer said. "Hit the button."

The claxon sounded. Seven pilots were in the ready room drinking coffee and telling stories about girls they'd bedded or failed to bed. "I hate unannounced drills," one of them shouted over the blaring of the airhorn. "Your coffee gets cold."

The flight line lit up as the pilots ran toward their planes. Mechanics were hauling quick starters for the powerful Merlin engines that drove the P-51's. The pilots hit their seats, buckled in and started their checklists.

"Flaps extended. Turbochargers on. Coils on. Heat. Prepare to turn over." One after another the engines sputtered and coughed and charged to full power. The ground crews pulled the starters away and signaled with their flashlights that the planes could proceed to the active runway.

"Wing abreast formation," said Major Jack Mahoney, the squad leader.

Headsets crackled. "You will attack incoming bogey," said the ground controller. "This is not a drill. Hoprat, this is not a drill."

"Oh, boy," one of the pilots said.

"We gonna get ourselves some action right out here in apple pie country." "No chatter, men."

Control ordered them to seven thousand feet so that they would come in above their quarry.

"Arm cannons." No test firing was allowed off the range area, so they didn't carry out that procedure.

Lieutenant John "Lucky" Luckman fingered his firing button, wishing that he could have a test volley. He watched the altimeter. "Passing three," the flight leader said, just as his instrument indicated the same. Right on the money.

"Heading eight-two," ground control announced. "Wide turn. Mark. Execute," Major Mahoney said. Luckman began a wide turn to the right. Combat rules meant no lights, so he couldn't see the position of his flight

mates without looking hard for the blue flames of engine exhaust.

"Two-two-one. I have a faulty compass." Without his compass at night Joe Lait was flying half-blind. He could easily lose his bearings.

"Turn back, two-two-one."

"Roger. Two-two-one leaving formation. Returning to base."

Now there were six of them.

"Two-two-three. Instrument failure. My board is dead."

"Drop back emergency two-two-three."

"Lights on at base," the controller said. His voice was now high with nervousness.

A dead board was an odd malfunction. Lucky Luckman had never heard of such a thing. He'd never seen it on the simulator. He surveyed his own instrument cluster. Everything was perfectly normal.

"Level seven."

"Continue heading eight-two until you have visual contact."

"Two-two-four. I have a hot manifold. Returning to base."

"Affirmative," the flight leader said.

That was a more/normal problem, Luckman thought. He didn't like the idea of being without a board at night, but a hot manifold was something you could deal with.

"Two-two-three. Cannot see base. Repeat, cannot see base."

"Two-two-three, your heading is zero-five-six. Make a slow right turn."

Herbie Nelson in 223 would be lucky to get back. If he hit any cloud he was going to drop a wing and spin for sure.

"Two-two-two. I have lost my compass. Lost my board. Turn—"

"Repeat, Two-two-two. Two-two-two?"

There was no answer from Ev Wiley. "Call him, Lucky."

"Two-two-two. Do you hear me? Two-two-two?"

Silence.

Lucky thought to himself that there was total electrical failure on that airplane—or worse. He was scared now.

Only three aircraft remained.

Then he saw it, suddenly huge and dead ahead, and not where it was supposed to be at five thousand feet.

"I have visual. Twelve o'clock."

"I do not see, repeat do not see." That was his wingman, handsome Bobby Virgo. Why the hell didn't he see it, was he blind?

"What is our position?"

Ground answered. "Approximately fifteen miles from target. Flying abreast in ragged formation. Separation four thousand feet."

"That thing looks closer than fifteen miles."

"I just lost my engine," Bobby announced.

Lucky broke into a sweat. Not Bobby. He loved his friend, loved him too much. "Jesus, Bobby."

"Leaving seven. Spin!"

"Bail out, Bob!"

There was no reply.

"Bobby! Jesus, Bobby!"

"Hey, Luckman! Snap out of it!" Lucky twisted his head around, looking for some sign of another plane. He didn't know who had spoken. "Two-two-five," he announced. "What is my position, control?"

"Calling two-two-five. Two-two-five come in."

"This is two-two-five! What is my position, ground?"

"Two-two-five is off the board with two-two-one. Calling two-two-one, calling two-two-five."

"Bobby's in a spin, you jerks!"

"Calling two-two-seven. Two-two-seven?"

That was the major. Where was he? Luckman was closing on the disk fast.

"Two-two-seven. State your position."

The major didn't answer ground. He was gone, too.

"This is two-two-five! I'm still closing! Can you hear me? Can anybody hear me?"

No reply. So his radio was out. He was on his own.

The disk was now huge, filling his gunsight. He had no more time to scream uselessly at ground control.

Luckman dropped his nose to keep the disk in his gunsight. He cut in his supercharger and increased revs to the maximum. The airframe screamed. Exhaust flickered past the cockpit. Airspeed passed through four hundred. Four-fifty. The disk grew larger and larger and larger.

He got as close as he was planning to get. His hands were shaking. At the least sign of trouble he was getting the hell out of this thing. He suspected that he had dead friends out there. Somehow the thing had shot them down.

He pressed his firing button and watched his tracer disappear into the

disk. "On target and still closing," he said automatically. "Firing. I observe tracer hits."

It has been universally true that the others have remained passive unless attacked. Even when they are attacked it takes a powerful weapon and an aggressive man to get a reaction. According to Will absolutely nothing we have thrown at them has ever had the least effect.

Will coached me very carefully before I began to write about what might have happened to Lucky Luckman after he pulled his trigger. He believes that he met both Luckman and the missing soldier, Charles Burluson, under very extraordinary circumstances, so his speculations about their fates may not be without foundation.

Of course we cannot be certain that it went as we have surmised. But it most likely did, or very close.

Lucky's story also gave me a chance illustrate the visitors' most astonishing capability, which is certainly their mastery of the soul.

A soul is part of the physical universe, and can be affected by appropriate technologies. It can get sick and be nursed and even medicated. Often the visitors say that they are doctors. They are, but it is the soul they wish to heal.

Souls can die, in the sense that they reject all identity and become simply an empty mote of potential.

Sometimes Will seems to think that the visitors are like farmers, and they are here harvesting souls.

One moment Luckman was flying an airplane. The next he was tumbling totally disoriented through a hell of wind. For an instant his mind was blank. He did not register what had happened and went on trying to push a firing button that wasn't there. Then the wind spread his arms and he saw light flash past his goggles.

He realized what had happened: he was outside of his plane.

A rush of adrenaline made his heart start hammering. His vision cleared for a moment, then curtains of black started coming in. Lights were shooting past like meteors. Tracer? Stars? Ground lights? He couldn't tell. He tried to get his right arm in to pull on the ripcord, but he was spinning so fast his arms were like iron bars extending away from his body.

He couldn't see at all. Was he blacking out? Couldn't tell. He was sick. He hurt, shoulders, legs. He was pissing, goddammit.

Falling! You are falling!

Tomorrow he was going to wash his car. How would he ever wash his

car? Goddamn, it was so sad.

His throat hurt. He couldn't close his mouth. The wind was tearing his cheeks open, ripping at his lips. It was so cold it felt like his skin was burning. He tried to get his arms in. He had to. God, this was death. This was what it meant to die!

Why the fuck did I ever join the Army Air Force? Oh, God help me. Momma. Momma!

I didn't mail your letter, Momma! I'm going to miss you, Bobby.

There was blue light here. With a slamming thud his arms wrapped around his chest. He was in a blue tunnel. He tried to pull the ripcord but it was no good. His hands looked like wet masses of blood-soaked cotton. There was blood all over him, too, sloshing inside his flight suit.

He tried to talk, couldn't. His throat hurt awful bad and he wasn't breathing. Straining, his chest bursting, he fought for air. Then there was something dark blue and covered with tubes and things, and it was coming toward him. Dark blue. He saw it vaguely, out of agonized eyes. He was smothering. He felt his bowels give way.

Then he was naked. He was a baby. His mother was carrying him on her shoulder. "Rockabye baby in the treetop, wind will blow and cradle will rock. ..."

Momma always sang it like that, in her bell-perfect voice, "Wind will blowwwwww. ..."

What's going on here, I'm not a baby! He squirmed, trying to see around him.

That woke him up.

He was lying on a table in a featureless gray room. Aside from stiffness he didn't feel bad. He could breathe.

The air stank of sewage. He sat up. "I've gotta wash my car," he shouted, "My friend and I—Bobby—" A hollow feeling filled him.

What the hell had happened? Bobby had been in a spin! He swung his feet off the table. This was the goddamn infirmary. He could smell the iodoform. Out the window you could see the base parking lot and the maintenance hangars beyond.

He got up. "What the fuck'd you do, fill me fulla morphine? Hey! Nurse! Somebody!"

The door was funny. At eye level it had a round, shiny black thing embossed on it. No knob. "Open up! You got one pissed-off pilot in here!"

Hey!" Again he thought of his friend. "What the hell happened to Bobby Virgo?

I've gotta know!"

He ran to the window. What the fuck, he'd go out that way. He could see his own damn car not a hundred feet away, his dusty-green DeSoto.

He raised the window. Now what? The outside looked double-exposed. There was a ghost DeSoto hanging over the real one. He blinked, shook his head. Somebody behind him said his name. The voice was an eager, hissing whisper, nasty. It sounded like a vicious fag, like those bastards he'd gotten tangled up with in St.

Louis . . . and he saw their greasy pale bodies . . . lying where the DeSoto had been.

He whirled around. "Nurse!"

There were three men standing there in pale uniforms with crossed Sam Browne belts. They were about four feet tall and they looked as though they were made of puffed-up marshmallow. They had big, black eyes. A smell of sulfur had been added to the medicinal stench of the room.

He reacted instinctively, rushing the three men. He grabbed the first one he saw and hurled him full force against the wall. There was a splat. His head bobbing, the thing crawled away. Blue-green goo dribbled down the wall behind him.

The other two held their hands out to him with the wrists limp, like they expected/him to kiss their long, pale fingers. The hell, he was gonna beat the shit out of these guys. He took a swing at the nearest one. It was a good punch, on the money—but he found himself whirling around, swinging through the air.

"Man," he yelled, staggering, "you got too much morphine in this soldier!"

What in hell was he doing, taking swings at nightmares. He dropped onto the bed. Had he gone crazy? Was this a goddamn padded cell?

Then he noticed the smear on the wall. He went over, felt it. Real. Sniffed it. Smelled strongly of sulfur and some kind of plant. Garlic? Celery? No way to be sure.

Either he had knocked hell out of a real mushroom man or this was about the shittiest salad dressing ever mixed on this airfield.

He was staring at the mess, thinking about tasting it to see if it was salad dressing when something bumped gently against the top of his head. When he

looked up he found himself staring directly into the ceiling. He looked down. He was standing on nothing. He'd floated up to the top of the room.

"Oh, fuck."

On its own his body rotated to a lying position. Then the door opened with a faint pop and he went shooting down another blue tunnel. He yelled but couldn't move a muscle.

He was aware when he stopped moving, he knew that he wasn't in any infirmary on earth; he wasn't a stupid man. He'd figured out where he was. A hell of a thing.

Realizing all this, he stopped being belligerent and became careful. He wasn't about to make these people even more angry. His mind raced with excuses for why he had already practically killed one of them with his bare hands, and maybe more when he'd fired into their ship.

They looked awful. He just hadn't expected to see them. He was really a very gentle guy, all he'd done -

"Is shoot at us and then injure one of my soldiers."

She was standing across the room, a perfectly normal-looking woman of about thirty. She had soft features, auburn hair and a small mole on her right cheek. Her dress was blue plaid. She reminded him very much of that strict Miss Bonny who was his fifth grade teacher. Miss Bonny had a big willow switch she kept behind her desk.

She came slowly closer, sort of drifting across the room. It looked weird and he got scared. He backed away.

As far as he knew Miss Bonny was still teaching school. So what in God's name was she doing here?

"Why do you call on your god? I'm the only one here." He hadn't talked. Did that mean she could listen to his thoughts?

The closer she got the more he backed up. All of a sudden something grabbed him hard from behind. Miss Bonny hissed, her eyes glaring with evil triumph.

He twisted, screamed, tried to run. But his legs wouldn't work. When he attempted to hit her his arms remained at his sides.

"Can you not see me as I am?" she asked. He frowned. That wasn't Miss Bonny's voice.

His whole life seemed to fall away from him. It was nothing, an annoying weight.

But he wasn't finished. He still had to wash his car and spend the evening

with Bobby and send his momma that letter -

"We will find work for you, child."

Then he saw her truly, flood and fire and war and flower, a baby struggling from the womb and a crone heaving in death, a woman at morning, splashing water on her face and she so young that his heart hurt, and a gate forever opening to secret light.

"You poor child. Your life is interrupted before the time of its completion."

He saw lovers he would never touch, moonlit nights he would never wander, lessons unlearned, a man who would never know real love, all because he had died.

Then he saw his father standing before a grave with his hat in his hand and he was so little and simple, was Dad, and all his hard work was buried there.

"Why would they bury his work?"

"You are remembered there."

"I'm here. I'm okay!"

"You are not in good fortune. You have died."

"Lady, I'm just as alive as I ever was! Look, my hands, my skin!" He looked down and saw his own torn flesh.

"You cannot live like that. I must move your soul, little one."

When the woman put her hands on him the illusion that she was human faded away. "It's an alien," he thought, "she's one of them."

Her laughter tinkled. "There are no aliens, child." There was gentle derision in her tone.

He was dead! Hot tears poured from his eyes.

She began to look more deeply into him. In the middle reaches there was a yearning, unacknowledged element of the female. He felt her mind probing into his own and he recoiled. She was stronger than he was, though, and she drew him inexorably into his earliest memories, seeking the core of his fears. And she did not forget that his innermost self was female.

Suddenly he was back home in Billings. He was on the potty. He didn't like this, there were things in the water and she was making him sit on them! They were going to come up and get him. "Momma, them is spidos in here! Spidos, they gettin' me!"

She came at him, her voice buzzing, her fingers darting.

"Nonono! Stay right there." He felt the overwhelming power of her hands

holding him against the spider hole.

His howls of terror echoed in the quiet house. Then he was on the floor. An elderly nurse was bending over him. To see her broke his heart, there was in her face such love, such caring, such total decency.

She picked him up. He lay in her arms. How could a fragile woman like this pick up a full-grown male? Then she turned him over and said in the softest, kindest voice he had ever heard, "Behold the flesh that was thine."

A savagely injured young man lay on the floor. From the way he was dressed he appeared to be aircrew.

Lucky wanted to touch his young face, so innocent!

"That was thee."

"That?"

"Yes, child."

In an instant he understood. She had rescued him—his soul, his essence—from his own dying body! He was overwhelmed with such gratitude that he could barely contain himself.

"Never fear, child, for you are with us now. No more harm shall come your way."

She took him through the great ship. The first room he came to contained rows and rows of what looked like little incubators, and each one contained a tiny baby. There was a hush here, as if in a church.

"They are the children of man," the old nurse said. They all turned as he entered, watching from their strange incubators with huge, black eyes. He'd never seen babies that looked like that, or babies that were so aware of you. "We are growing a new humankind, dear child." She drew him through a door and into a place where there were tall, strong bodies hanging in tubes of pale pink liquid. "This one will fit thee very nicely."

He felt himself drawn as if magnetically toward one of the tubes. The body seemed almost alive. He looked into its eyes. There was a roaring sound and then the fluid was draining from around him. He ached as if he'd been asleep for a thousand years.

When the fluid had gone down he took a choked, rattling breath. The air smelled strongly of human blood, an odor he knew from when his carrier had gotten hit by a kamikaze in August of 1944. There had been beautiful young sailors torn to pieces all over the deck.

There were forms outside. Then the tube was opened and three children stood before him. They were wearing silver coveralls. They smiled in unison.

He could see that they were grown versions of the babies in the incubators.

Behind them stood a tall, blond man. He was more than six feet. "Hi there," he said.

"What's going on?" When Lucky heard how high his own voice sounded he cleared his throat.

"My name is Charles Burleson."

"I'm John Luckman, lieutenant, USAAF." What made his voice sound like that?"

"I was in the Fifty-third Infantry. Grunt infantry."

"I was flying a fuckin' night fighter when—" As Lucky was speaking he glanced down at himself.

His voice died.

He was looking at rich breasts and long, smooth legs. When he breathed the breasts heaved; when he shook his leg, the woman's leg shook.

"Hey!"

"Calm down, you're okay."

"What the hell is going on here!"

Three voices came into his head, speaking in breathless unison. "It's the one that fitted you best."

"I'm a goddamn frail!"

"You and Charles Burleson can be mates."

"No!"

"They're artificial bodies," Burleson said. "They take your soul and move it."

"Get me the hell out of here! This is crazy! Nuts!"

Her voice came into his head. It wasn't a vague whisper as it had been before. In this new body she spoke as loudly as if she had been at his side. "In time you will find much happiness this way, child."

"I'm not a woman!"

"I think they're kind of new at this," Burleson said.

"I've got a major problem here!"

"Maybe we can convince them to move you later."

"Jesus, I can't feature this! I just can't feature it!"

"You have to begin orientation. We've only got a short time before our mission."

"Could you tell me what is going on?" Burleson laughed. "Be patient, John. First things first." "Well, who are all these kids around here, and what

the hell's the matter with their eyes?"

"They're human kids, sort of altered. She's raising them. They're really incredible people. You'll like them."

Burleson suddenly stiffened. A sad expression crossed his face and his voice changed subtly, as if he was being used to speak the words, rather than speaking them himself. "I'm going to ask you to close your eyes.

When you open them you'll be standing in front of a mirror." Lucky closed his eyes. "Now open them, child."

Before him in the oval mirror that had stood above his dresser at home was a face unlike any face he had ever seen. He blinked and it did, too.

It was as if a shadowy woman from deep within him had somehow floated to the surface. He felt charity toward her, and a curious sort of love. "I think my jaw is kind of heavy for a woman."

"Is it?"

"But I have nice eyes. Really nice eyes."

"It is well that you like them."

The mirror disappeared. Burleson sighed, relaxed. "She comes into your mind and takes you over sometimes. I don't think they actually have bodies of their own, not the ones in control."

Lucky wondered if he would get lipstick and stuff, but didn't dare to ask. A guy wasn't supposed to like that stuff.

"Sure!" came three eager voices in his head. "We can get all that!"

The three children came tumbling into the room in a state of great excitement. They were dragging clothes, shoes, they had a makeup case, all sorts of things.

A few minutes later he was wearing a flowered dress and comfortable if somewhat clunky shoes. He was extremely embarrassed by the clothes, but he was also a resourceful person and he was fighting to get used to it, to make this craziness work.

"Good," said the voices, "that's very good!"

"Dance?" asked Burleson.

"Yes," she replied. "I will dance with you." Slowly, without music, the two creatures moved about the room, their shoulders occasionally brushing the huge tubes where other bodies like theirs waited.

"I didn't know I had a soul."

"We all have them, and these people can do all sorts of stuff with them. Incredible stuff. You'll see wonderful things, man."

"I was a man."

"You were a male body. She says that inside you really wanted to be a woman. You've become your own truth."

"Were you a woman they made into a man?"

"I told you, fella, I was grunt infantry. A bad ass. And they gave me a lot harder time when I came with them."

"In what way?-"

"Let's just say I had to pay a debt. But that's over now and this sure as hell has the U.S. Army beat."

Lucky laid her head against the grunt's shoulder. Somebody turned on a radio, and they danced to

"Something to Remember You By."

"Let me lead, asshole."

"Okay, give me a break."

It was going to be possible to dance with Charles Burlison.

Chapter Twenty-four

Will stared at a laconic report from Eighth Air Force Command. Seven pilots had set out. Five had returned.

One had lost his engine and spun his plane into the ground. Another had attacked the disk and disappeared, plane and all.

He dropped the report on his desk. At this point he felt that he could not go on. They had broken him.

In those days they understood nothing of the motives of the others. According to Will it is now theorized that they will try to take certain souls to their absolute limits, to literally shatter them so that they can become free of all the ingrained ideas that had imprisoned them.

It is a testament to Will's strength that he did not go mad or, as happened in a number of other cases, commit suicide. Instead he took action on his own behalf.

Maybe he didn't choose the perfect response. But it was the best he could manage: he ran.

Will and his father had shared many peaceful hours on the trout streams of upstate New York.

Herbert Stone had passed his membership in the Trout Valley Club on to his son. Will realized that he could get on a train and be at the club by midmorning. It was nearly ten. The late express would leave for New York in half an hour. He put his papers in his safe and locked it. On his desk he left a terse note that he'd gone fishing. No phone number, no address.

He intended to tell Hilly his plans personally. He picked up the phone and dialed the admiral's home number.

Two rings and Hilly answered.

Will put down the telephone. He told himself he'd call when he arrived at the club. He packed a bag full of cotton shirts and canvas fishing duds. Most of his gear was at the club, so he didn't need to worry about carrying an eight-foot fly rod on the train. I looked at pictures of Will in those days. There are only three, all taken of other people. His appearance is always incidental.

He was an excellent dresser. His suits were tailor-made and he had a Panama hat. He must have looked the image of a well-heeled businessman as he left his apartment building for Union Station.

The Pennsylvania Railroad's "Night Flyer" had a drawing room available through to Poughkeepsie. He engaged it and made a long-distance call to the garage in Poughkeepsie where he and his dad used to rent cars.

Since his father's death in 1945 Will had not been able to visit the club. So this journey was not simply an escape from intolerable pressure, it was also an attempt to come to terms with deep grief, and perhaps even to reconnect with the only love Wilfred Stone had ever known.

Sitting back in the cab, he remembers feeling as if life itself had suddenly returned to him. He enjoyed the geniality of the cab driver, of that old, self-confident America.

Our America is a ship in a dark ocean.

"Have a good day?" the cabby asked.

"Good enough."

"Y'know, I just don't remember it got this hot during the war. I think all the gunfire overseas broke up the air and made it cool."

"It's sweltering."

"You're sure?" He gave an easy laugh. "Here we are," he said.

When Will casually described his train trip to me my heart practically broke. What we have lost!

He was welcomed onto the shiny black train by the sleeping-car porter, he took his bag and showed him to his drawing room. "You'll want that suit ironed," he said looking at Will's wrinkled seersucker. "Just put it in the door when you're ready."

He inspected the room and the lavatory, then pulled down the bed and smoothed the blanket. "Would you like an immediate makeup, sir?"

"I think I'll read in the club car for a while after we get started."

"Well, sir, there's a midnight snack in the dining car starting at eleven. Or I can bring you something in here if you prefer."

The train pulled out at 10:29 on the dot. Will let fifteen minutes pass and then made his way to the club car at the back. He didn't expect to find anybody there but lonely commercial travelers, but there was always that pebble of hope.

He ordered a sidecar and a pack of Luckies. LSMFT—"Lucky Strike Means Fine Tobacco." Also stood for

"Lord Save Me From Truman."

He sat with the commercial travelers watching the lights of Maryland flash past and dreaming idly of Her, the woman he hoped would soon walk in

and take the chair beside him. She would be dressed in navy, with dark hose and high, high heels. On her head would be a pillbox hat and around her neck a discreet but expensive string of pearls. She would be perfectly made up right down to her spectacularly red lips and fingernails. She would order a Manhattan and lean back sipping it and smoking.

And Will would say hello. She'd laugh, raise her eyebrows and say something like "again," and they'd be off to the conversational races.

An impressively tall blond man came in instead, and took her chair. When the waiter came up he asked for a glass of plain water without ice. He sat erect, staring straight ahead. Like Will, he wore a seersucker suit.

Oddly, there was a conventioner's tag on the lapel, but no name. Will knew nothing of artificial bodies. He never imagined that a group of them were on a mission that involved him.

"Warm evening," Will said.

The man slowly turned his head. Will recalls a twinkle of laughter in his eyes, that and a seriousness. His eyes were violet, quite startling. Will was fascinated, and he introduced himself. "I'm Wilfred Stone," he said.

"Going up to the City?"

"Where are you going?"

"Actually, I'm off to do a little fishing."

"Where?"

"On the Beaverkill. I'm a member of the Trout Valley Club—"

The man got up and left without a word. Of course, he had obtained the information he had come for.

Mildly perplexed at his odd behavior, Will watched him stride out of the car. He finished his drink while the Baltimore passengers were boarding, then went to the library at the end of the car and picked up a best-seller. He believes it was *The Story of Mrs. Murphy*. It proved to be a study of a woman's life rendered in the most meticulous detail. Normally he would have turned away from such a book, but he found himself desperately eager to participate in another, more normal life. Her loves, pregnancies, hopes, her happiness and sadness—he drank of it all like a thirsty man at a mirage.

The Story of Mrs. Murphy took him through the late supper of eggs and bacon. He followed it with a brandy Alexander and a cigar.

He sipped his Alexander and nursed his cigar through the midnight hour. Finally he returned to his room. The porter had opened the bed and laid out his pajamas, slippers and robe. He called for a final cognac and retired with

the book.

In the distance the whistle wailed and the bells of guarded crossings sounded through the rolling, muted night.

He awoke in a vague way while they were stopped in New York and his sleeping car was being attached to the "Broadway."

As they pulled out of Penn Station the porter woke him. He shaved and went to the dining car, where he had breakfast as morning light glimmered on the Hudson.

He left the train in Poughkeepsie, a troubled man in a freshly pressed linen suit. He knew it would only be a matter of a day or so before Hilly found him and called him back. But he needed this time, had to have it.

Even at nine-thirty the day was already steel-blue and hot. As he walked up the hill to Van Alter's Garage to get his rented Ford, he felt himself sweating into the suit.

He guided the car down to the Hudson ferry and crossed to the country side of the water. There was a yacht flying up the river, and a couple of excursion steamers were dashing along with flags snapping and ladies holding down their summer dresses.

West of the river the hills rose wild. "Dad," he said into the throbbing privacy of the car.

"Never attack your enemies, Wilfred. Confuse them." So his father would say. "If a man accuses you of a crime of which you are innocent, you may be sure it is what he would do in the same circumstances." He was wise. "Never sign a contract with any man with whom a handshake would not suffice."

Silent tears appeared in the corners of Will's eyes when he talked about his father. I could never find out quite why his grief had stayed with him for all these years. Their relationship must not have been complete. I suppose that Herbert Stone lived on in his son.

After he died Will had discovered that his father had done undercover work for the Treasury Department for years. He was flabbergasted. It was his father's contacts in the secret intelligence community that had led to Will's OSS appointment.

To Will's knowledge his father had never kissed him.

Will arrived in Roscoe at eleven-thirty, passing the Roscoe Inn, the scene of many a fisherman's evening, then turning off onto the narrow road that led up the kill to the home of the Trout Valley Club.

The club was housed in a rambling Catskills mansion with enormous

porches. In those days Ann and Jack Slater ran the place for the membership, keeping it open from March through October.

Before writing this chapter I took Will's journey. I will pass over without comment my experience on Amtrak -

not because it was bad, but because it made me long for the wonderful rail journey Will had so casually described.

I rented a Taurus in Poughkeepsie and drove to Roscoe. I found the former location of the Trout Valley Club, and even the place where Will had fished—and had himself been so deftly caught.

The club has been torn down, but its view of the Beaverkill was unparalleled. From that hill one can see at least three miles of water, and each of those miles can tell a thousand stories.

This place, this stream, was the birthplace of American fly-fishing. I am no fisherman, but when I went to Roscoe and saw that dancing water, I was captured a little by the romance of it.

Will lived that romance. "Mr. Stone," said Ann Slater as he climbed the steps. "Mr. Stone, I can hardly believe my eyes. I thought you'd moved away."

"You can't move away from the Beaverkill."

"I know that and you know that. But people do try."

He found that his gear had been kept in perfect condition. His fine Orvis rod was supple and his reel oiled. His lines and flies were ready for him. His heart ached when he looked into his tackle box. All of his father's best flies had been moved in, and some of his older or less successful ones discarded. The rest of his father's gear had been discreetly removed from their cabinet.

"Mr. Dette came in and rearranged your flies," Ann said. This man was one of the most famous flytiers in the Catskills, and a longtime personal friend of Herb Stone. His daughter still runs Dette's Flies.

Will walked back to the kitchen where Jack was preparing lunch for the four club members who were there.

Upon entering this place he really felt as if he had left the outside world and all of its difficulties behind. "I hope there's a good hatch," he said as he entered the kitchen.

"My Lord, Wilfred Stone. I thought this place was getting toney at last. Guess I was mistaken."

"What's for lunch, Jack—rat stew?"

"Well, the other fellas are having a little beef stew. But I can fry you up a

couple of rats if you want to catch them. I think there are some living in the bottom of your cabinet."

"I'll take beef stew."

"As far as hatches are concerned, we had quite a big hatch last night, and they took some fish this morning with caddis."

"How's the evening action been?"

"Well, if there's a hatch going its pretty good just after sunset. Nine would be about right tonight."

"That suits me. I'm going to spend the day loafing and then I'll fish."

After lunch Ann put the radio on the porch and brought Will a pitcher of lemonade and the Herald Tribune. The club had a good aerial, so he was able to pick up many of the New York City stations. He remembered only that he used to listen to WQXR. I looked up an old radio log in the library and found that he would have heard a program called Tom Scott Songs at that hour.

The Trib was full of Truman and the Russians and the Marshall Plan. Will found it strangely thrilling to read the public doings of the President, knowing so much of his most secret affairs.

It was also extremely painful. He finally turned to the "Thronton Burgess Nature Story." I also looked that up.

Will had read about the summer habits of the martin.

Nobody disturbed him, which was as well; he could not have spoken without sobbing aloud. He was a man without emotional resources.

Exactly in the state the visitors wanted him, in other words.

Once a large, black sedan drove slowly past the house. The other fishermen appeared. They were nobody Will knew and he has forgotten all but the idiotic nicknames by which they introduced themselves: Whisker, Pootie and Boy. They had no fish, and the luncheon talk was of throwbacks, big ones hanging under logs and better days.

As far as Will was concerned, he had left the others in Los Alamos. He could not have been more wrong.

Part Four

THE FLOWER

*Except a corn of wheat fall into
the ground and die, it abideth alone;
but if it die, it bringeth forth much fruit.*
- John, 12:24

Chapter Twenty-five

The Chronicle of Wilfred Stone

The Beaverkill at the turn of evening: mist rising, the rocky bed muttering with the water's many voices. I had gotten well into an isolated stretch and was just making my first cast when I saw a figure standing on the bank.

I was astonished because of who it was: a largish blond in a white dress printed all over with yellow primroses. She could have been the twin of the oddball I'd seen on the train.

She hung back in the bushes, her hands flittering nervously along her sides. Was she embarrassed by her dowdy outfit?

She had distracted me enough to ruin my firstcast. The fly dropped into swift water.

"Hello," I said. Her heavy jaw made her unattractive, but she had nice skin. She did not reply.

I pulled back my line and started preparing another cast. All the while I was aware that she was watching me.

It really wasn't very polite; nobody local would stand on the riverbank and stare at a fisherman.

Finally I waded out of the stream. "May I help you?" I asked as I clambered onto the bank. I had absolutely no premonition of danger.

When I straightened up from my climb I found myself face to face with her.

Why had she come so close? She was taller than me and her eyes were pools of shadow. Her lips were set in a mean line. I was suddenly aware that I was alone on the stream and far from help.

Her muscles rippled; she was obviously strong. I got the idea that she might be an inbreed from back in the hills. There were said to be a few pockets of such people in the Catskills.

Then I smelled something awful. I was thunderstruck. A familiar and terrifying odor of sulfur clung to her.

I threw my rod aside and leaped down the bank into the water. Fighting my hip boots I plunged across, keeping to the rocky shallows. I grabbed

brush and tugged myself up the other side. There were fallen logs and brush tangled in the rocks, and beyond them huge cypresses. I ran into the darkness, limbs slapping my face, roots tripping me.

That smell, that smell! It was a woman, though, an ordinary woman!

A vision of that face came into my mind as I struggled toward the bluff beyond the woods. If I could get up there I could circle back and cross the Beaverkill on the covered bridge, and from there make my way back to the clubhouse.

The boots were never meant for this kind of activity. I could barely keep my balance, let alone move quickly.

I soon noticed that she wasn't behind me. Finally I stopped. I was well into the stand of cypress, which was so dark that I risked colliding with a tree trunk if I didn't feel my way.

Obviously I'd lost her. But I didn't relax. That smell—I could never mistake that smell again if I lived to be a hundred. She had to be connected with them. I started up the bluff.

Then I saw behind me a brief flicker of light.

I didn't waste an instant. That flicker told me everything I needed to know. She was herding me away from the stream. I had to move fast or I'd never turn her flank.

She was one of their things, like the gnomie man I'd encountered at Los Alamos. I was literally dizzy with fear.

I dragged myself up the cliffs, tearing my fishing vest on the granite, lacerating my hands.

Behind me she seemed to glide through the trees like a ghost, her blue light flickering from time to time. I thought I heard her making a sound, a faint whistling.

Farther and farther up I went.

Soon she was behind me. She was climbing easily and she was very close. I pressed myself against the rocks. Now I could hear her breathing, could hear the sound of her dry skin scraping on the rocks. The beam of blue light flashed above me.

Then I smelled damp air, cave air. There was a hole to my left. I pressed myself back into it.

An instant later I saw a hand, then the top of her head. She was right here. As soon as her eyes appeared she was going to see me.

I forced myself back into the cave. I intended to go as deep as I could, to

press myself against the stone until I blended with it.

The tunnel was low. I had to go on my stomach. Moss and damp earth got into my mouth. Creeping insects fouled my hair and went down my neck.

Finally the walls spread and I was able to rise to my hands and knees. I was breathing hard now. My eyes were tightly closed; there was no reason to open them, not in this dark.

I began to be able to stoop, finally to run with my head tucked into my chest and my arms out to feel for jutting stones.

Then I heard it again, that strange cooing sound. Only it was in front of me, down deep in the cavern.

Three short, soft cries. They resonated with a tenderness of some sort, but to my ears it was the love of the leopard for the deer, of the snake for the frightened mouse.

I pulled out my lighter, flicked it but couldn't get fire. In the glimmer of the flint I saw huge shapes, old Indian paintings on the walls perhaps, and seething, glittering movement in the tunnel ahead of me.

They were here, deep in the cliffs, in the ground. God, what were they? Where had they come from?

The three cries were repeated, closer now. They were urgent, sweet sounds.

Behind me I heard her pushing herself along the tunnel. I was trapped, caught. All around me I could hear whistlings and rustles.

I couldn't run, could hardly move. A hand closed around my ankle. I yanked myself away and shrieked.

And suddenly I was falling. Wind rushed around me. I flailed and screamed. I didn't hit, I just kept falling and falling and falling.

There was light. My eyes flew open and I was staring with total incomprehension at a magnificent view. I didn't understand. Where was the cave? Where was I?

I had risen above the sunset and was in the light that ascending larks strive to reach.

The horror of dislocation so overwhelmed me that I was reduced to a primitive state. My humanity collapsed. I felt the man falling away like a flimsy costume, bits and tinsel fluttering in the sun.

My cries disappeared into the sky.

Below me the world was a purple shadow bisected by a glowing line of sunlight. Westward evening spread across the fields, and farther west the land

rested in spreading day.

Nothing was holding me up or restraining me in any way. I gritted my teeth and moaned. The impression was strong that I was about to fall. Why did they keep doing this to a man afraid of heights?

The lights of Roscoe disappeared into the general shadow of the globe. When I tried to breathe it simply didn't work. I was freezing cold. There was no wind around me. My skin began to feel tight, my eyeballs as if they were working their way out of my head.

It must feel like this for the trout to be dragged from his lair. He gasps and gulps, his eyes bulge from his head. And the fisherman, chuckling to himself over the cleverness of the capture, tosses him into his creel.

They were treating me exactly as I treated the trout, and in that there was a lesson I have never forgotten.

Now the world was glorious below me, half of it in sunlight and half blue with night. I had been pulled from out of the shadow line. It was an appropriate moment to grab me: my life was lived in that deceptive edge.

There was a heave within me. My stomach knotted, my knees came up to my chest, I retched. White foam flew from my mouth, and in that instant I felt myself lying on a floor. I gagged; I couldn't help it. The combination of shock, cold and oxygen starvation had caused the reaction. I was having a fit, flopping and spitting and choking—exactly like a fish Humping in a creel. By slow degrees my body recovered from the punishment it had received. I pulled myself to my feet. I was in an absolutely dark room, inky black.

Experimentally I put my hand in front of my face. I couldn't see it, not even with my palm touching my nose.

I went for my lighter, flipped it open and struck the flint.

For a moment I didn't understand what I was seeing in its shaky flame. Then the rows of glistening objects resolved themselves. There were dozens of pairs of huge, black eyes around me.

With a bellow of horror I threw the lighter at them. I jumped back but their long arms encircled me in an instant. I felt their black claws pressing into my skin.

I knew what these creatures were. I had seen one autopsied. "More vegetable than animal." I fought like what I was, a trapped beast.

The sentry's screams returned to my ears. He'd yelled "No, no, no" his voice rising to an absolute pitch of hysteria.

I would lash out and they would withdraw into the dark. Then there

would be silence for a while.

I would hear stealthy movement. When they touched me it felt like the skin of a frog.

I fought with the strength of the mad. They twined themselves around me, grasped me with their wiry fingers, scratched me with their claws. I kicked, I hit, I bit, around and around I turned, lashing out with my fists whenever I felt their wet, soft touch.

Again and again they came and I fought them off. I didn't think, I didn't hope, I just fought. Finally, though, I started to tire. My breath burned my lungs, my legs wobbled. All around me they were cooing and whispering, and I heard in my head a woman singing a gentle song. One of them came up to me and put its skeletal hands on my shoulders. Although I could not see I remembered from the autopsy how those hands looked: three long fingers and black, sharp claws.

I could feel the hands sliding around my back. The thing was drawing me closer. I was so exhausted that I could no longer raise my arms.

Another one was behind me now, grasping me, holding me, twining itself around me.

I screamed and screamed and screamed and they cooed and finally a voice spoke. It was like a machine talking. "What can we do to help you stop screaming?"

There wasn't a darned thing they could do! I screamed until my voice cracked and my shrieks became ragged blasts of air.

Then I could scream no more.

They were all around me, caressing me with their soft hands, their smell thick in my nostrils.

I sank to my knees.

"Can you take off your clothes or do you want us to help you?" The voice was breathless and strangely youthful, like a child of about fourteen.

Suddenly I was on the porch at home, playing with a toy when—hadn't they carried me, then?

I was a little boy then, and they had carried me, had carried me!

"You—you—"

They were touching buttons, scrabbling at zippers. There was rapid breathing and little snapping sounds. My fishing vest and shirt went off, my trousers opened.

And then there was a great deal of prodding and poking at my hip boots.

Finally it stopped.

"What do you wear?"

"Rubber boots."

"Take them off."

"Why don't you do it?"

"We can't."

"What will you do to me when I'm naked?"

"We're naked."

I toppled to the floor. I just couldn't stand up anymore. I went down in a cage of supporting arms.

There was more fumbling and scrabbling with the hip boots. Finally they withdrew. I sat up, feebly waved around me. Nothing—the air was empty.

"Pull thy boots, child."

This voice was very different from the ones I had been hearing. It was clearly ancient and full of authority.

"What will you do to me?"

"I can do with thee what I wish."

"I don't want to take off my boots! I want to go home! I'm a federal officer. My government will rescue me. We have planes—"

"You have no weapons, child."

"We have the bomb!"

"No, child, the bomb has you. Take off thy boots."

I would not.

There appeared to be an impasse. But then the boots started to get warm. In seconds they were hot. I smelled burning rubber.

I got right out of them.

A sort of chuckling followed, slow and low and terribly sinister. "Don't you remember us at all?"

I saw my red fire engine. It stood bathed in golden light, the lost treasure of my boyhood.

I reached out, put my hand on it. Yes, it was real, my own beloved fire engine, the one I'd lost when I was three.

All through my childhood I'd dreamed about it. How lovely it was, my heart ached to see it.

They'd—I remembered when I was very young . . . flying ...

The lights came on.

I was alone in a surprisingly small gray room. Although I was physically

the only person here, I had no sense of being mentally isolated. Just beneath the surface, my mind was seething with voices, images, thoughts. It was as if I was skating the short-wave band with its static and half-heard messages from far away.

Then two blond people came into the room. I recognized both of them. One I had seen briefly on the train. The other was the woman in the flowered dress.

"We are here to assist you," said the man. He sounded as if he was reading a script.

Soon I would know the secret of the disappearances. What would Hilly find of me?

Late tonight they'd miss me at the Trout Valley Club and decide that the stream had taken me. They'd search its length tomorrow morning, looking in all the places where a fisherman's body is apt to lodge. Would they find even my rod and reel? I thought not. My guess was that the woman had policed the area after I was captured.

Hilly would guess what had happened.

The government would lose balance completely. If Stone went, then they were all vulnerable.

The woman came up to me, grasped me firmly by the shoulders and kissed me on the lips. Her kiss was dry and firm and gave the impression of something a loving father might do to calm a distraught ten-year-old kid.

She embraced me in a wooden hug. She said, "It's gonna be all right, buddy."

The man in the seersucker elbowed her. "You don't sound a hell of a lot like a frail," he muttered.

The woman sent him a hard look.

He had some white stuff in his hands, which he unfolded into a robe. It was simply cut and made of soft paper. The two of them raised it over my head and drew it down.

For a moment it clung to me, then it seemed to take on a static charge and stood out from my body. I tingled.

"Come on," the man said.

Why were they like this? Were they robots?

"We aren't," the woman snapped. Her voice sounded petulant and very human. But when I asked them their names they gravely shook their heads. "Your name dies with you," the woman said. "We don't remember."

We went down a hall that was more a tunnel it was so low. I could see that it was made of paper of the same type that formed the inner walls of the ship we had found. Light came through it from the outside. The yellow flowers pressed into the paper seemed almost alive, so vividly did they glow.

We entered a round chamber that contained a circle of what appeared to my eye to be plush first-class airplane seats. As a matter of fact they were airplane seats, familiar to me in every detail. I recognized the United Airlines logo on some of the headrests, TAT on others.

When the man shoved at my shoulders I sat down. Considering his strength there was really nothing else to do.

"Are you in pain? Are you prisoners?" The woman dropped a big hand onto my own. Her utter lack of grace was extremely peculiar. One expects a certain ease of motion from a woman.

How incredibly alien they were. Had I understood then who they were, I wonder if I would have acted differently. All of my life I have wished I knew what they thought of me. It must have been an incredibly funny, poignant experience—if they had the full range of human feeling available to them in those strange bodies.

"Open your mouth," the man said. "I will not."

"Goddammit, I knew it. Look, I gotta—" He threw himself at me. He was huge and as hard as stone. I was too spent to resist him, even for a second. With one arm around my chest he held me from behind. With his free hand he forced open my jaws. I tried to clench them but his fingers were powerful. The woman had a graceful little bottle from which she withdrew a curved dropper.

My jaws were open, I was helpless. She put three drops of ice-cold liquid on the tip of my tongue. When they let me go I smacked and coughed. I spat.

"You can spit," the man said. "It doesn't matter."

"What have you done to me?"

"You needed that. You're going on a trip."

"I want to go home."

They pushed me into one of the seats. I quelled a wave of nausea, but it was followed by another, stronger one. The man reached around behind my seat and came out with an airsickness bag from the pocket.

transcontinental air transport was printed on it in red letters. I used it.

The air had changed. Far from being cold, it was now thick and hot. It was getting hard to breathe. Whatever was happening to me, my body was

being taken to the extremes of endurance. In those days we knew nothing of hallucinogenic drugs.

Without a sound the walls of the room became clear. At first I did not understand what I was seeing. A huge shining strip of light curved off into the sky. Beneath it there shone the amazingly complex surface of a gigantic sphere colored in a thousand shades of tan and green and blue.

Then I saw that it was all surrounded by reefs and oceans of stars, stars in endless numbers, stars beyond belief in a billion colors winking, as if God's own treasury had been spilled.

We appeared to be in the rings of Saturn. How far from earth would that be? I couldn't even begin to remember. However, I was completely convinced that we had come an awfully long distance in a very short time.

In the middle of the clear wall was a round doorway. It did not appear to open into the view around us at all, but revealed broad plains beneath the light of a strange, brown sky. It looked like a patch pasted on the wall of stars.

I had no intention of going through that door.

Chapter Twenty-six

The Chronicle of Wilfred Stone

The next second I was standing in a desert. It was strewn with sharp black boulders that shone dully in the weak light. A forlorn breeze fluttered my paper garment. I was aware of the fact that Saturn was a ball of gas, so I did not imagine myself to be there. I didn't know where I was. They had removed me from reality. A few minutes before I had been struggling in the depths of a cave, now I was on a desert worse than the Sahara.

I have wondered at those events, trying to determine if they were physically real or if they happened in some other way. I was here, and the grit underfoot was real and the air was crackling dry and the sky was brown.

I staggered a few steps, hitting my naked foot against one of the stones. I sat down, rubbing my ankle. I looked around.

In a way that is almost impossible to describe, this place was unfamiliar. Even the details were wrong.

Perhaps especially the details. The shape and color of the stones, the quality of the sand, all of it was wrong.

Even the air against my skin felt different.

I wasn't really thinking anymore. I was just here, my eyes looking out into the open.

Which was, of course, the whole point. My humanity had dropped away. I was still conscious, but I was an animal again.

And I was so lonely. I raised my head to the brown sky and keened. My sound was the only noise in the place. It seemed to be coming at once from far away and from deep within me, deeper than I had ever been. I took a breath, did it again. My spirit rose with the sound, for a moment to fill the empty air with the magic of being.

Then it died away and I was little again and it was getting dark.

I suspect that we made such sounds when we lived in the forest. Grabbing a rock I stood up. I threw it a tremendous long distance. It landed with an empty thud.

I raced across the plain, dodging and skipping with a grace I had never

before possessed.

When I came to a high point I stopped. Seeking for the scent of water, I smelled the air.

A growl of frustration came from my throat. The sound startled me. At first I thought there was some kind of animal behind me. Then I thought, "No, that is how you're supposed to sound."

I was me, me alone. No name, no education, no expectations. Just me.

The sky was pale and unmarked by clouds. Not far above the horizon there was a powdery brilliance, which I presumed was the sun in deep haze.

Next I scanned the horizon, looking carefully for some sign of life, a swatch of green, perhaps, or the glitter of water. Then I looked for smoke or just the outline of a building.

The place was completely empty and entirely silent.

Again I smelled the parched air. I was already quite thirsty; I couldn't live like this for long. The air was so dry that it was leaching moisture from my body. My hands looked like paper, the skin puckered and shriveled. I touched my face, feeling fissures that had never been there before. And my nose was cracked inside.

Where would I go, naked except for a flimsy piece of paper? Graceful or not, my feet were thoroughly banged up from the mad run. I don't think there was a single rock that wasn't sharp.

For the most part the desert seemed absolutely flat, but off to my right the land rose. I could not judge distances. The views, though, seemed much longer than they had any right to be.

I walked in the direction of the rising land. At least this would keep the sun behind me. What had appeared to be the gentlest of rises soon became quite steep. I wasn't going to be able to keep this up forever. My chest and head ached, my legs felt like lead, my feet were on fire.

Very suddenly I started to have trouble seeing. At first I didn't understand why, because I did not realize how fast night came. By the time I realized what was wrong the sun was already on the horizon.

It seemed as if the air literally absorbed light. The instant the disk of the sun disappeared it was absolutely dark. There were only one or two bright stars visible through the dusty haze.

God, this place was ugly.

I sat down. There was no point in walking farther without light. The dark was like ink, like something you could feel.

I wished they'd at least left me my lighter. Then I was crying bitterly. The tears came without warning. I had been left here to die. It was so damn unfair and I was so far from home.

Later I heard something, or thought I did. Now that it was dark I didn't want this. I didn't want to hear anything that I couldn't see. The sound was low and slow and high in the air. It was as if some tremendous thing was floating through the sky above me, breathing.

The breathing got louder and louder. I felt like it was right above me, huge. I cringed, waiting for it to land on me.

Instead it went away. I let out my breath.

No sooner had I begun to relax than there was a tremendous rattling noise in the distance. It got closer and closer and lower and lower and I could hear the breathing again, fast and excited. There was urgency in it, like a starving prisoner inhaling the aroma of the jailer's soup.

A new sound started up, sharp scraping. It was very regular, as if somebody was slashing knives together.

Something whizzed through the air just above me, so close that my hair was touched with a breeze.

Involuntarily I shrank away—and saw a red glow out of the corner of my eye. I looked. Redness spread along the horizon on my left. A moment later a huge red star popped up and the place was bathed in dim, bloody light.

There seemed to be a forest of thin trees all around me. It took me time to understand that I was looking at tall, black legs, many of them.

It took every ounce of my composure not to scream. I was under what appeared to be a gigantic insect of some kind, perhaps a spider. The rattling noise started again. I could see sharp mouth parts working.

Jumping, twisting, turning to avoid the legs I made a dash to get away from the thing.

It rose up into the air, making a gigantic leap. I had to scramble to avoid it landing right on top of me. Again I ran. This time I threw stones at it.

It leaped.

I evaded, but barely. I scrambled up the rise on the theory that those jumps would be harder uphill. They weren't. It sailed high into the red air and came down on top of me.

Legs clutched, mandibles scraped—and I was caught. I grabbed a rock and hammered against one of the limbs. For all the good it did I might as well have been trying to break steel pipe.

I fought against its quick, clever legs. Finally I went wild. I hit, kicked, bit. The jaws were slashing and I could see a bright green tongue darting in and out of its mouth. I was brought closer and closer to being sliced to pieces.

I could not possibly taste good to the thing. It was sure to tear me to pieces and spit me out. I was furious at dying so pointlessly.

Then the legs pressed me against the wide open mouth and I began to die.

As I sank away I saw around me a starry night of home. I was back at our old house. We were playing on the porch, my sister and I. I saw her beside me, attending to her beloved doll Ricardo. That word—I hadn't thought of it since I was tiny. The moment was bathed in a light that seemed to contain some essential emotion of loss and urgency.

There was between me and the thing that was devouring me a kinship of tremendous power. It pushed my fear aside and I lay like a raptured lover in the forest of legs.

If this was death, from where did love emerge? I was dropped on the ground from a distance of a low feet—put down gently. For an instant I saw the complex face of the thing that had held me. It looked like nothing so much as a tremendous mantis. But those eyes—huge, reflecting the red air—were not blank. I was shocked.

Somebody was looking at me. Joy rang out. There was peace, wisdom and then a cock of the head: the irony of our situation. Soundless in the charged air, laughter.

I was left collapsed on the ground, drained now not only of my culture and my name but also of my physical strength. Bit by bit I was being demolished, reduced to the simplest nub of self.

I lay staring at the sky. Did I sleep? I don't know, but when I finally felt like getting to my feet I was stiff and ached in every joint.

Keeping the red sun on my right I forced myself up the rise. As I walked I understood that I had been brought a long distance. Before me there stood the most tremendous cliff I'd ever seen. It seemed to go up for thousands and thousands of feet.

On its highest ridge there was a very distinct blue glow. The glow was pulsating. Life. So the attack had not been an attack at all. Somebody had simply been helping me. The cliff was not sheer. There were plenty of footholds, and I had already reached a dizzying height when the red sun sank below the horizon.

Again darkness came abruptly. I was left hugging the wall in front of me,

afraid to go another inch.

I don't think it was dark for more than ten minutes. When the pale sun rose again I resumed my climb.

There were moments of dizziness when I would have to stop. I wasn't in shape for a climb like this. My throat felt as if it had been packed with powdered glass. My head pounded.

Not only was I thirsty, I was also becoming hungry. I kept remembering that beef stew I'd had for lunch. Once I even sucked a bit of it from between two teeth. When that happened I hugged the rock and cried like a baby.

The loneliness came again, and stopped me for a long time.

The higher I went the more difficult the climb became. Worse, the soil up here was friable and there wasn't a single stable handhold. I had to dig down then haul myself up as the dirt collapsed around me.

Above me the blue glow was massive. I tried to call out but it was no good. I hadn't a trace of a voice.

At this height the cliff was more like a sand dune. To make headway I had to lie against it and squirm. I was so frustrated that I would have been in tears, but I had no tears.

It took me some time to realize that I'd made it.

Before me was a sparse but huge park. I dragged myself onto the surface, which I found to consist of tightly matted grass, bright green. I inhaled it, chewed at it trying to get some moisture. It was very dry.

I pulled myself to my feet. Off to my left there was a stand of tall, narrow trees. They were really huge, a hundred and more feet high by my estimation.

Directly ahead I saw a truly welcome vision, a cluster of buildings. They were obviously adobe. It looked very much like a Hopi town. I started stumbling forward.

A smell came to me on the air—or rather, a sensation. This was dampness. It loosened my drum-tight skin. It filled my nose with life, made my lungs open.

As best I could I ran.

Then I saw it. A fountain. It was made of black, shiny stone, round, with water playing out of a nozzle in the center.

I plunged my head in and opened my mouth. The water was glorious, cold and pure and perfect. I could feel my skin drinking, my mouth, sucking and drinking. Never had I experienced such raw pleasure. It was ecstatic, delicious, almost sexual in its intensity.

Finally I raised my head. Beyond the fountain there was a small garden.
In the garden stood a child. Her looks did not matter to me; what I saw
was the radiance within. I ran to her as would a youth to his perfect love.

Chapter Twenty-seven

I finally felt what I should have felt from the beginning for Wilfred Stone. My youth and arrogance had prevented me, though.

I looked at that old man in a completely new way. I reached toward him. He looked down at my hand, and then at me. In his eyes was an emotion I cannot name. It sent a jagged edge of fear through me, as if I had scented death.

"Turn it off," he said. I put down the tape recorder. He flipped the switch. He didn't actually tell me to leave out the material that follows, but that was the implication.

I do not feel that he was right, but out of respect for him—yes, respect—I took notes on this part of his narrative of the other world, rather than record it. The wise child walked quickly away, a chalky ghost in the gloom. She was the size of a three-year-old but her movements were mature.

Will called out.

She stopped when she heard him. When she smiled he sensed what he described as something almost vampiric about her. There was a sense of tremendous, overwhelming power, the night in the child.

He felt himself in the presence of tremendous wisdom. This was what it was like to be with somebody who had gone beyond the human.

His next words just popped out, as if formed from purest instinct. "Help us," he said.

The response was immediate. The next second he was back in his boyhood home in Westchester County.

The whole place was flooded with pure, sweet light. He could hardly believe it. And this was no illusion. Will says that he was there.

What's more, he remembers the event now from two different perspectives—that of himself as a little boy encountering a strange, shadowy man in his room . . . and also that of himself as the man.

