I ask Anne, “We have a sort of anesthesia about the soul. We don’t feel it. So of course we cling to ego and live in terror of death. How can we change this?”

I feel her laugh the big, deep laugh always seemed so improbable coming out of a small person like her.

“I don’t understand”

Then I do. She saw laughter as a key to consciousness— in fact, as the key. Her message of “have joy” I cannot repeat enough. She says, “When you ascend, you ascend into laughter. You can’t understand the big bang unless you understand it as an explosion of happiness. The instant that consciousness realized that it was alone, it laughed with surprise. That was the beginning of everything, soul laughter.”

Ego can laugh, but not like that. This is because ego can never experience the innocence of objective love and happiness. This is happiness that is too simple for ego to know. It is the happiness of little children and why Jesus was always using them as examples. It is the happiness of my wife.

I remember once we were in the Italian town of Siena. We’d been traveling all day and we were hot and tired. To our surprise, we discovered a wonderful big Jacuzzi in our hotel room. Anne got in it and rolled in the warm water with a smile of absolute delight on her face. It was the open smile of a baby. She lived in an innocence that I have never in all my adult life tasted, not with all my inner work. But it was just her—the way she was.

“Do you wear a dress like that girl?”

Then it hits me—another realization about the way this text is being constructed. Last night I had a rather mysterious dream. I was with Anne and we were looking at clothes. There were lovely knitted dresses in the store, very colorful, and I was sure she would like them. But she didn’t. She said,

“I’m already in my dress.”

I didn’t think to look at her and now I could kick my thick old hide for it!

I could have seen her from outside of time last night, and tasted of the whole wonder of her being, and I missed my chance!

But I also know from long experience that this was a good soul lesson. Ego blocked my innocence, which is why I couldn’t see hers. It has needs and desires, disappointments and failures. But we’re inside it. We see the world through it. We see ourselves and others through it.

“It also locks your expectations. Move your attention away from personality and into body and the key will turn, the door will open and you will come new.”

“You can’t destroy ego.”

“Nor should you try. Ego is your key social tool.”

“You didn’t always live in ego.” “Not always.”

She could laugh her ego right out of her way and then there she was grinning from ear to ear—her soul.

“That’s it, laughter!”

The place to start on this sweet work of letting ego go is to take ourselves more lightly. Ego cannot observe itself objectively. It cannot understand itself or hold a mirror up to itself. But the soul can understand it, for the soul was present at its creation and has observed it throughout all of the body’s life.

When you get to the bottom of everything you consider most serious in your life, all the disappointments and injustices and misfortunes, the loves, the needs and the hopes, you find that same quiet, bubbling, joyous presence that I would often see in Anne and occasionally even find in myself. And that’s your soul. That’s how it feels.

But to realize this, we must first go beyond the conventional definition of “soul.” If we think of it at all, we might vaguely imagine an echo of what we can see of ourselves, that is to say, ego. I have even heard people speak of “afterlife ego” and “soul ego.” But soul is not ego and it isn’t similar to ego.

Truly, our souls are undiscovered countries. They at once lie within us and live in all being and all time, knots of consciousness that have a definite sense of self, a definition that is all their own, but equally a sense of conscious infinity.

The moment the attention comes out of ego and enters soul, it sees the personality from the outside. It sees the body and all its parts as its own temporary container. Later, it also comes to see that it isn't actually in the container, not completely, but rather is more like a puppet-master manipulating the marionette of self from a perch high above.

When I go to this state, the first thing that tells me that I am drawing near is a rising sense of mirth.

“There’s laughter here,” Anne says. “It’s the first and most creative force. That’s what too many people forget. They forget that the holy of holies is joy.” And not just them. How little laughter there is in our world.

Meister Eckhart is one of the few religious leaders who understood the power of laughter. He said, “Do you want to know what goes on in the heart of the Trinity? I will tell you. In the heart of the Trinity the Father laughs and gives birth to the Son. The Son laughs back at the Father and gives birth to the Spirit. The whole Trinity laughs and gives birth to us.”

But why? What’s so funny?

Consciousness has set out to discover all knowledge, that’s what. So did Don Quixote. Riding his ass is so much fun, though, that nobody ever thinks of getting off. On the back of this ass, you go everywhere and nowhere at the same time. Contradictions abound, and yet they also make sense. The more conscious you become, the more playful you feel.

This is what is meant by the Meister’s comment that “God laughs and plays.”

Anne always maintained that “God laughs and plays” was the best thing about the sacred that anybody has ever said.

Meister Eckhart in his life was called a man who knew God. Anne did,

too, and laughed about it just as much.

I guess that's also why Quag showed up during that meditation of mine instead of some awesome figure with a fiery glare. He knew that I was with a friend of his, a fellow traveler on the laughter road, who would understand who he was and why he appeared as he did and teach me.

But why is laughter so creative? It reacts to contradiction with delight is why, thus opening the road to new discoveries. This allows mysteries to open like flowers, and what seems a prison—this life—becomes a palace of question and surprise and the deliciousness of discovery. And when the clouds are flying and the house is trembling, that is still true and true more than ever.

Life doesn't feel that way, though. Life feels hard and unfair and dangerous. Our physical instincts tell us to see others as enemy or friend, evil or good. We divide the world, and ourselves, much too simply. By identifying things in this way we lose sight of what they really are. We deny the soul it's chance to gain access to our attention, because the soul cannot perceive the world in this way. The rages and disappointments, lusts and triumphs of ego are a wall that stands between us and our souls. Caught behind that wall, you can't see the bridge beyond, or hear the dead, shouting themselves silly from the far side.

None of us can really hear, not very well. So let's look at the journey through these pages as building for the future. Remember that ego and soul both read the same words. They just read them differently.

Because we have divided ourselves into physicalists and dualists, we have also ended up thinking of the soul as being something that somehow lives in the body as a sort of separate entity, or that it isn't there at all. Anne is right, though, when she says that's not the way to go about it.

We have a long history of looking at the soul as something separate from us but within us. Descartes theorized that it was in the pineal gland, because that gland is at the center of the brain. But it's not there. In one way, the

physicalists are right: the soul isn't anywhere. It is part of the body in the same sense that color is part of paint. As Anne says, "Paint fades but color is immortal." When she described to our reader how it felt to move between the two densities of blue when entering and leaving the physical state, she was giving him the chance to see our world not as ego does—as an entanglement of beings, events and objects, but rather from the objective standpoint of the soul—the soaring eagle—who sees it not only as all those captivating details, but also as a density, that is to say a color of a certain shade.

But how can you possibly see life in that way—not as events and all the identifications that go with them, but simply as color? In other words how do we step away from the details far enough to spread the wings of objective love and rise above the riotous surface?

It turns out that it's simpler than the many weighty tomes on the subject would suggest. In fact, ridiculously so.

Let's take a closer look at love, compassion and humility. Love innocently, find compassion always and live a humble, simple life and you will emerge a pure soul. Your vibratory color will be, as Anne puts it, "azure."

Like all manifesting energy, the three pillars of the soul are a triad. Love is the active side and humility the passive. Compassion creates balance between the two. But compassion, like all balancing forces, is hard to understand. It isn't simply giving a dollar to a hobo, but understanding what all with whom we come into contact need the most from us, and what we need to give ourselves. In the Gurdjieff work, it is said that we are "third force blind." Until you can give up being a judge of yourself and others, you cannot begin a search into compassion.

In the gospels, there are many examples of it. When Jesus suffered the little children, when he told the story of the Good Samaritan—these are stories about compassion. But also the story of how he overturned the tables of the moneychangers in the temple is about compassion. But how was

compassion involved in what appears to be an expression of outrage? The answer is that he was giving the bankers a chance to see their greed and perhaps step back and review the direction of their lives.

With regard to humility, the sternest lessons I have received in the school of the visitors involve this soul tool.

Many years ago, my brother had come up to our cabin. I was feeling a lot of pride, showing him around, showing off my material achievements. Then, as I was taking him to see the place where my ascension into the presence of the visitors had occurred, I heard a voice say, “Arrogance. I can do whatever I wish to you.”

It was the lady on the cover of Communion. I thought, ‘surely this is my imagination,’ but told myself to quit my bragging.

When we got to the clearing, we saw a lovely, bright UFO slip elegantly across the sky. Then I thought, ‘oh, dear, it wasn’t my imagination.’

I was worried. I had already discovered that the school of the visitors is intense because it is about the health of the soul, and the soul is eternal.

I could expect a hard lesson, and indeed, that’s just what unfolded the next morning. My bank called to say that they had a number of checks I’d written, but I had no account with them.

She’d made my damn money disappear! Talk about an ego lesson! I had just a few dollars in my pocket, now the only money I possessed in the world. Worse, those checks would be bounced if my account couldn’t be restored by the close of business. Desperately, I pleaded with the bank manager to look for the account in their computer. Later, I drove over and sat with him while he searched. He found nothing. Finally, he agreed to give me another day and said he would look in the bank’s magnetic records.

In the event, they found the account in the Iron Mountain records storage facility where the bank kept its emergency backup files. Everything else had been erased. As the manager put it, “Nothing like this has ever happened before.”

No, I would think not.

I have never forgotten that lesson. I wouldn't dare brag that I've lived a humble life ever since, but I have surely tried.

It takes humility to see the frailties and arrogance of others and still love them, and a willingness to put one's own desires and needs aside in order to allow oneself how to be compassionate toward them.

Now, when life in the physical is easy, using these tools is also easy. So now is the time to learn. Just as a soldier learns to use his weapons best in time of peace, the soul learns to use its tools best in a time of ease and plenty.

There is more to the three pillars of the soul than actions in the physical world. They are relevant also in the world of the soul, but in a very different way. Nobody there needs a handout or a kind word, but they do need the equivalent in the form of energy. The young woman I saw, who was wearing her soul like Jacob's coat of many colors, was radiating energy. This is why my own soul left my body and moved toward her. It was elevated into a state of ecstasy by her soul energy.

Soul energy is expressed in those immortal colors Anne speaks about. Her soul is a deep and spacious blue. It's like looking into the top of the sky just at evening, at that darkening blue that seems like a window into eternity. Anne's particular vibrations—her colors—are unique to her and yet at the same time just as universal and immortal as all colors, and this is true of all souls.

But blue isn't her only color. She recently showed me her soul in three different colorations, red, green and blue. The red was her active side, the green her passive side, and the gorgeous, iridescent, glowing blue her soul in harmony. On this night, she came up beside the bed three times, each time wearing a robe of a different color. She was so vivid that I asked her if I could touch her hand. She gave me a worried look. Not that she was concerned about being touched. Maybe for an instant she even was material

enough for that. She was worried because she knew that touching her would inflame me with desire and, when she had gone, leave me in an anguish of need and grief.

So, if we are soul blind and our egos are out of control, why are we even here? What's the point of placing ourselves in such a situation?

The reason is that physical life also a soul tool. It is, in fact, a soul-altering machine.

“When you know for certain that those of us without physical bodies are real and that we are with you, fear of death will end for you. Instead of hiding in your ego, you will move your attention into your soul. Then you will become able to practice soul craft, using physical acts and emotional states to enrich your soul colors.”

“Unconditional love?”

“Objective love is craftsmanship, not sentiment.”

Not all soul tools are entirely inner. Some of them are practical, external tools.

I had been inspired to do the sensing exercise by Joseph Stein and William Segal of the Gurdjieff Foundation, and had it explained to me by the head of the Work at that time, G. I. Gurdjieff 's protégé Jeanne de Salzmann. I had understood it as healthy, practical work.

As my relationship with the visitors deepened, I came to understand that there was a basic grammar that I could use to relate to them, a sort of structure that would cause them to react in predictable ways, and therefore give me the opportunity to explore their motives for coming into contact with me more deeply.

They speak a very different language from us, and I don't mean words. I've never heard any words from them except a few in English here and there. However, there has been a rich communication in symbols. For example, the gray ones would often announce their presence by an appearance of owls, and if one goes into the habits and mythology of the owl, it soon becomes clear

that, like them, the owl is a clever and silent night predator with eyes to see in the dark and ears so sensitive that he can hear little creatures scuttling in their burrows. His claws are powerful enough to dig right into the ground and pull out a little shrew or chipmunk. And indeed, the grays show up in bedrooms at the most improbable times and pluck us right out into the night. But the owl is also a symbol of wisdom with a rich history across many cultures, and to one who ceases to resist and tries to relate, much turns out to be on offer.

The most important thing they have to offer is this potential new relationship between the living and the dead, and it was, I am sure, because of them that I found myself, as I have mentioned, coming into contact with the people from between the worlds.

They came to meditate nightly with me, and when they announced themselves, it was the sensing exercise that they wanted to do. When I meditated by sensing my body, it seemed to give them a focus. Until the day Anne and I left the cabin forever, they worked with me to open myself inwardly—to let my mind be silent and my ego rest—so that we could come into the state of communion that enables the deep, rich inner search so necessary to building a strong soul.

So I knew that it was important, but it would take until after Anne died for me to discover that the sensing exercise turns the body into a sort of antenna that the nonphysical world can use to communicate with us.

It was in October of 2015 that I was shown why my wife needed me to do this.

I had decided to go to a William Henry event in Nashville, in part to be with treasured friends, in part to revisit the Scarrett Bennett Center where we'd held annual gatherings for fans of our radio show Dreamland, and in part because I was in such a very low, very lonely place in my life and I felt being there would bring me closer somehow to Anne.

During a break in the conference, a woman came up to me. She seemed quite nonplussed. Nervously, she said that she had something to tell me, but

she wasn't at all sure how to go about it.

She began by asking me if I had a special chair, like a rocking chair or something along those lines. She then said, "I ask because I just heard Anne's voice in my ear. She said, 'Tell Whitley I can see him when he's in the chair.'"

At first I didn't understand. Then I did—and it was pure gold.

Given the state of my knees, when I do the sensing exercise and meditate, I sit in a chair and not cross-legged as I used to.

I realized at once that Anne could locate me when I was doing the sensing exercise and meditation. She could track me and come to me.

Once I realized this, my mind flashed back to an enigmatic incident that had taken place in 1988 or 1989. I'd had a brief dialog—mental or physical I cannot tell—with with one of the visitors, one of the few I've ever had. I asked why they had come here. The answer was, "We saw a glow."

At the time, I assumed that this meant the glow of cities, signs of intelligent life. But now, the moment the woman repeated Anne's words, I knew differently.

The real meaning was that when we place our attention on physical sensation there is an amplification of some kind that must give off a glow. That must have been what the visitors saw and why they came to me in the first place. They were curious about this one little glow that showed up night after night out there in the empty countryside.

I was excited. Had I finally found a means of communicating reliably with my wife, something that would work from my end of the bridge? Her ability to make people do things like make phone calls was by me unquestioned, but what about something more familiar, like conversation? Could we ever resume the wonderful journey in conversation that had been such a delightful and defining part of our marriage?

Naturally, as soon as I got home I went about meditating with redoubled effort. I would do the sensing exercise, then go deep into the quiet of my

being, the place where the soul's whisper can be heard.

The visitors now reappeared in my life. They were here to help Anne.

CHAPTER 10

Know Thyself

IN THE DEAD of the night about two weeks after my return from Nashville, a series of shocks pulsing through my left second toe startled me awake. I jerked my foot and the pain stopped. But what had happened? It was three in the morning, dark and quiet in my bedroom.

I lay there thinking about the pain. It had been sharp, but now it was gone.

Could I have gout? I turned on my cellphone and searched for symptoms and no, this was not gout. It was more like an electrical shock. I examined the bed. There was no wiring anywhere near it. I don't own an electric blanket.

Mystified, I went back to sleep.

The next night, I was startled awake again. This time, my right nipple was pinched and pinched hard. This was much more painful than the shock, and I leaped to my feet.

There was nobody there, at least, nobody I could see. I looked at the clock. Again, three a.m.

I recalled back when I had meditated for months with the group of people

from between lives. They would awaken me at three to meditate with them, usually by punching me on the shoulder. They'd also come back at dawn, and for a long time I joined them at eleven, three and six.

It occurred to me that doing the exercise at three, when most people were asleep, would mean that the little glow I generated would be easy to see. So maybe they were giving Anne some help.

I went into the living room, seated myself and began the sensing exercise, that simple matter of placing the attention on the sensation of the body, limb by limb, part by part until the whole body is included.

“I saw the glow,” she says. “It worked. I got through to you.”

“Why not just tell me.”

“Because what we say sounds like your own thoughts. It wouldn't have seemed to you like objective information.”

So I have been meditating at eleven and three ever since. For the first year, they would wake me up in various ways if I didn't do it. This could be quite startling, such as when something that felt like a small snake rushed up my nose, or when there would be a sudden, unexplained explosion. Later, I would hear a gentle call from the living room, “We're here.” Now, they wait for me silently. If I fail on two nights in succession, they'll generally get me going again on the third night by blowing in my face.

Recently, for example, I simply could not rise from the bed. No matter how hard I tried, sleep would not release me. They made it quite clear that they were there, but I still just could not manage it. They let it go.

A few nights ago, I was again very tired, sleeping in a friend's country house. I wondered at three if I still needed to do it on vacation. A moment later, the doorbell rang. The house, however, has no doorbell.

Question answered.

I know that many people find stories like this unbelievable. But I am describing my life as I live it. In all my books, I have never done anything different. I have been truthful and accurate, always. I report with total

honesty. I do this because mine is a life being lived in a new way—a life in contact with the nonphysical world, but absent the traditional trappings of belief and mythologizing.

It is extremely important to me to do both meditations every night, especially the three a.m. one.

“It gives me something to focus on. And I’m the one who blows on you. The best kiss I can manage.”

“Now I want to not get up so you’ll have to kiss me more!” “Remember their sense of humor.”

“So we’re not alone in this?”

“Whitley, we are so not alone! We can’t make much noise, so we really have to band together. Nonphysical consciousness in all its diverse multitude and size, can collectively manage

to project into the physical not much more than a sigh. The bridge is everything. When the bridge is built, the whole physical world will echo our song.”

“The chorus of the angels?”

“If you want to say that, sure, but the song begins with you.”

At first, I don’t understand. Then I see in my mind’s eye a dear old friend, Lorie Barnes. And with it, there comes another discovery.

When, after the publication of *Communion*, we began to get those thousands of letters and Anne took charge of the situation, she soon realized that one person simply was not enough, so she announced that she was hiring a secretary. I suggested a call to Manpower, but she said she’d find one among our correspondents. And indeed, not an hour later, she handed me a letter. “This woman will be my secretary,” she said.

But when I read the letter, the author made reference not to secretarial work, but to singing and acting. When I pointed this out to Anne, she said, “Have you ever heard of her?” I said that I hadn’t. “She’ll turn out to be either a part time waitress or a secretary. Look at how well written this is,

what a good hand. I think she'll be a secretary. Also, she lives two minutes from here.”

She called her.

An hour later, Lorie, who was indeed an expert secretary, appeared at our door.

Together, they created a substantial file of letters, cataloging all of the ones that contained fulsome descriptions of experience. For years, the file was ignored. We created the Communion Foundation to finance its study, but could not get any grants.

Recently, Dr. Jeff Kripal, my co-author on *Super Natural*, became interested in the letters, and I donated them to his school, Rice University in Houston, where they will be archived for posterity and be made accessible to scholars.

They are a treasury of reactions to mankind's most extensive contact with another sort of reality and other intelligent species, physical and nonphysical both.

Many of the letters report encounters with gray beings with big eyes, some fewer with the squat, dark blue figures that have become central to my own experience, and beyond those with many, many other sorts of entity. Of them all, the dark blue figures, though, seem most concerned with our souls and our lives, and perhaps there is a very special reason for this.

The experience that prompted Lorie to read our book and write us a letter, in fact, involved these figures. It was the early fifties and she was pregnant. One night she was alone in her apartment in Queens. It was about 11 and her husband, a performer, was out on a job. She was reading in bed when she noticed movement and looked up. Standing beside the bed in a column were a number of short, dark blue figures.

In those days, there was no “alien” folklore save stories about beautiful Venusians and other tall tales along those lines. But Lorie found herself looking into the face of a bizarre, frog-like troll. As she recoiled in horror, it

said, “Do not be afraid. We’re not here for you. We’re interested in the girl child you’re carrying.”

That only made it worse, of course. Seeing her terror, the figure added, “Why do you fear us?”

She said, “Because you’re so ugly!”

Whereupon it laid a gloved hand on her wrist and said, “One day, my dear, you will look just like us.”

It turned out that Lorie’s baby was a girl, something that could not be known in those days prior to birth. She grew up to be a perfectly normal person, in no obvious way connected to any strange experiences.

Note this: they were not interested in her because of psychic ability or some other unusual trait. So why were they interested?

I suspect that they are interested in us all and involved with us in ways we are only just beginning to suspect. There is a reason that they told her that they were “soultechs.”

The statement that was made, “One day, my dear, you will look just like us,” is so strange that it suggests that we know even less than we imagine about what is really happening here, what our lives are and who we really are.

Maybe the human species has more than one form. It’s not an uncommon situation in nature. Butterflies start out as caterpillars, for example. Tadpoles undergo an extreme transformation into frogs.

There is additional evidence that we may be more extensively involved with this other form, and that we may be filtering it out.

A psychologist was driving home one night along the Grand Central Parkway, passing LaGuardia Airport in New York City when he was horrified to see a huge jet dropping down onto the highway. His first thought that a plane had miscalculated the location of the runway and was going to crash into the dense stream of traffic. But as it passed over his car at low altitude, he saw that it appeared to be some sort of fake, that it wasn’t a plane

at all, but something that was designed to look like one.

The next thing he knew, he was observing an animated sign on the roadside. Strange symbols were passing across it. He saw a number of cars pulled over, and decided to satisfy his curiosity and pull over himself. Off the side of the road, he saw a group of people standing below the sign in a circle. Deciding to see if they knew anything about what was going on, he began walking toward them. Before he could get there, though, a shadowy sort of dwarf approached him. Blocking his way, it said “Get out of here.” The tone was gruff and menacing, and he decided at once to comply. He got in his car and drove on—and that’s where his story ends. He never found any explanation for what he saw.

Taking both of these stories together, a few things can at least be inferred. The first is that, whatever these creatures are, they are intimately involved with us. They are interested in our offspring. They gather groups of people together for unknown reasons, and protect these gatherings by utilizing distractions. They have told at least one person that, in the future, she will be one of them.

I see them all the time now. As of this writing, the last time I saw one was in June of 2017, and I’m sure that there will be more encounters by the time the book appears.

When we had our upstate New York cabin, they would come there frequently. Once, when there were a number of people sleeping in our living room and two more in a private room in the basement below, they appeared. The people in the living room could talk to one another but could not move. What they saw were short, dark blue figures leaping around the room like acrobats.

Meanwhile, the couple in the basement were surprised to see appear at the foot of their bed the figure of a friend who had died in the Mexico City earthquake of 1983. She seemed perfectly solid, not in any way ghost-like. She said to them that she was all right, then disappeared. At about the same

time, the figures upstairs also disappeared.

Later that month, I received a call from my literary agent telling me that there was a man desperate to speak to me, a person involved in aviation. Now, in those days, there were very many people trying to speak to me, but only this one had gone so far as to find my literary agency. I felt that I had to call him.

He said that, a short time before, he and his wife had been sitting in their living room at about ten at night. Their old dog, who was asleep on the hearth, unexpectedly became restless and needed to go out a second time. As the wife opened the front door to take him out, she saw what looked to her like a fireball crossing the sky and going down behind a nearby woods.

She called out to her husband, "I just saw a plane go in on fire. You'll get an emergency call in a few minutes."

At the same moment, their seven year old son came running downstairs saying that little men had brought his recently deceased older brother into his bedroom and he had said that he was all right.

The father was desperate to know if anybody else had ever reported such a thing, and I was able to tell him that they had—and that, in fact, Anne had discovered that the dead often appeared with the supposed aliens, especially these short, dark blue figures.

If close encounter truly involves aliens, then they must already be linked, their living and their dead. By bringing our dead with them during encounters, I think that they might well be seeking to help us become whole, too. But it may also be that what we are looking at is not an alien presence at all, but an aspect of our own species that mediates between the living and the dead.

The beings Lorie saw, the "soul techs," would, when they showed up at our cabin, often go into the childrens' rooms and shine lights on their bodies, saying that they were "doctors" and "looking at your soul."

Anne says they're "people who've done wrong trying to regain themselves

by helping others.”

I realize that they're the ones I called kobolds in the early days, dark blue, short. Human? That seems very strange to me.

"How are they helping?"

“One of the purposes of close encounters is to embed experiences like you and the close encounter witnesses have in your DNA. Future generations will be born with this record

in them. Because of this, they'll be able to take things farther. The huge increase in close encounters is about stepping up this process.”

A soul tool is being used to make physical changes that will in future generations enable contact across the bridge.

“We will give you the most exact guidance that we can, but it won't be complete. It can't be because the future isn't nearly as well known to us as you would like to believe. The worst part is that, when we can't offer enough detail, people in contact with us will use their imaginations to connect the dots. That's what happens to psychics who give out wrong predictions.”

“You've said some very exact things to me. The Trump election, for example.” (She predicted in September of 2017 that Donald Trump would be elected president, something that at the time seemed completely impossible.)

“When I said it, it was definite.”

“How can we know what questions to ask?”

“The best way I can think of is to ask about things that are not too far out in time. We can see the inevitable before you can, but not generally by much.”

“Can all the dead see the future equally?”

“It depends on their focus. I'm focused on the physical world. On you. My whole life was preparation for being this kind of teacher. Not everybody is doing this, but everybody can be called to it.”

“How do we do that?”

“Remember the love you felt for your parents, your

grandparents. Go back to it, the childhood love, innocent, trusting and so much a part of you that it flowed in your blood. It's very close to objective love. Reconnecting with it is what Jesus meant when he said we have to become as little children in order to enter the kingdom of heaven. Objective love is heaven."

One night in Malibu, in the spring of 2016, I began to find that out. I was at the home of friends, Leigh and Carla McCloskey, who often host speakers at their house. They have a large back garden, and on this evening a Tibetan lama was going to sit in it and chant. There were about fifty people there, some lying in the grass, others on chairs and benches. I was on a bench that looked across at a smaller bench that was unoccupied.

As soon as the monk started his repetitive prayer, I felt a change in my body. It wasn't unfamiliar. I have felt it many times during meditation. I would describe it as an increase in vibration, as if I was rising to a sort of higher speed.

In the next moment, I saw Anne sitting on the unoccupied bench. She was dressed in clothes she'd worn back in the 1970s, tan slacks, a green blouse and a sweater vest. It was an attractive outfit and I'd always admired how good she looked in it. Then she stood up and, without any sense of movement, I found myself at the bottom of a stairway. It wasn't a long stairway, but something like library stairs. I looked up and saw her again. She was looking down at me from at the top of the stairs. Behind her were rows of books. She made a little gesture, beckoning me to come to her.

But how could I ascend? I stood up anyway. Then I understood, because I could see my body behind me, still sitting on the bench. As I took one step and then another, the sound of the chanting died away. I entered a vivid, living silence and in a few steps stood before my wife. I looked directly into her eyes. There was a complete frankness there, a total openness. Also a sense that she was about to burst into laughter. And yet, had they not been so beautiful and so merry, the acuteness in her eyes would have made her

frightening. Then I noticed her hair, which was full and beautiful. She'd always hated her hair, and one of our readers had sent me a letter some months before saying that she had told him that she had gotten better hair at last.

When that thought passed through my mind, she smiled. She was now full of laughter, brimming with it—at herself, at me, with herself and with me. It was comfortable, accepting laughter, but tinged with seriousness.

She took a green book down from the shelf and handed it to me. On it was embossed in thick gold letters the word “Life.” It was the book, as I instinctively knew, of my life. I was rather nonplussed to see how thin it was. She gestured at me to open it.

When I did, I saw a young woman staring at me with a terrible expression in her eyes. For a moment, I was confused by this surprising image.

I had asked Anne to show me anything in my life that might explain why I am as I am. I know the literature of numinous experience well, which is why I know how alone I am in my life. Others have had strange experiences, many of them, but there are not many lives that are as consistently strange as mine.

I don't report most of these things. My criteria is simple: if there is some sort of corroboration, I will report an experience in detail. Otherwise, I keep them to myself.

I had been asking Anne to help me understand myself, and this moment was the result—the thin book, the young woman staring balefully at me.

My mother?

My birth was so hard that my mother had almost died of exhaustion. My head is big and it nearly killed her as I came down the birth canal. After I was born, I was unable to take her milk. I had to be fed on formula, and in the 1940s it did not provide satisfactory nutrition. I spent the first six months of my life screaming almost continuously.

I was so difficult to take care of that when I was six months old, my

mother had to go to a rest home.

Back in 1988, I had an MRI scan, which I have described in various books. The scan is normal except for one thing. There are a number of bright foci on the surface of my brain. In 2014, I had another MRI, and the same marks are there.

Lesions like this are a characteristic outcome of battered child syndrome. Add to this the fact that two vertebrae in my neck are fused and the picture becomes tragically clear: at some point in my infancy, I was dropped on my head.

Did my mother do this? Is that what the message from Anne is about?

A group of doctors are interested in my brain. They know that I am no liar, and are examining my MRI scans. One thing is clear so far: there was babyhood head trauma.

Was my mother a child batterer, then? Is that why she was sent to the rest home?

I don't know and I will never know. There is nobody left alive from that time who might be able to tell me. I don't remember my mother as being a terrible woman. On the contrary, she was my best friend and most staunch defender and advocate. We had a dear companionship. I fondly remember our endless discussions of philosophy and literature, and how much an ally she was of her too-bright little boy. Once I showed up in grade school with Salinger's *Catcher in the Rye*. The nuns telephoned her about it. She told them, "He reads whatever he wants to read. That book came from my hand."

Was there a lapse when she was alone with her difficult baby and desperately tired? In late 1945 or early 1946 when this would have happened, my father was still in the army. She was taking care of me and my sister, then a toddler. She must have come home from the hospital still exhausted, only to discover that this new baby was in agony and was going to be basically doing nothing but screaming and sleeping, and that the doctors could not help.

If it happened as I think it did, then my heart fills with forgiveness. I say

only that the mother who belongs to my memories and my heart is the one I cherish. I long ago embraced the message of the gospels regarding forgiveness, and also Anne's urging in "The Love that Led Me Home" to "put those burdens down." I refuse to cherish anger, even when it is justified, and in this case, I'm not at all sure that it is.

For one thing, perhaps I would never have lived this life without the injury. Head trauma is a characteristic of many people who display unusual psychic and psychological abilities. Obviously, I'm no exception.

So, on that night in Malibu, Anne started me on a journey into a truth about myself buried so deeply that I don't think I could ever otherwise have seen it. My mother, who loved me and who was the dear companion of my childhood, at one point in her life may have done me harm. This was the same mother, who, by the time I was eleven realized that my mind was hungry for much richer material than I could get from the children's literature of the time, and bought me the 54 volume set produced by the Encyclopedia Britannica called the Great Books of the Western World. She also introduced me to authors like H.H. Munro, "Saki", Franz Kafka, John Cheever, Thomas Mann and others. Salinger, of course.

In the Great Books, I found Plato's Dialogues, which excited me so much that I had to read them standing up. I would pace back and forth in my room, following the logic of the dialogues with intense excitement. The ideas and the way they emerged left me breathless. And Descartes—his work was so well designed, so careful and logical and yet so disciplined that I could not stop reading it. I just loved the way it made my mind feel, and I loved his famous presentation of Cartesian Doubt. Since then, I have lived a life in which I must practice this form of doubt constantly. He disciplined himself to doubt his senses. If I didn't doubt mine, my mind would descend into chaos. Keeping the question open is essential to my rationality and my sanity, and I have Descartes to thank for my understanding of how to do that.

I was alone as a child and am alone now. When Anne was alive, I had a

real companion—she also had suffered abuse, she also had hungered as a child for great thought and found it in some of her father’s books. She also was an advocate of the importance of drawing what we have lost in the unconscious to the surface in order to understand ourselves.

She used to say to me, “All you do is tell funny stories about your childhood. You need to face the truth.” And now here she was communicating with me across the bridge between the worlds, helping me to bring to the surface contradictions and unacknowledged dreads that were burdening my soul, and would have continued as burdens after death if I had not been able to acknowledge them during this life, and include them in the love that is my core, and the core of all of us, the objective love that frees us from all burdens and grants us the lightness of being that we need to not only climb those library steps, but to keep going.

So now people can say of me, ‘he got a bump on the head, that’s why he imagines all this crazy stuff.’ But I do not imagine it. I believe that the world as I see it is more accurate and true than the filtered version. It is possible for anybody to enter my world, too. You just need to know that it is here and that it is real, then learn how to notice its presence in your life. There is no need to suffer trauma.

When one begins to see the real world, the experience of being human becomes larger and more complex. Above all, the outlines of the bridge become more substantial, and those on the far side easier to see.

You realize that the real world is full of potentials and possibilities that we have tuned out, in fact, that nonphysical consciousness is much richer and more informed than we are. As you see this higher world, you also begin to experience this one as it really is, a sort of corner of something far greater than the physical could ever be.

As the scales fall from your eyes, you also see others as what they really are, every one of them.

They turn out not to be the small, pitiful creatures one might expect. Far

from it. Ordinary people are vibrant expressions of something—call it a divinity—that itself seeks to be known and longs to be known but that cannot be known. And this anguished, joyous being, also, you can see as part of you and all of you, and as all.

Then, for the first time, you realize that you are looking across the bridge, and there in that form are all you have ever known or loved, ancestors, friends, departed lovers, and another is there, too, a strange figure standing a little alone, looking back at you with the same wonder you feel.

You realize that you are more than you thought yourself to be, because that figure, already on the far side of the bridge between life and death, is also you.

Thus comes the recognition that we live not only in our bodies but also on the shores of life. We are fishermen who cast our nets into the mysterious waters of our own beings. What we bring up is self knowledge, and that is the most powerful soul tool of them all.

CHAPTER 11

What Is the Soul?

I ASK Anne what she is now. She says, “We’re light. Light, alive.”

“Then why can’t we see you?” She laughs. “I’m here!”

It’s as if she’s is just ahead of me, just along the road. “You say that the soul is light. What generates this light?”

“This is the energy of objective love, the desire to be itself. That’s why people who approach it during near- death experiences describe it as enveloping love. It includes everything.”

“But just calling yourself light isn’t enough. When I turn on my reading lamp, that light isn’t a soul.”

“We’re everywhere, but the light is undetectable.”

“I saw you as colors, red, green and blue. Were you at those physical frequencies?”

“Those lower frequencies parallel the higher ones in our world.”

“As above, so below?”

“This is why our world looks so much like yours. Why we look like memories of ourselves.”

“What’s the difference, then? Why are you above?”

“Remember the girl’s dress. That was a very important teaching, Whitley. That’s how reality looks from outside of time. How a life looks.”

I want to ask more, but then I realize the value of what she has just told me. I have a taste now of the difference between above and below. We are inside the images the girl wore, moving through life as if along a path. In the higher world, we don’t live our lives, we wear them. And that’s what it means to rise above life on the wings of objective love. That’s where she was.

I return to the colors. “Could an instrument have detected you when I was seeing you in the colored coats?”

“No, but the soul can be detected.” “How?”

“Those orbs people record—not the dust and junk like that—the ones like were in our woods. Those are souls moving slow enough to be seen and detected.”

“What do we need to do this more consistently.” “Strong attention.”

“So another tool of the soul?”

“Yes. You’ve cultivated your attention by doing the sensing exercise and meditating for fifty years. That’s why you see what you do.”

There is a tradition in human thought of relationship to this radiance that dates back to the earliest religious text we possess, and flows right through to the thought of American transcendentalists like Ralph Waldo Emerson, Henry David Thoreau and others.

When our world was simpler, it was easier to sense souls, both our own and those of the people around us, and those beyond physical life. This is because we were less distracted and so had moments of awakening such as the states of “transcendent wonder” described by the poet Tennyson.

Then, in the late 19th century we begin inventing technologies that, while wonderful, also had the effect of drawing us deeper into material reality. We created the telephone, the car, the plane, then the flood of devices that we

possess now.

We forgot things like the light of transcendent wonder, and into the bargain we forget ourselves.

The first exploration of conscious light appears in the first religious document we possess, the Pyramid Text inscribed on the walls of the Pyramid of Unas in Egypt.

The record develops from there, appearing in every culture on Earth, fading away only recently. It has faded, but not died. In fact, it has been returning to our awareness. It is, of course, central to the stories of the near-death experiencers.

In seeking for an understanding of the soul, it's worthwhile taking a look at the history of the physical world's relationship with this living light, and to do that it's necessary to start at the beginning of religious thought.

The Pyramid Text is the first place in recorded human thought where the soul is represented as a serpent of light living in the spine—what some would call Kundalini energy and others the nerve pulses in the spinal cord. When, two thousand years after the Pyramid Text, Genesis was written, the soul was now seen as external to man, the source of his self knowledge. In the earlier text, it was seen as integral to being.

Neither vision is wrong. In fact, the vision in Genesis is an evolution of the earlier one insofar as it recognizes a separation between body and soul. It sees self-knowledge as self-will, thus indicating that man had reached another stage on the long journey toward the light—the glimmering girl I seek in my own life—which is the level of surrender, becoming as “a clear glass through which god can shine.”

Later debasements of the Genesis text identify the soul as an evil being that is entirely separate from us—a demon who whispers the secret of self-knowledge to us, thus leading us away from union with god.

Certainly the demon rides—look at the world around us. When Anne was alive, she always said, “we are our own demons.” Whenever somebody

brought up demons and Satan, she would say, “Don’t talk to me about demons. Talk to me about you.”

In the Pyramid Text, the serpent is *iahw*, the light. It sleeps in the spine as the core life-force, the *ta-ntr*. It is circled by seven smaller serpents, nerve centers that became the chakras, or circles, of Tantra. For it is in the Pyramid Text that Tantra is founded. In fact, it is in that text that the whole search toward the light began, Ann Sexton’s “awful rowing toward God,” Yeats’s and my journey toward the glimmering girl and the search of those experts in the light, the Syriac and all mystics are seeking that which fades though the poet’s “brightening air.”

Brightening, though? It’s not as if we were searching into darkness, then, and like all this wandering that has transpired since the text was written, it is into gradually increasing light. As the darkness falls around us, the light concentrates like the light of that man I saw on that night in the early nineties, brighter than diamond, calm in its eternity, sending out rays that, when they touched me penetrated my skin and left me with the taste of another person’s essence, the naked truth of him, at once so precious and so common.

“I would like to feel you that way one day, Annie.” “You keep going.”

The colors of the chakras reflect the ascension of light from density to evanescence. The red of dawn is the deepest chakra, the dawn of the body. Next is the orange of morning, the wandering child, then the yellow of midday, then the rising light looking back at the green of earth, then entering and becoming the blue of the lower sky, ascending after to the indigo of the high sky, then the pale violet light of the Milky Way. Freedom, and I can feel it so clearly, that it is there even for me.

“Annie, are there beings in the stars who have already found the light?”

“It’s not like that. It only looks like that from inside time.”

“So is there a search, or has conscious energy already found where we’re going?”

“Both.”

The serpent in the spine is the road of ascension. In the Egyptian religion, it was the passage that the soul used to leave the body on death.

“What’s it like to die?”

“You feel a shock down your spine. Something unlocking. Then you’re loose. I flew out of the front of my body, not the top of my head. I shot out. Then I looked around and there you were with your hand on my chest. O my soul, I felt such strong feelings! I reconnected in an instant with everyone I have ever been and everything I have ever known. You looked so little all packed into your body. You’re enclosed light. We’re free light.”

“What’s that like? Do you disappear into something larger? ‘Go into the light’ as they say?”

“The second I was out, I felt an explosion of joy. I was out and there really was an afterlife! There was love all around me. I put my hand on you but you didn’t notice. I showed you I could walk to make you feel better, and you saw that. Like I said, I was me. I still felt physical. I was still in the bedroom.” “I saw you walking toward me, but I couldn’t tell where you were. In a sort of neutral space was how it seemed.”

“As far as I was concerned, I was in the bedroom with you.”

“Did you go into light?”

“I am light.”

Nestorius of Nonhadra in the eighth century describes this paradox very well, of being in light and being light at the same time: “You must give your attention to the simple light within you. In this simple light, moreover, a star will occasionally appear and shine, but later will hide itself and disappear: this is the mystery of the new world.” He then describes an ascent in light that reads to me very like the ascent through the chakras first described in the Pyramid Text: “The light is the color of the sky, which is also the color of the nature of the purified soul. That color is the color of the firmament in which the intellectual insights of spiritual contemplation are situated like the stars.”

When Anne showed herself to me in that deep, gorgeous blue, I felt the

presence of a great purity. I can well understand it as “the color of the nature of the purified soul.”

I ask her, “Are you a purified soul?”

“I am, but remember that life is a good alembic. The universe is full of purified souls. Don’t put us on pedestals. Expect to join us.”

Nestorius continues, “And when the light is that of crystal, the very light of the Holy Trinity shines on the soul as well, and the light of the soul projects rays of fire which are the murmurings by which the soul glorifies God among the angels.”

This is, I think, a description of the same rays I saw emanating from the soul I meditated with. They were living parts of him that conveyed his essential being into my own body. The beauty was fantastic—a direct experience, from my perspective, of limitless ecstasy. And that was just one small person!

“There’s no such thing as a small person, Whitley. The glimmering girl you’re following isn’t just me. She’s the final light of all knowledge.”

“When you wanted me to start reading “Song of the Wandering Aengus,” did you know why you were doing it?”

“My ego didn’t but my soul did. My soul’s been your teacher ever since the day we met.”

“My soul’s teacher?”

For an instant I feel—or perhaps remember—her hand on my hand.

I am so close to this light that it hurts, but I feel also that the fire of it is my own heart. Without being able to put it into words more articulate than these, I understand completely how it is that Anne can be all light and also herself, and how all are like this, even those of us locked away in these little time machines we call bodies.

The ancient Egyptian word for “life” and “snake” is the same word, hayy. It is the word both of the spine and the fiery serpent within it. It is this serpent of conscious light that ascends at death.

I first became aware of it in two ways. The first occurred in October of 1985 when I was being approached by the kobolds but not yet consciously aware of their presence in my life. I did not become aware of what had happened until March of 1986 when I was under hypnosis for the first time with Dr. Donald Klein. Unexpectedly, instead of going to the night of December 26, 1985, I returned in my mind to the previous October.

All summer, I had prowled the house in a state of terror, protecting my family from the soft summer nights with a Benelli Riot Gun loaded with lead slugs. I had installed alarm systems. I'd sat outside my little son's room with the gun in my lap, then patrolled upstairs to check on Anne, then back again, over and over. Only when dawn came would I fall into a fitful sleep.

When Dr. Klein hypnotized me, I remembered seeing a short, dark blue figure standing in our bedroom. I vividly remember the shock that went through me during that hypnosis session, and the screams that pealed out of me. This fierce, terrible being approached me with a crystal wand, with which it struck my forehead. It elicited fearful images of destruction. Maybe they were actual, physical warnings, but I think it more likely that they represented the symbolic destruction of the world I had believed to be real. They were part of the process freeing my vision by unlocking my expectations.

But there was more to it than that. Also that October, I was experiencing extraordinary neck pain because of my then as yet undetected childhood injury. One night, it was so bothersome that I tried to twist my head with my hands to relieve it and maybe reduce the pain, something I had done many times before.

What happened this time was that another, unseen hand seemed to guide my movements. There was a series of what seemed like very deep chiropractic adjustments, in the middle of which there came a deep grinding sound and for an instant it felt as if my soul had fallen out of my body. The adjustments continued down to the center of my back.

I lay there amazed. For the first time since the pain had started when I was a kid, I felt complete relief. Wonderful. A weight that I had been bearing so long that I had forgotten that it was there had been lifted.

I had not only been freed of the pain, something in my spine had also been freed, and I became loose in my body.

After the Communion experience, I felt the close proximity of the figure who is depicted on the cover of the book, felt her presence much as I feel Anne's now. When I went into bookstores, of which there were many in those days, she would direct me to buy one book or another by saying in my mind, 'Get that one, open it to such and such a page,' that sort of thing.

One of those books was Robert Monroe's *Journeys Out of the Body*. Naturally, given who had directed me to it, I read it with avid interest. After I finished, I attempted an out-of-body movement using the method Monroe outlined.

I felt a loosening along my spine, then came rolling right out of my body and into the middle of our bedroom. I was completely conscious and normally aware. Of course, I cannot

know if all of my memories were intact, but I certainly felt like myself. I decided to go outside. After all, Monroe had traveled far and always gotten back. As I pressed through the slightly greater density of the wall, I reflected that this is how the visitors moved. They are souls, I think, that can assume a physical form.

Everything was covered with a thin film of shimmering blue light, even the ground and the electrical wires along the road. I decided to go no farther on this first try, but rather to return to my body. But when I tried to do that, its interior seemed to be covered with a slick, shiny film of what looked like mercury. I kept falling out and sliding down the bedside. I found that, if I just hovered, I slowly drifted downward. That worried me. I would rather have drifted upward.

The next thing I knew, I was in the front yard of my childhood home. My

father was mowing the lawn. “When are you going to come help me,” he asked.

I had hated mowing that lawn, and was instantly back in my body!

At the time, I thought that I would be able to get out again easily. But I never have, not that cleanly, not, in fact, until 2016 when the most amazing OBE of my life occurred.

I still did not understand the serpent very well, and the spine’s function as the lock that keeps it in the body.

After Anne died, I wanted to go, too. I wanted to follow her and stay with her, and the more clear it became to me that she still existed and was a conscious being and still loved me, the more I wanted to go to her.

I attempted the Tibetan practice of p’howa, which is conscious release of the soul out the top of the head. I could not accomplish it, though, because my soul remained firmly locked inside my body.

Then, in the fall of 2016, I attended a conference at which there were a number of neurologists and professors who take an interest, as does my Super Natural co-author Jeff Kripal, in extreme human experience.

We were sleeping in dormitories with small private rooms and I meditated as usual at 11 and 3. Because of a long day of conferencing, it was particularly hard to get up for the three o’clock meditation, but I managed it. I collapsed back into the bed, looking forward to undisturbed sleep until dawn.

Instead, at 4 I felt a bolt of electricity shoot down my spine. I was furious. I had already done the wee-hours meditation. Why were the visitors waking me up again?

Exhausted through I was, I got up to meditate again. But it didn’t work. I sat in the chair staring at the wall. Finally, I went back to bed.

Instantly, I shot out of my body and into the corridor. It was so sudden that for a moment I thought I’d made a mistake and stepped out of the room instead of turning to the bed. But when I tried to go back in, it was clear that I had no body.

My first thought was to try to appear to people. I am well aware of the fact that illusion of an OBE can be induced by applying an electrode to the right angular gyrus of the brain, which is part of the right parietal lobe and responsible for body image. Also of myriad efforts that have been made to explain the phenomenon away.

Anne says, “The first thing you realize when you leave life is that all of our beliefs are immature. We don’t know enough to have beliefs.”

Of course these academics and scientist would have the same knowledge of the brain that I did, and might well therefore assume that some sort of brain effect was responsible for my experience. So my first thought was to appear to one or more of them in the nonphysical state. Given that it’s something that has happened to me a number of times, I had reason to hope that it would work.

I first tried the conference organizer, whose room was across the hall. I couldn’t get him to wake up, though, and so went through the wall to the next room. Asleep, also. But in the third room I tried, the occupant was half awake. I lingered beside his bed until I saw his eyes open wide.

He describes his experience this way: “I was sleeping at around 4AM when I remember seeing you standing in the open area between the foot of my bed and the wall. Arms beside you, calmly looking at me as we talked telepathically for some time. I don’t remember the topic but whatever it was, it kept me awake and was profound because I couldn’t get back to sleep for an hour or two...You had on a one-inch colored checked shirt and you looked calm and happy but you weren’t smiling. I guess I sensed you were calm and happy. You seemed to love me in some way because I felt comforted and calm when I went back to sleep. It seemed like a 20 minute talk and then you left through the ceiling.”

I went so high that I could see the line of dawn crossing the continent. Above me were the sacred, silent stars, around me the indigo of the height of the sky. Then I raced down

across the continent, flashing through the dawn and onto what appeared to be a college campus. It was just after dawn, the sun was golden, the shadows were long.

The next thing I knew, I was in front of a building. Vision in this state is not the same as physical vision, at least not in my experience. For example, I don't generally see things that I did not know existed as what they are, but as something similar that is present in memory. If this is true for many or most of us, it must add to the disconnect between the physical and nonphysical sides of life. As time goes on and things change, the nonphysical side might well have less and less of an ability to understand what is happening in the physical.

“Which is why I didn't like you throwing out my socks. I need things to be the same there if I'm going to stay connected.”

(The morning after she died, for some unknown reason I threw out Anne's playful mismatched socks, which were loud and fun and greatly enjoyed by her. I heard her say, 'you threw out my socks!' I bought new ones, and they are in her drawer to this day.)

In any case, I went into the dormitory. On the wall I saw a large black lozenge-shaped form. I have seen them before, but I don't know what they are. You do not see them when you're in the physical state. My guess is that they're creatures of some sort that exist in the level next to ours, which is perhaps material in some way that enables it to share our space without intersecting with it.

I wanted to see if I could enable anybody here to see me, so I went down the hall to the door of one of the rooms. Maybe somebody in the room would be awake. I'd seen a man of about twenty outside, but he had looked right through me. When people are motionless, like in bed or in a chair, it's easier to get them to notice you, I have found.

I saw what I took to be an exceptionally long dulcimer leaning against the wall outside the room. It had a fluted end, which made me think of a musical

instrument.

There was nobody in the room, so I decided to go back to the conference. After all, I was halfway across the country. I did not want to lose track of my body.

I ascended once again and this time angled down the way I had come, and returned to my body easily.

Understand, I did not control this. Whoever sent that shock down my spine, unlocking my soul, was managing everything. And this is something that must be remembered about the whole OBE experience. We are not in control of it. Even when I leave my body on my own, where I go is controlled. That level of life is, I think, a conscious medium and being in it is being inside a greater mind, and being part of that mind. It is going to be deciding for itself who comes and goes and what they do and why.

At breakfast, there was quite a stir going. The man who had seen me had emailed a friend about it and people were talking about my OBE. I was delighted, frankly. I was there to describe unusual experiences, and I had provided one to this group who were studying them from a serious scientific and academic standpoints, not all of whom accepted the idea that they were actual experiences, but rather perceptions that seemed experiential.

Later that day, as I described what I had observed on the campus, it became clear that two of the professors knew the place I had visited: It was their university. They were even rather sure that they knew the specific dormitory I had visited.

In the spring of 2017, I went to the campus in physical reality. We drove around, looking here and there, until I saw a familiar building. It was indeed a dormitory. We stopped and went in, and I found myself standing in a place that I had never seen before except out of the body. Every detail was familiar, the placement of the furniture, all of it.

In wonder, I proceeded down the hallway to the dorm room. It was there, just as I had seen it. But leaning on the wall outside the door was not a big

dulcimer but something that until that moment I had not known existed. This was a longboard, a type of extended skateboard. It had a fluted end, just as I had seen on it when out of my body.

I stood there reflecting on what was happening. The only reason this place was familiar to me was because I had been here while outside of my body. My soul had moved along this corridor while my body lay in a bed over a thousand miles away.

I bowed my head and prayed my thanks, and felt in that moment the truth of myself and the truth of us all.

I turn my mind back to the Pyramid of Unas and the authors of the Pyramid Texts. They had little in the way of material possessions. They knew hunger and pain and early death. Their understanding of the physical world and the nature of the body was deeply flawed and incomplete. But not the soul. This, they understood.

We are not used to engaging with the soul. We cannot see its colors or feel its presence in our bodies, along the spine to which it is attached or in the nervous system where it has its dwelling within us.

“Annie, what are we?”

“Light. Even the physical world, the body. All that is, is light. Slower or faster, in the end, it’s light.”

CHAPTER 12

The Most Powerful Soul Tool

WE UNDERSTAND how to build a house, how to write a poem, how to dream, but we don't understand how to think of ourselves as light. I look down at my hands, and I see physical objects. They feel solid. They're full of blood and muscle and bone, covered with skin. In short, they aren't light.

But then if I look a bit closer, I begin to see them differently. They are a complex of cells, each one an entity unto itself but none an island. My hands are colonies of cells divided into various different functional groups, all working together in sublime co-operation.

Looking even closer, I see atoms arrayed in intricate patterns, minute sparks of energy that are the actual building blocks of my hands. Closer yet, and the atoms lose focus. We imagine them as little planets with electrons orbiting them, but that's not what they are at all. Instead, atoms are fields of energy, nothing more or less.

So my hands look like hands and work like hands and are constructed of physical matter, but, at the bottom, they are energy fields. Even deeper, they are a sort of memory. They are information. Data.

I am this data, a swirl of information suffused with light that is too energetic for us to measure, which we call the soul.

We are light.

The kobolds told Lorie Barnes that they were soultechs— soul technicians. They look at people by shining lights on them and into them. Something is reflected from within, inner light reacting to the outer light with which they are exploring.

Alfred Russel Wallace, who, along with Charles Darwin, discovered the principle of natural selection said, “Man is a duality, consisting of a organized spiritual form, evolved coincidentally and permeating the physical body, and having corresponding organs and development. Death is the separation of this duality, and effects no change in the spirit, morally or intellectually. Progressive evolution of the intellectual and moral nature is the destiny of individuals, the knowledge, attainments and experience of earth-life forming the basis of spirit-life.”

Because he was a proponent of spiritualism, Wallace was a controversial figure in 19th Century scientific circles, exactly as he would be now. He was also, however, one of the great naturalists of the age and also one of the first advocates of the need to preserve the environment.

His description of the duality of body and soul fits very well both with my out of body experiences and Anne’s NDE and her and many other descriptions of her entry into the afterlife. In fact, she described her experience of leaving her body in terms that mirror Wallace’s concept quite exactly.

She says, “When I called you from my deathbed, it was because I was sort of falling out of my body. When you came rushing in, I was so glad. I thought, ‘he can hear,’ and I knew that we would stay together. When you put your hand on my heart and started saying goodbye, I just let go. I felt my heart stop. It didn’t hurt. Then there was an unclasping along my spine. I popped out. I went right through your hand and into the air above the bed. I

looked down at you with your head bowed and crying and saying goodbye. But why? I was right there, right with you. That was when I realized that there was an afterlife and I was in it and boy, that was exciting.

“I was me. I had on the clothes you saw me in. They were just there, part of the way I was imagining myself. Comfortable clothes. I felt like me, like my body but not sick and paralyzed and miserable. Normal. I felt normal.”

For the kobolds, being a soultech involves examining the light body, but for us it involves using it.

When I am in the out-of-body state, I can often be seen by others in a recognizable form. One woman was horrified to see me standing in her bedroom in the middle of the night. She recognized me by the glasses I was wearing. In another case, a radio talk show host saw me in the night looking down at him from his bedside. He proceeded to ask me about it on the radio. The professor at the conference saw me standing before him.

Despite how I appear to others when I’m out, I don’t perceive myself as a sort of lighter version of my body. I feel like a ball and I have vision all around myself. I don’t feel borders like I do when I’m physical. I don’t sense myself as light and I don’t think I’m ever seen in that way. When I was on the college campus, there was a student walking toward me. I paused right in front of him, but he did not seem to notice me. And yet, the scientist at the conference certainly did, and recognized me immediately.

When we are alive, the light body is intermingled with the physical body. Generally when we die the physical body takes on an appearance of emptiness. It’s movement stills, the light leaves the eyes. You can see death there.

But when Anne died, something rather different happened. There was a startling change in her appearance. I had been with people in their dying before, but I had never seen anything remotely like this. It was as if her features had not been composed of flesh and blood at all, but of some substance that surrounded her flesh and covered it. When she died this

substance departed. What was left in the bed was a person with thick, straight eyebrows and narrow cheeks. She was shockingly smaller than she had been just seconds before.

It was as if some part of her that you could normally see had departed, leaving behind much less physical substance than is normal.

“I let go. It was easy. I was mainly concerned about you and A. My guys were really sad!” “More left than usually does.”

“By then a lot of me was light. I’m big in light.”

There is in Tibetan Buddhism the idea of the rainbow body. This is the body of a master, which, on his dying, leaves behind a group of signs. The first of these is a shrinking of the physical remains that occurs because so much of the body had already become light. Those of highest attainment are said to completely dissolve over a few days.

“I didn’t.”

“Did you see what happened to you in the hospital?”

“Pieces of me are still there.”

“Would you donate your body again if you had it to do over?”

“Sure I would!”

Such a teacher, Annie! You’re teaching me right now not to be identified with whom I love, because I’m having a hell of a time imagining parts of you floating in formaldehyde.

I can feel her laughing at me, darn it! “You died very pure.”

“I did.”

Another sign of the rainbow body is a fine mist that forms immediately after death. This is then followed by many rainbows.

When, in the hours after she died, I began to notice signs of the rainbow body, I did what I could to record them. I took a picture of the hearse disappearing into the mist that had formed upon her death. A few days later, I took more pictures of the rainbows that followed me to her wake.

“Were you a rainbow body?”

“Yeah.”

“Is it different from going into the light?”

“Yeah.”

“How?”

“I’m here in the living room talking to you.”

“I can’t see any special light.”

“It’s too fast for your eyes. I’m wishing it wasn’t.”

“I just think of somebody becoming a light body as grand.”

“The man I saw like that was really magnificent.”

“Not to him. To him he was ordinary. Like Dog. Dog is ordinary and magnificent both.”

“When I’m meditating, I see you and Dog together a lot.” “Yeah. Dog can be absolutely Dog and absolute at the same time.”

The first really powerful manifestation of Anne’s continued presence was the explosive event at the home of Trish and Rob MacGregor—a flash of light and an explosion.

“I had been going around trying to talk to people and nobody was noticing me. It was just plain odd and really annoying. You feel like yourself and you talk and nothing whatsoever happens. You yell. You completely forget about being dead, at least I did. I was racing around the country with no effort and not even thinking twice about it. When people would think about me, it was like a wind blowing me toward them and all of a sudden there I was with Trish MacGregor, who was sitting there writing about me. I said hello. No response. I touched her head. Nothing. Finally I just blew up. Then she sits up and yells and they both start running around their house. You would have loved it, Whitley, it was exactly like one of your practical jokes.”

“So you weren’t angry about your death?”

“Are you kidding? I was glad to get out of that hulk. But I was frustrated that everybody’s so blind and deaf and—just plain thick.”

I feel the past her frustration the sweetness and the other- directedness that keeps her here among us. I see that this mission that she is part of is why she lived and why she died.

These thoughts move me and cause me to feel her presence deeply. I feel as if I can almost see her light right now.

Now, if you look back over these paragraphs, you can, I hope, see something of the soul tool I am describing. It can't be put into so many words, this tool. At its core, it is a willingness to accept what we cannot see. The locked expectations of ego do not allow us to observe the way souls give of themselves. Ego always holds something back. If any words can sum up this soul tool, it is that it is a state of giving everything that one has to give— of giving one's light to others. In Anne's case, that light was symbolized by those rainbows.

If you want to start using this tool while still in the physical, you have to be willing to open your heart so completely that you will weep merely for the existence of others. You will be completely compassionate, but without ego, for ego will make you judge rather than see, and judging others has nothing to do with real compassion.

When the kobolds look into the light of souls, I suspect that they are looking for something like this compassion, seeking it by the way it shines. When they find it, I think they stay with that person, offering them support and teaching from inner reality, only rarely if ever emerging into the conscious surface of their lives.

My mind goes to some other ways of Tibetan Buddhism, most particularly the way imagination is used in its practice. One finds the energy of the deities in that theology by imagining their presence, and I see that the disciplined use of imagination is integral to the inner seeing that is so important to the proper use of this deep and elusive soul tool.

As we have gone more and more soul-blind, we in the west have ceased to understand this skill. Here we say, "just the imagination."

It is crucial, imagination, because of the empowerment it can bring. For example, you can imagine yourself to be completely compassionate and completely open. You can imagine that your ego is a tool, not a trap, and that you will not fall into judgment when you see your failings and the failings of others.

“You died pure. How?”

“Gave up my anger, mostly. I made a conscious choice: I would take the happiness road.”

“But what about things like the Holocaust—mothers who died in the gas chambers trying to protect their children. How could they leave happy?”

“Blessed are the persecuted, for theirs is the kingdom of heaven. Understand that you enter our world in the split of a second, often even before the body is dead. The people in the gas chambers were screaming in agony and terror, but they were also in the kingdom.”

“And the murderers?”

“Forgotten.”

“You’ve said something like that before. Forgotten in what way? Do they just disappear or what?”

“Souls too heavy to rise fall.”

“They go somewhere, then?”

“You know.”

Yes, I do know. I have seen that. I have been there. There were in my life two instances in which I was shown something relating to an underworld. The first occurred after one of the mediations with the people from between lives. They used to page through my mind, causing me to relive past events in startling and uncanny detail. One night, paging through my memories, they came across a moment during which I had been tempted to cheat on Anne.

They hesitated. Lingered. I writhed in discomfort.

After the meditation ended, I went as usual to bed.

I hadn’t cheated. I’d only been tempted. So all was well— wasn’t it?

In those days, I could not have told you what a soul tool was, but I was, on that night, being taught the deepest of lessons about this elusive tool. It is that the way to open one's own heart in true compassion is to give everything one has to the needs of others.

A few hours later, I woke up to see something so horrific that for a moment I simply did not understand what I was looking at. But then the two presences hanging from the ceiling above our bed became clear. But they were impossible. Nothing like that exists.

Except that they did.

I was looking up at two bulging black spiders, each easily two or three feet long. Their gleaming abdomens were ringed with yellow tiger stripes. I could see the pointed stingers at the base of their tails. Worse, they were scrabbling against the ceiling, struggling not to fall on us.

Dear god in heaven, it had to be a nightmare.

I rolled out of bed, my initial impulse to run. But then I looked back and saw Anne lying there peacefully asleep. A few feet above her, the most unstable of the two looked ready to fall.

Now that I was on my feet, their appearance seemed entirely physical. I could even hear the rhythmic scraping of their claws as they struggled to find purchase against the ceiling.

I had never wanted so badly to run, never in my life.

But there lay Anne, completely helpless and right under them.

I stared at them. They were there. Impossible, but there.

I didn't see how I could attack them. They were far too big to crush. I thought of shooting them, but I dared not walk around to the other side of the bed and get the shotgun.

If there is such a thing as a demon, I was looking right at two demons.

And again, there was Anne. My darling wife, helpless, right there!

The scrabbling was louder. I noticed that one of them had built a sort of nest of spider web. Where they here to stay, then?

Then I realized what I had to do. No choice.

My only right move was to put myself between her and the danger by lying on top of her.

I stood there looking at them. They still appeared to be entirely real. The idea of getting even an inch closer to them was appalling. But I couldn't let them fall on her.

I told myself that they couldn't be real, but I also couldn't believe that they weren't.

I leaned down. There was maybe three feet of clearance between her and the one above her side of the bed. I was really close now, close enough to see the spiked hairs on its legs and the gently pulsating segments of its abdomen. In that moment, there was no way you could have convinced me that they weren't actual, physical creatures.

Then the thing shuddered. I looked up and saw one of its legs waving in the air.

I had to do it. Now.

I slid into the bed and lay on her. Her reaction—fantastically—was to sigh happily and open herself to me. But of course, she had no idea what was going on.

I was so scared that I felt myself getting dizzy. I was about to black out with terror, and here she was assuming that we were making love!

As completely as I could, I covered her with me.

I waited. Acid burned up into my throat. I shook like a leaf in a storm.

Nothing happened. I waited.

More nothing.

After a time, I noticed that the scrabbling of the claws was gone.

When I finally dared to turn and look, the ceiling was empty of spiders.

My wife was ready and we passed the deep night in the mystery of love.

I see now the depths of this remarkable soul tool, what it means to completely give oneself to the lives of others.

You do this and the part of you that is ego comes to seem small enough to contain. Because it would never, ever give itself so completely to another, you can see its borders. So this elusive soul tool is about discovering the borders of one's own ego by a process of completely selfless giving.

If I had failed the test and run, then things would have unfolded differently. How, I cannot know, but I do know this: nothing was going to prevent me from protecting Anne, whom I loved with all that I was and am. And I know also, now, another truth about me. Feelings at that level are objective. I would give myself in precisely the same way to anybody who came to me in such need.

Compassion sees only need. It forgets judgment and in so doing takes one out of ego and into soul.

The two things the visitors have been most intense about with me have been humility and protecting the hearts of others—in particular, Anne's heart.

A few years before, there had been not a test but a warning, and I will never forget it in all of my days and beyond my days.

In the years after *Communion* was published, Anne organized many groups to come up to our cabin. Often enough, as I have reported in previous books, they met the visitors.

Once, we had a group up which included a young woman who took a shine to me. She was attractive and I was tempted. I did nothing, however. Later, in Los Angeles, we once again encountered her and I was again tempted. Once again, I did nothing.

We spent that night in the Beverly Hills Hotel, and no sooner had I fallen asleep than I found myself being dragged downward through solid rock. I was in some sort of cage and I couldn't get out. This was more lucid than any lucid dream I could imagine. It felt real. As I shot downward, I realized that I was inside the legs of a gigantic spider. Nothing I did would release me. Those legs were like iron.

Finally, I managed to get out. I found myself back in my body,

hammering my arm against the bedside table. The lamp was smashed, Anne was screaming—and I was shaking with terror.

I connected what had happened to the temptation the young woman had offered me, and resolved never, ever to even entertain such a notion again.

Souls too heavy to rise fall. I will never forget those words. But in these cases? A man is just vaguely tempted and he ends one time being scared out of his wits and another at the gates of hell?

There was, however, a reason.

Recently, I read *the Science of Near Death Experiences*, a group of papers edited by Dr. John C. Hagan III. In the paper “Distressing Near-Death Experiences: the Basics,” by Nancy Evans Bush and Bruce Grayson, the case of a man who experienced a negative NDE after a cardiac arrest is discussed. He “felt himself falling into the depths of the Earth. At the bottom was a set of high, rusty gates, which he perceived as the gates of hell. Panic-stricken, he managed to scramble back up to daylight.”

I know that panic very well. All too well. But I didn’t do anything wrong! So why was I visited with these horrific experiences?

“If you had cheated on me and I had gotten mad and left you, our mission could never be completed. They feared for your soul, because you had no way of knowing then how serious the failure involved would have been. Only after death would you have seen it, and it would have crushed you.”

“Would you have left me?”

“If you’d cheated once or twice? No. But if you’d made a habit of it, then our life together would have been ruined.”

“This love is the most beautiful thing I can imagine. I never would have done anything to damage it.”

I feel her drawing close to me once again. I find myself recalling a summer night, years after these two experiences were behind me.

We were living in Texas then, and we used to get up at two in the morning to walk because it was too hot during the day. We walked under the

blowing trees. The south wind—the moon wind—was so swift and fresh that we could smell the sea a hundred miles away. On that night, I imagined that my soul and Anne’s soul could become one. I wanted us to be one.

I remember as we walked along, I took her hand in mine. Her hand was warm and small in mine. I recall thinking that it was like the hand of the man from between lives, as light as air, a hand that was warm, alive and a shadow.

I kissed her fingers and she laughed a little, and the wind blew, and the moon flew in the clouds.

On that sweet night I sensed for the first time that not only were our bodies together, so were our souls.

Our bodies have parted but our souls never will. Had I cheated on Anne and ruined our marriage, we would not be here now. Anne’s mission would have been destroyed because I would not have been here on this side of the bridge of love trying my best to record it and share it in this text.

So of course they over-reacted. They were terrified, and with good reason.

Fortunately, they scared the hell out of me, too. But for all that, what a great teaching. Give oneself to the needs of others and discover the borders of ego.

That, truly, is light. Enlightenment.

“You gave everything you had to this, even your life.” “You, too, Whitty.”

“I guess I did.”

I feel her warmth against me, so close now. The kiss I couldn’t feel—now I can. Souls can kiss, too, you know.

CHAPTER 13

Soul as Second Body

WE'RE TOLD that there's no such thing as second body, don't bother to look, nothing like that has ever been recorded or ever will be. So don't imagine for a moment that you have a soul, let alone that hungers for work and longs to understand and use soul tools, that wants to help itself and others, that loves all that it meets with encompassing objectivity.

Second body has been recorded. There's a photograph of it—one, single picture. It was left behind two thousand years ago, almost as if in anticipation of the eventual coming of an era when the soul would be generally dismissed and forgotten.

It is, if you will, an argument on behalf of the soul, left behind—with amazing insight—long before the debate had even begun.

It's been ruthlessly dismissed—debunked, as they now say. But that's a lie.

In 1977, Anne and I attended a meeting at which Father Peter Rinaldi was scheduled to speak about the Shroud of Turin. He showed images of the relic and spoke about the Shroud of Turin Research Project, which was then just

being formed.

It was an impressive presentation, and we both found the positive images taken from the negative on the shroud to be perplexing. We contributed some money to the project and went on to continue to follow it over the years. The initial result appeared to show that it was indeed a piece of cloth from the first century AD, and that the image had been produced by a very brief, very intense burst of heat. But then in 1988 three separate laboratories carbon dated it to approximately 1260 to 1390.

We were disappointed, but also suspicious. By then I had been out of my body. I knew that the soul existed as I had been in the soul state. The first person to see me OBE had already reported her experience to me.

I had been trying to find friends and had ended up in her bedroom in the middle of the night. She lived in a city a thousand miles from New York and I did not appear to be entirely solid as I stood at the foot of the bed gazing at her. She was understandably furious and didn't talk to me for years. But the event had confirmed to me that the out-of-body state was real. So I knew for certain that what many people call subtle body or second body, or, as I do, soul, was, just like the physical body, part of nature.

I was studying it not through science but through the enormous literature of the soul and the work of the lively academic community that is devoted to it. Science may have retreated, but the academic world has not.

Later, when I met the people from between lives who meditated with me and saw that they could affect the physical world in a number of different ways, I understood that souls that are correctly prepared can still affect the physical. So I suspected that the man of the shroud, whoever he was, had been able to control his second body.

I knew, also, that the scientists involved in the carbon dating had for the most part started with the assumption that the shroud could not be evidence of soul life because such life did not and could not exist.

A few months before these results were announced, I saw just how

powerful such denial can be in a mind that is not prepared to accept that there is more to reality than it believes.

We had a group of people at our cabin, among them a dear friend, Dr. John Gliedman, a psychologist who was also a physicist. He had seen enough at the cabin not to be completely skeptical about my experiences, but he was in complete denial when it came to the soul. He had been trained to believe facts and had fallen with the rest of the scientific community into the trap that only facts currently understood could exist.

The group of us went one morning to the clearing where I had originally been taken up by the visitors into their crowded little vehicle. As we were meditating together in a circle, a gorgeous beam of pure, clear light shone down from above. I was sitting in the center of the circle and felt it surround me with what I now understand from Anne's teaching was objective love. Of course at the time, I didn't understand. I could see the light around me and feel the love, but intellectually I was at a loss.

The others sitting around the circle all saw the light, all except Dr. Gliedman. He simply could not see it. About ten minutes after it stopped, the group of us went up to the cabin, excitedly discussing what had happened. We were in what I would describe as a state of joy. The light had been very beautiful, and had come with a wonderful, warm sense of love that felt remarkably compassionate and—well, just happy. It was happy light.

John continued to claim that he had seen nothing. I'm sure he was telling the truth, too. He soon had a debilitating headache. One of the members of the group, Dora Ruffner, was a body worker, and she spent the afternoon trying to help him with it.

I knew what that headache was about. In the months before I finally opened my mind to the close encounter experience and was able to remember what had happened to me in December of '85, I would have a headache just like it every afternoon. This was because I was pushing away what I was seeing at night. I could not admit it into my reality, not without seeing my

whole view of the world collapse into chaos.

It is that fear of chaos—the mind unmoored—that drives all of the denial that curtains off reality. We live in the world as it appears, not as it is. In other words, we live by assumptions. We cling to them, desperate not to fall into the reality of mysteries and questions in which we actually live.

Dr. Gliedman was in the same predicament. Something had appeared in his experience that was outside of what he believed to be possible. Many people, not just scientists, would have had the same experience he did, I feel sure. We cling to a limited world view for many different reasons, and only patient inner work over time can pry us loose from it.

“It’s locked expectations. They narrow the slit through which you view the world even more than nature does. Unlocking them takes patience, self-respect and an openness to new possibilities. Look into the eyes of an infant. There you see unlocked expectations. Go as far back as you can into your own childhood, remember how it felt then to be alive. That’s how to start opening your expectations. To be truly awake is to have none.”

Clinging like John and I did to our locked expectations, the scientists who did the carbon dating could not allow it to show the actual age of the cloth. No matter how objective they believed themselves to be, in fact they could not have been.

And indeed, it has since developed that some of the fragments of material that were removed from the shroud for the experiment may have been part of a repair that had been made at a later time, although admittedly not all. But the fact that the cloth was in a fire could throw off carbon dating. This, however, was not taken into account.

Subsequently, more and more evidence has accumulated that the shroud is indeed from the Roman period. In 2009, Barbara Frale, a paeleographer at the Vatican Archive, imaged the shroud and found writing on it identifying it as the burial cloth of “Jesu Nazarene,” a description that would not have been used in the middle ages as it would then have been

heretical not to identify him as Christ. His Roman executioners would have labeled his shroud in this way.

In 2015, geneticists at the University of Padua analyzed DNA on the shroud, determining that the most abundant human DNA present came from Druze people, meaning that it was probably in the middle east for an extended period of time. But there is no way to account for this if it was a 14th Century forgery. Also, the oldest DNA found on it came from India, not Europe where the forgery is supposed to have taken place.

The herringbone weave of the material would have been extremely rare in 1st century Jerusalem, something reserved for only the most luxurious cloths. It would have been even more so in 14th century Europe. Only one sample of similarly woven linen has ever been found from the medieval period.

This is an important finding, because it means that the cloth on which the image appears would have literally cost a fortune. But what forger would spend that on something intended to make a profit in the thriving relic markets of the 13th and 14th centuries?

It would also have been an extremely valuable item in the Jerusalem of the first century, something that would have been used in the burial only of a person of high stature, and affordable only to an elite few—like, for example, Joseph of Arimathea. Another burial shroud has been recovered from a first century tomb near Jerusalem. It is definitively carbon dated to the first century CE. It is layered together, not woven, and is made of wool and linen, not pure linen.

In 2017, it was announced that the red marks on the shroud are human blood, and not only that, but that the blood was from a person who had been stressed, probably by torture.

In a peer-reviewed paper entitled, “Atomic resolution studies detect new biologic evidences on the Turin Shroud” published in Plos One by Elvio Carlino, Cinzia Gianinni and Giulio Fanti of the Institute of Crystallography in Bari, the authors write, “we used atomic resolution Transmission Electron

Microscopy and Wide Angle X-ray Scanning Microscopy experiments studying for the first time the nanoscale properties of a pristine fiber taken from the Turin Shroud. We found evidence of biologic nanoparticles of creatinine bounded with small nanoparticles of iron oxide. The kind, size and distribution of the iron oxide nanoparticles cannot be dye for painting but are ferrihydrate cores of ferritin. The consistent bond of ferritin iron to creatinine occurs in the human organism in case of a severe polytrauma. Our results point out that at the nanoscale a scenario of violence is recorded in the funeral fabric and suggest an explanation for some contradictory results so far published.”

Thus the previously published claims that the markings are paint appear not to be correct, based on this more sophisticated test.

While there still isn't conclusive proof that the Shroud is of middle eastern origin or that it was created during the first century AD, or that the man of the shroud is a Nazarene called Jesus, there is now a significant amount of evidence that all of these things are true.

There have been many efforts to duplicate the image on the shroud, and some of them appear at first to be convincing. However, all efforts to use a camera obscura such as might have been available in the middle ages leave an image on the linen that is much deeper than the one on the shroud. Physicist Paolo di Lazzaro of Italy's National Agency for New Technologies, Energy and Sustainable Economic Development, an expert on the Shroud, explains the problem: “the color's penetration into the fabric is extremely thin, less than 0.7 micrometers (0.000028 inches), one-thirtieth the diameter of an individual fiber in a single 200-fiber linen thread.” He went on to tell the National Geographic in 2015 that the ultraviolet light that would be necessary to create the shroud image “exceeds the maximum power released by all ultraviolet light sources available today.” In addition, “pulses having durations shorter than one forty- billionth of a second, and intensities on the order of several billion watts,” would be necessary.

No energy release like this is possible now, nor has it ever been possible. And yet the Shroud of Turin exists.

A flash of energy—light—of extraordinary intensity and extreme brevity caused the image to appear. What the effect, if any, of such an event might have been on the rate of carbon decay in the cloth is unknown.

So the shroud remains a question on two levels. First, there is the carbon dating that suggests a medieval origin. Second, there is the impossible nature of the image and the fact that it cannot be duplicated without causing a much deeper burn than is, in fact, present on the cloth. And then there is that remarkable flash of light.

I have seen beings of light with my own eyes. I have been suffused in it and sometimes during deep meditation seen it inside my own body. I know this light, although not, obviously, at the intensity that created the image on the shroud. I think that this light is subtle body, second body or soul. It is in a larger sense, being. And, as Annie has said, “God is the community of being.”

If we look to what was seen after the resurrection of Jesus, what we find is the emergence of a second body of breathtaking power—in fact, the most powerful manifestation of the soul ever recorded in the history of this species.

Anne was a scholar of the gospels, and one of our most frequent discussions involved whether or not the resurrection happened. We explored the idea that Jesus might have had a twin, which is part of the very ancient tradition of the Syriac Church, for example. But if he did, why were the apostles surprised to see him after his death? They would have simply assumed that this was the twin. And surely, in that small world, the existence of this twin would have been known. During Jesus’ lifetime, there would have been no reason to keep him secret, and certainly, after Jesus was executed, the last thing a twin would have wanted to do would have been to start walking the streets.

The reasons that the Romans executed Jesus were two. First, he was

openly claiming to be the Jewish king, in direct opposition to their own puppet king, Herod. As a Nazarene, he would have been considered a descendant of David and thus a far more legitimate claimant than Herod. Second, when he attacked the money changers, he threatened the flow of money into the temple and thus the whole financial edifice on which the stability of this new Roman province depended.

He was a political rebel and he was killed for that reason, but only after he appeared in Jerusalem. The Romans didn't care what he did in Galilee. They knew that the Galileans would never follow him. This was because, just a few years before his birth, there had been an uprising in the area and the central Galilean city, Sepphoris, had been sacked by the Romans and its citizens either sold into slavery or crucified by the thousands in the surrounding hills.

The Galileans heard only the political side of his message, not the subtle, stirring moral message.

All four gospel accounts of the resurrection mention that beings of light being were present in the tomb when the two Marys went to anoint Jesus's body. John says that there were two of them, dressed in white. Matthew describes a single being, his appearance like "lightning." Mark describes his clothing as "lightning white." All four gospels agree that he was dressed in white.

As I have said, I have seen somebody who could easily have been described as "lightning" at one point. When he was in physical form, the tunic he wore was white. So, as far as I'm concerned, such beings are as real as we are.

The one I saw in physical form was careful not to move, I think because he was concentrating very hard in order to appear as a material being. But Jesus walked with his followers. At one point he even ate with them and, of course, placed the hand of Thomas the Twin into his wounds. Anne always maintained that this was his twin brother, and he appeared with Thomas to

prove that he was not the same person. And then we would wonder if he really even died on the cross?

She was certainly very good at enjoying the question, and I recall those conversations with fondness and longing.

If, as it would appear, what came out of that tomb was

Jesus's second body still in coherent form, he must have had a very powerful attention and a fantastic ability to sense himself in order to manifest so clearly to people. It is my belief that it takes two things to accomplish this depth of soul-sensation: lightness of being and strength of attention. The man I saw do it could never, I don't think, have walked around a room. I doubt that he could even have spoken, and, given how rarely it is done, he must have been a real master of the skill.

Jesus was very extraordinary, but at the same time, judging from the deplorable condition of the poor fellow who left his image on the shroud, very much what he said he was, a "son of man" who had been treated with great cruelty by the Romans.

To assert that the resurrection really happened, and I think that it did, is not to also say that the tenets of Christianity as they emerged in the centuries following the event must be followed to the letter. On the contrary, to understand his message it is probably best to go to documents like the Gospel of Q, which is a compendium of consistent statements from the gospels that scholars believe represents an earlier document from which they were all derived.

"It's all about light, Whitley. Letting the light enter you. But you have to have a loving heart, show compassion and be humble enough to open yourself to it."

"It feels a bit like disappearing."

"Ego does disappear. It doesn't end, but it steps aside to let the soul take the attention. That's what it means to become as a clear glass through which God can shine."

So we have been set quite a challenge by this man who lived and suffered and died among us so long ago. But now, as

we come to the time when Earth's womb is no longer able to contain us, we need to revisit that message in a new way, with pure hearts and in true humility.

It's evening now, a warm summer night, and I remember back across the river of evenings I spent with her. When our work was done, we would make our supper and converse together. Such precious times, and I feel her now as I did then, her rich conversation and her humor.

She used to say, "People are too ominous about the gospels. Jesus had a great sense of humor. He accepted that people fail, and he forgave."

She used to laugh about Mary Magdalene at the tomb as her visit is described in John, thinking that Jesus was the gardener.

The green man was a fertility god in much of Europe, replaced by Jesus as the resurrected one. Anne often wore green to public events and encouraged people who came to see us to do the same. She said it was the color of those who loved life. She used to say, "I'm a resurrectionist. That makes me a green Christian." She meant that Christ is identified with the old pagan Green Man all over Europe. The resurrected Jesus is the pagan god of fertility in a new form, not as the rebirth of plants and the things of the earth, but as the rebirth of the soul.

When we realized that the shroud really did tell the story of the resurrection, it changed us both profoundly. It freed Anne and delighted her. She would say, "the resurrection didn't just happen at a certain time. It happened outside of time. It's always happening. You can feel it."

I couldn't. I guess it's my Catholic upbringing, but I worried too much about sin to really embrace something as wondrous as that.

"The worst curse that was visited on Jesus after he left this world was the one that claims that he was in some way special, apart from us, a deity separate. When they started calling him Christ, that was the darkness within

us trying to put out his light. He was just a guy, Whitley, who had surrendered completely to the light. That's why it shone through him so brightly."

"I still worry. I worry about being sinful." "Let's talk about it."

"How it weighs us down—that's what I worry about." "We don't see sin that way at all. Here, it looks like disease." "That's—surprising. I've never heard that before."

"Sin seen objectively looks like sores." That stops me. A memory tries to surface.

Then I realize what it is and I'm shocked. Moved. I haven't thought about this in years, and now here it is come to mind again, this time with the power of revelation.

Back in the 1980s I had a very striking dream—what's called a lucid dream. In it, I was walking along a road in a pleasant area of low shrubs and brush. It was about midday. As I walked, I noticed some movement in the brush. The dream was so vivid that I was as wary as I would have been in real life. As is often the case, I had the sense that I was not exactly dreaming, but also that this was not exactly the real world, at least, not our real world.

Out into the road came a man, naked and filthy. My immediate reaction was to try to help him. However, as I looked at him I realized that he was covered from head to foot with livid, running sores.

I couldn't imagine how I could help somebody in a state like that, and I didn't want his infection to contaminate me. I stepped back, moving away from him. He came toward me, reaching out to me. But he was slow, barely able to move because of the encrustation of scabs and infection that covered him.

I woke up. It was still dark. I sat up in bed. I was covered with sweat. For a moment, I thought that I was going to vomit, but the sensation passed. I went into the bathroom and got a glass of water, then went back to bed.

For nearly forty years now, that dream has lingered in the back of my

mind. I sensed that it was important but didn't know why.

About fifteen years later, I saw him again. He was better, many of the sores healing.

“He was giving up his regrets.” “His sins?”

“Evil acts here are remembered only in regret. His soul was sick with it.”

“Then if he'd just forgotten about his sins, he would have been fine? No consequences?”

“You can't forget a single second of your life. Not anything. No filters here, no pretending.”

“If he can't forget, does that mean the sores are there forever?”

“Remember ‘put those burdens down?’ Easier to do that when you're still in the physical, which he could have done but didn't. The brain is a wonderful instrument. It can cause soul infection, but it can also heal it.”

“We think in terms of good and evil.”

“That's a level of emotion that stays with the physical. We see sick souls, not evil people.”

“No punishment?”

“Do you think he wasn't punished?”

“God gave him the sores, then?”

“His life gave him his regrets and only he can reconcile them. Nobody can cure us but ourselves. There are no miracles here.”

Once again, no miracles, just nature. It is so important to remember that the world of the soul and conscious light is a natural world. It is like everything else, part of nature and subject to the laws of nature.

In that sense, the resurrection was a natural event—the light bursting out through a man who had surrendered himself to it entirely. So also, the man covered with sores—he was part of conscious light, too, and so also part of nature.

Both of them—the first and the last—were part of the same aim, the journey into ecstasy that is the reason that everything exists and why those of

us who have been given the gift of intelligence are so precious. Everything that is, is on the journey, but those of us with knowledge of life and death and the life beyond, we know it.

That's why he died for us. Because we know and are alone in what we know of death, and doubt the world beyond.

The greatest act of compassion ever seen on this earth was not Jesus letting himself die on the cross, it was what came after, which was the revelation that second body—the soul—is real. It was the resurrection.

CHAPTER 14

A Hidden Plan?

STARS EXPLODE. Devouring black holes wander the firmament. Asteroids and comets strike planets. Stars, even whole galaxies, collide. Vast cycles rule life on Earth, cycles far too powerful for any human intervention ever to change. And all of it seems to be random.

It isn't all destructiveness, though. Our planet is precisely the right amount of distance from the sun to enable life to form. The moon is exactly large enough and precisely close enough to put just the right amount of drag on the planet's rotational wind to slow it down enough to enable complex creatures to evolve. The planet is shielded from strikes from cosmic debris by the gravity fields of the gas giants in the outer solar system and by the closeness of the moon. Jupiter and Saturn will take the first hits and if anything gets closer, the moon will work as a shield. The result of this is that large asteroid strikes are much rarer on Earth than they are on the other planets. Earth isn't pockmarked with craters because the moon is.

Looking at the precision of all this, it's easy to think of the Earth-Moon system as something designed, a life building machine carefully constructed

to shield its inhabitants from as much of the random destructiveness of the cosmos as possible.

In there a mind behind it, then? Or is it simply that the universe is so huge that this spectacularly improbable situation was inevitable, and we are the children not of consciousness but chance?

There are strong arguments for randomness, but it is also true that a strangely high level of what looks like good luck is needed to explain why things have developed as they have.

I hesitate to join the heavily politicized intelligent design argument. Even if design is part of the picture, there is no reason to take a step farther and claim that a biblical god, ancient aliens, or some other known or imagined factor is responsible. If it's true, something must be responsible but what remains an open question.

So, is there a presence subtly shaping and forming the world—shaping and forming us, also?

If the universe is not a motiveless, random system governed by chance and statistics, then it might be a living thing that has motives and expectations, and, one might suspect, dreams.

For example, there is something eerie about the cycles of expansion and extinction that have characterized the evolution of life on Earth, including both our physical evolution and the evolution of human culture.

Our cultures haven't just been affected by some distant creating hand, they have been repeatedly upended by what I call incidents of light—instants of intervention, each lasting only a few seconds, that have changed everything.

Moses saw such light in the form of a burning bush and we ended up with an entirely new concept of God. In antiquity, every temple in the world contained a statue of its god. The statue was believed not only to exemplify the god, but to contain it.

The god of Moses was radically different. The holy of holies in the

temple in Jerusalem was empty because, following his god's instructions, Moses had told the Jews that he had no form.

This remarkable change effectively made this god immortal. As he cannot be seen he cannot be finally identified and understood, which is why he has remained relevant for so long. His nature evolves with our idea of him, which can never be fixed into any specific form. By contrast, Ra lies in ruins in the Egyptian sands, Athena is lost from her Parthenon, and the Temple of Jupiter Greatest and Best in Rome is a tumble of columns.

But "God"—our God—who came to Moses as a life changing and mind changing burst of light, is with us still, to this day challenging us to seek deeper and see more.

When, after his resurrection, Jesus ascended, he was surrounded by this light and absorbed into it.

Whatever precisely happened, it was so powerful that it sent a group of poor men and women out into a hostile and dangerous world to tell about it. They did this by walking from city to city, entering the marketplaces, raising their voices and speaking out. They did it in a hostile community without anybody to defend them and they accepted their lonely deaths on its behalf.

This light has power.

Paul the Apostle saw a flash of it on the road to Damascus and was so inspired that he changed from a persecutor of the followers of Jesus to a disciple of his teaching, and also went out alone into the world to spread his word. Christianity was thus born out of a flash of conscious light.

Mohammed saw it in the form of an archangel in a cave, and the Qu'ran came to be written. He, also, took his message into a hostile world and found himself having to do battle for it, and almost lost everything as a result. His inspiration was so powerful, though, that it transcended all resistance and caused another religion to appear. But like them all, its pristine brilliance was quickly distorted by those who seek power over others, and now it is hardly a shadow of what its creator and his vision must have intended.

Mohammed never for a moment countenanced anything remotely like strapping bombs to children and using them as murder tools. As well, you have the religion created out of the words of humble Jesus identified with vast cathedrals and immense wealth, and a fifteen hundred year long history of oppression.

These and other incidents of light have injected very pure ideas into our world, but so far we have not been able to handle their energy, and have consistently turned them into cruel and confused systems of belief that have nothing to do with strengthening souls or making the physical and nonphysical sides of our species into a coherent whole. They also don't address the larger question of why they happen.

Science can speculate. So can religion. But it's only speculation. Science cannot prove that they were all misapprehensions any more than religion can prove that they represent interventions by deities.

Nevertheless, there is something happening here on a very large scale that does suggest design and intention. In some ways it cradles and protects life, but it also has a habit of upending everything with truly exceptional violence.

Or maybe the destruction is random, and the strange way the planet generally recovers is what is designed.

For example, Earth is changing once again right now.

But to understand this, it's necessary to first explore her more distant past.

Earth has seen many different geologic eras, each one peopled by its own unique array of species. It has gone through at least five major extinction events that destroyed the majority of the species then alive.

So, was this chance or not? Or some chance and some design? And, above all, what does it mean for us right now?

I ask Anne if she knows. "Not at all."

"You don't have perfect vision of the past?"

"I have perfect vision of this past life and a sense of others stretching

back—a flavor of me that is my essential identity. But as to the dinosaur era and so forth, I didn't exist then.”

“So we're not there from the first. What brings us into existence?”

“A species is an idea. We are all part of the great idea that is man.”

I think again of the sentence from Physics from Fisher Information that she left behind, that the universe began as “a single, primordial quest for knowledge.” I can well imagine something seeking, questing and questioning, coming up with ideas, experimenting, wiping the slate clean and trying again, on and on.

“We can know the stories of our own souls, but not those distant histories. You don't die into a state of total knowledge. You die into the knowledge that you bring with you.”

I have made it my business to search through the deep past for the fingerprints of the designer. If there is a deep plan, it is hopefully possible to at least see its outline.

As, indeed, we can.

When the planet was just forming, something so enormous hit it that the crater it left behind is now known as the Pacific Ocean. What remains of that strike is the moon.

If the moon was not here and in a close orbit, there would be no higher life forms on earth. This is not only because it protects us from asteroid and comet strikes, but also because its gravity retards what would otherwise be continuous orbital winds blowing with hurricane force. Nothing more than lichens could grow on a surface scoured like that.

So the collision that created the moon was the fundamental shock on which everything that has happened since depends, right down to the loves and hopes in the shadows of your mind, and your children at play there in the back garden.

Was it an accident, then? When you add it to all the other things that life and evolution have depended on—the location of the moon near the earth, the

placement of the outer planets in just the right position to absorb the impacts of incoming debris, the fact that the sun, unlike most yellow dwarf stars, is strikingly free of the huge solar explosions that regularly sterilize their planets with radiation—you have to wonder if you are not looking at a gigantic design. Not only that, we do not see the gamma ray bursts coming from the center of our galaxy that are present in most of them, and which render them permanently sterile.

So a benign star in a benign galaxy, a planet the perfect distance from its star and a moon in exquisite orbital balance with it are what have enabled life to arise and evolve here.

If somebody desired this—desired life—in the stretching vastness of the desert that is this universe, they might only be able to fulfill that desire by creating a place like this. And if they were, further, interested in deepening its perceptual experience—perhaps so they could look through its eyes like a child peering through a magnifying glass—they might use evolution to create ever more sensitive creatures, from the earliest microbes all the way to man.

But the exquisitely protective crucible we live in is not the only factor that enables evolution. Sometimes things are changed. The blackboard is erased. Life is put under ferocious pressure and forced to either adapt or die.

“That I understand. It happens in individual lives, too— not just physical lives but the long, evolving lives of souls. The evolution of the individual parallels the evolution of the species, and that of every species the evolution of the whole. Evolution is holographic.”

“You say you don’t know anything about the deep past, but I see great insight in those words.”

“We know only the facts we bring with us, but all the principles we can understand.”

So we’ll go back, then, and see if a very large scale picture can be at least glimpsed. Maybe something of the designer’s mind and motives will be revealed.

Multicellular life forms emerged about 580 million years ago, and since then have been getting steadily more complex, more sensitive to the world around them and, perhaps most important of all, more curious. Compared to the basic perceptions of a bacterium—nutrition, need, light, dark—the perceptions of a human being are as a whole universe is to a single grain of sand.

As Anne said, if people haven't led rich, searching lives they can be very minimal when they die. But they can also be, I would think, towering miracles of consciousness.

And yet it's not safe here. For all the protection that surrounds Earth, it really isn't safe here at all.

Something like 99% of all species that have ever existed are now extinct, and there have been five great mass extinctions.

The third one, the Permian mass extinction which happened 248 million years ago, killed 96% of all species then alive. Everything living now, including us, is descended from the 4% that survived. The most famous extinction is the fifth, the Cretaceous mass extinction, which killed off the dinosaurs.

Right now, we are in the midst of a 6th mass extinction. The stage for it was set when the current ice epoch began. This is called the Quaternary Glaciation, which started 2.8 million years ago. During this period, the ice has expanded and retreated many times, with each ice age lasting about 100,000 years. They are punctuated by interglacials, and we are at the end of one of these right now.

In geologic time, these are very brief events. Looked at from the perspective of hundreds of millions of years, it's as if Earth is currently having a sort of seizure.

The extreme climate cycle that has characterized the Quaternary has caused a lot of species migration north and south as the planet heated and cooled, but also a steady process of minor extinctions.

15,000 years ago, that process intensified with the end of the ice age, the destruction of the mammoths and many other species, and has now accelerated to a scale and speed not seen since the extinction of the dinosaurs.

This is happening because the constant cycling back and forth between ice ages and warm interglacials is keeping habitats in constant flux, and now human activity is pouring greenhouse gases into the atmosphere, functioning like a continuously erupting volcano.

Most of Earth's geologic history presents a very much more benign picture, with epochs-long periods of stability and slow change. Violent events such as mass extinctions are rare. However, while the wildly variable climate cycle we are in now has caused some extinctions, it has also forced much more rapid evolution on adaptable species, the chief one of which is man.

“When physical intelligence reached a certain level, consciousness realized that it could not only be aware of itself, it could contemplate its own meaning. Across the universe this has happened many times and consciousness looks at itself now in billions of different ways, through the eyes of countless minds. Still more minds are desired, which is what led to the current epoch here on Earth. The stress brought on by the continuous changes in climate of the current period are intended to speed up evolution on Earth.”

Homo Habilis, the ancestor of the whole human line, appeared at the same time that the Quaternary's stress-inducing ice cycle began.

Did Homo Habilis possess some version of “I am,” and did that excite conscious light, impelling it to increase the speed of change on planet Earth? Is the Quaternary's rapid cycling not Earth having a seizure so much as trembling with excitement?

To explore this, let's begin by looking at those past extinction events.

Logically, the fantastic destruction caused by an extinction event would seem to compel life to start over again, virtually from scratch. But this is not the case. Instead, extinction events generally result in the appearance of

better, smarter and more adaptable creatures than were present before they occurred.

The engineer sweeps his blackboard clear for the same reason. He wants to start with a new and better plan. And yet, everything I understand about reality tells me that it's not that simple.

The most famous example of this is what happened after the Permian extinction. For 10 million years after the event, life on Earth struggled with continuing negative conditions on a scale that we can hardly imagine. The land was stripped bare, the atmosphere was foul, the oceans were roiled by fantastic, all but endless storms. Little survived, nothing thrived.

But then, according to a study presented in 2012 in *Nature Geoscience*, by Zuong-Qiang Chen and Michael Benton, life not only recovered but entirely new species burst forth in millions. It was as if, according to a statement made by Benton on the LiveScience website, "the event had re-set evolution."

Another is the KT Event that destroyed the dinosaurs. When life recovered, mammals, a more advanced and capable genus than the reptiles, became dominant. These creatures, smarter, better designed and more active than the dinosaurs, filled the world with a proliferation of new bodies, minds and events.

Their rise marked the beginning of the next era, the Cenozoic, which is still unfolding. It is divided into the Tertiary, which lasted until 2.8 million years ago and the current period, the Quaternary.

During the Tertiary there was a phenomenal flowering of new species as the mammals raced to replace the dinosaurs.

Then came homo habilis and the upheavals of the Quaternary. There was no definable extinction event then, but when the ice ages began to disrupt the climate, the more exotic and specialized mammalian experiments of the Tertiary began their long period of decline.

This culminated in the extinction event that we are in right now. It started

about 13,000 years ago, when an apparent comet strike destroyed most of the large land animals in the northern hemisphere, including almost the entire human population of the American continent.

The upheaval was worldwide, but mankind survived elsewhere, and we immediately filled the niches left by the predators who had not. After we recovered from the shock of the event we proceeded to create larger social organizations than ever before. We see the outcome of this sort of early socialization in the recently discovered Gobekli Tepe monuments, which could not have erected by people who did not possess a complex society. Building began about 2,000 years after the upheaval during a period known in geologic history as the Younger Dryas. What happened was that, about 2,000 years after the glaciers began melting, there was a sudden return to cold conditions. This was followed, 11,500 years ago, by a dramatic temperature spike during which temperatures in Greenland, for example, rose 18 degrees Fahrenheit in just 10 years. Such a change today would lead to worldwide catastrophe, and it did then, too. Thousands of animal species, especially large ones that were dependent on specific ecologies, disappeared.

As a direct result of the fact that this event gave us more room, we have become the dominant species on Earth. I don't think that it is a coincidence that we are also the smartest and among the most adaptable. We are the absolute leading edge of consciousness here, the most self-aware, intelligent and, above all, curious creature the planet has ever produced.

Since the close of the Younger Dryas, Earth has been in an interglacial, and we have benefited from the warm, benign conditions. But we are coming to the end of this period, and this will be a violent event, in part because of the fact that we are pumping so much carbon dioxide into the atmosphere. And don't believe the claims on the internet that CO₂ doesn't affect atmospheric heating. These claims are demonstrably false. The fossil record convincingly shows that most past extinction events involved dramatic increases in CO₂. Only the one that killed the dinosaurs was definitely caused

by an impact.

First, the planet is going to heat up. That's what is happening now. Afterward, sudden cooling will plunge it into another ice age.

Interglacials generally climax with a dramatic temperature spike like this, which is followed by equally sudden cooling. The heating is caused by the release of tremendous amounts of methane "frozen" in hydrates beneath the northern oceans. When the hydrates melt, which occurs at 47 degrees Fahrenheit, trillions of tons of methane gas escape into the atmosphere. Right now, we are just at the point that this process is beginning. Right now methane that has been trapped in permafrost across the arctic is releasing. The methane hydrates beneath the ocean have not yet melted but the current rapid warming of the arctic will cause that to happen.

I ask Anne when it will happen.

"I see towers standing now that will be standing then, so not too far off."

"A hundred years?"

"I see kids in playgrounds. That tells me, within their lifetimes."

"You think in pictures? How does that work?"

"You see the future like that. You can't see things that haven't happened yet, but you can see people whose fates are intertwined with them. We don't see futures, we see fates."

Since human population began exploding in the middle of the 18th Century, our presence has functioned something like a volcano that never stops erupting, adding the intensity of manmade global warming to a natural cycle that has been under way for at least two thousand years. We have, in other words, sped up the climax of the interglacial, and probably by a lot.

We may or may not be able to change this, but we cannot change the underlying cycle. No matter what we do, how long we delay it or do not delay it, the interglacial is destined to end, and with it Earth's ability to support billions of human lives.

It's not our fault any more than we can fix it. What is our fault is that we

are neither planning for it nor trying to reduce our own effect on it. The reason we're not acting to save ourselves is very simple. All the debate that goes on around the obvious, demonstrable fact that the planet is warming fast comes down to one thing, which is fear.

Greedy people running companies that pollute fear the loss of their profits. People who feel helpless fear to look at something so horrible that cannot be changed. So we're paralyzed.

"That's part of why we're here. You don't feel fear in our state. We can communicate that by freeing you from the fear of death."

"That would be a start, given that we live in an age of upheaval."

The chaos of alternating interglacials and ice ages are now the natural order of planet Earth, and have fundamentally influenced the evolution of our species, the development of the mind, culture and history. In fact, we owe our existence to the upheaval we are living in. Dealing with the stress of the radical climate cycle we live in is what has given us our minds.

When the most recent glaciation started a hundred and twenty thousand years ago, we were naked, living in small family groups and practicing primitive forms of hunting and gathering. As the climate grew colder, we learned to clothe ourselves. When game became more scarce, we improved our weapon making and hunting skills. Then, around 40,000 years ago something unpredictable happened. The first wave of a nearby supernova seems to have struck the planet. It started with radiation strong enough to kill anything exposed to it, which seared Australia and parts of Asia and Africa for about 24 hours. It continued for weeks, but not a high enough levels to kill.

Not only does radiation kill, however, it also causes a flood of mutations. For example, prior to the supernova we're discussing here, man had only one blood type, type O. During this same period types A and B appeared. The human brain also mutated at about this time.

It was then that Neanderthal man began his decline and Cro-Magnon

appeared. He had a new sort of brain: a mutation had occurred that dramatically increased the size of Wernicke's area, which controls comprehension and the semantics of language. This is by far the most important difference between human and ape brains.

That the mutation was sudden is suggested by the abruptness with which Cro-Magnon enters in the fossil record, seemingly almost out of nowhere.

In addition, we now know that another crucial change was taking place, although over a much longer period of time. The NFIX gene, which is what causes the jaw of more primitive forms like the Neanderthal to protrude, was less active in early humans. This meant that, generation after generation, their faces shortened and vocal tracts changed, giving them an increased capacity for speech.

These things meant that Cro-Magnon could evolve complex languages and the correspondingly larger and more viable social groups that are essential to survival in a world of constant change like ours. Was it not for the shortening of the face and the expansion of this brain region, human society, art and culture could never have developed. Language could never have evolved.

It would appear that the supernova created us, or better said, was used as a tool in that process.

“That kind of super-speculation that you do drove me crazy when I was physical and I'm going to repeat now what I used to say then: keep it in question.”

Ok, then I think I can say this: Whether or not the radiation flood caused the brain mutation cannot be known, but all across the latter half of the ice age, as Neanderthals slowly disappeared, the vibrant new Cro-Magnons thrived.

Then, 13,000 years ago, the slower moving, solid debris from the supernova swept through our solar system. This caused the fantastic and deadly upheaval on planet Earth that brought the last ice age to its sudden

end. In North America, the entire continent was set ablaze, then the ice sheets that covered the region as far south as southern Illinois collapsed, flooding the burning forests and plains.

The result of this is a geologic feature is called the black mat. It is now found at various depths beneath the surface of the soil over much of the United States. This mat consists of ash and other debris combined with the fossils of algae.

What had happened was that the melting ice sheet caused a continental flood that put out the fires. The shallow floodwaters gradually drained away, leaving the debris that was floating on its surface lying on the ground. This dried and hardened into the mat.

All of the large animals that existed in north America except the bears and the bison were destroyed. The Indians who lived here at the time were entirely eliminated, except for those along the coast of the Pacific Northwest.

North America wasn't the only region flooded. All across the planet as the ice melted, flooding occurred. There are more than 50 flood myths worldwide that remember the event. About a thousand years after the catastrophe started, the situation stabilized.

As has happened again and again across the history of our planet, the catastrophe led not to chaos and ruin, but to something much more advanced rising out of the destruction. In this case, it was complex human civilization, agriculture and the beginning of our history and culture.

We have ascended into what is present on Earth today, a vast, complex and immeasurably wealthy human civilization filled with people who are beginning to look at themselves in new ways and, at the extreme edge of evolution, now attempting to forge this new bond between the physical and nonphysical sides of the species, breaking through into a new consciousness that bridges death itself.

However, the civilization we have created is in the process of overwhelming the planet's ability to sustain it. Not only that, as it has become

more and more intricate and demanding of resources, it has also become more and more inflexible and vulnerable to sequential collapse, a process that could escalate very quickly into a general catastrophe.

When I saw this danger some years ago, I wrote the book *Superstorm* with Art Bell, which led to the movie *the Day After Tomorrow*. Both were dismissed as being absurdly overdramatic. In 2016, though, prominent climatologist James Hansen and 18 other climate scientists published a paper in *Atmospheric Chemistry and Physics* entitled “Ice Melt, Sea-Level Rise and Superstorms: evidence from paleoclimate data, climate modeling and modern observations that 2c of global warming could be dangerous.”

So the word “superstorm” may have started with a raspberry, but it has entered the language of science, not to say the public consciousness after Hurricane Sandy became universally known as Superstorm Sandy.

No matter how it unfolds, we are facing a situation that seems ready to deteriorate so quickly that it is likely to lead to a significant loss of life of all kinds, including human life.

Whether we go entirely extinct in the physical or continue to survive to some extent I cannot say, but we are extremely likely to experience a population decline over the next century or so.

“I can’t tell you exact dates, Whitley, but I can tell you that there is survival. The end of a species’ life is not death any more than the end of an individual. Extinction is a another aspect of evolution, just like grief is another form of love.”

“Say something happens like one of those monster storms. Millions of people are dying. It’s hell on Earth. What’s that like from your perspective?”

“As I’ve said, death at your level is birth at ours.”

Birth is not pretty and it’s not pleasant. It’s hard and it’s frightening and it’s dangerous. It is also as much a natural process when it happens to a species as when it happens to an individual.

“Also, just as an individual is born and dies many times, the same is true

of a species. When you are no longer subject to physical filters, you can look back over the lives you have lived—the long shadow of your soul—but also to some extent the even longer shadow of the species soul. It lives and dies through incarnations just like individuals do.”

I don't know where to go with that. I've never thought of it before. It causes me to realize just how enormous all of this is, and make me wonder if mind unbound is more capable of understanding reality than mind when it has the use of a tool like the brain, or is the opposite the case?

“Life is an organ of soul, Whitley. Living bodies are sensing devices inserted into the river of time, both individuals and whole species. What you think of as yourself is actually a mechanism being controlled by your nonphysical self, which is using it to gain new knowledge. Remember that being is both individual and general. You attend to your own life cycle, but by so doing you also attend to the life cycles of the species, the planet, all the way up to the universe.”

Conscious light spreads its rays over the physical world, seeking always deeper, always farther. I can already hear the voices crying in the storm and know, also, that there will be ecstasy riding its winds. The coming forth of mankind will be like that, a great cry and a great terror, but also open eyes here and there, hands reaching across the bridge of love, and death fading into the illusion that it is.

CHAPTER 15

The White Moth

STARTING in the spring of 2016, something began to happen that would end by proving to me that Anne is still a conscious presence. It was brilliantly executed, it was witnessed by others and it could only have emerged out of deep knowledge of the relationship between the two of us.

I found myself in a position to believe—but remember, we are not asking you to do that. What we want you to do is to look at your own life and the life of the world in a new way, to find new sensitivities and with them new questions that belong to your own search and your own exploration of relationship with your loved ones on the other side of the bridge.

In May of 2016 I was at the first public speaking engagement I'd been involved with in years. It was a Saturday, April 9. I was attending a conference in Arkansas. I'd thought that the participants would be indifferent or even hostile to me because I've gone so far past the conventional flying saucer- alien stories, so I had been uneasy about attending. But I found instead people who were interested in the new direction my work had taken, so I was spending a lot of time with them comparing notes and discussing

experiences. It was really pretty exciting.

My talk was entitled “A New World If We Can Take It” and was about the fact that a new reality is on offer to us, and what we need to do to take advantage of it—the theme of my and Anne’s lives, really.

At the conference, I felt Anne’s presence very strongly. I was already communicating with her, but still unsure if it was Anne as a separate, nonphysical entity, or the Anne who is part of my own soul.

I did not yet understand that it was and always will be both. Compared to what it has since become, my understanding of the nonphysical world was primitive then.

When I spoke, it seemed as if she was once more standing beside me. How often in the past we had spoken together like that. We would give our talk and she would read from the Communion Letters, the book that she created from a representative sample of the letters from close encounter witnesses she had read over the years.

Then, on that Saturday afternoon, something unusual and disturbing happened. It had nothing to do with the conference, but rather with the surveillance system in my apartment in Los Angeles. If the cameras observe movement or hear unusual sounds, they send a text to my cell phone. In the years that I’ve had them, I’ve received a few such texts, usually indications of unusual sounds, such as a clap of thunder or a nearby dog barking. But this text was different. It warned of movement in the living room.

I at once went to the camera’s app on my phone and looked to see what was happening. To my surprise, a large white moth was flitting back and forth in front of the lens. As I watched, it flew back and forth, back and forth. It was about midnight in Arkansas, so 9PM in Los Angeles. The living room was dark. The moth could have been another color, but the camera’s infrared light made it appear white.

What was odd about this was that the doors and windows to the apartment were shut up tight and nobody had been in it since I’d left two weeks before.

So how had this large moth gotten in?

Over the next twenty-four hours, it came out a number of times, always at night. It still seemed perfectly normal to me. Most moths are nocturnal. It didn't look unusual.

My focus was on finding it and getting it out of my apartment as soon as I returned home. But when I showed the images to some of the conferees, I got something of a surprise. One of them, a psychic, said, "that's no ordinary moth," but he couldn't add more than that. I thought, 'yeah, it's in a place where it shouldn't have been able to get.' I still didn't think that it was anything more than ordinary.

When I returned home, the first thing I did was to search the apartment from top to bottom. No moth. I went through all the closets, pulled out furniture, even looked behind the refrigerator. There was no moth carcass. I left the camera on that night and for the next five nights. No moth.

Maybe, I thought, there was a point of entry that I hadn't seen, and it had left the way it had come. But insects don't behave that way. I should have found it fluttering against a window or dead on a sill.

Over the next year, no matter when the camera was on, the moth did not reappear. I thought nothing more about it.

But then in April of 2017, I took the trip to the campus where I had previously gone while out of my body. During a speech I was giving there, I mentioned Anne—and in that moment, the camera texted my phone.

Literally at the moment I had said the word "Anne," the white moth had passed in front of the living room camera. It briefly alighted on the cabinet where the camera is located, and I could see it well enough to determine that it had the antennae of a silk moth. The *ceanothus* silk moth is found in this region, so there was nothing unusual there.

Over the next few days and nights while I was still traveling, the moth never made another appearance. It had passed in front of the camera just at that one moment.

Given the fact that it was there only when I was talking about Anne, it finally occurred to me that it might have something to do with her. When I returned home, I once again made a search for remains. This time, I was extremely careful and methodical, going through closets, looking behind furniture, under the edges of rugs, behind appliances— anywhere it might have fallen.

Once again when I arrived home the apartment had been shut up tight, and once again nothing was found, except for the dried carcass of a different and much smaller species of moth that had been dead for a long time.

I stood in the middle of the apartment. I was at a loss. Finally I asked her, “Do you have anything to do with this?”

I didn’t hear a reply—I was only just learning how to detect the flavor of her thoughts and could not ‘channel’ her. But there came into my mind, and quite forcefully, a memory of my short story “The White Moths.”

Anne had loved it. She thought it the best of my short stories.

Now I reflected that the only time in a year that the white moth had appeared was a moment that I had mentioned her name. In a year!

I heard her laughter—that gut-deep, solid laugh of hers that I had so enjoyed when she was alive. Then she said, “I can talk to you.”

I was shocked. That voice had not been part of me, it had come as if somebody else was speaking in my mind, somebody besides me.

That night we talked and talked like we were two excited kids again, just discovering each other. I wanted to tell her of my daily life as it has been since she passed, but that didn’t interest her. She was interested only in my inner life, with special emphasis on learning to love myself objectively.

I found out that night that my wife is still a marvelous teacher, ready with penetrating questions but very careful with advice. She is not a “guide.” She seeks to help one guide oneself.

That night and the next day and night passed in illuminating dialogue. I finally got used to it. I want to say that I could now tell for certain that it was

her, and in my own mind that is true, but she would never let me settle into belief. Just like a moth, her mind fluttered here and there, never resting, always seeking toward the light and urging me along with her.

Still, though, there was that edge of doubt. Could this really be true? Really?

The next weekend I was with my son, who lives a hundred miles away. Since I'd gotten back from my trip to the campus, I had left the camera on day and night. The moth had not appeared either on camera or visually.

Anne had a lovely relationship with her son. As a little one, as a teen, as a young man, she was very, very good at giving him the kind of room and the clear limits that a kid needs. Her mothering was gentle, always, her advice for him full of wisdom.

In all the years of his growing up, she not only never punished him, she never so much as raised her voice to him. She didn't act toward him as if he was somehow less a person because he was a child. She respected his rights and expanded them as he matured. She disciplined him by being disappointed when he did not meet those expectations. Then she would guide him so gently back in the right direction.

Their love was deep and beautiful, a work of art between mother and son, dancing with humor and full of the ordinary excitement that attaches to a child's discovery of the world.

By this time, May of 2017, when I would go to visit him and his kids, I would feel very strongly that she was with me.

Mom always came, too.

On this afternoon, also a Saturday, I was sitting with him and telling him of what had happened during my speech of a week before, and of my suspicion that Anne was somehow behind the appearances of the moth.

I explained to him that "the White Moths," is a meditation on the time of dying and what it means to really live life, and also what it means to live in life's illusions, and how much mom liked it.

I said, “Anyway, I’m thinking that maybe it all has something to do with mother.”

In that instant, the camera texted me. It had detected movement.

I turned on the app. At the exact moment that I had said “maybe it all has something to do with mother,” the white moth had passed in front of the camera.

When we saw the image of the little creature fluttering past, it was like looking into the depths of an unknown truth.

It did not appear again, not on that day and not for weeks. Just that once, just in front of the camera, then gone. The camera has a wide-angle lens that covers the whole living room. The moth flew past that lens approximately six inches from it and disappeared.

I felt my beloved Anne fill my heart. Then tears came. I didn’t want to upset my son, so I fell silent, trying to control myself.

He sat a long time in silence also. Then said softly, gently,
“Mom, I love you.”

The reality was hard for me to deny. No, impossible. For there is much more to the white moth than even these appearances.

So here I was at the end of a question. I knew, now: Anne is still here. She is still conscious and she is involved with her family.

“And with lots of people,” she adds as I write. “I get around.”

“Do you talk to people?”

“That’s not how it works. You talk in them, not to them. Sometimes you influence them, mostly you don’t. The ego is like a radio turned up too loud. You have to tune it down or you can’t hear us.”

Like everything that comes from her, these few words are filled with teaching. Not guidance or future-telling, but solid, practical teaching about how this new kind of relationship looks from her side and how it can be made to work.

The use of the white moth as a symbol is very canny and very smart.

Somehow, she could influence the creature. Maybe she even conjured it. To this day, I've never found a single sign of a moth like that anywhere in the apartment.

“The White Moths” is a contemplation of death in which the white moths symbolize the spirits of the dead and life is seen as a journey in illusion.

Anne says at this moment, “You’d be amazed at how true that is. The first thing that happens when you look back on your life isn’t that dour contemplation they talk about—the life review. You realize that you took it too seriously. It’s a game. That’s life. Looking back on that serious, ambitious, frustrated little creature that you were is amazing and puzzling. That was me, that little thing with its tiny problems? Going into the physical causes you to forget the great scale of your own being. You touch that in “the White Moths” and that’s why I love it. Consider that white moth of mine my philosophical statement about the true nature of physical experience.”

There is also a mention of white moths in “Song of the Wandering Aengus:”

“...when white moths were on the wing, And moth-like stars were flickering out, I dropped the berry in a stream And caught a little silver trout.”

Just as my white moth initiated my search, his white moths began his.

Most recently, when I was staying with friends in Texas, the white moth would fly across the camera’s field of view just once every time I started to meditate. It was as if to say, ‘You’re away from home but I’m still with you.’

In choosing the white moth as the “word” she used to express herself into physical life, she opened up a richness of meaning that derives not only from my own creative urge and from her defining statement about the search that will occupy the rest of my life, but also from a treasury of symbolic meaning that crosses the cultures of the world.

In ancient Greece, the word psyche was used both for soul and for moth. But it goes much deeper, in that Psyche was also thought of as anima mundi, the animating spirit of the world. After hearing my story, philosopher and

friend Dr. Patricia Turrisi wrote me, “Psyche signifies at the same time soul and butterfly. The myth was interpreted by playing on this double sense. It became the story of the soul touched by divine love, but which, by reason of the mistakes made, must undergo some tribulations before having access to happy immortality. The night butterfly (the moth) attracted by the flame, like the soul attracted by heavenly truths, burns in the flame, reflection of the trials that must be endured to eliminate the fleshy sink-stones before knowing the joys of the beyond.”

It is those joys to which Anne has been preparing to ascend. Now, judging from a contact with her that has just unfolded, she is ready to make her onward journey.

I have long since passed beyond the notion that all dreams are “just dreams” and have learned to respect the power of a disciplined imagination. As we have gone soul blind, we have also lost the knowledge that, while dreams may be dreams, they may also be journeys into other worlds, most particularly the land where our dead dwell.

As I write these words I am just back from such a journey.

It started with a surprise meeting with a glowing woman, very beautiful, and her brother. I have not met them in physical life, but I learned their names and saw their faces. They introduced themselves carefully, but when I asked for a last name, they only smiled. I knew why: if I had that piece of information, our fates would be interrupted, and our fates are to meet, if we do, by chance.

It was a poignant, lovely moment when she smiled at me and I saw in that smile hope and pride, the pride of beauty, not only of the body but also of the soul. I could feel her seeking toward me.

I said, “I’m already married.”

They showed me their lives. They were lovely people, living somewhere that seemed to me to be typically American, prosperous, comfortable and settled. As I went with them, seeing their friends, the children and parents in

their lives, I experienced at once the pleasure of their peace and an aching sense of separation from Anne.

I wear both of our wedding rings to symbolize that we are now sharing the one body. I expect that to last for the rest of my life, and on my death to unite with Anne forever.

But if I meet these people, as I understand it, I am going to find a new destiny. I am going to start a new physical life in their family. The woman will fall in love with me and I with her. I will continue on into a new marriage.

As was my meeting with Anne, it's primarily a matter of the ambiguous nature of reality which is so crucial to the surprise that makes life worth living, that we call chance.

I could imagine myself falling in love with this woman. I could imagine it, but I don't want to. The idea brings me a homesickness more acute than any such emotion I felt during childhood, lying in my bunk on summer camp nights, watching the moon slide past the window and longing to be in my own bed.

Then I found myself, in the dream, with Anne. There have not been very many such direct meetings. I was about to laugh with her about "some woman" trying to seduce me when I noticed a new sense about her. I said, "You seem more free."

She replied, "Yes. I'm going on now. This was a beautiful marriage and I will always love you, but we're all part of nature and the marriage is ending."

This simply shattered me—right in the middle of the "dream."

The woman came, hesitant, wanting to comfort me and draw me into the gentle possession of a new love.

I thought no, no, it can't be true. And as I write, my eyes are filling with the same tears that filled them when we walked that path in the land of the soul. I said, "I don't want it to end."

But then I realized a truth, that marriage is about bodies and the heat of

bodies, life and children. You do not stay married across the bridge. You build a new kind of companionship, dear and loyal but not exclusive like physical marriage.

I felt Anne touch me on my arm. It was electrifying and terribly sweet, poignant beyond expression. She said, “Don’t be afraid, honey, we’ll always be together.”

“Don’t leave me!”