The old red fire engine was there, standing against the wall opposite his crib.

He moved slowly around in his room. The wonder of it made everything seem jewellike and perfect.

Then he noticed movement in the crib. His own curly head, his blue eyes

—the Willy Stone of thirty and more years ago rose up and climbed deftly out to the floor. Will could smell his baby freshness, could hear him, see him.

"Oh God, God," he told me, "Nick, my heart just broke in two. I was so little! And in that huge, shadowy, mysterious world, the courage in the eyes —"

The wise children, the others, had brought him home to the best and purest thing that he was.

He remembered a warm, huge hand that had come out of the dark . . . and suddenly the curtains blew and the moonlight came in and he saw a huge, terrible man, a nightmare man bending over him.

He screamed, a high bullet of a sound.

Feet pounded from downstairs. Will the man saw his father's balding head shining in the moonlight as he came up the stairs. Behind him his mother floated in her lace and silk.

He stepped into the shadows.

Will as child was terrified. "Daddy! Man! Man here!"

He saw his own father engulf him in himself and carry him like a limp offering back to the crib.

Then the room fell away, growing smaller and smaller until it was a dot of light in the air, and then was gone.

The vampire child was dancing slow turns around him. She stopped and smiled a dangerous smile. And he felt nothing but love.

At the far end of the oasis there was a tall arch, and beyond it a round, tumbledown building.

He wanted to go there, but she restrained him, pushing against his belly as a clown child might against her clown father.

Leaving him for a moment she ran to a small table. She pointed. On it there was a plain gray plate and three gray pancakes. Will realized that he was ravenous. He remembers still the taste of that food, the pure flavor of the buckwheat from which the cakes were made, the sense of a freshness he had never tasted before.

There was also a wide bowl of water. The girl came and scooped it up for him and he drank from her cupped hands.

Afterward she sang to him in a whispering voice, in a language he did not know. He began to feel sleepy and lay down on his side.

Much later he was awakened by a soft hand stroking his head.

He jumped to his feet. All the weight of his years seemed to have fallen

away.

He walked, then, as his excitement rose; finally he ran to the ancient building. Where the blue-gray stones were intact their perfect fit reminded him of Inca work, but for the most part the place was cracked and crumbling.

He went up the steps and into a wide, cool hall. It was made of dark-blue stone worked with great intricacy.

When he tried to follow the labyrinth of these carvings his head began to pound. Finally he had to stop looking at the walls, the ceiling, and keep his eyes on the floor.

There was a circle of children sitting before him. It was all so very familiar. Words came to him: beyond fear there is another life.

Was this the place the dead went?

Had he been killed? Was that what this meant?

He went to the center of the circle and waited, standing quite still. He soon heard a drum beating out in the corridor. The sound stirred him, infected him, made him start to move.

The children began to chant in repetitive notes, wonderful notes.

He spread his arms and started to turn. The room whirled and the drum pulsed and chanting hypnotized him.

He remembered his own beginning.

He was moving swiftly and secretly across the sky of home. There were little flecks of cloud. He went past them and down into the spreading summer trees. He moved around a great, gnarled limb, his heart full of love and delicious with the secrecy of his coming. His movement was so stealthy that not even a grasshopper stirred from her rasping as he passed by.

Then he saw a window. The shades were drawn but he passed through them as if there was nothing there.

The room was dim and very quiet. A young woman lay on a bed, her head turned to one side. She was as fresh and lovely as new light, covered only by a thin gown. Brown curls spread over her brow. Her belly was huge.

He loved her terribly, and could not resist going closer to her. Then he began to drift downward. He could no longer float.

In an instant he was inside her womb, a glowing cavern. Her body was roaring, the heart fluttering like a tent in the wind, her whole self a bubbling, oozing bladder barely managing to contain its liquids.

He swam into the fluid of her and drank her and smelled her essential flower, and was filled with the taste and sense of her.

There began a dialogue between them, long speaking together of the days they would spend as mother and son.

He would love her as a boy, but when she grew old he would abandon her. His love for deception would replace his love for her and so she would die alone, her breast weakly shuddering, on a cot in the hallway of a public cancer ward.

He sat before me, his head bowed, tears streaming from his eyes. So this was what he didn't want recorded and why he never, ever mentioned his mother. I wanted to help him, to offer him some word of comfort but I could not. We are all betrayers, all of us.

To find true joy one must first accept true pain.

Once again he was back in his old bedroom, only not as a man. This time he was a little boy again. He was dancing and dancing. It was a moonlit night and there was danger in the air. Terrible things were happening.

He saw waves of ships crossing the highest air. They were gray disks and the streets below rang with screams.

But more people were singing than were screaming and chains lay abandoned that had weighted their shoulders.

"The lamb will lie down with the lion." The secret moaning is that the son will love the errant father, the lamb will welcome the hungry nuzzling of the wolf-mother, the rat will perish of love as the owl's talons pierce his heart.

Beyond fear there is another world.

Chapter Twenty-eight

The Final Testament of Wilfred Stone

I was still dancing hard when I realized that the magic had slipped away. The room was silent, absolutely dark.

I heard a click, saw a flash of sparks, a flame. The blond woman in the flowered dress was holding my lighter.

Around us there were dim, dancing shapes on the walls, crude old carvings. I did not recognize their origin -

perhaps they were Native American, or maybe even older. They were powerful, they spoke of dance, these flying red figures.

This was no ancient building, and the children's circle was gone. I was no longer a little boy. We were back in the cave. I felt as if I had been to death and back. I saw the brilliant thing they had done. They had stripped me of all except what was most essential, pure and true about myself.

"Will you take the flower?" she asked. In her hand I could see a little yellow blossom. "There's a field where the sins of the world are buried. The soil is forgiveness. These flowers grow there."

I wanted to take it, but when I held out my hand a terrible thing happened: I saw Sophie hanging in the Gestapo's basement, spinning slowly and urine spraying like rain from between her furiously kicking legs. A blast of hate exploded out of me and for an instant I thought that flower was the ugliest thing I had ever seen.

She laughed and dropped it to the floor. At once I had a change of heart. I wanted it. I needed forgiveness too, after all.

The way she was looking at me, her eyes so full of love and humor, I saw that the aliens, as I called them in those days, were not evil. It was us, we were afraid. "We shot at you!"

An almost quizzical look came into her face. "I know all about that." She opened her mouth to say more, but was suddenly stopped. It was as if a switch had been flipped in her brain. Her mouth moved but no words came out. "Hell," she finally muttered, "I can't tell you about it."

Then she shuddered, her eyes grew penetrating and terrible and I backed away from her. It was exactly as if somebody else, somebody much, much

greater had entered her and taken over.

Knowledge seemed to pour out of her and the whole impact of my experience struck me like a great slap.

This was what mankind was seeking, this incredible state that I had entered. I was beyond the boundaries of reason and the prison of history.

It was as if I had been in the forest of Eden, but with a tremendous difference. No longer did I wish to eat of the tree of knowledge of good and evil, for I had consumed the last of its fruit, and digested it all.

I was truly free, and this was what mankind was about.

"My God, what I've learned—"

"Have you?"

"I want the others to know. I've got to tell them. The President's gone to war with you! I've got to explain!"

"You have made your decision."

"No! This would be—it's terrible—we can't shoot them—you—are you—what are you, anyway? Are you part of them?"

"There is no 'them.' Only us. We are part of us, and so are you."

She was holding out what looked like a plain, ordinary glass of milk. "You're thirsty, you need a drink."

She was absolutely right. I took it and swallowed two huge gulps before I realized that it was incredibly bitter, so bitter my head was splitting. I spat milky spray but she grabbed the glass, before I threw it down.

Then she was on me, taking me in a headlock and forcing the rest of the substance down my throat.

I choked and struggled but she was like a creature of steel, not a living body. "You will forget," she said, "until the latter days of your life."

What did she mean?

Then I realized that I was getting dizzy. The wise child, the children's circle, the ancient school—it was all becoming distant and indistinct and unreal.

My memories—but I couldn't forget! I must not! Finally she let me go. "You've given me a drug!"

"Yes, so that you can forget."

"For God's sake, I've got to tell them!"

"They aren't ready."

"Give us another chance, for God's sake!"

"When the time is right, you will take your chance. Nothing will be given."

You are charged with the task of keeping our secrets until man is prepared to hear the truth."

The milk of forgetfulness made the room turn slowly round and round. The last thing I saw clearly as I collapsed was that dress. In the flickering light it became a field of yellow primroses.

Then I was standing in the stream. I had just dropped a cast. When I drew my line back I found that the fly was gone. How strange, I tie good knots. Then I remembered, hadn't I cast into some swift water?

It seemed only a moment ago, but also ten thousand years. A woman had come up ... or a deer . . . yes, a deer had ruined my concentration.

I glanced at my watch. It said five-thirty. But how could it when I'd gone out at eight-thirty?

The light was very curious. Although the sky was cloudless there was no sun. In the western horizon I could see the pure stars of morning. The east glowed green and white.

I am not a fool in the woods: obviously it was dawn.

Just then I heard a bell down in Roscoe.

A trout slapped the surface of the pool I'd been fishing and I lost interest in the confusion of time. Knowing nothing of the style of the hatch that had drawn him to feed I simply chose a lucky fly and made a cast that turned out to be as soft as a drift of spider web.

My lure had hardly rippled the surface when I had a smart strike. He took me and ran for cover. My line shook with his life. I had always secretly loathed the wolf in me and loved the lamb. That was all changed. Now the wolf was my pride as the lamb was my joy, and I played that fish with skill beyond anything I had known before. My heart burst with love for him. I played my line and wept with the sheer beauty of it, the amazing goodness of the situation.

My reward was a phenomenal catch, a four-pound brookie struggling in my creel. To take such a large brook trout anywhere would have been marvelous. But from this stream in 1947 it was a miracle.

I stopped fishing then and returned to the club.

I was met with amazement.

One man reached his hand out, ran his fingers down my chest. I saw that my fishing vest was all torn. When in the world had that happened?

"You get lost up a branch?" somebody asked.

"No."

Then I realized the truth. I must have been out all night. How could that be? Had I fished in some water of dreams?

"Thank the Lord you're all right," said Ann. Her eyes were hollow.

"Yeah. I took a damned good brookie."

They did not exactly shun me, but they looked at me out of the sides of their eyes. It developed that I had been gone for three days. I had reappeared fishing happily in water they had dragged ten times for my body.

I called Hilly.

"I'm fine," I said. "I was fishing some pretty isolated water."

"For three days, Will? What did you eat?"

"Pancakes," I blurted. "I had some buckwheats."

Why had I said that?

"Get back here," Hilly said. "We've got a hell of a lot of work to do."

"I'll be there as soon as I can."

I stopped in Roscoe at the taxidermist and left my fish. Then I drove back to Poughkeepsie and chartered a plane, which bounced me down to La Guardia Field, where I took an American Airlines DC-3 to Washington National Airport.

When I landed in Washington an agency car was waiting for me. I sat back in the plush of it and watched the sights pass, the memorials and the White House, the Washington Monument gleaming like bone in the middle morning.

Hilly sat reading a report and gnawing on a roast beef sandwich. "We're having our problems in China," he said, "and the President wants to know if Gromyko can be made a friend of the Marshall Plan, and the Dutch are screaming that the East Indies are going to go communist and there will be an election in Italy that we could buy for about twenty million. If we don't, communism crosses the Danube and France will go next. I can give you and your little men five minutes, Will." "Yes, sir."

"I want the detailed organizational plans for Majestic on this desk by the end of the week. No more sudden vacations, fish or no fish."

"It was a hell of a catch."

"I expect to see it mounted in your office." It remained there for forty years.

Now it hangs in the shadows of my living room, its varnish browned with time. But the shape of the fish is beautiful to see. It hangs there frozen in the moment of its perfect death.

Now that the shadows of the dead come close around me I have at last remembered.

Flights of angels came and we called them hordes of demons. The light of the soul shone upon us and we hid our faces. A chance was offered to every man to extend himself beyond the boundaries of Earth. In the interest of maintaining the integrity of the nation, we denied you this chance.

If they should return with their wonderful offering, do not turn away. There will be tests and dangers. But be of courage, for at some point they will hold out to you a little yellow flower! Take the flower.

Afterword

This novel is based on a factual reality that has been hidden and denied. I have used what little is known for certain of the crash of a so-called alien spacecraft near Roswell, New Mexico, in July of 1947 as the springboard for my story.

My vision of the others, their world, their motives and their objectives is based on my own understanding.

Where what I have seen with my own eyes departs from conventional wisdom, I have always trusted my personal observations.

Insofar as military and governmental involvement is concerned, I have adhered to the available facts as I understand them. Thanks to the kind assistance of UFO researcher William Moore, I was able to interview many of the witnesses still living in the Roswell area.

When Moore took me there, I found that he and researcher Stanton Friedman, who along with Jaime Shandera have investigated the whole story with meticulous expertise, were well known to the local people, and well respected for their honesty and thoroughness.

By contrast, none of the "debunkers" like aviation writer Philip J. Klass, who have made so many facile pronouncements about this case, had ever so much as interviewed these witnesses.

After spending considerable time in and around Roswell, and reviewing the extraordinary admissions concerning this matter, it seems virtually certain to me that a disk crashed and this fact became top secret.

This was done as part of what has become an elaborate process of "official secrecy and ridicule," as described by former CIA Director Roscoe Hillenkoetter in the New York Times of February 28, 1960, quoted in the frontispiece of this book.

The Roswell Army Air Field issued an initial press release that announced that the debris of an alien spacecraft had been found. I have personally met and spoken with Walter Haut, the press officer who wrote this report. Colonel (then Major) Jesse Marcel was the intelligence officer who originally picked up the strange debris on the ranch of William "Mac" Brazel. In 1979, shortly before his death, Colonel Marcel had the courage to admit in a number of videotaped interviews that the debris he found was really from

an apparent alien spacecraft, and that the Air Force had covered this up.

I have met and spoken with his son, Dr. Jesse Marcel, Jr. Dr. Marcel assured me that his father was of sound mind when he gave his 1979 interviews.

As in my book, General Ramey, the commanding general of the Eighth Air Force, held a press conference shortly after the recovery of the debris. He claimed, in effect, that a group of the nation's best intelligence officers had mistaken a commonplace radar target of a kind they saw every day for the remains of an unknown craft. Marcel was ordered to participate in this press conference, an act which his family and friends claim made him extremely unhappy.

The press accepted the general's statements.

In their writings, "debunkers" avoid mentioning Colonel Marcel's interviews, no doubt because they are the key to the case, and cannot be refuted except by making the patently ridiculous charge that this honorable military officer was a liar.

The colonel was asked if he thought what he had observed was the remains of a weather balloon.

He answered, "It was not. I was pretty well acquainted with most everything that was in the air at that time, both ours and foreign. I was also acquainted with virtually every type of weather-observation or tracking device being used by either the civilians or the military. It was definitely not a weather or tracking device, nor was it any sort of plane or missile. What it was we didn't know."

Marcel went on to describe what he had found. "There was all kinds of stuff—small beams about three-eighths or a half-inch square with some sort of hieroglyphics on them that nobody could decipher.

These looked something like balsa wood, and were of about the same weight, except that they were not wood at all. They were very hard, although flexible, and would not burn. There was a great deal of an unusual parchment-like substance which was brown in color and extremely strong, and a great number of small pieces of a metal like tinfoil, except that it wasn't tinfoil." Later "Mac" Brazel's daughter Bessie described the paper as having apparent flowers pressed in it.

Marcel took this material back to the base. He was so far from thinking that it might become a security issue that he stopped at home to show some of it to his son, who was then eleven. Dr. Marcel remembers the incident well

and has described the material he saw to me.

If the major had actually mistaken the remains of a commonplace device for those of an alien spacecraft, and caused this information to become public, surely his career would have suffered. But it did not suffer. Far from it. Later he was transferred from Roswell to Washington, D.C., where he worked on the Air Force program that eventually detected the fact that the Soviets had exploded an atomic bomb.

In other words, after he found the debris and reported on it publicly, he was transferred from the 509th into the most important intelligence project that the Air Force was then pursuing. Far from being discredited, he continued to be held in the highest regard by the Air Force.

He reached the rank of colonel before retiring from a successful career.

That the cover-up has remained intact is astonishing, considering the existence of the Marcel interviews, and the statements CIA Director Hillenkoetter has made.

Interestingly, Admiral Hillenkoetter joined a prominent UFO organization after his 1960 admission of the cover-up. Later, on resigning from the group, he made an extraordinary declaration: "I know the UFOs are not U.S. or Soviet devices. All we can do now is wait for some action by the UFOs. The Air Force cannot do any more under the circumstances. It has been a difficult assignment for them, and I believe we should not continue to criticize their investigations."

Despite all this the "debunkers" are still taken seriously by the press and among scientists. In their refutations of the Roswell incident, they concentrate on rancher Brazel's testimony. After a week of being held in isolation by Air Force officials, in total contravention of his Constitutional rights, Mr. Brazel very understandably said that he was sorry that he'd ever shown the debris to authorities. Family members feel that he was coerced. It seems clear that he was forced to provide the government with support for its cover-up, and that his coerced testimony has been used by "debunkers" with close governmental ties.

In any case, Mr. Brazel was not a qualified observer. He knew nothing about radar targets and such. Major Marcel, the one professional who has spoken out, stated that the debris was of unknown origin.

The truth must be faced: this careful, professional man did not misidentify anything. When General Ramey told his press conference that the remains were of a weather balloon or radar target, he was, quite simply, lying

on behalf of national security. This was the beginning of the cover-up that has remained in place to this day.

What happened in Roswell remains a deep, dark national secret over forty years later. Fantastically, despite all the obvious proof to the contrary, the fiction that the others don't exist is rigorously maintained as official policy and generally accepted by the scientific establishment.

It is time for our serious investigative reporters to wake up and do some digging into this matter. If they did so, they would soon discover the hollowness and the propagandistic nature of the "debunker's" assertions.

The apparent appearance of someone else in our midst—a marvelous event by any ordinary estimate—has ended up as an ugly secret and a source of nasty journalistic humor, irrational denial and sleazy sensationalism.

I do not wish, by this book, to create the impression that I am asserting that the others are aliens from another planet.

What I am saying, very specifically, is that they are an apparently intelligent unknown. That is all I am saying, and that is all that presently can be said.

The truth, if known, is held secret. I would be very surprised indeed if the government had the least understanding of the others. If what I am beginning to discover about them is correct, real understanding will change our most basic ideas about the nature of reality.

What secrets the government does possess must be opened to the light of common life. Only then will we be on our way at last to understanding the mystery that has appeared among us.

Despite all policy and no matter with whom it originated, our government must now take a calculated risk -

perhaps even defy the others themselves—and officially admit that they are real.

When this is done we will finally begin to gain insight into what is happening to us.

It is time for the truth to be told.

—Whitley Strieber

A woman with long, flowing blonde hair stands on a rooftop at night. She is wearing a long, white, sleeveless dress that is blowing in the wind. Her hair is also blowing, creating a sense of movement. The background shows a city skyline with many lights, suggesting a high-altitude location. The overall mood is dramatic and ethereal.

PROLOGUE

The construction elevator clattered and rattled as it sped them up higher and higher. The child clung to his father. It bothered him that the elevator had no walls, and he liked even less that it was moving fast, rising through the windy, dripping-wet skeleton of the building. He could see the sky out one side and girders rushing past on the other. The wind made the elevator rock. Its cables snapped and sang, and its motor whined. His dad held his hand tightly. The boy clutched the blue rose in his pocket. He took it everywhere. His mom had given it to him before she died. He believed that there was a secret string that started at the blue rose and ended in her hand in heaven.

“Will we be up in the clouds?”

Daddy laughed. “Nearly.”

With a last clank, the elevator stopped.

Dad picked him up. “Now don’t go anywhere near the edge, do you understand me? You could blow right off in this wind. I’m gonna take some pictures, and if anybody comes up here, what did I tell you to say?”

“My daddy brought me here to see how high it was.”

“And did your daddy take any pictures?”

He shook his head. “Just one of me.”

Dad hugged him. "That's right."

He pulled open the big plywood door with the number 50 and the word TOP spray-painted on it. "Top of the world," he said, "highest point in Los Angeles."

They got out onto the wet roof. The storm had left puddles, and the sweeping wind rippled the surface of them. There were places where you could see through to the floors below and down for what seemed like miles. Gulls screamed in the dark, rushing clouds, white against surging gray. He had learned about gulls in school.

Dad stood him beside a big plywood shack. "Don't move unless I tell you." He stepped back and took a picture of him.

"Can I see it?"

"Later."

"How high are we?"

"High enough. Don't move from that spot. Is that understood?"

"Yes, Daddy." Since Mommy had gone to heaven, he had learned to follow Daddy and always obey him.

It was cold here, and all of a sudden it was really lonely, because Daddy had gone into a room on the far side of the roof. Through the partially open door, he could see camera flashes.

Then he saw a man in a dark coat, shining with rain. The man did not see him at first. He was looking intently toward the flashes.

The flashes continued, and the man went closer.

He was a small man, not huge like Daddy. His face was white and pinched, his eyes narrow slits.

The man said, "Come outta there."

The flashes stopped.

Then the boy saw that the man was carrying a gun. It was black and shiny and pointing straight into the room where Daddy was.

Daddy had said not to move from this spot, but Daddy had not said that there would be somebody with a gun. So the boy looked around for a place to hide.

“Luther,” Daddy said as he came out of the room, “you can’t do this. I can’t allow it.”

“You don’t have any right to be up here. You’re trespassing.”

“This structure is full of violations, Luther. It’s a death—” Daddy stopped talking. He looked down at the gun. “It’s a death trap, Luther!”

The man Daddy was calling Luther gestured with the gun. “Give me the camera.”

“You can’t be serious. Put that damn thing away!”

Daddy sounded scared, and that made the boy’s heart start beating hard.

“You gonna give me that camera?”

“Hell, no.”

“Yeah, you are.”

“What’re you gonna do, Luther, shoot me?”

The man turned. His eyes were like knives. “C’mere, kid.”

“Robbie, *no!*”

The man came closer, and Robbie backed away, but suddenly the man was right there, his fist closed around Robbie’s shirt, and he picked him up. Robbie fought and kicked, but the man was strong, and all of a sudden, he was holding him out over the edge.

“Oh, God. Oh, God. Luther, no!”

“Give me the camera!”

“Okay! Jesus, man, his shirt’s tearing!”

Robbie could see the ground way, way down, and he could feel his shirt sliding up. He looked at the man, and the man’s face was funny, his eyes widening.

“JESUS, LUTHER!”

He slipped. Then Daddy was there. Daddy was looking down at him, his hands coming, and Robbie was slipping—and then Daddy yelled and grabbed him and Robbie flew up and over onto the roof—and somebody was screaming, and the scream faded away fast.

Then Robbie was on the roof, and the man was on the roof, but Daddy was gone.

The man stared at him, eyes flicking from side to side, and he grabbed for him, but Robbie ran as fast as he could. The man roared and followed, but Robbie went into the room where Daddy had been. It was dark, and there were wires and pipes, and he went behind them. When the man came in, Robbie went down between two of the pipes and then was in a dark space.

Robbie crawled into the space. The man called to him, screamed that he would shoot Robbie, so Robbie kept going deeper into the dark, narrow space.

After a while, the man stopped calling. Then Robbie heard the elevator going down.

Still, he did not move.

Gradually, the light faded. The gulls stopped screaming. Night scared him, and so he still did not move. How long he slept he did not know. But the next day, nobody came. It was getting late, and he came out onto the roof. Slowly, his heart hammering, he went to the edge and looked down. Daddy was down there, and he was dead, and that hurt Robbie's soul and scared him more than anything, because now what did he do? Where did he go?

He was hungry, and he wanted orange juice, but there was nothing here. He could not go down—he didn't dare—and anyway he had no idea how to make the elevator come. There was no button, just a lever that he couldn't reach.

Night came again, and he found a place near the pipes that was a little warm. He sat close to the pipes and cried. He cried hard and long. Then he heard the elevator. He stopped crying. Maybe somebody was coming to help him. Maybe somebody would take him somewhere, and he would tell about the man, and they would find a place for him to live and give Daddy a beautiful funeral like Mommy had, with all the flowers.

But that made his heart hurt.

The elevator rattled and clattered, getting louder and louder.

Then it stopped. The door scraped open . . . but nobody came out. Then someone did—and at first he didn't understand what he was seeing: a black, hunched figure with a weird robot face.

He choked back a scream, watching as the figure looked carefully around

the roof. When it faced in his direction, he saw the gleaming glass eyes of a robot—but then the thing’s arms reached up and the robot face came off. It wasn’t a face at all; it was a mask and it glowed inside with green light, and the green light revealed the real face of the person who had been wearing it.

The man was back again.

Robbie stopped breathing. He was a small mass of pure fear . . . and hate. He had never known this emotion before, and he had no word for it, but he wished on his blue rose that the man would just die.

Then the man put the mask back on and went stalking off across the roof. He was hunting for Robbie, and Robbie knew what would happen when he was found: he would be thrown off the roof, too. And that mask was not a mask—it was a thing that made you able to see in the dark. He’d seen those on TV.

As the man came closer to the hiding place, Robbie wished that he could jump out and push him off the roof. But the man was too big.

He stopped. He looked this way. Slowly, he began walking toward Robbie’s hiding place.

Robbie was hypnotized by the oncoming figure. His mouth went dry. His heart fluttered. He wanted to cry, but his fear was so great that he grew stiff and silent, unable to make a sound.

The man came right up to him . . . but he didn’t look down, not far enough, not to this dark corner.

The man crept around for a long, long time, moving from one end of the roof to the other, looking in every nook and cranny. But he never found the small boy lodged in a corner of the equipment shed.

Finally, the man went away. Sometime the next day, the boy heard distant sirens, and for a while he thought somebody would come save him, but nobody ever did. He watched the light of day rise and then fall, and he watched the sun slip into the Pacific Ocean.

Only then did he come out onto the windy roof. He took out his silk rose and held it in both hands up to the starry sky. He asked his mom and his dad to come get him and take him up there, too.

He jumped toward the stars, but he couldn’t make it more than a few

inches. Again he jumped, and again.

Then he cried. He went in the equipment shed, where it was warmer, and he cried until he fell asleep.

The next morning the building filled up with workmen. Still, he hid in the back of the equipment room.

When he could, he crept out and took food from the workers' lunch boxes. He ate sandwiches and drank Cokes, and another day passed. When it was dark, he climbed to the highest point on the building and held up his rose and waited.

He waited until he was too cold and then he went back to the equipment shed. It had changed. Now there were big motors in it. He could get behind the motors and hide really well.

Another day passed, and many more, and he lost count of the days. He lived in the dark, in the recesses of the building, which he heard being called the Beresford.

Sometimes he saw Luther. His hate was a nasty feeling, and he didn't like it, but he couldn't help it.

All he had left of his old life was his blue rose. He would see his mom and his dad in its petals. Eventually, he gave up waiting for them to come down from heaven for him.

The building got built, people moved in, and he went from eating workers' lunches to sneaking into kitchens.

As time passed, he forgot where he came from, how old he was, Mom's name, Dad's name, even his own name. So he gave himself a new one.

He called himself Beresford.

CHAPTER 1

*I hear you, I know I do.
Who are you?
Who are you?
Don't scare me,
don't hurt me, Don't go, don't go, don't go. ...*

This is a really beautiful building and all, but something is wrong here. I don't know what it is yet, but it's starting to kind of piss me off. Maybe it should scare me, I don't know. Right now I'm in my bedroom on the fiftieth floor, and it sounds like somebody's in the stairwell behind my wall.

There are three doors to this apartment—the kitchen door, the front door, and the den door. The den is here at the end of the apartment, next to my room. Through its door is the back stairwell for movers and things.

Could it be somebody working back there? No, not at this hour.

A stalker?

Oh, man, these guys, there are so many of them.

Last night, I got Mom in here to listen. The verdict? The wind making the building sway. Tonight there is no wind, and I'm once again hearing this, so, *hello?* Except I know I can't prove it to her, not unless I actually catch somebody. She's going to come down on me again about a shrink, and I don't want that because prescriptions will follow, and that is a road that only

goes down.

Mom thinks teens should be messy and chaotic, and I'm anything but, so her theory is that I'm too tense. She's the one who's too tense, and her part of our world is complete bedlam.

Anyway, with this life I'm living, I'm totally tired all the time, so maybe it's just my wild imagination. But how do you sleep with paranoia?

My concert's coming up, and half the songs aren't even written. Plus, I'm behind memorizing my lines for *Swingles*. Plus, Sandy Green assigned me over a hundred pages of *Middlemarch* for our English class. Thank you so much. (You think it would be cool to be a showbiz kid with a tutor and no formal classes? Believe me, it's not cool. You can cut classes, but try cutting your tutor. Ain't gonna happen.)

I'm at the point in my career where it's either going up or going down, so I *have* to be awesome in every episode of *Swingles*, no matter how tired I am, and I absolutely must fill the Greek Theatre to capacity when my concert happens. I mean, that old outdoor theater in Griffith Park is part of LA music history. Tina Turner, David Bowie, and Elton John performed there, among many others. Getting a gig at the Greek really, really matters.

So I don't exactly need distractions. I pick up my guitar, start hunting for a melody. But what if this person is sitting out there listening? Can he hear me? I don't want him to hear me.

Mom moved us here because the Beresford is ultimate glitz, and right now I need high-profile everything. Paparazzi don't do dinky condos in Calabasas.

Anyway, it's okay because downtown LA is good. There are clubs like M&M where I can just walk in despite being underage, and nobody cares. The line claps when I get out of my car. Mike and Mikey, who own the place, are jaw-to-the-floor over me. I think they'd pay me to chill there all the time.

I don't have a boyfriend because when you turn into a celebrity as fast as I have, dating gets complicated. I dance by myself, and usually when I stop, I'm alone in the middle of a sea of cell phone cameras. I don't care. My own heart is my best dancing partner anyway.

I have Julius, my bodyguard. Julius wears a suit to remind everybody that he is with me on a professional basis. If I want a guy to keep hitting on me, I have to give Julius a little three-fingered wave. Otherwise, the guy is swept

away. Zoom. Gone. Then later you see him looking sheepish at the bar or whatever.

Stuff like this is probably why I really enjoy being alone, like right now when I'm in my room with the city out there sparkling in the night.

Except, am I alone?

I haven't heard the sound for a while, so maybe it is really nothing. The wind making the building sway.

I fool around with my guitar. My guitar is my most private place. And yet, it's also my link to my fans and to the world.

I find a melody, it's sweet, it has a catch in it. Nice. So I sing, "I hear you, I know I do. Who are you? Who are you?"

I'm not gonna call Julius, and I'm not gonna wake up Mom, but I need to get past feeling there is someone watching me.

I press my ear against the wall.

Nothing. So am I alone or not?

I put on the new billowy robe Mom gave me. I get the black and red can of Mace out of the drawer in my bedside table. Julius has taught me how to use it. I put my finger through the ring.

If there is some guy out there, I'm going to spray him like the roach that he is. *Then* I'll tell Mom. *Then* I will call Julius. Nobody is gonna tell me it's the damn wind.

Okay, I open my door. I step out into the hall. The apartment is really quiet—but not completely dark. As I look down the hall and across the living room, I see a faint line of light under Mom's door on the far side. She's awake. Also, I hear music. Frank Sinatra. So I know who's in there with her: Dapper Dan. At least, that's what I call him. She's dating two guys, Dapper D, who wears sports jackets and takes her to hear cabaret, and the Wolverine. He looks like an Egyptian mummy trying to be an Elvis impersonator and likes to go clubbing. Faint music drifts through the apartment.

Furious as she makes me, my heart hurts for my mom. Bottom line, my dad ditched her for a bimbo. We fight all the time, but I'll never leave her or stop loving her. It breaks my heart to see how hard she tries to find her way out of the loneliness of her life. But she's a pistol.

I turn. Now I'm facing the window at the far end of this hall. To my left is the door into the den. I enter it.

This is where all my books are. My poetry book that Daddy read to me when I was little. "The old canoe by the shadowy shore . . ." I would sit cuddled in his arms. We had a nice life, I thought. Guess nobody was happy except me.

Okay, the door is right over there. All I have to do is unlock it and step out into the stairwell. Oh, God, I am so scared. Mom's room is far away. I could scream but she'd never believe me. And *Mace*? What if it doesn't work, or I spray myself? What if he has a gun?

I put a hand on the bolt and, as silently as possible, I turn it. There is the faintest of scrapes.

My song echoes in my mind. "I hear you, I know I do, I know I do . . ."
Vampire?

Don't go there, girl. Anyway, they don't exist.

Ghost?

I lean against the door. The silence from the other side is total.

So maybe it is a ghost.

And then I feel the door move. As in, somebody just leaned against it from the other side. *Pushing*.

The second I turn the knob, they're going to burst in on me.

Very slowly, very quietly, I turn the bolt back . . . only it won't go back—it's stuck. Because he's out there pushing so hard the door is warping.

He must be incredibly strong. He must be huge.

And he knows I'm here, and he's just an inch away.

I twist the bolt harder . . . and finally it clicks in.

The whole door creaks. Then it sort of lets go. Has he moved away? Was he even there?

I am about to be sick. I want to say "I have a gun," but I can't make my throat work.

I run back into my room, lock my door, and dive into bed. I clutch the *Mace* like it's a lifeline.

And now, another sound against the wall. I hate this! I can't stand this! Am I losing my mind for real?

I look at the phone. If I pick it up and call Julius, he'll be up here in five minutes with ten cops trailing behind. Except I just wish I could prove there really is a guy out there and it's not all in my head. Because it could be. I fear that.

I get out of bed and pick up my guitar.

I hear you, I know I do.

Who are you?

Who are you?

Don't scare me,

don't hurt me, Don't go, don't go, don't go. ...

Am I completely insane to even sing that? Except it's got flow. It does. I click on Voice Memo on my iPad and do it again. Let the songs come.

Real songs come out of hurt and loss and longing. If they also come out of fear, then this is a winner.

I close my eyes, imagining who I used to be. Melanie Cholworth. Melody McGrath is much better—I have to admit Mom is right about that. Nowadays, I have to actually pretend that I'm the real me. I guess Melody took over.

I get back into bed and close my eyes. But sleep doesn't come; sleep is far away. Even though it's quiet now, I can't stop listening. I imagine claws coming through the wall.

On the day we moved in and I arrived with my gaggle of snapping paparazzi, I looked up at the soaring facade and I had this gut reaction that made me go, "Ohmygosh."

In my mind's eye, I saw people tumbling off the balconies. . . . They were all girls about my age, and they all had my hair and my complexion and my clothes on, and they were all falling just like I think I would probably fall, with their arms spread wide, trying to say "I am flying, Mother dear—look at me!"

Fly and fly and fly and fly. . . . There's a song there, girl, remember that. Songs live in my nooks and crannies. I have to hunt for them like a miner looking for diamonds or whatever, I guess.

Shit! I hear it again.

No way am I staying in my room, but also no way am I going to Mom's room when she and Dapper D might be getting cozy.

So I drag the mattress, which turns out to be really heavy, until it's all the way across the room.

I look at my wall. How thick is it? Could he cut his way through?

I will sing all night, until the dawn. Trouble is, dawn's so far away and I am so alone.

CHAPTER 2

Deep in the Beresford's basement, Frank the Torch listened, and he didn't like what he was hearing. This was exactly what Mr. Szatson had complained about. Some squatter. "Get him outta there, Frank. Wylie couldn't do it, but you know your way around buildings. Get him out." Wylie had been his predecessor. Fired over the squatter. Or so it appeared.

Six weeks ago, he'd come off a nickel in San Quentin two years early. Why the sentence reduction he did not know, but he was not about to argue. He'd been in for a dumb little job in City of Industry, the Alert Cleaners fire. The owner was looking to cash out and retire and couldn't find a buyer, so he'd called Frank. It had been an easy job—ten bills in his wallet, don't even think about it.

Except he'd come up against a control-freak insurance investigator who'd found an image of him on the security camera tape of the gas station across the street. With his record, it was a no-brainer. The jury took nineteen minutes to convict.

As soon as he was out, he'd gotten a call on his cell: Mr. Szatson wants to see you. He'd known Szatson for years, for the same reason that he knew a lot of real estate developers. They needed fires, these guys, and arson was Frank's profession. Also, he was at the top of the heap when it came to skills. He'd been a civil engineer, so he knew structures. If you hired him, you could

count on three things: The fire would work. The arson investigators would not trace it back to you. You would get your payday.

Mr. Szatson had sent him to work at the Beresford as its superintendent. “You’re an engineer, Frank. I need an engineer. Because the place has problems. There’s a squatter and a lot of famous and rich tenants. I don’t need that crap, so I want you to get rid of him.”

There were lots of ways to hide in a big place like this. Too many.

He didn’t think that was the only reason he’d been hired, though. Maybe Szatson had even pulled him out of the stir. He was that powerful. To put it bluntly, Szatson needed a fire. Somewhere in the Szatson empire, Frank the Torch was going to do a job, and probably more than one. Not here, though. This was the Szatson flagship.

Frank was thrilled by the Beresford. Aside from making sure the heat worked and the elevators didn’t get stuck, there wasn’t a lot to do but watch the beautiful people come and go. There were stars in the place, Melody McGrath, for instance. Pretty as a picture, sweet as honey. But that mother of hers—wow, that was one power hitter. He’d never tangled with her, but he’d been warned by other members of the staff that she was a bullmastiff and you did not want to cross her.

You also did not want her to pull her precious daughter out of the place since she brought so much media attention. If anything went wrong, they would surely leave.

He flipped from one security camera to the next. He’d seen this character—glimpsed him—standing in front of the laundry room. Black clothes, head to foot. Wild hair.

He was going to find him and take him somewhere far away. Maybe even drop the bastard off a cliff. Or at least punch him out.

CHAPTER 3

I went through today like a zombie and made everybody on the *Swingles* set furious. Mom thinks I'm hallucinating or whatever, and here I am alone in my room and *I just heard it again!* This time it went *hisss*, not like a snake but as if it was sliding against my wall.

Sleep is once again not an option, so I'm gonna work. The *Swingles* call is at six thirty tomorrow, and I could memorize my lines now instead of in the limo at the crack of dawn like I did this morning.

Swingles is pretty fun, actually. The pilot was huge in the ratings, and then came better news: the second week didn't bring all that much ratings deterioration, as they call it.

I'm lying on my right side and facing my wall of glass, letting my eyes slowly close to LA at night with a slice of moon above. Very beautiful and mysterious, as long as you don't think about the fact that the city is really a sea of condos and strip malls.

While I'm lying here thinking of the mysteries of life and wondering if love will ever come my way (I'm such a drama queen), the sound comes and I jump off the bed.

After a moment, the sliding starts again.

Is it coming from the other side of the wall, or inside it?

I grab my laptop and go to the Beresford's website, where I pull up the apartment layouts. (Can we *really* afford eleven grand a month for this

amazing apartment?)

Anyway, my bedroom backs onto a service shaft beside the stairwell outside our den.

So maybe Mom is sort of right. But it's not the building swaying—it's projected sound from somewhere coming up through the shaft behind my room or the stairwell behind that.

So here's a creepy thought: what if what I'm hearing is somebody actually cutting through the wall, not from the stairwell but from inside the shaft beside it? I've already had about forty-seven stalkers, guys with dirty T-shirts and gray skin and hunter's eyes.

If you had a gun, you could shoot me right through the wall that's behind the headboard of my bed. While I was on the *Swingles* set today, the maid put my bed back together. Maybe I'll move the mattress again.

Jesus—I am so neurotic, which is why my insides are turning into an acid bath. I'm sixteen and already chug Mylanta. Xanax is next, then amitriptyline, then up the line through Prozac to the Effexors of the world. I know the drill.

Maybe there is no .357 Magnum out there an inch from my headboard. Maybe it's something innocent but annoying, like a papi trying to plant a spike camera. If you don't know what that is, it looks just like a nail. Stick it through a wall, and you've got an eye in the room. Add a spike mike, and your target is in a movie.

What if it's some horrible old man who lives in the basement and comes up at night? What if he isn't a vampire but a cannibal? Has anybody ever disappeared in this place?

You're sixteen years old, girl, and *there's no bogeyman here*. Oh, my dear Beresford that I must now call home, you are haunted by a very real *something*.

I listen. Breathing? Maybe. Or maybe it's that I'm insane. That's what Mom would think.

Quiet time of the night, everybody asleep except me. Is somebody in with Mom? Don't know. Instead of looking, this time I just lock my door. I take my Mace out and cradle it. Earlier, I reread the instructions. Pull the ring and

press the red button. It's pretty simple, actually.

If a shot came through the wall, would I even have a second to realize I was dying?

I know he's out there.

Except now he's quiet. So maybe it's something else. I close my eyes and let my music take my mind.

"Far and far and far and far, I'm going far and far and far and far, and the stars are way behind me, the stars are way behind me."

I sleep with my head at the foot of the bed and all my pillows piled up against the wall to cushion the bullets.

CHAPTER 4

He could hear her; she was singing, and he pressed against the wall, listening to her voice—“far and far and far and far . . .” And he was so close to her, but also far and far and far.

Before Melody, he had looked at girls and liked girls, but now there was this huge difference. Seeing her for the first time had caused an explosion inside him. He had no idea that feelings like this existed. Sure, he’d seen girls, plenty of them, but never one who glowed like Melody McGrath, whose hair seemed filled with the sun, whose eyes laughed and said “come here,” whose skin looked as soft as the air itself.

He hadn’t known that you could feel this way, and he wasn’t sure if it meant that he was okay or that he was not okay.

He had to be near her. But he must never let her see him. Leaving this shaft where he was practically living now was too hard for him. He’d never known anything like the desire that kept him pressed up here against the drywall, listening to every faint sound from her room on the other side and holding an image of her in his mind.

He could see the gleam of her eyes, the broad paleness of her forehead, the way her lips seemed to laugh gently, as if she possessed some secret knowledge.

All of this he’d watched on *Swingles*. His love affair—for that’s what it

was, even if he did not understand it—had started when he'd been watching the show one evening in some vacationer's apartment.

A bristling shock had shot through him when he recognized her as one of the new people here in the Beresford and also realized that she was the most beautiful girl on earth.

Immediately, he'd climbed the chase, or shaft, up to an apartment whose tenants used their TiVo a lot, slipped in through his hatch, and added *Swingles* to their queue. Now when they were gone, he could watch. And he did, over and over again, loving her, longing for her with a pain at once sweeter and sharper than any he knew, except when he held the blue rose.

More than once, the thought of going in there had crossed his mind. He was afraid, though. He did not like her mother's voice; it had a knife in it.

He was much too shy to ever look at a girl changing or in the shower or anything like that. He tried not to go into the same apartment too often. Except for Mrs. Scutter's—to be sure she wasn't setting her bed on fire with a cigarette. She'd done that once, and since then he made sure to check on her every night.

When he imagined being with Melody, it was in the nicest place he knew, which was the park he could see far below. Trees and flowers bloomed there in summertime, and if he listened closely, he could hear music playing and kids yelling in happy voices.

He'd looked at himself in mirrors in the bathrooms of vacancies and vacationers. Wasn't he kind of odd looking? Every day, his nose got bigger, it seemed to him. And he cut his hair as best he could, but it was still too shaggy. He wanted to look like other guys, not like some kind of freak.

His dad, he remembered, had short hair, and he thought he should have it, too. He barely remembered Mom, except that she had wavy blond hair like Melody, and she laughed, and she had given him his blue rose.

He thought Melody was about his age, but he wasn't really sure. How old was he, anyway?

Now he was in the equipment shaft—called Chase Two during construction—beside Melody's bedroom. It was making him happy and sad at the same time to hear her in there. Earlier, she'd moved her bed so she was no longer so close that he could listen to her voice and her guitar.

Then he heard another sound, one that instantly drew his attention: a high, mournful sound like wind sweeping around the corner of the building. It was coming, he knew, from ten floors below, drifting up the chase from 4021.

Gilford was crying. This was because Tommy was out late again, and Gilford cried then. Tommy had no idea how much Gilford loved him.

He wanted to stay here near Melody, but he had a job to do, so he grasped the edge of one of the girders that framed the chase and quickly dropped down the ten floors, pulsing his fingers along the pipes, letting himself slide just fast enough but not so fast that he would lose control. The dark hole that yawned below hardly mattered to him. Falling was hard to imagine. When he was little, though, he'd fallen some—never more than a story or two.

When he felt himself dropping, he'd let himself go loose. That way it didn't hurt too much, but he knew he couldn't withstand stories and stories.

He arrived at forty and went along the crawl space to Tommy's apartment. He was growing, so the crawl spaces were getting smaller. He wasn't fat; he was just, well, big. Dad had been really, really huge, so maybe he would be huge, too. Then what happened? Without the ability to use his crawl spaces . . . he didn't even want to think about it.

He reached Tommy's apartment and went over to where he had installed his hatch. Over the years, he'd built lots of hatches. People thought they were supposed to be there.

He wanted to be where Melody was, to be her friend, to sit on the couch together. In a whisper in his mind, he told himself the same story again and again. He was with Melody on the couch. He said to her, "I love you," and she turned to him, and that wonderful smile came across her face, and then their lips touched.

Oh, yeah, like that would happen. He wanted to at least just breathe the air in her apartment. He wanted to, but he was scared because—well, the way she made him feel was just scary, with his whole body shivering like it did. As he slid open his hatch into Tommy's, Gilford was already whining at the door of the little foyer closet it opened into. He dropped down, pushing back Tommy's rarely used winter jackets, then opened the door.

He stepped into the foyer and immediately listened to the apartment while Gilford wiggled. He could hear slow breathing coming from the bedroom.

That would be Annabelle. The breaths were regular and long. She was sound asleep.

He needed to be really careful here. He had not expected Annabelle to be home while Tommy was out.

Bending down, he let Gilford lick his face. The dog was a mass of wiggles.

“Hey, Gilly,” he whispered. “Hey, bud.” Gilford was a pug. That’s what Tommy told people he was, a pug. He had a pushed-in face and he snorted a lot, but he was very sweet.

As Beresford went through to the living room, Gilford trotted with him, his nose in the air. He knew that it was treat and cuddle time because that’s what they both liked. But in the middle of the living room, Beresford stopped and listened carefully again. Annabelle had nearly caught him once. Just by nature, she was very quiet.

He headed for the kitchen, Gilford capering beside him, jumping up on his jeans. Or rather, Marty Prince’s jeans. Beresford’s clothes were all borrowed from tenants’ closets.

Tommy did not have one of the most wonderful kitchens in the building. For great kitchens, you needed the older people like Helen Dooling. She cooked chicken and made pie. He had learned to eat just a little here and a little there, never much in any one apartment.

“So, what we got?” he whispered to Gilford as he peered into the fridge, looking at the food arrayed on the shelves.

He fed Gilford some milk.

Then he heard the telltale sound of the elevator door opening. Somebody getting out on forty—no way he could take a chance. So he took Gilford’s face in his hands and gave him a quick nose smooch and went back to the foyer closet.

The key clattered in the lock. Continuing to lift himself, his heart hammering, Beresford slipped into the crawl space and carefully closed his hatch.

He wanted to race up the chase, but he forced himself not to make a sound.

Moving slowly at first, climbing hand over hand, he made his way back up to fifty, back to his station behind Melody’s wall. Through the thin

plasterboard, he could hear her breathing softly and steadily.

Sleep, little angel, for I will watch over you.

CHAPTER 5

*I'm goin' far and far and far and far
Up past the trees and the sky and the stars.
Far and far and far and far,
Where it's soft forever, soft and blue, soft and blue,
And I can reach out, and I can touch you
Far and far and far and far.*

The set is blazing hot, and I'm dying. Thank heavens Ted the Elf called a break. (That's my own private nickname for our tiny, hoppity director.) Now I'm in my trailer, where I'm supposed to have a little peace and quiet, but Mom is screaming at Mark, my manager, over the fact that *Swingles* isn't using my music in the dance sequences.

Mom says into her phone, "We have to do this, Mark. We need the exposure! Plus, it's in her contract. . . . *Why not?* She's the star—it can only help the show! . . . So what's he doing? Does he have another ingenue in the wings? Some tramp, Linda Lady or somebody?"

Linda Lady is my competition—sort of. She's all electronics, though. She can't actually sing, so she's gonna do a concert sooner or later that reveals she's lip-synching. There will be no forgiveness.

Mom paces, she makes a whistling sound through the plastic cigarette she uses whenever she is near me, and all of a sudden I feel this amazing love for

her. She tries *so hard*. If we go down, it's not just going to break her heart—it's going to break her totally.

There's a knock. Mom looks at the door like a rabbit looks at a wolf, but it's only Thor Bradford, my acting coach.

Thor comes in. He appraises me, his eyes taking in every detail. He grins and twiddles his fingers at Mom, who takes this as her cue to leave us alone in the trailer.

As she goes out, she crushes the plastic cigarette to pieces in an ashtray. By the time the door closes, she's already back on her BlackBerry. She's calling for the box office overnights. The question every afternoon is the same: How is the Greek filling? What if I have to play to a half house? Or if I have to make up an excuse and cancel? "Miss McGrath has sprained her elbow and cannot perform." Behind every excuse like that lies the same reality: empty seats.

These are dangerous times for any performer, especially somebody like me, just building an audience.

Thor asks me, "Honey, do you have a problem with Alex?" "No." (That is to say, YES!)

"Because on the dailies, we're seeing you kind of bend away from him when he tries to kiss you. Like he smells bad. Not like you wish he'd follow through."

"I thought I was supposed to be unsure. It says in the script, 'unsure.' "

Then Thor takes me in his arms and says, "My Tic Tac loves your Tic Tac!" (Yes, the show is stupid. And yes, it's full of product placements. They have to make money, and anyway I actually *do* like Tic Tacs.)

I lean back—but then he stage kisses me. This is not a real kiss, but it looks like one. You keep your mouths closed. It's very clinical feeling. So I melt into it. I try to imagine that this elderly gay acting coach is the guy who never quite comes into focus in my dreams.

"Now, that's good. That's what we want to see."

"But Alex doesn't kiss me in the script."

As Thor leaves, he says over his shoulder, "Oh, that's changed. He kisses you now."

“It’d better be a stage kiss.”

“Not my problem, beautiful.” He leaves, and I go to the fridge, crack a Diet Coke mini, and chug it. I have to face facts: I just plain loathe Alex Steen. Loathe, loathe, loathe. Not only does he smell weird, he has skin like some kind of an amphibian. Maybe he’s a skink.

I shouldn’t be repulsed by him when half the girls in America would like to jump him, but I can’t help how I feel.

“You’re wanted on set.”

“Thanks, Michael.”

Michael is Ted’s personal assistant. He’s about twenty-two and starting out on the ground floor. I’m always polite and thankful to him. Mom doesn’t even know his name.

As I go across the street to the soundstage where our set is, I see Mom huddled over her BlackBerry like it’s a bird she’s captured. Her back is to me. Whatever she’s talking about, she’s hiding it from the world, which makes me feel kind of sick inside because it can’t be good or she’d be all over me, whispering good news as she listened to it coming in.

“Hey, sugar,” Alex calls to me.

He’s been told not to call me this by the network’s political correctness maven, but he does it anyway.

I smile as mechanically as I can. Bright fake grin that’s a clue he chooses to ignore.

For this scene, we’re in the living room set. There’s a couch, chairs, and a flat-screen TV that’s really just a prop. When you see something on it in the background during the show, that’s the special effects department. The whole set is like that. Even the chairs are so light you could throw them. The window is a breakaway (it’s made out of melted sugar). We used it two episodes ago. In the scene, Mr. Forbes shattered it when his upper bridge flew out of his mouth and hit it. (Our writers apparently think that escaping dental prosthetics are funny.)

“Places, please. Is everyone aware of our changes?”

Nobody says anything. We’re all afraid of Ted. He doesn’t exactly carry a horsewhip like directors supposedly did in the past. Instead, he whips with

sarcasm.

Ted gives me a long look. I feel like a butterfly about to be pinned. “She’s SHINY!”

That brings a distant crash, and a couple of seconds later, a huge figure looms past the window and comes around the edge of the set. This is Martin, and he powders my immense forehead yet again. Shine is a no-no, but I’m not sure exactly why. I mean, I’m sixteen years old and therefore an oil factory, right?

So we take our positions, and Ted says “action,” and all of a sudden I’m not Melody or even Melanie anymore. I’m Babsie, and I’m full of flutters because Seth—that’s Alex—wants to kiss me and we’re at my house and my dad is suspicious of him. Last week, when I brought Seth home for the first time, Dad asked to see his driver’s license. Dad is out back cooking steaks, though, and Mom is in the kitchen, so this is Seth’s chance.

Ted moves his hands, encouraging me. I’m supposed to flutter at Seth, which I do.

Seth paces in front of the fireplace. He looks at me. His eyes look kind of odd, actually.

The way the scene works, Seth kisses me, Dad comes in with the steaks, and Seth panics and jumps out the window.

I sit and turn into Babsie. I look down, sort of smiling. Babsie wants this—she wants Seth to just hurry up and do it.

So Seth takes a step closer. And another. I say my line: “I think you’ve got something on your cheek.” I smile and pat the place beside me. “Come on, let me look.”

Seth trips over the coffee table, which collapses. (It’s balsa.) Frantically, he tries to put it together again. I say, “Dad’s not gonna like that.”

He stares at me like I’m totally insane, and there it is again, that weird look in his eyes—vacant. He’s not Seth at all, he’s Alex all the way, and he makes my blood run cold.

Now the kiss. I say, “Oh, Seth.”

He grabs me and embraces me, and here it comes—but his mouth is *not* closed like it’s supposed to be. He is into this; he’s kissing me for real.

I'm furious. Ted needs to control Alex. Now he's pushing against me and jamming his face into mine, then we go off the couch and I hear Ted somewhere in some other universe yelling, while Alex keeps at me, and I can't get out from under him; he's like some kind of machine made of iron.

I have so many dreams of guys, but not *this* one—this is the nightmare that no girl ever wants to think about, and it's happening to me right in the middle of a television studio filled with people.

Stop him, somebody!

And then there are voices, shouting, Ted's voice above them all as he shouts himself crazy. The weight is gone, Alex is off, and Ted and our assistant director, Sam Dine, are holding him. But he's like some kind of animal, and they almost can't keep him under control. His eyes are really scary.

I get up, and Mom is there. She puts a towel around me, and I realize my blouse is all torn up, but at least it's just my costume.

Ted is in Alex's face. They stare each other down. Then Ted turns away, disgusted. "He's high," he says to Sam Dine. Then, louder, "We'll move into the kitchen. Thirty minutes—get it lit!" The kitchen scene is me and Mom and Dad, no Seth. More quietly, he tells Sam, "Whatever it takes, bring him down. And find whatever it is he's using and get it the hell off the lot."

I am sick to my stomach, trying to hold it in, and all I can think of is my trailer. I knew this would happen, I just knew it. He's always icked me out, and now I know why. I'm not a smoker or a drinker. A lot of kids at Calabasas High smoked, and there was every kind of drug you might want there, mostly prescripts, though. Not whatever *this* is, which is probably something harder.

On the way to the trailer, a papi I know named Brandon Carcelli comes out of nowhere from between my trailer and the wall of the soundstage, and his camera starts clicking away.

Fury like actual fire just explodes in my head, and I break away from Mom and go after him. He runs, I run, I am screaming at him, he turns and shoots, runs more, turns and shoots, and I know I'm getting into trouble, but I can't help myself. I am just so mad.

Then security is there, and he's soon surrounded and hustled off the lot.

Mom runs up. “Come on, honey, you’re falling out.”

Well, not quite, but my blouse is ripped and there’s bra showing.

“How did he get in here, Mom?”

She shakes her head. “Look in the wallets at the gate. Carcelli probably paid his way in.”

My trailer is quiet and cool, and I go in the bathroom and gargle Listerine until I feel sort of clean. Sort of.

“I want Alex fired,” I say to Mom. “I never want him near me again!” I’m shocked to hear the rage in my voice. I think of myself as mild and nice, and I know that I’ve gone deeper into celebrity. I will wreck Alex’s career because he went too far with me. But he deserves it—he’s totally out of control.

I want to cry. I’ve never been kissed much before, and in the celebrity bubble where I live now, finding a normal boy probably will never happen for me.

Ted and Mark and Sam come in, and suddenly the trailer feels like a funeral. And maybe that’s just what it is.

Mom talks for me. I have nothing to say about anything, it seems. Even though it was me this happened to.

“Mel, we need to be very careful,” Ted says to me. His voice is different from the usual.

Mom says, “We understand that, Ted.”

Their eyes meet, and do I see daggers? What’s happening that I’m not being filled in on?

“Legal will have to get involved,” Ted says.

There is silence.

Then I hear Alex. He’s yelling like crazy, and he’s right outside.

“What’s going on?”

“They found meth in Alex’s trailer,” Ted says. “He’s being escorted off the lot.”

Mom explodes. “But we have a whole bunch of scenes to shoot. We’ll get behind!”

“He’s in violation,” Sam explains. “You know the contract.”

Mom has been real clear that if I get in trouble with drugs or alcohol, I'm fired. And it's the same for Alex.

"So . . . what do we do?" I ask.

"I'm writing Seth out. You're gonna have a new boyfriend."

What can I say, that I'm unhappy? Alex was poison, pure and simple.

Mom is like a statue. She must be thinking how easy it would be to write me out. It's scary. Of course, I'm the star, so they aren't going to do that. Only, that's not how she thinks. No matter how good things may be, Mom is always going to be clinging by her fingernails.

"I'll work over the weekend. We'll start shooting again on Monday," Ted says.

I doubt we're going to be shooting again any time soon. He can't possibly write Seth out that fast.

The funeral procession finally gets up and leaves us alone in the trailer. I can hear Alex's screams over the air-conditioning hum. On the other side of a scream like that is the black hole of being forgotten.

Mom says, "I need a drink." Then she laughs to herself. She sighs and says, "Small blessing. We can take off early. Let's get out of here, girl."

When we go out onto the lot, the California sun is painfully bright. A bright, hot desert where the sun burns away the lies.

CHAPTER 6

*Flying on with the stars, with the clouds that love me,
flying in the dark when you cannot even see,
flying on forever . . . forever .. forever . . .*

What happened, what happened, what happened?

They were screaming down there, screaming at each other, and Beresford was frantic, hiding in the crawl space above his new hatch. Something awful had happened. He strained to hear, but they were talking so fast and saying so much he didn't understand. He was sure of only one thing: the fight was over *Swingles*.

When Beresford finished his hatch, the first thing he'd done was to go down into the apartment. He'd walked through the rooms, touching nothing. Trembling so hard he could barely control himself, he'd gone from room to room. He'd touched Melody's blue silk bedspread and watched the sun go down through her huge window.

When he'd heard them yelling as they came down the outside hall, he'd levered himself back up into the crawl space and pulled his hatch closed.

As he listened, they came into the living room and Melody screamed, “He attacked me! What don’t you get about that? He’s a druggie and a potential rapist and he’s *gone*, Mom. And it is NOT my fault!”

“Honey, I know it, and I hate it, but we might lose the show anyway. It’s not your fault, but the network is embarrassed.”

“The *network*? You’re scaring me, Mom, you really are.”

“We need the money, Mel!”

“You need it, not me. If I had my way, we’d still be in Calabasas.”

“And you’d be flipping burgers and singing ‘Memories’ in the Calabasas school talent show.”

Their voices drifted off. They’d gone to the kitchen.

Swingles was over?

Their voices rose again, and then glass broke. He clapped his hands over his ears. They were throwing things, and that could not be good.

He just ached to go down there and take her in his arms and somehow make it all better, but Frank, the new super, was hunting him like crazy, and if he got found, he didn’t know what would happen. He couldn’t get thrown out of the Beresford. This was home.

Melody’s bedroom door slammed. He slid over to the crawl space above it and pressed his ear against the rough plaster of the ceiling.

Crying came up from below, long, bitter sobs.

Very carefully, he moved back off the ceiling and down into the chase between Melody’s room and the stairwell. From here, he could stay near her, and somehow maybe his love and his hope for her would help her.

He settled in, trying to get comfortable. He would guard her all night. Later, he’d sleep in his own tiny space on the roof, but not until after he was sure she was okay. It was real tight in here, and he had to keep twisting and turning so his legs wouldn’t go to sleep. If he was very still, he could hear her breathing.

Instead of the sounds of sleep, he heard a shuffling noise. Then the wallboard seemed to shift a little.

“Get out of my wall, you creep!” Then *bang*, right in his face, and *bang*

bang bang! “I know you’re in there, you sicko, and I’m gonna call the cops and get you put away!”

He was frozen with fear. She *knows*, and she *hates me*.

His heart broke as he quickly reached over to the crawl space that crossed 5052, then hurried along the beams. He headed for the elevator shaft, oblivious to the tears that were blinding him.

This was the top floor, so the way to the roof for him was to climb the cables into the elevator room, then go out through the service door. He never, ever used the stairs. He understood cameras very well, and he didn’t want to be seen on any of the security system screens in the basement.

He rushed out onto the roof and ran. He ran all the way to the far end, then around the edges. He got up on the rail and ran the rail, crying out and waving his arms, trying to make the feelings of sorrow and upset leave him.

He ran swiftly, deftly, and when he came to the spot where Daddy had fallen, he stopped. As he always did, he looked down into the alley. At night it was lit only by the one light over the side door. He looked down, and as always, he called out, cupping his hands around his mouth and shouting with all his might, “Daddy! Daddy!” Then he went on—or, he was about to go on—when he saw something below.

What he saw was a face like the face he’d seen peering at him the day Daddy was pushed, the same glittering lenses, the same robot appearance. Somebody was using a set of night-vision goggles to look up the side of the building.

That would be Frank or one of the other workers. They would be looking for him.

Had Melody told them? Were the police coming?

He shrank back from the edge and moved toward his tiny space on top of the elevator control shack, a tool storage shed just four feet high and nine long that had not been pulled off after construction was completed.

As he climbed the side of the shack, he saw one of the doors to the roof slowly open. For an instant, he was transfixed. Disbelieving. He quickly jumped down and in three strides concealed himself behind the shack, back where the water towers hissed and the bats lived.

A figure came out into the middle of the roof and stood. It was all in white, a woman, her back to him. The wind blew the thin white gown around her.

Then she turned a little, and a shock as powerful as lightning went through him. It was Melody.

She walked straight ahead, going toward the edge that dropped down to the building's marquee and front entrance. As she got closer to the edge, she walked faster. And now she spread her arms out and let the wind blow her white gown back, and he saw her body in its perfection outlined against the glow of the city. He knew that she was perfect and of the high world, and he was not perfect, hardly a person at all.

Her voice rose, magic in the night. She was singing a song he'd heard her working on.

"So not free, so not free, when will you come and take me? So not free, so not free, where is the love I need? So not free, so not free . . ."

She bent over and the words went away, and she was sobbing into her hands.

He wanted to help her so much that he actually reached out and took a few steps toward her.

She straightened up and went even closer to the edge. She was right against the railing now, and he was thinking that she must not get up on it, that she was not like him; she didn't know how to climb and balance. She raised a leg, and he almost moaned aloud.

Then she leaned forward. If she went just a few more inches, she was going to topple over the edge.

She held her hands to her head and uttered the saddest cry he'd ever heard in his life.

She bent forward further. Her thighs were tight against the rail.

No!

She stood very still now, her hands at her sides as she looked to where the moon hung low. Every inch of his body and every whisper of his soul made him want to run to her and put his arms around her fragile waist and draw her back from the edge. But if he surprised her, she would lose her footing.

Now she sang again, her voice climbing the tower of the air, peeling

through the wind as if there was no wind. “So not free, so not free, please come for me, please come for me. Unlock the perfect prison of my life, make me new, make me true, ’cause I’m so not free, so not free.”

The words moved him to his core, and he felt their meaning, the eternal sense of loss that is at the center of every human heart, and he thought they were the truest words he had ever known, a cry to the night and the moon to come and unlock the prison of life.

Again she swayed, and once again she raised her arms. He could see her naked form in the thin robe, outlined by the moonlight.

He thought if he ran fast enough, he could maybe grab her from behind and pull her back, then throw himself to one side among the air-conditioning equipment to her left. Once he was up under there, he would somehow make his way to the other side of the roof, where there was more than one place to slip away into the building and be gone.

Sure, but what if he missed? Or was too slow? If she heard him coming? It was just too dangerous to even try.

He stepped back into the shadows of the elevator shack and cried out as loud as he could, “So not free, so not free!”

She froze. It looked as if she was riveted to the rail.

He bit his tongue almost to bleeding, then covered his mouth with his hands. He stood as still as a statue.

Suddenly she whirled around. Her eyes were glaring, her lips twisted with pure hate—it was like the face of some kind of beautiful monster—and her hands were out in front of her like claws.

“I hate you,” she said, venom in her words. Then her eyes widened and she screamed, “I HATE YOU, I HATE YOU, I HATE YOU!”

He smashed his hands against his ears and cried out as if he was being struck, because that’s how it felt.

She was looking right at him. Did she see him? The light was behind her, but it wasn’t very bright, so he couldn’t be sure.

With a single broad step, he slipped behind a cooler tower. Now peering through the falling water, he watched her as she turned once again toward the edge.

For another long moment, she leaned out over the abyss.

Then she straightened up. Turned around. Without looking again in his direction, without making a sound, she strode to the stairway door.

Then she was gone, back into the building that was her home and, he now understood, her prison. He didn't know if she would actually have jumped, not even if she'd been planning to. But he feared it.

His heart went with her down the hard steel stairs to the luxury and torment of the fiftieth floor. In his mind was the image of her glowing in the moonlight, and another image, of her lying in the alley as his father had, arms spread, absolutely still.

He slid into his space and closed his eyes. He stayed there a while. He lay listening, determined to stay alert in case she came back. But his thoughts went to those night-vision goggles.

He got his rose and cradled it.

The rose of life and the rose of happiness, he thought, and in that moment he made a decision. It was dangerous, he knew, and it was foolish, and it would take from him the thing he loved the most. But he also knew that his rose could bring Melody happiness, too, and maybe even help her somehow.

He slipped into the electrical room through the hatch he'd made from his little space, then dropped down along the hot, humming cables and into the fiftieth-floor crawl space. There was rock music coming from 5052 and, from across the hall, a man and a woman arguing. Apartment 5050 was silent. He went out across the ceiling of the den and did something he never did when somebody was home.

He put his hand on his hatch. Closed his fingers around the little latch he'd screwed into it and opened it.

Silence below. Darkness. A faint odor of something sweet—perfume, he thought.

He dropped down into the closet. Hardly breathing, he listened for movement in the room beyond.

Not a sound.

He stepped into the hallway, then stopped listening.

All he could hear was his own thrashing heart.

Why was he doing this? Was he crazy? But he had to. He wanted to give her the rose.

He stood before her door, pressed his ear against it, listened, and heard nothing from inside. Was she asleep?

Turning the handle carefully, he opened the door a crack. He waited. No sound. He opened it further. Her bed was a dark pool, her form on it a curled shadow.

In three long, silent steps, he was beside her. He looked down at her face, shadowy and gorgeous, the full lips held in a line that suggested great sadness.

Trembling, he laid a hand on her broad forehead, feeling fear and electric pleasure as he touched her for the first time. For a moment he was paralyzed, unable to break the connection.

Then he took his rose from his pocket and placed it on the pillow beside her face.

He stepped quickly out of the room and slipped ghostlike down the hall and through the den, drawing himself into the crawl space and closing his hatch behind him.

He slipped into the darkness and hidden passages of the building, leaving behind, like a sacrifice and a talisman, the most precious thing he possessed.

CHAPTER 7

Frank waited miserably in Mr. Szatson's big office in his magnificent home. He wasn't precisely sure why he'd been called to come here, but it couldn't be good, that was certain.

He stared out through the glass wall toward the beautiful swimming pool. A woman sat beside it under an umbrella, reading a book in the sun and listening to music that was too faint to make out.

"My wife," Szatson said sarcastically as he came hurrying into the room. He threw his athletic form down behind the huge desk and fixed his dark, quick eyes on Frank.

Frank knew perfectly well that Mr. Szatson had hired him to do fires. So, probably that's what this meeting was about. Some Szatson development somewhere was being stalled by some jerk refusing to move, and he needed to be burned out.

Szatson looked at him for so long that it became uncomfortable, and Frank had to look away. It was an intimidation technique, he supposed. If so, it wasn't going to work. He was going to need more than his pitiful super's salary to do a fire.

"What's our present vacancy status?"

Frank blinked with surprise. He wasn't often wrong about people, but this

was not the question he had expected. “I’ve seen a steady stream of move-outs, sir.”

“What’s the complaint log look like?”

“Not a lot. The rents need to come down—that’s our problem.”

“Frank, I want to tell you something. The move-outs don’t matter.”

That made no sense, but he was the boss. “Uh, okay.”

“In fact, I want you to encourage more of them. Hassle people a little. Nothing illegal, of course, don’t go that far. But you can cut back air-conditioning, drop hot water pressure. You can do that sort of thing.”

“Sure, but why?”

Again, Luther Szatson’s eyes met his. “Frank, Frank, Frank.” He chuckled. “Have you learned the building?”

“Absolutely.”

“Then you know how it all works, the power systems, the air, the steam, all of that?”

“Yes, sir.”

“And how much fuel oil does it carry, Frank, at any given time?”

Frank was so astonished that he almost couldn’t reply, because that question told him instantly where this was going. But no—*no*. The Beresford was too big. It was—oh, God, it would be the fire of the century. He swallowed hard and fought to gather enough spit to talk. “We generally have about twenty thousand gallons on hand. More in the winter. The capacity is thirty thousand gallons.”

“And where is that?”

“Where is the fuel oil stored?”

“Exactly.”

“In the storage tanks. There are three of them under the machinery floor.” Szatson must be quizzing him to make sure he knew his stuff. Okay, he’d pass this quiz.

“And where is the elevator shaft in relation to this storage area?”

“Uh, the shafts come down—the service cars bottom on the tank floor.”

“The elevator shaft is actually open all the way from the top of the building

to the bottom, isn't it?"

"Well, yeah, of course."

"That would be a major violation, Frank."

"Yeah, but the doors down there are code doors. Fire doors. So any problem is gonna be contained, if that's what you're worried about, Mr. Szatson."

Szatson's eyes smiled, but his words were spat right in Frank's face. "It's none of your business what I'm worried about."

Frank would sooner have been watched by a cobra. He needed some kind of clarification. Because if Mr. Szatson was going to torch a fifty-story apartment building full of people, Frank was not his man. No way.

"You're saying I need to do everything I can to increase vacancies, Mr. Szatson? Because I'm not quite sure, here."

"Let me ask you this. If something happened in the basement, if there was a fuel fire, how well protected are we?"

The words hung in the air. People would be killed. With his record, the cops would be all over him. If he got convicted, he'd get the needle.

"Frank, are we protected? Or do I need to do something about that shaft?"

"Well, those fire doors would close. If it was a straight flamer, no problem. The sprinklers would take care of it before the fire department even got there. The thing is, though, if the fuel tanks went up, they'd blow the doors off, and then you'd see that shaft work like a chimney. You'd have fire all the way to the top of the structure in a matter of seconds."

Then he thought an incredible, chilling thought: Was this *why* the elevator shaft went down to the fuel storage tanks? Had Szatson always planned to torch the Beresford?

But why hadn't the insurance company seen it? One reason and one only: Mr. Szatson was in the insurance business, too. You could be sure, though, when the Beresford burned, it wouldn't be his money that would come out of the insurance trust to pay the gigantic claim. No, that would be the money of innocent investors.

How much would he collect? Easily half a billion dollars and probably more. There would be lawsuits galore, of course, from the survivors and the

families of the dead—for there would be many dead—but the suits would also be covered by liability insurance.

Instead of making a small monthly profit on the Beresford, Szatson was going to cash out in what was bound to be one of the most spectacular fires in Los Angeles history.

“Is it doable?” Szatson asked. His voice was very quiet. “I mean, could it happen? A fire like that?”

“I don’t think those fuel tanks are that dangerous. That oil takes special treatment to burn—that’s why you’ve got blowers on the fireboxes.”

“Well, good. Then I’m not gonna lose any sleep over it.” He went to a drawer and removed a file. “I got a variance from the city for that shaft. They let me off the hook, thank God. It was an honest mistake.”

Frank knew that he had to have paid plenty for that variance. No honest inspector would let a violation that dangerous go unrepaired.

“So, Frank, are we together on this?”

Frank knew he was the best torch in the game, and Luther Szatson had reached out for him.

He took a deep breath and spoke. “I want you to know that I understand very clearly, Mr. Szatson.” He would not say that he would do it, though. He would not do it. First, it was too dangerous. Second, he’d never killed anyone. He did arson, not murder.

Szatson strolled to the glass wall that overlooked the pool.

Frank interpreted this as a signal that the meeting was over and started to get up.

“No, no,” Szatson said, “we’re not quite finished here.” He opened the folder on his desk. “I’m looking at a complaint here.”

“About me? From a tenant?”

“It’s from a tenant’s lawyer. The singer on fifty.”

“Yeah?”

“The thing is, this lawyer is claiming that somebody is bothering the girl. Somebody is—listen to this—‘utilizing shaftways and crawl spaces to stalk Miss McGrath.’ ”

That damn squatter. Frank held up his hand. "Say no more. It's taken care of."

"Wylie said that. Christopher before him. Now you say it."

"Except I can do it."

Szatson glared. "Then why haven't you?" His voice was acid. Frank knew this shadow man could turn out to be a witness, and witnesses were dangerous.

"I've confirmed that he's there. That's a start."

"I don't need a start, I need a finish!"

"He's good at what he does."

"Get the job done!"

"I'll take care of him."

"If this bastard uses the chases, fine. He can fall."

Frank knew exactly what those words meant. His boss had just told him to kill the squatter.

"Yes, sir," he agreed, "he can fall. But then we have a police investigation inside the building."

"He falls, he disappears."

Frank could smell the stink of fear in the room, the sharp odor of his own sweat.

"Well," Szatson said, "I think we've reached an understanding. Am I right?"

Frank had just been asked to set a fire that was certain to kill and to murder a squatter. He temporarily froze.

"Frank, you know why you came out of the house early? Why you're off the parole list?"

"I've got an idea."

"It's the right idea. I did it, and I can undo it. I can make it look like you forged the release documents. *You*, Frank. You'll go back in."

And, as Frank knew all too well, this time it would be for good.

So he was being given a choice: kill people and risk being executed, or

refuse to do it and spend the rest of his life in prison, convicted of using forged documents to escape.

He sucked breath. Life in prison for certain against the possibility of a death sentence. A certainty against a possibility.

He made his choice.

“You’re gonna get your work done, sir. Just like you want it done.”

Szatson smiled. Somehow the brightness of his teeth made the deal even more terrifying.

Back in his car, Frank sat for a long time. “So what happens to me?” he muttered into the silence. “What happens to me then?”

The answer was, Szatson went on down the road amassing his billions, and a little guy like Frank—well, maybe he got something, and maybe he didn’t.

As he angled his car down into the city streets, he felt the tightness of frustration constricting his throat. Stopping at a light on Franklin, he watched a bunch of kids from Hollywood High School cross the street and head toward Starbucks.

When the light changed, he found that his foot had been pressing the brake so hard that it had cramped in the arch.

He drove on back to the Beresford with one thought in mind: the creep who was using the shafts was about to find out that when you got an unexpected push, the fall was long and the landing hard.

CHAPTER 8

We're in the middle of a media frenzy, and I'm totally thrown, I have to say. It's over Alex, of course. I should have expected it, but I didn't. I woke up this morning thinking only about the creep on the roof, then Lupe, who cleans our place, called to say the doorman wouldn't let her in because he thought she was with the reporters.

Now I'm gonna have to do a papi walk just to get out of the building. It makes me wish I could fly, and suddenly a new song is in my mind, "Flying on Forever." Every kid in the world will understand this song, I know it.

I'm still thinking about the unbelievable fight we had. The worst ever, I think.

We meet in the front hall, and the first words out of Mom's mouth are, "You look *wonderful*." She's trying to make up, but I still can't.

Now the doorbell rings, and Julius is here. The super, Frank, is with him.

"We're ready to move," Julius says, and Frank goes, "I've got the back entrance open, and we have security in the lobby to make it look like you're about to come through."

"We want to go through the lobby," Mom says.

"*Mom!*" But she's right. Of course we do.

So I stand in silence as the elevator goes down.

Frank says, "Mrs. McGrath, we have that other situation under control."

“Thank you.”

I would never tell Mom that I saw him on the roof last night, because she would go totally *insane* if she knew I’d been up there. She’d put armed guards in the stairwell.

I don’t think I wanted to jump. I don’t know. Maybe what I wanted was to fly.

The doors open—and there, in the middle of the hungry crowd, the first thing I see is the grinning face of this tiny woman with huge glasses who says, “Melody, I’m Amber. From *People*?”

Then a papi I don’t know says, “Melody, is it true you do meth, too? That the cops are covering for you?”

“Amber,” Mom says, taking her by the arm as we go through the camera clickathon, “you were supposed to call!”

We’re an entourage now, me and Mom and Julius and Frank and Amber. Not a big entourage, maybe, but enough to make me appear to be the star.

Shouted question: “Melody, is *Swingles* totally dead?”

“Nothing is ever totally dead,” Mom yells back.

“How do you feel about Alex going to jail?”

For a second, I’m thrown. What is this about *jail*?

“Did he rape you, Melody?”

Then we are outside under the marquee and the limo is there. Thank God.

The limo smells like bacon, and I discover that we have a nice breakfast waiting—scrambled eggs and coffee and bacon. I want to love Mom again.

I’m not even chewing a mouthful of food yet when Mom says, “Walker is on guitar, and Mickey is on drums again. So what do you have for them, sweetie?”

Mom is 1,000 percent business, as always.

“I have ‘So Long, Boyfriend’ and ‘Love Without You’ and two new ones.”

“Okay.” She puts out her hand.

“Um, actually, they’re in my head.”

“You do understand that studio time burns fifteen hundred dollars an hour?”

“They’re in my head!”

“They need to be on paper!”

“When I’m in the iso booth, I’ll do them. You can work with the arranger. We’ll put it together as we go.”

“So, basically, we have just the two songs. And that’s it.”

“Mom, we have four songs and probably more, and you have to respect my process! They *will* come out.” I get so mad I just boil over, and right in front of the damn *People* lady, too.

“And who scores? Who turns this crap into music?”

“Whoever you hired to turn this crap into music!”

I catch on that she *wants* the *People* lady to write awful things about her. She wants to be known as a harridan, a slave driver, because it makes a lot better copy than if she was wonderful and smart and sweet.

I eat my breakfast and watch her and think about her. This is the woman who came sneaking into my room last night and put her hand on my forehead, then proceeded to leave a weathered old silk rose on my pillow as some kind of odd peace offering. It looks like something off a garbage truck. And now I’m going to conduct an experiment.

I take the rose from my purse. “By the way, Mom, thanks for this.”

She looks at it. In the jump seats Julius and Amber gobble more eggs. But Amber is not oblivious. She is doing her reporter thing of disappearing into the woodwork so, hopefully, she can pile dirt on me. As she gobbles, she watches.

Mom looks at it. “What’s this supposed to mean?”

Which is not the reaction I expected. “Um, maybe that’s my question.”

She picks it up. “This is filthy.” She rolls down the window and tosses it out.

Suddenly I want to scream because I know what it is. It’s from *him*. He saw me on the roof and he stopped me. Maybe I didn’t need to be stopped, but now I know *he can get into our apartment*.

My breakfast comes up all over everything and everybody, and I am horribly embarrassed and totally sick.

“Oh, Lord, honey.”

“You want me to stop, ma’am?”

“No, Louie, we’re fine, don’t stop, for God’s sake!”

I’m fighting for control, but my body is suddenly not my own. I remember him standing there in the shadows on the roof, and another heave comes.

Julius gets his arms around me and helps me back into the seat while Mom finds paper towels somewhere under the bar and wipes up. Then she produces a new shirt, which I change into.

“I have to get out—I’m going to be sick,” Amber yells.

“Open the windows for her, but *do not stop*.”

So we go on down the Ten with the windows open and traffic all around us and the papis frantically trying to get up beside us so they can get a shot of whatever in hell is happening in here.

We’re going to Reynolds, one of the most legendary recording studios in the world, which I like because it has a real private feeling once you are inside. Plus, the isolation booths are big and comfy, and if I’m going to spend my whole day in one, what I don’t need is claustrophobia.

“Okay, honey, okay now, it’s gonna be good. It’s gonna be good. Am I riding you too hard?”

She is cleaning me up, fixing my face, her eyes full of pride and love.

“Mom, I’m so sorry.”

“We’re fine. We’re going to have an extraordinary day.”

I feel the car stop and whisper to Mom, “I’m not scared.” Mom’s look has love in it, but also a sharpness that *does* scare me.

The papis are parking on the sidewalk and running toward us.

“Now just look out the window, don’t say anything, and let them shoot you.”

So I sit amid the machine gun clicking of the cameras, which is amazingly intense. I smile, and, yes, there is this thrill that goes through me when I realize that they are working in relays because there are so many of them.

When the window goes up, they are all gone. I sit back and close my eyes, and for just a second the world is not there. Then I hear the gargling sound of

Mom sucking her plastic cigarette. I open my eyes and watch Amber writing on a pad. I mean, she actually does this. Every other reporter I've met never wrote a thing down and just made up all my quotes. This is real, though. It's not a tab, it's *People*, for Chrissake.

The door opens, and we're in the forecourt, which is full of bamboo and palm trees and blooming lantana. Then Willie comes out with Sassy Lester, my arranger.

"Mel, they're just brilliant, *brilliant*," she says. She looks at Mom. "Oh my God, Hilda, aren't they *fabulous*?"

"I know. We're so proud of her."

I actually haven't played any of these demos for Mom yet. And for a reason—she'll be too critical.

We go down the long hall paneled with blond wood and hung with pictures of people from ancient history, like Sandra Dee, and more recent ones, like Sister Hazel. There is a picture of me at the end of the hall, the one that was taken by Rod Gilliard last April. 'Course I know that it will be gone eventually, replaced by a picture of the next instant superstar.

But it sure does make me feel important, especially when I go into the isolation booth where I will spend the next however many hours. Inside I find the spritzer of mint Listerine that I like, a box of Altoids, and six-packs of Evian and fruit punch Gatorade. Nobody asked me my preferences. They found out on their own.

My demo comes through, and the first song we run is "Flying on Forever," which is almost whispered, with long bass notes backing it up, and I'm thinking we should add something like a theremin when Sassy says into my earphones, "When I heard this, I said to Willie, this is slow and dreamy."

"Kids need to be able to dance to it," I say. "Think slow dancing, just a few kids in somebody's rec room with all the lights turned off," I add.

"I think our girl's done this before," Willie says.

Then my voice comes into my ears, and I start singing to it, and I feel like I'm flying.

"Flying on with the stars, with the clouds that love me, flying in the dark when you cannot even see, flying on forever . . . forever . . . forever . . ."

Again I'm up on that railing and the wind is blowing my silk nightgown, and I sing, "When you are remembered, you're not remembered at all, nobody's real, nobody falls, nobody at all . . . 'cause we're all flying on forever . . . forever . . . forever."

I stop and after a second the scratch track stops too. Willie says, "Good. We'll take some of those."

"I need a punch in 'you're not remembered,' " I say. "I dropped off-key."

Then Mom's voice comes into the mix. "Is this a song about suicide?"

"No, Mom, it's about flying."

"We don't need people blaming us for kids killing themselves, Mel."

"My music is about coping with emotions, not giving in to them."

I remember the weirdo standing back in the shadows. Somehow he had stopped me.

"Flying on forever," I sing, "forever . . . forever . . . forever," and so it goes, on and on. I do my lyrics again and again and again. Hopefully what comes out the other end will sound rad, and I'll get amazing downloads and have a hit.

Some musicians will do fifty takes or more. But I can't do it that way. I'll sing it through five or six times, feeling it down deep in my blood.

Then we move on to "So Not Free," which I think will be the big seller on this album. I can see Mom outside the sound room with her plastic cigarette, glaring. She is not liking these songs.

"You think you're on the road, you think you're gonna go, but you're so not free, so not free . . . so not free . . . so not free. . . . You think there are no bars, but they put them around your heart. . . . You're so not free, so not free. . . ."

"NO, NO, NO!" Mom throws up her arms. "This is all crazy. This isn't music. There's hardly any rhyme—it's almost unsing-able! It's dark, depressive crap, and I won't have it!"

"I think it sounds great, Sassy. Let's do it again. I'm ready," I say.

"I believe we're in mid-freakout here," Willie says under his breath. "Mrs. McGrath, we were going to do that take again. Are you all right?"

“Okay, fine, do it again, but you will NOT get paid. None of you! Money tap is closed.” Her eyes pop practically out of her head and she looks at me. “And I *can* do it. Legally, I have the right, *little girl!*”

So I pull off my headset and go out into the observation room, where Mom paces and Amber sits scribbling wildly.

Time for me to take over. “Mother, I would appreciate it if you could go out and get Louie to take you home.”

“I’m getting in that car, all right, but so are you, you self-obsessed, self-destructive little bitch. And you’re gonna go to a goddamn shrink and get some antidepressants.”

“Well, that’s very insightful of you. Do you know that I went up on the roof last night, and I almost went over? And do you also know that it was *not* you who made me go up there and lean against that rail, and it was *not* you who made me come down?”

She grabs me and *shakes, shakes, shakes* until my eyes and neck hurt, and finally Amber says, “Hey there, hey there,” and grabs Mom’s shoulder.

“This is between me and her, dammit!” Mom lunges at Amber. “Gimme that notebook!” She grabs it and rips out pages and stuffs them in her mouth. “Your lies taste like paper,” she says as the pages come flying out.

Amber sort of recovers herself but looks absolutely horrified.

Then Sassy is there, standing in the doorway. Sassy is maybe thirty. She sings in cabarets of the kind Mom likes, so they have some sort of bond. Sassy has a sailor cut, and she’s real thin. Today she has on a Three Wolves T-shirt and jeans at least as old as me.

“It’s all brilliant, you know.”

“But it’s not gonna SELL,” my mom says. “Kids like—” She dances a kind of crazed little jig. “They like to dance and laugh and love! Like I did! It hasn’t changed. It’ll never change.”

Silence. Everybody is now in the room with us, and every single person disagrees with Mom. You can hear it in the total vacuum.

“It’ll never change!”

She throws herself down on the couch and jams her headphones back on. She takes out her plastic cigarette and throws it across the room. She lights a

Marlboro, takes a long drag, dragons the smoke out her nose, and says, “Okay, so Mommy’s being bad again. Call a cop!”

I won that one. We go on with the session, and I find a rhythm, grabbing songs out of some kind of spirit wind that is blowing through my head. I know we’re just laying down scratch tracks at this point, but they’ll lead to something. Anyway, we end the day with five finished songs, “So Not Free,” “Flying on Forever,” “Blue Roses,” “Love Without You,” and, of course, “So Long, Boyfriend.”

As we’re heading back to the car, Mom apologizes to Amber.

Amber says nothing. I can’t even begin to imagine what’s going to appear in *People*, but it won’t be pretty.

Mom is still smoking, so I crack a window.

She reaches over, closes it.

“Mom, I can’t stand—”

“I put up with your crap.”

“I can’t stand us fighting! Why are we fighting? Why can’t we stop?”

“Why are we fighting? Because you’re sixteen years old and I’m the dumbest mom who ever existed.”

“I hope I’m not that much of a cliché.”

She reaches over and pats my knee. And, in this way, a truce is declared. She says to Louie, “We go in on Tischer Court. The super’s got the back open for us.” Then to me, “The party’s over for the papis.”

“Thank you, Mom.”

Frank is there—he comes out the door as we pull up. He looks huge, like a guard coming out of a guard house. He must be six four. I imagine him carrying me upstairs.

There’s an elevator waiting at the end of the long gray hall near the security office. In the office I see all the screens, all the images from the security cameras on every floor, and I wonder if Frank knows who the stalker is. But I don’t want to ask him. I don’t want to say anything because there will just be more hell over it with Mom. If Mom knew he’d been in the apartment, there would be no peace.

We arrive at our floor.

“Thanks, Frank,” Mom says, and I hear in her voice the certain tone that she reserves for men she likes, a sort of smoothness with a whisper of bedtime in it. But he’s at least ten years younger than she is.

As we enter the foyer, I see an arrangement on the big table, a beautiful spray of flowers.

“Hi there, Mel. Hi, Hilda.”

A man comes strolling out of the living room, and at first I think it’s some new beau who has been given the run of the apartment without even a mention to me, but then I am introduced.

“Melody, this is Dr. Singer.”

Somehow, she has managed to call a shrink and get him over here.

I head straight for the door.

“Mel!”

“No, Mom, I’m not staying. If you want me to see a doctor, ask me. Don’t ambush me.”

“You’re a minor.”

“I’m a human being, and I have human rights!”

“You’re a child, and you’re in trouble, and you need help.”

She turns away, strides toward the wall of windows. “Oh, God,” she murmurs, “help me.”

I realize that she is absolutely terrified for me.

I look toward the front door and want so badly to just walk through it and keep going forever, just like in my song.

Except, except, *except*, I do want my career. It’s not the fame that matters—it’s the kind of musical inspiration that happened today.

“Okay,” I say to Dr. Singer. “What are we doing?”

“I’m here because your mother is concerned.”

I look at her. She looks right back. The defiance there makes me mad. The terror makes me sad. She says, “Honey, please.”

So I go into the den and drop down on the couch. “Is this how you want

me?”

“Melody, I want you to be comfortable. I just want us to get to know each other today. We’ll keep talking. But I want to put something right on the table now. Do you know what a suicide intervention is?”

Ohmygod. This guy must be from a suicide watch.

I say nothing.

“So tell me, did you do what your mom says you did? What you told her?”

I just had the best day of my whole life, and the worst day of my whole life.

“I don’t know what I said.”

He takes out a pocket recorder. He presses a button and I hear *me*: “Do you know that I went up on the roof last night, and I almost went over?”

He stops it. “That is you?”

My throat closes. I want to talk, but I can’t. I want to shake my head *no no no*, but I can’t.

“And you spent the whole day recording songs that can’t be used. Suicide songs?”

“This is totally insane. Because this was the best day I’ve ever had. I mean, songs I didn’t even know I had in me came out, and my arranger—who is the one who actually knows, not Mom—she says they’re brilliant.”

“She’s a paid employee. Of course she’s enthusiastic. But this material needs to disappear.”

Could Mom actually have my songs *erased*? Would she?

“Where is my music?”

“Excuse me?”

“You know what I said, you bastard. WHERE IS MY MUSIC?” I jump up. “MOM! MOM!”

She’s in the living room, smoking and drinking vodka.

I approach her. “Did you erase my day?”

“Darling, you can’t go out there with that stuff. It’s horrible. *Horrible!*”

And then I am on her. I am hitting her, slamming her, kicking her, and I

feel myself almost immediately being pulled off, and I scream—boy, do I scream. I scream with all my might for help, for anyone to come, for *him* to come because whoever he is, he's going to be better than the living hell this place has become.

I'm dragged across the room by this prick, who is stronger than he looks. I go limp. What's the use?

"Melody, we're going to give you a little sedative," I hear him say.

Mom nods.

"That was probably the best session at Reynolds in *history!*"

"When you wake up in the morning," Mom says, "there will be a composer here, and tomorrow the three of us are going to start creating some music that people want to hear."

He takes my arm.

"Don't you dare touch me!"

Then there is a pain in my shoulder and I jerk away, but it's too late.

Already the world is going. I can feel the covers coming up around me.

I see the sunset out my window, red at the horizon, gold higher up.

Then it is dark.

CHAPTER 9

Beresford had never felt anything like this before in his life.

All day he had stayed in Melody's apartment, forcing himself not to open her drawers or her closet, looking instead in the fridge at the things she ate and drank, the diet sodas, the cheese and roasted chicken, the cold cuts, the mint ice cream. He would take a taste and close his eyes and let the flavors fill his head and think, "*She* has tasted this taste; *she* knows this flavor."

Only when their maid had come in and cleaned had he hidden, and then just to go up his hatch and linger there, waiting for the vacuum cleaner to stop and the singing to fade away, which it did, as always, in a couple of hours.

He had looked for his rose, but it was not there, so that meant she liked it and had it with her. Good.

Usually, they were home late, so he wasn't expecting the man who came when the sun was midway down the western sky. Still, it was easy to slip into the den and back up into the crawl space. He'd lain along one of the beams, listening. The man went into Melody's room and searched it carefully. He could hear him turning pages, and he wondered if Melody kept a notebook. Why not? She could probably write and read and all that.

When they came home, the man met them and there was yelling that made Beresford stuff his fist in his mouth so he wouldn't shout out his own rage at

whatever they were doing to her. They were breaking her heart and maybe even hurting her. He could hear the terror and the sorrow in her voice.

Then the man put her to sleep. He'd heard that, too, had heard her scream and beg for him not to, and then her voice went low, and the man—a doctor—said she would sleep until morning.

Beresford sweated out the minutes until the place was quiet. He was going to enter an occupied apartment again. He hadn't been able to stop himself last night, and he couldn't now.

Slowly, carefully, he opened his hatch and looked down into the den closet. All was quiet. No light shone under the door. So he slipped down to the floor, then carefully slid the door open a crack.

The den was full of shadows.

Moving quickly and silently, he stepped out of the closet and crossed the room. There was light shining under this door, but none of the shadows revealed movement. Also, not a sound. Carefully, he grasped the doorknob and turned it.

The hall was dimly lit by a lamp in the living room. Melody's mom sat on the couch reading papers of some sort. She listened to soft music.

Beresford needed to be with Melody.

He slid silently along the wall to her door, then touched the doorknob as if it was a delicate blossom and gently turned it.

He was in. The curtains were drawn. With three quick steps he crossed to her bedside. He could just see her in the darkness, her face glowing as if with an inner light.

He bent closer, cupping his hands around her cheeks, not daring to touch her. He could feel her warmth and smell a faint perfume. She was so wonderful. Just so very wonderful. He drank her in with his eyes, touched the faint heat that lingered around her head, and longed for something he didn't understand and couldn't name but that made his whole body ache.

Finally, he sat on the floor beside the bed. At once shaking with fear and thrilled beyond words, he leaned his head against the mattress. He could feel the faint tickle of her breath against his cheek.

Hesitant, hardly daring, he slid his hand up until it just touched her arm.

After a time, she sighed and shifted in the bed. When she stopped, he was already halfway across the room.

Now she lay with a hand dangling off the edge of the bed. He crept back.

Her face was now turned toward the wall. His heart hammering, his breath shallow and quick, he knelt beside the bed, bent forward, and kissed her cheek.

Her skin smelled of flowers. His face close to hers, he imagined that he could send her his thoughts: “I love you with all my heart, Melody McGrath, and I give myself to you forever.”

Her sleep continued on, undisturbed.

He did not kiss her again, but he also did not leave.

Sometime very late, he heard voices. It was the doctor and Melody’s mom.

There was no time to do anything except slide under the bed. A bare second later, four feet entered the room.

“See, she’s peaceful,” the doctor said. “It’s not the Nitrazepam anymore. It’s just natural sleep. She’ll wake up normally and feel a lot better.”

“I don’t know if she hates me or what.”

“Sixteen is very conflicted.”

“You can say that again.”

Beresford was furious. This man was supposed to be a doctor, and he sounded like one, but he shouldn’t be in the apartment this late with the patient’s mother. That was not right.

“What am I gonna do with her?”

“Make money, Hilda. You have two years before you lose control of her.”

“I’ve got her album back on the charts. I’ve got her show sold out.”

“And she’s ever so grateful.”

“Hardly.”

In reply, he chuckled. Then the feet came together and Beresford’s face burned, because he heard the sound of kissing.

Finally he saw them walking out, her arm around his waist. When they were gone, he pulled himself out from under the bed—but as he did so, he heard something else.

Listening, he froze. It was in the ceiling, a faint creaking.

But there was a lot of wind tonight, so maybe it was the building. Nobody but him ever went in the crawl spaces.

He resumed his vigil beside his sleeping beauty, wanting to protect her but not sure exactly how to go about it.

As before, she breathed softly, her breath warm on his cheek when he leaned near her.

He was just settling back down beside her bed when there was a sharp intake of breath. Before he could react, she shot up to a sitting position and her eyes opened wide. She was going to scream.

He laid his mouth beside her ear and whispered, “Don’t scream, don’t scream, please, please, please.” In response there was a choked groan, then another. “Please, please, please . . .”

Then, for the first time in the world, the girl he loved spoke to him. She said in whispered breath, “Who are you?”

He raised his head and looked into the most perfect face he had ever known. His heart hammered and sweat came all over his shivering body, and he told her the truth. “I don’t remember.”

A frown flickered in her eyes, then her lips opened slightly and her eyes glanced away. “W-what?”

He thought she must be at the edge of total panic.

“I guess I had a name a long time ago, but I forgot it because no one talks to me.”

He had never in his life wanted to hug somebody as much as he wanted to hug Melody. Impulsively, he kissed the end of her nose.

She smiled a little, but then wagged her finger in front of his face.

“How do you get in my room?”

“I live here.”

“In my apartment? You *live* here?”

He pointed to the ceiling. “In there. All over. I live in the Beresford.”

She looked at him a long time, her eyes rich with questions, her soft lips alternately touched with a smile, then trembling at the edge of fear.

“You know you’re wearing a woman’s blouse.”

It was a shirt he got out of the trash in an apartment, so he was not sure what this meant.

“Yes,” he said carefully.

“Are you a TV?”

He was confused. Wasn’t it obvious that he was a person?

“Do I look like a TV?”

“No, except the blouse.”

He looked down at himself. “It’s not a TV.” He felt it. “It’s cloth.”

Surprise washed her face, sparkles came into her eyes.

“What is going on here?”

“Shh! Shh!”

She got out of bed, swept across the room, and locked the door. “Man, I need coffee. Can you make coffee appear, magic boy?”

“Yeah, but we better go to a vacationer.”

Suddenly there was light! Instinct made him go for the closet, then terror swept through him like a rush of fire, because his hatch was not in there.

She stood by the door with her hand on the light switch. She was looking at him now with frank, wide eyes. She came toward him.

“Turn around,” she said.

He turned slowly.

Now her head was down, her cheeks flushing a soft pink.

“You’re beautiful,” she said.

“You’re beautiful.”

“You need to get out of here.”

“I want to stay.”

She smiled at him, which caused him to think again of the meaning of the word *love*. This was love. That was what he felt.

“I want to stay because I love you.”

She tossed her head and laughed a little in her throat, and the way that sounded made his body stir. He longed to hold her but knew from TV that if

he did what he wanted, it would make her upset.

He said, "Can we hold hands?"

Silently, she came to him. She held out her hand. He took it. They stood face-to-face, hands clasped almost formally, and he thought there must be something else he should do, but he didn't know what it was.

"You kissed my cheek. That's why I woke up. I dreamed you were a prince. Are you?"

"I don't know."

"A beautiful boy with magical powers who wakes the sleeping beauty."

She raised her face to his and brushed her lips against his cheek.

It was fire that tickled. He shuddered.

Then she looked up at him, her eyes shining, her lips just parted. She took his chin, drew it down, and brought his lips to hers. An instant passed that was like eternity for him. But then she turned away.

"You have to go."

"I want to live here now."

"You haven't met my mother."

He did not say how well he knew her mother. He did not say how well he knew her life.

"If she found you, she would have you arrested."

He'd seen that on TV. "I didn't commit a crime."

"I'm still jailbait, you know. How old are you?"

"I'm as old as you are."

"You're sixteen?"

"Yeah, I think so."

She gave him a sideways glance. "Can you count to ten?"

"I can count to a hundred. I can read some stuff."

"Where do you go to school?"

"Uh . . . I don't remember."

"You don't. You really don't." She folded her arms and looked him up and down. "Do you live in an apartment? Where are your parents?"

“Mom died. Luther killed Dad.”

“Luther? Who is Luther?”

“I don’t know. I just never forgot his name. He pushed Dad off the roof.”

“My God. Did the cops come? Did they arrest this guy?”

“I don’t know.”

“This happened—when? Today?”

He shook his head. It was so long ago now, it felt like it was at the bottom of a well. In the dark of the past. “I had to hide or Luther would get me, too. Luther would kill me.”

“So you hid . . . where?”

He dared not tell about his place, not even her.

“In here.”

“In my room? Luther killed your dad, and you hid here?”

“Wait, wait, I’m trying to tell you. It happened when I was little.”

“But—*what?* Where do you come from, then, a foster home?”

“I come from here.”

“I think you’d better leave now.”

He didn’t want to. He really, really didn’t want to. “Please let me stay.”

“If my mother found you in here—I don’t even want to think about it. Do you have any identification?”

He threw his arms around her. “Don’t go on the roof like that again. Don’t ever!”

She leaned against him for a moment with her full weight, and it felt so good that he said in his mind, “Never stop, never stop.” But then she did stop.

He grabbed her hands. “Promise me.”

“You can’t ask me that, because—you just can’t!”

She turned away from him. He thought of the little birds that sometimes got into the crawl spaces of the upper floors. He tried to catch them, but he never could, and they died. They always died.

She said, “You have to leave now.”

“I can’t. I’m scared for you.”

“Oh, Lord, now a lurker fan who lives in the walls. Where does it end?”

“If you come back up on the roof, I’ll be there,” he said.

“I have a balcony.”

“I’ll be there.”

Her eyes widened and then sort of seemed to flash, and he decided that, whenever possible, he would be no more than ten feet away from her. He wanted to say “you have to live,” but it sounded selfish, so he said nothing.

He put his hands on her shoulders and held her, and looked down into that perfect face. He knew there was a great sadness in her and realized that, at all costs, his primary mission was to save the woman he loved.

Unable to speak, he turned from her and went quickly out the door, into the hall, and back to the den. In a moment he was up in the crawl space and racing off down the equipment chase and into the depths of the building.

He did not see the light that followed him as he dropped down the chase, but it was there, and it carried his fate with it, a terrible fate that was thundering toward him with all the fury of an avalanche.

CHAPTER 10

Ohmygosh! Ohmygosh! Oh, he was beautiful, he was *beautiful*, he was gentle and amazing, and he lives in the walls. *He lives in the walls!*

I—I—I think I should be furious—at him for breaking into my house, at this stupid building for its rotten security. I think I should sue their asses. I think somebody should call the cops and get this kid into foster care. I think the Luther thing should be followed up . . . and I think I really, really want to see him again.

Where does he go, what does he do? Where *did* he go? He just suddenly walked out of the room, and I went out behind him and he was *gone!*

Is he a ghost, a *real* ghost? No, because he kissed me. It was like how a little boy kisses you, all sloppy and hard. He was clumsy and his heart was beating like a motor, but he's *huge*, way over six feet, and handsome, too, with hair that makes him look wild, and those big soulful eyes and rippling arm muscles. The way he held me, it was like he was some kind of master of dance. I just fell into his arms. He made me feel like a feather, an adored, beautiful feather. Then the kiss, and it was just darling—he had no idea what to do, he was just way out of his depth.

And what's with the blouse? What is *that*? He thought I was calling him an *actual* TV set, not a cross-dresser, because he must have no idea what that is.

I am laughing so hard I have to hold my face in the pillow until I

practically smother, but then I just roll around in bed imagining him in here with me. He is really strong, and I know why—because he climbs around in this building like some kind of wonderful, beautiful phantom of the skyscraper.

His hair is a huge, blond wave that frames his face and hangs down behind him. You can see on the sides where he cuts it, but not very well. What does he use, pinking shears?

His face is an open window. His eyes are wide and blue-gray. He looks like everything surprises him. When I kissed him, he was so surprised that he almost collapsed.

He's rough but sweet, and the way he was forcing himself to hold back just thrilled me and made me feel more wanted than I've ever felt before—

“Stop that preening and get dressed!”

“Oh, Jesus! Mom, you scared me!”

“You live for the mirror. It's a sickness.”

“You don't want close-ups of my zits ending up online, do you?”

She sighs. Her hair is in curlers; her face is so bare of makeup that her complexion looks as if she's been drained by a vampire.

“Feeling okay, Mom? Because you look really pale.”

“I didn't get much sleep.”

“Worrying about me, of course. So, my fault,” I say sarcastically.

“I'm glad you got some sleep, at least.”

“I've been up since four. Your boyfriend's dope didn't work all that well, I guess.”

“He's a doctor, Melody.”

“A doctor who I'd bet spent the night with his patient's mother? I'd like to see his credentials.”

I run to my bathroom and slam the door. I know I'm being hard on Mom, but she's being hard on me, too. I mean, erasing my entire day of work at Reynolds? I'm expected to just forget it, I suppose, like some two-year-old who has about a thirty-second memory span.

All I can think about is *him*. How did he end up in here? There was a

murder and he hid, so he says. This Luther, he hid from him. Why did Luther kill his dad? Or is it all a fantasy? What if he actually *does* have an apartment, or is just a damn stalker who lives in the Valley and snuck in?

No. He's real. A wild child.

I turn on the shower and get in. It's blue marble with gold fixtures, just like I wanted.

I'm amazed all over again, and kind of shivering while I stand looking down at the water sluicing me and think, what would it be like if we took a shower together? I'm really torn. Do you do it or do you not? Calabasas was no help—the girls ran in packs, and to hear one pack talk, all the other packs were basically whores. Actually, most of them were like me, complete virgins.

I finish the shower and slab on enough makeup to make Mom believe that I've decided to do it her way. But then I dress in a black, very severe Jil Sander dress that makes me feel good and bad, which is part of my love affair with Jil, I guess.

I have a heartbreaking day to endure with this ancient composer and his equally ancient lyricist. Back to Reynolds to do some songs he's probably had in a drawer since the days of Brandy. Brandy, the former star of *Moesha*, grew up into oblivion and that's what I fear is my fate.

"You look great," Mom says as I come into the kitchen and eat a strawberry Pop-Tart.

As so often before, I feel this intense love for my mother, despite the fact that I'm still angry about last night. I go over and kiss her on the cheek.

At first, there is no reaction. Then I realize she has stopped moving. Her hands clutch the countertop, her head is down, and her hair hangs around her face. I hear her quietly crying.

Suddenly we are in each other's arms and I'm saying I'm sorry and she's saying she's sorry, and we're bawling.

You cannot hate your mother for very long, at least I can't. In the limo, we sit hand in hand. This time, I don't get sick. This time, she does not smoke. We have, thankfully, left Mr. Dr. Shrink behind to water the plants.

We meet Jim Dexter at Reynolds, and his partner, Ray. Jim and Ray. They

smile. I can see that they're happy for this work. I have a vision of a tiny apartment somewhere cheap, and them counting their change for food.

The first words out of my mouth stun me: "Could you do an arrangement of 'Nature Boy' for me?"

This sounds insane, even to me, but I know why I am saying it, and when Mom gives me a funny look, I just turn away.

Mom and I are not only mother and daughter, we are also business partners—and practically a married couple. But we're business partners who don't trust each other. At the core, it's mom and kid, I guess, and that's where we always end up.

We go to work in a little acoustic studio with a piano. People like Elton John and Burt Bacharach have worked in this room, Jim tells me. At this very piano.

Ray is thin and shabby. He has taped glasses. There are nicotine stains between his fingers. He has a scar up the side of his throat.

He begins to play, and for the first couple of bars, I think maybe there's something there. But then it all falls apart into these god-awful cascades of arpeggios, and I cringe. It's agonizing.

I can see Mom knows as well as I do that these guys are a disaster. But we keep working anyway. We've paid them for the day, so we might as well get what we can out of them.

They will do the "Nature Boy" arrangement for me. Mom is suspicious, but she doesn't say anything except, "Since when did you take an interest in Nat King Cole? He's not your kind of sound at all."

All I can think of is those words from the song—"a very strange, enchanted boy." They go round and round in my head. Will he love me—or does he already—and will I love him in return?

I've thought about the fact that Nature Boy washes his hair and he's clean and everything. So he must use apartments. My guess is that he totally owns the Beresford, and nobody knows he even *exists*.

On the way home, we show up randomly at the Ivy, which is, I think, Mom testing my star power. We're instantly seated. I get my usual scallops mini plate and Mom orders the lamb two ways. She says, "Bring me a Blue Label.

Huge.” I go into my iPhone while she buzzes away, wildly enthusiastic about the songs and the arrangements. My Twitter profile is active. At least my professional tweeter is awake. My last tweet was twenty minutes ago: “I’m so into my new songs. On a roll today!”

The meal passes, we come home, and Mr. Dr. Shrink is not waiting for us as I expected him to be. He appears to be like the others who show up around here, strictly gone tomorrow. Not even mentioned.

I’ve been lying in my room in the dark for fifteen minutes, and there are *no* sounds of my boy. He is not in my wall, he is not in my ceiling. I miss him and I want him because frankly I was counting on going to sleep listening to him breathing in the wall, and waking up to find him beside me again.

You know how this feels? Exactly like waiting for Santa Claus when you’re a little kid. Only my darling guy is no big fat Santa.