But just as she had on the night she died, she went on, walking easily toward a new world and a new life that I cannot imagine.

I must remain here to do my work in our family and in the physical world of which I am still a part. And if I should ever meet that lovely woman, I will find another courtship and a new life path.

Anne said, “Keep looking always, never forget your search. You gave me everything you have to give, Whitley, and here I am in this immortal state.”

“You gave me everything, too.”

“I’m still a teacher.” I could feel a closeness between us then, a new aspect of life across the bridge. These teachers we so absurdly call “the dead” teach from within our own minds and souls, standing ready to take us deeper than it has ever before been possible to go, into lands and knowledge yet distant, but which are meant for us to know. We will learn to be as these beings we call aliens are, living in the physical and nonphysical states both at the same time, as a whole species.

Such happiness was flowing out of her as we walked that I laughed through my tears, a delight of anguish.

But then—then—she began to walk on ahead. I couldn’t keep up. I tried and tried but she rose from the land of the dream just as she had on the night she died, ascending farther and farther.

I woke up in an ocean of tears.

It was three in the morning, the hour of meditation. Still in tears, I rose from my bed and went to the chair where I meditate, did the sensing exercise

and went deep.

New love came flowing into me, a fine, careful love that is aimed squarely at the strengthening of my soul. It was no longer the love of a wife, though, but that of a dear teacher and friend, the best I could ever know.

“Will you leave me now?”

She shook her hips provocatively. It sure didn't look like somebody who was leaving me, not even physically. But that's not true, as I have come to understand. The freedom we both need is for me to accept that I am physical and have physical needs that I cannot simply long for her to fulfill. I may or may not fulfill them, but I cannot continue to ask her to be my marriage partner. When the physical body ends, so does the physical marriage.

On the other hand, the deeper one between souls needs never end. But it is not exclusive, not like physical marriage. Anne's soul belongs to the world in different way now.

We have found a new kind of relationship together, the teacher learning, as all good teachers do, along with the student. For she, also, has a journey ahead of her, to fulfill her essential destiny, helping in the great work of drawing souls— many souls—through the alembic of life and into joy.

I know she will do her work very well. She is so good at it. But my girl will always be my girl, slipping now ahead of me along the path. I want so badly to keep up, but I belong still to the physical and must stay here like a old lump. My soul can soar, but never high enough. And yet, even though I see her far away, I feel her with such intimacy, a ghostly presence soaring within me, that it makes me howl out my longing.

I take in my heart now the last lines of Aengus, the defining song of my search:

“Though I am old with wandering
Through hollow lands and hilly lands,
I will find out where she has gone,

And kiss her lips and take her hands;
And walk among long dappled grass,
And pluck till time and times are done,
The silver apples of the moon,
The golden apples of the sun.”

Fare you well, dear soul, more to me than I am to myself. I will follow along as best I can in the path you are laying. I will find you in my memory and the turnings of my mind and in your whispering, laughing voice, so rich with wisdom and so very kind.

As you said so often and so well, great love never ends.

At this moment, seemingly by chance as I write the last words of this book, I see that it is August 11, 2017. It is 7:25PM, exactly two years to the minute since you rose through my arms and began your journey.

I belong still to Earth and you now to heaven, but I know that you will always be there when I call to you across the bridge, for the love that we share will carry my voice into that smiling country, the mysterious land of light where you dwell.

The End

Anne and Whitley Strieber

APPENDIX 1

The Love that Led Me Home by Anne Strieber

I would like to tell you a story that seems to me to have helped almost everybody I have told it to, and has certainly helped me.

I have gone on a long and dangerous journey into an unknown world. I don't remember much about it, except one thing that is extremely clear: I remember a point at which I was given a choice. There was a natural desire to live and survive, and I was looking for ways to do it. But I think that if I hadn't found a guide, I wouldn't have made it.

The guide turned out to be my beloved cat Coe. I remember weeping into his fur when I finally had to put him to sleep after a long bout with cancer. Coe was always the family clown. He had no instincts. He didn't fall on his feet. He was very smart, and quite capable of lying.

Once there was a terrific crash in the living room, and Coe came strolling into the family room elaborately yawning as if he'd just waked up. The catastrophe in the living room, we were supposed to believe, couldn't have had anything to do with a peacefully sleeping cat.

I was very surprised to encounter Coe. I didn't really see him, but more sensed his presence. I knew that I was at the juncture between life and death.

It was a busy place, and I wasn't sure Coe would even wait for me.

There seemed to be very little time. At that point, in the physical world, I began trying to call my son on the cellphone, or so I thought. I later discovered that he was at my bedside. It was as if I was living in two worlds at once. I wanted to tell him that Coe was here, because I thought he'd be very excited. They were close, close friends, those two.

I'd always expected to see my dead mother. She passed away when I was only seven, so I don't remember her much at all. I'd been waiting for this moment all my life, because I want to see her and remember her. I've always thought that I would see her again after death, and remember her then. And yet, she wasn't at the center of my love. Her death was just so long ago, and I was so little when it happened.

I certainly had a lot of love with Coe and I was so glad to see him, but right now he was very matter of fact.

It was as if he was saying, "C'mon, there's no time to waste." I was left with the impression that animals know the secret of life and death far better than we do.

I heard him say inside my head, "These STUPID humans--Don't even know how to find the World of the Dead on their own!" He took me to a place that looked like a subway or Greyhound bus station, an underground waiting room lit with those weird yellowish lights you see in such places. The place was busy: I had the impression of lots of people around, and that they were clutching bulging shopping bags and suitcases, maybe the memories they wanted to bring with them from life.

And I somehow knew that they weren't going to be able to go on (to catch that subway or bus) until they were willing to put their packages DOWN.

To Coe, it was nothing special at all. It wasn't as if he thought of himself as a spirit guide or anything. It was much more casual and matter-of-fact than that. He was ready to take me down a certain path if I wanted to go, and there was love, but it wasn't filled with elaborate new emotions.

He never functioned well as a cat, mousing and that sort of thing. But he was the world's best cuddler, little boy playmate, and friend of the heart and soul. And now he was here, ready to take me for a little stroll into the beyond.

After he died, he showed up in our apartment a few days later. Whitley, who sees such things, saw him and saw that he was lost. He took him and pointed him toward the other world, that now seems to me as much a part of ordinary life as it is for Whitley. Now he was back, ready to help me take the same journey.

I think that the reason for this happening is that there has been an investment of real love. I put love into Coe, and he loved me, and that love now has an independent life. Maybe it wasn't even Coe there, really. Maybe he found the path long ago, and is far down it now. But the love was left behind, waiting for me until I needed it.

It took a journey beyond the edge of life and the help of a little animal to bring me to a place of new understanding, that all that really survives of us is the love we have made in the world. It's a simple truth that will stay with me forever, even when I pass again across the threshold, this time never to return. Especially then.

APPENDIX 2

The White Moths by Whitley Strieber

What to do? There was the coffee cup needing to be washed, and the bed could do with a smoothing. There were those buggy roses. And a letter to Janie, yes, there was that to do.

She watched the sunlight instead, creeping about in the lawn. How long had she known this light in this lawn? Nineteen thirty-one to nineteen eighty-seven. How on earth long was that? Thirty one, forty one...over fifty years.

Damned long, you old coot. Funny. You have gotten old. Become old, it sounds better. And what of your phoebes, there in their nest in the old grape arbor? You have been watching that pair of phoebes--well, always.

She realized with a bit of a dry chill that her little friends had probably gone through dozens of generations in that ruin of an arbor. She had not made pets of a pair of birds, not over fifty years. She had made pets of a whole line of birds, stretching back into the dark past.

Now why hadn't she realized that before? She had been feeding them for over half a century, all through Bob's life, from when he was a young husband bounding up those stone steps until he was a thing of rattling papyrus with his pain and his awful grasping.

Here she was alone in this comfortable old house, well, banging around a little, really, but content with her diet of mystery stories and waiting for the evening news.

She watched the hopeless folly of Presidents, one after the other failing in some manner, and thought it odd that nobody seemed to notice that every one of them since Johnson had come a-cropper. The whole institution had failed. Another symptom of dying.

A flock of geese appeared in the northern sky, nothing but a brush of dots but she knew what they were, oh yes, the geese of October again. She ran her finger along the window sill, wondering at the white dust. Natalie would be disturbed; she kept this place so carefully, the blessed soul.

There was that letter to write. She stood up and moved through the great shadows to her old roll-top, the desk where Bob had spent so many hours doing his evening work. There were burns from his cigars, and still in the secret drawer there was that little flask of cognac, untouched since last she refilled it for him so many years ago.

She took paper and pen--her own pretty paper with the blue crest--and laid the nib against the white sheet.

“My Dear Janie,” she wrote, “I am so afraid.”

She stopped. Now what trick of hand or mind was this? She had not intended to write those words. No, certainly not. Afraid? Never. She was not afraid. Death would come soon, of course, but one went on.

She regarded the words she had written. What nonsense. She hadn't meant to write that. Still, there had been the softest,

gentlest dream, had there not, of those--well--perhaps...

A white moth fluttered suddenly up from some cranny in the desk, a moth so swift and pale. She brushed it away. It came again, swarming at her face. She batted at it. Yet again it appeared, fluttering, its legs scabbling at her cheeks, her eyes, as if it had mistaken her face for a route of escape. She pushed the chair back, batted with both hands, then stood up.

She had thought to go down to the kitchen for the fly swatter--surely it would work against a moth--but the thing appeared to be gone.

Moths were not a good sign. She thought of what they could do to her furs, the lynx, the minks, the white wolf she had worn so many years ago in Paris...the Opera Steps...

She grasped air, thinking of the balustrade, of touching it lightly as she descended into the bright interval throng. And had not Willy D'Orsay glanced up at her and smiled his benign, perfectly naughty smile?

How odd to remember him, an acquaintance of half an hour...She had danced with him at the Club--which damned club--or was that aboard the Mary? Danced. "Talking band," he'd said. And she'd said, "yes!"

She must not let the moths get at her coats, not at her beautiful white wolf, the furs bought from that poor Russian man, the one who jumped from the hotel window and had the misfortune to live. But the Nazis finished him, as they did all of the cripples of Paris.

An American in Paris. She saw herself reflected in the window as she crabbed about hunting the moth. But there were her coats to think about, her gowns, her frocks, the smooth cloths for the skin of girlhood.

And what wisdom have you gained, you who teeter here, ghastly old creature smelling of drought and Listerine? What wisdom?

She knew about politics. She had always voted. Landon slide. She remembered that, but he had not won. No, it was FDR again, that raging cripple, as angry in his way as the Russian with the white wolf furs, spreading them across the dining table in the Crillon suite, the perfect, white furs of six wolves, how extraordinary and she had been so clever with him. "Well, they are good, but I am not paying retail."

"No, madame, of course not," and he a duke once before the destruction of the Empire. Madame, and he a duke once. She had taken the furs for nothing--nothing--a few dollars, and now that white moth--

She moved quickly, maneuvering her leaden body about the room,

wondering if the moth had come in the window, or somehow popped into life inside Bobby's old desk, that wretched old thing full of cigar smell and tin boxes with keys to here and there, abandoned sheds and hunting cabins up in the hills and all of his intricate, leathery things, his boxes of moldering papers, his safe full of damned stamps.

Oh, he lay so still that morning.

The white moth flew round and round her head and she saw it clearly, a pale thing, so soft...with tiny eyes as red as they could be. Tiny, red eyes, alien, cold and strange, eyes that brought the stars to mind.

Billy had enjoyed peering at the stars with his telescope. He'd get up at two in the morning and hunt with his dogs until dawn, then come back for eggs and bacon and coffee. Then off he'd go to the office or come in here and work until noon, then lunch and a heavy nap and more work until four, then drinks.

Drinks...the flower garden in the summer, the white chairs, her cool dresses, the girls in their summer things, and Woodrow serving the bourbon and water and the chunky ice when it came delivered then, and those wonderful little salted things that Jenny made--what were those things? And politics were discussed. She had taken to reading the papers, the New York Tribune, then it became the Herald-Tribune, so that she could agree with him intelligently.

Landon slide. Win with Willkie. FDR. Truman blowing up all of those sinister Japanese. She'd never made it to Japan after all. She'd meant to go. Maybe next year. There was no longer a boat, you had to fly and in airplanes they treated you like a dog, those awful supercilious girls in their little blue suits with their trays of dubious food, and the droning and the shaking. The Weedens had gone down.

She sat, suddenly, in a dark gothic bishop's chair. "It is not enough," she said in a calm, clear voice, "to be afraid."

She was old and ugly and her eyes were like two piercing blades of

obsidian. Her children disliked her and her mere presence terrified the grandchildren.

One ends up wearing one's sins on the face. The easy laughter, the indiscreet tone, the gobbled life--it all floats to the face like scum to the surface of a pool. Had she known when she was thirty what she knew now of herself she would have followed that miserable Russian right out the hotel window.

Now she took long oil baths, telling the cosmetician at Fallow's that she wanted the oils for her daughter, for Janie, or for her granddaughter Mary. Her fingers were long and smooth again in the bathroom light, her arms round and gleaming, and the oil would slip along her skin. She would be left smelling of gardenia or chamomile or hyacinth. Hadn't somebody called her his hyacinth girl?

She wanted too much, she knew that, but her life had made her that way. It had been so perfect and yet so hard, the deaths in war, the men who were young and made one breathless who died in ditches or screaming in those horrible little airplanes. Somebody had sent back a picture of Timmy Trogget from France, that horrible picture of him so burned. The picture had come anonymously and why, didn't they know that she was a flower and innocent and not to be worried by the ghastly glamour of the front?

Tommy had a ukulele of course--they all had them, that group of boys before the war. He also had a lovely sporting carriage--what was that called--and they would go trotting through the park. His driver was named Waldo. Waldo Salt.

The white moth circled her head and she knew that it was a terrible thing. She began to move out of the room. But the light was long and golden in the gnarled garden, late sun drawing memories from the ruins, and didn't she get already a whiff of some night-blooming flower? No, of course not, November, well. She could well imagine the wolf coat becoming a repository for moth eggs. Who would have known, that beloved masterpiece with her

perfume still clinging to it at four o'clock in the morning.

She would be eating scrambled eggs and bacon and drinking coffee with Gladys and Amy and Bob and the Booth brothers, what laughter then and oh yes, that was after the war and everybody had forgotten that poor Trogget boy. Jimmy Andrus had come back from the Hat in the Ring Squadron and not a mark, so perhaps Trogget with his tongue looking like a burst sausage had simply been too slow. He was always too analytical, poor boy.

She wondered if the young and beautiful went on in shadowy consort when they died. Did Trogget come home upon a ship of air and live out the rest of his intended life as if it was real.

Carefully, she placed a chair in the center of the room and climbed it, intending to slap the white moth between her two hands. It fluttered gaily, darting and flashing around the yellow chandelier. She drew her hands apart and slapped them together just as it flew past. The chair rocked, she tottered, regained herself and made another slap at the creature. It was so tiny, so unequal to the battle, and yet it fluttered still, a saucy little flag of a thing. She was furious at it.

Sweeping her hand through the air she tried to scoop it up, but the white moth eluded her again. It flew so fast that it seemed to multiply, ten white moths, a thousand, fluttering in the yellow light of the chandelier. She waved her arms.

She was already falling when she noticed that the chair was no longer beneath her. She hit with a dry crunch and an awful giving-way deep in her back. The parquet floor felt like concrete, despite the fact that a lovely old Bokhara from grandmother's house was spread across it. She heard a voice utter a cry and knew that it was her own.

Then she became aware of a complex sort of pain. She was surprised at how it clarified everything; she had not known much pain in her life.

There had been that time with Saucy Dill, riding in that funny little car of hers--the Dills were ruined right after the crash--when she had dangled her

hand against some sort of pipe that extended along the running board. Oh, yes, that was a burn and that had hurt.

This hurt more fundamentally and the treatment would be more elaborate than a cold poultice and a tumbler of bootleg gin. Oh, jazz, what happened to that music, to the days and nights of jazz? The jeweled cascade of years, the dances, the boys, the girls in their frocks...

How does it end, this mystery? Does agony strip away all the romance? That German boy, Knutt VonHauer had sent her his photograph in forty-something--or wasn't it earlier, had to be before the war--standing in the hatch of his tank with his arm raised high and Ruthie had whispered that he looked penile like that. Penile. After the war he became a railway worker. Somebody, Willy or somebody like that, had encountered him on the wagons-lits to Hamburg, turning down the beds!

Later he was living with that philosopher in the Languedoc, wasn't he. Knutt was a man of forty with white, white hair. That Hitler, honestly.

She realized that she would have to get up or rest forever among the hungry white moths. What had been the use of it all, and why had it ended so quickly? A life, just like that. It had seemed fun, but what did that mean? There seemed to be a darkness entering the air, the ceiling of the room rising and parting like two uncupping hands and she was there on a little black cabaret stage in a sinister and compromising pose. What awful things she had done. She had to face that. Gossip, rumors, the ruin of souls. She had brought the whole world tumbling down around her, sweeping her arms about with destructive abandon, destroying the boys of the wars like white moths themselves oh, they were so lovely in their uniforms, the wastes of uniforms marching across the fields like mad, besotted animals singing and then in the awful, private squalor of the front lines.

She wondered if a bullet in the back felt like this. Had she not sent Jimmy or somebody candied fruit at the front and had he not written back that fruit at the front was only eaten by fruits? His captain had written to that awful

woman--what was her name, the one with the persistent warts on her fingers--that he had died from lighting a cigarette at the wrong moment.

Died, died, did it matter? She looked up toward the chandelier and thought perhaps that it did not matter. There, in the shadows where the ceiling had been, was there not some clarity, something startling up there among all those swarming masses of moths?

The heat in the house had failed. Wasn't this December? Or was it already January? When was this, what hour, what day, what year? How long had she been like this, adrift in the years? She struggled against the crunching pale rug, trying to rise to have some tea and perhaps some really nice sandwiches, something spicy and nice. Fortnum's and those faintly sinful teas, the perfect ladies, the girls in their--who was that, who had done something outrageous in Fortnum's, that heavy girl from Montclair who had gone to London in search of a Lord but had married a hatter instead? Mad Hatter Harry, but he had worked out very well in Montclair with his high English manners, selling automobiles.

She wanted rather a lot to get back on her feet. But there was a mystery: she was trapped in this flying room, its rococo weight borne upon the wings of moths.

Was death as banal as this, nothing more than a brief struggle on a rug? She might soil herself, she thought. No, not that, it was such an abnegation; she did not want to be found like that by the servants, that wicked little maid Natalie with her implacable, penetrating eyes. What did she know? Why had she come here? What awful thing was her soul here to avenge?

It was terrifying to think that one might have wronged somebody in another life, only to find oneself at their mercy later. She suspected that Natalie would take a chair, light a cigarette and simply watch her die.

Her whole life had been an ocean of death. You young people, you don't know anything. History was poison in my time. I lost so many friends, the grandeur of three generations, Princes in their white uniforms jammed into

darkened trains, leaders of men and artists--and what about that wonderful satirist Guttman--after the war nobody mentioned him--and the French milord, that lovely man with his grace and his extraordinary knowledge of horses, that man--nobody mentioned him.

Couldn't there be some sort of service for the century, perhaps up at Norman Vincent Peale's church, some sort of hopeful little thing?

Bob. Come here. Help me.

A really terrible pain, as red as the moth's silly eyes, came up from her deeps. She had laid on the wide bed and open wide herself and Bob in the darkness with his dry, soft hands and his shirt still on, and had there not been then a flowering tree? A flowering tree...was it a tulip tree?

No. That was in Louisiana, in Grande Coteau in that house by the river when the mist of night came and the river boats passed in the moonlight, and it was so wonderfully stifling and their skin was as slick as ice, hot ice. She had spread herself wide and thrown back her arms and known the delicious smoke of the night down there where never had there been light, and he had lit the gas lamp in the wall, the sputtering yellow flame and she had danced on the bed to his opalescent eyes.

Gleaming things, slick things, her hands moved along the concrete rug, seeking him. She would hold him by the hour, hold and hold until she slept and would awaken still holding. You--I thought--passive--he would say--passive--his whole mind lurking in the syllables. Oh, yes, Bob was predatory. You saw the sores occasionally that marked his secret conquests, and you knew of the relations between him and the New Orleans whores.

She had been glad to leave the south, to come back to these perfect Connecticut hills, to the apartment in the city and the black Packard and the immense power of his parent's wealth. Oil, they would say, Bob found oil and brought us all back to life. She thought of them, those rich, lying in quiet living caskets after the crash while Bob toiled in the alligator swamps in his boots and jodhpurs, directing men to drill here and drill there. And that

guttering Ford car they had then, guttering and rattling and behind your back you could feel the springs...

Men and women do not die, they are harvested. They are harvested by the shadows, who live in the enigma. Unlike cattle, men and women if allowed might understand their predicament. What does it matter to the hog who is being scratched behind the ears by a kindly farmer that he will be next month's rasher? What warped, confused logic must append to his comprehension of the meaning of the love and sudden slaughter? How can it make sense to him, all the warm slops and then the axe?

The moths were terrible now, swirling in the light, settling on her shoulders, on her arm, in her hair, crawling coldly down her neck. She could not scream, dared not open her mouth, could not weep, had no tears left. Only Bob, she wanted Bob to come and be young with her again.

I really loved you all those years. I loved you, you damn man with your whores and your conquests and the smells of cigars and leather and the high grouse hanging by the kitchen door. You, you--what did the whores offer that I could not offer? I gave you me and you went and got crusty sores from crusty whores. I was a lily, o man.

I thought that I was nice. Perhaps I was a little plain of face, yes, and maybe it was--position, appropriateness, that made you marry me--and you remained so calm that night in Grand Coteau when I was transported to such an extreme of desire. After your perfectly creditable love, we spoke in the moony dark of Wendell Willkie and oh I was so sad.

The forties...the fifties...the sixties...we thought the years were bright; how little we knew of the cave we were entering. The cave and the rising lazy smoke of those days, perfect ghostly trails into the air--all the air, all over the world.

I am afraid. What is that shadow?

The two policemen walked together through the flying snow, passing under a radiant street light, then going deeper into the night.

“Look at that pile of snow over there,” said the older man. The rookie stared at it. “What should I be seeing?”

“It’s a body, son.”

“Christ. I didn’t know the street people got this far uptown.”

“Them bag ladies is everywhere. This one, she’s gone and froze to death in the snow.”

ACKNOWLEDGMENTS

I would like to acknowledge the patient and determined help of my editor, Kevin Mulroy, the often surprising insights of Elaine Koster, publisher of Dutton Books, the careful attention of my friend and longtime reader Michael J. P. Smith and most especially the inspiration and editorial skills of my wife, Anne Mattocks Strieber, who has struggled with me through twenty-three books.

The Forbidden Zone: An area around an extremely energetic object which normally cannot—and must not—be entered. But once it is entered, then time, movement, all events stop, everything changes. Within such a forbidden zone lies a state beyond mere destruction. It is a condition of chaos, absolute derangement.

—William N. Holmes, Ph.D. "Large-Scale Transitions and Quantum Derangements," *The Journal of the Physical World*

One

1.

To the middle of a perfect summer afternoon came a long, trembling scream. Because it was so faint, Brian Kelly feared at first that it was a memory. It could have been, certainly. His young and pregnant wife, who was lying in the grass beside him, didn't seem to hear it. He would have looked to his dog for reaction, but she was off on a wild chase after a rabbit.

The scream died away. He sat up and gazed out across the wide view. Perhaps he would see a column of smoke from a burning house, or a wrecked car on a roadside. But Oscola seemed quiet, and the southern range of the Adirondacks that rose beyond the town dreamed innocently in the blue haze of summer.

He could see past Judge terBroeck's house down Mound Road and on up Main into the center of town. In the other direction, he could follow Mound almost to its intersection with Route 303, which wound off toward Ludlum thirty miles distant.

In all of this expansive view, nothing was amiss. Maybe it had been an animal or a bird, or the wind.

The sun was warm, and he soon closed his eyes, letting the quiet of the hour transport him toward a nap. Time possessed him, that strange substance that had been the focus of his career and his life... time, his beloved mystery.

In the past he would come here with Mary. But she never cared for the mound. She was an indoor person, an intellectual—a genius, really, the best physicist he had ever known.

Her young death, with work and life unfinished, had left so many echoes.

He kept listening, worrying that he was going to start hearing her death screams yet again, and that they were indeed going to be like the scars on his

chest, with him forever.

He reassured himself that this little mound was not a place for dangerous memories. People in Oscola had been coming here on summer afternoons for generations. Kids sledded here in the winter, always had. Judge terBroeck, who owned the place, didn't approve of casual trespass, but the town had long ago become indifferent to his many dislikes.

Ever since Mary and Kate had been killed, Brian had been hearing screams. His doctor had been the first one to speculate that he might hear them for the rest of his life. Initially, this link with his loved ones had seemed in a strange way reassuring. But once he found a new love, it had come to be an imprisonment. For his own sake and for Loi's—and for the sake of their baby—he had to let his dead family go.

Trying to escape, he found a state remembered from boyhood afternoons lying in this very spot. "I can almost feel the earth turning," he said. Loi answered with a contented murmur.

Every time she heard his voice, looked at him, touched him or felt his passion, she reminded herself of her good fortune. For a woman whose life had been almost entirely unfortunate, finding him was a great piece of luck. He meant escape from the past, the dreadful memories of the Chu Chi tunnels, the soul-breaking anguish of the Blue Moon Bar in Bangkok. There was nothing in Vietnam, and very little in the rest of Asia, for a woman born of a G.I. father and a French-Vietnamese mother.

Before Brian, she had felt that a brutal life had robbed her of the ability to feel joy. But his gentle, persistent ways, his blazing, devoted love, had planted a new seed in the brown dust of her heart.

Brian would have thought nothing more of the scream if there hadn't been another—this one hard and loud and long. It was the kind that made you sick inside, a scream touched by death agony. But his wife still didn't stir. "Loi, did you hear that?"

She opened her eyes. "I was just dozing off."

He raised himself on one arm. "I'm definitely hearing screams again."

She turned to him, her stomach shifting heavily. Despite her grace of body, eight months of pregnancy had made her clumsy. "Oh, my poor Brian." She kissed him, hoping that the unfortunate ghosts of his Mary and Caitlin would finally go to their rest.

"I think they were real."

Dutifully, she listened. "There's nothing, Brian. You must try to forget the past."

"I am, Loi."

"Maybe I can help you." She shifted herself again, took him to her and embraced him. Very deliberately this time, she kissed him.

How she could kiss, he thought. She did it with a combination of attention and sensuality that never failed to thrill him. Her kisses were so careful, yet so hungry. For a rumpled old physicist, and a damaged one, she was quite an extraordinary catch.

Mary, also, had been considered a catch. Poor Mary had burned alive.

Loi could tell by his stillness that his mind had retreated to the tragedy. She broke gently away. "You used to come here a lot?" If her predecessor had made love to him here, she must be very careful or her own efforts would only strengthen the power of the ghost.

"Not often enough. Mary wasn't an outdoor person."

She stretched luxuriously. "I love it so much outdoors."

He watched a smile envelop her face. As it did there emerged in her black eyes the trembling glance of a girl. Normally, her face—the neat, sad mouth, the hints of wrinkling under her eyes—communicated hurt. But these smiles when they came were miraculous.

He knew that she'd had a terrible life: her very refusal to say much about it

revealed this. And yet, somehow, the tight little woman he'd met while she was waitressing at the Waywonda Inn had become this fabulous lover, tender and vulnerable and passionate.

There was a crash in the brittle summer brush, and Apple Sally came bounding up barking. "Hey, Sal." She sat on her haunches, whined. She was not happy, which was very strange. "Sal? C'mon, babe, take it easy." His tone quelled her nervousness, and she lay down with her big face between her paws.

There came another cry, one of total despair. It stopped abruptly, as if stifled.

Loi sat up. She'd heard that, all right. A look of agony came into her poor husband's eyes. As he dragged in a frightened breath, she took his hand. "These screams are real."

He felt a great familiar vise enclose his chest and begin to squeeze.

Mary shrieked, and then she turned and she was burning—

Another cry erupted, this one as clear and sharp as the crack of ice on a winter night. "We go for help, Brian!"

Apple Sally started digging, her claws ticking against stones, throwing back earth and bits of grass and flowers.

Brian leaped to his feet, stared down. "Jesus, they're coming from *inside* the mound!"

Loi could hear that it was true. There was certainly somebody in there. But who, and where? It was just an earthen mound, hardly even a hill. Could Mary be in there, she wondered, her ghost still suffering from the flames of her death?

Brian ran the twenty feet to the mound's bare summit. He peered around, pitifully trying to find some kind of an opening. His face was twisted, his eyes glistening.

"We have to get Bob," Loi called. His best friend was a state trooper. She

started off down the hillside as fast as she could go.

When she saw Brian lean toward the ground, she returned. From below there came a long, echoing scream, lost in despair, indeed a cry from hell. "Brian, come." She tugged on his shoulder.

Sweat was pouring out of him. He was shaking like an old tree rattled by the monsoon. "Brian, we get help!"

The next scream spoke of absolute, almost inconceivable suffering.

"We've got to go!"

Beside him Apple Sally dug with the fury of the possessed. Maybe she could smell the poor woman, Brian thought, maybe she was actually close to the surface. Brian joined the dog, yanking up tufts of grass, trying to drag back the heavy, unyielding soil.

To Loi it appeared that he was going crazy. "That doesn't do any good! We need help!" She ran a little way, then saw that he was still ignoring her. She wanted to pull him away, but she dared not be so disrespectful.

He dug, he struggled, again there was a scream. He began to gasp, to grunt with the strain of his useless work.

She saw that he was entering a hypnosis familiar from her childhood. When soldiers did this, their officers slapped them back to their senses.

To treat an honored husband in such a manner was unthinkable. He was no common soldier—but he was digging like the animal beside him, grunting, panting, lost.

He felt something slam into the side of his head. Stars snapped behind his eyes and then he was on his back, his hands clawing air. Loi stood over him, all five feet of her, and she shouted in a trembling, unsure voice, "We have to get help at once!"

His cheek stung, his ear was ringing. He watched her shoulders hunch, saw her take her guilty right fist into her left, squeeze it until her hands shook. "I

meant no disrespect," she whispered. "Please forgive me."

Chiefly, he was amazed at how strong she was. He sat up, realizing that he was being incredibly stupid, on some level reliving the moment he'd tried to dig through the wall of the burning kitchen where Mary and Kate had been trapped.

Another scream came and it was terrible to hear. "You come with me now, work the car phone!" Digital technology mystified and angered her. She took his hand, forced all the authority she could into her voice. "Come with me, Brian, if we are to help."

They went headlong down the mound, Loi rolling along with what Brian saw as all the grace of a small tank. He hurried behind her with his arms out, protective lest she take a fall. Apple Sally bounded through the grass beside them.

Loi ran because she had to run. Somebody was in agony, somebody was dying. Brian Ky Kelly bounced within her.

"Slow down, honey! Take care!"

As Brian hurried to keep up with her, his knowledge of local topography brought a frightful possibility to mind. He thought that a sinkhole might have opened up, maybe the ceiling dropped out of an old cave. Given that somebody was already inside, it was likely to be on the path. "Loi, stop!"

She ignored his cry.

"Loi!"

She shot off like a deer, racing wildly, heedless of her condition, unconscious of the danger. He dashed after her, past the clumps of daisies and dandelions, into the spreading view of Oscola, St. Paul's church spire and the town roofs awash in the green of summer trees.

He reached the base, looked desperately for her. "Loi?"

Silence.

No, please, not again. Not another wife killed, another baby. He ran madly toward his truck; he didn't see her in the cab. "*Loi!*"

Just then she sat up. She'd been bending over, pushing buttons on the phone. "It won't make the dial tone," she cried. He jumped in the cab, turned the phone on and punched in the number of the state police.

"Lieutenant West, please." Bob came on the line. "There's screaming coming out of the mound. You'd better get out here."

"Screaming, Brian? You're sure about this?" Bob knew all about Brian's problems.

Brian handed the phone to his wife. "Tell him."

"I hear it, too, Bob. And the dog, she is upset."

Bob said he'd be there in ten minutes, and Brian put down the phone.

Instantly, the thrall of summer reclaimed the moment. Bees were working through a soft white cloud of Queen Anne's lace in the field that led up to the judge's ruined pear orchard. A songbird warbled in a stand of hemlocks beside the road. Brian uttered a sort of whispered groan.

"Sometimes waiting is what we have, husband." She took his hands and began wiping them clean as best she could with some Kleenex. "Why did you do this crazy digging? Already your poor fingers are scarred."

"It was stupid."

She looked toward the mound. "I don't like it anymore."

"It's just a little hill. Some kind of—well, a small hill. A geologically trivial feature."

"Yes, my husband."

"There may be a sinkhole opened up around here. We've got to be careful."

"Yes." She noticed then that his temple was flaring red where she had hit him, and longed to touch it. But her shame was too great. Let it not become a bruise, let it fade.

Finally they heard a siren. The next moment a Chevy Blazer in state police colors swerved to a stop behind them. Bob climbed down out of the cab. He was in his usual shabby, unkempt uniform, and his wide, gentle face was grave.

He came toward their truck, running hard. Loi watched him through the rearview mirror. When she had been a child working for the Vietcong, he had been an American soldier. His unit had pumped liquid fire down the tunnels; her worst dreams were haunted by that same fire. When he had heard her side of the story he had shed silent, unacknowledged tears. Bob was the sort of tough-tender policeman who spent his off-duty hours coaching Little League and doing charity work. One of his secrets was that he corresponded with many of the men he'd put in jail. If they wanted, he'd be there for them when they came out.

2.

Apple Sally began to woof with excitement. She knew Bob, and her tail bounded against the bed of the truck.

"Lo, buddy," he said into the window. He barely glanced at Loi. They'd both left parts of their souls in Vietnam, and their relationship was complex. Sometimes when their eyes met, she would see something that frightened her a little. She could not tell if it was suspicion or anger or simply part of his pain. When they'd been getting to know one another, she had wondered if they could find forgiveness in their hearts, two soldiers who had lost dear friends to each other's armies.

"Show me where she is."

Loi would not be left behind; she also descended from the truck.

To Bob she looked ready to explode. He'd never seen anybody so pregnant. "You'd better stay here," he said. "Until we've got an idea what we're dealing

with."

"Brian needs me," she said, afraid he would panic again if the person in the mound continued screaming.

"He's right, Loi. Somebody's already fallen in."

His tone told her that he wanted very badly for her to obey him. Normally, Brian did not insist. But when he did, she had to concede. Not to obey now would cause him loss of face. She bowed her head.

Bob was already running up the mound as she got back into the truck.

Brian put his hand on hers. "I'll be all right, Loi. I swear." Then he started after Bob, checking the path ahead, looking for any sign of an opening. Sal ran beside him, her dewlaps flying. They weren't halfway up before she started baying.

"What on earth do you think you're doing?" came Judge terBroeck's voice from behind them. The old man must have been alerted by Bob's siren.

Brian was surprised to notice that the judge was changed, even from a few weeks ago. Where was his prissy, self-important way of walking, his easy arrogance? Now he dragged along, a wavering reed, his thin hair chalk white, his face all wrinkles and angles, his lips a bitter line.

As a matter of fact, he looked meaner than ever. A good deal meaner.

"There's somebody trapped in the mound," Brian shouted back at him.

"There's nowhere in there to *get* trapped."

"We know that, Judge! But she's there."

When the judge began to hurry, his spider legs pumped comically. The way he swayed reminded Brian of a great cornstalk blown by the wind. He arrived puffing hard. "My liability insurance covers me, thank God," he gasped. "I've never cared for people coming here! Why do they do it? They all know it's private."

"It's been part of this town forever."

"So has everybody else's backyard, Brian!"

With a terrific jerk Apple Sally abandoned all her years of training and ripped her leash out of Brian's hands. "Jesus," he cried.

Seconds later she reached the site of the original rescue attempt. She dug in a frenzy, her whole body pulsating with effort. Dirt and stones flew up around her.

As if the woman heard the sounds of renewed digging, she began to shriek again. "My God," Bob said, "she hears us!"

"That doesn't sound like screaming to me," the judge announced.

Sal's frenzy increased. She became a blur of flailing legs, her ears flapping like flags in a hurricane, her eyes bulging.

At first Brian was proud of her, but then he began to see red flecks on the stones she was throwing back. She was tearing her paws to ribbons. "C'mon, girl. C'mon, easy! Easy, Sally, back! *Back!*"

The wailing, pleading screams continued.

Something awful was happening to the dog. Spittle sprayed from her flapping dewlaps, and she made noises Brian had never heard her make before.

"C'mon, Sal," he shouted, "back!" He grasped the dog around the midriff and started to tug. She turned, snarling and snapping. He released her.

"Goddamnit!"

She used the moment of freedom to jump back into the hole she'd been making. The red flecks became gobs of bloody earth. The screaming rose. Then Sal's huffing growls changed to the desolate moans of a dying hound. Brian grabbed her tail and tugged. She skittered around, dug in with her feet, snarled and twisted.

Brian had hunted with dogs all his life, but he'd rarely seen a hound in a state like this. The whites of her eyes were showing, her teeth were bared, her

muzzle sloppy with foam. Despite visibly torn paws she was still digging hard even as he dragged her back away from the rough pit.

Her whole body flopped and writhed, she twisted around, her jaws snapped, her bulging eyes gleamed. She began making undulant, humping movements, her skin quivering, her fine, clear voice gone to cracking, whispered barks.

As if responding to the sounds of the dog's effort, the screaming reached extreme frenzy.

"It isn't human screaming," the judge said. "It's some damn coon."

"It's gotta be checked out," Bob responded.

"You're a damn nut," the judge snapped at Brian. "All this over nothing!"

Abruptly, Sal collapsed, as if she'd been turned off with a switch. One moment she was in full cry, struggling to get back in her hole, the next she was a heap of floppy brown animal with froth pouring out of her slack mouth.

"My God," Brian said. He lifted her head, listened at her nose, looked into her eyes. "She's dead."

When the sound of Sal's digging had stopped, the woman in the mound had begun to sob. "We're coming," Bob shouted.

Silence.

"Just hang on, ma'am!" Bob's voice was shaking.

The response was terrible to hear, as if she had just made a new and hideous discovery, something awful beyond belief.

"Oh, Christ, get a backhoe, Bobby! Get a damn backhoe!"

"Don't you dare! You'll tear my property to pieces."

The screams dropped low, became gurgles, finally stopped.

"Listen," the judge said. "Nothing. So you don't need a backhoe. Not for a coon that just died."

As Bob ran down the mound, Brian gathered the dog into his arms.

"You let her overdo it," the judge said, "you let her run herself to death trying to dig out a coon."

"Hell, she wasn't trying to dig anything out, Judge. Don't you know a single damn thing about hounds?"

"Well, I—certainly!"

"Judge, there's something in there that Sal wanted to kill."

Both men looked down at the roughly ditched ground. Brian knew his dog. Sal had died of hate.

Two

1.

When the phone rang Ellen Maas was—as usual—alone in the office. It was eight-fifteen on a Saturday night and this week's edition of the *Gazette* was supposed to be put to bed, but she was working desperately to expand the all-important local gossip column, the one with everybody's name in ALL CAPS. The more people she could fit in, the more papers she would sell.

She stared at the ringing phone. Surely it wouldn't be a bill collector, not on a Saturday night.

Between rings, she listened to the moths fluttering against the screens. There was a mutter of thunder, she blew sweat from her top lip.

"*Gazette.*"

"This is Harry terBroeck."

She sat up a little straighter. You wanted the extremely powerful, deeply respected, profoundly unpleasant Judge terBroeck on your side around these parts, you sure did—especially if you were the new owner of a broke newspaper. "Hello, Judge."

"I have a story. You know the way the paper used to run the local news on the front page? Well, this is that kind of thing. It's not going to be up there with a presidential visit to China, but it's interesting to us yokels."

The new girl in town had just been criticized. OK. She could handle that. "Great," she enthused, "I'm always looking for a big local story."

"Well, this is big, I mean, for us yahoos."

He waited for her protest that they weren't really yahoos, that they were terrific, that she just loved the town, gush, gush. The expected words got

stuck in her throat like a backed-up corn fritter.

He went on. "The state police are out on my mound. You know the place?"

"Of course. What's the story?"

"They're tearing it all to hell. Making an awful mess of my private property without so much as a by-your-leave!"

Ellen tried not to sound impatient. "Right," she said, "shoot."

"Shoot?"

"Tell me the rest. Why are they there?"

"Well, I'd never let 'em do it, and if there's nobody in there I've got a fine cause of action against the state."

"Nobody in where?"

"The mound! *My* mound! They're tearing it apart to find a supposed woman. Been screaming."

"What woman would that be?"

"The one that's supposedly trapped in there. Nobody told you anything yet?"

"Why should they? This is just the newspaper."

He cleared his throat. For Judge terBroeck the paper was chiefly a forum where he could publish letters about the many liberal plots he detected in the affairs of the community. Evil forces on the town board trying to put in streetlights, hippies from downstate with their communistic recycling schemes, that sort of thing. "A dog—badly handled, poor damn thing—already died trying to reach her."

"You heard the screaming?"

"I heard sounds that I personally connect with a raccoon in distress. Brian

Kelly said it was human screaming, of course—which he would, given that he's more than a little off balance on that particular subject, poor man. He was out there trespassing with that peculiar new wife of his when they first heard it."

"The woman in a cave or what?"

"They haven't found any woman! The story isn't the damn fool alleged woman, it's the invasion and destruction of my property, you stupid creature!"

She wanted to slam down the phone on him. She swallowed hard, then forced herself to thank the judge with dutiful and agonizing care. She hung up and went to the steel locker to get the ancient Speed Graphic that had been there when she bought the paper. It had been slated for immediate replacement, of course, considering that it was fifty years old, weighed twenty pounds and required old-fashioned glass plates that had to be special-ordered from Kodak.

"Immediate" had come to mean the end of her current five-year plan—if said plan could be realized somewhere this side of bankruptcy court.

Lugging the miserable hunk of photographic iron and an old Bloomie's bag full of plates, she went down the angular stairway onto the street. It was dead quiet, of course. Early on she'd discovered that Oscola nightlife ended when the Mills Café closed down at nine. She'd been a night rider in New York, as often as not starting with the theater or a concert and ending when they flushed out the after-hours clubs at dawn.

A Crown Victoria slid up Main Street, the frail driver sitting stiffly erect. The car moved like a hearse. Why? Small towns tend to be elderly, and old drivers can't see spit after dark. Plus, streetlighting was a liberal plot.

If she walked out in front of that Crown Vic, there wouldn't even be the flicker of a brake light. Still traveling at a stately fifteen miles an hour, it would roll over her like a bump.

It being past eight on a Saturday night, Oscola was as dark as a cave, except

for dim light coming from the Mills Café and Handy's Tobacco. The Rexall Drugstore was dark, as was Mode O'Day Fashions, which was like an antique clothing store where everything was still new. They had black patent leather belts and slack suits along with boxes of hair ribbons in the glass-topped counter and a rack of \$2.98 harlequin reading glasses.

But Main Street was lined with big old oaks and maples, and down at the end where it became Mound Road there was one streetlight, a wonderful old iron creation meant to resemble a sapling, complete with iron leaves cradling the lamp.

The smell of pipe tobacco that floated out of Mr. Handy's open door was pleasant, and the faint clink of dishes coming from the Mills communicated the peace of the entirely ordinary.

Farther off something revved and died, probably some of the town's smattering of teenagers tuning a pickup out at Fisk's Garage. The "blown" pickup was Cuyamora County's ultimate muscle car. There were no Porsche Carerras here, no Acura NSX's. But then again, there were also no orthodontists in mirrored sunglasses to go with them, which was a plus. She'd had her fill of mirrored orthodontists, especially ones named Ira Bergman.

Still, something appealed about those breezy early-morning runs to East Hampton in Ira's Porsche with the wind in their hair. That was back when the relationship was still in the battlefield maneuvers stage, before the actual war had started.

Well, hell, what was love compared to owning a dying newspaper?

People around here hadn't stopped buying the *Gazette* because it was bad, but because she'd breezed into town and bought it and she was a city person and a fancy former *New York Times* reporter into the bargain.

She pulled her ancient gray Duster out of the parking space in front of ludicrously named Excelsior Tower. It was two stories tall, for God's sake. Then she drove the mile out to the mound, the Speed Graphic on the seat beside her.

As she turned into the long driveway beside the judge's house her ears drank the newsy snarl of heavy machinery out on the mound. A glance in the direction of the old terBroeck place told her that the judge was at home. She could see him in his kitchen, still on the phone.

Ahead she observed dancing red light bars, and up on the mound itself the glare of portable floodlights. She opened her door and jumped out, hefting the camera.

Passing the jumble of cars and trucks at the base of the mound, she noticed Brian Kelly's exotic wife asleep in the cab of their truck. The way the story went, he'd met her while she was waitressing at the Waywonda Inn in Ludlum. Discreetly turning tricks was more like it, Ellen thought. She was one of those desperate, unwanted souls coughed up by Southeast Asia, a Vietnamese all mixed up with French and American blood. As a child, she'd allegedly been used by the Vietcong as a tunnel rat. God only knew how she'd made her way to Oscola, New York. Ellen leaned into the cab. "Mrs. Kelly?"

Loi's eyes opened, but there was no sense of her being startled awake. Maybe the tunnel rat story was true. She certainly displayed the elaborately careful attitude of a person who's lived with danger.

"I'm Ellen Maas, Mrs. Kelly, with the *Gazette*."

Finally, Loi smiled. "I'm tired," she said apologetically. It wasn't surprising, considering the advanced state of her pregnancy.

"What do you know about the woman in the mound?"

"You must ask my husband." She made a movement so sudden that it shocked Ellen. The woman was as swift as a cat, but all she'd done was glance at her watch. Then she came down out of the truck and moved off up the path, her huge belly making her rock from side to side.

Ellen had the feeling that Loi Kelly was running away from her. So naturally she followed, stopping when Loi did among a group of men standing under the lights. They had a large chart open between them. She stared right back at

the trooper eyes that were now regarding her.

Trooper Numero Uno was here, Lieutenant Robert West. His big, open face broke into a grin. She was not deceived: West was a sweet man, but he was no hick. And he was very careful about the press. She knew why: this particular Medal of Honor winner had gotten his award for doing some very hard things, very hard indeed. Very brave, also, but it was not West's nature to be proud of killing people with his bare hands.

She'd made the mistake of doing research into his medal. He'd begged her not to print the story. "Tell about my Little League work. Tell about my Great Books stuff. But leave the medal alone." She'd complied: her feature about him had quoted his thoughts about Aeschylus, but not Westmoreland.

She walked toward him, working on her mask. Don't smile like an idiot, just look very professional. Reticent though he was, the man remained a hero. How do you share a secret heroism?

Of the men with West, Ellen knew only Brian Kelly, now standing hand in hand with his wife. Her face had gone soft, the almond eyes melted with love, the full, heart-shaped lips revealing what Ellen thought was probably pride.

He'd lost his daughter and his first wife in a fire, and Ellen had looked that up in the newspaper's morgue, too. The fire had been attributed to a defective propane line under his ancestral home. He'd been burned half to death attempting to save them. He and Mary Kelly had been extremely close. She'd been one of his students, and after she got her doctorate they'd taught as a team.

The fire had crushed him. He'd walked away from his university job and become a hermit, gone on a two-year bender. Then he'd suddenly met Loi and astonished this half of the state by bringing her into his distinguished old Oscola family.

Ellen took a deep breath. West, with his obsessive concern for safety, was already asking one of the men to help Loi back down the mound. She'd be next, she knew, if she wasn't careful. "Any luck?" she asked in a voice that came out so husky it could have pulled a dogsled. Too many cigarettes.

Bob West glanced at her, then hid his face under the shadow of his hat.

"I'm sorry, but I've got to ask a few questions. Is she in a tomb?"

"More likely a cave," West responded. "And you'd best wait in your car until we've found the opening."

She rushed on. "Well, isn't it an old Indian mound? Maybe it's full of tombs."

"Now, ma'am, we've got a lot of heavy equipment working out here, and—"

"I'm press, Bob, you know that."

Instantly the head lowered, again the eyes disappeared. "I just worry that it isn't safe."

She sighed. "I have to stay. It's my job."

"You keep near us," Dr. Kelly finally said. "We don't want anybody else falling in holes."

"Thank you," Ellen responded.

"We think a sinkhole has opened up," Kelly explained. "Our theory is that she's fallen in and she's wandering in our hypothetical cave."

Fifty feet away the backhoe growled again. The machine rocked, its operator clamped his cigar in his jaws, a jet of exhaust fumes shot up past the lights. The hoe turned and the debris went pouring down into a pile near the base.

Ellen cranked up the Graphic and took a picture.

"Kill the backhoe," a man bawled from the dark summit of the mound. It ground, coughed, rumbled, finally went silent. All that was left was an occasional random crinkle from its hot exhaust manifold.

Ellen could just barely see the face of the man who had called out. It was visible in the faint green glow of some sort of electronic device. Smelling more story, she started up toward him.

"Quiet," the man yelled. "Hey, lady, *quiet!* Don't move, don't even breathe!"

Little pinging noises started above, continued for a few moments. Then the man stood up, removed his earphones, stepped out of the glow coming from his instrument's screen. He hurried down toward Bob West, who regarded him with eyes so full of pain that Ellen wanted to cuddle the poor man up in her arms.

"It's solid earth, in my opinion," the man said.

"You're sure?"

"There's nothing in there. It's exactly what it looks like, a small glacial tip without geologic significance. Certainly there are no caves."

"Then what did we hear, Danny?" Brian's voice was much too smooth.

Danny, who Ellen surmised was a state-owned geologist, rubbed his left hand against the stubble on his cheek. "I just don't know. Maybe it was a trick of the wind."

The Speed Graphic began to feel awfully heavy.

"There's somebody in there," Brian Kelly said. His voice had taken on the low, ominous note of a threatened man. "I can't buy your finding."

"Well, you have to," the geologist replied blithely. "It's reality."

Kelly tucked his chin into his chest. "She was in a hollow space. We could hear the echoes."

"Well, it wasn't in this mound! I'm telling you, there's nothing in it. Zero. Zip. *Nada*".

"That's bullshit, Danny."

"Then dig the goddamn thing up yourself, Doctor! You've got a backhoe here, raze the damn thing."

Bob West spoke. "Let me ask you a question."

"One I can answer, certainly."

"Are you willing to say I should abandon this rescue, given that a woman—a human being just like you or me—could be in there dying in agony? You're that certain?"

"I can only tell you that my instruments do not support the notion that this mound is anything except what it appears, a pile of broken schist and stone."

"Come on, Danny," Kelly interjected, "you're dealing with a government surplus echo sounder that was designed for work in water. It's next to useless here. Even a dumb old physicist can tell you that. The resistivity of the soil isn't going to allow a meaningful reading."

"It's been recalibrated," the young man snarled. "Of course."

In the motionless air, the mutter of thunder became more defined. Off in the west the dark was thick.

"I've never liked this place much," the backhoe operator said. He'd been standing at the edge of the group. "Back last month the wife and me was up here and the whole thing sort of shook. It spooked us and we took off."

The geologist wiped his brow. "Admittedly there's evidence of some earth movement. The schist's probably loose. Changing temperature, degree of dampness—a lot of things can cause small-scale earth movement. Even the Towayda fault could be involved."

"The woman was screaming," Kelly repeated.

In support of her husband, Loi Kelly became fierce. "I heard her, too, Danny!"

Ellen made a mental note never to tangle with this woman.

"You might as well go ahead and move this equipment out," the young geologist said.

Brian Kelly roared. "No you won't! You sure as hell will not!"

Bob looked at him. "I can't get a budget for it if the expert says there's nobody in there."

"What expert? He was a failure when he was at Ludlum, and he's a failure now. That's why he works for the state!"

"How dare you!"

"Hey, Brian, come on. He's still my official expert. He's the guy I've gotta rely on."

Kelly went up to West, face-to-face. "Somebody's dying in there!"

"Brian, I don't have enough evidence. And what about the judge—he's already been after us to get out of here. I continue this dig without good cause, I've got a lawsuit on my hands."

"If there turns out to be a story here," Ellen said to West, "could you please give me a call?" She started off down the mound.

"Take care," Brian Kelly called after her.

She waved, and was soon negotiating the dark with the dubious old penlight she kept in the bottom of her purse.

She was past the halfway point when she felt a sort of lurch. A distinct vibration began pulsing up from the ground. It stopped her dead. "Jesus," she heard herself say.

It hurt her bones in a way she'd never felt before, as if the marrow itself was vibrating. She imagined a crazed dentist boring into her jaw with a bone-burning drill. The vibration was accompanied by a metallic shrieking noise, like a very large buzz saw going berserk in the distance.

Lights flashed, the sound hummed off into the sky. She turned around to see the floodlights swinging on their poles. Shadows darted as men jumped to hold them steady.

She heard a new sound, painfully loud, like the squeal of a desperate child. Ellen turned toward the group she'd just left in time to see Loi Kelly stagger backward clutching her belly.

2.

The buzzing sensation was so intense that Brian slapped his hand to his jaw, instinctively going for the pain that was screeching through his head. But Loi's agonized shriek made him forget himself, gather her in his arms. "Baby," he said, "oh, baby!"

She felt the fire of a bayonet plunging into her womb, a thing she had seen done. She wanted to scream, but fought against it. Best to maintain a serene appearance.

Before anybody could react further there was a faint, tremendous clang, as if a door the size of a mountain had been slammed shut.

Bob threw himself down, listening. "Hey," he shouted at the ground, "hey, lady!" Then he crouched. "Nothing."

Loi felt a tickle along her inner thigh. She turned away into the dark, bent over and reached her hand up under her loose outfit. Yes, the worst. She straightened abruptly.

"Loi?"

She hated to reveal weakness, but she had no choice. This was urgent. "Brian, there is no cause for alarm, but I would like to be taken to see the doctor now."

"Is the baby—"

"No, Brian, he is not coming. But we must go at once, please." Always in the back of her mind was the fear that Brian would reject her if she lost his son. Love was wonderful, but even American men surely had their practical considerations.

Brian fought down the churning acid in his own stomach. He must not let Loi

see how frightened he was.

Ellen Maas reappeared in the swaying pool of light. He was startled by what it did to her face, making it appear alternately hard and soft. It struck him that she was an unusually beautiful woman.

"We go now," Loi said. Eight months was much too late for blood.

"I can take her," Ellen announced. She was fluttering her long hands at Loi, communicating concern. But Brian sensed something a little predatory in the gesture. A reporter always wanted something from you.

"I'll do it," he said.

His arm around Loi's shoulder, Brian guided her down the slope. He should have taken her back to the truck the minute she reappeared, not let her stay like this.

As they left, Brian heard the geologist telling Bob that the earth movement theory had just been confirmed.

Brian didn't believe it for a moment. But Danny wouldn't have been the first scientist who wanted to dismiss a mystery rather than explore it.

To both him and Loi it seemed a long, long time before the dark shape of the truck came into view. He helped her up, belted her in, then got in himself. He started the engine and began driving carefully toward the road, avoiding ruts and bumps as best he could. "Call Dr. Gidumal's office, hon, tell 'em we're on our way." He started the phone for her, trying to control his shaking hand.

When they finally reached the relative smoothness of Mound Road, he floored the accelerator and the truck jumped forward, tires squalling. They went racing through the dark and out onto Route 303, then down toward Ludlum and the hospital.

He shifted in his seat. She reached over, squeezed his hand. She was very scared, but she wanted him to be reassured, to think well of her. "I am a strong woman, I have a good womb." Was it true, after all the abortions,

some of them done by casual midwives, others by well-intentioned friends? At the Blue Moon Bar they used to abort each other with a long instrument provided by the management. She had no idea of the condition of her womb.

He looked over at her. She was sitting with her head pressed far back into the seat, one hand on his. He reached the hand to his lips, kissed it. Her hand was as soft as a little bird. She seemed so brave and so vulnerable. He was terrified: he could smell his own sweat.

She finished the call to the hospital and put down the phone. "I am very healthy, Brian. I will give many sons!" She could feel the blood coming out steadily now. Baby Brian was jumping a little, as if he was beginning to become distressed. Sometimes she thought she could feel his beautiful young soul lying within her, like a golden shaft of light in her womb. He must not die, not now.

"We'll be there in twenty minutes, honey."

The ache was growing, becoming touched by what felt like heat down at the bottom of her belly. She forced back an urge to moan. The heat began to spread into her thighs, up her back. She sat as still as stone to stifle what she knew could quickly become agonized squirming. She turned to him and gave him a smile. "I am admiring your skillful driving. Please hurry."

That brittle, terrible smile told him that she was in agony. His own breath began coming hard and tight. It would have been easier for him, he thought, if she had not been so composed.

Her mind drifted on long waves of pain. The birds called softly in the garden of the Emperor of Jade Pagoda in Saigon, while little Qui Thanh Nguyen crouched in a secret place, a small girl in a white *boo dai*.

She'd changed her name to Loi because the white-eyes couldn't pronounce the "Q" sound correctly. She loved her white-eyes husband, though, no matter how he spoke.

The pain dug at her. Touching herself, she brought up blood on her fingertips. In the light of the dashboard they gleamed as if darkened by wet paint. She

snatched the evidence out of sight, wiped it away under her blouse. The smile remained fixed on her face.

Although Brian knew every twist and turn, the trip seemed to last forever.

When they finally saw the lights of the hospital, the big red sign that said emergency, Loi was drifting into soft blackness. She came back, feeling the pain like a saw grinding between her legs.

Brian raced into the ambulance bay honking his horn.

Nurses came running out, followed by Dr. Gidumal.

"Help us," Brian said. "Please help us."

3.

A couple of minutes later she was in an examining room in stirrups, and Dr. Gidumal had a speculum poised as delicately as a wand in his gloved hand. The pain was now slamming up from her gut in great, red waves. She could no longer maintain even a fixed, rigid smile. But Dr. Gidumal was a stranger, and before a stranger one must be composed. She was breathing too hard. She tried to be more quiet.

"We went on a picnic," Brian said. "We heard someone screaming, called the state police. Loi is very gentle. She got upset."

The doctor stroked her forehead. "You experienced a sudden pain before you noticed the blood?"

She was silent. To speak of the pain would be to let it capture her. Now her womb felt like a great balloon filled with boiling blood, compressed, packed, being penetrated by white-hot needles.

"She is like the women of my country, she prefers not to reveal pain." The doctor looked at Brian. "You must tell me."

Brian looked into his wife's face, seeking an answer to the doctor's question. Her sweated skin gleamed in the hard fluorescent light. "I am going to have

such a healthy boy," she said. "You will be very pleased with him!" Her voice was a harsh whisper. Her face was something carved.

An American woman would have been howling, Brian thought. He reached out his hand, and she pressed a clammy cheek into his big, rough palm. "She's suffering terribly," he told the doctor.

It was awful, like fire within! Brian Ky Kelly was jumping, also. She could feel his distress now! "A happy baby," she managed to whisper.

The doctor examined her. "There are no signs of labor. This baby is not going to be born today." He plunged his gloved hand into the bloody passage of life. It took only a moment. "As I thought, there is a tear," he said. "We may be able to repair it with fast work."

Barking orders to nurses, he went quickly away. Moments later Loi felt her stretcher begin to roll, saw the ceiling sweeping past. The suddenness of it all caused her composure to fail her. "Brian," she shrieked.

"I'm here, baby." He was trotting along beside the stretcher. They went up an elevator, then down another hall that ended in two huge and familiar double doors. The old, awful smells assailed him, the iron reek of iodine and the fuzzy aroma of alcohol. He remembered the burnt-meat tang of his own skin on the morning they'd brought him in.

Another doctor hurried through the doors, leaving them swinging back in Brian's face. He peered into OR-2. She lay on her back draped in rough green sheets.

"Good luck, baby."

Loi's voice came back, thin and high, "All will be well!"

When they closed the inner doors he went to the waiting area, all bright colors and cheer, equipped with coffee machine, Coke machine and plenty of magazines. Four years ago his father had waited for him here, bearing the knowledge that Mary and Kate were gone. Yellow curtains or not, blue chairs or not, you could smell the fear in this place.

Brian waited, feeling like a dog left out in the rain. For a time he stared blindly at an old copy of *McCall's* magazine. He was counting the tiles on the floor when a shadow appeared. His heart jumped, but it wasn't the doctor. Instead, he found himself looking into the beautiful face of one of the very last people he would have chosen to see.

"Hello, Dr. Kelly."

"This isn't going in the paper."

"Shouldn't that be my decision?"

"I'd appreciate being left alone."

She pulled a chair up in front of him and plopped herself down. "What happened out there?"

"She was injured."

"Yeah, I noticed. But what did it? What was that noise, for God's sake? It went through me like a knife."

"Look," he said, "I don't want to be rude—"

"Then don't be."

"I want to be alone, Miss Maas."

"Ellen, if you prefer. It's just that I don't understand—"

He had no reserves of politeness left. "Leave me alone!"

"Do you know what the noise was?"

"My wife might be in there losing our baby and I want my privacy!"

"I'm sorry, Dr. Kelly, really I am."

He shook his head wearily. Then he walked to the window, stared into the

black glass. Behind him, he could see the reflection of her arm reach out, hesitate, then drop.

She waited for a full minute. Finally her reflection turned away and went off down the hall. Her head was bowed and her shoulders were stooped, and he found himself feeling a little sorry for her.

But she was gone, and it was a relief.

Over two hours passed before the doors to OR-2 finally opened and Dr. Gidumal came out. Brian, who had been resting on three chairs pulled together, clambered noisily to his feet. Flecks of Loi's blood stained the doctor's green hospital gown, and for a moment Brian had a horrible thought.

"She's fine and so is your son," the doctor said in one quick breath. Brian sagged. Suddenly he felt absolutely exhausted. The doctor guided him to a chair. "But I want to know what happened to her, Brian. This is a violent injury. There ought to be a police report."

"She—I guess she got upset. All the excitement."

"No, this is wounding of the uterine wall. She has lesions. We have repaired all we could, but this is caused by one thing— concussion. Hitting."

"That's impossible. She didn't fall, and she certainly wasn't hit."

The doctor nodded, his face screwed into a deep frown. "This injury is the result of a concussive force against the womb. An explosion, a blow. Nothing else could account for it."

"Nothing exploded," Brian said. He heard a high note in his own voice.

"There was a little... tremble in the ground, I guess. But nothing exploded."

The doctor folded his arms. "That wouldn't do it. Was she— well, to be frank, Brian—was she beaten?"

Brian knew that his hair was wild, his face stubbled. He probably looked very much the part of someone who would strike his wife. "I'd never hurt her."

"Of course not. I meant if there had been an assault. A stranger, of course. It's just that I don't understand this injury. You say no explosion. You say no blow. So I say, something is funny here."

"Wait a minute, there was more than just a little tremble. It was a strong vibration coming up from the ground."

"There are houses down, trees uprooted? No, Brian, you would see this if she had been in a terrorist bombing, or gotten a kick in the belly."

Brian made an effort to keep his voice level. "Nothing like that happened," he said. "I want to see my wife."

"Yes of course. She will wake up soon, I expect."

Brian followed the doctor into the recovery room. And there she lay, a pitiful, delicate vision. "Loi," he said.

"Oh..."

Suddenly Dr. Gidumal pushed Brian aside, leaned into Loi's face. "Did anybody hit you, Loi?"

"No... it was the humming... the humming that hurt me..." She closed her eyes, suddenly asleep.

Dr. Gidumal straightened up. "Certainly this was not caused by any humming." As he had when he first saw her, he laid his hand on Loi's forehead. Brian saw the tenderness and understood at once. Both of them were far from home, both were Asian, both must have known the acute hurt generated by all the small, silent acts of prejudice in a self-involved little community like the Three Counties. Dr. Gidumal obviously felt protective toward his fellow emigrant, and worried that she was being abused. "She will doze for a little time more. When she awakens fully, you must be present. There must be no upsets to her. She is in a delicate state. There are many microlesions. Any one of them could open up, with the right sort of stimulus." Here he paused, gazed at her. When he looked up, it was with a frank plea in his eyes. "A delicate condition. We will keep her in hospital for

two days' observation. Then she can go home. But you must be careful, careful, careful."

"Yes, Doctor."

Dr. Gidumal gave him another long look, then took his hand. "We will not fail," he said.

Brian wished that he hadn't said that, it sounded awfully ominous.

He stayed with Loi until eleven, when the nurses convinced him to go home and try to get some sleep.

That proved to be a great mistake.

Three

1.

Ellen drove along Route 303, returning from the hospital in Ludlum to her little cabin in Oscola. The uneasy ratcheting of her Duster clattered in her ears. Getting stuck out here alone would mean a long, dark walk, and probably a wet one too: lightning was flickering against the horizon, thunder guttering off in the mountains.

Oscola was hidden deep in a wild country. The woods were not friendly. More than one small plane had crashed into these mountains and never been found. Every summer campers and hikers went out and never came back.

Much of the region—which fifty years ago had been a thriving community of foresters, apple farmers and dairymen—was now abandoned. Orchards so ancient that the trees appeared to be deformed, clung to the few arable valleys. Abandoned houses, their windows covered with plywood, their interiors gutted, were all that remained of families who had made their livings here for ten generations.

It was a beautiful country, though, with sun-dappled valleys and laughing streams the locals called kills, using the old Dutch word. Its dangers were known—the isolation, the size of the forest, the tracklessness of the mountains. Getting hurt in the woods, getting lost—those were the things you worried about around here.

No matter what the state police had decided, she wasn't going to drop the matter of the woman in the mound. Even if it was as empty as their smarmy geologist claimed, there was still a story in that agonizing sound. Loi Kelly was lying in the hospital. Ellen could still feel an ache in her bones.

Now, what on earth had done that? Certainly not any of the equipment they'd had up there. It had come right up out of the ground.

There were brighter flashes of lightning. Thunder boomed back and forth, a

deep and savage argument. She turned down Mound Road and passed the judge's place, a stone house with a gambrel roof and narrow second-story windows. The first floor was more graceful, as if the old Dutch patroons had attempted to recapture in a small way some of the elegance of the world they had left behind in Holland. But the effect of the tall windows and imposing front door was to make the house look crudely unbalanced. At this hour the place was dark and silent, the mound behind it a great, curving shadow, black against the tumbling clouds. A few moments later she was approaching her own place. From the road there was virtually no indication that her cabin even existed. Even the dirt track twisting off under the trees was hard to notice.

As usual it was shuttered in silence—the silence she hated. After the first six weeks, which had been grim indeed, she had decorated her three rooms with chintz curtains, rope rugs and Adirondack views from the Mountain Gallery in Ludlum. Even while she had been shopping the Sears catalog for curtain rods and cutesy cup towels, she hadn't known exactly why she was dropping her sloppy old ways and doing the *hausfrau* two-step.

But she soon admitted the obvious: she was lonely as hell. Living the life of a backwoods hermit was an experience so oppressive that she had endeavored to disguise it by making her lair as warm, old-fashioned and cozy as she could. Maybe there was a little sympathetic magic in it. If she made a place that looked homey enough, perhaps a companion would show up at the breakfast table one morning.

A steady drip of water was the only thing breaking the present silence.

She looked at the phone. The only person she might conceivably call was Ira, and he didn't even have the same phone number anymore. For all she knew, he'd packed his collection of Ray-Bans and aimed the Porsche for Taos.

What would she tell her mythical phone companion—that she was lonely and in need, that she was past thirty and found her eyes caressing other people's kids, that she had foolishly bought a dying small-town newspaper and was tailspinning toward bankruptcy and spinsterhood?

She was headed for a white nylon dress and an order pad. The only real

question about her future as a waitress was, did she have the feet for it?

A flash briefly lit up the front yard. She sighed, went into the kitchen, opened the pantry cabinet. Tang, Swiss Miss Cocoa, Café Français. She was turning into a rural frump with a junk-beverage habit. Vague, listless thunder underlined the thought. Somewhere out there the storm slipped through the night like a prowling cat.

As she was taking the cocoa out of the cabinet it crossed her mind that she could spend her sleepless night productively. She could work on the story.

The mound was out there, nobody would stop her, she could snoop to her heart's content.

Underground screams, a killer sound—there was a story all right.

Come morning, the judge would either be guarding his precious property line or the mound would be swarming with state cops again, in which case she'd have to negotiate both his tearing rage and their hostility.

She had a penlight. All she had to do was avoid the judge. How? Her car would shatter the tomb-like silence that shrouded Oscola at night.

She could walk. Along the road it would be a mile. But through the woods it was less than half that. It was rough, though, and full of animals. Black bears abounded. She'd seen them humping along like bridge trolls even during the day. They had strange, pointed faces, cruel, empty eyes.

Going out at this hour would be nerve-racking, no doubt about it. On the plus side, though, she couldn't get lost even if she walked. All she had to do was follow the path along Coxon Kill, the stream behind her house. After a quarter of a mile the forest opened into meadow. The mound would be directly ahead.

She stepped out onto her porch to assess the possibility of actually doing this insane thing. She tossed her hair, a gesture of defiance that had been with her since she was a child. She moved down to the loamy forest floor that formed her front yard. Another flash of lightning reminded her to count, one

thousand, two thousand, three thousand... She reached eleven before she heard a faint patter of thunder. So the storm was probably not going to be a factor.

Shining her penlight ahead, she set off into the blackness of the forest. Soon she could hear the babble of Coxon Kill. Last winter it had frozen solid and its rapids had looked like quartz. She could touch them, run her hand along their wrinkles and curves. She'd fallen sort of in love with the kill then. A month ago she'd found a swimming hole about fifty feet long and eight feet deep, the water so clear you could count the trout ghosting along the bottom.

She could walk naked from her cabin and swim there, doing the breaststroke until the water turned her blue. She had adored the astonishing sensation of being naked in the woods, of feeling the cool forest air caress her breasts... God, she wished she had a man who was gentle, poetic and sexy. A nice man.

Her light flickered in a thicket of mountain laurel. Sharp stars of flowers shone pale. Far above, the enormous pines whispered on the slight wind. When the kill was so loud she was beginning to think she might stumble into it, she finally found the path.

Twenty minutes later the forest gave way to a wide field and the brook became sluggish, its banks muddy and indistinct. The mound stood before her, a low and unimposing shape blotting the horizon.

As she advanced, she saw light in a couple of the judge's downstairs windows. When she observed that it was flickering, she stopped. This light had an odd purple tinge, reminding her of the arc of a welder's torch.

Was he running a gas space heater? Surely not in this stifling weather. Maybe something was burning.

She went over to the house, moving swiftly through the ruined pear orchard with its twisted, twig-choked trees, and up the uneven brick walk that led across the garden to the kitchen door. This close, the house breathed out its own intimate smells, the odor of its cellar and the faint suggestion of the evening's meal that had been prepared in the kitchen, and another scent that was harder to define. Maybe there was a dead opossum in the crawl space.

Given that she was a tall woman, it was easy for her to look in the window. She discovered that the source of the flickering wasn't a fire, it was a huge television set.

The set was a room away, facing in her direction. Before it was a chair, and she could see the judge's head lolling to one side. Was he asleep? It looked like it.

The odd thing was the image on the screen. It was smoke— thick, roiling, purple smoke billowing endlessly past. An after-the-bomb shot from a war movie might look like this, but such a shot would only last a second. This never ended.

What in the hell was it, she wondered, and why purple? Smoke was black. When stations went off the air, didn't they go to static? Who would leave an endless loop showing nothing but this?

Well, they had, and the judge had gone to sleep watching it. No doubt it was some regional station manager's concept of a cool idea, purple smoke in the night. Her experience with the world of small-town media was that it contained a high quotient of morons. Look at her, she'd given up a decent salary, a secure job, an orthodontist with a good car and the city she loved for this.

She was about to turn away when she saw the judge's long, thin hand come up to his face. The fingers spread, hesitated in the air, then fell against his cheek and slowly slid down out of sight.

She backed away from the window, repelled as much by the bizarre sensuality of the gesture as by the realization that he was awake. Now that she knew that he wasn't sleeping, it looked as if he was in some kind of weird state of tongue-lolling ecstasy.

What if he was an addict? Wouldn't *that* be a lovely story to print? She watched him. My, but it would be fun to beat up the old creep in the paper.

Now he was nodding up and down. She could see that his mouth was wide open. He was jerking. She realized that he must be masturbating.

Her impulse was to run, but she stopped herself for fear the sound would stir him. She'd interrupted a private moment, and her cheeks began to burn.

She crept off, feeling decidedly perverse.

2.

When she reached the summit of the mound her feet began to crunch in gravel. There'd never been any reason for her to come here before, and she'd always assumed that the summit would be like the rest of the mound, lushly overgrown with weeds.

It wasn't hard to find the place where Dr. Kelly and his Saigon Sally had heard the screams: that was where the backhoe had done its work. She went over to the black scar it had left. As she approached, she could smell the sick-sour odor of the raw soil. Once this would have surprised her, but she'd smelled enough cut dirt in this area to know that soil isn't necessarily sweet. A city dweller expects black, rich-smelling earth. But the reality is very different. Wild earth smells of death and decay, for it is a killing ground and the home of a carrion multitude.

She lingered at the edge of the ditch, not quite willing to commit herself to inspect that soil. She imagined black beetles, earthworms, grubs, moles, shrews, massive high-speed snakes. The ditch was an open wound bleeding confused little creatures who wanted so very badly to rush up her legs.

A reasonable compromise was to lie in the dandelion-choked grass that gave most of the mound its green surface. She pressed her ear against the ground, closed her eyes. After a few seconds she felt the most appalling sense of vulnerability.

She got to her feet. Looking around, she noticed a glow at the far end of Mound Road. A car. She turned off her penlight. Who would be coming down here at this hour? Then another glow appeared behind the first, and a third behind that.

A whole procession of cars was coming down Mound Road. She didn't like this at all. Maybe the judge had seen her, had called the sheriff's office or the

state police.

But no, the first vehicle was an old pickup with a rattly bed. There was nothing official about these vehicles.

She crouched down, watching. A total of nine cars approached, parking along the sides of the road and in the clearing where it dead-ended at the judge's pear orchard. When they turned off their lights it was too dark to see, but she could hear the doors opening and closing as they got out.

She got ready to run. But then the front door of the house opened, pouring white-purple light out into the yard. The people filed into the judge's house, men, women, and children, all walking stiffly, as if they were—what? She didn't know what. They were just walking funny.

What the hell was this, a midnight meeting of some kind? Old communities are full of secrets. She ought to go back down there, try to find out what was happening.

Old communities also tend to be mean about keeping their secrets.

The judge had been flinging his fish. Was this some sort of wildly perverted backwoods sex club meeting going on here?

Then she heard low voices, saw lights going on throughout the house. Not exactly a secret meeting, after all. As the light got brighter, she could hear shouts.

The story was still out here. Again she stretched herself out, pressed her ear firmly to the ground and listened. The grass beneath her head crunched. There was nothing else... or... no.

Yes! A deep, deep sound. Underground stream, some kind of machine?

She raised her head, trying to tell if she'd been listening to the rush of her own blood. No, that deep, throbbing note had nothing to do with her.

It was a sound of engine power coming from a place where no engine should be. She took the cassette recorder out of her fanny pack and turned it on,

pressed the mike into the soil.

But then it went still, almost as if—but no, that was impossible. But it did seem as if it had stopped *because* she'd been listening.

For a moment she wondered if she was going crazy. There weren't any machines down there.

Again she looked at the ditch. Would going down in a three-foot-deep cut really help her hear better? The mound was at least fifty feet high. On the other hand, what if the woman was in a tomb near the surface, too exhausted to scream? Maybe—if she'd heard anything—it had been the booming tremor of an exhausted voice.

She clambered down into the ditch. Did earwigs really run into your ears and start digging wildly toward the interior of the brain?

There was a bright flash of lightning and an immediate roll of thunder. That was all she needed—the storm had decided to come back. After the thunder subsided it grew very quiet. It was dark, too, like pitch, like ink, like the emptiness of profound sleep.

She leaned down, far down, and worked her ear into the muck. It was thick, giving stuff, but not nearly as gooey as she'd imagined. In fact it had a light, friable quality that was quite unexpected. The mud of the forest floor was as dense as wet concrete.

Suddenly she remembered a coke tailing she'd found behind an old silver smelter she'd once done a story about. This was what extreme temperature did to some types of stone.

She was rewarded with another noise, this one clear and close and quite ugly. It made even less sense than the deep rumbling, this rapid slithery noise. It was frantic, a lobster scabbling in the pot, the whipping body of a snake whose head is being crushed under a boot.

She instantly leaped out of the ditch. Her impression was that the thing had been right under her.

There was no question about this sound: it had been big—very big. Not an eel in a pot, an anaconda in a caldron. Good God, what was *in* there?

It was time to get out of here.

She started down the mound—and was stopped at once by what she saw below. Cars now choked the dead end. There must be twenty of them. And there was activity in the house, a great deal of activity. Every curtain was drawn, but she could hear the hum of many more voices... and a sort of sizzling noise. There was also lots more purple-white light, strobing behind the curtains.

Risky or not, she knew she had to get a closer look. She moved quickly down the side of the mound—the path was well worn— using her penlight as little as possible.

The pear trees were gnarled and full of branches that seemed designed to stick her in the eye, but she found that they also afforded good cover. She could come within thirty feet of the house without showing herself.

This close, the purple light was really intense. It was odd, too, the way it made her feel kind of... trembly inside. Trembly and warm, a bit like sex.

Inside the house it must be intolerably bright. And the voices—it sure wasn't any fun party they were having in there. People were choking and bellowing, children were wailing, it was an altogether dreadful sound. People burning, people drowning, people being torn apart—these were the images that the screams brought to mind.

She moved out of the cover of the orchard, stepped quickly across the dry grass of the back lawn. She reached what was probably a dining room window, heading toward a bright chink of light that was leaking out from between a parting of the curtains.

Close up, the house was really rocking and the cries were ghastly—too hoarse, too loud, too... lost.

Her stomach twisted, she swallowed. She wanted to run, to get out of here, to

go home and bury herself under the covers.

But there was a story here, very certainly.

Closer yet, the voices were even worse. They weren't simply sounds of agony. She recognized something she thought must be pleasure. It was a mixture of pleasure and torment. She pressed her face to the rusty screen and peered into the lit interior.

The light was so bright she was blinded. She had nothing more than an impression of movement—not even the sense of shape. People were leaping, jerking, flailing so fast that their bodies were blurs in the purple-white ocean. She felt a sensation leap through her eyes and right down to her groin, a sensation that ended in a tickling so intense that it caused an instant convulsion.

She screamed, she couldn't help it. Then she threw herself backward, sprawling in the grass. The pleasure was so great that she was momentarily helpless. However, she recovered herself and dashed off, running wildly away toward the orchard.

She crouched among the trees, breathless with fear. Nobody emerged from the house. She rubbed her left eye, which tingled furiously. What was going on in there? She'd been—it was like instant climax. More than climax. She sweated, her body tingling at the memory. Her eye was numb, though, and she wasn't sure she could see clearly.

The light had hurt her. Maybe it was a retinal burn. Perhaps she'd looked into a laser.

She began to back out of the orchard. When she was parallel to the end of the road, she decided to risk trotting across it and running among the cars. She didn't recognize many of the vehicles, which meant that they weren't Oscola folk but people from nearby towns. She knew most Oscola cars by sight.

Could it be a secret society—the Order of Purple Light Freaks or something—here to have an electronic orgy?

She had already crossed the road when she noticed that one of the cars was running. It was making a deep, throbbing sound, the growl of a monster engine.

Then she spotted it, parked facing outward with a clear run to Mound Road. It was a sports car, a convertible with the top down, low and mean, of a shape unfamiliar to her. It was a taut machine designed to dominate. Gas-guzzling sports cars left her cold... and thrilled her. She'd always been conflicted about his Ira's Porsche. But this was no European jewel-box. This car had USA written all over it—the shape said tough and smart and powerful.

She moved closer, her eyes on the glowing instrument panel, which could be seen inside the open interior. The closer she got, the more obvious it became that this car was something very special. When she was just behind it, she could see the name-plate. It was a Dodge Viper. She was stunned: what was something like this doing in the Three Counties? This was the ultimate muscle car. The paper had gotten some press releases about it. A Viper was the kind of thing that belonged in Arnold Schwarzenegger's driveway, not Judge terBroeck's. She went around to the door. There were no handles, so she leaned over and peered at the odometer. Everything came up zero. According to its instruments, this car had never traveled a foot.

Was it stolen? What in hell was a stolen car doing here?

Then she heard another sound, one that made her stop dead. Somebody was breathing, slow, regular, deep. And it was coming from up under the dash, as if a dwarf was hiding himself by pressing into the car's cramped foot well. She started to shine her penlight, but then hesitated. The feeling of being watched was overwhelming—and absolutely terrifying. She backed away from the car. "I'm sorry," she said.

There was a grumbling sound from the dark—and what felt like a tangle of threads landed on her right hand, encircling it.

She leaped back, yanking her arm away. Had she gotten in a spider web?

It was then that she noticed the lightning bugs. They appeared suddenly, because otherwise she would have seen them before. As far as she was

concerned, fireflies were one of the pleasures of country life.

But she wasn't interested in enjoying them now, even though they were drifting up from a hole behind the judge's pear trees in a graceful wave. They were coming in a tight group, gliding across the lawn.

If she didn't change course, they were going to collide with her.

The sky erupted with a lacework of lightning. It was rendered fuzzy by low, nasty clouds, but it was nevertheless an astonishing display, accompanied by guttering, persistent thunder.

In the silence that followed a breeze came up, at first welcome in the wet, sucking heat. But the breeze got harder, fast. Soon it was wind, cutting and mean. Huge drops of rain began to strike her.

Even though she was out of the pear orchard, the lightning bugs were still behind her. She wasn't being chased, of course, but it sure felt like it.

When a firefly landed on the back of her hand, she shook it off. Then she noticed one was in her hair. She reached up, brushed it away. Another came so close to her face that she could feel the breeze of its wings.

And she could smell it, a cutting mix of acid and dirty skin.

She ran like a madwoman.

3.

The weeds cut into her shins. On the uneven ground she stumbled, flailed, twisted.

But the moment she slowed down a firefly landed on her face near her left eye. Before she could brush it off another joined it. Simultaneously a third started scrabbling in her ear. She thrashed, and her right hand came away dripping crumbs of pink-purple phosphorescence.

Her flight became headlong, hell-bent, desperate. She had not felt like this since she was ten and running down the middle of Garr Street in Montnoy,

New Jersey, running through the dark from Steffi's house to her own.

By the time she reached the meadow her breath was coming in ragged gasps. She was no jogger, and her run dropped to a lope. Immediately a firefly came tickling into the hair along the back of her neck. She yanked it out, threw the body away. What on earth was the matter with them?

Others appeared, cruising around her, their little lights blurred by rain. Up close she noticed legs lit by the glow of fat, segmented bellies, and between each segment was a more deeply colored glow, purple and angry, suggesting intense heat. But fireflies aren't hot.

More appeared and yet more, and she began to hear a deeper note in their buzzing. She also became aware that a long shadow strode before her.

A moment later she tripped and fell across a stump that had looked in the light like a clump of weeds. She landed hard, rolling to break her fall—and then she saw what was behind her.

They flowed and undulated along the ground like a single creature, a burning snake five hundred feet long. This living band twisted and turned through the meadow, glittered in among the trees of the ruined orchard, glowed across the judge's lawn. It was emerging from that hole back in there, which glowed with purple haze.

They were literally pouring out, swarming fifty feet into the air in a burning geyser.

She stared, for the moment too amazed to feel her fear. This is the state of frozen terror the snake seeks to induce.

The great mass darted at her with the speed of lightning. She felt a hot finger between her legs. Her belly shuddered with pleasure so deep and intense that it almost incapacitated her. A terrible sense of menace came with it, though, and she knew she had to run, must run, must get away.

They wanted to get her back, to take her down into their hole.

Then the Queen Anne's lace that choked the meadow was whipping her thighs, and she was racing with the wind in her ears and the rain jetting against her face, racing for the woods, and she felt—knew—that the race was against death. Her own shadow danced before her, darting and long and getting darker as the thing behind her grew, its light increasing. It became as bright as moonlight, then sickly day.

When she reached the woods she was once again enveloped in darkness, which caused her to founder helplessly until she turned on her penlight. Recovering herself, she dashed in among the tall pines. She couldn't find the path, not even the stream, so she just kept blundering ahead. She'd left lights on, and her hope was to see a glimmer among the tree trunks.

They came in buzzing and winning, their abdomens so bright she could observe each fiery segment. In an instant she was surrounded by thousands and thousands of them, all scrabbling at her, getting in her hair, her ears, under her clothes. Where they remained on her skin there came a sharp sort of tickly pain—almost a pleasure.

It was loathsome.

They scrabbled up her legs, tickling and pushing until they were deep between her thighs. When they got in her they felt like a single thing, a thrusting, eager finger. It was a carefully intimate presence, probing, stroking, going in, up in, deep.

When she gasped ten or fifteen of them rushed into her mouth, and she found herself crunching into their bodies with her teeth. When she tried to spit them out more came in, plunging down her throat.

She fell back, too overcome by the thick masses of them that were filling her mouth and nose to utter the scream of abandoned pleasure that was making her heart leap up even as she choked.

There were so many she couldn't close her mouth, couldn't spit, couldn't swallow. She stuck her fingers into the writhing mass, into the crunching salty-sharp taste of them, and dug them out. They resisted, swarming down her throat, tickling horribly as they scrabbled along her esophagus. Then she

lost complete control of herself, heaving great, rattling coughs, unable to breathe. Their sheer numbers stuffed her throat shut. She grew frantic for air. Even as waves of shimmering genital pleasure made her back arch, she began to suffocate.

She toppled over. A needle of fire cut into her face. For a moment she thought that they were setting her aflame, then she realized that it was water. Somewhere in the back of her mind a voice said, Coxon Kill, water, water will save you. She dragged herself forward, wriggling down into the stream like a grateful otter, sucking it in and spitting out jiggling masses of glowing material.

But the pleasure grabbed her and drew her back, made her ache for more. She struggled against the urge to throw herself onto the bank, to lie down and spread her legs to the undulating, buzzing creatures. The buzzing rose higher and the tickling came around her whole middle, began to infest her again, to break her with rapture. Again and again and again she came to climax, and each time the freezing water shocked her out of it. The fight continued between Ellen's will to live and the gruesome lure of death by pleasure.

As she struggled and writhed, she came closer and closer to the long, deep pool where in happier hours she had swum above the shadows of the trout.

She sank to the bottom of the pool. In an instant all the pleasure was gone and she was screaming, inhaling water and spitting out masses of bubbles thick with bug legs and broken cellophane wings.

By crawling along the bottom of the pool, coming up for gulps of air, she could more or less avoid the creatures. They impotently pummeled her back with their bodies. In this pure water she had no trouble seeing. The insects in their millions lit everything brighter than day.

Then it was dark.

Coughing, she sat up. Her mouth was still full of the jelly-like phosphorescence, and crisp bits that crunched when she worked her jaws.

Then she realized what they tasted like.

A wave of nausea hit her. She vomited a burning white stream of matter into the night. It arced over and fell with a hiss to the surface of the stream. She watched it float away on the quick current, its glow soon lost around a bend. Seeing the goop produced another attack of nausea, then another. She almost vomited her gullet inside out.

Slowly, the agony subsided. Grinding muscles went slack, helpless choking was replaced by long heaves of sweet air.

At last she stood and waded out of the pool.

It was then that she saw the tip of the swarm of insects. It was a glimmering strand in the reeds halfway down the length of the pool.

As she watched, it grew thinner and came closer, closer—then seemed to snap back against itself, exactly as if the millions of separate bodies were linked by unseen tendons.

Again it stretched toward her, the tip of it glowing fiercely as if with enormous effort. It *was* connected to itself, not a swarm but a single thing, and it had reached the limit of its range. It must be anchored down in that hole.

She fought to control the motion of her stomach but she couldn't do it, not with the taste, the memory of those awful things in her, the feeling that they were still crawling along her gullet. Then she realized what they tasted like—blood and filthy, sweaty skin. If she'd licked somebody's naked feet, she'd have tasted the same complex mix of salt and dirt and stink.

Another spasm brought up more glowing debris. She went staggering off into the woods, thinking only of finding her cabin and getting this filthy, vile taste out of her mouth.

She left the thing behind her, questing and stretching against its limits. It had wanted to get her back. It had not wanted her to leave the judge's place.

Dear God in heaven, what was going on here?

After long minutes of blundering, she located the sparks of light that marked her cabin. The night deceived her, and what should have been a few moments' walk became a crashing battle with unseen ditches, rough tree trunks and deceptive paths.

At last she struggled onto her porch, weeping and crying out, and went into the house. Immediately she slammed the door, locked it. For a short time she leaned against it, crying like a baby. She shook her head, no, no, no, trying to eradicate the whole experience from memory, to somehow explain what had happened, to escape from this awful feeling of defilement, of having been literally packed with filth.

She crossed the living room, dropping clothes as she went. The taste in her mouth was sharp and strong, and she had an image of herself licking open sores.

In the bathroom she gargled with Listerine, pouring it down her throat, then spitting it into the toilet. Again and again she did this, until the bottle was empty. She smashed toothpaste into her hands and jammed them in her mouth, working the paste down around her gums, in between her teeth, beneath her tongue. She brushed until her mouth was filled with foam, then washed it out.

Still the taste lingered, so she got some Palmolive dishwashing detergent from the kitchen and washed her mouth out with that, gagging from the bitterness of it, and she saw when she spit that there was a whole bug left. It was badly damaged, moving slightly. It looked like skin, like *skin*. Horrified, she managed to hold it just long enough to put it in a jelly jar, closing the metal top firmly and carefully.

Then she made a saltwater gargle, again she brushed, and finally felt a little cleaner. She took a long, hot shower. As she washed in billows of steam she heard thunder outside and moaned when the lights flickered. But she couldn't stop washing. She used Jergens soap and Ivory soap and Lava soap and would have used lye soap if she'd had any.

At last, lying on the floor of the shower, her skin aglow from the soap and the hot water, she began to feel a little better.

There was a terrific crack of thunder and the lights went out. A moment later the shower stopped. Of course—her well had an electric pump.

In the silence, she listened to the quick gurgle of water going down the drain. This was replaced by another sound—a peculiar sizzling like bacon frying. She got up, listening, struggling to find something to grasp—a corner of the shower, the wall. She was so scared and exhausted that it was almost impossible to control her movements.

That sound—she'd heard it before, coming from inside the judge's house. She found her way to the bathroom window, raised the edge of the blind.

Off in the woods she saw light—more than one light, as a matter of fact. But it wasn't fireflies, it was a group of bright winks of light like purple jewels. They were advancing slowly toward the house, and the sizzling noise was coming from them.

It was the most menacing thing she'd ever seen. Had she locked every door, every window? What about the crawl space, were the vents closed or open? And the flue—had she closed the flue in May after she'd made her last fire?

She began to cry, her throat tight with the frustration and the fear. This was worse than the worst nightmare, and it just would not stop.

Then the shower came to life with a roar. Startled, she uttered a scream. But the lights also came back on and that calmed her down a little. At least she could do something more than cower.

Her nakedness was making her feel horribly vulnerable. She grabbed a towel and dried herself, then rushed through the house checking window locks and closing curtains.

She could no longer tell if she was awake or asleep, in nightmare or reality. Naked, cold, damp, shaking and still deeply nauseated, she prowled her three small rooms, her eyes flitting from door to window, her mind alive to every creak and sigh.

A gust of wind made her run to the kitchen, grab her two biggest knives. She

advanced through the house, her teeth bared, growling softly. At some point she'd put on her white terry-cloth robe, and it hung loose about her as she patrolled.

Finally she sat on a rigid dining chair, putting her knives on the table before her. There was an occasional dribble of rain, but no more lightning, no thunder. Then she realized that she could see the dim trunk of a tree beyond the picture window.

The night was over, the nightmare past. She thought she'd like some coffee.

She was putting the coffee in the percolator when the true impact of what had happened slammed her as hard as a physical blow. She leaned far down over the kitchen counter, her eyes shut tight.

It had all been impossible.

Groaning, she held her belly as if her guts were spilling out.

A crackle from the woods made her snap to attention. Instantly, the knives were in her hands. She rushed to the window. All was still. But she knew the sound of a footfall in the pine needles that covered the forest floor.

She stepped away from the window, and then—following another thought—rushed through the house dousing lights. For a long time, she simply watched. Slowly, dawn began to define first the outline of the window, then the trunks of trees outside. Finally the first birds began their tentative peeping.

Full daylight came then, shimmering with dew. Today was Sunday. She had been planning to drive down to Ludlum, get an *Albany Times-Union*, and sit on the terrace of the Waywonda Inn and eat croissants and drink coffee.

But she would never reach the Waywonda Inn, would never read today's paper. Dawn or no dawn, Ellen Maas stood at the edge of a great darkness.

Four

1.

Night was the worst time for Brian. He'd wake up smelling smoke, hearing Caitlin's first, sharp shriek, hearing Mary's surprised shout turn to an inarticulate bellow of agony.

He sweated out the nights.

Before the fire his habit when under pressure was to retreat into the intricacies of mathematics. He would play with equations, carrying them to their angelic and logical ends.

No more.

When he'd first been released from the hospital, he had gone to the Ludlum campus, expecting to begin the return to his old life. But he'd seen Mary everywhere, heard her singing across the reaches of memory.

Memory frightened him, because his equations told him that every moment was happening forever.

They told him that Mary and Kate were dying forever.

He hadn't even entered the physics building.

After that experience, he'd begun to spend more and more time on his land. He'd fallen in love, a little, with the farm.

But he could not bring himself to repair the house, not even when he'd brought Loi home as his wife. To provide her shelter, he'd bought a bigger trailer. It was dinky, in his opinion, but she'd been awed by it. She'd managed to decorate it pretty nicely, if you liked the pictures in *Trailer Home Designs*.

"Loi," he said to the empty, dark room. A glance at his watch told him that it was past two.

He looked around at her things, her furniture, her pictures, her beloved Laughing Buddha. It was plastic, it was chipped and scratched, but she loved it. He picked it up, wished on it that she would be well. Too bad it hadn't helped her today.

He sighed, wondering if he would ever get to sleep.

What in God's name had happened to her? No wonder Doc Gidumal was suspicious, he had every reason to be.

Apple Sally—she'd been attacking something. What? Could there have been one of those little black bears down in there? Sal hated bears.

There was her dish, still half full of Kal-Kan. She'd been a good friend, that busted-up old hound. He took a long breath, then tossed the dish in the trash.

No bear had made the noise that hurt Loi.

What would be the properties of a sound that could cause such an injury? Great intensity, enough oscillation to actually set cells in motion, enough power to burst them. It'd take an awful lot of energy to produce such a sound.

First somebody is screaming like a banshee, then you get something like that.

He went to the refrigerator, got a bottle of Bud and returned to the living room. He sat in his easy chair, balancing the beer on its wide arm.

The nature of the sound continued to bother him. It had been a sort of undulant hum, a warbling acoustic discharge. The oscillation would have been what caused the damage; it would have set up the kind of motion that could burst cell walls.

Afterward, he'd had muscle aches and a fairly severe headache—far less damage than Loi, but he was a lot less fragile than a woman at the end of her third trimester.

Outside there was a series of brilliant flashes. The storm that had threatened earlier was hanging on the higher elevations, lurking back in the Jumper Mountains above the little town of Towayda. Right now it could go either

way, stomping off into New Hampshire or coming back here to give Oscola a predawn pounding.

He swilled the last of the beer, tossed the bottle toward the trash can. It hit the floor with a sullen clunk. So much for any nascent Scottie Pippen fantasies. The living room clock bonged three times. He sat staring, wishing he had a fire to watch.

It was long after the crickets had stopped and the bats had gone to bed that his eyes shut for a final time, and a tired, uneasy man slept.

2.

It only lasted a moment. When he woke up he found himself sitting in a very different sort of a seat. There was a sensation of electricity going through his body.

Then he realized that he couldn't open his eyes. He heard familiar rattling. Sounded like he was in his truck. And why couldn't he move? Muscle spasm? Stroke?

He realized that he wasn't in bed at all. He was in a seat, his hands were on a steering wheel.

He *was* in his truck!

No, this couldn't be. How could he be driving his truck with his eyes closed?

This was crazy. No matter how it felt, how real it seemed, he had to be dreaming. He wasn't in his truck at all, he was still sitting in the easy chair in the living room.

There was a bump, followed by the rattle of the passenger door that had been bothering him for weeks.

Light flashed on the other side of his closed lids. Thunder rumbled.

He tried to open his eyes, tried again, raising his eyebrows until his forehead was deep with furrows.

Suddenly they popped open—and he was dead stunned by what he saw.

He was in the truck all right. His hands were on the wheel, his foot on the gas, he was driving down Kelly Farm Road in the direction of Mound. "What the hell?" The dashboard clock said it was five-fifteen.

He was going... was it to Ludlum, back to the campus, back to the facility?

He had a vivid memory of his old facility with its walls covered by the blue PVC pipe that contained the vacuum-sealed cables.

He was out of control. He was heading down Kelly Farm Road toward Mound and he couldn't stop himself.

He fought. He willed his hands to move off the wheel, willed it until he groaned with the effort. His hands shook, his neck throbbed, he grimaced with effort—and suddenly his right hand did as it was being ordered. Struggling mightily, he managed to get the shaking, quivering fingers around the key, to turn it.

The truck stopped. For a moment he slumped over the wheel.

Then a tickle started down between his legs. For a moment he thought a rat was on him. Before he could even panic, though, the sensation blossomed into one of electrifying pleasure. It was a needle, hot, vibrant, incredible, stabbing deep into his solar plexus. He hadn't felt such a sensation in years, not since he was first touched there by a girl. He still remembered that pleasure, how it had stripped him of his will. Now it drew him out of the truck, into the woods.

Like magic he was walking somewhere, being drawn, being pulled. On some level the pleasure made him sick, made his heart weep. He wasn't going to the campus, not back to the facility, not at all. He was going somewhere else, to a house, a familiar house...

He thought he could feel something wrapped around him, threads that he couldn't see, hair-thin but wildly active, tickling as they raced about under his clothes.

He grimaced, shut his eyes—and the pleasure disappeared. He became aware that there had been purple light, deep almost to black, shining in his eyes.

When he opened them again, the purple light came back. He moved like a robot, or a puppet controlled by strings that gave him pleasure down to the depths of his soul.

Then he burst into the meadow beside the mound, and before him was an extraordinary scene: a burning woman with her arms over her head, followed by a long, swinging stream of white fire. It was something from another version of the world.

The vision of the burning woman was so bright that it left red ghosts in his eyes after he turned away from it. He saw Mary burning again, Mary in a flower of popping, blurry flames, moving fast, her hair a spreading blossom of fire.

He was close to her, only a few feet away, and he saw that the supposedly heavenly glow was actually coming from thousands of busy winged worms.

Her face was pale fire, her hair flying sparks. Behind her was the dark shape of the mound. He could also see the judge's house—which was bizarrely transformed. Its windows were pouring electric purple light so bright that silhouettes were visible behind the closed curtains, gyrating as if some sort of maniacal dance was taking place inside. But it wasn't a fun dance, he could see that.

Cars jammed the driveway, spilled over into the front yard.

He was being drawn here.

And he was in a fight for his life. He'd fought like this before in the burn wards at Ludlum Community and Midstate Catholic in Albany.

The pleasure drew him, dragged him, made his hands shake as he tried to untangle the threads, weakened his arms when he sought to tear them away. Still, he lurched forward.

Desperate now, he concentrated all that was left of his willpower. Ahead of him the front door began to open, letting out a shaft of pure purple light. A silhouette stumbled past, horribly contorted. Long legs and arms as thin as sticks swam in the light. Inside, screaming mixed with caws and whoops and the continuous sizzling of a gigantic skillet.

It felt so good that he wept. He was aware that he was marching across the yard like a mechanical toy. The threads were all around him now, enclosing him like a deadly web.

His will was a single dot of white light in the center of his being, and that dot wanted to live, to be free. It wanted to live so badly that it began to grow, to get brighter.

Higher the pleasure rose, higher and higher, to greater and greater intensity. He groaned, he yelled, his skin quivered with it.

But it was death, he knew that, he could taste it, feel it in the coldness of their touch.

His mind fixed on Loi and the baby. On his son. He would never get to see his son.

No!

He was being dragged now, toward the open door, toward the angry purple flashes and the capering, twisted figures inside.

He tensed his muscles, stiffened his legs until his heels were digging into the ground, and he pushed. He fought, tearing at the threads, he flailed and yanked and ripped, he threw himself back against their strength.

A tall, angular shadow came onto the judge's porch. He could not see the face, but he felt watched, carefully watched.

Spittle flew from his mouth as he twisted and shook, his muscles strained to their limits as he fought the threads. All the while the purple light pulsed into him, causing his deepest soul to cry out in the agony of the pleasure.

The grave figure on the judge's porch gracefully tossed what looked like a thick cable in his direction. It fell before him with a dense thud and began scrabbling at the earth, trying to get closer. But it was stretched to its limit.

The tickling threads disappeared, the purple light went out, the figure withdrew from the porch.

He ran away like a frightened child. He kept running until he reached the woods at the far end of the meadow that surrounded the mound. Then he stumbled into Coxon Kill, lurched through it and collapsed on the opposite bank.

He felt as if every aching muscle had been pulled awry. He was soaked and cold and miserable.

A crow raised its voice in raucous anger. He could taste the sourness of its inhuman rage. He whirled around, looking for it. The tall, strange figure from the porch had followed him. It extended a long, thin arm toward him.

Absolute panic. A man running. Leaves whipping past. Little sounds, half-made screams. A man running, running and the blaze of dawn striping the horizon with perfect colors: long gold lines of cloud tinged with the black of the departing storm, the sky going from green to soft pure blue. Beneath this grandeur, a man running.

A brace of pheasant rose before him, their wings shining. When he first noticed the glow in among the trees he stopped, shrinking back like a terrified deer. But then he saw that it was a cabin with lit windows and smoke coming out its chimney. The logs were dark and old, the lights in the windows were dim.

It looked like something from a sinister fairy tale.

3.

A miserable Ellen Maas was waiting for the percolator to stop coughing when she again heard footsteps.

Nobody ought to be around here at this hour.

She grabbed the biggest knife.

"Who's there?" she asked. It came out as a thin, ineffectual whine.

A man's face appeared in the living room window.

It was waxy green, the eyes staring, the mouth slack. The eyes went to the knife she was brandishing, then the face reared back into the dark.

She threw down the knife, reeled away from the window. She was biting her knuckle to keep from screaming. It was Dr. Kelly out there and he looked as if he'd been in a wreck or worse. She dashed out into the Living-dining room and threw open the front door.

"Dr. Kelly..." Her voice died away. The expression on his face was unlike anything she'd ever seen before. His eyes were wide, his lips open, his skin wet with sweat. He shuffled toward her. Instinct made her step back. All sorts of unspoken dreads began to rise.

Then he stopped, buried his face in his hands, trying to wipe away a thickness of sweat and grime. His hair was full of pine needles, his T-shirt was ripped almost to shreds, he was wet. "I'm sorry. I've had—had—" The hollow eyes met hers. They pleaded.

"Dr. Kelly?"

"Help me." As if the two small words had drained the last of his strength, he slumped forward. Big though he was, she had to catch him or he was going to fall. She reached out, was staggered by his full weight.

She was just strong enough to get him in the door, to aim him at the couch. He toppled down, hitting its old springs with a squealing crash. She didn't want that door left open; she slammed and locked it. What had happened to her was bad enough, and now look at this poor man.

Then she saw him fully in the light. His scars were clearly visible and she was surprised at how extensive they were. His chest looked... molten. She'd

never seen such deep burns.

Her old percolator went from coughing to wheezing, indicating that the coffee was finally brewed. Looking back at him, she moved quickly across to the kitchen. The man had to be helped, but the damn thing would explode if it wasn't turned off. That taken care of, she rushed into the bathroom.

What should she get? What did she have? Alcohol and cotton balls, a tube of Mycitracin, some Kaopectate, lots of Mylanta. Obviously, her first-aid capabilities were a disaster.

"May I have some of that coffee?" he asked in a beaten voice. At the hospital he'd been cruel to her. Now his eyes were anguished.

Brian couldn't get over how good the brew smelled, so rich and strong and familiar. Dimly, he remembered struggling through the woods, seeing the gingerbread little cabin, coming up to the door...

There'd been a beautiful woman in the doorway, wearing a fluffy white robe. Now she had a percolator in her hand and was filling a big mug.

In amazement he reached out, touched the terry cloth of the robe. He no longer felt able to verify reality merely by looking.

The green eyes blinked, regarded him. "Are you hurt?"

Her voice was as pure and refreshing as the water of Coxon Kill.

"Hey, listen up, Dr. Kelly! Are—you—hurt?"

He didn't know how to explain his pain, what to say that would identify the cause of his wounds.

"Please tell me!"

"I—I don't know..." He tried to remember what he'd just been through, but it all seemed so impossible, it was just a crazy jumble. He was exhausted, but he didn't think he was actually hurt. "I'm fine," he said. He realized that the woman was Ellen Maas. He'd come all the way to her cabin.

He didn't understand at all.

"You don't look fine." She thrust the mug of coffee into his hands. Beneath her tone of concern was a much sharper note. She was afraid of him, he decided. That wasn't too surprising.

He took the coffee, drank gratefully, deeply. "I'm sorry, I know it's early."

He got only a guarded shift of the eyes from her. She definitely wasn't happy to have him here, and he couldn't blame her. "Dr. Kelly, what the hell is going on around here?"

"I don't know!"

She watched him with increasing wariness. He appeared mad. But after what had happened to her out there, she was willing to give him a little latitude. But only a little. "Why are you here?"

He tried to explain himself. "I've had—an experience. Something happened to me that I can't explain."

He was surprised to see that this made her less uneasy. "I had a bad night, too."

They regarded each other.

"I'm sorry I burst in on you." He noticed for the first time that his scars were visible. Ashamed, he covered his chest with his arms.

"You don't need to do that."

"I'm sorry."

"You got them trying to save your family."

She went into the kitchen and began preparing her breakfast.

He followed her. "Will you give me something to eat, Miss Maas?"

"If you like."

The smell of coffee and bacon, the sound of butter being spread on toast, the clink of spoon against cup—these familiar things allowed him to do what he so desperately wanted to do, and that was imagine that life would return to normal. For her part, the familiar rhythms of cooking the meal and setting the table were what enabled her to return to the ordinary.

The terrors of the night sifted into memory.

Brian and Ellen were like deer who have glimpsed the hunter and run, and think themselves safe, and pause to crop the stems of autumn.

Five

1.

He ate mechanically, his eyes on his food. She hadn't wanted anything after all; she wasn't sure how long it would be before she cared to eat again. Instead she sat and smoked and watched him. He had the rangy build of a hard-working farmer, but his eyes betrayed the complexity of his intelligence.

"I think I'm feeling separation anxiety," he said.

"From your wife?"

"In the sense that I want to stay here. I want to hide."

A silence fell. She wanted to talk about what had happened to her, but she didn't know how to do that. There was no simple way to explain something so weird, not without sounding deranged.

Unless the same thing had happened to him. To find out, she would try an indirect approach. "What are those insects that come out at night—the glowing ones?"

"Lightning bugs."

"I mean that attack you. Like wasps."

He looked up from his food. His eyes now held a question. "None."

"Not anywhere? Not back in the mountains?"

"No."

She smoked, watching him carefully. So that wasn't what had happened to him.

So what had? Why had he come staggering out of the woods at six a.m.?

He wondered what she'd been driving at with her questions. Had something happened to her, also? No, he'd had a nightmare of some sort. "I'm sorry to disturb you."

"Do you know any entomologists at Ludlum?"

"Bug boys? Nah. I'm a physicist. Worked on esoteric particles."

"Star wars?"

"We were going to harness a new sort of particle. If we could find it."

"I want to talk to an entomologist."

"But not to a particle man." He cut across the second of his two eggs, dipped some toast into the yolk. "Thanks for this. I needed it."

She smiled a little. "My breakfast usually consists of cereal and a half grapefruit. I didn't even know I had those eggs. What kind of particle were you studying?"

"Generating. I was trying to generate it. A particle that would have moved backward in time. It sounds esoteric, but it would have been a very powerful particle. Capable of great things."

She went to the window and looked out a long time. He watched the shoulders of the shabby terry-cloth robe. Perhaps he should leave. Probably should. But he found himself pouring another cup of coffee.

"What happened to it?" she asked suddenly.

"It?"

"Your project."

He shook his head.

She came back to the dining table and sat down across from him. "So, have you figured out why you came walking out of my woods at six in the

morning?"

He watched her movements, hasty, nervous. She was very tired, still wary of him. Still angry, he suspected. "Please don't put it in the paper."

"No, I won't hurt you. It's not my style." She smiled then, and it was quite wonderful to see, a sudden, fierce brightening of her tense features. But the smile disappeared abruptly. "You didn't answer my question, Doctor."

He had to explain more fully, he saw that. "I had a waking dream," he said carefully. "It's called hypnogogia. A commonplace of psychology. Apparently I walked in my sleep."

She nodded. "Go on."

"Well, that's the explanation."

She laughed in his face, but the laughter was gentle, it wasn't mean. In simple, straightforward language, she told him the craziest story he had ever heard, about killer insects that glowed.

"I can understand your interest in entomology," was the best response he could think of. It was a most curious story, though. "But you're talking about a nightmare, not a real experience."

She went into her kitchen, came back with a pickling jar, held it out to him.

"What?"

"On the bottom. Look."

The jar was empty, with a hole in the tin lid. Silently, he gave it back to her.

She unscrewed the lid, examined it. "Damn."

"A lightning bug that can bust through a tin jar lid. Not possible."

"You do have your pompous side, Doctor."

"I know my science! And I know that this hole was not, repeat *not*, made by any insect known to man."

"I know what I saw. I can't explain it but it wasn't any hallucination. Hell, look at Loi. Your wife's lying in a hospital bed because of this—"

"You're assuming that a strange sound and... lightning bugs... are related? That's more than a supposition, that's a leap of faith."

"Everything strange that happened out there in the last twenty-four hours is related!"

"What makes you say that?"

"The screaming in the mound, the injury to your wife, my experience, your experience—they've all happened within a few hours, and inside the same square-mile area. Of course they're related."

He felt sweat gathering under his arms. Acid twisted his stomach.

"You look sick, Doctor."

"Call me Brian. I'm just—"

"You're scared. Like me."

"I'm scared."

"It's time to tell me all about it."

He recounted his whole story.

"I saw those damn cars, too! I even touched one!"

"If this was real—" He fell silent. He had just realized something appalling.
"Dear God."

"What?"

"You say you ran through the field behind the judge's place, and you were covered with them?"

"Totally. They were even in my mouth."

It was incredible. That image—that dream image—must be real. "I saw you. I thought you were part of my nightmare—a burning woman. I often dream about people burning."

A prickling sensation told her that goose bumps were rising on her arms.

He was hunched, staring at his food. "You're trembling," she said. She held out her hand.

Silently, he nodded.

When he didn't take the offered hand, she withdrew it. She had only wanted to comfort him. "I think maybe that creepy judge is breeding some kind of tropical insect," she said at last. "They came out of a hole in his yard. Probably wants to drive people off his land."

"What about your theory that it's all related? How does Loi's injury fit in? And what about me?"

"Well, I'm a reporter. I'll do a little research. A lot of research. But you're a scientist. What's your considered opinion?"

"I can't even begin to formulate one. Except that I have a sense it's all very dangerous."

"That I know."

2.

Brian went out and located his truck, then drove home and fell into a deep, empty sleep. He awoke at noon and rushed off to the hospital, angry with himself that he hadn't been there the moment visiting hours began.

On the way down to Ludlum he pushed the truck through seventy. When he

saw the low, white buildings of the hospital complex, he felt the muscles of his neck stiffen, felt his breath tighten in his chest. He was a man capable of intense passion, he'd always known that. But Loi's combination of beauty, vulnerability and determination had moved him very deeply. He had loved Mary and he always would, but this was deep, too, this was valid, too. Loi deserved every bit of love and loyalty he could offer.

He drove up to the big parking lot, got out and hurried through the heat waves rising from the tarmac. Grasshoppers ratcheted in the wide lawns that surrounded the buildings, and a gopher moved stealthily toward a shrub.

Brian went through the revolving doors, listened to his own shoes rattling on the linoleum floor of the lobby.

Loi was on the second floor, housed in a private room because of the need for absolute rest. When he appeared, a smile danced into her face. "You are late coming."

"I overslept."

"You look tired."

"Nightmares."

She reached out, drew him close, kissed him. "I am feeling much better. When the doctor saw me, he was pleased."

"I'm glad."

"What were your nightmares? Do you want to tell?"

He didn't want to worry her. "Just the usual," he said. "Screaming."

She nodded. "You need me home."

"Yeah."

There was at this moment an opportunity to say something about Ellen. "I sleepwalked."

"Oh. That is demons, make us do that."

"There's also a scientific explanation. Sleepwalking's well understood. It's a stress reaction."

"I gave you this stress, husband. I cannot apologize enough."

"An accident did it, Loi, not you. If anyone's to blame, it's me. I never should have let you get back out of the truck. I should have taken you straight home at the first sign of danger."

"What happened to me, Brian?"

"My best guess is that rocks grinding together created some sort of electrostatic field that set up the vibrations."

"I heard screaming also, Brian. I heard that poor woman!"

He took her hands, kissed them. She was so precious, so sensitive. "It could be that the geologist was right. Some sort of earth movement created the screaming sounds, too."

"But you don't believe it?"

He shook his head. He didn't know what to believe.

"You know, you and I have a real problem. Because I want to know what happened to me, and I don't. Dr. Gidumal says I must have been hit. But it didn't happen."

Now was perhaps the time to bring up a rather delicate subject. "Did you fall, perhaps?"

She looked at him steadily. "I did not."

"Loi, if you did, I won't be angry. I'm not like the people from your country, I don't treasure the child more than the mother. I treasure you both." He moved closer to her, drinking her in, smelling the soft fragrance of her hair. He embraced her.

"Brian, I didn't fall. I—maybe all the running. But that noise, Brian, it hurt! It hurt right in the middle of my womb!"

He remembered exactly how it had felt. "It hurt me, too, honey. And I have to admit to you, I don't know what it was all about."

Normally he told Loi everything. Normally he shared every detail of his life. But he did not share the terrible story Ellen Maas had told, and most certainly didn't tell Loi about his own bizarre experience. Those stories would scare her—they'd scare anybody—and he wasn't about to take that risk.

"I wish we were home in bed together," she whispered.

"Me too, Loi." He closed his eyes and felt her softness beneath his hands, and dreamed.

But visiting hours ended, and he had finally to go.

After he left her and got in his truck, he made a turn that he'd never expected to make again. He drove over to the campus, into the heart of his past.

Ludlum University was lavishly kept, rich with a hundred years of endowments and, more recently, a substantial amount of Defense Department funding. It wasn't large. Like Rockefeller University in Manhattan, it was highly regarded for its science programs. People came to Ludlum for physics and math.

It consisted of- a cluster of red brick Victorian buildings, with a smattering of more modern structures on the outskirts of the campus.

He told himself that he'd come here for the peaceful drive, for the shade and the quiet.

And he knew that wasn't true. He'd come here because he was a worried, confused and very frightened man, and this was where he'd done his best mental work and solved his most challenging problems.

None of them had been as thorny as this one, though. None of them had even approached it.

For some time he drove along the quiet streets. There were few students about this time of year, giving the place an air of abandonment. The ancient oaks and maples spread their shade on the lawns and over the roads, and beds of flowers bobbed in the warm summer breeze.

He did not intend to drive past the physics building, where his lab and research facility had been. There was a very good reason for his reluctance, one that went beyond grief.

He was a man touched deeply by the mystery of time. His equations told him that the past was still there, frozen in memory, awaiting only the magic touch of physics to be restored to a sort of flickering life.

Perhaps the deepest reason that he had been unable to continue without Mary was that he thought—knew—that their time together still existed somewhere, a bud that was closed forever, and yet in some way alive. Just the right particle, aimed in just the right direction, might light it briefly in the magic space of the mind, making her laugh again, lift her eyes to him again.

With the equipment they had been building, it might have been possible to shine a light into the past. Remotely possible. Not to go back—that could never happen. But to look back, yes.

With twenty or so years of effort, he could perhaps have created such a light.

So he'd quit.

And maybe for that reason it would still be too painful to return to the building itself, to face the old places, the echoes. But he knew that he had to return to science, in order to solve the mystery that had ensnared him.

Which discipline, though? Geology, to explain the earth sounds that hurt Loi? Entomology, to identify Ellen's insects? Psychology, to heal his own mind?

Or was this a problem of physics? His mind was too well disciplined to allow speculation based on insufficient data, but it was also true that the manipulation of time could theoretically lead to some very strange

derangements of reality.

His own equations had, in fact, suggested dangers—some of them profoundly serious.

What if there were parallel worlds, living by other laws, harsher worlds, perhaps... and what if somebody made a light and shone it pastward... but aimed it wrong and tore the fabric of present reality instead?

His work had been classified, his work had been dangerous, his work had been full of unknowns.

It had also ended—hadn't it?

He didn't intend to go in, but he decided to at least pass the old building... and—when he saw it—to stop in front.

The Physics Department was housed in a great Gothic pile with the crenellated roofline of a castle. Its tall, peaked windows seemed to glower down at Brian as he parked the truck.

For fifteen minutes he sat and watched. A couple of grad students strolled up the walk and went in the big double doors.

After a time he saw a figure at one of the downstairs windows, looking out at him. It was a man wearing glasses. Maybe it was the chief of security, Bill Merriman. He'd have cause to be concerned about a strange truck stopped in front of a building where classified work was being done.

The last thing he wanted right now was an encounter with an old friend like Bill. Brian started his truck and drove home.

After he'd parked the truck he went into the trailer, made himself a ham sandwich, then spent the afternoon treating some of his older trees for borers.

When night came, he thought to call Loi, but he was afraid that he'd wake her up. No matter how optimistic she'd been, he knew that she needed lots of rest.

For dinner he threw some Lean Cuisine into the microwave, and ate it with a

Coke. No more beer.

All afternoon, he'd been hoping that some good ideas would slip into his mind. In the old days he'd hiked the Jumpers to get ideas. Anything diverting helped, even a shower.

Tarring borer holes hadn't helped. Sitting here eating his grim little supper certainly wouldn't.

He needed somebody to talk to, somebody intelligent, who could at least pretend to follow his discourse.

Ellen Maas.

He didn't actually know Ellen's number, of course, but the phone book was only fourteen pages long. "Maas, Ellen, Bx 358, Oscola," and a number.

Just as he was about to dial, it rang. He snatched it up. "Hello?"

"Are you eating dinner?"

A thrill of happiness went through him. "Loi, hi."

"I want to know what you're eating. I'm concerned about you."

"I had Lean Cuisine. How about you?"

"Com on the cob, roast pork. I ate gratefully."

"In other words, it was lousy."

"Not entirely perfect."

"Inedible."

"Yeah, but I got it down. I am having strong lonely feelings now, Brian."

"I miss you, too. I was just thinking about calling you."

"I am worried that you need me."

"I need you. But not sick. I need you well."

This brought a silence. Again he was bothered that he hadn't told her what had happened. It was eerie to conceal something of such importance from her, and distanced him from her in a way he didn't like at all.

"I am feeling very much love now, Brian."

"Me too. But I also want you to sleep. I don't want you to worry. I'm perfectly fine."

"Brian, I called three times this afternoon and you weren't there."

"Oh, Loi, I was out doing those old trees. You remember, the borers?"

"Oh, yeah, of course. I'm glad that you keep busy."

"I'm fine and I love you and I want you to go to sleep right now."

"OK, husband."

She hung up. He looked at the phone in his hand. Dare he call Ellen and discuss temporal refraction and the instability of the reality constant? Poor woman, he didn't want to torment her like that.

Maybe it would be best to leave Ellen out of it. He could go over to the hospital in the morning and talk to Loi instead. She'd listen eagerly, even if she didn't understand.

But he didn't need a sounding board, he needed a foil. Ellen was a bright, sophisticated and—above all—reasonably well-educated person.

More importantly, she was involved in the secret.

He called her—and got her answering machine. He left a brief message, hoped it wasn't too terse. He wasn't an answering machine person.

He went out onto the small porch that overlooked the driveway and the barnyard.