I’ve never felt so beautiful as I felt in his eyes. I want that again. I want it right now, and I’m tossing and turning. I *want him here*.

I go up against the wall and put my mouth to it. “Are you in there? Where are you? Because I want you to come back. Please, come back.”

But ohmygod what if he’s a crazy person? He could be anybody. I could be in terrible danger.

Mom knows he is here because I told her, and I know a major complaint was filed with the building, so this beautiful person is probably being hunted down because of me.

I think he’s wonderful and strange and kind of like a poem. Could I love him? Maybe, but first I have to stop feeling sorry for him. Right now, that’s what I feel. It’s a good feeling but it’s not love.

I look in the closet again. The walls behind my clothes, the ceiling, the floor under my shoe rack. No secret openings. My bathroom, same deal—no secret openings, and the vent is too narrow. Under the bed? Not there, and no trapdoor.

So he doesn’t come in via my room. Could he possibly have a skeleton key? But how? We had our own locks installed, and most everybody else does, too. We have three doors that lead into the apartment through the den, the foyer, and the kitchen. All locked all the time.

Is there another way in, like maybe in the pantry?

I open my door, but carefully. If Mom is still in the living room, I'm not going out there.

She is, but she's asleep on the couch and looks kind of haggard now. I love the Wicked Witch of the West because she is often my *mother*.

I creep very quietly into the kitchen. Open the cabinet under the sink. There's a hole back in there, but it's no bigger than your fist, plus it has a screen in it. Cabinet by cabinet, I open them all. No secret passages. Plus, the pantry is too full. He couldn't come in through a door in the back of it because he would arrive covered with pasta and olive oil and Carr's Whole Wheat Crackers.

Mom's bedroom? I look again at the heap on the couch and go in. Her room is totally chaotic. *Much* messier than mine. I'm not insane on the subject, but I like things to be where they're supposed to be.

There are a whole lot of clothes in Mom's closet. Stuff I haven't seen before. Crunchy silks and satins, and a big fur. When is she going to wear a fur? This is LA, so it's never all that cold. It's all white and stuffed into a plastic sheath. I didn't even know she owned it. Anyway, who wears real fur?

I leave because this is ridiculous—he didn't come in through Mom's room, and if she wakes up and finds me snooping around in her territory, then what?

He has to be coming in through either the foyer closet or the den. Or the living room, but I can't search there now. So I look in the closet, which contains my red parka and some umbrellas and no sign of any trapdoor, hatch, or anything like that.

The den, then. The walls are fake paneling. Could he be coming in through the paneling under the bookcases—like, pulling a piece of paneling back, laying it aside, and crawling through?

He sure could. But how do I find that out? Maybe I can't, actually.

Where is my phantom boy?

This seems hopeless. I'll check the closet just for the heck of it, because I can. Here's all of Mom's old stereo equipment. Here's the ridiculous basket collection. Why were we into that, collecting antique Easter baskets? And the Monopoly, Risk, Diplomacy, and Mexican Train boxes—all the old, ancient

games of our life. Even Chutes and Ladders. Oh, wow. I remember Daddy always lost, and it was so funny because he wasn't faking to let me win. He was just hilariously awful at it.

Now, look at that! There is a hatch. It's in the ceiling of the closet, above the shelf so you hardly notice it even if you look up to get a game. But it's there. It looks official, like some kind of equipment access hatch or something, which is probably exactly what it is.

I think that it's also the only other way to get into this apartment apart from the locked doors.

I've found it.

I go into the kitchen and get the step stool out of the pantry. Oh, he'd better be in there, or I am going to go *insane*. Mom's head is thrown back, and she's snoring. She was wobbly drunk when we came in and does not hold her liquor well.

I return to the den and set up the step stool.

The hatch is so neatly framed, it's obviously an access point that's part of the building. There is no lock on it that I can see. It's basically a painted board resting on a frame. I push on it—and it silently goes up. Of course, he probably uses it all the time, so he'd make certain it was smooth and silent.

The smell of the dead air of the crawl space causes a shivery thrill through my body. And, wow, what a weird person I am that a crawl space gives me literal shudders. It's dark up here. I am talking *cave* dark.

I need a flashlight. The tool chest? No. The kitchen.

I make yet another trip past comatose Mom and look in the junk drawer. Very good, the flashlight sort of works.

So, back past Sleeping Beauty. I close the den door.

I look up into the darkness and turn on the flashlight. First I see black pipes. It looks too crowded up there even to get in, but then I see how it could be done. And, in fact, if I just move my head a little, I see that behind the pipes there is a big clear area. Above it, the light shows some kind of junk that has been sprayed on the top of the space. Insulation, maybe. Hanging below it are three rows of electrical wires.

I am fairly strong, I guess, but pulling myself up is going to be really hard.

I'm going to do it, I have to do it. Why doesn't he come back, darn it? I guess I sort of threw him out, didn't I? I'm such a moron sometimes, but I was scared because it was all just so different and not what anyone would expect.

"Hey, up there! *Pssst!* Are you there?"

Not a sound, so I get up on top of the step stool and stick my head into the crawl space, which is not very roomy. How can he live like this?

I pull myself up, struggling, trying to get my knee up to brace myself, kicking against the wall (crap, *shh!*), pulling myself a little more and then rolling a bit, and I'm up. I am in the crawl space. His space.

I shine my flashlight around, looking for something resembling a human shape.

Off to the right there is a darkness. I move over that way, keeping to the beams because I have no faith in the plaster ceiling I am crawling on. All I need is to fall through and land on Mom.

With my flashlight and the light from the den, which is now behind me, I can see a bit. So I crawl farther, and where there are no pipes or wires, it's actually possible to get around.

Ahead, I hear rock music. That's our next-door neighbor, the party girl. Then *bzzzz*, *scree*, *bzzzt!* Light comes up and there is a hissing sound, which I realize is one of the elevators. I hear voices, a woman telling a man good-bye. Then the elevator goes clicking and scraping off down its shaft.

I go over and look down and the shaft is HUGE. You can see light glowing out of the rooftop vents of the four elevators, which are moving up and down, and a couple of them look *really tiny* because this building is *T-A-L-L*.

How could I *ever* have stood so close to the roof's edge? Was it really just the night before last? Time is losing all meaning.

I shine my flashlight around—and, of course, my flashlight is so awful, it only shines about three feet. I move a bit, trying to see more. I have to let him know he can come back. He is in here somewhere—he has to be.

Not around here, though. And suddenly I'm not sure where I am. Is the elevator shaft still over to the right?

I back up. Careful, here. I find a narrow shaft. It's not big around, maybe three feet on a side, and there are all kinds of pipes in it. I don't know what

they are—sewers, water lines, whatever.

This is the shaft behind my room wall—must be. But how ever does he stay in here? This is his world, his home—that’s how. He is somewhere down in there, but there is no way I can climb down a floor. Not possible.

I decide to call him. I will shout. Maybe it’ll be audible in my room and maybe in the party girl’s apartment, but not with all that music.

“Hello!” I flick my flashlight on and off. “HELLO!” I do it again, on and off, on and off. “HELLOOOOO!”

Nothing. So I have to give up on this because climbing around in here is dangerous, obviously, and I am no longer the girl who was on the roof. I am a different girl because I have a phantom boy somewhere off in that darkness.

One more try: “HELLOOO . . . HELLOOO . . . HELLOOO!”

Echoes. The rock music suddenly gets turned way down. Uh-oh.

I am as still as death, barely breathing. And then I hear something—a slapping sound. Is it party girl coming out of her apartment to see what’s going on?

I hear it again, louder, *slap, slap, slap*. Louder and louder and I think—is it—is it coming from below?

I lean over the edge and shine my light and, *oh, Jesus, there he is!* And look at *that*, he is climbing the pipes, levering himself up from one side to the other. It’s just awesome and magical to see how he does this, moving up the shaft so fast he’s like the wind. Graceful and agile, look at that, just *look* at that!

My stomach goes shivery as I watch him coming, his hair flying, his hands gripping the pipes, his muscles rippling in the dim light of my flashlight. He almost doesn’t look human, he is so good at this, a dancer of immense strength and power, a beautiful dancer. Then he rises over the edge, pulls himself up, and he’s beside me. I am looking into the most beautiful, innocent smile I think I have ever seen.

“Hi,” I say.

“Hi,” he says back.

We lie in the crawl space side by side, facing each other. He reaches over and lays his hand on my cheek. I close my eyes and feel its weight, feel it

stroking my skin.

Should I say it? Should I tell him I'm crazy for him? I want to but—Why do I hold back? This is a once-in-a-lifetime moment of magic, and I can't ruin it with my analytical, practical brain.

"I love you," he says. His breath smells like a taco. So he was down there somewhere eating Mexican food.

"Thank you," I say.

Our eyes link in the almost dark.

I open my mouth a little. I'm waiting. I don't want to wait, but I will wait because I want him to do it, to take me in his strength and his gentleness.

He kisses me. Our lips are together, but it's clumsy. We part, laugh a moment, and then he rolls his eyes and tries again. This time it works. I just love his strength, the feeling of him holding me to him so tight and him all trembly and excited, and me, too. I am so excited, I am almost wild—as wild as he is—except he is no brute, and I am no cave woman. He's very gentle with me, looking at me now with wonder in his eyes, then kissing my face all over until I throw my head back and laugh.

He says, "I thought you didn't like me."

"I was scared," I say.

He looks at me with the kind of seriousness you see in the faces of little boys, and it's so endearing. So I kiss him again, longer, more intimately. Afterward I draw back and he remains very still, his eyes closed, his lips slightly parted. He's savoring me, and I know how he feels about me—it's written in his shadow-filled face. I am so happy that I feel like laughing and kind of, I don't know, bubbling up inside in some way that I can't quite put my finger on. He is ready for me, and I can sense that he is quietly hopeful, but this is not the time. We have to cherish this moment. I have to especially cherish him, because he is so innocent.

I want him with me, because I think what's happening between us matters, and I want to find out for sure.

"You have to come and live in our apartment."

"Where would I stay?"

"We have two more bedrooms."

He turns onto his back and puts his hands behind his head. He's considering this. Finally he asks, "How?"

"*How?* Just come in and use whichever one you'd like."

"Oh, yes."

"Let me ask you this. Have you ever been out of this building?"

"No."

"Never? Never ever?"

"Not since Dad got killed. Luther held me over the edge. Luther wants me dead, too."

"Who is Luther?"

"Luther. That's all I know."

The quiet sadness in his voice reveals his grief.

Then I hear a noise. The sudden stillness that envelops him tells me he heard it, too.

"What is it?"

He doesn't reply. He's listening to something I cannot hear.

All of a sudden and without the slightest warning, a light shines on me.

From behind it, I hear Mom's voice say, "You must be psychotic."

I just scream. I scream and I scream, and I cannot stop screaming. He tries to comfort me, holding me, fluttering his hands at me, his face a pale image of agony.

Then *more* light—this time, shining directly at him—and his face is white as if glowing, his eyes bright with shock, his teeth bared, and I can hear him go, "*Aah! Aaah! AAAH!*"

The person shining the light on him is on top of an elevator that has risen up and stopped.

"Okay, young fella, don't try anything. I've got a gun."

My boy's eyes meet mine, and it's as if all of his heart is in those big eyes of his, now looking at me with terror. He grabs me for a second, lets me go, and then heads toward the equipment shaft.

"Stop or you're dead, kid."

So calm, so matter-of-fact, and not a cop, either, because no cop would ever say anything like that.

He is in the shaft now, and I try to go to him. I see the black maw of it and I know that it's death, and I think maybe I should just go with him, just drop down into the dark forever.

The man grabs my shoulder like some kind of iron monster, digging into me. The pain makes me shriek—and then my beautiful boy drops. Oh my God, he just *drops*.

But then I hear his *slap, slap, slap, slap* fading downward.

I turn and crawl toward the light my mother is shining in my face, and I go back down into the real world with her.

In the den, she grabs my shoulders and glares at me. “Did he touch you?”
“Go to hell!”

She cuffs my head, and I run out of the den and into my room and lock my door. Let her think what she wants. I go to my big windows and look out over the city, thinking of my beautiful boy and wondering if I will ever see him again.

That evil man's words ring in my memory: “I've got a gun.”

Was it Luther? I couldn't see who it was 'cause of the bright light shining in my eyes. Well, whoever it was, he sure sounded like he meant what he said. I've got a feeling that he'll not only kill my sweet boy if he can, he'll enjoy every minute of it.

CHAPTER 11

To save himself, he had to leave her behind, that was crystal clear. She could never run a chase like he could. He saw her angelic face go flashing away as he dropped down the shaft, slapping against the pipes that lined it to break his fall.

When he was maybe five floors down, he stopped. It was nice and dark. He felt safer. But then there was a whining noise and something came zipping down from above—a cable!

A second later, light was beaming on him again, and with a terrifying screaming sound, a human form sped down the wire.

It was mountain-climbing equipment. He knew a lot about it; he'd seen it on TV and wanted it.

He dropped so fast that he almost lost himself, but then he managed to clutch a pipe. Again he went down, faster and faster, farther and farther, until the floors were whizzing past. Then he stopped and threw himself onto one—he wasn't sure which—and went skittering off into its crawl space, as far from the shaft as he could go.

The light came flashing, and he pressed himself down between two beams, praying that the ceiling he was lying on would not give way. Slowly, the light worked its way back and forth, back and forth, coming closer and closer.

Beresford began moving toward one of his hatches. A moment later, he heard grunting and scraping. *The man was almost on him.*

But a hatch was just two feet away. He opened it and looked down into a foyer closet. Who was this?

Oh, yes, he could tell by the smells of floor wax and cigarette smoke. This was Mrs. Scutter's apartment. He dropped down into the closet and pulled the hatch closed above him.

All he cared about now was being with Melody, but how could it ever work? *It would work; it had to.*

He couldn't plan, not now. He couldn't think ahead even ten seconds. He just wanted to feel her in his arms again—that was all he cared about.

His ability to listen was made acute by a life lived mostly in darkness. Beresford heard the man blundering in the crawl space, cursing and muttering. His pursuer wouldn't get far—he was too big.

He stood, barely breathing, as the man kept working his way closer to the hatch above. Despite the danger, he had only one thought: *Melody, Melody, Melody.*

At first, when the dog started barking, he thought it must be somewhere else because Mrs. Scutter didn't have a dog. But, no, it was right outside the door, and it was barking and barking and barking! So now she did. A new dog.

"Now, *now*, Buddy! Oh, goodness, what's come over you?"

The last three words were uttered in a tight, scared whisper. He could feel Mrs. Scutter looking straight at the door. He heard movement, then her whispered voice: "Operator, this is Elaine Scutter, apartment 4250 at the Beresford. I have an intruder—my dog has him cornered in a closet. Please hurry!"

Overhead, the hatch opened. "Okay, son, I've got you."

The light glared down on Beresford, and he burst into Mrs. Scutter's foyer.

The dog was not big, but it jumped almost up to his neck, snarling and snapping, and he had to grab it and hold it away from him.

"God, don't hurt me! Don't hurt me!" Mrs. Scutter lurched away, spit flying with her screams.

Then Frank tore out of the closet, filthy with dust, breathing hard, a long black flashlight in one hand and a bright silver gun in the other.

“All right, you bastard—”

But Beresford was already out the front door and running. He was not often in the halls like this, and he hammered at the elevator buttons until he realized that, of course, the elevators would be too slow. But then how, where?

The exit stairs, of course. With Frank right behind him, he ran to the door at the end of the hall. His first impulse was to go up, to hide in his place on the roof, to hide there forever. But he couldn't do that—he'd lead Frank right to his one safe place.

So he went down, leaping a whole flight at a time, his old T-shirt billowing as he raced faster and faster, with Frank pounding along behind him.

Then the pounding stopped.

Beresford also stopped. He listened . . . and heard breathing—*way closer* than he'd thought possible.

Instantly he started running the stairs again, the gun went *whang*, and he felt something sting the right side of his face. Plaster dust. Frank had shot at him!

He leaped over railings to get from one flight to the next, going down and down, until he reached the bottom of the stairwell.

Now he was in the subbasement. Like all the hidden parts of the Beresford, he'd been here before. But where to hide—what place would be absolutely secure? Because this was death that was coming for him.

“Melody,” he said in his heart, “if I die tonight, my last thought will be of you.”

He went along the catwalk above the machinery floor, then through the steel hatch into the fuel storage area with its three huge tanks. His plan was to get between two of them and lie there until they gave up looking for him, however long that took.

Then, somehow, he would go back up to fifty, and he would go to Melody and be with her forever. Somehow!

He didn't have it thought out; he just wanted it to happen. It *had* to happen.

Love deserves to live—it's good and it's right. He needed her with him always, and she needed him. He had seen her face as he dropped down away from her, seen the sorrow in her perfect eyes.

It was inky dark in the fuel storage area, but he knew just where to find the space between two tanks, and after opening the hatch he slid into it.

Here, there was no sound except his own breathing. Or, no, that wasn't quite true. There was something else—a high, whining sound. But what could it be?

He listened more closely and realized it was coming from just behind his back, out of the place where the two tanks touched each other. What would be whining like that? It sounded like a very small electric motor.

Then he heard a metallic *clunk*. Somebody had opened the door into this room. The next second, the light came on, yellow and far away, but light nevertheless.

“Now I've got you, and I'm gonna kill you slow, bastard. Down here where nobody's gonna hear, you goddamn *freak!*”

Frank came along the catwalk, his heels clinking on the steel grid. Beresford slid farther back into the shadows between the two tanks—where he felt something press against his back, something that should not be there. The whining sound was louder, also.

There was some sort of small machine tucked in deep between the tanks.

Frank was looking in this very space. Beresford squirmed back as far as he could go.

Frank stopped. With a soft grunt, he bent down and shone his light almost to Beresford's feet.

Beresford turned his head and saw the thing making the whining sound. It consisted of what looked like two big red candles with wire around them and a small black box between. It was this box that was doing the humming.

But what was it? He wasn't certain. Some kind of electrical machine, but what were those big candles doing attached to it?

It should not be here, he knew that, and it looked like it might be dangerous—but then a light was shining straight into his face and he couldn't think about it anymore.

“You are good, you little shit. You are real good.”

Beresford said nothing. All he could think about was somehow escaping, but he couldn't escape, and he had the sickening, stomach-burning feeling of being absolutely trapped.

“Come outta there or I'll blow your goddamn head to pieces!”

The gun clicked.

An image of Melody came into Beresford's mind, of her eyes, the depth of them, when she looked at him as they were starting to kiss.

If he came out from between the tanks, somehow maybe he would be able to break away from Frank and live to see her again. Staying where he was, he would die.

Stretching himself, wriggling forward, he crawled into the light.

“Get on your feet.”

He stood up.

Frank looked him up and down. “Well, I'm damned. You're a specimen, you are. You a juicer? You got guns like a juicer.”

Beresford was silent. He had no idea what Frank meant.

“Okay, come on, muscle boy.”

Come where? How?

There came a blow to the side of his head that knocked him almost off his feet and sent a bright yellow flash through his left eye. He stumbled along the floor, then Frank jammed the gun into the small of his back and said, “Go up the damn stairs. Do it!”

Beresford took the stairs three at a time, thinking that he might—just might—get out the door and escape Frank again. Beresford had already realized that he was stronger than Frank, and he thought he might also be faster.

“Don't even think about it,” Frank said, coming up behind him and pressing the gun into his back. “A bullet's a lot faster even than you.”

Frank grabbed the back of Beresford's T-shirt in his fist and pushed him through the door.

With Frank prodding him along with the gun, he soon found himself at the back door of the building. Often he had wondered what lay on the other side.

It was just beyond this door that Daddy had landed. So it was a sad place for him, a very sad place.

More than once, he had stood here crying. Over the years the door had seemed to get smaller and smaller, but he would never forget it as it first appeared to him, huge and ominous.

“Go on,” Frank said, and pushed him with the gun.

His memories of being outside the building were very vague. Green grass, bright in the sun. His mother in a white dress. A dog named Prissy biting the water coming out of a hose. His dad’s laughter, big and loud and happy.

The alley was silent. Up against the building, there was a long row of dark green Dumpsters stinking of garbage.

“Go on. We’re going out to the street. Take it slow.”

Beresford was shaking so much he couldn’t control himself. The noise from all the cars shooting past hurt his ears. There was another sound, and it was getting louder: sirens.

He saw a gleam in one of the Dumpsters. A broken bottle. If only he could scare Frank with it, he could get back in and be okay. He could hide better. Someday, maybe even Frank would give up.

He could be near Melody, and somehow love would help him.

He glanced at the bottle. He was closer to it now. In another three steps, he could reach out and grab it.

The sirens were louder.

“Move it!”

The pistol poked into his back. He grabbed the bottle and whirled around. Frank jumped back, snarling.

Police cars came screaming into both ends of the alley, and Frank stuffed the gun in his pocket. “He’s got a weapon,” Frank shouted.

“DROP YOUR WEAPON AND LIE FACEDOWN ON THE GROUND!” came a huge voice, echoing up and down the alley.

But the way to the door was now clear. So Beresford obeyed part of the order—he dropped the bottle. In three steps he was in the door, but there were footsteps and a man in a uniform but with no gun was there, and then

Frank was coming in also.

“Careful, Joe, he’s a monster!”

Joe stepped aside as Beresford went past. He needed to go up this time, to get to the foot of one of the shafts and climb into the heights of the building. But then more lights came on and the door into the lobby opened. A whole bunch of cops crowded into the narrow corridor and tackled Beresford.

He fought, pushing one of them aside and then another, slowly working his way closer and closer to the entrance to the equipment room, where all the shafts came out. But finally they had his arms and legs, and he was upended and being carried into the open space of the lobby, where the lights were blazing and there were more people than he had ever seen.

He struggled, he fought, but there were just too many of them, and despite his strength, he ended up in steel cuffs.

“He’s just a kid, a big kid.”

“Hey, kid, take it easy. You’re gonna be fine.”

“Man, he’s pale as a damn fish.”

“You stay in here, kid? You ever go outside?”

“Get him on his feet, but be careful.”

Mrs. Scutter was there, and she shrieked, “He tried to kill me! He was going to rob me!”

As they took him out the front door, he craned his neck, looking for Melody but not seeing her anywhere.

But then he heard a cry, unmistakable, her voice in the crowd, *her voice!*

“Melody! Help me! Help me!”

“Wait! Give him to me!”

The crowd fell silent. One of the police said, “Miss McGrath?”

Then her mother was there and Julius, her bodyguard, and they swept Melody away, and Beresford called out to her—he called again and again—but she did not come back. Then he was in a strange little cabin with wire all around and a policeman beside him. The world was rushing past him, and he could not understand what he was seeing. The room was bouncing, flashing by, all blurred, none of it making much sense. He threw himself against the

window, trying to get out.

“Jesus Christ, he’s like a damn animal!”

Beresford felt himself being grabbed—his arm—

“Cool it, damn you! Stop the car, Jake, *stop the car!*”

The outside came into focus again, and Beresford settled down, once more looking for some way to get back to the building. But the building was gone.

Then they clicked more locks behind him, and the cop got out and went in the front on the other side of the wire. The space started moving again, and Beresford tried to get out and run, but his hands were cuffed behind him. No matter how hard he tried he could not move, so he yelled and tried to bite them and growled, but they just sat there.

“Okay, we got—we don’t know what we got. Possible fifty-one fifty. Probable minor. We’re gonna need social, and we’re gonna need restraint on him big-time.”

“You think he’s a nutcase?”

“What’re you, blind?”

“Just askin’.”

This made more sense. This sounded like the way cops talked on *Law & Order*.

“I’m not blind,” Beresford said.

“Hey, it can talk. Hey there, kid, take it easy. We’re just runnin’ you into juvie. Piece-a cake. Get you all squared away.”

“You like hot dogs, kid? How long since you had a decent meal?”

“I had spaghetti.” Earlier he’d eaten at the Neimans’, a can of Chef Boyardee Forkables that had been in their pantry so long they’d never miss it.

“You’ll get a square in juvie. How old are you?”

He didn’t answer. He didn’t want them to know that he wasn’t sure.

“What’s your name?”

Silence.

“You don’t know your name?”

“We got some kinda problem child deal here, be my guess.”

“There’s a possible violent offense.”

“You got ID, son? Driver’s license?”

Beresford was not sure what he was supposed to say, so he said nothing.

The car stopped, and they unchained him.

“Now, stay calm, okay? ’Cause we don’t want to make you walk around in chains. I mean, just take it easy. Nobody’s gonna hurt you. We’re your friends.”

The other cop said, “Come on, now. Come on out.”

“Man, this is the original wild child we have here.”

“You got that right.”

“Go in and push him out. Go in the other side.”

Beresford understood that they wanted him out of the car and standing on the ground like they were. So he did as they said.

“Hey, he’s gettin’ with the program. Yes! Come on, kid, this here is Westview. You’re gonna spend the night here.”

“Not if he ain’t charged. Violent offenders only.”

“Well, that super is going to make sure he gets charged. He’s gonna want him to stay in the system and not get back in their damn sewer pipes.”

They took him across a parking lot with big lights everywhere. He was trying to understand where he was and where the Beresford was so he could go home as soon as he got the chance. But it was all very confusing. There was a noisy, flashing mass of lights and swinging glass doors, and then he was in a room where there were other kids, a girl sitting hunched on a bench, a boy with orange hair who kept saying, “This is crazy, man, this is crazy,” and other kids who eyed him like they wanted to maybe cut him up and eat him.

For a long time, he waited on a bench. The light was bright, the fluorescent bulbs the brightest he’d ever known.

As he waited, he examined his surroundings, thinking of only one thing: how do I get out of here and go back to where I belong?

There was a drop ceiling, but he knew that the crawl space would be no good. The ceiling was suspended from a metal frame like in the security

room. If you tried to get up in there, the whole thing would come down.

The building was low, so there were no long chases to get through. He looked at the air-conditioning ducts for a while, wondering if they offered a way out. They were just about big enough, so the only thing to do would be to try.

“Okay, son, we don’t have any identification on you, do we? Could you state your name, please?”

He had figured out what he would say: “I’m Mr. Beresford.”

The lady, who wore a blue uniform and had complicated braids, wrote on a clipboard. Then she looked up at him. “Your name is the same as the building? Whaddayou, own it?”

He did not know what she was asking, so he remained silent.

Finally she said, “C’mere, come with me.”

She unlocked him. They went to a desk where a man sat writing. “This isn’t a violent offender. I think it’s a mental case, so he goes to Social Services. No ID. Told me his name was the building he’s been squatting in. What you got here is a homeless teenager. Looks like he’s been in the wind for a while.”

“He’s not hurtin’—look at ’im. Healthy kid.”

“Yeah, he’s got a good crash somewheres.”

Beresford decided that the ductwork was his best chance.

“Son, how old are you?”

The questions were beginning to buzz in his mind like a plague of flies. He couldn’t take them much longer.

“Where were you born?”

“Just a moment.” The lady stepped across the room, then came back with a stack of cards. She held one up. “Read this.”

It was words. He did not know what it said. He did not know how it worked, not with big words like that, big long ones.

“That is the word *train*. Do you know what a train is?”

He’d seen the trains down in the railyard. South side of the building, look down and out, they were there. “They are in the railyard.”

“Henry, this boy is nearly illiterate, and he doesn’t know his own name or age, and he has no identification. What have we got here?”

“Well, I’ll tell you one thing we got is a charge sheet.” He picked up a sheet of paper. “This boy is getting charged. Breaking and entering and theft of services. The complainant is the Beresford 123 Apartment Corporation. Next, attempted robbery and attempted assault. Complainant is a Mrs. William Scutter.” Henry put down the paper. “They don’t want him back, that’s for sure.”

“We’ll isolate him. He’s not gonna survive the population.”

Beresford did not think that the window glass was too thick to break, and he was just considering throwing himself through it when they led him into a little room where a lady with a cheerful voice said, “You’re going to get your picture taken, pretty boy. Smile, now.”

He did as he was told.

She laughed. “Now, that is about the biggest smile I’ve ever seen in here. You’re one happy defendant.”

They fingerprinted him, which he knew about from TV. He also knew that they were going to put him in jail, because that’s where this kind of stuff led, and he needed to get out of there before they did that. He could not escape the bars of jail, and the idea of being trapped like that, of not being able to get back where he belonged, of never seeing Melody again—he could not think of these things very long without his mind starting to roar.

There was only the one person in this room, and he saw an air-conditioning vent, so he jumped up and pulled off the grate.

“My God! You come down from there!”

He slid into the duct and went a few feet. Behind him, there was a lot of yelling, and he knew that they were trying hard to get him and bring him back. Sweat poured off him, and he used it to lubricate his way when he came to a turn. Getting his body around it pulled muscles in his neck and chest so tight he thought they might rip, and he had to suck breath through his teeth to keep from screaming with the pain.

Voices boiled up from below, and then there were thuds and clanks and the sound of scraping as somebody pulled away ceiling tiles. He moved more

easily now, and quickly, turning another corner and going down to the far end of the wide building. Navigating by sound, he went toward the machine room.

Soon he was in a larger duct and a lot of air was coming toward him. The darkness was absolute, so he felt his way ahead carefully, until his hands met an edge.

There was a crashing noise, and light flooded in behind him. They'd broken into the ductwork. So he had to do this, and he had to do it now. But what? How?

"It's been tried, son. It don't work."

The voice was right behind him; he felt a hand around his ankle.

"You go down there, you gonna get cut up by that fan. Don't make a mess like that, son. It's nasty cleanin' up."

Now there were hands on both his ankles, and he was being pulled back. Frantic, he pressed against the walls of the duct.

"Dammit, it ain't no use, spider boy."

He was dragged back and into the light.

"I got him, I got him—don't let this thing fall, man!"

The ductwork sagged and groaned, but it didn't break as the big man brought Beresford out.

"We gonna get you tucked in nice and tight, spider boy. You a piece-a work, you are."

They were in a room full of desks. There were strange green walls with markings on them, some of which were letters and others numbers. He could read a few of the words—*red*, *big*, *July*—but most of them were too long.

As they led him out, somebody hit him on the head from behind.

"You give us trouble, we give you trouble. It's an eye for an eye around here, spider boy."

They went down a long hallway, its walls painted dirty green. There were doors every few feet, with narrow glass windows embedded with wire.

"Okay, put him in twenty-one."

"You wanna do that?"

“He’s violent—he tried an escape. You’re damn right I want to do that.”

“Because he’s harmless.”

“Harmless? We got a good five grand of ductwork and ceilings to think about. That ain’t exactly harmless.”

The man used a circular key that Beresford knew was a very difficult one to unlock the door. When it opened, there was a sharp smell of human bodies, and he saw eyes peering at him from bunk beds. There were six of them, and two of the uppers were empty.

“Okay, girls, you got a new roomie. He ain’t got no name, so don’t ask him. And he don’t talk a whole lot.”

“Hey, man, he a ghost. We don’t want no ghost in here.”

“Shut up. And if he gets into a squabble, nobody’s listening.”

“What he do to you, man?”

“He troubled me, Louis. He troubled me very much.”

They left and closed the door, and Beresford heard it lock.

“What you doin’ in here, ghost? What you do?”

“I need to get back to my building,” he said carefully.

“You *need* to get on your knees, ho, that’s where you *need* to get.”

Beresford looked at this boy, who had come up out of a lower bunk. He had short red hair and eyes unlike any he’d ever seen. They were the eyes not of a person but of a very smart animal. Beresford wasn’t sure what this meant, but he was sure he was right. He felt a huge sadness for this boy and thought, he has been made this way by somebody very mean.

The boy came face-to-face with Beresford. He had good muscles and a metal band of some sort in his lip. “Go down, ho.”

The others in the room were silent, watching.

Beresford decided that he would not kneel down. Why this boy wanted him to he did not understand, not exactly, but it was not good—that he did understand.

Then the boy’s fist came up and, before he could block it, struck a shattering blow to his head.

There was a flash. The world floated silently away, and all became dark.

CHAPTER 12

Frank's phone rang. He was exhausted. He'd been up all night getting rid of the evidence that the damn kid might have seen.

"Hello?"

It was Szatson.

"Yes, sir?"

"What's with this wild child?"

"Excuse me?"

" 'Wild Child Found in Exclusive Downtown Apartment Building.' You damn jerk, this is all we need, drawing this kind of attention to the building just now." As he said the last two words, his voice dropped down. *Just now.* Concealed in them, Frank knew, was the terrible secret the two of them shared.

"He's in juvenile custody."

"I figured that out. You knew what needed to be done, and it wasn't done, was it?"

"Sir, I didn't have—"

"Don't hit me with excuses. You did not do your job."

Frank had never killed anybody, and to tell the truth, he'd been glad when the cops got that kid. Even worse was the idea of killing this building. Every

time a tenant said something to him, in the back of his mind was the thought that this person was probably going to burn to death or be a jumper, and it would be on his head.

Now the intercom buzzed. Frank jabbed at the button and Linda, the day concierge said, “There’s a couple of detectives up here.”

His stomach gave a sick turn. The last thing he needed.

“What is it? What’s she saying?”

“Bulls.”

“You *jerk!*” Szatson slammed down the phone.

Frank feared that Szatson would send a gun over here. Frank might have a hard time with murder, but he doubted Luther Szatson did.

He’d cleaned up the fuel storage area, of course, but the kid had been in the worst possible place, right in there next to the device. Had he seen it? Had he understood what he was seeing? Had he told the cops—and was that why they were here?

At four o’clock this morning, he had dropped the remains of the incendiary device off the Santa Barbara pier.

“Frank?” It was Linda again.

“I’m coming!”

“Stay there. They’re on their way down.”

At that moment two LAPD detectives came in the door, one a short, Italian-looking guy, his hands nervously exploring his narrow jaw. The other was taller and solemn, with a sad, beaten sort of a face.

“We just have a few routine questions,” the tall man intoned.

“Okay.”

“The thing is, this kid that came out of here—he’s—we’re stumped. He’s not in any database. We can’t even get a name out of him.”

“I don’t know a thing about him.”

“Which is what you said last night to the uniforms, sir, and that’s fine. But he must have a room in here somewhere. There must be something for us to see.”

The other detective added, “We can find out a lotta things. We just need

access to his room.”

“Look, I’ve been trying to figure that out. Where the hell did he stay? My employer wants an answer, too.”

“I’ll bet.”

“Because what if I’ve got a whole damn colony of homeless in here? It’s a big place. To make a long story short, me and my security guys, we went through every vacancy in the structure this morning and didn’t find so much as dust out of place.”

“So he was here but he wasn’t? The juvies say he looks like a mushroom. He’s been indoors for months.”

“Unless he roomed with somebody who hasn’t come forward, then I don’t know how he managed.” He was about to add that he’d found him in a crawl space with Melody McGrath, but decided to keep his mouth shut about that. Any cop would turn right around and sell that to the media, and the place would be overrun again.

“Look, Social Services will keep hassling us until we get something. They don’t like nameless orphans—it screws up their paperwork.”

“I thought there were charges against him. So he stays inside, right? No matter who he is.”

“You can process an adult unidentified, just John Doe him and forget it. But not a minor. A minor, it’s all different.”

“You know he’s a minor? You know that?”

“The medical staff at Westview made that determination, yes. He’s between fifteen and seventeen. He is a minor.”

If they had a name, they’d go away. But Frank was afraid to just make one up. As soon as they found out it was no good, they’d be back, and they’d have more questions, harder ones, and some would be about him.

The phone rang again. He snatched it up.

“Where is he?” It was a female voice, young—and familiar.

“Excuse me?”

“Let me tell you something. You might work hand in glove with my mother. You might suck up to her, but you *will* suffer for what you did.

Damn you!” And then *click*.

He did not need that little fireball on his ass, that was for sure.

The detectives were watching him. They looked like a couple of poured-out old doofuses, but that, he knew from too much experience with detectives, was just a shtick. The thing about detectives was that until they suspected someone, they suspected everyone. They were never without suspicion, not the good ones, and the LAPD had a lot of good ones.

“If there’s anything else I can help you with?”

For a moment, they both stared at him in silence. Finally, the tall one unfolded himself and stood up. “We’ll get it figured out,” he said. “It all comes together in the end, am I right?”

They left, wandering off down the hall, seemingly oblivious but, he felt sure, taking everything in. They’d be suspicious as hell now. They’d assume that he was concealing something, because how could this kid have been in here without being noticed?

When they went after Frank’s records in the system, what happened then? If there was the least thing wrong with whatever paperwork Szatson had used to get him released, there was gonna be a world of trouble coming his way.

He opened his bottom desk drawer and took out the bottle of vodka he kept there. Took a big swig, then again.

The phone rang. Szatson. Dammit.

“Mr. Szatson, may I help you?”

“Get over here now—we need to talk pronto.”

Frank hung up, took two more long pulls on the bottle, and left.

He drove the streets almost blindly, trying to convince himself that the thing to do was to just keep driving. Head east, maybe to Vegas. You could get lost there, live on odd jobs. There was always something to do in Vegas, if you were willing to work the bottom.

Problem was, if he went into the wind now, the detectives would certainly follow.

He went up Szatson’s driveway, stopped for the entrance gate, then parked his old Plymouth. For a moment, he sat still, trying to get his mind to slow down. He was gonna be raked over the coals here. He needed his wits about

him.

Szatson pulled the door open.

“Frank, this is a mess.”

“It got away from me.” He followed Szatson into the dark, silent cavern of a house.

“Let’s get it fixed,” Szatson said.

“Mr. Szatson, I collected the materials that—”

Szatson turned on him. “That what?”

“That the kid saw.”

“Goddammit! And you’re certain of this?”

“We have to assume it.”

“And he’s in the juvenile system.”

“He’s at Westview, transferring tomorrow to the Willamette Camp above Los Feliz.”

“Well, then let me ask you another question. Can you handle it?”

“There’s nothing for me to handle. He’s gone. He’s in the system.”

“Frank, do you understand how much money is involved here?” Szatson asked.

He nodded.

“A whole world of money. Money that is *obligated*.” Szatson fingered what appeared to be some sort of college ring. “All over the world. Russia, China, Myanmar.”

If people in places like that didn’t get repaid, they killed you. So Mr. Szatson was in danger, too.

“We need to get this done, Frank,” Szatson added. “I’m giving you a chance to fix it, but understand that it’s a last chance.”

Frank nodded. But he still didn’t understand. “Fix it how?”

“Do the damn kid! Reach in there and do him!”

Was this possible? Of course it was. It was always possible to hit somebody on the inside.

“You don’t need to worry about the kid,” Frank said. “The kid is finished.”

“When?”

He would have to reach into juvie, which meant going to the gangs. He had some connections there, guys who did fires for him.

“Couple days.”

“Tonight, damn you! No later.”

He nodded. So he was committed to his first murder, and the most dangerous kind. Hits went wrong. People sang to save themselves from hard time.

“Tonight,” he said. “For sure.”

CHAPTER 13

*You never forget a boy who touched your soul but had to go.
Your heart follows him until it 's lost.
But you' ll never stop, no matter the cost.*

I have to get him out. I have to get him back. But I still don't even know where he is, and I have no name! I think I'm going to go totally insane here.

I want him. I can help him grow and become a real person. He is so innocent and vulnerable, and I am so upset that my brain is buzzing with images of him being beaten up or screaming his lungs out in some cage. I don't think I can bear another night of the sleepless hell I endured last night.

I tell myself, "Girl, you hardly know him—he's some kind of a freak who lives in walls," but then I remember the joy sparkling in his eyes when he looked at me, and I think love that pure has value.

Innocence like his is almost unknown in this world, and to touch it as I have is an incredible privilege. I want to take him in my arms and make him safe. And I can, I know I can. If only I can find him.

And yet, work goes on. My concert is Saturday night, *this Saturday night!* I look at my MySpace and Facebook pages—they are swarming. Speculation. Anticipation. The story of Mom's freakathon over my music is all over the place.

One thing, Mom is aware of her mistake. Today we went up to the Greek for rehearsal, and she didn't have her sweet old composer there to feed me ditties. Of course she ruined all my scratch tracks, so my music won't be available for download and the album is delayed six weeks, but at least it will be my music, my real music.

The *People* reporter got right to her blog and went all hissy, and, guess what, now my fans want my music as never before. Mom as the Wicked Witch of the West is laughing all the way to the bank. She staged that one brilliantly.

If it's to ensure my success, Mom isn't afraid to make me hate her. She isn't afraid to make my fans despise her. It's an act so good that even I believe it.

So, the Greek Theatre. I looked out off that stage and was amazed at how huge the Greek actually is. And get this: there were fans waiting for me when I came this morning for sound check—a couple hundred of them who had been hanging out there for hours just hoping to say hello.

I was supposed to be driven right up to the stage entrance, so their wait would have been for nothing, but Mom made the driver stop, and I got out and hung with them for a while. Julius was so nervous that he practically exploded. A couple of guys gave me phone numbers. Everybody who had the CD of my first album got it signed in metallic blue ink.

My fans made me feel better. Some of them look really fierce. Bikers. Gang boys. Go figure.

For a few minutes, I didn't think about him. But the second I was on that big, lonely stage, my mind went back to a torment of worry: Where is he? What's happening to him now? Will I ever see him again? And when? Last night I lay awake in bed just wishing that he would somehow escape and I would hear his breathing through the wall again.

If only I hadn't been scared of him. If only I hadn't complained to Mom, he would still be there and we'd have our little secret nest in the crawl space. No matter what happens to him, he will never return to life in the walls of the Beresford. I'll teach him about the world; I'll teach him everything he needs to know. I'll even hire him. He can be a roadie, and I'll get a tour bus, and we can live on it together between tours.

It's all a total fantasy, I know that. They will never let him out. The building will accuse him of all kinds of crimes, because Mom says the super told her he did robberies and all. I fear that our love will be, for him, a brief spark lost in the past. But for me, it will still be in my heart just as it is now.

The one good thing that has happened is that my band is coming together. We had some strong rehearsals today, and I had the added fun of watching Mom suck her plastic cigarette when I did "Flying on Forever." She hates that song the most because she thinks it's about teen suicide. I don't know. I just like being on the edge.

I've thought up a plan to save my beautiful boy. I disguise myself and pretend I am his mother. Yeah, right.

Another plan: I break into the juvie tank. I looked at it online, and this does not look impossible . . . for a professional safecracker or whatever.

When I got home, I had a frozen burrito for dinner—bad girl, slap your hand—it was cheesy and delish. I also drank a beer, which was great until I discovered that Kaliber couldn't put a buzz on a gerbil. Now that dear Dr. Singer has gone the way of all her other instant boyfriends, Mom has replaced his Chimay with something I could safely steal.

Okay, girl, you have to get with the program and stop coming up with ridiculous plans because you need to do two things: First, find him. Second, get him out of there.

I thought of calling our lawyers, but they would instantly call Mommy dearest, and then I would probably end up chained to my bed with duct tape over my mouth—except for rehearsals tomorrow and Friday, of course. And the concert. Oh, how amazing, *the concert*. The last one had, what, two hundred and fifty people? It looked great because the room was small. I know they call the Greek small, but that's not how it looks to me. It's this positive *ocean* and incredibly scary.

I'm all over the place. This is happening because I can't figure out a thing to do to help him. Except—what if I were to report him as a missing person? How do you do that? Is there a Web site? Or, no, you probably have to do it in person at the police station, which is where?

What if I just go to the big juvie facility in East LA and say he's my autistic brother? I'm his guardian, except I think you have to be twenty-one

for that.

Maybe the thing to do is go down to the parking garage, get in the Mercedes, and drive over there. Except I've had my license since my birthday, which was less than twelve months ago, therefore I can't drive between eleven P.M. and five A.M.—thank you, California.

I could take a cab. Get there, talk my way in, get visitation. I know it says on the Web site no visitation, but maybe it's not all that cut-and-dried—you never know. Does money talk? Bet so.

I pull down my hair, wash my face totally plain, then put on my dark glasses. I look sort of like a vampire who's pretending to be me. I put on this Vincent Napoli lipstick, "It's Not Me," which is this sort of Goth-insane purple-black color. I hit my face with a bunch of white foundation, and now I look like some punk moron trying to do Angelina Jolie as if she was a punk moron.

Okay, heavy disguise and I am gone. Mom left a while ago, so hopefully she's reconnected with Dapper D or the Wolverine or whoever and is off playing house somewhere far away.

Julius is on call. Do they have something rigged up that lets him know if the door is opened? Probably, so I have to move fast.

I hit the hallway and run down four stories, then take the elevator, clever girl. As I go down, I hear the faint *whoosh* of the car beside this one going up.

"A cab. I need a cab, please."

"And you are?"

I lean close to the building attendant. Lower my glasses just a tad, look over them. "I'm Angie Jolie."

"Oh, wow! I mean, sure! Uh . . ."

Angelina Jolie would, of course, never need a cab, but the woman makes the call anyway, and I go out and sit on one of the benches, hoping that Julius does not—"Hello, Mel."

"Hi, Jules."

"You goin' out?"

"Not to a public place, so you can go back to your room."

He sits down beside me. “We can take the Mercedes. I’ll drive you.”

Actually, it might work if he doesn’t go apeshit on the spot. If I say the truth, either I’m ruined or I get my chance.

“Will you take me to juvie in East LA?”

“Where that streeter was taken?”

“He lived here! This was his home!”

“Whatever. Look, you got a thing for him, don’t you? Your mother already ripped me about it, although she had to admit that I’m not gonna be able to monitor the crawl space.”

“Take me, Julius, please!”

“You tell her we went to the Star Room, and it’s a deal.”

“Will she believe that, Jules? That I would go there, ever? I mean, they do the foxtrot there.”

“She won’t believe it. But she will believe me when I tell her it wasn’t some rock-’n’-roll pharmacy like M&M.”

So I agree to say I went dancing the foxtrot, and we get in the Merc to go to the juvie facility.

I am so incredibly happy until we arrive. Now what? What do I do—go in with my bodyguard and say I want to see a big blond kid with no name, the one who came out of the wall at the Beresford?

As Julius stops the car, he tells me, “You will see some real sad stuff in there, Mel. Saddest stuff you’ve ever seen, so be prepared. And don’t bring me out a bunch of vagrant kids to feed, okay? Promise me.”

“I promise.”

Boy, is this place BIG. Plus it feels all courtlike and scary, and I see cops bringing in these two sweaty fat monsters in handcuffs with torn up T-shirts. One of them has blood on him and looks like he could eat the Incredible Hulk for din-din, which maybe he just finished doing.

I push the door open and there are these benches with kids sitting on them, and there is a big Latina beside her hunched-over daughter, who is crying, and Mom has a defiant look on her face, like her girl had to have been picked up by mistake or something. I hope that is true, but I bet it isn’t.

I go up to a desk where there is a lady in uniform. She has a gun. Everybody in uniform here has a gun and a billy club. This is not a nice place in any way.

The lady is writing. She keeps writing. If I was a taxpayer, I'd be outraged.

"Ma'am, I am trying to locate a boy who was brought in last night."

"Family?"

"That's the thing—we're not sure. We read that he'd been taken from the Beresford and was unidentified."

She looks up. Now I wish I'd worn a nun's habit, not this ridiculous getup.

"Oh, man," she says. "Melody McGrath!"

Silence falls. I feel the eyes on me, all of them in the room. It's as still as the air before a storm.

"You know him, Miss McGrath? Because we got no ID on him."

"I may know him." I feel like a bird that has just discovered it is in a cage.

"Oh, hey, can you sign this for my son?" a guard asks. He has a napkin, which I sign with his Bic.

"He went into the system," the lady at the desk says. "He's at, um—actually, I shouldn't tell you this if you're not family."

"We don't know. If he's autistic, he might be."

She gives me a this-is-weird look, then goes into bureaucratic mode. "They took him over to Willamette. The charges didn't go with him, so he's gonna get fostered."

I tell her thank you and turn and give two more autographs. The girl who was hunched over watches me with the most incredible longing, and I know what's in her mind: "If only I was you."

Back in the car, I tell Julius, "He's at Willamette." Then I ask, "Do you know where that is?"

"Silver Lake. But it's a camp. They have visiting hours at those places."

"Will you take me?"

"If your mom allows it, sure."

"Then forget it. Because she won't."

“You have your live run-through tomorrow. When it’s over, we can do a detour.”

“She’ll be in the car.”

“She’ll be in the limo. I’ll come separately.”

He can be such a doll, but when I really think about it, what will they do for me at Willamette that didn’t happen at Westview? They’re not going to help me. Going to these places isn’t the way to succeed, here.

“Thanks, but let’s just forget it.”

At home I lie back on my bed and think. He is in there. I am out here. He has to be very scared and confused. I mean, he doesn’t know much of anything.

What if I could identify him for them? Find out his name?

Maybe he has a place on the roof. That night he found me up there, he hid back in the shadows near the water towers.

One second later, I am in the hall with my flashlight in hand. Julius is probably downstairs in his room watching me on a camera and saying to himself, “Doesn’t this kid ever stop?” Since I got caught with the boy, he has orders to check on my every move. (The hatch into the crawl space is gone, plastered over while we were in rehearsal.)

I go to the stairs and up to the roof.

It’s big and beautiful and easy to imagine that you’re on a magic carpet flying above this astonishing sea of lights. The Beresford is fifty stories tall and on a hill, so I think it’s about the highest building in downtown.

I look for his place. It has to be small and well concealed.

Up close, the air-conditioning towers are massive, and there is a humid, old-water smell to them. I’m not sure how building air-conditioning works, but up close this is really impressive and daunting. Could I get hurt getting too close? Is it electric? But no, it’s full of falling water.

Back here, this is where he came out of, definitely.

I shine my light along the opposite wall, which must be some kind of storage or equipment room. I see nothing . . . until I do. There, down there, is a long crease, black. Looks like a shadow until I go closer. Shining my light in, I can see that it’s like a low, narrow hatch. There is no handle, so I pull at

it but I can't get a grip. I push, but it doesn't move inward. Then I slide my fingers along the edge, which is so fine that without the flashlight I never would have seen it.

I push the top edge. Nothing. Then the bottom edge. It levers out a little at the top. I pull at the exposed sliver, and it comes down.

To see in, I have to lie flat on the roof. I shine my light into this very small chamber. It's maybe seven feet long, three feet deep, and three feet high. It's like some kind of shelf with a cover on it. Could have been a space for drills and things.

I'm highly claustrophobic, but I slide in anyway and look around. There are clothes stacked up at the far end, neatly folded. There are three bottles of water, an Evian and a couple of Poland Springs. There's a half-empty bottle of fruit punch Gatorade. On the wall, there's a picture of a woman. It's color, an old snapshot, tiny and wrinkled like it came out of a little boy's pocket, which I'm sure it did. She is thin, with blond hair like his. Standing beside her in the sunlight of another time is a happy-faced little boy, and I know with total certainty that it is him.

I can see a story here, of loss and abandonment, and although many of the pieces are missing, I can also see the tragedy of it, the little boy deserted during his father's murder, too scared to ask for help but smart enough to make this crazy, impossible place his home.

Looking at his little bit of stuff—the few clothes, the threadbare blanket—and thinking of his deep, pleading eyes, I know I am falling for him in a big way.

What I cannot see, though, is any sign at all of who he actually is. No name scrawled on the picture, no souvenir with an address on it, nothing.

It's so sad and so incredible. I turn over and grab his blanket, and I can smell him in it—the sadness of a boy alone. And I cry and I cry and I cry.

CHAPTER 14

On the third night of his captivity, Beresford was watching TV in the rec room at Willamette when he saw something that really scared him: a shot on *CSI* of a time bomb. It had a digital timer wired to three waxy, bright red sticks that looked like candles. For a moment he was confused, trying to recall where he'd seen this before. Then he remembered—there had been something that looked very much like it in the space where he'd hidden between two of the tanks in the Beresford's fuel storage area.

Before he could stop himself, he jumped up and cried out. He immediately stifled the sound, but not before a ripple of suppressed laughter filled the room. The other kids hated him. They called him “the vampire” or “zombie boy.” He dropped back into his seat, but his mind was racing and his breath came in gasps.

He'd been focused on the kids since he arrived, on trying to figure them out. But this discovery devastated him. He had to get back to the Beresford. Somehow, he had to escape.

There was no point in telling the staff. They'd just think it was another one of his crazy attempts to get out.

He sat like a stone, staring at the TV but not seeing it. He needed a plan. Since his attempt to get out through the ductwork at Westview, they had kept him on tight lockdown, so he was in his own tiny cell at night. There was no

way out—he'd explored every inch of it.

Sometimes kids got to go with their families on weekend nights, and maybe there was some sort of opportunity. He approached Mr. Lopez, a monitor on duty.

Finally Mr. Lopez looked up from the magazine he was reading. "Yeah?"

"Can I go to the Melody McGrath concert tomorrow night?"

"Whaddaya know, it talks! You ain't got a family to be signed out to, and with an escape attempt in your record, no judge would give you a home date anyway, even if you had one."

"My name is Beresford McGrath. I told everybody that."

"So ain't it strange that your momma, Mrs. McGrath, has no idea that she even gave birth to you? You can't just make up an identity, kid. An identity comes with a birth certificate and parents who know who you are—and a school record. You ain't got none of that. What you do have is a placement hearing coming up, so you got a court appearance Tuesday."

Beresford returned to his seat. He had to get back—that was all there was to it.

He knew that this place wasn't all one building, and when you went from building to building, you were outside. They watched you, though, every minute, and anyway the rec room where he was now was in his dorm, so he wouldn't be going out tonight.

Mr. Lopez was looking at him. Why? What was he thinking? He could never tell if somebody was mad or not. He didn't know how to tell. It was easy to insult people here, and maybe he'd insulted Mr. Lopez. But how?

"Hey, kid." Mr. Lopez nodded for him to come over, so Beresford went back to the desk.

"If you got a pass, where would you go? Just to that concert?"

At that moment, the bell rang and all the kids got up, suddenly very disciplined, heading for the wings of the building where the sleeping areas were. You could get a demerit for being slow on the bells.

As they congregated in front of the door to the boys' wing, waiting for it to be buzzed open, Beresford felt a hand slip around his waist. He jumped away and whirled around, but the faces of the kids behind him were all blank.

Could they get into his room? They hit the door and rattled it whenever they got a chance. Only the staff had keys, but what did that mean around here? The kids really ran the place.

Beresford went into his room and closed the door. With the familiar loud buzz, all the doors locked.

In the silence that fell, the situation hit him so hard he had to gasp for breath. There was a bomb in the Beresford. Who might do this he could not imagine, but it was there, no question. When would it explode?

He had to get out of here.

He paced back and forth, back and forth, slapping the door, slapping the narrow window, back and forth, back and forth.

Beresford thought about all the dogs and cats he comforted, the people who needed him, even mean old Mrs. Scutter—especially her, the way she was always falling asleep with lit cigarettes. He thought of Melody asleep in her apartment way up at the very top, and realized that when the explosion came, all the people on the top floors would be cut off and trapped.

He paced for a long time, he had no idea how long. Time was always kind of a surprise to him. He'd known night and day—but mostly night—in the crawls and chases where he'd lived. Sometimes on the roof he'd seen the sun, which was always disturbing because of how hard it made it for him to hide.

Finally, he felt sleepy and thought it was time to find a vacationer or go to his place on the roof—and then he remembered where he really was. He cried out, stifling it instantly with his fist.

Beresford lay down on the incredibly soft bed, then, as he had on all the nights he'd been here, took the blanket to the floor so he could sleep without feeling like he was falling. Melody had an even softer mattress. How could she stand it?

He lay staring up at the ceiling, at the faint reddish light that kept the room not quite dark. That was another thing he didn't like here. It was never totally dark. He was best in total darkness, even climbing and moving through the crawls. It was what he was used to. He could navigate just by sound and touch.

He must have fallen asleep without realizing it, because a sound woke him

up. The door went *bzzt!* Hardly any buzz at all.

Was it morning? No, the window was black. He sat up. Why would they be opening the doors now? He stood and grasped the door handle. Gently, he pulled and pushed, but the handle did not turn. So maybe he'd dreamed it.

The door burst open. Four hooded figures came in and pushed him up against the far wall. As they did, he shouted in surprise.

“Shaddup! The bulls ain't comin'. The bulls gone deaf tonight.”

One of the figures was Rufus the Butcher, a gang guy. In his hands was a length of wire.

Beresford had not used his real strength against them before, but he had to now, he saw that immediately. As Rufus raised his fists, the wire taut between them, Beresford shrugged off the two boys holding him, lifting one of them and throwing him into the ceiling. The boy hit hard, crashing to the floor in a heap of ceiling tiles.

“Jesus!”

Beresford waded into them, swinging his arms, hammering them. Strong as they appeared, to him they were like paper. A lifetime of climbing had turned his muscles to iron.

He grabbed Rufus by his T-shirt and landed the hardest punch he could throw right in the middle of his stomach. With a huge gasp, Rufus shot backward out the door and into the far wall, then slumped to the floor.

The other two started to run, but he caught up with them in the hall and hit their heads together, dropping them both. The one he had thrown into the ceiling was still knocked out on the floor of his room.

He did not like hurting anyone—he hated it, in fact—but that wire meant only one thing, that they were there to kill him. Then the place would go back on lockdown and nobody would be the wiser. That was how it happened here.

He went down the hall and out into the rec room. From here, he had to pass the front desk, but just as Rufus had said, nobody was there. To keep the peace, the guards cooperated with the gangs.

Why would the gangs want to kill him, though? He had nothing to do with them.

He pulled open the main door and smelled the air, rich, cool, and scented

with night-blooming flowers. The world was beautiful in so many ways. He would never cease to feel this, not after all his years in concrete and darkness and dust.

He ran, dashing between the gym and classroom building and heading across the baseball diamond to the high fence beyond. He knew about maps, but the connection between the lines and the streets and roads did not make any sense. His instinct was to get high up; then he could see.

The lights on the baseball diamond were on, so he skirted it and climbed the twelve feet of chain-link fence, until he reached the vicious-looking razor wire at the top. He'd only seen this stuff from a distance, and he touched it in horrified amazement. How could anybody put up something as evil as this? It could cut a person to pieces. But it kept people like Rufus inside, and you sure didn't want him free, did you?

Beresford lifted his body on one arm, drew in his legs, twisted until his feet were facing the other side of the fence, then extended his legs through a gap in the wire.

Even for him, holding his entire weight on one arm was hard, so he immediately grasped the fence with the other hand as well, then levered himself down, drawing his head carefully through the wire.

He moved one arm out and closed his fist around two links of the fence, then tightened his muscles so when he released the hand still on top of the fence, he could pull it out without touching a single razor.

On the other side, he hooked his feet into some links below him, stretched, grasped links at waist level, then let the weight of his body down on the strength of his arms.

When his feet touched the ground, a rush of heat went to his face and hope filled his heart. Usually, he went barefoot. It was quieter, and his toes were essential to climbing. You didn't want to negotiate a chase in shoes—not if you wanted to live. Here, though, he would leave on the sneakers they'd given him. This was rough ground.

The land sloped upward, although not steeply. It was fairly well wooded, which was a help to him, especially because all the lights in Willamette suddenly turned on and the bell started ringing.

He moved faster, heading for the top of the hill. He needed to get some

idea of where he was. Behind him, he heard an engine start, then another, and in moments there were headlights moving through the woods, coming fast. Small trucks? No, four-wheelers, the kind the staff used.

A big voice: “Stop running, son. You can’t get away!”

He would not stop.

From above, a huge light appeared, and with it the thunderous chopping roar of a helicopter. He’d watched helicopters from the roof of the Beresford. They were fascinating.

The helicopter’s searchlight was playing along the edges of a nearby road, but he had no intention of going anywhere near a road. He continued to the top of the hill where, very suddenly, a view unfolded—even more magnificent than the one from the roof of the Beresford.

Keeping to the trees, listening to the clatter of the engines and the roar of the helicopter, he surveyed a gigantic ocean of lights. To the east, above the shadows of the mountains, the sky was a pink so perfect that it seemed to him in some way sacred.

Tears choked his throat. There was no time to waste, though. He headed down the far side of the hill, going toward houses that were buried in the trees.

He made progress, soon leaving his pursuers behind, at least for the moment.

There was a problem, though. He had no idea which way to go. In the Beresford, he could usually tell what floor he was on, no matter how dark it was or how fast he’d been moving. Outside, all was confusion, an incomprehensible complication of trees and streets full of madly rushing cars.

Moving more carefully, his tread so soft that he left only the occasional track, he hopped a fence into a back garden. Here was a house with a swimming pool. The Beresford had a swimming pool, but he’d avoided it because of the cameras.

Time was passing, and what had been darkness when he left Willamette was now thin gray light. He looked around, seeking someplace to hide. He went toward a big house, but a dog started barking and, a moment later, lights began to turn on inside.

He hopped back over the fence and went to the next yard, and the one beyond it, and so on.

As he jumped a last fence, the helicopter suddenly popped up out of nowhere, so low that he could feel its prop wash on his back. Worse, the lights of the four-wheelers appeared, moving fast, heading straight for the row of houses.

He rushed along the side of the house, then out into the front yard. Crossing the street, he came to a ravine, which he leaped into immediately—and not a moment too soon. Police cars came screaming around the corners at either ends of the street. Policemen piled out and raced through yards, shining powerful flashlights into every bush and hiding place.

“Okay, son, we got you—come on outta there.”

Except that they were pointing their flashlights at the wrong cluster of bushes.

Beresford went down the ravine, picking his way among the sharp stones, then moved up the side and into a more elaborate yard, this one with not only a pool but also a tennis court. Keeping between the fence that enclosed the court and the high brick wall that edged the property, he once again followed the side of the house, then slipped down the driveway and into the next street.

After a while, he could hear only the occasional distant *thutter* of the helicopter. He was fast and had gotten away.

He was soon passing storefronts, and there were people here and there on the quiet street. Farther along, there was a rattling sound as a merchant opened the front of his store.

Then he saw a police car. He stepped between two buildings, went down an alley, crossed a nearly empty parking lot, and came out on another street.

There was a bookstore in an old building. He went up to it, found a basement window, opened it with a few easy shakes, and slipped inside.

The dark was better. He felt a bit safer. But where was he now?

He crossed the cellar and opened a low door. Inside, there were dusty bottles of wine. He went in and pulled the door closed behind him. In the dark, he listened to his own breathing and tried to decide what to do.

CHAPTER 15

The Greek is roaring, every seat filled. You can hear the anticipation. Is my mouth gonna be too dry to sing?

Mom says, “Five minutes.” She’s hoarse from the ordeal of our final rehearsals.

I say, “Don’t state the obvious.” She nods. After the knock-down-drag-out over my beautiful boy, we’ve come to a silent agreement. She understands that I’m not some raving lunatic, and I accept her place as my mother and my manager. No more criticism, either side.

I think I have lost him. The juvie system is not telling us anything. I’m going to put the amazing feelings I have for him into my music.

The band is set up, the drums are riffing. Suddenly makeup people are all over me and I freak, but then my mike is in my hand and Timmy turns it on, and I know that every sound I now make will be heard by the crowd.

The stage is dark. My marks glow, the six step marks and the stop marks in night-glow tape. As I walk out, there is this awesome sense of bigness.

Silence. Then, with a *whoomp* of circuit breakers, the lights hit me, which feels like a physical slap of energy. We’ve lit rehearsals, of course, but not like this, not in the dark, and suddenly my entire body is glowing, my arms as if coated in white fire, the glitter of my blouse like stars around me, and my red boots two prancing flames as I take the mike to my lips and sing my very

first hit, “I Want You.” It’s a girl just *saying it*, what they all want to hear, the long and the short of it, dammit, tell us, *tell us*.

“I want you, come with me, I want you, let me hold you, I want you, I want you. . . .”

I go on, but it doesn’t click with them.

They are watching, waiting, and I feel this total horror, that all the controversy and media attention has built me into something bigger than I am, that Mom has filled this auditorium with more anticipation than I am worth.

They watch and I sing, and it feels like being torn to pieces with silence. I tell myself I am putting my heart into it, I caress my words, I cover them with my blood—“Don’t leave me, I want you, I want you, don’t tell me good-bye.”

And they *watch*.

Agony. I want to be like a boxer who can go off and get pumped up for the next round. If I look into the wings, I can see Mom standing like a statue, Medea or Lady Macbeth, one of those tragic horrors, her face zombified by the steely reflected light from my funeral pyre.

The song ends and there is applause, but who wants *that*? I need screaming, I need total wild frantic mystical passion, or I am dead after tonight. That’s the reality of music nowadays. Elvis or the Beatles could reach the entire world on one damn TV show. No more. I need ultimate buzz everywhere, or I am nothing.

Next, I do another of my hittish hits, “So Long, Boyfriend.” This is slow and intimate, and it takes full advantage of the throaty whisper that haunts the edges of my voice. “Tomorrow I’m gonna meet you, tomorrow I’m gonna talk to you, tomorrow.”

And they *watch*.

My heart beats harder, and I try harder, almost eating the microphone, willing myself to feel the longing that defines the song. “Tomorrow, I’m gonna love you, tomorrow I’m gonna hold you. . . .” A girl dreaming of a boy to whom she dares not speak. Alone in her room at night, knowing that this tomorrow will never come.

And now they do *not* watch. I think I can hear a new sound, a sort of low buzz, and I know what it is, under the band, under me. There is this sound coming up almost from my subconscious or whatever, but it's not coming from me; it's coming from them. They're talking. As I sing, they're *talking*, and I can feel them starting to tweet their disappointment to the world.

Why, why, why? I have no emotion left in me, nothing to transmit, nothing inside me but a heart so sad that it has turned to white winter ice, and snow queens cannot sing.

I do two more songs, and they might as well both be called the same thing—"Robot Girl." The more I lose them, the more shy I become, until I am practically whispering. You can hear the tears and the anger in my voice, and my throat is all tortured and dry, and I am barely even making a sound when suddenly—that's *HIM! IT IS!*

My heart has been a locked safe until this second, because right down there in the second row, looking up at me, is my beautiful boy with his wild blond hair and his huge shoulders.

Somehow he's escaped. Somehow he's come here.

I close the door of my soul on everyone except him. My eyes drill into his. My heart engages his heart, I can feel it. I cue my band and I go not to the next song in the set but rather to "Flying on Forever," which is the song of our tragedy and our hopes, and suddenly I am back out on the roof of the Beresford in the night, looking out across the sea of lights to the low moon, and he is behind me, a reproachful sentinel.

"When you are remembered, you're not remembered at all, nobody's real, nobody falls, nobody at all . . . 'cause we're all flying on forever . . . forever . . . forever."

As I sing, conversations slow down, then finally stop. I stare straight at him, and he's noticed now. He looks back in confusion, and my heart practically tears itself into pieces when I realize that it's *not him*—it's some other boy who is wondering what's going on.

Oh, my poor lost boy, where are you? "Are you flying somewhere in the stars? Are you lost in the darkness of the lights? Are you flying . . . flying . . . flying?"

Then it's over. Silence fills the theater. I see a bat flutter through the lights

and disappear.

Earthquake. Volcano. Never heard anything like it. Never knew such a sound could exist. A gigantic wave of noise, and the noise is clapping, it's yelling, it's foot-stomping. It's huge and totally awesome, and it makes me feel at once like dancing. And then they are coming toward me—the guy is actually coming up on the proscenium. I can see veins pulsating in his temples, his face is practically purple, his lips are twisted. He looks like some kind of monster.

Then he is at my feet and there are cameras flashing. Suddenly I'm jerked back, and I realize that guards are frantically pulling me away from him. My drummer, Mickey, and a guard are also pulling me, and for a second I think it *is* him! I lash out and scream at them and watch as he is swallowed up in the crowd. An instant later, about eight brown uniforms move off with him buried among them.

"I'm okay, man," the guy yells. "I'm okay," but they keep walking him out and then he is off somewhere in the crowd, gone.

Was it him, or wasn't it? I don't know, but my heart is just breaking now. Suddenly the drums start again and somebody puts my mike in my hand. The lights hit me.

The audience disappears into the blackness, and I yell back to the band, "So Not Free." I have no idea what we rehearsed—my mind is a blank. I have almost no idea even who I am, because I know now that what happened in that dark crawl space was way bigger than it felt at the time. It's burning me alive from the inside. I have to see him again.

I look out into the dark. Some longing part of my soul is looking back at me, and I feel this song as I have never felt any song before in my life. The words come out of me echoing with the loss of being a kid and looking at a future you thought would be free—the wonderful adult world that in reality is even less free than ours, and ours is *so not free*.

I sing not only from my heart and soul but from an even deeper place. I sing from behind the bars of life, but as I sing, I also see that the song is not entirely true—that all we have to do to find our freedom is to find love.

For a long moment, there is silence. Then a sound hits me. It's so loud that I think a bomb has gone off. Then I realize it's people clapping. They are

clapping and yelling and stomping.

Somebody is yelling at me from the wings. Yelling at me to do something. More. Yes, that's what they're yelling.

When I put the mike up to my lips, the whole audience turns off like a switch. I sing "Nature Boy."

At first, I sense a withdrawal from the crowd, as if they've been in the dark and are getting hit by light.

It happens again, though. Here I am singing this old song, and something opens up in me—a door, like, to another world.

The song ends. The applause comes again. The crowd surges forward, and I notice that a couple of the guards have their uniforms torn up, and there are cops—real ones—coming up on the stage and surrounding me.

As they lead me off into the wings, I say nothing. Being up there was incredible, and I know what it is now to be truly high, in the sense of being taken totally out of myself, of letting my heart flow like a river, of becoming something primitive and completely free.

Mom's face is covered in tears. She shakes so much it scares me. She looks suddenly little and old. I see that she is crying not only with joy for me but also with sorrow for herself. This is her own life's dream, and now it has come true before her eyes, but it's not her.

When I embrace her, it does not feel like it always felt before, and I know exactly how it's different. She's not holding me. I am holding her.

When my mother grows old, this is how it will feel to cradle her in my arms, and I will do that. I will never turn away from her.

Then, as if she has read my thoughts, she leans back and looks me in the eyes. We both laugh and cry at the same time, me and my dangerous, evil, wonderful mom. Then Julius interrupts us. There is a police car waiting for us. We can't use the limo—the crowd is too hysterical.

I cannot express how weird this all makes me feel. You know they are putting you on a pedestal, but you still feel like yourself anyway.

So here we are in the back of a police car, and the cops are handing me programs for autographs for their kids. It's looking like I'm more of a guy thing than a girl thing, which is okay, I guess. Wonder who buys the most

music?

I am a bit boy crazy, so it fits, I suppose. Interesting to be boy crazy while sealed up in the cocoon of fame. No boys in here, that's fer sure. Unless I want to be taken to a tea dance by some guy from, say, Megadeth, which I'm sure our publicists could arrange. Problem is, no celeb is going to date jailbait, and guys my own age are way too intimidated. I mean, who would invite me to a prom?

I have a tutor, hello? Is there a tutored-kids prom somewhere? Note to self—check that out.

We go into the Beresford by the back entrance, and the pig Frank is there. I'll get him, one way or another.

Back upstairs, the silence is kind of strange. You get used to applause real fast—and miss it just as fast.

I am sitting in the middle of my bed. I scoot up to the head of the bed and press my ear against the wall. It seems like just a minute ago I was being terrified by his breathing. But now it's totally quiet. Just the wall, nothing more.

I go out to the hall, heading for the den. From Mom's room, I hear music. And this is incredible: it's *my* music. She never just listens. It's always for work. Not tonight, though. She kissed me earlier. She had tears in her eyes.

Now she's shut up in there, and I'm wandering the halls, full of wishes that won't come true and desires that won't be fulfilled.

I go into the den and look at where his hatch used to be. Knowing Mom, the entire apartment is now encased in concealed armor plating.

He couldn't get in here, even if he *was* in the building.

I know he won't be coming out of juvie anytime soon. My one real way to get to him is to persuade Mom to hire a lawyer who can game the system for information.

Now that the concert has come and gone, maybe Mom will calm down, not only about my music but about life in general. She'll realize that she can't go bananas just because I like somebody.

Once we were transferred from the cop car to the limo, she put her head back and closed her eyes. Normally, she would have been all over me with

critiques, checking things off on her clipboard, yelling into her BlackBerry, and sucking the plastic cigarette.

I leaned over and kissed her cheek, and a sort of rueful little smile came and went on her face. The rest of the way home, the car was quiet.

I go back to my room, lie down, and close my eyes.

Was it him in the audience, after all? Did I make a horrible mistake tonight?

No, he's lost deep in Willamette, or maybe somewhere else by now, even farther away. Could be anywhere.

Tomorrow is Sunday, but on Monday I'm going to ask our lawyers about him, and Mom is going to let me. She has no right to stand in my way.

I look at the clock—it's nearly three. I'm unbelievably tired but I'm also wired.

Safe in this big, strong building. Lonely. And so to sleep, perchance to dream of my poor lost boy.

CHAPTER 16

Frank arrived at Mr. Szatson's house gobbling Tums. Building the first device and then nearly getting caught had brought the whole situation home even more forcefully. If he did this, people were definitely going to die, and he was definitely going to be found out and given the needle.

He had no appointment and no idea how Mr. Szatson would react. But this was how it had to be.

As the ornate black gate swept open, he looked for signs of the guards he felt certain were there, but he saw nothing except the peaceful lawn and the flower beds.

He'd never considered himself a man with much of a conscience. What he had was a will to live, not a will to help others stay alive. But, dammit, didn't Szatson realize what he was doing? The investigation would be incredible. If they didn't both get caught, it would be a miracle.

He stopped his car in front of the house and got out, going up the steps to the big white front door. It was a formal house, red brick, that had once belonged to the chairman of some film studio. Probably to famous actors as well.

As he lifted his hand to ring the gleaming brass doorbell, the door swept open. Mrs. Szatson stood in front of him.

She smiled at him. "Luther?" she said softly, her voice a gentle lilt.

Szatson appeared behind her. “Good to see you again, Frank.” He smiled. “Come on in.” As they walked toward his office, he added, “Are you bringing a problem to our doorstep on a Sunday morning?”

“A little problem.”

This time, there was the ghost of a reptile in Szatson’s smile. “I don’t handle little problems.”

“It’s not a little problem.”

“I thought not.”

Szatson crossed his big office and dropped into a chair. He gestured to Frank, but Frank remained in the doorway.

“Mr. Szatson, I don’t think we can do this.”

“Why?”

“Mr. Szatson, it’s the crime of the century. It’s going to be investigated beyond anything we’ve ever known. It’s going to draw incredible, detailed, and prolonged attention to you.”

“Frank, excuse me for being so blunt, but don’t think ahead. That’s my job, okay? So don’t. Now, if you don’t mind, my wife and I have to leave in five minutes.”

He came over to Frank and put a friendly arm across his shoulder. “Frank, Frank, Frank . . .” He chuckled. “You’re the smart one, so do the good job you’ve always done, you hear me?” Now he laughed. “Whatever will be will be, am I right?”

Not ten minutes after he’d arrived, Frank was back in his car. And what had he accomplished? Not a thing. It was still on. His warnings had been brushed off.

He drove around the corner and pulled over. He gripped the steering wheel, fighting for breath.

He couldn’t do this, no way. But either way, he was a dead man. If he went through with it, he’d certainly be collared, imprisoned, and given a death sentence. Of course, Szatson would never allow him to walk away now—he knew too much. Szatson wouldn’t just send him back to jail, either. He might even do it himself. But it would be done, no question. Frank would be dead, age thirty-two.

He drove back to the Beresford, passing the Beverly Hills Hotel and the restaurants and expensive boutiques along Sunset, then Amoeba Music and the ArcLight Cinema, where he sometimes went to the movies.

He turned into the parking garage, went down to his space, and cut the engine. He started to get out, but instead he began shaking. A feeling came over him as if he was immersed in ice water, and the shaking became almost uncontrollable. He gripped the steering wheel, striking his head against it again and again.

Now that his attempt to scare Szatson off with warnings had failed, what was his next move?

He went into the building and headed through the employees-only door into the office zone. As he passed security, he tapped on the window, and Joe gave a wave of his fingers. Joe was happy with his little bit of money and watching his damn screens. Then he passed what had been the office of Renee Titer, who had been their rental agent back in the days when they did that.

Oh, how careful was this plan. The building was even designed for fire values, the structure coming in just this side of codes—except for that shaft extension, of course. That was the key to the whole plan, as it had been from the first.

From the first. That was the amazing evil of it. True evil. Satanic evil.

He reached his office, standing for a moment and looking at the black door with the sign on it that said, simply, SUPERINTENDENT. Then he went in and sat down. For a time, he stared into space. He opened his desk.

The new detonator he had built was black because he had covered it with electrical tape. It was about the size of a box of matches. He took it in his hand. It was feather-light and so simple. Its job was to ignite a tungsten filament. But this would happen deep in one of the fuel tanks, inside the oil.

He cradled it. He felt the weight of the building above him, and in his mind's eye he saw the people in the apartments above, some sleeping, some watching TV, some just getting up late on a Sunday morning, others making love perhaps, whatever. He thought of the little singer way up there where there would be no escape. That death alone would make this fire famous.

He laid the detonator on his desk and looked at it under the hard

fluorescent light. He could smell the faint odor of the electrical tape. Why had he covered it with tape? He'd wanted it to survive, somehow. But why? It would not survive, not any part of it.

He peeled back some of the tape. The electronics were simple. He had put them together in ten minutes—a twelve-volt battery, a small timer, a piece of tungsten. He'd designed it himself, and he knew it would be effective.

His fingers seemed huge in comparison with the small timer he'd bought at Target. He pressed the Set button. It began counting back from thirty minutes. Half an hour to the worst disaster in Los Angeles since the Northridge Earthquake.

He would drop it in tank two, the center of the three tanks, then he would tell Joe he was leaving, and he would go down to the IHOP on Olympic and eat pancakes until he heard the sirens.

Briefly, he thought he might just go ahead and kill himself. But he knew he was too much of a coward to do it.

Twenty-seven minutes. He touched the box. It was a strange thing to contemplate what it would mean to this building and its occupants, to the city and the world, if he closed it and took it down the hall.

He watched the timer count down until it reached the twenty-five-minute mark.

Making sure nobody was in the hall, he left his office. As he walked down the corridor with the device, he found that he had to wipe away tears. But he didn't feel sad, at least not in any part of his heart that he was in touch with.

“Hey there, Frank.”

“Hi, Joe, where'd you come from?”

In answer, Joe glanced toward the men's room down the hall. Then he returned to the security office. Frank went on. He didn't think that Joe had the slightest chance of survival so he couldn't even look at him. He reached the end of the hall and climbed down the spiral stairs that led to the main equipment floor, where the steam generators were housed, along with the backup electrical generators.

He didn't see the figure that appeared in the hallway behind him, slipping out of a storage closet. Luther Szatson watched him carefully as he

disappeared down the spiral stairs.

Luther had been hard at work on this for a long time, and Frank Turner was going to take the entire hit for the catastrophe.

Clear and simple, Frank had been set up. Even while he was still in prison, the frame was built around him. He'd been chosen carefully. First, he'd done good work in the past. Second, he could be blackmailed because he'd been released illegally.

Szatson went past the security office with its big window. He stuck his head in the door. "Joey, where's Frank?"

Joe glanced at his monitors. "Don't see him. Want me to give him a call?"

"Yeah, do that."

Joe picked up his walkie-talkie. "Hey, Frank, Mr. Szatson's here." He waited. "Come in, Frank." He waited longer, then repeated the message.

As Luther knew perfectly well, the walkie-talkie's signal wasn't going to penetrate into the fuel storage area, blocked as it was by the big iron of the generators above.

"I saw him heading toward mechanicals, but he's not in there now."

"I'll go take a look," Luther said. "If he turns up, please ask him to wait for me in his office."

"Is anything the matter, Mr. Szatson?"

"Nothing that can't be handled."

Luther then went down to the end of the hall and opened the fire door into the machine room. It was almost silent, with only one steam generator running, emitting nothing more than a soft whine.

Moving carefully so that his heels wouldn't clatter on the grating of the floor and alert Frank, he went to the steel hatch that led down into the fuel storage area. Below, the lights were on. Frank was up on a ladder, bending over the middle of the three huge fuel tanks.

Very quietly, Luther lifted the hatch and put it down over the opening. He then slid the locking bar in place with his foot. He would later say that he had done it because there had appeared to be nobody in the fuel storage area and it was a code violation for it to be open.

He went back to the security office. “Not there,” he told Joe.

“That’s funny, because I didn’t see him come back. You looked down below?”

“It’s closed.”

Joe thought for a moment. “You can’t close it from inside, so he must’ve gone out while I was . . . I don’t know—I had my back turned.”

“You’re not required to be monitoring this hall, so it’s no skin.”

“I just like to notice. I like to be aware.” Joe stood up. His break time had arrived. “I’m taking my break, Mr. Szatson.”

“Sure thing.”

So Joe went upstairs, without the slightest idea that, by doing so, he was saving his own life.

In the fuel storage room, Frank was working up a sweat as he methodically unscrewed the big bolts that kept one of the inspection ports sealed. You could see through the ports, but the tanks were not intended to be opened unless absolutely necessary.

Grunting, pushing against the long handle of the wrench, he finally got the last bolt to move. As he opened the inspection port, fumes from the warm furnace heating oil filled his nose, choking him and making his eyes water. The oil had to be kept at a constant hundred degrees, or it would be too thick to flow through the system. This was no home heating system on a larger scale. It was completely different and far more complicated.

Now was the moment. He had laid the box atop the fuel tank. He picked it up and opened it. Just eleven minutes left. But that was good—it was enough time to get well out of the basement area before the explosion. He did not think anyone down here was going to survive for even a second.

The fire would travel up the building’s various chases and shafts, then blossom when it reached the top of the building. The top three floors would start burning immediately. Lower down, the process would be slower. To an unknown extent, the building’s sprinkler system would retard the flames. But in an explosion like this, standpipes would be wrecked up and down the line, and there was no way to tell how many of the sprinklers would work, or for how long. If Szatson had done his construction right, they wouldn’t work for

very long at all.

He closed the small firebomb, then immersed the detonator in the oil. Circulators inside the tank kept the oil in motion, and the box soon disappeared into the thick blackness.

It was done. And he did not feel anything—except, of course, urgency. He had to get out now. He could not waste time, but even as quick as he was, by the time he was going up the spiral stairs again, he had only nine minutes left.

The hatch was closed.

He looked at it. How could this be?

Then his heart *really* started hammering. “Hey, Joe! Joey! You locked me in, dammit! JOEY!”

The moron had found the hatch open and closed it. What did they give him, a monkey brain? Obviously, if it was open, somebody was in here. With shaking hands, he pulled his walkie-talkie off his belt. The damn thing had better work because eight minutes might not be enough time to get this open from the inside.

“Joey, you locked me in the oil hole!”

Static.

“Joey!”

Static.

Too much steel. It had never worked in here, and it never would. But hell, Joe would have at least called down. Nobody in his right mind would close this hatch without checking the space. The lights were still on. Joe wouldn't close the hatch and leave them on. He would definitely have turned them off, which would have alerted Frank immediately.

The truth hit him. *This was not an accident.*

Of course not—how stupid had he been! Szatson would never, ever let a man with knowledge like he had live.

Szatson had done it.

Frantic now, he leaped down the stairs, grabbed the ladder, and threw it against the oil tank. He pulled off the hatch cover and peered in, but saw only slowly roiling blackness. Even if the box came to the surface, he would never

find the incendiary sunken in all that oil.

Maybe he could drain the tank, then close the valve so that nothing would explode but fumes and residual oil.

Dropping down, he looked for some sort of emergency release valve, but there wasn't one. He could see where the piping went out to the fuel oil fill station behind the building, but there was nothing anywhere that would release oil into the room itself. Maybe it was possible to drain it into the sewer. Surely the tanks had to be cleaned.

No, they didn't. This was modern equipment that didn't build up residue. It never needed cleaning.

Four minutes. Almost dizzy with fear, he took a wrench up to the hatch and began hammering on it with all his strength.

"Damn you, Joey, WAKE UP!" *WHAM, WHAM, WHAM.*

Fire. It would hurt, it would be agony, and it was death, the real thing, *death*—and why had he done it? He hadn't wanted to. He had tried to talk Szatson out of it.

"God! God, it's wrong, I know it's wrong!" *WHAM, WHAM, WHAM.*

Two minutes.

Hissing. What was it? No, it was early, *it was early.*

Fire was gushing out of the inspection port. The hissing became a roar. His whole body, all at once, felt as if his skin was being ripped off.

Fire.

CHAPTER 17

Beresford's muscles were screaming, his head was pounding, his lungs sucking agonized breaths. He had been running for hours, always moving in the direction of the tall buildings he glimpsed occasionally. He'd tried to stop cars, but nobody would let him in. When he'd seen police cars, he'd gone the other way or hidden.

He took big, ragged strides down the shoulder of a highway with cars speeding past just inches from him. To his left was the wall that enclosed the highway; above it appeared the sheer facade of the Beresford. A sunken highway ran along the west side of the building. You could see it when you looked down.

Ahead was an exit ramp, but it was narrow and had no shoulder. Nonetheless, he had to get up there, so he took it, squeezing himself as tightly as he could against the concrete wall. The cars passed him so close that some of them actually bumped against his right thigh. There was honking, the squeal of brakes, shouting.

Then he was high enough to reach the top of the wall, and with his great arm strength, he hoisted himself up.

Before him stood the side wall of the Beresford, its cladding gleaming black in the soft midmorning light. Ahead was the front of the building, with its doorman and concierge and other lobby personnel. He must not go near

them; he must not let them see him.

Quickly, he trotted across the street and went down the alley behind the building. There was no concealed way to enter except that one door. In the front there would be more building personnel, and he feared that he wouldn't have time to explain the situation before they called the police.

He had to get into the fuel storage area and get that bomb out of there. Again and again, he'd tried to think who would put it there. Terrorists was the only answer he could think of, but how had they gotten into the depths of the building like that?

He came out the far end of the alley. Now he was on the east side of the building, and the entrance to the parking garage was just ahead. It was not attended, so the only chance he had of being seen was if somebody happened to be driving out and became suspicious.

As he hurried toward the parking level elevator lobby, he thought of only two things: the bomb in the basement and Melody on the top floor. In the back of his mind, though, were less formed thoughts of all the other people in the building, and all the animals, and the fact that the explosion would be so dangerous.

A few more steps and he would be standing in front of the elevators. But he did not take those steps, because he also knew that he would then be on camera.

To one side of the four elevators was an alarmed entrance to the emergency stairs, and if he opened that door, not only would an alarm sound, another one would go off in the security office. He wouldn't get two flights before he was caught.

But he had a better way. One of the chases came all the way down to this level. From this side, its opening was buried behind the spray-on ceiling material. But Beresford knew that it was like all the other chases—open-shaft construction.

To reach it, he stood on the hood of a car and pushed at the ceiling material until he found an area that had give. Then he pushed a fist through and tore at the ceiling until he had made a hole large enough to enter.

The car he was standing on was now a mess, but that didn't matter. From here, it would take him just a couple of minutes to reach the crawl space

between the two basements. He would remove a few ceiling tiles and drop right down into the machine room, then make his way to the fuel storage area.

This was the same shaft he used to reach Melody, and being in it again made him think of her fifty stories above him. Right now, he could only hope that she was safely away from the building. But why would she be on the morning after her big concert? She'd be resting.

He looked up into the darkness. There was a faint light that he knew came from the elevator shaft—again, an open shaft that should have been closed.

How he longed to just climb to Melody and get her out of here—and Mom, too, even Mom. Because he knew that Melody loved her, despite all their fights. So he loved Mom. Not like his own mother, of course, but he would fight for her life if he had to, no question there.

The second he got the bomb out of the building, he would tell Melody and Mom everything, and he was going to make them stay out of the building until the police had searched every inch of it.

He was just raising himself into the chase when there came a distant sound, a pop like bacon frying, but louder. The chase was lit yellow, and he dropped down onto the car and rolled away as a big ball of fire burst out of the hole.

For a second, he was too shocked to move. The chase was now filled with flickering light. He raised his head into fume-choked heat. If that fireball had hit him, he would be dead.

He looked up. The higher reaches of the chase were still untouched.

He had to climb, and he had to do all fifty stories or Melody was going to die. He pulled himself up into the chase. Off at the end of the crawl space there was roiling fire, but it was boiling up the elevator shaft and the chase that ended in the equipment room, not this one. This one would be clear for a while.

Without another thought, he started up, climbing hand over hand, pulling himself on pipes, doing it the way he had always known. Except, this time there was a difference. This time he was already terribly tired, and as he grabbed pipe and drew himself up, he felt unaccustomed pain in his muscles.

Still, he continued. Normally, he could do twenty stories with ease, thirty if

he really wanted to push it. Then he'd rest for a couple of minutes and go on. There was no time for that now, and he forced his body to keep working, forced himself to ignore the torment in his muscles and the fire in his lungs.

Then, as he passed forty, he heard barking and immediately recognized Gilford's voice. He cried out in anguish. He couldn't let Gilford die in a fire! But Melody—she was in bigger trouble way up there.

Moving as fast as he could, he went to Tommy's and dropped down.

"Hello! Anybody home?"

Only Gilford, who jumped up and down, snorting happily. The apartment was filled with a haze of smoke, and the detectors were buzzing.

He picked the wiggling dog up, went to the front door, and opened it. He already knew that this was safe; he'd seen from the crawl space that there was no fire here yet.

He could hear others crying out, and he ran up and down the hall, hammering on doors.

"Get out! Use the front fire stairs!" he shouted. They would be safe, at least for a while. He assumed that the pressure of the explosion would have blown in the doors on the back stairs, at least up to the lobby. So they were likely full of smoke, probably fire, too.

He ushered people toward the stairs, giving Gilford to a woman he didn't know and making sure that Cheops, the Egyptian cat from 4033, and Modred, Sam and Angela Parker's big old Lab, were also safe.

Then he returned to Tommy's apartment and reentered the crawl space, continuing on his journey upward. As he passed forty-one, he saw elevator four stuck at an angle, smoke pouring up around it. From inside he heard terrible, terrible screaming.

He could not pass. He had to go over there. So he jumped the chase and headed for the smoke-and flame-filled elevator shaft.

He got to the elevator, which was shaking, and he could hear coughing and crying. Jumping onto the roof of the elevator car, he started choking, too, because the smoke was thick here. Just above him was the pull-down lever that opened the shaft to the fiftieth floor, but he was not going to pull it because it would only increase the draft, drawing the fire up from below even

faster.

The cars had access hatches in their ceilings, but they weren't really for escape. They were maintenance shafts, and narrow. He unhooked the four latches and pulled the cover off, pushing it away past the cable housing. Faintly, it went clattering away into the glow from below, which was rapidly increasing.

Inside the elevator, there were two people. One of them was Mrs. Scutter.

Her face was black, her hair partly burned, and she was shaking so badly that, when he dropped down into the car, he could barely lift her birdlike frame onto its roof.

There was a man there, also, and Beresford was horrified to see that his skin was raw and broken, his clothes almost burned off. This man was standing, looking down at himself, muttering.

"Come on," Beresford said. "We're getting out of here."

Then he recognized this man. It was Luther.

His burns were terrible, but Beresford could only hate his father's murderer. Had he been in the basement? He must have been. Beresford lifted him onto the top of the car, then he came out of the thick, overheated air only to find that the smoke around the car was practically impenetrable.

There was no fire control system in this shaft, and the flames already seemed close to maybe the eighth floor. Dropping down from above were molten bits of plastic burning off pipes and wire sheathing on the top two floors. The fireball that had come up this shaft and the north chase had set the underroof on fire, and flames were now spreading there. The fiftieth floor would be trapped, and roof access was probably already impossible.

Time was rushing by. He had stopped to rescue others, and now he feared there might be no way to get Melody and her mother out.

Dragging a shrieking Mrs. Scutter, he crossed the crawl space to the south chase, then moved a few feet until he was above one of his hatches. He threw it open and lowered her into the apartment. "Go feel the door. If it's hot, don't open it. If it isn't, go to the front fire stairs. Do you understand?" When she nodded, wide-eyed, he left her.

Then he went back to Luther, but it was too late. He looked into the faded

eyes, at the surprise and shock that still haunted them. Poor man, he thought. But ironic, too, that the person responsible for all the violations would also be killed because of them.

The other elevators were far down at the bottom of the shaft, enveloped in flames. He could only hope that nobody had been in them.

The chase was getting hot now and filling up with fumes. Even so, he returned and began going up once again, forcing himself not to waste breath by uselessly screaming her name.

The building shook, and suddenly he was casting a long shadow ahead. He didn't need to be told what this meant—he threw himself into the crawl space between forty-two and forty-three just as a solid wall of flame came up from below and filled the chase.

He screamed then, not because he had been burned—he hadn't—but because this meant only one thing. Melody was now hopelessly trapped.

CHAPTER 18

I don't know what it is, but it smells *horrible* and there are bells ringing and I hear sirens and—*Mommy, the ceiling has smoke, the ceiling has smoke.*

It's impossible; it has to be some kind of weird nightmare. I feel like I'm in mud or something, like I can't move. From the hall, I hear terrible screaming, again and again and again, screaming and banging against the walls.

I try 911 on my cell, but it won't work.

"Mom! Mom!" I go out into the living room, and she is there, bent over the phone. The front of her hair is all curled and black, and the whole place stinks of burned hair. She looks up at me, and it's as if we are both dreaming as she says, "I can't get this to work," and hands me the phone.

This is not happening. It cannot be happening. I see that her bedroom door is shut and there is a sort of haze by the door, and under the door is flickering light.

This phone is dead. I curse at it, and she bursts into tears.

I have to get out of here. I cannot bear this, not one second longer. I run for the front door and grab the handle—it's as hot as an iron! I scream, and Mom screams, "DON'T OPEN THAT!"

She grabs me from behind, drags me away by my hair—*my hair, that's right*—growling like a tiger, and, my God, she looks like a creature from another planet with big, bulging eyes and a face as gray as somebody already dead.

“Mom, here—” I run into my room and grab my computer and open it. It comes to life, so I call up the Internet, and *it works*.

“I’m online!”

I go to Twitter and tweet “Help we are burning Apt 5050 Beresford Melody McGrath Call 911 Help we are burning call 911 call call call 911!”

I press Update, and it just sits there going, “Loading.” *Loading*, oh, God, it’s not posting. I watch. It will not post! Come on, COME ON! But it will not post.

Then I realize the truth. That was a cached page. I’m not online at all.

As a helicopter passes the windows, I glimpse the pilots, their faces turned toward the building.

“Mom!” I run and grab my bedspread. The ceiling is now all cracked, and smoke is sort of shooting down in puffs, like people on the other side are blowing cigarette smoke through little holes.

“Help me!” I go back to the living room and start to open the door onto the balcony, but Mom grabs my wrist.

“No.”

“*No?* There’s a helicopter right there!”

“If we open that door, we’ll create a draft.” She says it quietly, as offhandedly as a teacher explaining a problem she has explained many times before. Then she covers her face with her hands and begins shaking. But then she stops.

“Mom?”

A great cry comes out of her, and she throws her head back with her fists to her temples and howls. I scream, too. I scream because she is screaming, and I know it’s because we are going to burn and there’s nothing we can do and nobody can save us.

The smell is horrible, and oh, God, I am so afraid. I am so afraid that I am just about to burn. I’m going on the balcony, and I am going to jump. If the fire comes near me, I will. I will!

Again, the helicopter passes. But what can they do? How can they help us? Smoke is coming out of my room, so I pull the door closed. That is my life

in there: my dolls, my snuggly Boo-Boo that my daddy gave me when I was four, my iPad, and, oh, God, the one thing I cannot lose, my guitar.

All of a sudden, a strange sort of calm comes over me. I am going to die, and I am going to either see God or be nothing. My mind starts saying it over and over—“see God or be nothing, see God or be nothing”—and that seems to make it all real and unreal at the same time.

“Mom,” I say as I return to the living room, “MOM! MOM! MOM!”

She comes out of the kitchen. We throw our arms around each other.

The water stopped working almost right away, so she was gathering up all the Cokes and stuff and soaking kitchen towels with them.

“Help me,” she says.

We line them up at the bottom of the front door. The door is so hot that the towels hiss when they touch it. The hall must be a complete firestorm, and that door is liable to blow open at any minute. In fact, Mom was right about not going out on the balcony. If we slide that door open, the smoke and fire will blow into the foyer and the apartment will become an inferno.

Again, I hear sirens. They seem miles away.

Mom grabs my shoulders. “They’re coming,” she says. She laughs and her face is scary. “They’ll be right up.” Solid confidence in her voice.

No, they won’t. I know what happens to skyscrapers when they catch fire. Everybody does.

I nod to Mom. She kisses me, covers my face with kisses.

“My baby, my baby,” she says, and I see over her shoulder that one of the towels we just put against the door is smoking, and then I see a slim tongue of flame rise along it, leaving a dark scar where it licks against the door.

I run into the kitchen and open the freezer, and there are still ice cubes in the icemaker. I pull out the whole thing and go back and throw ice against the flame.

The flame goes down, but the ice hisses into steam when it touches the door. I realize that our time is almost up—we must only have minutes. And no sooner do I think this than the flame comes back, and another one beside it, low, flickering.

Then there is another sound—*pop pop . . . pop . . . poppop*. It’s Mom’s

bedroom door now. Her room must be full of fire, and the hollow wood door is not going to last much longer.

“Mom, we have to try to escape.”

“Don’t open the front door! Don’t touch it!”

“There’s that crawl space I was in, remember that?”

“Oh, that’s got to be a deathtrap.”

“We could break through the den closet. We could, I know it!”

She points upward. The ceiling is full of little cracks, and more of them are appearing by the second. I realize that the crawl space above it must be filled with fire. The ceiling will fall any second and I am going to catch on fire then, and it hits me all over again, the idea of burning and feeling that pain. I look again at the glass wall and the big doors and the balcony on the other side.

The sky has dozens of helicopters, some close, some farther away, all of them, I know, with cameras on this building.

“WHY DON’T THEY SAVE US?”

Mom has Perrier water, which she opens and pours over me. She cries as she does it, then she takes me in her arms and encloses me in herself as best she can. Long, deep red tendrils cross the ceiling.

“We have to try the balcony.”

“Don’t open doors and windows during a fire. Close all doors and windows.”

“Mom, it doesn’t matter anymore. Either we stay here and burn or we take our chances out there. A little more time, Mom! And maybe that’s all we need. Maybe all we need is a little more time, and they’ll get to us.”

“If we open that door, it’s over, honey.”

“What if they don’t know we’re even here? What if they think the apartment is empty?”

To get some attention we hang her bright red robe on the curtain rods, and when I get up on the couch, the air is so hot it hurts my head.

I decide that I will not burn. I will not let the fire destroy my face. I will jump instead. But I am so afraid of heights.

And yet I stood on the edge barely a week ago! How stupid that seems now. How incredibly, totally stupid and self-centered. Poor little rich girl.

Right here and now, I pledge that if I survive this I will become a better person. I go to my knees.

“God, if I live, I will change my life.”

Mom comes down beside me, kneeling also, and she bows her head. “Forgive me, Lord. I tried so hard, and I made mistakes.” She sobs, tries to say more, and can’t.

“We did it together,” I say to her.

We hug each other, and I think what I bet she is thinking, too, that ambition can make you great or it can make you evil, and if we get out of this, we are both going to change. We’ll use our ambition and my celebrity to do worthwhile things.

There is the chugging of a helicopter again, and we both hold out our arms, begging for rescue.

There is a sling under the chopper and a woman in it. We can see her face clearly.

They have rescued our neighbor in 5052.

“HELP US,” Mom shouts, “OVER HERE!” Then her voice breaks. “Oh, God, they can’t see us!”

“We have to risk it,” I say. I go toward the doors.

“NO!”

The voice that comes out of me is almost primal, it’s so big and furious and powerful. “WE WILL RISK IT!”

She closes her eyes. We both know our situation. Die here because nobody can see us, or go out on the balcony and risk burning to death or having to jump.

For a second, I feel this other person inside me, and I discover a truth about myself—I am what I am at sixteen because I am no innocent little girl. I might be a kid, but I have power, and I feel it now.

Mom pulls open the door to the balcony and we run out, but before we can close it, there is a ferocious wind and the whole inside of the apartment fills

up with flame.

She shuts the door, but the glass starts crazing as flames boil against it.

There is no time, I know that now, there is *no* time! I run to the edge, she runs to the edge, and we lean over because there is smoke behind us—if we do not lean out, we will suffocate. It’s hot, it hurts, and it’s getting hotter fast.

A helicopter appears. It thunders, bounces in the air fifty feet away, and comes closer—but suddenly the fire blows it back away from us. Then another one comes, higher up, and I can see a long hose dangling from it. It hovers in the smoke overhead, and there is gushing water, and I feel the coolness of the spray.

But it misses! Most of it just goes down past us and into the street!

Mom screams. She holds out her hands, begging, and then something else—a sling—comes down out of the smoke. It is orange, attached to a rope.

Mom grabs it and comes toward me, but at that same moment the rope tightens and *she is pulled off the balcony and into the air.*

She doesn’t have it on. She’s going to fall. Mom, *Mom!*

She disappears upward into the smoke, still clinging to it.

I drop down to the tile floor, where I used to dance, where I was supposed to prance around in that robe for the papis in another world, on another planet, in a distant age. I can’t watch Mom’s body fall. I will never forget the look on her face as she swung out, her eyes so full of pain and terror.

But here comes the sling again! Did they save her? Is she alive? Did she not fall?

“Mommy!”

The sling bobs, sways, and comes closer, closer still! I reach for it, but it swings away. I reach for it, grasp it—yes! I grasp it and pull it toward me, but there is a low, hungry sound, almost as if the fire has a voice, and that voice is saying “noooo.” There is *searing heat*, and I throw myself to the tiles as the entire glass wall disintegrates. I am lying seven feet from the glaring, flaming maw of the blast furnace that our apartment has become.

And the sling—*the sling is a molten blob of burning plastic.*

It disappears into the smoke.

Now it's quiet. I am alone, me and the fire and God. "Please don't mind if I jump, God, please don't mind because I don't want to burn, and I am, oh, God—*I am burning—ow—ow—*"

Then—what?—hands on the balcony, hands coming up. On the edge, somebody is coming over somehow, but from where? It's impossible.

And then I see his blond hair and his big, pale eyes and his huge muscles, and I realize that it's HIM! Jesus—it's my beautiful boy! Oh my God, he's trapped, too.

He slithers across the railing and down, staying under the smoke and fire that are boiling out of the apartment. He lies on me, and instantly it's cool. His shirt and pants are soaked with sweat.

"Now, listen," he says. "I am going to carry you. I want you to close your eyes, love."

"Yes, I will close my eyes."

"It's going to be very hard, and we might fall."

"Yes, love."

His arms come around me. I realize that he is breathing really hard, grunting.

He lifts me into sudden heat, terrible heat, but I force back my screams. All I can think is that my magic boy is here, and I wonder, is this a dream given to me by God? Am I really burning right now?

I am under one of his arms, and he is carrying me like a bag of potatoes; he is lifting me. It's getting cooler.

He told me to keep my eyes closed, but I do not do that.

I open them.

At first I don't understand what I am seeing—a long, gleaming black cliff disappears into the hazy distance.

Then I see movement, and I realize that all those red things are fire trucks, their lights flashing, and those white pillars are streams of water hitting the lower floors of the building. There are also TV vans down there, dozens of them.

He is carrying me down the side of the building. And he's having trouble; I

can hear him gasping, and I feel us—oh, God—I feel us starting to slip.

Then, no, we go another floor, and I see how he's doing it with the tips of the fingers of one hand, then with his toes, climbing the ribbing between the panels that make up the side of the building.

We will fall. I close my eyes and pray, "God, give him a chance. He is so young. He hasn't had much in his life, please. . . ."

We slip and he cries out, but somehow he gets us steady again. I hear helicopters everywhere. Another rescue sling comes down, but then it goes away. We can't get to it.

It's terrible to be in this, but he is so strong—his arm around me is beyond steel. I love this boy with all my heart. I want him to be rescued, to be saved—I want this with all that I am.

He stops. He is breathing hard. His muscles are like marble, hard and suddenly cold. Sweat pours out all over him. I open my eyes. I see the side of his head and his other arm, his fingers clinging to the wall . . . and his fingers are *purple*.

When he lets go, we die. I close my eyes again, trying to be as still as possible, to imagine myself as light as a feather, as light as air. I think, the first guy who ever loved me died for it, and I just want to bawl. It's so unfair to him, it is *so unfair*.

Now we are moving again. Incredibly, he is bending his legs, going down another floor somehow. Oh, it's impossible, it must be—and then we slip. . . .

We are falling. The wind is screaming and I am screaming. Time has stopped, and I see in his face total love. Looking at me. Total love.

Then *wham*. Black. *Thud*.

We are lying side by side in a rescue net. There are faces all around us, staring. Men in helmets.

Suddenly I understand: he got us close enough to the ground to drop into a net.

We're alive!

"Don't move, now. We're just putting the net down—don't move. Let EMS come to you."

A moment later, I feel a hardness come up under me, and the men stand

up. They are tall, like sentinels in their black coats.

Then a woman in an orange smock bends over me.

“Do you hurt anywhere, honey?”

“I . . . my hand . . . I burned my hand.”

They lift me and put me on what feels like the most comfortable bed in the world. It starts moving, and I see above me the gigantic, towering side of the Beresford with a massive plume of smoke above it. Helicopters are circling, dropping water loads onto the roof, which seems to be where most of the fire is.

There’s a thunder of engines all around me as countless fire trucks pump water into the shattered lower floors. I’m rolled under the building marquee, and he’s beside me, also on a gurney, and then suddenly I’m wheeled away. I cry out for him.

There are dozens of people from the fire in the hospital. A woman looks down at me. Her face is covered with soot, her hair is burned into little melted knots, but her eyes are swimming in silent tears.

“Mel? Mel, honey?”

“MOM!”

We touch, our hands grasping. There’s so much between the two of us.

Then, like a flash, she’s gone and I am no longer in a hallway. I am in a room. Time passed. How much time, I don’t know.

I try to figure it out, but I keep drifting away. Am I drugged? Yeah, there’s an IV . . . plastic gleaming in the light. Am I burned? My face? No . . . hand. I remember, my hand was burned.

The TV is on. There is a video playing.

Mom’s voice: “That’s you, honey, you and Beresford.”

Beresford? *Beresford*? “Mom, what—where—”

“It’s the most incredible rescue ever recorded. He carried you forty-five stories down the side of the building. Nobody knows how he did it.”

“Beresford! BERESFORD!”

“Sleep now . . . sleep.”

“No! I want him! Where is he?”

They are silent. I see a nurse's long hand move toward my IV. And I feel sleepy, but I don't want to sleep. I must see him now!

"He's not dead—he can't be!"

Screaming. I hear terrible screaming. I don't want to hear it. I try to cover my ears and scream back.

Hands touch my face, powerful hands. I realize that it's me doing all the screaming, and I fight for control—and then there are lips against my mouth, lips covering my screams.

Deep breaths, one after the other. I feel long hair drifting along my cheeks. I see his face, those big, wonderful eyes. Oh my God, he is alive!

I cry harder than I have ever cried in my life as Beresford wraps his big arms around me. I just sink into his amazing strength, so happy to be alive and with him. It seems like a miracle that we're both still part of the world, and Mom, too. I hear music in my soul.

He isn't there long, though, and I can't tell if he's leaving on his own or being taken away; there are so many people in here. I see uniforms and scream after him, but he's gone just like that, absorbed in the riot.

A warm feeling spreads through me, and I shout, "No, NO," but I can't fight it. It's total peace, and I know they have hit me with a knockout punch of some sort of sedation.

But my heart keeps screaming, screaming for him.

Then I'm floating. I don't want to float, but I just can't stop myself. He disappears into a cloud of sleep, and I fear that this time, for sure, he's gone forever.

EPILOGUE

More people watched the blurry figure crawling slowly down the side of the burning building than watched the first landing on the moon. As Beresford's impossible struggle unfolded, an entire world stopped and looked to their TVs at home, in bars, in store windows, on planes, everywhere there was television. And then came the last, perilous jump, the boy and girl like two rag dolls flopping out of the sheets of smoke and onto the huge inflatable cushion the firefighters had deployed.

“They're being rushed to the hospital. Nobody knows their condition.”

Everyone waited, millions upon millions of people from Los Angeles to London to Tokyo.

The director of emergency services at Downtown Receiving Hospital came to read a statement.

“One hundred and fifty-three emergency cases have been accepted at this hospital from a structural fire at the Beresford Downtown Apartments. We have eighty patients in critical condition with burns, and they are being relocated to hospitals throughout the region.”

Reporters yelled about Melody and the boy, but the doctor still didn't have any information.

It turned into a siege, with cameras, reporters, news anchors, bloggers, and columnists all waiting for the answer.

Finally, the doctors were sure of themselves. Melody McGrath and the unidentified young man who had rescued her were alive but in critical condition. Melody had a broken leg, a burned hand, and internal injuries, and the unidentified young man had second-degree burns, was suffering from smoke inhalation, and had a dislocated shoulder.