The whippoorwills were thick tonight, their voices echoing in the woods. He'd always found their call the most beautiful next to that of the loon, and he stood for a time listening.

The moon rose in silence, and the evening star followed the sun westward.

Until deep night, he was fine.

Then he began to pace the trailer's few small rooms. He turned on all the lights and locked the door. He would have turned on the air-conditioning, but something made him prefer to hear the night. Katydid's argued, the whippoorwills continued their gentle talk, and the night wind hissed in the pines.

He found himself listening. But for what?

Maybe Ellen was out doing research.

Would she be fool enough to return at night to the scene of her experience? No, surely not.

He watched the news at eleven, then went to bed. That night he had more dreams, terrible dreams. In them he was being dragged toward the judge's house, toward the open door, and there were huge shapes inside that radiated malevolence like a foul purple gas.

3.

Ellen began work at once. Unlike Brian, she was not hampered by excessive respect for something as cumbersome as the scientific method.

She proceeded efficiently. On the *Times* she'd learned effective investigative techniques. The first thing she'd learned was that clams stay open until they perceive a threat. So she didn't question anybody directly. She resisted the temptation to pressure the old judge.

She spent most of a day just nosing around Oscola—and finding it a good deal more interesting than she'd thought. Towns reflect the deep nature of their people, especially old ones where certain small, critical things have become important. A wonderful old neon sign is not changed simply because the shop joins a chain. The tobacconist keeps stocking Borkum Riff even when he has few customers left for it, because of the atmosphere its familiar aroma gives his store. The druggist reupholsters the stools at his soda fountain in red marbled vinyl because they've been like that for sixty years.

A town full of people with such sensibilities becomes in time fertile ground for an astute investigator, revealing things about itself at every turn.

At their worst the people of Oscola were narrow and prejudiced. They suffered most of the weaknesses of the self-involved.

But they also had good in them. They worked and did not steal. Generally, they were not violent. They knew beauty when they saw it, and that was reflected in the appearance of their town.

Essential to Oscola's beauty was the fact that it was so taken for granted by the townsfolk. It wasn't a model town, it wasn't a toy. It was just itself, and she found that she liked that about it.

Walking slowly down Main Street, passing Fisk's Garage with its splashy new collection of all-terrain vehicles and Mode O'Day with the latest tangerine pants suit in the window, she noticed a sense of emptiness even greater than usual.

At one o'clock the Mills Café had six customers. Usually, Betty Mills had easily twenty people in for hamburgers and fried chicken, and her mouth-watering meatloaf from yesteryear.

Maybe Ellen wasn't the only one who'd encountered the damned bugs.

The one person who knew what was happening behind the scenes in Oscola was Mr. Handy, who'd been the tobacconist for nearly forty years. When she'd first gone in the place she'd been tempted to buy cigars, but Mr. Handy

was too nice to tease, and it would have shocked him deeply.

As she entered the store he pulled down her usual carton of Salems.

"Mr. Handy, what're those meetings at the judge's place? The ones that happen late at night?"

"I wouldn't know."

Oh, but he would. Mr. Handy was no liar. She could tell by the look that came into his face. "Come on, I'm curious. Maybe there's something in it for me."

"Don't put anything about that in the paper!"

"So you do know."

"Look, Miss Maas, it's private stuff. The people who go there are from downstate."

"You make it sound very mysterious."

He nodded, ringing up the Salems.

"But if the people are from downstate, then why do they all have local license plates?"

Color spread up his neck. He coughed. "Masons," he said. "That's what I think."

"But you're not certain."

He shook his head. "They wouldn't let me in, you know. All my life I've been here, and not really a part of Oscola. Forty years in the town, and they don't trust me even yet. You want to know why?"

"Weren't born here?"

Again he nodded. "In my opinion, it's the Masons. He's the grand master

here, you know."

"They always meet late at night?"

"There's no way to know what they do. It's a secret society."

"Except that everybody belongs except you. Does Brian Kelly belong?"

"Not him. He's a Catholic. The Church won't allow it, and Father Palmer's really stuck on the subject."

She watched him nervously rubbing a finger along the top of his glass counter.

"Goodbye, Mr. Handy." He handed her the accursed cigarettes. Maybe this was her last carton, ha ha,

She looked up and down the street. Now the silence had a different tone. Cults, secret societies, the mean, autocratic old judge... and the insects.

They had been so vile, so aggressive. They'd wanted to eat her, drag her away—she couldn't imagine what they'd wanted to do.

She ought to go after that miserable old judge with a gun. But that would be a mistake, given that a gun wasn't her weapon of choice. Instead, she returned to her office and looked him up in the tiny morgue. There wasn't much, not from files that only went back five years. Prior to that, the morgue consisted of scrapbooks. They weren't much help, although she did find out that he'd been born, educated locally, then graduated Columbia Law back in the forties. Missed World War II by a hair.

In a controversial 1956 trial he'd sent a local man to the electric chair.

He wasn't a mobster, a sexual pervert or a violent man. In fact, he was a pretty good judge, if a bit conservative for her taste.

He was a nasty little man; arrogant and cold as stone.

It was time to confront him. The hell with this pussyfooting around town.

This bunch of clams had been closed up tight even before she started. They were always closed.

She got in her car and drove down Main to the intersection where it became Mound. When she crossed it, she was in the judge's territory.

He answered his door after the third ring. Up close, it was obvious that he was very old.

"Judge terBroeck, can you tell me what goes on out here at night?"

He just stared at her.

"The cars. Dozens of 'em. I've seen them. What's it all about?"

"Get out."

"Goddamn you." Oops, that was a mistake.

His eyes widened. "I'll thank you to keep a civil tongue in your head."

"What about the bugs that live in your backyard?"

For a moment, his face was totally without expression. Then he blinked.

"Ah."

"Come on, you know what I'm talking about. The ones that come out at night. Glow in the dark."

"Lightning bugs?" His voice was small. He'd backed a good distance into the foyer.

She advanced on him. She wasn't going to let him pretend he thought her crazy. "Don't give me any crap, Judge. I know they're there because they tried to kill me. And you know they're there too. You're a poor liar, Judge."

"I have no idea—"

"You sure as hell do have an idea. What are they, Judge? Something you

imported from Brazil or somewhere to scare people off your property? Well, they're pretty scary, all right." She took another step toward him. "Let me tell you something. If I find one of those things—and I will find one, sooner or later—I'm going to take it to a lawyer. Not a bug collector, but a lawyer. And I am going to get him to sue you until you're left on a street corner with a cup of pencils, and they're my damn pencils!"

"They have nothing to do with me!"

"You're a liar!" Her heart was pounding, she could feel the blood rushing to her cheeks. All her pent-up fear and rage surfaced. She wanted to bash his face in, the arrogant old bastard.

"Listen—please—don't come around here at night. Don't do it!"

"Why the hell not—have you got Satan and his demons after you or what?"

His face had gone as gray as death. His hands shook, making a dry paper sound against his old suit pants. "It's worse, my dear. Worse than that." He raised his old claws, seemed to be seeking some sort of comfort. "Keep to your house at night. Do it for your own sake."

"What about all the cars? Other people come here at night."

He nodded. "Stay away, if you value your life."

"Melodrama won't scare me off either."

"Then you're a fool!" Now it was his turn to advance on her. "This is my property. Get off my property!"

She didn't want to stay. There were other ways to skin this particular cat, better, quieter ways. "OK, I'm going. But I want you to know that I'm a real curious person. And I'm gonna find out everything."

"Yes," he said, "you do that. You find out everything. And see where it gets you, young woman." His eyes were sunken, his lips were trembling. "See where it gets you."

He shut his door.

4.

Two days after her admission, Loi returned home.

The doctor had warned her to be extremely careful, and she became a fragile, gliding shadow of herself. She had been told to think of her womb as made of glass, and so got Brian to put pillows on all the hard chairs and generally arrange things in the trailer to minimize her chances of taking a stumble. She wanted to be wrapped in blankets, to be cherished. Above all, she wanted to be held close and often.

Sadly, they couldn't make love. Obviously it was a danger, especially with him being so big and heavy and getting so excited.

He consoled himself that this was safest. She was high fruit now, untouchable by a groundling like him.

Loi had been home a day when Ellen called. "It's the *Gazette*," Loi said, handing him the phone.

"I figured you'd be in for lunch." Her voice was taut.

"Yes."

"Look, I want to come talk to you about Judge terBroeck. I've interviewed him and it was strange."

"I'm not surprised." He glanced at Loi. She must not hear this. "I'll come to you."

"Fine. I'm at the office."

He hung up. Loi gave him a questioning look. "She's still investigating what happened on the mound. She wants to ask me a few questions."

"Oh, Brian, I want to forget it."

"I told her I'd meet her at her office. That way you won't have to be involved."

Loi smiled slightly. "This afternoon I am reading *The Winter's Tale*. We will discuss it tonight?"

"Sure. Gladly."

He went across the driveway and got into the truck. Even running the air conditioner full blast didn't cool it off before he turned onto Main Street, parked in front of the Excelsior Tower, and gratefully got out.

He'd never been in the offices of the *Gazette* before, at least not since he could remember. She was sitting at a steel desk like the kind of thing one might encounter in a welfare office. There were hard fluorescent lights burning overhead, and an ancient window unit ineffectually circulating the smoke-hazed air. Papers were strewn over every available surface. There were five or six insect books opened on tables and chairs, dozens of pictures of the judge and of his estate, some old, others obviously taken in the past couple of days.

He was shocked by these. She'd obviously been spying on the town's leading citizen.

She thrust a photograph into his hand. He found himself staring at tire tracks. "Taken this morning in the judge's front yard,"

she said. She gave him another picture. There were many fewer of the tracks. "Yesterday morning, same spot."

"Isn't Bob going out there to work on the mound?"

"The judge put a stop to it. No more equipment on his property without a court order. But I've been on his property."

"Obviously."

The whole office was devoted to his property, right down to a house plan that must have been obtained from county records.

"He's scared, Brian. I hated him until I realized that. The man is terrified."

"Have you got any more information?" He gestured toward the insect books.

"I went down to your old alma mater and described the things to a Dr. Soames."

Brian nodded. Soames was a biologist. "I wasn't aware that he has an interest in insects."

"Well, he seemed to know what he was talking about. But as far as my bugs are concerned, he drew a blank."

"We've got to get more information of some kind."

She took a long drag on her cigarette. "I've been working on that." She held up some sheets of paper. "Your friend Lieutenant West gave me these. The cops use them to identify what kind of tires make a given mark." She picked up one of the pictures. "Like this one. It's from a Michelin of the type they use on the Volvo 240. And this, a Goodyear Aquatred—an aftermarket tire. The size suggests something large, a Crown Vic or maybe a big Olds or Buick."

"Typical local cars, except for the Volvo."

"I've found out that there are seventeen Volvo 240s registered in Ludlum County."

"That many, in Ford and Chevy country like this?"

"Sixteen of them are Ludlum cars. Popular with your fellow professors. But one of them lives up in Towayda. And you know what? They're not at home. As of yesterday, they've been gone. Just packed up and left night before last. People are real curious. Evans is their name."

"Sure. Ritchie and Charlene. I know them a little. Charlene was on the debate team with me in high school."

"They went over to the judge's night before last. They haven't been seen since."

"And the judge says—"

She shook her head. "If I want to talk to him again, I'm gonna have to take a gun. He won't open his door to me, he won't stay on the phone."

"Scottish Rite's a big deal around here. Maybe you've stumbled onto some sort of Masonic group."

"I know all about that."

"If the Rite's involved, everybody would be very secretive, especially with an outsider."

"You're not an outsider, so you ask him for me."

"I'm Catholic. Catholics don't join the Rite, at least not in the Three Counties."

"I found the hole where the bugs come out. The judge calls it a root cellar, but he's lying. It's deep, Brian."

Maybe a sinkhole had indeed opened up. It would be like the judge to conceal such a thing, for fear that the county would make him pay to have it filled in.

He dropped into a chair across from Ellen. "This work is brilliant. Why you're not still on the *Times* I can't imagine."

"Too many soft news assignments. I wanted the hard stuff."

"I think you got handed a little, I have to tell you."

"Unless I'm connecting dots that shouldn't be connected."

"Physical evidence of the bugs—that's what we need."

"So let's get a net and go back to the judge's."

"A strong net, given what happened to your jar lid."

"Do you believe me?"

He nodded. "Let's say that I've accepted your story because I respect you. You're not a nut and you're not a liar. But as a scientist, I sure would like to see that evidence."

She sighed. "I was hoping we'd make some progress bouncing ideas around."

He rubbed his face. "Jesus. I've thought and thought about it. My problem is, the connection issue. I drove past my old lab yesterday morning. Just sat there thinking about it." He watched her light another cigarette.

"I still don't really know what you did at Ludlum. Not the details."

"The details are classified. Let's just say it was a way of connecting with the past, using a stream of particles."

"So it's unrelated."

"Well, probably. But these particles—if they exist—would break all the laws of continuity. The math says that they might *also* break holes, in a manner of speaking, between parallel universes. That's a fairly silly way of saying that they would cause profound chaos."

"Goddamnit, Brian, I want to know what happened to me."

"So do I."

"It eats at you. Jesus!"

"Just don't be foolish."

"In what way?"

"By going to the judge's at night."

"It's the only alternative."

"We have to be methodical and careful. Given time, we'll make some headway. Scientific investigation always works like that."

"I'm a reporter!"

"Do it my way. We'll get better results." The clock on the wall behind her head told him that twenty minutes had passed. "I have to get back to Loi."

"I'm sorry I bothered you."

"No, it was no bother, believe me. And who knows, we might be about to solve the secret of the ages."

"Is that what this is?"

"I think it could be." There was silence between them. Then he got up.

Ellen followed him to the door. "How is she?"

"Improving, the doctor says."

He was aware of Ellen's hand coming into his as they paused at the door. "You take care, Brian. Me personally, I bought a shotgun which I have no idea how to use. I keep all my lights on at night and my windows closed."

He drove home slowly, considering what their most logical next step would be. It seemed clear that insect bodies were needed. And they should follow up with the Evanses, be certain that they came back.

She was going to go charging off to the judge's, he knew it, and put herself in great jeopardy. Care was needed. To convince the outside world that this was really happening, an array of carefully gathered evidence had to be presented.

When he got home he folded Loi in his arms and kissed her deep and long.

She took him to their bed. In the way of some familiar married couples, they undressed without speaking. He lay with her, listening to the baby, kissing her breasts, her belly, tasting the sweetness of her skin. Very gently, she caressed his penis, and kissed him there in her modest way. She kept on until

he rose to his full passion. Familiar waves of pleasure enveloped him, and he watched in amazement as the author of his pleasure moved her head in the gentle, rising rhythm that led to only one thing.

After he spent himself, she stroked his hair and gazed into his eyes. To his own intense annoyance, he found himself thinking about the problem.

"You frown."

"No, I'm happy. Loi, I'm so happy." He embraced her and kissed her long, tasting a hint of himself in her mouth, and loving her the more for her willingness. "Thank you," he whispered after the kiss.

They made a chicken stir-fry for supper. He chopped and she cooked. They had it with tart lemonade.

Afterward he sat in his chair reading the latest *Astronomy*. But he couldn't concentrate. He stared off into space, ruminating. He thought of the tire tracks, the missing people... and of fighting the steering wheel in that truck. If Ellen went anywhere near that house after dark, she was in danger.

Half an hour passed. An hour. He got up and phoned her. There was no answer.

"Honey, I'm gonna ride into town. Get a magazine."

"You were just in town."

"I'm restless. I'll just go down to Handy's and be right back."

He drove out into a dark, starry night. At the intersection where Mound became Main, he turned down toward the judge's house.

Mound Road was empty of cars—almost. Parked well off the road about thirty yards from the house, Brian was not very surprised to see a familiar Plymouth Duster, dark and empty.

He got out of his truck. The night was silent, very dark before moonrise.

Five minutes passed, then ten, then twenty.

He got back in and called Loi. He said that he had a flat. She sounded a little strange, but said she was fine.

He'd been there forty-five minutes when he saw the glimmer of a flashlight coming up the road. Relief poured through him as she came up to the truck. "You've been spying on him."

"Yeah."

"And?"

"I expected lots of cars. But I think I have to come back later."

At all costs, he had to deflect her from that course of action. "We should try to catch one of the insects."

"I think it's more practical to take pictures of the cars, get license numbers."

He took her hand, then almost as quickly released it. "Go home, Ellen."

"Let's compromise. You come with me tonight. If we fail, then we'll do it your way. We could meet at your place at about two. Go back through the woods, see what we can find."

This was a bad mistake, he knew it. But he couldn't let her do it alone. "We'll need a container."

"I have some jars with glass lids."

They parted then. He followed the Duster until she turned into her driveway, then accelerated toward Kelly Farm. Five minutes later he was home and wishing very much that he could explain things to Loi.

"You got the tire fixed OK?"

For a moment, he drew a blank. "Oh! Yeah, fine." He glanced at his watch. "Look, it's pushing ten-thirty. What say we turn in?" He wanted to get some

rest before it was time to go out. Above all, he wanted to make certain that Loi was deeply asleep when Ellen came.

"Sure, Brian."

He threw on the boxer shorts he used as pajamas in the summer and got into bed. Loi soon followed. They lay together, she reading a dictionary, he an old *Newsweek* he'd grabbed. "I thought you went for a new magazine."

"Handy's was closed."

Page by slow page, she perused the dictionary, referring frequently to a look-up list from *The Winter's Tale*. Every so often, she would whisper a pronunciation to herself.

An hour became another hour, midnight approached. He dozed, only to wake and find her still studying.

"You really need your sleep," he said at last. But it was nearly one before she turned off her light.

He lay awake, waiting.

When there came a light tapping on the front door, he almost jumped out of his skin.

She'd done it.

He said nothing, only sat up in the madly creaking bed, put his feet on the floor and went shuffling into the kitchen. He even went so far as to get himself a glass of water, on the off chance that Loi might be vaguely aware of his movements.

Ellen appeared at the kitchen window. "I'm scared, Brian." Her whisper was little more than breath itself.

He pulled on a pair of jeans over the shorts, and threw a T-shirt across his shoulders. Then he slipped into his ancient sneakers. He went to the door, opened it a crack, hesitated. The hinges seemed to creak even more loudly

than the bed. Well, no matter, he had to risk it.

They walked toward the woods. "We can go along that path by the kill," she said. "We'll be at his house in a few minutes."

"I know."

"Did you tell Loi?"

He didn't answer, and she didn't repeat the question. As they passed the ruins of his old house, he began to feel the cold. He put on the T-shirt.

Ellen's arm moved around his waist. "I'm afraid," she said. "I'm scared all the time."

"We'll get one of your bugs. Then science will react."

They were well beyond the ruins of Kelly Farm now. Here the woods were deeper, darker. The breeze sighed in the trees.

"You know, Brian, even being out here with you, I'm still real afraid. Are you as scared as I am?"

"For a couple of minutes I was totally helpless, moving toward the judge's house against my will. You're damn right I'm scared."

"I keep remembering the way they smelled." She shuddered.

"You have a sensitive nose."

"They stink like sweaty old men."

They began to hear Coxon Kill up ahead.

"This is where I got away from them—by diving into the water right there!" She pointed, then glanced back the way they had come. "I hadn't realized your place was so close to mine."

"Our old roads wind around a lot. The whole area's deceptive that way."

At that moment there appeared a glimmer among the trees.

A shock like a slap went through him when he realized that it was a long stream of light, like a glowing snake. It shimmered and undulated among the trees, the tip of it gliding about, seeking. Ellen's hand gripped his arm. "They're here."

She opened her purse, pulled out a Ball jar.

He was watching the thing, deeply fascinated. Was he actually seeing something from another reality, another world? "It's as cohesive as a single creature."

"We've got to go closer. You'll see it's actually a swarm."

She fumbled the jar open. They stepped forward. They were hand in hand, like two children.

The moment they moved, the swarm shot at them like a bolt of lightning. It stopped short fifty feet away. Brian could hear the sigh of many wings. It seemed to strain toward him. "I think it has a limit to its range."

"Yeah."

"Give me the jar."

She put it in his hand. Her heard her sob.

"Stay back, Ellen."

"Hell no."

Together, they moved into the pale light of the swarm.

Without warning he was covered with them. He screamed like a shot deer, grabbed at the legs scrabbling against his face—felt himself pulled hard from behind.

He fell back against her. There was a tinkle of glass. The jar had broken

against the ground. "Run." Her voice was choked.

In moments they were in one of Brian's orchards. The trailer was visible in the distance, a black shadow. The swarm had extended itself again, and was now a hundred feet beyond where it had originally stopped. It was also a good deal thinner, like a long, glowing cable.

She was sobbing openly now, her shoulders shaking, her hands tearing her hair. "We're OK," he said, "we're OK."

She clutched him.

The glowing cable was undulating, and getting shorter and thicker. "Look at it, Ellen. It's pulling itself back."

He held her to him, comforting her.

Another voice spoke: "Brian?" Loi came out of the shadows, moving softly and carefully—but fast. She was very fast.

"Loi!" He pushed Ellen away. His heart started thundering.

Ellen said the worst possible thing. "I'm sorry, Loi!" She could not have appeared more guilty.

"Brian, please come with me now."

"He was helping me in an investigation," Ellen said.

"Ah. You are exploring sex?"

"I—he—Loi, there's something you should know."

"I guess so."

"It's not what it seems. He's helping me investigate the judge."

Loi looked toward the forest. "The judge is in the woods, then?"

Brian went to her. "Loi, it's not what it seems."

"Don't you dare tell me what it is or isn't. You think I'm stupid?"

"There really is an investigation—"

"And as for you, Miss Fancy Reporter, you get off my land right now. And stay away from my husband, or I'm gonna come after you the way we do at home!" Her voice crackled with authority. This was a very new side of his wife.

Ellen gasped, stepped back. Brian was so shocked he couldn't make a sound. Loi's tone had sliced through the air. She'd meant those words, they were no idle threat.

It felt to Brian as if the whole world was falling in on him. He loved this woman with all his heart and soul. "You mustn't think—"

"Come, husband. We go." With that she turned and began moving back toward the house. She walked fast, slipping through the night with the grace of a trained infiltrator. "Come," she called.

He hurried after her.

Six

1.

For Loi the awful details of her discovery were the hardest part to bear. Brian's hurrying along home with her like some silly geisha; the way Miss Maas had nervously drummed her fingers along her jaw—these were the things that cut through the lies that they spoke.

A part of her sought blame and wanted to apologize. Another part wanted to do something to him with a knife. She had been a worthy wife, and wasn't she carrying his son?

She had seen all—and not two hours ago he had been making love with her. Was he never tired, never satisfied? Why were men slaves to their sticks?

She took him back to their trailer in silence, listening hardly at all to his protests. "Loi, I did not—" "Loi, it wasn't what—" At home a man discovered like this would not have further humiliated himself with such babble.

At home, indeed. What was she thinking? She was without a home. This trailer, this man and her big belly—these were her home. Without the man she might fall back into destitution. She would fall back. She knew well what awaited a little boy in the back streets of Bangkok. Was it also the same in the slums of New York?

The thought tightened her throat, made her stomp with rage as they passed through the brushy field that had once been Mary Kelly's vegetable garden. Her own far better garden was nearby, sited farther down the slope for correct drainage.

When they got back to the trailer, he spoke again: "Loi, please, I beg you, listen to me."

"Why you put me in a trailer? Why not rebuild the house, you've got the money, you old skinflint."

"I—Mary—"

She put her hands to her ears, she didn't want to hear that name, not now. "All of these women," she shouted. He grabbed at her but she pushed him away, turned from him. She did not even want to look upon the face of Dr. Brian Kelly.

"Loi, please. I can't bear this."

She went to bed. When he heard the springs creak, he came into the room, but she delivered a look that drove him out.

Let him go. Let all the white-eyes go. They were no better than the devils who had made her a soldier at the age of eight. The devils would never have put a pureblood child in those tunnels. Only a nigger girl, the child of a round-eyed colonialist whore and a dirty American, an ugly little embarrassment.

Loi lay imagining that she was a statue, as still and cool as the Emperor of Jade Buddha in his shady pagoda.

Within her she felt Brian Ky Kelly begin to move. She smelled the aroma of the cigarette Brian was smoking in the living room, and her soul reached into her womb and twined tendrils of it about her baby, imagining that the sweet threads of family still bound them all together.

She didn't want this new weight in her heart. But she was a proud and good woman, she did not deserve to be treated in this disrespectful and humiliating manner.

Her anger was so great that she couldn't sleep; she got up and went to the front door. Maybe the quiet of the night would calm her spirit.

"Loi?"

She thought she wouldn't answer him now. She stepped onto the tiny porch, surveyed the still, silent yard. The driveway was a pale shadow, beyond it the dark bulk of the barn. If she walked to the far end of the trailer, she would be

able to see the ruins of Kelly Farm, where he had left his past life... his real life.

She was only his whore, not his wife.

The driveway was lit briefly by a lightning bug. It was a lovely, large one, like the ones that floated through the jungle at home.

She went along the path that surrounded the trailer, stopping when she could see the remains of the farmhouse. There were lightning bugs gleaming among the ruins, lending them a ghostly significance, as if spirits of the dead still lingered there. She went closer. One of the bugs came up and hovered before her. It acted as if it wanted to land on her belly. Idly, she slapped it away. The thing was big and fast, and it buzzed angrily and came straight back, bouncing against her stomach as if it wanted to burrow its way inside. Again, she brushed it away.

In each beat of her heart she felt her love for Brian. She wanted to turn it off, but she could not.

She looked back at the trailer. If he was really suffering as much as he pretended, then there was still hope. He would have to apologize, of course. He would have to do many things.

Two of the lightning bugs were hovering around her belly. They landed, she brushed them off.

Maybe he'd been seduced. That woman certainly had the capacity to do it. The need, too. She was alone in a small town. The only available men were either too young, too old, too mean or too drunk.

Annoyed, she pulled another of the pesky bugs off her stomach. It buzzed angrily, and two more came racing toward her. Then she noticed that a great swarm of them was coming up the field behind the ruins of the farmhouse, pouring out of the woods like a river of moonlight.

For a moment she watched this phenomenon. Its beauty distressed her, though, because she could not enjoy it, not through her new sorrow.

Five or six of the bugs began pummeling against her stomach like moths crazed by a light bulb. Waving them away, she began to think that it wasn't so pleasant to be outside now.

More angry at him than ever, she returned to the trailer.

From the dark of the living room, she heard a sound like a dove sighing.

Behind her lightning bugs began hitting the screen door. They were peculiar and unpleasant, not a kind she'd seen before. She shut the wooden inner door to make sure they wouldn't get through.

"What was that?" he called from the dark.

"Nothing." She went into the bedroom and lay down. Her body sank into the mattress.

Maybe she had wronged Brian, somehow hurt him. Perhaps the slap—had that driven him away from her? But no, he'd never even mentioned it.

The truth was that men were weak, feckless creatures, led by the stick, as the old grandmothers used to say at home.

Brian belonged to her, and she would not let his stick lead him away.

She was so much smaller than the American woman, so much darker. That was her real trouble. Ellen was as pale as a lotus flower, as tall as a goddess. Her eyes were beautifully round. Despite all her white blood, Lois were more slanted than her own mother's. Slanted eyes were such a misfortune.

The dove sound came again, and this time she sat right up in the bed because she could hear that it was definitely coming from Brian. Was that the sound of his weeping?

She rose, went softly into the living room. "Are you all right?"

He looked up at her, his eyes hollow, his face gleaming with sweat. His reply was mumbled.

"Brian, I can't hear you."

When his words came again, they were like the rumbling memory of a storm, slurred echoes of speech. "I'm sorry. I was terribly insensitive."

She bent to him, took his face in her hands.

"Godawful things are happening," he said. "*Godawful!*"

"I know," she said.

"No, Loi, you don't know. You don't know anything!"

"I know all."

He pushed against her chest, so that she had to rise to her feet, step away from him. "What do you know?"

"Her beauty is very great."

He closed his eyes, a look of pain.

"Are you going to go with her?"

He came up from the chair. "You're the best thing that ever happened to me!" His bulky body pressed against hers and he held her, trembling like a guilty boy.

He looked down at those rich, dark eyes, and was shaken, amazed by how much he loved her.

Somewhat roughly, she broke away.

"You have a right to your anger. But I still want to ask you to understand."

She looked down at the floor. He reached for her hand, but she drew away.

"I lose my face. All face." Her voice shuddered with emotion. For her, there could be no catastrophe worse than loss of face in her marriage. "I saw you

embracing her. It hurt me so much!"

"Oh, my poor baby! I beg you, forgive me, somehow find it in your heart."

"Brian, I am wishing to but I don't think it's gonna be!"

He no longer had the option of telling her about the insects. How could he ask her to believe such a crazy story—it would sound like an absurdly clumsy attempt to conceal an affair. "Loi, this is a horrible misunderstanding."

"Nothing is misunderstood."

"No. She isn't my lover."

"What is she then, a concubine?"

He didn't answer. There was no way to answer.

She did not want to fight with him. This would accomplish nothing. If he still loved her, she would find out soon enough— but only if she was careful. She gave him a smile. "It's a hot night, Brian. You're sweaty. If you'd like some lemonade, it's still in the fridge."

They went into the predawn kitchen together and she gave him a glass of the lemonade, watched him drink. "I am a good woman for you. Better than her!"

He could see what had enabled this woman to drag herself up from the bottom. Sometimes great human beings are born into very small lives. In the scheme of things, Loi's escape from her past was a small thing. But it had required the same kind of human greatness that enables big people to change history. He raised his glass to her. "Thank you, Loi." "My lemonade is good, isn't it?"

2.

She watched him drink, his eyes pleading. For forgiveness? For rescue? What terrible thing troubled him, so big it was even more important than his infidelity? Better always to speak of big things in the morning when the blood was strong. "You're exhausted," she said.

"I can't possibly sleep."

He needed help, she could not deny that... nor that she had the desire to give it to him. Even so, she drew him to the couch, got him to lie with his head in her lap. "Ellen Maas does not even know you. She couldn't help you now."

He closed his eyes, let the whirl of explanations fall silent. He dared not ask her if this small intimacy meant that he was being forgiven. Somehow he had to prove to her that he wasn't being unfaithful with Ellen. Maybe Ellen herself could do it. Together, the two of them could explain all that had happened. It would seem more plausible then. Yes, that was what had to be done.

In the meantime, it was so good here, with his cheek pressed against her stomach, his son communicating faint movements from inside. He closed his eyes. "Loi," he whispered, "I love you."

She did not reply.

He had not been asleep two minutes before he became troubled by a nightmare of a tall, black insect standing before him in the darkness, cloaked like a monk. There was a loud cawing noise, the sound of an enraged crow.

Her cool voice awakened him from the dream, then her soft caressing hands lulled him. "Nobody could do this for me, my love, nobody but you."

He sank away into deeper sleep.

When he woke up she was in the kitchen preparing breakfast.

He sat up from the couch, saw her standing at the sink, sunlight pouring over her from the window.

He'd had more bad dreams, of being trapped down in his old facility, of seeing the charge in the waveguide rising and rising, going beyond redline, of the blue pipe shuddering and smoking and glowing orange, turning into a glowing swarm and rising into the control room—

But nothing like that had ever happened. It was just a nightmare. It

symbolized his life going out of control, his brain humming on overdrive, everything flying apart.

Regret cut his heart. Between the two of them everything had changed. Her posture—shoulders stiff, head down—told him that the incident had penetrated the depths of their relationship.

He got up and went into the bathroom. He shaved, mechanically preparing for the day. Her peculiar and delightful Vietnamese singing did not fill the house on this morning.

When he kissed her on the back of the head she neither responded nor resisted.

There was a nice breakfast laid out: grapefruit, pineapple juice, yogurt filled with strawberries. A tiny incident, however, confirmed that nothing was forgiven. Usually, he took his coffee cut with milk, and he preferred American roast. She liked it as dark as she could get it, French style.

On this morning all the coffee was her way.

He drank it without complaint. He wanted to talk to her, but her silence was a wall. Maybe if he tried again, if he just plunged in. He took a swallow of coffee, looked up at her. "Loi, I want to be forgiven. I want it to be like it was."

"You should think of that first." Her eyes went to the window. "A truck." She looked out, cupping her hands around her temples to cut reflections.

He heard a rising roar, then the slam of a door.

Suddenly Bob West was coming in. Brian was glad, his appearance would transform this crushing atmosphere.

"We've got trouble up in Towayda," Bob said without preamble. "Another screamer. Down in the Traps, other side of Jumper Ridge."

"That's nasty country back in there. Not like the mound."

"Brian, I'd like you to come with me as a scientist. Tell me it's not the damn wind so I can order a proper search."

All of a sudden Brian wasn't glad anymore. This was the last thing he wanted.

Loi stopped what she was doing, looked hard at him.

"I'm a physicist," he said. "Not a geologist."

"You'll be the only scientist there."

"Brian." Her fingers touched his.

"I'm hoping this is nothing," Bob added, glancing at her nervously. "But I want you along, Brian."

"How will a physicist help you?" Loi asked.

"You don't want him to go?"

"I'm worried, is all." She glanced down at her stomach.

"Course you are, Loi. The last thing I'd want is to take him away when he's needed. But this isn't a fishing trip." He regarded Brian. "I would've leveled the mound if it hadn't been for that fool Danny. This time I want to go in with more than just a back-hoe. I need your credentials."

A request like that from an old friend couldn't be denied. "I'm gonna have to go, Loi."

At first she said nothing. When she spoke, her voice was like velvet. "You will leave me." Her tone was low and sad.

"You make it sound like forever, Loi!" Bob said. He gave her a playful peck on the back of the head.

"Call me from the road," she told Brian.

"I will, honey."

"You go." She smiled wide, projecting an impression of happiness that she most certainly did not feel. "It's OK, really."

He left the small figure of his wife in the doorway, got in Bob's trooper-marked Blazer. As they rolled out toward the road, he looked back for a goodbye. Almost formally, Loi raised her hand, a gesture that suggested long farewells.

They drove down to Ludlum and got on the Northway.

"She seemed upset," Bob commented as they rolled out the driveway and turned onto Kelly Farm Road.

"She's worried about the baby."

"Can't blame her. What's Sam Gidumal say?"

"He's optimistic."

"She looks like she's gonna pop."

"That she does." He thought to himself: you've made your bed, Brian Kelly, now sleep in it.

Although it was only fifty miles to Towayda by the old road, the new highway with its smooth curves and moderate grades was faster. The site was sixty miles up the Northway, then ten more through Towayda, deep into the Jumpers.

For a time, they drove in silence. Brian's mind remained fixed on Loi. "Did she seem just normally upset, or real upset?"

"You've had a fight?"

"No. But she's been moody."

"It's the pregnancy. Nancy gets on a roller coaster at the beginning of the third trimester. And that's without the worry of complications."

He shared a lot with Bob, but he didn't see how he could share this, not any of it. "I hope that's all it is."

"You married a very special woman. You know how I feel about her."

"Yeah. A beautiful woman with all kinds of incredible assets."

"Would you look at that," Bob said, snapping Brian's train of thought. He was peering into the rearview mirror.

"Oh, beautiful," Brian replied dutifully. A brand new Dodge Viper was closing from behind. It was bright red, being driven by a cross between Nick Nolte and Cary Grant. Beside him sat the goddess Venus. Cars normally bored Brian, but this one was remarkable.

"Is that a vision or is that a vision," Bob said. He loved fine cars. He had an Austin-Healey he'd been rebuilding for years, but it was nothing like this. Chrysler's new competitor to the Corvette was the hottest car to come out of Detroit in thirty years.

"How fast are they going?"

Bob sped up so they wouldn't pass, paced them ahead. "Seventy-one. Nope, now they're slowing down. They've noticed the livery."

As the Viper dropped back, Bob slowed even more. Soon they were alongside. The car was all mean angles and seductive curves. To him its engine sounded like fabulous sex.

He peered down into the leather interior, looking directly at the perfect lap of the woman. "Oh, man, short-shorts." As he watched, the girl turned her young face and smiled at him. Then she made motions. She wanted him to roll down his window. He complied. She yelled, but he couldn't hear her over the throbbing engine.

"Say again," he shouted down at her.

"... setups..." was all he got. But it was enough. He knew what they wanted.

Brian looked over at him. He'd heard, too. "You gonna tell her?" If Bob found out the location of the radar units ahead on the highway and told the Viper, he and Brian were going to get a chance to see what it could do.

"What the hell, let's find out." He went to the radio. Dispatch gave him the location of the next radar trap, a single unit at the one-six-zero mile marker.

They were still running parallel to the Viper. "They're at the one six zero!"

The driver saluted. He had thirty-one miles of clear road. "This is gonna be fun," Bob said.

"Is it legal?"

Bob laughed. "Course not." At that instant he noticed the driver's arms. They were jointless like snakes, and long, monstrosly so, curving around the cockpit, looping down into the foot well. And the hands—long, muscular fingers that ended in black claws. "Goddamn! Can you see the guy?"

"Yeah."

"Look at his arms!"

Brian strained, but he couldn't see that far into the vehicle. Bob swung the Blazer toward the center of the lane but the Viper accelerated. As it did he caught a last glimpse of the girl. Now the pretty face seemed entirely changed. It was nothing but cheap plastic, something you buy in a dime store. It was cheap, painted plastic, and behind the dark eyes there were things glittering and rushing, as if the mask concealed a seething mass of bugs.

"Oh, fuck, Brian, look at that!"

Even though it had started at nearly seventy miles an hour the Viper was pulling swiftly away.

"It's a beautiful thing to see, Bob."

Bob hardly heard the words. His blood was rushing in his temples, his heart was rattling in his chest. That man had the arms of a—a—he didn't know

what. And the girl—he'd wanted her, tasted her in his mind.

His stomach heaved; he only had seconds before it went on him. Swerving across the lanes, he caused a Lexus jammed with elderly ladies in designer hair to bleat its angry horn.

"Jesus Christ, Bob!"

He couldn't talk, all he could do was pull onto the shoulder. With little more than a glance back at the onrushing traffic, he stumbled out of the vehicle. Before he could get off the highway, his stomach turned inside out. A second later a UPS thirty-six-wheeler came blasting past, its airhorns blaring. Bob grabbed the door of the Blazer, choking as he swayed in the rig's slipstream.

Then he was out of control again, his whole insides seeming to twist against themselves, as if a fist was opening and closing in his guts.

Brian piled out and then he was holding him, lifting him from his helpless crouch. "What's the problem, buddy?"

Bob peered down the road. The Viper was half a mile away and going like the wind. "Did you see?"

"What?"

"They were—" But what could he say? He couldn't tell anybody what he'd seen, not even Brian. If one word of it got back to the Department, he'd be put on psychiatric report. He steadied himself against the hood of the truck. He was a state police officer in uniform, he could not reveal weakness like this in view of the public. People would assume he'd been drinking.

Another car passed, its horn blaring. He hopped back into the cab. "Too much cheap breakfast," he said as Brian joined him on the other side.

"You have eggs sunny side up?"

"Always. Good for the heart."

"Maybe it was salmonella You can get that from soft-cooked eggs

nowadays."

Off in the distance Bob could just make out the Viper, a dot on the horizon. Then it was gone. He had recovered himself enough to want to find out what the hell was going on in that car. He picked up the mike, thumbed it live. "This is unit two-two-eight on a detail passing marker one niner zero. We just had a red Dodge Viper through here at about warp speed. He's moving north, and moving is the word."

There was a click, some static. "We hear you and we appreciate," came an unfamiliar voice. The way troopers were shifted around these days, Bob wasn't surprised that he didn't know the voice from the radar car.

"You shouldn't rat on the guy." Brian remained completely unaware of what Bob had seen.

"Come off it. He's doin' a buck fifty at least. That qualifies as abusing the privilege."

Brian laughed. "You guys are all the same. Traitors to the core."

As he drove, Bob's stomach slowly settled. He began to think about maybe a cup of tea to complete the process.

"You sure you're OK, buddy?" Brian asked.

"You ever do lucy?"

"A couple of times. I saw Puff the Magic Dragon in a phone booth, as I recall."

"Ever flash back?"

"Nope."

"Well, I think maybe I just did. In that Viper—hell, I thought I saw—" He managed to chuckle a little. "The damn chicken!"

"What chicken?"

"The one that laid the egg that made me sick!" They both laughed. "Lookin' for a Dunkin' Donuts," Bob added.

"I don't believe it, you just don't quit."

"A cruller and a cup of tea'd set me up just right."

In Vietnam he'd dropped acid until it was coming out of his pores. He'd had to, he had a death job as commanding officer of a Long Range Infiltration and Intelligence unit. He'd take his squad of specially trained men deep into the jungle for patrols lasting a week, two weeks, three. Charlie hid rice in holes, but he and his men had no holes. Charlie had underground field hospitals, like the kind of place where poor Loi had worked. They even had field kitchens down there. Bob had stayed alive by eating water rats and sucking pond scum.

The funny thing was, acid had never tripped him out back then. His stress level had been so great that it had worked as a kind of tranquilizer. It made colors prettier, it smoothed over the cellulite on the thighs of Saigon whores. When the sun hit his face when he was on acid, he felt the subtle and deeply comforting presence of some greater force, some deity.

Maybe it was Brian's mere presence that had set off the flashback. His best friend getting a VC wife—could you beat that? She'd worked in the Chu Chi tunnels. After his stint in intelligence, he'd spent four months tunnel-busting, which meant blowing them closed and then pumping them full of napalm. To drown out the horrible sounds from below, they'd screamed their throats raw.

At first he'd thought he would hate Loi, then that he would be unable to face her.

Part of him was still at war, would always be at war. But then the two couples would sit down to a bridge game, and his heart would touch deep feelings of respect and friendship for Loi. Because it had given him these feelings, the war had come to seem in a curious way blessed.

He searched the horizon for the familiar Dunkin' Donuts sign. Tea and a cruller were his original comfort foods.

There was nothing at the next exit, meaning that he had to put down another eleven miles before relief.

They drove those miles without saying so much as a word. Brian never pushed anyone to talk, it wasn't his style, hadn't been since Mary died. Before that, he'd jabber physics until your ears dropped off. The friendship had sort of knocked along in those days. Brian had gone through the war on a student deferment, and Bob really resented that. Then he'd resented all the fancy professors hanging out at Kelly Farm, and been rankled along with the rest of Oscola by the way Brian let those fine Kelly orchards go.

But he'd come back to them, hadn't he, in the end?

The minutes crept past. Would the radar unit stop the Viper? Sure they would, even if they didn't get it on the gun. Just to remind the guy that this wasn't the friggin' Sahara around here.

Finally the exit showed up, and it had everything—a Roy Rogers, a McDonald's and a local place called the Franklin Inn and—praise the Lord—a Dunkin' Donuts. Bob went for tea with milk and two crullers, what the hell, he'd work it off later. Brian got the coffee with milk that he always drank.

Just past mile marker one-six-zero they spotted the radar unit. "Nicely hidden," Brian commented. "Cunning bastards."

Bob slowed down. "The better to get your ass with, civilian scum."

"That's how you guys feel, I know it."

The crullers were hitting Bob's stomach like a load of bowling balls. Maybe this was a combo flashback and stomach flu situation. Be just his luck.

Twenty yards down from the radar unit, Bob pulled over. They got out and walked up to the car. "You get that Viper?" Bob asked.

The station man looked up at him. "Never came through."

"Never came through at all?"

"Nah. Musta taken the Corey Lake exit."

Bob concealed the rush of emotion that this caused. He'd wanted to hear that the people in the car were wearing masks or something. That would put the whole thing to bed. But now he was just going to have to suffer.

They drove on. From time to time he glanced over at Brian, then stuck his nose down into his tea. No way could he afford to go crazy, he had kids at home.

He was glad when they reached Towayda and he could get his mind off LSD and weirdness, even if it was only to think about whether or not a horrible crime had been done here.

They drove down Towayda's main street. "Quiet this morning," Brian commented.

"Damn quiet." There wasn't even a car in front of the grocery store. "There isn't a soul."

"Well, you're a cop. What gives?"

"Fishing? Hunting? A mass migration to Atlantic City? I have no idea"

They passed through the town and headed toward the frowning Mount Jumper ridges. Bob had never much liked Mount Jumper itself, it was too rough and raw. People fell off, got themselves busted all to hell. The name had been conferred when an entire tribe of Algonquin Indians had thrown themselves to their deaths rather than accept captivity.

As the Blazer moved along, the ridges were arrayed north to south like a wall. The somber green of the pine forest opened every few miles to a rock face.

As they reached the summit of the Jumpers the views appearing below could not have been prettier: green fields, long stretches of forest, undulating hills. But just beside the road there was a brutal cliff. Dangling from it like a pretty spider was a girl in bright red shorts. For a long moment they both gazed at

this apparition. She was hanging in her climbing gear eating a sandwich.

Brian noticed that Bob had gotten dead quiet. As they ascended into the Jumpers, the road narrowed and became pitted with potholes. Finally the pavement gave out and Bob stopped briefly to shift the truck into four-wheel drive.

The road was now just a track enclosed by dark pines. And up ahead, through those pines, they could see the winking red of light bars.

Seven

I.

Bob hit his own light bar and accelerated. Three minutes later they pulled into the tiny parking area near the Traps. Two trooper cars were standing parked with their doors still open. Beside them was an ambulance marked TOWAYDA RESCUE. But for the clicking of light bars, the silence was total.

They went off along the path to the Traps, moving as quickly as they could on the steep path. Around them the woods lived according to their own slow meaning. They were dark, black and silent. A man who grew up with the woods might enjoy what they could give him, but sentiment was for city people.

The path wound down, deeper and deeper into a rocky, forest-choked crevasse. It was in this sort of place that the desperate Algonquins had hidden, and eventually met their deaths.

The thick trees gave way to huge rocks jutting up on either side of the path, giving the sense that they had entered some vast, half-finished temple. But it wasn't beautiful: the sharp, jutting edges, the hard angles, the gray stone, made it a cruel place.

Then the crevasse widened, and suddenly what had been simply big became awesome. Enormous boulders, like prehistoric monoliths, stood every thirty or forty feet. And it became clear why the place was called the Traps: it was possible to get lost in the labyrinth, maybe for a long time... and if you wandered off a bluff, then it would be forever.

They moved carefully among the columns of stone. Only dim light penetrated, and the odor of mildew was strong. There was also another odor and Bob knew instantly what it was: human blood, lots of it. He had smelled it in Vietnam. He smelled it at the sites of bad accidents.

"Hello," Bob called. Now that they were among the stones, it was impossible to tell which way to go. The ground was softened by a layer of decaying pine bristles which muffled sounds and sprang back into footprints, meaning that any path would disappear in minutes.

A trooper burst around one of the huge stones. There was blood on his hands, his shirt was sticking to his body, his face running with sweat. "We got her half out," he gasped. Brian and Bob traded looks. The fact that somebody had been found here meant, also, that somebody had been in the mound.

Deeper and deeper, they followed the trooper in among the columns of stone. Now the silence was absolute. Not even wind penetrated this place.

Then they saw her. Brian made a low, trembly noise. Bob simply sucked in breath.

Brian had never seen anybody so wounded. She was covered from head to torso with bruises, cuts and scrapes. She looked worse than the raw, dripping ninety percenters on the burn ward. She was still half-buried in the earth.

"What happened to her arms?" Bob asked. They were dark blue and narrow, the skin tight. They looked rubbery and jointless, as if the bones had turned to pulp. He was reminded of the arms of the man in the Viper.

But no, that was impossible, he told himself. What he'd observed in the Viper was a flashback, pure and simple.

Then he saw her eyes. His hand came up to his chin, he sucked breath. But he did not cry out, he fought it back just in time.

Those eyes were vividly aware, darting from face to face. The irises were invisible, the pupils huge and black. The whites were ash gray. Her eyes *almost* didn't look like... eyes. Not normal eyes.

"Can you hear me?" Bob asked.

"She won't respond," one of the troopers said.

"What's wrong with her?" Brian wanted to cradle her, to somehow make it

better.

"It's some kind of compression injury," one of the rescue squad men replied.
"We need to know more."

Her lips moved and she made a small internal racket. Her voice sounded like somebody was burning leaves in her guts. She looked to Brian as if she had to be dead, and yet she was not only alive, she was still conscious.

Bob, who was now the senior officer present, went down on one knee.
"Ma'am?"

There was a sort of response, a crackle.

"What happened to you, ma'am?"

Silence.

"Ma'am, try to tell me."

The torso writhed, the face softened, the eyelids flickered, the teeth appeared behind half-parted lips. Her expression was unmistakable. Inexplicably and horribly, whatever she was remembering was bringing her great pleasure.

"We want to help you, ma'am," Bob repeated. "What did this to you?"

"Purple..."

"Yes? Purple what?"

The lips quivered, the eyes rolled. "Ma'am?" There was no further response.
"Where was she, in a cave?"

"She's stuck in the fuckin' dirt like a grub-worm!"

The eyes were moving again. Now the chief medic tried to get through.
"Lady, can you hear me?" The eyes didn't slow down, the voice didn't even crackle. "She's out to lunch," he said. He looked around. "We gotta get her out."

They withdrew her from the earth with a sighing pop, as if she'd been a giant cork, tightly jammed. A congealing gel of blood coated the hole.

She began spitting and gyrating when the medics tried to put her on their portable stretcher. It was a hideous thing to see, like watching a corpse move. The skin was so dead, and giving off a rotted meat smell, that Bob found it almost impossible to believe that they were seeing life here. But the damn eyes were still going, moving like crazy, and the spray of her spit was colored rose by blood.

The medics finally got her onto their stretcher, strapped her down and covered her. They lifted her and moved off, with the troopers giving assist.

Flushed and sweating, the chief medic hung back. "What do I tell them in ER? How did the injuries to her limbs come about?"

He was ignored by the flustered young troopers. But he had a job to do, so Bob swung into action. He reached out, grabbed one of them on the shoulder. "Answer the question."

The kid turned on him, his face gone white with fury. "We don't fucking know! She was screaming like hell and we dug toward the screams. Then we see hair, we get her face free, two hours later we got what you see. Until ten minutes ago, she was totally unconscious. For the first hour, we thought she was in a coma."

The medic's face tightened. He wanted to help her, too, but he couldn't do his best unless he knew more. "Her legs and arms— it's not a familiar pattern of trauma."

The trooper glared into his swimming eyes. "She's been in the fucking ground, packed as tight as a goddamn rock! Look, I don't know what the hell this is. You said it yourself—compression injury. Put that down on your damn form!"

The medic glanced toward the path, realizing that his patient had been carried far ahead of him. He set off at a fast trot.

Bob and Brian also ran, soon catching up with the others. "Y'know, it just never ends, these days," Bob said. "Any goddamn bizarre thing can happen."

The run up the steep path was exhausting. "Too much bridge," Bob said, "not enough medicine ball."

Brian was too winded to reply.

The tumble of rocks ahead was so tall that it seemed as if they must have gone all the way down the mountain to get to the Traps. But it was only a hundred feet or so.

Finally the path smoothed out and the woods dropped away. They had returned to the parking area.

Theirs was the only vehicle left.

The last echoes of the rescue truck and the troopers' sirens could be heard dwindling toward Towayda. They would be taking the victim to the hospital up in Saranac.

"Let's follow 'em," Bob said.

They were both grateful to get back in the truck. For a moment, Bob hesitated. He waited for his heart to slow down.

They went through Towayda and back out onto the Northway. Saranac was forty miles farther north, farther from Oscola. Brian wished that there had been time to call Loi, but that was obviously out of the question. "I'd about convinced myself that Danny was right," he said.

"God knows how it must've felt to that poor woman in there, when she heard us quit."

It was too hideous for Brian to comprehend, and he did not reply. His mind turned to Loi, and he wished yet again that there was some way to contact her. There was nothing to explain, there were no more apologies to make. It was just that he suspected that her pride might make her pack her bags and leave. That he could not bear.

The forty miles passed quickly, though. Bob was using his siren, driving fast. Once he cursed when the electrical system faltered and the siren cut out, but it began working again and he became silent.

Soon they were passing through the outskirts of Saranac. The hospital was close to the center of town. The parking lot was full, and Brian could see the rescue vehicle still parked in the emergency bay.

It turned out that the woman, now classified as a Jane Doe, had been brought in DOA. "May I speak to the attending?" Bob asked the duty nurse.

"She died of massive internal injuries," the young doctor said as he came from behind a privacy curtain drawn around a bed. "Practically every bone in her body was broken. She was a victim of torture."

"I'd say so! She was buried alive."

"That was only part of it. Her arms and legs had been literally pulverized. The bones were liquefied. Frankly, we've never seen anything like it. Not remotely like it. They're gonna take her down to New York City for the autopsy. They've got pathologists down there who've seen everything."

"This'll be news even to them," Bob said.

Brian was relieved when he turned to leave, heading toward the glass doors that led from Emergency Receiving into the parking lot.

"Hey, Officer."

Bob stopped. "Yes?"

"You want to see her?" The doctor's face was grave.

Brian didn't want to. "We've already done that," he said. "We were on the rescue."

But Bob turned around.

"Because she's definitely dead. The brain's reading goose eggs right across the chart. But the left eye is still moving."

They went. She'd been taken to the hospital's small morgue, which contained three aluminum tables and four refrigerators. She was the only cadaver, and she lay on the central table. Except for a green square of cloth covering her face, she was naked. Her arms were at her sides. Like her legs they were black and unnaturally thin. Her belly seemed enormous.

The pathologist, who had been making notes on a clipboard, looked up as they came in. She was a woman in her twenties, and Brian was surprised that he knew her. She'd been in Physics HI as a pre-med student. An efficient scholar, as he recalled.

"Oh my goodness, where in the world did you come from, Dr. Kelly?"

He fought for her name, but it didn't come. He smiled weakly. "I'm with him." He nodded toward Bob. "We have an interest in the case."

She wasted no time on pleasantries, given the situation. "She's an unidentified white female, approximately thirty-three years of age. Death due to traumatic injuries and shock. There are a number of strange factors. First, the condition of the arms." She lifted one of the loose, black appendages. It looped through her hand like a hose. "This is due to liquefaction of the bones. It's as if they were actually taken out and ground into a slurry of marrow and blood and bone, then poured back in. Obviously, that's not what happened because there are no corresponding wounds. We don't have any idea what happened to these bones."

"Why Eire her arms so black?"

"That might be a combination of bruising and cyanosis. Frankly, we're not sure about that either. It's one of the reasons she's on her way to Bellevue Hospital down in New York. Another is this eye." With that she removed the cloth covering the face.

In death, the woman's face had attained a hideous stillness. Hideous, because the expression was one of extreme pleasure, lascivious and wanton.

Brian must have groaned, because Bob dropped his hand onto his shoulder.

Silently, the pathologist lifted the lid of the left eye. The effect was startlingly lifelike. The eye moved, it seemed to rest on objects, people. You could almost feel curiosity—strange, malevolent.

"Cover it," Bob said quickly.

The pathologist dropped the cloth back onto the face.

"How can this be happening?" Brian asked.

"Obviously the muscles are receiving electrical stimulation. We've tested the voltages, they're low normal. But where's the energy coming from? It's a mystery."

"I gather that you never see this."

"Oh, absolutely not. None of it. Not the condition of the bones, not the eye. This is definitely the strangest cadaver I've ever seen or heard of."

It took an hour to drive back to Towayda, and on the way they followed the squawks back and forth as the state police brought heavy equipment up to the Traps and started digging for the answer to where the woman had come from.

For a long time nothing was heard from the dig. It was pushing five when Bob finally broke into traffic and communicated with the barracks in Saranac. "This is Lieutenant West. Could I hear a progress on that dig, go ahead."

"All the soil that was around her has been saved."

"What'd they find?"

"Nothing. Just the dirt."

Bob flipped the switch. "If that don't beat all!" He glanced over at Brian. "We've got a decision point here, buddy," Bob said. "Either we stop at Wally's for a burger or drive straight to Oscola. Choose your poison."

"I'd like to get to a phone when it's convenient."

That decided Bob on Wally's. He got off the Northway and went down into Towayda. "What's buggin' you, Brian?"

"What's bugging me? You must have nerves of steel! We've just seen an incredibly brutal murder and you're stopping for a burger."

"We have to eat."

"We let that poor woman in the mound die!"

"Now look here, Brian, it's time to settle down. She was probably in worse shape than this one, the way she sounded."

Bob pulled the truck into Wally's parking lot. It was a famous local place and the main reason to come to Towayda. The burgers were always perfect and the fried chicken basket could make a grown man cry on a night when Wally was doing the frying.

Brian called Loi from the phone in the foyer, but she didn't answer. "She must be at the grocery store," he said. He forced back the worry.

Wally's was a comfortable diner, open all the time, and often crowded at hours like three and four am. with hunters or fishermen. It was the real thing, too, made out of a couple of old railroad cars. There were pictures of the Republican presidents of the twentieth century on the walls above the window and a MARINE AND PROUD OF IT sign behind the counter. Wally was Mr. American Legion of Towayda township. The fact that Bob was not only a trooper but also a vet and a Medal of Honor winner made him always welcome. Money was not discussed, and if there were no tables, Wally would kick some city people out to clear one.

In the event, the place was a graveyard. Usually at the dinner hour in the summer, Wally's was hopping. On this night there were exactly two other customers, a man and a woman sitting together in a booth.

Bob looked around. "This is getting mysterious. I mean, there just plain ain't

nobody in Towayda."

"They're lucky," Brian said. "Considering." He wondered about the Evanses.

"Yeah, that's for sure."

Amy, who had been waitressing here since the days of the ponytail, got their orders. It took Wally all of five minutes to roll out of the back with the two burger baskets.

He was a big, tough guy, but he had the disposition of an Irish setter. "You goin' out of business, buddy?" Bob asked him.

"If I don't get a few people in here soon, I am. Been like this for a week."

Bob told him what had happened, and he was just as saddened and disgusted as Brian. "Tell you one thing, Robert. You catch the creep, you give him to me. Just remember to pass on the chili for a while. Let the city boys eat it."

After their meal Brian called Loi again. The phone rang once, twice, rang again. He let it ring five times, then seven, then ten. Finally he hung up. "She should've answered."

It was after seven when they pulled out onto the Northway. "*Tempus fugit*," Bob said.

"It's hard to believe it's been all day."

"Fear compresses time. You notice it if you do enough accidents."

"Are you afraid?"

"Yep." Bob watched an eighteen-wheeler with only one headlight pass in the oncoming traffic. Bastard. Who knew what else was in violation on that rig?

The Blazer moved steadily south, the western horizon slowly went from gold to orange to red, and finally to deep purple. The evening star hung in the perfect sky.

South of Corey Lake the road emptied and narrowed, and the evening was broken only by an occasional passage of lights. A deep tiredness began to filter through Bob's body. The radio drifted in and out of static.

It was pushing ten when the Cuyamora County sign passed on the right. The night around them was clear, and stars hung in multitudes above the pines that crowded the road.

Feeling the Blazer shudder slightly, Bob blinked, put both hands on the wheel. He swept the gauges. The alternator needle was oscillating a little, the way it had earlier. The vehicle wasn't being properly maintained. Budget cuts, no doubt.

Then the headlights started flickering along with the oscillations of the needle. The engine was obviously having trouble. Bob began to think about radioing for help.

When the faint hiss coming from the speakers died, he toggled the switch. Too late. "Goddamnit," he said.

That brought Brian back from wherever he'd been. "What?"

"We got a problem. Bad alternator. It's taken the radio down."

The engine coughed and died, and Bob began wrestling with the now-heavy steering, guiding the vehicle to the shoulder. As he did so the electrics failed completely. He watched the gauges and lights die. By the time the Blazer was stopped, it was also stone dead and dark.

"We'd better start walking," Brian said.

"A state trooper never walks. We'll put out flares and wait for the divisional car."

Brian didn't want to be away from Loi for another second. Why hadn't she answered the phone? She'd known perfectly well who'd be calling. "When'll it come through?"

"Well, before the midnight shift change, anyway."

Three hours to wait. "Jesus, I don't need this."

Bob turned the key. There wasn't even a relay click. "Gone."

"Bob?"

"Yessir?" When he turned, he could see that Brian was staring fixedly out the windshield. The shadows transformed his profile into a mass of black ditches and tight lines.

When he followed Brian's gaze, Bob was shocked. He couldn't grasp what he was seeing. It seemed as if an enormous black curtain had dropped onto the highway about a hundred feet in front of them. "What the hell is it?"

"I have no idea."

Bob saw that the blackness had depth as well as form, like a kind of opening. A suggestion of movement made him strain to see more clearly. "There's something there!"

"I know it!"

It was the same kind of awful rushing Bob had seen behind the mask of whatever had been riding in that Viper. But this time it was huge, swirling around down inside the hole. He glanced over at Brian. It was incredible, but he was definitely seeing this, too. "Lock your door, Brian. Roll up the windows."

The rushing became a flickering, and suddenly a mass of glowing bright dots appeared in the darkness. For a moment they swirled as if in some kind of a vortex. They were so bright that they lit the walls of the opening, which gleamed as if it was wet. It was extraordinarily wrinkled, and the material was undulating rhythmically.

Then the glowing dots of lights resolved themselves into a tight ball, so bright that it was hard to observe directly.

Like a bolt of lightning they shot at the car. Bob was so surprised that he

cried out. Brian was silent.

They came around the side windows, slid like a thick liquid down the rear window. In moments they had blotted out everything, and the interior of the Blazer was filled with their light.

Brian could even hear them scrabbling against the glass. His mouth was dry, his hands were trembling, but the scientist in him was observing. They were definitely insects of some kind, with six orange-red legs and fat, segmented abdomens. "We've got to get a specimen." He started to crack the window.

An iron-hard hand grabbed his wrist. "Are you crazy?"

Then the light went out. All of a sudden the vile, bright little things were gone—and both men were night-blind. Bob couldn't see the dashboard a foot from his eyes. Sweat was pouring down his face, tickling his underarms.

Brian saw an opportunity that must not be missed. He fought for control of his shaking hands, forced himself to open his door.

"Are you nuts, man?"

Brian's heart was leaping in his chest, his throat was so dry he could barely talk. "We need to gather a specimen," he managed to say.

"We don't need to gather anything, we need to pray!"

"Look, I'm scared, too, but I'm gonna go out there and do what I can, because this is important. It's so important, you have no idea"

Because he knew his fear would stop him if he didn't act at once, he stepped quickly into the dark.

Bob had never been so scared that he couldn't move, and he wasn't quite that scared now, but he was closer than Brian. He cracked his window. "Don't do it, Brian."

"We need that specimen."

"We need to stay alive."

"These things—they attacked Ellen Maas a couple of nights ago. We've gotta find out more. Without a specimen, we're nowhere."

Bob put his hand on the door handle, felt it, hesitated. God, he didn't want to go out there. But he couldn't let Brian down. He pulled the handle, opening the door into the cool night air. "What's that smell?"

"I don't know."

To Bob it smelled like an overcrowded drunk tank on a hot night.

Side by side, the two men approached the dark area. "Brian, what the hell is going on?"

"It's a nest. Or maybe some sort of a trap."

"Keep well back, man."

In its depths there was a faint purple glow. There was also a deep, persistent sound, impossible to identify. It was a mixture of buzzing and sighing, punctuated by the crackles of static electricity.

"Sounds like bacon frying," Bob said.

The purple light grew, and Brian backed away. He wanted no part of that, ever again.

Without the slightest warning a stream of insects burst forth. In an instant they were scrambling over Bob. He didn't even have a chance to scream. Then he couldn't because if he opened his mouth they were going to get in.

"Get one," Brian shouted, "get one and kill it!"

They clogged Bob's nose, slinking like sweaty farmworkers. He danced, a gilded man, plucking at them, trying to get them off him. Their legs were like wire, pulling at his eyelids, his lips. He struggled, but they were strong and they would not stop. They pried his lips open, poured down his throat, cutting

off his screams. Then they came swarming up his pants legs and invaded his privates, pushed into his anus. The horror of it froze him.

Then he felt his feet leave the ground. He knew he was moving, and fast. It was so surprising and bizarre that his emotions turned off. He was watching a movie, Bob West being carried down a hole, Bob West going deeper and deeper and deeper and all of a sudden they were gone, all the light was gone.

He was in a damp, warm room. The floor was thick, like sponge. Great, rhythmic pulsations heaved all around him, and the walls got closer, pushing against him. He shrank away but the oozing, gulping motion became stronger, closer, until finally he was completely surrounded by a mass of what had to be wet, muscular living tissue.

There was a wet crackle and the flesh pressing against him flickered with purple light. He could see veins and some distant structure like bones far away in the seething, gelatinous mass. The flicker came again and he was for a moment knocked senseless by a burst of sheer, total pleasure. The sensation was beyond anything he had ever known. It made the best possible moment of bellowing, gasping sexual release seem empty.

It came again and again, and in the back of his mind a voice said: it's a weapon.

But the voice was drowned out, and he was overwhelmed by wave after wave after wave of shivering, glorious, soul-bursting ecstasy.

2.

Brian battled his way through the mass of creatures, grabbing for them. Their bodies were as pliant as rubber and their legs were springy and strong. Even so, he might have crushed one if they hadn't been so fast. If he got one in his fist it wriggled out between his fingers before he had a chance to bear down. Their curved pincers seemed almost artificial, so carefully burnished and sharpened were the edges.

Brian was awash in them, smelling their sweaty-skin stench, feeling them crawl over him. He fought to keep his reason. "Use your gun, Bob! Fire the

damn thing! Maybe we can get some fragments." They were lifting him, they were actually picking up a human being! "Bob, they've got me!" He struggled wildly. "Bob, where are you? I can't see you!"

For an instant he glimpsed the side of the Blazer. Then it was gone, a blur behind him. He pulled them off in fistfuls, dragged them out of his throat.

He realized that he was being moved toward the hole. Because he was neither confused nor surprised by their appearance, his response was very different from Bob's.

Instead of freezing as Bob had, he went wild. Lunging, plunging, battling with animal fury, he ripped them away from his face, took in deep breaths of fresh air. He was thrashing, leaping—half here and half back in the fire, fighting for his family, for Loi, for his baby.

He felt something hard in his grip—the door post. He pulled it, dragged himself ever closer. Then he was inside the vehicle. Yanking the door closed, he trapped at least a hundred of the insects inside with him.

They changed instantly. Instead of remaining aggressive, they lined up with military precision against the top edges of the window frames. They were all turned toward him, their red eyes glaring. It was like being face-to-face with the biggest, meanest-looking hornets in the world.

Evidence, certainly. But too much of it. They were revving their wings. They were going to attack. He cracked his window, hoping a few would escape and he could contend with the others.

With blinding efficiency and speed they flowed out, every last one of them. "No! Oh, shit!"

An instant later it was night again. Brian waited, his breath catching in his throat. "Bob," he whispered.

There was no answer.

He managed to say it a little louder. Still nothing.

He realized that he could see the road stretching ahead, looking perfectly normal. No hole, not a trace. "Bob, I think we're OK." Then there came a truer sign, the chirping of a cricket.

Soon he heard the whine of an approaching car. He peered ahead. Headlights glared, then he glimpsed the slick red curves of a Dodge Viper.

In the headlights he thought he saw Bob running. The car shot past, its engine howling. He had only a glimpse of the occupants, who were sitting as stiff as dolls.

The bastards had come back! They'd been ticketed and they'd come back for revenge!

He jumped out of the Blazer, dashed off into the woods in the direction Bob had gone, calling him at the top of his voice.

Silence answered. Darkness enclosed him.

Around him the woods rustled and sighed. The memory of those red insect eyes still bored into him, the huge, wet opening gaped in memory.

He went back to the truck, stationed himself beside it with the door opened, and from there he called Bob again and again, his voice echoing flatly. He called until he was so hoarse he couldn't do it anymore.

All remained silent.

Brian threw open the Blazer's rear deck, got out Bob's large flashlight. "Where the hell are you?" he rasped.

The wind sighed as Brian walked around the vehicle. There were no footprints in the soft shoulder, not a single indication that anybody had ever been here but him. Also, the road was devoid of markings, despite the fact that a large opening had been there just a few minutes before.

He actually found himself hoping that Bob had been hit by the Viper. It was better than the other thing, the impossible thing. "Bob!" He played the light along the shoulder, back into the grass, trotted across the highway and

searched the other side. "Bob!"

Alone with the night, Brian slumped against the truck. He considered—stay here or start walking?

No question: stay here with the windows closed and the doors locked.

Down in the valley he saw headlights. When the oncoming car was perhaps a thousand feet away, he went out into the road and started waving his arms. The car, an aging Buick, stopped. "Yes, Officer?" Because of the livery on the truck, the driver was assuming that Brian was a trooper.

He didn't bother to correct him. "This truck's broken down.

Could you stop in Ludlum and call the state police barracks for me?"

"Well, I'd be pleased to do that."

"Get them out here right away. Tell them it's Lieutenant West's vehicle, and he's down."

"Down?" The man looked around.

"I think he's been hit by a car. I can't find him."

"Jesus, I'll do my best!" The driver accelerated away.

When the sound of his engine died, Brian was sure he heard the Viper again, now off in the dark somewhere, idling. He got in the Blazer and locked it up.

Ten minutes passed. Fifteen. What the hell was he going to tell them? Had he really seen Bob running in the lights of the Viper, or... how did he even talk about the other thing? They'd think that Brian Kelly had gone completely around the bend this time.

Quite suddenly the Blazer was awash in flickering light. A patrol car was coming up fast from behind. Finally!

As Brian got out, he found that a dark vehicle had somehow overtaken the

patrol car. The Viper roared past three inches from his body, a red needle blurred by extreme speed. Brian was thrown against the door. Hot wind washed over him as the car disappeared into the dark.

The report of an officer down meant that the trooper car stopped instead of giving chase. "Jesus Christ," one of the officers said as he trotted up, "that guy's doin' more'n a C."

Brian swallowed, forced his throat to construct the words. "It's a sports car, a Dodge Viper. It's been after us because Bob turned it in to a radar unit this morning. I think it might've hit him. I can't find him!"

"Where'd you last see him?" one of the troopers asked. Brian noticed that both of them had their guns drawn.

"Over there," Brian replied, pointing weakly toward the shoulder.

They shone their lights around. "Why'd you stop?"

"Electrical problem."

"So he got out? What then?"

He could not lie. He did not know how to tell the truth. "Well, we saw some lights."

"Car lights?"

"I'm not real certain what we saw. We were observing what I think is a new species of insect."

"Insect? You stopped to look at a bug?"

"A lot of them. Very unusual. We got out of the truck, and then it all happened very quickly."

The theory became that Bob had been grazed by the fast-moving car, had become disoriented and wandered away. The troopers made a search, but could not find a sign of him. A helicopter was called in and it spent half an

hour shining its searchlight from above, also with no result.

After another hour a mystified group of rescuers gave up, planning to continue at first light.

Bob's commanding officer drove off to perform the miserable task of informing Bob's wife and two boys that he was missing. Brian would have gone, but how did he explain things to Nancy? Her husband had disappeared. He couldn't show up with a story as crazy as the one he wanted to tell.

He wanted to compare notes with Ellen, but he didn't dare go near her. Instead he asked the troopers to take him home. He rode in silence, sitting in the cage of one of the patrol units. As the dark forest passed outside his window, his mind turned the day's events over and over again.

He felt the same disorientation that would have followed if he'd sighted a flying saucer or seen the Loch Ness Monster.

A new species of insect? Hell, it was a new genus, a new type of life altogether. He was very much afraid that it was a man-eater, too. But not Bob. Please, not him.

No, he'd seen him in the lights of the Viper, surely he had. The poor guy was probably unconscious, that's why he hadn't answered.

He had to think this through carefully, theorize and try to understand.

Women hidden underground like grubs—actually, that fit. It was very insectoid to encase caches of prey for further use. Typical behavior of colony-living insects.

Oh, Bob, where are you, my friend? When he'd been in the hospital, unable even to mumble, Bob had come every evening and sat there holding his hand and talking baseball.

He needed lots of help if he was going to save his friend. He needed entomology, but also biology, physics—maybe even the damned Air Force.

He felt a moment of relief when they pulled onto Kelly Farm Road. But then

he worried. What would he do if the trailer was dark, the truck gone?

He saw a glimmer in the woods, then another. The trailer—it was lit, she was still with him.

But she didn't come out onto the porch when the car pulled up. The troopers said their grim farewells and drove off into the night.

When their car was gone the night enclosed the little place, the mobile home with its few dim lights, the ruins beyond. The yellow bug light over the kitchen door was surrounded by a cloud of moths, and at the edge of its glow bats squeaked and darted. A great white barn owl flew through the edge of the light, a pale shadow. A moment later it muttered softly off in the dark.

Normally, he would have felt a sense of peace, hearing the bats and the owl, and smelling the rich scent of apple blossom and corn tassel. But not now.

He went inside.

At first he had the horrible thought that she'd gone and left the lights on; he actually looked for a note.

But she was in the bedroom, apparently asleep.

As quietly as he could, he undressed and got ready for bed. She might or might not actually be awake. In any case, she did not stir.

Normally a big dinner would have been waiting, beside it a cold Bud or a glass of wine.

He slipped into bed beside her.

Her breathing was regular, even. "You asleep?"

No reply.

Outside, the owl muttered and coughed. The past hours were like a nightmare, a sort of tumor in the middle of memory. When he closed his eyes, he saw the insects, heard the sound of the destroyed woman being

drawn out of the ground.

Vaguely he recalled that there were known species of insect that encapsulated their prey in the ground, injecting them with a drug that paralyzed but did not kill, so that they would be fresh when the larvae hatched.

The woman in the Traps had been like that, helpless but still retaining enough consciousness to suffer and to scream.

Was that happening to Bob right now? Was he three feet underground somewhere out in the woods, screaming bloody murder?

His hand slipped beneath the sheets, sought Loi's. She let him hold it, but there was no response whatsoever.

They were man-eaters, these insects. He had to get a specimen, that was now absolutely essential.

He slept, and in his sleep saw red eyes, and heard Bob crying out again and again, from the depths of the earth.

He dreamed they were all together in a tiny, stifling cave, him and Bob and Ellen and dear Loi and all the rest, the people of Oscola and Towayda and Ludlum and all the land around, and there was an earthquake and the way to the surface was blocked. They were trapped here forever and something was coming, coming up from the depths, coming fast.

And he was right.

Eight

1.

Loi was awakened by the thuttering of a helicopter, a sound that always brought her instantly to full consciousness. Once she would have cried out, fearing the lazy track of tracer, the hiss of a phosphorus bullet burning out somebody's stomach. But since she had been with Brian, she had stopped allowing herself the luxury of nightmares. His were enough for them both. "Brian," she asked carefully, "did you call a duster?"

"No way, not this time of year." The sound had awakened him also, brought him suddenly to sickening recollection of all that was happening.

There was just enough thin light for the air search to start again.

It was time to tell Loi everything and damn the consequences. He didn't know how, but he would have to try. "Bob's truck broke down and there was some kind of bizarre accident. He disappeared."

"What is this?"

"We were outside the truck investigating an unusual incident. A car came past very fast. The next thing I knew, he was gone. They haven't found him yet." He gestured toward the window. "That's what the choppers are about."

"He was hit?"

"I couldn't find him, Loi! I called him and called him but he didn't answer!"

Her eyes widened, her hands went up to her cheeks in an oddly antique gesture of horror. "Nancy and the kids!"

"The troopers are taking care of them."

"They need their friends! You have left them all night without friends!" She went to the phone, dialed the Wests.

The line was busy. She dialed again, then slammed down the phone. "We go." They dressed fast. She wouldn't even let him shave. While he was still combing his hair, she marched out to the truck.

Brian didn't even consider the idea of arguing. She was right anyway. They should have been with Nancy and the boys from the beginning, that was obvious. The shock of what had happened had numbed him, shut down his mind.

Well, he had better get it powered up again. People needed him.

They went down Kelly Farm Road and turned onto Mound. It took ten minutes to get to Queen's Road and the little four-house development where the Wests lived. In that time he had decided that he was going to have to attempt to explain the insects to her.

"Loi, there's more." Out of the corner of his eye, he could see her nodding. He continued. "There have been a series of what I would characterize as unusual and dangerous incidents involving a number of people. I think they're related, but I don't know how."

"Brian, what is this you are trying to say?"

"There are apparent insects. I don't know how to say this. Something that comes out of the ground, that glows like a mass of coals—"

"You saw a demon."

If he didn't say exactly the right thing, this conversation was going to go off the deep end in about three seconds. He really didn't think that Southeast Asian animism had any part to play in it. "This is about something else. It all started with the screaming in the mound. On that night, Ellen Maas also had a very strange experience."

"What is her part?"

"She went out on the mound and saw a thing there. It defies description, really. A spectacular apparition, like a burning snake made of vicious

insects."

"So that's it, a demon brought you together. I should have known! We must put a stop to this at once."

"Whatever. The thing is, Bob and I confronted something similar in the road. Strikingly similar. The same sort of glowing things menaced us. It could have been that they—well, that something dreadful has happened."

She sighed. "If demons took him he is gone, finished. There is no help for him. Now there is something more urgent than waiting with Nancy. She will have her grief a long time."

"Loi, this is all very unknown. Very confusing."

"They confuse you so you will not fight so much. But they will come back." She touched the edge of an eye. "Why Bob? Ellen has sinned, she tried to steal somebody's husband. You're OK, you've confessed and faced your wrongdoing. But Bob... it's very strange. Maybe they made a mistake. Maybe they'll return him to us after all."

She's lost in her demons, Brian thought miserably. "This is a physical phenomenon."

"We must try to save her, Brian. She is hateful, but nobody deserves such a fate. We go first to Ellen Maas."

Brian was so stunned that he almost killed the engine. "Loi, why?"

"To warn her! She must get out of Oscola at once. She must admit her sin and cleanse her soul. Otherwise—" She made a chopping motion.

So that was it. She was going to try to scare Ellen away with tales of demons, thus neatly removing the threat of her imagined rival. He did not want to pity his wife, but it was a pitiful stratagem. "There are no demons, there's only nature."

"Demons are part of nature. Turn around, please."

There was that sound in her voice again, that new determination. He obeyed her.

Ellen's cabin was back in the woods a few hundred yards behind them. Despite the hour, he found that it was blazing with light. He wasn't surprised.

Ellen pulled the door open before they got there; obviously she'd been watching since the moment the truck arrived.

"I'm sorry," Brian said.

She laughed, a brittle trill. "How about some Café Français? I've just been making some." She could not conceal the shock in her voice.

"We need nothing, thank you." Loi moved into the small cabin, looked around. "This is nice."

"Thank you," Ellen said. Her voice was wary.

Brian met the confusion in Ellen's eyes.

"Bob West disappeared," he said.

Ellen looked up at him, blinking.

"A demon has come. It has come and it is collecting souls. You must leave, Ellen. Your soul is in danger."

"Excuse me?"

"If you don't pack your bags and leave, it'll carry you off to hell while you're still alive. This is a very unfortunate fate, Ellen. It is reserved only for the worst of sinners. Such as women who have seduced the husbands of others."

"I didn't do anything of the sort! Your husband was helping me investigate the very things that have apparently caused this tragedy."

"We went up to Towayda yesterday, Ellen. There was a woman encapsulated in the ground. It was horrible."

"Oh, Jesus. So there was somebody in the mound, too."

"I'm afraid there was."

"If there is no sin, then why has the demon come?"

"There is no demon," Brian said patiently. "The only thing wrong here is that something horrible's happened to Bob."

"We don't talk about what happened to him. Bad luck." Then she went to the window, looked out into the brightening morning. "There is much sin here. Secret sin. Demons can smell it from a long way off." Her hands were on the two sides of her belly, protecting her pregnancy. Another helicopter came drumming along, its sound growing to a roar, then slowly diminishing.

When the helicopter was gone, Brian spoke again—very carefully. "They're looking for him, Loi. If anybody believed he'd been taken to hell, they certainly wouldn't be doing that."

Ellen wasn't interested in Loi's demons, either. "What happened out there, Brian?"

He told her the story. By the time he was done, they were beginning to hear sirens. They rose in the distance, fell, rose again, became rapidly louder.

"Going toward the judge's," Ellen said.

More helicopters thundered overhead, started circling.

"Bob's been killed," Brian said. "They've found him in the mound and he's dead."

"I'm going," Ellen announced. "Instantly." She pulled her hiking boots on, got her heavy old camera out of a box at the foot of her bed, then headed for the door.

"We go, too," Loi announced.

2.

They followed Ellen's car. Loi sat with her chin in her hands. "She is very beautiful, Brian."

"Not as beautiful as you."

"So you say."

A state police car, its light bar blazing, stormed up from behind and darted away down the wrong side of the road. Brian increased his speed.

The judge's yard was swarming with people, state troopers, sheriffs deputies, the men from the Oscola rescue unit.

The dismal yard with its abandoned orchard and its weedy lawn was now an accident site. A rolling stretcher stood on the front walk, its white sheets gleaming in the bright morning sunlight. The judge hovered about in black trousers and a dirty dress shirt. He'd looked bad when they'd met on the mound. But seeing him now, Brian thought in terms of death.

Then he noticed the tire tracks everywhere, all over the grass,

in every bit of naked soil. He glanced around, trying to determine if the police had done it. There was no way to be sure.

"Judge terBroeck," Ellen asked, "what's happening here?"

The judge stared toward the bottom of his yard, in the direction of the mound. Brian followed his gaze.

"That's where they came from, Loi," Ellen said. "They came out of that hole."

Bob, his hat missing, his uniform tunic ripped to pieces, was being pulled out of the old root cellar by a group of troopers and emergency workers.

The next moment Brian was running. "Bob," he shouted.

There was a shriek of tires in the driveway and another car stopped. Nancy West got out and started running also. "Bobby," she cried in a hoarse voice, "Bobby!"

As they pulled him up out of the ruined cellar he regarded his wife with vacant eyes.

It seemed for a moment as if he was going to respond to her, but then his eyes rolled back in his head and he slumped into the arms of the medics. Somebody brought the stretcher and they put him on it. Nancy came down to him, threw her arms around him.

She made not a sound, a silence that was as heartrending as it was impressive.

They took him away, Nancy moving along beside the stretcher, her eyes streaming. Loi went to her. "We are with you," she said.

Nancy hugged her. "The boys are at home. Take care of them, Loi."

"They'll be well with us."

The parade left, marching to the ugly chatter of Ellen's camera clicking and grinding as she shot and reloaded and shot again. She was not one of those people who are graceful in their work. There was something awkward about her, almost brutal, as she slung her bulky camera around.

Loi missed none of this. "Look at her, Brian, how greedy she is. It is greed that allowed the demon into her heart."

"There is no demon!"

"I am not wrong. They send him back because he is a good man."

Brian looked at his wife, at her hollow eyes. "Why would they take a good man in the first place?"

"This will emerge," she replied.

Ellen's Duster rattled off at the rear of the crowd of departing vehicles.

"Let's look in the root cellar," Loi said. She tugged at Brian's hand. "I will prove there are demons, show you their marks."

"I don't think so."

"Come." Loi marched across the yard.

"Loi, get away from there!" His shout made her turn toward him. As she did so her weight unbalanced her and she toppled backward, stumbled, then slipped down into the weedy, bramble-choked hole before he could reach her.

"Brian!" Her arms came up, barely reaching above the edge.

Brian dove after her, crashing down through the choke of roots that held her.

He landed hard, rolled. The first thing he saw was her legs dangling in the dimness above him. "I've got you, baby!" He reached up, took her ankles and pushed her. Despite her unaccustomed bulk, she scrambled up into the light.

"Brian, come on!"

"I'm right behind you, I'm coming."

He grabbed the roots, hauled himself up, tacking and scrabbling against the moldering bricks in front of him.

There was a grating sound, deep and close, and all at once the whole wall started crumbling. Musty air came out. Brian flailed, pushed himself back, struggled to get away.

He grabbed the weak, giving roots immediately above him. Soil poured down into his face. With a huge, howling cry he pulled himself up—and went crashing back down amid a mass of roots and vines and a great deal of dirt.

Above him there was a terrible, piercing cry. He could see Loi's face framed against the morning sky. "Brian," she shrieked.

"I'm OK!"

Then she turned to one side. "Get a rope," she shouted.

The judge's voice replied, apparently some sort of refusal. Probably he didn't

have a rope.

"You find one!" There was a sharpness there that Brian had never heard before. She leaned down into the root cellar. "He will find a rope," she said. "Are you sure you're not hurt?"

"I'm sure." He was looking into the blackness that had been opened up by the crumbling wall, trying to penetrate its inky gloom. This was more than just a root cellar, this was some sort of abandoned mine shaft or something.

People had once mined this area for iron, but that was over two hundred years ago.

From deep in the dark, Brian heard a sort of sighing... like the sound of many small wings.

Maybe the old mine had another opening, and it was the wind. But he didn't think so. "Where's that rope, Loi?"

"Coming. Remain calm."

There was an almost military sense of command in that tone. But Brian was not reassured. He was beginning to notice air moving out of the hole, and the air stank. It stank of sweat and skin, urine and feces, the smell of a concentration-camp dormitory, a man-jammed boxcar. "Hurry, baby."

Was that a glow down in there? And another sound, a low sort of popping noise?

He jumped toward the roots, missed them entirely, ran back the five available steps and tried again, straining with all his might. The fingers of his right hand closed around a thick vine. He dangled, bringing up his left hand, wishing he was in better shape.

He hung with both hands, his legs windmilling. From far below there came a flicker of light.

He pulled himself up, trying to somehow get his feet over the vine. As he struggled, he felt it give. When he put even a little weight on it, the thing

trembled.

He went crashing back to the floor of the pit.

The smell from below was strong now; the wind was blowing steadily. He could hear many sounds: buzzing, sizzling, a grating snick, like the snap of great scissors. The air was suffused with a purple glow.

He threw himself against the back wall, tried to somehow claw his way up the crumbly bricks. But they gave way like dry clay, collapsing even more.

Brian kicked, he tried to make chinks for his feet.

"The rope, Loi!"

Finally it came dropping down. But it was too thin, it was nothing but a clothesline. "I can't climb this!"

"Listen to me carefully, husband. Tie it around your waist, bring it around the front of your right arm, take it across your back and under your left shoulder. Do you understand?"

He fumbled with the rope. "I'm not sure."

"You do it, and do it right. Now I get the truck."

There was plenty of slack to tie it securely. He just hoped he'd done it right.

A single glowing object, looking like a lantern, rose lazily from the depths, hung for a moment on the air, then winked out. Instantly, Brian felt something in his hair, something moving. He screamed, tore at it, grabbed it—and was suddenly swept straight up and out onto the grass.

He landed with a bone-jarring thud, was dragged a few feet before Loi could stop the truck. Then she was running back, to him. "Brian, Brian!"

She came down to him. "Careful," he said, holding out his closed hand. "I've got one of the insects." He opened it—and there lay the crushed remains of a large but entirely commonplace wolf spider, a harmless creature.

"That's an insect from hell?"

He threw it down without comment.

She rushed into his arms. "I was so scared for you!"

The judge, his face pinched, peered at them from his kitchen porch. He looked for all the world like a vulture on a stump.

"Were they there?" Loi whispered.

Brian formed his words carefully, forcing the answer past a bone-dry throat, through cracked lips. "They were there."

She went to the hole, looked down inside.

"Stay away from it," Brian said.

She stepped back, regarding him gravely. "We have a great battle on our hands, Brian. A very great battle indeed."

His first impulse was to get into the truck and take her a thousand miles from here, and never turn back.

And that, perhaps, is exactly what he should have done.

Nine

1.

Brian and Bob and Nancy were like most Oscola folk, they went back to childhood together. In a small community, the people are woven of one another, they are not single and alone and isolated. This was happening to his best friends, to people he could not remember being without.

How had he ever left Nancy alone all night to worry by herself? How had he done that? He couldn't imagine, he was shocked at himself.

Brian and Loi reached the hospital a few minutes behind Ellen.

They drove up into the emergency room parking lot, got out and went inside through the swinging glass door that led to the emergency receiving area. The nurse in the check-in booth looked up expectantly.

"Bob West," Loi said.

"He's upstairs in the Brain/Mind Suite. Let me call them and see if he can have visitors."

That was the local euphemism for the psychiatric ward. Brian had the horrible feeling that Bob had talked about the wrong thing.

Ellen was already in the waiting room. "He's physically OK. But they've got him in the psycho unit." Her voice was flat.

"You'll put this in the paper?" Loi asked.

"No."

When the nurse finally called them, Brian found himself going down a familiar corridor. It had been on his route when he'd been struggling along with his IV tree six months after the fire.

Bob was in one of those rooms that had always been closed. When the door opened, Nancy looked up, and Brian was deeply touched by the way her eyes tugged at him. "What happened, Brian?"

"I don't know."

Bob spoke. "Blue pipe," he said faintly. "E.G. and G."

Those few words changed Brian's life, his view of himself, his understanding of the world. The room rocked, the ceiling whirled. He grabbed the door frame and hung on, looking in astonished horror at the man on the bed.

Bob stared at the ceiling.

"What blue pipe, honey?" Nancy asked.

The conduit that housed the miles and miles of wire involved in Brian's facility were made of light blue PVC pipe. "Where did you see it, Bob?"

There came out of him a howl as high and wild as any from the deepest woods. The power of it made Brian stumble away from him. Nancy covered her ears with her fists. The doctor reached toward Bob, tentative, his face grave. He muttered something about the Valium drip. "It's LSD," Nancy said miserably. "He did a hell of a lot of it during the war! He's having hallucinations all over again."

"That was a long time ago," Brian said.

"An LSD flashback," the doctor interjected, "can happen at any time. This isn't uncommon."

Again Bob howled. The sound rocked them with its deafening power.

Brian had not been aware that a human being could make a noise like that. When it finally stopped, Nancy turned on him, shrieking. "What happened out there, Brian? You tell me!"

What could he say? "I don't—"

"*Tell me!*" She was face-to-face with him, her eyes swirling, sweat pouring down her face, her top lip quivering. Never in all the years he'd known her had he seen Nancy in a state like this.

"I observed some insects. Wasps. Maybe something from the tropics, I don't know."

"What sort of insects?" the doctor asked.

Brian shook his head.

"Could he have been stung? I'm thinking in terms of a bizarre venom reaction."

"It's possible. They were all over him at one point." Brian did not expand on Bob's mention of blue pipe, but it had sickened him inside. That was the project, it had to be. They'd gotten that pipe specially manufactured. It wasn't anywhere except in the facility.

The room seemed very small, the hospital stink made Brian feel as if his throat was going to close. An awful coldness began creeping through his body.

He saw the dead eye of the woman from the Traps, that staring, dead eye, moving, moving, looking into him and through him, carrying with it a message from another world—and from his own past.

He felt his skin growing clammy, crawling beneath his clothing, smelled the oily sour stink of fear.

Nancy spoke again. "Brian, you're holding back."

"I don't—"

"Brian, *please!*"

He put his arms around her. Something about the way she leaned against him recalled a long time ago, before either of them were married, when they'd had a couple of very intense weeks together.

"My project involved the use of lots of blue PVC, and it was stamped with the logo of a defense contractor, E.G. and G. Bob must have somehow seen some of this pipe."

"Last night?"

"I don't know when else."

Ellen came into the room. "Where was he, Brian, was he in some lab? Did somebody use him as a lab animal because he used to be a soldier?"

"It was almost certainly a combination of the LSD and these... apparent insects," the doctor said, with more than a trace of self-importance.

Bob groaned.

Everybody stopped talking.

He growled.

The doctor raised his eyebrows.

With a hollow cry Bob leaped on Brian. They went down hard amid screams and toppling equipment. Brian saw his friend's face distorted beyond belief, hideous, the lips quivering, the eyes darting like—like—

The woman in the Traps. Her eyes had darted like that when she was alive, and after her death, the one eye had kept on.

Then Bob was being dragged away, he was being restrained, and Loi and Ellen were helping Brian up, he was brushing himself off, watching as orderlies piled on his friend, covering him with heaving bodies, until only his head was visible, jerking like the head of a trussed bird, his cries rending the air.

2.

Four hours later the howls were still echoing in Brian's mind, tearing into his heart.

They'd left because there was nothing else to do, gone like three wooden people out into the innocent morning. Brian and Loi had picked up the Wests' two scared boys, eleven-year-old Chris and his eight-year-old brother, Joey.

Now the boys sat in front of the TV, quietly watching through tear-drowned eyes.

Brian was pacing like a trapped animal, physics flying through his mind. How could Bob have been in his old facility? He had paranoid visions of some vast underground complex, growing like a cancer out of his own abandoned work while he spent his time tending his damned apples.

What on earth did gross anomalies like mutated insects have to do with his *work*?

Nothing made sense. He paced back and forth in the little trailer, trying to put together a functional scenario. But abstruse experiments in subatomic physics simply did not lead to... this.

If they had taken Bob underground, how had he managed to return? Why hadn't he ended up buried?

He imagined insects burrowing beneath the whole region, from Ludlum to Towayda, a distance of over sixty miles. They must be using caves, old mines, tunnels of their own, burrowing like ants or termites.

He had to make some kind of a case with Nate Harris, Bob's commanding officer. It shouldn't be hard to talk him into investigating the damned hole behind the judge's house. Maybe he could even get him to send a detective to one of the judge's little parties. "Look," he said to Loi, "I'm gonna go down to the state police barracks in Ludlum."

"I'm going, too."

He could see her filing a complaint about demons. "You stay here." He started to leave.

"No." She snapped her purse shut and slung it over her shoulder. "Boys, we'll

be back in two hours. You aren't to leave the house. Is that understood, Chris?"

"Yes, Aunt Loi."

They rode together in silence. As was her habit, she fiddled with the radio, trying to tune in WAMC, the public radio station out of Albany. She was a voracious consumer of news.

"Listen, Loi, don't say anything to him about demons."

"Brian, I'm not stupid. But we should pack up everything we own and leave."

"Is that what happened in Vietnam, when the demons came?"

"Those demons wore uniforms," she said, "and burned our houses with cigarette lighters. But when they died, they had the faces of scared kids far from home."

She hadn't spoken so many words to him in quite a while. "I love you," he said.

She nodded solemnly.

The barracks was a brand-new prefabricated building on the Northway about a mile north of the Ludlum exit.

As they pulled into the parking lot, Loi opened her purse and examined her makeup.

The sight of Bob's Blazer sitting alone and abandoned with an impound sticker on the windshield made him feel physically ill.

"Hey, Brian," Nate said as soon as they entered his small office. "Figured you'd be along."

"He's bad."

"I know it. He's gonna be on psychiatric leave for a while. Won't get paid, I'm

afraid."

"It happened in the line of duty."

"The pencil pushers have this phrase, 'preexisting condition.' Send quite a few guys to the poorhouse with it." He crossed his legs, leaned back in his chair.
"You got some more information for us?"

"Nate, I want you to investigate that root cellar over on the terBroeck place."

"Where we found Bob? I took a look around there. It's nothing much. An old root cellar built over an even older mine shaft."

"How did he come out of it? Where did he come from?"

"Look, I'm gonna tell you the same thing I told that *Gazette* lady—"

"Ellen Maas?" Loi asked.

"Her. He didn't come out of the thing, he was going in."

"You know that?" Brian asked.

"Well, it's obvious. Where would he be coming from, a mine that's been abandoned for two hundred years or more? I don't think so."

"The presence of that mine could explain the screaming on the mound. That's reason enough to investigate right there. Maybe somebody got themselves trapped in there."

Nate sighed. "We did that two days ago. You know what we found in that mine? A shoe. A button shoe, in fact, with a big cut right down its side. Damn thing was probably a hundred years old."

"You might have a dead body back in there somewhere."

Nate's eyes narrowed. "Yeah, Brian, maybe we were just too damn dumb to find it."

"I didn't mean it that way, Nate. I only meant that a mine like that's a honeycomb."

"Well, we searched every inch. I guess your bugs ate your dead body."

Brian opened his mouth, closed it without speaking.

Nate went on. "The *Gazette* lady told me all about them. How they got in her—between her legs—excuse me, Loi. For God's sake, Brian, I think you'd better forget about these bugs. The wasps are heavy whenever we have a humid summer."

"Ellen Maas is a smart woman," Loi said. "She didn't lie to you."

Brian glanced at her. His wife was softening to Ellen.

"I wasn't implying that," Nate said. "But from what I hear around town, the *Gazette's* on pretty shaky ground. If this was a really sensational story, she could sell it to other papers, bring in some dough."

"That isn't her style," Brian said. "She's very straightforward."

Loi gave him a sharp look, then slipped her hand into his.

"Look, I don't begrudge her the story. But she's gone a little bananas about it. At least, that's my impression. I don't know if you're friendly, or what."

"She's a levelheaded woman," Loi replied, much to Brian's surprise. "If she tells you something, you've got to think it's true."

"You'd have to show us some evidence."

Brian broke the silence that followed. "There's something out there, Nate. No doubt it's entirely explainable. But whatever it is, one person was roughed up by these things and another one's been hurt pretty bad. Others may have been killed."

"Again, I have to see something. I mean, the mound area is clean. That hole the things supposedly came out of—clean. So what do you want me to do,

send up smoke signals? Rattle beads?"

Nate's hands were tied, and there was no use arguing. Brian got up to leave.

Back in the truck, he made a decision. He had to face his old life, at least enough to return to the physics building and see what in the world was being done in his facility.

"You are feeling OK with this?" Loi asked as they reached Ludlum University's tree-shaded gate.

"Not really. But it has to be done."

He guided the truck through the gate and up the winding street that led around the main building and curved past the physics building behind it.

The old Gothic castle was as forbidding as ever.

Loi said nothing as they went toward the building, but her eyes were big, taking in everything.

"Lovely, isn't it?"

"It's so big."

"Not actually. We needed more space three years ago. It must be bursting at the seams by now."

He took her up the herringbone-patterned brick walk, between the familiar rows of flowers.

Bill Merriman was at the proctor's desk in the central hall. He looked up in surprise as Brian came forward, then his face erupted in a smile. He got to his feet, his big glasses glistening in the sunlight that was streaming in the door.

"I don't believe it, Dr. Kelly!" Merriman's voice thundered like a foghorn.

"Hi, Bill. Bill, I'd like you to meet Mrs. Kelly."

There was just the slightest hesitation, as Bill quietly acknowledged the passing of a beloved friend. Then the smile resurfaced. "I'm so pleased to meet you, Mrs. Kelly. I just can't tell you how pleased I am." He pumped Loi's hand until she began to vibrate. Then he stopped, gave Brian a sly, twinkling look. "Am I the last to know?"

"What?"

"Are you coming back with us, Doctor?"

"Bill, I'd just like to take a walk through, have a look at my old facility."

"Well, I suppose you can do that. It's off clearance, so I don't have to follow you around with a gun." He chuckled. "There's no classified work being done here now, not since you left."

"None?"

He shook his head.

"You're sure it's OK for me to go in?"

"Oh, absolutely. That'd be Dr. Robinson's lab now."

"Active?"

"Under construction until the fall term begins. But there's not much of your stuff left. You know, when the funding went—"

"I know, my immortality went with it."

Bill laughed. "I wouldn't say that, Doctor."

Loi looked like a small child, peering up at the foyer's faded grandeur. Before them a wide staircase soared up to a wall of stained-glass windows depicting the achievements of practical physics circa 1897, the year the building was completed. A blast furnace belched fire, electric lighting dotted a cityscape, a locomotive came roaring out of a tunnel.

"I'm afraid we descend into the Stygian depths," Brian said as he led her around the staircase to the rickety iron steps that led to the basement labs. "In the old days there was nobody in the basement but us trolls."

He had been trying to push the memories of Mary aside, but the smell coming up from the basement brought them flooding in. That familiar odor of slightly damp concrete—he hadn't recalled that until just this moment. He'd smelled it a thousand times through their life together, working down here.

Behind him Loi negotiated the steps with exaggerated care. As best he could, he helped her down the thirty feet. The basement was deep, its ceilings high. Originally, it had been a dormitory of some sort. It must have been a depressing place to live.

Brian's big steel door now had ROBINSON stenciled on it in black, but it was still possible to see where the KELLY & KELLY plate had been—brass, bought at the Door Store in Albany.

Brian opened the door, reached in and turned on the lights. As they always had, they glared down out of cheerless metal gratings. Brian looked up, and when he did his blood almost stopped in his body: the red tinsel they'd hung as a joke during the 1987 departmental Christmas party was still there.

"All right," he said, looking around the room, "let's see what's going on in here."

"This was your lab?"

"This was our lab." He pointed to a wall now covered by shelving. "Our control console was over there." The steel hatch in the floor near it looked much the same. "The waveguide was underneath."

"What is that?"

"An esoteric particle generator—or rather, detector. Although detection and generation would have arguably been the same event, in this case."

"I don't understand that."

"It was my main piece of equipment. The barrel of my rifle."

"The barrel isn't the most important part of a rifle. That's the firing chamber."

"Oh, OK. Then it was my firing chamber."

The work being done in here now clearly had nothing to do with particle physics. When he opened the hatch, he was going to find a ruined waveguide, blue pipe and all. "The service facility is just under the floor, and the device itself eighty feet farther down."

He went over to the hatch, which was partially occupied by the leg of a chair. "We used to call this place the forbidden zone."

"Because it was secret?"

"Because a forbidden zone is an area near a very powerful object that you can never escape, once you enter it. In a forbidden zone the laws of physics become deranged, everything changes, the world is turned inside out. You reach a point where time runs backward and you end up forever remembering that you've been destroyed, but never actually dying. That's the paradox of a forbidden zone."

Loi had twined her arm in his. "Step back," he said, "I'm gonna open the hatch."

"Is there danger?"

"It's just a ruin, it seems."

He lifted the ring, pulled. The hatch was sheet steel, but not particularly heavy. Disuse made it creak, but it came up easily. An odor rose, of mildew and dust tinged with sewage.

The service facility was pitch-dark. All he could see were the first two rungs of the ladder that led ten feet to its floor. It was here that he and Mary had gone to adjust the polarity of the waveguide, or aim it. The guide had to be absolutely straight or there would be dropoff when it was activated.

"Be careful, Brian!"

"It's OK, I know the terrain like the back of my hand." He descended the ladder and reached for the light switch. He flipped it, and the fluorescents flickered on. Two of them did, anyway. In the old days, they'd been able to flood the place until it was as bright as the surface of Death Valley on a sunny day. A good bit of their work involved extremely fine wires, which were always getting lost. They manipulated these wires with tiny padded tweezers called picks.

He had not expected the place to have been stripped to the bare walls. Every single piece of equipment had been removed, even the conduit that had housed the cables leading to the waveguide.

Most extraordinary, the foot of the guide was gone. In its place was nothing but the original well, now empty of the blue tubing that had housed the guide and its supporting cables.

Brian looked into the well. About ten feet down he saw concrete, and embedded in that concrete, the heads of ten massive bolts. "It's been sealed!"

"Brian, are you OK?"

He backed out of the hole. "I'm OK, I'm fine. But the guide— everything's been ripped out. And it's been sealed." He returned to the ladder, climbed up, closed the hatch. "Sealed like an atomic containment."

Her hands drifted to her belly. "There's radiation?"

"No, no. Our work didn't involve radiation. High-energy plasmas were used in the waveguide, but there was no radioactivity."

Brian stared at the closed hatch, confused—and for a moment, horrified—by a glow emanating from around its edges.

Again he opened it—and went back down to turn out the lights.

"You won't stay down there?"

"No." He climbed out.

She wrinkled her nose. "That place stinks, Brian."

"There must be some sort of mildew in the walls. Maybe down in the well."

"It stinks of the demon."

3.

He went upstairs. "Bill, where's my waveguide?" "They took it out about a year ago." "Who took it?"

Bill only shook his head.

"Don't tell me it's still classified."

Bill's face was reddening; it was obvious that he knew more than he could say, and he was extremely uncomfortable with this. When his beeper went off, he lunged with relief for the phone. "Excuse me," he said, dialing. He spoke earnestly into the phone. "This is Bill Merriman of the Physics Department. May I help you?"

Brian did not want to embarrass him further, and he knew there was no point in pressing the man. Merriman would never divulge a secret. "Thanks for all your help, Bill."

Bill cupped his hand over the receiver. "I wish I could do more, Doctor. It's not a day passes that somebody doesn't mention you—" He did not finish the sentence.

"You mean my work is still discussed?"

Bill shook his head, went back to his call. Brian could see that he wasn't going to get anything more.

When she was finally sitting in the truck again, Loi sighed with relief. "I am tired of carrying you," she said to her stomach. "You must come soon, my baby Brian Kelly."

Brian drove almost blindly. His facility hadn't been abandoned, it had been taken. And those bolts—dear heaven, what did they mean? Why would they see the empty well as so dangerous that they had to sink a million-dollar containment vessel to seal it off?

"We are not going home," Loi said as they passed the Northway exit to Route 303.

"Not just yet."

"Brian, I must go to the bathroom."

Brian felt urgently compelled to go back to the spot where Bob had disappeared. The state police had searched it thoroughly, but not for things like insect legs and bits of broken wing, things that would prove something to a scientist.

It wasn't hard to find the spot. Locally, it was a famous place, where the highway came down off the high ridge of the Jumpers into the Cuyamora valley. From where Bob's truck had stopped you could see twenty miles and more on a clear day.

He pulled over onto the shoulder. "This is where it happened," he said.

"I don't want to be here." Her voice was tight and high.

"I just need to take a look around."

She folded her arms. "Please hurry, then. This is a place of misfortune. Not a good place to bring an unborn child."

He'd never encountered anybody before for whom superstition was fact, and had no real idea of how to deal with his wife.

He got out of the truck.

Flooded with summer sun, this certainly seemed an ordinary enough place.

"Brian, I must pee now."

"You can go over there." He pointed to a clump of bushes.

She glared at him. Angry but helpless, she moved off into the brush that bordered the shoulder. In a moment the forest had swallowed her.

He walked up and down, looking for some critical fragment. He and Bob had fought the insects fiercely. They must have broken a few of them, there must be some remains.

Soon he came to the place where they'd seen the hole, and noticed that the gravel here had a light, friable quality. It looked stony, but would crumble between your fingers. Clay, really, that was all it was. Nothing unusual about that, though. He couldn't bring the authorities out here and show them a little clay in a road shoulder otherwise composed of gravel.

The sun bore down on his neck, white clouds drifted lazily in the late-morning sky. From far off came a deep mutter—thunder back in the mountains. Day after still, quiet day the storms had been building back in there, and at night they marched forth like a discontented army.

He could see the thunderheads already bulging upward toward the stratosphere, a wall of mysterious caves and ranges.

Then he turned his attention to the ground.

On his hands and knees, he crawled slowly along, examining every detail. Bits of tar, stones and clay presented themselves, along with dandelions, teasel and other weedy plants, but nothing that seemed in the least unusual.

He extended his search back away from the gravel, into the cut part of the shoulder. There were slow grasshoppers grinding in the thick air, and quaking aspen rattling at the edge of the woods.

Another, softer sound penetrated Brian's consciousness only slowly. Without quite realizing why, he paused in his work. He found himself watching the aspens. Behind them was a thick stand of scrubby white pine, then the taller forest.

He began to listen, gradually becoming aware that he was hearing somebody breathing.

"Loi?"

No answer.

He peered into the forest, but could see only leaves and close-ranked pines. "Loi?"

Far off, a car was droning closer, its engine straining.

He went toward the woods. How long had she been in there, how far back had she gone? "Loi!"

The car screamed past so fast Brian couldn't tell the make.

In the silence that followed, the breathing became more distinct, and Brian realized that it wasn't Loi, couldn't be. This sounded like some kind of machine.

He heard a rattling sound, almost a sizzle, as if an electrical circuit was sparking.

Without wasting another moment, he went tearing into the woods, calling her at the top of his lungs. His voice shattered against the dim forest silence. His own crashing blotted out any other sound. "*Loi, Loi!*"

"Brian, yes!" She came rushing out from behind a tree, still pulling on her floppy maternity pants.

He grabbed her, threw his arms around her, kissed her hard. "Oh, God, I thought—" He stopped, fought for control. "I don't know what I thought."

"You scared me yelling like that."

"You were gone for so long. And I heard—sh!"

It was still there, only faster. And louder—it was getting louder. The

rhythmic breathing was big, the crackling was sharp and steady.

They ran, both of them, ran headlong and jumped in the truck. Frantically they rolled up the windows and locked them. Then he started the engine and hit the gas, turning around in a flurry of dust and gravel.

When he looked back, he thought he saw what might have been a thick, black cable emerging from the grass onto the gravel shoulder. But he couldn't be certain, and he didn't linger.

"What do you think it was, Brian?"

He shook his head.

"It was horrible!"

He was beginning to feel the awful desperation of a child whose innocent play has unaccountably set the house afire.

The material world was very different from its appearance, very much less stable, he thought.

—There are an infinite number of possible universes. Reality appears as it does because of the way we look at it.

—Communication with past and future is happening all the time, and we know it. But we can't talk about it because we don't have the right verb tenses.

—The river of time runs between banks of chaos.

What hath God wrought? Or you, Brian Kelly? "What have I done?"

"You?"

"I think maybe so."

The sound of his own words reverberated in the jittering cab.

"I don't understand you."

There are messages everywhere, messages from other worlds. That breathing—one, two, one, two—perfectly timed. The insects lined up along the window, as if they *knew in advance* that he would open it.

The brain is a quantum machine, filtering reality out of chaos. Rockets screaming in the sky, bombs sailing, children playing, cats screaming in the night—

Oscola passing the windows, a doll's town, the gingerbread trim on the porches, the arched windows of the Excelsior Tower, the flowers in the town common: a doll's town, full of secrets, dolls concealing secrets in their glassy blue eyes.

He saw where Bob had gone, down the hole of madness. He could go there, too, go and set up shop, build himself a little cottage of chocolate cement and candy.

He could attract the children of the world to his oven and bake them into obscure and terrible forms.

"I want to get home," Loi said.

He realized that he'd been driving up and down the streets of Oscola. He turned down Main, past the town square with its bandstand and its monument to Oscola's dead from four wars. "I was thinking," he said. "Trying to understand."

She made a small sound. Was it derision, or just impatience?

They drove out Kelly Farm Road, turned into the driveway. "When will you rebuild our house?" she asked.

He felt anger flare in him, then felt it transform itself, become something else. "Soon, Loi. As soon as I can."

4.

They got to the trailer, went inside. The boys were asleep in the tiny second bedroom that would one day soon belong to Brian Ky Kelly.

When she was comfortable again Loi made coffee and gave him some. He noted that it had milk in it. She sat across the kitchen table from him, drinking her own. "My name is not Loi Ky," she said suddenly.

He was astonished.

"That's my whore's name."

"Your whore's name?"

"Easy for the white-eyes to say."

"What's your real name?"

She regarded him. "I'm used to Loi Ky by now."

"Please tell me."

She smiled in a secret, inner way. "Someday I will. When all is well again." She kissed his forehead.

He spent the afternoon sitting on the front porch trying to come up with some useful ideas. He had a yellow pad, and he tried to do some equations, but he couldn't make anything work. The jump from his original work to the present mess was just too great.

The shadows lengthened, and he found that he was not looking forward to the night.

When the sun was turning gold and the voices of the larks were echoing in the sky, he put his work down. This wasn't about his theories. It was about something so far beyond his theories that he simply couldn't see it.

Evening brought sheet lightning, and wind heaved through the old trees around his ruined house. But the storm did not break. He wondered if there even was a storm out in the mountains, in the conventional sense. Maybe the

lightning represented another sort of cataclysm altogether, too big to simply break of an evening and slip away by dawn.

Bob's boys were playing in the gloaming, their voices shrill in the shadows.

The TV went on, and Brian heard the familiar music that announced the Yankees' pregame show. The boys heard it, too, and went racing inside to watch.

The wind began flowing down from the mountains. It swept across the back fifty with its tall stands of white pine, whispering in the needles. When it reached the barn it moaned in its eaves, then splashed up against the trailer and Brian on the porch, and made him follow the boys into the bright living room.

Loi was reading, her eyes tight with concentration. She looked up at him. "Brian, listen." She read: "Why do you tremble at my doorway? A man of many hearts does not need me."

"What's that from?" He tried not to sound wary.

She held up the book. "Anne Sexton." She laughed a little.

"This man needs you."

She smiled, but he knew that she was still struggling to heal the pain that he had inflicted on her with his carelessness.

Silently, she handed him the book. The poem she'd been reading was called "The Interrogation of the Man of Many Hearts." In his wife's eyes he saw something entirely new.

"You shudder, Brian."

A roar came from the TV. "Line drive right into the glove of Mattingly," the announcer yelled.

Brian went down onto the couch. Chris leaned against his shoulder. He drew Chris closer, and tried to get caught up in the baseball game.

Soon, though, he sank into a black study, staring at the television and returning to the flow of theory that might have led him astray.

He thought that he must have inadvertently discovered a great poison, the most terrible of all poisons. He still didn't fully understand. But whoever had removed his equipment, then sealed his facility with steel-reinforced concrete understood.

He was deep in thought when Loi got up and went to the door. He hadn't heard the tap that had announced the visitor. "Your friend is here," Loi said, stepping aside as Ellen's striding entrance brought him to his feet.

She came straight into the room, and she came straight to the point, too. "I'm at a dead end," she said. "I've played out every lead. The judge has ordered me off his property at the point of a gun." She locked eyes with Brian. "Midnight. His root cellar. Breaking and entering."

She stood there in the light, her flawless skin glowing, her soft round eyes sharpened by determination, her lips a rigid line.

Loi's eyes widened. "We have been in this man's house as guests. We won't go as thieves."

Ellen knew that she had to be very careful here.

She sat down in the big easy chair, crossed her legs and took out a cigarette. "May I?" Loi went into the kitchen, returned with an ashtray. "Look, Loi, I know that you don't want him to do this. I don't blame you. I don't want either one of us to do it! But it's my obligation to discover the truth of what's happening here and tell the public. Brian has an obligation, too, because he's a scientist."

"Didn't Nate Harris tell you that he'd gone through that place? You don't need Brian to help you do something the police have already done."

"The insects come out of the same hole Nate said was clean. Therefore it is not clean."

Concerned lest the boys overhear upsetting talk, Loi sent them off to their room. She pulled their door closed. "I know something's crazy," she said quietly. "But I don't see where my husband has to get in the middle of it. Skulking around playing robber! What use is it, Brian? What will you accomplish? Let me tell you, the more you place yourself in their way, the more you tempt them. Eventually, they will strike again."

"Just for a second open your mind to the idea that this isn't demons," Ellen said. "Consider the idea that it's something so completely different that we can hardly even begin to understand it. Something totally new."

"I know about demons from a long time."

On the television, the crowd roared. First baseman Don Mattingly had just hit a stand-up triple. Chris peeked out of the bedroom. "Can we come back out, Auntie Loi?"

"Yeah, boys," she said. "We're finished with the private stuff." She gave Ellen a guarded look. "We keep it *Reader's Digest* from now on, OK?"

"Brian, we can get our evidence, I know we can! It's down in that root cellar, I'm sure of it. That's the lair."

Loi put her arms around Brian.

Ellen wanted to yell at her, but there was nothing to say, nothing she *could* say. Finally she let out a long exhalation of smoke, slumped. "Brian—"

"I know what it is! And I'm not going back in there."

"You went in?"

"Fell."

"And—"

"I'm not going back. I can't."

"You're a funny kind of a coward."

"We need more information. The direct approach is too much of a risk."

"It's all we have!"

"People are getting killed!"

Little Joey began to cry. "Stop this," Loi said. "Both of you, shut up!"

Ellen got up and left without another word.

"She's a damned fool," Brian said into the sudden quiet.

Their eyes met. They had both felt the faint, deep vibration that could have been a big truck out on the road, or maybe the engine of Ellen's old car starting roughly. And they both knew that it could have been something else.

Ellen lingered a moment on their porch, furious at them and at herself. Here the vibration was too small to be noticed. She peered out into the night, which was rushing with wet wind and not a bit pleasant. She'd come to hate the hours between dusk and dawn.

She'd searched the woods looking for strange nests. She'd even searched her house trying to find where the thing she'd put in the jar had gotten out. Eventually she'd located a neatly burned hole in the top of the bathroom screen, and she'd patched it with a square of duct tape.

She walked down the stone path into the sleepy argument of katydids and the deep rhythm of frogs. Her car was a shabby ghost in the driveway. She turned around, and the light flowing from the windows of the trailer seemed to her to possess a special gold.

Down in the woods she could see lightning bugs. She tensed, watched.

They were ordinary.

She resumed the walk to her car. What she was about to do was insane. She ought to go home and lock her door and windows and pray. Her habit now was to sleep from five a.m. until ten, never in the deep night. To keep going she floated in coffee, which made her irritable. She was smoking like hell,

too, like she had when she was first starting out in the newspaper business and she thought it made her look more reporterly.

She reached her car and got in. The Speed Graphic was on the seat, beside it the large flashlight she'd gotten from Ritter's Hardware this afternoon.

She caressed the cold steel box of the camera, then picked up the flashlight and turned it on and off, testing it.

Do it, woman. She had her principles, and one of them was to get to the bottom of a story.

Quite near the car a lightning bug shone and faded. She rolled up the window with fumbling hands.

The question was, how scared could a person be? Was fear like cold, with a final, ultimate extreme, or was it like heat, that would just keep rising forever?

The mound, the root cellar...

Don't think, do.

She turned on the car, pulled out into Kelly Farm Road. Once an opossum's eyes flared like angry little torches, another time some deer were briefly caught in her headlights, but the drive to the terBroeck estate was otherwise without event.

She drove as far down Mound Road as she dared, then cut the lights and pulled off, letting the car roll into the woods, hoping the tires wouldn't sink. She cracked her window, inhaled the fresh night air. Ahead of her stood the judge's house, as dark and quiet as a tomb. At least there were no cars here tonight, and no dance behind the curtains to the purple light from hell.

Far off a powerful engine guttered, began to whine, then settled into a steady rumble. It echoed in the darkness, mingling with the mutter of thunder.

There were answers out here somewhere, she could almost smell them. She clutched the steering wheel.

Ten

1.

For a long time she sat without moving. Every so often a lightning bug would glow nearby. She held the flashlight, flipping it on, flipping it off, trying to gain courage. These were only ordinary lightning bugs, after all, slow, beautiful, a little mysterious.

She watched moon shadows dance along the ground. The moon was only half full, but it shed plenty of light when it emerged from behind the rolling clouds. She fingered the door handle. This was a little like diving into a cold swimming pool. The point was to start.

No. It would be insane to take one step out of this car. She sat, her hand on the door handle, wondering if a thirty-year-old could have a heart attack, just from fear.

She wanted a cigarette, she wanted water, she wanted a gun. Most of all, she wanted somebody to help her.

She took a deep breath, let it out slowly, reflecting that the Ellen Maas of even a week ago would never have come out here like this. This was somebody else, a secret Ellen Maas that she hardly even knew, a strong, determined woman who was capable of pulling this door handle like this, and shifting in the seat, and putting her feet on the ground like this, and standing up.

She took two wide steps into the middle of Mound Road. In three minutes she could be in the judge's yard. Thirty seconds later she'd be at the root cellar.

She stood dead still. Using her flashlight, keeping it pointed low, she tried to get a look into the woods. It wasn't hard to picture the insects waiting back in there with their little lights turned off. Could they fly without their lights, were they doing that now? Or were they coming along tunnels, ready to burst up out of the ground wherever it suited them?

It was difficult to tell through her boots, but she had the impression that some sort of vibration was rising from below. She bent down, pressed against the road with her outspread palm. Nothing.

When she stood up, though, a gust of breeze brought a distinct sound: somewhere in the dark, a powerful vehicle was in motion.

More carefully, she moved forward, going down the side of the road, keeping to the shadows. Was that a crackle in the woods? Yes. Probably an animal.

The memory of that first night she'd seen the glowing insects remained vivid. People had been dying in the judge's house, she was sure of it. She reached the edge of the property. The house was dark and quiet.

Carloads of people had been here that night. Their cries came back to her, full of dreadful ecstasy.

The judge had not been forthcoming, he'd ordered her off his property, he'd threatened.

She proceeded past the house, forcing authority she did not feel into her stride. Even this close to the house, the windows were absolutely dark. Was he in there? The old Cadillac was in the garage.

As she came closer to the house the forest gave way to a wide lawn. The wind snatched at her hair, seeped down her collar. She increased her speed. The small hairs on the back of her neck tickled. Glancing behind her, she almost stumbled over the stones that lined the judge's driveway.

The silence was not the silence of sleep, but of watching.

Jagged clouds raced across the sky, pouring down from the north, and suddenly she saw coming toward her, across the hills and forest tops, a great wave of silver light. Then she was in a flood of moonlight so bright she could see the bobbing heads of dandelions in her path.

Hurrying now, almost running, she crossed the shaggy lawn to the root cellar. Quickly she squatted, thrusting the flashlight down into the tangle of

undergrowth, then turning it on. She could see an open area below, and in it long black coils.

They were entirely motionless. Could they be roots?

She pressed down into the undergrowth, wishing she had a stronger light.

Then she thought that they must be a garden hose, old and tangled, long since discarded. Beyond them she could see a collapsed brick wall, and considerable evidence of work—footprints, scrape marks, bricks organized into piles.

Ironically, the police investigation might well have destroyed vital evidence.

She shifted, dangled her legs into the opening. The air was cool around her exposed ankles. For a long moment she hesitated. She fought to prevent her thoughts from forming into definite shape.

But that was a battle she couldn't win. The only thing to do was drop down, and at once.

She hit the floor of the little chamber with a jaw-snapping thud. Her light got away from her, the beam casting wildly among the roots and brush. She ran to it, grabbed it, shone it in the direction of the strange tangle she had seen from above.

There was nothing there.

She went to the spot where the hose had been, but there weren't even any marks in the earth. Then again, the ground was packed hard.

Her light revealed an opening behind the collapsed wall of bricks. This must be the entrance to the iron mine that Nate Harris had talked about. She moved through the burst wall, careful to avoid dislodging any of the loose bricks still hanging overhead. If they all caved in at once, they could trap her.

The iron mine was little more than a hole leading downward at a steep angle. There were no supporting beams, no steps, no little miner's railroad. This was an old, old mine of the kind that had been run by slave labor back during the

Colonial era, before slavery had been outlawed in the northern states. Her flashlight revealed the scars of chisels and hand drills. The granite had been penetrated with muscle and blood.

As she moved deeper, she cast her beam first at the floor, then at the walls, then the ceiling, continually seeking the bit of wing, the dried carcass, that would prove their case.

Within minutes she had to bow her head, then to crouch. Here the footprints of the state troopers ended. She went on, noticing that the floor of the mine had become curiously springy and soft. She reached down and felt a smooth, giving surface, cool and a little damp. It felt as if it was made of the flesh of mushrooms. But when she tried to tear some off, she found that it was extremely tough, like leather. There was an odor, too, that first tickled the back of the throat, then burned. She sneezed, recovered herself—and realized that the tangle of coils she had seen from above was now two feet in front of her.

She backed away, suddenly very aware that she was deep underground in the middle of the night in a terrible place, and she didn't have the faintest idea what that thing was.

It was completely inert, but from this close very obviously not a garden hose. It seemed to be the source of the acrid odor. Carefully, she peered at the tightly knotted coils. Was there a faint pattern in the surface? She couldn't be sure.

This was something alive, and not a normal something. It was unlike anything she had ever seen or heard of, not a snake, certainly not a worm.

She coughed, and the sound went echoing off down the mine like a shot. Shaking now, feeling the sweat trickling down her face, fighting not to choke on the odor, she forced herself to go closer to the thing. The whole knotted mass of it was about two feet across, a foot high. Conceivably she could pick it up, probably even push it out through the growth above to the surface. Gingerly, she touched it with the edge of the flashlight. Then she prodded it harder. Totally inert. She pushed it with her toe. It had heft—maybe it weighed as much as ten pounds.

Pushing harder, she shoved it onto its side. Shining her light, she could see considerably more structure underneath.

Eight of the thick, snake-like appendages came out of a center that had the tightly wrinkled appearance of an anus.

This thing was in no way normal. It wasn't even something you'd find in the tropical rain forest, not as far as she knew, and she felt sure she'd know about anything this odd. They'd have them in zoos, or stuffed in museums.

To get the thing out, she was going to have to pick it up in her bare hands. She was going to have to touch it, and she didn't know if that was possible. Again, she shoved it with her foot. It was upside down now, still totally motionless.

But it had come in here. So it could move if it wanted to. It wasn't dead, and she must not allow herself to forget that. On the one hand, she had to be careful. On the other, if it slipped away down the mine, then what was probably the story of a lifetime would have slipped through her fingers. Not to mention the danger, and there was no doubt in her mind that this thing represented danger.

She reached down, grabbed the two most prominent coils like handles and lifted the thing. There was a lot of weight, more than ten pounds. But this was gold, proof absolute, the most valuable scientific specimen in the world, the biggest story.

Staggering, she carried the thing up out of the mine, lurched through the hole in the brick wall, and dropped it onto the floor of the root cellar itself.

Catching her breath, she shone her light upward. Soon she found the place where she'd come down. She would have to shove the thing up, then grab roots and haul herself hand over hand to the surface. Too bad she hadn't kept up her aerobics. She was going to need every bit of strength she possessed.

But when she picked the thing up and held it overhead, she realized that she was going to need more than strength. She had miscalculated the depth of the root cellar.

When she saw that she was trapped, she cried out, a brief shout, stifled almost at once.

Frantic, she cast her light around, looking for a hanging root, maybe a ladder.

The piles of bricks—she could build up a platform.

It took time, and she discovered that the bricks were soft, old and of poor quality.

As she worked, she watched the coiled creature, which never once moved, never an inch.

In fifteen minutes she had a platform three feet high. When she stood on it, her head was pressed up into the tangle of brush and roots above.

She picked up the coiled creature and put it onto the flat surface. It landed with a wet sound, and seemed to quiver a bit. Getting up onto the platform, she heaved the thing upward, gripping its slick, cool coils in her dusty hands.

The roots and briars overhead seemed almost to come alive, fighting its passage to the surface. She struggled, found that she couldn't get it quite to the edge of the hole. She had to wedge it in among the roots, then climb up herself.

As she climbed, it slipped, falling toward her, and she caught it against her chest. She pulled up with her arms, struggling desperately now, her feet seeking purchase, not finding it. The thing was knobby and knotted, as hard within as wood, but the surface was taut and felt as if there was a muscular fascia immediately beneath the skin. It was slippery and, she realized, also beginning to flex. She kicked, slipped back, kicked again.

The smell that had hurt her throat was strong now, and easily identifiable: the thing was sweating urine, and she was being soaked in it. The wetter it got, the more slippery the skin became.

She could feel the wetness soaking through her blouse, running along her midriff, tickling down her belly and inner thighs. A wave of nausea rocked

her, making her gobble back her own gorge. Then she slipped, felt the thing collapse down on her shoulders, felt the urine running down her face and neck.

She grappled for purchase, slipped, slipped more—then found a long loop of root. As she straightened her leg she burst to the surface. The bundle in her arms fell to the ground and she sprawled out beside it.

She sat up. She had the damn thing. Immediately she gathered it into her arms, embracing it to prevent its slipping back into the hole. The surface of the thing was now covered with a sort of mucus, as slippery as boiled okra. Moonlight flooded down, glimmering on the ooze that covered her hands. She raised her head, trying to escape the stink.

She went off toward her car, charging fast. She got it into the front seat, pushed it down onto the floor under the dash.

The next and urgent step was to get herself cleaned off. Coxon Kill wasn't far from here, running clean and fresh. The urine was so acidic that her skin was beginning to sting.

Using her flashlight, she crossed the road and dashed into the woods, went at an angle to the mound, toward the place where the kill turned and crossed the meadow where she'd originally been chased. Soon she heard the burbling of the stream. She threw off her wet shirt and sat down beside it, splashing herself with water. She splashed furiously, rubbed, then soaked her shirt. She rubbed it along the bottom stones, squeezed it, then drew it soaking out of the black water and sluiced herself, her face, her chest, her abdomen. As the freezing cold water poured down her, the stinging diminished. This was the second time that water had delivered her. She decided that she loved Coxon Kill.

Cold as it was, she got her shirt back on. Now she had to do one more thing, and that was to get Brian and get this thing to the authorities. He'd know scientists who would do the right thing with it. She wasn't ready to turn it over to the state police, not without knowing how they would approach the investigation.

She reached the edge of the woods and stepped into the road. Darkness, silence. She began to walk, her heart slowing, her breath coming more easily. Her car was fifty feet away, and she started feeling in her pocket for her keys.

The Viper, when it came, came like fury, its engine pulverizing the silence. She leaped back, falling into a clump of weeds, feeling briars dig into her back.

At once there was a screech of brakes, the sound of tires wailing in protest, a red shadow turning in the dark, then the cruel, rising snarl of the engine.

She was still rolling but she wasn't going to be fast enough;

the car was going to kill her. As she rolled, her flashlight flew to pieces around her.

As the moon went behind clouds the car shrieked past not three inches from her twisting body. She was jerked hard by its slipstream, it had come that close. Then she was in the woods, a big pine with sticky resin on its trunk shielding her.

Clawing at the tree to steady herself, she fought back the panic. The engine guttered, began idling.

Terrified now, she peered around the trunk. It was pitch-black, almost impossible to see. A wave of fear and frustration brought hot tears to her eyes. The Viper was right beside her Duster.

But it looked empty. She could see no movement. But she had a distinct impression—a taste, really—of *somebody*. It was easy to think that she was being watched by baleful, cunning eyes.

Evil. Horribly so. She was stunned at the power of it, and at the sense of there being an actual personality behind it, as if the whole array of terrors was being orchestrated by a single individual.

She could smell him, taste his foulness.

Another sound came, a sharp curl of breeze... or a whisper. She listened.

There it was again—a definite whisper in the woods behind her. She couldn't make out the words. She cupped her hands behind her ears, faced the sound.

Another whisper. My God, it was coming right down on her. It seemed to know exactly where she was standing.

And it wasn't alone: there was now a chorus of quiet whispers.

When the moon came out again, it cast mottled gray shadows on the forest floor. But it also made it possible to see, at least a little.

She tried to remember how the roads went. She had to cross Mound and try to sneak out through the woods to Queen's Road, then double back to her place.

She heard another sound, intimate, growing. Slithery. Something huge was slithering toward her through the leaves.

The moonlight disappeared, but even so she ran. Almost instantly she careened off a tree trunk, tumbled cursing into the dead leaves of the forest floor. It hurt, but also brought her to her senses. She wasn't going to get away by running, not in a forest this dark. Why wouldn't the moon stay out, just for ten minutes?

Two careful steps later she fell again, tripped by a low branch. There was a flash in her head, a pain, the momentary sense that the ground was on top of her.

The slithering came again, something brushed against her thigh. That did it: she scrambled to her feet and slogged off, all sense of direction gone, blundering and crashing aimlessly.

She hit the road so suddenly that she almost fell flat. She stopped, peered up and down the strip of tarmac. Mound? Main? She trotted along, her side flaring with a stitch, her breath coming in hot gasps.

At last the moon returned, sailing majestically from behind an angry tumble of cloud. She was horrified to see a dark, familiar shape on the immediate

horizon—the mound. And off to the right, the judge's place.

This was Mound Road and she'd gone in a circle.

She crossed it, began to double back. But then light flickered in her eye, followed by a shudder of pleasure that made her heart jump. Just across the road were a dozen dots of purple light, a hissing like a gasoline lantern.

To keep back the scream she jammed her fist in her mouth. She forced herself to retreat... back toward the woods where she'd heard the slithering.

She took a step, then another. Behind her she was aware of more flashes.

Where the light touched exposed skin—the back of her neck, her arms—it left a rich, seductive tingle, like the slowly drawn finger of a gentle and subtle man.

She plunged off into the woods, crying out when she was slapped by limbs, smashed into tree trunks.

Ahead was a gleam.

"Dear God—"

But it wasn't purple, it looked like the moon on a metal surface. She crouched, moved forward as slowly as she dared. Everything she did made noise—her feet crackled leaves, her breath rattled, she bumped loudly into trunks.

It was a car in the woods. She became cautious, barely moving. It must be the Viper.

She was fifteen feet away when she recognized her own car. She was thunderstruck. This was worse than being in a funhouse. You just did not get anywhere, not one damn *inch!*

It was right there where she'd left it, seemingly unmolested, seemingly empty. The Viper was nowhere to be seen.

Had she escaped, or was this a trap? Was the car really in the same place? She moved toward it. The keys—she got them out of her pocket. She reached the door. Feeling blindly, she found the lock.

At that moment the moonlight again disappeared. But it was no matter—the interior light would come on when she opened the door. She got the key in the lock, turned it, heard a click, pulled at the door.

No interior light.

There was a stink in the car so horrible that it knocked her head back, made her gag. It was like pressing your face into the underarm of a corpse. She looked down into the dark beneath the glove compartment. There was a thickness there, very still. Maybe the thing had died.

Holding her breath, she moved toward the open door. She rolled down the driver's window, then reached inside and lowered the one behind it.

She got into the driver's seat, reached over and opened the window opposite. Fresh air came in. This was better, she was going to be able to handle it. She put the key in the ignition, stretched her foot out to the gas pedal.

A black arm snaked up the dash. At the end of it she thought she could see a narrow hand.

Then the moonlight returned and she saw that the hand was to all appearances human. Before she could so much as cry out in amazement the fingers spread and the black, clawlike nails dug into the thick plastic dashboard, cutting it as if it was modeling clay.

Another hand came creeping up her inner thigh. It was cool and damp, its palm as soft as deerskin. Razor nails tickled her flesh.

She kicked, momentarily popping her right leg loose. The response was a flash of purple light, a spangle of pleasure.

Her skin crawled, she was almost drowned in a wave of the warmest, sweetest, most delicious sensations, wonderful little tickling penetrations that

went deeper in her than she'd thought delight could reach.

The hands got their grip on the dash, the arms rippled with muscular contractions. Under her feet there commenced a flopping and heaving so great that the car began to shake.

The moonlight disappeared.

With all her might she smashed her foot down into the muscular, writhing mass. Again she kicked, again and again.

A third hand shot out, barely visible in the gloom. She heard its claws sink into the back of the front seat with a popping rip of leatherette.

She wanted to close her thighs, but the claw tips pressed into the tender inner flesh.

Some deep instinct she knew nothing about sent a rush of white-hot adrenaline into her blood. Her muscles turned to steel, she reared back on the seat. The three hands all detached themselves from their various moorings and came clawing toward her at once.

With a great boneless flopping and writhing, two of the hands grasped for purchase, one clawing the ceiling and ripping it down, the other popping holes right through the metal door.

She was so stunned by the violence, by the bizarre ugliness of what she was witnessing, that she lost consciousness in the middle of lunging back away from the thing between her legs. This caused her to fall limp, and the sweeping, grasping hands clutched air barely an inch from her neck.

The impact of falling against the ground brought her back to consciousness just as a fleshy coil poured out the door. She pushed away from the car, leaped up and started running blind, her arms windmilling before her.

She blundered into brush, into trees, arms flailing. As she skittered away, pushing herself with her heels, her whole being contracted into a dot of savage terror. Ellen Maas wasn't there anymore, she had been torn from her

moorings. An animal was all that remained, a terrified animal.

2.

Into her view there came the vague image of two rough old boots, two jeans-clad legs.

"Ellen! Hey, Ellen!" Brian jumped away from her panicked flailing. "Hey, it's me!"

His truck was idling at the roadside, the door open, the lighted cab glowing. She was beyond the reach of words. She choked and gagged and clawed the air. He tried to stop her, but she yanked away from him.

She could see nothing, but the slithering sounds in the woods behind her held a terrible meaning. Close beside Brian she could discern movement. Her impulse was to jerk away, but when she did he tried to hold her more tightly. "Take it easy," he said.

Then the moon came out.

Two hands were quivering, fully extended, not a foot from Brian's head.

She swallowed, gasped.

"Ellen, it's gonna be OK."

The arms undulated, stretching. The hands came closer.

"Brian!"

The claws extended. To get away she threw herself backward—but he grabbed her, clutched her to him. The claws now vibrated an inch from his head. "Take it easy," he repeated, his voice shaking. She could see that the flesh of the arms was pulsating, getting thinner and longer, the fingers wriggling, now questing, now a mere breath away.

In another instant they would tear his head from his body.

She pummeled his leathery chest and bellowed, desperate at her own incoherence.

His response was to press her against him harder. "It's all right, baby, you're fine now, you're fine."

The pulsation of the arms was getting faster. They were getting thinner and thinner, jerking spasmodically. He reached back, absently brushed his head as if he thought a bug had landed there. But his strong left arm held her tight.

Other parts of the thing were swarming out the windows of the car.

No matter how hard she tried, she remained unable to control her own screaming. All she could think of was being touched again by those fingers.

Brian had come out here largely to stop her from getting hurt or getting in trouble. Now she was having a breakdown right in his arms. He thought she was going to shatter his eardrums.

All of a sudden she gave him a vicious knee to the groin. He jackknifed, gurgling with agony as she wrenched herself free of him. Digging with her heels, sliding down the path on her back, she dragged herself toward the road.

Fortunately, she hadn't incapacitated him, and he was able to rise almost at once. As he did so something slapped the side of his head. It hit him hard enough to jar his vision. He turned toward it.

The four strangest, most lethal claws he'd ever seen were spread out in front of his face, trembling in the moonlight.

For a long second his mind was totally blank. Then he saw details: an ordinary palm. The claws had been carefully sharpened. He could see the serrations left by the fingernail file. This terrible hand was manicured.

On the finger pads were prints; the hand was so close that he could see even this tiny detail.

Another joined it. As he pulled back, the two of them closed just in front of his face with a sound like springing rat traps. Then he saw what looked like

stiff cables in the moonlight, leading back from the hands all the way to Ellen's car. More writhing arms were pouring from every window.

A slight movement in the brush drew his attention to the fact that another of the appendages was staking along the ground off to his right. Then he saw a fourth, this one looking like a black fire hose reaching into the trees above the car.

A deep, visceral shock went through his body.

He thought: my shotgun, my shotgun is in my truck.

He ran so fast he caught up with Ellen, who was just clambering into the cab. He could see the barrel of the shotgun, blue in the dim light. Throwing himself past her, he dove in, grabbed the weapon.

With one hand he pushed her down. "I'm gonna shoot!" She cringed as he braced the gun against the steering wheel and pulled the trigger. The gun spat blue fire. Ellen screamed. Again he fired, and again, the thunderous reports blasting away her cries.

Then there was silence.

With a thud one of the hands dropped onto the hood. The diameter of the arm was now no thicker than that of a rope, and it seemed almost devoid of strength, able only to flop weakly forward. But then it contracted, and the claw-like nails slid right through the steel hood. Instantly the arm went tight and the truck lurched. It began to be dragged toward the deep woods, like a fish on the hook.

Then the moonlight went yet again, and they could see nothing outside but dead, inky blackness.

The truck lurched and shook, being dragged farther into the woods.

He turned the key, listened to the engine cough, cough again, die. Again he turned the key. The truck jerked forward, stopped. Again and again he tried the key.

Finally the engine struggled to life.

He threw the transmission into reverse, started to let out the clutch. The engine roared, the truck pitched, the tires whined in the damp, loose soil. A stink of hot tires filled the cab. Oil pressure and water temperature began to rise toward the red lines.

When another of the hands flopped against her window, Ellen practically leaped into his lap. The claws tapped furiously against the glass.

The truck engine was powerful, but the gauges were climbing steadily and it was only a matter of time before a gasket or a tire blew.

Mound Road was just a short distance behind them.

Something shook the truck as if it was a toy. Brian jammed on the gas and the engine's whine rose to a shriek, the tires wailed.

Despite all this effort the truck lurched forward, moving deeper yet into the woods.

The hand must still be embedded like a hook in the hood, reeling the truck in. Brian threw the gearbox into first and smashed the accelerator to the floor. The truck shot forward much faster than the hand had been dragging it. In the glow of the headlights Brian could see the arm, which had been wire-tight, flopping in helpless tangles across the hood.

He threw the door open, leaped into the tangle and grabbed for the hand. The extreme stretch of the arm had caused it to lose its strength. Under him, however, the coils pulsated and wriggled. They were warm, getting hot, getting rapidly thicker. Faster they pulsed, faster and faster.

By the time he had grabbed the hand at its wrist, it could resist. As he tugged it toward the windshield, away from the hole it had made, the muscles pulsed. The arm was now the thickness of a bicycle tire. Under his fingers the flesh of the thing bubbled like a thick, hot liquid.

From the woods came a flicker of purple light. He was surprised to feel deep,

warm stirrings come up from the depths of him.

While he paused, confused by this unexpected sensation, the coils surged faster, getting thicker and thicker.

Then Ellen appeared, also yanking the hand. It came out of the hood with a clanging screech, the claws doubling up on themselves so fast they made a sound like the crack of a whip.

"Drive," she bellowed, "for the love of God, *driver*

He threw himself back into the cab, ground the gears, backed out onto Mound Road.

They were free. "Thank God," Ellen whispered. "Oh, thank God."

He went bolt upright, he couldn't believe what he was seeing.

"Jesus," Ellen said.

Stretching off into the distance was a line of cars, all heading toward the judge's house. Against the sharp spikes of the pines that blocked the view of the house from here could be seen a constant flashing of purple light.

Every car was filled with people—men, women, children.

Worse, he knew them, they were familiar faces. "It's Will Torrance—hey, Will!"

"Don't stop, Brian!"

Brian hardly heard her. He put on the brake, staring in amazement at his fellow townspeople. "Look, there's Mike Mills, Betty's boy, and his wife's with him! And the Robertsons and old Mr. Hanford—"

"Brian, get us out of here!"

With a hissing sound, a great shape slid out of the nearby woods, flowing toward them like a massive snake. Before he could react, pale purple light

flashed right in his face. Reflected in the rearview mirror, it emanated from the headlights of a car behind him. He recognized this vehicle, low, mean, red. A terrific wave of pleasure hit him. He felt himself spring erect, found his eyes glaring hungrily into the reflection.

It was all he could do to shove the mirror out of adjustment. That broke the spell.

He returned to his senses. "Ellen, open the glove compartment, get out the shells. Can you handle a shotgun?"

"Not yet."

"Then be real careful, please. Put a couple of shells into the breech, lean out the window and fire. But don't look into that friggin' light!"

"I know about the light."

She was clumsy with the shells, she dropped two or three of them, but finally got some loaded. The Viper was right on their tail. A floodlight was filling the cab with purple iridescence.

It was the light of heaven. He began to go weak. The truck's speed dropped as he unconsciously lifted his foot.

A roar followed and the cab went dark. Ellen screamed, threw herself back from the window, tossed the smoking shotgun to the floor.

Instantly the pleasure ceased, and Brian felt a brief, black sense of loss. Ellen pitched back against the seat.

"Ellen?"

She did not answer.

3.

He turned onto Kelly Farm Road, drove hard for five minutes. He had only one thought: the worst thing in the world was somewhere in these woods, and

Loi was alone.

When Loi saw the way the truck was racing up the drive she came onto the porch, then hurried toward the driveway. He jammed on the brakes. "We gotta get inside," he yelled.

Loi reacted instantly, pulling Ellen's door open. "Oh, Brian, look at her legs!"

"Get her into the light!"

They took her onto the porch. Loi pulled away torn cloth. The lower part of Ellen's pants legs were shredded. For a moment Brian thought he'd accidentally shot her. Then he saw the pattern of the injuries—dozens of puckered, red dots, each leaking blood and pus.

"What is this, Brian?"

As best he could, he swallowed his terror. He peered out into the dark.

"Pour water on her head," young Chris yelled, seeing that they were supporting her and assuming that she'd fainted.

"Get inside at once," Loi told the child, "at once!"

Astonished at sweet Aunt Loi's change of voice, the boy retreated.

With Loi's help Brian walked Ellen into the living room. He shut and locked the front door. "Loi, the windows."

"What?"

"Lock them!"

His tone of voice caused an automatic response: she raced through the trailer doing as he asked. Then she returned to the room. "Tell me the problem."

"Something's out there," Ellen breathed. "Something—"

"It's beyond belief," Brian said.

"What is?"

"You don't want to know," Ellen said.

Brian remembered those hands, the pared nails.

"Well, we have to see to you," Loi told Ellen. "That's the first thing." She went into the bathroom and returned with alcohol and cotton pads. "Boys," she said, "go in your room." She looked at Ellen. "You will suffer, I'm sorry."

She poured alcohol over a pad and began methodically washing the injuries. To Ellen it felt as if her skin was being rubbed with a hot iron. To prevent a scream she bit her lip.

Brian was looking out the living room window, his hands cupped around his eyes. He was watching for any kind of unusual movement. The driveway seemed empty, but he didn't believe it, not for a moment.

"Brian," Loi said. "Call the state police."

He obeyed instantly, realizing that he should have done it before, even from the truck. He dialed, listened to the familiar clicks—and got nothing.

Again he dialed, hoping that he'd done something wrong.

The phone was stone dead. He held the receiver out, stared at it.

There was a plan at work, a strategy. Whatever was out there, it could not only act, it could think ahead, it could be cunning.

He had to get the shotgun out of the truck. And now he also had to use the cellular phone to call for help. With a quick, nervous motion he stepped onto the porch.

There wasn't a sound, not a cricket, not a grasshopper or a frog. It was like being in a cave lit by the moon.

The ten feet to the truck seemed a very long way. From the darkness around the side of the trailer he heard a distinct whisper, almost a word, but not one

he could understand. For a moment more he listened. Nothing. It could have been a raccoon snorting at him, but he didn't think so. He moved closer to the truck.

When the whisper came again he whirled. There was something out by the ruins of the old house.

He went quickly to the truck, got in, opened the glove compartment and dug out the box of shells, loaded it with the five that were left.

When he turned around he was horrified to see Loi coming across the driveway. "Go back in!"

"No."

"Go back in the house, run!"

She came up to the truck. "Give me the shotgun." She held out her hands. He gave her the gun and she took a position in the middle of the drive, porting the gun across her chest. "Now make your call." Her voice was trembling.

Brian turned on the ignition and started the phone. He waited, but no dial tone came. Finally he turned off the truck.

"It didn't work either?"

"No."

She was staring out into the dark. He followed her eyes and was appalled to see a thick, black hose of a thing lying across the drive thirty feet behind the truck.

"It is like a snake," she said, "it hides in its stillness."

He ran into the trailer. Loi came rolling after him across the driveway, wielding the shotgun.

"It's unwise to run from a snake, husband." She leaned the gun against the wall near the door and pulled up a dining chair, seating herself across from

Ellen, who was nursing her legs, tears of pain in her eyes.

"We've got to get out of here," Ellen said. Her voice was a moan.

"Ellen, it's in the driveway." Brian touched her cheek, full of compassion for her.

Loi folded her arms. "Brian Kelly, you will tell me all that has happened since you left."

"All right! I'll be very specific, but I warn you, Loi, this ain't gonna help your sleep!" He described what he had seen.

She nodded, taking it calmly. "The demons."

"We're dealing with anomalous taxonomy. But it's entirely physical, believe me."

Ellen lit a cigarette. Silently, Loi reached over and took another from her pack. She didn't like smoking much, but she was too worried. She didn't mention the sensations that were radiating up from her uterus, the dull, long pains.

"It'd help if there was a name," Ellen said. "I wish I knew the name."

"There is no Bureau of Monster Nomenclature," Brian commented.

A long, sighing scrape crossed the roof. "That's the sycamore blowing."

"No, Brian." Loi took off the shotgun's safety.

A moment later a mournful howl rose, then died away into the night. The three of them huddled together.

"That could be one of the Flournoys' cows," Brian said. "If she's lost her calf."

Silently, Loi pointed to the trailer's low ceiling. All three of them knew that the sounds had both come from directly overhead, and that the Flournoys'

dairy herd was at least a mile away on the other side of dense forest.

To Brian the howl had seemed much more human than animal. It had been a conscious sound, full of the deepest woe, as lonely and sad as any he had ever heard.

Then there was another noise, this one from the driveway. It was distinct, something scraping through the gravel. Loi positioned herself before the door. To a stranger her face would have appeared to be without expression. But Brian knew different. She was expertly concealing her fear; she'd looked like this during the hemorrhage. "Watch at the windows," she said softly.

He went to the living room, window, parted the drapes. For a moment he didn't understand what he was seeing. Thick black cables surrounded his truck, thrusting up out of the ground. "Give me the flashlight," he said, trying to discern some detail.

Ellen thrust the light into his hands. He turned it on, pressed it against the glass to reduce reflection. Each cable led to a hand, and every claw was buried in the body of the vehicle.

The cables went taut, the truck shuddered, the ground beneath it began to seethe. Dust clouds rose and the truck went down. When it was half underground there was a pause. Then the hands shook, the vehicle shuddered, more dust rose.

"My God!"

Loi abandoned her post, joined him at the window.

The truck sank slowly into the driveway. As it disappeared the gravel surged like disturbed water.

Moments later, all was still.

The lights went out. Ellen screamed, Brian cried out, lurched back into the room. Both boys rushed out of their bedroom, crying and fumbling among the confused shadows being cast by the flashlight in Brian's hand.

"Get into the middle of the room," Loi said. "Brian, push the couch against the door."

"What's wrong, Uncle Brian?" young Chris cried.

He started to speak, but the words died in his throat. He couldn't tell the truth to an eleven-year-old, he didn't know how. "There's a—we think it's a bear. There's a bear outside."

"Oh, those little blacks ain't any bother." Chris started strolling toward the door. Brian froze as the boy put his hand on the knob. "You just shoo 'em off."

Loi got to him, drew him back into the room. "Not that kind of bear," she said.

Joey started to cry. Loi got the boys away from the windows, then went once more for the phone. Silently, she shook her head.

"The floor's hot," Chris announced.

Brian bent down, felt with wide sweeps of his hands. Hot, so hot in places that it stung. *Mary is burning, Kate is burning.*

What strange meaning was ghosting about behind the facts? He felt the floor again. A lot hotter.

The first fire—Mary and Caitlin's fire—had started exactly the same way, under the floor. "We've got to get out of here!"

"Brian, we can't!" Ellen's voice had a desperate edge.

A line of dancing orange flames appeared along the wall behind the television. Loi lunged for her precious laughing Buddha. Before she could get it, Brian grabbed her, lifted her into his arms. "Not her," he shouted, "not her!" A sheet of fire rushed up the wall. Ellen and both boys shrieked. The flames boiled dark red and orange across the ceiling.

Mary and Katie were howling, dancing in a curtain of fire.

It would be fast, he knew that, almost instantaneous. He threw the door open, pushed Loi out, grabbed the nearest bit of shirt and pulled. Joey. "Ellen, Chris, come on!"

Ellen was pressed against the kitchen closet, the narrow little pantry that never offered enough space, her face as expressionless as a statue. Frozen by fear.

Brian went for her, knocked her to the floor just as the fire tumbled from the ceiling. The linoleum began curling like bacon. He knotted her shirt in his fist and tugged. Help came in the form of Chris, who half dragged, half pushed her.

Then they were on the porch, and a hungry maw of flame was all that remained of the doorway. Brian pitched away from the slicing heat, Ellen flopped and flailed, regaining her balance. Chris shrieked as fire danced on his back. Loi leaped on him, rolled him in the gravel.

When the flames were extinguished she cradled him. Sobbing, his brother crying with him, he buried his face in her bosom.

"We're gonna get you to the hospital, son," Brian said. He couldn't imagine how.

An owl's muttering made him look up, and he saw in the fire-bright trees a white barn owl, its baleful eyes staring.

With a sighing roar the trailer exploded. Brian shepherded them toward the barn. "We'll get the tractor," he cried over the rush of the flames.

"It only goes ten miles an hour, Brian," Loi said.

"Well, it's what we've got!" Maybe they could use it to go cross country to Route 303. "Form a chain, everybody holds a hand." Thus linked, they began the journey across the driveway and down through the weed-infested barnyard.

"Look for things like cables on the ground," Loi said.

"And if you see any purple light anywhere—turn away," Ellen added. "No matter how it makes you feel."

The boys, who had been silent with shock, began to whimper. "My back hurts," Chris said.

"Be brave, guys," Loi told them. She was between them, holding their hands firmly. "Be as brave as the bravest man in the world."

Behind them the fire flickered and hissed. Brian couldn't stand to look back. His wife simply walked along, her head down, putting one foot in front of the other. This was like a natural catastrophe, a storm, an earthquake, or it was like a war. She'd probably walked a hundred miles just like this, a refugee.

There was a low, vibrating sound in the air around them. Fifty feet ahead of them dust was rising from the roof of the barn,

glowing in the moonlight like smoke. Brian remembered that sound and grabbed his wife, trying desperately to shield her with his body.

It came again, like an immense groan from deep in the earth. His teeth vibrated, the boys howled, Ellen clapped her hands to her ears. The barn shuddered, seemed almost to be going out of focus. The whole front wall loomed over, and Brian saw that it was collapsing. "Run!"

It hit the ground with a huge thud and a cloud of dust, and in the dust the rest of it came to pieces, beams crashing down, walls, finally the roof itself tumbling into the destroyed heap.

Brian didn't even stop to look for the tractor. "We've gotta try to walk out," he said. But in his heart he asked a question: why don't you just kill us? Why torture us like this? He knew the answer, it was no mystery. People were not being killed, they were being *summoned*.

Well, not everybody was willing to go, Brian thought angrily.

They came straggling along behind him, still clinging hand to hand, and started out the long, dark driveway.

From the grass on both sides he heard steady rustling. He just kept going, not even hoping anymore. His understanding of the world had been gutted. There was nothing left to do but struggle blindly on.

Loi drew the boys closer to her, her eyes searching the shadows.

"You can hear it," Brian said. "That slither."

Ellen hesitated, then took a jerky step back.

"Take it easy, Ellen," Brian said. But then he saw where she was looking. There was movement in the brush, coming toward them.

Then he heard a siren, thin but unmistakable. He let a moment pass, another. They all listened, nobody making a sound. The boys knew how to count the changes in tone as the vehicle maneuvered through the town. "It's turned onto Main," Chris said.

"It's the fire truck," his brother announced. A policeman's kids could tell just by the note which service was involved.

Brian saw what looked like a long, thin tree limb appear above the line of the weeds.

The hand spread, the claw-filed nails arcing to hooks. Then a second one appeared, gliding above the moonlit grass. Behind them another shadow slipped across the driveway.

He heard more slithering, this time very close.

A long wire rose over them, looking for all the world like a gigantic lobster's feeler. It danced in the air, swept down, touched Chris's shoulder. He skittered away, slapping at himself.

"Only a moth, Chris!"

"OK, Uncle Brian." But he continued to clutch the place on his shoulder where he'd been touched.

The timbre of the siren changed. "It's turned," Joey announced as the sound faded.

A coldness clutched Brian's heart, the dark seemed about to suffocate him. He ran a few steps down the driveway. "It's going down Queen's, it's leaving!" The raw bellow of his own voice shocked him.

Loi slipped a hand into his, squeezed firmly. "It is on its way up Kelly Farm Road, husband."

He looked down at the gleams of moonlight on her black hair.

Then the volunteer fire brigade arrived, their truck lurching into the driveway. Air brakes hissed as the big old truck rocked to a stop. It was a mess, pumps dripping, hoses looped crazily in the back. The men looked exhausted, their slickers smeared with ashes and dirt. "Everybody outa there, Brian?" the driver asked. It was grizzly old Mort Cleber.

"Everybody's out."

The truck snarled, dug in, moved slowly toward the flaring ruins of the trailer.

Loi spoke quietly to her husband. "Brian, I am bleeding again. Just a little." She leaned her head against his chest.

Tommy Victor had followed the truck in his pickup. He stopped and leaned out. "Anybody hurt?"

"I am," Chris said. His voice was choked, but he was being brave. "I got burned."

"My wife needs a doctor, too."

"My legs are hurt."

"But nobody's dead?"

"We're all accounted for," Brian said.

"You're lucky. The Jaegers were killed about an hour ago. Whole family."

"What's happening, Tommy?"

"Cold snap in the summer, you always get the fires. Better get in, we wanta get you people to the docs."

Brian was so stunned he was left speechless. They didn't know, not a thing! He looked at Ellen and Loi. Their expressions confirmed his helplessness. There was no way to tell the story.

They rode out, Loi and the boys inside the cab, Ellen and Brian in the hay-dusted bay.

To shelter from the night wind, the two of them sat silently together with their backs against the cab. Brian watched the ruins of the trailer recede into the night. "Thank God she's still alive," he said.

"She's still a soldier," Ellen commented, "every inch of her."

Brian considered the idea Little Loi, with her constantly lowered eyes, her scuttling feet, her quick kitchen hands... a soldier. "A refugee," he said. "It must be killing her. That trailer was the best thing she ever owned."

"I'm sorry." The wind whipped Ellen's hair into Brian's face.

He brushed it away. "What for?"

She was silent. They were both watching car lights behind them, glowing, then going dark as they were lost in a curve of the road. The thick forest flashed past on both sides.

When the lights disappeared and stayed gone, Ellen spoke again. "I went down in the root cellar. Back in the mine. I got something—a creature—I put it in my car. The next thing all hell broke loose."

"It came after you."

"And kept after me. All the way to your place."

"Did you find it in the mine?"

"Yeah. It was like a—well, a big, curled-up spider. But ten pounds at least. It wet on me."

"Wet?"

"Urine-type wet. It was so vile!"

The car lights reappeared, this time much brighter, much closer. Ellen's hand gripped his.

Even over the roar of the slipstream and the rattling of the old truck, they began to hear the deep thrumming of a powerful engine. "Oh, God, Brian!"

The purple light—it would be fired directly into their faces. They'd go mad. "We have to get in the cab!"

The car came closer yet, pounding around the curves, its lights slashing the darkness.

Brian rose up, went to the side of the truck, leaned his head into the surging air, until his face was beside the driver's door. "We're gonna come in," he yelled.

The truck started to slow down.

"Don't stop! And don't look in the rearview mirror."

Tommy was peering at Brian out of the corner of his eye, obviously aware of his reputation for being a little crazy.

The car came closer, closer yet. The engine was drumming, thundering, howling. Ellen covered her face with her hands. Brian went around to the passenger side. "Loi, roll down the window!"

It came down.

Ellen was behind him, clawing at him. He put a leg over the side of the truck

bed, pulled his way forward. The truck swerved onto the shoulder. "Don't slow down, Tommy!"

"Brian, you're going to be killed!"

"Tell him to keep driving!"

The car's lights were flaring now. Ellen's face was white in their glare.

And then, very suddenly, the car passed them.

It wasn't a Dodge Viper, it wasn't even a sports car, and it wasn't red. It moved off, heading innocently south.

Brian returned to the truck bed, slumped down beside Ellen. He looked out at the blackness of the night. Being here, now— this was *alone*. And he didn't just mean himself and Ellen and Loi and the other people in the truck.

He had a feeling that every living soul was about to find out what a few people had already discovered: this little world of ours, lost out here in the dark, is very much alone.

Eleven

1.

Shock numbs, but unfortunately not for long. At first they all welcomed the lights of Ludlum, the familiar cluster of fast-food places out at the Northway interchange, their signs challenging the dark.

The tall Rodeway Inn sign invited Ellen. "I'll never, ever go back there again," she told Brian. "At dawn I'm outa here."

Brian hardly heard her. Again and again his mind went over the events of the night. The fire had come up through the floor, just like the first time. The first one had been attributed to a defective propane line, but was that really true?

He shivered, clutched himself. It was nearly two in the morning. He looked up at the sky, the moon red against the horizon, the stars like eyes, diamond-hard, cold as ice.

He wanted to hold Loi, to enclose her precious body in a protective embrace.

He couldn't protect anybody.

"Two hours ago I was thinking in terms of moral obligations and major stories," Ellen said carefully. "Now I'm thinking in terms of saving ass. We've got to get out."

And where did she think she would go?

Then the truck was turning, and the buildings of Ludlum Community Hospital appeared ahead.

When he got down off the truck, Brian embraced his wife. "How's it going?" he asked.

"The bleeding stopped, Brian."

He closed his eyes, felt relief wash through him.

Young Chris was hunched over. Brian picked him up. "It's gonna be OK, guy," he said.

"It's hurting real bad, Uncle Brian."

"I know that, Chris. I know all about burns."

As they entered the emergency room, Joey said, "Our house burned up." Nurses came, there was a brief admission ritual, Loi was put in stirrups and Chris was laid on his stomach for an examination. Brian could tell at a glance that the boy's burns weren't serious, but those red welts must hurt like the very devil.

Loi and Chris were in cubicles side by side. Brian stood between them. Chris cried when the ER doctor began dressing his burns. "You're lucky this wasn't worse," the young doctor said.

"There was a bear out there," Joey announced. "It had long arms like a snake."

The ER doctor didn't even look up. "We got a lotta bears coming down this summer," he said. "They like the landfills. I went to see the ones up in Long Lake. You ever see those, Chris?"

"No, sir."

Dr. Gidumal arrived for Loi. Brian slipped into the front end of her cubicle and kissed her cheek.

She smiled at him, then closed her eyes as the doctor examined her.

"This is doing well," he said. "You have a little bleeding, maybe, but this is doing well."

Brian kissed her again, whispering in her shell-like ear, "Thank God for you, thank God for you." With a quick motion of her head, she gave him a peck.

The doctor put his hand on Brian's shoulder. "How are you feeling, Brian?"

"I'm good."

He took Brian by the shoulders, looked into his face. "No, I beg to differ. You are not good. You are in shock."

"I feel fine. I'm—yeah, I guess you'd say that."

"You have lost your home, you are in a terrible time. You are not good."

"Doctor—"

"Do you two have a place you can go? Relatives, perhaps?"

Brian did not want to go to any relatives. He wanted to do three things. The first was to get Ellen and Chris and Loi in a condition to travel. The second was to find Bob and Nancy and get them out of here. The third was to run.

Ellen's leg was examined by a bored intern who announced that she'd brushed against nettles and experienced an unusually strong allergic response. She reflected on the futility of telling him what had actually happened. She'd already had Nate Harris laugh in her face, and Bob was on the psycho ward for blurting out his story.

The doctor gave her antihistamine cream. "This'll keep the itching down. If you're not better by tomorrow afternoon, come back and we'll take another look at it. But I'm sure this is a very minor problem. You must have gotten in the nettles running away from the fire. Lucky that was all that happened. You're all very lucky."

"You're sure it couldn't be anything else?"

Smiling, he shook his curly young head. She read the easy condescension in his face.

She wanted to yell a warning from the rooftops, but what could she say? Hey, my name is Ellen Maas and I think that Oscola's full of creepy crawlies. Please strap me to a bed beside Bob West.

It sickened her to realize the truth: the enemy had been breathtakingly efficient. There were no hordes of refugees claiming to have witnessed the impossible. Only four people who knew what was happening had gotten away—Loi and Brian and Bob and a very frightened outsider called Ellen Maas. Not even Bob's children understood the truth.

When she left the treatment area, she found the rest of the emergency facility quiet. Brian and Loi and the boys were gone. Looking around at the sudden emptiness, she felt hurt.

The quiet, the soft voices of the intern and the resident talking together on the nurses' station, the distant whirr of the air-conditioning system, even the familiar hospital smell, combined to enforce upon her a sense of deep isolation.

She would never return to Oscola, not even to get her belongings, not for any reason whatsoever.

She paid her bill with a MasterCard. There wasn't any insurance, so the \$270 would just eat a little further into her credit limit. It was possible to see a welfare office in the future, if she couldn't find work somewhere.

"Did the Kellys say where they were going?" she asked the desk clerk.

"No, ma'am. But I don't think they left the hospital."

"Was Mrs. Kelly admitted?"

"None of 'em were. But that guy with the truck, he told 'em goodbye. So I figure they're still here."

Of course they were, and it was perfectly obvious where they had gone.

She went through the long, echoing corridors to the so-called "Brain/Mind Suite."

"I'm here to see Lieutenant West," she told the nurse at the station.

The nurse peered along the hall. "They're all down there. Two-forty-three.

"Are you a relative?"

Ellen walked into the open room, confronting a tableau of complex human emotions. Loi and Nancy were standing side by side, Brian was leaning over his friend. The two boys were in a corner, their eyes open wide.

Their father was under restraint, his body wrapped in long, soft hospital-green clothing of a type she'd never seen before. There were lots of belts and straps. It froze her insides to see a human being treated like this. She'd never dreamed that this sort of thing was still done. Shades of Bedlam, with the mad chained to the walls.

"Miss Maas," Nancy said. "Please—"

"She is with us," Loi interrupted. "She has great courage. And you need to listen to her." Their eyes met.

"Thank you," Ellen said. She turned to the bed, where Bob was straining against his straps, his face gleaming with sweat. The poor man was struggling to get up. Ellen looked to Brian.

"He's absorbing it. Aren't you, buddy?"

His voice when it came was a deep, throaty rumble, vastly weaker than Ellen remembered it. "It's... all of it..." Then he looked to Ellen, a fierce question appearing in his eyes.

"It's true, Bob. I've seen them. You're not hallucinating."

"You're not psychotic, Bobby," Nancy said. "The things you're remembering—the things with the arms and all—"

Slowly, it sank in. Deeper and deeper it went. They could see the wonder come into his face, followed by a flicker of relief, a sudden turning of the head, a sigh as if a weight had lifted, then a widening of the eyes—wider, wider—and a great, long, rolling groan mixed of relief and triumph and abject terror.

Followed by sudden silence.

Then his eyes seemed to look into some far distance. "Get me out."

Ellen began working the straps, then the others joined her, and they all untied him together. When he sat up in bed he wobbled a little, but then he was on his feet, swaying in his hospital gown, going down on one knee as two very excited boys flew into his arms. "You're gonna be OK, Dad," Chris said. Joey snuggled against him, burying his face in his father's chest, drinking his returned power.

"I'm fine, boys, but I don't think the Yanks are."

"Yes they are," Joey said, suddenly coming to life. "They just won six games in a row is all."

While Loi and Brian and Ellen waited in the hallway, Bob dressed. "I really think we ought to all go to a motel," Ellen said.

Loi looked at her. "We certainly can't stay in Oscola."

"I thought I had some kind of an obligation, but this is beyond that."

"Yes," Loi agreed, "our obligation is to survive." She put her hand on her belly. The pains had faded, but she did not feel strong.

During the fire Loi had seen that Ellen was a very strong, mature woman. Somebody who was cool in the face of the unexpected, who was efficient at times of high danger, was not also an emotional baby. That woman would never try to seduce a married man.

She hadn't lost Brian, she could see the love in his eyes. But she had certainly lost all her curtains and dishes, her marvelous dresses she'd bought at the Mode O'Day, her pretty furniture.

She'd also lost her collection of books, the mathematics and physics texts she was studying, her poetry, her *Great Novels in Outline*. She had lost the papers that identified her as a new American and the wife of an important man: her citizenship certificate and her marriage license.

She had lost her beloved Laughing Buddha, that was her luck. She was just a barefoot on the road again.

She had stopped crying years ago. Weakness must never be revealed.

"We gonna go home," Joey piped as the Wests came out of the room.

Bob hushed his son.

Quietly, the whole group of them went to the far end of the hall and down the back stairs. It wasn't difficult to leave undetected; the hospital wasn't guarded.

Now that the moon had set, the sky was filled with stars. Ellen did not like going out into the parking lot where there were only a few cars, did not like being in the dark, under the sky. "What if they're here?"

"It's possible," Brian replied, "but I don't think so."

"Well, why not? I mean—"

"They're apt to be confined to the area of Oscola and Towayda, at least for a while. We've seen that they have limits, a sort of range."

"But they'll spread?" Bob asked.

They had reached the Wests' Taurus. "Oh, yes," Brian replied.

"The bears?" Chris asked.

"It's not bears," his mother replied.

"Something else," Loi added. "We do not know for certain what it is."

"Look," Brian said, "there's almost no chance that we can fight this on our own. And I doubt very much that we can get the evidence we need."

Ellen looked at him. "Do you realize what you're saying?"

Brian glanced down at the boys, nodded. Ellen thought she had never seen

such sadness in a human face.

"We go to the Ludlum Inn," Loi said. "Wait until dawn." She was holding her own shoulders. "I don't want to stay outside any longer."

They got into the car, all except Ellen. There wasn't room for her. She leaned into the driver's window.

"I'll catch up with you," she said. "Take a cab."

The car pulled away, leaving Ellen to face the dark and silence alone.

2.

She hurried back to the hospital lobby. The car had obviously been jammed, but something about being left behind still hurt.

The corridors were so quiet that she could hear the humming of the fluorescent light fixtures on the ceilings.

So, where was she going to go? Following the others to the Ludlum Inn was one alternative. But she could also rent a car and just start driving.

"Excuse me, ma'am." The maintenance man stood before her in his blue uniform, his keys in his hand.

"Yes?"

"You can't stay here at this hour."

She used the phone in the entryway. When you need something after midnight in a small city like Ludlum you call the cab company. Sure enough, the Tru-Serve dispatcher knew of an all-night car rental. Allomar Texaco was also an Avis station. She took a cab there and soon had wheels again, a green Escort with a complicated stain on the front seat.

She drove out to the Northway, intending to crash at the first motel she found. There was no point in trying the Ludlum Inn. Only well-known locals could get a room there without a reservation. Unlike the higher Adirondacks,

the Three Counties were not much of a tourist area, so there was a possibility of getting a room on short notice in the summer season.

Even so, the Suisse Chalet was full, the Rodeway Inn likewise.

She finally found a room at the Days Inn. On the way in she bought a Hershey Bar and a 7-Up from vending machines. She didn't even like the walk down to the room from the lobby. It was all she could do not to run.

She called the Ludlum Inn, but they hadn't arrived.

Sitting in the middle of the bed in her ripped jeans and dirty sweatshirt, she ate candy and flipped from channel to channel on the TV, trying to blank her mind. The memories of the past eight hours were not to be touched, not if she wanted to stay sane.

McLaughlin was bellowing on CNBC, tonight's "Larry King Live" repeating on CNN. "The Brady Bunch" flashed past, followed by a chunk of *Fort Apache*, followed by a story about a school prayer scandal on *Headline News*.

It should have been reassuring, but instead it was eerie, like peering into a dead man's eyes.

without realizing it, she fell asleep. A soft sound... a tickle along her right arm—and she leaped back against the headboard screaming bloody murder.

She clapped her hands over her mouth, horrified that she'd get thrown out of the motel. There was nothing on her arm, nothing unusual anywhere in the room.

She sighed, drank down the dregs of her 7-Up. It was warm, which surprised her. Then she noticed that she could see the swimming pool.

Incredibly, it was seven-fifteen. She'd slept for three hours. The last thing she remembered, she'd been sitting in the middle of the bed.

She grabbed the phone and called the Ludlum Inn again. This time, they were already gone.

Next she called the Wests' house. Would the phones in Oscola be working?

Nancy answered.

"This is Ellen."

"What happened to you?" She spoke off line. "It's her."

"I'm sorry, I accidentally fell asleep."

Brian came on. "We were worried sick."

"Brian, what in the world are you doing back there? Are you people insane?"

There was a pause. "Look, Ellen, we can't just turn our backs on this."

"We have to!"

"I'm gonna try one last time. I didn't come back for somebody else's shirts and underwear."

"Brian, you took those children, your pregnant wife?"

"It's broad daylight. So far, everything that's happened has taken place at night."

"So far."

"What I'm going to do is look for fragments over near your car, where I did that shooting. And the Wests are packing a few things."

She should put down the phone right now. She should not say what she was about to say. "I'll come help you."

"Ellen—"

"I'll come," she repeated as she hung up. She sat on the bed, fumbling in her purse for a cigarette. Lighting it, taking the first drag, she relaxed a little. Then she daubed her tongue on the shoulder of her shirt. Smoking was a

nasty habit. It made her taste bad and smell worse. It made her look weak or stupid or both. But she sure as hell was stuck with it, especially now. She took another drag, a long one.

This problem would not blow away with the smoke.

After washing her face she went to check out, stopping in the hall to buy a cup of vending-machine coffee.

Coffee in hand and cigarette in mouth, she passed the restaurant. There were a couple of people in booths, a couple more at the counter. The morning papers stood near the door in stacks, still tied. Outside, crows perched on the motel's sign, calling to one another. The leaves of an aster quaked in the morning breeze.

Nothing was wrong, nothing at all.

She signed her credit card receipt and went out to the Escort.

Driving back, she watched the road narrow, the woods close in, watched the rolling mountains behind Oscola, thought about what lurked in the shadows, in the depths of the ground, thought of the quietly growing number of empty houses.

She approached Belton Road, the last turnoff before Route 303's unbroken run to Oscola. This was the point of no return. "What are you?" she asked the humming silence as her car passed through the intersection.

Her foot touched the brake, hesitated, wavered, then pressed harder. Just beyond the intersection, she rolled to a stop. She raised the windows and locked the doors.

She drove fast, alert for the least sign of movement back in the woods. But 303 seemed abandoned. Nobody passed her, she overtook no other cars. She reached River Road, then crossed the bridge onto Mound, then turned onto Queen's Road at the intersection.

At the Wests' house, she turned off the engine, got out and went up to the

front door. From inside came the familiar smell of cooking bacon.

This was one of those small moments that is really huge, and for once she knew it. She was making a commitment here, a big one.

She knocked.

There had been soft voices inside, which now stopped. "It's me," she said through the closed door. She stepped back, suddenly certain that this was a mistake. The door opened a little.

Bob West dragged her inside.

Behind the closed curtains the lights were on. She found herself in a cozy living room. A big photograph of an Adirondack stream hung on the wall above the entertainment system. The room was filled with solid Early American furniture. Some of the pieces were obviously very old. She had seen family antiques like these in everyday use in many Oscola homes.

"Ellen," Loi said from her place lying on the couch, "welcome." The smile seemed warm, but Loi's personality had so many subtle twists and turns, it was impossible to be certain.

"How are you doing, Loi?"

She touched her stomach, smiled. "We are well."

Ellen looked around for the boys. "Chris?"

"He's going to be fine," Nancy said. "There's still a good bit of pain, though."

"Burns hurt," Brian added. He gazed at her. "I've got a theory in place."

She raised her eyebrows, questioning.

"Some of my equations suggested that we could crack a hole in space-time. Somebody must have done it. Built a device and done it."

"They took my husband's work, twisted it."

Bob walked over. His wide, kind face reminded Ellen of her own father. "I remember being in a room full of blue pipes and broken equipment. I was swallowed, for God's sake. Like Jonah in the whale." He paused. "Somebody talked to me, tried to get me to see it his way."

"Who was he?" Ellen asked.

"I remember a tall shape. Blacker than black. A sense of great dignity and... what I would call evil. Essence of evil."

Loi sat up. "The demon."

"Satan," Nancy added.

Loi gave Bob an appraising look. "Did you feel like you wanted to help him?"

"I don't know what I felt. If it was Satan—"

"This isn't about the devil," Brian snapped. "I'm talking about a derangement of reality on the deepest and most subtle level."

"I remember him as being... insectoid. When he moved, it was slow and stealthy until right at the end. Then—wham—he was at your throat."

Nancy went closer to him.

Ellen was fascinated by the idea of just sitting across a table from somebody from another reality, if that was the right way to describe it. "You said he was evil. How could you tell?"

"It radiated from him like a stench. Total contempt, total hate. Like nothing you can imagine."

Loi, who had gone to the kitchen, put a plate of bacon and eggs on the table with a bang. "We've got to eat," she said.

Brian took some eggs. "Then I'm going out to make the last try at evidence."

Again, there was that terrible sadness. Poor Brian. Ellen could see how responsible he felt.

Nancy called her boys and they were soon loading plates with food.

Brian stared into his own plate. "We're pawns. I'm my own pawn. Or the pawn of my own inaction. Ironic." His voice went low. "My grief over the loss of my first family has placed my second in mortal jeopardy."

Ellen's heart went out to him, but it was Loi who tended his sorrow, putting her arms awkwardly around his big shoulders.

A moment later he looked up from his food, stood, and without a word strode out the door.

"Gotta go, baby," Bob said to Nancy. They kissed and he hurried off behind Brian.

Ellen watched them go in Bob's sedan, watched it kick up dust at the end of the driveway, then disappear around the corner of the house.

Soon Loi and Nancy began to pack, with Loi cooing over Nancy's humdrum wardrobe as if it belonged to a princess royal. The boys turned on the television. Ellen went over to the picture window and opened the curtains. She stared as far as she could see down Queen's Road.

"You don't wait well," Loi said, coming up behind her and putting her arms around her waist. "Best to work." She grasped her shoulders and turned her around. "Put the fancy monogrammed linens in the cardboard box in the hall."

Ellen worked, but her mind was turning over and over, she couldn't stop it. She was worried about Brian and Bob, and that was a fact. She possessed none of Loi's fatalism.

The two men had been gone thirty minutes by the time the women were finished with the packing. "Loi, we've got to go out and look for them."

"Ellen, I am *waiting*. I will wait a certain time that is in my heart. Then I will

go."

"Do you—I mean—I know nothing about Eastern religions. Do you pray for him? What are you?"

"I am somewhat a Buddhist. As much as Brian is a Catholic. Also, my people have their beliefs. Their understanding." Suddenly she went to the front door, threw it open.

"What?"

"Be still."

The sedan appeared.

The three women streamed out into the driveway, followed by the boys. Brian leaned out of the passenger's window. "Your car's gone, Ellen. Not a sign. Just treadmarks."

"Any—"

He shook his head. "The site was as clean as a whistle."

"So we're leaving, then?" Nancy's voice had an edge in it.

"Let's go, Dad," Chris said.

His younger brother added his voice. "Dad, I don't like it around here at night. There's *bears!*"

They divided into two groups: Ellen and Brian and Loi rode together in Ellen's rental, and the Wests went in their own car. The plan was to continue on to Albany, and meet up again later.

They went in procession down Queen's Road to the four-way intersection where Main became Mound. From here they could see up into the heart of Oscola. "It looks as empty as Towayda did," Brian said. The fact that the roads weren't yet full of refugees seemed a bad sign. He felt sure that each empty house represented a dreadful tragedy. "Turn on the radio."

The Oscola fires were the big story. "Prominent local farmer and professor Brian Kelly" was mentioned as having survived one of the two fires that had struck the Oscola community the previous night.

All the land seemed to be smiling, so beautiful, so completely benign, so harmless.

They were about halfway to Ludlum when they came upon the first sign.

"What's that?" Loi asked.

"I don't know."

Ellen peered beyond the windshield. A cloth object, torn, lay on the roadside. "It's a shirt. Was."

"Look at the red on it." Lois voice was small.

Then they rounded a curve and found a car lying on its side amid a great tumble of possessions. There were shirts and sheets and toys, furniture that had been tied to the top, a lawn mower, an exploded television, all manner of smaller debris.

Brian hit his brakes, and so did Bob behind him. An instant later Bob ran past. Everybody else crowded out of the cars. "It's the Michaelsons," Bob shouted. He clambered up onto the wreck.

"Boys, stay back," Nancy said. She and Loi took their hands. Ellen went forward with Brian.

Bob looked around. "Not a sign of 'em." He dropped back down to the road. The group came together.

"Should I know the Michaelsons?" Ellen asked.

"They're new people over from Rochester," Brian explained. "I don't think the family's been around here more than thirty years or so."

"They must've walked away from it." Bob peered into the woods. His words

sounded hollow in the roadside silence.

"How many kids do they have?" Ellen asked.

"Three," Bob said.

"I think I see someone." Loi was looking toward the tree line.

"Where?" Brian asked. His voice had become soft. He could smell the death, too. They all could.

"Get the kids in the car, Nance." Bob's hand went to his hip. There was, of course, no pistol there. He ran a few feet toward the trees. "Hey there, you OK?"

The figure did not move. But its outlines were clear. There was no question but that a man was standing in the woods about two hundred feet away.

"Hey!"

"Could be in shock," Ellen suggested.

"Maybe." Bob went forward. Both of his sons grabbed him. "Daddy, no," the smaller boy said.

"Get in the car! Nancy, take care of 'em!"

"Stay here, Bobby."

"I'll do it." Brian took a step toward the woods.

"No!" Loi threw her arms around his waist.

Silence fell. Nobody moved. Obviously, the fathers and mothers could not take the risk.

3.

Ellen began to walk toward the forest. Nobody stopped her and that was all

right. "Are you hurt?" she called into the silence. The figure didn't move or speak.

"Everything OK?" Brian called.

"So far." As she walked forward Ellen recognized a new set of reactions—lack of muscle control, extreme tightness of throat, whistling breath. This was a state of fear she had never entered before. Then her vision blurred. She shook away a great flood of tears. Her heart was humming, her face was hot, every cell in her body screaming at her to turn and run.

Brian stayed back, unwilling to leave Lois side, yet also unwilling to completely abandon Ellen.

She took a jerky step forward, then another. This was ridiculous, she was barely in control of her own body. Instincts she didn't even know she possessed were being engaged. If she'd had a pistol she might have done something outrageous, like empty it right into that shadow.

The drone of flies was loud. She could see the definite shape of a man, even that he was wearing a blue denim shirt. "Hello? Can you hear me?"

No reply. She took three quick steps closer.

"Be careful, Elbe!"

She sucked in a breath, let her hands go to fists, and forced herself to step into the forest, pushing aside the leaves of some maple saplings.

Her first clear impression was of a glaring eye. Then teeth, a tight smile. She did not exactly scream, but rather made the kind of gasp of surprised agony that comes from stepping on a scorpion or having a centipede bury its red legs in your thigh.

She twisted against herself, her fists coming up to her throat. There remained a tiny spark of self-control. But when she saw the horrific distortion of the man's neck, she shrank back in panicky confusion. It was a ropy stalk an impossible three feet long. It was the color and consistency of dried beef

jerky.

Then she saw the left arm.

She shrieked, a terrible, inarticulate wail that brought them all running down from the road, even the boys.

Brian was the first into the woods beside her. "Ellie!"

"God help us all!" She threw herself away from it, as if the mere sight of it was a slamming, crushing blow across the face.

Brian gagged, bent double, stumbled back.

Under its ripped, bulging clothes, the body was a great mound of tight, twisted flesh jutting with bones. Knots of muscle and fat distorted stomach and thighs.

The right arm was a bloated dirigible of black, wet skin, covered almost completely with flies. It was as if all the man's fluids had been pushed into that one arm.

The face above the hideously stretched neck was grinning, the teeth visible all the way back to the molars. Unlike the right arm, the head had been sucked of every molecule of blood. It was the face of a mummy, the eyes pulled wide, the cheeks sunken against the bones. Flies raced between the teeth, and the tongue within was the shape and color of a rotted fig.

The neck was as tight as wire, and with every stirring of the air the head bobbed on its springlike neck.

But they weren't looking at the head, not at the swollen right arm, not at the bulging humps.

They were watching in horrified fascination as the left arm grew and grew and grew. It seethed, its fingers turning to claws, its muscles bunching and popping, an awful, crunching creak coming from the torsioned bones.

This was the fate of the people who went to the judge's house: before their

eyes was unfolding the future not only of their little community, but of all mankind.

A smell filled the air, of hot electric wiring, as if a machine somewhere nearby was working at extreme speed.

"We've got to go," Loi rasped.

Suddenly Bob grunted, plunged off into the wall of leaves. He charged forward rapidly, thrashing through the dense foliage. Then he was coming back, and the others saw the dangling arms and legs of a child.

Bob emerged carrying the poor little burden, a dead naked girl. Her hair was blond and long, still done up with a pink plastic barrette. There was no visible damage. Even her skin still seemed to glow with life.

As they got closer, though, Ellen saw that this was very far from the case. In some infinitely delicate and inhuman operation, the outer layer of the girl's skin had been eaten from her body.

And the glow came not from life—it came from something *inside* the child, something packed in tight under the remaining skin.

Ellen had seen them before.

"Drop her! Oh my dear God, *run!*"

Then young Chris cried out, "It's Lizzie!" His voice was high and clear, and stopped the grasshoppers that were singing in the meadow. Chris sat down on the ground. His mother hid her other son's eyes. With a child's insatiable curiosity, he fought her. "I want to see, Mommy!"

"Jesus," Brian cried.

Lizzie's body surged in Bob's arms. "What the hell?"

Grabbing her by the hair, Ellen yanked the child clear of him and hurled the wet, breaking mass of her as far away as she could. The force broke the carcass open and they came pouring out, swarming, their wings buzzing, their

red legs scabbling.

Bob lurched back, astonished, then horrified. He gagged, frantically brushing his chest.

"Evidence," Brian cried, "it's evidence!" He plunged toward the mass of insects. But the father's long left arm whipped around, and suddenly Brian was confronting one of those clawed hands in the light of day.

All of them ran out of the woods and across the bordering meadow, and dove into their cars. "It's evidence," Brian moaned, but he started the engine as the hand swarmed out of the woods and the insects followed in a mass as cohesive as a jelly, dashing toward them like a shark in air. They took off at full speed toward Ludlum and safety.

"They were trying to get away," Loi said. She looked down the road. "They also knew."

"Don't anybody panic!" Ellen's own voice told her that she was about to do just that. Loi heard it, too, and touched her shoulder, a gesture Ellen found curiously reassuring.

She cried a little bit as the car moved down the road. In the front seat Loi sat stiffly erect, staring out the windshield. They climbed a hill, and the tires complained around a sharp curve. The forest was thicker here, drawn close to the road on both sides. They drove in its dense shade.

Without warning Ellen was thrown forward, her head hitting the back of Lois seat. "Brace yourselves," Brian yelled, but too late. The car pitched, there was a terrific jolt, followed by an explosion of white dust.

Silence. Both airbags hung out of their housings, deflated. "Are you OK?" Brian asked. With shaking hands he reached toward his wife.

Loi was clutching her abdomen. "I think so," she responded in a careful voice.

Ellen was completely confused. "The airbags went off?"

No reply. Then, from Loi: "Why did you stop?"

"I didn't. Jesus!"

An enormous coil rose in front of the car, higher and higher, unwinding itself in the light. It was dead black, filled with rushing musculature.

Loi shrieked in short, sharp bursts. Brian leaned back, staring, his teeth bared.

Ellen jumped out onto the road. The thing was coming up from the ground, clumps of flowers and chunks of pavement ripping away as it surged out.

Hundreds of gray threads surrounded the car like a web of fungus.

Ellen tore at them, yanked Loi's door open. She and Brian scrambled out. Ellen struggled, ripping at the curtain of threads. Where they touched her, they made her skin itch fiercely.

There came a piercing sound. Brian shouted, Ellen shrieked, Loi went stumbling back toward the Wests' car. The heavy coils were dropping down on the rental, crushing and pulverizing it.

From the woods came a snapping, sizzling sound. They began to see purple light winking among the leaves.

Then Bob was beside them. "Let's *move*," he cried. The whole group of them forced themselves into his car, crowding in, falling all over each other.

They turned around, going in the only direction they could— right back into Oscola—the trap.

Twelve

1.

The car hurtled down the curving road, pushing through fifty, sixty, seventy. Brian drove hard, the images of what he had seen in the woods building in his mind. Surely those masses of sweat-stirring insects couldn't think, couldn't remember what they'd been. But the other things—those long, long arms, those hands...

The filed nails he'd observed on the hand last night took on a whole new meaning. That had once been a person's hand, those nails had probably been filed in a local home before the horrible transformation took place. Maybe he'd been face-to-face with an old friend.

"It's ail because of me," he said.

"Shut up," Ellen snapped. "Quit apologizing."

"You are not responsible, husband."

"Brian, it's an awfully long jump for me from some esoteric physics experiment to—what we're up against." Bob spoke for them all, Brian felt sure.

"Jump or not, it's real. Otherwise you'd never have been in my facility."

"I saw blue pipe. I can't remember much else. That E. G. and G. logo. It could have been a lot of different places."

"No. That pipe was made especially for us, using an experimental fabrication process. It's unique."

As they passed the Michaelsons' wreck, Brian noticed that Loi closed her eyes. Ellen made a raw, empty sound that could have been a sob. Nancy held her boys' heads down.

The sentinel trees whipped past.

"There," Loi said.

"What?"

"Just where the road curves. Something is moving there."

He floored the gas and they raced past the spot at ninety. Purple light flickered in the corner of his eye. In the seat behind him, Nancy sighed and squirmed. Her younger boy's head popped up. For a moment he drank in the light. "I like that," he cried. "Stop. Stop, Uncle Brian!"

Brian pressed the gas pedal to the fire wall and the car leaped ahead.

Purple light, sizzling sounds... and pleasure—howling, insane pleasure: it didn't hurt to be transformed bone and brain and gristle into one of those vile nightmares, it *felt good*.

"If it looks like they're going to get us, I think we should consider suicide," Bob said.

At that Chris burst into tears. His brother, now sucking his thumb, made no sound. "Bob," Nancy said with soft reproach.

"I don't want the boys to end up like—God help us!"

Ellen barely moved her lips as she spoke. "I want to win this."

"I agree. We must win." Loi slipped her hand into Ellen's, and Ellen laid her head against Loi's shoulder.

They all fell silent, all hearing the same thing—a drumming sound was coming up the road, moving fast.

"The Viper," Brian whispered.

"Let's get the hell out of here!"

And go where? There was only one road between Oscola and the outside world, and this was it. The alternative was to go up to Towayda.

"It's not the Viper," Loi said. "Listen carefully!"

When it appeared, the vehicle proved to be an ordinary pickup, blue and tired-looking. It was piled high with household goods.

Brian got out and walked into the middle of the road waving his arms. He knew the family, of course. It was Jimmy Rysdale and his wife and kids. The Rysdales were really Ruisdaels, one of the original settler families. They had come with the Dutch landowner, the patroon, who had settled the area in the eighteenth century.

When they stopped Bob gave them the story of the Michaelsons, speaking quickly, his voice so low that he sounded as if he was sharing a pornographic secret. He omitted the terrifying details of what had happened next, saying only that something very, very dangerous was guarding the way out of Oscola.

"But you can't cut off a whole town," Jimmy said. "What about people tryin' to come out here? FedEx and stuff, and the grocery truck and the beer wagon? And calls. What about phone calls?"

"Our phone is dead," Loi said. "Was before we were burned out."

"Yeah, well, ours has been dead since last night. That's what decided us."

"Some phones are working," Ellen said. "I got through to the Wests from Ludlum, remember."

Brian thought: you were probably meant to get through. He thought also that the enemy was a careful planner, that he had a remarkable head for details and a highly developed sense of theater. But he was careful. He did not want them to lose what little hope they had, for he did not want death or suicide. He was herding them into his lair.

Jimmy Rysdale was on the near side of fifty, balding and a little dumpy, but a

good farmer and a smart businessman. He owned a piece of a specialty lumbering operation that made out pretty well. He and Brian had hunted grouse and deer together, and Annie made about the best venison sausage in the Three Counties. Their youngest, known as Annie Junior because she looked so uncannily like her mother, was ten, solemn, and said to be a math whiz. Their boy, Willie Rysdale, was a starting pitcher for the first time this year on the Oscola Patroons, and a pretty good one from what Brian had seen.

"Let's go, Jimmy," his wife called from the truck. She had red O'Shaughnessy hair, and the flashing green eyes of that clan. "Jimmy, start the truck. We're getting out of here!"

"I don't think that'd be such a good idea," Brian said. "Our enemy must know he can't keep a town isolated for long."

Jimmy stared off down the road. "Which might also mean this is the last chance."

"It's past that, Jimmy."

Rysdale did not respond directly. "We're gonna spend a couple of weeks with my sister in Saratoga, make a few visits to the track." The races would be in full swing down there at this time of year.

He got back into the truck.

"Mr. Rysdale, don't do it," Ellen said. "Think about your kids!"

Jimmy looked at her in amazement. "What the hell do you know, Miss New York hotshot newspaper lady?"

"Too much," she said.

Jimmy lowered his head, closed his eyes a moment. "Them things that've come," he said in a mean voice, "we hear 'em tunneling under the house."

"They want us," Annie said, "they're gonna get the kids!"

"Shut up, Annie! The less we talk about it, the better."

"We can tell these people, Jimmy! They're like us, they won't go to the judge's. So them things, they were coming up under the house. And the closer they got, the more you could hear... voices."

"It was people screaming, Mom!"

"If we could get word to the military," Jimmy said, "they could come in here and fix this. That's why we have to leave, it's not just to get away. We aren't quitters. It's for patriotic reasons."

Brian shrugged his shoulders. "What're you gonna do? Who're you gonna tell?"

"You tell people the truth, you're gonna end up in a padded cell like I did," Bob said.

"We've been trying and trying to get physical evidence," Brian added. "Now that we're trapped here, it's there for the taking. We're up against something very smart, very careful, very determined. And why not? He's fighting for his life, just like us."

"With every blow, a demon grows stronger. To fight back we must be cunning also." Lois eyes were steady. She believed in her demons as much as she did in her own breath.

Brian recalled the sound of little Lizzie Michaelson's body falling open, the soft, tearing whisper of the skin parting, and then that hideously energetic buzzing as her contents spewed into the air. In the thoroughness of its evil, the attack was indeed profoundly demonic.

But there was another side to that, wasn't there? The old Greek word for demon, *daimon*, also means soul, or source of knowledge. To look into the eyes of the demon was to see the truth.

There was movement in the pickup and Willie emerged. He was still his handsome, athletic self, but he looked as if he'd been crying. "Let's get going,

Dad." His voice was sullen.

"The Michaelsons," his father said, gesturing ahead. "We don't want that."

"So we don't pull over or slow down or do whatever they did. Come on, Dad!" The boy hefted a shotgun, pumped a shell into the firing chamber with an efficient snap.

Now the daughter came down off the truck. "I don't want to die." She tugged her father's sleeve. "I'm staying here, Daddy!"

"Shut up, sis!"

Jim Rysdale looked down the road. Brian followed his eyes. "You could go examine the Michaelson wreck, buddy. Convince yourself."

Willie climbed up into the truck bed, stood behind the cab and ported his gun. "Let's move out, Dad."

Just then something shifted behind the roadside screen of trees. All eyes turned.

Loi saw it first, a slick black worm a foot in diameter uncoiling in the grass. Locusts leaped away from its gliding progress, as it exuded itself from the ground, its tip probing ahead.

How quick you are to make your point, Brian thought.

Bob was the next to see it. He cried out, an inarticulate bellow. Willie fired his gun, which discharged with a bone-jarring boom. The pellets tore through forest leaves with an angry clatter.

Pouring blood, the worm slid back into the ground. "See, Dad? Now, let's go."

A hand shot out of the woods on a long black arm and dug into Annie Junior's hair. It started dragging her toward the woods. She was too stunned to cry out, but her eyes widened, her hands went up and fluttered uselessly against the thing.

Her mother's fists went to her temples, her whole body lurched as if she'd been gut shot and she shrieked, a raw, resounding cry of astonishment and anguish. "*My baby!*"

Willie aimed his gun. Now Annie Junior shrieked, kicked, tore at the claws.

"You'll kill her, Willie!"

"I can get it, Mom!"

Loi started after Annie Junior. Brian didn't even have time to call her before she had her arms around the girl's waist. Then she was ripping at the shrieking child's hair, trying to extract it from the monstrous fingers before the long arm retracted into the woods.

Brian could see more coils gliding up among the leaves, their hands flexing, claws spreading.

Loi and the child were moving fast now, their bodies making a rasping sound as they were dragged across the summer-dry grass. Loi's stomach ground against the earth.

Brian ran after her. Stretching out his arms, he hurled himself at their feet and grabbed his wife around the legs.

The poor child's hair was torn right out of her head, and she screamed in agony.

The hand shot into the air on its long, curving arm, its fist full of bloody blond tufts.

"Baby, baby," Annie cried, dashing to her little girl.

There was a thunderous boom and the shotgun spat white smoke. The shot slapped the wall of leaves and the gray shapes within undulated.

Then Annie Rysdale had her daughter in her arms. The child was bawling, gripping her temples with fists like gnarled white nutmeats.

A moment later the two vehicles were speeding off in the direction of the town. To relieve the congestion in the Wests' car, Brian and Loi rode with the Rysdales. Annie Junior was on blankets in the truck bed, cradled by her mother. Willie was with them, clutching the shotgun to his chest.

Brian put his hand on his old friend's shoulder. "Jimmy buddy," he said.

"They are from the world underground," Loi said. "They've broken loose. We must get them to return to their world."

"That may not be possible."

"That was a very brave thing you did, Loi. I don't know what to say—you saved our baby."

"You would have saved mine."

2.

All the way to the Wests' house they saw broken telephone and power poles, lines down everywhere. Just in the past half hour, great destruction had been done. Worse, they observed half a dozen more wrecks along Route 303, and a tall column of smoke rising from the direction of the Jackson place out on the Towayda Road. This time there were no sirens raised in response.

When they arrived back at the Wests', Pat and Jenny Huygens were waiting in their car with the windows locked. They opened them as the little caravan drove up. "Bob," Pat said, "you gotta get the state police—"

"I'm gonna try to use my radios."

Everybody went into the house. They made sure all doors and windows were closed, and most of the windows curtained. Nobody wanted to risk so much as a glimpse of the purple light, day or night.

During the next hour more people came, drawn to the authority represented by Lieutenant West, and because they saw the other cars there.

The growing carnage along Route 303 had been what turned them all back.

In addition to the Rysdales and the Huygenses, old Mary Yates, Brian's cousin Dick and his wife Linda, and Father Palmer from St. Paul's church came. He was followed by the Reverend Simon Oont, the Dutch Reformed pastor.

Dick and Linda brought a bucket of fresh eggs, which made more sense than the family heirlooms and favorite clothes that tended to clog the trunks of the other cars.

"We're the accidents," Brian said, "the ones who've been missed."

The seventeen people present cramped Nancy West's living room. "We oughta go on a rampage, kill 'em all," Dick announced.

"That'd be smart," Bob responded. He'd been trying his handheld radio. It appeared to be working, but he couldn't break in on any of the calls. "Funny, the division's still patrolling the Northway as usual. No emergency's in effect or anything."

"Don't they ever come back in here?" Jenny Huygens asked.

"Not normally. Just the sheriff."

Mary Yates barked out a laugh. "So *that's* why we're being eaten by devils from hell."

"Let's inventory our weapons," Bob said. "We have to know where we stand."

There were five shotguns, seven deer rifles, a couple of .22s and five pistols.

"We need a plan," Mary Yates said. "We need to sit down and work it out right now."

"The things are getting bigger and stronger," Jim Rysdale responded. "How do you plan against that?"

Brian wished he had more information. But he could scarcely imagine the bizarre permutations of his elegant theories that had led to this disaster. A

theoretical particle traveling back through time doesn't lead to... monsters. "I suspect it's going to go very quickly now. I doubt we'll be left alone for long." He looked around him. "My thought is, every single survivor from Cuyamora County is right here in this room. Look at it this way: we've been very efficiently rounded up. Now for the *coup de grace*."

"I think you're right about that," Father Palmer said.

"I have an idea," Dick Kelly announced. "I say we work out a fuel line from Fisk's to the judge's root cellar and pump as much gas as we can down there. Then just strike a goddamn match." Dick had black hair cropped close at the back and around the sides. The curls left on top looked curiously artificial, but Brian knew that they weren't, having yanked at them many times when they were boys.

"A two-mile fuel line—that's a technical problem and a half," Pat Huygens said. He'd been a civil engineer. He was retired now. "What're you gonna do, get every garden hose in town?"

"Well, maybe something like that."

"Those old pumps over at Fisk's aren't going to move a volume of gas like that. Even if you got the line charged somehow or other, the gas'd be too heavy for 'em. You wouldn't even get a dribble out the other end."

"We could use a tanker truck. Could we get one?" Dick looked from face to face.

Everybody knew the answer, so nobody replied. The closest gas tanker would be at the Texaco distributor in Glens Falls.

A sound outside set everyone to frantic activity. In moments every window in the house bristled with gun barrels.

A blue Acura Legend came down the driveway and parked.

"It's Dr. Gidumal," Loi cried. She went out onto the porch as the Gidumals got out of their car.

Nobody went down the steps, though. Sam and Milly came in quickly. Their real names were Sanghvi and Maya, but the town had changed them to something easier to remember.

There were brief greetings, people automatically observing amenities that were now meaningless. Then Dr. Gidumal was taken to Annie Junior, who was lying on the Wests' bed with a blood-splotched turban of towels around her head.

Dr. Gidumal, it developed, had tried to call the hospital this morning. An investigation had revealed all the phone lines down. Then the power had failed. They'd been picking their way out toward 303 when they'd seen the cars here. They knew nothing of what had happened, and had difficulty believing what they were told.

As Loi watched and listened, she grew increasingly impatient. They were letting time pass, maybe too much time.

"To fight something this powerful," Milly Gidumal said at last, "it would seem important to know exactly where it is weak."

Brian shook his head. "I probably ought to know, but I don't. I mean, I was working on a project in theoretical physics."

"They are demons," Loi said. "We cannot fight them directly." There was acid in her voice.

Ellen disagreed. "This all has a scientific explanation. It seems like something supernatural only because we don't understand it."

"What does *she* know," Mrs. Yates commented *sotto voce*.

Ellen heard, and turned to her. "If hell's opening up, we obviously aren't going to get away. That's the trouble with that kind of thinking."

"Father," Pat Huygens asked, "could a door to hell actually open?"

"Well, now, we're not sure about that. But I suppose it might."

"I concur," Oont announced solemnly.

"We're ignorant, helpless and we don't have much time." Brian looked from face to face. "That's the truth of it."

"What about the judge? Maybe we ought to go over in a body and interrogate the judge." On the surface Pat Huygens' suggestion was reasonable.

"An awful lot of people have gone there and not come back," Ellen said.

"We stay away from the judge, folks." Brian put all the authority he could into his voice.

Willie Rysdale flared at him. "I say we take every gun we got and go over there and shoot everything that moves, then torch the place!"

People glanced nervously at each other.

"I'm capable of facing who I have to face," Loi said. "But I don't think we should attack frontally." She regarded the Rysdale boy with cool eyes. "Only fools do that." Her words caused a silence. She was not used to being the center of attention, and she felt sweat tickling her temples. But she continued. "I was born to war, raised in battle. This is war, I am a soldier. And you, Bob, you also."

"You won our war, don't forget," Bob said.

"The Americans were brave."

Bob nodded slowly, regarding her. The feelings now passing between these two former enemies were very deep.

"What about your baby?" Ellen asked. "You're not exactly strong."

Loi tossed her hair out of her eyes. "If I fight, my baby has a chance. If I don't fight, he dies."

"I say we form a box and go out armed to the teeth. We fire at anything that moves."

"That might work!" Willie's father was enthusiastic, but nobody else supported them. People were trying to imagine themselves winning a pitched battle, and having a hard time doing it.

"Maybe we should wait to be rescued," Bob said.

Brian thought that was at least as dangerous as the banzai charge idea. "Bob, that's a gamble. I mean, I'm looking at this as a minute-to-minute thing."

"Let's go!" Willie hefted his shotgun.

"We've got to have a more practical plan," Loi said.

Father Palmer, who had been in the kitchen with Nancy trying to put together food for the group, now returned to the living room. He was carrying a tray with boxes of Wheaties and Quix cereals on it, a couple of dozen boiled eggs from the bucket Dick had brought, a bowl of pickles and some salami. "Let's all try to eat," he said. "We need food."

"What's your take on this, Padre?" Pat Huygens asked. "The door to hell gonna close, or do we all gotta burn?"

Brian respected Father Palmer, but a theological explanation wasn't going to work. "I think we'd better forget fighting and concentrate on survival."

"My husband is right," Loi said. "It's getting toward noon already, and the last thing we want is to be caught in Oscola after the sun goes down."

"God save us," Reverend Oont said.

"Somebody sure as hell better," Mrs. Yates responded.

That stopped conversation. Husbands and wives moved closer together, gathered in their children.

Morning was gone, and the shadows of afternoon were emerging. The day was no longer young.

Thirteen

Loi was watching the street. "There are clouds forming up again off toward the Jumpers." She looked back at Brian. She feared that her husband felt helpless, that he was freezing like an untried soldier.

She listened to the murmur of voices. So many people were here, most of them not well known to her. Except for Bob and Nancy, she had made few friends in Oscola.

Even so, she wanted them to live, all of them. If they would not find a way out for themselves, she would do it. Her hands went to her belly, to the baby within. No demon could attack a baby, young innocence was too powerful, it drove them back.

But she could lose her baby.

Mary Yates, the owner of Mode O'Day Fashions, where Loi often shopped, suddenly rose from the couch. "OK, folks, this is official. I've panicked. So what I'm gonna do before the shadows get another inch longer is, I'm just gonna drive right on up the Towayda Road, turn out when I get to Corey Lake and go down that old logging track up there. I can slip right across to the Northway. I'm asking for volunteers."

Jim Rysdale narrowed his eyes. "You gonna do it in your Oldsmobile, Mary? That logging road's probably washed out up beyond the first ridge line. God knows, nobody even hunts back in there anymore."

"It may be hazardous, Mary," Sam Gidumal said. "If you were to get stuck, you'd be helpless."

"I've got front-wheel drive." Again she glanced out the window. "Better than being shut up in here waiting to die."

"Mary, *please!*" Nancy held her boys close to her.

"Daddy says we gonna commit suicide," little Joey said. His voice was hushed, exactly as it would have been at a wedding or a funeral. His brother shushed him, then glanced over to their mother for approval.

"Look," Mary said, "I don't want to commit suicide or die or end up God knows what way, like the folks that got caught out on 303. Which is why I'm going to take my rifle and my pistol and I'm just gonna go." She smiled, but her fingers were twisted together like a tangle of worms. "Jimmy's right about one thing, though. My trip's gonna be dangerous. I need another car at least, in case we have to help each other through."

Loi pulled back the curtain. "The clouds are getting dark. That logging track won't be passable in another hour."

"All the more reason to get our tails in gear."

"I'll go," the Reverend Oont announced. "I have my four-by-four Cherokee. We can leave the Olds here."

Mary went to him and threw her arms around him. Others milled. Nobody seemed ready to follow them. Father Palmer wished them luck.

Brian watched Loi as she went to the table and carefully ate a hard-boiled egg. Rather than cracking it against the edge of the plate, she cut the shell with a fingernail, and removed neatly cut squares of shell.

There were hugs all around, and more than one pair of eyes went wet as the two prepared for their departure. Oont had no guns, so he and Mary split her stash. She took the rifle, he the pistol. She also had a shotgun, an old single-shot small-gauge of no particular value.

Loi also was planning an attempt to escape. But it would be carefully designed, not thrown together slapdash like this. She wished them the best, but she was filled with foreboding.

Concerned that she keep up her strength, she ate her egg. "Brian," she said as she returned to the living room, "I want you to eat." She handed him another egg, and he cracked it against the arm of a chair. Bits of shell went

everywhere.

Mary put on her canvas hat and Oont buttoned his hunter's vest. Together they looked about as defenseless as two human beings could be. Oont was a pallid man, small, with the eyes of a big puppy and a disposition to match. Mary had her little bit of bluff, but she wasn't going to scare a half-blind housefly for long.

"I want you to think again," Loi said. "We're best off staying together."

"So come!" Mary's voice had a high, edgy note to it.

At that moment they heard a sort of subtle, fluttering sound— more a feeling, really—from under the house. "That's what we had," Jenny Huygens whispered harshly. "That precise noise." She looked at the silent, frightened faces around her. "It's down there right now. Under us."

There was a hurried conference in the Rysdale family. Willie was even more vehement about putting up a fight. His mother's face became the color of old wax. Then Jim stepped forward. "We'll go with you, Mary." Annie Junior buried her face in her mother's dress.

"Thank you, Dad," Willie said. He slapped his weapon. "I wanta get my licks in!"

The fluttering came again, this time strong enough to shake bric-a-brac on the shelf above the TV and rattle the dishes on the table. "There ain't a lot of time, folks," Mary said.

Along with Mary and the Reverend went the Rysdales, a total of six people. "I don't want to be here when it breaks through," Annie explained. "I've been through it, and once is enough."

Loi went to Brian, put her hand in his. Ellen had stuck a big kitchen knife in her belt. She stood before a shelf, examining a portable shortwave radio, blinking the tears out of her eyes. "This work, Bob?"

"I can pick up China with that Sony. But remember we had trouble with my

portable."

"You couldn't transmit. But this is a receiver." She turned on the radio, began twisting the dial.

The Yates group went out onto the porch. Loi drew open the curtains in front of the picture window. She saw them get into Reverend Oont's 4x4 and the Rysdales' pickup.

As they were leaving, the earth stirred again. Nancy's bric-a-brac trembled, the ceramic elves shook, the imitation Dresden figurines danced.

"If there's a tunnel getting dug under the house," Bob said, "maybe we all ought to go."

"No! We stay." Loi backed away from the window. One of the figurines fell with a crash from its shelf to the top of the TV. Its head popped off and rolled to the floor.

Outside, the two vehicles were moving out into the road.

From the basement came a soft grinding sound. "I think we're making a mistake," Bob said.

"Why don't you join them, then?" Loi's voice was sharp. Brian was worried about her and Bob. The more this became like war, he thought, the more the buried animosities of these two rival soldiers were apt to surface. They needed work to do, something to focus their energy. Brian searched his thoughts, trying to find a sensible way of fighting back. "We need to locate the facility," he said at last. "That's the key."

Bob nodded, but said nothing.

"You have a way of doing this?" Loi asked.

Ellen came over to them. "It could be anywhere."

"It's here. Everything is happening here. The way I visualize it, they've linked up with some parallel universe, working from my equations and using some

incredible hybrid of my equipment"

"Could you also have done this?" Loi asked.

"I was working with the scientific equivalent of a black-and-white photo. Whoever has control of my facility has evolved my equipment all the way to the era of three-dimensional TV."

The group was beginning to move out onto the porch to watch the caravan leave. Brian and Loi followed them.

The air was warm and laced with the fragrance of Nancy's roses. Birds sang, a butterfly fluttered across the lawn. The near view could not have been more normal. But there was also a long loop of ordinary telephone cable lying in the street, and a power line sparking intermittently at the intersection. Reverend Oont's Jeep rolled slowly forward, followed by the Rysdales' pickup. Willie stood in the back balancing against the cab, his Remington in his arms.

Father Palmer began to pray, "Our Father who art in heaven..." A ragged chorus picked up the prayer. Brian joined, wishing more than believing.

The two cars rounded the corner. As they disappeared, their engine noise was absorbed by a stand of fir.

Even so, nobody went inside. Far from it, they kept praying.

Not twenty seconds had passed before they heard the unmistakable crack of a rifle. The prayer gained intensity. Veins rose on necks, hands clasped hands, eyes closed. There were three more cracks, then a fusillade. The prayer died, the little group closed in on itself.

Mary's old shotgun boomed once, its echoes slapping off against the hills.

Into the breathless silence that followed, there came a single scream. It was deep and awful, a man's cry. Linda Kelly sobbed. Nancy said, "Kids, get back in the house." As she went in, she herded them ahead of her.

More screams followed, as high and lost as the voice of the wind on a wild

winter night.

"God help them," Father Palmer cried.

Crackling sounds erupted, the angry rasp of electricity. Despite the sunlight, purple flashes were visible above the tree line. The screams went on and on, and Brian realized that he was screaming, too, everybody was, everybody except Loi and Bob, who walked side by side down the driveway. They had armed themselves with shotguns.

Brian forced himself to follow. He passed Father Palmer, who was now on his knees, his fists closed and raised in supplication or anger.

With a dull thud a blossom of flame rose into the sky beyond the trees. A single tire, smoking, came rolling down the slight incline and back into Queen's Road. It stopped, fell, and lay in a haze of rubber-stinking smoke.

Dr. Gidumal held his hands to his temples, his eyes wide, his teeth clenched.

As the screaming died, Brian was astonished to hear music. For a moment he was confused, then he realized that it was WRON, the Voice of the Adirondacks out of Glens Falls. They were playing an oldie, Nat King Cole's "Mona Lisa." Only seventy miles away, and they had no idea what was happening here.

Then he saw a long, thin coil rising out of the smoke, rising high above the line of pines that blocked the view of Main. "Jesus Christ, look!" It waved in the air like a vine, and at the end it held something.

Loi and Bob raised their guns, calmly aimed and fired. The vine reared like a snake and a black dot came arcing across the sky, falling right toward them.

Bob fired again and the object was deflected, spinning wildly. It fell into the street twenty feet away.

Then there was silence. The cable or snake disappeared.

"Bring a blanket," Loi called. "Cover it."

Brian saw that it was a head. He recognized Willie Rysdale's young face, frozen in a drum-tight grin. "I'll get one," he shouted.

"Brian," Nancy shrieked as he came through the front door, "Brian, something's *down there!*" She was staring at the entrance to the basement, her eyes wide.

"Get out of here."

"Oh, God, Brian, where will we go now?"

"Hurry up," Loi called. Her voice was as high as a girl's. Brian grabbed the tablecloth and started for the door.

As he returned to the porch, he saw that the head was still somehow alive, the face working.

Loi and Bob both fired at once, fired again and again. The boy's head danced in the street, split as buckshot slammed it.

Brian reached their side, waving the tablecloth. "Loi, be careful. That gun's got a lot of kick."

"I can fire a shotgun, Brian." She pointed with her chin. "Don't let them see. Cover it."

The head was still alive, its left eye blinking spasmodically, the tongue flapping in the mouth with a sound like a moth fluttering against a screen. One blast had gouged the left temple, the other torn off the forehead, exposing an interior complex with thick green folds where the gray brain ought to be.

Brian saw then that the shattered eye was looking at him.

He sensed that this was no longer the face of Willie Rysdale. It was *him* from the other side, a self-portrait.

The eye blinked fast, then the muscle around it tightened. As Brian moved, the eye followed him.

He thought it looked hungry.

Loi fired. Brian threw the cloth at the head rather than covering it. He didn't want to go any closer to it.

More shots followed, and Brian realized that Loi and Bob were not firing at the head, but rather at something farther down the street.

A thick coil had slid across the intersection. It shone in the sun, dripping as if just washed or just born. As the echo of the shots retreated into the woods, he heard a bizarre mix of sounds, the lazy ratcheting of summer bugs, the strains of "Memories Are Made of This" from the radio, and the fan-quick fluttering of Willie's tongue.

Nancy and her boys rushed out of the house. "It's on the stairs," Joey shrieked.

"There's something coming from under the basement door," Nancy wailed, falling into her husband's arms.

"Get a grip," Loi cried. "What's there?"

"Threads," Nancy said, "long black threads."

"They're sticky," Chris added. "Really sticky."

"They're getting thicker," Joey said, "like earthworms get if you touch 'em."

"Bob," Loi asked, "have you got any gas in your garage?"

"Well, yeah, for my lawn mower."

"We have to burn the house."

Nancy's mouth dropped open. "The hell you're gonna burn my house, you damn *gook!*" She planted herself before the door, her legs spread.

From inside came an ominous sputtering.

"Burn it now," Loi shouted. "Do it, Bob!"

Bob hurried into the garage, came out with a five-gallon tin of gas.

"You are not gonna do this, Bobby West." His wife took the can from him. "Not you." She put it down.

"Get it, Brian. Pour it in the basement window. But you be careful. If anything down there starts toward you, run!"

Brian felt the gas sloshing in the can, looked into Nancy's raging eyes, at their diamond-hard anger, their wet, glistening fear. She spat. Nancy West, a woman he had known since they were babies, spat right in his face. He felt it against his cheek, trickling slowly down. With his free hand he wiped it away, advancing toward the basement window.

"Cover him," Loi told Bob. Then she smashed in the window with the barrel of her shotgun. Methodically, she put it to her shoulder, braced and fired two shells into the basement in quick succession. The response was a dense splash, as if a huge bladder full of oatmeal had burst.

"Dick, Linda, let's go in and get the weapons," Bob said. "But don't take any chances."

The three of them ran into the house, returning moments later with rifles and pistols. "Those things—they're all over inside," Linda said, "oozing along like slugs."

"One of them touched me," Dick said as he distributed the guns.

Brian stepped forward and started pouring in the gas. He could see coils undulating, thick and wet. A segment of heavy black flesh passed the window, and he saw goose bumps form on the skin where the gas splashed against it.

Then the can was empty. Brian looked to Loi. "How do we—"

Before he could protest she squatted, producing a book of paper matches. As she lit one and tossed it into the basement, he jumped back.

A blast of fire roared out of the window and Loi was rolling away, struggling to protect her belly from the violence of the motion.

He grabbed her, brought her to him, pulled her away from the fire-choked window. "I could've done that!"

"This is no time for discussion. We have to act."

A great surging movement began in the basement, in the fire.

"We've got to go to another house." With that Loi got a rifle and crossed the street to the Gilbert Swanson place. Gil and Erica were just gone, like most of the rest of Oscola.

Ellen, who had taken the shotgun Loi had been carrying, now blew the lock off the front door. They entered the house.

Nancy hesitated, looking sorrowfully back at the flames roaring out of her basement windows.

"You would have been caught," Loi said, attempting to console her.

At that moment a gigantic object rose past the smoking living room windows, burning with deep red flames, yellow smoke pouring off its black flesh. It came slopping up out of the basement amid clouds of smoke and steaming, pearl-gray masses of what appeared to be boiling mucus. The house around it disintegrated into kindling, couches and beds and books and appliances tumbling down its sides like foam on a wave. For a moment the humping thing had a roof.

The refrigerator, still festooned with messages and Chris's prized drawings, smashed down into the yard five feet in front of the West family. When it hit it flew open and covered them in frozen steaks and Healthy Choice dinners, vegetables and cans of Coke, leftover green beans and low-fat desserts. "I got a ice cream sandwich," Joey yelled.

Nancy staggered back, soaked in milk and orange juice, and went stiffly in the front door of the Swanson place without so much as a glance at Loi and

Ellen.

"Now it knows we'll fight," Loi said. "It knows."

"He knows, Loi. I was with a person. Somebody."

"Very well, Bob. *He* knows."

Brian realized that his wife had just saved them all. She'd fought, just as she said she would, and Bob had fought beside her. He hoped their alliance would last.

This house was not as full as the last one had been. Seventeen people had dwindled to thirteen. Loi inventoried the little cadre. There were Wests, with Nancy in tears and her boys clinging to her. Then Sanghvi and Maya Gidumal, gentle souls, incapable even of firing a pistol. Brian's cousins, the Huygenses, who would probably fight like dogs if called upon. Then there was the priest. She tried to visualize Father Palmer in battle. Forget it.

Her question was, would these people respond to her as a leader? They needed her, she saw that. Unless she gave orders, nothing happened. Not even Bob could assume the role of the officer.

Very well, she would try. "We will wait until sunset, then get out on all-terrain vehicles. We know that things are OK in Glens Falls, from the radio. If we move fast, maybe we can use the cover of dark to make a run for it." Her idea was a good one, she felt, if it could be carried out. "We need to find some ATVs."

"I think we ought to be as quiet as we can, too," Brian added.

"Why?" Father Palmer asked.

"Something operating from underground probably uses sound to find things on the surface. The quieter we are, the better."

"We could create a diversion," Ellen suggested. "Go across the street, turn on the radio in that other house."

"The Cobb place?"

Loi joined in. "After we've found the ATVs, we go upstairs, stay absolutely silent until dark. Then we move."

Would it work? Brian had no idea. But he did know one thing: by their calm courage Loi and Bob had pulled the whole group together. They were no longer a helpless rabble of scared civilians, they were an organized band.

"The hard part's gonna be getting the ATVs," Dick said. "If none of the houses around here have them."

Loi addressed Ellen. "You go turn their radio on. Turn two radios on. And the TV, and the dryer. Leave it on its longest cycle."

"The dryer?"

"Put a shoe in it. We want voices and thumping. Like we're all in there."

Ellen met Loi's fiery eyes, and did not even consider refusing.

"Now," Loi said, "please, at once."

Ellen went into the yard, watching the raging destruction that was still unfolding across the street. The Wests' house was unrecognizable, an exploded belly choked with burning worms. The air was thick with oily smoke that stank like fish that has dropped down into the coals at a cookout. She turned away, her throat closing, and coughed—gagged, really—into her hand.

"Hurry up," came a sharp voice from behind her.

"Right, Loi." As Ellen hurried toward the Cobb house, others fanned out through the neighborhood searching for ATVs.

Only when she had reached her destination did Ellen think of something that even Loi had missed. It was stupid and obvious, too. They couldn't turn on radios and appliances because there was no electricity. They'd been listening to a battery-powered Sony at the Wests'.

There had to be an alternative. What would make noise in a house with no power? Turn on the water? Not in Oscola—each house had its own well, and the pumps were electric.

Fortunately they hadn't locked up, so it was no problem to open the front door and enter the world of these strangers. She had only the faintest memory of them. The wife was chunky, he was tall and had heavy glasses. Children? Yes, there was a toy truck lying on the floor near the television set. On the coffee table was an ashtray full of cigarette butts and a copy of yesterday's *Post-Star*, the Glens Falls paper. No *Gazette*, of course.

She went into the kitchen and tried the water, which ran weakly as the holding tank drained.

What to do?

The recent use of lawn-mower gas gave her an idea. She went into the garage, and found exactly what she needed.

She tugged their power lawn mower into the kitchen, leaning it on its side to fit it through the door. Then she pushed it into the middle of the family room. The mower had a dead-man's bar, which she fastened down with a tieback from one of the living room curtains.

It was a pretty room, if your taste ran to big floral prints and tufted recliner chairs. A game of Scotland Yard lay open on a card table. Beside it were some glasses of Coke, flat and warm. They'd been playing a family game when they'd gotten right up and just gone.

She pulled the lawn mower's starter cord. It was stiff and didn't give easily. On the first stroke, the engine rattled. Again she pulled it. There was a smell of gas now—which reminded her to look in the tank. Nearly empty.

She wondered how much longer she would live, and tasted bitter acid in her throat. "I've never even had a damn baby," she thought, and pulled the cord with a fury. The mower buzzed—and shot off into the couch. Tufts flew as the blade sucked up the ruffle and started eating a cushion. She grabbed the machine and yanked it back, eventually managing to disengage the gears.

Tamed at last, it sat there clattering and vibrating and belching fumes. She went back to the garage, got a gallon tin of gasoline she found against the far wall, took it into the house and filled the mower's tank until it was brimming.

She went out onto the porch, trotted down the steps and into the street. She was appalled to see that poor Willie Rysdale's head was out from under the cloth. Worse, it had transformed, becoming a mass of black cords with hooks on their tips. When she drew close the cords all stiffened toward her, straining the wicked hooks in her direction.

The intact eye glared at her.

A shot rang out and the thing bounced off up the street in a spray of blood. Loi had been covering her from the porch. Another shot slapped into it and flung it farther. Lying across the end of the street Ellen saw two gigantic black objects like huge, supple tree trunks lying side by side. They emerged from the forest on one side of the intersection and disappeared into it on the other. They must have had a diameter of twenty feet or more. How long they might be she couldn't even guess.

At last the head was lifeless, a limp tangle of cords and vicious hooks. Another look up the street revealed two more of the huge, slick pipe-like objects sliding into place.

People were returning to the Swanson house. Pat Huygens was riding a very new-looking Suzuki Quadrunner. The others had cans of gas, Father Palmer had some bottled water, Dick and Linda Kelly had bread and cereal and other supplies.

To Loi it was a disaster. A single ATV was no help. "Now we go upstairs and wait," she said. "Nobody walks around, nobody talks." She looked at Joey and Chris. "This means you."

"Yes, ma'am," Chris said.

The group climbed the stairs and spread out in the large master bedroom. The boys sat on the bed munching Count Choculas from a box they'd found in the kitchen. After a time Father Palmer moved quietly toward the door. "Come

back, Father," Loi said.

"Loi, I—"

"He wants to pee," Ellen said. "Right, Father?"

The priest nodded.

Loi doubted that the old man could be quiet enough using the toilet. "Get a bucket, put a towel in the bottom and do it there. No bucket, then either hold it in or use a corner of another room. You don't want to splash in a toilet or risk a flush."

He crept off.

Loi addressed their situation. "We have the problem of only one vehicle."

"There's a Jeep in the garage," Jenny Huygens said.

"We cannot use a Jeep. Our chance lies in going through the deep forest. No Jeep can do it."

"Then we have to go into town," Dick said. "Henry Fisk's a Suzuki dealer, he's got a bunch of Quaddies."

Father Palmer returned.

Bob spoke. "I look at it this way. The longer we hang on here, the more likely we are to see rescue."

Loi gave him such an appraising look that Brian worried that there might be friction brewing between the two of them after ah.

"It's dangerous to wait," she said. As this terrible day went on, she was becoming more and more uncertain of him. He'd been with the demons, deep in their tunnels and caves. They were invincible, incredibly cruel. So why had he been allowed to leave? Had he been possessed? Was he a spy, or an unfaithful adviser?

Perhaps. But when the two of them fought side by side, it was good.

She returned to her post at the window. The sun was down in the sky, the shadows had grown long. From the Cobb place there came a satisfying grumble of sound. She could feel her friends behind her, sense their desire to live.

This desire was universal, but life belonged only to the lucky and the strong.

Her baby moved within her. She was tired and hungry, and the stretched skin below her belly button ached. When she walked, she could feel the motion of the water in her womb.

Her baby... she laid her hands lightly on both sides of her stomach, closed her eyes and imagined that she could hear him dreaming dreams that would one day be woven into the future of the world.

If it had a future.

Fourteen

As people must have hidden at the back of caves when the world was still wild, the straggling, miserable band of survivors huddled together in the Swansons' master bedroom.

Loi considered them, Brian's cousin Dick and his wife, Linda, Bob and Nancy West and their boys, Father Palmer, Ellen, Pat and Jenny Huygens. The Gidumals, she noticed, had quietly gone. As long as Dr. Gidumal had been here, she'd felt a little less uneasy about her pregnancy. "Where are Sanghvi and Maya?" she asked in a whisper.

Nobody answered.

Loi had more to say. She spoke as softly as she could and still get some authority into her voice. "Since we didn't find enough ATVs here, we've got to walk into town to get what we need. We must live like fighters. We must give all to the fight."

"I don't think we need VC propoganda to pump us up," Bob said mildly. " 'We must give all to the fight.' That was one of your slogans, I remember it well."

"Then perhaps you'd like to go out and ask the demons to dance."

Bob's face flushed with anger, but he spoke softly. "I think we can hold out right here if we stay organized and don't get crazy."

"Whisper," Loi said. She was beginning to feel as if she was fighting them for their own lives. "When something comes up through the floor and every other house is gone, then what?"

"That's not necessarily going to happen."

Loi had had enough of his reluctance. "You were with them for hours. What did they do to make you a coward?"

For a moment he looked ready to strike her. Ellen broke in, supporting Loi. "If she's right, what happens? What's your alternative?"

"We're organized. We shoot, and not at random."

Ellen's support helped Loi stand up to Bob, which was not easy for her to do. "When do you imagine that this rescue will take place? Ten minutes from now? An hour?" She tried to use her most reasonable tone of voice, but inside she was ready to scream.

"I don't know when. But inevitably."

This faith in rescue was typically American, and she was afraid that she would be unable to prevail against it. "If we were going to get saved, it already would have happened."

"I don't want to hear that," Father Palmer responded. "I think we should pray and hope."

Pat Huygens went to the window, looked out. "Niagara-Mohawk ought to know that there's a problem here, but where are they? And what about NYNEX? Where are the telephone trucks? We've been cut off. That's the reality of it."

"The demon will *not* let us get away. For whatever reason, it wants everybody, not just the evil. If we remain passive we have no chance."

Bob regarded her. "I thought passivity was part of your makeup."

Loi would not call Bob a racist, because that would be unfair. But his innocent prejudices could make him seem cruel. She gave him a careful smile. "I left my passivity in the Chu Chi tunnels, Bob."

"We could consider this move," Brian said. "It's better than just sitting."

"Not for me," Dick said. "I agree with Robert here." Linda went close to her husband. "But we oughta do one thing. We oughta write 'help' on some sheets and put them out on the roof."

"I think that's a great idea" Nancy was cradling her younger son in her lap. Without medication, the older boy's burns had begun to hurt, and he was cuddled in the crook of her arm, his eyes closed.

They began to gather sheets and the heaviest tape they could find, to make their sign. There were questions about the number of sheets to use, the size of the letters, on and on. It became a project, a substitute for the real work of escape. They worked with quiet intensity, their silence punctuated from time to time by Jenny's coughs.

Loi waited helplessly as the day wore on. She let them carry out their project without argument. Maybe by dark they would realize that it was hopeless. She prayed that they would be given the time.

At three the Wests and the Dick Kellys and Pat Huygens went to the attic and squeezed through a dormer window onto the roof. They put up their sign, and also added the Swansons' American flag, which they stretched between slacks of books. The sheets were tacked down with roofing nails, but you didn't put holes in a flag. Dick wasn't sure you laid a flag on a roof—too much like putting it on the ground.

Loi borrowed cigarettes from Ellen, smoking and remembering her life before. Even the Blue Moon Bar was preferable to this, even the damnable tunnels. This was worse than that dripping, deadly prison, or the awful numbness of soul she had felt in Bangkok.

She spent time on the bed, sitting beside Brian. From time to time she kissed him. She was beginning to feel close to him again, and she could see that he was glad.

He laid his hand on their little Brian, and she enjoyed that very much. "Do you feel him move?"

"Yeah."

Silently, Ellen came down beside them, sitting with her legs tucked under her.

Loi thought she could work on the two of them. She took them into the hallway, spoke softly. "We must go alone. They will all be caught."

"I hate to leave them," Brian said.

"She's right, Brian," Ellen said. "We've got to move as soon as it gets dark."

Bob soon appeared in the doorway. "What's the big conference about?" he asked.

"Yeah," Pat Huygens agreed, appearing behind him. "No secret conferences."

Loi drew Brian and Ellen away from them. "I think Bob is dangerous."

"That's a hard thing to say."

"Brian, you don't escape from hell. He was sent."

"Loi, that isn't—"

"Hold on, Brian. She makes a good point. He couldn't have gotten away from them. So maybe she's right."

Instead of lowering her eyes as she would customarily have done, Loi gave her husband a hard, challenging stare. "The advice he gives could be from them."

Roughly, self-consciously, Brian hugged her. "I wondered about that myself, at first. But he seems so loyal and so much himself. It's hard to believe now."

"We should go as soon as the sun sets."

"Yes, maybe... but won't it be more dangerous at night?"

"Better concealment."

"Let's hope."

As the hours dragged toward evening Loi got more and more nervous. Ellen

was completely on her side, at least, but Brian still wavered. The others gave every indication of planning to remain here overnight. Loi did not think for a moment that they would be left alone.

For the sake of her baby, she would leave here on her own. It would hurt, though, more than anything else she had ever done in her life.

Moving carefully to avoid making any telltale thumps, she took Ellen downstairs. She was looking for something—anything—that might be useful. They found an Adirondack atlas and took it back up with them, and spent their time sitting on the bed memorizing the trails that led south out of the Three Counties.

"Why do that?" Brian asked. "I know all the trails. We all do."

"I don't."

He gazed at her. "You have me."

Another hour passed, and Loi became aware of small sounds coming from outside. She thought she knew what they were. But she did not acknowledge them, not just yet. Nobody else noticed, and it was best that way.

Most of them were eating again. Her journey downstairs had encouraged the others to explore also. They'd found a big bag of Fritos in the pantry, and three cans of ranch-style beans.

Loi waited, poring over her map with Ellen.

Soon enough, there came a huge cracking noise. People looked at one another.

"Move quietly to windows if you want to see."

The Cobb place, where Ellen had left the running lawn mower, was heaving and twisting with a sound like continuous thunder.

Dust came up in clouds that were turned a delicate shade of gold by the setting sun.

"My God," Brian whispered.

"And yet you stay here."

Around the house the ground itself was blurring, beginning to melt, to run like a liquid. The rubble shuddered and shook, and started sinking. From its tangled center came a continuous flashing of purple light, so intense that Loi could feel a faint stirring within herself, even from this distance. Chris West pressed his face against the window. Jenny Huygens ran her fingertips along the screen.

"If we left, we'd go south," Brian said.

"Yes. Keep away from Towayda" Loi got the atlas and turned to the Cuyamora County map, pointed to Queen's Road. "We can cross the street and go up the ridge toward Lost Pond, then down to the center of town through Yelling Gorge. We'll come out right on Main, and we'll only cross two roads in the process."

Bob looked at the map. "Those things are out in the woods. They own the woods."

"They're here, too," Loi said. "Obviously."

"What about our sign on the roof?"

"Screw the sign, Bob!"

"Come on, Miss Maas! All I'm saying is we ought to leave a few people behind."

That would be foolish. Loi knew it. She chose her words carefully. "Then we would have to return for them. That would be dangerous."

"Going in those woods is dangerous!"

"If we stay here, we die."

"The Michaelsons tried the woods. I rest my case."

Loi became vehement. "We have to go right away. When they realize we weren't in that house, they're going to try this one." She took Brian's hand. "I have to protect our baby. Please come with me, Brian." She got to her feet, still holding on to him.

"Look, Loi—"

"Be quiet, Bob!" She glared at him. If she'd had a knife, she might have put it in his heart.

They all fell silent, all for the same reason. As the noises of destruction were dying away another sound was rising, the steady mutter of an engine. Everybody in the room had seen the Viper at one time or another, cruising the back roads or racing down the Northway. Those who'd had threatening encounters with it shrank from the windows. The others began to move closer, to try to see.

The car sat in the middle of the street, gleaming and unlikely in this neighborhood of small houses. "What's it got to do with this?" Bob asked. "I just can't understand why they would want a beautiful piece of machinery like that."

Loi saw the meaning: red was the Western color of blood and violence, the lines of the car were mean and lethal and incredibly beautiful all at once, and its speed was dominating. "Power and death," she said. "That is what it means."

Ellen nodded. "The messenger is the message. The car is a tool of communication—a warning, a threat."

"Where's the driver?" Bob asked in a choked, shaking voice. He had gone to the far side of the room.

Brian followed him. "Hey, buddy."

"Where's the damn *driver*, the one I saw when I thought I was going crazy?"

Loi whispered as softly as she could, barely moving her mouth,

breathing the words. "Please be still. There is somebody downstairs."

It wasn't footsteps or breathing that betrayed the presence, but rather the creak of boards as a heavy form moved about the house. Loi listened, but the beating of her own heart grew so loud that it interfered.

"It's not... walking," Father Palmer murmured.

Loi put her finger against his lips.

The sound dragged slowly along the floor of the living room beneath them. Then they heard the scrape of moving furniture, the stealthy creak of a door.

Young Joey came closer to Loi. Tears were running down his face. When she wiped his eyes, he smiled weakly at her, and she hoped that her own son would have such courage.

Her thoughts turned to escape routes out of the house. There was only the one stairway down. They might have to jump out a window. But there would be injuries... she herself would certainly be hurt.

She had waited too long.

Now they heard a sound at the foot of the stairs, as if bubbles were bursting in thick soup, or something sticky was slowly opening.

Father Palmer's lips began moving in a steady rhythm. What was prayer worth in a world that could produce horrors like this? Where was his God now?

There came a single loud flop, as if a fat beef liver had been dropped onto a butcher's board.

Jenny coughed a little.

"Be quiet," Loi breathed.

Again Jenny coughed, then stifled it. Her throat worked and another small sound came out. Mucus dribbled from her nose, tears of pain squeezed out of

her eyes. "You must not," Loi whispered.

Jenny nodded vigorously, then convulsed, grabbing a pillow to stifle the sound.

A pair of black claws appeared at the top of the stairs. Jenny made gobbling sounds as she tried frantically to silence her next cough.

They all watched the claws, lying there as if they would never move again, as if they had always been there. They consisted of two thick, black nails crossed at their curved tips. They were perhaps two feet long, as large as the claws of a predatory dinosaur. They were easily sufficient to slice a man in half. If these had ever been human fingernails, they had been horrendously transformed.

Jenny's eyes were pouring tears, mucus was running in a stream from her nose, she was rocking back and forth, her hands jammed into her mouth.

Loi knew what would happen now, what always happened in war: the weak and the unlucky were about to die.

If only they didn't shoot their guns, if only they kept their heads and remained silent, then some of them might survive.

Father Palmer prayed on in a rhythmic whisper. Pat Huygens had his arms around his wife. Nancy and Bob held their children. Jenny watched with slow, wide eyes. Brian came near Loi. He had a pistol in his hand.

By all gods of luck and wisdom, do not let him be a fool.

Jenny's mouth flew open and she jerked away from her husband, shut her eyes, pitched forward and emitted a long, rolling, wet, barking grandmother of a cough. Her face going purple, her arms flailing, she coughed again and again and again.

With the perfect smoothness of a machine, the claws came up and snapped off her head. There was a sticky click, like the opening of a refrigerator door, and her body toppled.

For an instant the only sound in the room was that of blood hissing in a powerful stream from her neck.

Then both boys shrieked. Pat Huygens opened fire, the blasts of his pistol jarring the air in the small room. "Brian, Ellen, come," Loi shouted into the din.

Brian was staring in fascinated horror as more claws swarmed up the stairs, flowing on their long, supple arms with fluid grace.

When Brian didn't react, Ellen marched up and slapped him across the face. He blinked, seemed to reenter life, and followed the two of them along the short hallway and up the stairs into the attic. The dormer window was still open. Ellen pushed ahead and climbed out. Then she turned around and gave Loi the support she needed.

Brian was behind, and then came the Wests. Inside the house terrible screaming started, and purple light began to flash.

"They're all still in there," Brian moaned. "Dickie and Linda are *in there!*" Then Father Palmer's head appeared at the window and Bob and Brian hauled him up. They shut the window, but it could not be locked from outside.

"We've got to get moving," Ellen said.

The street was filled with long black trunks, six or seven of them. They were sweating thick liquid and exuding smaller limbs, each ending in a claw. They passed into every house, and in the windows the smaller trunks could be seen surging and seething about.

Downstairs, the screams became a high babble, a mixture of crazed delight and abject terror. The house shook. They heard a sound like something cooking in hot fat. A smell came, electric-hot and meaty. Purple light flashed out of the windows, and every flash made their skin tickle delightfully.

Father Palmer looked up toward the pearl-blue sky. "Dear Lord, if you exist, you will come to us now."

"Father?"

"He will come on his fiery chariot, Brian! He will either come in glory right this second or it's all a lie! I tell you, this is too terrible, there has never *been* a human soul bad enough to deserve this, not even Torquemada, not even Hitler!"

"Oh, Father," Chris said.

The priest went silent. "I think a cock just crowed," he mumbled.

The screams became more frantic. Loi could picture the people in the purple light, their eyes bulging, their tongues lolling, shrieks pouring from their twisting mouths. It was a slow process, slow and meticulous and, despite the pleasure, obviously agonizing.

She looked at the old priest, now weeping in shame. "Come," she said in the strongest tone of voice she could manage, "we're going to town."

Nancy stared at her. "To *town*? Just like that, bang, we go to town?"

"Not much choice now, Nancy." She took Brian's pistol, which he had thrust into his waistband. "Bob, I want you where I can see you. You will go on point. And take the correct path, or I will shoot you in the back."

Nancy put her hands to her cheeks. Bob smiled a little, shook his head. "I'm not a traitor to your cadre, Loi. This isn't the war."

They made a rope of the sheets that had been used for their rescue sign, tied it to the radiator under the dormer window.

To test it, Bob climbed down first. It held, and the others began to follow him. Nancy came with the two boys, then Ellen. Loi followed, lowering herself carefully into Bob's arms. Then Brian came.

Father Palmer peered over the edge. "I need help," he said. As if in answer a long, gray arm came out the window, extending three half-formed claws. They were cupped around what looked like a purple jewel or glass eye.

Then they all saw the figure behind the arm, a misshapen travesty of Dick Kelly, his lips ripped back, his tongue splayed across huge teeth like yellow, knotted fists, his left eye darting from place to place with a lizard's jerky glance. A net of veins had grown over the teeth. His skin was a gleaming, chitinous mosaic.

"Oh, Jesus!" Brian gasped.

Bob made a small sound in his throat, then suddenly clapped his hands over his face.

The glass object flickered, then glowed brightly. Father Palmer was hit full in the face with the purple light from a distance of an inch. His head shook furiously, as if he'd been slapped almost senseless. But he laughed.

The horrible remains of Dick Kelly grunted, and they could see that he was engaged in a titanic inner struggle. Part of him was trying to turn the light away from the priest. The arm wavered, the claws snapped, the poor, contorted ruin of his face pulsed with effort.

For a moment the thrall of the light was broken, and Father Palmer began coming down the sheets, falling more than climbing.

"Get his legs, Brian!" Ellen could see black, dripping flesh seething past all the windows of the house. As Brian moved forward, sticky threads floated toward him out of the first-floor windows. Each had an anchor-like hook on the end. As they came near him they went rigid.

Loi cried out. "Careful, Brian!"