Beresford was in a charity ward with five other homeless patients. Each day, he got a little better.

Melody drifted in and out of consciousness. She was aware of pain, then of painlessness, then of a deep loneliness that filled her eyes with tears.

She struggled with infection and a heart murmur, and three days after the fire, the doctors told her mother that she had a cardiac infection.

Her mom stayed with her day and night, sleeping in a chair, listening to the heart monitor, praying and worrying and resolving again and again to repair her relationship with her daughter.

Her dad came and made a promise to be in her life more, and she hoped it was true.

Down in the charity ward, there came a day when two caseworkers from Social Services arrived, and Beresford was released into their custody.

Eleven days after she had been admitted, Melody found herself staring at what at first she thought was a fog bank, but then realized was a ceiling.

Was there smoke? What was happening?

“Honey?”

“Beresford. Please, Mom, where is he?”

Hilda was embarrassed because she had been so concerned about Melody’s state that she hadn’t thought about him for days. When she finally called patient services, she was told that he had recovered. “He’s fine,” she said. “I’m sure he’ll come see you when he can.”

“Where is he?”

“He’s in a group home.”

Melody was heartbroken, a devastated angel lying in her ever-changing sea

of flowers, hollow-eyed and silent.

“You did this, didn’t you?”

“What?”

“You got rid of him. You had him sent away. Oh, Mom, where is he? I need him!”

“I didn’t. I didn’t do—” And now Hilda realized her mistake. She hadn’t done anything. She’d just let Beresford get sucked up in the system.

She had often been outraged at this complicated, talented daughter of hers. But now, and perhaps for the first time, she was outraged at herself. Ashamed, really.

“I’ll find him. I’ll bring him back to you, Mel.”

In these terrible weeks watching her daughter hover between life and death, Hilda Cholworth learned a lot of things, about love and how it must give—and also forgive. She had seen Mel glow when Beresford came in the room, a joy that she herself had never known.

Social Services had just been doing its job. They had no idea that they had inspired an attack from a one-woman army.

Hilda learned about the fostering process. She hired a lawyer, fired him, hired another. She went before judges, shuffled papers, signed documents, sucked her plastic cigarette, and worked far into the night in her cluttered hotel room near the hospital. No matter what it took, she intended to fulfill her promise to Mel.

It turned out that Beresford was in a group home in West-lake. He wasn’t a prisoner, not exactly, but he wasn’t free to come and go, either. She talked to the manager of the home, who e-mailed her the house rules. She bit her cigarette to pieces and fumed.

Then she found a new judge, who was willing to listen to a crazy story. By gently questioning Mel, Hilda had discovered enough to track down Beresford’s identity. His name was Robert Langdon. His father had been murdered, almost certainly by Luther Szatson, when he discovered that dangerous violations were being intentionally built into the Beresford.

Before the fire, Mel had been a rising star, just beginning to shine. Now

she was a mega superstar. Her concert recording had led to three top positions on *Billboard*, her downloads were slowing iTunes, and the checks were beyond belief. Suddenly, they were looking at a seven-figure income. Monthly.

Hilda told herself it wasn't success that made her so grateful to Mel. She finally felt love in its true and unselfish form. In her mind, there had crystallized one thought: make it up to Mel. Give her what she wants.

So now, at last, she was ready. With Mel waiting and the entire world watching, Hilda turned onto the street where the group home was located. Ten carloads of paparazzi followed.

She strode down the block, pushing reporters and camera crews aside. She marched up onto the weathered porch of the big old house, where she was greeted by a hard-faced man backed by two large teenagers and what looked to her like a Great Dane with filed teeth.

"You need to leave him alone. Let him get his bearings."

"I want to hear him tell me that." She shouted, "Beresford, dammit, get out here!"

The manager stepped in front of the door. "Ma'am—"

"Don't you *ma'am* me, little man."

The dog started barking, a series of great, roaring woofs. She glared him down, then stepped across the porch, brushed past them all, and entered the house.

"Beresford! Beresford, it's Mom. Where are you?"

Silence. To her right, there was an empty living room; to her left, a family room where the TV was on. A CNN reporter was yammering into the camera about Melody.

"BERESFORD!"

The manager had come in behind her. "Ma'am, this is private property!"

She marched upstairs and went from bedroom to bedroom.

She found him about where she'd expected to, hiding in the back of a closet with the door closed.

His big eyes looked up at her, full of fear but also the power she'd seen in

him before. This was an unusual person, but not a weak one. In fact, he was incredibly strong. This kid had raised himself in the damn walls of a building. He was resourceful and highly intelligent.

“Come on, Robbie,” she said gently. “Mel’s frantic. We’ve got to get you back to the hospital.”

Three cops came piling into the room. “Excuse me, ma’am,” one of them said. “There’s been a complaint. I’m afraid—”

Hilda turned and looked up at the cop. Why was everybody else in the world so damn gigantic? Well, shortness hadn’t stopped Napoleon, and it wasn’t going to stop her.

“Come on, Robbie,” she said.

“Ma’am, you can’t do this. This boy is an unidentified ward of Los Angeles County.”

“Your information is out of date, officer. This boy’s name is Robert James Langdon. His parents are dead, and if you call Child Protective Services, you’ll find that Hilda Cholworth has been awarded kinship care on the basis of the fact that I’m so damn pushy the judge was afraid to say no.” She dragged Beresford out of the closet. “Come on. We’re going back to Mel, and don’t tell me you’re scared because I won’t listen.”

She didn’t say it, but she was scared, too, as she led him out into the mob of journalists.

But the mob scene she was anticipating didn’t happen. At least, not at first. This was because the appearance of this tall boy with his otherworldly eyes, rippling muscles, and shining hair simply stunned them to silence.

The press and the public had glimpsed him before but had never seen him up close, and it was an unforgettable experience. His eyes were big, and the way he used them reminded Hilda of the steady gaze of a tiger with the sweetness of a kitten. He was jammed into a T-shirt and jeans, but you could see the rippling athleticism of his muscles. His appearance told you at once that this was no ordinary person—this was somebody very special. If ever you could say there was such a thing as a magical being, that’s what he was.

In other words, a perfect fit for her golden daughter.

All at the same moment, the mob of journalists seemed to snap out of the

trance. Flashes exploded, questions were shouted, video cameramen backed up before them as they moved toward the car.

The manager stood behind them on the porch with his hands on his hips.

“I’m gonna see Melody again?” Beresford asked.

“You are. In fact, you’re gonna see a lot of her. I’m on your side, Robbie.”

“Is that my name?”

“You’ll remember more in time. You’re suffering from something called traumatic amnesia.”

“Do you know anything about my dad and mom? Where I lived?”

She was silent, wanting him to be with Mel again first, then later to begin the painful process of remembering his childhood terror. He had lost a lot. He had lost everything. But he’d found love, and that would heal him.

In the hospital, Beresford grew wary. He didn’t like elevators, hallways, or crowds.

They came to Melody’s room. He went up to the door. Then he turned and gave Mom a questioning look.

“Go ahead.”

“She’s not busy?”

“You crazy kid, for you she’s *never* busy!”

Still he stood there, unsure.

“Oh, fer—” She opened the door and pushed him in, then followed.

Mel lit up and threw her arms toward him, wincing from pain but doing it anyway. Her beloved Beresford bent to her and embraced her, and over his shoulder, Mel’s eyes met her mom’s. In them, Hilda saw the spark of gratitude that every parent longs to see. They’d fight again, no doubt, but right now the moment was perfect, and for that Hilda was grateful.

She put her plastic cigarette in her mouth and went down to the hospital cafeteria, where she had spent so many hours. She drank a cup of coffee and thought long thoughts of the way life goes, how lovers find each other in all kinds of strange ways.

When she went back upstairs, Mel was asleep in her bed, and Beresford was in the big chair beside her.

Hilda cried a little, watching them in their innocent peace.

Melody stirred, then woke up and held out her hand. Hilda reached for it, but Beresford took it instead.

For a moment, she wanted to push him aside, but she stopped herself.

This was their time, and what might come in their lives and their life together was not her business.

It was a hard thing to accept, but she did. Neither of them noticed her; they were too involved in each other.

But as she left, Melody suddenly broke their embrace.

“Mom, thank you,” she said. “You gave us a chance.”

“Thank you,” Beresford repeated.

Hilda left them to each other, and to the future she could hardly even imagine would be theirs.

ABOUT THE AUTHOR

WHITLEY STRIEBER is one of the great names in science fiction. He is the bestselling author of many books, including *Communion*, *The Wolfen*, *The Hunger*, and *Critical Mass*. Several of his books have been made into major films. *Melody Burning* is the first novel he has written for young adult readers.

He and his wife and collaborator, Ann Strieber, divide their time between California, New York, and Texas.

FROM ANNE STRIEBER

Mankind is a species divided, not so much between the sexes but between the living and what are called the dead. It isn't natural and it isn't necessary. We can become whole.

ACKNOWLEDGMENTS

We would like to thank Belle Fuller, William and Clare Henry, Trish and Rob MacGregor, Leigh McCloskey and Alex Rotaru for allowing us use their names in our reporting of what they witnessed, and Dr. Patricia Turrisi for her invaluable advice and insights, and all of our other early readers who were kind enough to explore our journey with us during the writing of this book, and most especially Dr. Gary Schwartz for his foreword.

--Anne and Whitley Strieber

FOREWORD

Gary E. Schwartz, PhD

“All through history, there have been those who have lived in conscious relationship with Earth and the cosmos. We call them masters. In the future, everybody who enters the physical will do so as a master of being. And why will we still be using the physical? Give somebody a kiss. That’s why. Humanity’s destiny in the universe is to bring forth the experience of love, that all may share in it. Objective love, the core creative urgency, is also the essential human energy....Enlightenment is what happens when there is nothing left of us but love.”

--Anne Strieber

“Incredibly, Anne has managed to provide what for me on a personal level must be final proof. She has done something that once goes to the heart of our relationship and also explores the deepest meaning of death, dying, and living on. I will devote the final chapter of this book to it, but know that, from the time it happened just a few days ago, my position has changed. I now feel

certain that Anne still exists, and with her I must also assume the legions of the dead, all still very real, but in ways that we have scarcely even begun to understand.”

--Whitley Strieber

Is life after death real? Is there a greater reality beyond our five senses? Can we personally know, for sure, whether our loved ones' consciousness continues after physical death? And can we grow into this emerging knowledge and wisdom as individuals and a species?

According to Anne and Whitley Strieber, the inspired authors of *The Afterlife Revolution*, the answers to these profound questions are emphatically yes.

I have read many books on near death experiences, after death communications, observations made by gifted evidential mediums, and afterlife science. I have written forewords for some of these books, and I have also written a few spiritual science books myself, including *The Afterlife Experiments* and *The G.O.D. Experiments*.

However, *The Afterlife Revolution* stands out among these books in terms of its scope, beauty, and lessons for all of us. Despite the well-known controversies surrounding the authors of this extraordinary book – for example, their reported observations of aliens – and maybe because of their historic openness to the existence of intelligent life beyond planet Earth, their personal journey following Anne's physical death takes on additional importance and meaning.

One of the reasons I felt compelled to write a foreword for this book was to honor the inspiring nature of the breadth and depth of Anne and Whitley's love for each other, both before and after Anne's physical death, coupled with the intense intellectual curiosity they shared for understanding life and

the cosmos. We will return to the importance of love, especially objective love, at the end of this foreword.

However, another reason I had to write this foreword was because of the surprising and compelling spontaneous evidence that emerged for the presence of Anne in my professional and personal world following the beginning of my reading of this book!

Let's consider this extraordinary evidence for Anne's presence first, and then return to the Afterlife Revolution. I have provided enough details below so that you can appreciate, and appropriately evaluate, the convincing nature of this evidence.

On Thursday morning, September 14, 2017, Rhonda (my wife) and I were preparing to drive to Scottsdale, Arizona, where I would be giving two presentations at the Afterlife Research and Education Institute Conference ([www. afterlifestudies.org](http://www.afterlifestudies.org)). The lecture on Friday afternoon was titled "Lessons from mediumship science for spirit communication technology research." The other was a Saturday night banquet presentation titled "How science is proving that spirits are collaborating with us."

The evening banquet was coincidentally hosted by George Noory of Coast to Coast AM. Whitley had co-authored a bestselling book with Art Bell, the prior award winning host of Coast to Coast AM. Their book, *The Coming Global Superstorm*, inspired the popular movie *The Day After Tomorrow*.

I had just started reading *The Afterlife Revolution*, and the thought popped into my head that maybe I could obtain some independent evidence of Anne's continued consciousness.

In an early morning meeting with Rhonda and a team of "hypothesized collaborating spirits," Rhonda – a selective research medium who describes her journey to this unusual profession in her book *Love Eternal* – asked Susy Smith, an active member of the spirit team, if she could locate Anne and bring her to two different evidential mediums who would be presenting at the Scottsdale conference. We call this the "double-deceased" paradigm, where

one deceased person (e.g. Susy) brings another deceased person (e.g. Anne) to a medium under blinded conditions. Rhonda's sense was that Susy was present at our meeting and that Susy would try to do so. Susy has successfully employed the double-deceased paradigm with these two mediums on multiple occasions. FYI, unlike Rhonda and Whitley, I do not have mediumistic or channeling skills, and I do not see or hear spirit. In fact, one of my former research colleagues, Dr. Robert Stek, refers to me as the "Helen Keller of afterlife research."

Anyway, after our meeting, I was inspired to text two research mediums and alert them to the possibility that Susy might be attempting to contact them with a mystery deceased person. To help them connect with the second deceased person, I provided Anne's first name. Since neither medium knew that I was currently reading Whitley's unpublished book, it is probable that they would have no idea that Anne X was actually Anne Strieber. At this point Rhonda did not know that I had texted the two mediums.

Meanwhile, unbeknownst to me, Rhonda had reconnected with the Team and suggested that they could either (1) attempt to connect with the mediums and bring through evidence relative to our current research, or (2) be creative and bring through any other potentially relevant evidence. What Rhonda heard next was utterly novel which she later shared with me.

The phrase that she clearly heard in what she calls her "mind's ear" was "Listen to the wind whistling through the pines." She was not sure who said this atypical, poetic-type phrase. And she had no idea what, if anything, this might be referring to.

When Rhonda told me this, I wondered if it was possible whether Susy (and Anne?) might have been aware of my decision to text the two mediums, and I pondered whether the "listen to the wind whistling through the pines" phrase might somehow relate to Whitley and/or Anne.

I immediately emailed Whitley. I mentioned the context and the phrase and explained that we needed to keep him blind to the identity of the spirit

who might have shared the utterance. I had no idea if this phrase would have (1) no significance, (2) a vague, general meaning, if not (3) a highly specific one. What Whitley wrote back was completely unexpected.

In the draft (of the book) in your possession you will find the following passage: “The great-grandmother who could move tables was a Swedenborgian. She used to say to me, “After I die, listen to the wind in the trees. That’s how I’ll speak to you.” he was a noted school teacher in San Antonio with an excellent reputation for taking a very empirical approach in her professional work. But in private she explored other domains with great panache and, in my experience, skill.” “She lived to the age of 106, and after she died, I listened for her when the wind sighed in the night trees, but never heard her promised whispers, or perhaps I tuned them out.” “Anne knew this statement of my gran-gran’s well, so did my grandmother and my mother.”

Really? I wondered, what about the specific kind of trees– i.e. pines?

I followed this apparently confirmatory email with a subsequent email and learned that both the great grandmother’s home as well as Anne’s and Whitley’s cabin happened to be surrounded by pine trees. Hmmm....FYI, Susy Smith happened to be a Swedenborgian as well....

But it gets more interesting, as well as evidential.

It turns out that neither medium “heard” from Susy either Thursday or Friday night. However, at 5 AM on Sunday morning, one of the mediums (Suzanne Giesemann, author of many books including Messages of Hope and Wolfe’s Message) was purportedly awoken by Susy and Suzanne took multiple of pages of written notes. Suzanne then carefully typed them up and gave them to Rhonda and me at noon on Sunday. The information in this reading turned out to be highly evidential. However, Susy was focused on non-Anne related material.

At one point in the reading Suzanne asked “Who is Anne?” Suzanne wrote “Nothing sensed.” However, Suzanne then went on to write that: “She (Susy) draws my attention to the lower legs as if there’s a challenge there

such as phlebitis or neuropathy. Then she shows me someone falling or the legs taken out from under them. Not talking about herself.”

Of course, lots of older people have trouble with their legs. However, the way these statements were written suggested to me that maybe this applied specifically to Anne. I then emailed Whitley and wrote “I do not know if the above issue with the lower legs applied to Anne. Might they?”

Here is what Whitley wrote back:

“Anne lost the use of her left leg due to a stroke in January of 2015. She literally fell in a coffee shop as the leg was “taken out from under” her.”

This specific confirmation is compelling. Remember, at this point (1) Whitley was “blind” to (i.e. was not told) the identity of the medium, and (2) the medium was blind to (i.e. was not told) the identity of the deceased or the absent sitter, save for the first name Anne.

But it gets even more interesting and evidential. Mediums need to receive feedback about their impressions, and I felt a responsibility to share this novel confirmation from the secret grieving husband (i.e. Whitley) with Suzanne. I sent the confirmatory email on Tuesday, and Suzanne was very grateful. However, I also wrote: “Hi Suzanne - this is a follow-up to see if Susy visits you and brings Anne. If Susy shows up with Anne, please see what, if anything, Anne provides. Could be very evidential.”

What happened a few hours later was super surprising.

Suzanne wrote:

“Well, that sure was interesting and unexpected. I have just finished a very strenuous workout. I sat on the couch in our bus to read emails and as I read your email the room started to go dark and I thought I was passing out. I called out to Ty and suddenly realized it was a drop-in -- it was the subject of the email. I began typing as I received impressions. They are attached. As I began typing, the symptoms eased.

“Please provide feedback.”

What—a whole reading, possibly from Anne? Needless to say, I eagerly

opened the attached document and noticed many items that fit Anne. The reason I now knew details about Anne was because I finished reading *The Afterlife Revolution* on Tuesday.

However, what mattered was how Whitley might score these items, using a rating system developed in my laboratory. Below is what I wrote to Whitley on Wednesday AM:

“Hi Whitley - see statement below from medium. It is possible that Anne showed up for the medium last night! See attached. She has no idea who you are, or Anne is. My sense is that many of the items fit Anne perfectly or very closely. I would like you to rate every possible item in the attached using the following six point scale:”

0 = The item cannot be scored (i.e. the rater does not have the necessary information to make an honest and fair rating)

1 = A clear miss (i.e. the information provided by the medium is inaccurate as applied to the particular deceased person)

2 = A stretch (i.e. the information vaguely fits the deceased)

3 = Possible fit (i.e. the information could fit the deceased)

4 = Probable fit (i.e. the information could be interpreted as being a genuine fit / hit, but it is not completely clear)

5 = A clear hit (i.e. the information can easily be scored as being accurate – i.e. the fit is obvious)

6 = A super hit (i.e. the information is especially meaningful and significant, in addition to be clearly accurate)

Besides making these 0 – 6 ratings, please provide a one sentence explanation or justification for each of the ratings. This way one can confirm that you are reliably and responsibility following the instructions and thinking through each rating.

Then, while I was waiting for a response back from Whitley, something astounding occurred that inspired me to write a separate email to Whitley

(described in detail in the next section). What Whitley did was respond to this second email and include his ratings from the first email.

Here is what Whitley said:

“Wow and super-wow! I’m attaching the graded reading. I can explain them all, of course, and I have a picture of the physical bridge. She told me yesterday that this was easy for her and to “quit your caterwauling.” (I was pleading with her to go to the medium.)”

What is important to share here is that there were 33 scorable items, and Whitley scored 27 (81.8 percent accuracy, conservative estimate) of them as being 5’s and 6’s (i.e. hits). If we add the 4 ratings of 4 (probable hits), the percent accuracy increases to 93.9 percent accuracy.

Only 2 of 33 items were scored as misses (6.1% misses /errors).

How’s that for double-deceased, double-blinded accuracy?

Meanwhile, something very unexpected occurred in the feedback I received from Whitley after he formally scored the 5 AM reading. Whitley wrote: “If your medium wasn’t communicating with Anne, I’ll eat my Greek fisherman’s cap!”

Greek fisherman’s cap? Whitley was referring to sentence that I included from Suzanne’s 5 AM Sunday reading with Susy which made absolutely no sense to me. Directly after the “legs taken out from under them” phrase, and “not talking about herself,” Suzanne wrote:

“She’s bringing my attention to a cap on Gary’s head –kind of like a Greek fisherman’s hat or Harley Davidson cap.”

Ye, I had a Harley cap (which I rarely wear), and no, I do not have a Greek fisherman’s hat. I would have rated this as a 1 or 2.

Why was Whitley referring to the Greek fisherman’s hat? In a subsequent email, I asked Whitley: “do you have a Greek Fisherman’s hat? That would be really weird.”

Here is how Whitley responded:

“I don’t have a Greek fisherman’s cap, but I was with my grandson on

Sunday in San Diego and he was looking at one and wanted it very much. Now he's going to get one for his birthday in a couple of weeks—from his nana! (I felt her with us, as I always do when the family is together. As she says, "I'm right here.")"

Of course, if the only evidence for Anne's presence was the coincidence between Whitley's grandson looking at Greek fisherman's hat and wanting it very much, and an evidential medium mentioning a Greek fisherman's hat when referred to Susy and Anne – as highly improbable as this pair of events is – we would not take this evidence very seriously. A skeptic would dismiss the data out of hand.

However, when (1) this highly specific and improbable evidence is combined with (2) "wind whistling," (3) "pine" trees, (4) "legs taken out from under them," all followed by (5) an entire reading containing 33 items at 81.8% accuracy (the conservative estimate), the Greek fisherman hat evidence takes on added significance and meaning, and it deserves our serious consideration (and maybe celebration?).

As you will discover as you read this book, one of the most replicated, evidential, and odd sets of evidence supporting Anne's connection with Whitley concerned the detection of a white moth by Whitley's security camera (which was recorded at the instant he was describing the phenomenon to his son a hundred miles from where it had been happening. The camera texted the image to the phone.) Whitley's description of this evidence is beautiful and stirring, and I will not reveal any more here.

However, I will mention what happened to me less than 24 hours after reading about the white moth phenomena. Below is what I wrote to Whitley:

"Thought I would give you a heads up. This morning Rhonda saw a gigantic - maybe five inch wingspan - dark moth on the ceiling of our outside porch a few feet away from our hummingbird feeder.

"Rhonda told me about it, and I requested she take a few pictures.

"I can see it right now from my home office window. I just took a few

pictures for you.”

We have seen such a moth maybe three times in 11 years! And I just read about the White Moth phenomena yesterday afternoon.

What are the odds?

Consider the following: how often do you (1) read about highly evidential afterlife information involving automated photographs of a white moth (or read about photographs of moths in general), and then (2) discover a super moth outside your window? FYI, I was writing the first draft of this Foreword on Wednesday afternoon, and the super moth was still there!

Was this simply a chance event, what many might interpret as a “mere” coincidence? Or, was it as Susy Smith – a journalist who wrote more than thirty books on parapsychology and life after death – of an event that was “too coincidental to be accidental”, or, as Yogi Berra put it, an event that was “too coincidental to be a coincidence.”?

Was this coincidence a possibly synchronicity, an event somehow mediated by Anne, or maybe mediated by something even greater? Was this a divinely inspired coincidence as Einstein described it in his famous statement, “Coincidence is God’s way of remaining anonymous?”

As Whitley explains, Anne “knew” God deeply when she was in the physical, and she apparently knows even more of the reality of an all pervasive super intelligence or super mind now that she is in the greater reality. Anne’s personal experiences of the divine are awe inspiring, filled with joy, friendship, and even laughter.

You are in for a special treat when you read the sections about God, plans, evolution, love, and laughter in this challenging and uplifting book.

Simply stated, the Afterlife Revolution is huge. The revolution not only involves us and our awakening here on the earth, but them and their awakening in the greater reality.

Whitley’s personal journey with Anne “here” and “there” (and notice that t-here includes here) is compelling, but their integrative analysis of what is

emerging and transforming both here and there is especially challenging, engaging, and enlightening.

Yes, there is much in this book to question. You will wonder how much is real and how much is imagined, just as Whitley does, and with great integrity.

I cannot underscore the question of integrity enough. Just because certain topics are unsettling if not threatening to our egos or current beliefs does not justify our ignoring or denying their potential importance. The very best evidential research mediums I have worked with (e.g. those whose average accuracy is around 90%) all speak of higher beings, include those from other planets. When we emotionally deny possible truths and dismiss them without due process or discernment, we inadvertently convert consciously intended nonfiction into unconscious fiction.

This is especially important when the ultimate take home lesson from a book is what the authors call objective love.

Here is how Anne describes it, as experienced by Whitley: “The tools that strengthen the soul – understanding and living in objective love, having a strong attention, engaging in the sensing exercise and meditation, practicing love, compassion, and humility. Those are the basics.”

I have come to the conclusion that *The Afterlife Revolution* deserves to read, and reread. Even the ending is surprising. May you savor and learn from this book as much as I have.

Gary E. Schwartz, PhD is Professor of Psychology, Medicine, Neurology, Psychiatry, and Surgery, and Director of the Laboratory for Advances in Consciousness and Health, at the University of Arizona. His books include *The Afterlife Experiments*, *The G.O.D. Experiments*, *An Atheist in Heaven* (with Paul Davids), and *Super Synchronicity*.

CHAPTER 1

The New Revolution

IN AUGUST OF 2015, at the age of 69 and after 45 years of marriage, my wife Anne died. For two years, she had been struggling with a catastrophic brain tumor and I had been trying with increasing desperation to save her. The dark pit of grief I fell into when I looked upon her still form was the greatest pain I had ever known.

She, however, had not been afraid to die. Ten years previously, she'd had a near-death experience that had freed her, as they do so many people who have them, from that fear.

I've never had an NDE and I was in despair. Despite all I had learned about the afterlife I feared that she was gone forever. But then, within hours of her passing, very carefully and methodically, she began to make her continued presence known.

Based on all the things about the afterlife that the two of us have learned, including some of the most extraordinary direct experiences with it ever recorded—and her return—I feel justified in saying that she still exists. I don't think we die, and I also think that we can forge a much better and more

solid relationship between the physical and nonphysical sides of our species, a more reliable one than exists now.

Studies of mediums and channeling and electronic voice phenomena where conditions are created that enable those in the afterlife to express themselves in the physical world, have provided a background that strongly suggests that contact with the dead is possible, but this book is not a survey of that research. Rather, it explores the possibility of a true revolution in our relationship to reality, that emerges out of the idea that a species is not whole unless a relationship between the living and the dead is an ordinary part of life.

Over the course of this book, we will discuss certain tools that can be used to create this relationship—tools of the soul that are explained here in just this way for the first time. Then we will take a completely new look at the ageless questions of who and what we are and, above all, how to build a strong soul, lead a good life and die into joy.

While I don't expect our story to be accepted uncritically, I do want you to know that I feel sure that our book is being written by two people, one physical and one nonphysical. I am not talking to my own imagination. My wife set out to do this and she has accomplished steady, reliable communication between us, and as I think will become clear, many of the new ideas that are discussed between us in these pages emerge out of a very different perspective than we are used to in physical life.

We are calling the book the Afterlife Revolution because it is basically about making this way of living ordinary, and by doing that enabling us on the physical side to see more of ourselves and our futures, thus greatly increasing the richness of our individual lives and the capability of mankind as a whole to thrive.

It is a book, also, about replacing the fear and uncertainty that are now associated with dying with the sort of calm, informed and finally joyous attitude with which Anne and many other near-death experiencers now

approach it.

It is not a lie or a hoax. It is not a cynical attempt to exploit the death of my precious wife. What I am reporting happened. On a personal level, I know it. While I cannot claim that my personal knowledge deserves to be considered universal knowledge, the evidence is strong enough that our story deserves to be taken seriously.

The experience I have had with Anne emerged out of knowledge that we gained from our relationship with the people she and I call “the visitors.” They first came to our attention after I found myself face to face with them one night in late December of 1985. I later wrote the book *Communion* about my encounter with them. They scared me so badly that I was planning to call the book *Body Terror*. Anne said that it should be called *Communion*, because “that’s what it’s about.” *Communion* with who, though—or what?

Most people who have any engagement with them assume that they are aliens from another planet. Billionaire Robert Bigelow, who has taken a longstanding interest in them, stated frankly on *60 Minutes* on May 28, 2017 that they were not only aliens, but here. His company, Bigelow Aerospace, takes referrals of UFO report from the Federal Aviation Administration. He stated as well that he has had personal contact with these aliens and that he no longer cares who knows it.

I’m going to also state frankly that, while I cannot confirm that they are aliens, I have been in contact with them most of my life and have, especially in the years since Anne died, come into an intimate and ongoing personal relationship with them.

I have asked Anne about them, and she has replied that they are “inward beings.” When I asked her what that meant, she said, “they live within reality. You’re on the surface.” I then asked, “Are they with you in your reality?” She replied, “There’s only one reality. Different ways of relating to it.”

I know that this sounds mysterious, but what Anne means will become clear soon enough. As matters stand, we have evolved an elaborate set of

assumptions about them as aliens, right down to beliefs about the various planets they might be from and so forth—and also the assumption that they don't exist at all, which is at least as popular. But there is something much greater, more extraordinary and far stranger going on than we have as yet realized. And also, to speak quite plainly, more wonderful.

The ones with whom we cultivated a relationship are interested in the soul, in strengthening it and in helping us create a new bond between those of us in physical life and those in the nonphysical state. In fact, this would seem to be their primary mission here, and it has become my mission, too. Anne's, too, I would think.

Had it not been for them, Anne and I would never have been able to come back into contact after her death. They taught us how. They also taught us that living as a whole species—with the physical and nonphysical sides in contact—is the next stage in evolution.

At the same time that this wonderful possibility is emerging, a sort of disease, which I think of as soul-blindness, is spreading through the human community. Ignoring the soul is a self-imposed poverty and a personal tragedy, but it is also a way of life for more and more of us every day. Souls can be nurtured and strengthened, but if their existence is denied, then that obviously cannot happen. And no matter who is here to help, they can do nothing if we ignore them and what they have to offer.

As far as the visitors who are involved in this are concerned, the soul is what matters. Everything they have taught us comes down to this: it is the soul, not the body, that is the most important part of any living creature and especially those who are like us, not only conscious but intelligent. Intelligent souls are the most creative branch of consciousness in the universe and are precious beyond belief. But not if they are confused and unformed. That's a tragedy.

Anne came to understand this deeply and became a master of the soul. It is thus her wisdom that we will communicate here, and her ideas that form

the basis of the afterlife revolution.

Science in general asserts that there is no soul, and neuroscience assures us that no sign of an afterlife can be detected. Contacts with the dead are called bereavement hallucinations. As has historically been true, the scientific community is generally united in the idea that the only reality that matters is the one that can be detected by existing instruments at the present time.

In his influential book *Hallucinations*, Oliver Sacks discusses afterlife communications without the least thought that they may not be hallucinations at all.

Science is a great triumph of the human mind. For the past three hundred odd years, it has been applying theory to detected phenomena and coming up with ever more accurate and useful insights. But when there is data it doesn't know how to detect, the system falters.

When the great 18th century scientist Voltaire was shown fossils, he dismissed them as fish bones tossed aside by travelers. Scientists for years denied that meteors were possible because “stones cannot fall from the sky.” But fossils too large to be fish bones were eventually discovered, and meteors were tracked to the ground and their celestial origin proved.

Just as Voltaire had no data to justify an investigation of fossils, science at present does not possess any data on the soul, nor any instrument that can convincingly detect it. This has led scientists to take a step too far, and assume that it doesn't exist. But what doesn't exist is not the soul, but an instrument that can detect it.

There are two impediments to the development of such a device. First, this energy—conscious energy—surely makes its own decisions about whether or not it is to be detected by instruments. Second, as scientific culture has matured, especially over the past century, an assumption has crept in that no data can exist that isn't currently detectable. So no effort to gather such data—even to understand how to go about it—is ever made. The primary focus of the scientific enterprise is no longer the search for new

realities, but interpretation of the one we know now.

Science has a towering reputation. So when it makes an institutional declaration that the soul doesn't exist, even those of us who believe otherwise find ourselves doubting our own experiences of our souls and, as often as not, ending up just filtering them out.

As will be seen from some powerful examples, nonphysical humanity very much wants contact with physical humanity. But our assumption that they don't exist creates something like a wall between us. We need to be alert to the signs that they leave in our lives. After she died, Anne went about leaving such signs for me, and did it in way calculated to defeat my inherent bias against the possibility.

Anne had read Sacks and understood the scientific view of the soul. She also felt that it was wrong. This because, after we published the book *Communion* about my close encounters, and letters from other witnesses around the world poured in by the tens and finally hundreds of thousands, an extraordinary secret was revealed to her that made the argument that there is no afterlife seem improbable to her. As she read and catalogued them, she came to understand the message that our visitors had left in them.

The letters and some astonishing things that happened in our lives in the early 1990s caused us to become intensely focused on the question of the afterlife.

We began to think that communication must be possible, and so started discussing what might happen when one of us died. We decided that whichever one of us moved on first would attempt contact, but not directly.

We were both too skeptical to accept something like that uncritically. So we decided that initial contacts had to be with other people who had no idea of our plan, which we never discussed with anybody.

By the time she died, though, I had forgotten all about that plan. I never dreamed that she would execute it, or even that such a thing was really possible.

When we had groups of people to our upstate New York cabin to encounter the beings who had taken an interest in us, and from the letters we received from the public, we discovered that the dead and the “visitors” as often as not appeared together.

Added to all of this came Anne’s 2004 near death experience, when a stroke nearly took her life. Prior to it, she had come to accept the idea that we might in some way persist after death. Now she knew it. She had crossed over and come back.

In the end, she had become wise about the afterlife in ways I think few others have been. I can go so far as to say that Anne was probably one of the most informed experts on the subject who has ever lived, both because of all she had studied and researched, and because of personal experience.

After her NDE, she joined the larger mission of our visitors and our own dead. Her purpose was not only to show that the afterlife is real and that we need not fear death, but also that there are things we can do to prepare— not elaborate rituals, but the same straightforward, personal things that she did— that will enable us to build strong souls, communicate with our own dead while in this life, then make a good transition and be effective communicators from the other side as well.

Since her death, she has eloquently proved that the methods she advocated work.

Human beings have been trying to contact their dead for thousands of years, most recently through the use of mediums, psychics and electronic communications techniques. All would appear to work, at least at times. But personal, intimate and permanent relationships between the physical and nonphysical sides of the human family are also possible.

As we have lost touch with our souls, we have also abandoned our ancestors. But they have not abandoned us and we need them now, and more urgently than we realize, and they know it. As you will see, they have been calling to us for at least two hundred years. It is time for us to respond, and

for the two sides of this family to start living and working together.

Death is not the end of anything. It is transition into a new form, just like the transformation of a caterpillar into a butterfly, and just as much part of nature. It's not supernatural, or beyond nature. There is nothing beyond nature, but there is also more to nature than we realize.

As humankind proceeds along the new path that is opening before us, we will leave our violent and anarchic history behind. Anne says that fear of death is the basis of all violence, and as we become whole as individuals, families and a species, that fear will fade away, and with it the violence that it causes.

The connection of the two halves of the species represents a turning point as fundamental as the one that caused civilization to begin and history to unfold. On this side of the change, there is one kind of history, full of blunders, confusion and terror. On the other, there emerges new sort of history altogether that is inlooking and outlooking at the same time, anchored in wonder and beckoning discovery now undreamed. It is a new way of seeing reality which brings with it a new way of being alive. In fact, it is a new birth.

After Anne died—the only woman I had ever known intimately and the absolute center of my life—I found myself drowning in a flood of grief. It buried me in such sorrow that I couldn't think, couldn't eat, could hardly move.

Parting is agony. Period. If she had come back to life in those first hours and shouted in my face, I don't think I would have heard her.

One of the first things I distinctly heard her say to me was "Grief is love in another form." I realized that when I grieved for her, I was actually loving her. Of course I grieve. I miss her at every level of my being. Even though I can communicate with her, my body misses her body so very much, and that cannot change.

Understanding this enabled me to make my grief part of my work, to

respect it and love it, but also to use it to focus my attention on her presence and her words, rather than letting it bury them in my tears.

She had prepared carefully for what she knew was coming. I had, too, but not nearly as well. I so badly wanted her to stay that I could hardly think about her going, let alone in the calm, dispassionate manner with which she approached her physical end.

I didn't know it at the time, but already six months before she died, she was getting me ready to carry out my part of our mission. She did this in a characteristically subtle way, by asking me to memorize a certain poem which, as will be seen, has become central to my understanding of what she wants to do and, in fact, also central to the proof she has provided that she is still a conscious presence.

The poem, "Song of the Wandering Aengus," by W. B. Yeats, is about Aengus' lifetime of search for a "glimmering girl" who, as soon as she appeared in his life by magical means, slipped out of his arms and into a realm that might as well be called heaven.

It has become my life story, that poem of a man's search.

If ever magical means united a couple, it is what brought us together. We were two kids living in New York City who both happened to fill out the forms of a matchmaking organization. We had never known one another before. We had no mutual friends. We met on a list sent to us by the matchmakers.

From the day we sat down to lunch for the first time until the day Anne left this life, we were only once apart for as much as two weeks.

The ways in which Anne has woven that poem and its metaphors into our new life together, and done so much to prove that this new relationship is real, have granted me the most beautiful and richest experience I have ever known. I can assure you from my own life that as you come close to your dead and they to you, you will find a sweetness of the heart that you never knew was within you, and a sense of wonder that will make your life new.

But even when contact is easy and familiar, questions will and must remain—which is right and as it should be and, frankly, a big part of this whole adventure. Beliefs are walls. Questions are doors.

Despite all of our advances in knowledge, the universe still cradles the human mind in ambiguities and unknowns. We must not push them away by saying “I believe” or “I do not.” Much better to abandon belief altogether, and stay with Anne’s “I wonder.”

Before Anne entered the nonphysical, there was one me. Now there is another, and this is not simply a grief-stricken wanderer, but a traveler on two paths at once, one in this world and one in the other.

The theme of Anne’s life was joy, which she identified with acceptance of whatever happened, love for others and, above all, laughter. She would often quote that wonderful sentence of the 14th Century mystic and theologian, Meister Eckhart: “God laughs and plays.” Laughter is light and as Anne understood inner search, it was about finding that light within oneself.

There are many reasons why we aren’t in clear contact with the dead. One is that they are not like us. They are not unseen versions of us, but rather are living by different laws. Anne has said, “I’m not Anne anymore, I’m me. But I’ll always be Anne for you, Whitley.” As she describes herself and the legions of the dead, “We are an infinity of dreams.” But don’t be deceived. Those dreams are living presences and they are waiting for us across the bridge between our worlds. She also says, “I am the part of me that’s part of you.”

Those without bodies are at once more deeply individual than any physical being could ever be, but also conscious as a whole, without beginning and without end, that is outside of time and contains time. Your beloved parent, wife, child, is at once themselves as they always were, and all selves they have ever been, and all that is of being.

As a result of soul blindness, when we are facing death we use every tool we can muster to extend our lives as long as we can. When we die it is as

often as not in fear and foreboding, sometimes in resignation, and those we leave behind generally never hear from us again.

This not because the dead aren't trying. When I asked Anne about this she said, "It looks as if you're intentionally ignoring us." And that is exactly what we are doing. We're hypnotized by the physical, by which I mean that we are looking so intently into material reality that we simply cannot see beyond it.

She says "The first time you ignored me, I was upset. Then I got mad at you. I yelled. You acted as if I didn't exist. It was weird and confusing."

We have come a long way together since those early struggles. I know how to listen for her now and how to let her into me. Her communications are fleeting, identifiable to me by a sense of the unbidden and a taste of her presence. I keep a notebook with me now all the time, because I know that I will forget her words after they fly past, often in seconds. This, I think, is because they are not my thoughts, not part of my mind, and have no place to land in my brain. Like flashes on the wing of a passing bird, they are there then gone.

They leave behind two things: wonder and questions. Always Anne's beloved questions. Communion, would not have ended with the group of questions that it did had it not been for Anne's influence. As she read my manuscript, she would say again and again, "Whitley you don't know that. Rewrite it as a question."

The great human question is "will I live on after death?" It is simple, universal and haunts us all, every one, all the time. Science, by insisting with such compelling authority that we are mortal flesh and no more, reinforces our fear of annihilation. At the same time, the increasingly complex and vivid material world makes it harder and harder for us to hear the soul's subtle inner voice.

But even as many of us are giving up on the soul, the voices of many others are being raised, proclaiming that there is indeed an afterlife. In 2011,

researcher Pim Van Lommel, writing in the *Annals of the New York Academy of Sciences* reported that nine million people in the United States alone have reported near death experiences. Anne was such a person, and like very many of them returned to this life with no fear of death. Like most, she was brought back by medical science.

How ironic that the same science that is telling us that the soul doesn't exist is also responsible for one of the foundations of the afterlife revolution.

Over the course of our narrative, Anne will describe her new life in ways that seem to me to be revelatory. She was highly articulate, and brings her descriptive skills to bear in her depiction of what it is like to be on her side of the divide. But don't expect simple stories of loving light. The world she describes is a complex place full of nuance and ambiguity, and it is also very surprising.

Among the most surprising things about it is that, when you die into it, you're not surprised. We are much more nonphysical beings than we are physical. These journeys through time that we take by entering bodies are valuable but brief. Most of our experience is not physical at all.

Once a new and more reliable means of contact becomes commonplace, as it will, then this species is going to wake up to its true reason for existence, and in so doing is going to reach a whole new level of life. There is joy ahead in the afterlife revolution, but joy requires a light approach. As Anne puts it, "the hardest thing to do is to let this be fun. But once you do, then it's easy."

When, soon after I had the December 26, 1985 close encounter that would lead to the writing of *Communion*, I told her what I thought had happened to me, she went right to the heart of the matter: 'let's figure this out, we'll do it together, and what an adventure!'

I had feared that she might want to divorce her crazy husband to protect her child from his ravings, but that could not have been further from the truth. From the first days, before we knew anything except that something had really shaken me up, she was right there beside her man with support,

guidance and, above all, insight and, frankly, excitement. She was definitely up for that adventure.

Her thinking is reflected in every word I have written about the phenomenon. In fact, it is the foundation of my work. Over the years, working together, we learned a great deal from our visitors, about them, and about the human journey. Anne, especially, understood that they had aspirations for us and what those aspirations were, and their motives for revealing themselves not only to me and us, but to so many people worldwide.

I think that their greatest hope is that we become rich, strong souls and that our species survives and evolves for a long time to come.

Their message about what we need to do in order to achieve this new sort of enrichment is clear. To experience the true richness of our humanity, we need to be a species united.

This is the afterlife revolution, a journey into a new evolution of mankind and an entirely new experience of living.

But how? How do we recover our contact not only with our own souls but with those who have already passed out of the flesh? Where are they? What do they want and need from us? What is on offer from them?

Anne has executed a plan that we laid years ago that has proved to me that she still exists. She has done it on behalf of the great mission of which she is now a part, to make this species whole in an entirely new way. But why has she been able to do this? Is there something about her that give her a special ability, or is she simply using a skill that is part of every human soul, and teaching me on my side of the bridge how to use it, too?

We will explore these things together, and show just how the skill we are using works and can work in any life and any relationship. Establishing the bridge between the worlds means a more competent, more peaceful and happier species.

Working together across the bridge between the worlds, Anne and I vote

for this future. Of course there are challenges now, with all the changes that are taking place on planet Earth. But we have glimpsed the possibilities and they are more marvelous by far than even our most optimistic speculations.

We are under pressure now from circumstances that would be familiar to our distant ancestors. They, also, struggled through hard times to reach a new life. A hundred thousand years ago, when the world entered the last ice age, they were naked wanderers. When it ended, they had learned to clothe themselves, they had language, they were organized into tribes and expert in everything they needed for survival.

Once again, we are going to find our way into a new life— but this time, it will be truly new, for we are going to learn to live at once in and beyond the material world, moving into an expansive reality that is just now beginning to reveal itself to us. To reach this new mankind, whole at last, there is also coming a new journey.

That journey is what this book is about.

CHAPTER 2

The Shadow Falls

AS MY BRILLIANT, deeply thoughtful wife gazed into a personal distance, she said quietly, “Whitley, it’s time.”

I wanted so badly to ask her, “time for what?” I wanted her to mean that she was looking toward some further episode in our life together. But that wasn’t it, and I knew it. Her tumor had not grown since her surgery two years before, but the part that had to be left behind was now stressing her brain’s vascular system. The doctors had warned us that the strokes she was having would get worse.

A few days before, her left side had become much weaker. Her future was grim: more strokes until she died. The great danger was that she would become unable to communicate before that happened and be forced to die a lingering, helpless death, maybe suffering pain she could not communicate.

Our life together had been a subtle, intricate dance of mutual discovery and a joy greater than any I could have imagined before meeting this complex and yet welcoming human being.

Many times before, I had talked her out of it, pleading with her to stay a

little longer. I had done everything I could to give her a rich life experience despite the cancer and the growing paralysis.

We had often spoken together about end-of-life. She had researched her situation carefully and prepared her plan in such a way that she could depart from the world with dignity and in an entirely legal manner.

Depart from me, she who was more than half of me.

She had said the previous January that she had prayed that the stroke that had paralyzed her left side then would take her. But instead it left her unable to rise from a chair, to use her left arm, to read, even to see well enough to watch television. While her mind was as acute as ever, her eyes and ears could not make sense of the world around her. She had become a brilliant presence trapped behind a wall of defective sensory input.

I read to her, explained things to her, kept her abreast of world events. Because just moving her from bed to chair was so exhausting, we hired helpers to ease our days. I found things she could enjoy, even things as simple as going out to get an ice cream, and I made sure that her life was as rich as it could be. Despite the difficulty, we went to the movies, the theater, had dinners out, went to a weekly reading group we both loved—in short, kept up with our life as best we could.

When she couldn't put things together, I explained them to her later, and we managed to make those conversations a lot of fun for us both.

She participated with enthusiasm, as she did in rehabilitation and physical therapy. But there was that tumor mass remaining, and its presence prevented any progress with rehab. In the months between January and July, she went to therapy three times a week but got essentially nowhere.

When she experienced the increase in weakness, I suggested that we go to the hospital to see if she was having another stroke. But she was finished with hospitals.

She was as bright as ever, as wonderful as ever, full of joy, wisdom and humor. She was not afraid. On the contrary, she was calm and practical. On a

day in early August, she told me that, starting the next morning, she was going to carry out her end of life plan, which was to refuse food and drink.

I had tried so hard to prevent this moment from coming. But also there was a part of me that was so very tired that the idea of not living in this haze of work seemed freeing—which only added an element of guilt to my grief. I wanted her to stay, but I knew that I wasn't making it, either. My left knee was destroyed from lifting. My back hurt all the time. To keep going I had to spend my nights on ice packs. I was at the chiropractor twice a week, sometimes more often. I couldn't write, so we were in yet another dangerous financial spiral.

The truth was that her illness had exhausted us both. I would see her watching me as I worked to lift her, to cook, clean and so forth. Even with help, I was running out of steam and she knew it.

Because she couldn't travel, we could no longer see our grandchildren except on the rare occasions that they could visit us. She felt that we were valuable to them. "Whitley, we know some of the deepest secrets about life that there are. We need to pass that down." This was much on her mind. She knew that, if she saved one of us, then at least they would have that benefit.

I had told her that, when she went, I wanted to go, too. I am no more afraid of death than she was.

She insisted I stay behind for the kids, and to complete this book. I had to agree and now I'm sure this was the right thing to do. In a deep way, in the part of life we never see, she both lived as she did and gave up her life for her mission. I am grateful and proud that she entrusted me with completing it. I can only hope that my effort is adequate to the task set me.

On that first night of her dying, I sat beside her as she lay sleeping. But I was unable to stop crying and had to leave the room so she wouldn't wake up to that. What she was doing was as hard a thing as a person can experience. I did not want to make it even harder for her, so she did not need to see my own agony.

I hoped that morning would bring a change of mind. But when she woke up, she was even more determined. Finally, my heart just broke and I cried openly. I couldn't help it. She touched me gently on the cheek and said, "What would my life have been worth if there was nobody to grieve for me?"

Then I was glad she saw my pain, and my grief just poured out of me. The harder I tried to choke it back, the more intense it became. She stroked my head with her good hand, and simply let it happen. She didn't cry. I wouldn't have either if I'd been in her shoes. Her decision was a hard one, but for her also a relief.

Just as she was not afraid, she was not sad. Instead, the most conscious human being I had ever encountered, my beloved wife, was deeply and profoundly ready.

All morning we talked quietly together, side by side in our chairs. The healthcare aides came and went. We said nothing to them of Anne's decision. Instead, we reminisced about a life filled with wonderful moments. I remembered her coming down the aisle in the Lady Chapel at the back of St. Patrick's in New York, lovely in blue and with wine red roses at her waist. It wasn't exactly a big wedding. We only had two hundred dollars. There were some friends there, a beloved cousin and her husband, my mother, a priest and a sleepy altar boy. But it was the most wonderful day of our lives.

Our best friends had come up from Washington. They couldn't afford a hotel, so we ended up spending our wedding night in our tiny apartment with them camped out in the living room. We didn't care. We were so happy.

Then came seven long years of struggle to sell a book and establish me as a writer. Anne became my muse and editor. She went back to school and got a degree in English Literature to make herself better at both.

Occasionally, I would give up, clear my desk and put my typewriter out with the trash. Inevitably, the next afternoon when I returned from work, everything would be back in its place, often with notes from Anne about how to move ahead with whatever story I was writing. Finally after half a dozen

novels and hundreds of rejections, the Wolfen sold. Anne got pregnant at once and the next thing we knew, we had a book in the stores and a baby in the house. (We now had two bedrooms.)

It was all so hard and such fun. And discovering one another as people, too, that was such a joy.

Anne had an oppressed childhood. She'd had to keep her mouth shut and endure whatever was dished out to her. Her opinions had not been wanted and her feelings had not mattered. Now, in a new relationship, I think that she was wondering if things had changed. I loved her, she knew that, but could I bear her?

She set out—not quite consciously, I wouldn't think—to test this.

In our first months together, I could see her suppressing her anger. I didn't often make her mad, but it was a new relationship and there were inevitable moments of friction. Any anger or disappointment she might feel she covered with smiles.

When I saw that, I would say, "Have I made you mad?" She'd say no. Then I would laugh and her lips would tighten.

Eventually, what I was instinctively probably hoping would happen did: all the suppressed annoyances and irritations boiled over and she blew up in my face. It came after I kept saying that I wanted to return to London, where I had lived the year before I met her.

She cried out, "So go! Leave! Get out of my life!" And then she burst into tears. And so did I. But that didn't end it. Fury had erupted in her, but her eyes were filled with fear. She raged on, out of control, terrified that she was driving me away but unable to contain her anger.

This was a person who did not consider that she had a right her own feelings, not to her anger or her happiness, or to love and be loved, any of it.

She screamed at me to leave right now so she didn't have to look at me anymore. Coming from a family where voices were rarely raised, I was deeply shocked. But I also saw that she had been stifled and pushed aside for

a long time.

I decided that she would not have the experience of having to stifle her feelings again, not ever. She had a man and this man treasured her, and her anger was important to him—and she had a right to fully express it and to have her needs understood and respected. She had been a sort of throwaway. Not now. Now, Anne mattered.

I told her that she had become part of my heart and I wanted to be part of hers. I needed her and could not live without her.

She looked at me like I had just arrived from Mars. I said, “Forgive me honey, I was insensitive. If anybody goes to London, it has to be both of us.” Then I took her in my arms. She opened the door to herself much wider then, and our love affair flowered.

Once she realized that fits of temper weren’t going to drive me off, she did a lot of exploding. I think that I experienced every temper tantrum in her life that she’d had to suppress before we met. Once, she got so loud that the neighbors called the police. She proceeded to hide and I was left to explain to six cops that she was actually OK even though she refused to make an appearance.

The fights always ended with us throwing ourselves into each other’s arms, and then going on from there. And gradually, she learned to complain when an annoyance was small rather than waiting until it filled her with rage. She became good at what is now called anger management, and our relationship settled into one of quiet mutual respect and enjoyment of one another. The loving acceptance that had replaced all the fireworks enabled the relationship to deepen even more. We didn’t know it, but our souls had come together. The inner marriage—modeled in the esoteric practice of Alchemy as the chemical wedding—had taken place, and we would now live and grow together as one. Truly we were married.

There was much beauty in our relationship and much fun, and also much humor. We ended up spending most of that last day of our life together in this

world laughing over things that had amused us in the past, me through my tears, her with deep and genuine pleasure.

After refusing food and drink all day, I knew that she was now hungry and thirsty. I asked her “Would you like supper?”

She smiled gently. “No, baby,” she said. Then she added, “Whitley, it’s time for hospice. I need them here in the morning.”

OK, so this was it. She was committed, at least for now. I’d waited for her to get good and hungry and good and thirsty. But she wasn’t going to break her fast. Instead, she was ready to brave a night of hunger pangs and thirst.

I could not let her go through that. We’d already chosen our hospice. They knew her situation and her plan, and were ready to come when called.

I made the hardest telephone call of my life. I’d been dreading it for months. I could barely talk. But I manage to get it out: it was time. Anne was fasting.

They came at about nine that evening and began giving her the assistance that was then allowed by law, consisting basically of mild doses of morphine to relieve her discomfort, and a mouth lubricant.

The next morning when the registered nurse came, the first order of business was for me to leave the house so that she could ask Anne without me present whether or not she wanted to continue, and if she understood clearly that this would cause her death. So far, she had been given only one light dose of morphine. Her mind must not be clouded, I’d made sure of that. There must be no mistakes here. To keep her comfortable, I’d stayed up all night making sure that she would have mouth lubricant and chapstick the instant she called for them.

I drove around aimlessly, struggling to see the streets through my tears.

When I returned, I could see from the grave expression on the nurse’s face what Anne’s answer had been.

Nevertheless, every two hours until she lost consciousness, I asked her again if she wanted to change her mind. I wanted so badly to beg but I forced

myself not to. She saw my tears and my great anguish. I could not hold that in, and it was plea enough.

On the Friday before she died, there was a ray of hope. She said that she wanted to go to the movies. She wanted popcorn and a coke. My heart leaped and I said “Sure, let’s do it.” But then I had to add, “You’re too deep in the fast to just

break it. We’ll need a couple of days for you to come back.” I had researched this whole process with the utmost care. I knew exactly what would be required at any point in the fast to bring her back, and when that would no longer be possible.