Now Pat Huygens slid up beside what remained of Dick. He was glowing brightly, his skin shimmering and undulating. Under it could be seen thousands of yellow-gold shapes, running wildly.

"Oh, no," Ellen said, backing away. "No."

Father Palmer slid fast down the rope, dropping with a resounding thud to the ground.

Miraculously, he was able to walk. "I think I'm OK," he said, looking down at himself. "A hell of a jolt!"

But when he lifted his face into the evening light, Nancy threw her head back as if hit, her boys skittered away, even Bob cried out, a sharp yell that was quickly squelched.

The priest raised his hands to his cheeks, his eyes going wide. He felt along the cobbled surface of his left cheek, his fingers flitting from knob to knob, jerking back when they touched the sharp places. "What—what—"

Ellen said, simply, "The light. You were too close."

It had twisted the priest's features. Had it also captured his mind? Loi touched her pistol. "How do you feel, Father?"

"I—I feel fine." Again he touched his face. "Do I—look..."

"Awful," Nancy moaned.

"It felt—dear God, it was the most wonderful, wonderful—" He glanced back, saw all the activity behind the windows of the house.

Without another word the old man started running toward the woods. This was a good sign, and Loi was relieved. It might become necessary to shoot one of them, it was entirely possible. But she wasn't made to shoot people, it wasn't her nature and she dreaded it.

They all followed the priest, stopping in the woods just out of sight of the house. Brian and Loi, the Wests, Ellen and the priest—the group had dwindled terribly.

A sound as of somebody stepping on a gigantic tube of toothpaste was followed by angry buzzing. The husk of Pat had split. "Run," Ellen cried. A thousand of the most terrible hornets imaginable roared out, creatures from the age of giants, with red eyes and fiery, burning bodies. Their wings droned low, and the sound contained a moan, and its tone reminded them all of Pat's voice. As they left him, his skin collapsed in on itself.

The group ran for their lives.

The ridge that rose behind the house was cruelly steep, and their climb was slow and difficult. There was no trail and the underbrush was thick, the trees close together. Nobody looked behind, nobody had the strength. Loi maneuvered Bob to the front of the group. "You will be point man."

"Yeah, you're probably good at picking off point men."

"Very good. Go faster!"

"Get off my case!"

"I will never do that, Bob."

He shook his head, kept moving.

"Baby, are you holding up OK?" Brian asked from behind her.

Loi's heart was rocking in her chest, her legs screaming protest. "I am full of strength," she gasped.

"You can make it," Bob said over his shoulder.

"There's a bug on me," Chris cried.

Bob came racing down from above, Nancy grabbed her child. Loi went to them. "It's just a wasp," she said when Nancy opened her fist and showed her its remains. "But the next one will not be a wasp. We must hurry."

"I'm tired," Joey said. "It's too steep."

Father Palmer was huffing. Thick blood was oozing down his cheek, which now looked like the skin of an alligator. Flies swarmed around him.

Loi put her hand on Bob's shoulder. "Back to point. Let's go."

"All right!"

Again they started. "Nobody stops for anything again," Loi said.

"I'm tired!"

"I am too, Joey. But if you value your life, do not stop."

That silenced even the children.

These people had to be treated harshly. They were strong and healthy, but unused to even the smallest adversity. As a child she'd seen men beaten to superhuman efforts of tunnel-digging or defense. People are capable of far more than they realize, but this is something they must be forced to discover.

Her mind roved ahead, focusing on Fisk's and the ATVs. They'd move by night, move due south toward population centers, and hope that Oscola and Towayda were the only towns affected. Then the area could be nuclear bombed, pulverized until it was nothing but a crater made of melted stone, and the mountains themselves razed.

The door to the inner world would be sealed again, and a woman could raise a family in peace.

Overhead she heard a drone. It was high, above the top of the thick forest. But she knew what it was. The insects were prowling, looking for them. How far from the house could they go?

Her legs felt like stone, the muscles beneath her belly screamed in pain. She smiled. "We are nearly there," she said. "See, it's not so hard!" She forced herself to hold her head up, to go a little faster.

The drone above the trees grew louder, then fell away. Why didn't the damned things come down? Maybe they couldn't. Or something worse was happening, something they couldn't anticipate.

The droning ceased altogether.

She looked up, but could see only leaves dappled by faded sunlight. Where they broke, there were patches of deepest blue. In some of them stars floated free.

From below came the sound of a horn honking. It honked and honked, and she began to want to know what was happening. She couldn't climb, but others might be able to. Ellen was lithe. "Can you go up a tree and tell me what you see?"

Ellen looked up doubtfully. "I never climbed one of those things in my life."

"I can do it," Chris said.

"No!" His mother grabbed him to her. "Ellen, you try."

They hoisted her into the lower limbs of a maple. With surprising speed she climbed hand over hand into the distant top. Her body grew tiny in the vault of the forest, and finally she was so high that she could see beyond the roof of leaves.

A few moments later and she was dropping down with an agility born of great fear. "It's the Gidumals," she said. "They're in their car and those bugs are swarming over it. Millions of them!"

Far, far away there were high screams. Maya and Sanghvi were being absorbed. Loi could hardly bear to imagine that excellent man being transformed. How could his humanity ever be destroyed? He was too good a man to become anything less. What was going on that the demons were taking good people? Where was the justice?

"Let's go," Loi said. Soon they were climbing again and her breath grew hot as it raced in and out. Her lungs were screaming for more air, the baby within her was jumping. "Your womb is like glass..."

Sanghvi. What would she do without him?

She went on, the screams of the Gidumals ringing in her ears and her soul.

As they struggled upward the boys sobbed with effort, their parents urging them on. Then Nancy had to pick up Joey. Chris began to drop back.

Bob suddenly stopped. "We've had it!"

The others caught up with him, gathered around.

"This isn't you talking, Bob," Loi said.

"My kids are exhausted."

"They have to keep on."

"You're right," Bob said. "I'm sorry." He took Joey from his mother. "Come on, big guy."

"So we go." Loi waved them on. "Go." She took Chris's hand. "You can make it with me. I have special strength for both of us."

They walked up and up, and she suffered greatly from her weight. The flat muscles of her underbelly began to ache, and a sour, dry taste filled her mouth. Even holding hands with Chris seemed a great effort. "You thirsty, Chris?"

"Yeah."

"Me too."

Very slowly the woods thinned, became brighter. Then they abruptly gave way.

They broke out onto the top of the ridge, where there were only pitch pines and scrub, and long, wind-polished stones.

From here they could see across Oscola toward the north, and back south toward Ludlum.

Above them larks spun in the slow air, their wings flashing in the last sun, their voices whistling shrill excitement. Loi staggered, Brian caught her around the waist, Bob gently tried to take her gun.

"I'll shoot!"

"All right! Jesus! Brian, all of a sudden she hates me!"

"I hate what is in you."

"There's nothing except me!"

"Yes, what's in my husband?" Nancy asked. "What do you hate, Loi?"

Loi spoke as reasonably as she could. "I think you know very well that the demons are within you, that they are trying to use you."

He laughed a little, a miserable, unconvincing sound.

A moment later the whole group was assembled on the spine of the mountain. It was Father Palmer who first looked to the north and noticed Towayda. He fell to his knees, awed and terrified all at once, whimpering.

The whole sky flickered with purple light.

It infected them with a frenetic sort of elation, like some drug. The two boys groaned and danced from foot to foot. Loi sensed movement inside her. "He kicks hard, Brian."

So at last it was finished, hell had come to the surface of the earth. She took a long, studied breath, observed one of the small secret silences that she used to restore her inner self. "Husband, we must not wait here a moment."

"We can't get away from that," Bob said.

"In our army the defeatist was shot."

"Oh, come on! That's the most ridiculous thing she's said yet! Brian, can't you shut her up?"

"Loi—"

"He was the one who said to stay for rescue. But there was no rescue. Now he says it's all hopeless. That is also a lie." She slapped her belly through her sweat-soaked shirt. "I will live!"

Brian embraced her, feeling her strength, drinking in her power.

"We go," she said. "You in front, Bob."

"No, I don't want to be in front anymore."

"Do it." If the demons attacked, let their own puppet be their first victim.

He stared her down, his expression complex with sadness and hurt, and something that could have been hatred, or perhaps an emotion very much more alien than that.

She did not waver.

The little group straggled off into the spreading dark, making their way down toward their beloved town.

Above them the larks circled, and to the west the sun set in an increasingly angry sky. Northward in the mountains another world was awakening, savage and cruel, struggling in its ugly purple light to be born.

Fifteen

1.

The little party from Queen's Road struggled down the mountain and into Oscola's familiar streets.

Chairs and tables from the Mills Café were strewn about in the street. Office furniture, paperbacks and bottles from the drugstore, dozens of boxes of disposable diapers, waterguns, baseball caps, lay in piles. The gas station's pumps had been bent on their foundations so that they stood at crazy angles. Handy's was split like a fish, its guts of magazines and cigars and candy spilled out before it. The Rexall sign, circa 1932, was smashed to bits in the gutter. Even the Village Green was ruined, its gazebo flattened to kindling, its huge shagbark hickories ripped asunder by fantastic and malevolent energy, split down their middles, left with their leaves slowly shriveling.

The destruction had been wanton and extremely violent, but also full of awful, cunning care. Chicken parts were rammed into coffeepots from the Mills, cigars jammed down the throats of dead kittens from the Pet Pantry, car seats lying on roofs, the front half of a large dog dangling from the shattered Citgo sign.

Forgetting their danger, the need to hurry, the little group halted on Main Street, staring in disbelief. Nancy West whispered again and again, "No, no, no." Her husband had assumed the stolid pose that he took at accident sites. Chris picked up an Uncle Scrooge comic book from the street, rolled it up, and put it in his hip pocket. Joey said, "Candy, Mommy," as he touched a Milky Way with his toe.

The destruction had been wrought with a tornado's monstrous attentiveness. A crate of hair dryers had been jammed through the wall of the Excelsior Tower, and they jutted out of the brick surface like some mad work of conceptual art. Ellen's papers and files blew about their feet, and she saw the body of her desk smashed into a counter full of black girdles with red accents from the Mode O'Day. The top of the desk lay on the street, its blotter still

neatly in place. She walked closer and found a cabinet, its drawers thrown open and filled with something that looked like mucilage and smelled like wet human skin. She reached down, disgusted but wanting to reclaim her possessions.

Loi knocked her hand aside. "Don't touch it! Nobody touch anything! No telling about diseases."

They went up the middle of the street together, Bob and Brian behind Loi, Nancy and Ellen and the kids behind them. Father Palmer struggled along at the rear, his breath whistling through the twisted black stump that his nose had become.

Getting a heavy enough dose of the light, it seemed, started changes that did not stop. His left eye was fiercely veined, filmed over by a dense, milky membrane. The skin of the left side of his face was now made up of even thicker tiles, like a turtle's back, and each was centered by a fat welt.

The priest's breath hissed, his tongue went around and around, patrolling the fissures that were turning his mouth into a hole.

Absent a mirror, he remained innocent of his true condition. Touch told him that something was very wrong, but he couldn't possibly have imagined just how awful it really was. Nobody could have; his disfigurement was so extreme that it was outside human experience.

A naturally cheerful man, he had even regained some of his good spirits. He'd decided that he had to keep up morale, so he sang as he walked, a catchy old Kingston Trio tune from back in the days when he had a guitar and something of a voice. "Back to back, belly to belly, well I don't give a damn 'cause I done that already." Again and again he bleated out the only verse that he remembered.

"For God's sake, stop him singing the Zombie Jamboree," Nancy West muttered as they passed the Citgo.

"Better be quiet, Father," Bob said.

"I'm sorry. I suppose the Kingston Trio's a little behind the times, isn't it?"

Nancy peered up at the flashing sky and the tumbling angry clouds. "I hate you," she shouted. "I hate you!"

"Mommy, Mommy," Joey shrilled.

"How can you be so noisy?" Loi could walk through dry leaves in total silence. These people couldn't be quiet on a flat street, with all their stomping and roaring.

Father Palmer went to Nancy. "The Lord is here," he rasped, attempting to whisper. "The Lord is with us and helping us right now."

Nancy turned bitterly away from him, her face reflecting disgust.

Loi worried that his infection might penetrate very deep. Was his soul being transformed along with his body? She watched him as he humped along leaking fluids, and thought he might bear more scrutiny than Bob did.

How quick her mind was to recapture the habits of that time long ago. She would have thought she had forgotten the sense of careful suspicion instilled in her by Wonmin Kyo, the stern, genial shadow who had been the political officer in her cadre. The men had mostly been entirely indifferent to her, hardly even aware of her existence. He had taught her to listen and report back.

Loi kept on walking, observing and assessing. Even as she scanned windows and roof lines, she evaluated the actions of each member of the group, especially those under suspicion.

"We've got to keep moving," she said. "There's no time for crying about this now." She'd seen villages a thousand years old burned to ashes. People made a mistake being upset by ruins. The first thing was to stay alive, then find a place to start over.

Nobody heard her. Nancy was having hysterics because Father Palmer had embraced her, in a misguided effort at comfort. They were preoccupied with

trying to calm her down, and to make the old priest understand why he couldn't. His face grinned hideously, and Loi noticed a net of veins growing across his teeth, which now looked yellow and soft, like big pieces of chewing gum. Only shooting it to pieces had killed the living head of the poor Rysdale boy. She wondered when they would have to begin on the priest.

"Listen to me," she said. Nancy was still sobbing, and now Ellen was having trouble, too, crouching before the remains of her office desk, running her hands over it.

Loi raised her pistol and fired into the air.

The report froze them. "All right," she said into the stunned silence. "No need for me to be quiet, you're all so noisy." She tucked the pistol back into her belt. "Now we go."

They followed her up Main, toward the darkened bulk of Fisk's Garage. "Get food," she said as they passed the devastated ruin of the Indian Market grocery. "But be careful. Nothing with any strange substances on it." The glue-like material was everywhere in and around the store, dripping from tumbled counters, off ruined crates of melons, thickest around burst cans.

A slick of melted frozen food covered the floor, making it treacherous to walk without slipping in melted spinach soufflé and breaded veal cutlet dinners. The fresh-vegetable bins had been upended, as if something had looked behind them for people. The meat locker was wide open, its door pushed up through the ceiling into the second floor, where Caroline Chipman had her art gallery. Like the rest of the food, the meat was ripped up and damaged, but not eaten.

Fisk's Garage was devastated. It was getting dark and they had no flashlights, so they had to pick their way carefully among the glass shards and twisted ruins of yard tractors and all-terrain vehicles to get in.

Gas tanks had been pulled off, axles bent, tires torn to bits. The cylinders and spark plugs from engines that had been ripped open littered the floor around the remains of the vehicles.

"Let's look in the back," Loi said in a brisk voice. "Come on, there's no time to lose."

"No!" Bob was in front of her, barring the door.

She took out her pistol. I will do it if I have to, she thought, although it made her sick at heart.

They faced one another. "Loi, I have this very strong feeling that we shouldn't go in there."

"If we don't find transportation, we're going to get caught, Bob."

"There's something in there!"

Chris ran to his father. He looked from Loi's face to the barrel of her gun, holding his dad around the waist. She felt tears come to the corners of her eyes. "Resolution is the soldier's credo," they had taught her.

"You have to let her through," Ellen said.

"We'll all be killed if we open that door." Bob was sweating. In the gloomy half light, Loi could see that his eyes were glassy with fear.

"I am going to step forward and open the door," Loi said.

Bob gathered up his wife and sons.

Loi threw the door open.

Father Palmer cried out, "Glory to God!"

There stood four beautiful Suzuki ATVs in picture-perfect condition, smelling faintly of gas and new paint, gleaming.

For a moment they were brightly illuminated by a distant flash of lightning, then long thunder rolled back and forth between the mountains.

Behind her she heard sobbing. She turned to see Bob sinking to the floor, his

shoulders heaving. He looked up at her. "You oughta shoot me," he said miserably. "My God, I'm possessed."

"From now on, no matter what you think is right, you trust me."

"I'm going to do everything I can to be loyal to all of us. You're my people. But I have these... feelings that make me want to do different."

"Never trust yourself. Never!" She sighed. Maybe he would be all right and maybe he wouldn't. She hoped for the best. For the moment, she saw another problem. "Where are the keys to these things?"

"We can hot-wire 'em in a second," Chris announced, marching up to the closest one. In moments he had them running.

"Where did you learn that?" Nancy asked him.

"I forget."

As Ellen tried the seat on one of the vehicles, Brian and Bob raised the door to the street. Although they were designed for only one rider, each must somehow take two.

"Just one damn minute, you people!"

They all turned. Standing in the shadows of the glassed-in office was the figure of Henry Fisk. He strode to the middle of the room. His scruffy jacket and John Deere cap made him look inoffensive, but he was carrying a weapon that Loi recognized instantly: an AK-47. She became very still.

"What do you think you're doing?"

"Hi, Henry," Brian said mildly. "Just lookin' over some of your machines."

"The hell! You're stealin' 'em."

So deep she felt more than heard it, Loi became aware of the sound of an engine coming in from the outside, loud enough to rise above the steady idling of the ATVs. It was heavy equipment. "We have to leave."

"You sure are right about that, China girl." Fisk turned to Brian. "Get your ass out of my sight. And take Shanghai Lil here with you."

"Take it easy, Henry," Bob said. "You calm down or I'll have to put you under arrest."

"You? You escaped from the psycho ward down at Ludlum Community. They're looking for you from here to Buffalo!"

"They might have been. Not anymore. You know what's happening around here, Henry, as well as we do."

"No, that was a dream, that there. I thought it was real, I sure did. But it was a dream. I mean, Allies lying on the back porch with a bicycle pump sticking out of the side of her head. That's not real, that's a nightmare! And Junie and Charlie, they—they—oh, shit, Brian, tell me it's a damn nightmare!"

"It's real, Henry. Look at the priest."

Fisk glanced at Father Palmer, then lowered his head. Loi knew how a man feels at such a moment of realization. She laid her hand on the butt of her pistol. He might well put down his weapon. Or he might shoot everybody in sight.

Outside, the engine note was now distinct. It was more than one machine, many more. "We can't get away," Fisk moaned. His head remained down, but his assault rifle was still pointing straight at them.

"We must try to, Henry!" He didn't respond. Loi took a step toward him.

"Don't you move, slant-eyes!"

Bob realized that Fisk was capable of killing her without a second thought. She was nothing to him, just a Chink. But not Bob West. Fisk would hesitate to shoot a man he'd known all of his life, a respected member of the community. Bob stepped in front of Loi. "You put that thing down, Henry. And stop calling her names."

"Bob, I'm warning you."

"Give me the gun, Henry."

"Fuck you!"

"Henry—" Bob took another step.

The AK-47 clicked nastily. Bob could see a vein pulsing in Fisk's neck. He was about to shoot. Another second and they were all going to be dead. He spoke quickly. "You remember that yard tractor I bought from you last summer, the Toro? It's running damn good, Henry." He took another step closer.

The building shook a little. Dust filtered down from the ceiling. That meant only one thing: action in the ground underneath. "Henry, we have to hurry!"

"That was nothing! It was *nothing!*"

"Was Allie nothing? Is Father Palmer nothing? It's all real, Henry. Give me the gun."

Fisk hesitated. Bob approached him. "Hand it over, Henry."

Behind them in the dark somebody made a protracted spitting sound. "My teeth," Father Palmer hissed, pronouncing it "teess." He'd tried to chew some beef jerky he'd picked up along the way. His attempts to drag the mess out of his mouth made a noise like a child playing in wet clay. Henry Fisk watched this, appalled. "What happened to him?"

"Got hit up close by that light."

"Purple light? I seen that. Made me feel funny. Made Junie and Charlie... made 'em worse than him." The priest let out a slopping noise, snorted. "I'll get you a towel, Father." Putting down the rifle, he went over to a sink the mechanics used, and brought the priest a roll of paper towels.

Bob picked up the weapon. Loi came close to him. She held out her hands.

"I can do this, Loi."

"I want to trust you, but I'm not sure I can."

"Do you know how to use it?"

She shook her head.

"Then you'd better leave it with me. Somebody could get hurt."

"An AK is easy to use." She grasped the weapon.

They both held it. "Loi, I know something's been done to me. But I can control it. We started this thing as a team, you and I. Let it stay that way."

The floor cracked from one end of the room to the other. More dust sifted down. A growing vibration told of movements beneath the earth.

Loi wasted no time. "We go now."

They got on the bikes, and after a short struggle with the seating arrangements, moved off into the dark. Fisk jogged along behind them nattering about his loss.

2.

The street was a gray strip between the shadows of buildings. Loi was sure she'd heard machinery, but it was nowhere in sight. Then her quick eyes detected movement. "There are vehicles out there," she said in a voice just loud enough to be heard over their own engines. They were coming straight up Main from the direction of the Towayda Road. To escape them, it would be necessary to either go back toward Mound and Queen's Road where they'd come from, or ride out into the woods.

At first the others saw nothing. Finally Bob made out the slowly moving shadows. They were so wide and low that he didn't at first understand what they were. But when he saw them clearly, the shape became familiar. "Those are humvees."

They were absolutely dark. Loi watched carefully. "I count six. Everybody be quiet. Get ready to move out fast."

Bob was astonished at her. "But that's the U.S. Army!"

Suddenly Loi was behind him with her hand over his mouth. "So it seems. But we must be careful. Do you agree?" She pressed the flat side of her gun against his back.

Only when Bob nodded was he released.

Ellen was the first to see the lights that had appeared at the other end of the street. "Oh Jesus, here comes a car."

They all looked. "I think that's Judge terBroeck," Brian said. "That's his car." It was coming up from Mound Road. Loi saw that they were now trapped between the car and the slowly advancing humvees. Their only escape route was to go through the alley, across the yards of the houses behind it, and up onto the ridges.

There was a flicker of purple light from the front of the lead humvee.

Nancy started to walk out into the street. Loi put her hand on her shoulder. "Don't be a fool."

"Look, those are humvees, a la the Gulf War. This is the American Army and we're saved." She looked to her husband for support.

"Listen to Loi," he said.

"Get back. You do it."

"But those are our people!"

"We cannot know that."

She came back.

"You've never been in a war," Loi said. "We have no room for mistakes." She paused. "Do you see the foot soldiers?"

Nancy looked. "No. There aren't any... are there?"

"There are nine soldiers coming down the street hugging the walls. They're in full chemical protective dress. They're wearing some kind of night vision equipment on their faces. They are heavily armed."

"I don't even see them!"

"Whisper! Always!"

"Go easy on her, Loi."

"No, Bob, not if she's taking these risks." She looked out across the dark. "They are in front of the drugstore now. Walking parallel to the humvees."

"I see them," Nancy muttered.

To Ellen they looked like robots, with huge mechanical eyes and glistening black metal where their faces ought to be. Something about their movements was wrong. They came slowly along, looking into doors and windows. The humvees moved along ahead of them.

In a matter of minutes, the soldiers were going to be peering down this alley with their light-amplification goggles.

Loi gathered the group around her. She barely breathed her words. "Get on the ATVs. When the humvees are past, we go out quick. We'll have to hope we surprise the soldiers when we pass them. We'll go as far as Mound, then turn south into the woods. Can everybody get his engine started?"

Quickly, Chris taught his father and Brian which wires to touch together. Ellen had no trouble, and Nancy had already seen him do it. Henry Fisk bristled but said nothing.

As they came closer together, the rights of the judge's car illuminated the first of the humvees. It was a dead, dark black, the blackest color Loi had ever seen.

The first humvee passed the alley, then the second.

With a squeal of brakes, the third stopped, neatly blocking the entrance.

They were trapped. They shrank back into the dark between two buildings. There remained for them only a narrow view of Main, illuminated by the lights of the judge's car.

He came into the lights. He was emaciated, far more so than he had been even two days ago. His dark blue double-breasted suit hung on his frame like a slack sail.

Brian recalled the tall figure he'd glimpsed in the woods, the time he'd been pulled to the judge's house. There was that same grave stillness, that same sense of evil dignity.

"Now listen up," the judge shouted into the dark. "We've got the U.S. Army here to help us out!"

Loi noticed that he wasn't shouting in any particular direction, or using names. They had not yet been discovered.

That wouldn't last. The oncoming soldiers were bound to see them.

"It's all over and we've won," the judge continued, his voice radiating authority. "There's been a tragedy here. An experiment being conducted by a scientific institute failed and a door was opened into something that we don't understand. But the military has things under control and we're safe. You can come out now. There's even a field dressing station set up outside town. So come out, come out all of you!"

Loi saw movement in the dark interior of the drugstore. Two women and three men whom she didn't know appeared. Then came Sam Young and his sweetheart, Henrietta Lohse. Others followed, hidden by the dark.

"Don't any of you move," Loi said to her group.

"That's bull," Fisk said firmly, speaking for the first time since he'd reached the alley. "Judge terBroeck is a fine man." He walked past them and joined the small knot of people now clustering around the judge.

Ellen saw this as a rapidly deteriorating situation. "If we stay here, the

soldiers are gonna notice us."

"We have to assume that they already have."

Things were changing quickly in the street. The soldiers had abandoned their building-to-building search and were hauling an ungainly black device out of the back of the judge's car. It did not have the appearance of a weapon. Like the humvees, it was so black that it was hard to see. Thick, tapering cables jutted up from it at odd angles and drooped down around the sides. It began to clank, then to emit a low humming sound. The soldiers stepped away. Apparently under its own power, the thing began gliding toward the knot of survivors.

Brian thought it was the ugliest object that he had ever seen. It was squat and fat like the body of an old-fashioned furnace. There were bars on its sides, and behind the bars something shiny, like black glass. It had the squat, dense appearance of something designed for work with great heat.

With a hiss like a bus door opening, its cables stiffened. They pointed at the survivors who had accepted the judge's promise and begun to approach. "Hey, Judge," Young began.

"Now just take it easy," the judge said. "Come on ahead." Again Brian felt that august presence.

A leader, a general, a monarch. Concealed in the body of the judge, him.

The tips of the cables adjusted themselves with great finesse, until each one was aimed at a specific individual. Two were not needed and they retracted with the sound of somebody sucking up spaghetti.

One of the women from the drugstore suddenly broke and ran. "Calm down now, Joanie," the judge called in a gentle voice. "This is just high-tech testing equipment, it won't hurt us."

"That's Joanie Dooley," Father Palmer whispered. "She's one of my deaconesses."

"Honestly, Joanie," the judge said, "I thought you had better sense than this."

She was running like hell now, right down the middle of the street.

Suddenly the judge's left arm slid outward, extending from his sleeve as if made of rubber. As it got longer and longer, people screamed, began to cluster together.

It grabbed Joannie Dooley around the neck and dragged her back with such speed that both of her shoes flew off and spun away. He dropped her in a heap at the feet of the weeping townsfolk, and in the next instant the black glass in the machine glowed a roiling, angry purple, and flashes of light spat from the tip of each extended cable into their faces.

"Shoot him," Brian cried.

The head turned, the eyes flashed. He saw them, the soldiers saw them.

Loi hopped on an ATV. "Go, go, go!" To her horror, the Wests went charging for the street, followed by Ellen. They should have turned around and gone out the alley, the fools! She had no choice but to follow. "Go, Brian, stay with them!"

A series of extremely bright purple flashes erupted as the ATVs worked their way around the blocking humvee. Ellen closed her eyes, but still felt a shudder of unwanted delight.

When she opened them again all nine of the people who had gone to the judge were down on their knees gagging, their fingers gripping their throats. Knotted masses of dark mucus were pouring from their mouths and noses.

The purple light flickered continuously now, bathing them in its glow. They were moaning, but it wasn't a sound of pain. Far from it.

The ATVs roared into the street. "You," the judge roared, "you!"

Bob pulled the trigger of the AK-47 and bullets sprayed, sparked off the hood of the lead humvee, exploded against the sputtering machine, sent four of the soldiers flying up against the far sidewalk, apparently lolling them.

To get out of town they had to pass not only soldiers and humvees, but also the judge and his machine.

Ellen could see that the victim nearest her was full of moving humps, kicking and flopping his arms and shaking his head with a furious, impossible energy, like a windup toy gone crazy. The intensity of this motion caused him to rotate slowly in the street. She glimpsed his face, but did not recognize it, such was the distortion.

Henry Fisk made noises like a bird caught in a net, squawks punctuated by piping shrieks. His muscles were full of bulges the size of grapefruits, his face was oozing down the bones of his skull. He struggled, he shook, he groaned like a man in the extremity of sexual excitement. Then his head began to go back and forth, faster and faster, until his pop-eyed stare was just a blur, and spittle and raw muscle and gobs of melted skin were spraying like a multicolored fountain. Now his lips sounded like some kind of berserk lawn-mower motor. A long, thin leg or mandible popped out of his mouth, extended upward, and began sailing round and round his head like a lariat.

"We've got to help them," Father Palmer managed to gabble. Behind Ellen on her ATV, he threw his arms around her, trying to reach the brake.

"No!"

She gunned the motor, but the machine swerved violently. He'd gotten hold of the handlebars.

The sight of their confusion caused two of the cables to exude from the machine and begin swaying toward them. The sizzling grew louder. There was an almost human quality to it, as if a ten-year-old was trying to sound like the biggest, meanest snake he could imagine.

The machine focused on Ellen and Father Palmer. To give it room the soldiers pressed themselves back against the walls. "It's not painful, Ellen," Judge terBroeck said. She saw now that his mouth didn't move when he talked. His face was a mask. Behind the eyes she could see black, gleaming material, rushing and seething.

"Ellen, come on," Loi cried.

Once more the AK-47 chattered. This time the bullets went through the judge, causing him to flounce but not to fall. Again his arm stretched, and suddenly it had the rifle and was hurling it off into the dark. "We have a right to do this!"

"You have no right," Ellen shouted back.

The judge rose to his full height, lifted his arms. They went up and up, far into the sky, and then came snaking down toward Brian and Loi. But Brian hit the gas and their ATV darted ahead. The arms flopped after them, the hands snatching at Loi's back. She clutched Brian and screamed as they ripped at her shirt, trying to reach around and get to her stomach.

Behind the judge the machine continued its busy cooking of the ones who had been captured. It was not only sizzling but making sighs, metallic shrieks, and a light, continuous thumping like the excited beating of a heart.

Meanwhile, another part of the machine stiffened a cable toward the departing ATVs. Purple light flashed and Loi felt it like angels caressing her neck and head. She did not turn around, resisted the urge to look into it.

Inside her, the baby began kicking and squirming. "Hurry, Brian!"

But Brian slowed down. "Ellen."

"They're after the baby, Brian! I can feel it!"

Just then Ellen screamed, a long, despairing howl.

The machine had pointed cables at her and the priest. As they weaved about on then: roaring ATV, the cables swayed, trying to aim. Behind them the humvees were deploying in a line abreast to block escape back toward Mound Road. To surround their ATV, soldiers trotted up both sidewalks.

Brian dismounted. He and Loi were trying to shield their eyes from the light the machine was shining at them, but it was very hard.

Just behind Brian and Loi, the Wests also stopped. "I'll cover you," Bob shouted as Brian went past. He didn't have the AK-47 anymore, but Brian could hear his pistol banging steadily away.

Crouching down behind their ATV, Loi noted that Bob really did seem to have overcome the power of the demon. But this was not easy to believe, and she resolved never to let down her guard.

Ellen was down, Ellen was off the ATV. The judge's hands were extending toward her, racing across the ten feet between them.

Where the survivors had been there remained only masses of waving arms all tangled up with clothes and shoes and hair. Faces were visible in the tangle, faces slack with rapture. The cables from the machine had plunged into the mass, and their sensitive tips raced here and there, buzzing angrily as they flooded this or that remaining bit of human flesh with their light.

A complicated stink rose from the mass, of scorched clothing and melted hair, of sweat, of blood and urine, feces and hot meat.

Suddenly Loi realized that the machine had turned its attention away from Ellen and Father Palmer.

One of the free arms was pointing directly at her. The baby was kicking more than he had ever kicked before. She clutched her stomach. "Brian, *get us out of here!*"

He dashed back to their ATV, leaped on.

Ellen watched him go. For the moment she'd stopped trying to escape. Loi's desperate cry had gone through her like a white-hot blade.

3.

Bob's pistol snapped and the judge began to choke, wrapping his long hands around a hole in his throat.

Loi and Brian disappeared into the darkness, their ATV screaming.

The machine turned its attention to Father Palmer. He was still sitting on the ATV when one of the cables jugged right into his face, flooding it with light. His eyes widened, his arms waved, he began rocking back and forth oozing sighs that belonged to night and the bedroom.

Ellen got back on the Suzuki, pushing in front of him, feeling tingles of delight where the light touched her skin, gasping with pleasure when it entered her eyes. She gunned the motor and the vehicle wailed to life, shot ahead. The soldiers, who had just come up, grabbed at them. Then the humvees snarled to life and began weaving around the spitting machine, coming fast.

Ellen didn't like having the old priest behind her with his arms around her waist. Being touched by the poor man was disgusting. She could hear his breath whistling, could feel his fingers kneading the flesh of her sides as he hung on to her.

She followed the ATV in front of her, staying with it when it turned off the road behind the others. Ellen was clumsy with the unfamiliar machine. It was extremely responsive and she had to drop a good distance behind Chris and Nancy to avoid running them down.

Behind her she heard engines. The humvees had come off the road, too. But surely they were much too wide to maneuver in the forest.

Suddenly the Suzuki screamed and slid sideways. Her reflexive hitting of the brakes only made things worse. They skidded between two trees into the thick woods. "Jesus Christ," she muttered. There was nothing out there ahead of her, nothing but darkness.

Her heart practically flew out through her mouth—she was lost in the woods with a half-monster clinging to her back and at least one humvee from hell somewhere behind her.

Father Palmer coughed. "Where are we?" he asked.

"In the woods."

His hands slid up onto her shoulders. "Are we lost?"

"No!"

He clasped his hands together behind her neck. She could feel his hard, knobby cheek pressing against her back. Sharp things protruding from his torso worked through her clothes, pricked her. She leaned as far forward as she could.

Then she saw a wonderful sight, the tiny red dot of a taillight. "There they are!" The ground sloped up so steeply that she was afraid they'd topple over backward. They went through thick, lashing undergrowth. As best she could she kept her head down. At this speed a twig could put an eye out, a branch hurl them both off the vehicle.

The path grew so narrow that trees scraped their legs, but still they climbed, up and up, seeking that flash of red.

Far off up the ridge ahead, she saw bobbing lights. She took out after them, cursing the ATV because it wouldn't go faster. They bounced across boulders and cracks and the great, gnarled roots of pitch pines. She shouted and Father Palmer hissed and made deep, popping noises in his throat.

The lights went out.

She didn't even slow down.

A moment later the nearest ATV appeared in her headlight. Chris was there, waving. She took her hand off the gas and the Suzuki stopped so fast that she was almost thrown across the handlebars.

"Shut it down," the boy whispered, his voice urgent.

"I have no idea how to do that!" She got off, followed by the priest. He clambered down, his breath a busy whistle. She tried not to look at the black, misshapen hulk of his head.

Chris turned off the ATV by pulling a wire.

They were received back into the group, now haphazardly armed with two shotguns, a rifle and three pistols. "I thought I'd never see you guys again," she said.

Silently, Loi touched her on the shoulder. Nancy came up and pressed a small pistol into her hand. "The safety's in the butt," she whispered.

"Why are we stopping?"

"We're shaking the humvees," Brian murmured.

"But—"

"Whisper," Nancy hissed. "You're louder than I was, Ellen."

"They are looking for movement and light," Loi added softly. "Sound."

"Where are we?"

"About a mile and a half south of town, by my reckoning," Bob murmured.

The night wind blew steadily. To the north, the horizon was now bright purple.

Father Palmer, who had moved off into the dark, groaned. Loi came up to Ellen. She whispered low, barely breathing. "What's his condition?"

Ellen shook her head.

Loi went over to him, draped her arm around his shoulder. There was a murmur of conversation. After a moment she jumped back, uttering a small cry. She returned to the group. "He's not good." She was rubbing the back of her hand. "He says he feels the same as always, but he's beginning to hear a voice in his head. He hears a voice shouting instructions at him. It's telling him to keep us here, not to let us move."

"I've started hearing it, too," Bob said.

Turning away to hide the movement, Loi took out her pistol.

"But it doesn't affect me," Bob continued. He knelt and put his arms around his nearest boy. "*This* affects me."

Chris threw his arms around his father's neck.

Loi looked down at him, now with both of his sons beside him. She thrust her pistol back into her belt.

Ellen, who had seen the stealthy movement of the weapon, realized that Loi would have killed Bob if he'd said the wrong thing. She could kill—even up close, even a person she'd known for years. Ellen found herself feeling a little worshipful toward her, and shook it off angrily.

"How about you, Father?" Loi asked softly, going over to the priest. "Can you resist the one who calls to you?"

"It's angels," he said faintly, his own voice barely understandable, "angels singing the glory of heaven." He raised his tortured face, and in the starlight its mosaic surface looked like a dry, cracked riverbed. His eyes were heavily filmed, his mouth full of what looked like wet modeling clay filled with pumping veins. Then he gobbled out some words. "I'm about done. I want to — want to..." His voice sank away.

Loi went back to the others. "He's dangerous." Again her pistol was in her hand.

"Oh, no," Nancy said. "He baptized my babies."

"He baptized all of us," Brian added.

"Whisper! Please!"

Ellen stepped up. "He didn't baptize me."

"I'll do it," Loi breathed.

"I can do it. Give me the pistol." Ellen held out her hand. They all saw how it was shaking.

"Jesus Christ, I'll do it," Brian said, snatching the weapon.

"Go in at the base of the skull, buddy. He'll drop like a bag of flour."

"That's professional advice, Bob?"

"Hell yes it is!"

"Here we go again," Joey said, putting his hands over his ears.

"Wait. We must do it silently." Loi gestured toward the night.

There followed another hushed discussion. They could have hit him with a stone while he knelt praying, but nobody would.

He had begun pulling at his face and making small sounds of chagrin.

Brian was gazing out into the night. "The thing is, I remember we used to come up here and look at the lights of Ludlum."

"So?"

He gestured toward the southern horizon.

There were no lights.

Nancy stifled a sob. Welling up from deep inside Loi was a sensation of obliterating sorrow. If there were no lights in Ludlum, maybe there were none in Albany or New York City or anywhere.

They heard a noise, all of them at the same moment: the rumble of an engine.

"It's a humvee," Loi said in a quiet voice. She pointed along the spine of the mountain. "There." She sighed. "We were too noisy."

Three of the shapes came quickly and quietly along. They were not half a mile away, coming down from the north.

"Let's move out," Loi said.

"Which way?"

"South, always. If not Ludlum, then maybe some other place."

"We can't go that way," Brian said, "it's a cuff! I've climbed it, I know what it's like."

Now the grinding of the humvees' gears came clear, and the rising growl of their engines.

Loi got on their Suzuki. "Come on, Brian."

"I'm telling you, it can't be done!"

Loi flared at him. "Then why did you even stop here?"

"How was I to know they'd get around behind us like that? How could they, in those things?"

"So where can we go?" She wasn't whispering now. Her voice was shrill.

"We could go down the way we came," Bob said.

"Back to town?"

"We skirt the town, cross the Cuyamora where it's shallow up near the Pratt place. Then we go south through the fields. We'll sure as hell make better time than we will in these damn mountains."

It sounded to Brian like a reasonable enough plan. The humvees were now only minutes away. They had no time to consider whether or not it was a mistake.

The instant the first Suzuki started, huge lights flooded the whole ridge with beams brighter than the brightest sun. The ungainly vehicles leaped ahead, rumbling down on the little band of survivors like a herd of maddened rhino.

The ATVs bounced off into the dense woods. They had been expertly turned back in the direction they had come.

Sixteen

1.

Brian's ATV bounced and lurched, its engine screaming. Every jerk went right through him. He worried that Loi was going to start bleeding again, and they were so helpless now.

To the north and west the sky glowed purple, and he thought of the forbidden zone, the region of no escape. Was it already too late?

He had conceived of an idea, a long chance. If he was right and his facility had been moved to this area, he might be able to get inside and do some sort of damage that would stop this.

Loi pressed her cheek against his back. "We must turn, Brian. Turn north here."

"Toward Towayda? Is that wise?"

"We've got to go where we aren't expected. We can get around town that way, cross Towayda Road, then go out into that apple orchard the other side of Mound."

"That'll take us right into the center of this, Loi!"

"Where we're least expected."

"I've got to stop. The others'll have to agree." He turned in his seat, trying to see them. In the near distance he glimpsed movement. Farther back, the forest was radiant with light from the humvees.

Loi clutched him tightly. "They'll stay with us."

It was her they trusted. He was no leader. "They'll stay with you."

"Yeah, so let's go."

He made the turn, and the purple glow now lit the glimpses of sky ahead of him. The woods grew thicker, and he had to slow down.

"Go, Brian!"

"Jesus Christ, in this morass?"

"Go, break through it! There is no time!"

The ATV slid and protested, the branches and leaves slapped his face, the bumps came again and again. "Loi, stand up in the seat, you can't risk the shock!"

"Just go!"

Suddenly a yard appeared ahead of them. Then they were crossing grass. Brian recognized the Huygenses' place, now dark and silent. So often he'd sat with Pat under these very trees, discussing town affairs deep into the night.

There were the four green Adirondack chairs Pat had built ten years ago.

"Faster, Brian! This is the most dangerous part."

He crossed the patio, tore through the vine-covered wire fence that gave them privacy from the road—and saw a group of people just ahead. He jammed on the brakes and the vehicle slid to a halt.

A flashlight blazed into his eyes. "State police!"

Loi's pistol came out.

Ellen roared up beside them, the dark lump of Father Palmer huddled on the seat behind her. She gunned her engine, stood over the handlebars, ready to try to blast through the crowd.

The Wests stopped a short distance back.

Behind the light Brian could see state police uniforms, and then familiar faces, friends he had known since he was a child. Among the troopers he

noticed Nate Harris.

Bob also saw Nate, his oldest friend in the troopers, his mentor. With them, though, were more of the heavily equipped soldiers with the hidden faces.

The street was blocked. "Loi," Brian said, "we've got to deal with this." He took his hand off the gas.

"All right. Dismount, everybody." They complied immediately, moving now with the speed of a well-trained unit.

The group facing them stirred. "State police," the voice squawked again, "come forward with your hands on your heads!"

Father Palmer wheezed, seemed about to keel over.

Ellen went to Loi. "We're losing him."

"Does he seem dangerous?"

"He was quiet. He groaned a little."

Loi surveyed their predicament. The only alternatives open now were to go down into Oscola or double back the way they'd come. But the humvees were back there, somehow negotiating the woods despite their ungainly shape.

If she could leave a rear guard, they might be able to make the run down through Oscola. She crept over to the priest. "Father Palmer, can you keep watch here for us? Do you trust yourself?"

A rumbling groan.

"Do your best. You're what we have."

He hissed, then his voice guttered low. "I love you all," he said. He may have gasped the word "Jesus," uttered a part of a prayer.

"I'll stay," Chris said. He looked toward the humped shape that had been the old priest. "He ain't gonna make it." Chris carried a 30-30 almost as large as

he was.

Loi gave him a fond glance. She remembered so well what it was like to be a child at war. "We need you with us."

"Come forward with your hands up!" Nate Harris called.

"We're on your side," another trooper said.

"Come on, Bob. You'll all be treated well."

Bob took a halting step.

"Tell Mrs. Kelly to put her pistol down on the ground, Lieutenant. And is that an AK-47 tied to your vehicle?"

Bob took another step. "They've got a lot of firepower, Loi." Then, more softly, "I'm playing for time. Get ready to move."

One of the troopers began walking toward them. "I wanta see everybody's hands," he said as he approached.

There was a slapping sound, the clink of metal. "Stop," Chris shouted. He was aiming his rifle directly at the trooper.

The trooper dropped. The others took positions behind cars. There was a general clicking as guns were cocked. "Unless you throw in your weapons by the count of three, we'll take all of you down," Nate shouted. "One... two—"

"I'm bringing a gun in," Father Palmer burred. There was a sloshing sound in his throat. "Somebody give me a shotgun."

Nobody moved. They looked to Loi for a decision. "Yes," she said. Nancy handed him one.

He dragged himself into the middle of the road.

Nate spoke. "Put it down now, Father."

Closer Father Palmer went, moving to within range. "I can't hear you."

"Father, don't take another step."

The priest stopped, his breath gurgling and wheezing.

Nate yelled at him. "Put it down!"

Instead Father Palmer raised it to his shoulder and fired a round of twelve-gauge buckshot directly into Nate's body. There was a blast and a dry smack of sound and Nate flew into pieces—which at once began to jerk spasmodically, the hands clutching, the face working. Black liquid sprayed out of the torso and the neck, and dribbled from the severed arms and head.

Bob was astonished to find that he himself had been following Father Palmer, even starting to raise his hands. Now he reared back in horror, the thrall broken.

Father Palmer's gun roared again and more of them fell. As he fired, appendages grew from his torso and wrapped around the barrel of the gun, attempting to wrest it from him. "By the love of my Lord Jesus," the priest bellowed, his voice suddenly clear and hard and strong, "begone!" Again he fired, and again, and the shotgun's roar rocked the night.

Crowds of black serpentine arms unfolded from him, ripping out through his skin, tugging the gun, snaking around his neck. They squeezed. "Lord," he croaked.

Shots were returned, and the stink of cordite filled the air. For Loi and Bob it was an odor from long ago. Her blood began to run high, his eyes to well.

Yet again, the priest's gun thundered and more of the crowd of false people was rent into pieces. Father Palmer gargled and grunted and struggled against himself, but he kept firing, again and again.

Loi and Brian and Chris fired. Joey hid behind his mother, his little voice cutting the air with its terrified cries.

Quite suddenly there was silence. As the ringing faded, they all heard the

same awful noise in the dark. Pieces of soldiers and troopers and townsfolk lay about scuffling and flopping, their motion chaotic. Hands vibrated, legs kicked like landed fish, lips burred, torsos wheezed and spilled blood.

Father Palmer ceased firing and began to dance a kind of horrible jig, his hands batting at the great coils that now swarmed from his belly.

"Shoot him," Ellen shouted. "Don't leave him like that!" She fired her own gun, but he didn't react. She was no marksman, and the dark only made it worse.

Bob raised his pistol, but it wouldn't be effective in this light against that gyrating hulk, not from a hundred-foot range. He gunned his ATV, went closer, began to take down the AK-47.

"Bobby, come back," Nancy moaned.

"Daddy!" Joey bellowed.

Chris trotted up beside the ATV. "I've got a few rounds left," he said.

They got to within thirty feet of the priest. This close, the man was a struggling, heaving mountain of fleshy complications.

Now Bob fired, and as usual he didn't miss. The priest staggered, lurched, then toppled. His fluid-filled skin creaked, it was so taut. Liquid spurted from around his knees like water from a burst pipe. Then the head came to muttering life, the eyes opening wide, bulging until they imparted an appearance of extreme surprise.

Chris fired three shots right into the center of the face.

With a series of wet plopping sounds the priest became entirely transformed, his head, his body, changing into a furiously active tangle of worm-like feelers that probed and pulsated, all seeking the same thing: control of the shotgun that lay before him.

Almost without his realizing it, Bob dropped his gun to the ground.

"No, Dad," came Chris's shout. "Pick it up!"

He looked at it, looked at his boy, who calmly fired two more shots into the bubbling, spitting remains of the priest.

"Goodbye, Father," Bob said, and quietly added a prayer for him. He took the AK-47 to his hip and fired again. The priest's chest burst open, his monstrously deformed head lolled.

Chris tugged his shirt. "Let's move, Dad!"

From long range, Loi fired at the remains of the priest three more times, hoping that this would be enough, fearing the worst. Angry, disgusted, she shook away the tears that had started forming in her eyes. She got up behind Brian and they darted through the dismembered, disorganized rabble that was all that remained after Father Palmer's effort.

From behind them there rose a hideous sound, a high-pitched, raging bellow so filled with hate that it made her cling to her husband's back to drown it out.

They went on.

Just as they were about to hop the curb and get back into the woods, the Viper came speeding up from the direction of Oscola. Its lights were off and it was moving at blinding speed, coming straight at them. But Loi was a good shot. She rose behind Brian and fired over his head.

A blue spark flew off the hood of the onrushing car.

She had perhaps three seconds.

Her next shot dissolved the windshield.

The sound of the engine went high, the car swerved.

Another shot missed. "Goddamnit."

Again she fired, this time into the right tire.

The car careened to the right, narrowly missing Bob and Joey West on their ATV, then rolling off into the dark by the side of the road.

A moment later a series of purple flashes exploded up from the ditch where it had crashed. Out of the flickering explosions there raged a mass of flailing, segmented legs, clashing red mandibles, plates of gleaming red chitin.

It hadn't been a vehicle at all, but a—what? A colony of something?

Before anybody could so much as take a breath, crystalline purple eyes had appeared at the ends of the mandibles.

One of them shot forward.

Loi found herself staring straight into its glittering darkness. She saw the mesmerizing image of a beautiful little baby. He was floating, still attached to the umbilical. He kicked, his whole body jerking with the suddenness of a man waking from an unexpected sleep.

Brian grabbed both of her cheeks and turned her face forcibly away.

Then she was back in this world and they were pulling out, tires wailing protest.

Holding on with one hand, she touched her face with the other. "Did it get me?" she bellowed. Her baby kicked. "*Did it get me?*"

"No!"

"Thank God." As they raced off into the night, she had the bloodcurdling realization that the demon was especially interested in her, and she knew why: it wanted her baby.

Ellen was behind them when she saw, coming up from behind the tree line, something entirely new and completely unexpected. A gigantic, tapering mandible, visible in the dark only as a shadow, probed along behind Loi and Brian's speeding ATV. It was as if the most tremendous, the most terrible of all the dragons of myth had risen from the depths.

For a moment it wavered, as if seeking direction. Then it stopped, focused, and went questing after Loi. On its first pass it came so close that she rubbed the back of her head where it had touched.

"Loi," Ellen shouted, "look out! Look out behind you!"

When Loi turned in her seat she saw a grasping, outstretched hand with fingers ten feet long.

She grabbed Brian's waist and hung on for dear life as they chugged toward the sheltering forest. On her cheek she felt a chill cooler than the wind rushing past, felt it slip around her neck, felt the gentlest of tugs, persistent, getting stronger—then broken.

She was free.

But then the serpent arm flashed back into view, tremendous fingers waving gracefully in her face. She shrieked, threw herself against Brian's back. Her baby leaped within her. She felt a dull, deep pain. "No, please," she whispered. She tried to force the muscles to relax, but they did not relax. Again her baby jumped. There was a dull, familiar pain. "Oh, no. Please no."

The serpent arm rose high over the ATV, curling in a huge arch. Then its end disappeared into the roiling clouds. She could not see where it was anchored to the ground, or the gigantic creation of which it must be a part. It was large enough to slap all four vehicles to oblivion. "Brian, it's going to hit us!"

The tree line was fifty feet away.

She could feel the thing's presence above like the looming cave-in of a tunnel or a fat client at the Blue Moon Bar sinking down on her. Then the ground shook, the ATV's engine wailed, and the whole enormous thing crashed into the road behind them. The hand closed on air.

Instantly the gigantic apparition rose, stretching its serpentine form to the absolute maximum, and this time swinging out to the side. As it shimmered away into the woods seventy- and eighty-foot pines shattered into matchsticks, their trunks riven, the roar of their fall like the voice of a

maddened river.

It came back, sailing toward them at full speed, right beside them, then just beside the rear tires, then just missing, the fingers extended.

They were within twenty feet of the woods.

But the road before them erupted in a geyser of dirt, stones and soil and concrete flying upward as something came bursting out of the earth.

Desperately Brian swerved away. Loi, who had been hanging on by one hand, was thrown hard to the side. She fell, her shoulder glancing off the ground. As she felt the shock blast through her, she screamed in pain and terror. Her womb shuddered like jelly, and long, hot knives of pain penetrated deep.

"Loi!"

She grabbed his back, the far edge of the seat, forced herself up. "I'm OK!"

The other ATVs were coming fast, engines bellowing.

Brian gunned his engine, their ATV leaped ahead—and Loi found herself lying in the road flat on her back. Her mind snatched details, the smell of the exhaust, the faint warmth of the pavement, the gnarled shadowy clouds above.

From underground came a booming, pulsating sound. Her skin felt suddenly shivery, tight. She saw Brian still on the ATV, a look of absolute horror on his face. Then she felt the ground churning beneath her body.

She was falling.

She saw Brian disappear, the sky above him disappear, saw it all become a haze, a blur, then saw it folded away into blackness. She was dropping fast, so astonished that she couldn't even cry out.

From far above she heard Brian shouting, heard her name echoing.

Then she hit something thick and warm, sank into it, kept going down and down, felt it hot around her, breathed, choked, tasted a foul taste, went deeper and deeper and deeper.

2.

Brian threw himself to the ground, began clawing at the pavement, which was still loose where Loi had been absorbed. But the stones soon acquired a sort of crazy, spinning weight, rushing out from under his fingers and back into their places.

Inside of twenty seconds there wasn't a trace of the hole that had consumed her. The only sign that it had ever existed was the presence of pale, friable clay, just like the summit of the mound, or the spot out on the Northway where Bob had been taken.

Deeper silence descended. It was broken when frogs out in forest ponds resumed a tentative chorus. Brian crouched beside their ATV, weeping.

He was unaware of the others as they pulled up around him. Realizing that something was terribly wrong, they'd come back.

Bob leaned over him. "Brian?"

"I've lost her!"

His words sickened them all. She had been their strength. Her belief in escape was what had sustained their effort. She was the only reason that any of them were still alive.

Ellen went down to him, put her arm around his sweat-soaked back. "Oh, Jesus," she said.

It felt as if his heart had been ripped out of his chest. The agony was so pure that he didn't cry out, he didn't even weep. He was there, and Loi wasn't.

"We have to keep going," Nancy said from the dark nearby. "We can't stay here. Loi would want it, Brian. She wanted us to survive." Nancy's voice went low, and a great, racking sob escaped.

Nobody moved. They were all together now, all in one place.

"This could be a trap," Chris said. The boy he had been had evaporated like foam, replaced by this tough little survivor.

Brian looked at him. He wanted a son. He wanted another baby to raise. He wanted Loi. "You go," he told them all.

From deep in the ground there came a cry, long and full of mourning.

That ended what little self-control remained. The anguish came pouring out like lava from the depths of his soul and he raised his eyes to the sky and howled. Then he hammered at the ground, finally leaped to his feet, yanked the pistol out of his belt and emptied it into the road, which sent back little puffs of steam where the bullets struck the asphalt.

Then there came up from the center of him such a feeling as he had never known before. He went beyond agony. It felt as if his soul was congealing in psychic fire. But it also brought him a certain peace, the peace of an absolute decision, of total and complete determination.

"I'm going in," he said. "I'm going to go in there somehow, and I am going to find her and get her back."

"Come on, honey," Nancy said to Bob. Her voice was urgent: they could hear the humvees off in the darkness somewhere.

"We gotta go, Brian," Ellen said. She got on her ATV. The others got on theirs, all except Brian. He backed away.

"I can't leave her." He would not tell them this, but he was hoping that the thing would return and take him as well.

Ellen got off her vehicle. "You go ahead," she said faintly to Bob and his family, hardly believing her own voice.

"Brian," Bob said, "I've gotta keep going. I have my family to think of."

"You go," Ellen said, "it's dangerous here."

"I can't."

She reached out to him, was glad that he let her take his hand. "Brian Kelly, you listen to me! If you stay here, you'll never have the chance to help her."

"A door that's been opened can be closed," Brian said firmly. "If I can get inside, maybe I can do some good."

A great rush of wind went through the trees, bringing with it cold, intimate smells from the deep forest. "I see a light," Joey hissed.

A hard white light was flitting through the woods, and they all knew what it was. It flew slowly along, almost lazily, winking on and off as it passed among the trees.

Ellen had the horrible, secret thought that they might be looking at part of Loi. She went closer to Brian. It was going to be awfully hard to get on that ATV and leave him behind.

The Wests mounted up. "If we can get help," Bob said, "we'll come back for you, buddy. Both of you." He looked at Ellen. "We've gotta move."

"I'll be going out on my own later," Ellen heard herself say. She was amazed at herself. But the truth was that she had become too committed to Brian and Loi to leave them like this. She just couldn't do it.

Brian's hollow eyes bored into her. His face was a sweaty mask. "Ellen, don't be an idiot." There was something very new in his voice: it cut, it was raw, it was white-hot.

"There's another one," Chris said. A second lightning bug darted across the road. Under them, the ground vibrated.

The Wests left, dashing off into the dark.

Brian nodded to Ellen, almost formally welcoming her to the world of his pain. "I thought he would take me, too."

"Who is he?"

Brian shook his head. He looked down. "That's what I need to find out."

3.

Loi was struggling against the thick, mud-like substance. It was getting in her mouth, her eyes. She had to breathe and she couldn't, she was in agony, her whole body being pressed harder and harder, so hard she couldn't stand it. Her womb was getting tighter and tighter, and she was afraid she was going to burst.

Then she was back in the brothel, spreading her legs and counting, one, two, three. No, she was in real, physical filth, drowning in it.

Involuntarily her mouth opened as she gasped for air. She had to breathe, she had to, *had to!* Mud came sliding in.

Then air.

Air, roaring clouds of it: she hacked, spat, spat harder, shook her head, gasped and promptly choked on little stones and soil, shook her entire body. Debris cascaded around her, plopping to a floor that sounded soft and damp.

Total darkness.

She gulped and belched helplessly, as she'd seen prisoners do in terror of impending torture.

She raised her hands to her belly. Trembling, she felt down to her vagina for blood there, brought up her finger and tasted... only her own familiar musk.

She got to her feet—and found just overhead a dense, giving thickness centered by a puckered, rubbery area. It was like an opening in the ceiling, closed by ligaments. She pushed her fist into the center of it, and in a moment dirt ran down her arm.

Then it came to horrible life, tightening as if it was filled with muscle. Her hand was forced out. The lips were rigid now, being held taut. She could not

push them open again.

This did not feel like a tunnel or a room or a cave. It was so confined, the air was so bad, that she felt as if somebody huge had his arms tightly around her chest. She flailed against the limits of the tiny space, her hands slipping in the substance that coated it.

She hadn't been sucked into a cave at all, she'd been swallowed. As she ran her hand across the soft floor, the slick, sinewy walls, they shuddered and seethed. This was a living thing. She was inside a huge organ.

That broke her. She slapped the giving walls, kicked the floor, which gave and bounced back like a sponge.

Another fear invaded her, and she felt her face with frantic little detailed gestures, trying to be sure that she had not changed, that she had not become —

No, her skin remained smooth and soft.

Then she heard something new, a hissing, rattling sound. It was coming closer to her. She drew away from it—and found herself pressed up against the other side of the living chamber.

The space was getting smaller, she could feel the far wall touching her, then pressing against her.

A blazing white explosion of terror convulsed her and she wailed, feeling as she did it all the loneliness of the truly lost.

She did not know how long she screamed, but eventually her howls changed to hard, gulping breaths. The air was even more dense now. Breathing didn't work well. She was being smothered.

Then she knew that something was pressing against her belly. Her reflex was instant—she pushed away, pressing herself into the wall behind her. Dense liquid squeezed out behind her back and oozed down her shoulders and breasts.

Hard, rough hands grasped her thighs, scraped slowly along her sides, again coming to her stomach. Inside her, the baby jerked spasmodically.

She could not move any farther away. The hands came up her sides, up her breasts, her shoulders, her neck. She heard a rattling sound not an inch from her face. Reflexively, she tried to shield herself.

Her hands came into contact with thin wrists as hard as steel pipe, cold and covered with hairs like spikes. The hands came to her hands. They also were hard and cold.

When they tried to close on her hands, she reached out, slapping, hitting.

She came into contact with a face. Undoubtedly it was a face: she could feel the shape of it. But the cheeks were hard, the mouth was complex with parts that tickled her palms as they worked. The eyes were dry and protuberant, feeling under her sliding fingers like the surface of a strainer. They reminded her of the eyes of a fly.

Her baby was jumping and jerking, as if he entirely shared his mother's anguish.

Slowly, the face turned, and her fingers slipped away from the eyes. But there were hard, springy hairs all around them and she clutched these and pulled as hard as she could.

A great caw burst out, blasting straight into her face. The hands came up and closed their hard fingers around her wrists and yanked her arms away. She twisted, she spat, she shrieked.

A feeling of incredible malevolence washed over her with the power of a hurricane stinking of profound rot.

She could not see him glaring at her, but she knew that *he* could see.

"Kill us," she said. She was thinking of the hideous changes she had seen in the Michaelsons and the Rysdale boy and poor Father Palmer. This must not happen to her baby!

A new sound came, a sawing wheeze, coarse, loud, as if it was made not with vocal cords but by sticks rattling together. Even so, she recognized this sound: it was laughter, the laughter of triumph.

He had hunted her and captured her and taken her for one reason: the child.

Seventeen

1.

Ellen and Brian had moved off into the woods and were making their way slowly west, paralleling the town. To their right, they could occasionally hear the falls of the Cuyamora River as it came leaping down out of the mountains. To their left behind a screen of thick forest lay Oscola.

Brian was stricken by his loss, but he had tabled drastic action until he knew what had happened to Loi. If she was dead, then he thought he would want to join her. He had to find out. Rather than paralyzing him, it was the nature of this uncertain grief to drive him to greater effort. His mind was now entirely centered on discovering her fate and the fate of their child.

He watched Ellen riding slowly along beside him. Although he felt gratitude for her support, she could not stay.

Ellen also watched him. She did not know how he kept on. Had she suffered a loss like his, her first impulse would be to just shrivel up and die. She could see his pale ghost of a face, his dark mass of curly hair.

His mind analyzed and deduced. There had to be a way in, and it must be somewhere in this general area.

The highest probability was that the entrance to whatever remained of the facility would be near the judge's place. He had excellent reasons to think this.

First, the judge had been co-opted early, and the initial manifestations had taken place on his mound and in his root cellar. Second, as they drew closer to the estate, Brian was observing more and more changes in the plant life—subtly twisted limbs, leaves reduced to contorted green knobs, or turning into sticky green-black sheets that stank of mold.

It would have made sense for the scientists involved to move the facility to

Oscola. It was close to the Ludlum campus, site of the original problem. More importantly, the town was in the middle of a small but geologically unique area.

The veins of iron and basalt that ran beneath it were among the strongest geological formations on earth. The men who were fighting this war would have wanted that strength, in case they had to try another containment effort.

So he knew where he would find the entrance to the new facility, and that was where he was going.

Ellen stayed with him, even after they moved past a clump of pulsating, bloated saplings.

He called to her. As soon as she stopped she slumped over her handlebars. She was almost done in. "Yeah, Brian?"

"It's time for you to follow the Wests."

"I think I can help."

"Ellen, it's not real likely that I'm going to be coming back."

"But there's a chance we could hurt this thing, isn't there? Or even stop it altogether."

He could not lie to her. "There's a chance. Not a good one, though."

What she wanted was to be in a nice cozy bed with a cup of cappuccino and a sweet, loving husband. But that wasn't to be. She could not turn away from this problem, not if there was any chance at all of doing something useful here. "What would we have to do?"

"Get the equipment turned on—assuming that's even possible."

"Turned on? You'd think we'd have to turn something off. Bust hell out of it."

"The link's already been made or this wouldn't be happening. Obviously my

colleagues were trying to break it."

"What link?"

"I'm not sure. But I know I'm right about the equipment."

"Which is where?"

"You remember that old iron mine?"

"How could I ever forget it?" The wetness the spiderlike thing had left on her legs remained a vivid memory.

"If we go down there, we'll find an entrance, almost certainly."

"We have a couple of pistols. We'll need flashlights. A company of marines."

He smiled at her then, a thin smile. "Listen to the frogs."

Their croaking had risen to hysteria.

"And the crickets," Ellen noticed. They were shrilling wildly.

From all around them there came a continuous rustling, creaking sound. "If we're going to go, we'd better do it, Ellen."

She took a deep breath, blew it out. Then she revved her ATV, put it in gear. "Here goes nothing," she muttered under her breath.

They moved off, deep into the forest.

At first the trip was uneventful, as far as Ellen was concerned. She did begin to notice the twisted limbs, the funny leaves. Then she saw a fern that looked like a pile of seaweed. A few minutes later a black, complicated creature flashed past in her headlight. It was too big to be an insect, too full of spindly legs and feelers to be a bat.

She watched for lightning bugs.

With a soft scratching sound something landed briefly on her chest. She glanced down just in time to see what appeared to be a flying scorpion, its wings still whirring.

Before she could even scream, it had sailed off into the dark.

The closer they got to Mound Road, the more things changed. The trunks of trees were grotesquely twisted, and their leaves were withering like small, closed fists. Purple light glimmered beneath the forest floor. Wet brown tendrils sprouted from the moss, twisting and growing, seeking.

Closer, and the fattened tree trunks were sprouting great black sheets of material in place of leaves.

Along with the trees everything was changing, the ferns turning to flopping, rubbery slabs that exuded black ichor, the mushrooms growing to great size, a fog of mold-stinking gas.

A pearl-white millipede at least eight feet long glided out in front of her. Before she could stop she had driven over it. With a splash the soft body exploded, slopping her feet with liquid that reeked like clabber.

Despite the rough ground, Brian increased speed. Behind him Ellen's vehicle careened along, bouncing into a gully, then bursting back into the thicker woods.

Now the leaves when they touched her clung a little and felt like leather. Purple sparks played in the soil, and the haze was like dust. She coughed, bringing up something like black tapioca.

Brian kept his eyes focused ahead, watching the dark woods whip past. It wouldn't do to hit a tree. Even letting those crawly leaves touch his bare arms made the gorge rise in his throat.

He wanted only to follow Loi's fate. If she was dead, then he would die. If she had been changed, then he would submit.

The thought of her suffering even a little bit made him twist his throttle and

go speeding even faster through the woods, forgetful of the less efficient driver struggling to keep up.

Rough limbs dragged at his chest. His stomach felt as if it was boiling.

A glow flickered in the woods ahead, as quickly died.

Ellen also saw the glow, and sensed her will faltering. Then she fixed her attention on the speeding ghost in front of her.

He swerved to avoid a sapling. At the same moment he saw another flicker off among the trees. He grew wary, began to sweep the area ahead with his eyes. Above all, he didn't want to be destroyed on the way in.

They'd used his equipment to open a door into another world and this was what had come out.

Behind him he could hear Ellen's four-wheeler slurring and slipping, the engine alternately guttering low, then screaming. She wasn't much good with it. Maybe she'd get lucky and the thing would overheat. She'd be out here alone, but at least she'd be alive.

Off to the left he saw a gray strip. For a moment his heart raced. They were closing in on Mound Road.

They broke out onto the grassy shoulder at more or less the same time. The clouds had parted and they could see the Milky Way overarching the heavens. The moon hung low in the west, above it the evening star.

But their light shone down on a forest that was twisting and lurching and changing, limbs sweeping back and forth against the sky, whole trees splitting with explosive reports, contorting into new shapes, growing great, misshapen leaves as black and slick and floppy as sheets of fungus.

The din was horrendous. The crunching and creaking of limbs, the sighing of leaves in extreme agitation, the bellows and shrieks and ululations of the forest creatures, all combined into a single groaning cry.

When they stopped their ATVs this new sound at first confused them. Then

Brian understood. He could hardly bear to do it, for he knew what he would see. But he forced himself to look down the road toward the judge's house.

There, in all its contorted glory, stood the borderland of a new world. Huge, bloated barrels topped by fungoid sheets had entirely replaced the trees. Black, twining vines covered with hair so stiff they looked as if they had been shocked attempted to choke the barrels. Here and there dark forms moved slowly along. Cries rose and fell, gawps and croaks echoed. All stood beneath a purple haze. The farther they looked, the thicker the monstrous forest became, the broader and higher the barrels, the wider the black, mucus-dripping sheets that they presented to the sky.

"I think speed's our only hope."

Ellen got on her bike, turned it around and prepared to escape. "What if we meet up with the humvees?"

"Ellen, the only direction I'll go is forward."

"Into *that*? We'll be killed for certain."

"But we might be able to do some damage."

Under the grass and weeds around them, she began to notice purple flashes and sparks. It was coming, moving like a wave out of the dark, changing everything it touched.

From behind them on the road there came a series of wet snarls, loud enough to be heard over the forest's agony. A bend in the road made it impossible to see what was there. Ellen heard Brian take out his pistol, did the same.

An enormous creature on four segmented legs came stalking around the bend. The legs were at least fifteen feet long. Lurching like a sedan chair in their center was a boxy body that had once clearly been a humvee. Beneath it gnarled, troll-like shadows humped along, seeking the protection of the great beast. They bore long, thin arms. The ruins of the uniforms and chemical protective gear of these creatures who had once been ordinary American soldiers hung in tatters from various appendages.

Where the lights of the humvee had been, the head of the creature had compound eyes that glowed with purple fire.

This light struck joy into their hearts. They did not expect it, and they cried out with the pleasure. Brian stomped his feet and yelled. Ellen staggered in circles, wailing, impotently waving her gun.

It was like being burned to death in glory.

But Ellen also felt it as rape, and the single, tiny spark of anger that this produced was enough to cause her to turn away for a moment.

The thrall broke. Beside her Brian was on his back, supported by heels and shoulders, bellowing and thrusting his pelvis at the oncoming monstrosity with the fury of a sex-maddened rodent.

She leaped on him, pressed her face to his and screamed out his name with every ounce of strength in her body.

Then they were rolling—and not a moment too soon, for the huge walker with its phalanx of trolls had positioned themselves not a hundred feet away. As Brian and Ellen scrabbled, stumbled, finally ran deeper into the forbidden zone, the monstrosity poured purple light into the two ATVs, which belched yellow smoke and began to grow legs.

Ellen, who had been terrified beyond words, now reached another place entirely in her heart, the place where men in battle go, that is beyond pain, beyond fear, beyond hope, beyond everything.

She was a body, bone and blood and brain, sweat and flying hair, racing between bloated monstrosities through foul purple air, behind a man in a tattered T-shirt who was waving a pistol as he ran.

They went toward the judge's vine-encrusted house and beyond it, now running, now climbing through curtains of vine that shuddered when they were touched. When Ellen slowed for a moment, she felt these vines begin slipping stealthily around her legs, felt leaves plastering themselves to her arms, her thighs. Stifling a scream, she snatched them away. More came, and

she could feel all the limbs and twigs and leaves bending toward herself and Brian, could see the fat bodies of the trees beginning to pulsate.

But then they reached the area of the root cellar, and suddenly conditions changed again. Here there weren't so many of the monstrous plants. The brush that had choked the cellar's entrance had given way to sheets of the slick fungus. This had the effect of increasing the opening rather than narrowing it.

Brian sat down on the stuff, began inching toward the hole.

"Brian, don't!"

"We've got to go where we're least expected. There's no other way."

She looked back. With the strange grace of a spider, the enormous machine marched after them. The shadows of the trolls were fanning out, cutting off all escape. Two dead black piles of what appeared to be gleaming meat jerked and heaved in the background: the remains of the ATVs were continuing to mutate.

"We need flashlights, Brian."

"Oh, Christ, you're right." He peered across the seething lawn. "We've gotta try the house." He sounded sick.

Crossing the heaving, tortured earth, they crouched like soldiers under fire. They kept their faces carefully averted from the oncoming juggernaut, but now even the purple flickering in the subsoil had become bright enough to deliver pleasure.

Every time they as much as slowed down for breath, the grass itself came spinning up around their ankles, the blades having taken on the configuration of thousands of busy, tapered worms.

By the time they reached the porch, these creatures had covered their shoes with a substance so slippery that they could hardly keep on their feet. They entered the quiet, inky black kitchen, feeling their way, unsure of anything.

When Brian inhaled, he noticed a strong odor. "What's that smell?"

"Sweat, I think."

"Is it us?"

"I don't know. Maybe."

"Where would an old man keep a flashlight, Ellen?"

"A cabinet, a drawer?"

She heard a scrape, then clinking. Brian had opened a drawer. Flailing ahead, she found the refrigerator, opened a cabinet above it. Her hands swept the shelf. She snatched them back. There was something slick. It felt... organic. She listened, but nothing moved. Licking her paper-dry lips, she stuck her hand in again. "Brian, I've found some candles!"

"Matches?"

"No... Yes!" She pulled down a familiar box. "Kitchen matches. Big box!" Holding them, she grabbed the candles. "Four candles."

He came close to her. They fumbled with their booty like excited children opening Christmas presents. Then he struck one of the matches and held it high.

They both screamed at once, shrieked, really. Standing in the doorway was a seven-foot-tall insect with gigantic, glaring eyes. Lying before it on the floor were five supple arms of the type that had destroyed the Dick Kellys and the Huygenses. They emerged from an unseen source in the dining room. With the easy stealth of a cobra, two of them rose from the floor. Both were carrying purple crystalline eyes.

The insect's mouth parts vibrated and it emitted a buzzing caw. They could hear the excitement.

Then the match went out.

Brian fired his pistol into the dark. In the first flash, the thing's eyes glared, filled with malevolence. In the second, it had spread great, sheet-like wings that looked like black, veined plastic.

In the third, it was gone.

"Let's get out of here," Ellen yelled. She was thinking of those arms.

This time they did not stop at the edge of the root cellar: there was no time to stop. The humvees were in the yard; something was crowing angrily from the roof of the house; the arms were snaking out the kitchen window, their surfaces gleaming in the last failing light of the moon.

Ellen landed on Brian, both of them sinking a foot into the spongy, giving surface that had replaced the earthen floor of the root cellar.

Working with furious haste, Brian lit another match. The room was empty, and the entrance to the mine gaped unattended. They lit candles and went in.

Ellen was so scared that her nervous system was beginning to betray her. She could hardly walk, let alone keep the candle lit in the stinking draft that exuded from the tunnel. "Brian."

"I smell them." He sighed. "If only we had flashlights," he muttered. He was cupping his hand around his guttering candle, leaning into the opening.

"I can't go in there!"

"Where else is there?"

For the first time in her life, the idea of suicide crossed her mind. "Why did I come back? Am I crazy?" She sobbed a ragged sob. It made her mad when she cried, and she choked it back.

"Look. I came back because there's no place in the world I'd rather go. And I have a chance of doing something in here. Out there, none."

"What sort of a chance?"

"There's bound to be something we can do."

"Don't make me think there's hope if there isn't any. Because I think I want to blow my own head off before I get made into one of those... things. I don't want to miss my opportunity, Brian."

"If somebody opened a door into another universe—a parallel reality—then the door can be closed. My theories suggested this possibility."

"It's science fiction."

"The Many Worlds Interpretation is accepted physics. Parallel universes are real, I'm afraid."

They went down the mine. The walls were iron, but the floor was mushy. It was like trying to walk on raw dough.

They went down twenty feet, then fifty.

And they encountered an elevator. "Goddamn that Nate Harris.

He's a liar!" Beyond the elevator a tunnel went off toward the surface, no doubt to the main entrance to the facility, which would be hidden well back in the woods.

"The project was classified, Ellen. They probably didn't even let him come down this far."

"They? You mean people?"

"Of course. The scientific team that was working on this."

"They oughta be thrown into the deepest dungeon in the world and left to rot."

He thought he might know the fate of two members of that team: one might have died screaming in the mound, another could have been the woman disinterred from her living grave near Towayda.

To one side was a glass-fronted box with an elevator key in it. Brian broke it with the butt of his pistol and they got the shaft open. Down one side there was a row of ladder rungs. The car was nowhere to be seen.

Without a word, Brian started down, his candle dripping wax into the gloom below. Ellen followed him. She'd never much enjoyed heights—bungee jumping was good copy, no more—and she fought to keep her vertigo from making her lose her balance.

Perhaps an impossible task. "Brian?"

"Yeah?"

"How deep is this?"

"Could be hundreds of feet."

They were now lost in the gloom, two people in a tiny pool of fluttery candlelight, dropping down and down.

"Hold it," Brian said crisply.

She stopped. Her blood was blasting in her ears, her breath snapping.

"Now come ahead. Be careful."

She hit a surface. There were cables going up. "Where are we?"

Brian pulled open a hatch. "We've gotta go through the elevator car." He dropped down inside, making it bounce. "Shit, lost my light!"

Carefully, she put out her candle and thrust it down in her pocket with her other two.

The darkness was now absolute. "Brian?"

"I'm right here. Just drop."

She slid into the hatch, let go. An instant later she hit the rocking floor of the

car. She flailed, felt Brian, then grabbed something thick and cool and wet. "Jesus, it's full of that ick!"

"Strike a light!" His voice was high with terror, and that made her fumble.

Her right hand was covered with goop, so she used her left. "I can't find the matches!"

"Jesus, Jesus, I hate this stuff!"

Her hand closed around the box, drew it out of her pocket. Her candles scattered on the floor. "Brian—" She thrust the matches into his hands.

There was a scrape, a spark, then the small sound of dozens of matches hitting the floor. He scrabbled. "It's OK!"

The match lit, revealing his gray, sweat-sheened face, his bulging, glistening eyes. She looked down at the material on her hand. Black gel. As best she could she rubbed it off against the wall.

Filling the back of the car was a thick, black mass of the material she had touched. It looked like a wet, lumpy garbage bag slathered with ooze.

They stared at it for a moment without comprehension.

Then Brian doubled over, retching loudly. In the semi-opaque gel floated parts of a human being. There were eyes suspended in the mass, connected by tangles of nerve endings to a dark, shriveled appendage, the congealing remnant of a brain. A face, stretched to extremes of distortion, the eye-sockets wide, the lips like red rubber bands, the cheeks crazed by horizontal wrinkles.

"Jesus Christ, it's Bill Merriman! He was our security director." He pointed down into the complex mess. "On his belt—that's his pager!"

"Got a page from hell, I guess."

"Poor guy."

They found the hatch in the floor, and pried up the sunken handle with Ellen's pocketknife, a pitiful little thing with two blades and a fingernail file.

They went on, descending another thirty feet before they reached the bottom of the shaft. The floor was littered with gum and candy wrappers and other familiar debris: lost coins, a half-empty pack of cigarettes—things people had dropped on their way in and out of the elevator. There were stacks of cinder-blocks, coils of wire.

"This is only half finished, Brian. It's a mess."

"Yeah." His voice was bitter. "They didn't have enough time. Not quite enough."

A moment later they stepped out into a hallway. Ellen held up her candle. "This part's finished."

The hall was short, the ceiling low. Brian looked around at the blue pipe that lined the walls. "This is all very familiar. It's a waveguide. The visible part of one. The rest is buried."

"What's a waveguide?"

"When you create an extratemporal particle, it flies off through time and space both. It leaves a sort of track in time. This guides it, so you can detect its passage. But somebody with superior understanding could use its track to literally climb through the ages to reach you."

"From the future? These things are from the future?"

Brian shook his head. "If they're not from some sort of alternate reality, then they must be from the past."

"The past? How?"

"I don't know. Except when you consider that the earth existed for billions of years before the first sign of what we define as life appeared, you can see that there's plenty of room for whole worlds to have come and gone and left not even a fossil behind."

Then they saw a figure lying in the farther shadows. As they went toward it, Brian at once hoped and feared that it was Loi.

It was a young man. The uniform told them where the judge's soldiers had come from: they had been facility guards like this one.

Ellen turned to Brian, put her hands on his shoulders. They held one another in silence, two very frightened and lonely people.

From deep within the complex came a rattle, followed by a long sigh. A wind rose from below, this one foul with odors neither of them had ever smelled before, thick, sour odors, complicated by dense sweetness. It stank like old meat, like rotted fruit.

Then the direction of the air flow changed. What came down from above was fresh by comparison. "What gives, Brian?"

"A ventilation system."

"There's no electricity."

"It isn't our design, Ellen. We vent with fans."

The whole place was quietly breathing.

2.

The first contraction confused her. Despite all the years she'd spent on her back, she'd never given birth. At the Blue Moon Bar girls who didn't get aborted got taken down to the banks of the Chao Phraya River, and they didn't come back.

She'd been aborted seven times, and that was the secret reason she was so fragile inside. Only the doctor had known. "Dr. Gidumal," she moaned, staggering along in the blind dark. "Sanghvi... Sanghvi Gidumal..."

Now she held her belly, encircling it with her arms. Memories came to her aid, gentle and vivid, of the few good times she had known. But even these

memories contained betrayal.

When she was eight, her uncle had dressed her in a beautiful white *bao dai* that was scented with flowers, and taken her from the Chu Chi tunnels to Mai Thi Luu Street, with the Saigon Zoo at one end and the Emperor of Jade Pagoda at the other. Behind the pagoda flowering weeds choked the banks of the Thi Nghe channel, and their aroma scented the grounds. There had been small bells that tinkled peacefully, and incense that filled the air with the scent of old memories, and the gleaming bald heads of boy monks who had watched her with wide, calm eyes.

In that pagoda was a very special and terrible place, the famous Hall of the Ten Hells. All the torments of the damned were portrayed there, the suffering of those so weighted with karma that they had fallen from the wheel of life forever.

Her two years in the tunnels had taught her about maneuvering in wet and dark, and that training was indispensable now.

She'd been touched all over by those terrible rough hands, and they had left something runny on her that had congealed and become sticky. More than bearing her contractions, she thought now about getting this stuff off her skin.

She did not believe in the contractions.

Brian Ky Kelly would not choose such an inauspicious time for his arrival. He was a glory child, intended to come at the very moment of dawn, under the protection of the sun and the morning star.

Her legs seemed to weigh a thousand pounds, she didn't know where she was, where she was going. There were sparks in her eyes but nothing else, no light.

She must have sinned too much with the perverts who visited the Blue Moon Bar. She had done many things repugnant to heaven and nature. But she had a baby! "I am with child," she cried, a shout she had often heard in the smoky dawn, when the American planes had sailed high and the firebombs had fluttered to the ground with the motion of silver leaves.

She heard a woman sobbing, knew it was her, for there was no other woman here, nobody else so bad she had been sent to the black bottom of the Ten Hells. She knew she would burn soon, she could smell combustion in the air, hear fire rustling in the walls.

Something brushed against her shoulder, then small threads began dragging across her chest. Reflex caused her to jump away, and the threads disappeared.

She continued walking, trying to hurry now, using her tunnel skills. She kept her head low, waving her hands before her.

Demons, demons, demons.

She cast about in her mind for some deliverance, and found herself returning to the Emperor of Jade Pagoda. There also was a painting of the Guardian Spirit of Mother and Child. "I call on you to help us."

Another contraction came, and this time there could be no doubt: she was going to give birth in hell. At the drumming apex of the pain she sobbed and shouted out, "There is a baby here!" She had also heard this in the quivering waters of the rice paddies, when both sides would be firing bright-burning phosphorus bullets into anybody in a sun hat.

She remembered how the peasant villages smelled in the rain, of rich, damp thatch and sweet cookfire smoke.

Once or twice she thought she'd seen sparks ahead, flickering like candles. But they did not reappear, and so she knew that they were only lights from the tunnels of girlhood.

She would not allow the lamentations that wanted to rise from her to stop her progress. Brian Ky Kelly was coming! She had to find the sun.

Something trembled inside her, a flutter of the inner belly. Then a hot gush of something poured down her legs. She felt fluid sluicing along her thighs, as if the sea had come out of her. "Do not take my baby!" This had been the cry of her people when the guns roared. Bullets are blind, she remembered, and

softly cursed heaven for not letting her keep her gun.

She dabbed at her legs, fearing that this new gush was also blood, a fatal hemorrhage. She lifted the fluid to her lips, tasting, praying.

It was the water of birth. "Help me!" Their baby would see the Hall of the Ten Hells, she had brought him here because of the evil of her life. As if he was already a dead man she grieved for him.

She had heard it coming from under flattened thatch and fiercely burning fire, the cry *help me*. Usually the first answer was that of the mocking parrots. Often, theirs was the only one.

Another contraction came, shooting down from the middle of her belly, causing her to arch her back and cry out, shaking her arms and her head. She nearly toppled back, then staggered forward. She had seen peasant women give birth squatting in a corner of a room, their faces without expression. When she squatted the pain was less.

Finally the contraction passed. Unsteadily, she got to her feet. The way the floor of the tunnel trembled made it very hard to walk. It was like trying to march in a hammock. Worse, the whole place was covered with phlegm, lathered in it.

But when she breathed in, she could smell the dear damp of thatch, the sweetness of a mud floor. She waved her arms about,

but felt only the slick, oozing walls. There was no thatch here, no little hut where a baby could be welcomed.

She was going to have him at the wonderful Ludlum Community Hospital! In one of the beautiful white rooms! Attended by nurses! "Don't forget me, everybody! Dr. Gidumal, I am in need! Dr. Gidumal!"

A sound came like a child drawing the bow across the strings of a *bar-woo*, crackling and guttural.

Instantly she swallowed her cries.

The next contraction hurt so much that she fell to her knees. She was gasping, helpless, lost in the pain. But she would not scream, not if sound drew attention.

When at last it had passed she could taste the salt of her own blood. To keep the screams in, she'd gnashed her lips raw.

She did not try to go forward anymore, she was too exhausted.

This strong woman, who had braved practically every obstacle there was to find a husband and bear a child, was finally being broken. Swelling pain engulfed her, starting down in her center, driving her to slump forward like an abandoned ragdoll. She pushed because she had to push, but every cell of her body wanted to protect her baby. As she arched her back, she raised her arms—and suddenly her hands were in contact with something complicated.

It was cold and wet and warty, and it left a stickiness like slobber in her palms. Gagging, she wiped them uselessly against her soaked jeans.

She crawled then, a few feet, a few more. A slashing sound started overhead, as if somebody was opening and closing huge scissors. A shower of drips rained on her naked back.

Something up there was drooling on her.

She knew, suddenly, why they did not attack her, transform her into a demon with the purple light. They were waiting for the baby to be born. They wanted to eat his sweet and tender flesh. They were up there sharpening their claws.

Crawling as best she could, she silently called on the Goddess of Mothers and Children.

Another contraction broke over her with the power of an explosion, setting her inner thighs afire, sending spears of lightning up her back. She felt something tear within her, felt it give, and suddenly there was deep movement. She went forward to her face, kneeling now with her butt high, her shoulders against the floor. Pulling her jeans away, she reached under

herself and felt, and there was Brian Ky Kelly's wet head in her hands.

She turned onto her side, her back, took Brian onto her belly, grabbed a corner of her blouse to shield him from what was above. It came closer and closer, until its hard, warty shell pushed against her belly, her breasts, the still, hot body of her baby.

She pulled him out from under it, felt a pain within herself, realized that he was still attached to the umbilical cord. How to unfasten it? Women must do it somehow, poor women without the simplest tools. She reached down and by stretching took it into her mouth. It was slick, salty, tasting faintly of blood.

Before she could bite down there was the whisper of a blade, very close.

The parted umbilical cord fell away.

She was so exhausted that she couldn't raise herself, could hardly hold him against her breasts. He was squirming, his little hands clutching. "Oh, Brian," she said, "oh, Brian."

Suddenly he was taken from her. A cry tore from her throat. She grabbed for his disappearing body, missed, ended up with her hands clutched against her chest. Even though she was drained dry, she still found enough strength to hammer against the knobbly breast of the thing above her. "Give me my baby!"

There was a crack of sound, sharp and quick. Brian went "Oh! oh!" He gasped, wet, rattling. He cried again, breathed, gasped. Silence. Then he mewed like a kitten.

She hammered the hard body, kicked, screamed. Then a new sound, softer, more easy. He was cooing. As gently as a butterfly dropping through the jungle gloom, he was laid back upon her. She clutched him. He was breathing now, short breaths, very quick, and his arms and legs were moving a great deal.

She took her right nipple and moved it against his face. Despite the dark his

lips found it right away.

The air was cold and dank, and all they had was her blouse to warm them. "Brian, my husband," she whispered in wonder, "you have a son."

Behind her she noticed a flicker of light. Turning, she felt a deep warmth in her bones. She'd suffered so much and was so tired that the pleasure almost knocked her out.

But she knew this pleasure, she knew that purple light.

Now that they'd made sure the baby was out, they were bringing their cooker.

Clutching her baby to her breast, she began to slog along. The machine came hissing closer, moving easily. As it came she could hear it sizzling and popping.

Soon the purple light began to touch her back. She sighed, fought down the desire to stop and let the sweet relaxing heat wash over her. She must not let them get her baby!

She ran right into a familiar figure: she knew this coarse hair, these thin, steel-hard arms. Frantically, she pushed away, falling to the floor, bouncing in the giving slickness.

Behind her the purple light strobed furiously. Ahead there was a slurping noise. In the purple flashes she saw a wet cable as thick and alive as an animal's long tongue. As it appeared, it made the sound of a boot being drawn from the sucking bottom of a swamp.

Behind it the compound eyes, in their thousand lenses, were flickering, purple images of a filthy woman with a baby.

Then wet cable was pressing directly against Brian's face and flooding it with that terrible light. She snatched him away, but the cable came too, as if the end of it had been somehow glued to his face. The light flickered, the machine crackled and sputtered, a horrible stink of heat filled the air.

Her baby kicked, he waved his arms, he mewed like a kitten in ecstasy.

Loi could not stop the light, could not detach the cable without pulling her baby's head apart. From deep inside her there came something basic and raw and furious, the tidal wave of savage love that links a mother to her child. Instincts that she didn't even know she possessed came bursting to the surface.

She screamed and screamed and screamed. And as she screamed, she slammed a fist into the cable that was linked to her son's head. He was so tiny, so full of innocent magic, nobody had any right to do anything but cherish him.

There was no time, if she didn't break that connection, he was going to be destroyed. She leaned forward and bit the cable, clamping her jaws like two steel blades. The surface of it cracked and something like hot glue oozed into her mouth. It tasted sweet and alive and stank like old vegetation, the wet rot in the depths of a peasant's compost.

There was a flash of fire that made her groan with pleasure, and suddenly the baby was free in her arms. Wasting not a moment she turned and hurried away from the sparking machinery.

He was still warm, was mewling in her arms, and as she scuttled along she ran her hands over him, feeling his little face, his skin, seeking any sign of damage.

There was none. They had not been able to change him. Her mind raced, turning this over and over again. Of course, the baby had no evil in him, he was innocent, he was not accessible to demons.

She had to get him out, and there was a chance now, a little, tiny ridiculous chance.

Behind her there were squishing sounds, then a great, roaring, furious burr of a voice. Was it speaking words? She didn't know, didn't stop to wonder.

She hurried along the giving floor. She was a tunnel rat again, eight years old and very scared, moving with swift efficiency through the dark.

The great, buzzing roar rose again, and she knew that the demon was in motion now, it was coming fast, bearing down on her like the tiger in the night.

Eighteen

1.

Ellen and Brian heard screams. They raised their candles but they could see nothing beyond the immediate jumble of machinery. The screams faded into the sound of dripping water, which was the chief problem in this ruined place. The water ran along cables, down conduits, fell in streams from the low ceiling, splashed, poured, creating a nervous chorus.

They were well below the water table, perhaps sixty feet down. Pumps had once kept the place dry, but no more. The sweating walls were covered with cables and blue conduits. The floor was made of steel mesh, underneath which could be discerned the shapes of several small machines.

"Generators," Brian said. "This is where they got their power." Overhead, bulbs in black steel cages remained unlit. He knelt on one knee, produced a quarter from his pocket and dropped it through the mesh floor. It fell a few feet, ringing against the equipment, then splashing into water.

It was all so small, so confined, so... pitiful.

"If nothing's running, Brian, why is this still happening?"

"I know it's hard to understand. Our people created the link back in my old lab in Ludlum. This facility is designed to break it. Which is why it has to be turned on."

He started down the catwalk, reassured by her clattering footfalls that she was following him.

He hadn't gone twenty feet before the light of his candle fell on something strange. "Stop."

Ahead was a gray substance hanging in folds like a curtain. He touched it and found that it was soft, giving. When he pushed, it tore, the pieces dropping

lightly away. An odor came out, of mold and acid.

"I don't think we should go in there, Brian."

He gazed at her, a curious peace in his eyes. She'd seen this expression before. Her father had worn it on his deathbed.

The odor stung their noses and made their eyes itch. A greasy taste settled into their mouths, as if their tongues had been painted with a paste made from vinegar and toadstools.

He stepped through the rip in the curtain, his feet squishing into the spongy surface beyond. "It's wet. Goopy."

Nausea stirred in her.

"We'll only have one chance," he said. "If that."

She came up close behind him. "I want some exact information. What are we looking for? What do we do when we find it?"

"We've got to get to the control room. Start the thing up."

"What if we can't?"

"Then we can't."

They set out, two miserable people huddled over faltering candle flames. They had to wade rather than walk on the mushy floor.

"It's like the interior of a nest."

"It is the interior of a nest. These creatures are modeled on the same paradigm as insects."

Soon they came to a depression that turned into a sort of hole, fleshy and soaking. He reached in, touched the pliant, slick wall. There was a curious sensuality, a feeling of life.

He pressed himself into the opening. "Here goes something."

Ellen watched as he went feet first into the blackness. Instantly he disappeared, leaving only the orifice behind, gray and gleaming in the light of her candle. She could hear him sliding wetly along. "Brian," she said. Her throat was tight, her skin tingling in the fetid, acidic air.

There was no answer.

Sweat began trickling down her face. He was gone. Just like that, he was gone! "Brian!"

She was in here all alone. She couldn't bear this, she had to get out. She had to get out!

No, wait. Don't panic. "Brian, answer me!"

Silence.

He was gone and she was in terrible danger herself. At any moment whatever had gotten him was going to come out of that hole, and—

She backed away. She was getting out of here.

"Ellen."

"Oh my God, Brian! I thought—wait a minute, where are you?"

"Ellen."

She frowned. What was the matter with him? "Brian?"

"I'm over here, Ellen."

"Oh, thank God! I thought I'd lost you."

"I'm fine."

"Well, you're hoarse. You sound like you've swallowed sandpaper."

"Yeah."

She looked in the direction of the voice. It had been coming out of an opening two feet across, lined with thick, tight-stretched lips—a gigantic, hideously distended mouth.

"Jesus, Brian, are you... in there?"

Something inside moved. She had the impression of complicated unfoldings, like a wasp shifting about in the chambers of its nest.

At first she did not understand what she was seeing. The creature was so complex, with so many gleaming angles, that it didn't make proper sense.

Then it did.

The thing was grave and full of dignity, and he had something black and lumpy in the long, narrow hands. A greasy cable came squishing out. Then she saw a ruby eye, and before she had so much as a chance to take a breath felt a white-hot explosion of pleasure down in the depths of her gut. Choirs sang, her mind flooded with delicate, pink-purple light as fine as the first blush of morning. She was peering into a perfect spiral blossom.

The spiral began spinning, turning faster and faster, and Ellen followed it down into the dark, secret heart of the flower.

Far away she heard an urgent voice crying out, roaring her name. Far away... Brian was far away, not in front of her at all.

She was dancing in the light.

Then Brian was there, Brian had his hands on her shoulders, he was pulling her back.

The purple light flashed, Brian tugged... and a soft sound began, like the clash of beetles in the grass, at once intimate and brutal.

"Ellen, Jesus!"

She was being changed and she'd hardly noticed!

Then the light came back, more powerful than before. Brian had his arm around her neck. She could feel him pull until her bones creaked and her muscles screamed. But he could not break the power of the light.

With every molecule of strength she possessed, she tried to get away. They both pulled, groaning with the effort.

A blasting climax caused her whole body to spasm. She spat, she choked, her back arched, delicious tickling cascaded up from her clitoris.

Again, she climaxed. Again. Again. She dragged in air, saw *him* then, felt *him* in her deep. Again, again. In his many-lensed eyes she saw a thousand reflections of her face. Her lips were slack, nostrils pulsating, tears gushing down sinking, withering cheeks. The pleasure went up and down her spine, a hot agonizing wonderful fire racing from vagina to brain and back.

The pulsations got harder, the hardness began to hurt, then quickly to hurt more. She understood why they cried out in agony and pleasure at the same time, and knew that the voice that was doing it now was her voice.

Pop, pop, pop. Pistol being fired.

Her body was full of swift, sickening movement that wrenched like having dozens of tearing muscle cramps all at the same time. The cable spat purple light and she felt busy itching as her skin liquefied, melting before her eyes.

Brian stood stunned, watching the changes, the drooping of her body, the sudden jutting of bones as they twisted and turned beneath her skin.

To her, it felt as if hot needles had penetrated into her marrow.

He came closer now, getting the light deep into her eyes, deep into her, deep, deep, down into her very essence.

There was a rip inside her, a great bubbling up from her bowels and a feeling of tightness in her left arm. She felt it swelling and knew that she looked the way poor Mr. Michaelson had back in the woods, her appendages bloated,

her face and body twisting and distending.

Now it wasn't even a little pleasant anymore. Now it hurt more than she'd thought anything could hurt. Hot waves of agony swept up from her depths, grinding, scraping, churning.

She became aware that *he* had won. She had been destroyed forever, had been captured body and soul. She knew it with absolute clarity.

There was about him something so deeply, fundamentally *wrong* that she almost felt she could taste the evil of him.

He'd been covered by the depths of time, crushed and obliterated and extinguished with all his voracious kind. Their memory lived on only in the hungry cruelty and endless variety of the insect world.

She tried to get away from the hatred he was blasting into her, to return to Brian. She turned—but her body didn't work right. Her body—she saw complicated, stick-like legs flailing, felt herself fall to one side.

But she arose, righting herself as if by magic. To her horror, she leaped at Brian. He skittered away but she was faster, in an instant she was on him again.

She didn't want to, but there was nothing she could do, nothing at all. His pistol flashed.

With a long, long arm she swept the weapon out of his hand.

2.

Brian's candle was snuffed by the onslaught of the thing that had been Ellen.

The fear made him struggle like a man in flames, the sorrow felt as if it might drown his heart.

Something came sweeping up his leg. Kicking as hard as he could, he leaped back, found the sphincter they'd come through to get here, began pressing his arms against it, trying to break the grip of the muscle.

Behind him claws began snapping, at first in a confused clatter, then with more control, then with authority.

He could not return the way he had come. But the undulating floor sloped down and away. Feeling ahead, his body coated with slime, his nose and lungs burning from the acid-cut air, he slithered and slipped away as fast as he could. Blundering helplessly, unable to tell where he was, how close she was, he cried out his rage and terror.

There was an answer, echoing from somewhere ahead.

He knew Loi's voice. Also, that it was a cruel hallucination.

He saw light... soft, delicate, purple.

A ruby eye was staring at him from a distance of three feet. It began sizzling smartly.

He threw himself down, rolled away, flailing helplessly.

Then he was falling.

An instant later there was an impact. His confusion was such that he took freezing cold to be blazing heat and breathed in enough water to start himself choking. Forcing himself to clamp his jaws shut, he struggled in the water. His lungs began to ache, then to burn, then to scream for air.

A little water came down his throat. He breathed it, coughed. Another breath came in—more water.

Then he coughed, he knew he was going to gasp this time, to gag, and he was going to start drowning.

His chest heaved, his mouth opened—and he sucked in air. Air! He gobbled, retching, gasping, throat distended, mouth gaping.

Splashing, flailing, dragging himself away from the water, he choked and gagged, then forced calm to his striving muscles, fought down the panic. Treading water, he opened his eyes.

Darkness and silence—but no purple light. He tried to find bearings of some sort. There were none. He swam, throwing one arm in front of the other, paddled aimlessly until his shins hit something hard. Then he felt a steel loop and grabbed it. Hauling himself up, he came onto a sort of shore, which consisted of a floor, an ordinary floor. He felt what seemed to be a broken chair, another beside it.

He realized that he lay on the dark shore of a ruined office.

From off in the gloom there came a droning sound. He listened.

There was something in flight, which meant that it could see in the dark. It was coming closer.

His pistol was gone.

He fumbled about, trying to find something to use as a weapon. The metal chairs were twisted but couldn't be broken. He threw open the drawers of a steel desk, feeling frantically through the paper clips and other debris.

All he found was a letter opener, which he hurled to the floor in frustration.

He began to explore, touching along the walls. He felt steel... a door, a locker door. He opened it. Empty. Then a file cabinet. This he also opened. The drawer was heavy, it was jammed with papers. There was what felt like a computer screen on the floor, wires everywhere.

Files, computers—dared he hope he'd reached the control point?

He felt around the jumble—and found something that made him stifle a cry of joy. Frantically he felt for a switch—but what kind of a flashlight was this, what were all these little belts?

It came on, the beam dim. It was a headlamp, the kind miners wore, thus the straps. He put it on, looked around, avid to see. The first thing he laid eyes on was a row of lockers. He threw them all open.

In the last was a Kevlar safety vest and a hardhat. On its floor was a beeper. Dead, of course. He threw the beeper against a wall.

The drone of wings began again, got louder.

This light was insane, what had he been thinking? He reached up to flip the switch, but then his eyes fell on a thick Manila-backed document. He grabbed it, read the title: "Superluminal Violation Repair Program Structures Integrity Handbook." Another rattling buzz, this one closer. He flicked the light out, shrank back toward the cabinets.

He was right, they'd been trying to fix an earlier break! The problem must have occurred at Ludlum, the first break from the other side. They'd covered that over with concrete, but it obviously hadn't worked.

When the buzzing didn't recur, he turned on his light again. He had to find out more. But the document in his hands wasn't going to tell him, it was just a series of construction protocols designed for engineers and inspectors.

He found a file called "Causality Violations: Kelly Report."

The file was empty. Information about exactly how his work had violated the flow of cause and effect would have been priceless to him right now. As it was, he had to keep guessing, hoping he was right.

Brian threw himself on the files, not noticing the thick black feeler that slipped along the floor behind him, moving swiftly and quietly.

Some of the files were filled, others empty, as if somebody had sorted them, presumably removing the secret material as the facility was abandoned.

A second long, thin cord slipped in beside the first. They curled about, touching furniture with their delicate tips, seeking, searching.

He read file names, "Causality and Extratemporal Physical Emergence," "Ancient Life Forms in Interaction with Extratemporal Absorbers," "Temporal Flags and Kelly Factor Attacks from Extratemporal Entities."

They had been engaged in a desperate secret war down here, trying to throw back demons called forth from the depths of time.

From the signs of violence all around him, it must have been a near thing, maybe a matter of minutes. The things that had come here were forming a beach head of bloated forests and acidic air. Hordes would come to fill those forests, to breathe that air.

Something brushed his ankle. In the intensity of his thought, he hardly noticed.

But out in the dark water beyond the tilted door there was large movement, very quiet.

Swiftly, easily, eight long arms now uncoiled into the small room. They came across the floor. Their claws opened.

Brian read. This was all quite fantastic. They'd broken into time, not space. It wasn't a parallel universe, but an unknown past that they had unleashed.

When they came, the hands came swiftly and quietly. They closed on his arms, his legs. One of the black arms looped itself around his neck, tightened.

From the depths of the chamber there arose a furious droning buzz.

Brian began to be dragged away. Although he struggled hard, he couldn't even begin to resist. It was like being captured by living steel.

His cries ripped the air, but cries can't overcome steel.

In the blackness, something started sizzling and popping, cooking hot and hard.

He'd waited too long, now he was going to end up like Ellen, he was going to endure that horror, live like that—

He shrieked like a child.

3.

Loi heard the cries clearly, the sounds of a man in gravest anguish. Often enough before she'd heard such sounds. Somebody else had been captured,

was being changed.

She held her baby close to her, letting him nurse.

He was her strength, because of the astonishing thing that had happened when the attempt had been made to change him.

Because the demon had been frustrated, he now chased her with unbridled fury, terrible buzzing roars that exploded from him every time he failed to catch this desperate but tunnel-wise mother. She was filthy, steeped in the mucus-like substance that seemed to ooze from the walls. But she would not stop, could not, must not.

While mother rat scuttled along baby rat nursed, then slept on her breast. But she could not run forever, because she was so exhausted that her feet felt like stones and Brian like an ingot of lead. Her throat was burning for water and her hungry baby was eating her alive.

There was a purple flicker in the air, like a storm nearby. The demon was running, the demon was furious, and when it caught her she knew what it would do. It would not try to change her baby again, it would tear him to pieces with those long claws.

Another scream went echoing through the darkness, and she was reminded of the first night on the mound, how lost and forlorn that voice had been. But this was a man's voice, and closer than before, and there was a tone in it that pierced her very heart.

Oh, Brian. Brian, if only it was you.

She had not reconciled herself to the possibility that she would never see him again, couldn't even begin to do that. But these screams might be another trick of the demon, to get her to come closer.

Her heart breaking, she moved along yet another of the organic tunnels. Little Brian went back on her teat, made a small sound of discontent. Her milk was going, she knew it.

As she crossed a down-spiraling opening, she heard another cry. It was much closer, so close that she was certain.

It was Brian, it had to be him!

Her heart lifted—and then a great pain stabbed it. What if he was being melted?

Another scream, and she heard the depths of his anguish, and her heart all but broke in half.

She hesitated, crouching, trying to think what to do. She gritted her teeth, clutching the baby so close that he wriggled uncomfortably. A shaking hand felt downward, seeking the hole from which the screams were issuing. It was narrow, but she knew she could squeeze through.

Could the demon even kill a baby as fresh and beautiful as this one, still wet with the dew of heaven?

She couldn't risk it. But then her husband wailed and she thought she had never heard such agony. She entered the hole, descending quickly through its twists and curves, her infant cradled between her breasts.

Brian threw himself about in the grip of the claws. They could have cut him to ribbons, but they only held him. He screwed his eyes closed against the purple light.

"Brian!"

Loi's voice—but where? "Loi?"

"I am here," she replied.

Instantly the hands released him, went questing off into the dark. "Look out, Loi!"

He used his sudden freedom to hurl himself with all his strength in the direction of her voice. As he pulled her down he could hear the claws snapping.

To get her away from them, he shoved her hard. Those sinewy arms could stretch, but not instantaneously. They had a few seconds.

"Be careful," she cried.

Then his arms found her, he felt the familiar coarse Asian hair, felt her shoulder, the softness of her body as he folded her in his embrace.

He realized that she was holding something, something soft and wonderful and deliriously warm. "Oh my God."

Wet cables were oozing out of the machine that *he* carried.

The last moment had come. By making the man scream, he had skillfully lured the agile, tricky woman into his hands. He was just about ready.

Brian's fingers raced over the small body. "Oh, Loi!" The baby made a contented sound.

"This is your son," she said.

Brian went beyond fear, beyond everything but the love that defines the human heart. In wonder and gladness he felt the soft, giving curves of the tiny, naked baby.

He took the little creature from her arms. His son wriggled, seeking a teat. Brian buried his face in the flesh of his child, inhaling the wonderfully sweet smell of his skin. "You're OK," he asked her, "both of you?"

Brian and Loi heard a curious vibration, as if a snake of enormous size was quivering its rattle. The sound was thick with menace, very close.

"He is here with us, Brian, the demon."

Protecting his baby in his left arm, Brian reached out to his wife. She pressed against him. "He could not harm the baby," she said. "The light did nothing."

"Nothing?"

"It doesn't hurt the baby. He did it right in his face."

That terrified Brian. He wished to God he could see—just one little glimpse. He remembered Father Palmer—that horrible, cancerous change—the loamy excrudescences, the stench...

Again his hands touched his son. The baby's cheeks felt soft, perfect. Brian ran his fingers along the damp tiny lips, his button of a nose. Shaking fingers crossed the vaporous suggestion of hair on the tiny scalp.

Carefully, he gave back the baby, tucked him into Loi's arms.

Out in the dark there was a splash. Then the purple light started. In its flashes he could see Loi moving off with bird-like speed. Claws snapped the air where she had been.

"Come on, Brian!" He followed her crouching form, moving as best he could through the ruined office. "We've gotta find a way out," she said.

"Not yet!"

"Are you crazy?"

"The controls are around here somewhere. I've got to get to the controls!" He was blundering, feeling his way.

Suddenly there was light—ordinary light sparking in his eyes. Loi was twenty feet away. She'd found a headlamp.

Brian rushed to her, threw his arms around her. "Turn it off!"

"They can see in the dark, so light only helps us. There's got to be a way out around here somewhere."

"We have to find the controls."

When Loi cast the light about, Brian caught a glimpse of black water dancing with wavelets, of a misshapen mass of flesh rising out of it—the source of the long arms and the claws. Ellen? He couldn't bear to consider it.

There was something very different perched on its broad armored carapace, something with huge fly's wings and compound eyes.

The head of this creature turned toward them.

The gaze was so terrible that he gasped as if struck a blow.

Then the thing took flight, came buzzing straight across the small room.

Like quicksilver Loi stepped through a door. She'd been standing right beside it, poised, waiting for the thing to commit itself. "Brian, fast!"

He went racing after her. Her light darted about. "There's a desk," she said. "Block the door."

No sooner had he shoved it against the plywood door than it began to leap on its hinges. Her light flashed from wall to wall. "This is a trap, Brian."

He was looking at the equipment. There was a forest of wires and switches. Here and there were piles of gel filled with the blurry remains of body parts.

He swept the tangle of wires with his eyes. This wasn't his area of expertise, but he knew enough about modern switching techniques to understand a fail-safe system. There were three switches, meant to be thrown at exactly the same time. He stretched, strained, but could not touch more than two of them. It was an "agreement" system like the one used in missile control centers. "Loi, help me with this."

He had to get it turned on. But which side of the forbidden zone was this control room on? Would the breaking of the link catapult Brian and his family into that other world, or leave them here? Best not to think about that now.

The door cracked loudly. In a moment it would burst.

"Brian, we've got to find a way out!"

"Loi, it's our only chance. You have to do this!"

"What do I do?"

"That switch—stand there—turn it—"

The door came off its hinges.

She turned the switch, but not at the right moment. "Honey, we have to do all three at the same time."

Two of the arms came into the room, swarming along the ceiling, their claws cocked wide.

"One, two, three—*now!*"

Something started groaning. A generator? Pumps? He said a silent prayer. Clanging followed, from above, from below, and suddenly a crackle of energy, the hum of one generator starting, another harmonizing with it, a third starting.

Light.

He stood before them with all the dignity of a dark god, this tall, segmented presence—

He came toward them, the buzzing roar so loud that he could not hear, could not think. But the baby regarded him with slow eyes, calm and full of peace.

He faltered.

Loi and Brian saw that they were standing before an awesome tragedy, something proud that had fallen lower than any human being had ever fallen.

He had been glory itself, once, when the world was very, very young.

But then he raised his eyes, and in them there was no glimmer of defeat. Rather, he seemed full of... laughter.

With a long, crackling sigh of static, the waveguide started.

Then they were moving, they were sweeping through a blur of changes, into the very well of loneliness and Brian knew that the control room had indeed been on the far side of the zone.

They came to rest in a huge square, a place miles on a side. It was paved with gigantic blocks that reminded Brian instantly of the Bimini Roads, thought to be an ancient geologic formation in the Bahamas.

Loi gasped with surprise, the baby coughed on the yellow, clogged air. A hundred yards ahead there stood a ruined building, once massive, but now tumbled down, its exposed chambers jammed with oozing egg sacs. Thick masses of glowing, red-legged insects swarmed across them, tearing into them and wolfing the contents with complicated jaws.

A high gabble of mad language thundered, and Brian saw that the creatures were so desperate for food that they were eating their own young.

Overhead, wings droned as thousands more flew round and round, seeking something, anything.

This was the heart of the matter: this desperate, dying world was trying to escape its extinction. That was what this was all about.

Using their obvious brilliance and their bizarre science, these creatures had made a link with the living earth, and sought now to possess it and so cheat the darkness that had them in its grip.

Then Brian and Loi were seen. Every eye turned at once, every body grew deathly still. Pincers opened, chitin rattled ominously.

Brian grabbed Loi. Then he saw something truly amazing to him, something that he could not even begin to understand, not for all his knowledge of time and its miracles, and of hidden worlds.

Somehow, the baby in her arms was still connected to their own world, indeed had never left it. It was not an obvious thing, but rather something in the shimmer of light about the child's body, and in the quiet wisdom in those eyes.

We are born to our lives in clouds of wisdom so great that they are an innocence unsurpassed. The wise child knew, if he did not *see* this place, then—for him—it would not become real.

The dead brown sky split down its middle, exposing a darkness spotted with stars and rolling great planets, a vision of such scope and awe that Brian went to his knees. For the face of God is not a simple thing, nor small, nor made in any image that is known.

Swimming there in the good reefs of stars was the familiar blue earth of today.

The whole mass of creatures saw at once what lay in their sky. A great rumble went through them, a shriek, a hiss, then the blasting drone of wings as they rose in a body, attracted as if to dancing fire.

The things buzzed and roared and struggled.

But their future wavered. Seemingly inside Brian's own mind, the waveguide itself groaned, and the link between the worlds began to falter. He understood what was happening, and why it felt as if it was at once inside him and everywhere: the waveguide was allowing the fundamental order of the universe to be restored.

The earth of the future wavered in the sky. A loneliness like the hollowest hour of an autumn night filled him. His soul ached for the earth that was his own. Beside him his wife choked out a sob.

Brian looked down at his baby, innocently nursing at Loi's breast. The child's eyes met his with a frankness so total that it made him start back in amazement. But there was also tremendous compassion, an openness of spirit that made the old father sob aloud.

Then the angelic presence of the baby focused him, focused Loi, and they saw that they could not be here, they did not belong here, and nothing could keep them here.

Hope filled them like a rich and dizzying oxygen, and they felt the

exhilaration of flight, soaring up, high above the great plaza, the tremendous stone city of the past. Brian saw that it swept to the horizons with its huge shadowed structures, the great blocks with their tiny, frowning windows, and the deep, lightless streets.

Evil had filled every soul in this whole vast place, and they were all corrupt, and so the baby rose above them like a bubble rises in a swamp, and his parents rose with him.

Then they were back where they started, in the dripping, tiny room that housed the control point.

Had it all been a hallucination?... or a wish—something from his mind?

The thing they both now thought of as the demon was coming forward in joy and pride, his wings whirring, his long arms spread wide, to greet the horde of his kind that he had so confidently expected to appear.

Instead, Loi and Brian and their baby appeared. The growing power of the waveguide had severed the link between the ages, and the baby's innocence had brought the little family home.

The demon shrank back.

Then Brian saw why: the creature had known better than they what would now happen. A disaster began to unfold. Dark, torn objects started dropping out of thin air—steel-spring legs, pieces of wings, heads with mouth parts still a-scramble, glowing, pulpy abdominal segments.

First the pieces dropped, one here, one there. Then they fell in greater numbers, and the demon was jostled by them, moved to protect himself with his cable-thin arms. Then they poured out of the air, and he was thrown back, his howl a jet at full throttle, covered by an avalanche of his own ruined kind.

When he recovered himself, he began moving toward Loi.

Brian pushed his way through the slippery mass of body parts. He had to protect her.

"Brian, no!"

"Get ready to run, Loi."

Closer he went. He could see the segments pulsing, opening and closing to expose bright blue oxygenating organs. This was a primitive creature indeed. This body had been molded when arachnids were the highest form of life on earth. But those eyes—they were very, very smart.

Then Loi did the unexpected, jumping farther than Brian would have thought possible. "Come quick, Brian!" She dashed through the door.

Then what? He'd face that later.

As they ran the lights flickered, and he shuddered with dread. The facility was full of water and in poor repair.

This wasn't over, not at all. If the waveguide failed, or if the demon decided to stop chasing them and destroy it, then all their effort would be for nothing.

They ran up a spiral staircase that had been revealed by the light. In moments Brian's breath came short, his chest burned.

Again the generators ground low, again the lights dimmed.

Little Brian was in full cry, his mother trying to comfort him even as she raced upward.

They reached another surface—and found organic material everywhere lying in limp folds, quivering and dissolving before their eyes.

The outpost he had so carefully fashioned for his people was disintegrating and dying. There was a meaty odor of human blood here, and Brian and Loi both knew that the destroyed creatures in this part of the facility had once been their friends, the people of Oscola and Towayda. Ellen's voice echoed in Brian's memory.

"At least they've died," Loi said. She was also breathing hard.

Brian fought for his bearings. He had no idea where to go to find the exit. But there were limits: they had reached a catwalk, and it only went in two directions. Again the lights flickered. Brian listened—and heard behind them the telltale buzz and clatter of the oncoming creature. "I don't know where the hell we are!"

"We try this way," Loi said.

"You're sure?"

"Just come!"

The buzzing was followed by a great, cawing cry, very different from the roars of anger that had come before. There was blood lust in that cry.

They hurried along, Brian keeping his head down to avoid being knocked senseless by a protruding valve or pipe end. In the light he could see that this place was little more than a few hastily dug tunnels.

They entered a slightly larger room. Brian was amazed: incredibly, Loi had taken them to the main entrance, and there was the elevator shaft. "How did you find this?"

"Too many tunnels in my life, Brian."

He started to push the elevator button, to bring the car down for them.

"No, it's too much of a risk. He can get control of the car from down here."

Brian looked up the shaft. "You can't climb all the way with the baby. It's over a hundred feet."

"I'll carry him as long as I can. Then you do it."

They started up. Brian's chest pain, which had diminished, now returned. His arms shook and his muscles were jelly. Sweat poured down his face. His scars tormented him.

They reached the bottom of the elevator cab. A shaft of light shone down

from inside. "I'll pull myself up. Then I'll reach down and take the baby and help you." They were fifty feet from the floor of the shaft.

At that moment there boiled up from below a great, pale cloud, glowing purple within. The lights flashed.

Brian clambered frantically into the car, turned to get the baby. She handed him up, then came herself, moving with the supple grace of a cat.

Absolutely without warning an arm reached out of the gel-covered remains of poor Bill Merriman and grabbed the baby.

Loi threw herself into the mess. She tore at the arm, dug into the gel, throwing gluey body parts over her shoulder. Merriman's enormous glasses sailed past, an eyeball sticking to one of the lenses.

Brian pulled at the mess with her, and together they got their baby back.

"Let's go," he said. They scrambled up through the hatch to the top of the elevator. He had the baby.

With a massive clank and a *whang* the lift cables around them went taut. The elevator began to move downward. Light like a purple sun blasted up from around the car, getting brighter as they dropped.

The ladder was whipping past. "Jump on it," Loi cried.

They leaped, grabbing, clutching, their fingers slipping, holding.

With every ounce of energy they possessed, they climbed. The elevator clicked again and began to return.

"Faster, Brian!"

He fought for every rung of the ladder, tortured by the possibility that he would drop the baby, grabbing for rungs with just the fingers of his left hand. His heart chugged, his breath bubbled.

The car clicked as it came, and the clicks got quickly louder.

Harder they climbed, still harder. But it was no good, Brian could see the car not twenty feet below them. "Loi, as it comes past, jump on the roof! But don't let yourself fall through the hatch." He listened. *Click. CLICK.* "Now!"

Another second and he followed her. She groaned as he landed hard on her. A pain shot up through his leg. He clamped his jaw shut. The baby in his arm cried out in surprise.

"Inside, quick!"

They climbed down into the car.

A moment later it jerked to a stop. Now a doorway was there before them, but this would only last an instant. Now that they were in it, the car would be brought back down. Brian pressed his fingers between the doors.

He tugged as hard as he could. The doors began to open. But then the elevator moved a couple of inches and they stuck. There wasn't a foot of clearance. Behind him Loi made a stifled groaning sound. He turned. The gel was rising like a slow wave up the back wall of the car. In it the remains of Bill Merriman were coming to life again, but this time they were transforming, moving together, the arms growing thin, the skull changing form, huge compound eyes forming—

He was coming, and in doing so revealing yet another strange ability. He was forming another version of himself out of the man's remains.

They had to get through that door and they had to do it fast.

The baby was easy: Loi pushed him through and set him on the floor outside.

Struggling madly, jerking, twisting, flouncing, she forced her way out. Her breasts stretched agonizingly as she dragged them through, and her own howls made Brian scream, too.

Brian could not make it. He pushed, he shoved, but he was trapped. The creature began to touch him. He felt the purple light beginning to flicker against his back.

Loi pulled and he shoved. His head came out between the doors, then his shoulders. He felt her strong fingers grab him, digging into his scars. "Go on without me," he screamed, "I can't make it!"

She tugged first one shoulder and then the other, and he came by inches.

Within the car there arose a great roaring buzz.

Then he realized that he was out. He was out and crawling, his face scraping dirt.

A long, thin arm came out behind him.

Loi had found some tools and smashed the arm with a shovel, and its surface cracked like a beetle's crisp armor.

Brian realized that she must also have pried the doors with the shovel.

Behind them, the elevator hopped and jumped. Purple light flooded it.

The lamps overhead dimmed, died, then returned, glowing low and weak and red. There came a horrible silence, as if the whole world waited. But Loi gave a shout of joy: not far away was the light of a tunnel entrance.

They had reached the surface.

At that moment a great moan rose, from below, the voice of evil stripped naked. There was fierce hunger in it, for the dimming of the lights meant that the waveguide was weakening, and he was gaining strength again.

The cry rose and rose, echoing into the depths, filling the air with its coarse, buzzing savagery.

They covered their ears, they screamed to drown it out.

It ended with the suddenness of a passing storm, and then they heard a scuffling as if of rats, and the sighing of movement in the chambers of the old mine.

He was coming. More slowly now, but still coming. The lights stayed .

They moved as fast as they could, dragging themselves toward the entrance, too tired to talk. Brian was sick inside, sick with fear. Now that he knew what was trying to get through, the whole thing was even more awful. What a hideous, hideous fate his experiment had offered the world.

Behind them the scuffling movement of the ravaged demon was getting louder. Brian turned, and could see him in the long corridor, a shrunken, struggling shape all twisted and full of angles, coming along the floor with slow, snake-like undulations.

They went out the facility's entrance, which had been skillfully hidden in the woods between the judge's house and the mound.

They entered a ravaged world.

The alien forest of barrel-like trees was now a desert of sunken bladders. Everything was disintegrating and falling away. Here and there great legs were still attached to huge, dissolving bodies. Shells and carapaces lay scattered about among the leaking, shriveling remains of the trees.

But there was a new scent in the air—new and yet familiar. When dawn is sweet, this is its sweetness. The sun was on the point of rising. Behind the black, torn silhouette of the mound, the morning star floated in pale blue air.

They walked a few steps and sat down. Brian's heart was thundering and his breath was much too short. Loi came beside him and put her free arm around him. Their baby was nursing again, completely content.

"We've got to get help," Brian said. "The facility's got to be kept running!" He could not continue. His grief for his little family expanded into grief for all the world.

"Brian?"

"Yes?"

"You hear that?"

He listened. "Oh God, no." It was the unmistakable sound of humvees. They struggled to their feet. "Loi, I can't go on."

"Yes you can! You have to!"

No. This was the end for him. "I'm sorry."

At that moment a caravan of at least ten of the vehicles came lurching into view, crushing the ruins of the forest beneath their wheels.

Loi turned away from them, heading back toward the entrance to the facility. Somehow, Brian staggered after her. "We can hide in the opening a few minutes. Then we'll think of something else."

But the humvees were fast, and they were already stopping, disgorging their soldiers.

Brian realized that the only thing he could still do for his family was to give them a few extra seconds. As Loi moved away, hurrying as best she could, he turned to face the creatures.

Twenty, thirty, forty soldiers came out of the vehicles, their white chemical warfare suits rustling, their protective masks gleaming in the half light.

With a growl of sheer hate, Brian threw himself at them.

They grabbed him, he shut his eyes against the purple light, snatched at the white cloth, ripped at it. When they took his arms, he fought as best he could, finally yanking away the mask of the closest one.

He came face to face with a perfectly ordinary—and very scared—kid. "Take it easy," the kid shouted. His breath smelled like chewing gum.

"You—"

"Fourth U.S. Army, mister."

The meaning of this voice penetrated. These were human soldiers. People.

"Loi?" But Loi was nowhere to be seen. From the dark entrance to the facility there came a low, ominous buzzing. *He* was there, his shadow clogging the opening. "Loi! Oh God, no!"

She was not in the entrance: she rose from behind a pile of debris nearby. He watched her come warily forward, her baby in her arms. Her blouse hung in shreds, her jeans were ripped. He went to meet her and they embraced silently. One of the soldiers gave them both jackets.

The buzzing came again, rising like the cry of an insect, then fading to a rumble, sinking. The shadow in the entrance was gone. He was fading like a nightmare with the coming day.

"Listen, you've got to get good generators in there! That facility's got to be kept running at all costs. You've got to—"

"Get in the truck, mister. You're gonna be all right."

"No, for God's sake, listen to me! The waveguide, it's got to be kept on or he'll gain strength again, he'll come out!"

"It's not your problem."

"It's my problem and my fault."

"Mister, this thing is too big to be any one person's fault. Mistakes were made all along the line, way I hear it. Now you get in the truck and let us do our job."

Then Brian saw a huge vehicle trundling down Mound Road, and he recognized what it was: a massive portable generating station of the type deployed in battle. They'd had it outside the zone, waiting for their chance.

Tears came rolling down his cheeks. Somebody somewhere had obviously understood that this would be needed. By getting the guide turned on when they did, he and Loi had given the army its crucial window of opportunity.

They were helped into the backseats of one of the vehicles. The men had some sandwiches and a thermos of coffee. Soon they were lurching and

bouncing slowly along the pitted roads of Oscola. Helicopters began landing in the judge's yard, troops pouring out.

"Brian, where are Bob and Nancy and the boys?"

"They went out by ATV."

"They made it?"

"I don't know."

More quietly: "What about Ellen?"

Brian shook his head. "She didn't get out."

She asked no further questions. Silently, she watched the destroyed world going past the window. Suddenly she stiffened. "Stop," she said.

"What the hell for, ma'am?" the driver asked.

Then Brian saw the familiar ruins of the old Kelly Farmhouse, with the burned-out shell of the trailer behind it.

"Just do it, please," she said. "This was our home."

They stopped. "Just for a minute, ma'am."

They got out and went closer to the remains of their old life.

She was solemn. "Even the land is destroyed. Worse than Agent Orange."

Gravely, she offered the baby to his father. "Take him for a second." She marched straight into the fragile, creaking wreck of the trailer. Both soldiers clambered after her.

"Careful there, lady," the sergeant said as she entered the gray, twisted ruins. She reached into the ashes and came up with a blackened lump of an object. "My Laughing Buddha," she said. She rubbed away soot to reveal the familiar rotund figure. "He can be fixed, I think."

The sun rose, and the first shaft of light revealed the true hideousness of the misshapen death all around them. The trees that had surrounded their trailer were dissolving into twisted masses of sludge. A brown, bloated sac of flesh with pincers and spindly legs, and the muscular tail of an opossum, moved slowly across the driveway, dropping chunks of itself, clucking and wheezing as it went.

Dying, it sank down on itself.

But not everything had been reached by the transforming light. A busy cockroach scuttled under a rock, and the dawn chorus began—although it consisted only of a single tattered robin.

Coming out of the rubble, Loi took her baby and held him up to the dawn. "See it, Brian, see the sun."

The baby stirred, smacked, turned his head, seeking instead the nipple. She cuddled him back to her breast. "Our son is going to be so strong."

Brian heard her, but his eye had been attracted to movement in the clear predawn sky. Up very high, a golden contrail went south. "Is that a military jet?"

"Nossir. That'll be a flight coming in from Europe. Probably on its way to New York."

Brian and Loi watched the plane, drinking in its promise with their eyes. The baby, who had finally satisfied his hunger, fell asleep on his mother's arm.

This book is dedicated to those millions of people around the world who, like me, have faced the enigma of the grays and are also left with the certain knowledge that they represent a genuine and spectacularly provocative unknown. It is my hope that this work of fiction will penetrate into that unknown and draw its secrets into discovering light.

ACKNOWLEDGMENTS

The Grays has been many years in the making. I have not the words to thank Anne Strieber for her patience, her great courage, and her willingness to travel with me on what must seem like a quixotic journey indeed, seeking to find in fiction the truth about the grays, which is too elusive to bring to genuinely sharp focus in factual narrative.

I would also like to thank my agent, Russell Galen, whose faith in this project kept it alive, Tom Doherty and Bob Gleason of Tor Books, who were willing to say yes and have provided me with such useful discipline and insight, Cary Brokaw and John Calley, whose enthusiastic support have been an inspiration, and Aaron Craig Geller, whose attention to detail and story sense so helpfully illuminated my efforts.

PART ONE
NIGHT FLYERS

Who's in the next room?—who?
I seem to hear
Somebody muttering firm in a language new
That chills the ear.
No: you catch not his tongue who has entered there.

—THOMAS HARDY

“Who's in the Next Room?”

ONE

BECAUSE WE KNOW IT IS there, danger in an obvious place—on a battlefield, say—is often far less of a threat than it is on a quiet street in a small town. For example, on a street deep in America where three little boys rode interlocking figure eights on their bicycles, and on a sweet May evening, too, any danger would be a surprise. And a great and terrible danger—impossible.

Not all of the boys were in danger. In fact, two of them were as profoundly safe as anybody else in Madison, Wisconsin, on the scented evening of May 21, 1977. The third boy, however, was not so lucky. Not nearly.

Because of something buried deeply in his genes, he was of more than normal interest to someone that is supposed not to exist, but does exist—in fact, is master of this earth.

It was too bad for this child—in fact, tragic—because these creatures—if they could even be called that—caused phenomenal trauma, scarring trauma . . . to those of their victims who lived.

Play ended with the last of the sun, and lights glowed on the porches of Woody Lane, as one by one the boys of the lane retired.

Danny rode a little longer, and was watched by Burly, the dog of Mr. Ehmer. Soon Mr. Ehmer himself came across his lawn. His pipe glowed as he drew on it, and he said, “Say there, Danny, you want to come night fishin’ with me and your Uncle Frank? We’ve been getting some good’uns all this week.”

Danny was a lonely child, saddled with an alcoholic mother and a violent father, so he welcomed these chances to be away from the tensions of home. He could take his sleeping bag and unroll it in the bottom of the boat, and if his line jerked it would wake him up. But not tonight. “I got Scouts real early,” he said, “gotta get up.”

Mr. Ehmer leaned back on his heels. “You’re turnin’ down fishin’?”

“Gotta be at the park at nine. That means seven-thirty mass.”

“Well, yes it does. It does at that.” He drew on the pipe again. “We get a sturgeon, we’ll name ’im for you.” He laughed then, a gentle rustle in his throat, in the first gusts of the wind that rises with the moon. He left Danny to go down the dark of Woody Lane alone, pushing the pedals of his Raleigh as hard as he could, not wanting to look up at the darkening sky again, not daring to look behind him.

As he parked his bike and ran up to the lit back door, he was flooded with relief as he hopped on the doorstep and went into the lighted kitchen. He smelled the lingering odor of fried chicken, felt hungry but knew there was none left in the house. He went into the living room.

He didn’t stay long. *Love Boat* was like a religion with Mom and Dad, and then came *Fantasy Island*. He’d rather be in his room with the *Batman* he’d bought from Ron Bloom for twenty cents.

At the same moment a few miles away, Katelyn Burns, who adored *Love Boat*, watched and received advice from her mother about painting her toenails. Very red, and use a polish that hardens slowly. They last longer, chip less, good on the toes. Next week school was out and she wanted—had—to paint her toenails for Beach Day.

A magnetism of whispers that Katelyn assumed were her own thoughts had drawn her to Madison, Wisconsin, and to this shabby apartment near the water. An easy place, Madison, the thoughts whispered to her, for a divorcee to find a man. An easy place, they most certainly did not tell her, from which to steal a child, carry her out and take her far, so that when her screams started, there would be none to hear her but the night wind. And so it would be this night, after the *Love Boat* sailed away and silence filled the house.

As Saturday evening ended, the moon rode over houses that, one by one, became dark. Madison slept in peace, then, as the hours wore past midnight.

Sometime after three, Danny Callaghan became aware of a change around him, enough of a change to draw him out of sleep. He opened his eyes—and saw nothing but stars. For a moment, he thought he’d gone night fishing after all. Then he realized he was still in bed and the stars were coming from his own home planetarium, bought from Edmund Scientific for nine dollars. It was a dark blue plastic sphere with a light in it. The plastic was dotted with pinholes in the pattern of the night sky, and when you turned out the lights and turned the planetarium on, magic happened: the heavens appeared all around you.

He hadn’t turned the planetarium on, though, and that fact made the acid

of fear rise in his throat. He opened his mouth to call for his dad, but there was no sound, just a puff of breath. As the stars crossed his face, twisting along his nose and across his eyes, his tears flowed in helpless silence.

The only sounds were the humming of the planetarium's motor and the breeze fluttering the front-yard oak. Dan sat up on the bedside. Like a man buttoning his coat for a journey, he buttoned his pajama top, until all four big buttons were neatly closed. A thought whispered to him, "Stand up, look out the window . . ." He clutched the bedsheets with both hands. The old oak shook its leaves at him, and the thoughts whispered, "Come on . . . come on."

Then he knew that his toes had touched the floor, and he was up in the flowing stars. Then he floated to the window. As he moved closer, he saw it sliding open. Then he went faster and moved through it. He tried to grab the sash as he passed, but missed. Then he was moving through the limbs of the oak that stood in their front yard, struggling and grabbing at them.

He got his arms around one, but his body turned upward until his feet were pointing at the sky. He held on with all his might, but the pull got stronger and stronger. "Dad," he yelled as he was dislodged and drawn into the sky.

He heard a dog raise a howl, and saw an owl below him, her wings glowing in the moonlight, her voice swept away by the wind.

He rose screaming and struggling, running in the air, clawing at emptiness. Far below him, moonlight danced on Lake Monona's baby waves. And then he was among the night clouds, and he flew in their canyons and soared across their hills, and heard their baby thunder muttering.

The wonder of it silenced his screams at last, but not the tears that poured down his face, or the trembling gasp that came when he slowly passed across the top of a cloud and saw, so very far below, the silver lake and the dots of light that were Madison. He closed his eyes and covered his face with his hands as he moved up toward what looked like a silver island in the sky.

The island had a round opening in it, dark and black.

Then Danny was through the round opening. He stopped in the air, then fell to a floor. Opening his eyes, he found himself in darkness, but not absolute darkness. Moonlight sifted in the opening. Far below, he could see the pinpricks of light that marked fishing boats on the lake's surface.

A cold sorrow enveloped him. Now, here, he remembered this from before. He did not want the little doctors to touch him ever again. He knew, also, that they would, and soon. He thought of jumping back out through the

opening, but what would happen then? He went closer to it, leaned out as far as he dared. “MR. EHMERS! UNCLE FRANK! HELP ME! PLEASE, UNCLE FRANK!”

A rustling sound. He cringed closer to the edge, wishing he dared jump through. A voice whispered, soft: “Hello?”

He backed away from the form. He could see white—a white face, loose white clothes.

“Help me,” the form said.

It was a girl, he could see that now, could hear it in her voice. She was standing on the far side of the opening in the floor, her face glowing in the faint moonlight that slanted in.

“Are you from Madison?” she asked. Her voice trembled.

“Yeah. I’m Danny Callaghan.”

“I’m Katelyn Burns. I never saw anybody else here before.”

“Me, neither.”

“Where are we?”

“I’m not sure.”

“ ’Cause when I come here I remember I was here before, but then when I go home I don’t remember anymore.” She lowered her head. Her voice dropped to a hesitant murmur. “Do they take your clothes off, too?”

His face grew hot. He clutched his own shoulders. “Uh-huh.”

“They do stuff to me that’s *weird*.”

“Some kind of operations.”

Her eyes flashed. “Yes, but this isn’t a hospital!”

As the two children came together and held each other, they were watched by cold and careful eyes.

The embrace between the children extended, the girl in her nightgown, the boy in his pajamas stained with yesterday’s oatmeal. It had nothing to do with sex, they were too young. They were like two little birds stolen from the nest, trying to find some safety where there was none.

“If we dive down to the lake, would that work? Instead of just jumping?” Dan asked Katelyn.

“I don’t know. Maybe not.”

“I’ve got a diving merit badge. I’m going to try,” he said.

She sighed, understood. The children moved along a rickety catwalk, going closer to the opening they had been drawn through. The ship wasn’t high tech. It didn’t even have a way of closing its hatch. It was old and

handmade, but the materials involved were far in advance of our own. It was constructed of sticks that would not break or burn, and aluminum foil you could not penetrate even with a bullet. There were no glowing control panels, nothing like *Star Trek*. Just tinfoil and plywood, and a tin box full of an extraordinary substance mined out of the Earth, that resisted the pull of gravity.

The creatures hiding near the children knew what they were thinking because they could see not only their fleshy bodies wrapped in their fluttering cloth covers, but also their electric bodies, a shimmering network of lines that coursed through them, the fiery nerves that carried sensation and love and memory, and blue fear racing from the heart.

They could see, in the heads, lines of gold and green changing to red and purple, and they knew that these were also the colors of fear.

Katelyn and Dan gazed down at the shimmering, wrinkled surface of the lake.

“You gonna?” Katelyn asked.

Danny could imagine Mr. Ehmers on the lake smoking his pipe and watching his line. He took a deep breath. What would Mr. Ehmers see, though—a boy falling out of the sky? Maybe, but probably not. Probably they’d think the splash was just a fish jumping.

Then he heard the fluttering sound in the dark that meant the *things* were on the move.

Katelyn drew close to him. But then the slowest trace of a smile flickered on her lips, and she raised her hand. In it was a match.

There was buzzing now, urgent, coming closer.

Katelyn shouted out the opening, “I live in Madison! I live in Madison, Wisconsin!” Her voice carried past the thin walls, echoing loudly, but only the clouds heard it.

Cupping his hands around his mouth, Dan shouted, “Uncle Frank, help us!”

“Who’s that?”

“My uncle. He’s down there fishing.”

She struck the match, and in its flare something moved behind her. A green glow. As he watched, it resolved itself into the slanted shape of an insect eye, but huge. It was right behind her, just inches away. It glittered and disappeared into the shadows, and then the match burned out, and then something slid up under his shirt and slithered along his chest.

He heard Katelyn gasp, heard a scream explode out of her and screamed himself, screamed with all his voice and soul. Arms came around him, and a prick like fire penetrated his chest, went deep, made him gag and filled his mouth with a taste like a dead thing smells.

Now he could not move, could not make a sound. He felt himself being carried, felt his stomach twisting and knotting until gorge came up into his throat.

He could see nothing, hear nothing except Katelyn breathing in little, shocked cries.

There came a hand, extended into a faint light, as if it was meant for him to see, a long hand with fingers like naked branches, each tipped by a black, curving claw. In this hand was a kitchen knife with specks of rust on the blade.

The knife came down on his chest, pricking, then, as the tip of the blade ran along his abdomen, tickling. In the dark nearby, he heard a slicing sound, then a crack, and the bubbling of breath being sucked through liquid. Then a coldness came that extended from his neck down to his groin, and he saw the handle of the knife, which was being used like a saw. As it rose and fell, a coldness grew in his chest. Then, with a sucking sound, two great white things were lifted away from him. He raised his head, looking down at himself. What he saw was so bizarrely unexpected that he just stared. He saw what looked like a wet hamster curled up in the center of his chest, shivering furiously. It lay in a pool of ooze. On either side of it, things like big rubber bladders were expanding and contracting, and hissing as they did so.

Freezing cold and deadly weak, he fell back, his head hitting the hard iron of the bedstead upon which he had been laid.

Then stars came, millions of tiny stars all gold and green and speeding like sparks on a windy night. They surrounded the children, swirling around their bodies. They moved with the grace of a vast school of fish, swarming through the body of one child and then into the air, then through the body of the other. Again it happened, and again, and each time the stars invaded the profound nakedness of their open bodies, the veins and organs glowed. Light poured from their screaming mouths, blasted out of their ears and eyes.

The children struggled but could not rise, screamed but were ignored. The torture, terrible, somehow beautiful, went on.

HALFWAY ACROSS THE CONTINENT IN Colorado, a young officer

picked up a phone and called Washington. “Sir, we have a glowboy hovering over Madison, Wisconsin.”

“How long?” came the tired voice of Lieutenant Colonel Michael Wilkes.

“Twenty-two minutes, sir. Shows no sign of moving.”

Wilkes glanced at his watch. Pushing four in the morning. “You were right to inform me, uh—”

“Lieutenant Langford, sir.”

“Yes. Thank you.” He put down the phone. The spruce-sounding young lieutenant would order a jet up if the glowboy stayed very much longer. Couldn’t have one of the damned things lingering over a major metro area after sunrise. Mike wondered what devilry it was up to, sighed at his own helplessness, then tossed a pill out of a bottle, knocked it back with a glass of water he kept at his bedside, and hit the sack again.

He might request Eamon Glass to ask Bob about the stationary glowboy, but probably not. Bob was one of the two living grays they had acquired during an extraordinary incident in the New Mexico desert when one of the grays’ craft had crashed after it had moved into the range of powerful new radars being tested at White Sands. They had not expected these radars to be there, and their ship’s ability to stay aloft had been affected.

The Air Force had raced to the site of the crash and recovered two grays alive, one dead. Three were a triad, the equivalent of a single human being. Without their third partner to complete their decision-making process, the two that remained alive had been relatively helpless, and the capture had been a brilliant success . . . unless, of course, it was, instead, an even more brilliant deception on the part of the grays.

You communicated with Bob and Adam via thought—or rather, Eamon, who was the only person they’d ever found who could manage it, communicated with them.

Somehow, the man used his mind to exchange pictures with them. It was a very strange business, and nobody was sure if it was even really working, but it was all they had, and some of the technological information Eamon had gotten from the creatures was making valuable scientific sense, so there had to be something in it.

But they could not find out what the grays *did* with people. It was awful, though, that was certain. Awful and it came from the sky and the Air Force couldn’t do a damn thing about it. So it was secret, and would remain secret.

He groaned, turned over, waited miserably for the pill to work.

IN THE SILVER VEHICLE, THE children struggled, twisting and turning in their captivity. Dan saw something white. He looked at it, trying to resolve its meaning in the haze that still obscured his vision. It was very dark, but he could still see this thing. It dangled as if it was hanging on a clothesline, and he thought it might be a big sheet, wet, because it was dripping, the drops pinging on metal somewhere below.

It was a very strange sort of a sheet, though, because it had a kind of face, a mouth gaping like that of a big lake bass, with two distorted black sockets above it. Were they eye sockets? He thought they must be, because there was also a darkness above them that looked like it might be hair. Then he saw a curliness to it, and a lightness and he knew that it was blond hair—and he had seen blond hair on Katelyn when she lit the match.

He tried to say her name, but there was only a gusty whisper. He wanted his mother, he wanted his dad, he wanted Uncle Frank, who was damn tough, to come up here and *help them!*

Drip, drip, drip.

Then he saw that there was another one, and it had short brown hair and its face was all wobbled like a mirror in the Crazy House at Madison Playland.

When he stared at it, though, he knew: it was his skin. But if it was up there and he was down here, then—

His stomach churned, his heart began raging in his chest, and his throat became so dry it felt as if it had been stuffed with ashes. He wanted to scream, he wanted to beg God for help, but he couldn't make a sound.

Off in the dark, a buzzing sound started. The things in the dark were coming. He looked, but he knew he would not see them, he never had.

Then his skin flew up and out, and spread like a huge cloud above him, a cloud with a gaping mouth and holes for eyes, and it came down on him as gently as dew falls when you are camping under the stars, and enclosed him in the deepest warmth he had ever felt in his life.

He uttered a long, delicious groan of raw human pleasure and profound relief. Beside him, Katelyn groaned, too, and he knew that she had, as well, been covered once again in her own skin.

Instantly, without them going out through a door or anything, the silver ship was rushing away overhead, turning into a dot. Wind screamed around

them, their hair blew, and Dan thought they'd been pushed out and were going to die in the lake.

Below, Mr. Ehmers saw beams of light playing out of the summer clouds. "What the hell," he said. Then Frank said, "Ho, got a strike goin' here." They brought up another bass.

DAN WOKE UP SCREAMING. HE was upside down and the covers were all over the room. He got out of bed, immediately felt incredibly thirsty, and went into the bathroom and drank and drank. His mother heard him and came in behind him. "You okay, Dan?"

Then he cried, clutching her with all his might, burying his face in her nightgown that smelled of cigarettes and gin.

"Hey, hey there—"

"Mom, I had a dream. It was real bad, Mom."

She went into his room with him and sat at his bedside.

"It was these Indians, they got us, and they skinned us alive."

"Skinned who alive?"

"Me! Me and—her. I don't know. Me and this girl."

A cool hand touched his forehead. "You dreamed you were naked with a girl, and that's a little scary, isn't it?"

"The stars," he said, "the stars . . ." But what about the stars he could not recall. He closed his eyes, and his mother's hand on his brow comforted him, but deep inside him, down where screams begin, there was a part of him that remembered every terrible moment, and would never forget.

His mother, drunk though she was, sad though she was, sat a while longer with her child, then went back down to the kitchen and resumed her mechanical and relentless assault on a bottle of cheap gin.

Katelyn found herself on the floor naked and covered with sweat. Not understanding how she had gotten there, she scrambled to her feet—and found that she was afraid to look in the mirror—terribly, agonizingly afraid. She stood, her head bowed, holding onto the sink and crying bitter, bitter tears.

Her mind could not seem to make sense of what had just happened. Why was she naked? What was she doing on the floor? Who was that boy, and why did she remember a boy at all?

She returned to her room, found her nightgown, and put it on. She went to her window seat and sat down, and watched the moon ride low over the

lake, and smelled honeysuckle on the air.

Then she was sick, and ran into the bathroom and threw up. She washed her face, brushed her teeth, and finally saw in the mirror her own haggard face. As if she was seeing a miracle, she touched the glass. Tears beaded in her eyes and rolled down her cheeks. She went to her bed, then, and lay down, and slept the dismal and uneasy sleep of a captured soul.

TWO

ON A SOUR OCTOBER FORENOON in 2003, Lieutenant Lauren Glass watched her father's coffin being lowered. She was now alone, given that her mother had abandoned them when she was twelve, returned to Scotland, and no longer communicated.

Also at the graveside were four men, none of whom she knew. They were, she assumed, members of whatever unit he was involved in. She did not know its name, what it did, or anything about it at all.

The wind worried the flowers she had brought, the chaplain completed his prayers, and she threw a clod of earth and said inside herself, *You will not, you will not* and then she cried.

He had died on duty, somehow. She had not been told how, she had not been allowed to see his body. The coffin was sealed with federal seals warning that it was a crime to open it. Lead solder filled the crack beneath its lid. She had wanted to at least be alone with it for a short while, but not even that had been allowed. There had been no obituary, nothing to mark all he had done in this world, what she believed must have been a heroic life.

She had been given a five-thousand-dollar death benefit, and he had been listed as killed in action.

Killed how? In what action? He'd left home as usual that morning, then driven to his work, she assumed. They lived on Wright-Pat in Dayton, but he commuted to Indianapolis on the days he worked, which were sporadic.

As the ceremony concluded, to her amazement a missing-man formation flew overhead, wheeling majestically away toward the gray horizon. Then, down at the end of the field, an honor guard she had no idea would be there fired twenty-one times. The highest salute. Taps were sounded.

He was being buried with the highest of honors, and she felt bitter because she did not know why.

The four men were walking away from the grave when she caught up with them. "Can you tell me anything?"

Nobody answered.

“Please, I’m his daughter. Tell me, at least, did he suffer?”

One of the men, tall, so blond that he might have been albino, dropped back. “Should I say no?”

“You know how he died?”

“I know, Lauren.”

He knew her name. But who was this man in his superbly tailored civilian suit, as gray as the autumn clouds, with his dusting of white hair and his eyes so pale that they were almost white as well?

“Who are you? Can you tell me what my dad did?”

“I want you to come to an office. Can you do that?”

“Now? Is this an order?”

“I’m so sorry. Are you up to it?”

This walk across this graveyard was the saddest thing she had ever done. She did not understand grief, it was a new landscape for her. Could you go to an office in grief? Talk there in grief? In grief, could you learn secrets? “I want to be at home,” she said.

He gave her an address on base. “You think about it, and I want you to bear in mind that we wouldn’t be asking this if—”

“I know it’s urgent. Obviously it’s urgent.”

“I’m Lewis Crew,” he said. “If you don’t mind, please do not mention the appointment to anybody, or my name.”

“Okay,” she said. “Will you tell me what happened to my dad?”

He gave her a long look, long enough to be disquieting. He was evaluating her. But why? She had no clearance, she was a lowly procurement officer, she had not cared to follow her dad into Air Force Intelligence.

“Will you?” she asked again.

“I’m so sorry to have to ask you to come in on a day like this.”

“So am I.” She walked away from him then, passing among the neat lines of identical military graves into which the Air Force had poured so many lives, in so many steel coffins, most of them too young, too innocent, too good to die the sorts of improbable and terrible deaths the Air Force had to offer.

It was duty that had taken them. Duty, always, her dad’s breath and blood. “The oath, Lauren, never forget the oath. It might take you to your death, and if it does, that’s where you have to go.”

She’d thought, *If some stupid president sends me to some dumb country where we shouldn’t even be, is it my duty to die there?*

She'd known the answer.

Had Dad died a useless death? She hoped not, she hoped that the missing-man formation was more than just a passing honor.

Her life with her dad had not been perfect. Eamon Glass could be demanding, and he had not been happy with the way her career was unfolding. "You need to push yourself, Lauren, Air-Force style. Be ready when it matters, be willing when it counts."

Boy, was he out of it. He was part of another Air Force, as far as she was concerned. In her Air Force, the main issues were things like padded bills and missing laptops, not duty and dying amid huts and palm trees.

"Who were you, Dad? Why did this happen?"

Dad had nightmares. God, did he have nightmares, screaming cyclones of terror from which he could not awaken. And you couldn't get near him. He'd belt you and then in the morning be so upset by what he had done that he'd be in a funk for days.

Often, he would ask if he'd said anything in his sleep. It worried him, obviously, worried him a lot.

She'd listened for some meaning in the screams, but never found any.

She got in her car and started it, eager for the heater to drive out the deep Canadian cold that was sweeping down the vast plains from the north, shivering the naked trees and the stubble-filled fields.

She drove home across the great, gray base to their apartment. She stood in the living room thinking how anonymous it all seemed, the inevitable landscape on the wall, the not-too-challenging books on the shelves, the oldish TV. And his chair, big and comfortable, and beside it the magazine rack filled with *Time* and the *National Review* and *National Geographic*.

All so ordinary, and yet so filled with him that every step deeper into the place was a step through more memory and greater loneliness.

She made coffee, and was drinking it when she realized that it was Dad's mug in her hand. That did it: she cried again. These, she knew, were the anguished tears of the bereaved, that belong both to grief and defeat.

She had a last confession of love that must remain frozen in her forever. Most importantly, there was the conversation that had been their life together, that could never now be brought to rest.

A whole career, and there had only been five people at his funeral. But it hadn't been announced in any way. So his unit was not large, obviously. A colonel, looked about fifty, with the name tag Wilkes. A younger one,

Lieutenant Colonel Langford. Maybe thirty-eight. Then a civilian, dumpy, wearing an ill-fitting suit. He'd cried, the civilian had, silent tears that he had flicked away as if they had been gnats landing on his face. And then Mr. Crew, tall, no way to tell the age, looking a little like the Swedish actor Max von Sydow. Great suit, and those eyes. White-gray. Unique.

Dad's people. His coworkers. She shook her head, considering the little collection of silent men.

She went into her bedroom and lay down, closing her eyes and contemplating what the voyage of her life would be like now.

Dad had had one of those stealth tempers that would boil up out of nowhere and, for a few minutes, rock the world. He had been bitter about never making general. "It's the damn work I do, nobody else can do it and it's not a general's job." He had hated it and loved it. He would drink at the kitchen table, lifting shots of vodka, and then he would be poetic, which was beautiful and awesome and scary, because he had such a huge memory for quotations, and because when he was like that, being with him was like looking into the darkest room in the world.

"When in disgrace with fortune and men's eyes," she could hear him reciting, "I all alone bewep my outcast state . . ." and then looking at her and adding, "pardon my bathos."

"Oh, hell," she said, "I'm going to miss you! I am going to *miss you!*"

How could he be dead? How in God's name do you get KIAed in Indianapolis?

Well, hell. As far as he was concerned, the day she received her commission, she had been on her way to general. He would manage her career. "You can't fly combat, so you need to get on a hot staff."

He had stared at her orders to report to the supplies depot for a long time. Stood there and stared, so still she thought he might have gone to sleep on his feet. He put them down far too carefully, on the back of the couch. Then he had marched off into his office. She'd heard him yelling, and gone to his door, which was not right, she knew, but she was involved, for God's sake. She'd only heard one thing, but it had been repeated a number of times, "put her on ice." And he'd cursed the person at the other end of the line with a venom that was far beyond his worst tantrums, that had frightened her because it had implied that the hidden thing in his life somehow also involved her.

Thinking back, she closed her eyes for a moment. Fortune and men's

eyes . . .

There had also been another thing between her and Dad, that would come at moments of silence and his strange sorrow, a kind of bond that would seem to enter the air between them, almost as if they could somehow link their minds. Or so she imagined.

The phone rang. She looked at the incoming number. Base call. Could it be the guy from Dad's funeral? Could he actually be pressing her this hard, on this day? She didn't believe it.

"Hello?"

"Lieutenant—"

"Look, mister, are you somewhere in the chain of command, because if you aren't, very frankly, I am here trying to deal with the death of my father and really my only friend, and I am just not doing this."

There was a silence. It extended. "I am in the chain of command," he said at last. "My orders are legal."

Could this be real? Could this guy really, actually be on the phone pushing her around like this now?

"I'd like to do this tomorrow."

"You have your orders, Lieutenant."

She hung up the phone and wanted, very badly, to do something hurtful to this man. But that was military life, wasn't it? You weren't here to grieve.

She reported to an impressive but sterile office suite that had all the anonymous earmarks of being some kind of official visitor's lair. She was called in immediately.

With Mr. Crew was the younger of the two colonels, Langford. She was just as glad—the older one had exuded something that had made her uneasy, Wilkes or whatever his name was.

The office was large and the furniture real wood, but there wasn't a single citation on the walls, nor a photograph, nor anything that might identify him further. Obviously, a spook, but not Air Force or he'd be in uniform.

She saluted the colonel. He returned. "At ease, Lieutenant," he said, smiling and shaking his head slightly.

"Please take a seat," Crew said.

"I want to extend my sympathies, too," Langford added. "Your father was a great man and a national hero. You should know that he's going to receive the Intelligence Medal." He paused. "And also the Medal of Honor."

She knew that her mouth had dropped open, because she had to snap it closed. “The Congressional Medal of Honor?”

Crew nodded.

She was stunned silent. In awe. In sorrow that he had not been able to share what terrors must have beset him in his work, and had killed him.

“Do you remember the tests you took at Lackland?”

What in the world did that have to do with anything? “I took a lot of tests during basic.”

“One of them involved a page of numbers, and you were supposed to draw lines between them.”

“Sure, I remember it,” she said. The test had been tucked in among the standard battery of aptitude tests she’d taken as a recruit. “Sort of connect-the-dots type thing.” She’d sort of doodled it, as she recalled. “I messed it up.”

The two men stared at her, saying nothing. They looked, she thought, like people must look to an ape from inside his cage. “What on earth does it matter now?”

“I have another test for you,” he said.

“Another test? That’s what this is about? Because—”

“Lieutenant, it’s terribly important.”

Langford’s voice had an edge that told her to listen and keep her mouth shut.

“You need to fill out a consent.”

“I thought you were going to let me know something about my dad.”

“I am.”

She took the form he handed her, and was very surprised, as she read it, to see that it was no ordinary medical consent.

She looked at Langford. His face was bland. A dentist’s face—that is to say, a mask. She read aloud, “Any commentary or discussion or unauthorized record of any subject or meeting or action carried out within the context of the project is prohibited conduct and subject to prosecution under provisions of the National Security Act of 1947 as amended.” She tried to laugh. They remained silent. “This is very heavy stuff.” Still nothing. “Excuse me, but this is a very serious document, here.” She pushed the paper back toward Crew’s side of the desk.

“We can’t bargain with you,” Langford said, “and we can’t talk until you sign.”

“Volunteer or be shot, in other words.”

Langford pushed the paper back toward her. “Don’t miss this,” he said. “You’re first in line, Lieutenant Glass, but there is a line.”

“If I sign and don’t like what I hear, can I walk away?”

Langford turned toward Crew, who didn’t so much as blink. “I’m sorry, but the agreement is binding,” Langford said.

“It commits me to something I can’t learn about until I’m in it? And then I can’t get out?”

“I know it sounds unreasonable.”

“Unreasonable? It’s downright scary. More than scary. I mean, the Air Force doesn’t handle things this way.” She wondered if that was actually true.

“Sign it. It would be very helpful.”

Maybe her dad was looking down on her right now. Probably was, assuming there was anything left of him, any sort of a soul.

She picked up a pen off the desk . . . and had the odd feeling that these two guys were waiting, but in a funny way . . . like they were hungry, almost, and she was lunch.

“So, I don’t think I need to do this,” she said. “No.” And she was more than a little ashamed. *Sorry, Dad, but this does not feel right.*

Crew unfolded his long legs and leaned forward. She expected him to speak. But he did not speak. He just looked at her. It wasn’t a special expression, not at all. But it moved her. It did, definitely. A very serious, very important moment.

“I can’t very well jump off a cliff without knowing what’s at the bottom, can I?”

Crew sighed. Was it anger? Suppressed impatience? Boy, she could not read this guy. You thought saint, then you thought—well, something else.

“We want you to continue your father’s work,” Crew said. “If you pass this small test.”

“It’s urgent,” Langford added. “You’ll need to start this afternoon.”

Crew pushed the agreement back at her.

“But . . . what did he do?”

“Please help us,” Crew said. His voice was still as soft as ever, but the desperation in it was somehow terrifying.

“What if I . . . can’t?”

He smiled then, very slightly.

Suddenly she knew that she would not walk away from this. She could not live the rest of her life in ignorance of what her dad had done, knowing that she had passed up this chance.

He had been killed, though.

She grabbed the paper, signed, then thrust it back.

Colonel Langford took it, folded it once, and slipped it into a manila envelope. “You’ll get a copy countersigned by the Secretary of Defense,” he said.

“You’re kidding.”

“Lauren, you have a very unique ability,” the big man said, “inherited, we believe. That first test you took, you passed. You were the only person to have done so in the forty years it has been administered, in one form or another, to every military recruit in the United States, Canada, Great Britain, New Zealand, and Australia. The only one who even came close. But we weren’t surprised, given who your father is.”

That sort of sounded . . . whoa. “Did you say, uh—what’s that?”

“You are one in many millions, Lauren. You have inherited an absolutely unique skill from your dad.”

What in the world could this be? “I have to tell you honestly, I have no unusual skills.”

“I want to warn you, you’re going to have a very extraordinary experience. I want you to understand that it will not be in any way pleasant or easy. I won’t pretend that there is no danger, because it must be obvious to you that there is great danger. What’s more, we’re not going to be able to help you. You have to do it on your own. And you are on your own.”

“But, uh, you said there was a list, Colonel Langford. And you were going to . . . you were going to the next person if I didn’t sign.”

“I lied. And you will, too, many times. It will be a big part of your job.”

“If I’d said no—despite Dad, absolutely and finally no—what then?”

Crew said, “We would have had to say something dramatic, like the survival of the human race might depend on you.”

The words hung in the air. Unbelievable. Crazy, even. She didn’t know whether she should be scared or what. Finally, the whole idea just seemed so overblown that she burst out laughing—and it was the only sound in the room, and it stayed the only sound in the room. She looked from one deadly serious face to the other. They actually were not in any way kidding.

But she was a girl, she was twenty-two, and, while she liked being both

things, neither suggested that she had any sort of amazing mission in life. “This is too weird,” she said slowly. “I mean, are you telling me I’m some kind of outrageous, like, freak?”

Langford cleared his throat. “You know nothing about your father’s work?”

She shook her head.

“You’re what we call an empath. You can hear thought and you can transmit it to others who can hear it.”

“Yeah, Dad used to say that. He read science fiction, too. Arthur C. Clarke kind of thing.”

Crew handed her a yellow pad. “Write down the first thing that comes to mind.”

She took the pad, thought for a moment, then scrawled the first word that came to mind. “The name of my dad’s barber,” she said. “Adam.”

Now Langford pulled an envelope out of his pocket. “The person you will be working with cannot speak. His brain is so entirely different that, without a person like you, we can only exchange the most rudimentary ideas. At present he is terribly upset, but we have succeeded in getting him to transmit the name we call him to you.”

He handed her the envelope.

In it was a note scrawled on a piece of paper that smelled oddly of what she thought might be Lysol. The single word written there was “Adam.”

She looked at it. She looked back up at the two men. “Who . . . who is this guy, anyway?”

“That’s part of what we’ve been trying to understand, Lieutenant Glass. What your father spent his career working on.”

“His name is Adam but you don’t understand . . . what?”

“They don’t have a naming convention in their culture. Adam and Bob are really just our labels.”

“Bob?”

“Died.”

Another death. She noted that. But who in the world would communicate via thought and not use names?

“Our next step will be to send you to meet the head of your part of the project. He operates a very small unit and runs a very, very tight ship,” Colonel Langford said. “You have to understand, you are never to speak to him about your background, about your meeting with us, about anything that

you do not absolutely need to talk to him about in order to do your work. Do you understand that?”

This was sounding crazier and crazier. “So I just walk up to the guy—my commanding officer—and I say—what?”

The colonel handed her an envelope. “You don’t say anything. You give him this. He’ll take it from there.”

She recognized the envelope, of course: it carried orders. She started to open it.

“No.”

“No? I don’t open my own orders?” She shook her head. “Why am I not surprised?”

He gave her a card with an address in Indianapolis on it. “You’ll drive to your new assignment. Colonel Michael Wilkes will be expecting you. You saw Mike at the funeral. You will receive further orders from him verbally.” He paused for a moment. “Lauren,” he continued, “I want you to understand that there is an extremely good reason for all this secrecy. In time, you’ll come to know this reason, and you will find yourself in the same position we are—it’s a secret that you won’t hesitate to defend with your life.”

She found herself walking toward the parking lot with this weird verbal order to report to an address in University Heights in Indianapolis, and to be there by six this evening. Not impossible, given that it was a little over a hundred miles and she had five hours. Typical of the Air Force, though, she’d been sitting in procurement for two years and then, with barely time to go back to the apartment and grab her toothbrush, she was on the move to, of all places, Indianapolis, and not even a USAF facility as far as she could tell.

“You just get your belongings out of your billet and go,” Langford had said. “No good-byes, no e-mails, no cell calls.”

She had friends, a life, at least something of a life. No, hell, there was Molly at the office who was going to wonder, there was Charlie Fellowes who was getting to be more than just a friend, but he was out on a refueling mission and wouldn’t be back for forty-eight hours—so he was just going to find her apartment empty, her cell phone disconnected, and her e-mail bouncing everything back.

She worried that she’d run into a familiar face on her way home, but all was quiet. She knew the Air Force: her current commanding officer, General Winters, would have been duly informed of her transfer, etc., but nothing would run smoothly. Undoubtedly, the next thing she’d get from her current

unit would be a notice that she was AWOL.

She spent three quarters of an hour packing. At the last, she put their small photo album in a suitcase. Her and Dad through the years. She staggered down to the parking lot under her bags, and got the Focus pretty much stuffed to the roof liner.

Then she was gone, outta here, no looking back.

It was not until she was sailing west on 70 and WTUE was rocking into her past that she began to think again about Dad's dreams.

As a little girl, she'd covered her head with her pillow and begged God to help him. Later, she'd gone into his bedroom to try to provide him with whatever support a daughter could. She would find him with his eyes wide open, screaming and shaking his head from side to side, and you could not wake him up.

He'd said it was 'Nam coming back to haunt him. He'd flown Hueys in 'Nam, and he had two Hearts for his trouble. Also a scar down his back where he'd been wounded. His story was that a lot of guys had burned alive in a hospital tent that had been torched by the V.C. Helpless guys, guys with no faces, guys with no legs. He'd had a broken arm and a bad infection, but he could run, at least.

There was, of course, a problem with this. It was that, as she knew, her father had not served in Vietnam. She'd seen his duty book, and he just had never served there.

In fact, her father had served at White Sands, then at an army base in Arizona called Fort Huachuca. Her earliest memories were of the wonderful rocks around Fort Huachuca. After that, they'd come to Wright-Pat, where he'd been connected with the Air Materiel Command. She knew that because his unit was attached to the Behavioral Research Directorate, which was a division of AMC. She knew that behavioral research was about understanding things like pilot alertness and endurance. Also, muddier stuff, nonlethal weapons and such.

It was a nice drive, once you got out of Dayton traffic—which was, truth be told, pretty minor.

Farms, midsummer corn, a different way of life out here. She'd like to run tractors and combines and things. She liked big machines.

She'd been around the Midwest for a while now, so Indy was no stranger to her. Back before Mom moved home to Glasgow, they'd gone to the 500 here practically every year. Mom was into fast cars—or rather, the

drivers, the mechanics, and just about anybody connected with racing. Actually, just about anybody else at all, as long as it wasn't Dad.

She was expecting an office building at least, or maybe some kind of lab facility tucked away next to the university. But this was pure residential around here. Wide streets, big old houses, quiet in the late afternoon.

She drove past 101 Hamilton and was, frankly, confused. It was a house. Looked like it had been built around 1910 in the Craftsman style. Beautiful place, for sure. But a *house*? An Air Force facility was in a house in a neighborhood?

Okay, so be it. She pulled into the driveway behind a very sweet-looking SLK convertible, that was, no, not your usual Air Force colonel's automobile. It was possible, of course, that the car belonged to somebody else, but she'd been told that the chilly Colonel Wilkes ran the place and this car was in a special little chunk of tarmac all its own. Commanding officer's privilege, for sure; she knew her Air Force.

There was only one other vehicle there, though, and the garage was padlocked. The other car was an Acura, not too young. So there was Colonel Wilkes with a fast car and a flunkie to be named later. Not the lowest of the low, they'd be in your Focus or your Echo like her, trying to make ends meet on just enough money to make that impossible.

As she mounted the stairs to the porch she noticed, of all things, a pair of longhorns over the front door. She stood looking at this incredibly improbable choice of decoration for Indianapolis, Indiana.

The front door had one of those old-fashioned bells on it that you twisted. She turned it and was rewarded by a dry crunching sound, not loud. In fact, hardly audible. So she did it again, a couple of times.

She was still doing it when the door swept open and Colonel Wilkes, looking shockingly older than this morning, stood there staring at her out of bloodshot eyes. "Please come in," he said, stepping aside.

His voice sounded sad, and she had the odd impression that he might have actually been crying. She noticed that there were boxes against the wall.

"They're yours," Wilkes said. "Eamon's things."

"Colonel, nobody has told me yet what happened to my dad. I've been ordered to come to this place and I have no idea why, beyond reasons that sound like some sort of science fiction crap to me, and I have to tell you that this is not being done right. Couldn't someone have at least warned me that I'd come here and see Dad's stuff in damn boxes!"

“Who sent you here?”

She could not believe that he actually didn't know. “I've been ordered not to tell you.”

He nodded, as if that was the most natural thing in the world. She followed him into an office that had clearly been carved out of what was once the master bedroom.

“This place was built in 1908 by Indy's only cattle baron,” he said as he dropped down behind his desk.

There had been no exchange of salutes. But he was her superior officer, so she brought her hand to her forehead and said, “Lieutenant Lauren Glass reporting as ordered, sir.”

He looked up at her. “Obviously. Please go to the scrub room and get prepped.”

“Excuse me?”

“The scrub room. You'll find it at the base of the shaft.”

“Sir, I have to explain to you, I have no idea what's going on here. I would like a little more information, sir.”

“You'll get the hang of it.”

“Uh, look, what is this scrub room? What do I have to scrub for?”

“Listen, I know you don't understand any of this. We were planning to bring you along as your dad reached retirement. Nobody thought it would be like this. But we have a desperate situation, Lauren.”

She found a chair. “Sir, I'm sorry to disabuse you, but I have not been on any training program in any way, shape, or form. I am not prepared for whatever this is. I basically have no idea what you're doing here at all, but whatever it is, it killed—” She had to stop. Her grief, appearing suddenly, had choked her on her own words.

“Lauren, I knew your dad for a long time. So you'll know that what I'm about to say is not meant to be hard or callous. It is what your dad would say to you if he could talk right now. Your dad would say to you, ‘Soldier, you have a duty. Do your duty.’ ”

“Sir, respectfully, you tell me in one breath that my predecessor is a KIA, then you tell me to proceed into whatever situation he was in with no training or prep whatsoever. Sir, I would like to understand this order a little better. I know that I am dealing with somebody called Adam, and my father dealt with him and with somebody called Bob, and my father died as a result. That is the extent of my knowledge.”

He stood up so suddenly that she did, too. He turned his back on her and strode to the window. “There is no training, and there is no time. I want you down there now, because we have a situation, Lieutenant, and I believe—no, I know—that you are the only person remotely available to us who might be able to help.”

When he attempted to smile at her, she saw that coldness again, this time more clearly than she had at the grave. This was a driven man, she thought, a fanatic. And she wondered, should she trust a fanatic?

Well, Dad had. This was his commanding officer, this frosty man with his carefully decorated office and his fabulous car.

He showed her to a small elevator that opened under the front stairs. “There’s a very skilled man at the other end who will be there to help you.”

She stepped into the dim interior and descended. It felt as if it was moving fast, and continued for more than a minute. When the doors opened, she found a chunky young man in a white sterile suit waiting for her . . . and saw that he had been the fourth man at the funeral.

“I’m Andy Morgan,” he said. “Welcome to the facility.”

“This place is *deep*.”

“We’re two hundred and eighty feet down. Deep in the bedrock.” He tapped a foot on the floor. “Basalt.”

Faintly, she could hear another voice. It was groaning and sounded tired. Also angry. She looked around but saw nobody.

“Who is that?”

Andy Morgan shook his head. “You’re good,” he said.

“Who’s moaning? What’s going on in here?”

“Lauren, listen to me. You’re going to meet him in a moment. Sort of meet him. What you’re hearing is coming through a six-foot-thick tempered steel wall that is further protected by a high-intensity electromagnetic field.”

“Then how can we possibly be hearing it? Because it’s perfectly clear. And the man is in agony.”

“I can’t hear it.”

“But that’s crazy. Listen to him, he’s wailing!”

“The fact that you can hear his thoughts is why you’re here.”

“What thoughts? He’s crying!”

“You need to go in there,” Andy Morgan said. The same tone, she thought, that he might have used if he had told her it was time for her to do her wingwalk, or perhaps go over Niagara Falls in a barrel.

Behind him was a steel door, armored and locked with great, gleaming bolts. Why in the world would anybody be that locked up? What did they have in there, some kind of deranged superman? She tried to conceal her total and complete mystification, not to say her fear, and to concentrate on what she needed to know, here, on a practical basis. “Now, is this person going to be violent?”

“Baby, he is *flyin’* in there! He’s been bouncing off the walls ever since the colonel bought it. Excuse me! Since your dad passed away.”

“Before I go in there, I think you’d better tell me exactly what happened to him.”

He lowered his head. “Nobody told you?”

“They did not.”

“Okay. Your dad got a scratch.”

“A *scratch?*”

“That caused an allergic reaction so intense that he bled out.”

She did not need to think very long about that. She sat down in one of the two chairs that stood before the control panel. “I’m not doing this.”

He was a gentle-looking guy, more than a little overweight, with sad, sad eyes. “They sent you all the way down here without telling you a damn thing, didn’t they?”

“That would be correct.”

“Okay, I’m going to level with you. Have you ever heard of aliens?”

“Yeah. No green card.”

“The other kind.”

“Oh, that stuff. I have no interest in that stuff.”

“Perhaps you had better see your dad’s office.”

“God, I’d love that.”

Across the small room was a door. The nameplate holder was empty. He unlocked the door and she saw a small, windowless space that had a steel desk, a couple of chairs, and a cot. There was a bookcase, also, and it was filled with books on electromagnetism and, of all things, UFOs. She read the titles, *Intruders*, *Communion*, *UFO Condition Red*, *UFOs and the National Security State*, and dozens more.

“You can pick what you’d like to keep. We’ll ditch the others.” He lifted a picture that was lying facedown on the desk. “I knew you’d want this.”

It filled her heart and her eyes, the picture of the two of them taken when she was twelve. They were at Cape May, New Jersey, she was wearing

her new bathing suit, and her Boston terrier, Prissy, was still alive. For a moment she smelled the salt in the air, remembered a radio playing down the beach, and heard the breeze fluttering in their cabana.

He took the picture and set it on the desk. "This is your office, now."

"There's an alien down here."

"And your father was his empath, and you will be his empath."

"Meaning?"

"You are going to find that you can see pictures he makes in his mind, and describe what you see to us."

Her father had kept quite a secret. "I should have been trained."

"Your dad wanted to wait until you'd had a little more Air Force. You know, you sign up and you wear a uniform, but really becoming part of this crazy organization takes time. Your dad wanted you to have that time."

"I'm an Air Force brat down to my toes."

"He knew that. He respected that. But duty is something different. I mean, our kind of duty. Keeping a secret so big that it is a kind of agony. Above all, knowing every time you go in that room over there, that you might die. Every time. But doing it like your dad did, on behalf of the Air Force, the country, and future of man." He took the picture from her, looked at it. "We need you to get in there and calm Adam down. If we can't get him to pull himself together, he's going to literally be busted apart by knocking into those walls in there. Considering that he's been doing this since your dad passed, we're desperate, Lieutenant."

Either she took up her dad's sword or she let it lie, and let the meaning of his life lie with him in his grave.

There was no real choice here. Never had been. She took a deep breath. "Okay, what do I do?"

He drew her through a steel door into a tiny dressing area. She stood naked in a shower with nozzles on the ceiling and walls, turning slowly as instructed with her hands raised over her head while green, chemical-stinking liquid sluiced over her.

Still wet, she donned an orange isolation suit and what felt like asphalt gloves, they were so thick. "He's electromagnetically active," Andy explained. "If you touch him, he'll extend into your nervous system and take over your body. You don't want that."

"No."

"Cover your face with Vaseline. And here's an epinephrine injector. If

you get the least feeling of even so much as a tickle in your throat, press it against your leg and get out of there.”

As she dug into the Vaseline container, she reflected that her father’s hand was probably the last one to do this. She could almost feel him beside her right now, telling her not to be scared, to remember her duty, that he was with her every step of the way.

Then something changed. The room, the guy—everything around her disappeared. She was suddenly and vividly in another room. It had stainless-steel walls, a black floor, and a fluorescent ceiling. There was a man on a table, naked, surrounded by people in full protective gear, sterile suits, faceplates down, the works. The man was purple, his chest was heaving, and blood was oozing out of his eyes, out of his nose, down his cheeks like tears.

The hallucination, or whatever it was, was so vivid that she might as well have actually been standing in the place. She could even hear the air-conditioning hissing, and the muffled voices of the doctors behind the masks, who were trying to save the man on the table.

He gasped, gasped again as they set up an IV. A nurse intoned, “BP 280 over 200, heart rate 160, basal BP rising, glucose 320 rising, we have another infarction—”

There was a high-pitched whine and blood began spraying out of his skin, spraying their face masks and their white sterile suits, beading and running down to the floor as he bled from every pore, a haze of blood pink and fine, like it was being sprayed from a thousand tiny high-pressure nozzles affixed to his body.

Then his head turned and she saw his face, and an ice cold spike stabbed her straight in the heart.

In that instant, the vision of her dad’s death ended.

She realized that she was still in the basement room she had entered in the first place, and Andy was supporting her under her arms.

“Sorry,” she managed to mutter, regaining her footing and stepping away from him, “I—uh—I think it’s the . . . depth.”

“If you say so.” He put an arm around her.

“Back off!”

“Hey, okay! Okay. I’m just trying to help, here.”

She blew out breath, then shook her head. That had been vivid. That had been real vivid.

Andy watched her. “You sure you’re okay?”

“I’m not okay. No.”

“Uh, was that a seizure, because—”

“It’s my business, okay!”

“Okay! Sorry.” He paused, then, and when she said nothing more, continued. “I’m going to open up the cage itself. When you enter, you’ll see a chair and a table. Sit in the chair.”

“That’s it? That’s all I get to know?”

“It’s all any of us know. Frankly, what your dad did, and what we know you can do, is not understood. You just have to do it.”

“And what if I can’t?”

“You’ve passed the test.” He went to a small keyboard and keyed in a combination. “I’ll be in the control room. You’ll be able to see and hear me, and vice versa. If you get into trouble, I’ll pull you out. But obviously things can happen fast in there.”

He left the dressing room, closing the heavy outer door behind him. A moment later, his voice returned, tinny, coming out of a ceiling speaker. “You reading me?”

“Yeah.”

“Okay, the door’s opening now.”

There was a loud click, then a whirring sound, and the wall of the little chamber slid back. She saw before her a room lit by what appeared to be ultraviolet light. It reminded her of the *Animals of the Night* exhibit at the Cleveland Zoo, where the vampire bats and things were deceived into thinking it was dark during the day. “Are there any lights?”

“Don’t worry about seeing him. You won’t. If you get so much as a glimpse, count yourself lucky. Pay attention to the corners of your eyes.”

“The corners of my eyes . . . you mean use my peripheral vision?”

Then the air hit her. It was dry—*real* dry. She could feel her face shriveling, it was so dry, feel her lips starting to crack. The function of the Vaseline was now clear, and she grabbed another handful of it right in the glove and slathered it on.

The room open before her was not large, maybe twenty by twenty. It looked like it had rubber walls. There was a window on the far side, and Andy could be seen sitting there at a control panel. His face glowed green from the instruments before him.

Suddenly something shot past so fast she lurched back waving her hands. It felt like nothing so much as being buzzed by a fly—but not a small

fly, no. More like the size, say, of a buzzard.

There was also a voice: groaning, howling, wailing, and it was the strangest voice she had ever heard, because of the way it echoed in her ears and her mind at the same time, as if she was hearing both sounds and thoughts that were the same as the sounds.

A thud, bzzzt, thud, bzzzt, thud, bzzzt, shot around the room, and with it the wailing, mourning voice, its howl thin and pitiful now.

She saw something—a flash of something that gleamed black. It was big, the size of a hand, and slanted. It was also brilliantly alive—a big, gleaming eye. A sound came out of her that she knew, objectively, was a scream. Sharp, intense, made of pure fear.

The wailing at once increased. Now it was desolated, like he'd been instantly aware of her revulsion and her fright and it was making him feel really, really miserable.

“Hold on,” she said. Dimly, she was conscious that Wilkes was now standing beside the tech at the control panel.

Suddenly, the buzzing stopped. There was no sound now but the hissing of the powerful air-conditioning.

“Sit down in the chair,” Wilkes said over the intercom.

“Where is he?”

“He moves with your eyes, so he appears totally still. The eye doesn't see anything that's totally still.”

“Yeah, like a rock or a mountain.”

“No,” Wilkes explained, “when you look at anything at all, *you're* in motion, so you see it. Since Adam is constantly making micromovements to match your eyes' own natural flickering, he doesn't register in the optic nerve at all.”

“What in hell is this *about?*”

“Tell you what. If you want to see him, make a very sudden move. As you do that, concentrate on the corners of your eyes, not your central vision. You'll see him.”

She sat, took a deep breath, tried to concentrate on her peripheral vision, and leaped to her feet.

Not a foot away, there was a shadow. Then it was gone again.

“He's right here! He's right on top of me!”

Then he started wailing again, and she could feel him whizzing around the room. More and more, he was racing past her face at the distance of what

felt like about an inch. Dad had gotten scratched. She sat frozen, terrified.

“Stay with it. You’re doing marvelously.”

She could see Wilkes nodding and smiling at her. “This is one hell of a sucker play,” she yelled. “False damn pretenses!” She got to her feet. Adam whizzed past so close she was forced to sit back down. She jumped up again. Same thing happened.

“He likes you, Lauren,” Wilkes said.

It felt a lot like getting a bat in her hair or something. How had Dad ever stood this, it was just way, way too weird.

“So what are we doing with an alien?” she screeched. “How in the world did we capture an alien?”

“We got two of them in a crash in New Mexico. They may have been given to us, we’re not sure.”

Bzzzt! Whooosh!

“Get away!”

“He wants to touch you. Let him touch you.”

She began waving her arms around her head. “No way, I’ll bleed out!”

“Remember, that was an accident. He’s in an agony of grief, that’s why he’s like this. Now you settle down, young woman, and follow your orders.”

Pictures of Dad kept flashing through her mind like photographs. With them came emotions of grief and the most acute regret. It was clear that they entered from the outside, although she could not say how she knew that. It was sort of like breathing a kind of emotional smoke.

“Shh,” she whispered, “now, baby . . .” She looked toward the control room. “The buzzing stopped again.”

Something brushed her cheek.

“I think he just touched me. I know you’re sorry,” she whispered, “I know . . .” She looked again toward the figures in the control room. “What am I supposed to do now?”

No response.

So she comforted him. She went through her mind, seeking for the words of some song from childhood, some sort of comforting song. Dad had not been a big singer. Mom had her Elvis, but this did not appear to be your basic Elvis moment.

Then a sort of hallucinatory flash took place. In it, the light in the room was deep red and there was a man at the table, sitting across from Adam. On the table, a bright green light like a laser that hopped up and down in the air.

The man was her dad.

It was so real, it was so good to see him again, that the tears were immediate. And then she heard inside her head, *oohhhhh*, and she knew that Adam had realized who she was.

“Yeah,” she said, “yeah, he was my dad.”

Ohhhhhh! Ohhhhh!

“Oh, yeah,” she managed through her own tears, “I miss him, too, I miss him bad.”

She saw next a glowingly beautiful woman, her face surrounded by a halo of golden light. It was, she knew, herself as Adam saw her.

Empath. One who empathizes. Turned out it was in the blood. No training needed. Genetic thing, she supposed. Maybe their ancestors had been psychics or witches or something. Dad’s grandfather had come from Ireland, that was about all she knew of their bloodline.

In the control room, Colonel Wilkes and Specialist Martin exchanged looks. “He’s got her wrapped around his little finger,” Wilkes said.

“For sure, sir.”

“He knows how to handle ’em, the little bastard. That is one smart piece of work in there.”

They said no more. Lauren Glass had been captured. She would not escape, never, not until she followed her father and his predecessor, both of whom Adam had killed with a scratch.

PART TWO

THE THREE THIEVES

They stole little Bridget
For seven years long;
When she came down again
Her friends were all gone.

—WILLIAM ALLINGHAM

“The Fairies”

THREE

DAN CAME INTO THE KITCHEN while Katelyn was washing spinach and nuzzled her neck. She moved her head back, enjoying him. In their case, not even thirteen years of marriage had been enough of a honeymoon, and she was very far from being used to this guy of hers.

They had met here at Bell, two days after he arrived. Bizarrely, it turned out that they'd both grown up in Madison, Wisconsin, just a few blocks from each other. He'd been crossing the campus in that aimless way he had, looking here and there, smiling even though there was no reason to smile. He was a strikingly handsome man, the last person you'd pick for a professor, let alone a specialist in physiological psychology. But that's what he was, and he'd just snared a provisional professorship when they met. Now Bell had reached a point of no return with him. This was, at last, his tenure year, and in a few days, his career here—and their pleasantly settled life—would either continue or it would end.

“What's Conner up to?” she asked. “Is he downstairs?”

“He's in the living room.”

“Too bad, he'd hear us if we went upstairs.”

“Mmm.” He continued nuzzling.

Their son was more than a genius. A well-constructed, handsome tow-head, gentle of eye and so smart that he was a de facto freak. His IQ of 277 was, as far as anybody could determine, the highest presently on record.

Dan came up from nuzzling and said, “He's in a funk.”

“Symptoms of said funk?”

“Staring miserably at the TV pretending not to stare miserably at the TV.”

“He's eleven. Eleven has stuff.” She arched her back, drew his head over her shoulder, and kissed the side of his lips.

“He's watching *2001*.”

Which meant that it was a serious funk and he needed Mom. “Why didn't you say that in the first place?”

“In the first place, I wanted some love.”

She went into the family room, stood for a moment looking at the back of her son’s head. On the ridiculously huge TV Dan had unveiled at Christmas, the apes were howling at the monolith.

She sat down beside him. “Can I interest you in—” She glanced at her watch, picked up the *TV Guide*. “A *Mork and Mindy* rerun? *The McLaughlin Group*?”

“Invasion of my space, Mom.”

“Point taken, backing off.” But she didn’t do that. She knew to stay right where she was.

“And just because I’m watching *2001* does not mean that I’m sad.”

What could she say to the misery in that voice? “Conner, a genius does not an actor make.”

“Mother, could you consider dropping that label? You say that all the time and it does not help.”

“That you’re not a good actor?”

“Okay, let’s do this. Would you care to come out on the deck with me?”

“On the deck? It’s twenty-six degrees.”

But he’d already gotten to his feet and slid open the door. He gestured to her, and she saw the anger in it. She went out with him.

The air was sharp with smoke, the western sky deep orange beyond the black skeletons of the winter trees. One would have thought that a winter silence would prevail, but instead she heard the shrill voices of preteen boys.

When she looked down toward the Warners’ house, she saw streaks of light racing around in the backyard.

“You’re not invited?”

He went back in the house, sat down, and jammed the button on the remote. The bone sailed into the sky, the “Blue Danube” started.

Paulie and Conner had been friends effectively from birth—Conner’s birth, that is. Paulie was a year and a half older.

“Conner, what happened?”

“Nothing.”

“Something happened.”

“Mom, I’ve asked for space.”

“Honey, look, you’ve got one place you can go. Here. Two people who are one hundred percent on your team, me and Dad. And I want to know why you aren’t at that party.” And why, moreover, was it unfolding outside where

Conner could watch from a distance? That was real hard, that was.

Conner was ten months younger than the youngest child in his class at Bell Attached, the school that served the children of Bell College's professional community. He was nowhere near puberty, in a class where half the boys were shaving at least occasionally.

"Conner, would it make you feel better if I told you that puberty turns boys into monsters?"

"Thank you for that little dose of sexism, Mother. Girls have trouble with puberty, too."

"But boys *really* do."

She could hardly believe that Maggie and Harley would allow Paulie to leave Conner out like this. "What's really wrong?"

"All right. Fine." He got up, crossed the room, and went downstairs.

She heard him shut the door to the basement that Dan had finished for him when he was five. It was boy heaven down there, with an X-Box and a TV/DVD combo and a hulking but powerful Dell computer, plus his dinosaur collection, all of them painted with the utmost realism, and his train set, HO-grade, which had lighted houses, streetlights lining the streets, and lighted trains. He would play trains in the dark down there by the hour, muttering to himself in the voices of a hundred train men and townsfolk, all of whom he had invented, all of whose lives evolved and changed over the years. Katelyn thought of the train set as a sort of ongoing novel, and that her boy was a word genius as much as he was a math genius.

The care he lavished on everything he modeled came from his ability to concentrate. Even when he'd been little, he hadn't been clumsy. When he was eight, she'd discovered while cleaning up one day that the tiny human figures in his train set all had different-colored eyes, they had been that carefully finished.

She had loved him so, then, looking down at a tiny suited figure with a tie so small that you had to look under a magnifying glass to see the design he'd painted on it. And then you would hear him deep in the night talking to himself, and you would realize that he was reciting a book he'd read, maybe even years ago, all from memory, just to enjoy it again.

Conner and Dan had celebrated the completion of the room by putting a plaque on the door: THE CONNER ZONE.

She and her husband had celebrated in quite a different way, later that night. This was your garden-variety tract house, as isolated as it and its three

neighbors were, and the walls were tract-house thin. They did not feel that this extremely sensitive child needed to overhear the sounds of sex in the next room. And on that night, at last, they had been able to use their bed the way a bed was meant to be used, instead of being as still as possible, wincing at every squeak, and keeping their cries to a whisper.

“Dan,” she said, walking into the kitchen where he had begun trimming ribs, “there’s something kind of ugly going on. Paulie’s having a party and Conner’s not invited.”

“Jesus.”

“They’re actually outside playing with flashlights, which I kind of have the feeling is on purpose.”

“Kids are cruel.”

“Listen, incidentally, I had an e-mail from Marcie Cotton about you.”

“Oh?”

“They’ve reached the point of asking general-faculty opinion.”

“Oh, God.”

“I gave you a great report.”

“What a relief.”

“Come on, what else would I do?”

“Tell the truth like everybody else. I’m dull as dishwater in the classroom.”

“No, you’re actually interesting. It’s physiological psychology that’s dull. In the hands of most profs, it causes birds to die in the trees outside their classrooms. At least yours just fly off.”

“Dull is dull. I should’ve used puppets or worn costumes.”

“I would have preferred almost any other referee, frankly.”

“Yeah, you and me both. But I can handle her . . . maybe.”

“Not too much.”

Dan went to her, embraced her. “You’re my girl.”

There came a sound from below—a crash.

“He just kicked the wall,” Katelyn said. “Like father, like son.”

“Maybe a mano a mano would be good.”

One of the most precious things about this Dan Callaghan whom her heart had whispered to her to marry was that he was a genuinely good father—not an easy thing to be for a boy as challenging as their son. But Conner’s brilliance and demanding personality also made him fascinating, and she thought that the rewards for loving their boy were substantial. “Maybe a

mano a mano would be very good,” she said.

As he went downstairs, he noticed that the Conner Zone sign had been removed from the door, leaving some areas of peeled paint that would have to be repaired. But not right now. He started to open the door, thought better of it, and knocked.

A moment of silence was followed by a grudging, “Okay.”

The room was dark and the trains were running. Conner loomed over the board like some kind of leering godlet, an image that Dan found oddly creepy. In fact, he found Conner, in general, oddly creepy—a great kid, he was crazy about him . . . but there was something sort of fundamentally creepy about somebody who was probably smarter than Shakespeare, and certainly smarter than you—way smarter.

“Hey there, I see you’ve abolished the Conner Zone.”

“It’s stupid.”

A streetcar, wonderfully modeled, shot around on the tracks, racing through intersections, wheeling out into the forest and then returning to the town, passing Andy’s Garage and Sill’s Millinery and Carter’s Groceries, racing along as crossing guards whipped up and down and the figures inside sat as still as if frozen in terror.

“Isn’t it going a little fast?”

“I’m exceeding the speed limit and maybe they’re all going to die.”

“It hurts, buddy. It’s meant to. Only, we need to get in front of it. Figure out what we’re doing wrong and not do that anymore. That way, we don’t lose our friends.”

Conner turned the transformer up a notch and the streetcar shot off the tracks, tumbled through the woods, and crashed to the floor. The roof broke off and half the figures came out. Conner leaped around the table, grabbed the remains of the car, and smashed it to pieces against the tiles.

“Hey. Hey! You’re killing the floor, here.” Dan went down to him, but he was up again and off across the room.

“I’ve gotta get rid of this whole kid setup,” he said, his voice cracking. “I’m an asshole, Dan. I’m a *little boy*. In fact, I’m *the* little boy.”

Dan went over to the bed where Conner had thrown himself. “Conner, your mom and I both felt you needed to skip grades. You were bored silly in third grade. You could do all the problems, you could read all the books.”

“I can still do all the problems and read all the books. Only the difference now is, I’m the class freak, Dan. The *freak!*”

“You’re not a freak. You just happen to be somewhat smarter than most people.”

“You know who I really relate to? I really relate to Junior Hamner. Do you know who that is?”

Dan thought that the Hamners had a little boy with Down syndrome. “He’s that mentally disabled child, isn’t he?”

“Exactly. Another freak. We should be joined at the hip.”

“Except that your mind—who knows what it might do one day? And Junior Hamner’s always gonna be eleven years old.”

“Actually, he’s four. Mental age.”

“Okay, let’s get down to it. What, exactly, happened to cause you to get ditched?”

“I told you, I’m a little boy. Little boys aren’t allowed.”

Dan had, to be honest, been one of the bullies. He’d had a childhood full of nightmares, so many and so intense that he now speculated that he might have been an abuse victim. He’d often been taken night fishing by an old man who lived down the block. Most of the time, his uncle Frank had been with them, and Frank was to this day as straight an arrow as had ever been carved, but there had been times when he and Mr. Ehmer had been out there alone all night, and he wondered what had transpired then.

He remembered strange violence. Screaming. Being swarmed by flies. And maybe those were screen memories for things Mr. Ehmer had done, that should not have been done.

Dan had been angry and big, so he used to push the little kids around—whip their butts, take their money, you name it. So he could understand the ugly frustrations of Paulie Warner and the other boys as well as he could his own boy’s hurt. He put his arm around Conner’s shoulders, gave him a friendly squeeze. “This was not like this a week ago. Two days ago.”

“Let me tell you what they’ve done. They have created a club called the Connerbusters. Clever name, do you get it? Everybody in the seventh grade is supposed to be a Connerbuster except me, of course—” He stopped, his voice cracking.

Dan looked over to see the young face twisted in pain. Agony.

“I’m sorry, Dan, here I go being a *little boy*.”

“Look, I was a class bully. I would’ve been a Connerbuster. For sure. But I cried, too. And you can be sure that Paulie Warner and the rest of them are just as vulnerable. You’re a little behind them physically, Conner, but

mentally, you're on another planet. In another universe."

"Aye, and there's the rub. So listen, my friend, and you shall hear, of the careful humiliation of Conner the queer."

"You're not gay?"

"I have no idea, I'm prepubescent. And incidentally, without hurting her, you have got to tell Mom to stop bragging about me to the other mothers."

Now, that was a stunner. Katelyn was hardly your braggart mama. "That doesn't sound like her, somehow."

"She refers to me as a 'genius.' 'My son is a genius,' she says. And do you know that Mrs. Warner resents this? And Mrs. Taylor and Mrs. Fisk and probably every other faculty wife with a kid at B.A. Because they all *want* geniuses, Dan. This is a college! These are college people! And I really am a genius and they resent me. So you give a kid ammo like that—the parents can't stand some classmate with an unfortunate disability like mine—and that poor cripple is fair game."

Dan could certainly see, from Conner's standpoint, why he might view his intelligence as a deformity. It was ugly, though, to see him driven to feel that way about a gift so rare.

The thing about Katelyn was, if you were going to love her and you were going to be her husband, you were going to have to accept that Conner was the center of the universe for her. He was, indeed, a professor's dream child and she was, indeed, a professor. "She's always bragged, Conner."

"She's really messing me up."

At that moment, flashlights began appearing in their yard, swarming over from the Warners'. There were also voices making low howling sounds. "Great," Conner muttered as he turned out his bedside light.

For a few more seconds, Dan hoped that this was something nice, but when he heard them calling Conner's name, he knew that it was more cruelty, and he, perhaps unfortunately, got mad. He headed for the glass door that opened out onto the underdeck and the yard.

"Dan, please just go upstairs."

"Conner, those kids don't have any business in this yard."

"Dan, please!"

Dan opened the door. Behind him, Conner pulled his bedspread over his head. Then Dan heard cracking sounds. He realized that somebody was hitting the aboveground pool with what sounded like a board or even a

hammer.

“All right, that’s enough,” he shouted as he strode up to the shape that was hacking away at the pool. It was a kid he didn’t recognize, but when the boy saw him, he tried to run. Dan got him by the collar of his jacket.

The kid swung and managed to land a crooked blow on Dan’s thigh. And the rest of them didn’t run. He heard Paulie Warner say in an almost bored voice, “Let ’im go, Dan.”

Dan carried him across to the fence and dumped him over. “Get out of here, all of you.” He grabbed Paulie as he was leaving. “You oughta be ashamed of yourself.”

Paulie snorted—laughter. Only a miracle from above prevented Dan from smacking him. Instead, he brushed past him and strode across the Warners’ driveway. “Get off my property,” Paulie shouted from behind him.

He hammered on the front door. A couple of seconds later, Maggie opened it. He was so furious that for a moment he was at a loss for words, and the two of them just stared at each other. Finally, he spoke. “Keep those vandals out of my yard, Maggie, or I’m calling the cops.”

“Dan?”

“Paulie had his gang out there busting up our pool, damnit! It’s not on, Maggie. If I have to, I’ll see you guys in family court. Paulie might not like Conner anymore. That’s his privilege. But when he starts vandalizing our stuff—that I am not going to allow.”

She turned around, called into the house, “Paulie?” Then, “*Paulie!*”

He came, not looking afraid in the least, Dan noted. He was growing up, Paulie Warner was. The peach fuzz was getting dark, the eyes getting hard.

“Did you bust up their pool?”

“No.”

“Yeah, you did—or your friend did. I think they have a little gang, Maggie. What’s your little gang called, Paulie?”

“I don’t have a gang.”

Maggie shoved his shoulder. “Where’s Conner, Paulie?”

“He couldn’t come.”

“They cut him out and the gang is called the Connerbusters, and they invaded our yard with the intention of vandalizing us, and I’m not gonna stand for it, Maggie.”

“Okay! Hey!” Maggie called into the house. Boys began to appear, just young enough to be a bit wide-eyed with worry. “Party’s over, fellas. Call

your parents and tell 'em to pick you up. You can wait on the front porch, I don't want you in here anymore. I've already had a shelf busted in my fridge —”

“That was an accident, Mom!”

“—and now the neighbors are complaining and I've had it. You go up to your room, young man.”

Paulie started to speak, but she cuffed him in the back of the head. “Learn how to choose your friends, dummy,” she said.

He went upstairs, his face red, fighting tears.

As Dan left, the other boys filtered out behind him. They crowded together on the front porch, blowing on their hands and waiting for their rides. He walked across the yards, feeling the cold now through his cotton chinos and his light sweater. The kids sure were growing up, and it was sad. Last July, he supposed, had been the high summer of Conner's childhood. He remembered those days of his own life. He'd been like some kind of water creature, like all the kids who lived along the lakes of Madison.

He went over to the pool. The moon was rising, and in its light he could see that the little creep had done a fair job on the fiberglass.

As he was walking back to the house, something caught his eye—a flash, he thought, coming from somewhere to the west, in the direction of the town. An explosion? There was no following rumble, so he supposed not. Nothing ever happened around here, anyway . . . except for kid trouble. Kids were a problem in any college town. Bored, affluent, smart, faculty brats were a notorious irritant on every campus he'd ever worked.

He went in and gently explained to Conner what had happened. “Son, there will be no fallout from this. You'll see, Monday morning in school it'll be as if none of it ever happened.”

“I'm so glad.”

“Count on it. They went a step too far, that's all. They're testing, trying to figure out who they want to be—and they're not like you, they're much simpler, to be honest. So even though they're older, in many ways they're less mature.”

“Dan, do you think you could find out about the Wilton public schools for me, since I really can't return to B.A? I think the, uh, middle school—what's it called, Colonel Saunders Memorial or something—has a rather good reputation in shop. And, of course, the football team is the stuff of local legend. Who knows, maybe I can try out for back end.”

Dan saw that there was nothing to be gained by arguing with him. He'd go up and report to Katelyn.

As he left, Conner said, "Promise me, Dan. Call Wilton."

"I'll call them first thing Monday."

"And that boot camp in Lockridge. I could commute, actually, on the Louisville bus. I wouldn't have to live in the barracks or anything."

"Yeah, that's a possibility, too." Dan turned to leave and, to his surprise, saw a boy standing just beyond the deck. His shape was clearly visible in the moonlight. He was not one of the gangling creeps from Paulie's party. This kid looked even smaller than Conner. Which was very strange, because Conner himself was the youngest child on Oak Road, not counting six-month-old Jillie Jeffers.

It was dark in the underdeck, but the child was in the light of the moon.

Something struck Dan, then, hit him like an axe blow between the eyes. He was in a loud, echoing space looking down through a round hole, and there was a surface far below glistening silver just like this, in moonlight just like this. He felt in that moment a longing so powerful that it seemed to stop his blood, to cripple him with a sense of loss that might actually be larger than he could contain. For a moment, he was disoriented, as if detached from the ground, and he fell forward.

Then next thing he knew, somebody was calling him. Far away.

"Dad! Oh my God. Mom! Mom!"

Then footsteps, then he was aware that he'd fallen, and his head—his head hurt. That was it, he'd hit his head on a beam. Katelyn and Conner were there, they were terrified.

No problem, had to calm them down. "Oops," he croaked.

"Dan, don't move."

He sat up. "I about knocked myself silly."

"What happened, honey?"

"I was—" He looked around the cold, dark space. "I hit my head. One of the beams. I thought those kids had come back."

"What kids?"

"Paulie and his buddies."

"What were they doing in our yard?"

"It's a long story, Mom. And there *was* somebody out there just now." He pointed. "Something, anyway. It was an owl, right over there. A barn owl standing beside the pool."

There was nothing in the backyard now except the pool itself, gray in the moonlight, and beyond it the strip of woods that separated all the houses from a cornfield that fronted on Wilton Road.

Nothing more was said about the incident. Katelyn spent some time, then, with her son. She already knew all that had happened. Maggie had called, full of apologies. The boys had overstepped. Paulie would resume the old friendship, she would make sure of that.

She left him listening to a Leonard Cohen CD, another of his private eccentricities. God forbid that any of the other children should ever find *those* CDs, or his audio books of things like James Joyce's fantastically obscure and prolix *Finnegan's Wake*, from which he drew some sort of equally obscure comfort. Maybe he even understood it, who could know?

She took a bottle of wine and a couple of glasses up to their bedroom, and drank some wine with her husband. No more Conner until the morning. They lay together, then, with the light of the westering moon falling on their naked bodies, and the wine in them. Dan said, "You want to give it a try?"

"With no diaphragm?"

"Clean and clear."

She kissed him. "I do, I do."

"Oh, wow, hey—" He reached over, got his wineglass and raised it. "To the next genius Callaghan. If we make it."

"Okay, listen, you—I do want to, but this is not the right moment, Dan, and you know that."

"The tenure will come."

"The tenure may come. And when it does, we celebrate." She laughed a little. "By doing this incredibly profound thing of making another child. But, Dan, if you do not get it, then—"

"The tenure will come!"

"Marcie is a complex, difficult human being."

He threw himself back on the bed. She laid a hand on his head.

"You sure you're okay, Dan?"

"Absolutely."

"Well, you know there's no beam down there you could've hit your head on. So that's not what happened."

He knew it. He allowed himself to consider the possibility of a seizure. He'd had them as a child, he remembered them, they would start with an aura that involved seeing his planetarium lights, then progress to this bizarre,

echoing room where there would be unspeakable things, human bodies with no skin, giant flies—and then it would be morning, and he'd wake up perfectly fine.

He had never told a soul about the seizures, and he didn't intend to tell Katelyn now. They were, perhaps, one of the reasons that he had become a physiological psychologist. His own suffering had led him to a fascination with the mechanics and abnormalities of the brain.

They slept then, joined to the sleeping world of man, a place that is different by night, that is not at all what it seems.

They did not sleep alone, though. They were watched, and carefully watched. Minds very different from our own, with objectives and needs completely beyond the imagining of the Callaghans, drew conclusions about what they saw, and acted on those conclusions.

Deep in the night, they acted, and Marcie Cotton became the latest victim of a great and intricate terror.

And then things went wrong. Very, very wrong.

FOUR

OAK ROAD WAS SO QUIET at 3 A.M. that you could hear the whispering fall of individual pine needles as they dropped in the woods that separated the houses from the farmer's field behind them. So when screams erupted, every human being and all the animals woke up instantly.

Marcie Cotton also heard the cries, and an expressionless voice repeating again and again, "What can we do to help you stop screaming?" Only when she felt herself suck breath, and realized that the narrow, black cot from which she could not rise was not her bed, did she connect with the fact that the screaming was coming from her. She thought: *nightmare*. And then she screamed again.

THERE WERE FOUR FAMILIES LIVING at the end of Oak Road, all Bell College faculty. The last house on the dead end was occupied by the Jefferses, Nancy and Chris, and their baby daughter. Beside them were the Callaghans, next the Warners, Harley and Maggie, Paulie and Amy. The house closest to the beginning of Oak Road belonged to the Keltons, two parents and two teenage sons.

At the Kelton house, Manrico, the family dog, sat up and snorted, then stood and commenced barking. The two teenagers leaped out of bed and started pulling on their pants.

Nancy Jeffers also screamed, and Chris, the youthful head of the physics department, jumped up as if there was a snake in the bed. Out the bedroom window, he saw a glow through the woods. "Dear God there's a fire," he shouted, pulling on a pair of rubber overshoes and an overcoat.

THE TRIAD HAD BEEN COMMANDED to bring Marcie Cotton to Dan Callaghan. The collective wanted them to bond her to him, so that she would do anything to make sure his tenure bid succeeded. There must be no chance that the Callaghans would leave Wilton, where every street, alley, basement, attic, and mind was known to the collective. An attack on the

Callaghans was inevitable, and the collective's plan to defend them had been constructed around their staying in the town.

Important work, certainly, but not all that they intended to do on this night. There was a reason this particular triad called themselves the Three Thieves . . . which was their imperfect ability to handle temptation. And Marcie was such very strong temptation.

PAULIE WARNER RAN INTO HIS parents' room, shouting that the Keltons' house was on fire. Harley Warner said to his wife, "My God, they might be trapped."

Maggie went to the window. "Is that a fire? It's very steady."

"Somebody's really screaming," Amy said, coming in behind her brother.

"Let's get over there," Paulie said.

Harley was pulling on his jeans. "Not you kids."

"Aw, Dad!"

"Paulie, not until I know what's going on out there." He did not want his children exposed to whatever might be happening over there, not given the agony he was hearing in those screams.

THE MORE MARCIE SCREAMED, THE more excited the Three Thieves became. They knew they were too low, they knew they should quiet her, they knew there was a dog nearby, and they could not control dogs. But they also knew that they could reach into her and taste of her emotions, and the taste would fill them with a delicious fire that their kind did not possess, the fire of strong feeling. Man might not be intelligent enough to save himself from the environmental imbalance overpopulation had caused on his planet, but his emotional genius was beyond compare.

They dug into her gushing terror like wolves digging into the flowing guts of a deer . . . and the collective at first reacted with surprise. Then it raged.

Conner thought the female voice was his mother screaming, and she thought that it was him. They met in the living room, and threw their arms around each other. Then Dan said, "There's a light in the field." From their perspective on their rear deck, it was clear that none of the houses were involved.

Conner and Katelyn stayed behind while Dan, wearing slippers and a

robe, went out onto the deck and down into the backyard. He carried a flashlight.

Their scraggly yard was quiet. The toys of summer—the slide, the swing set, the empty aboveground pool—were sentinels in the stark light of the setting moon. He moved toward the glow, which was in the field beyond the end of the yard, past a stand of narrow third- or fourth-growth pines.

Katelyn and Conner came out on the deck.

“I think it’s a fire in the field,” he said.

“Are you serious?”

“Oh, God, somebody help me! Somebody help me!”

Katelyn clutched her son. “Conner, we’re going back in.”

Conner broke away from her and went racing down the deck stairs. “Look at that,” he yelled.

As he and Dan crossed the yard, hurrying toward the thin woods, a huge light loomed up from below the tree line. They stopped, stunned by this second moon rising.

Katelyn arrived beside them. “Conner, put this on.”

“Thanks, Mom!” He dug his arms into a jacket. “You know what that is?”

“No.”

Dan walked closer to the edge of the woods. “Can we help you?” he shouted.

“Don’t go too close, Dad.”

The thing seemed to wobble, then rise.

“It’s moving this way, Dan!”

It hung above the woods. Not a sound, now.

“I think it’s a balloon,” Katelyn said.

Then more screams whipped out, shrill to cracking.

“A balloon is on fire!” Katelyn shouted.

The three of them ran again, fumbling in the brush, guided by the light.

“Who in the world would be up in a hot-air balloon at night?” Conner asked. “And that’s not fire, that’s a piezoelectric effect of some kind. Look at it shimmer.”

“It’s a student,” Katelyn said. “Something’s gone wrong with some prank.”

It wasn’t anything to do with hazing, not in February, but it could indeed be a prank. Every house that backed onto the field was occupied by a Bell

College professor.

THE THREE THIEVES LOOKED OUT across the electromagnetic haze that flowed off the wires with which humans surrounded their shelters. Sharp eyes watched Conner and Dan.

DAN PAUSED IN THE WOODS. “Maybe nothing’s gone wrong. Maybe the screaming is the prank.”

“I hope so,” Katelyn said, calmer now, embracing this most reasonable of probabilities.

“Come on,” Conner said.

Before them, as they left the woods, they saw people running toward the object from various directions, Harley Warner, but not Paulie or his mother or sister, Chris and Nancy Jeffers, and the entire Kelton family, robes flying, Manrico barking furiously, but hanging well back. Jimbo Kelton was using a video camera, and Nancy Jeffers held her cell phone out like some kind of shield, no doubt taking pictures with it.

Another scream peeled out.

Dan shouted, “DO YOU NEED HELP?” He hoped it was just a prank because Bell did not need adverse publicity, not with the sort of enrollment problems faced by a small college located at the burnt-out end of a bus line that only served what the college brochure gamely called “the sophisticated little city of Wilton.” What sophistication there might be in a row of closed stores and a grain elevator was anybody’s guess.

“Oh, God, God!”

The words seemed to ring in the trees, to leave their narrow trunks trembling.

“Can’t you see that she’s in real trouble?” Conner yelled. He took off toward the object.

THE ONE WATCHED CONNER, WHILE the Two and the Three regarded Marcie with the reverent cunning of boys in a candy store. The Two drew closer, now pressing his face into her churning aura. Angry static bounced around the tiny space—the collective was furious that they were not performing as directed.

Which made little difference. The thousand grays who were here were spread all over the planet, feeding in Brazil and Britain and China, mining

gravitite in the iron deposits of New York, extracting Helium 3 fuel on the moon. They were linked to the great collective, yes, but it was moving toward Earth far more slowly than the lead group, so what could it actually do? Nothing, and they would carry out its orders . . . eventually.

The Three Thieves would have been more efficient with Marcie, but the luscious fears, the darting hopes, the bright, wet desires that filled her smooth flesh were just too much of a temptation. Dan Callaghan was awake anyway, so the whole expedition was a waste. They might as well make of it whatever they could.

The Two, as the negative pole of the triad, showed her a long needle. Her eyes widened as she saw the silver of it appearing out of the dark that surrounded her. She could not see the Thieves, of course, they were too careful for that.

He plunged the needle into her forehead and she shrieked and they gobbled her agony . . . for the moments that it lasted feeling as alive as their distant ancestors must have, before they had enhanced themselves with machine intelligence, and lost contact with the only thing that mattered, in the end, which was feeling.

Without it, life was ongoing death, and to find it again, crossing a galaxy was as nothing, not even if the journey took fifty generations, not even if it took a thousand.

From a billion times a billion miles away, they had seen Earth glowing with emotion. It had drawn them like excited moths to its mystery, first in hundreds, then in thousands, and soon the billions would come to drink the healing waters of the human soul . . . if all went well.

THE KELTONS WENT CLOSE, RUNNING low like actors on a movie battlefield. It occurred to Dan that Jimbo Kelton might be recording the prank for the later amusement of fellow perpetrators.

All the people in the neighborhood were not only known to each other, they counted one another as friends. Nancy and Chris were dear friends of Katelyn and Dan. Kelton was a historian, working at the far end of the campus from the Hall of Science, but still a member of the cozy little Oak Road crowd. The Warners and the Callaghans, were very close—or had been.

Nancy clutched her cell phone to her ear. Dan felt for his, miraculously found it in a pocket of his jacket. He punched in 9-1-1. “This is Dr. Daniel Callaghan, one-oh-three Oak Road. There’s a fire in the field behind our

house that borders Wilton Road. Somebody's trapped in it."

The screams lost form, became a continuous roar of pain.

Dan closed his cell phone while the dispatcher was still talking. He was now convinced that this was serious. Those screams were real. He took off after Conner, going flat-out.

"Don't let him near it," Katelyn howled, passing him in her pursuit of her son.

As Dan ran, he looked for the basket, for the burning student, but he could see only the fearsome glare, like looking into a thousand car headlights or a flashbulb that would not quit. He shielded his eyes and struggled closer. "Conner! Conner where are you?"

"I can't see him, Dan! CONNER! CONNER!"

Another scream came, trembling and high, desolate with agony, then the object wavered a little in the air. Far off, the thin wail of a siren could be heard, then more sirens, getting louder.

"Conner, oh thank God!"

He was with the Kelton boys, his small form hidden in the bulk of their teenage bodies.

"Come on, we're getting out of here," Katelyn said.

"Mom!"

"Come on!" She took him by the wrist, yanked him away, heading back toward their empty house.

"No!" He broke away.

And suddenly she was terribly afraid. Afraid for her son. He was vulnerable—to what, she did not know, but she knew that he was vulnerable.

"Conner, please, I am begging you. I am begging you right now to come back with me."

"Mom, I think I know what this is!"

"Conner, no. You have no idea. Nobody does. But it's not right and it's dangerous."

He threw his arms around her. "Mom, don't worry." In an instant, he had broken away and was running back into the light.

The Thieves were concerned now. Conner should not be here, and they could feel the fury and the fear of the whole collective. Of course everybody was scared: their survival depended on this child, who had been bred through fifty human generations.

Katelyn had the awful and frightening sense that the thing was somehow

watching her son. She took off after him, her feet slamming into the winterhard ground, and she tackled him and brought him down.

It made him cry out in astonishment. Katelyn had never disciplined him physically. Such a thing was unthinkable, to humiliate a brilliant child in that way—or any child, for that matter.

She got up on all fours, crying, trying to keep herself between him and the thing. She had the hideous feeling that it would somehow suck him into its fire, and he would join the poor woman who was screaming there.

He stood up. Glaring down at her, he turned away from the object and strode back toward the house. Thanking God in her heart, she followed her son home.

FIVE

THE YOUNG LIEUTENANT HANDED COLONEL Robert Langford a sheet of paper. “My God,” he said as he read it.

“Sir?”

“This is under the blanket,” he said. The young man, who was not cleared to hear what was about to be said, left the room.

The glowboy that had been snooping around Wilton, Kentucky, had just done something that Rob had never seen, and that he was quite sure no monitor had seen from the beginning of this mission, which dated back to 1942.

He pulled up a satellite view of Wilton. The glowboy was bright, its plasma fully deployed. The thing was ready to move out of there fast. He zoomed in on the image. Disbelieving, he zoomed in on it again. What in hell were people doing crowding around the thing? The grays considered their secrecy essential, and they had threatened dire consequences if it was ever compromised. But they themselves were breaking it.

And also breaking a fundamental policy of the United States of America, which was to keep their secret until and if something could be said to the public other than, “We know they’re here, we know that they come into your bedrooms and kidnap you in the night, but we don’t know why and we are helpless to stop them. And yes, some of you disappear, and some of you die.”

He stared at the image, watching the figures move, trying to form some sort of a rational explanation of what might be happening.

Rob spent too much time in the Mountain, or so he’d been told by practically everybody who worked with him. Because the grays operated at night and tracking their movements was his duty, over the years he’d gradually become a night person.

Mike Wilkes had negotiated a treaty with the grays, using the interface between Bob and Adam and Eamon Glass. The agreement was that they would limit their abductions in number and region. In return, the United

States had guaranteed to protect their secrecy.

It was Rob's job to keep track of the abductions, and, in the most extreme cases of treaty violation, to put up a show of force.

This was not to be done lightly. The grays would not stand to be fired upon. That had been tried back in the forties, and the reply had been horrifying. The grays had caused six hundred plane crashes in the year 1947. Shortly thereafter, President Truman had ordered that they were not to be interfered with in any way. Nobody cared to challenge the grays, but now was one of those dreadful moments when something had to be done.

Early on, there had been a fear that the Soviets would find out how the collective minds of the grays worked, and announce to the world something like, "We have seen the future and it is Communist." However, nobody except the United States Air Force possessed a gray. Therefore the rest of the world—including the remaining U.S. military, the intelligence community, and the government—was at best minimally informed. Within the Air Force, fewer than twenty people knew about this project.

He put his hand on the phone. There was nobody else in the world who could make this decision, or even offer advice. If he was wrong, there was just no way to tell what the grays would do.

Could he bring about the end of the world when he picked up that phone?

He lifted the receiver, punched in some numbers. "Jimmy, Rob. Do you have my glowboy coordinates?"

"Yes, sir. It's been ground bound for a while, sir."

"I need a scramble out of Alfred moving on it *instamente*."

"Yes, sir!"

He paused, then. Took a deep breath. "God be with us," he said into the phone. His next step was to inform Wilkes of what was happening, and that required setting up a listening device on the call. Mr. Crew expected all contacts with Wilkes to be logged, recorded, and sent to him.

Personally, Rob was convinced that Crew was right to be suspicious of Wilkes. He believed that the man was using the empaths to discover new technologies, and selling them to the private sector. Also, Wilkes's pathological hatred of the grays was inappropriate. He believed that they were bent on invasion. They scared him and that's why he hated them. But hate does not win wars, knowledge does, and that's what Wilkes's empath unit was supposed to be gaining from the one remaining gray in captivity.

But damned little useful information came out of the new empath.

Rob did not understand the grays but he didn't hate them. In fact, he found them incredibly interesting. They'd been here for fifty years and they hadn't invaded yet, so that didn't seem to be a very real concern. What they did to people was weird, but you didn't see folks disappearing or being injured, at least not physically. Obviously, though, whatever the grays were doing to the people they abducted was damned important to them. Otherwise, there would not be threats. They were taking something from us, no question of that, but in the way a farmer takes milk, not meat.

The information flow, Rob believed, was being shunted to Wilkes's real buddies, the quiet companies who fed off the United States' one-hundred-and-twenty-billion-dollar annual black budget. In Rob's opinion, there was a pipeline that led, through Wilkes, from Adam right back to the industry. It would certainly explain why an Oklahoma orphan boy, who had nothing to live on but his soldier's pay, called a multimillion-dollar house in Georgetown home . . . and why an officer whose work was in a hole two hundred feet below Indianapolis, Indiana, even needed a presence inside the Beltway.

"Mike, it's Rob. Sorry about the late hour, but I have a situation. There's a glowboy on the ground near Wilton, Kentucky. I know, it's very odd and very disturbing. What's even more of a concern is that there are civilians in the field around him. He's got his plasma deployed and he's ready to run, but he ain't running. There have gotta be video cameras down there, all kinds of trouble. I'm doing a scramble, I've got to get that guy out of there. Do you think you could get Glass in the hole with Adam? Let's reassure him that it's just a friendly warning that they might spill their own secret. And let's please find out what we can about what in sam hill they're up to."

He waited until he heard Wilkes's grunt of assent. The good colonel did not like to be dictated to, which is why Rob did just that whenever he had a chance.

ALFRED AIR FORCE BASE WAS a training facility. It was still up and running largely because Kentucky's senior senator was a member of the Armed Services Committee and powerful enough to hold onto his bases.

Whatever, Rob was damned relieved that the place was still operational. He widened the image on the overhead satellite, punched a couple of keys, and saw a white outline of the base superimposed over its location. The base

was barely thirty miles from the unfolding incident.

IN THE FIELD IN KENTUCKY, they were standing in helpless amazement, watching the object. Nancy Jeffers had gone home, because she and her husband had no wish to leave their baby alone with something like this taking place. Katelyn and Conner were also gone, and Dan was just as glad. A child had no business out here, and he thought that Kelton was letting his boys get way too close with that camera of theirs.

Without warning, a clap of thunder hit. Dan cried out, they all did. Chris Jeffers covered his head with his hands. Dan saw a double star wheeling in the sky. Then he heard the shriek of a jet and realized that what he was looking at were afterburners. "It's the Air Force!" he shouted.

Its underside glowing in the light being given off by the object, the fighter howled past so low that a hot stench of burning jet fuel washed over them.

The object turned purple. It moved, wobbling, above the ground.

The voice in the thing cried out, "Help me, help me, oh God, no! *NO NO NO!*"

The light rose into the sky. It hung there, still wobbling slightly. The jet's glowing afterburners turned and started back.

"Stop it! Stop that!" came the voice. Then more screaming. "*Ah! Ah! Ah! Oh aaaaa . . .*"

Maggie Warner screamed with her, crying into the agony of it.

In that instant, the object rose a hundred feet or so, then shot off to the north literally like a bullet. It went faster than Dan had ever seen anything go.

The jet passed over again, its engines screaming. It turned and followed the object. They watched the afterburners creep away into the sky.

Into the silence that followed, Chris said, "God help her."

"That was a UFO," young Jimbo Kelton announced.

Maggie asked, "*Was that a UFO?*"

"Dear heaven," Harley Warner said, "I think so."

Dan was looking at a small shadow in the field standing where the glow had been. "Folks," he said, "uh, I don't think we're alone here."

But when he shone his flashlight toward it, there was nothing there.

SIX

LAUREN GLASS WAS ENJOYING TEDDY Blaine's lovemaking, powerful and persistent from this sweet, rough guy. As a fellow Air Force officer, he was carefully disinterested in Lauren's classified work, and that made this particular affair very fun and very easy. As long as she was involved in heavily classified work, Lauren's plan was to keep the lovers moving through her life. Nobody deep, because it made it too hard to keep her secrets.

When Colonel Wilkes called her, she tried to ignore it. She pushed the chiming out of her mind, concentrated on the warmth under the covers, and the fabulous young man who was loving her.

The warble became a whine.

"Oh, Lauren," Teddy whispered, sinking down onto her, burying his face in her neck, kissing her now gently, pressing his prickled cheek against her soft one.

"My love," she said, and thought that she really did kind of mean it. Which meant—should she ditch him on the never-get-too-close theory?

The whine became a wail.

He jerked like he'd been stuck with a pin. "I don't believe this."

"My cert's up," she said, referring to the security certification system on her computer, which started automatically when she began receiving a classified message.

But why was he after her now, at—what—jeez, it was 3 A.M. She'd been in the cage for six hours yesterday waiting without result for Adam to at least take a breath, and she was most certainly not ready to return to his dark, claustrophobic hole.

Throwing off the covers, she went over and typed her password. Code came up, four lines, which she sight read. "They've got a virus," she muttered, striving not to reveal to him her true horror. The message communicated extreme urgency. Something was wrong. *Real* wrong.

"Let somebody else fix it."

“I have to go,” she said, going to her closet and starting to dress.

“Miss Indispensable.”

“Unfortunately.” Zipping her jeans, she went over and kissed him. “I’ll be back, love,” she said.

He drew her toward the bed. Briefly, she sat down. They kissed. She looked into his eyes. She sighed. “You know the rules.” And she realized how much she hated what she did—how deeply, profoundly twisted it felt . . . but she loved the perks, and, quite frankly, she was also sort of okay with Adam. The facility was a hole, but at the bottom of that hole was a most extraordinary being.

The thought that Adam might not be well crossed her mind. That made her hurry even more. She threw on a sky-blue cashmere sweater and her black jacket. After a perfunctory brush of her hair, she strode across her large living room and out the door.

She did not look back toward Ted. When she returned, he might well be gone. Fine, she’d rustle up another roll in the hay, maybe a civilian this time.

She had a lot for a girl of twenty-six. But she did a lot. As far as anybody knew, there was only one person on this earth who could do what she did. No doubt there were others, but how to find them? The Air Force had never been able to succeed at that, which was fine by her, since it meant that she could name her price, which had been promotion to full colonel. So now Mike’s orders were requests . . . but this was one she would certainly meet.

In the elevator, she turned her mind to her work. What could be wrong? She wished the elevator would go faster. She arrived in the condo’s garage, strode to her car, and sped off to the facility. It wasn’t far. She couldn’t live far from Adam.

She turned two corners onto Hamilton, and made her way down the tree-shaded street to the old house.

Wilkes met her at the door, which was unusual in the extreme. “A glow-boy kiped a newbie in the forbidden zone and there were civilian witnesses,” he said all in one breath. “I want you to query Adam on it.”

“Why?”

“Because it’s so extremely unusual, obviously.”

“You understand, they don’t have the concept of treaty. They don’t know what that is. And they futz with newbies all the time. You just don’t see them do it, because they stay in the approved zones.”

“You know this?”

“What if I told you that they’re a rambunctious, fun-loving bunch of extremely brilliant but weird people? How would that sit?”

“First, they are not people. Second, they are not only extremely brilliant, they are extremely sinister and they have no emotions.”

“Adam showed grief when Dad got killed.”

“He was faking it.”

“Plus, he—I don’t know how to put it, it’s not human emotion, not at all, but he does care about me.”

“You’re projecting. End of story. Now, let’s go down. We have work to do.” As they waited for the elevator, he added, “We have a scramble running on the glowboy, incidentally.”

“Oh, great, how do I explain that?”

“Communicate that it’s a friendly warning. The civilians are liable to have cameras. There could be a security breach that’s beyond our control.”

“*Wunderbar.*” She was annoyed when Wilkes got into the elevator with her. She did not like him around when she and Adam were together.

A few moments later, the doors opened onto the control room and, beyond it, the huge door that sealed Adam’s space.

As Lauren stripped, Andy began opening a fresh prep kit. She dropped her sweater to the floor and rubbed her temples. “So I need to find out why this triad is off-station?”

Lauren threw off her clothes in front of both men. Let them see. She was proud of what she was.

“Lauren, I need concrete information from you on this.”

She let Andy cover her body with the emollients that would protect every inch of her skin. Over the years, she’d gotten drier and drier from the zero-humidity conditions in the cage. At twenty-six she had the skin of a forty-year-old. She caked her face in Vaseline.

Andy’s hands felt only clinical to her, but she was aware that she did not feel clinical to him. She knew because of the way he would turn away when he was finished, his cheeks burning, poor guy.

She pulled on her orange coverall, zipped it, and wrapped the neck shield tightly. Andy fitted her cap. Then she rolled her heavy latex gloves onto her hands.

She faced the steel door.

Andy pushed up the sleeve of her coverall and injected her. “Sorry,” he said, as always. He kissed her then, very quickly, on the place he’d just

pricked.

She opened the door, stepped into the airlock, and waited. The inner door hissed and slid aside.

She entered her secret heaven and hell, the world of love and terror that she shared with Adam.

SEVEN

AS A SOCIAL SCIENTIST, KATELYN Callaghan understood the impulse to congregate after a tragedy, which was why the Jefferses had returned, baby in carrier, and now sat before the Callaghan fireplace. The Keltons had rushed home to study their video, the Warners to keep their excited kids from doing anything rash.

Hell's gate had opened for somebody tonight, and now there must be congregation—the ancient holy act that was intended by deepest human instinct to declaim the persistence of life.

Chris and Nancy sat with straight backs, methodically sipping wine. Six-month-old Jillie slept in her carrier between them, her little mouth open, her pacifier in her hand.

Katelyn wanted only to go downstairs to Conner. As irrational as it probably was, she was nevertheless experiencing an urge to guard him, and this urge was growing by the minute.

Nervously, she paced in front of the fireplace, drinking rather than sipping. She feared that Conner might go back out there on his own. That was why the Warners were staying home, to keep Paulie in. Conner could easily leave via the door that led from his basement room under the deck, and out into the yard.

She stepped onto the deck and looked out across the yard. No movement. Total silence.

It had seemed like half the campus police department, the entire volunteer fire department, County Emergency Services, and the state police had come.

None of the official types had seen the light, but the Air Force jet had still been maneuvering around when they came, at least. Police Chief Dunst had called Alfred AFB, only to be told that there were no fighters in the air at that time. No planes at all, in fact. He'd closed his cell phone in disgust. "Guess that was a privately owned F-15 on afterburners," he'd muttered.

The emergency crews had combed the field with infrared detectors. It

had all been very impressive, but it would have been more impressive if they had found something resembling human remains, or even a shard of debris of some sort.

“Well,” Nancy said at last, “what do we think?”

“We think some damned kids are in big trouble. I mean, I saw the Air Force out there,” Katelyn said.

“Dan. Danny Dan.” Chris laughed silently.

“No, Chris,” Nancy said.

“No? With regard to what?”

“With regard to the fact that you think it was a flying saucer.”

“With an abductee aboard, yes, I do think that.”

Now it was Nancy’s turn to drink deep. She glared at her husband. “I don’t want to hear this.”

“It’s true, though.”

“Maybe and maybe not, but I do know one thing, we’re here because of this UFO stuff! Shunted off into this backwater with barely enough of a salary to raise our baby—and it’s because you side with the trailer trash instead of your fellow physicists. Excuse me, folks. Family stuff.”

“No, it’s true,” Dan said, “everybody here is a failure somewhere else.”

“They’re real, they’re here, and my colleagues are wrong. If that video —”

“Don’t you dare go on TV about this, Chris. Don’t you *dare!*”

Chris raised his hands defensively. “Be it far from me, unless—”

“Unless nothing! No more, Chris. I have gone from CalTech to U. Mass to this because of your damn UFOs. Below here, we are looking at the junior-college pit.”

“I reserve judgement until I have seen the video. If it’s as good as I think it’s going to be, it might just get us back to CalTech.”

“You are so fired, Chris. You will never, ever get back there. My God, you made a public idiot of yourself on national television.”

“I told the truth!”

He had appeared on *Dateline* as an advocate for the reality of UFOs, and his status as a CalTech professor had been used to give him credibility. Within a year, he was out. At U. Mass, it had been an article in the *Boston Globe* that had quoted his *Dateline* statements. He lasted six months that time.

Dan told himself to keep out of it. But then he thought that the poor

woman was just so vulnerable, with that little baby, and, as much as he liked Chris, he was way off base on this one. “Alien abduction is seizure-related folklore. Did I ever tell you that I suffered from waking nightmares when I was a child? Which is why I know what this is. I saw these little figures. Yeah, me, Chris. I’m an abductee, by your rather dubious—excuse me—standards. But because I also happen to possess a little professional knowledge of the brain, I know where the aliens come from—” He pointed to his own head. “The same place that ghosts and demons and—whatever—goblins come from. And not from some damn field on the outskirts of a one-horse town in Kentucky.”

“Officially, I believe that Wilton is classified as a half-horse town.”

“Whatever, we saw a prank, it was terrifying, and now the Air Force is involved, and there is likely to be hell to pay for these students and this institution, and that is a damn crying shame! Although they do deserve it. The students, not poor Bell.”

“The Air Force said they weren’t there.”

“Dan,” Nancy asked, “are you concerned about your tenure bid? You must be.” She turned to her husband. “Because he won’t involve you. That I will not let him do.”

“All the witnesses—”

“Don’t even start, Chris, my dear love. Dan and Katelyn did not see this. And Kelton, look at him, he’s on thin ice as it is, the history department’s a basket case. Don’t involve them, Chris. Don’t you dare.” She looked at Dan. “How’s it going, by the way?”

“Marcie is how it’s going.”

“Marcie is your referee? You’ve got to be kidding. She hasn’t voted yes on a tenure since Clinton was in the White House.”

Now Dan went for the bottle, poured a glass, sucked it dry. “This is pretty bad,” he said, looking at the label.

“Six dollars at Kroger, don’t knock it,” Chris said. “Now, listen to me. I don’t want to set you off again, but you do realize that this is a historical event. A large group of witnesses, armed in some cases with video equipment, have observed, and, I hope, recorded a UFO on the ground up close. Exhibiting every evidence of the presence of an abductee inside. Which I intend to proclaim to the world.”

“Chris, shut up!”

He looked at his mild-mannered wife in open astonishment. “Excuse

me?”

“Just you shut up! Are you hard of hearing or something? Okay, look, you do this and you do it without me and Jillie, because we will be gone.”

“Where?”

“Anywhere!”

“Nancy, this is proof!”

“Oh, Jesus. Junior college, here we come.” She stood up. “I think I’m leaving.” She picked up Jillie in her carrier.

What Katelyn feared was that there had been a murder out there, involving God only knew what sort of bizarre method. A murder, and, perhaps, if the shadow Dan had seen was really somebody, a murderer who was still nearby.

“If you get yourself fired,” Nancy told Chris as she pulled on her coat, “expect divorce papers, mister.”

“Let’s approach it from the direction of each of our specialties,” Chris suggested.

He seemed unbothered by his wife’s outburst. And indeed, Nancy did not actually walk out the door. Katelyn thought, *It’s a real marriage, then. They’re long-haulers like us.* She knew where this kind of fight took you, in the end. It took you to bed. “Well, certainly,” she said, attempting to move things to a somewhat calmer level, “from the standpoint of the sociologist, we witnessed a real, physical event that I fear was tragic. We all do, or we wouldn’t be here huddled together in the back of the proverbial cave in the dead of the night.”

Dan said, “I’m in agreement that it wasn’t a hallucination. It was a prank and possibly somebody was injured. I agree there. Unless some genius actress has just recently emerged here at Bell, which I very much doubt.”

“I thought *Death of a Salesman* was pretty good,” Chris said.

Dan smiled. “*Death of a Salesman* is not working when you find yourself pulling for Willy Loman to commit suicide.”

“What we didn’t see was an alien spacecraft taking somebody on a rough ride,” Nancy said. “I want that established, Chris. Admitted.”

“So, what did we see?” Chris’s question was softly put.

Silence fell.

Katelyn said, “My concern is the injury issue. And frankly, getting awakened in the middle of the night. It is the middle of the night. I am outraged and I am scared.” She told herself it was mostly outrage. She knew

that it was mostly fear. “I think somebody might be badly injured, hidden in some dorm basement right now, trying to tend her burns with Bactine or something.”

“Don’t say that,” Nancy said, shivering

“What’s the enrollment picture looking like, Nance?” Dan asked. He was well aware that the psychology department was overstaffed. If Bell had another bad enrollment season, he could not only be passed over for tenure, he could see his professorship dissolved. Obviously, a campus death would not be helpful.

“Iffier than last year, actually.”

“Maybe the idea that we’ve had an alien visitation would actually help,” Chris said.

“Excuse me, guys,” Nancy asked, “but who’s in the kitchen?”

“That would be nobody,” Katelyn said. Except she had also heard a sound—a chair scraping against the kitchen tile floor. “Excuse me,” she said, standing up. “Is that somebody there?” she asked as she headed across the dining room.

The kitchen was empty, but as she walked in, Katelyn thought she might have seen the back door closing. She called, “Dan, come in here.”

Dan got up, sucking in breath as he did so. He came into the room. Nancy and Chris followed close behind.

“I don’t want to alarm anybody,” Katelyn said softly, “but I think someone just went out on the porch.”

Dan opened the door. The tiny side yard was bright with moonlight, and clearly empty. He peered along the driveway, then stepped out and looked at the street. Cold, quiet, that was all.

“What gives?” Katelyn asked as he returned.

He shook his head. “All quiet on the Oak Road front.”

“I heard the chair, and I thought—I don’t know what I thought.”

“It must have been the wind.”

“There is no wind.” She put her hand on a chair, dragged it. “It was somebody doing this.”

“There’s nobody,” Dan said. He locked the back door. “At least, not anymore.” He had the odd feeling, though, that this was not right. He shuddered. The room seemed somehow—what? It was clean enough, but it seemed—well, there was no way around it: the place felt . . . occupied. “Does it seem—” He shook his head. How could he explain what he felt? Watched,

when there was obviously nobody else here.

Chris lunged suddenly, slapped the kitchen table with his open hand.

The sound silenced them all.

“I—uh—there was a fly.”

“In February?” Nancy asked.

“No, there wasn’t a fly. Something moved. I saw it out of the corner of my eye. A cat—maybe a cat . . . over there by the pantry. Could a cat have gotten in here?”

“Stranger things have happened,” Dan said.

“Obviously,” Katelyn said as she got a bottle of wine from the cabinet where they were kept, “just an hour ago.” She looked at the bottle. “Will our five-dollar cabernet beat your six-dollar merlot?”

Dan checked the pantry. The familiar neat rows of canned goods stood untouched on the shelves, there if they ever got snowed in. He shook a box of cereal Conner had left open, re-rolled the wax paper inside, and closed it.

As he turned away, he felt something—like somebody’s hand had brushed against his left ear. He fumbled for the light, turned it on.

There was nobody in here but him.

Then a pain like a blowtorch flashed through the ear. He gasped, cried out, stifled the cry.

Katelyn had the chair in her hand. He staggered toward it.

“Dan?”

“I’m okay!” He fell into the chair. He could do nothing else, he was in agony. “Jesus, Jesus,” he said, trying not to gasp, trying not to seem to be in pain and failing utterly.

“What the hell?” Chris said.

“It’s my ear,” he breathed. “Oh, Jesus!”

Katelyn looked at it.

“Whoa, that smarts. Christ.”

“It looks fine.”

“Oh, man. It must be—” He tried to get up, failed. He was too dizzy. “Am I having a stroke? Does anybody know the symptoms?”

“Is it a headache, honey?”

“My God, it’s my ear, it’s killing me.”

“Perhaps a visit to the health center,” Nancy suggested.

“Dr. Hamner’s on senility leave,” Dan said. “Anyway, it’s closed at night because people might need it then.”

The pain began to get a little less. Dan managed to come to his feet. Still dizzy, he staggered a step. “Better,” he said.

At that moment, everything in the room rattled, there was a loud whoosh, and the back door opened and slammed itself.

“The *wind*,” Nancy shrilled, then knocked back a full glass of wine and poured another.

Katelyn did not tell them what she had just seen, which was a sort of light flickering along the back porch and into the yard, a light like a narrow searchlight beam from somewhere over the house.

In her most private self, in places inside herself where she almost never went, there were vague memories from childhood, memories that had drawn her to watch a TV documentary here and there about alien abduction, and to wonder. The memories were very unformed and very strange, but the fact remained that when she had first seen one of those big-eyed alien faces depicted on the cover of some stupid book, she had been transfixed, literally unable to move, and unable to stop the tears.

She would never tell Dan this, not with his childhood seizures. He needed to leave apparitions, demons, and all of that sort of thing behind him.

She could only think now of one thing: Conner, because, in her heart of hearts, she worried that he might be seizure-prone, too. Or worse, *what if it was true?* Even more than a criminal or idiot pranksters, if there were aliens out there right now, her place was with her little boy. She stepped back toward the living room.

“Katelyn?”

“Sorry, Dan, I thought I heard Conner.”

“Help me, here.” He went toward her.

She strode over to the freezer, rummaged for the blue cold pack, thrust it at him. He took it with thanks, pressed it against his head. “Better,” he said. “Somewhat.”

She went downstairs. On this night, she would sleep on the floor beside her son.

“Hi,” he said as she came in.

“Not asleep yet?” She sat on the bed. “It’s terribly late.”

“Three twenty-eight. I guess that qualifies.”

“Conner, I’m so sorry I knocked you down like that. I was just—oh, honey, I was so scared. I’ve never been that scared in my life!”

“You want to know a secret, Mom?”

“Sure.”

“That you *swear* you will especially not tell any Warners?”

“Sworn on the old heart.”

“I’ve never been that scared in my life, either. Mom, you know what I felt like? I felt like it was watching me.”

She did not—dared not—tell him of her own feelings.

No matter all the elegantly dismissive conversation above, the dumping on Chris with his silly ideas, down here in the dark with Conner, she found a truth that she could not deny. Whatever had happened out in that field, it had nothing whatsoever to do with any pranks, and murder was even more far-fetched.

The truth was, it had everything to do with the night and the unknown.

She took Conner in her arms, and prayed to the good God that she be granted the right to never, ever let go of him again. Soon, his breathing grew soft and steady, and she, also, closed her eyes. With her boy safe beside her, Katelyn slept.

It was then that the shadows came, stealing in from the dark place under the deck where they had been hiding.

PART THREE

THE SECRET OF THE GRAYS

Late at night, when the demons come,
I want my pillow to push between them,
So they can't get on my skin.
I cry they rub my head I cry.

—SALLY, AGE 9, FROM HER STORY,
“Beings Come to Our House”

EIGHT

ROB LANGFORD HAD NOT BEEN called by Lewis Crew in months, but he was not surprised to receive a summons on this night, when a glowboy had acted up like this. He had driven hard up from the Mountain, and now moved carefully along Lost Angel Road in the Boulder foothills, trying to find the address Crew had given him. He'd never met the owner of the house, Dr. Peter Simpson, but he'd heard Crew mention him often enough. In their field, need-to-know was so extremely strict that this kind of compartmentalization was normal. They all knew the reason, too. In fact, once you were told, it became the center of your life, the one thing you never forgot.

Back in 1954, long before the empath program existed, there had been a brief, fumbled meeting between President Eisenhower and a triad of grays at an air base in California. The president had come away shattered, saying that if we revealed that they were here, the aliens would destroy Earth completely.

This extraordinary threat had built the absolute wall of secrecy and inspired the intricate labyrinth of need-to-know that surrounded the reality of the grays.

Bob and Adam had never responded in a coherent manner to questions about it, either, which had made the threat seem more dire.

Rob found the house, set well back from the road, and turned in the driveway. As per regulations, he was in civilian clothes. Even the license plate on the car he was driving was registered to a civilian. He carried both false and real identification. The false ID, provided by AFOSI, would hold up under police scrutiny—say, if he got stopped for speeding.