She smiled softly and said, “No, I’d just have to do it all over again.”

Even so, I can’t put to rest the idea that, if I’d just been a little more convincing, a little more hopeful, she might have ended the fast.

But she was right. If she’d returned from it, she would only have decided to do it again. I had no right to wish that on her and I’m glad now that she stuck to her decision.

She could not get better and she could easily have come to a point where she could no longer make decisions. Then the legal situation would have become much more complicated. The Supreme Court has ruled that a person of sound mind has an absolute right to refuse food and drink, but not that a family member can make such a decision for a loved one who is unable to communicate.

This way, she kept her dignity and approached death in full consciousness.

We’d discussed the morphine dosing very carefully with our doctor. She wanted to have a conscious experience of dying. I wanted her to remain aware of what she was doing as long as possible on the chance that she might yet change her mind.

I know that she made the right decision and was right to stick to it. But that didn’t mean that I wouldn’t suffer terribly and experience extraordinary

mental anguish. I did and still do and always will, and that's how it should be. She was more valuable to me than I am to myself, and so of course the grief of loss is and will remain part of me. I remember the last time I said to her, "Anne, refusing food and water means that you're going to die. Do you want to change your mind?"

There was no answer. Her eyes were closed. She had slipped into the deep, last sleep that would soon become a terminal coma.

Anne had left—sort of.

Within hours, she would begin to communicate telepathically—and for those of you who scoff at that, please try to keep an open mind or, barring that, put our book aside. Our story is not for you. But for those of you who will at least entertain such things as a possibility, do read on because a great story is going to be told here, of a love that has survived death and a marriage that is still flourishing even though one of the partners no longer has a physical presence in the world. It is a universal story, too, told in many different lives, but in the privacy of the home and the silence of the heart. Here, it is going to unfold on the page.

My grief is about the loss of her body, not the absence of her being. In fact, as you will see over the course of our story, in her new state Anne has become a presence of great intelligence, compassion and, above all, insight.

By Monday morning, she was completely silent. I was in the most powerful emotional state not only that I had ever known, but that I had ever known was possible. It was not anguish only, but anguish mixed with something close to awe.

I was aware that I was witnessing the departure of a great soul.

She'd started out in life in the most humble of circumstances. To her schoolmates, as they had written to me when I contacted a few of them, she'd seemed to be a quiet, ordinary girl. Nobody had ever bothered to nurture her mind. Until I met her, her brilliance hadn't mattered to anyone. All it had meant in her life was that she was constantly annoying people by correcting

them. Because she was a natural teacher, she could not resist explaining to people better ways of doing things. This was resented, and she used to get fired every few months.

She hadn't the slightest idea how bright she was. But I knew within ten minutes of meeting her, as the brilliant thoughts and insights poured out of her and her sharp wit sparkled, that I had a treasure. I had wanted a smart wife. Very smart. As smart as possible. By the time we'd known each other for a week, I was aware that she was the brightest person I'd ever met, and I was determined that, if the relationship worked, the first thing on the agenda was to get her the education she deserved.

When I would look into her bright brown eyes, I saw not just a twenty-two year old girl. I could see a being of great depth hiding behind that innocent sparkle. I wanted the girl in my life, but I wanted that other person, too, the genius who was hiding inside, peeking out uneasily at me, afraid she'd drive me off.

From that day to this, I have lived in the shadow of a hidden master, whose wisdom and strength towered above my own. I have loved every minute of this great privilege, and I still do.

I was going to miss her sweet presence and enormous mind more than I thought it would be possible to bear, but I also knew that she was going forth in triumph, for she had done things in this world that were marvelous, but at the same time had remained gentle and humble. She knew how extraordinary her insight into the close encounter experience had been, but she did not wear that or any of her other accomplishments like a badge, and she did not resent the dismissive ways of the world. She didn't like the way we were treated, of course, but instead of wrapping herself in anger and resentment, she simply continued with her work

Those early struggles with anger management had made her skillful at accepting injustice and disappointment.

I remember when we were watching the first episode of South Park

together and realizing that it was a lampoon of me, she took my hand and said to me, “They’re empty people and they know it and you’re not and they know that, too, and that makes them mean.”

She knew people and she knew me, I think, better than I knew myself.

As we always had, on our last night together we slept side by side and hand in hand. When I squeezed her hand during the night, I thought perhaps she squeezed back, so I spent the day reading poems to her that we loved, Whitman’s “There was a Child Went Forth,” Wordsworth’s “Ode on Intimations of Immortality Recollected from Early Childhood,” Eliot’s “Waste Land,” Lowell’s “Skunk Hour.” I read Ecclesiastes and Molly Bloom’s Soliloquy from “Ulysses” and many of the couplets from Joe Brainerd’s “I Remember.” And, most especially, of course, “Song of the Wandering Aengus.”

Anne’s first moment of telepathy came when she was in her final coma. She had been unconscious for about four hours when one of our caregivers suddenly said, “She just told me she wants to die in red pajamas!” The woman was so absolutely certain that this request had really come from Anne that she instantly leaped up and ran out to a department store and got some. We dressed my wife’s thin, faded body in them.

Note here how certain the woman was and how that motivated her. It was just like being spoken to by somebody who was alive, and yet it wasn’t a voice like a radio or anything like that. It was what I have come to think of as a “silent voice,” a sort of knowing what is being said without hearing anything. It is not, in other words, an auditory hallucination. Instead, it’s a spontaneous inner speaking that carries with it the flavor of another personality. When it is strong and quick and not of yourself, it is hard to mistake.

Anne’s choice of the color red was no accident. She was already living partly in the world of the dead and partaking of the knowledge that is there.

She has since taught me how colors reflect different vibrations of light

and different levels of being, and shown me the colors that are associated with the body and the soul and their commingled relationship. She says, “Paint fades, but color is immortal.” The body dies, but the soul persists.

To understand the significance not only of colors but also of many other messages from those in nonphysical reality, it is important to know the principle of the triad. A triad has three sides: active, passive and harmonizing.

Because the body is the active side of the triad of being, its color is red. One can easily sense how red suggests urgency and action, just as green does passivity and peace. She wanted to leave this world symbolically clothed in the color of blood and life.

By the evening of Tuesday, August 11, 2015, Anne’s coma had reached its terminal phase. She lay in our bed, in the spot where I now sleep every night and from where I hope one day to leave, also.

My son and daughter in law had come up that morning. It was clear that the end was near. The three of us were in the dining area when I heard Anne say in my mind, “Whitty, I’m dying right now.”

I leaped up and rushed into the bedroom and lay beside her. I put my hand on her chest and felt the beat of her heart. I said, “goodbye, goodbye, goodbye.” As I spoke, her heart stopped.

My center, more of me than I am, had left her body—and me—behind.

Despite all I had already seen of those in the afterlife and all we had both learned about nonphysical consciousness, in that moment it felt as if she was gone forever.

Never one to waste time, however, she was prompt to make her continued existence known. It wasn’t a fleeting thing, either. From a small beginning on that first night, it has grown into a relationship that is, if anything, even richer and more complex than it was when we both had bodies. The sweetness of the flesh is missing, of course, but it has been replaced by a commingling of being that is the deepest companionship that I think I could ever know.

Anne and I live, now, facing one another across the bridge of love. I go to

her side sometimes but we the living cannot stray far from our bodies. More often, she comes to me.

In this life, Anne was wise. Now she is profoundly so. She was intelligent. Now her mind glows with brilliance.

After she died, I lay beside her with my hand still on her chest. I was unable to move. I fought for breath. Then I heard her say, “Get up, go on.”

I could practically feel her pushing at me. I sensed that she was very close. Finally I got up and sat beside her. We called the nurse, who came in about half an hour and confirmed that she had passed.

There she lay, a ruin. My God. She had given so much of value to this world and had been so ignored during her life. Just as I had seen her from the first for what she was, I saw her contribution for what it is, which is a fundamental discovery about the nature of humanity and our place in the universe. As we shall see, what she learned and taught—and is teaching right now—not only identifies our place in the world, it also tells us why this strange experience we call life even happens.

Soon after her death was officially confirmed, two people from the medical school arrived to take her body. She had bequeathed it to the medical students so that, even in death, it would continue to be the vessel of a teacher.

That was very hard for both me and my son. The idea that she would be dissected instead of buried or cremated in the presence of those who loved her was so very, very hard to bear. But it was her wish and, as with almost everything our gentle teacher did, also a lesson on many different levels, not least among them that we should not let ourselves be attached to the physical form.

As in many other spiritual disciplines, there is in the Gurdjieff Work, which we joined in 1970 and which continues to play a big part in my life, an idea called “identification.” We identify with who and what we love, and in so doing lose track of our own true selves.

Anne was an expert on identification. She would never speak of it

overtly, but when she saw an identification, she was quick to challenge it. So I understood that she was not only donating her body for the sake of the medical students, but to give my son and me the chance to see our identification with her physical form and free ourselves from it.

The flesh is not what matters, and she had finished using her body. The best thing that could be done now was to let it be used to teach others. And so, in fulfillment of her wish, that's exactly what was done.

I had promised of who were sitting together in vigil that I would let them know when she died, and at 7:45 PM I texted them the news. One of them, Leigh McCloskey, opened Ranier Maria Rilke's "Letters on Life" at random. His eyes rested on page 121, and this is what he read:

"In life there is death and it astonishes me that everyone claims to ignore this fact: there is death, the pitiless presence of which we are made aware with every change that we survive because one must learn to die slowly. We must learn how to die: there is all of life. To prepare from afar the masterpiece of a proud and supreme death, of a death where chance does not play a role, of a death that is well wrought, quite happy, of an enthusiasm that the saints had known how to achieve' the masterpiece of a long-ripened death that effaces its odious name by restoring to the anonymous universe the recognized and rescued laws of an intensely accomplished life."

He found this passage at random, or perhaps not. Perhaps Anne opened it for him and through him. The reason I say that is that, just a few minutes later, perhaps ten minutes after her death, I found a book fallen open in our office. It was Roy Frieden's Physics from Fisher Information and it was laid open to a page on which Anne had years before marked the sentence "...a single observation of the metric occurred at the onset of the Universe, and this generated the Wheeler-DeWitt equation for the pure radiation universe which had existed then. In other words, the gravitational structure of the Universe was generated out of a single, primordial quest for knowledge." (Like Bohm's "pilot waves," the Wheeler-Dewitt equation is an attempt to

reconcile Einsteinian relativity with quantum indeterminacy.)

I asked everybody in the house whether or not they'd taken the book down in the last few minutes, because it had been on the shelf untouched for years.

They had not.

I was reminded of a remarkable story which a famous surgeon had told me, about how he had been given all the details of an important surgery he had developed. (It's not in his biography, so I'm leaving his name out. In this strange world of ours, the story would diminish the reputation of a fine man who deserves the all the honor that his life accorded him.) He was in the hospital suffering from an infection of the myocardial sac. He'd gone into crisis and began calling for the nurses, but none came. However, a woman in a long white gown suddenly glided into his room, plunged her hands into his chest, then glided out. In that instant, the entire design of the surgery he pioneered came into his mind. Moments later, the nurses rushed in, explaining that they'd been in the next room because the patient, an older woman, had just died. He felt that his surgery had come into his mind because of what that woman's departing soul had done.

Anne loved the story and we discussed it often. So it was logical that she would leave behind a crucial piece of information as she departed. She knew that I would understand.

Later that night, at 9:20, she had just been taken away and for the first time in all these years, my life was empty of her. I was sitting alone, bereft, and asking her if she still existed, and if so, would she somehow contact me. I was asking her with carefully structured intensity in my inner voice. A moment later, my phone rang. It was another dear friend, Belle Fuller, saying that she'd just that moment had a message from Anne to call me. I was so grateful and surprised that I almost couldn't reply. It was a lovely moment. She'd had no idea that Anne had just died.

As the little van had rolled away down our alley with that beloved body

inside, a peculiar sort of mist appeared. I took a photo of the van as it left, its brake lights glowing amid many colors in the strange, soft haze. The photo, taken at night, doesn't show the colors that could be seen, but the mist is clearly visible.

As it turned out, that mist was the first manifestation of something that is known to happen when certain souls pass from this life. The Tibetans call such souls "rainbow bodies." There will often also be rainbows, and as I drove to Anne's wake a few days later, rainbow after rainbow appeared. I also took pictures of them as my son and I drove along.

Anne would laugh to hear herself called a great soul, but that's exactly what she is, and not only that, she is still very much turned toward this world. The reason, I feel sure, is the mission she is on. Beyond our current reality, there is a new humanity. We are one half of it, still darkly afraid and confused, living in what Anne calls "the level of violence." The other half awaits, its arms open, to welcome us at last into the union that is our destiny.

CHAPTER 3

A Flash of Light

ABOUT THREE HOURS after her death, I saw Anne in my mind's eye. She was walking toward me. She was moving carefully, as she had not been able to walk for half a year. But she was there, definitely walking, and by grace and her love showing me that she could do so once again. As I looked at her, I saw that her eyes had changed. Rather than the bright softness of life, they were penetrating and intense. They were the eyes of knowledge, but also in them was a sparkle of something that seemed to me to be satisfaction. She looked like a victor, radiant. It was as if the wonderful twinkle of life had become a great, sounding chorus of purest joy.

The tears poured down my face.

That night, I did not think I would sleep. How could I? The emptiness of our bed was horrifying. Anne's death was incredible. Unbelievable. And yet, instead of lying there in tears as I had expected, I fell at once into a deep sleep. It was almost like an enchanted sleep, it was so deep.

Then I saw her, still dressed as she had been when she walked toward me. She turned and gave a little wave. Wherever she was, she was moving up and

away from me, and fast.

I knew instantly what I wanted to do, which was to accompany her as far as I could go. I'd read the Tibetan Book of the Dead and thought not only from its descriptions of the region between death and life, but from my own experiences, that the first part of the journey Anne was starting could be confusing and unsettling. If I could, I wanted to help and protect my beloved.

Usually, I cannot leave my body by my own efforts. I must be taken out. But this time I moved out easily, slipping into the layer of life that lies just above the physical world.

We soared out into a region that seemed almost like it was under water. Shadowy enormous forms loomed around us, watching us alertly. Then we broke into the sweetest light I have ever known, moving faster and faster, farther and farther. Anne was laughing a bit at my persistence, but I would not go away—until, finally, I was caught short by the cord that connects the soul to the body. She rose away from me, gazing back, smiling, and then was gone.

And then I was back in the bed alone.

I gave voice to my grief, stifling my anguished howls in my pillow so I wouldn't disturb the neighbors. But then I slept again. It felt as if a kind hand had been laid on my head, her hand, in such peace and in such love as I had never and yet had always known, for it was greater than normal, physical love. It was the calm and accepting love of one soul for another, what Anne calls "objective love."

In her diary on Unknowncountry.com, in an entry dictated to me on July 10, 2017, she said, "I no longer experience subjective, or sentimental, love. I am in love with reality. I am part of the joy of consciousness. I am me and all being both at the same time. Objective love is the energy that created the universe and that sustains its expansion. There is a quest for knowledge going on. Everything seeks to be known. This desire is objective love. It loves all knowledge, not just the things that are pleasant or nice. It loves and desires

the dark, too.”

It is also the key to building the bridge between the worlds. But before that was going to happen, continued efforts had to be made to get me to understand and take action.

The next afternoon, a Wednesday, I received an email from a friend in Florida, author Trish MacGregor. Trish and her husband and co-author Rob had gotten word from a mutual friend that Anne had died, and I had written them to let them know that it had been a peaceful passing. While Trish was writing back, what she describes in her blog as “an incredibly strange thing” happened. As she was typing “Thank you for letting us know that she died peacefully. If we can do anything to help out, in any way, please let us know,” there was what she describes as “a brilliant flash of light and a huge explosion” in their house. At first they were terrified, then puzzled to discover that nothing had exploded. The house was fine. The explosion took place just as Trish typed the last “know.” She says in her blog, “We think it was Anne, making her presence known.” Given all that has happened, I would say that this could well be the case. But it worried me, of course. Had Anne’s death been harder than it had seemed to me? Was she angry or upset? She had seemed so at peace right after her passing. Maybe it was a burst of joy affirming Trish’s comment. That’s what Trish thought and what I hope, but I could not know and I cannot know.

The death of one so beloved leaves a great wound, but not knowing if she really wanted to do what she did, if she perhaps changed her mind after she could no longer speak, if she suffered but could not say it—all of these doubts and fears are mine to bear. When I heard Trish’s words, I remembered Anne’s temper, and how I was often responsible for her anger. Was this true now?

A great part of the journey of grief is learning to let such doubts go. There is nothing more to be done. She has entered a new reality and I cannot bring her back, not to touch and hold. But I can communicate with her, so I asked

her why she had done what she did to Trish. She said, “Because it was fun.”

At first, of course, I was delighted with the answer. It was so like Anne.

But there was seriousness, too. It was important to Anne that Trish notice and that she communicate her experience. It might have been fun to do, but it also guaranteed that notice.

It was about that time that I remembered our plan from so many years ago. The one to die first would initiate communication through friends, not directly.

I thought, ‘my God, she’s doing it!’

Although I cannot pinpoint an exact time or specific perception that took me beyond the amazement factor into assuming Anne’s continued presence, it was during this period that I started to think more deeply about the mission. She wasn’t just trying to contact me to be nice to her husband, she was doing it for a reason. In her own way, as articulate as always, she was taking up the cause of the afterlife revolution.

Her efforts to prove her existence by contacting people other than me continued. I had not only never told anybody about our plan, I hadn’t thought of it myself in years, not until I realized what she was doing.

At six o’clock on the morning after her death, a filmmaker of our acquaintance, Alex Rotaru, found himself waking up quite suddenly. It was unusual for him to awaken at that early hour. He immediately felt the presence of Anne all around him. She said, “I have lots of ideas.” In the next moment, he found the way to end a film he has been struggling with for two years. He has a lot of it shot, but has been unable to come up with the ending. In this life, she’d been concerned about the fact that he was stuck. Now, from the next, she gave him what he needed.

Anne’s next moment of contact was the one that made me all but certain that she was executing our plan.

I needed to get out of the house and not be alone, so my kids proposed a visit to the desert city of Palm Springs. Anne and I had spent many lovely

weekends in the desert, so I thought it would be an ideal getaway. I would be out of the house, but in a place we had both loved.

On the afternoon of our first day there, we drove into the mountains above the small city. My kids decided to go hiking. I could not follow them because my bad knee would never take the strain. So I sat on a bench and waited for them to return.

I spoke in my mind to Anne, asking once again for some sort of sign that she still existed. Within seconds, my cellphone rang. Although I was in a pretty isolated area, it turned out that cell coverage was more or less normal. I answered it to find a good friend from Nashville on the other end. This was Clare Henry, the wife of author William Henry. She said, “Whitley I just had a message from Anne. She said to call you and tell you she was all right.”

Then I knew. This could not be a coincidence. In fact, it was not just a perfectly timed call, it was also the only time that Clare had ever telephoned me. I made a decision. Anne had proved to me that she was still here. She not only still existed, she was conscious and aware of what was going on in my mind, and had new powers of communication.

Right now it feels as if we are sitting side by side, the way we used to when we worked. She says, “Except what I have to offer now is different. It’s accurate vision.”

Our species, in this time of crisis, certainly needs that. She adds, “but don’t forget to say that it has limitations. The future isn’t an open book to us, but it’s also not a complete unknown. We see more clearly because we can tell the difference between the inevitable, the probable, the possible and the impossible. There’s no guesswork.”

Such insight will be a significant advance over what those of us on the physical side of the species have now. But when it comes to communication between the two sides, objectivity and repeatability are necessary, otherwise we end up with nothing but guesswork, confusion and runaway imagination. Anne says, “Numbers are essential. A lot of you need to be able to cross the

bridge in order to detect any consensus we come up with.” I would also add that consistency of response is what we should look for. I can envision a situation where many people, working together in an organized manner with each other and their beloveds on the other side could build an exchange about the future that would be consistent enough to be actionable.

More than that, though, the new relationship is going to be about the enrichment of souls on both sides of the bridge. For that’s what life is about. It is about the soul. And the universe, all of it. It is about the soul.

As we build our bridges and seek to make our species whole, we will need to understand what is a belief and thus open to question, and what is knowledge, and thus actionable.

All these events—Belle’s call followed by Clare’s, Trish and Rob’s experience, Alex’s dream—caused me to alter my basic question about whether or not Anne’s consciousness was still intact. This was no longer a speculation, but a possibility. But knowledge? Was my expectation that Anne still existed now knowledge, at least for me?

I decided that I should do what I could to draw more confirming events. Whereupon Anne said, “Fine, but don’t get stuck .”

One of the hardest things about being in contact with the dead is believing that it’s real. This is because we determine reality based on physical cues, and they are totally absent in this type of communication. So we want signs, sign after sign.

I am no different. As soon as one sign appears, I’m looking for another. We were in continuous communication for 45 years, talking, touching, loving—being physically together in every way. Not a day passes that my body is not startled anew by her absence. And yet my mind knows that she’s here. Right now, this moment. Here. I hear her speak to me, see various manifestations, get convincing reports from others that are so varied and consistent that they qualify as personal knowledge. Not universal knowledge, certainly, but on a personal basis, yes.

However, my body's reaction is different. Without smells, tastes, sounds—no physical manifestations at all, as far as it's concerned—she's gone. Unlike my mind, it has no way of believing otherwise. As it no longer has any confirmation of her existence, it adds a layer of question—which is good. Far better to open the door with question than close it with belief. Above all, we must not look to those in the nonphysical as prophets and guides.

The reason for this has to do with why we are here on our side of the bridge. We are not here to see the future, but to experience the present. This is how we explore and come to understand ourselves. Surprise is crucial or we will not act out of our deepest truth. We won't get to discover ourselves. So there will always be a limit not only on how much our dead know of the future, but also on how much we can be told.

I would say that my relationship with Anne is deeper now than it was when we were both in the physical. I was her companion in life. Now I am in communion with her. We are, in other words, sharing our beings in ways that are not possible when both are limited by the barrier of the physical. We share our beings and at the same time cultivate questions that will help us both continue the process of discovery that is the core aim of any relationship, including—and especially—one that crosses the bridge.

Teacher that she is, Anne loves the question and understands its value deeply. It would be wonderful to be able to have certainty. But as much as we would rather enjoy the comfort of belief, to live in the adventure of the question is richer, better and, frankly, a great deal more fun.

To our deepest cores and in every drop of our blood we human beings fear to die. It is this crushing fear that can strip the humanity right out of us and turn us violent.

Anne is part of the effort to change this by helping us, the living, to replace the fear that rules us with another approach entirely. It is not a rigid belief, but rather a supple, questioning sense of assurance that this universe isn't simply a passive reality that happens to contain us, but a living presence

of which we are a part.

The bright materialism of modern life makes it hard to believe that there is anything more than the body, even though some of us still embrace religious beliefs that tell a different story. But Anne, like my other near-death experiencers who weren't religious, didn't follow the old rituals but did believe in the soul.

She didn't just believe in a subjective sense. Because of her NDE, she felt that she had objective proof of the existence of her soul.

She wrote eloquently about the NDE in Anne's Diary, which she kept on our website, Unknowcountry.com. The entry is called "The Love that Led Me Home" These lines from it are relevant to this discussion: "All that really survives of us is the love we have made in the world. It's a simple truth that will stay with me forever, even when I pass again across the threshold, this time never to return. Especially then."

Anne meant, of course, objective love, the great creative force that binds the world together.

Recently she expanded on the idea when she said to me, "love is the basis of being." In other words, it is something like gravity, without which the material world would not exist. But without love, nothing, not even gravity, would exist. So it isn't just an emotion, but also the fundamental building block of the universe.

That sort of love is what remains of her. It is what our dead are. The love that filled her being has now become her being. This is not to say that she has ceased to exist as a separate person. Far from it.

Her life was and is about creating, teaching and, above all, spreading the energy we know as joy. A few days after she died, one reader of our website wrote, "Anne was strong on my mind during yesterday's commute. I struggled to focus on her message to have joy, instead of crying. Just then a car pulled in front of me. The plate read, 'Joy to U.'"

To me, this was a familiar method of Anne's. About six weeks after she

died, I was driving home from a concert on a Saturday afternoon. It was the first time I'd been back to the lovely home where this intimate concert series is held. Anne and I had spent many pleasurable afternoons there, and going back without her had been hard.

Afterward, I was driving along home quietly crying when I heard the a-capella singing group Cantus on Prairie Home Companion. They sang a song called "Wanting Memories."

"I am sitting here wanting memories to teach me, to see the beauty in the world through my own eyes."

"You used to rock me in the cradle of your arms, you said you'd hold me till the pains of life were gone. You said you'd comfort me in times like these and now I need you, now I need you, and you are gone."

"I thought that you were gone, but now I know you're with me, you are the voice that whispers all I need to hear. I know a please a thank you and a smile will take me far, I know that I am you and you are me and we are one, I know that who I am is numbered in each grain of sand, I know that I've been blessed again, and over again."

It was so precisely what I needed to hear that I called her aloud, "Anne, is this from you?" At that moment, I noticed the car in front of me. Its license plate read, "Believe." She was not asking for the empty belief that shuts out the richness of question, but real belief based on the fact that the event was too improbable to be a coincidence.

My teacher, the mistress of the question, was now asking me to believe something, which was that she was definitely with me. From long experience with her, I knew that, once I had accepted this new evidence, fresh questions would follow.

I asked her what they might be and at once found myself thinking about the mission, the building of the bridge. I saw, suddenly, that she might well have lived and died, and left this world when she did, on its behalf.

We do not know our souls' reasons for our lives. We act from hidden

direction, and Anne was no exception to this rule. I doubt that she is the only soul with this mission. Indeed, far from it. I sense a whole vast chorus calling to us from the other reality, saying ‘awaken, awaken, the time is now.’

But why? Why not fifty years ago or a thousand from now?

There are three reasons: the first is that we must enlist both sides of the “brain” of mankind—the living on the left and what we call the dead on the right—in order, in a very practical way, to thread our way through the upheavals that are coming; the second is that it is possible now and it has not been before. The third reason—dare I say it—is that it’s wonderful, joyous fun.

The reason it can happen now is the explosion of near death experiences. Before the medical breakthroughs of the past half century, they were relatively rare. No longer.

Anne was a beneficiary of such medical advances. She had, ten years before her tumor appeared, experienced another extremely dangerous illness. Over its perilous course, she had traveled deep into death. But then the impossible happened: she returned. Medical advances that had only taken place in the previous few years enabled her improbable survival.

She had ventured deep into the undiscovered country, returning as a modern version of the shaman, a master of travel between the worlds. And she had a message: that country is undiscovered no longer. We come and go, and we are learning the secrets of this greatest of all journeys. Our modern shamen—walkers between the worlds—are the growing legion of people like Anne, the near-death experiencers.

This is their revolution, both those on this side of the bridge and those on the other.

CHAPTER 4

“Whitley, I Need Your Help”

OUR WORLD EXPLODED in our faces for the first time on a rainy Saturday in October of 2004. We were in Los Angeles working and visiting our kids. We’d had lunch, then gone to a movie. Then we went to our son’s house and watched a baseball game with him and his girlfriend.

A peaceful, normal day. Two people long-ago grown together, deeply in love.

All was well.

The minutes of the day passed without remark, time slipping away as it usually does in the sweetness of life. We knew nothing of what was happening inside Anne’s brain, a tiny vein bulging more and more. The defect had probably been there since birth, causing no symptoms and never noticed.

A year before, she had begun suffering from a nerve inflammation in her buttocks called periformis syndrome. It had come from playing racquetball too hard and sitting on a badly constructed couch. She’d been taking Aleve for it—too much Aleve for a person with a brain defect like the one she had.

But nobody knew.

As we watched the Yankees and the Red Sox, the crisis silently approached, a ticking bomb, ticking faster and faster. Unheard.

After the game, we got in our car and drove to our temporary rental apartment—coincidentally on Whitley Terrace in the Hollywood Hills. In the car we spoke quietly about the coming evening. I was due to go on Art Bell's Coast-to-Coast radio show in about an hour, and as always Anne would be at my side, listening, feeding me ideas, doing everything she could to support me. She would come on the show as well.

On the way, she said, "I want you to know I've had a wonderful marriage."

She sounded grave and introspective. I replied, "Oh, honey, me too!"

I wondered why she'd said it, such a serious thing at what seemed to be an entirely trivial, commonplace moment.

Tick, tick, tick.

There was not the slightest sign that her life might end before the clock struck nine. It was eight forty.

She was now very quiet. What she wasn't saying was that she had a terrific headache and it was building fast. Anne did not report symptoms. As a girl, when she had done so, she had been accused of trying to avoid her chores. All through our marriage I had tried to get her to change this deeply ingrained habit, but without success.

When we reached the apartment, she had literally only minutes to live. By now, her head must have been pounding. The moment I stopped, she jumped out of the car and went racing into the flat.

A little surprised but not yet concerned, I followed her.

As I walked in, I heard her call from the bathroom, "Whitley, I need your help."

I could see her standing with an open bottle of Aleve in her hands. Her eyes rolled back into her head and her legs buckled. I caught her on the way

down and, protecting her head, got her to the floor.

At that moment the phone rang. It was Art Bell. I shouted to him that Anne had collapsed and hung up. Then I called 911 and then my son, who started over immediately.

I went back to Anne, made sure she had a good airway and was still breathing.

It was obvious that she was in terrible distress. I didn't know what was wrong, but this looked to me like a person who was dying, and quickly. Her lips were slack, her eyes rolled back in her head, her pulse racing, her breathing becoming erratic.

I began CPR. Our son arrived, then had to go chasing off down the street after the EMS wagon, which couldn't find the address. But then they were there, oxygenating her and setting her up to travel.

Maybe ten minutes left, maybe less.

In total shock, my son and I followed the wagon to a nearby hospital. I told him to prepare himself. My heart was thundering, I was being rocked to the core of my being by the absolute suddenness of the change. No warning, no idea at all that anything was wrong.

I thought that she might well be dead by the time we got to the emergency room, but as we walked in, I could see her being wheeled into a cubicle, clearly still alive.

When the doctor came out to see us, he was frank. She'd had a hemorrhagic stroke—a brain bleed—and it was a bad one. Her prognosis was, as he put it, “very guarded.”

While we waited, I looked up the statistics and saw that she had only a small chance of survival. Then I saw that if she did, she might well end up severely impaired.

Another blow: our life together was probably over, and if not, then it was likely to get much harder. The remarkable, beautiful, immeasurably alive woman I loved might well be gone forever, or left in ruins.

Thus began the greatest battle of both of our lives. While Anne fought to survive, I fought to make certain that everything was done for her that could be done, and that it was done right.

Little did I know that Anne was already dead. She was no longer in her body, but rather was taking a journey that in the past used to be a final one. She had become an explorer in the undiscovered country.

She found herself in what she later described as sort of way station, like a railroad terminal or a subway stop. It was filled with people sitting on benches, clutching bags and suitcases. It was clear that nobody was leaving that station, not while they clung to their burdens. Then Anne heard a voice say to her, “you can go on, or you can go back if you wish.”

She had no burdens in her hands. She wasn’t clinging to anything. But she did have a husband she loved and a son in his twenties who had not yet started his family.

Our Persephone, our underworld journeyer, had a decision to make. Would she return to her family, or travel on into the bright realm she could see ahead?

As I have said, Anne was a teacher to her core. It was and is the essential reality of her soul, her truth. She also had a life goal that was deeply important to her, which was to create a family that was better and stronger than what either of us had known.

She had raised a wonderful son. He had found a fine young woman. She had a family to nurture.

Maybe somebody on the other side thought she could come back, but what was happening on this side was that we were losing her. The hospital to which she’d first been taken—the closest one—was not equipped to deal with a brain bleed as bad as hers. The most they could do was to temporarily stop it.

We had to take her, loaded with stents and tubes, on a dangerous journey across town to the UCLA Medical Center. I rode with her in the ambulance,

my heart almost stopping with every jostle and every bump. But she made it and was soon in an intensive care unit that specialized in strokes. Half the patients in it were bleed victims, and hardly a day passed when one of them wasn't quietly removed to the hospital's basement morgue.

When Anne was in intensive care, I lived in the hall. Time and again, the staff gently threw me out, but I would wait until the coast was clear and then go back to my perch beside the door. Family members were not allowed in the ICU except at certain hours, and sometimes not even then. It depended on how busy the nurses were. So unless you were there when the door opened, you might not see your patient for hours. I knew that Anne wanted me beside her. I could feel it very clearly and strongly. Sometimes, I could see her in the hall, standing before me, looking down at me gravely and curiously.

In normal life, there was an aura around Anne. Her eyes were bright with intelligence, her mind was quick, she was extremely well informed, she was witty. But there was more— that glow.

When Anne first came to me, this light—unlike any I had ever known—had entered my life. Compared to her, the girls I had known before were sweet shadows.

Now here was this bright being brought low. To me, it seemed as if nature had committed a sin against itself. She belonged to sunlight and happy days, not to this cruel struggle.

When I was allowed into the ICU, she would look at me with searching eyes. Because of her intubation, she could not speak.

I sat beside her bed praying the Hail Mary and the Lord's Prayer from my Catholic childhood. When I was in my car, I prayed the repetitive Jesus Prayer, "Lord Jesus Christ have mercy on me," but I changed the words to "on her." I went to sleep praying and woke up praying, and when I wasn't praying I went deep into the sensing exercise I had been doing since we joined the Gurdjieff Work in 1970, passing my attention from one limb to the next, until I was everywhere in my flesh, not just riding the mind. Over the

years, I had found that sensation deepened, slowly becoming something more than just awareness of the body. The exercise is simple, but also an amazingly effective way of opening the inner door to the soul. This is because in life soul and body are so intermingled that it is very hard to tell the difference. When by chance the attention extends into the soul level, there may be a startling moment of awakening. The world seems then quite new, quite unexpected, even magical. But there was little magic for me then.

Normally, soul and body in concert sailed the fears of those nights. They still do, but no longer in fear. I am like a companionship within myself now, the ego and the physical appetites directing the body to act, the body acting, and the soul watching, my dear friend who is also me, and more of me than I am.

But then—those days—I was so afraid that Anne would miss seeing her family grow. Selfishly speaking, I could not imagine life without her. I had to save my wife!

When I was too tired to go on and had to sleep, I would comfort myself by holding one of her nightgowns close to me. The black dogs of fear would run in my mind. Again and again I would ask myself how I could live without her. I did not know. I could not imagine. And her life was so unfinished! The kids had to get married, there had to be grandchildren, and she had to see that! I knew somehow deep in myself that this had to be. When she left this world, she had to be free. Nothing essential must be left undone.

But even as we struggled to keep her alive, she went deeper and deeper into the world of the dead.

As the doctors pumped fluids into her body to combat the brain swelling, she blew up like a balloon. It was done to keep the tiny intercranial capillaries open. Wherever that blood flow failed, that part of her brain would die.

Then another crisis: the fluid load was causing her blood pressure to rise astronomically. But the treatment had to be continued as long as there was blood in her spinal fluid and her brain was swollen.

Her blood pressure rose—150, 180, 210, then higher and higher yet. The treatment that was keeping her brain from being destroyed was now raising the specter of stroke.

An agonizing decision was laid before me. Should they continue treatment and take the risk of a catastrophic stroke, or should they stop and risk a degree of impairment? No matter which they did, death would always be a possibility.

Death, death everywhere! It was surrounding us like a thick, black fog.

If I decided to stop the therapy and she came out disabled, how would she feel about her life then? About me?

Again and again, I read her living will, written carefully in her own hand. No resuscitation if no hope of survival. Everything possible to be done prior to that.

But what about impairment? She said nothing about it.

I went to the hospital's chapel and prayed more. I went to mass and afterward tried to get counseling from the priest, but I cried so much I couldn't express myself.

The doctors were waiting. They needed a decision. I asked my son what he thought.

“Dad, mom would not like to be in a wheelchair..” No, but who would? She'd get used to it, people do.

Then I thought, ‘what if she lost her ability to think clearly?’

That decided it. Anne would prefer death to that.

I could almost feel her next to me as I went to tell the doctor on the unit that Triple H therapy was to be continued until her spinal fluid was clear.

So we waited, watching the blood pressure monitor, watching the shunt that circulated her spinal fluid, waiting for that faint pinkness to clear.

Day after agonizing day, we prayed and watched and waited. Then, one day, I was told that her fluid was clear and the therapy could be stopped.

But was she damaged? Could they tell?

A few days later she came awake—and she seemed fine!

She knew me, she knew herself, our son, remembered her life, all of it. A therapy dog came to visit and she petted it. She spoke normally with me. The doctors talked of a release.

To say that I was elated would be an understatement. For the first time in weeks, I slept a good sleep. We were home free, we had made it through one of the most dangerous illnesses known to man.

But then, the next morning, she wouldn't wake up. Worse, her temperature was rising. At noon she was diagnosed with spinal meningitis.

By this time I'd read a great deal about Anne's disease and I knew of this danger. I knew that death had returned.

She was administered broad spectrum antibiotics, but her fever rose and rose. The doctors were having difficulty identifying the bacillus that was causing the infection. The antibiotics were useless.

In even the recent past, this latest catastrophe would have been her last, and it is during this time that I believe she was having her near-death experience. Then they identified the bacillus. A new antibiotic therapy was begun. But she was so full of infection that even though the right antibiotic had been found, it was still touch-and-go. Her temperature continued to rise.

If it could not be brought down, she was going to either die or suffer yet another form of brain damage.

The nurses had gotten used to my constant presence and were making use of me as a volunteer. I watched over her every moment, day and night, sleeping only in fits and starts. When the ICU had to be cleared, they simply closed the curtains around us.

By this time in our life together, I was well aware that my wife was a spiritual expert. I had seen the grace and ease with which she taught others, always without them realizing it, drawing them to moments of richly revealing inlooking. She did this with me all the time, always with love and skill and her wonderful humor.

Only a master can do that because only a master can see the truth of souls.

I was not going to lose this woman. I was not going to see her value lost when she was still in the prime of life.

But if that particular ambition was to be fulfilled, her temperature had to come down, and soon.

My son and I spent all one night keeping her body cool with wet towels. The danger was in the wee hours, the time when defenses are at their weakest. We applied towels, the antibiotics dripped and her temperature continued to rise.

It went on and on like that, hour after hour. The nurses spelled us but they also used us as volunteers for which we were both grateful. We didn't want to be away from her for a single instant.

It became hypnotic, soaking the towels in the ice buckets the nurses were bringing, applying them until they were warm, then doing it again. Through it all she slept the sleep of eternity.

Then, at about four in the morning I noticed that the readout had dropped a tenth of a point. But it went back up so quickly that I thought I had hallucinated.

The nurses began watching her closely, two of them now helping us keep her cool. Her temperature dropped a tenth of a degree, then another tenth. Another. By five thirty, the tension of struggle had left her face. She was sleeping peacefully. Her temperature was 98.9 and still dropping.

As dawn slipped in, we slumped exhausted into the chairs beside the bed. Later, when she had been normal for a few hours, we drove back to the apartment for showers and sleep. We both sensed that another miracle had occurred. The nurses and doctors had clearly not expected what had happened.

A few days later, she was so improved that it was possible to remove her tubes. Except for those few lucid hours now three weeks ago, I had not been

able to speak with her since before her bleed. I would be able to talk to her, to find out what she had been experiencing through all of this.

But when she could speak, it turned out that she had acquired something known as “ICU psychosis.”

My brilliant wife with her razor-sharp mind was completely off her head.

She was moved to the transitional intensive care unit. On the doctor’s instruction, I talked to her endlessly, working to bring her back to the real world. Hour after hour she babbled on. Hour after hour I told her that her fantasies were wrong. Our son came and helped me. We spelled each other. As I recall, she talked continuously for something like fifty hours. When she finally fell asleep, so did we!

Finally, it came time to release her from the ICU area into the general population. Once she was settled in, I left her alone for the first night in a long time. But she became completely uncontrollable. She did not know where she was and she was terrified. She kept leaving the room, calling for our doctor in Texas, a lifelong friend. But we were in California. The nurses had no idea who he was.

I was called and I rushed back to the hospital. When she saw me she ran up to me and threw her arms around me. “Oh, thank God, thank God! I thought you’d left me! I thought I was alone!”

“I’ll be beside you every second from now on.”

That night, I slept on my side on her narrow bed, and the next night and the next. Finally, they gave me a chaise lounge and I slept in it. I never let go of her hand, and again and again in the night, she would whisper, “Whitty?” and I would say, “I’m here.”

One day, given her continued improvement and the need for beds, the resident decided to discharge her.

I was appalled. I told him that it was too soon. During an illness like hers, debris builds up in the areas of the brain where spinal fluid circulates. This material can clog the tiny passages that allow the flow to continue. If that

happens, fluid builds up in the brain. If left untreated, this hydrocephalus becomes dangerous, even catastrophic.

He reacted to me with arrogance and open contempt that some stupid caregiver would dare to question him. The next thing I knew she was no longer an inpatient. I tried to protest to the head of neurosurgery but he could not be reached.

She was sent to rehabilitation. But they would not allow her into the hospital's rehab unit because it had a door that led directly to the street and they were afraid she'd blunder out. So she was transferred to another hospital, which proved to be something out of a Dickens novel. I was regarded by everyone I encountered with beady-eyed contempt and wariness. Apparently my reputation as a 'hands on' caregiver had preceded me.

Fifteen minutes after she was admitted, she fell asleep. It was noon and she'd slept all night. But the move had been tiring, I thought. I sat beside her, waiting for her to wake up.

She did not wake up. Finally, in the evening, I tried to rouse her but she remained asleep. In fact, she was not asleep, she was unconscious. I told the nurses about this, but was ignored. I went back to my son's place but neither of us could sleep and at two in the morning we returned to the hospital.

I examined her, lifting her eyelids, feeling her pulse, trying to rouse her.

She was nearly in a coma.

I immediately went to the nurses' station and reported that Anne had hydrocephalus and needed to get to an emergency room immediately. (This rehab hospital didn't have one.)

The nurses laughed in my face and told me to go home. I knew that I had only so much time to save her. But at least this time it was hours, not minutes.

In the morning, I called our doctor in Texas. He managed to get the number of the hospital's on-call neurologist. The nurses had refused to call her or to give me the number.

At length, I got her on the phone. She came in and confirmed that Anne was hydrocephalic. I immediately telephoned the head of neurosurgery at UCLA and told him that she needed to be readmitted. The neurologist talked to him and concurred. But then another glitch: the hospital refused to take her back!

This had all taken until three in the afternoon and I was now frantic. Anne was close to a coma. I told the nursing staff that I wanted all of their names because I was going to sue not only the hospital, but each of them personally. The next thing I knew, a guard was lurking nearby.

Finally, I telephoned my brother, who is a lawyer, and he called the head of UCLA neurosurgery and said to him that the premature release was a clear case of malpractice and if Anne wasn't back in the hospital in an hour, he could expect a suit to be filed forthwith.

Twenty minutes later, an ambulance showed up and we were on our way back to UCLA. A surgery was performed to install a shunt under her scalp that would enable her spinal fluid to circulate again. This was successful and she spent some more time in the ICU, then once again entered the general population.

She had wandered far during her various crises, going deep into an unknown world of incoherence, confusion and, eventually, a sort of poetry. But now, finally, when the pressure was relieved, she was coherent.

She said, "My last memory is of you dancing around like a vaudeville performer."

"Yeah," I said, "I've been doing a bit of dancing."

We were finally in the UCLA rehab unit. She had been admitted on the understanding that I would live in the unit with her and never leave her side. That was fine by me. In fact, I was delighted. Right next to her was exactly where I wanted to be.

As she gradually regained more and more coherence, she suddenly announced, "Coe! Coe is here."

Persephone had returned from the underworld and those four simple words were her first message from the beyond, the first suggestion that she'd had a near-death experience.

Our little Siamese cat, named Coe by our son at the age of six, had died five years previously. I thought that Anne might have been dreaming, but also that it was possible that she had seen him during an NDE. Pets are sometimes encountered.

Over the next few days, she began to talk more about where she'd been and what she'd seen. I listened without questioning her, letting her proceed at her own pace. But I was pretty sure by now that I had indeed had an NDE.

The fact that she had lived to describe her journey is the foundational reality of the afterlife revolution. Medical science had defied death and saved her, and in so doing enabled yet another near-death experiencer to bring her story back rather than disappearing with it into the unknown.

These new pathfinders like Anne and so many others are our best chance—and first real chance—to find our way out of the hell of fear and cruelty that is our world and into the wholeness of a truly mature species, where the physical and nonphysical sides work together.

Anne had been transformed. She had a completely new vision of reality. Her mission remained unstated as such, but she had been put on its path by the breathtaking power of her NDE. Again and again, she would tell the story of it, always concluding with that statement, “we have to put those burdens down or we're not going anywhere.”

This modern shaman, like so many others, had been initiated not by death-tempting rites but by death-defying medical procedures.

It used to be a rare thing for a person to actually complete an initiation. The ancient rituals were generally dangerous, often very much so. But that was the point. They were about tempting death.

The ones who had entered the world of the dead and been resurrected were considered remarkable and indeed, they were very rare. The stories they

brought back remain to this day at the center of much human religious belief and practice. Books like the Tibetan Book of the Dead and the Egyptian Pyramid Texts are based on observations from such journeys. But they are not ideal texts for our era. The journeys they chronicle are described in terms of mythology that could be understood by the people of the eras in which they were written, but which do not resonate with us now, not in our secular and de-mythologized culture.

Most of the new near death travelers come to their experiences, as Anne did, with essentially no preconceptions about what this other reality might be like and what they might expect to see.

There are consistencies, though. An experience of entering an encompassing and loving light is often described—the literal manifestation of Anne’s ‘objective love.’ The approach of dead friends and relatives is very commonly reported. Journeys into worlds that seem to be almost physically real also appear frequently in the considerable literature that has emerged as the field of near-death studies.

Near-death experiencers are the wonder workers of modern times, leading us into an entirely new understanding of and relationship with our own souls. They challenge us to revisit our entire approach to death and dying. Their reports suggest that the soul is not only real, but that what we think of as reality is actually a small corner of a much larger world. They suggest that consciousness is not only in us and part of us, but more that we are in consciousness, journeying through a world largely unseen by us in bodies that appear to be designed to filter out any vision of the larger reality.

When Anne was alive, her relationship to the divine was private but powerful. I feel that she was closer to God than anyone else I have ever known. She would say, “We don’t know what god is,” but also, “God is my best friend.”

Many an NDE experiencer would agree, I think. God seems to be a living mystery to them, at once a familiar friend and an unknowable presence.

This is a much different vision of deity than we are used to. This combining of the comfortably familiar and the completely mysterious points the way to nothing less than a new understanding of man, universe and the sacred that both acknowledges the reality and accepts the mystery.

I cannot ever fully express how completely my wife's NDE changed her. She was so unafraid of death that it was, frankly, astonishing. She laughed at it. She was always happy, full of the joy of spirit that comes with the relief of great fear.

Our teachers—the near-death experiencers—are pointing the way to this new way of being human and this new kind of mankind—free of belief, past all the confusions of mythology, and yet more spiritually alive than ever before.

The awe that has distanced us from heaven for so many generations is imploding. Their god—Anne's god—isn't on any sort of a throne. Far from it. This new god is so much like us that he she and it might be us.

Man in god. Man as god.

Anne would say these things and she would laugh and I would laugh too, and I would wonder, 'what has my wife become?'

She had become herself, truly, a human being in full wakefulness, spreading her message as best she could in a sleeping world.

CHAPTER 5

Laughter and Shadows

ANNE MIGHT NEVER HAVE CALLED herself a teacher, but I had recognized early on what she had to offer, and I was certainly using her as one. As to being a master, she scorned that sort of label. “Anybody who calls themselves a master isn’t one and when a real master is called that, he laughs.”

Laughter. She would often repeat a quote of Anne Lamott’s, “If you want to make god laugh, tell her your plans.” She used to say, “You know what the word in John was, the logos? Laughter. That was the word of power that started it all.” The Gospel of John begins with the sentence, “In the beginning was the word and the word was with God, and the word was God.”

If you asked her if she knew god, she would laugh, but that laughter had something in it that was great with wisdom.

She would say, “that’s a crazy question.” Then she’d look at me and her eyes would say, “no it’s not.”

I could have conversations with her like this: Me: “Who is god?”

Anne: “We are.”

Me: “Then who are we?”

She would smile, looking inward, and say no more.

A form of meditation called the sensing exercise centers my spiritual life. To do it, you sit quietly and place your attention on your body, first one limb and then another, then your torso and head, until you are no longer in your mind, but concentrating your attention on your body.

Anne did not do it much, neither before nor after her NDE. This is because to her everything was always new, all the time. She used to say that she noticed everything, and this was quite true. Although on the surface she seemed an entirely normal person, there was also within my wife the powerful, loving stillness I had seen when I first met her. It was this stillness—this part of her—that saw so much.

She had always been tolerant of the posturing and egotism of others—including this one. After her NDE, this changed. She became much more urgent. Previously, she’d hoped you would see. Now she couldn’t contain herself. You had to see that you had a soul and that it mattered terribly.

She would lead you into an instance of self-revelation that could be devastating. Then she’d say sweetly, “Oh, dear, did I say the wrong thing?”

Hardly.

She did not suffer fools, and the temper of the early years became a tool she used to draw people into seeing themselves. She was the fiercest gentle person I ever knew.

She had understood identification from our years in the Work but after the NDE she was really focused on it. I’m not sure that she was consciously aware of this, but I learned a long time ago not to question my wife’s level of awareness about anything. I don’t know what she did out of deep, unconscious knowledge and what was done from conscious awareness.

I do know, however, why a person with awareness of the needs of the soul and the consequences of living in ego, would be so intent on helping people learn to use their personalities as tools of their souls rather letting their

than letting their personalities use them.

I was sitting reading one afternoon when a celebrity who had died the day before appeared in my mind's eye. He said, "What am I supposed to do now?"

I didn't know him personally at all. I knew his work, of course, some of which had been quite good. I knew that he had been involved in charitable work, also.

He was wandering in this level of reality, and I knew from experience that this was because he couldn't see any other place to go. For souls in that state, the physical world is as enclosing as it is for us. What you have to do is turn them around. It's hard. It often doesn't work. But when such people show up, I always try.

I said that there was a light behind him. I could see it there, though it was very dim. He said, "Who are you?" I told him my name and he replied, "You're some nobody. I expected to be met by Mother Theresa or somebody like that."

I laughed and replied, "She's not here."

He went away and I lost contact with him for a time. When I saw him again, he had realized that he had been extremely cruel in his life and was literally twisted with regret.

He will wander in this level maybe for a long time, slowly shedding his big ego and the bad memories that go with it. Once he is just a tiny fragment, he'll probably drift into a womb and return to this world, more or less at random.

Anne didn't want anybody to suffer that. In fact, she didn't want anybody to suffer at all. Thus her willingness to infuriate people in the interest of helping them see their arrogance and hopefully escape it.

Much of my inner work with the visitors has from the beginning involved gaining control over ego, and Anne came back from her NDE with a master's ability to work with it.

Even before that, she'd been aware of how it can get in the way of inner growth, and was always eager to challenge it. She had seen how the visitors worked to help me get mine under control.

Once I was making a speech before a large audience. She sat in the front row. Normally, she would listen to every word and afterward, her eyes filled with admiration, compliment me on how well I had done. But this time, just as I started to speak, she stood up and walked out on me. She went marching off down the aisle with every eye on her.

I was appalled. But what could I do? I had to give my speech. As I did so, I saw my ego with more clarity than I ever had before in my life. Standing on that podium, I also found myself standing outside of my own personality, watching it as it postured and performed for the audience.

Afterward, I asked her why she'd done what she did. She said, "Oh, I'd heard it all before." Then her eyes met mine with such frankness, such love and such deep humor that all I could do was thank her.

I asked her, "How did it feel to walk out like that?" She laughed.

If she saw in you a weakness that was undermining your soul's health, she was going to try to help you. She wanted us to see with new eyes, and true eyes. That was her goal, often stated.

One would be bragging away, lost in self-regard, when she would make some small, seemingly offhand comment, or just glance at you in a certain way, that would make you realize that you were completely full of yourself. In an instant, she could set you on a new and better path, one that was oriented toward living a more loving and selfless life, and a more humble one. And your vision would expand.

The understanding of God that she'd brought back with her was at once subtle and simple—and yet also light and full of fun.

A particularly important example of what I mean took place in 2012—it was, in fact, the first of the "license plate communications" that would later happen to me and others after her death.

I was in meditation one afternoon when I saw in my mind's eye a dog I had known in my youth. He was called Quagmire because he was always a mess. His was a troubled family and he lived a hard life. But he was always happy. No matter how difficult things were for him, you could always count on Quag to bring a sloppy lick of joy up to your face.

I had not thought of this dog at all since I was a teenager.

When I told Anne about it, she said, "Dog-God. You just had a visit from God."

God? Was she kidding? God was a distant, immeasurable and awe-inspiring presence. I said, "I'd need some sort of a sign if I was going to believe that."

Half an hour later we left on our afternoon walk. And there, parked at the curb in front of our house was a car with the vanity plate QGMIRE. Quagmire. A coincidence, but also too much of one. She said something along the lines of, "He's ready to be your dog even though it's his universe. So lighten up and let it happen."

I thought about all the lessons I had received from the visitors about humility, and decided to just accept what had happened, and let Anne be my guide.

My totem animal, as a shaman might call Quag, became the dog—in fact, this particular dog, shaggy, ordinary and joyous even in his suffering.

In our many future conversations about the sacred, Anne always referred not to god but to dog. "Dog's going to be disappointed, Whitley, if you do such and such." Or, "Ask Dog. Dog will help you."

Dog did, and does. Dog's here and he's not going anywhere. But then again, how can he? He's everywhere. I cannot count the number of times since that day that dogs have showed up in my mind's eye while meditating, or in my dreams or my life.

In childhood, I had a pet dog called Candy, a little rat terrier. We were inseparable. When, during Anne's first visit to my childhood home, she

peeked in on me while I was sleeping, she saw Candy's head on the pillow beside mine. Afterward, she would often laugh and say, "I discovered that I had a rival!"

Sometime in 2008, I was asleep beside Anne in bed and found myself stroking Candy just as I had when I was a boy. I thought to myself, 'I wonder how old Candy is now?' We'd gotten her in 1953 when I was eight, so—I calculated in my head—and I sat straight up in bed. Candy would be nearly sixty.

Then I realized that it was just a very vivid dream.

Next morning, Anne said, "It wasn't a dream." Then she laughed. "She's back, darn it!"

Some weeks later, Candy appeared again. This time, she brought a strange vision with her. It was of a dark, narrow road bordered on both sides by bushes. Anne and I are riding in a car. Ahead in the distance, the lights of another vehicle appear. I think to myself, 'if we don't turn around right now, we'll die on this road.'

Anne was a skilled interpreter of dreams. She always had been, since long before her NDE. "That was a warning, Whitley. If you're ever on a road like that, turn around."

A few months later we were in England at a conference in the town of Devises. A friend invited us to visit Stonehenge for a special evening tour, so we rented a car. Driving on the left was always a struggle for me, but I seemed to be managing. Soon we were on a narrow road bordered by bushes. It was nearly dark.

Anne said, "Whitley?"

"I'm okay," I snapped. But I was hardly that. I could barely keep the car on the road.

Ahead of us lights appeared, just as in the "dream." "Turn around now," Anne said quietly.

The lights raced toward us.

I realized that I didn't have mine on. As I fumbled to find the switch, the car came closer and closer. I pulled onto the verge, smashing into the shrubs.

The car raced past us. I doubt if the driver ever saw us. Anne said, "Candy just saved our lives."

I took the car straight back to the rental station. We never went to Stonehenge.

As I look back, I find that my life before Anne was that of a wanderer. I had been lost in a kind of labyrinth. I wanted to be a writer, but I didn't know how to do it. But then, in the spring of 1969, there she was, this time as Ariadne with her thread in hand, ready to guide me out of my confusion.

Our powerful mutual attraction caused us to decide to combine our meager resources. We weren't married and couldn't afford to get married. We had to first save up that two hundred dollars, and with my salary of \$125 a week and rent of \$125 a month and the fact that she kept getting fired, that took a while.

She was living in a miserable little room in Queens, me in a tiny apartment in Manhattan. But it was at least in Manhattan, so she moved in with me. The place was a shambles, furnished with a seedy couch and a bed loaned to me by the superintendent of the building. When Anne first came in, she took a look around and said, "It has possibilities," and she didn't only mean the apartment.

She arrived with a single small suitcase and a cardboard box, which together contained all her belongings. It took us ten minutes to move her in and we started our life together.

We didn't have money for books but both loved to read. So we pooled our money and shared them. We also started library memberships. At first, she just read mysteries. But when she discovered that I wanted to be a writer and was working on a novel in the evenings after coming home from my advertising job, she turned to more serious fiction.

My ambition at once became a major focus of Anne's life. She read every

page I wrote, and proved to be an insightful editor and a wonderful source of ideas. It seemed natural for her to be a muse. She was marvelous at it.

Nevertheless, I got rejection after rejection. In fact, my first readers who were members of the public came to me because of a rejection. I'd sent a novel to an agent, who had responded that she'd like to see more of my work. So I sent her my latest opus, a book called Catherine's Bounty. For weeks, I heard nothing. Then one Saturday morning there was a knock at the door. It was an off-duty postman. He had my manuscript tied up in a neat bundle. He said that he'd found it in the bottom of a mailbox with no postage on it, not even an envelope around it, just a heap of pages. The agent had simply tossed it in, as if into the garbage. As the postman gathered it up, he found my name and address on the title page. He said, "It's really good. My wife and I both read it and we loved it."

Anne not only completed her BA, she got a masters in education from the prestigious Bank Street College of Education and taught grade school for some years. She did it in an entirely unique way, getting with her kids on a one-to-one basis, coming to them on their own terms. And they loved her for it. She helped them fill their school hallways with murals. In our neighborhood she was known as "the paint lady" because she strolled around covered with paint. She thought nothing of things like that. She wasn't afraid to simply be herself. It never occurred to her to live in any other way.

As the years went on, I came to understand and appreciate her ways more and more. She lived out of herself as she was. She contrived nothing, she concealed nothing. When you knew my wife, you knew her truth.

Over time, our love deepened more and more. One without the other came to seem inconceivable.

This happy life was disrupted and complicated by the Communion experience and its aftermath, but the happiness of just being together remained the currency of our relationship. Our friends used to joke that we were more like a single person with two bodies than a couple.

We lived in love, in the false eternity of the years. We were poor, we were rich, we were poor again. Our son grew up and thrived. No matter what happened in our lives, at the end of the day we could lie in one another's arms in the sweet dark.

And then there came, seemingly out of nowhere, the last shadow. Until the moment it happened, we had not the slightest idea that a final night was falling on our life.

By 2013, Anne was completely recovered from her stroke. Her illness was long in the past. It was easy to forget that it had even happened.

But then, in the wee hours of a morning in February of 2013, the terror began again. Anne had been suffering from a heavy cold and had been taking cough medicine at night so she could sleep. One night when she had finally managed to fall asleep, I was awakened by a strange movement in the bed, a sort of steady shuddering.

I turned on the light to find her in a full seizure. It had come completely out of the blue. For a moment, I watched her. I called to her. There was no response. She was blacked out, her eyes rolled back in her head, her mouth working, her whole body trembling.

I at once dialed 911 and EMS was there within minutes. By then the seizure had ended but she was still unconscious. I watched as she was prepared for transport to the hospital. On the way to the ambulance, she came to. She had no idea who she was or who I was. Her entire life appeared to have been erased.

I found myself once again following an ambulance with my beloved in it. Once again, there came a night of agonized waiting.

She was taken into radiology for evaluation. I feared the worst. I thought she had a brain tumor. When she came back, she had pretty much recovered her faculties. She had returned to normal.

I waited, sick with fear, for the MRI report to come back. When it did, I was amazed that it said that her brain was normal. The ER doctor thought

perhaps the seizure had been caused by a reaction to the cold medicine.

Even though, once back home, she seemed to return to normal, I still did not believe the report. I wished I could see the actual MRI, but at the time I didn't know how to obtain it from the hospital. Given her history of so many CT scans during her illness, I knew perfectly well that she could have cancer. But there was also another reason that I was concerned about cancer, and in fact, any unusual illness.

Back in the early nineties in our old cabin, I woke up one night to see a purple glow coming from the living room. I hurried along the corridor to see what was going on downstairs and observed a purple ball of light below. It was hanging over the couch. Our older cat, a Burmese called Sadie, was creeping toward it.

I thought, 'if I could get a picture, that would really be something,' and raced back down the corridor to grab the camera that I kept at my bedside. Before I could return, a purple flash filled the house and darkness returned. I went downstairs to find both cats curled up on the floor sound asleep. They could not be roused.

The next morning poor Sadie came crawling along the hallway yowling. We could see purple-pink tumors in both of her eyes. They had appeared overnight. We took her to the vet, who diagnosed cancer. There was no choice but to put our dear old cat lady down.

Many years later I read in a declassified British Ministry of Defense document called the "Condign Report" that there was a type of ionizing radiation associated with "unknown plasmas" that causes trouble for people who are exposed to it.

I think that it's pretty clear that the plasma in the living room is what gave Sadie cancer. So, had it also affected Anne? She had been sleeping at the far end of the house, but there is no way to know. Personally, I think it more likely that she was a victim of too many CT scans during her struggle with the brain bleed. But at least she got ten good years during which she saw her

son married and witnessed the birth of both of her grandkids.

I'd had a hard time believing the MRI report, but could not get an early appointment with anyone at UCLA who could take a look at the actual scan. So we went to a neurologist associated with St. John's, another local hospital. I told him I was worried that the report was wrong and I wanted him to look at the MRI. He agreed to do this, but UCLA proved difficult to deal with. They would not release the scan, only the report.

When new seizures took place in April, I didn't call EMS. I had made it my business to learn about the type of seizure she was having and kept her airway clear when they took place.

I lay beside her with my arm around her, knowing that our path had just taken a very dangerous turn. In the morning, I told her of the seizures, but not of the probability that they announced a brain tumor, not yet.

I phoned the neurologist and asked him again to get the scan, to warn UCLA that the patient was once again seizing and he needed that scan at once.

The next morning, I received a truly terrible phone call. It was the neurologist. He had the scan and it showed what he described as an "angry" brain tumor. He told us to get to the UCLA ER at once because they were the only ones nearby with the capability of dealing with such an extensive and aggressive brain cancer.

On the way over, Anne was calm and composed. For my part, I was absolutely terrified. I was losing her. I felt it. My precious lover and dearest friend, my muse, my editor, my teacher, my dear, brilliant angel and the keeper of my heart— how could I hope to save her from an angry brain tumor?

The surgery was scheduled for a few days hence.

Those days of waiting were so sweet, a dark and strangely lovely time in our lives. I cannot express how the minutes felt, each so precious, little jewels falling away forever, one by one.

At night I lay looking at her. I kissed her sleeping face again and again. I hardly slept.

She, by contrast, was completely at peace, and through it all—the surgery, the struggle that followed—that peace never left her.

She died knowing that she had done two brilliant things, one a triumph of the mind, the other one of the heart. Her wonderful, supple mind had understood the close encounter experience and that lovely heart had led to the fulfillment of her ambition to start a family. “I think we’re good, Whitley.

I think we should leave as many Striebers in the world as we can.”

She did all she could.

She didn’t say it at first, but she was ready to go from the beginning. Neither of us wanted this couple to end, but she was accepting of her fate.

I was not. I struggled against it, trying nutrition, cannabis, all sorts of alternative cures. I explored all the different clinical trials, but she wasn’t eligible for any of the promising ones.

She accepted my desperate hope that she would survive and took radiotherapy and the anti-cancer drug Temodar. She went on a cannabis regimen that included a daily dose of cannabidiol, or CBD.

The result of all this was that the tumor stopped. But then, about a year into our struggle, the strokes started, and once again she approached the threshold of life.

Her passing was the most fearless and noble human act that I personally have ever witnessed. Every moment of every one of her last days—of all her days—is engraved on my heart as an inspiration to approach my own death in such peace and with such courage.

I sensed when she left that a great soul had ascended. You could feel it in the room, in the very air, a beautiful and fine event—not only a tragedy but also a triumph of nature.

She says, “Don’t forget to say that what looks like death to you looks like birth to us. The same second that you lost me, I found a new world.”

Now two years after her passing, as I write I look up to a photograph of her. I am still her husband and not just in memory and dream. We are not the only married couple for whom “till death do us part” has ceased to have meaning. Very quietly, hidden away from the scorn and disbelief of the people who cling to the old, dying reality, a new one is being born, and rich, fulfilling relationships between the living and what we call the dead are at the center of it.

People like Anne are forging this new mankind. It is coming out of a more clear understanding of what life and death really are. Our scientists and intellectuals, for the most part committed to the old secular ideology and the cultural empowerment it affords them, disdain the very idea that the dead may persist.

Anne says, “We’re not dead. That must be somebody else.” They are going to bring their revolution anyway, no matter what we are told to believe by the priests of mind and laboratory. They will not be stopped because what they are bringing is true, and they know it, and we need it and our need is urgent, and they know that, too.

Since its first great discoveries in the 15th and 16th centuries, science has been concentrated on what can be detected and measured, and that means the physical world, everything from minerals to microwaves and beyond. While it calls consciousness “the hard problem,” it also expects to find its seat in the brain, and its fate in the mortality of the body.

Every time I ask her where she is, Anne says “I’m here.” If I press her, she says, “Right here!”

So “here” must include more than I can see, hear, and taste and touch. But what would that be? This world is full of radio waves that we can’t perceive, light in invisible frequencies, sounds that are too low or high for our ears to detect, smells that we can’t perceive—in fact, the world is full of energies that elude the human senses.

All of the ones I have named, however, can be detected by scientific

instruments. Anne is saying right now, this moment, that she's here. But I don't know of any instrument that can detect her.

My mind can hear her. Often, she says things so spontaneous and original that it's difficult for me to believe that I could have imagined them. But even those of us who do have contact with the nonphysical cannot provide material proof, not even to ourselves. What we generally have are signs such as the ones I've been reporting in these pages, sometimes quite startling, usually rather cryptic, and an inner voice of the loved one that might or might not originate in our own minds.

But, even as I am writing this, something has happened— or rather, reached a climax, and it is startling to me and deeply freeing and has changed my situation in fundamental ways.

Incredibly, Anne has managed to provide what for me on a personal level must be final proof. She has done something that at once goes to the heart of our relationship and also explores the deepest meaning of death, dying and living on. I will devote the final chapter of this book to it, but know that, from the time it happened just a few days ago, my position has changed. I now feel certain that Anne still exists, and with her I must also assume the legions of the dead, all still very real, but in ways that we have scarcely even begun to understand.

And yet, my innate skepticism persists with its questions. If they are as real as they now seem to me to be, then why can't they tell us what the president is doing, what planets harbor alien species, when we'll die?

Anne responds , “you see the world through a slit.”

For a moment, the words sort of stun me. But then I think, ‘yes, that's exactly right.’

But why would we be doing that? It would seem to be a tremendous disadvantage.

“Can we see more?”

“Some psychics already do, but it needs to be something everybody

does.”

“Because of the way things are changing?”

“Exactly. It’s the first thing you find out when you come here. Then you realize that people can’t hear you no matter how loud you shout. It’s because we’re less dense and faster. We can see you and hear you, but you can’t perceive us.”

“I sure perceive you.”

“How well, though? Right now I’m kissing you but you can’t feel it.”

How I wish I could!

CHAPTER 6

Journey of Souls

SOME OF OUR website readers have reported contacts with Anne, and one of those reports might shed some light on the question of why we can't perceive those on the other side more clearly and fully.

This reader wrote that he had heard Anne say that she was returning to Earth by “going from blue to unguent blue.” He was not clear about what this meant, but I saw it as another moment of valuable teaching, and it relates to why we can't interact with nonphysical being more coherently and reliably.

Anne was saying that she was in the higher vibration of light blue but moving to the darker, denser vibration of our world, explaining how the free souls move to contact those of us who are enclosed in physical bodies. The use of the word “unguent” is the key here. First, it means an ointment, that is to say, something more dense, as this world is more dense than the one above it. Also, though, it comes from Latin word, “to anoint,” with its implication “to make sacred.” It implies not only a movement from a lighter density to a heavier one, but also a touching of a kind that confers holiness—a healing touch from a higher world.

A kiss of objective love, such as I just received but could not feel.

To understand more deeply, we need to discuss the “why” of physical life. Why are we dense in the first place? Wouldn't we be better off if there was no physical side of our species at all? To somebody like Anne, it must be like scuba diving or dropping down into the abyssal deep in a submersible. Maybe it's even more difficult than that.

Unless physical life is some sort of prison, there can be only one logical reason for our being in such a condition: we need it like this. But why would we? I don't want to stumble through life as I do. I want to know my fate. I want to know how to avoid danger and tragedy.

Or do I?

If I knew what they dead know, my life would no longer hold the surprises that it does. A person in that state would never need courage or to appeal to conscience. Discovery would be impossible, revelation irrelevant.

The richness of surprise that fills the lives of those of us “looking through a slit” seems to me to be a treasure. Everything I have learned about myself has come from discoveries that depended on me knowing only enough of future, the past and the world around me to live in a continual state of surprise.

This limiting of vision is what gives life its impact. It causes us to act spontaneously, and therefore to look into the reasons for our behaviors and come to understand ourselves.

It is, in fact, the reason we are in physical form. Take it away, and one has no further reason to live as we do, blind to the future. So it's just as Anne said—we are indeed “intentionally ignoring” the nonphysical side of our species. In fact, I would assume that we're hard-wired to do it. We are like horses wearing blinders. We have no way of taking them off, for if we did, we would be overwhelmed with information about our true pasts and planned futures that would make our lives meaningless.

“Could you tell me things about the future that would disrupt my ability

to learn from life?”

“I did at first. When I saw the world in such a new way, I just poured it out to you. I was so excited, it was incredible to see and know.”

“Do you see everything—past, future?”

“We see what we are able. The more knowledge you bring, the more you can see. If they lived empty lives, people can be very minimal—just vague memories of themselves.”

“You had a huge store of knowledge.” “I did. I do.”

“So tell me what’s in store for me tomorrow?” She does not reply.

“Well?”

“I did. Very clearly and in detail.” “I didn’t hear a thing.”

“No.”

“Could I have?”

“That’s what we have to work on—widening and sharpening vision.”

“Can you tell the future, then? Be a guide?”

“We can see what comes into focus earlier than you can, but nothing can be communicated that interrupts fate. I can tell you, but you won’t hear me.”

“Spirit guides?”

“Wisdom, yes. The future, no.”

“You implied that your knowledge expanded when you died.”

“It did. A lot. What you get is the ability to contemplate what you did in life. In the physical, we gather self knowledge. In the nonphysical, we seek to understand it.”

“But if there’s reincarnation, we must have already done this before.”

“We often do it many times. Lives are brief and bodies are transitory, but souls are enormous, complex entities, each of them on a journey toward ecstasy that it would never, ever abandon. Something that big and nuanced can’t finish its work in just a single lifetime. Most of us spend time between lives contemplating what we have done and planning our next journey. Not everybody, though. Some return right away, those who die in war, for

example.”

I recall the story of James Leininger who, as a toddler, recounted obscure details of a life that ended violently when he was a fighter pilot in World War II.

Incredibly, all the information he gave his parents turned out to be true even though it involved many incidents, ships and people who were too obscure to have entered history. He had the extraordinary experience of meeting in this life people he had known in his last one. The whole story is recorded in the book *Soul Survivor*.

He didn't ascend into a higher state or enter the all-encompassing light of objective love. Instead, he seems to have returned after a short time to this world, eager to complete the task he had set himself before his untimely death.

One reads in the near-death literature about that light that seems to absorb the soul into its loving and all-encompassing peace, but there must be many other states. Anne is still an intact, coherent being. In fact, preparing oneself to enter the state of coherence that she is in is a spiritual discipline that I practice every day of my life. That's one of the things the exercise I do is about.

I think that Anne came into life already in a state of soul coherence. Some ascend as Anne has, others enter the light, others linger nearby and get reborn. Maybe some even go to physical realities or other worlds and species entirely. Some also seem to descend into densities greater than this one.

I ask her, “How can we proceed here? What do I need to say to help people gain perspective about the aims of their own lives? And me too, for that matter? What do I need to know to improve the usefulness of my life experience to my soul?” “Let's do this stealthily. I'm not going to dialog with you.

Instead, I'm going to feed you ideas. They'll seem spontaneous, but they'll be coming from me.”

“Is that common?”

“Yes, and it’s not usually a good thing. It’s called possession.”

“I’d love to be possessed by you!” “You already are.”

I quiet my thoughts. I listen.

I begin to find myself thinking about channeling, specifically about our experiences with a practitioner, Australian Glennys MacKay. She had channeled for us in such a way that it had proved to both of us that it had to be real.

After we met her and heard some of her claims, Anne decided to test her. She asked us to send her a lock of hair and she would ‘read’ it.

We were at our hairdressers a week or so later and it occurred to Anne to have him cut off a lock of his own hair to use in the experiment. There was no way in the world that Glennys could have guessed anything about this man. She had never met him or even heard of him and had no idea that it was his hair that arrived in an envelope from Anne a short time later.

Glennys reported that she had heard a woman’s voice calling “Howie, Howie.” As the hairdresser’s name was Jay, we both assumed that she had failed.

However, when Anne told Jay what had happened, he was aghast. He said, “Anne, my real name is Howard. My dead sister always called me Howie.”

When we heard this, we just fell silent. Anne said, “The dead call and call, and we don’t hear.” How ironic that she’s doing that very thing right now and I’m the one she’s calling. But there is a difference. I listen. I try hard to hear.

This was a very clean moment of mediumship. Glennys could not have plucked that information from Anne’s mind. It wasn’t there, not any of it. She didn’t know Jay and we had no idea his real name was Howard. Just as what happened with Dr. Schwartz’s medium and her hit on the Greek fisherman’s hat, there is no avenue of information except contact between the medium

and the dead person.

This does not mean that we understand what the dead are. Far from it. But we do know this: in some way, they are there. They must be.

A year later, Glennys and her husband arrived in Los Angeles on a trans-Pacific cruise. We were riding to a restaurant together when I asked Glennys, “Do you see the dead all the time?”

“Not all the time, but somebody dead is here right now.

With you.”

I thought, ‘ah, another chance to test.’ I said, “Do tell.” “He’s wearing a tuxedo and playing a piano. No, now he’s holding up a violin.” She paused. “He says to tell you his name is Milton.”

For an instant, I was blank. Then I remembered and when

I did I almost crashed the car. I had not thought of Milton A. Ryan, Jr. in at least thirty years. He had been the older brother of a boyhood friend, Mike Ryan, whose story figures in Ed Conroy’s book about me, *Report on Communion*. He had not been a great part of my life, except for one thing. When he practiced the Beethoven Violin Concerto in his room and the notes had floated out across the neighborhood. His playing gave me a great gift, my lifelong love of classical music.

I had not been thinking of Mitty. In fact, I hadn’t thought of him in all that time, not since his death in the early seventies. But here he was in the car with us, and she hadn’t simply described him, she had given me his precise name.

This happened. Both events happened. On some level, I think that they were orchestrated to compel even resolute skeptics like the two of us to face the fact that channeling is real and the dead are still present and conscious.

I’m glad it happened, because now when I channel Anne I feel a sense of confidence I would not otherwise have.

Given that we have been exploring contact with the world of the dead in the west now for over two hundred years, it amazes me that so many of us are

so resistant to this material, me included! It's as if we dare not embrace this reality, if only because we so badly want it to be true and so fear that it isn't.

Channeling probably started in the Scottish Highlands where "second sight" was a popular belief. Second sight practitioners, it was believed, could read the thoughts of others.

The first one to become well known was an 11 year old girl called Janet Douglas who, in the 1670s, began demonstrating her skills by revealing objects hidden by supposed witches and relieving people of the curses attached to them. She became a great sensation and was eventually sent before magistrates in Edinburgh on suspicion of being herself a witch. Shortly thereafter, she disappears from history, having apparently—and wisely—fled Scotland for the West Indies. The penalty for witchcraft in that time and place was to be burned alive.

Second sight remains very much part of the Scottish experience, with more than 10% of the overall population reporting it, primarily visions of future deaths. Most often this involves loved ones and friends, less often strangers. While this is not contact with the dead, it is related to the spiritualist movement that would develop in the 19th Century. But it is an event—or rather, the appearance of an individual

—in the late 18th Century that started the evolution of the modern concept of contact with the dead.

Swedish prophet and seer Emmanuel Swedenborg produced the first modern text specifically claiming to have been derived from contact with the dead and journeys into their reality. This was *Heaven and Hell*, published in 1758. In 1744, he'd had a spiritual awakening and thereafter sought to reform Christianity as essentially a spiritualist movement centered around contact between the living and the dead.

It was in the mid nineteenth century that channeling began to reach public attention. By that time, the idea of communication with the dead was spreading, and three sisters, Margaret, Kate and Leah Fox in upstate New

York began making claims that they could effect it by a process that was called “spirit rapping,” which is first mentioned in the early Scottish literature. As they were children when they began playing at this, it seems doubtful that they read any such accounts. Of course, it may have been discussed in the household.

The story of the sisters and their rapping spirits soon spread far and wide, and within a few years they were not only famous, but making a good living.

In the nineteenth century, with lifespans shorter and death a constant visitor in every household, the movement spread and became extremely popular. Soon, there was a lot of money involved and so also a lot of fraud. In fact, in 1888 one of the sisters, Margaret Fox, told how as children they had created the rapping noises to fool their mother. They had used an apple tied to a string, dropping it on their bedroom floor at night. At first, they called the spirit they claimed to be in contact with “Old Splitfoot,” but then later claimed it was a peddler called Charles Rosna, who had been murdered and whose body was buried in the cellar of their childhood home.

The Fox Sisters were dismissed as a fraud, but in 1904 a skeleton was indeed found buried in concrete in the cellar of the house, just as they had predicted.

The skeleton was very old, so it’s unlikely that it was buried during the sisters’ lifetime. Was it a household legend, and was that what inspired them to play their trick on their mother, or was the spirit of Charles Rosna somehow present and restless because of whatever befell him?

The way apparent fraud, even admitted fraud, works as part of this experience is complex. For example, right now in my life, I frequently hear unexplained rappings. I’ve been experiencing them for years, and they will often respond to simple questions. I don’t make a practice of soliciting these rappings, but they do show up. In fact, one of the longest and most complex experiences I have had started every night for two years with seven loud thuds on the roof of my meditation room in the cabin that Anne and I owned

in upstate New York. This involved an extensive contact with a group of people who claimed to be from between lives. It was no hoax and no misapprehension on my part, as I have reported in more detail in Solving the Communion Enigma.

What happened was that seven beings showed up at the cabin one night, dropping noisily onto the roof of the room where I meditated. For a moment, I wondered if opossums or raccoons were involved, but after the thuds there wasn't another sound.

I soon sensed their presence in the room. Without being able to see anybody in what now seemed a room full of people, I certainly couldn't meditate. I asked them to show themselves, but got no reaction. So I said that I'd have to see them if I was going to meditate with them and left the room.

Late that night, I was awakened to find a man sitting on the foot of our bed. I was terrified until I realized that he was no ordinary person. First, he was quite short. Second, he was wearing a tunic, not normal clothes.

I slid down to the foot of the bed. He was as slumped and still as a rag doll.

I looked right at him from a few feet away, right into his darkly shadowed eyes. Then I took his hand in mine. It was as light as that of a child, a little cooler than mine but not cold.

I held his hand and smelled his skin, and he seemed entirely human.

When I dropped his hand, he seemed to shudder as if shocked, then disappeared before my eyes.

The next night they came again. We meditated at eleven, then they woke me up at three and again at six. Each time, I would go down to the meditation room and sit and go deep. Their presence intensified my experience of the sensing exercise, and I began to feel as I do now, as if my sensation extended beyond the borders of my physical body and into the stuff of my soul.

We meditated together for months, night after night. It was among the most powerful and wonderful experiences of my life. During this time also,

seven glowing plasmas were seen in our woods by a number of witnesses.

I felt as if we had raised our little cabin and the land around it to the edge of another reality. Truly, we were living at the edge of heaven. But our finances were also suffering and in October of that year we were faced with a choice: keep paying our mortgage and starve, or give up our beloved home.

Obviously, we had to go. But still they came, night after night, right up until the last night. I told them that I would never be here again, and also that I knew that I had never seen what they really looked like. I knew it wasn't just the plasmas or the physical form. I knew in myself that there was more.

On the last night, I asked to see the truth. I waited. Nothing happened. So I stood up and said goodbye and left that precious room forever.

I was lying in bed when I saw a glow in the front yard, along the side of the house. I rushed to the window. Slowly, majestically, a small star floated out the window of the meditation room and into the middle of the yard. Its rays were part of its life and as they touched my skin with gentle pricks, I felt the very essence of another human being. There were golden shapes in among the rays, and I knew that these were the emblems of past lives lived to such perfection that their memories had entered eternity.

That was a human being. It is what every one of us can become. All it takes is a willingness to live in love, to practice compassion and to be humble before all we meet. The burdens of anger, desire, regret and all the others will fall away, and there will be lightness of being, and ascension into ecstasy.

So we have the following: nightly rappings, a seemingly physical being, seven orbs of light and a star. I observed these things, and carefully. I am not mistaken about them. Anne came in one night and heard the thuds, but was not comfortable staying in the room to meditate with people she couldn't see.

Jeff Kripal comments in our book *Super Natural*, "I have studied religion for three decades now. I don't run into many new ideas. But this notion is shockingly new: the soul as a plasma like energy that can superpower our imaginal capacities and so generate the movies of visionary experience."

As I do, Jeff sees the experience as something unfolding within me. But also, I feel sure, it is outside of my body entirely, in the objective, real world. The beings were able to take many different forms—in fact, to control both their form and their density. When one of them became physical, I looked straight at him from a couple of feet away. I took his hand in mine and felt its solidity. But at the same time there was something subtly different about him. He was a material being, but it was a lighter material. I wouldn't think he had organs or blood.

Anne says it very well: “I’m a dream, but I’m also me.”

Just as recent studies suggest that second sight in Scotland is something inherited genetically, I seem to have inherited my own tendency toward spirit contact, in my case probably from my mother’s side of the family. One of my maternal great-grandmothers could generate table rappings and even cause heavy tables to hop and crack loudly. I sat in some of her séances and there was no fraud involved. As a skeptical teenager, I certainly looked for it, peering under the table and actually watching her feet and legs as the rappings came rattling out of the tabletop. She did not move.

So I’m not prepared to dismiss mediumistic rappings as simple fraud. Rapping may or may not involve contact with the dead, but it isn’t all hoaxed. What happened at the cabin was also no hoax and was, in fact, one of the most intimate experiences of contact with the dead that I think has ever been recorded.

Unlike the ectoplasm that came out of the mouths of 19th Century mediums and was generally regurgitated cheesecloth and other substances, the plasmic being who sat on the foot of my bed was entirely real. He was not a mental construction but a physical entity about four feet tall, sitting there slumped against the bed’s footboard in a tunic. When I smelled his hand, the skin was ripe. This man was not only real, he was not somebody who bathed.

I looked right at him. There was the unmistakable sense of a physical presence. But when I dropped his hand, he disappeared in a wink. I think this

happened because it was taking all the attention he possessed to maintain his memory of his body as a physical presence. When I suddenly let go of the hand, the need to simulate the movement was too much—he could not maintain balance anymore and, as it were, fell up into his normal—and higher—vibration.

I know that these are extremely unusual experiences, but I am describing them as accurately as I am able. They happened. It's that simple. And to me they mean that the dead are still with us and even that they can, under certain circumstances and perhaps needing specialized skills, manifest a physical presence.

The great-grandmother who could move tables was a Swedenborgian. She used to say to me, "After I die, listen to the wind in the trees. That's how I'll speak to you." She was a noted school teacher in San Antonio with an excellent reputation for taking a very empirical approach in her professional work. But in private she explored other domains with panache.

She lived to the age of 106, and after she died, I listened for her when the wind sighed in the night trees, but never heard her promised whispers, or perhaps I tuned them out.

In all of our past efforts to reconnect with our dead and in all cultures, there is a missing element which is probably essential to real success. The dead do not need to be called by any special techniques. The essential element is not skill, it's love—that is to say, the creative power of objective love. This love is a principle, I think, of a higher physics than that of the material world. Just as certainly as gravity, which holds the material world together, it is a fundamental attractor. Learning to live in this state of objective love—wanting the universe, the world and all life to be—is crucial to connecting with one's own dead. They don't need to be given sacrifice or worshiped, but rather to be enjoyed for their lives and presence, just as they were when in the physical state.

My contact with the dead began at my grandmother's funeral in 1976.

Although she was the daughter of a Swedenborgian, in her life, I never heard her make serious reference to spiritualism. But, like many of us in the family, she had seen ghosts and participated in her mother's séances, which entertained three generations of our family.

There was a large congregation, and her coffin rested in the aisle of the church. I was in a pew just behind it when, to my surprise, I saw six large, softly glowing balls of light come sliding gracefully in through the ceiling and array themselves around the coffin.

They appeared entirely real to me, but I was also aware that nobody else was reacting to them. I thought, 'they're souls.' Then I knew that they were there because my granny did not believe that she was dead. She had been determined to live as long as her mother, and was still in her body in the coffin. They were trying to get her to come out.

I wanted to help, but I couldn't see how. After a while, the six souls soared gracefully upward and were gone. They did not float. They moved with a precision that was startling to see, it was so perfect and so accurate.

This was the beginning of what has become a lifetime of contact with the dead. In this particular case, it went on for years. My grandmother was not finally freed from the bonds of this life until the late 1980s.

Right after she died, I saw her in my mind's eye sitting in a room in her house telling a group of patient listeners about all the wonderful homes she had created. She had exquisite taste and had, in fact, created some lovely places. I sensed, though, that she was still entirely unaware that she was dead.

A couple of years later, I saw her again. This time, she was standing before a lovely and elaborate house. I called to her, but she would not turn around. Then, at least ten years after that, I saw her again. Now, only the front of the house remained, just the part that she was staring at, red brick with roses climbing up the walls. Again, I called to her. This time, she turned. She looked at me curiously. As she did so, her eyes slowly turned to gold. Then she darted upward and was gone at last from her remembering and her

dreams, finally free.

I will not see her again, I wouldn't think. She was not like Anne, a person with a mission here. Maybe she will return to the physical. Maybe she already has. But there are many paths in the land of consciousness. All I know is that wherever she is, love is there, too, as it is everywhere that being is, the found, the lost, the wanderers and the seekers, it does not matter. This greater love—objective love—simply is. It sees reality from the outside and yet also fills it in every nook and cranny. It allows without necessarily accepting, and that is why it is so fundamentally different from the idea known as 'unconditional love,' which, as a form of sentimentality, both allows and accepts.

You can feel it. We all can. When I do the sensing exercise, I let myself also feel this urgency, this wanting that is objective love. My subjective feelings of joy, love, anger, hate, compassion—all of that—are not ignored but rather are seen as part of objective love, like everything that is, wanted.

I feel myself as a humble part of a greater whole, and let awe and joy carry me into the sweet, expansive state that is higher awareness.

So one can let one's own love join objective love as a humble part of the whole. If you do that, then even though you are still just a little person struggling along on this Earth, you are also all love everywhere, beyond time and pain.

Encounters with souls that are stuck in one way or another is a commonplace of any life that is lived in communion with the nonphysical level of humanity. As we become more skilled in managing our relationships with our dead, we are going to find them all around us.

When I was meditating during the summer of 2017 in an old house in Italy, I watched a woman in a black skirt and loose-fitting blouse move slowly around the room dusting furniture that was no longer there. I watched her for a long time and tried to get her attention, but she dusted and dusted. Finally, she walked off into another part of the building. How long she might

have been doing this I cannot tell, but she obviously still sees the same world she lived in. She should be called a ghost, I suppose, but I see them as spirits who are simply unaware that they have lost their way.

To help them, you have to go out of your own body or raise its vibration so that you can touch them and turn them, and send them on their way. When you try to do this, you'll find that you can. We all know how. This is because we also have instinctive knowledge at the soul level.

Those trapped in the physical wander. They have no idea where to go or what to do. The heavy ones fall like tears

forgotten. Some like Anne ascend, then turn around to face life from their new perspective, seeking to help tend this garden.

Others rise and rise, seeking beyond the stars toward the expanding border of consciousness, the limit of ecstasy. I hunger for this myself. I feel it in me. I sense what it is, ascension: a new song that I—and all of us—have always known.

CHAPTER 7

“The Living Will Know the Dead”

AS PLANET EARTH CHANGES, our fragile technological societies become ever more vulnerable, and our huge populations with them.

I am not speaking so much of short term changes such as global warming, but rather of the much larger cycle which is going to happen regardless of any human effect. Either we will go into another glaciation or a long period of warming. Both have happened in the past, and it's not clear which will happen now. But one thing is clear: climate is changing.

So how should we prepare?

There can potentially be all sorts of technological fixes and scientific solutions, but this book is not about that.

Previously we made reference to tools—the tools of the soul. It is these tools that are involved in the kind of preparation we are concerned with here. They are inner tools, and we already possess them. It's a question of opening the inner door behind which we conceal them from ourselves, taking them out and making use of them.

We need help doing that, though. We need the wisdom of our dead, and

this could be why, over the past two centuries, there has been such a marked change in their relationship with us.

Their attempt to reach us would explain the rise of the medium movement, the appearances of more and more psychics and now the afterlife revolution. These things are the human species attempting to increase its production of strong souls and increased its overall intelligence and predictive abilities by reconnecting its two halves.

Let me describe how this is working for Anne and me right now, as I am writing.

I feel her close to me. She wasn't close earlier this morning, but she has become aware that I'm writing and is now a definite presence near me and, to an extent, within me.

I accept this but also don't abandon the question. While I am functioning as if Anne is Anne and is right here, but I am asking if it's really her or if I am communicating with my idea of her, and I am accepting that it is probably part of both. I am communicating with the Anne in my mind and heart, and also with Anne in the afterlife.

It would help if there was physical manifestation, of course, but there has so far been only one of these. On that occasion, when she finished speaking to me in a particularly intense way, full of the speed and spontaneity of physical conversation, I glimpsed a small light go flashing away out of our apartment.

She had been here and close because of something she wanted to say. After she created our website in 1999, she began posting the occasional entries on it she called "Anne's Diary." About six months after she left the physical, I heard her saying that she wanted to continue it.

I sat down, quieted my mind and opened it to her. I did this by doing the sensing exercise. As it draws the attention away from the mind and onto the body, it opens the mind to outside influences.

At once, thoughts flew through my mind. They were so fast and so

spontaneous that they really did not feel like my own. It was exactly as if somebody else was talking in my head. And they were. Anne was.

If I tried to listen, they were pushed aside by my own thoughts. I solved that problem by jotting notes, and in a few minutes I had a whole, complex statement written down, one that was original and wise and beautiful. In it, I could almost hear Anne's gentle, insistent voice.

I posted the entry, pretty much quoting her word for word, on February 16, 2017 as "Anne's Valentine to You: 'We are Lovers.'"

In it, she says, "We have trouble believing what is real even when it's staring us right in the face, especially if it's not what we want to be true. But we do have something that makes us special. We are lovers, and in this respect we stand out as a very remarkable achievement of our planet and its star."

I say to her now, as I am writing, "I'm glad that we have something to recommend us, but I'm more interested in this problem of seeing what's real. That's why we can't communicate with you reliably. That's what we need to change."

Anne: "With no physical points of reference it's always going to be hard for you to accept us. I also don't think it's healthy to do that uncritically. The key is a stable attention, strong enough to keep your mind empty of thought so we can enter it. The mind flutters around like a little moth, drawn here and there at random."

"That's what I did to hear the diary. But I want to know how to strengthen it."

"Go to a quiet place, do the sensing exercise, listen and take notes without thinking about them. Not automatic writing, though. Open yourself to directed thought from the outside."

"In other words, channel."

"Exactly. It's the process we've been teaching you for two hundred years. Remember that every time somebody channels in one life, they're better at it

in the next. That's what our school is all about: multi-generational teaching."

"Remember the study we made of prophecies, when we were researching channeling?" We had found that spirit guides did not do well at foretelling the future.

"Now I know why guides turn out to be such bad prophets. They're not like us, not on this level. They're with you, and they don't know any more than you do about the future. So they guess. A spirit guide is generally no more prophetic than the person channeling her."

"But you know more?"

"To a surprising degree the future is an open book." "Could you meditate with us, then? That might help us." "Getting to you is like swimming really deep. It feels like

getting lost. There's no exit. You feel like you could end up among the wanderers who can't find their way out."

"It's frightening?"

"It's difficult. But when the glow that comes from the sensing exercise starts, it's much easier. We can focus on that light and get right to you."

"What about the dead who show up with the visitors?"

What's going on there?"

"The ones you and I call the visitors are practiced at moving between densities. When they tunnel down into your density, the human dead can follow them, or they can be brought. This is being done to make those of you in the physical aware that we still exist. It's part of the fight against soul blindness and it's also the foundation of bridge building."

I ask, "So what happens now? Where are they taking us?"

"Higher and higher into ecstasy, as you've always said." "But terrible things happen and are going to happen. That

doesn't seem to me like a journey into ecstasy."

"Pain forms a foundation of strength. Remember your story."

In early 1986 I wrote a short story called Pain that was about an angel causing a man to experience pain that frees him from his past and causes him to see life anew. A new vision, brighter, more fruitful, comes to him when he accepts the pain and goes past it.

She responds, “Out of the coming age of upheaval there is going to emerge either a new humanity or no humanity.”

I pause, letting the stark frankness of that statement penetrate. I have always known that the stakes in our era were very high, but not until this moment did I have a real understanding of just how high.

“Earth’s surface is a womb. In this womb, a baby, life, has been growing for eons. This baby has matured to the point that it has intellect and therefore the capacity to enter higher consciousness—that is, to be born. So the waters of Earth’s womb are breaking.”

I understand this all too well. When Earth’s waters break, as they are now doing, mankind—her baby—will no longer have the support of the womb. Like it or not, the baby is going to be born, and into a completely new life.

Anne says, “We will still have a physical presence, but not nearly as large a one as we do now. So souls will need to be more efficient. They will have to enter bodies to accomplish specific tasks of self-discovery. It cannot be random anymore, not if everybody is going to get all the chances they need.”

“I’m not sure I understand.”

“After the transformation of the planet, there will still be souls entering physical bodies, but the experience will be different. The whole species is going through a gigantic shamanic initiation. The seeker enters death in order to experience life in a new and more encompassing way. The outcome of this initiation will be that the blinders of physical life will be removed, randomness and chance will no longer play so much of a role in life as they do now, and souls will enter bodies with knowledge of their reasons for doing so intact. The living will know the dead. They will no longer be wanderers like the fool in the Tarot, but users of the tools of consciousness, like the

Magician with his bundle open on the workbench before him.”

But don't make any assumptions when you see the word “Tarot.” It is an ancient psychological system that references body, mind and soul, not just body and mind as modern psychology does. And that is how Anne and I use it, not as a means of divination. I have laid this out in a little book called the Path.

I say to her, “I want to know more about his tools.”

“The tools that strengthen the soul are understanding and living in objective love, engaging in the sensing exercise and meditation to strengthen the soul, and practicing love, compassion and humility to free it from the bondage of ego. Those are the basics.”

“That's the basic message of the gospels.”

“It's the basic message of all religions. It is the message of man.”

It is also the reason that the afterlife revolution can now take place. Nonphysical mankind, along with many different

sorts of midwives and helpers, is preparing physical mankind for the shock of species initiation, and to use our planet afterward in a new way. To be born to the world is to die to the womb. On exiting the birth canal, the infant enters on a new life, and so does the mother. There is no return, not for either of them.

The mysterious presences that are here with us know this. They have lived it. Having been through the sort of birth that we are now facing, they are here as midwives. The mother may find the midwife a comfort and a blessing, but in the baby's confused perception as it emerges from the womb she appears to be a raucous, dangerous and monstrous presence, ferocious and frightening. But then there is something else, a bond to mother that baby feels but does not understand. The baby focuses on this bond so completely that the mother becomes everything to her.

This is very different from the baby's time in the womb. During that period, the baby took everything for granted, food, comfort, safety—all these

things were provided.

Once outside, though, baby begins to see mother as a separate being. He perceives that he is dependent on this mother of his, and stops taking things for granted. When the mother feeds him and comforts him, he falls in love, as we will with our own planet. We will at last come to see her as a living being with hopes and dreams, not simply as a passive lump of nutrients there to serve us in silence.

The mother, who has loved the baby in her womb out of instinct will now join it in a state of conscious love. A relationship between mother and child will form. We will see that our planet has awareness and needs and will come to regard her not only as our home, but also as our dear and beloved friend.

Anne: “All through history, there have been those who have lived in conscious relationship with Earth and cosmos. We call them masters. In the future, everybody who enters the physical will do so as a master of being. And why will we still be using the physical? Give somebody a kiss. That’s why. Humanity’s destiny in the universe is to bring forth the experience of love, that all may share in it. Objective love, the core creative urgency, is also the essential human energy.”

Love, again. It always comes back to this missing element, the unseen strength that will see us through even the most difficult of times. “Love one another,” said by one of those masters of whom Anne speaks.

This is, after all and above all, a book of love. But love as a power, a force in the universe. Gravity draws matter together and keeps things whole. Love draws us together, and urges us to seek higher and deeper, into the realms of joy that are our destination.

CHAPTER 8

A New Vision of Life

I ONCE MET a person from a species that has been through the valley we are now entering, and living as we will if we emerge from it. At the time, I didn't fully understand what I was experiencing, but over the years I have learned more about the way souls—and species—evolve and what living a good life really means. It is not living in empty sweetness, but taking the good with the bad—embracing the light of life, learning from what we find in the dark.

“I didn't understand that when you told me about it, either, but now it's clear to me, too.”

We were at a hotel in San Francisco attending a conference. At about midnight, I was meditating in the living room of our little suite. The next thing I knew, there was a young woman standing before me. She had a northern-European face and complexion. Looking back, I seem to remember that she had eyes as green as emeralds. Green—the color of acceptance and also of rebirth. I see it now as a reminder that we must experience what is unfolding in our world, but also that afterward there will be a new birth.

The young woman was wearing the most wonderful dress I had ever seen.

It was a living thing, not a piece of cloth. As I looked at it in astonishment, I saw that it was decorated with thousands of scenes, like tiny, incredibly detailed paintings. But they were not paintings, they were living moments. They moved, as if all of these incidents were happening right now, all at once.

The dress carried scenes of her life as they would be observed from outside of time. Every one of them radiated a poignant joyousness, as if each was the sweetest moment that had ever been. But I could see that there were dark scenes there, too, amid the flowers and the blue.

She radiated a goodness so intense that my soul went out of my body to get closer to it. And there I was, fluttering at her feet. She looked down at me, nonplussed and embarrassed.

I had just enough time to feel like an idiot before my son came rushing in. “Dad,” he cried, “there’s a big silver flying saucer outside my window.”

Instantly, she was gone and I was back in my body. I ran into his room, but there was nothing outside but the night.

Anne says, “You were seeing what we can become. That’s the next state after this one.”

“Have joy?”

“Exactly. A joyous and accepting heart. You saw her life journeys. Even though not all of them were pleasant, she experienced every one with joy. You were seeing her from outside of time.”

“She was enlightened, then?”

“Enlightenment is what happens when there is nothing left of us but love.”

“Were you enlightened while you were physically alive?”

“When you’re enlightened in one life, die and enter another, you’re still enlightened. Death and rebirth don’t turn that light off.”

“You seemed just normal.”

“Enlightenment is normal. Pretending that it’s special is what’s not

normal. That's why that kid was so embarrassed. She was just there to offer some knowledge. She didn't expect to be worshiped."

"We're all enlightened?"

"Accepting yourself is the key. Enjoying yourself."

Anne enjoyed herself every moment she could. She enjoyed her mind, her heart, her body. (I did, too, for that matter!) To my wife, life was a continuous and unfolding miracle. For her, consciousness was a matter of noticing all the details of life, and she was wonderful at it.

"Also, species in the state humankind is entering—living as we do and that girl does, outside of time looking in—have new opportunities to find joy, and with them new responsibilities. The child is born, grows up, leaves the mother's side and goes out into the world to find his own life. And marriage. That, too, and children, even that."

"We'll have children as a species? I'd never thought of that."

"Everybody is somebody's child. We'll go out in the universe just like others do and find worlds full of scuttling creatures out of whom we can make new minds."

I think a long time about this. It reminds me of an idea I proposed in Solving the Communion Enigma, that we might eventually play the same role with another species that the visitors play with us. But this is a bigger version of that idea. It suggests a rich and unexpected future for us, and certainly makes it clear why others might be here trying to midwife our birth.

I remember so fondly the evenings of long ago when Anne and I would sit on the deck at our cabin and speculate about the meaning of this journey of being. Anne was the one who understood the situation and knew why our visitors—at least the ones who were involved with us—were here. She saw so clearly the towering possibilities that lie before us.

But look at the promise her idea of our future contains— that we may be able to join a vast communion, the presence of which we are now almost entirely unaware. More, that we may become shepherds, helping others in the

future as we are being helped now.

What would it be like to be somebody else's gods? They would be like children gazing up at us in awe, and we would be like our visitors, tired and scared and working hard.

Perhaps ten years ago, maybe more, an image appeared in my mind during meditation. It was of a slow, wide river. I was looking down into a boat where a small figure sat huddled over a fishing rod, his back to me. As I looked down at him, a glow appeared on the water. He sat up, stared, then turned to see its source. He looked up at me carefully, as if he was seeing something that he didn't understand but also didn't see as a threat. And then it ended. I was back in my living room, my mediation once again normal.

Did he see a glowing orb, perhaps, that was me? Is that how I appeared to him? I wonder what he made of it and how he described to others what he had beheld. I also wonder if we will ever meet again, perhaps many hundreds of years from now, when mankind has become for his species in their distant world the spirit moving on the waters, struggling to help them be born as we are being born now, into the light of objective love.

If we do our job well, they will say, "it happened to us naturally," as the people say of the actions of the best king in the Tao Te Ching. As our own visitors will when their work is done, we will slip away into the firmament and be gone from their lives.

When we find them, they will be living as we are now, in a state of separation between physical and nonphysical sides— as it were, an immature species.

They will be at the point of birth out of their own mother planet, just as we are right now. We will become their "aliens," offering them support and schooling from our own experience. Doing midwifery like this is the next stage in our collective journey into the state of ecstasy that the woman who appeared in my hotel room was in. From what I have seen of our own visitors, this midwifery is a real challenge, too, exhausting and frustrating

but, I suspect and hope, worth the effort.

Anne: “Birth doesn’t necessarily have to work, you know. There are no guarantees. We could be “born dead,” that is to say, in a state of such chaos that we may never fully recover from it. Never forget that the baby doesn’t see what’s at stake, only the midwife. You’re fixated on these “other” beings acting as midwife. Seek deeper. They are like us and part of us. Forget the idea of aliens versus humans, angels versus demons. These ideas are not big enough to fit reality. There are no aliens. No humans. Only us. No good, no evil—only us again, making our choices.”

I think she means not that “they” are or are not from other planets, but that this sort of difference is irrelevant to the experience of being conscious. Of course, different brains compile different visions of the world, but above the physical level, in nonphysical consciousness, all vision is objective and inclusive.

“Graduating into the next level, where we will be a teacher for others, is only a small part of growing up as a species. Consciousness is a journey into joy, which is without end. After you leave your body for the final time, this is the first thing you remember. And you think—at least I did—how could I ever have forgotten this? Your ego disappears, just like that, and when it does you see, Whitley, you really see. We live in a huge world that we hide from ourselves. As I left my body, “Anne” became a memory. You’re you, but also everybody. It’s really a warm, joyous moment.”

“It sounds like disappearing.”

“Ego dies, not self. We need to rethink our idea of body and soul. It’s not entirely right to think of them as being separate. There is only one person. We exist on a continuum of densities. Over time, we shed these densities. Just as you won’t be physical forever, I won’t be in my current state forever. And the less dense we become, the more holographic we are. This is the surrender to God that adepts like Meister Eckhart describe. As he puts it, we ‘become as a clear glass through which God can shine.’ As our world

becomes unable to support us, we are going to need to surrender ourselves into that greater truth.”

“How?”

“‘Two are better than one, and a cord of three strands is not quickly snapped.’ Remember that? In the physical, that cord is our kids. In my density, it’s the silver cord you saw stretching between us as I left your level.”

She is quoting from Ecclesiastes 4: 9-12 here. Back in 1970, she chose that as the motto of our marriage and made a cross-stitched sampler of it. To this day, that sampler hangs on our bedroom wall. The third strand is our son who is carrying us on, and also the harmony between us that is eternity in our marriage.

The hours after Anne left this life revealed to me the strength of that cord, which I now see as the fundamental binding between the physical and nonphysical sides of the species, and the one thing that we can count on never to break.

What she and I are doing together, and what it is possible for any two people who have surrendered to love to do, is summed up in Card XXI of the Major Arcana of the Tarot. The twenty-first card is called “the World.” On it, a being that

is both man and woman ascends in a wreath of laurel, symbolic of their victory.

On the four corners of the card are pictured the four keys to attaining objective love. These are the four beasts of the sphinx, a triad in balance. Instinct, emotion and mind are working together objectively, without identification with desires, fears and needs. Objective love is the fourth beast, the eagle, who soars above life and sees it from the distance that the dead experience, a distance that lends objectivity.

When one lives like this, in this state, one becomes free of the idea that the body is all we have. People do not seem to be just bodies, but rather

bodies come to appear as coatings that contain souls. The coating, the body, is a mechanism that the real person—the soul—uses to navigate physical reality.

Living with a vision of oneself and others like that is a great freedom that leads to deeper understanding of a kind that prepares us for any shock, any change, because we are always that crucial hair's breadth behind the shocks that the body is enduring. No matter how desperate the situation, the watcher retains the power of reflection.

We the living are generally absorbed in ego, and because ego dies with the body, we are terrified of death. People like Anne, who didn't live that way, don't find death frightening at all. Like her, they see it as a transition, which is one of the most empowering things that they can teach us from their nonphysical perspective.

For example, the presence I call Anne is not the person I knew in this life. She holds that personality between us so that I can recognize her, but it is not her true being. Even though

Anne is now a memory, she is not gone. Personality echoes essence, though, so even when I glimpse my dear teacher in her true expression, what I see is someone who makes sense as the foundation of the person I knew in physical life.

I find myself returning once again to the man who materialized before me. If that could happen in a regular, verifiable way, it would solve many of the problems of communication, not to mention finally curing the disease of soul blindness.

“What makes materialization possible?”

“You have to be able to get energy to organize itself like matter. It takes tremendous concentration and skill.”

“It's too rare!”

“That's why they make you do the sensing exercise so much. The more you do it, the more coherent your soul becomes. When you lose your body

you don't lose your focus. You can come back."

"Will I be able to do that?" "That's the hope."

I think about that. Will it happen? It seems completely impossible, and yet I have seen it done.

"Why did those people come to just me? Why not thousands of people? Millions?"

"People don't notice."

"Why not?"

"Ego filters out what it fears, and what it fears most of all is death."

I remember how terrifying the visitors were at first. I could feel it in my blood that they had something to do with death. "If ego is that afraid, what can we do?"

"Strengthen humility. Fear of death comes from ego. A humble person lives from the part of themselves that is immortal. They accept death naturally instead of fearing it."

"Which is exactly what you did."

"I put down the burdens of desire and anger, judgment and self-importance, all of that, and there I was still in my body but behind Anne. I was my soul, not my personality, and knew for certain that there was nothing to fear."

And there it is—the state we need to find within ourselves in order to navigate the coming drama of our birth. But how? What are we to do?

CHAPTER 9

Soul Tools

THE YOUNG WOMAN I saw had a highly evolved soul. But why, and how had she come to be that way?

We discussed the soul tools in the last chapter, but how do we use them? We can't see the soul. We can't even feel it. When one does the sensing exercise, little happens. The mind is quiet for a few moments here and there during the session. Almost always, though, there's little else.

So, are there changes? Anything?

The visitors Anne and I work with are experts at soul building, and they have given us plenty of advice. The first thing to understand is that we identify ourselves as our egos, but that isn't who we are. Ego is a brain function and as such mortal. It develops around the name we are given at birth. It is a social tool that the brain uses to interact with other people.

When a person goes soul blind, ego rushes to fill the vacuum. Being out of touch with the soul, it becomes obsessed with the survival of the body. We find ourselves living in constant, unspoken terror of death.

But when one learns the art of deepening the sensing exercise enough to

include the soul, this changes. Ego fear is accepted as a natural side effect of its mortality. The soul is not afraid of death. It has no reason to be. But how do we even begin to see the world through the eyes of the soul?