Simpson's house was dark in front, but the door opened before he rang the bell. There stood the imposing Mr. Crew, looking a bit older, his white hair even more white.

As Rob entered the tiled foyer, a compact man appeared behind Lewis Crew. "Rob, this is Dr. Pete."

"It's a pleasure to meet a legend."

Simpson laughed a little. "I wish the circumstances could be more pleasant. Come on back."

They went along a hallway, then through a room cluttered with books. Surprisingly, Dr. Simpson read a great deal of poetry. He unlocked a door into a small office. There was some damaged equipment there. Rob asked what it was.

"A quantum communications device," Dr. Simpson said. "It passed signals between entangled particles, and thus was capable of instantaneous transmission across the entire universe. But no longer."

"Things have been at crisis for some time now," Crew said. "And we've reached a very serious point. A flash point, we believe."

Given the threat they were under and the absolute inability of the Air Force to offer any defense against the grays, those words made Rob feel a little sick. "What sort of a flash point?"

"We need to take you to another level, Colonel," Simpson said. "I've revised your job description and your need-to-know."

"You can do this?"

He laughed a little. "Colonel, you're talking to your boss—for the first time in your whole damned career. Isn't it the damndest thing?"

Rob shook his head. "Maybe we're a little too bound up in need-to-know."

"I'm a Defense Intelligence Agency specialist and chairman of the Special Studies Sciences Committee." Special Studies was the umbrella euphemism for all the scientific groups that worked on the problem of the grays.

The Sciences Committee, Rob knew, oversaw the whole operation, including his own Air Force mission. The poetry man was indeed his boss.

"How has my mission changed, sir?"

"We'll get there. First things first. I brought you here for the specific purpose of showing you this device, because you need to understand exactly what it did, why it's been destroyed, and by whom. Because you are about to be tested, Colonel, more rigorously than you have ever been tested before. I cannot stress this enough. In a few moments, I am going to ask you a question. Your answer will be crucial."

"If I answer wrong?"

Simpson gazed at him. The man's eyes were rat-careful. "This machine gave us communications access to Mr. Crew's species," he said. "Which we

very much needed, because they were generating questions for Bob and Adam that were, frankly, a lot more subtle and a lot more effective than anything Michael Wilkes has ever come up with himself.”

Rob realized that he’d just been told that his old friend Crew was an alien. He looked at him, pale in the dim light that filled the room. He appeared human enough. But then again, Rob had read enough UFO folklore to know the stories of a tall, blond race from a planet somewhere in the direction of the Pleiades. “You’re what the UFO-nauts call a Nordic.”

“Ours is a very stable agricultural world with as much land mass as Earth, but barely a million people.”

“But you look so much like us. What are the odds of that?”

“We’ve done DNA studies,” Dr. Simpson said. “We and Crew’s line split from one another about a hundred and fifty thousand years ago.”

“But we—we’re the same species? On two different planets?”

“So it would seem,” Simpson said. “The most bizarre part is that the DNA trail is quite clear. We are not their colony, Crew’s people are our colony.”

“But in the past, uh, weren’t we pretty damn primitive? How could we possibly have colonized another planet? We couldn’t do that now, couldn’t begin to.”

“The past is a greater mystery than we allow ourselves to believe,” Crew said.

Rob’s mind raced. “All of those ruins that nobody can understand, things like the pyramids and the fortress at Sacsayhuaman in the Andes and that impossibly huge stone platform at Baalbek in Lebanon—all of those ancient engineering impossibilities . . . does this explain them?”

“The remains of our lost civilization, or so we believe.”

“The legends of the fall . . . Atlantis, that sort of thing, the war in space narrated in the Vedas—”

“Distorted memories of a world that was lost in a ferocious war that plunged Earth back into savagery and caused you to lose contact with us altogether. The Book of Ezekiel in the bible is a confused account of a failed mission on our part to rescue you, when we built the Great Pyramid at Giza. We had to come physically, and that is extremely slow. The journey took thousands of years on a multigenerational starship.”

“The Great Pyramid is dated. We know who built it.”

“You know that Khefu put his mark on it. We returned in force about

thirty-five hundred years ago. For a time, we ruled Egypt. The Pharaoh Akhenaten and his wife Nefertiti were from our world. We attempted to reestablish essential lost technology, which is the technology that enables the movement of souls across space. A journey that takes eons in the physical can be accomplished in a few moments by a being in a state of energy. The Great Pyramid is a device that enables this. The Egyptian religion of the journey of the soul to the Milky Way is not imagination, but mythology based on lost science.”

“And did it . . . work?”

He nodded. “It still does. At present, I can use it to return home, but nobody else can come here.” He gestured toward the blackened console. “That new device had a lot of capability. Among the things it could do was transmit the entire record of somebody’s DNA at faster than light speed. A clone could then be grown using stem cells and DNA matching. Using pyramids on both planets, the soul could cross from one body to the other. But that’s all impossible now, because of what Michael Wilkes did.”

“*Mike?* But why?”

“Before we can answer that question,” Simpson said, “you need to understand a little more about why the grays are here.”

“They’re exploiting us somehow, I’ve always assumed. Feeding, perhaps, in some way that doesn’t seem to hurt people but that they regard as absolutely essential to themselves.”

“They’re here because they’re in terrible trouble,” Crew said.

Simpson joined in. “They have one hell of a problem. Genetic. Only in the past few years were we even able to understand it. But when you do a really good genetic study on them, you find all kinds of breaks, inserted genes, genes that must be from other species, artificial genes—they’re a genetic garbage can, is what the grays are. They’re not actually alive anymore. The grays have replaced so much of themselves that they’ve become, in effect, biological machines. If you can believe this, the few original genes we have detected are at least a billion years old.”

“A *billion?*”

“Or more. Maybe much more. What we’re looking at with the grays is a species so ancient that it has used up its gene pool. As a species, in their entirety, the grays are dying of old age.”

Crew continued, “Every gray we have ever recovered from crashes, a total of fifty-eight bodies over the last sixty years, has been suffering from

this degenerative genetic disease, where the membranous nucleus of their cells hardens, until the genetic material that's stored there can no longer be used by the cell. Then the grays replace the affected organ with an artificial substitute. Over time, the individual becomes a sort of machine. They have even created a prosthesis for their brain."

"So, why are they dying? If they've become artificial versions of themselves, they're immortal."

"The more artificial they are, the less alive they are. Knowledge and intellect transfer to the artificial brain, but not feelings. They've gained a sort of immortality, but at the price of losing their heart. And every gray is like this, and they all remember their lost hearts, and all they care about is getting them back. What they have now is not life, but the memory of life."

Rob had seen the Bob autopsy. He had been a living entity, but with things like a manufactured skin and metal bones, and a mind that was housed not in a brain as such, but in silicon filaments that filled his head in intricate patterns that looked something like Mandelbrot Sets. You could see, though, in the structures of the skull, that it had once contained a natural brain.

"So how does coming here help them?"

"The grays are trying to save mankind."

"What's that supposed to mean?"

"Oh, it's not altruism. They're getting access to our rich young gene pool. In return, they're going to save us from the environmental catastrophe that's going to ruin us. Together, both species survive. Apart, both die."

"Then why—I've always had the impression from Wilkes that they're evil."

"He and his friends are at the center of the linkage of corporations, governments, and individuals who currently control the world. He sees any threat to that structure as an act of war, and what the grays are doing is such a threat, big time."

"But what actually . . . are they doing?"

"That's the incredible part. The miracle. They know what needs to be done for their survival. They need access to our genes. And they know what needs to be done for our survival. We need to understand how to fix our planet and how to start colonizing other worlds. But what they *don't* know is how to communicate the information we need to do these things."

Rob looked from Crew's mild face to Simpson's careful, acute eyes. "Who does?"

“They have found a way to give a super-intelligent human being access to their collective mind. This, we believe, is why they were on the ground tonight. They’ve begun this process.”

Rob felt his face flush, felt sweat breaking out under his arms. “And this person is . . .”

“It’s a child. Bred over dozens of generations for extreme brilliance. The smartest person humanity can produce. When they bridge him to their collective, he’ll be even smarter than they are. He will trump their genius and, they hope, figure out how to save us all.”

“A messiah?”

“You could say that, I suppose.”

“But this is all predicated on the collapse of our environment being a real thing. If it isn’t, then they need us but we don’t need them.”

“It’s real.”

“It’s not global warming, is it, because—”

“Global warming is one aspect of a very complex phenomenon. A sixty-two-million-year extinction cycle. The last time it struck, it killed off the dinosaurs.”

“Which was sixty-five million years ago. So what is it, late for the bus?”

“It started right on time, three million years ago, when what is now Central America rose up out of the ocean. This destabilized ocean currents and led to what we have now, a devastatingly lethal oscillation between ice ages and warm periods. The number of species has been declining since before there was a single human being on Earth, and the climax has now been reached. We’re finished, basically—at least, as far as nature is concerned.”

“But why? And why sixty-two million years? I don’t get it, who’s behind it?”

“Ah, the silent presence. Nobody knows. The grays don’t know. But they hope that their brilliant child will understand. They hope he will understand the universe, the work of God, as it were, because, unless he does, we are all going to suffer extinction, both species, for different reasons. Twelve billion vital, living minds, all hungry for life, for love, for children and all right about one thing: every single one of us, whether human or not, is exactly as important as he feels.

“The grays are going to arrive on Earth in force in 2012, around the time the planet comes apart at the seams. They’ve been racing against time for thousands of years, and now it’s down to a clock that’s ticking fast, and either

they get that kid to figure this all out and fix the world, or both species crash and burn.”

“This is beginning to sound—well, to be blunt, horrible. Truly horrible.”

“You can understand the reason for the secrecy. For the grays’ terrible threats.”

“Keeping us from panicking and shooting ourselves in the foot.”

“And them.”

“So what has Mike got against all of this? And how can he stop them?”

“He and his buddies see this as an invasion, pure and simple. The grays are gonna show up in force and cream us and take our planet.”

“Why do they believe that?”

“They don’t know. Can’t know. They fear it.” Crew looked at Rob. “Do you fear it?”

“I’m not sure.”

“Good answer. Truthful. Neither are we. But Eamon Glass—you know, he was the first empath—he felt that the grays did indeed need us, and if they need us, they aren’t coming here to take the planet.”

“But how can Mike and friends possibly stop them?”

“First, they kill this child. That throws the grays off their timetable, because there won’t be time to breed another one before mankind goes extinct. They lose the tool they’ve been breeding across a hundred generations, that’s endgame for them.”

“But the other consequence—the environment falls apart and we go extinct. Where’s the win?”

“Mike and his group—they call themselves the Trust—intend to save about a million. Who they regard as the best people.”

“One million? Out of six billion?”

“There’ll be a few survivals on the outside, but the million people the Trust save are going to be the core of a new humanity, as defined by the Trust, of course. Their million survivors represent every race they consider valuable, every DNA group, all chosen to ensure an adequate long-term gene pool. It’s scientifically sound, certain to continue the species, and a nightmare of racism.”

“But why would doing this stop the grays?”

“For the same reason that they’re not coming to my world,” Crew responded. “Too little genetic material to help them. They need to create a new genetic foundation for billions of their own people. That’ll take a huge

number of human donors. A million would be useless to them, so they'd go away and, presumably, die somewhere off in space."

"The Trust isn't stupid," Rob said, "and Mike's had unlimited access to Bob and Adam for years. He knows the grays as well as anybody."

"And he would rather see the human species essentially brought to an end than live with the grays on what we believe will be at least equal terms. After all, this person who's brighter than them, and thus able to control them, is going to be a human. They're doing that for a reason, to give us a basis for confidence."

"But if Mike's concluded that life with the grays wouldn't be worth living, I think we have to respect that."

"Evil is a funny thing. It comes out of fear. Mike and his people think of themselves as the saviors of mankind. But they're genocidal monsters."

Rob found the scale of the thing so large he could hardly think about it intellectually, let alone morally. He shook his head.

"Here's your question," Crew said gently. "The one we need to ask you. In your mind, which is worse? Die, as a species, or take our chances with the grays?"

"Think carefully before you answer," Simpson added.

The only possible answer was immediately obvious to him. "I don't have a right to make a decision like that. None of us do."

"You pass," Simpson said. "Any other answer, and you would have failed the test, as a result of which, you would now know too much."

"I came close, then," he said.

"I don't think so," Simpson said. "I've always respected you. You have a good, strong conscience. You realize that this decision has to be made by every individual human being. This child, when he grows up, is going to give us the chance to do that."

Rob thought of a question so crucial that he almost didn't want to ask it. He did ask, though, he had to. "Are you saying that they might give us a choice? I mean, if we don't like the idea of sharing our genes with them?"

"We won't," Simpson said. "We'll say yes."

"How can you be sure?"

"The grays will be here, billions of them, asking for life. We will say yes, it's human nature, because we are fundamentally good. And this child, grown up by then, will help us do it right."

"You know, I have another question. Why are we like we are? Why are

we so much less intelligent?”

“We have less knowledge. We lost it during that ancient war, the basic knowledge of how the world really works, knowledge the grays have preserved intact. This is why we can no longer account for those engineering marvels you mentioned—Baalbek and such. We’ve literally forgotten how we did that.”

Crew gave Rob a long look. “We’re trying to sell you on something I sense you’re still dubious about. That’s how you see this whole conversation.”

“You’re not reading me right,” Rob responded. “I don’t see any alternative. We have six billion lives to save. It’s a completely unimaginable responsibility, and this poor damn kid, boy, there is one hell of a lot on his shoulders. You know how I feel? I feel like I would give my life, without hesitation, to protect him.”

“That might happen,” Simpson said. “Because Mike will go after him if he finds out about him, and Mike is good.”

“Then we’ve got to put him under arrest. Roll up these friends of his.”

“We cannot even consider that,” Simpson said. “They’re more powerful than we are. Anyway, it would show our hand and we don’t want that. We’ve been lucky in one respect, that Mike doesn’t understand this child thing at all. He has no idea that the grays are even trying to save mankind. He’s sitting back, confidently waiting for the extinction to ruin their plans. And they’ve played that like the experts that they are, warning him constantly about the environmental crisis, in order to make him think they’re helpless to prevent it.”

“What happens to this kid? Does he suffer?”

“Does he suffer? Being that intelligent? That alone? I don’t think it’s an answerable question.”

“So we protect him. Can do. But why did they do this glowboy thing? Point him out like that?”

“It looks like some triad being bad. Not all that unusual. It’s actually a signal to us, and it’s full of information. It tells us that the child is right in the area of Wilton, Kentucky, and that they’re going to begin the process now. It’s up to us to do our part, find the child in our own way, and put down the kind of protection the grays can’t.”

“Which is?”

“Up close and on the ground, supported by good threat intelligence.

Their ability to determine things like what's going on in a human social group is very limited. They'll be there to react if somebody jumps out of the damn bushes, but we're the only ones who are going to be able to see a threat developing."

Pete Simpson leaned forward. "Which gets us to your new mission. We need you to move your operations to Alfred AFB, Rob. Right now. Your orders are to identify and protect that child. We know that he's somewhere in Wilton. Possibly even on Oak Road, where the glowboy touched down. But don't be too sure of that. The grays are very, very careful, remember. Assume he could be anywhere in the region."

The three men fell silent then, each sinking into his own thoughts, all feeling the same sense of being swept up by a current that was easily powerful enough to drown them.

Through the last darkness at the end of the night, a black triangular object had been coming, flying just feet above the treetops, taking its time, moving in absolute silence. Fifteen minutes ago, it had arrived over the house. It hovered overhead now, enormous, darker than the night itself, a triangle three hundred feet long, two hundred feet across at its base . . . and six inches above the roof.

Inside the triangle, in a low-ceilinged cockpit, a woman in a USAF flight suit sat adjusting a sensitive device. Every word being said below was being recorded and transmitted with digital clarity.

Literally as they spoke, Mike Wilkes listened. He sat in the facility in Indianapolis feeding Lauren questions based on what he was hearing.

His mind raced. This child—dear heaven, it was the single most toxic thing on Earth, the most dangerous creature ever to live. He would lay Wilton, Kentucky, to waste.

Or no. He had to be certain that he'd gotten the right child. Absolutely certain. He needed to be careful, here.

He watched Lauren sitting in the easy chair she'd insisted on bringing into Adam's hellhole, watched and considered how to form his next question, which would be the most important one that, in his whole career of dealing with the grays, he had ever asked.

NINE

OVER THE THREE YEARS SHE'D been working here, Lauren had done what she could to make Adam's cell more endurable. Rather than the steel table and hard chairs that seemed to have been enough for her dad, she'd made a very unwilling Wilkes get her a Barcalounger and had a daybed installed. On the walls, she had a copy of one of Renoir's Aline and Pierre paintings, of Aline holding little Pierre in a way that she hoped one day to hold her own babies . . . off in the future when her life was no longer at risk and she was no longer tangled in an ever-growing web of secrets, and she could finally settle down to a husband and a family. There were also views of forests and mountains, intimate little waterfalls and another one that she especially liked, Van Gogh's *Starry Night*, that seemed to contain, in some way, the same fiery and mysterious energy she found in Adam.

As Mike watched her, he reflected on just how careful he had to be right now. The grays must not find out that he knew about this little monstrosity of theirs. "I want you to transmit an image of the satellite photo again, Lauren," he said smoothly.

She closed her eyes.

"Lauren, pick it up and look at it. Do it right."

"I've already done it ten times! Come on."

"You barely glanced at it."

"Shut up and let me work!"

Her dad had been a guy you could settle down with after work and knock back a few drinks. In fact, Mike had wanted to bring him into the Trust. It was too dangerous, though. For some years, it had been obvious that the grays couldn't read minds well—not normal minds. But Eamon's mind was a different story, like hers. They had to be kept strictly unaware of any secret the grays shouldn't know.

Although the daybed appeared empty, Lauren knew that Adam was lying on it. She had learned to see him in her imagination, even though his tiny movements, synchronized to her flickering eyes, prevented her from

observing him in detail.

Mike wanted her to be careful, so she'd be careful. She formed a thought series this time. First, a picture of a map of the state of Kentucky. Then a vision of the satellite image of the event in the field behind the Oak Road houses.

Nothing came back.

She formed another thought: *React, Adam*. She called up a sense of urgency, stared, tensed her muscles.

There exploded into her mind an image that at first seemed to make no sense. She was looking up at a towering, immense wall of ice, ghostly white and iridescent, blue against a deep blue sky. And then she heard a sound, a gigantic snapping noise that combined with a strange sort of sigh, as if a thousand people had simultaneously gasped.

She was on the upper deck of a cruise ship. They were glacier-watching. The deck was jammed with people . . . and the ice was curving slowly over them, bringing with it a shadow that turned the bright afternoon an eerie, glowing blue.

The ship's huge horn began to sound, thundering again and again. The whole body of the vessel shuddered as it strove to get underway, the propellers churning, smoke gushing from the stacks.

With a boom to wake the dead, a gigantic boulder of ice—an ice mountain—slammed down on the foredeck. The whole ship lurched violently upward and forward. Water, clear and frigid, surged over the bounding deck, and the passengers were hurled screaming into the waves.

Lauren looked up again and saw, dropping toward them, an even greater mountain of ice, an eternity of ice.

She was back in the cage. She asked Adam a question with her mind, felt the question in her heart: what does it mean?

Then she saw—

A supermarket, bright lights . . . voices bellowed, a little girl toddled past with a tin of sardines, a man swooped down, grabbed it, knocking the child aside. Screams came, merging with the bouncy shopping music. People clawed for bread, raced down long, empty aisles, hollow people, their eyes wild, ripping open boxes of uncooked pasta, gobbling it, throwing back raw oatmeal, eating from the mashed garbage on the floor.

Gunshots. Soldiers in dirty uniforms, tired young faces, terrified eyes, shot into the crowd—and people just sat there, staring like a dumb animal

stares who has no idea what's about to happen. As they got shot, they crashed back with astonishing force into a shattered freezer, and then the soldiers passed down another aisle.

"What's going on in there?"

"I don't know! He's showing me some sort of tragedy."

"Wha-a-at?"

"Ships sinking, people starving in a supermarket—"

"Christ, will you get me what I need!"

"Damn you, Mike, what I am gonna get you is what I always get you. I am gonna get you what he has to give!"

Because Adam was showing Lauren images of the coming extinction, he might be aware of the conversation Mike had been listening to, which made continuing this way too dangerous. "Okay, that's it. Come out. We're done."

"I love my baby," she whispered, getting up from the Barcalounger. She reached out, touched the cool, soft skin of a hand that only became visible when she held it, the narrow fingers and lethal black claws fading when she withdrew.

Adam shot back an image of a mother nursing an infant, his standard good-bye. As she got up, he made one of his audible sounds, a cry like a shocked and despairing woman. Did he feel anything? She didn't know. But she did know that he was trying for sympathetic attention.

"Adam, I know you have a message for me connected with all these disasters, and I know I'm not getting it. However, we're asking you about a *specific incident*, and—"

She got no response from him. She knew why: he'd heard the words, but unless you formed your thoughts in your mind, he didn't understand you.

"Lauren, break it off!"

"Mike—sir—"

"Lauren, there's no time!"

No time? What the hell was he talking about? She had all the time in the world. And God knew, Adam had time. "I'm going to get this thing rolling."

"There is no time!"

But Adam had different ideas. Adam's mind was all around her, she could feel it. She closed her eyes, took a deep breath, and let herself go blank.

He came into her, as always, like a dog sniffing for a buried bone. Letting him get inside her felt kind of good, but also oddly sad . . . a sadness that he brought with him. He would go into her memories and kind of troll

there, bringing up all sorts of things from her past, things she'd just as soon have forgotten, stuff done when drunk, that sort of stuff. He liked the intense things. Sort of ate them, she thought.

She let him go deep into a familiar little corner, the cardboard box experience when she was about ten, one of the first things she'd ever done that was related to sex. She smelled the slightly damp cardboard box again, saw Willy Severs's plump, white body, felt his hand go under her blouse—and then shut *that* door with a great crash.

She shot her question at Adam: the satellite image again, the town of Wilton, the houses on Oak Road.

For the split of an instant, she thought she glimpsed a boy's face, but it was not Willy Severs. Curly hair, slightly chunky, looked about fourteen or fifteen.

"I have something," she said. "A face."

"What sort of a face?"

"A kid. I asked him about Oak Road and I got the face of a kid."

"Bring it out."

Mike was all over her the moment the door closed. "Got what? What did you get?"

"They're interested in a child."

"Say more."

"He's a boy of fourteen or fifteen, curly hair, and another thing, I glimpsed a dog. He has a dog."

Mike became furtive. "Okay," he said, "that makes no sense."

"Yes it does. They're interested in this kid."

"Probably some kind of breeding issue. We'll never figure it out. You're dismissed. Operation complete."

He was lying and he was scared—and she was suspicious. "What's the deal with this child?"

"Look, I have to go to Washington and I'm already late. You're done, Lauren. Thank you."

She watched him leave. The one pleasant thing about her relationship with him was knowing that he wanted her, and denying him. She did it because—well, she didn't like him. Just did not like the man. She was not nice to him, couldn't be. Why, she thought, had something to do with Adam. Adam seemed suspicious of him, somehow. Wary.

"What's going on, Andy?" she asked as she came into the control room

still drying her hair.

“The boss is sure as hell in a lather.”

She went topside, and when the elevator doors opened found Mike just leaving. He was in full uniform, which was pretty unusual around here. He had his briefcase in his hand.

“You’re moving fast,” she said.

“Yep.”

“Are you going to do something to that child, Mike?”

“Look, this is not your issue. Your issue is to communicate with Adam, and to take that job one hell of a lot more seriously than you do.”

“How dare you.”

“How dare me? You’re the one with pictures on the walls down in that hellhole. That thing is a predator. It’s a monster. It’s not a damn pet, for God’s sake, woman.”

She made a decision. He was going to Washington. Fine, she was coming back here and going at it again with Adam. She would get to the bottom of this without Mike around. Because, if this child was in some kind of danger due to her report, then she had a very clear moral duty: no matter the legal blockade her clearance created, she had to protect the kid. She would not be a party to murder, and she would not follow orders that she considered to be illegal.

She watched Mike hurry out to the parking lot, and take off in his latest car, a brand-new VW Phaeton. She knew the value of that car, she’d looked it up. He’d just driven off in half a year’s pay. Where his real money came from she didn’t know, but it sure as hell was not the United States Air Force.

TEN

THE SUN PEEKING OVER THE Warners' roof woke Katelyn. As usual, she rolled over, at first feeling entirely normal. She considered turning on the news.

And then it hit her: she was upstairs in bed, not in Conner's room where she had gone to sleep.

Dan chose that moment to slide an arm over her. Katelyn leaped away from him as if his body was on fire.

"Hey!"

"Conner!" She ran downstairs, ran across the kitchen, took his stairs three at a time, and burst in.

When she saw that the door to the outside was open, she stifled a cry. But the lump in the bed seemed entirely normal. She knelt beside him and peeked into the covers. Conner was deeply asleep.

She kissed his freckled cheek, inhaling the milky-sour smell of his skin.

Dan came in, went over and closed the door that led out under the deck and into the backyard. "Look," he said.

There was a puddle of water on the floor in front of it, standing on the linoleum.

"And outside."

In the sparse grass that clung to life under the deck, were numerous small holes. They looked for all the world as if somebody had walked there on stilts.

She went to Dan, looked down at the water, out at the peculiar holes. This was not right. None of this should be here. She rushed back to Conner, drew down his covers. Again she kissed him. She pulled him into her arms.

Conner moaned, then suddenly stiffened. "Mom?" he said.

Kneeling beside the bed, she held his face in her hands and looked into his eyes.

He asked, "What's the matter?"

She hugged him to her, feeling the heft of him against her. Her boy was

on the verge of becoming a young man, and he was so beautiful, and you had to be so very careful not to let him know how beautiful you thought he was.

“Could you guys let me get dressed, here?”

The little boy who had cheerfully laid naked in her lap just a few short years ago now did not want to get out from under the covers in her presence, not even wearing pajamas.

She kissed his cheek. “Six months to your first shave,” she said. “Mom predicts.”

“The sooner the better.” He looked at her. She looked back at him. He moved his eyes toward the door.

“Breakfast in ten minutes.”

She and Dan went upstairs.

“What was that about?” Dan asked as she closed the door.

She whispered, “It’s about his growing maturity. Problems controlling what’s up down below.”

“You think? Puberty?”

“Bright kids reach it early, so it says in the book.” As they mounted the stairs, she saw the CONNER ZONE sign in his recycling bag and took it out. “The Conner Zone was so cute,” she said.

“Cute is the problem,” Dan said. “Part of it. The other part is being too smart in a world that glorifies the lowest common denominator. Conner’s intelligence is not fashionable, and it’s too big for him to conceal.”

“Oh, I never want him to do that. How’s your ear, by the way?”

“Not actually okay. I could stand to get an X-ray.”

“You’re kidding. On your ear?”

“Well, there’s something there.”

“Something *there*?” She reached up and touched the outer edge of the ear. “It’s a little sort of a knot.”

“I know what it is.”

“Relax, Dan, I’m not the enemy.”

For the past half hour, the smell of coffee had been getting stronger, and she went into the kitchen and poured them both mugs. Dan took his over to the table. She went into the pantry and got Conner’s latest cereal, some kind of amaranth flakes thing. Conner had his own dietary ideas, most of them pretty smart—and pretty awful. He was a modified vegetarian except when Dan grilled steaks. Then he was a sullen but voracious carnivore.

There was no cancer of the ear, was there?

Conner appeared, poured himself coffee. She waited to see if he put the required amount of half and half in it. Did—but just a drop.

“Eggs?” she asked as she turned on the skillet.

“I’m going to be eating really pure for a while,” Conner said. “No dairy, no alcohol.”

“You don’t drink alcohol,” Dan said. “Better not.”

“I mean, no wine with dinner.”

“Wine belongs to the soul, son. No man can be fully himself without wine.”

“The other kids can’t drink it.”

“Which is why they’ll all be bingeing like the college students in a few years. Did you know that binge drinking among the young is unheard of in Europe, but common here and in the UK? What does that tell you—children have to learn wine early, get used to it. Which is why you’ll continue with a glass of wine at dinner, thank you.”

“I love the irony. Most kids would do anything to drink even so much as a sip. But I don’t want to, so it’s forced on me.”

“Well, you get a glass. One glass. Which is mandatory.”

“Do you want to have the fight now or schedule it for later? Because I will not be drinking wine.”

Dan sighed. “I’ve got to go to the health center to get my ear amputated. Let’s do it when I get back.” He picked up Conner’s cereal box. “I saw this lying open in the pantry last night. Are roach eggs okay for vegans?”

Conner took the box, poured himself some cereal. “Amaranth is one of a handful of dicots which photosynthesize directly to a four-carbon compound.”

“Ah. So the reason you’re now eating nothing but horrible-looking little crumbs is explained. You want that four-carbon compound.”

“Actually, I want the protein and the lysine without meat, plus I get a designer-quality lipid fraction. I have the cholesterol readings of a twelve-year-old, you know.”

“You’re eleven.”

“It’s a joke, Dad.”

“Ah. Of course.”

Katelyn put down her and Dan’s eggs and sat at the head of the table. “May I know the why of the vegan thing?”

“The aliens.”

A silence fell, extended. “Are you about to piss me off?” Dan asked.

“I am eating pure because this neighborhood is in a close-encounter situation and it’s the eating of animals that triggers the kind of fear response I experienced last night. I don’t want to fear the aliens. I want to face them.”

“Oh, boy,” Katelyn said. “Dan—”

“No. No, I understand that I’m being baited. It’s not a big deal, Katelyn.” He watched Conner digging into the amaranth, and as he watched, he got angrier and angrier. He *was* being baited, damn right. Conner was masterful at it. And here he’d been the confidante, the father confessor, just yesterday. Now he was the enemy and his ear hurt like hell, to tell the truth, and he really did not need this just now.

“We had a visit from the grays, and they had an abductee aboard the craft, *and* the Keltons probably have video. A first in history. The world is changing, lady and gentleman, and I am preparing myself.”

“What grays?” Dan asked carefully.

“Try Googling ‘gray aliens’ sometime. You’ll find more than four thousand references. Plus, this business of a UFO descending with a screaming woman inside happened in Kentucky before. Moorehead, 2003, same situation, with one difference—no video. Lots of nine-one-one calls, but no video and therefore no story.”

The sanctimonious singsong, the eyebrows raised to make the face appear absurdly credulous—it was all calculated to infuriate. Conner knew perfectly well how ridiculous Dan considered the whole UFO/alien folklore to be, and how damaging to the culture.

“Goddamnit, it was nothing but some kind of dope-inspired prank!”

“Dad, please. You’re embarrassing yourself.”

Dan’s hand had slammed down on the table before he could stop it.

Conner seized the opportunity. “Right, go physical yet again, Dad. It’ll make a juicy story for my psychiatrist-to-be. Another one.”

Dan had spanked Conner exactly one time, when, at the age of three, he had rewired the toaster and caused a dangerous fire in the wall of the kitchen. It had been a single, sharp blow to the left buttock . . . which had been thrown back at him perhaps ten thousand times since.

“Conner, listen to me. I’m up for tenure, which the entire college knows. It’s terribly important to us. If I don’t get it, I have to resign, which means that we have to move to some other college where Mom and I can both get work, and she has to give up her own tenure here—it’ll be a mess, son. And

something like this—a UFO in the backyard—can ruin my chances. Marcie Cotton already wants to write me off. So please, for me, do not say anything about us seeing it for at least another few weeks.”

Conner gazed off into the middle distance. “Prediction: the Keltons’ tape, if it is halfway decent, will make this place famous. Prediction: Dr. Jeffers will make a total idiot of himself about it and he’ll end up with walking papers. Prediction: you will not be damaged by this, but Dr. Cotton will still screw you to the wall.”

Every time Conner used the word “prediction,” a chill went right through Dan. Their son was never wrong. Actually, he found that he was so on edge and Conner sounded so right that he almost burst into tears—and was instantly appalled at himself. How could he possibly react like that? That wasn’t him.

But then he thought—the pressure of the tenure conference coming up, the bizarre events in the night, the sleeplessness, Katelyn’s waking up in near hysterics, this damned lump in his ear—of course he was on edge. Stressed. Big time.

“Look,” he said, “thanks for a perfectly delicious breakfast. Tomorrow’s my turn and it’s waffles unless there are objections.” He looked down at the still-gobbling Conner. “I’ll make yours without egg.”

“Fine.”

“They’ll be fascinating. I’m going to the health center, I’ll call you with a verdict.”

“Prediction,” Conner said. “They will find a small object enclosed in a membrane made of cutaneous tissue. And, if you search your body, you will find an indentation where that tissue was taken from. It’s called a witch’s mark.” He smiled up at Dan. “The grays have been with us for some time.”

“Conner, this happened last night in a kitchen full of people. I hardly think the grays could have operated on me without anybody noticing.”

“There was a moment—probably just a few seconds—when you were all turned off. The grays did what they did and turned you back on as they left. It’s called missing time. It’s the way they handle us. We’re their property, you know. You know what the great anomalist Charles Fort called the world? A barnyard. The grays are the farmers, and right now they’re doing a little farm work right here on Oak Road.”

“Okay, I’ll bite. What are they doing?”

“For one thing, they’ve got some kind of a plan for you, which is why

they gave you that implant. You're involved, Dad."

"Let's look," Katelyn said. "I want to see this thing for myself."

But Dan did not want them to look at it. He retreated upstairs and took his shower. Safe in the stall, shaving and soaping himself up, he felt his body for the sort of indentation Conner had described.

Nah, there wasn't one. They'd X-ray him at the health center and tell him what he already knew: he had a cyst that was mildly infected. The doctor would prescribe a couple of weeks of an antibiotic, and if it got worse, he'd go in and open the damn thing up.

He had to wash his hair, anyway, so he sat down on Katelyn's shower chair that she used for shaving her comely legs and—well, what the hell, he felt along both ears and across the back of his neck.

There was nothing there. Thank you, Conner, it's so delightful the two or three times a year that you're wrong. As he stood back up, though, he felt a very slight soreness in his right buttock. He felt back there, just above the cheek. As his fingers ran along the smooth, wet skin, he knew. He felt again to be sure.

Then he was having an aura, one of those odd sequences of perceptions—in his case, a vision of stars all around him from his childhood planetarium, followed by a feeling of floating—that were the prelude to one of the seizures like he'd had in childhood.

He leaned up against the side of the shower. "Katelyn," he managed to say. Not yell it, couldn't do that. "Katelyn."

The feeling of floating got stronger. It was uncanny, he even looked down to be sure his feet were still touching the floor of the stall. Then his eyes fixed on the drain, the silver circle of it with the water swirling down.

The drain became larger and darker, and now what he saw was a round black hole in a field of gleaming silver. Objectively, deep within himself, he knew that he was seizing. He felt nothing, you never did. All he could see was this opening that had been below him but was now above him, black and foreboding, getting bigger. It was like being drawn into the underside of a gigantic silver balloon, that was how the seizure affected his temporal lobe.

Then it was gone, *bam*. The shower was back, drumming on him. He coughed, gagged, recovered himself. Quickly, he rinsed his body, got out of the shower, and dropped down, still soaking wet, onto the toilet. Jesus God, he'd seized. After all these years, he had damn well *seized*.

In his late childhood, when the seizures had first been diagnosed, he'd

been put on Dilantin. He had tolerated it well, and maybe he'd better go back on it. He hadn't had actual spasms while in the shower or he would have gone down, so he was still dealing with a petit mal epilepsy. That was on the good side. On the bad side, for this to return after so many years suggested that there could be some other syndrome present. For example, maybe there had been epileptiform tissue in his brain that had developed a tumor. Maybe the thing in his ear was indeed a tumor. It would not be a primary, that did not happen to earlobes. It would be metastase of a hidden primary, asymptomatic until it began, last night, to press a nerve.

If this was a distal metastase of a brain tumor, he might well be a dying man.

He toweled himself and dressed fast. He went downstairs and through the kitchen again, where Katelyn and Conner were still breakfasting, Conner now absorbed in NPR on the radio, *Meet the Press* on TV, and the *New York Times* "Week in Review," while Katelyn read the funnies in the *Herald Leader*.

"Zits is great," she said as he headed out to the garage. "The father gets this—"

"Later. I'll call."

"Be sure they're open."

If they weren't, he was heading to the Wilton City Hospital emergency room. There was no way he could make it through another night without knowing what this thing was.

In the event, the health center was open and staffed by a nurse and a squeaky little doctor who appeared to be just a hair older than Conner. He was tempted to head on to Wilton anyway, but his paranoia was running full blast, and he feared a note to Marcie from some tenure inquisitor: "Subject refused treatment at College H.C., preferred Wilton."

Listen to that thinking, though. Paranoid. He was having seizures for the first time in over twenty years, and now entertaining lunatic paranoid fantasies . . . but how could he ask this freckled little boy with a sunburned skier's nose for what he really needed, which was a damned Xanax drip to take home with him?

"Doctor, I have a little cyst in my left ear that's giving me trouble. Mild trouble, but it's waking me up at night when I lie on my side."

He sat on the edge of the examining table while the doctor, if that's actually what he was, gently examined the ear.

“I’m assuming a subcutaneous infection,” Dan said, aware of his own nervousness. He wanted to also say that he’d seized, but he dared not do that. Paranoid delusions aside, if that got back to Marcie, it might indeed have implications.

“There’s a mass,” the young doctor said.

Dan felt the blood drain out of his face, felt his heart turn over. He was forty. He was dying.

“Let’s do an X-ray,” the doctor said.

He followed him back into the green-tiled, Lysol-scented depths of the health center. Dan managed to get enough spit up to talk. “What do you expect to find?” he asked mechanically.

“Have you been doing any sort of carpentry?”

“Carpentry?”

“There’s a mass in there with something hard in it. I’m thinking a nail head. Something along those lines.”

“Can you see a point of entry?”

“Not anymore. When did it start hurting?”

“Last night.”

“That part of the ear’s not very sensitive. It could’ve been there for a while, just recently become irritated.”

They reached the X-ray room and the doctor turned on the lights, which flickered to life, revealing the same X-ray machine that had been there for all the years Dan had been involved with Bell College. Probably war surplus, and not from a recent war.

The doctor took four views of his ear and then he was sent off to the waiting area, an extraordinarily bleak little room with an anorexic gray couch against one wall, three plastic chairs, and two chair-desks for students who might wish to study while waiting for their bad news.

Dan would have taken out his iPod and listened to the *New York Times*, but his iPod was on his bedside. His choices were a coverless copy of *Bicycling* or the front half of a not-very-recent *Newsweek*.

Half an hour later, he began to fear that the young doctor, upon seeing the X-rays, had leaped into his car and rushed off to Wilton with them.

He went back into the depths of the place, where he found him sitting in a tiny office studying a thick textbook. “Oh, hi,” he said. “Let’s see if that e-mail’s come in yet.”

“E-mail?”

“Yeah, your X-ray’s being read by our radiologist. He got it online.”

Now, that was somewhat reassuring—a high-powered radiologist at another institution was reading his film.

“Here it is.” He opened an e-mail. “Boy, these guys need their English translated into English.”

“You can’t read medical terminology?”

“I can’t read a Sri Lankan’s idea of medical terminology. Your radiologist is in Trincomalee. Actually sounds rather romantic, Trincomalee.”

Dear heaven.

He reached across his desk and pulled out an X-ray folder. “This is interesting,” he said. He put two of the X-rays up on a wall light. “You have a foreign object in your ear,” he said, “as I suspected.”

Dan stared at the X-ray. The object was a tiny pinpoint of light. He could hear Conner’s precise young voice, “They will find a small object . . .” He asked, “Is it enclosed in a membrane?”

“A membrane? Not likely. Maybe a little calcification if it’s been there for a while. I think it’s a metal filing. It could have migrated from anywhere.”

“I have a sore place on my buttock.”

“Let’s take a look.”

He lowered his trousers.

“Nothing visible. Perhaps a slight indentation is all.”

Once again, Conner had been exactly right.

“So, what should I be doing about this?”

“If it bothers you, I can take it out.”

“You?”

He laughed a little. “Quite easily. It’s not deep, it’ll take five minutes.”

He lay on the examining table and let the nurse swab his ear with iodine. They injected him a couple of times, and went in.

“Feel anything?”

“No.”

“Okay, here it is. It’s a white disk. A—whoa.”

“What?”

“It just went—what the hell?”

“What?”

“I’m withdrawing.”

“Did you get it?”

He was silent as he took a stitch in the wound.

“I did not get it,” he said at last. “I got a little sliver of it before it migrated. It’s down in your earlobe now.”

He felt the lobe. “How can that be?”

“I’m not sure. It’s not a normal object.”

He had to say the word, hard as it was. “Cancer?”

The doctor laughed. “Cancers don’t generally run like hell when you touch them with a scalpel.”

“Was it, uh, a living thing, then?”

“Dr. Callaghan, I have no idea what it was. But I am going to do two things to put that question to rest. First, I’m going to put this sliver under a microscope, then I’m going to send it to the lab.”

“Does this happen to people often?”

“First one I’ve seen. Foreign objects are a whole subdiscipline of trauma medicine. It’s nothing to worry about, though. I wouldn’t think twice about it.”

They went into another room, this one containing a lab bench with a fairly decent microscope on it. The doctor prepared a specimen slide and put it into the viewing area. He lowered his face to the binocular.

Dan watched him, waiting.

He lifted his head. “Okay, off it goes to pathology.”

“But—what did you see?”

“White material. Probably some sort of a protein.”

“Why did it move? Is it a parasite?”

“Lord, no! Here—take a look for yourself.”

Gratefully, Dan looked into the microscope. What he saw was shaped like a sickle of moon, and along the curved outer edge there was what looked like movement. “What am I seeing? It’s still moving, am I right?”

“That has to be a light effect.”

Dan adjusted the scope. Clearly, the thing had scilia on it, and the scilia were propelling it. He lifted his face. “Scilia,” he said, “look.”

The doctor barely glanced at it. “Well, call day after tomorrow, we’ll give you the pathology report.”

“But it has scilia on it that are moving. So it’s a living thing, it must be. And it can migrate. What if it goes somewhere else? Into my brain or my heart?”

“There are no ear parasites like this.”

And that ended that. Another two patients had come in, and the doctor

was off to attend to their hangovers.

On the way home, Dan called and told Katelyn that he was fine. She asked him what they'd found, and he came, quite unexpectedly, to a powerful personal moment. He found himself shaking so intensely that he pulled over to the side of the road.

"Dan?"

"Sorry. It was a little something in there. They took it out."

"What sort of a little something, honey?"

"Not a tumor." He found that he very much did not want to tell her that Conner had been right. He did not want Conner to be right, and he never, ever wanted to ask Conner how he had known. "It was a little cyst. Took ten minutes to get rid of it. The main delay involved waiting for the radiologist to evaluate it . . . in Trincomalee. It seems we outsource our diagnostics to experts in the Third World. Or is it the fourth world? Is there a fourth world?"

"You sound a bit out of it."

"It's been a long twenty-four hours, dear. I'm coming home and I'm going to turn on the TV and watch Sunday golf and spend the afternoon in a coma."

All the way home, without knowing why and without being able to stop, he cried. There was no sound. In fact, his expression never changed, except for wetness flowing down his cheeks. He felt like an idiot, he never cried. But he couldn't stop himself now, because a tremendous sorrow was coming up from his depths, a hidden river exposed.

He remembered this so well, this anguish that he could not control. It had been a feature of his childhood, had come after his seizures.

He thought he knew why the syndrome had returned. This was probably the most tense period he had never known in his life. He was not a particularly successful teacher. In fact, he was pretty much a failure. Bell wasn't just a holding tank for second-rate students, it was a refuge for dead-end teachers, too.

He had his good points. You could not find a more loving husband. You could not find a better man to father a kid as sensitive and exasperating as Conner. But he tended to the pedantic when he lectured. He was too careful, too humorless, too predictable.

Still, he had built a life for them at Bell. Conner's life was here. Katelyn was having a successful career in the sociology department. *She* was tenured,

popular with students, had crowded classes. She was pulling down seventy grand to his forty-eight-five, also. It would not be fair for his failure to uproot her.

Tomorrow at ten sharp, he would have his final tenure review with Marcie. Of course, it wasn't the official word, that came from the tenure committee next week. But by the end of the meeting tomorrow, he'd know.

He drove past Marcie's house, noted that all the blinds were down. A signal? An omen? He drove on, circling blocks—but not Marcie's of course, God forbid—and forcing back these ridiculous, if thankfully silent, tears.

When he arrived home, he hoped to avoid Conner.

"I was right," his son said as he got out of the car. "I was exactly right."

"Conner, you were wrong. It was a cyst."

"Where is it?"

"Oh, brother. Son, it's in the garbage at the health center."

"Dad, do you realize what that is? It's an alien artifact! It's important, there's even a Web site about them. A lot of Web sites."

Dan tried to get past his son and into the house.

"Dad, it's important! You're involved in a close-encounter situation and —"

"SHUT UP!" He ran across the garage. "Will you just SHUT UP!"

Katelyn appeared. "What's the matter with you? What's going on out here?"

"Katelyn—oh, God. Katelyn, I'm sorry. I'm sorry, Conner. Please forgive me, both of you." He tried to smile. Failed. Shook his head. "Look, Conner, you're always asking for space. I need some space right now. I need some, okay?"

"Dad, are you crying?"

"It's a mild allergy to the anesthesia."

"Dad's just had an operation, Conner. We need to back off."

"But Mom, he's letting them throw away an implant!"

"Goddamnit, there's no such thing! Conner, for a supposed genius, you can be an amazing idiot. A Web site on *alien implants* is your source of information? You urgently need to learn some discrimination, son. You can do calculus backward and recite Wittgenstein, and yet you come up with this garbage."

"Be careful, Dad. It was Wittgenstein who said, 'Our greatest stupidities may be very wise.' "

Dan knew not to pursue it. No matter how correct he might be, in a sentence or two more, Conner would win the argument. To avoid that, Dan went inside, took a relatively good Barolo out of the wine rack, opened it and grabbed a glass, and headed for the family room. Golf, decent wine, and deep, deep sleep were what he needed.

He'd gone over the top, of course. The boy was terribly sensitive, of course. Well, he'd apologize later. Conner got under your skin. He really did have a skill at that.

He poured some wine, drank it . . . and felt his ear. The damned thing had moved again. It had returned to its original site, under the stitch.

He considered screaming. But no, that would be rude. Instead, he poured himself another full glass and drank it down.

PART FOUR

THE HANGED MAN

Ah, love, let us be true
To one another! For the world, which seems
To lie before us like a land of dreams,
So various, so beautiful, so new,
Hath really neither joy, nor love, nor light,
Nor certitude, nor peace, nor help for pain;
And we are here as on a darkling plain
Swept with confused alarms of struggle and flight,
Where ignorant armies clash by night.

—MATTHEW ARNOLD
“Dover Beach”

ELEVEN

MIKE WILKES WATCHED AS, ONE by one, the members of the Trust filed slowly through a large white device that was set into the doorway to the conference room on the second floor of his Georgetown home.

As each trustee stood waiting in what was essentially a magnetic-resonance-imaging system reconfigured and retuned to detect very small metallic objects, Mike watched a whole-body image come into focus on a flat-panel display located beside the entrance.

“Come in, Charles,” he said to their chairman, Charles Gunn.

“I’m wiped every morning at home,” Charles said. “I had one pulled out of my damn neck last week.”

“Uh-oh, hold it, Richard.” The display showed a bright spot deep in the brain of Richard Forbes, the Trust’s security chief. “They got one in your damn temporal lobe, buddy.”

“Is it deep?”

“Oh, yeah. You’re gonna need a neurosurgeon, big time.”

“Well, guys, I’m out of this for the duration, then. I’ll see you after my lobotomy.”

There was nervous laughter. Brain implants were rare. They required an abduction, while an object that went in under the skin could be placed while the host was wide awake. All it would do would be to cause some pain, but there would be no wound, certainly no scar. The grays were, among other things, masters of atomic structure. They could walk through walls if they wished, and they could certainly deposit an implant under the skin without surgery. The terrifying thing about a brain implant was that it could be used for subtle mind control, detectable only by someone with profound understanding.

“They anticipated this meeting,” Charles said.

“Yeah, they know damn well we’d want our security guy in a meeting called because of a security issue,” Henry Vorona added as he came through.

Then Ted Cassius had one under his scalp. These were nasties, too,

because that close to the brain, they could be used not only for monitoring, but for a degree of mind control as well.

“How long have you had this, Ted?”

“I got a splitting headache two days ago. Jesus, I should have known.”

“We need to assume that you’re both under mind control and we have to get your asses out of here fast.” He opened his cell phone. “I’m calling for a Secret Service escort for both of you guys to Walter Reed. If you go under your own steam, you just might change your minds, as you know.”

“Thank you.”

Nobody else, thankfully, was implanted, and Mike finally was able to take his customary place at the conference table, second from the head on the left. Charles Gunn was head of table. Normally, he would not be at a meeting of the security-operations committee, but Mike had specifically requested his attendance.

Henry Vorona shuffled some papers as the Three Blind Mice took their places, three sour and mutually indistinguishable liaison officers from the main corporate groups that accepted delivery of the technologies and processes that evolved out of the liaison with Adam. They were Todd Able, Alex Starnes, and Timothy Greenfield, all in their forties, all looking like undertakers. It was their corporate dollars that funded the survival program. Creating the database of people who would be sheltered was costly, and monitoring their movements even more so. But those things were nothing compared to the cost of the underground shelters themselves, a hundred at half a billion dollars each, hidden around the world.

“Let’s get going,” Charles said. “I’ve brought a little patents-and-processes business to deal with first. Where are we with the plasmonics device?”

Mike was confused by that question. The invisibility fabric was deep in the pipeline. “Uh, do we need more from Adam? Because I wasn’t aware—”

Tim Greenfield said, “We have a report, Mike. It’s on its way to you.”

“Then there’s a problem, Timmy?”

Tim Greenfield’s pate flushed. “It doesn’t work.”

“Well, that is a problem.” The concept was a material that would reduce light scatterback to zero, thus rendering an object effectively impossible to see. They knew that the grays used invisibility cloaking in their abductions, in addition to their peculiar physical ability to lock movement with the slightest flickering of the eye, so their victim could not see them.

Adam and Bob had been queried on the cloaking, in the tiny bits and pieces necessary to extract information from them, for fifteen years. They had a ten-billion-dollar check riding on the success of the process.

“There’s a compositional issue. Chemical. We need a real formula. What they’ve given us is not real.”

So the grays had lied again. All of those years of work, those hundreds and hundreds of tiny, seemingly innocuous questions had led down another blind alley.

Not that they didn’t have successes. “How are we doing with the electrostatic anti-friction shield?” Mike asked Todd Able, who was team leader on that project. He knew the answer better than Todd did, but he wanted to remind everybody that his work with Bob and Adam had resulted in its share of successes.

“It’s deploying and we’re looking at a ninety-seven percent decrease in friction across angular surfaces. If we could mine gravitite, we could fabricate non-aerodynamic spherical vehicles and we’d be looking at the same zero-friction profile we see in the grays’ craft. All we’d be missing is their engine.”

“The coherent mercury plasma can’t be made more efficient,” Henry Vorona said. “We’re getting everything we can out of it.”

Mike knew that well. Using a combination of research into ancient Vedic texts about the technology of Earth’s previous civilization and questions to Adam, they had evolved a device that rotated a mercury plasma inside a powerful magnetic field, that reduced the weight of the craft that carried it by 40 percent. Simply knowing that the Vedic references to aircraft and weapons referred to actual devices had enabled scientists to proceed much more quickly.

“So what about gravitite? Progress?” Charles asked in his peculiarly cheerful voice, so improbable in a man who looked like the director of his own funeral.

“We know what it is and where it is, but extracting it is another matter,” Mike said. He looked toward Henry Vorona, who was a substantial shareholder in a dozen companies that were feeding off the grays’ technology. One of those companies, Photonic Research, had been mining for years in the same seams of iron in the southern Catskills that the grays used, pulling iron out of shafts directly adjacent to theirs, but failing to extract more than a few molecules of gravitite.

Henry said, "We're not going to be saving the human race with gravitite. We can pull up the iron and cut it up atom by atom, but we find one atom of gravitite for every three hundred billion atoms of iron. The grays must have a more efficient process, otherwise they would have used up every bit of iron on the planet to get a handful of gravity-negative product."

Charles now rested his eyes on Mike. "Colonel, if you'd like to go on to this security matter now."

Mike told himself that he wasn't frightened, but he was, he felt like a schoolboy about to get a thrashing. "We have a potential crisis that needs to be addressed immediately."

"Adam's not sick?"

Bob had been invaded by common household molds. This was why they kept Adam in an ultra-dry, ultra-clean environment. They were all terrified of losing their only captive gray. "Not that, thank the Lord, but something might be unfolding that could be bad for us."

Henry Vorona sighed. He was not a patient man and Mike could see an explosion building. He hurried on. "Basically, we've obtained information about a very unusual operation on the part of the grays. Spectacularly threatening, I am sorry to say. What happened initially was that the triad that works Pennsylvania and up into Canada, came out of their boundaries and did an abduction in a college town in Kentucky."

"Okay," Todd said, "I'll bite."

"The grays have devised a way to communicate with mankind. To teach us how to save ourselves. They've been working on it for probably a couple of thousand years. And now, gentlemen, they are going to spring it on us. Of course, we save ourselves not for us, but for them. Mankind survives, but as a genetic milk carton for them. Slaves."

That brought total silence. These men had counted on the coming catastrophe to free their carefully selected fragment of humankind from the grays. None of them liked the idea of the disaster that they knew was coming. But they feared this slavery more. If six billion were alive in 2012, they would all be enslaved. If only a million were left alive by then, they would be left alone. So, at least, went the theory.

"So, get on with it," Henry Vorona snapped.

"Okay," Mike continued, "we've known for some time, based on the abduction pattern we've observed over five decades, that the grays are especially interested in children."

“Because they’re small, easy to control, and emotionally rich,” Henry said. “Easy to feed on,” he added in a tone electric with contempt. Every man here shared one truth: he despised the grays.

“That does not explain the ‘why,’ which has always been our problem. The grays can outthink us. They’re always ten moves ahead.”

Henry slammed his briefcase, which had been open on the table. “That’s it then. Let’s all go home. Follow Forrestal out the damn window.”

“I’m too old to jump out a window,” Charles said. “Mike, you finish this. What’s your problem and what do you need from us?”

“Well, wait,” Tim said, “what about the scalar weapons program? We’re going to have eighty of those birds up by 2012. We’ll be able to induce the destruction of most of the species ourselves.” He sighed. “God help us, I hope it doesn’t come to that.”

“You think they’ll sit back and let us kill their cattle?”

“They haven’t touched the scalar prototype.”

“Because its only one small weapon,” Charles said. “It doesn’t have the potential to affect their plans.”

Mike continued. “The grays are doing something very inventive. What they’ve apparently done is to breed a child so intelligent that he can process and use the contents of their knowledge.”

Vorona shook his head.

“You have a problem, Henry?”

“They’ve been preparing this from the beginning, then?”

“I found out about it early this morning.”

“Mike, we’ve known about them for fifty damn years, and you found out *today*?”

“Look, let’s not argue about me.”

“I want to argue about you! This is not good enough!”

“Hold off!”

“You hold off! And you listen. Because this is urgent. Our whole damn program is in jeopardy. The freedom of the human species!”

“Because somebody didn’t do their job,” Alex murmured.

“Hold off, all of you,” Charles said softly. “Go on, Mike.”

“My expectation is that they’re going to install something in him that links him to their collective.”

“An implant does not a demon make.”

“In this case, it does. This child’s intelligence will enable him to use

vastly more information than an average human being can.”

Silence fell. He watched each face as each man explored the implications of this.

“Gentlemen,” Mike said, “if this child survives, mankind survives. When the grays show up in 2012, dinner is served.”

“Now,” Tim Greenfield asked in his soft Georgia drawl, “we are absolutely sure that their coming is bad for us?”

“You cannot seriously entertain a question where we can’t know the answer until it’s too late. Good or bad, we can’t take the risk!”

“Why not approach the child, get him on our side?” Todd asked.

“When we approach him, we approach the grays,” Mike said acidly.

“So, do the child, Mike,” Charles said. “Shouldn’t be hard, not for a pro like you.”

“I might remind all of you that every life I took because of this damned thing, I took under orders.”

“I repeat, do the child.”

“Which is why I’m here.”

Charles slammed his hand down on the table. “You don’t need our permission! For God’s sake, Mike, this meeting is a waste of time. Do the damned child!”

“Charles, Goddamnit, will you please give me a chance to talk!”

Charles glared at him.

Mike continued. “My problem is that the grays are not alone in protecting this child. They have the help of some people within our own organization who appear to have come under mind control.” He took his iPod out of his briefcase, plugged in its tiny speaker, and played for them the conversation that had taken place on Lost Angel Road.

“It’s pitiful,” Henry said. “Those are good men, all of them.”

“The hard part is,” Mike said, “I can see where their choice is coming from. There’s a lot of life going to be lost doing it our way. A lot of life.”

“You’ve made no headway finding this child, I presume.”

“No, Henry, I have a description, obtained from Adam this morning. And I will undoubtedly find a child who fits it on Oak Road. And kill the wrong child.”

Todd said, “Unless they’ve given you a description of the right child in hope that you’ll assume that it must be the wrong one.”

“Kill all the children,” Henry said. “And what in the world are we going

to do with Lewis and Rob and Dr. Simpson?”

“Tell you what,” Tim Greenfield said, “let’s suck them up in the terrorist thing and ship them to Saudi Arabia. That’ll do it.”

“It will also bring in the CIA, AFOSI, and the FBI, not to mention the Saudis. We need a plane crash, an auto accident, a fatal robbery attempt, a nice heart attack, stuff like that,” Charles said. “Take a year doing them. There’s no hurry.” He looked toward Mike. “The sort of thing you’re expert at.”

“The child is our urgent problem, and please let me repeat: the grays are protecting him—”

“—and so are our friends from Lost Angel Road, don’t forget that, Mike.”

Tim said, “Gentlemen—excuse me, Charles, but I think you’re panicking, here. We have years to deal with this child, and—”

“We do not have years,” Mike said. “Please get rid of that misconception.”

“I’m sorry, Mike, but we have until 2012.”

“WE DO NOT! GODDAMNIT! Let me tell you how this will work. The second they possess that kid or parasitize him or however you’d like to describe it, he is going to become invulnerable.”

“Oh, come on!”

“I have spent the last fifteen years of my career sparring with Bob and Adam, and I am warning you, if we let that kid go *even a day*, we’re done. They win. We will not be able to do a single thing to him. He will always outwit us. Good Christ, he’s going to be *smarter than they are*.”

Alex said, “Let’s put a nuke on the damn town. Pick up the phone and call the president.”

“I can’t imagine him agreeing to that,” Charles said. “In any case, we need to keep this in-house if at all possible.”

“Which gets me to my next question,” Henry Vorona said. “Mike, you have a big rep. Given that you’ve been sitting at the bottom of a hole for fifteen years, may I know why we should believe you’re qualified to go operational again?”

Charles said, “Henry, you surprise me. Mike is my choice and that ought to be enough. But if it’s not, let me lay things out. Mike didn’t always spend his days licking the heinies of those damn gray bastards down in that hole. He did a lot of hard, sad, wet work in the early days.”

“Okay, I get it.”

“No! You’re questioning my authority, Henry. You’ve done it before and you’ll do it again. That’s fine. You want to run the show. Very ambitious. Maybe, if they vote me out and vote you in, you’ll do okay.” He looked around the table. “Do we want a vote of confidence? Gentlemen?”

No hand was raised.

He went on. “Suffice to say that Mike here had the unfortunate need, back some years ago, to become a master of untraceable murder. He’s got quite a number of notches in his little cap pistol, am I right, Mike?”

“I’ve done a few,” he muttered.

“Using everything from a chemical that induces cancer to a mind-control technique that makes people kill themselves. And he’s never even come close to being caught.”

Vorona smiled at Mike. “Then I’m relieved,” the CIA representative said. “We can count on you.”

Todd spoke up. “Obviously, the nuclear option isn’t available to us, but I think Alex’s concept is a good one. We could do a training accident, say, compliments of Alfred AFB, which is out there in Kentucky, if I’m not mistaken. Blow away the neighborhood with a stray incendiary, say.”

“ ‘Then Herod, when he saw that he was mocked of the wise men, was exceeding wrath, and sent forth, and slew all the children that were in Bethlehem, and in all the coasts thereof, from two years old and under, according to the time which he had diligently inquired of the wise men.’ ” Wilkes paused. “But, of course,” he added, “Herod missed. If we just do that one little cluster of houses, we might miss, too.”

“However we do it, we have to do it now,” Vorona said.

“Gentlemen,” Charles said, “I think we’ve heard enough. Mike, we need to find this child. Would it help if you had a TR?”

“A triangle is essential. It enables me to enter the community with minimal risk. The grays will inevitably discover me, but at least it can get me to the scene undetected. Once I’m there, I figure I have a couple of days.” He stood up, signaling that the meeting was ended. Vorona was right about one thing: there must be no delay now.

“Wait just a minute,” Vorona said. “You’re not walking out of here without telling us how you’re going to proceed.”

“I think we have mind-control capabilities of our own that can be brought to bear on the situation. We can do this without revealing to the grays

that we're responsible. *How* is my business."

"There's one system that works," Greenfield said, "the violence wire."

"Duty calls, gentlemen," Mike said as they started to filter into his living room for drinks. "There's no time, not tonight. There is no time at all."

He left, then, heading down to the garage in his basement. He needed to get to Wilton—which, of course, would turn out to be a trap. The larger question was how, exactly, did the trap work, and how could it be defeated?

If it could.

TWELVE

AS DAN ENTERED MARCIE'S OFFICE, he was enveloped in what he immediately perceived as an ominous silence. Behind her, the westering sun made a halo of her glowing russet hair. Her hands, holding what Dan presumed were his student evaluations, gleamed softly in the late light. Her skin was smooth and her features exotic, with large, frank eyes and lips that generally contained a hint of laughter—not the pleasantly sensual laughter that the face suggested, though. Marcie was first and foremost an administrator. She fired, gave bad news, and disciplined wayward professors for their crimes—drunkenness, sloth, and, of course, lechery.

He imagined her fingers touching him, and it was oddly thrilling. He blinked and shook the thought away.

She smiled, and he saw something unexpected: a sort of warmth.

“Given what I have here, it would have been useful to you,” she said, “if you could have gotten a little more support from faculty.”

“The student evaluations, ah—”

“I can't give you details, Dan.”

“No, of course not.” Student evaluations at Bell were held secret from professors, so that they could be used as a tool and weapon of the administration. “But they're bad, I assume.”

She laid the paper back in the file from which she'd taken it, aligned it with a long, deep red fingernail, and closed the manila folder.

From outside there came the distant strains of the Bell Ringers Band hammering away, improbably enough, at “Moon River,” the sound carried off on the stiff north wind that had come up around noon. Voices echoed along the hall, the comfortable laughter of some succulent coed making light, no doubt, of a flapping faculty admirer.

“Marcie,” he said. He stopped himself, astonished by a shocking and completely inappropriate sense of desire for her. She was doing nothing to seduce him. He looked at her right hand, lying there on the desk. If he reached across that two-foot space and laid his own hand on it, what would

happen?

“Yes?” Her voice seemed almost to tremble. But why? Did she have to tell him no, and was she afraid to do that? But why should she be? He was no friend of hers and bad news was job one in this office. Poor student evaluations and no faculty support, open and shut case, toodle-oo.

“Marcie, look, we both know what’s going on here.”

She laughed a little, the nervous tinkle of a girl. “I think the problem is that your courses aren’t sexy.”

He had arrived at the edge of the cliff: poor evals, no support, now a negative on his courses. The next step would be, sorry, I cannot vote for tenure. “It’s physiological psychology,” he yammered. “Give me a couple of sections of abnorm, I’ll bring my comments way up.”

“That’s unlikely until you’re tenured.”

“But I can’t get tenured without good evals, and I can’t get those without good courses.”

“You’re Yossarianed, then. As we all are. Bell Yossarians us all.”

For a moment, he was at a loss. Then he remembered *Catch-22*. Yossarian was the character in the novel who was caught in a bureaucratic endless loop. Dan searched for something, anything, that might help him. He could drop a name. Pitiful, but it was what he had. “I knew a fellow when I was at Columbia—what was his name, Speed Vogel—who knew Heller.”

She made a note.

“What are you writing?”

“Knew friend of Heller.”

“Does it matter?”

“Not at all.”

He found himself watching her lips, the way she pressed them together, the slight and fascinating moisture at the corners of her mouth.

But why? Was he going mad? How could he feel this way for this woman who was about to wreck his life?

Did he want this so badly that he was willing to whore for it? Probably, but why would she want him? She had her pick of faculty masochists, eager to roll in the hay with their punisher. And yet, the only thing that was stopping him from leaping across that desk was the fear that any such action would backfire.

“Marcie,” he heard himself say, and he heard the roughness, the unmistakable sexuality in his tone. He almost slapped his hand over his

mouth, but she looked up suddenly, blinking fast. Her eyebrows rose to the center of the forehead, her eyes filmed with tears that made them bright and awful.

“What’s the matter?” she asked in a horrible, low tone that made him think she feared him.

He remembered, suddenly, his seizure dream, going up into the dark womb of the sky, the cave in the silver moon. He shook it away, frightened for a moment that he was going into aura again. But no, it was only a memory.

She cleared her throat, lifted her hand, and brushed her lips with the back of it, smearing her lipstick a little. “Yes,” she whispered.

He said, “Is this the conference? My conference with my tenure advisor? We sit here staring helplessly at each other?”

“There’s nothing to discuss, Dan,” she said. She straightened herself, clasped her hands, and lifted her chin. She was beautiful, then, tragically beautiful. He could see her in the darkness, and she looked very afraid. But no, it wasn’t dark and she wasn’t scared. She looked across at him, her eyes steady. “It’s just—obviously, you know the student evaluations—well, you know, they’re often rather indifferent to the welfare of somebody they know has need.”

“They know I’m up for tenure?”

She nodded, her little mouth grave, her eyes flashing. “Oh, yes,” she said, and he knew, in that moment, that he must have her. He must do this, he could not help himself. He also knew that she was aware of the potential that existed between them. He went to his feet.

She looked down his body, then cleared her throat. Her cheeks had gone bright red. He stood before her like a little soldier at stiff attention. He said in his heart, *Katelyn, I am so ashamed*, but Marcie’s rising flush told him that there would be no escape for him.

She lifted her hand off the desk and reached toward him, her fingers extending.

They froze, then, remaining like that, him pressing his thighs against the edge of the desk, her reaching to the air six inches in front of his midriff.

Tears poured down her cheeks. She whispered, her voice an unsure murmur, “What happened last night?”

Something in him, some sort of inner door, fell open. He remembered the blaring confusions of his boyhood, the stars passing his face, the field of

silver and the black opening, gaping.

“You heard about that?” He backed away from her desk.

Then he saw:

—A narrow steel cot, Marcie lying on it in heat, her face flushed and sweaty, her bush brown and touched as if by dew.

And he felt:

—His own nakedness delicious in the night air.

She gasped as if struck. “Dan,” she said, “Dan.” Her eyes widened, glistened, their green suddenly horrible to see, too glassy, too . . . hurt.

“Marcie, listen, uh—”

She stood up and came around the desk, entered his arms. She drew against him, drew close, and in the fur of his sweater he heard long and bitter sobs.

“I’m sorry,” he said, “I’m so damn sorry.”

She pressed herself against him harder. Then their lips were touching, asking one another if there should be more. If she—of all creatures, she—could be admitted to his sanctum?

He laid his hand on her back and pressed her closer to him, and delivered himself to her kiss.

THIRTEEN

LAUREN DID NOT HAVE SEXUAL feelings about Adam, of course, and the idea of him having such feelings for her was repellent. But there was something else there. He liked to explore her intensities—sexuality, anger, passion, loss, triumph, her slight kinks . . . those little fantasies that she sometimes relaxed with, of helplessness and ardor. And her childhood. Adam moved through her childhood memories like a tiger prowling the tall grass.

Normally, he was curiously empty of emotion himself. You'd almost be willing to believe he was a machine, he was so—not cold, that's an emotion. Adam's heart was empty. But earlier this morning, when he had been showing her the images of the dying cruise ship and the supermarket full of the starving, she had felt such a powerful sense of disquiet that she'd gotten the idea that they represented a great fear of his, and therefore of his whole species. They were a collective, connected in some esoteric way across the whole universe. She thought it had to do with quantum interconnected-ness. A gray could communicate instantly with a gray in another galaxy, but hardly at all with a human being.

She had come to feel that Adam's ceaseless quest to share her heart was central to his meaning, and probably the meaning of them all.

They weren't predators, like Mike thought, but people who had somehow become machines. They were smart enough to know that they were the most profound possible outsiders: they were functional, very much so, but had no access to the emotional universe that seemed to her to be the essence of being alive.

She lay staring at the living room ceiling, vaguely listening to Ted's golf tournament on the TV. What was it? The Masters? She enjoyed golf, the precision of it, the struggle, the inner calm that was essential, as well as beating her dear Ted at a game . . . which she managed occasionally.

He was her shelter in the storm of desperation that defined Adam. She wondered if the grays had lost their souls. Was that their problem—they'd once been more fully alive than they were now, and they were searching the

universe for some way to regain themselves?

Adam rejected every effort she made to find out about his people, his world, any of it. If she tried to penetrate his mind the way he did hers, by latching onto the pictures stored there, all she'd ever get was white light. Static. He blocked her.

It was a little sinister feeling, truth to tell. What did he have to hide?

She became aware of a siren outside, which was certainly unusual for University Park. This was not a siren-oriented neighborhood, no way. The deep, booming horn that accompanied it announced that it was a fire truck.

Well, that was more believable. There were dorm fires over on the two campuses every so often, usually involving mattresses or common-room couches. Once in a blue moon one of the beautiful old U. Park houses burned. Still, it would be extremely serious if the facility was threatened in any way, so she got up from the couch, went to the front hall, and put on her jacket.

"Hello," Ted said as she passed through the living room.

"I'm going out. Back in a few."

He knew not to ask, of course.

When she reached the street, she smelled a faint tang of smoke. Okay, that was to be expected if there was a fire in the area. She got in her car and drove to the facility. She was appalled, as she turned the corner, to see three big fire trucks in the street.

Her mouth went dry, she began mentally reviewing the steps that had to be taken to protect the secure areas. Nobody, no fireman, no fire inspector, must go down that elevator.

As she pulled into the driveway, she saw that the house itself was not burning, but there were firemen in the drive. She fumbled frantically through her purse looking for her credentials. Mike was in Washington and Andy was off. They often left Adam alone. He was safe down there, and when he wasn't being interacted with, he lay as inert as an abandoned toy. If he began to move around, sensors would alert her and Andy, and they could watch him from their laptops. It had never happened, though.

She stepped out of the car and walked over to the firemen. Just the other side of their garden wall there was smoke.

"What's going on?" she asked.

"Grass fire, probably started by kids."

"It's not going to come over this far, is it?"

"No, ma'am. That's why we're here."

“Okay, thank you. Listen, I’m going to be in the house. If there’s any change, please let me know.”

She entered by the front door. Before going down, she went first into her office and turned on her computer. After it had voice identified her, she pulled up the feed from Adam’s chamber.

Unlike the human eye, the camera simply saw what was in front of it. On camera, you could sometimes glimpse Adam. He could feel you watching, though, and would usually disappear in under a second.

She was shocked to find him pacing, the slim gray form speeding in a blur from wall to wall. At least he wasn’t flying around like some kind of gigantic berserk blowfly.

Immediately, she went to the elevator, pressed her thumb against the print reader, and stepped inside. She dropped down into the pit. Quickly, she prepped, just covering her face and hands with emollient and leaving it at that. Her skin was as stiff as leather anyway. She didn’t bother with an antihistamine shot, but she did stuff an epinephrine injector into the pocket of her slacks. Then she stepped into the lock, waited for the outer door to close, and entered the cage.

“Hi,” she said aloud. She went to her chair, sat down, closed her eyes, and directed her attention to the physical sensation of her body. By thus removing her attention from her thoughts, she signaled to Adam that he could enter her.

He rushed in with all the eagerness of a dog leaping to its master’s breast after a long absence . . . or a lion pouncing. It felt like both things when Adam came into her. This time, he didn’t go to her sexual memories, but rather to earliest childhood.

She found herself back home in Philly, in Mom’s study, and all the furniture was incredibly tall. She was gliding from chair to chair, and her heart was soaring. It was a place he’d gone to frequently, the moment she had taken her first steps.

She loved these memories Adam would bring up out of childhood’s amnesia. Because of him, she had remembered her birth and even before, a sort of secret communion with her mother in the womb.

Then he went to a moment in the living room when she was about two, when she had stood watching the sunlight slanting in through the window, and listened to the voice of the sun singing a song whose words were deeper in her than even Adam could reach.

The message of these excursions into her earliest life was clear: see what I am about to show you with the open eyes of a child. She emptied her mind even more and waited.

Drifting in like a dream, she saw the Earth from above. North America was wheeling slowly toward the sunset. But the coastlines were changed. Florida was just a narrow spike, half its usual size. The Caribbean was mostly featureless blue. The whole East Coast was submerged beneath a brown scar of filthy water. Then she saw numbers, and she realized that these were a series of dates, ranging from 2012 to 2077.

She sucked in breath. She now understood the cruise ship, the starving supermarket: Adam was warning her about a great catastrophe.

“Oh, Adam,” she said, “I’ll tell the colonel. I’ll be sure to tell him.”

He began shooting around like a rocket, slamming into the walls with hideous, crunching thuds.

“Adam!” She leaped up out of the chair, but he was whizzing now, racing so fast she could hear the bzzt of his passing but not see so much as a glimpse of gray skin or the gleam of one of his huge black eyes.

At that moment, without the slightest warning, thick smoke came pouring through every air-conditioning vent in the room.

For an instant, she was frozen, her mind unable to take in what she was seeing.

The smoke roiled along the ceiling, and she saw that it was filled with glowing red streaks. The lights began flickering, grew dim.

“Adam,” she screamed, “we’ve got to get out!” In two strides she was across the room. She fumbled open the cover on the bail-out switch and hit it with the heel of her hand.

Sirens erupted, the facility went to emergency lighting, and the door to the lock slid open. “Adam,” she screamed, “*Adam!*”

The smoke came down like a curtain, turning everything inky dark. An instant later, the fire struck her head and neck with ferocious, terrifying heat. Covering her head, she dropped to the floor. “Adam! Come toward me, Adam, stay low!”

Nothing happened. There was bare visibility here, and it was hot and getting hotter. She could smell in the stink of the smoke the additional stench of her own singed hair. The next breath she took caused a reflex of a kind she didn’t know existed. The choking was a fearsome weight slammed down on her back, the gagging like some sort of spring unraveling in her throat.

She backed out through the airlock and into the control room. Here, meteors of plastic were dripping down from the ceiling.

She was sick with dread, she knew that she had lost Adam, but she also knew that she had to get out of this place fast or she would be burned to death. The elevator doors were open, but she would not dare to enter it. Feeling her way along, she came to the door of the emergency stair. She reached up into the heat and opened it. As she went through, smoke gushed in behind her, and she only just managed to get the door closed.

Crying and screaming, she opened it a crack, but there was nothing but smoke and now also flames licking into the shaft. "Adam! Adam! Adam!"

The door began to crackle, and heat hit her in the face even though she was low, and she had no choice but to slam it again.

Crying and coughing, she began the long trek upward on the narrow circular escape stair. As she trudged along, pacing herself to avoid exhaustion, she wracked her brain to understand how a grass fire next door had spread to the facility. Sparks must have somehow entered the ground-level air intake and started a conflagration in the air-conditioning system.

Three-quarters of the way to the top, she dragged her cell phone out of her pocket, but it was still out of range. She continued on, reaching the surface so winded that she had to stop and catch her breath before she could even manage to open the door that led into the foyer.

She felt it, noted that it wasn't hot. She cracked it, looked out into the foyer. There were two firemen standing there. Above her head, thuds indicated that another man was on the stairs to the offices.

There was a rumbling from below and smoke came bursting up the stairwell. In an instant, it was fiercely hot, her eyes were burning, and she was choking again, even worse than before.

She had no choice but to act. She could not stay here. Again she opened the door. The intensity of the smoke increased at once. Behind her, the heat rose. Opening the door turned the stairwell into a flue.

The next instant, the door flew out of her hand and the firemen dragged her out, slamming it shut as soon as she was safe.

"Are you conscious?"

"Yes!"

"Okay, dizzy?"

"No, sir. My chest is burning."

"Is there anybody else down there?"

She wanted to say yes, she wanted them to try to rescue Adam. That could not be allowed, though. These men had no clearances. These men could not enter the facility.

She fumbled in her jeans, drew out her credentials. “That facility is classified,” she gasped. “There’s nobody else in it and it cannot be entered without authorization.”

“This is a fire situation, lady. We’re gonna go in there.”

“No! It’s illegal!” She struggled to her feet, went for her cell phone again. “I’m calling my supervisor.” She punched in the colonel’s speed dial . . . and got his message. “Colonel, there’s a fire here, we’re dealing with a lot of unauthorized personnel and I need somebody here to control this situation!” She hung up.

At that moment, Andy appeared. He came hurrying in and threw his arms around her. Then he held her at arm’s length. “My God, you’re burned, you have no eyebrows.”

The foyer door burst open and fire gushed out with the ferocity of water from a burst main. They got out of there, and the firemen began deploying hose.

“It’s totally out of control,” she said to Andy.

“Where is he?”

“I couldn’t manage to save him.”

“Dear God.”

“They mustn’t find remains. We can’t let them find remains.”

“I know it.”

Her cell rang. “It’s him,” she said. “Colonel, there’s a fire in progress here.”

Silence. Then, very calmly, “What happened?”

“There was a grass fire next door. When I heard sirens, I came over here from my place. The fire didn’t appear to be serious, but I felt that I should be with Adam, so I went down. A few minutes later, the whole facility filled with smoke and fire. I’ve never seen anything like it.”

“What’s Adam’s status?”

“He’s still down there!”

“Is he dead, then?”

“I would assume so.”

More silence. Then a sound that Lauren thought might be a cry, but it was so loud and so close to the phone that it broke up into a series of

shattering electronic noises. Then she could hear him taking breaths. He said, finally, “Okay. You cannot let those people down there. Anything could be going on, this is outside the envelope.”

“Sir, I can’t stop them, they’re ignoring my credentials.”

“I’m gonna blow somebody’s brains out if this doesn’t get handled,” he said, but so mildly that it didn’t seem like the threat she knew that it was.

“Sir, where are you? Can you get here soon?”

“I’m an hour out in my plane, damnit! YOU handle it, *Colonel*.” He sneered the word. Then he disconnected.

“He is one pissed-off guy,” she muttered.

“Oh, yeah, he would be. You know what we lost here? We lost the most important thing this country possesses, that’s what we lost. And that man is the person who has to take the heat for it. So he is gonna be pissed.”

Mike couldn’t pace in the plane, the cabin was too confined, so he sat rubbing the arms of his seat. He had to report this, he had to do it immediately. He said into the intercom, “I need the code box.” This small, highly sophisticated device transmitted and received in quantum-encoded bursts that could not be decrypted by intruders.

The first officer brought it back from the equipment bay behind his station, then returned to the flight deck. Mike turned off the intercom, then glanced at the flight-deck door to make certain that it was closed.

He pulled out the red handset and punched in Charles Gunn’s secure number. It rang once, part of a second time.

“Gunn.”

“Charles, I’m in condition two-one-zero-one. Do you understand?”

“GODDAMN YOU!”

“I’m in the plane, for God’s sake. It was Glass. Glass let a situation get away from her.”

“Glass. Glass doesn’t matter anymore. Glass is a liability and so are any other support personnel.”

“I realize that, Charles.”

“Well, act accordingly.”

Mike replaced the phone. He stared, thinking. The grays were not sitting still, they understood that there was a threat, and the direction it was coming from.

Okay, first things first. Do the support personnel. Andy was a good man and that would be hard, but Lauren—pretty as she was, he was going to enjoy

putting her down.

The Goddamn bitch had lost ADAM!

FOURTEEN

DAN HAD COME HOME REEKING of booze, of all the incredible things, and gone in the living room and begun playing the “Ode to Joy” from Beethoven’s Ninth over and over again at blasting volume. He lay there now in front of the stereo in the dark, splayed out on the floor like a great, gangling rag doll. She’d wanted to put her arms around him and mother him a little. His mother had been mostly indifferent to her little boy, and she felt that he needed the reassuring support of his woman right now.

She knew, of course, what had happened: Marcie Cotton had ditched his tenure. She was scared, too, she had to admit, because they could not remain here on just her salary. So what was going to happen to them was that they were going to fall off the academic cliff into the stew of little, tiny colleges and junior colleges and spend the rest of their lives scrimping and scraping.

She looked at the clock. Eight-twenty. She went into the living room, turned on a lamp.

“Please.”

“Dan, you’ve been in here for hours.”

“Please leave me be!”

“Dan, no.”

He did not respond.

She went on. “It’s about time for Conner to get home and I want you to come down out of the tree and face this together.” She had to bellow over the music. “Let’s turn that off, now.” She went to the stereo, flipped the switch. “Enough is enough.”

He rose off the floor, then went to the bar. “What’s in here? God.” He came up with an ancient bottle of crème de menthe, left over from some distant summer party when they’d poured it over ice cream. Earlier, she’d removed the rest of the booze to the garage.

“You already stink of bourbon. I hope you didn’t do this at the Peep?” The Peep Inn was the campus dive, where a professor most certainly did not need to get drunk.

“I did indeed. I consumed alcohol there, in the absurd hope that I could drink myself unconscious before the fall of night.”

“Dan, we’ll get by. Something good will happen.”

Staring at her as if she was insane, he slowly shook his head. Then he bared his teeth and rocked back in silent, agonized laughter.

“I got promised tenure by Marcie Cotton.”

She thrust her hands at him, connected with his chest. “Go on! You did not!”

He nodded.

“And you won’t be getting drunk again, so it’s forgiven. Now, Marcie told you? She actually told you this?”

He nodded.

“You’re going to get a yes on *tenure*! Oh. My. God.”

He stared at her, his eyes hollow, his lips hanging slightly open—an expression that said that this wasn’t the whole story.

“If I needed punishment, how would you go about it?”

What an extremely strange question. “Excuse me?”

“If I’d . . . done something wrong?”

“What have you done? You’ve gotten tenure, that’s hardly a matter for punishment. Is she sure?”

“Oh, yes.” He closed his eyes, shook his head.

She realized, then, that he was trying to say that he had done something with Marcie Cotton. Or no, it couldn’t be possible. You didn’t go to *bed* for tenure, not even in this sinkhole.

“Dan, are you telling me—what? I’m not getting it.”

“You’re getting it.”

“Damn you!”

The front door opened and Conner called, “I’m home, people,” and Dan said, “I’m so damn sorry, baby. I’m so damn sorry!”

Conner breezed in. “Hi, Mom, hi, Dad. I have just been at an amazing editing session. The Keltons have an awesome video and they’re bringing it over, and Paulie and his parents are coming, and there’s a chance that—” He stopped, looked from one of them to the other. “Hello?”

Katelyn drew breath, drew it hard, trying mightily to contain the rage, the hurt that shuddered through her.

“Mom?”

She went to him. “I want you to go downstairs for just a little while.”

“They got video of the UFO. Everybody’s coming over to watch it on the big-screen TV.”

She did not exactly want a convention just now, but obviously she couldn’t prevent it. “You go down, and we’ll make popcorn when they come.”

“You sound strange.”

She took him to the stairs and closed the door behind him. Then she went back to Dan, who was now slumped on the couch with his face in his hands. “You asshole,” she said quietly.

“Hit me.”

“Dan, I’m not physical. But what I would very much like is for you to go upstairs and gather your belongings and take them with you, and get the hell out of my house.” She curtsied. “If you would be so kind.”

“I don’t know what happened! I don’t know how to explain it.”

“You screwed her for your tenure.”

“I did no such thing!”

“And I find that grotesque. And equally grotesque that you confessed it. What happened to you, you’re not this drunk blubbering jerk I see here! I sure as hell didn’t marry *him*.”

“Look, I want to ask forgiveness.”

“It’s that easy, you get drunk and you cry and what happens, I kick you around and yell a little and this violation of your sacred trust is forgotten? And if you go to go creeping off to sleep with her in the forenoon from now on, then what do I do? Just bear everyone in this miserable fishbowl knowing my—what’s the word—shame, I suppose. My shame.”

“It left me . . . vulnerable. Somehow, it affected me.”

“What did?”

“That incident!”

“Something weird happens and therefore you go make love to Marcie Cotton?”

He shook his head, waved his hand at her. “I—it made me . . . want her. I don’t know why, but it did. I relate the two things.”

“What in hell are you saying?”

“I don’t know!”

“Dan, I’m an orphan to the violence in my family, and you to the neglect in yours and, Dan, nobody but another orphan can heal either of us, this is why we’re together. But you—you’ve taken something from us, and it is

profound, Dan, because trust has a different meaning for people who suffered from betrayed childhoods.”

“It wasn’t over the tenure. It was—” He shook his head. “Oh, my love, it was like some demon flew in and sweated us with his fire. I think, being so tired, so surprised and relieved—I just suddenly found myself in her arms.”

“Don’t tell me about it! For God’s sake, Danny, have some mercy!”

He slumped yet deeper into the couch. He looked so tired, so sunken, nothing at all like the rippling, robust husband she adored. Had adored. He looked like somebody who’d fallen victim to a vampire, shadowy about the eyes, gray of skin.

Her stomach had grown tight and sour with fear, her own skin was so cold she shuddered. This had been her rock, this marriage, in its honesty and the richly sensual capsule of its love. But how could she let him touch her now? How could she bear it?

“Momma, what, exactly, is wrong?”

“Conner!”

“Because something is and I need to know.”

“Conner, please.”

He came into the room. “You two are fighting and I want to know why.”

Figures appeared on the deck, looming up out of the dark, flashlights bobbing.

Conner went to the door. “This is a chance for me. Don’t wreck this.”

Dan got up, started to kiss Katelyn on the cheek, wisely thought better of it, and greeted the Keltons.

“You need to see this, folks,” affable John said. “It really is genuinely odd.”

“It’s not what it seems,” Dan said. “It’s explainable, trust me.”

“Dad, it’s not,” Conner said. “That’s the whole point!”

Dan went into the kitchen and picked up the phone. Chris answered on the third ring. “Have I woken you up at nine-fifteen, old man?”

“We were out with the ’scope. It’s a good night for the Crab Nebula.”

“Speaking of nebulas, the Kelton clan has arrived with what’s probably a pretty nebulous video of that prank.”

“Prank?”

“The affair of the fiery balloon.”

“That could be historic footage.”

“How so?”

“You saw somebody in the field, buddy. And then you didn’t. I think that somebody was an alien.”

He had indeed seen somebody. It was also further support for the prank theory, but they could get to that later. “When you come, you might think about bringing some spirits. *Mon femme* has stripped our bar.” He hung up the phone, then returned to the living room where the crowd had surrounded the gigantic TV. “We gather round the campfire,” he said, “and see shapes in the sparks. And thus the mythologizing begins.” He sat down. “The Jeffers will be here directly.”

Paulie Warner burst in from the kitchen, followed by his parents and then Chris and Nancy. The energy in the room exploded as the two boys excitedly traded speculations. “It’s the grays,” Conner yelled, “they’re doing an operation right here at Bell!”

“Okay, Conner, sure,” Paulie said.

Terry said, “What we actually have is some unexplained video.”

“Edited,” Dan added. “Most carefully, I’m sure.”

“Not really,” John Kelton said, his voice sharp with annoyance. “It’s actually just pulled out of the camera. Not edited at all. There’s no reason to edit it.”

“We copied it onto a DVD,” Terry said as he dropped the gleaming disk into the player’s open tray. “Beyond that, you’re seeing what the camera saw.”

The player absorbed the disk. This was followed by blackness, then a couple of flashes.

“Fascinating,” Dan said.

“Just wait,” John snapped.

There was a sound of gasping, then crunching. “That’s us running,” Conner said.

“You were really there?”

“Conner was there,” Dan told Paulie.

Another flash, then a blur. Dan was beginning to think that this might be pretty minimal when suddenly the screen filled with light. And with screaming—as terrible, as powerful, as it had been the moment it happened. Silence fell. Paulie sat close to Conner, Dan was pleased to notice. He heard his own voice shouting, then saw himself and Conner in the light of the thing.

“Conner, you were *right there!*” Paulie whispered.

It was the eeriest thing that Dan had ever seen. Two faint seams were

present, one running the length of the object, the other around its center. Behind the thing, something seemed to be moving in the light, almost as if it was climbing out of an opening that was concealed by the object's bulk.

"There's your culprit," Dan said. "Nancy, be prepared to ID a student who needs disciplining."

The object rose a bit and seemed to shimmer.

The woman's voice, which had been screaming and then silent, now cried out more clearly and a cold horror shot through Dan as powerfully and unexpectedly as a lightning bolt from a silent sky. "My God," he said—whispered.

"What? What, Dan?" Conner was pulling at him.

"Don't miss this," Jimbo said.

In the flash of a single frame, the object disappeared leaving behind it the fleeting shot of a figure, barely visible in the dark. The figure seemed to turn, but it all happened so quickly that you could see little. There was silence, blackness. Dan heard his own voice say that he didn't think they were alone.

"It *is* the grays," Conner shouted, jumping to his feet. "I told you, Paulie, it's the grays!"

"Yeah, you're right," Paulie said. "I gotta go to the john." He headed out of the room.

Dan hardly heard them. His mind was reeling. Because Marcie had been involved, he had recognized her voice in that last scream. But what could it mean? Had she pulled the prank? Maybe she'd gone insane. It would fit with the bizarre seduction, maybe even vindicate him in Katelyn's eyes . . . eventually. That was going to be one hell of a siege.

But then he thought, what if it *wasn't* a prank? What if Chris and Conner were right, and some sort of genuine anomaly was unfolding? Perhaps he and Marcie had both been traumatized by it. Psychological trauma was well known to drive people to sexual activity. It even had a popular name: battlefield syndrome. He was confused and, frankly, afraid. He wished he hadn't drunk all that booze at the Peep. He felt lousy, his head was pounding, and now he had this bizarre, impossible thing to consider.

"Boys, can you slo-mo the last little part?" Chris asked. "The figure?"

Terry stabbed a couple of times at the remote, and the figure appeared again, frozen, its back to the camera.

"Let me juice the contrast," Terry muttered.

The scene became lighter, the figure more clear.

“Is that a balloon?” Katelyn asked.

“It’s the head, Mom.”

As Terry shuttled the image forward frame by frame, the figure turned in short jerks, until its face was visible in a blurred three-quarters view.

Total silence fell as every person there reacted to the image. It was not clear, far from it, but anybody could tell that this was no disguise and no inflated toy. The one fully visible eye was black and slanted, gleaming. It gave the creature a breathtaking look of menace. The lower part of the face was complex with wrinkles, like a very, very old human face might be, the face of a man deeply etched by the trials of his time. There was the tiniest suggestion of a mouth, little more than a line.

With another flick of the shuttle control, another frame appeared. Now the mouth had opened slightly, and the sense of surprise it communicated was so vivid that it was eerie.

Another flick of the shuttle and the figure was gone.

Dan found himself feeling his ear and remembering what Conner had said. Dear heaven, what if this was real?

His mind rebelled. It just could not be true, because if it was, then he was involved and so was Marcie. But why? In the name of God, *why*?

“Look at that,” Paulie said as he returned. He went to the glass doors and stepped out on the deck.

Conner followed him. “It’s them,” he said softly, his voice trembling.

“Jesus, it might be,” Jimbo said.

A glow rose behind the stand of pines that separated the house from the field beyond.

Dan went onto the deck. The glow was smaller, but it was still very damn bright, and was indeed out in the field.

Were they in contact? Aliens had chosen to land in a little college town?

It just did not seem possible. No matter what was happening, that was not the whole story.

Then he saw stars slowly wheeling around him—an aura, another one, the third in two days. Maybe if he could get to the couch, they wouldn’t notice the staring emptiness of petit mal. Hardly able to navigate through the sea of stars that now surrounded him, he somehow found the couch, nearly sitting on Maggie’s lap.

“Slow down, buster,” Katelyn snapped.

“Sorry! Sorry!”

He slumped back. Before him was not the gleaming sliver he usually saw, but a room. There was a person there—a child. She was exquisitely beautiful . . . and recognizable.

He cried out and the seizure was over.

“Dan!”

“Sorry!”

“Dan, aren’t you hearing me? Stop the boys!”

Then he realized that Paulie and Conner were outside and running like two mad things toward the field, flashlights bobbing.

The world seemed to stop. Harley and Maggie looked up at him, their expressions identical, eyebrows raised, slight smiles playing on their faces.

Chris said, “This could be it.”

Katelyn burst out the door and went running down the stairs. Dan followed.

“Come on, Conner,” Paulie yelled.

“Calm down,” Conner yelled back. “Stay together!”

Dan was aware that the Warners had come out onto the deck, and were quietly standing and watching. Then he saw Chris beside them. “You better come down here,” he shouted.

It all seemed to be happening in slow motion, as Chris came across the deck and down the stairs.

Dan ran after Conner and Katelyn, moving more slowly through the woods because he had only the light of the object to guide him.

When he broke out into the field, he saw an extremely bright light, but it appeared to be more of a pinpoint. He could see the silhouettes of the two boys close to it, and Katelyn coming up behind them.

“We mean you no harm,” Conner yelled. Then, “*Nous vous voulons dire aucun mal.*”

“Conner get back,” Katelyn shouted.

“Come to meet us,” Paulie cried. His voice almost bubbled.

Dan ran harder. The children should be very damn afraid.

“Wait! I’m getting a mental communication,” Conner said. “They want us to come closer.”

“Hold hands, buddy!”

The two boys went forward—and suddenly the light went out. “Run, boys,” Dan shouted.

Then he heard laughter, a lot of young laughter. There was more laughter behind him, and he turned to see the Warners breaking out of the woods. They were laughing, too.

“Aw, shit,” Chris said from the dark. “I never win.”

There were flashlights up ahead, and as Dan arrived, he realized that he was surrounded by kids, and they were laughing and jeering and shining flashlights on Conner, who was trapped in the center of a circle of derision.

It had been a prank, and it looked as if most of Conner’s classmates were here.

Conner put his hands over his head as if he was being stoned by the voices. Katelyn ran around the outside of the circle, trying to part it, to get to her boy.

Harley and Maggie Warner came up chuckling amiably. “That’s our gasoline lantern,” Harley said. “It came back from Neptune just in time.”

Dan closed his fist, pulled back—and just barely managed to stop himself from decking Harley.

“He-ey,” Harley said. “It’s a joke. An innocent practical joke. They’ve been planning it all day. We need something to cut the tension, man!”

“At my son’s expense!” He was not as careful as Katelyn, who was still trying to gently push kids aside. He grabbed a fistful of somebody’s jacket and hurled what turned out to be a girl to the ground. As she screamed and cursed at him, he waded in and reached his son.

“Get out of here,” Conner shrilled, “please just get out of here!”

“Conner, come home,” Katelyn said, joining them. She looked around them. “You’re pitiful, all of you!”

“Asshole!” came a muffled yell from the dark. “Bitch!”

Their arms around their boy, Katelyn and Dan headed for home. As they passed the Warners, Dan said, “You stay away from our place and keep that fat troll of yours away from our son.”

“Dan?” Harley called after him. “Hey, man, stay loose.”

When they returned to the house, Chris was already back. He and Nancy were replaying the video.

“It’s real, you know,” Chris said.

Conner started to run downstairs.

“Hey, wait.” Chris caught up to him. “Hold on. We have historic footage here. Come on back, take another look.”

“Dr. Jeffers, I really can’t right now.”

“Forget those kids, Conner. The Warners are idiots, and the Keltons haven’t got the faintest idea what this actually is. This video is one of the most precious records ever created by the human hand.”

Conner was silent. Dan saw why. Tears were pouring from his eyes. But he raised his head. He said, “Could I possibly be homeschooled?”

Dan’s heart almost broke, but he said, “You have to learn to face it, Conner. To gain control.”

“Don’t be ridiculous,” Katelyn said. “He does not! And the fact that Harley and Maggie keep letting these things happen is a big part of what’s wrong with child-rearing these days. They’re passive, they believe in the mythical wisdom of the child, but children are savages and they need boundaries or they turn mean.” She threw her arms around Conner. “You’re the exception, love. You *are* a miracle, and if they can’t handle that, then they’re scum. That’s all.”

Conner sighed. “Mom, they happen to be people I have to spend every day of my life with.” He moved away from her. “So, Dr. Jeffers, what have we got?”

“Come on. We’ll go frame by frame, from the top, making a note whenever a new point of proof is present in a frame. Hey, you could count the rivets in this thing if it had rivets. There’s a lot here. This is wonderful, convincing footage.”

Dan hardly listened. He was in a state of complete turmoil. He had to understand about Marcie, and he did not. He just did not get it.

Then he did. “I remember,” he said.

“What?” Katelyn snapped.

Dan got out of there. His stomach felt as if it had just filled with a foamy storm of acid. He dashed upstairs and into the bathroom.

“Dan,” Katelyn called, following him.

She found him on his hands and knees over the toilet, barfing like a sick dog. He rose to his feet and started yanking paper off the roll to clean up the considerable quantity of yellow froth that had missed. He worked furiously, perhaps not yet aware of her presence.

“Dan,” she said as she went down to him. She took the paper from him and flushed it away. They knelt there awkwardly, face to face.

“It’s impossible,” he said. “It has to be impossible.” How could he tell her what he thought he was remembering? He had not only been in some way connected with Marcie two nights ago, it was worse than that. His childhood

seizures hadn't been seizures at all, they had been memories so extremely strange that it hadn't been possible to recognize them for what they were. "We're lab rats," he said, then got sick again.

As she nursed him through it—rather bravely, she thought—he gasped, "I'm sorry, I'm sorry," and it meant a whole lot of things, and she wasn't real sure what all of them were. He got up, shook his head.

"Are you okay?"

"We're in some sort of trouble."

"Oh, yes."

He took her in his arms and held her. "This goes deep," he whispered, "real deep."

She wasn't sure she should, but she remained in his embrace.

"No matter how bizarre and how impossible it may seem, it had something to do with them."

"Something to do with whom?"

"Them! It was Marcie screaming in that thing."

She leaned back, looked at him.

"I recognized her voice—it was all crazy with fear, but it was her yelling, it was certainly her."

Katelyn could not think of how to react. She wasn't even sure exactly what he was trying to say. And yet the screaming had sounded vaguely familiar to her, too. She knew that he was right. It had indeed been Marcie—in the thing, with the alien, and absolutely terrified.

"How did she . . . seem?"

"*'How did she seem?'* My God, that's too small a question! 'What in the name of all that's holy is going on here' just begins to approach it. When I walked into her office, that sour, rigid woman was—oh, Lord, totally changed, love. All soft and steamy and really, really sold on me. That cold fish. As if her personality had been totally revised overnight." He paused. "Which is exactly what did happen, in my opinion."

"Aliens did something to Marcie because—why? What does this have to do with the price of beans, Dan? Because you are an Irishman to your core and you might be a dull lecturer, but you can sing a song to a lady, and I think I'm hearing a damn clever one now."

"I'm telling you the truth!"

She backed away from him, looked at him out of the corners of her eyes. "You're telling me aliens—which you have always until ten minutes ago

thought were utter bullshit—made you do it. I don't think I'm going to buy it, Danny-O. Nice try though. On the fly like that, very impressive.”

Inside herself, though, she was much less sure. It seemed to her that she'd had more than a glimpse of an alien down there on that video. She'd seen, ever so vaguely, into an aspect of life that she had never even dreamed existed. There was somebody behind the scenes, it appeared, stitching things together, and they were taking an interest in this neighborhood and most specifically, she thought, in this family.

“Katelyn, I have to tell you something. I believe that I was brought into that thing. That I was with Marcie in there. Because I have memories of that.”

“Oh, come on.”

“I have *memories!*”

“Okay, don't have a cat. So, when did this happen? While I blinked my eyes, maybe? Remember, I was there most of the time. And you did not go into that thing. In fact, if you had, it'd be on the video.”

“Do you remember that you went to sleep with Conner afterward?”

“I was scared and so was he. I didn't want him left alone down there.”

“And when you woke up, you were up here. In bed up here . . . and we saw those marks, that strange water. What if they were tracks, Katelyn?”

“Holes in the ground?”

“After we came back and went to sleep, that thing returned. It brought her back after they'd knocked her out or whatever they did to her. And for whatever reason . . .”

“No, Dan, the aliens did not make you do it. That will not fly.”

“OKAY!”

“Keep your voice down!”

He pushed on, because a lot rode on this, his whole life with her rode on this. “The thing is—”

“Dan—”

“Listen to me! You listen, because this is bizarre and impossible but it is real, and you need to wrap your mind around it.”

“I need to wrap my mind around your infidelity and I will not be talked out of it! Come on, Dan, at least respect my dignity as a human being.”

“Katelyn, that's your melodrama showing and I accept that. Self-dramatization is a characteristic of people scarred by traumatic childhoods.”

“Analyze yourself why don't you, my self-obsessed little boy.”

“I take that. And I accept that what I did was wrong no matter what the

explanation.”

“Okay, now we’re getting somewhere.”

“Now will you listen?”

“All right. The star people made you do it. I’m fascinated.”

“I remember seeing her on a sort of black frame cot, and we were—something was happening.” He shuddered, then went to the sink and slugged water.

“What would that have been? Alien foreplay?”

“It was horrible! Katelyn, *horrible!* They—I remember some kind of sparks, and we were—oh, God—some sort of arcane thing where I kept seeing these sparks and hearing, like, her inner voice, her memories, her—like some kind of inner scent . . . the smell of her soul.”

“Was there a rectal probe involved, or is this even kinkier?”

“I deserve that. Sure I do, but—”

“What, Dan? Don’t talk in riddles, please.”

“When we were kids . . . I saw another girl under the same circumstances . . . with them. A girl that was you.”

“We didn’t even know each other.” And yet, she did have certain disjointed memories that were really strange, that she had always thought involved child abuse by one of her mother’s many boyfriends. She did not mention these memories to him, though, not just now.

“We knew each other, but not in normal life. We knew each other very well . . . because they made sure we did. They made this family, Katelyn. We’re damn lab rats is what we are.”

“Oh, come *on!* Look, we have guests, I’m going downstairs, plus the ever-alert Conner is going to figure out that we’re fighting again and do you really want him involved?”

“He is involved! He’s heavily involved. Katelyn, don’t you get it—why he’s so brilliant, so off the charts—he’s *theirs*, Katelyn.”

“Oh, I don’t think so. I really don’t think so at all, because I seem to remember something about an epidural and a hell of a birthing struggle and he is *mine!* MY DAMN SON!”

“Shh!”

“Don’t you shush me! First the aliens made you fuck that slut for your tenure, professor prostitute, then you dare to tell me my son is some kind of pod person? You’re fucking certifiable, is what you are.”

“I didn’t say that. Of course he’s our son. Our flesh and blood. Who

sweated through that labor with you, who spent seventeen hours, *breathe, breathe*, who kissed your sweat and prayed with you? Who was there, Katie Katelyn, and is still here and will always be here, if you let me—and if you don't, will live still, yes, but will also be dead?"

She looked at him. He looked at her. In that moment, something, perhaps about the vow of marriage itself that is sacred reasserted itself, and the union decided to continue on . . . at least for the while. "Was that a question?" she asked.

He raised his eyebrows. She raised hers. He opened his arms. She went in.

"Something so complex has happened—it's like I've glimpsed a level of life that's normally hidden, where there are other motives and meanings, that never normally come to light. And somehow, Marcie and I—and you and I, Katelyn—are connected on that level . . . and it's all to do with our boy, somehow, I know that. I know it and I love him and I love us, Katelyn, oh my God, so much."

"We've got to be with him," she said.

They walked together from their dark bedroom. Out the east window, which overlooked the field where the thing had appeared, an enormous moon was rising. By its light, silver with frost, she could see the whole field, wrapped now in the familiar mystery of an ordinary night. She looked up toward higher space, the glowing dark of the deep sky. There were stars, a few, battling the flooding moonlight.

Perhaps he was right. Maybe his struggle was, in some way, true. Maybe a shadow was there, one that you couldn't see, but that was nevertheless very real, the shadow of an unknown mind from a far place.

He came beside her, put his arm around her. "They're watching," he whispered.

She leaned against him, wondering what the future would bring. He might be going mad. It happened to people in middle age, and for a psychology professor to become psychologically abnormal had a certain irresistible irony to it, did it not?

Then again, maybe aliens were the answer. Certainly, the video was odd and disturbing. It had provided him an inventive excuse, she had to give him that.

"Come on," she said. She pushed away from him, and went back downstairs to rejoin the tormented odyssey of her son.

PART FIVE

THE MINISTERS OF DEATH

No man is an island, entire of itself. Every man is a piece of the continent, a part of the main. If a clod be washed away by the sea, Europe is the less, as well as if a promontory were, as well as if a manor of thy friends or of thine own were. Any man's death diminishes me, because I am involved in mankind, and therefore never send to know for whom the bell tolls, it tolls for thee.

—JOHN DONNE

“Meditation XVII”

FIFTEEN

LAUREN WATCHED THE COLONEL AS he moved back and forth, back and forth. She'd never seen him like this, all of his rigorous professionalism gone, his eyes flickering from place to place like an animal looking for escape from a cage.

"Where's Andy? Andy is supposed to meet us here."

"Andy is gone."

"And you don't know where, of course."

"No, sir, I had no idea he would leave."

"You know your problem, Lauren? You're naïve. Relentlessly damned naïve!"

"I—sir, I did everything I could. I only backed out of there because I had no choice."

"You didn't think to detain Andy?"

"Of course not! Why in the world would I do that?"

"You don't have the whole picture, I grant you that. With all his years in the hole, working with you empaths, Andy knew a little more than you do."

"Has he, uh, what has he done?"

"Run, you damned fool!"

"Don't you take that tone with me."

He gave her a look that made her step away from him. He'd never been a pleasant man to work with, but he seemed violent now, and she did not like this, she did not like it at all.

They were standing in his smoke-stained office. The fire department had saved the house, but the facility below was a total loss.

"I want to know the truth of this thing, Lauren, and I'm sorry to say that I don't think I'm getting it from you."

That made heat rise in her cheeks. She did not like her own professionalism challenged. "My report is correct in every detail."

"Don't you understand what happened, even yet?"

"Of course I do. There was a grass fire, it spread to the air intake, and

flammables in the air dryers ignited. That's the official verdict and it's also the truth."

"Then where's Adam?"

"Excuse me?"

"You do understand that there were no remains."

"Well it was incinerated, then. He was, I mean. All they pulled out of there was ash, anyway. Black, sodden ash, I saw it."

"It's been gone through and there are no remains!"

"He burned! *Burned!*" And she was crying. Thinking of him. "He had a beautiful mind, you know. Incredibly beautiful."

"The skeleton is made of a metal that's quite indestructible. But we did not find that skeleton down there, and the rubble was sifted through screens. It was very carefully gone through, Lauren, so I think you must be lying to me."

"You're beneath contempt, you know that?"

He backhanded her. The blow came unexpectedly, a flash in her right eye. For a moment, she was too stunned to understand what had hit her. Then she did understand and a torrent of pure rage filled her. "That's a violation," she said, trying to force the anger out of her voice, "and I'm going to put you up on charges for it."

She realized that he was laughing in her face, then that he was withdrawing a pistol from underneath his tunic. She was very quick of mind, which is one of the reasons that she was effective with Adam, and that quickness enabled her now to recall the rumors that people could get into lethal trouble in these deep black programs. Within perhaps three seconds of the weapon appearing—in fact, before he even had it fully out, she had turned and left the room.

Leaping down the stairs, she brought all of her considerable athleticism to bear. She hit the floor, staggered—and heard a gigantic roar. She knew what it was a shot. He was trying to kill her. She dashed across the hall as a second shot crashed into the wall beside the door. It was close, she could feel the heat of it on her cheek. He was a damned good shot, getting that close from that far away with a .45.

She got the door open and another shot rang out. She ran down the sidewalk and out into the middle of the street. She had to get this out in public, that was her only hope, and keep enough distance between them to make a hit a matter of luck. Fifty feet, at least. Closer and he would not miss.

She ran down the middle of the street, zigzagging and not making the mistake of looking back. Damn this neighborhood, it was too damn *quiet!* Just one car, please, just one damn car—but there were none.

Maybe not all of Dad's nightmares had been about the grays, maybe he had also feared this sort of thing happening to him one day.

Then, as she rounded the corner, a lovely Mustang with two coeds in it appeared. "Help!" She stood in front of them waving her arms. "Help! I need the police! Help me!"

As they swerved around her, she yelled into the car, "*Help me!*"

They did not help her and she ran on. Almost immediately, she heard the growling of a powerful engine and the whine of tires. He was turning the corner.

She raced down the driveway of one of the large homes and threw herself down behind the garbage cans beside its garage. Hiding there, barely breathing, she heard a car stop. It was him, it had to be.

She dared not look, dared not move, found herself hardly able to breathe. She had never been this scared, never remotely. She could almost literally feel the sensation of the gun pointing at her.

She heard footsteps on the driveway, soft, quick . . . and then a loud click and some muttered words. A woman was there. Her remote control hadn't worked.

She brought her car into the garage and the door began closing.

Lauren sobbed, stood up, started toward the house—and in that moment Wilkes's Phaeton came snarling up the driveway.

She turned and ran, crashing past the garbage cans and down the side of the house, across the expansive backyard where an elderly man struggled with a broken gate. "Call the police," she shouted as she darted into the alley.

Behind her, she heard Wilkes snap, "Official business," to the old man. Curse him, the bastard was in uniform, too. She would get no help.

She moved to the end of the alley, darted across the street and into the next alley. She pressed herself back into a tangle of bare bushes, hoping that he would miss her.

A moment later, she saw him come out of the other alley. The gun was now concealed. He was breathing hard, his chest heaving. He looked up and down the street, then toward this alley. He stared a long time at the big shrub. He was looking right at her, but apparently couldn't see her.

Then he took out the gun. He went down on one knee and braced it

toward the shrub. She got ready to run. He snapped the barrel—and she froze. She bared her teeth, fighting the urge to break cover like a terrified pheasant. You did not need to do what he'd just done to cock a .45 automatic. Therefore, he'd done it for effect, to frighten her into moving. He was guessing.

Finally, he stuffed the gun under his jacket and began hurrying away.

A moment later, she heard his car start. She moved deeper into the alley and crouched down behind the edge of a shed. She could not be seen from the street at all. She called Ted on her cell.

“Hey, bad girl.”

“Teddy, love, listen to me and listen close. Never go back to my apartment. Never, at all, for anything.”

“What the hell are you saying?”

“Okay, Ted, I know how this sounds. But you'll be in terrible danger if you go back there. Don't even come in the neighborhood.”

“Lauren?”

“I'm not ditching you, I'm warning you. There's terrible danger, Ted. It has to do with my work, and I am extremely serious. If you go back there, you will be tortured and you will be killed. You just forget it, you forget me, you go on with your life.”

She broke down, then, so badly that she held the cell phone away from her ear and gritted her teeth to keep from sobbing.

“Lauren, what's going on?”

She forced back the tears. “Where are you now? No—don't tell me! I shouldn't have asked, not on this phone. Look, you can help us both. Go to the Air Police. Tell them that Colonel Wilkes threatened us with a gun. Both of us!”

“He didn't.”

“He did, he threatened me, he shot at me.”

“Jesus!”

But the Air Police weren't going to be able to help. They couldn't reach into a black program like hers. He would end up confronting all kinds of questions he couldn't answer, and probably confronting Wilkes into the bargain. “No, I'm not thinking straight. Don't go near the Air Police. Move back on base and just go about your business. You'll be left alone.”

“Lauren, I love you.”

“Oh, Ted, no you don't. You were going to, but it hasn't happened yet

because I ditch guys before it does happen, and stuff like this is the damn reason. You obey me on this. You trust me and you obey me.”

Silence.

“Ted, promise!”

“You can’t tell me a thing, can you?”

“Not one thing.” She closed her cell phone, leaned against the wall of the shed for a moment, then continued on.

She went down the alley to the next street and crossed it quickly. She continued this process, going down one alley and then the next, until she arrived on North Meridian at the edge of University Park. She went into a Starbucks and moved about looking at the coffee machines and CDs, staying well away from the front of the store.

She thought that Colonel Wilkes might well have license to kill her as a security risk. In fact, he would never have pulled his gun if he hadn’t known for certain that he would get away with it.

She remembered, suddenly, a story Andy had told her. At the time, it had seemed like so much scuttlebutt, the kind of thing that went down over beers. Now she knew that the tale of the code experts who were lobotomized on retirement, as lurid as it was, had been a veiled warning.

Andy was gone because he’d understood the situation they were in the instant he found out what had happened. He was running, probably even had an escape plan all worked out for himself.

She had no such plan, and zero confidence that she could survive very long at all in this situation. She had no operational training at all. Beyond the basic attack-and-defense maneuvers and gun skills she’d learned at Lackland, she was not capable.

If she had Adam, though, things would be different. If she brought Adam back, instead of being a liability, she’d become an asset again.

If Adam wasn’t dead, and Wilkes had been certain that he wasn’t, then where was he? Given how fast he could move and his ability to make himself so hard to see, he must have escaped without her seeing him go. Left her behind to die.

No, not Adam. He was always ten moves ahead. He’d have known that she would escape on her own. Or maybe he hadn’t wanted her to, or hadn’t cared.

Nobody had ever told her much of anything about the way the grays functioned, whether they had bases or satellites or even exactly what they

were, for that matter. So how would she go about finding somebody that weird, who had all these special powers and abilities?

She could try remote viewing for him, but that only worked if you were completely calm, and anyway, she wasn't much good at it. All she was good at was making pictures for Adam and seeing the ones he sent her.

She couldn't reach him that way, either, because that only worked from a few feet away. Oh, she could sense things about Adam from a distance—sort of intuit them, but there was no mind connection over distance that she'd ever experienced.

So where did that leave her? She couldn't very well go looking behind houses and in trash cans. There was no point at all trying to find Adam. Adam was lost to her.

She was at a loss, getting so frantic that tears were forming in her eyes. This feeling of being trapped was just hideous and it was panicking her and making it hard for her to think clearly.

She decided that there was only one real option open to her. She had to go in. She had to go straight to Wright-Pat and actually file a complaint against Wilkes. She was within her rights, the man had shot at her. If she was a liability, fine. The more public she became, the safer she'd be from the shot in the night.

When she saw a bus pull past and stop at the corner, she hurried out of the store and got on it. It would go downtown, she was fairly sure. "I need to get to the Greyhound station," she told the driver.

"First stop on Illinois, walk two blocks, you'll see the sign."

"Thank you." She took one of the seats in the very last row, because there were no windows beside it. She sat wondering what she might do, where she might go. She thought carefully.

She knew that there were other aspects to the operation. Somebody watched for violations of the agreement with the grays about who they could involve themselves with. But who? She had no idea and no way of finding out.

Again, though, she might find out more at Wright-Pat. Officially, she was stationed there, on detail to the facility. Given that the facility was now inoperable, she couldn't be said to be violating any orders if she returned to base. In fact, that was likely her legal requirement.

She saw that they were passing her condo. She looked up toward her windows, thinking that all her stuff was there and maybe she would never see

it again, or her cute little car that was still parked at the facility or any of her old life, not Ted or any of her friends.

As she looked away, she felt a sudden shudder go through her body. And she was *in* the apartment. Vivid. Real. Her bed still unmade, yesterday's skirt on the floor of the bedroom, a flat beer open on the kitchen counter. All of it, just as it was.

Then she was back in the bus.

She knew it immediately: Adam was there, Adam was in her apartment! She jumped up. "Let me off! Let me off the bus!" She hurried forward. "Driver, you have to stop!"

"Express to downtown," he said.

Idiot! She thought fast. They were a quarter of a mile away, the place was likely to be watched, she should not risk this. But it was her best shot, she was sure of it. "If you don't stop this bus, I'll throw up on your head!" She leaned over him and started gagging.

The bus was stopped and the door was open and she was running back up the street toward the condo. She was insane to be risking this, of course, but Adam was there, he must be, he had to be. That was Adam's mind broadcasting to hers, it was totally and completely unmistakable.

As she ran, she looked for Mike's Phaeton but didn't spot it. Maybe she'd outrun him.

No, don't be a fool, assume only the worst. You didn't need operational training to understand that.

She went into the cleaners next door. "Hi, Mr. Simmons," she said.

"Hey, Lauren—"

She ducked behind the counter and headed to the back of the establishment.

"Lauren?"

"Hey, Mrs. Fink," she said to the seamstress as she passed her sewing station and went out the back door.

She ran up the alley and then took the stairs down to the trash room, and opened the steel outer door with her passkey, which fit all the building's outside locks. Going through into the basement, she hurried past Jake Silver, their handyman.

"Miss Glass!"

"Hey there, Jake, taking the back way today." She went to the elevators and pressed the button.

“You ain’t supposed to come through there. That’s not a door, Miss Glass.”

The elevator opened and she got in without responding to him. She started to punch seven, thought better of it, and took the car to the top floor, nine. The corridor was silent, the air smelling faintly of cooking. She went down to the fire stairs and took them two flights.

Her own corridor was just as quiet. She formed a thought—Adam’s face, with a feeling of question attached to it.

Instantly, there came back another thought—an image of her own face. It wasn’t Adam’s usual signature, but it was certainly an image from him, she could tell by how it felt when it appeared, bursting out into her mind like a television picture.

She opened the door and went into her flat. She stood in the doorway with the door still open behind her. From many, many questions she had put to Adam, she knew that whoever she really worked for was attempting to understand and use the process of communication by mind. They had even had her test the range, which was about a quarter of a mile, and could pass through anything except a certain type of electrical field, which was used at times to isolate Adam in the cage.

She looked toward her bedroom. Everything was as she had seen it in the bus, every detail. In the back of her mind, she had been worrying that this was some kind of trick on Mike’s part to draw her here, so now she closed the door and double-locked it—as if that would keep him out for more than a few seconds—and moved deeper into the apartment.

She’d never been with Adam outside of the cage and on one level she was fascinated to find out what this would be like. Hunching her shoulders to express an atmosphere of question, she moved into the center of the living room. With a faint click that made her gasp, the heat turned on. “Hello,” she said. “Adam?” Simultaneously, she projected an image of his face—well, not really his face, because she’d hardly ever actually seen it except in glimpses, but a sort of generic face, long and thin, with big, black eyes.

There was a sound behind her. She turned, but there was nothing there. “Please don’t hide,” she said. “I need you, now.”

Another noise came, behind her again. She turned, and for a moment could not understand what she was seeing. There were two small creatures, each about four feet tall, standing near the broad picture window that crossed the front wall of the big living room. She was appalled at how insectlike they

looked, shocked by the gleaming eyes, the expressionless faces, the gracile forms. Insectoid children.

As she stepped forward they turned into two great vultures, black, their red and terrible eyes glaring, their huge beaks open, their wings spread in warning.

A scream pealed out of her, totally involuntary, and she jumped away—only to feel something leap on her back. It held her arms down with an iron grip, its legs pressed against her hips. She could hear it breathing, an absolutely regular sound, like some sort of machine.

Frantically, she projected an image of herself on her knees, then went down as best she could. She made an image of herself as a little girl.

The two vultures postured, screaming, their wings spread wide.

She projected an image of a beautiful garden, then of she and Adam sitting together, then of Adam with his head in her lap—imaginary, of course, she'd never seen him so close.

One of the grays before her became itself again. The other turned into an enormous hooded cobra, coiled against the wall, its head raised a good four feet off the floor, the hood extended, its tongue licking the air.

Then the one that had grabbed her disappeared.

As she had at first with Adam, she sat down, closed her eyes, and cleared her mind. She brought a long-ago trip to the seaside to mind, the blue waves, the smell of suntan oil, the seagulls crying. "It's okay," she said, "I know you're scared. I'm scared, too. But Adam is my friend. I love Adam." She opened her hands on her knees. "I want to help you."

The cobra swayed. The other gray stared at her. The one behind her slid its long hands around her neck.

She made an image of Adam again, then of the ruined facility, then of Wilkes shooting at her, then of her running through along an alley. She fired these off fast, one after another.

The cobra struck at her—and was suddenly a gray again, hanging in midair before her. She fought to quell her terror. The gray disappeared, but not completely. The three of them were racing around her, moving so fast through the air that they were blurs.

She got an image of Adam running, then rising into the sky in a shaft of shimmering light.

In return, she made an image of Adam in the light, then of herself in a coffin. She imagined Mike Wilkes closing the coffin with a bang.

Then she said, “Take me with you,” and imagined herself in a shaft of light, going up.

The blurring movement stopped. The condo suddenly seemed empty. Then she saw, in her mind’s eye, Mike’s Phaeton pulling up down front. He was here.

He was coming—but they were helping her! She blanked her mind as completely as she could.

Immediately, she saw a satellite photo of a small community, a big light in a field behind it. Then an image of a little boy, not the one Adam had shown her, but another child, and Adam was standing behind him. Then Adam stepped forward and went *into* the child. For a moment, they were superimposed on one another, then the child threw his head back and got this look on his face of ecstasy . . . or was he screaming? When he was quiet again, his eyes were like two headlights, with fire glowing out of them.

The vision was replaced by another one of Mike, this time in the lobby waiting for the elevator.

She made an image of him blowing her brains out, which caused something to happen, a feeling of movement, in fact, of rushing.

When she opened her eyes, the world was a blur. Then she saw the city wheeling below her, then the sky, its hard winter-blue glowing, then she heard a great, crashing noise and a building rushed up toward her.

She stopped, there were water noises—and a man was sitting in front of her. He stared up at her, his eyes bulging. “WHAT IN HELL?”

She wasn’t in her apartment, she was in a men’s room, in a closed stall, face to face with a guy sitting on a toilet. She stared down at him. He covered his midriff with his hands.

“Get out of here,” he rasped. “*Get out!*”

“Sorry, uh, sorry, I took a wrong turn.”

She opened the stall and left the men’s room as fast as she could. Behind him, she heard him yell, “*What the fuck? The fuck! Hey!*”

She was in the Greyhound station. *Thank you*, she said in her mind, *thank you from the bottom of my heart.*

She hurried to the ticket window, bought a ticket for \$25.50 cash and immediately got on the waiting bus, which was due to leave in four minutes. The windows were tinted, which was good. There were already a number of other passengers, so she felt at least somewhat safe—as long as the guy in the men’s room wasn’t going to Dayton, that is.

They had rescued her, those weird, fierce little beings, the only grays she'd ever even glimpsed except Adam. They had been waiting for her there in order to save her.

It was just awesome. Beings from another world were involved with her and they wanted her safe, and now she really began to feel better, because they were not about to be thwarted by Mike Wilkes.

They had taken her in one of their vehicles, they must have. It had seemed—well, like flying, and it had been so damn wonderful because it had saved her life, and she began to laugh and cry at the same time.

When she opened her eyes an old man was right in her face. “How’d you do that?” he asked.

“Excuse me?”

“You got in my damn toilet.”

She thought quickly. There were other passengers around. “Sir, please.”

“No, she come in my toilet. Outta nowhere! She come in my toilet.”

“I don’t know what’s going on,” she said.

The driver came back. “Sir, you’ll need to take a seat or get off the bus.”

“I was sittin’ there mindin’ my own business and all of a sudden, *wham!* How’d you do that?”

The grays obviously did not know the difference between ladies’ and men’s rooms. They’d dropped her in a place from which she could emerge without suspicion. Except, it had been the wrong one.

The driver got the old guy seated toward the front, and warned him against returning to the back of the bus. He’d just have to live with what he’d seen.

As the bus started off, Lauren leaned back and closed her eyes, her whole body filling with a delicious relief. “You helped me,” she whispered, “thank you for helping me.”

An old lady smiled at her. “He helps me, too,” she said. “Jesus helps us all, isn’t it wonderful?”

“Wonderful,” she said, “really, really wonderful.”

She had a couple hundred dollars in her wallet, so she would not leave a paper trail. As far as her apartment and possessions were concerned, until this situation was brought under control, she was not going near them again.

If Mike had the backing of the Air Force, then she couldn’t escape anyway, could she, no matter what she did? So this was the best course of action. She would surface at Wright-Pat and hope his powers were limited.

The bus was running a bit early, so she found herself presenting her regular Air Force ID at one of the guard stations of the gigantic base before eight in the evening. She was directed to the Wright-Patterson Inn, where she obtained a room. Rather than waste time and take risk, she at once called the Law Enforcement Unit and reported Colonel Michael Wilkes's assault with intent to kill on her person. She stated her location and that she was slightly injured due to a blow to the face.

She then went to the unit and filled out a complaint against Wilkes, getting more and more furious at him as she did so. The man had shot at a fellow officer. If she could manage it, she would see him in that secret Air Force detention facility he was always talking so much about, where they kept all the crooks with high-level clearances. Sonofabitch.

One thing at least: she would no longer be working for him, because his operation was over. No more Adam, no more detail. Great, as far as she was concerned. She'd had it with the whole mess. Let her get back into procurement, anything but this.

But they'd told her, three years ago, that there was no exit.

An Air Police captain came over to her. He was carrying her complaint form. "You're Colonel Lauren Glass?"

"Yes."

"Lady, Colonel Glass is a KIA."

"A KIA?"

"She died yesterday in a facility fire in another city, and I want to know what this is supposed to be about."

Her heart missed a beat. KIA? If he got that to stick, she was outside the context of the whole military infrastructure. No chance of getting him up on charges, no ability to use Air Force facilities or appeal for protection.

"Ma'am, I'm gonna need to ID you."

Did she have her credentials? Yes! She fumbled her wallet out of her purse, handed the card to him. "Excuse me," he said, taking it.

She made images of herself with a gun to her head, of herself lying in a coffin, but the grays did not respond. It was the range issue, again. Did they even know where she was?

She heard a car stop outside the guard station. She went to the front and looked out the window. An awful coldness crept into her gut as Colonel Robert Langford's tall form got out and headed her way.

Him! She had to run. She whirled. The desk officer was watching her,

his eyes narrow. Behind him was another door. She strode across the room, passing the sergeant's counter.

"That's off-limits, Colonel," he said.

She broke into a run and got out the door. Where to go now? Ted's apartment was on base, but it was a good mile away. She took off down a sidewalk, heading toward a big hangar. At least there would be people around. At least when they got her, there would be someone to remember.

Then she saw a general's jet sitting on the tarmac, its engines turning over. The stairs were down, and two officers were talking at their base. The plane was either landing or taking off.

She took a chance and went over to it. "This isn't General Martin's plane, is it?" she asked.

"General Cerner."

"Finally!" As she went aboard, they barely glanced at her, then returned to their conversation.

There were three officers in the plane, a full-bird colonel, a major, and the general. "Sir," she said saluting, "Colonel Glass. I need an urgent hitch to D.C. It's classified, sir, national security."

He looked up from his seat. "I'm reading a lotta levels of bullshit in what you just said, lady."

"Sir, it's extremely urgent."

"Who's your commanding officer?"

"Sir, I'm not at liberty to tell you that, but I can commandeer this aircraft."

"Don't give me that kind of guff. I've been in this Air Force a while, girlie. But what the hell, fellas, who wouldn't want to take boobs like these to thirty-thousand feet?"

She swallowed her outrage, managed to construct a seductive smile.

Then she noticed something. He wasn't looking at her. In fact, his eyes were practically glazed over with fear.

She turned—and there stood Colonel Langford with a pistol in his hand. "We'll take care of this," he said.

"Be my guest," the general replied.

"What in hell is going on?" the major asked.

"A prisoner is being taken into custody," Langford snarled. "Come on, Miss Jacobs." He glanced past her. "She's not even Air Force. She's pulled this hitch trick for the last time."

“My name is Lauren Glass,” she said as he marched her out of the cabin. “I am a colonel and I’ve been listed as a KIA. I am alive, General, remember that when you read her obit, Colonel Lauren Glass is alive!”

“Don’t even think about running,” Langford said when they reached the tarmac. “I’ll have the Air Police on your tail in a matter of seconds.”

She walked ahead of him.

“You’re a problem,” he said, “a very serious problem.”

She felt the gun in her back. So the stories were true. Black ops had their own special way of solving problems, and Lauren Glass, as the colonel had just said, was a problem. She thought, with a curious sort of detachment, that she had reached her last hours of life. It was a sickening, trapped moment, and yet oddly peaceful.

She had avoided marriage, and now she regretted that. She’d never felt a child in her belly, nor the pain of giving birth. She regretted that, too. It was so very odd, this feeling. Not awful at all. The end of all responsibility, the end of the need to run.

Too bad the grays couldn’t help her now. She tried sending images of her with Langford’s gun in her face, but nothing came back. Too far away.

She wondered if he would kill her here at Wright-Pat, or take her somewhere else. Maybe it was even an official killing. Probably it was. So there’d be some stark room somewhere, and a steel coffin waiting. “I’m ready,” she said. If he was planning to move her, maybe there would be a chance to escape. She might feel oddly peaceful, but if she could get away, she sure as hell would.

“It’s going to be easy, then?”

“What choice do I have? You’ve got me.”

“Yes,” he said, “I do.”

SIXTEEN

THE MOMENT HE HAD REALIZED that he'd lost not only Adam, but also the two handlers, Mike had raced back to Washington. There was only one way to fire somebody in an organization this secret. Nobody was retired. You were either actively involved in the Trust or you were dead . . . and Mike understood and agreed completely. You could not risk even a rumor getting out that mankind was on a death watch, or that there was an organization that planned to save only a precious few, or that any part of the U.S. government was involved with aliens, not when there were such dire threats associated with revealing the secret of their presence.

Mike explained to Charles Gunn how Andy and Lauren had gotten away.

"That was damn stupid."

"I don't think—"

"Andy moved fast, you couldn't help that. But we'll pull him in. The empath is another matter, Mike. You were stupid to shoot, but an asshole to miss."

"Charles—"

"Shut up, I'm thinking."

"Charles, the gray is at large."

His eyes fixed on Mike's face. His lips opened, then he closed them. He suddenly grabbed a pen and a pad of paper and started writing.

"Charles?"

The writing became scratching, then trenching, then he rose up like a tower and ripped the pad to bits. He rushed around the desk and loomed over Mike. "Goddamn you."

"Charles—"

"*Goddamn you!*" He paced, then. "I have to think."

"Do me, Charlie. Get it over with."

"Boy, that would be a pleasant way to spend an hour or so, you stupid piece of shit. I've defended you, but you are fucking incompetent. You and

that fancy house of yours, your theft that I've ignored all these years. Not to mention those special passes to the shelters that you've given your crook friends."

That would wreck him, to withdraw those bribes that were also such superb blackmail. His every defense industry contact would turn against him. He'd be a ruined man. "Charles, those people—some of them are essential —"

"The hell they are. They're gone. History. And so are you, Mike. There's no way you're getting anywhere near one of the shelters. When this planet's environment collapses, you're gonna be in the wind. You live with that, now. You live with that."

By which Charles actually meant that he had just allowed Mike to live. He had expected to die in this room, right now.

Charles asked, "Do you think Glass could be hiding Adam?"

"I went to her apartment first thing. No sign of anyone there. I think Adam's been recalled. The moment they realized that we were aware of the child, they pulled the plug."

"Because you asked the wrong question." Charles dropped down behind his desk. "They've got us in check, here."

"They always have us in check."

"We have to locate this child."

"It's in Wilton."

"You know that?"

"Crew said they were signaling him. So he could play his role."

"We've got to scorch the earth, then. Langford, Glass, Simpson, Crew—they've all got to be done. But first, find and kill that child."

"We have this Oak Road group with a grand total of six residents under the age of eighteen, so that's our target. But we can't approach them directly or we get the grays on us like a bunch of infuriated hornets. The key is to identify the right child without getting so close to him that the grays become aware of us."

"We have the children's test scores? IQ tests?"

"Unfortunately, the school they all attend doesn't do IQ tests. Too elitist or too P.C. or some damn thing. They're all bright kids. Professors' children."

"What about the public schools in the area?"

"Their gifted and talented programs have a hundred and sixty kids in

them. Highest IQ is 160. We don't know how smart the grays want their poster boy, so they're a possibility that needs checking."

"Let me ask you this, then. Do you have a plan?"

"I think the child will reveal himself to us."

"How?"

"He's got to be spectacularly bright. A freak, like."

"What if he's ordinary? We have only that tape to tell us he's going to be some kind of a genius. Maybe Crew and Simpson knew you were listening. Maybe the tape is a lie."

"Then we're already defeated, Charles."

"Do you think that?"

"I think they're going to be mighty careful and mighty ferocious. Look what's riding on him—their whole species. And ours."

Charles shrugged. "Don't tell me you're disloyal, too."

"I've been to India, I've been to Vietnam, I've see the brainless, gobbling hordes of human filth out there. No, I believe in what we're doing with every cell in my body, Charles. This little band we call the Trust, is the most noble, the most courageous, and the most important organization in human history."

Charles gave him a twinkle of a smile. "You know what Stalin did when his little commissars were too eloquent in their praise? He had them shot."

"Then do it, Charles! Get it over with!"

"I can't, Goddamn your soul. You know that I've been defending you from Henry Vorona for years. Ever since CIA saddled me with him, in fact. If I tell the others just how royally you've fucked things up, I'm gonna end up sitting on a vote of no confidence, and guess who's gonna join you in hell? No, Mike, I'd like to see you good and dead, I have to admit that, but I damn well can't, because the bullet that goes through your head goes through mine, too."

"Charles, I'm going to fix this."

"You'd better, because you are talking about the entire human species being enslaved, Mike. Because that is what this is about. Somewhere out there, they're coming. And they will do this. They will do this, Mike. Just remember one thing, we have to get that child before they change him, because if we don't, God only knows what kind of abilities and powers he's going to have."

"I need people. I need backup."

“You can’t have a damn soul!”

“Charles—”

“I can give you equipment and I can give you money, but *not people*. The second I do that, Vorona finds out and both of our throats get cut.”

Mike had assumed that he’d have a trained team of experts. But he could see Charles’s point all too clearly. Unless he fixed this, and did it quietly, they were both dead men.

“What’s your plan, Mike? I want to know your exact plan.”

“Forget Adam, forget Glass, Langford, all of them. Go for the kid now, fast, next twenty-four hours. Then worry about everything else. Use the TR to get me into Wilton with absolutely no chance of detection.”

“The grays will know you’re there.”

“Not right away. Remember, I’ve seen this mind-reading business up close for years. Distance is a big issue. They’re not going to find me until I’m physically near the kid. But that’s the one place I’ll never be.”

“You’re a sniper or what?”

“There will be no direct approach to him whatsoever. But he will be killed, Charles. Coming from me, I know it’s not worth much to you, but I do guarantee it.”

To his credit, Charles made no comment, but the expression on his face eloquently communicated his contempt for what he undoubtedly regarded as outrageous braggadocio on the part of a proven incompetent. “You know how to access the TR?”

“Yes, sir. You’ll recall that I set up the security.”

Charles turned around in his chair. The Capitol glowed in the distance, the Washington Monument beyond. “What do you think this’ll be like in a thousand years, Mike?”

“In a thousand years? If we succeed, it’ll be the holy city, the center of heaven.”

Charles said nothing more, and Mike took that as a signal to leave, for which he was very damned grateful.

He had a good plan, and if he acted quickly enough, he thought there was a reasonable chance that it would work. The important thing was to push all consequences out of his mind. His life being at stake was bad enough, but looking at the larger picture was enough to freeze a man’s soul.

As he drove to National Airport, he called his personal travel agency and booked the next civilian flight he could, which was Delta to Atlanta. He

parked in long-term parking, then went to the ticket counter and got his ticket. He bought a newspaper and went to the gate to wait until the agent arrived. He did nothing out of the ordinary.

When the agent appeared, he checked in and selected his seat.

Having set up this false trail, he then left the airport and hailed a cab, which he took to a small office building a short distance from his house. He descended into the garage, took out some keys, and started another car. This one was a Buick from the mid-eighties, nondescript compared to the Mercedes he kept here in Washington.

He drove to the Beltway, then took 95 up to Baltimore, exiting onto 695 toward Owings Mills. An hour and a half after he left the garage, he was exiting onto Painters' Mills Road. As he drove up Caves Road, he entered a more isolated area. He turned off onto an unmarked road and soon came to what appeared to be a construction zone. From here, the road appeared to be impassable. He took a right, and it turned out that what looked like brush was something quite different. The car moved through the brush and trees as if they weren't there—which, indeed, they weren't. This was a state-of-the-art holographic projection, one of the most advanced camouflage devices in the Pentagon's arsenal. The design had come from Adam. It was deployed sparingly, out of fear that the press would get wind of it. If the origin of any of these technologies was discovered, the whole deception would become unglued.

The result of this was that certain select areas of military technology were stunningly ahead of public understanding. To accomplish his purpose, he would use an array of that technology.

Central to his plan was a device that lay in a large underground hangar in these woods. Its development had taken forty years. It had cost perhaps a quarter of a trillion dollars, paid for by misuse of the gigantic criminal enterprise known officially as the "black budget" which was really a cover for making select people rich at the expense of the American taxpayer, by using national security to conceal the theft.

The TR, or Triangular Aircraft, officially designated TR-A1, had also cost the lives of scientists who had come to a fatal eureka moment. When they realized that they were working on alien technology, they became too dangerous to be allowed to live. Test pilots had died, too, perfecting its capabilities, as had engineers who had suffered mercury poisoning in the fabrication of its extraordinarily toxic power plant.

The reason for the extreme secrecy was twofold. Not only did they have to protect this device from the public, they had to protect it from the grays. They had gotten every kind of lie from Adam and Bob, most of them infinitely subtle, and as a result had gone down a thousand blind alleys and consumed literally vast wealth, indeed, so much wealth that every American citizen, for the past fifty years, had worked a fourth of his life in support of the development of technologies he wasn't even allowed to know existed, let alone gain any benefit from.

He came to a certain spot in the narrow roadway where the radio, which he had tuned to an unused frequency, suddenly began to make a faint, high-pitched sound. He stopped the car, got out, pulled back a stone that lay at the roadside, and pressed his hand against a silver disk that had been concealed beneath it. A moment later, the small hill before him opened. He drove the car in.

Inside, it was absolutely dark and silent. The only light came from a single red bulb, glowing softly. As Mike strode toward it, the outlines of an enormous object became visible immediately above his head. It was a triangle, totally black, measuring hundreds of feet on a side.

Its power plant involved the rotation of a ring of a coherent mercury plasma at extremely high speed, reducing the overall weight of the craft by 40 percent. The rest of the weight reduction was accomplished with a very old technology. The triangle had to be as large as it was because, for the rest of its lift, it relied on helium. It contained the most sophisticated surveillance and camouflage technology known, but it was not much faster than an old-fashioned dirigible.

Years ago, it had become obvious from Eamon Glass's talks with Adam and the stories told by Mr. Crew, that mankind had lost a very sophisticated civilization to a ferocious war that was fought some time around fifteen thousand years ago. The combination of the use of devastating weaponry and the rise in sea levels that had taken place when the last ice age ended twelve thousand years ago, had first pulverized and then drowned this civilization.

It lived on only in myth, most notably in the Vedas of ancient India. But there was almost enough information there, in the descriptions of Vimina aircraft, to reproduce the power plants of the distant past. Careful questioning of Adam and Bob had filled in the missing pieces of information.

Large though they were, the TRs, of which there were ten on the books and two off, were no more difficult to fly than a small general aviation

aircraft.

As Mike continued toward the faint red light, his head was just a few inches from the lower surface of the craft. The light marked the entrance, a simple hatch that was slid open by hand.

He withdrew the ladder, which gave a bit under his weight as he climbed aboard. He took the long tunnel to the flight deck, pulling himself along on a stretcher as the crew had in the old B-36 bomber.

This flight deck, though, was very different from what a bomber pilot from the fifties might have seen. It wasn't even meant to be flown by a pilot, but rather flown *in* by a reconnaissance expert. The plane all but piloted itself.

Mike used a penlight to find the code panel, and input the thirty-three-digit code that activated the craft. A moment later, its amber control panel came to life. The basic aircraft instruments were there, of course, airspeed, bank and turn, altitude. There were others though, that were not so familiar. Most of these involved the craft's extraordinary surveillance capabilities.

Mike keyed Wilton, Kentucky, into the autopilot. He pressed the three buttons that activated the plasma. Behind him, there was a distinct "pop," the loudest sound the device would ever make. The altimeter began to wind up—but not far. It was a very unusual sort of altimeter, because it could measure anything from thousands of feet to inches. The plane's operational altitude was, essentially, ground level. Unlike a cruise missile, it did not rely on comparing a picture of the terrain it was crossing to its memory. Instead, it had the intelligence and the instruments it needed to examine the terrain it was crossing, and adjust its altitude accordingly.

He watched the altimeter rise to 60 meters, then felt a slight shudder as the ship's propulsion system, which used the Earth's magnetic field, slowly began to impel it forward. It took ten minutes for him to reach top speed.

The craft sought out forests and mountains, only rarely slipping across a town, and never a city. From ten feet away, it made no sound at all.

The flight from Owings Mills to Wilton covered 433 kilometers and took just over two hours. As Mike flew, he prepared instrument after instrument, most of them gained from his own hard work managing the empaths, extracting bits and pieces of information from his grays.

Sound, in the craft, was as carefully managed as all other emissions. Even switches had been carefully damped so that pressing a button made nary a click. The fans that controlled the craft's altitude were entirely silent,

designed so that the air they emitted was always exactly the same temperature as the air they took in. Just as it had no sound signature, and at night essentially no visual signature, it also had no heat signature and no radar signature. Even the pilot's body heat was dissipated by being used in production of electricity.

The TR could fail; if the mercury plasma malfunctioned, the craft would be incinerated inside of a second. During development it had happened many times. There was never anything left, only ash drifting in the sky. In 1980 in Texas, some civilians had been close-up witnesses to one of these failures. One of them got cancer and filed a suit against the U.S. government, but the judge was prevailed upon and the case went nowhere. The civilian died soon thereafter, thankfully.

He flew on. When he was within thirty miles of Wilton, he flipped another switch, and something happened that would have awed anyone who had not expected it.

This was a technology that they had developed by analyzing the stories of a close-encounter witness called Travis Walton, whom they had also discredited in every possible way, making a national joke out of him so that the public would never be convinced by his tale.

Why the grays had taken him on a ride was not clear. But they had, and on that ride, they had made their ship disappear around him, so that he appeared to be floating in the stars. Such a capability would be extremely useful for a reconnaissance craft, and Eamon had gradually obtained from Bob knowledge of how to design materials that would change their opacity by the simple application of heat. He pressed a button and was rewarded with the apparent complete disappearance of everything around him except the control panel itself. He floated now over the broad hills of eastern Kentucky, a man alone in the night sky.

The ship was on a course that would take it directly over Oak Road. He had only to watch the world slipping by fifty feet beneath his feet. He saw horses running in the moonlight, he passed over an elegant farmhouse and barns, so close that he felt as if he could have reached down and touched a weathervane. He smelled nothing of the night air and felt nothing of the cold, because the temperature within the ship was carefully controlled. There was a heat signature, of course, but it was no greater than that of the breath of a swooping owl.

The ship's voice said in his earphone, "Two minutes."

He turned on the camouflage. This drained electrical power, but also provided an additional level of protection from notice from above and below. It consisted of thousands of tiny light-emitting diodes served by cameras on the upper and lower surfaces of the ship. From below, an observer would see the night sky under which the ship was passing. From above, the image that was projected was of the ground.

“One minute.”

He saw light ahead, winking in among the trees. Soon a small neighborhood of tract houses appeared. He stopped the ship. Now he activated the infrared sensors, trained them on the first house in the tiny development. Two adults, one registering 98.6, the other 97.9. An infant, registering 99.1.

The ship was so low that it was buffeted by gas fumes coming out of the furnace chimney. He “opened” the house by activating the whole array of surveillance instruments.

An ultrasensitive receiver read the electroencephalograms of the occupants, and provided a readout of their state, whether awake or asleep, and a level-of-awareness index. One adult was fully awake. One adult was registering mostly Alpha. Dozing, according to the computer’s interpretation. The infant was profoundly asleep.

It seemed to him that he was not likely to be dealing with an infant, because this child would surely need to be at least fairly mature by 2012.

He went to the next house. In it, he saw two adults. Deeper in the structure was another person, perhaps a small adult, perhaps an older child. The two adults were physically motionless but their minds were alert. He deployed the microphone system. He heard a familiar voice, and for a moment was shocked. How could he know somebody in that house? Who would it be?

Then he realized that it was Grissom. They were watching *CSI*.

In the basement, there was another sound, a continuous noise identified as a small electric motor. Could it be a shaver? No, it was moving over too broad an area. He visualized the movement and immediately had his answer. The person in the basement was using a model train set. Therefore, it was not a small adult, but a child.

He moved to the other two houses, then, gathering the structural plans into the computer, identifying approximate ages and sexes of the occupants.

When he was finished, he had all the humans and all the animals. He

then found the open space behind the houses that the grays had used on their revealing foray. He dropped down into it. He wanted to step on the actual ground, but he must not leave the ship unless necessary. It had been designed to allow the occupant to reconnoiter on the ground, and was intelligent enough to protect itself, even for extended periods, but still, no chances were to be taken unless they were essential.

He increased altitude to a thousand feet, then went online again. Using Expedia, he found motels in Wilton. He input the address of the local Days Inn and was carried there.

He then observed the local terrain for heights. It turned out that the top of a grain elevator was the highest point in the area. He flew until he found it, an enormous structure in the center of the small community.

He went close. There, on one of the silos, was where he would place his antenna. Nearby, he saw a field. He dropped down.

Putting the ship's remote into his pocket, he slid back along the access tunnel and climbed out. The ship would find a hiding place on its own. It would not go to altitude, but rather would hide just above the surface somewhere, probably back in the hills that surrounded the town. When he looked up, even though he knew that it was there, and not but a few feet overhead, he could not see it.

As it departed, he felt the brief wash of one of its altitude control fans.

He crossed the field, then walked into the lobby of the Days Inn.

"Hey," he said to the sleepy clerk, "got a room?"

"Yes, sir," the young man said, coming out of the tiny office where he had been watching TV. Mike had a dozen false identities to choose from. He checked in under the name of Harold A. Hill, salesman. It was one of his favorites, because nobody ever wants to talk to a salesman.

He went through the lobby and crossed a bleak courtyard to his room. He entered it, turned on the light, and used the bathroom. Naked now, he slipped into the bed.

Tomorrow morning, he would scout the town for a Radio Shack. To complete his mission, he needed a few commonly available items. He lay down and closed his eyes. He was deeply tired. Deeply, deeply tired. Curse Lauren and Andy, who were both out there in the wind doing God knew what. The grays were on the warpath and extremely dangerous.

He wished he was a damn fool salesman.

PART SIX

CHILD OF HALLOWS

Our birth is but a sleep and a forgetting:
The Soul that rises with us, our life's Star,
Hath had elsewhere its setting,
And cometh from afar:
Not in entire forgetfulness,
And not in utter nakedness,
But trailing clouds of glory do we come . . .

—WILLIAM WORDSWORTH

“Ode on Intimations of Immortality Recollected from Early
Childhood”

SEVENTEEN

CONNER HAD WAITED ON THE steps for Paulie to leave school. Usually, they would be carpooled home by Mom or Maggie, but that had obviously ended.

The thing was that Paulie, leader of the Connerbusters though he was, also remained the only real friend he'd ever had. He had to reach him somehow, and he thought that the way to do it was still through the idea of the aliens, despite what had happened. If they were real, then maybe he could contact them somehow and get them to come back, with Paulie as a witness.

It was an audacious, insane idea, but there were more than a few Web sites out there put up by folks who were doing just that, and posting video of the UFOs that had turned up. He'd communicated with one or two of them and gotten detailed instructions about how to do it using, as one of them had put it, "a flashlight, patience, and a serious interest in meeting them."

All day at school, he had kept to himself. There was nothing else he could do, not without triggering some sort of additional humiliation. As it was, everybody had gotten up from the table and moved when he sat down for lunch. He had eaten alone, ostentatiously and purposely reading a book none of them could begin to understand, *Physics from Fisher Information*, a rather basic text, actually.

He had considered going the total eccentric route, perhaps refusing to speak anything except Latin and dying his hair purple or something. But that would just justify his isolation, and he did not really want to be isolated. Faint though it might be, there remained the possibility that some girl might some day do just slightly more than run screaming when he drew near. Amy, for example. After all, they had an embarrassing past in the woods, did they not? It had, when he was ten and she was eleven, involved the revelation of body parts, back where the little stream flowed and the bluebells nodded along its banks.

He had been thinking fairly carefully this past couple of days about what actually *had* happened the other night. What did the Keltons' video really

show? The answer to that question, he thought, might be far less obvious than it seemed.

It was possible that the legendary grays of Internet fame actually were involved, but only very remotely.

Although the Search for Extraterrestrial Intelligence people claimed that the chances of finding a signal from another world was vanishingly small, that was incorrect. They were actually pretty good—about 0.4 percent a year.

He thought that, if somebody actually had appeared here from another planet, they must be desperate. It would take vast resources to cross interstellar space, and huge amounts of time. Wormholes and such were science fiction. The reason was simple: it was theoretically possible to bend space until two distant points touched, but the amount of energy necessary was unimaginable. To bend the United States until, say, Phoenix and Buffalo touched, would be child's play by comparison. Faster-than-light transmission of signals was indirectly possible using quantum-entangled particles, but the movement of structured physical objects at hyper speeds was out of the question.

So, if they were here, they had come at less than light speed, probably far less, and thus even a journey from Centauri A, the closest sun-like star, would have taken many years. Internet scuttlebut had the grays coming from Zeta Reticuli, a double star. Such a situation would make for planets with lots of seasons and some really eccentric orbits, but it wasn't completely impossible.

All of these thoughts danced in his mind even while, at another level, he considered his father's straightforward advice to confront the kids who were tormenting him. Dad was no genius, but his advice could be relied on, and Conner intended to take it.

“Paulie,” he said as he came down the steps, “hey.”

“Hey, Conner.”

“Would you like to come over?”

Paulie stopped. He stared at him like he was some kind of bizarre animal. He was flanked by two of his most unpleasant new friends, Kevin Sears and Will Heckle. “ ’Course not,” he said.

“The video's real, Paulie. We all ought to respect what it means. The event happened.”

“I wasn't there, Conner, I didn't see it.”

Conner was pleased to hear the anger and disappointment in his voice.

This was precisely what he had expected. He had taken Paulie exactly where he wanted him to go, and now he would win him back. “You know I can fix things,” he said. “Maybe I can fix that.”

“How? Build a time machine?”

“What if I could get them to come back?”

Will Heckle burst out laughing. A smiling Kevin shook his head.

“No, wait,” Paulie said. “I want to hear this.”

“I can call them,” Conner said, “with you as a witness.”

The boys were not laughing now.

“If I do it, then will you agree to cancel the Connerbusters?”

“Oh, sure. Sure, Conner.”

“Come over after supper and spend the night. You’ll meet the grays.”

“What about us? Can we meet the grays, too, little boy?”

“Not yet, Kev.”

Kevin grabbed his jacket, loomed over him. “Kevin to you.”

Conner stared right back. “Okay, Kev, I’ll make a note of that.” Finally, Kevin released him. Conner turned and went down the steps, looking for Mom’s car in the line out front.

On the way home, he wondered what the odds were of Paulie showing up. Actually, he thought, they were excellent. In fact, he would show. But the larger question was, how in the world would he get the grays to come to the party?

He also knew that he would get resistance from Mom, so he said nothing in the car. In fact, he waited until after dinner, until just before Paulie would appear.

“Incidentally, Paulie’s gonna sleep over tonight.”

She stopped clearing the kitchen table of dishes. “No, he isn’t.”

“Yes, he is, Mom. He’s been invited and he is.”

“No way, Jose.”

This did not surprise him, but he pretended that it did. “Mom, come on!”

“Conner, no! You’re groveling.”

“Mom, I have arranged a sleepover. Simple as that.”

“I don’t want any Warners in this house, not Paulie, not Amy, not the parents. Especially not Maggie and Harley. You find other friends.”

“Then let’s move into town! I’m twelve miles from the nearest other kids my age.”

“You’re so handsome when you’re mad,” she said.

“God, the condescension. All right, let’s come to a compromise. I invited Paulie. He didn’t say yes or no. If he comes, he comes.”

“Why did you invite him?”

“Because, Mother, if you diagram the social configuration of my class, you quickly discover that Paulie Warner is at the center of every major structural orbit, and, in fact, I am not going to make any headway with anybody until I have solved my relationship with him.”

She almost burst into tears, to hear him applying his genius to a problem as trivial as being accepted by some little bully with a room-temperature IQ. She went to him and hugged him. He came to her with raglike looseness, neither willing nor unwilling.

“You know something that’s going to happen in a couple of years, Conner? In a couple of years, Paulie, who looks like a little dump truck, is going to be running after girls and getting nowhere. They’re going to be all over you. You’re sweet, you’re smart, and you look like a movie star.”

“That’s then and this is now. What about my compromise? Fair?”

He’d won, of course. She couldn’t very well call the Warners and tell Paulie not to come, only to find that he hadn’t been planning to anyway.

Since last night, Conner had been using the same technique of meditation the Internet contact mavins used, and intended to make the same flashlight signals toward the sky that they did, and at the same time, 3:33 in the morning. One of them had craft showing up about 70 percent of the time. The other had never had a failure in two years, and had hundreds of hours of video, including a photo of the palm of a long, thin-fingered hand with claws pressed against a window. Conner had gotten the guy to upload a high-res file of this photo to his personal FTP site where he usually collected dissertations and things, and had analyzed it carefully.

Using a very conservative extrapolation algorithm, he had been able to bring out the fingerprints. They were absolutely remarkable in one respect: they had completely symmetrical whorls. He’d thought at once, *if a machine had fingers, they’d look like this*. The design wasn’t a digital trick, it was actually on the hand, and it was self-consistent, too. He’d measured it micrometer by micrometer. It was a real print, all right. Maybe the Keltons had gotten the first somewhat clear shot of a gray; this guy had definitely gotten the first fingerprint.

Mom and Dad were having all kinds of hush-hush conversations about the grays and about their friend Marcie Cotton, who Conner had understood

from their transparently cryptic comments to one another, had been the person screaming in the craft the other night. No matter how well they hid it, even from themselves, Conner could see that the incident had terrified his parents. Therefore, he certainly had no intention of telling them that he planned to attempt to vector the grays in.

“Just one thing,” his mom said—and he instantly anticipated one of her little zingers. “I want you guys to sleep upstairs. We don’t want you sleeping alone in the basement anymore.”

“I don’t care for those beds,” Conner said smoothly, hoping to deflect this zinger. “Also, we’re going to be doing gaming until late.”

“Not downstairs you aren’t.”

There was a crash and Paulie came banging through the back door. “It’s snowing,” he yelled. “We’re gonna be sledding in the morning plus Gestapo Torture Fest came from Games Unlimited!” He brushed past Katelyn and went pounding downstairs, Conner hurrying along behind him.

She went into the living room, where Dan had been watching the Kelton boys’ video again and again. As she walked in, he froze the blurry image of the hydrocephalic with fly eyes on the screen.

“I don’t want the boys sleeping in the basement,” she said.

“God, no.”

“And turn that damned thing off, it’s hideous.” When she sat down, he got up from the far end of the couch and moved closer to her.

Before she realized it, she’d reestablished distance between them.

He did not try again. Instead, he gestured toward the TV. “I’ve had them with me all my life. I’ve never had a seizure. It’s been memory, traumatic memory of this. Which I need you to understand, Katelyn.”

She wished he hadn’t brought it up. She wished it didn’t hurt so very much. “Understand what?”

“About Marcie! Which is connected to this.”

“That again. Dan, you screwed the woman.”

“We were made to do what we did.” As, he thought, *were you and I, my precious heart and fellow breed animal.*

“Okay, I’ll bite. If the devil made you do it, why? Why does he give a damn about you and Marcie—and me, for that matter? He’s a busy devil, he’s surely got more important things on his mind.”

“I cannot even begin to answer that question. I don’t understand any more than you do. All I can say is, if they wanted me to get tenure, then

whatever they did more than worked.”

“I should say. It got you tenure and a mistress.” She heard Conner’s voice rise downstairs as they reached some sort of crisis in the shrieking video game that Paulie had brought.

Angrily, she shook away a tear. She didn’t want to feel like this, all tragic over her marriage. She wanted to feel angry and full of righteous self-justification. She wanted to be strong enough to march off to a lawyer, if that turned out to be what her heart wanted her to do.

Dan reached out across the distance. “Hey,” he said.

She turned away.

He sighed, got up, and went into the kitchen. As she came in behind him, he drank down a glass of wine in a couple of huge gulps.

He turned, looked at her. Dear heaven, she was as beautiful as an angel. What had happened, here? He was getting really scared, he was beginning to think that he’d ruined his life by being honest with her.

He touched the thing in his ear . . . and touched, also, his memory of seeing her as a child. He looked into her eyes, saw the sorrow there.

“Oh, God, Katelyn, you’ve got to accept something. The aliens—”

“No! Shut up!”

“You shut up! You listen!” He touched his ear again. “You know what this is? This is an implant. I got it right here in this kitchen. Right here, right in front of everybody and God only knows how they did that.”

“Dan, I can’t handle this. I warn you.”

He went to her. She turned away from him. “Katelyn, they brought us together when we were children, for God’s sake!” He touched her shoulder. She pulled away. “I remember you, Katelyn, in a blue nightgown. I remember—oh, my God, they’ve been with us all our lives.”

She shook her head, waved her hand in front of her face.

At that moment, Conner burst in. “Can we take the DVD down?”

“Be my guest,” Dan said.

“Be careful with that, the Keltons’ll kill you if you mess it up.”

“We will,” Conner said as he raced off. Then he returned. “Plus, we need a flashlight.”

“A flashlight?”

“Check the snow, see if it’s stickin’!”

Dan got a flashlight out of his toolkit and gave it to him.

“Okay, listen,” Conner said to Paulie when he returned to his basement

lair. "I'm reasonably sure that they've been in here. In this room."

Paulie's eyes opened wide. "They have?"

"What's interesting is I have a screen memory—"

"Which is? Remind me."

"Paulie, you've gotta quit. Right now."

"Quit what?"

"I can hear the laughter in your voice. You've seen the video, you know this is real. So trying to laugh me out of court is wrong. And that Connerbusters thing, Paulie, it's incredibly corny. It's the sort of thing that happens in third grade, not middle school."

"It's just a joke, Conner. If you didn't take it so seriously, nobody else would, either. You gotta be more mature about these things. Kids are assholes. You get a few more years on you, you'll learn to roll with it."

Conner said, "You want me to crack that game?"

"Jesus, yes. Can you?"

"You know I can. But you have to promise me, Paulie. We've been friends a long time. All of our lives. You stop dumping on me."

"Is that why I'm here? To get begged? Because I'm not the one you need to beg. You need to beg every guy in the class, Conner, because they all think you're a complete schmedlock. The schmedlock of the century."

"Paulie, if you quit, they will quit, which you know very well."

"You got guts, I'll say that. You crack the game for me and the Connerbusters are on hold for a week. You vector in the grays, and I'm your puppy dog." He pulled a Nikon digital camera out of his backpack. "Six megapixels. Detailed pictures should be worth a fortune. So, when do they show up?" He looked at his watch.

"The exact time will be three-thirty-three," Conner said. He realized that he was setting himself up for something. The odds against him felt huge.

"Okay, then, let's synchronize watches."

"My watch—"

"Conner, everybody on planet Bell Attached knows that your Christmas watch automatically sets itself to the Naval Observatory time signal once every twelve hours. So let me rephrase that, let me synchronize my ordinary watch to your awesome one."

"Paulie, you want this watch?" He started to take it off.

"Conner, you just do not get it. I don't want your watch. If you're gonna get people off your back, you need to stop bragging and showing off."

Everybody knows you're a genius. Half the school are geniuses. Maybe you're our major genius, I don't know, but kids don't like having their faces rubbed in the kind of shit you dish out."

"I'm not understanding you."

"Like night before last. You actually tried to communicate with the aliens you thought were out there in English *and* French. That was so lame, Conner."

"I hadn't realized that."

"Well, try K-Paxian next time. I'm sure you're fluent in that, too. Now, little boy, if you're gonna crack Gestapo, crack it and I'll suck your toes."

"Conner!" Katelyn called.

"Okay! Okay! In a while."

"It's after ten."

"So, little boy, we gonna get tucked in by mommy?"

"No, we're not at your house, little boy. Come on." Conner went across the room and out under the deck. He was outside before he asked himself why he'd done this. He'd just suddenly felt like coming out.

Paulie joined him. "Wow, is it ever *snowing!* Look at this!" He danced around, then went down on his back and made an angel. He leaped up. "It's butt cold, we need our coats."

As he ran back inside, Conner pointed the flashlight upward and flicked it on and off. As he'd learned, he varied the signal, three long, three short, two long, two short. The beam revealed a whirling maelstrom of snowflakes, dancing, racing before the wind. The air was sharp with smoke and the tang of ice. Off to the west, thunder rumbled. Conner went on signaling, even though it was nowhere near 3:33, even though it felt hopeless, even though Paulie was probably right and he'd dreamed up the whole thing.

"Lame-o, Conner! I mean, you really are trying. You believe this."

"Shut up."

Paulie brushed Conner's head with his hand. "Ah, little boy's getting all covered with snow, isn't he?"

Conner stopped signaling. A light glowed around them just then. It didn't last long, but it came from above. "Oh, Jesus," Conner said. He started signaling again.

"It was lightning."

"They're here." He looked up, letting the snow pummel his face. "You guys," he whispered, "come on down."

Suddenly and without a word, Paulie took off toward the house. Then, in the distance, Conner heard the Keltons' dog Manrico set up a howl. He looked in the direction of the Keltons' place . . . and saw, standing at the edge of the yard as if they'd just come up out of the woods, three kids. They had really big heads and their eyes were terrible in the reflected light from the house. "Paulie!" Conner whispered. But Paulie was standing under the deck, as still as death "Paulie . . ."

Then he saw that they had a lantern. He looked at it, glowing in the snow, the interior flickering orange.

"Mom," he called, but it came out as a whisper. He fought to form the word. "M-o-o-mm." It stayed in his throat.

They came across the snowy lawn, sort of floating just above the ground, floating and flickering.

Conner was terrified beyond anything he'd ever thought possible. It was freezing-cold fear, a fear so deep he had not known that it could exist.

Had he been insane? Why had he done this?

The thought crossed his mind that this was yet another joke, but then he heard them, a buzzing sound like huge flies, a sound that was really, really strange, that was not of this world. They remained out in the gushing, swirling snow.

The lantern wasn't a lantern at all, it was a very black metal thing with glowing holes in it that sort of looked like eyes, and it seemed to Conner as if it was sort of alive, too. The three aliens came closer, moving swiftly and accurately now, no longer floating and flickering. They were like wolves in the snow, now, and they were clearly interested in him.

And then there was something on his shoulder, as light as if a bird had landed there. Almost too scared to move, he looked down. A hand was there, with fingers like long, thin snakes, and black claws.

EIGHTEEN

CONNER HAD TO RUN, HE had to get out of here, but then the world distorted, seeming almost to bend, and the glowing thing was right in front of his face and he was staring into the orange light inside where there were millions of glowing threads. They were just threads of light, but he couldn't look away from them, he had to keep staring.

One of the creatures pulled his shirt front up, and he felt something pushing against his chest and getting hotter and hotter and he couldn't stop it and he had to because it was burning him.

The snow swirled and lightning flashed and there was a loud snap like a wire had come down and was spitting in the yard.

Suddenly Conner realized that he was alone. He was standing in the snow and he had to get back inside because somebody was out here who should not be, and he was in danger.

He'd seen black eyes and orange light, terrible light, but the rest of it was all confused. Had he met the aliens? He wasn't sure. Or no, he was sure. He hadn't. He'd pointed the light at the sky and everything, but they hadn't shown up.

He opened the door. He walked past Paulie who, without a word, went into the bathroom and drank glass after glass of water. When he came out, he was transformed from a posturing preteen into the little boy he had been as recently as last summer. "I want to go home," he said quietly. Then he ran upstairs.

Conner ran after him.

Paulie burst into the living room. "I want to go home," he yelled.

"Paulie?" Katelyn asked.

Paulie looked toward Conner, his face soaked with tears. Conner went closer to him. "Hey, man?"

"Don't let him near me!"

Katelyn got to her feet "What in the world did you do to him, Conner?"

Conner shook his head.

“Here, come here to me, Paulie, honey. I’ve dealt with a lot of scared guys in my time, honey.” Katelyn took him by the hand. “Now, we are going into the kitchen, fellas, and guess what we’re gonna do? We are going to make a big, old-fashioned pot of hot chocolate flavored with brandy. Would you like that?”

“We have brandy?” Dan asked.

“I’m not allowed to drink.”

“This is a very tiny bit, Paulie,” Katelyn said as she drew him toward the kitchen.

“Hey, guy,” Dan said to Conner.

“Yes, Dad?”

Dan patted the couch cushion. Conner sat down beside him. “Conner, did you—no. Better way to do this. What did that to him?”

“Dunno. He was okay, then he wasn’t.”

“Did you, perhaps, have a fight? It was awfully noisy down there at one point.”

“No. No fight.”

“No, that wouldn’t make him cry. What made him cry, Conner?”

“Homesick, maybe?”

“No.”

Conner’s chest hurt. He tried to sort of move his shirt away from it to not have anything touch it.

Dan saw, and lifted it. “What’s going on here?”

“Nothing.”

“Yeah, there is. Katelyn, could you come back, please?”

Conner heard a voice, *Hello, Conner.*

“Hi.”

Dan said, “Hi what?”

Be quiet!

He started to talk, but it was like somebody had grabbed his throat from the inside.

This is real, Conner.

A coldness raced in Conner’s veins. This was somebody that was *inside* him, somebody else alive, *in him!*

“Katelyn, something’s not right here.”

Don’t tell them, Conner.

She came in.

“Look at his chest.”

“Conner, what have you boys been doing?”

Paulie had followed her. She turned to him. “Paulie, you tell me. Have you boys been playing too rough?”

“No, Mrs. Callaghan.”

“Mom?”

“Son, you’re all skinned up! You look like you’ve been sandpapered, so I want to know what you were doing.”

Conner had no way to respond. He wasn’t sure why he was hearing this voice, only that it was not being heard by anybody else.

That’s right, Conner.

Mom and Paulie returned to the kitchen, followed by Dan. Conner hesitated a moment, then hurried after them. He was trying not to be scared, because this was the real thing, this was contact. But he was not just somewhat scared, he was so scared that he was actually dizzy.

He knew what had been done to him: they had put a communications device in his chest.

Right again.

The kitchen was filling with the smell of cocoa and it seemed so wonderfully comfortable it almost made him burst into tears. He ran over and threw his arms around his mother’s waist and tried not to let Paulie hear him crying.

“What is the matter with these boys?” Katelyn asked.

“I think it’s called nervous energy. Running on fumes. When’s your bedtime, Paulie?”

“Whenever.”

“I repeat the question, Paul Warner. When is your bedtime?”

“Nine-thirty.”

“It’s already ten forty-five,” Dan said. “You must be tuckered out.”

“Conner’s an eleven o’clock guy,” Katelyn said. “But you’re tired, too, right?”

“I’m tired.”

Paulie nodded into the mug of hot chocolate that Katelyn had just poured him.

They drank their cocoa in silence, and the voice did not recur. Conner began to hope that it had been an auditory hallucination, because if contact was going to mean you had a voice inside you, that was going to take a whole

lot of getting used to.

He'd read most of his father's abnormal-psych texts, so he hoped it wasn't an early symptom of schizophrenia, the curse of the excessively intelligent. Even though that might actually be better than having an alien communications device buried in his damn chest.

He and Paulie did not argue about going to bed upstairs. There was no way that either of them were going anywhere near that basement again tonight. In fact, Conner considered proposing to Dan that they brick the thing up tomorrow and just forget about it.

After they were both in pajamas and had their teeth brushed, Paulie said, "I'm sorry about not believing you."

"About what?"

He put his arms on Conner's shoulders and pushed his lips close to his ear. "The aliens! I saw them. I saw the whole thing!"

"Forget it, Paulie."

"*Forget it?* Are you nuts! I saw aliens in your yard, man, three of them!"

"We don't know what we saw."

"Hello? You were the big believer. You were the guy who was vectoring them in."

"Maybe I made a mistake."

"Maybe you didn't."

They left it there, and soon Paulie was asleep. Conner watched the night, listened to the snow whispering on the windowpanes, and wondered how the world really worked.

There came that voice again, very quick, trembling with something like fear and something that, oddly enough, sounded to Conner like a sort of awe: *Soon you will know.*

NINETEEN

CHARLES GUNN PULLED UP TO the presidential safe house on Embassy Row. The mansion had been acquired during World War II when the Roosevelt Administration was concerned that Hitler might develop a long-range bomber and attack the White House. Successive administrations had continued to use it, and during the cold war, tunnel access had been added across the mile that separates it from the White House. Now it functioned as a very private presidential enclave, at present ostensibly owned by Washington insider Larry Prince, but actually under the control of the Secret Service.

He walked quickly to the door, which was opened as he approached. A young man in a dark suit, with an earbud in his ear and the bulge of a small machine gun under his jacket, stepped aside and let him through the metal detector. Another young man fell in ahead of them, and the three of them proceeded silently down the hall, then turned right into the president's ornate office.

The president didn't know it yet, but he was going to provide a diversion that would, hopefully, deceive the grays into looking in the wrong direction for the source of danger to their evil little child. It might well mean that the president would himself be killed, but to Charles this was of little consequence.

He was watching the news and paging through a speech. "Hey there, Chester," he said without looking up, "just give me a second, here." Then, a moment later, "Pull up a chair."

"It's Charles, sir," Charles said as he sat down.

On the wall of this office there were paintings chosen by FDR, the most spectacular being a Nicholas Poussin, *Landscape with St. John on Patmos*. As Charles knew, and as FDR had certainly known, the geometry of the painting resolved into a date: 2012. That this was the year of tribulation had been known by the secret societies that had created western civilization literally from the very beginning. The date had been handed down through

the Masonic community from the ancient Egyptian priesthood who had divined it by looking through the last, clear glass of man's old, lost science: a window into the future. This had been at Abydos in Egypt, and some of the other things they had seen had been commemorated on beams that held up the temple's roof to this day.

"So," the president finally said, "how are you gonna make me miserable today, Charles?"

"Mr. President—"

"You never come here with good news. All your good news is secret. So, hit me."

"The grays are acting against us in a major and very bizarre way."

"The grays are acting bizarre? You're kidding. I sit here astonished."

Charles had constructed his lie carefully. "Sir, they're going to do something that will reveal to the public the fact that the government's been concealing their presence for sixty years. They're going to destroy our credibility."

The president pointed a finger at his own temple.

"Exactly. They're trying to undermine the government. First, the public becomes aware that they're real. Second, people tell about their abductions. Third, it's discovered that we're helpless. Chaos follows."

The president was silent for a moment. "And, for some reason, you can't get control of this situation, which is why you're here. First, tell me why it's out of control. Second, tell me what you need."

"It's not out of control."

"Then why are you here?"

"Sir, I need a TR-A. I need to surveil in the area where this disclosure event took place."

"You have TR-A1."

"Mike Wilkes is using it. He's on detail out there now, but he needs backup."

"Okay, you've got another TR. I'll cut orders for you to have access to one. What else?"

"I need some people killed, *toute suite*."

"Just do what you gotta do."

"You need to be aware that one of them is Mr. Crew."

"Oh, fuck."

"Exactly. Our friend from the beyond is not our friend."

“He’s—what’s he done?”

“He’s giving the grays support.”

“Next.”

“I need one other thing.”

“Hit me.”

Charles smiled. “I don’t want to hit you. I want you to hit Wilton, Kentucky, with an earthquake. Enough to disrupt the place and reduce the college that’s there to rubble.”

The president stared at him for some little time. “Why?” he asked at last.

“We need a diversion so that we can clean up all the principles. We need it to look accidental. All the folks who were present during the disclosure event.”

“I see.” He looked down at the top of his desk. This time, his silence extended even longer. When he spoke, his voice was soft with what Charles knew must be pain. “You know, it feels like the best day in your life when you walk for the first time into the White House as president. President of the United States—wow, and wow again. Then you find out the secrets, and you spend the rest of your life in mourning.”

“Mr. President, this will be a very localized hit. It’s not going to activate any fault lines, nothing like that. We’ll see significant disruption and a few deaths, obviously. It will be a cover for us to sterilize the area. We’ll confiscate all original video, and deal with the people who were firsthand witnesses. We have assets already at work who will get a local physics professor who saw the thing to debunk it. Our media people will see to it that his message gets spread far and wide. But the damage and the deaths will be the minimum necessary, let me assure you of that. I feel the same way you do about the American people, of course.”

“You’re assuring me that this will not do any more than the minimum damage necessary?”

“Absolutely. It will be very precisely contained. We’ll have a TR directing the pulses from the immediate vicinity of the target.”

“And the grays are not going to react adversely? That is one limb I sure as hell don’t want to go out on.”

“Sir, again, there is no way. They are not going to be able to connect the dots, as it were.”

“I’ll redeploy the scalar weapon.”

“Thank you, sir. I’ll call you when I need it fired.”

God only knew what the grays would do to the president after he unleashed a scalar pulse that devastated the whole center of the United States and threw all of their plans awry. One thing was certain, Charles planned to stay far, far away from this particular moron after he pulled that particular trigger.

“I have a state dinner in an hour. I gotta go over to the rathole and put on my monkey suit, and spend the evening with the prime minister of Thailand—whose name I will never, ever learn to pronounce—who is here to whine at me about some damn thing or other.”

He stood up. The interview was at an end.

MIKE WILKES LAY IN HIS motel room trying to do anything except worry about the next few days. He had a difficult, complex task, and if the grays detected him, he was going to be something worse than dead meat. Over the years, they’d found bodies of people who had been attacked by the grays, mostly airmen who’d gone too close in the early days, when Truman was still trying to shoot them out of the sky.

They would have their lips cut off, their eyes and tongues gouged out, and their genitals removed. There would generally be seawater in their lungs, no matter where the bodies were found. The grays would cut them up, drown them, then leave them as warnings. The grays could very definitely be crossed, and this particular action was certain to qualify.

He really did not feel so comfortable right now, sitting in this dismal little hole of a room and, frankly, waiting to start getting cut to pieces by somebody he couldn’t even see. He’d long held that the grays couldn’t read minds beyond a few feet, and that they had trouble even understanding what was going on in the human mind. But lying here on this bug-ridden bed watching Jay Leno wish he could suck any part of his guest, Drew Barrymore, he feared that the opposite might be true.

His only chance was speed. If he could get this done by tomorrow night, he could be back in D.C. by noon on Wednesday, and maybe he would be okay. *Maybe.*

AT ALFRED AFB, THE FLIGHT line was being used for foul-weather training runs, and the sound of engines being fired up and jets screaming off into the night could be heard clearly in the disused office block where Lauren Glass and Rob Langford had been together for hours. Since he had caught up

with her last night, he had not let her out of his sight.

And now that she'd understood that there were two opposing groups within the Air Force, she was glad that she had ended up with Rob. She had never liked Colonel Wilkes, and had not been surprised to discover the danger he posed to her.

She sat across from Rob in the office, watching the snow sift past the windows. She was exhausted, and she was hoping that he would soon let her rest.

He remained formal and distant, though, and showed no sign of either becoming more at ease or of offering her a place to sleep.

She wished it was not so. He was a lovely man, handsome in a way that made her want him, simply and frankly. His eyes were gray and intense, but also had a sort of wide-open look to them, as if he was as friendly as he was dedicated. They were the eyes of somebody who worked hard, but, she thought, also liked to have fun.

He did not trust her. There was a secret he wanted to tell her, but he was wary. If he decided that she was the enemy, what then?

She knew what then. She just didn't want to think about it.

"Tell me again about your relationship with Adam," he asked. In all these hours, she had not refused to answer a question, no matter how often he had repeated it. She knew this interrogation technique. She would let him use it. She would cooperate fully.

"I've been with somebody who shared the life of my soul," she said. "I don't think he was a predator like Mike said. Losing him has left a hole in my life, almost as bad as when my dad died."

"That's not what you said the last time."

"I'm being creative."

What you said was, "They aren't predators, but I think they're missing something they know we have, and they're trying to get it."

Rob could not take his eyes off Lauren Glass. It wasn't just her beauty, it was the trembling, delicate play of emotions in her eyes as she spoke about Adam. He could see that the love was genuine, entirely so. But there was also something furtive about Lauren, as if, on some level, she might be lying to herself, and might at least sense that.

This long, repetitive interrogation was leading to a judgement. When he was finished with it, he would draw his conclusions and her life would either continue or it would not. He wondered if she knew, decided to assume that

she did. “So tell me, are the grays a danger to us? How do you feel about that?”

“I guess I miss Adam more because I know he’s somewhere. If he’d died in the fire, that would have been closure, you know.” She fell silent.

“That didn’t answer my question.”

“It did, indirectly. If you want a precise answer, I have never been able to figure out exactly what the grays are here for, so it’s pretty hard for me to tell if they’re a danger. I mean, they look like aliens. God knows, they act like it. But I’ve seen the Bob autopsies. They’re partly biological and partly manufactured, and they have no brain as we know it. Just all those threads of glass in the head. But far, far fewer neurons than we have. So why do they think so well? We don’t know. And since we can’t say what they are, we also can’t assign motive. Those are my thoughts, anyway.”

He watched her. He didn’t know exactly what he was waiting for—perhaps for some mistake, the nature of which would only reveal itself when she made it. Potentially at least, this woman could play an important role. He had no doubt that the grays had maneuvered her very neatly out of Wilkes’s hands and into his, and he had understood that it was so that she could perform a function with the child. *Teaching*, he thought.

She asked him, “Listen, do you know anything about them? Like, where they’re from? I’ve always asked Adam about that but, you know, he doesn’t tell you much.”

She wasn’t afraid of him, and that was good. “We don’t know anything about where they’re from. We do know that there are a lot of them out there, and they’re on their way here.”

“So the DNA thing is true?”

“You know about that?”

She nodded. “Mike told me that they’ve used up their DNA and they want ours.”

“That’s part of it.”

“So this is the reconnaissance element of an invasion force and we should fear them.”

“I didn’t say that. I think they may also be our only chance of avoiding extinction.”

Her lovely mouth opened. The tip of her tongue, a soft, pink pearl, ran along her lips and withdrew. “Are you—uh . . . no.” She shook her head. “Wow. That’s big.”

“The calculations are correct. There’s going to be a tremendous environmental breakdown. In fact, it’s been building for eons. We’re at the climax.”

She sat there, staring at him.

“Lauren?”

“What about babies?”

He shook his head. “Nobody makes it . . . except your friend Mike and his outfit. Have you ever heard of the Trust?”

“No.”

“The way they’ve got it set up, about a million people will survive, chosen by the Trust—Mike and his group.”

“But then the grays will get them. They’ll have gained nothing.”

“That’s not how it works. We have reason to believe—to know—that the grays will give up on us unless there are billions of us alive. Smaller numbers will be of no use to them. The reason that Adam left when he did is that something has come to crisis, and Adam is apparently involved. Man and the grays are both in danger of extinction, and they’re trying to save us all. Your boss and his friends are trying to prevent that so the grays will go away and leave the Earth to their million elite.”

He watched her thinking, saw the pain in her eyes, the shock . . . saw a young woman’s face reflect fear for children who had not yet been born. “What happens . . . if the grays get their way?”

“Lauren, a very long time ago, there was a war on this Earth. A great civilization fell. When it did, we lost our knowledge of how physics really works. We set off down a road of ignorance that’s led to where we are now: all six billion of us trapped on an overburdened and dying planet. Meantime, the grays are so ancient that they’ve used up their DNA. Without each other, both species go extinct. They’re looking for a sort of marriage: they get access to our youthful DNA, we get access to their brilliant minds. Everybody survives.”

“But how? What happens?”

“Lauren, it’s my growing belief that you are one of the most critical human beings now alive on this planet, because you are a big part of the answer to that question.”

Suddenly, she looked every inch the soldier. Her eyes flashed. Rob thought, as always, that the grays had chosen well. She would be able to do this. He made his decision about her, after all these hours, in that split second.

The grays had given her to him so she could be the child's empath, it was the only explanation that made any sense. "You'll be a sort of teacher, Lauren. An interpreter, if you will."

"Of who? Of what?"

"I don't want to be mysterious, but it's best that we let this unfold in its own time."

"That's hard."

"So be it, duty is duty. I have one further question. Do you know how to hide? I mean, on a trained, professional level?"

"Why in the world should I hide? Colonel Wilkes had no right to do what he did, you said that yourself. He's up on charges."

"He's also very powerful. More powerful by far than we are. He's dangerous, Lauren. I hope you understand that."

"He's trying to kill me, of course I understand it! But I have no idea how to hide."

"You got this far. That's saying something. A hell of a lot, in fact."

"If I'm a KIA, then I have no Air Force standing. If I'm already dead, he can kill me without fear of penalty."

"We're going to hide you, Lauren."

"I wish the grays were here."

"Keep trying to contact them."

When they went outside, the snow of earlier had stopped. The base was very quiet, the flight line now shut down.

She noticed that he moved very quickly, striding across the base to the carpool. He had a car of his own, but he requisitioned a staff vehicle instead. "This is part of staying hidden," he said. "I'll exchange this for another staff vehicle after I drop you off."

He took her to a Days Inn, which appeared to be about the only motel in this small town.

Thus it was that Lauren ended up in the room next door to Mike Wilkes, an event that had not been orchestrated by the grays, but was not entirely chance, either. Rather it emerged out of the fates of both species, human and gray, as they rode the dark rails of their destinies.

Mike heard voices next door, a man and a woman. He took no notice.

Rob wanted to stay with Lauren—he told himself, to protect her. But he had work to do, because if he didn't find Wilkes, not only was Lauren going to be in trouble, the rest of this thing was going to come apart. He could not

imagine the consequences if the grays were thwarted, dared not even think about what might happen.

As he drove back to his office, Mike Wilkes and Lauren Glass both lay on their beds unable to even think of sleeping, their heads separated by just six inches of drywall. Lauren's mind whirled with the astonishing secrets she had learned, and, as she sank into exhaustion, also with the image of Colonel Rob Langford, who appeared to her as a sort of angel, powerful and good and strong enough to take her the way she loved to be taken, and give her the babies her whole heart and soul told her that the future needed.

Mike would doze for a moment, then see Adam looming up, his insect eyes glaring. Then he would start awake and toss and turn, and nuzzle his gun close to his side.

Far overhead, in a sky that had cleared magnificently, strange stars hung over the town. The Three Thieves had been joined by Adam, and the first phase had been accomplished. They were counting the hours, now, the minutes, the seconds, the nanoseconds until they acted again, and Adam entered Conner, and became part of him, and either it worked or it did not.

It was an amazing time, truly, with six billion human lives and six billion gray lives hanging in the balance, in the quiet of a little town, in a dark corner of a small state, in a strange and faraway place called Earth.

PART SEVEN

LOST LAND

There was a child went forth every day,
And the first object he look'd upon, that object he became,
And that object became part of him for the day, or a certain part of the
day,
Or for many years, or stretching cycles of years.

—WALT WHITMAN

“There Was a Child Went Forth”

TWENTY

CONNER AND PAULIE WOKE UP late and had to rush to get to school. When Paulie saw Conner's mixture of amaranth flakes, wheat germ, and unsweetened live-culture yogurt, he did not ask for an explanation, but gratefully ate the bacon and eggs that Dan, wearing only green boxer shorts and huge, fluffy slippers, provided to him. He was fascinated to watch Conner eat what looked like upchuck.

Conner had called in aliens, which was damn amazing. But now here he was gobbling down this fantastically geekish food. Nobody could eat like this and get away with it. Paulie had an obligation to uphold the reputation of Bell Attached as a cool school.

"So, what's your lunch?" he asked Conner. They'd stop by his house to pick up his, which would be Cheetos, a ham sandwich, and a power bar.

"My lunch?" He went over to a little plastic greenhouse that was sitting on the kitchen counter. "Ah, excellent. *Sprouting* alfalfa, I'm happy to say. Some organic hummus, which is really pretty delicious if you'd like to share, buddy."

Aliens or not, Paulie saw that the Connerbusters had to continue.

"Sounds great, but I've got my dumb old ham sandwich waiting for me at home."

Dan listened to the boys with only half an ear. Conner had somehow managed to bring this off, it appeared. He was more socially resourceful, then, than he seemed. All to the good.

During his own wakeful and uneasy night, Dan had made a decision. Once he was tenured, he was going to do the unthinkable. He was going to circulate his resume, and he was going to concentrate exclusively on schools in large cities far from here. An untenured professor was an academic beggar. But a man operating from tenure was more significant, even if he came from the lower ranks of colleges.

The reason he was going to do this was that he wanted to get his family as far from open spaces and dark, abandoned nights as he could. Preferably,

he would raise his remarkable boy in a Manhattan tower, some place like that. Conner was vulnerable, and Dan's instinct was that moving to a more populated area would protect him.

As for Katelyn, she was in the process of putting Marcie behind her. She dressed for her morning round of classes while listening to the males crashing around downstairs. She would not have believed Conner's skill in recapturing Paulie. She'd been furious with him last night, but now she was proud of her son.

She hurried downstairs to be in time to give her men good-bye kisses—accepted with dear brusqueness by her son, with hopeful eyes by her husband.

She let him hug her. This family was her responsibility and her achievement. She was not going to let it go awry simply because he'd done something foolish and she felt humiliated. "Men are fools," her mom had said, "expect the worst." As, indeed, her dad had been, disappearing on them the way he had, effectively orphaning her and widowing Mom.

So far, her mother's advice had never been wrong.

AT THE DAYS INN, LAUREN Glass was awakened by a tapping on her door. She was shocked, then frightened. Then she remembered the code that Rob had given her, and recognized the pattern of taps. As if a motel room door would keep out Mike Wilkes or whatever goons he might send.

She still had no clothes but what she'd been wearing when Mike had attacked her, so she went into the bathroom and wrapped herself in a towel before cracking the door.

"What time is it?"

"Six-fifty. We've got to get started."

"What are we doing?"

"Trying to figure out where the kid is, if he's really here, or if this is some kind of a feint designed to throw Wilkes off, in which case we can concentrate on the issue of you. But we need to solve the child question first."

His life before hers, that was clear enough. "The grays aren't protecting this child?"

"We're not in communication with the grays anymore. As you know."

"I do indeed. And I have to tell you, I just don't see them as really understanding how jeopardy functions in our society. They know how the

brain works, but I don't think they understand reality the same way we do. We need to assume that they're going to be blindsided if this child is attacked."

MIKE WILKES WAS RETURNING TO the motel from the early run he took every day when he saw, from a distance of about a quarter of a mile, two people get into a USAF motor pool car in the parking lot and drive away. A man and a woman, but too far away to see their faces. He noted that they'd been parked directly in front of his room.

He decided that some sort of Air Force investigative unit must have been activated, no doubt because of what had happened last night, when Lauren Glass had appeared at Wright-Pat after he'd listed her as KIA.

He put in a cell phone call to Charles. "Hey there, sorry I'm so early. Yeah, it went fine—at least, the trip was fine. Look, there are a couple of officers in mufti sniffing around. I haven't gotten a close look at them, but I have the feeling that they're an arrest team. I need that handled, Charles."

He hung up quickly and did what he now had to do with his cell phone, which was to take out the battery and throw the whole instrument in a ditch. You might as well paint yourself purple as carry one of these things. If you had a cell phone, turned on or turned off, they could track you from twenty-five thousand miles overhead with the WatchStar satellite.

He had probably a dozen cover identities. He didn't even remember them all. Some of them were essentially perfect, provided to him by the Defense Intelligence Agency. They would stand up to the most rigorous scrutiny. Others, thrown together as needed over the years, were less reliable. But all except two of them were on file somewhere within the U.S. government.

So, at the moment, he had only the two to choose from. He decided to stay with the salesman he'd used last night. He found a gas station, went in, and asked the attendant for directions to the nearest rental car agency. He had about twelve hours to perform a whole complex sequence of actions, then the night to do the really challenging work.

The Three Thieves watched Conner leave home and be driven to school. So far, there had been no threat against him. They wanted to be closer to Conner even than the collective demanded. He was their creation, too, and his mind was like a garden of jewels. They wanted to partake of his rich feelings, but they dared not, he was too precious to disturb in any way.

Because, as a species, they were so close to death, the grays were particularly terrified of it. Their main body was alone in the immensity of space, no longer protected by a home planet and a parent star, their own having long since perished as victims to time. They traveled now in an engineered world on what many considered a hopeless quest, and their collective mind dreamed of oblivion, and worried about it, and clung.

The Thieves had spent much of the night hanging over the town, listening to the people they could hear through implants, trying to ascertain if any of them might seek to harm their treasure.

Last night, they had carried out the instructions of the collective and prepared Conner to receive the extraordinary implant that was going to be given to him.

The fragment of the collective the humans called Adam had been assigned to man some years ago, with the hope that Adam, through exposure to them, would evolve structures in his mind that would enable him to do something that no gray had ever done before—indeed, that was only an idea, a theory, perhaps a hope and maybe a forlorn one. They wanted him to meld into the boy, in effect, to implant his entire being into Conner and become part of him.

Now Adam lay waiting in an empty barn, on the floor of a disused horse stall. Later, when darkness fell, he would complete his mission. Death was in this for him, but a very strange sort of death. It would not be the oblivion that was at the center of the long, complicated drama that obsessed the collective, but rather the surrender of self in a sort of living death. Once his thoughts and knowledge became part of Conner, he believed that he would disappear entirely.

He listened to the dripping of the old barn and the rustle of beetles in the hay, and dreamed formless, uneasy dreams.

The Three Thieves were fascinated and horrified by what Adam was being called upon to do. Like every gray, in the privacy of the self, they regarded it with horror. Superficially, though, they were grateful both that he was trying and that they didn't have to.

The grays in the scout group had various human genes, this and that, whatever they'd been able to use, and were much healthier than the ones in the main body. The Three Thieves, for example, had human blood, vivid with life, not the dank artificial goo that sustained most of those in the main body. They had taken this blood and adapted their bodies to it, and used it now as

their own. It made them quicker, smarter, and also, they thought, more able to understand man.

The Three Thieves watched Conner from above as he moved about in his school. They wanted to get closer, but could not go into a crowd and remain invisible. They could lock their movements to no more than two or three pairs of eyes. So they could not enter his school, they could only watch. This was why grays worked at night, when people were alone.

CONNER HAD SLEPT A RESTLESS, frightened night, and now sat in history class bored senseless because he had realized that his teacher did not understand the events in the Napoleonic Wars that he was teaching. The French loss of the Battle of Borodino in 1812 had led inevitably to the political structure of modern Europe, and discussing the way that had happened would have been interesting. Instead, he had to listen to stupefying trivia about General Kutuzov's bad feet and Napoleon's good lunch.

His chest hurt. He remembered some kind of fire, but he had not been burned. He knew he had seen the grays, but it all now seemed curiously unreal, like it had happened to somebody else, or not happened at all.

This disturbed him. He knew that he had seen them. He remembered them, though, in the unstable way that you remember a dream. He understood that this was because the experience had been so strange, but it still troubled him. He wanted these memories. He knew that the grays were here for a reason and they were obviously interested in him. But what was the reason, and why him?

At the ten-fifteen break, he caught up with Paulie before he had reached the protection of Kevin and Will. "Do you still remember?" he asked.

Paulie stopped opening the combination on his locker. He stared down at his feet. "Yeah," he said in a low voice.

"Paulie, I'm scared."

"I wasn't when we got up, but I am now."

"Yeah, the same thing's happening to me. I don't want to go home. I don't want to be there at night."

Paulie looked at him, his eyes hollow. "I was gonna restart the busters," he said, "but I'm not. You're having too rough a time. But I don't want us to be together again, Conner. I don't want ever to see those things again, not ever."

"I can't handle it, either!"

“Yeah, you can. You’re as smart as any alien. That’s why they’re after you, I think. Because you *can* handle it.”

Conner’s throat closed and tears welled in his eyes. “No, I can’t,” he said.

FAR ABOVE, THE THREE THIEVES felt his fear, and drew closer together in their own disquiet. What was the matter with him? Was he in danger? Helplessly, they watched the purple fear flowing up out of the shimmering haze of feelings that hung over the school like a many-colored smoke. They could tell it belonged to Conner by listening to it. They could also talk to him, but dared not. Last night, they had done something with him that the grays had never before managed with human beings, which was to form words in his mind that he could hear and respond to—words, not images.

They dared not do that now, because it might panic him and that must not happen.

Conner went to his physics section at the college, hurrying along the snowy walk that linked Bell Attached to the campus, and wishing that he was safe inside some building and not exposed to the watchful, dangerous sky.

TWENTY-ONE

THE SUN WAS HIGH IN a thin haze by the time Mike reached the Enterprise rental car agency that was tucked between the Wal-Mart and something called Goober's Used Trucks. He considered buying a truck instead of renting a car, but he didn't have but about six hundred dollars in his wallet. Too bad, a purchased vehicle would be a hell of a lot more secure than a rental, which any expert could trace, no matter what sort of identity he used.

"I'd like a car, please," he said. He pulled out the Harry Hill driver's license and credit card.

"Missouri," the agent said, looking at the license.

"Yes, sir. Here trying to sell the college on some new band instruments."

"Well, good luck. Pardon my French, but they're tighter than a witch's tit over there. You want a Grand Am?"

"A Grand Am is good."

"Looks like we're gonna get some serious weather tonight. If you want, I've got a Volvo. It's three-sixty a week. Front-wheel drive might be useful, though."

This was certainly true. "Yeah," he said looking at the sky. "It sure might." He took the Volvo.

In his top pocket was the remote control that would summon the triangle, which was laying by in some concealed draw somewhere in the hills. The trouble was, it connected through the MilStar communications satellite, and the second he used it, whoever was looking for him would know both where he was and where the triangle was.

Once he had the car, he went through a drive-through and got some food. It was too dangerous to stop and eat, lest some sort of horrible serendipity expose him to those two investigators. Professionalism in a situation like this was defined by attention to detail. He also knew from long experience that going without food was a mistake when you were dealing with complex and stressful issues.

AIR FORCE CHIEF OF STAFF Samuel Gold was ushered into the presidential executive office next to the Oval, which was open. No matter how often he passed near that room, he was always inspired by its history. No matter which president happened to be sitting at that desk, the power of the office was so intense that it was like a kind of scent around them all. Gold saw the presidency of the United States as the greatest governmental institution ever devised to expand human freedom and happiness. So he was especially concerned about this order he had come to discuss.

“Sir,” he began, “I won’t take up but five minutes of your time. I am requesting confirmation of an order received at oh-nine-hundred today, directing—”

“I know the order,” the president said. “You’re to prepare to fire the scalar weapon.”

“Yes, sir! I just—sir, what you may not know is that this weapon is not stable. It’s still in development.”

“The tests have worked pretty well.”

“Yes, sir. But you’re going to fire it into the New Madrid fault line.”

“Oh?”

“Mr. President, this thing is going to devastate the entire central United States. You might see half a million deaths and trillions of dollars in damage. Sir, if I may ask, why do you need this?”

“General Gold, you can’t ask. But I do want you to put a hold on that order until further notice.”

“Yes, sir, thank you, sir.”

“Thank you for coming in.”

Gold’s thick neck flushed. He went to his feet, saluted, turned, and stiffly left the room. The president watched until the door was closed, then called for his next meeting to be delayed. He went out into the Rose Garden, bleak in winter, and stood a long time alone and in silence. To slow his pounding heart and damp his rage, he sucked long, deep breaths. And it passed, and he returned to his work.

MIKE WILKES’S NEXT STOP WAS Bell Attached School. They were all college families on Oak Road, so he could be reasonably sure that the children attended Bell, which went from kindergarten through high school. He wasn’t concerned about the Jeffers infant. The grays needed their instrument to be ready by 2012, not in twenty years. That left the two Kelton

boys, Paul Warner and his sister Amy, and Conner Callaghan. There was a fair chance that he'd find his candidate among these children. If not, then he'd expand his search. He would not fail, that was unthinkable.

The school was housed in two elegant old redbrick structures on the edge of the Bell College campus. The place was certainly beautiful, with its tall white columns and broad sports field behind the main complex. As he walked up the long sidewalk to the main entrance, he reached in his side pocket and turned on his Palm Pilot. Tucked in beside it was the remote that would call the triangle.

Now the Palm would record the emissions of any computer in any room he entered. He would be able to access that computer again from the parking lot. If they used paper files, he'd find a way to physically invade them.

He had held the belief for many years that a person with sufficient training and resources quite simply could not be thwarted. Today, he would put that theory to the test.

As school was in session, the doors were locked. He identified himself over the intercom as "Dr. Wenders," interested in enrolling his children in the school.

He was admitted by a student volunteer and led to the principal's office. Mary Childs was a quick-voiced woman, big and ready to smile.

"Dr. Wenders," she said, thrusting out her hand. "I thought I knew everybody on the faculty."

"I'm not on the faculty just yet. I'm considering an offer, so I'm trying to get the lay of the land."

"Oh, okay. How can I help you?"

"My son is a rather special case."

"All right."

"He's extremely bright."

"So is everybody here. The whole school is a gifted-and-talented program, essentially."

"At nine, Jamie devised a muon detector that won a Westinghouse commendation. His IQ is over two hundred. As you know, even in a very accelerated program, students like this can pose some special challenges."

"We have such students."

"I'm surprised to hear that. They're relatively rare."

"Oh, we have one or two."

"That's very reassuring. How do you approach their needs, if I may

ask?”

“Certainly.” She turned aside and began typing into her computer. “Here,” she said, “we devise special enrichment programs to address the needs and strengths of each child.”

“Could I see such a program, something you’ve developed for a two-hundred-plus student?”

“We don’t actually do IQ tests, but there is a student who we’ve identified as hyperintelligent, and we’ve devised a special program for him.”

“Could I see that, please?”

“Well, I can show you the program itself, I think—just a minute, let’s see if I can print out his curriculum without his identity. Yeah—no, it’s not gonna let me do that. Here, I’ll read it.”

As she read off a list of the special tutoring, the accelerated reading program, the various high school and college language, physics, and math classes the child was attending, and his grade-point levels, Mike knew that he had almost certainly identified his kid. If he was also among the Oak Road families, then it was final.

“That’s certainly very impressive.”

“It’s an advantage that we’ve got the college right here, of course. His college-level courses are just a short walk away.”

That little slip told him that it wasn’t a girl. Mary Childs was easy to handle. “That’s a very impressive program. I don’t think my son’s in as good a situation now.”

“Where are you, if I may ask?”

Here was a chance to work his list a little more. He chose the professor with the most candidate children. His response rolled out smoothly. “I’m at Mabry in California. I’m in history.”

“Then you know John Kelton, our department head.”

“I certainly do. He sent me over here, in fact. But he didn’t say anything about his boys being like my son.”

“No. But we do have one actively matriculated. That program is in current use, I can assure you.”

Another two off the list. Nice. That left Paul and Amy Warner and Conner Callaghan among the Oak Road possibilities. But the information had come at a cost: at any time, this woman might mention “Dr. Wenders” to John Kelton. Probably, it would amount to nothing more than a moment of confusion between them, but if it went further, it could be dangerous. “I

haven't actually resigned Mabry yet, so if you don't mind . . ."

"Of course, I understand perfectly. Not a word."

"May I take a tour? Just look in on a few classes? We'll be in middle school."

She conducted him through their science lab first. Among the things it contained was a truly elaborate tangle of lab glass, with three retorts bubbling happily away. "Oh, boy," she said, striding over to the rig. "This should not be left on unattended." She looked quickly around the lab. "Conner?"

Silence.

"That boy, he's always doing this sort of thing. This is supposed to measure the body burden for some-odd-thousand pollutants found in common foodstuffs. But he can't just leave Bunsen burners on like this."

"This is your super-gifted one?"

She laughed. "Please keep *my* confidence, too!"

"Of course."

"The Callaghans have their hands full with this one. He's absolutely awesome. But this experiment's going to have to be moved to Science Hall, we can't have this in our lab anymore. Look at some of that glass!"

"I've never seen anything quite like it."

"Oh, I'm sure it separates each molecule into a different container or something. Probably has five original inventions floating around in there. *And* he speaks French, German, and Spanish and, God love him, Cantonese."

"He must annoy the other students."

"Let's put it this way. If yours comes in, he will be eternally grateful to you for a companion who runs at the same speed."

"My son isn't in this kind of overdrive, but he's close enough to where I can guess that it'll be a relief for both of them." He glanced at his watch. "I'm off to see the libraries," he said. "I want to thank you for your help. You've moved Bell to the top of my list."

"Which is where it darned well should be. We're the best little overlooked and ignored college in the United States."

In other words, a perfect backwater for the grays to hide their bright little baby, Conner Callaghan. On the way back to her office, he said, "I'm seeing a rather high class density."

"I don't think so."

"That class back there—I saw about thirty kids."

"Where?"

“Back opposite the lab.”

She shook her head. “Let’s check that out.” She went into her office and did just what he needed: called up a class list. “Nope. Twenty-two in sixth-grade English B. And that’s high for us. We try to stay around eighteen.”

Back in his car, he opened the Palm and tapped the screen a few times. He was out of Wi-Fi range, so he attached the antenna to the Palm and was soon looking at her computer’s desktop. The class list was still there. He downloaded it to his Palm’s memory.

He had his weapon, now, as well, in the form of that list. Armed with it, he would not need to go near Oak Road to carry out his plan, nor would he need to be anywhere near Conner Callaghan when he died, nor would it appear to be an assassination.

But he would go to Oak Road. Two could play the gray’s lying game, and he planned to trick them into believing that he had bought into their deception. He knew that Conner Callaghan and Paul Warner were in middle school, and that the description given to Lauren was of a high school student. That meant that it was one of the Kelton boys. So Mike would enter the Kelton house and only the Kelton house. The grays would think that he had swallowed their bait.

What he was going to do there and elsewhere in the community did not involve directly killing anybody. Nor was the process in any way extracted from the grays. It had been invented during World War II, in fact, by a Dr. Antonio Krause, who had brought it from Auschwitz to Dr. Hubertus Strughold’s operation in Texas as part of Operation Paperclip in 1947.

By now, it was part of CIA routine. Field-tested, reliable as rain. The only difference between what he had to do and how a field agent might function was that he didn’t have a neat little surgical kit and would have to devise his own.

He drove down to the county seat. He needed a good map of the community, as well as the large property that surrounded the Oak Road development, in addition to a look at the plans of the houses.

By the time he reached Somersburg, the thin light had gone. The sky was dull now, the sun pallid. The air had that empty coldness that portends a blizzard. He was glad of the car he’d chosen. A lot of this work had to be done tonight, and he absolutely could not get stuck, not at any point.

He went into the small county records office, and up to a clerk who sat behind a counter playing Texas Hold ’Em on a computer. He froze his screen

and looked up.

“Any luck?” Mike asked with a smile.

The clerk raised his eyebrows as if to say that yes, he was having some luck, which meant only one thing: he was having no luck. “What can I do you for?”

“I’ve seen a large farm out Oak Road east of the town, and—”

“One, that’s the Niederdorfer farm. Two, they aren’t sellers.”

“I’d still like to take a look at the plat, if I may.”

The clerk got up and came back with a large black record book. Mike took it to one of the three tables in the room and opened it. He familiarized himself with the layout of the farm, and noted down the longitude and latitude. In the car, he would use his Palm Pilot to go online and get a topo map. Unlike a cell phone, a Palm Pilot could not be specifically identified just by using it in a wireless context, as long as it was effectively firewall protected, which his was.

He then went to the pages that contained the little Oak Road development. He copied the plat numbers of each property, then went back to the clerk and asked for the blueprints of the houses.

“You looking to buy?”

“Not sure. I want to see what kind of construction I’m looking at in the area.” This office was too small and this man was too inquisitive. He would remember every detail of Mike’s visit, which was really damned unfortunate.

He finished drawing a diagram of the Kelton place, then returned the book. “I’m looking at the wrong area. Is there an Oak *Street* in Wilton, maybe?”

The clerk consulted a map of the community on the wall. “No, not up there.”

“Well, thank you then.” He cursed himself as he left. This had been sloppy. His problem was that he was too used to power.

He sat in his car, letting the Palm look for a network. Sure enough, it found one—the town clerk’s. It was WEP encrypted. Good, WEP was easy. The software was online in ten seconds, the encryption solved.

He got a topo of the entire eastern half of the state, then went offline and zoomed to the Wilton area. The map was from 1988, but Oak Road was there, and the houses. He saw the way the land worked, coming down in a series of ridges. Across Oak Road was an old rail line, and beyond it a very large forest. Half a mile behind the houses was Wilton Road, with the field

where the glowboy had come down visible between them.

He found one hill with an elevation of a hundred and eight feet, but it wasn't enough to cause him a problem. His choice of the grain elevator for his antenna and transmitter was the correct one. As the trap that would lead to the death of the kid was sprung, the evidence of its existence would be destroyed.

His next step was to buy the various items that would have been in an operative's surgical kit. Everything was important, but the most important was a small reel of narrow-gauge copper wire that would provide both his transmitter's antenna and his receiver's. He also needed a radio transmitter, an X-Acto knife, electrical tape, and, from a drugstore, a topical anesthetic and that old reliable, ether.

He got everything except the drugstore items at a Radio Shack he found in an almost derelict strip mall. There was a chain drugstore down the street, where he picked up a fairly decent tube of anesthetic. The local druggist was able to sell him a bottle of solvent-grade ether.

He drove until he found a rural area, where he opened the transmitter carton. He read the schematic and specifications, opened the back of the transmitter with the tool pack he had bought, and modified the circuit board by bypassing a couple of resistors. The unit would now transmit at a far greater power output than allowed by amateur equipment. Carefully, he stabilized the connections with electrical tape.

He returned to Wilton, driving the quiet country road in an unhurried manner, listening to the radio and making certain that he violated no traffic laws. He passed the motel, observing nothing unusual. His room opened onto the parking strip, which was now empty. He drove to the end of the block and turned. To his right was the field he had come down in the night before, now covered with a new dusting of snow. Snowflakes drifted slowly out of a hard, gray sky. The field was empty, and there was no sign of any tracks, human or vehicular, in the new snow. Beyond the field stood the immense grain elevator.

He drove past the elevator and then turned into its concrete loading area. It was abandoned at this time of year, and the large bay doors were carefully padlocked. He went to the personnel entrance and opened it by sliding a credit card between the door and the jamb. Nobody expected an empty grain elevator to be robbed in a small town, so the security was extremely light.

Inside, he went to the control room. It was simple enough to understand.

The conveyor that moved the grain from trucks into the silo was what he was interested in. He descended to the cellar and threw the switch that turned on the power. Then he went back to the control room and started the conveyor. It screeched and clanged, then began to rattle along doing exactly what he wanted it to. Its tubs threw off dust every time they bounced. Overnight, the constant motion of the conveyor would fill the whole enormous space with a volatile haze. Explosive dust like this was the reason that elevators were not run when the weather was too dry.

Later tonight, he would return and set up the transmitter.

He left the grain elevator and drove out into a neighborhood. He found a corner lot with a house set back on it. The place was silent and dark, the family obviously off at work. He turned into the driveway, parked, and went up to the back door. He tapped on the glass.

A dog barked, came rushing to the door, its claws clattering on the kitchen floor. As it barked furiously, its face kept appearing at the lower edge of the door's window. It was a big dog, he thought some sort of hound, maybe a coonhound. Whatever, a big, mean dog was just what he was looking for.

He had learned how to handle dogs years ago, when he was a young officer and had been in training for the Air Police. But he would not risk tackling the Keltons' mutt without a practice run. The dog was one of the few weapons man had against the grays. They could not control a dog's mind. They hated and feared the dog.

He got the door unlocked after a small struggle with the mechanism. After soaking a handkerchief with ether, he pulled it open.

The dog rushed him, of course, and he clapped his hand over the snout and grabbed the animal by its scruff. While it was still struggling, he pushed his way into the kitchen. By the time he had closed the door with his heel, the dog was limp.

He spent a moment examining the skull, then cut into it about two inches above the right eye, making an incision so tiny that it hardly bled. He inserted a half-inch length of wire into the incision. Now he covered the wound with a little anesthetic. The dog would feel no pain when it woke up. Later, the wound would look like an insect bite, if it was noticed at all in the animal's fur.

He was about to leave when he noticed a faint sound coming from the back of the house. A television, a soap opera. Moving swiftly and quietly, he

was quite surprised to find a man, big, in his fifties, asleep in a chair in the family room.

A nice chance to practice. Working gently and swiftly, he dropped the man into a deeper sleep with the ether, then wired him, too. He did not hypnotize this man. He had no way of knowing what the name “Conner Callaghan” might mean to him, if anything. To direct an assassin at a target, the assassin had to have a means of identifying the target. This was why most of Mike’s subjects would be kids from Bell Attached School. Conner would be killed by somebody who knew him. It would look like a particularly vicious and crazy version of a school shooting.

He looked at his watch. One-forty. So, around breakfast time tomorrow, these two would be the first to enter a state of rage.

THE GRAYS WERE DEPLOYED ACROSS Earth in strict and carefully guarded territories. In the United States, they even adhered to the agreement they had made with the humans, and minimized their activities so that the Air Force would not come buzzing around and annoy them. In the rest of the world, they observed no such strictures.

It was difficult to reach into the human mind, but it was not hard to communicate with each other. The collective was growing excited, almost holding its breath, as the time for the attempt drew nearer. They did not know what their creation would be like, could hardly imagine a mind greater than their own. They felt a sense of worship and hope, and the Three Thieves an even more intimate wonder, because, as his guardians and his link to the collective, they were closest to him. Indeed, the feelings toward Conner were the strongest any gray had known in eons. And the hope, now that they had come this far and were so close to success, was very intense.

The other scouts, a million of them who had been scattered throughout the galaxy searching, had started racing toward Earth at 99 percent of the speed of light as soon as it had been understood what a perfect fit man was, a species that needed the grays as much as they needed man.

Inside the gigantic artificial world that was the main body, creeping along at half light speed, the sorrowing ranks stirred with hope so intense that they thought that a plague of suicide would overtake them if they failed.

When one of the lucky thousand scouts here on Earth tasted of a human dream, or licked the suffering off the soul of a prisoner or swam in the delicious sea of discovery that defined a child, all the billions quivered with

joy, and all longed, themselves, to once again have such feelings of their own.

So, when it became clear that a particularly dangerous satellite was moving from one orbit to another, and that its new orbit would park it twenty-five-thousand miles above Conner's head, the whole mass of the grays fluttered with unease. They knew exactly how this satellite worked, they had seen it built. Had they wished, they could have built a similar instrument based on much more elegant principles, and with it shattered the planet.

They would never do that, of course, not to precious Earth, to precious man. They knew that there must be a way to revive their souls, to make their lives worth living again. Locked somewhere in the human genome was the secret of man's vitality. Conner would find this spark, and understand how to enable the grays to share it.

At least, that was the dream. But if this atrocious weapon was fired at him, maybe the dream would end.

The collective directed a triad to attend to the thoughts of the president. Ever since Harry Truman had, in 1947, ordered his airplanes to shoot at the grays, all presidents were routinely implanted. This made their minds easy to hear, with the result that their most private fantasies, desires, and actions were part of the vast public entertainment the grays had constructed for themselves by implanting humans.

This was one of the main reasons they abducted human beings, to implant them so that they could enjoy them from a distance. Thus some of the most peculiar and most intense people, the ones with the most colorful fantasies—usually deeply hidden—were actually among the most famous creatures in the universe.

This president was a marvelous *seraglio* of sexual invention and hungry, innovative desire. His thought processes were more conventional. Sexy he might be, but he was also an efficient man.

Listening to the flowing whisper of words and watching in their own minds the flickering mass of colors, fantasized human body parts—long feminine legs and white, full breasts, mostly—and the low growls of desire that were the mental “voice” of his subconscious, they saw that he was uneasy about Charles Gunn's murderous request. But would he deny it? Of this they could not be sure. Mind control was not a reliable tool. Also, they did not like to interfere in the action of human will. They had wrecked their own independent spirits by creating their collective. They would not also

wreck man's independence with excessive use of the tools of collective thought.

But this was one time that it was necessary. They began to work on the president's mind, to touch it with images of the suffering the scalar weapon could cause.

As the collective mind of the grays concentrated on the president's decision, they failed to address the building crisis in Wilton, or to see just how serious it was, and Conner's death began to come closer and closer yet, as the fatal hours passed.

TWENTY-TWO

ROB LANGFORD PUT DOWN THE phone. “We’ve got orders,” he said to Lauren. “First, we are to assume that Colonel Wilkes is in the area, second that he is definitely here to kill this child. We are to protect the child at all costs, and deal with Wilkes in whatever way is required.”

“What does that mean?”

“Find him, kill him.”

“Wait a minute on that. Are these orders in writing?”

“No, they are not.”

“I don’t think murder is such a hot idea. I mean, if you don’t have a written order that is definitely legal, that is way out of line.”

“Let me deal with Wilkes. You concentrate on the kid. That’s the way it ought to be, anyway. What we are going to do is uniform up—or rather, I am—and pay an official visit. We will seek cooperation from the parents.”

“How far along is Mike? Do we know?”

“We do not.”

“What if these folks don’t like the Air Force?”

“Our objective is simple. It is to determine if there is an extremely smart child living on Oak Road. If not, then we extend our search to the local schools. Assuming we identify the child, we provide information to the parents and put them under surveillance protection. We must not do anything that might cause these people to resist the approach of the grays to the child.”

They went to the traveling officer’s quarters where Rob had a suite. She remained in his small living room while he changed.

Rob was an attractive guy, and she wanted, she was finding, to do more than sample him the way she had been doing with men since she’d started this job. In fact, she could get serious with this guy. In fact, she thought he was the best man she had ever met.

He was also the most dedicated to his mission and the most businesslike.

They drove off the base and through fourteen miles of slowly worsening

weather, passing through the town and going onto the Bell campus. On the way, they phoned all four Oak Road houses. They got three answering machines and a non-answer. So everybody was where they were supposed to be, which was working at their various occupations on campus or attending school.

“We’ll try the physics guy first. His discipline fits best, I think.”

“The baby’s not our target.”

“No. It could be one of the two teenagers, the Keltons, unless Adam was lying to you. The other three children seem too young.”

“He was lying.”

“Maybe Oak Road doesn’t even figure in it, then. Maybe the whole thing was a feint in anticipation of some discovery they knew Wilkes was about to make. They directed his—and our—attention to Oak Road because it doesn’t matter.”

She felt a shiver of unease the moment the words were out of his mouth. “My sense of it is that Oak Road is very damned important.”

“They don’t make mistakes.”

“Adam made one. He killed my father.”

“That’s true enough.”

“So they do.”

“What do you think they’ll do if they lose the child?”

She thought about it. “I get a feeling of tremendous rage.”

“Are you in touch with them now?”

“I’m not sure. I think I might be.” She shuddered. “Sometimes I feel sort of as if I am. As if I’m part of a great sorrow. I think that’s the heart of the grays, the way I perceive their collective being.”

“That’s chilling.”

He turned the car into a parking lot, beyond which was a neat white sign with black lettering, SCIENCE HALL.

It was a towered old brick pile, Bell’s science center. The enormous windows were designed to gather light, from back in the days before electricity had come to rural Kentucky.

According to a schedule affixed to his door, Dr. Jeffers had been teaching until five minutes ago, so they waited in his office. He had no secretary and the door wasn’t locked. Inside, it was surprisingly uncluttered for an academic’s lair.

“Uh oh,” Rob said, picking up a book from the professor’s desk.

“We have to expect them to be in a tizzy about UFOs. Look what just happened.”

“Well, we have to stay far from that topic.”

Ten minutes passed. Rob remained composed but Lauren did not wait well, and she got progressively more and more nervous. How could he be so collected? He was like too many military people, in a certain deep way resigned to fate, a fault that, in her opinion, came from living by orders.

“Maybe we should try the school,” she said, somehow keeping herself from screaming it at him.

At that moment a short, quick man came through the door. His eyes fixed on Rob’s blues. “Hello?”

Rob went to his feet. Smiled. Extended his hand. “Good afternoon, Dr. Jeffers, I’m Colonel Langford.”

“The UFO!”

“Excuse me?”

“You’re here about the UFO, yes?”

Rob shook his head. “I’m not aware . . .”

“We saw a UFO. There’s videotape. Our whole neighborhood saw it. There was an Air Force jet chasing it.”

“Uh, I don’t think we do that.”

Rob was really very impressive at this.

“We’re here to talk about gifted students.”

“Gifted students?”

“There’s a new program, and we’re informing science departments all over the country. Seeing as you’re head of the physics department here at Bell, and we’ve got Bell on our list, we decided to come on over.”

“On your list?”

“We’re from Alfred,” Lauren said. “I’m in procurement. He’s—”

“Traffic-control supervisor. I make sure our trainees don’t run into each other. We’ve volunteered for this mission, actually.”

“What mission is it? I’m not understanding.”

“The Air Force is looking for a few very gifted, very extraordinary students. Unusual. Freaks, even. That smart.”

“This is Bell College, nobody here is smart. I’m not even particularly smart. In fact, I’m not smart at all, and certainly my students aren’t. They’re a bunch of idiots, actually.”

“Ah. We always thought—”

“A beautiful campus does not mean smart. It only means lots of red brick and white columns.”

“What about that other school?” Rob asked. “The professors’ kids?”

He leaned back in his desk chair, stared at the ceiling. “Actually, my neighbors have a sort of monster. Aggressive, peculiar, frenetically loquacious for age eleven. Builds remarkably detailed model trains.”

This didn’t sound promising to Lauren, but Rob said, “Should we interview him? It could mean an appointment to the Air Force Academy.”

“Somehow I don’t see Conner in a uniform. He’s . . . anarchic. I really find him quite disturbing, but now that you mention it, he is pretty much of a genius.”

Now it sounded promising. “Can we meet him?” Lauren asked.

“His father’s over in the psych building. Daniel Callaghan. Or he could be off fucking some administrator. Apparently he does a bit of that.”

What a bitter man this was. Bitter, mean little man. “So he’s a monster and his father’s a womanizer. Has he got a mother, or has she killed herself?”

Rob shot her a frown, but she couldn’t help it. This was a very nasty little man, and she wanted him to know it.

“Surprisingly not. Actually, I’m being mean, which I suppose what’s got your back up. I am rather frustrated, I’m afraid.” He held up the UFO book. “I believe in this, which has demoted me from CalTech through the middle Ivies to Bell. I thought you were here about our astonishing, wonderful UFO. I thought everything was about to change. Instead, you’re here for some totally conventional and annoying reason. The Callaghans would never let that precious child of theirs anywhere near the military. At least, I hope not. I suppose I was trying to scare you off, to preserve them from a temptation I don’t actually trust them to resist. Truth be told, he’s the most marvelous human being I have ever encountered, and I bless the day we happened by sheerest chance to move next door.”

She knew for certain, then, that they had found the child of the grays. She thought of all the generations of effort that must have gone into his creation, of the struggles in the night, the long and careful thought of those strange, exquisite minds, and all the people who had suffered their bruising attentions, all for this person with the euphonious name of Conner Callaghan.

She knew, also, that she had more than a little of Adam still within her, whether due to some arcane connection devised by the grays or from her own beating heart, but she felt at that moment that, without question, she would

give her life to save him.

Rob had flushed and grown silent. In his silence, he had taken the book from Professor Jeffers. “*UFOs and the National Security State*,” he said. “What does this mean?”

“Essentially that another academic has been marginalized for promoting folklore as fact. However, it’s actually an expertly written and devastating indictment. By careful and scholarly inches, it proves without question that the government is engaged in a cover-up of the UFO phenomenon. So what would you do with him, Air Force people, shoot him, get him fired, trump up some charges against him?”

How extraordinary to sit here and see this man suffering like this for a truth he believed in—and to know that he was right, to know it better than he did, and to still lie to him, and curse his innocent soul and condemn it with your lie.

“Dr. Jeffers,” Rob said, “we’d like to thank you for your time and help. We’ll contact this family in due time. Who knows, perhaps Conner Callaghan will solve the mystery for us.” He handed back the book. “I’ve always thought that the Air Force hid a lot of things that it shouldn’t. Maybe about this. But it’s not my lookout, unfortunately.”

He gave the wild-haired professor a grin that made his face explode into gleaming, twinkling boyishness.

On the walk to the parking lot, the snow was more persistent.

“That was pitiful,” Rob said.

“Why don’t we just tell them?”

“You don’t know? Even yet?”

“Sure I know. You tell people that something is going to invade not only their space but their actual, personal bodies, they are going to panic. I’m panicked, just thinking about it. If there was any viable alternative, I’d take it.”

“I think that’s how we all feel. But our next step is to meet this family. Because if we found this kid, we can be sure that Mike has found him, too.”

“Maybe the grays will attack him.”

“If he showed up with a gun they’d probably abduct him and barbecue his damned brain. But what if he’s more indirect? They have their limits, Lauren, as you must know.”

“Look, I don’t know how to protect him, either, okay! And it’s winter, it’s snowing, and it’s starting to get dark, so one of us had better come up

with an idea. How about it, boss?”

“I’m not the boss. You’re the one closest to the grays. You’re the boss.”

“Fine. I say we go out to Oak Road. Take it from there.”

First they returned to Alfred. Rob threaded his way around to the parking lot closest to his billet and went up to change again. After Jeffers’s reaction, he no longer felt that the uniform was such a good idea.

She sat in the car and listened to the radio, which told the story of the onrushing storm.

TWENTY-THREE

“HI, CHRIS,” KATELYN SAID. SHE was quite surprised to see him. The Jefferses usually called before they came over. As he entered the foyer, snow swirled behind him and he brushed off his coat. He looked extremely solemn, she noticed. “Are you okay?”

“Where’s Conner?”

“Downstairs designing a train wreck. He had an unpleasant day, apparently. Why do you ask?”

“We need to talk. Where’s Dan?”

“Dan,” Katelyn called, “Chris is here.”

“Yo. Hey there,” he said coming in from the kitchen. “Whassup?” Then he saw Chris’s face. “What’s wrong?”

They went into the family room together. The TV was blasting. Katelyn turned it off.

“I got the classic visit from the Air Force today.”

What was he talking about? “What visit?”

“You’re not conversant in the UFO literature, of course. You’ve never read a word of anything I’ve given you.”

“That would be correct,” Dan said.

“I got a visit from the Air Force.” He looked from one of them to the other.

Katelyn had no idea what to say. She was at a complete loss.

“All right, let me background you. There is this legend that when somebody has a serious sighting or gets video or something like that, the Air Force secretly investigates. Do you follow that?”

“Yeah,” Dan said. “Of course.”

Katelyn felt kind of queasy. She wasn’t sure she wanted to hear this.

“Okay, so I went back to my office after class and who’s there but this Air Force colonel and this woman—my God, this *woman!*”

Not another one down, Katelyn thought. “Is Nancy at home? Is she aware of this woman?”

“Yes, she’ll be over in a minute. The baby’s going to sleep. But I didn’t want to wait, and you’ll see why in a second. Just listen. Okay, so I come in and the colonel is looking at *UFOs and the National Security State*, which I believe I foisted off on you last summer.”

“Okay,” Dan said. “Ended up on the shelf with *Trailer Park Ghosts*, and *Bigfoot: First American*, I’m afraid.”

Chris’s voice had a curious, measured quality to it, so different from his normal tone that Katelyn felt a twinge of concern that he might be sort of crazy just at the moment.

She did not want him to be crazy here. She and Dan were trying to work their way past the Marcie incident and having trouble. She wanted to let him make love to her, but so far had been unable. Unable just a couple of hours ago.

“Anyway, I have a prediction. These two folks are going to show up right here at this house sometime very soon, and they are going to ask to meet Conner.”

That focused Katelyn at once. “That’ll be the day,” she said.

“The man is this very big, tough-looking type. But fatherly, sort of. You know this guy is in on the secrets the second you lay eyes on him. Very imposing figure, indeed. The woman—well, you have to see her. She radiates something and it is weird. If I ever saw anyone who might be an alien in human form, it’s this woman. She has these big, staring eyes and she is very, very still. She just sits there staring at you, and you get these bizarre feelings, like she’s penetrating your mind, somehow.”

This was all beginning to sound more than a little crazy, even for Chris. “You’re scared,” she said. “Tell us why.”

“I didn’t realize at first what was going on, and I slipped. I told them something I don’t think I should have. About Conner being a genius.”

“But they were there asking about the UFO,” Dan said, “so what does it matter?”

“Oh, no, they never mentioned the UFO. Of course not. That isn’t the way these things are done. They were asking if we had any physics geniuses at Bell for some kind of Air Force program.”

Katelyn laughed, she couldn’t help it. He glared at her, though, and she stopped.

“I’ve had enough laughter,” he said in a low voice. “The point is—”

“They didn’t actually mention UFOs, though?”

“No, Katelyn, they did not.”

The phone rang. Katelyn got up and took it in the kitchen. “Hi, Nancy.”

“It’s snowing too hard, I’m staying put. Has he told you?” Nancy asked.

“He thinks the Air Force is interested in Conner because of the UFO. He’s not making a lot of sense, Nancy.” She did not tell her that he sounded like he was on his way around the bend, not with a little baby for her to worry about. Anyway, he’d probably be fine in the morning. He had these flights of weirdness every time a big UFO report appeared on one of the crazy-person Web sites he haunted.

“The reality part is that the Air Force is looking for geniuses for some sort of program of theirs,” Nancy said. “The Chris part is that they’re secretly investigating UFOs.”

“Well, then, I’m glad he told them about Conner. Conner could use more stimulation.”

“Be careful, Katelyn. This is some kind of military thing. I’d make certain that you can supervise Conner at all times.”

Katelyn had no real problem with the military. But then again, she would protect Conner and Conner’s mind from any kind of intrusion at all. “For sure,” she said.

“Is Chris drinking, by the way?”

“No, he didn’t ask and I didn’t offer. Dan got tanked at the Peep the other day and I loaded the liquor into the garage attic.”

“Over the Marcie thing, yeah, I heard.”

God, this was such a little place! “You mean, the fact that he got tenure?”

There was the briefest of silences, then Nancy said, “Congratulations, by the way.”

“We’re holding off on the official celebration until after the official announcement. You want me to send yours home?”

“Yeah, please. Before the UFOs come out.”

She went back into the living room, where Dan and Chris were staring at each other like two people at a funeral. “Momma called, Chris. Time to go home.”

“Katelyn,” Dan said, “I’m what they call an abductee, and so are you.”

She sat down. “That again. Okay, Dan, it has to do with folklore, not with reality. There’s nobody being abducted by aliens because there are no aliens, at least not here at the moment. I’ll grant that the video is strange, but

we are in no way involved.”

The doorbell rang—and sent a shock through her. Silence fell. Dan jumped to his feet, strode off to answer it.

Katelyn brushed past him. “I’ll get it.”

She swung the door open.

A QUARTER OF A MILE away, Mike Wilkes crouched watching the Kelton house. He was freezing cold, despite the fact that he’d bought boots, gloves, and a black Eddie Bauer jacket. He knew the house’s layout, and by nine he also knew that the boys both slept in the same room, that the dog was a Doberman, and that nobody in the house was in good enough condition to match him, despite the boys’ age advantages.

Lights flickering drew his gaze to the road. A car came, moving slowly in the snow. He slid back a little, lest the lights reflect on the lenses of his tiny, light-amplifying binoculars. He did not recognize the vehicle, but he could see two dim figures inside.

The lights went out abruptly, and he was sure that it had stopped around the bend. That would mean that it was either at the Jefferses’ or the Callaghans’ house. That was of interest, and he had to find out. He left his position but remained behind the tree line as he worked his way to a location that would enable him to see the last two houses on the road.

OVERHEAD, THE THREE THIEVES SAW the radiant energies of all the bodies on Oak Road. Given the alteration of the deadly satellite’s orbit, they were on full alert now. Below them, they observed the shimmering darkness that was Colonel Wilkes moving among the trees. The Thieves were uneasy about Wilkes being out here. But he showed no interest in the Callaghan house. The collective had instructed them to let him proceed, as long as he didn’t threaten Conner directly. In fact, it was eager for him to proceed. Maybe he had bought their little trick.

MIKE RETURNED TO HIS ORIGINAL position. He had wanted to see if it was a motor pool car. It was not. Not only that, it was in front of the Jeffers house. His conclusion: continue with his plan.

KATELYN WAS THUNDERSTRUCK TO SEE the very people that

Chris was talking about standing on her stoop. They were snowblown and miserable looking, and she immediately let them in.

In the family room, Chris, smiling tightly, introduced them. He was at least partly right about the appearance of the Glass woman. She had huge eyes, but they worked well in her face. She was a beautiful woman, and Katelyn knew instantly that her friend Colonel Langford was head over heels in love with her. Was she weird? Not at all.

They began a spiel about a special Air Force program for the very brilliant.

“Now,” Katelyn said, “let me get this straight. You put Conner in this tutorial program. But he does or doesn’t have to commit to the Air Force Academy?”

“Oh, no,” Miss Glass said, “no commitment at all. What will happen is that I’ll visit Conner daily and work with him in these accelerated concepts we’ve been referring to.”

“And back we go,” Dan said, “around the circle again. Let me be blunt. We want, in writing, an exact description of what you intend to do with Conner. And we want to be physically present at all times when you are with him.”

“And why don’t you just tell the truth about this?” Chris said.

Lauren Glass turned to him, and for an instant Katelyn saw a flicker in her eyes that was most definitely not normal. Katelyn thought she knew why. This girl was also super-bright. There is an aura around such people. They are not the same as the rest of us.

“The truth is that we’re in trouble with some important classified problems, and the country needs its very best minds to work on them.”

“Is it weapons?” Dan asked.

“Sir,” Colonel Langford said, “I can only repeat that we cannot go into detail.”

“Not with us,” Katelyn said, “but with our eleven-year-old son. I don’t think so.”

“Yes!” Chris said. “Way to go!”

Katelyn watched Lauren Glass grow very still, then saw her lips go into a line and her face become pale. The big eyes glittered with suppressed rage.

“Folks, I’m sorry, but I think we’re ready for you to leave,” Dan said. “Because I think that you’re here because of that UFO and aliens and abduction and all that sort of thing, and the fact that you’re trying to involve

our son just plain scares me.”

“Me, too,” Katelyn said. She stood up. “So let’s just call it a night, shall we? And don’t come near our son, because if we find out you’re trying to approach him, we’re going to report you to the police.”

They gave each other frantic glances. “Ma’am, sir—we can talk to him. We can approach him. We have the right.”

“Okay, that’s it,” Dan said. He went out across the hall and upstairs, and Katelyn suddenly knew what he was doing.

“Dan!”

“Ma’am, your son is the most intelligent human being presently alive,” Lauren Glass babbled. “Please listen to us, because I am uniquely capable of teaching him what he needs to learn.”

Dan came rushing back with his hand thrust in his pocket.

“My gun is bigger than your gun,” Colonel Langford said with frightening nonchalance. “I want to see that thing on this table right now.” He pointed at the coffee table. “Right now, Dan. Do it!”

Dan took the pistol out and put it on the table.

“You’re right,” Langford continued. “This does have to do with certain extraordinary secrets.”

“At *last*,” Chris said.

“I remember me and Katelyn being brought together when we were kids. Being brought together in this dark, womb-like place. And I think you might know something about what this was.”

“I have some odd memories, too,” Katelyn said. “But nothing . . .” She trailed off. She didn’t know what more to say.

“We believe that you were abducted together, so that, by a process we don’t understand, you would inevitably later marry and have Conner.”

Katelyn’s mouth was so dry that she could hardly speak. She didn’t remember anything about any aliens when she was a kid, and she hadn’t even known Dan back in Madison, but she had gone from being furious at these people and scared because they were obviously a couple of stinking liars, to a sort of nauseated dread. From the dark, in other words, to the very dark.

“And Conner is the smartest person in the world,” she said.

“There could be others, of course. But he must be among no more than a very, very few. Certainly, in this country, yes.”

“That part doesn’t surprise me. But as far as me and Dan—I met Dan years after we lived in Madison. So that’s all conjecture.”

Again, Lauren Glass smiled. She was a person with a thousand different faces, it seemed to Katelyn. This one combined what appeared to be contempt with anger, thinly masked beneath the grin. And the more you looked at her eyes, the odder they got.

“Conner’s a staggeringly good physics student,” Chris said. “He’s doing advanced graduate-level physics at the college and his work is . . . well, beautiful. The grasp of math is a lovely thing to witness.”

Langford spoke, his voice dense with authority. “Dr. and Mrs. Callaghan, what has happened here is that your child is intended to be the point of contact between mankind and a very old, very brilliant, and very advanced galactic civilization.”

Katelyn felt suddenly horribly dizzy. Then a sort of bomb seemed to go off within her. Did this mean that Chris’s nonsense . . . wasn’t?

Something came rising up from deep within her that seemed like a kind of release, as if some part of her had been in a trap and was now free.

To her own amazement she reached up so quickly that she didn’t have a chance to check herself, and slapped the colonel across the face.

Nobody said a word. Then Dan began to shake. For an instant, it seemed as if he was having a full-bore seizure, but it emerged into silent laughter. His eyes were closed tight, tears filling them.

Lauren Glass had cried out softly when the slap had taken place. Now she sat still and silent, rigid in her chair.

Rubbing his cheek, the colonel said, “It’s an understandable reaction.”

“I’m sorry! I just—Dan, will you stop that!”

He took a deep breath. Another. “What do we do?”

“What do you do?”

“With our little boy? Who is he? Who are we?”

“Let me give you a piece of advice,” Langford said, “you just take things as they come. Don’t worry about anything happening to your boy. He’s well protected.”

“He needs to be protected?” Katelyn asked. But then it seemed a rather obvious question. Of course he needed to be protected, and so did his secret. “I don’t want anybody told this.”

“Oh, no. Not at all. We tried to avoid telling even you.”

“This should be public knowledge. It’s immoral to hide it.” Chris’s face was alight with zeal and excitement.

Katelyn had a sudden, chilling thought that he might go on TV with that

stupid video the Keltons had made. “Conner’s life probably depends on hiding it,” she told him. “Think about it. Think how many different fanatic groups would want him dead. How many governments would fear his power.”

“I hadn’t considered that.”

“Announcing the most amazing railway accident in the history of this or any other century!” There stood Conner, his shirt smeared with model paint and his tattered engineer’s cap on the back of his head. He glared at them. “Doom on the railways. Come and seeeee . . .” Then he saw the two strangers. “Oh. I’m so sorry.” He came into the room.

“This is our son, Conner,” Dan said. “This is, uh, Mr. Langford and Miss Glass. They’re from the, from, ah—”

“We’re from St. Francis Parish, Conner,” Colonel Langford said. “Soliciting for a fund drive.”

“I don’t guess this is the right moment for a train wreck, then. It’s quite amazing, though.”

“Conner has a train set,” Dan explained to the two wondering faces. “He often builds staged railroad accidents.”

“I guess Catholics wouldn’t approve, somehow,” he said. “We don’t actually go to church—or, oops, perhaps—”

“We know that, Conner.”

Conner took a step back. He had noticed a sense of winter that clung to them both. They were not pleasant people to be around. But all suspicions immediately dropped away when the colonel said, “We’d love to see the train wreck.”

“Great! I’ve been working very hard.”

“Conner, did you do my homework?” Chris asked as the adults followed him down into his basement room.

“*Absolutment*,” he said. “I’ve got a new way of integrating the calculus, boy-o.”

“What are you talking about?”

“I have *no* idea! Look at it and see if it flies.” He crossed his room, picked up a badly tattered notebook, and thrust it into Chris’s hands. “And now, may I present, the Wreck of Old Ninety-seven.” He looked up at Lauren. “It’s a metaphor,” he said, “of my day.”

“Conner, this is beautiful,” she said, looking over the train board. “Oh my God, Rob, look at this. Look at the detail!”

“Glad you like it,” Conner said. There was something in his voice that Katelyn knew well. These two were going to get a surprise.

OUTSIDE, MIKE WILKES HAD BEEN forced to return to his car, which was hidden about a quarter of a mile away. The snow was getting more persistent, and he couldn’t risk it becoming immobilized. He had processed a few of the kids in the town, but he needed the night to finish his work. He wished the damn Keltons would go to sleep. He pulled the car out into the road and drove it for a distance in the giving snow, getting it onto the crown of the road. There would be no plow through here tonight. He decided that he had about an hour. After that, he was going to be forced to abandon this part of the plan.

Not good, possibly even fatal.

WHILE THE COLLECTIVE WORRIED ABOUT the president, the Three Thieves worried about the fact that Wilkes was still close to Conner.

Adam was with them as well, preparing himself for what would happen tonight.

He detected a familiar voice. Lauren was nearby. He shifted his interest away from Wilkes. The collective wanted to let him make his mistake, and that seemed a good idea. But Adam needed Lauren away from here, too, and soon. What was to be done required absolute privacy.

He sailed across the snowy fields and into the yard behind the Callaghans’ house. There he built a vivid picture of Lauren’s car being covered with snow. He sent this like a drift of smoke into her mind.

AS THE TRAIN MOVED AROUND the tracks, Conner made sound effects, screeching and huffing. Then he touched an edge of track, which sprung open.

“It broke,” Lauren shouted.

The next instant, the wonderful black-and-brass steam engine, spewing smoke, struck the sprung track and bounded off into the superbly modeled little town. It churned down the main street crashing into stores, snapping light poles, and sending figures flying.

“Wow,” Rob said into the silence that followed this remarkably realistic effect.

“Why did you do this?” Lauren asked the boy.

“So I can build it all up again a new way. Hey. I just got this flash. Are you people gonna want to get back to town tonight?”

“Well, yes, we live in town.”

“Then I see in my mind’s eye your car getting slowly buried. Or, actually, quickly.”

THOUGHTS HAD TO BE PUSHED into Lauren’s mind, but the child just sucked them up. Adam regarded him, a smiling, strutting little thing, the aura around his body vastly more complex and colorful than those around the others.

Adam prepared to die.

TWENTY-FOUR

CONNER WOKE UP—AND REALIZED instantly that he was not in bed. He could hear wind and he seemed to be standing.

He opened his eyes. White flying dots. Cold. A leathery thing beside him. This was all impossible, so he closed them again. He opened them for just a second, saw darkness and millions of white dots, and closed them again, tight.

He surveyed his situation. The strange church people had left, he'd gone to bed in his upstairs room. Mom had come in and stared at him and gone all eerie. She'd cried for no apparent reason and Dan had come and they'd hugged each other, then gone across the hall to their room. Sometime after that, he'd fallen asleep.

Without opening his eyes again, he tried to decide what was happening to him now.

Then he knew: he was going down the street in the snow, but he wasn't walking, he was sort of . . . flying.

Which couldn't be real, therefore he was asleep.

Again, he opened his eyes. He could see the house, which was drifting back behind him. This looked like a dream and felt like a dream, but it sounded and smelled like the real world.

Perplexing, in other words—not a dream, yet not possible.

For a second he thought he heard the living room clock chiming, but it was the wind clattering pine branches in Lost Land, which was what he had named the big woods across the street.

The woods were drifting closer, home farther away. There were three big leathery heads bobbing along around him.

He gasped, started to scream, then forced himself back under control. He had to stay calm, this was contact, it had to be handled with all the skill and intelligence he possessed. *You're up to this*, he told himself.

But he was being *taken*.

Okay, this was bad, he was being kidnapped by these guys, no question, no way to get around it. Is kidnapping ever good? If you're going to be straight, why not just ring the doorbell?

He realized that he was hearing something odd in his left ear, a sort of deep whine, if such a sound could exist. He reached up and touched an earbud. Then he saw that one of the big-headed creatures had an MP3 player. There was no music coming out, though, just this odd noise.

He ripped the earbud out and immediately fell down in a big puff of snow. For a second he lay trying to understand just how this worked. It was *sound*, sound that had caused him to defy gravity. Okay, there had to be some kind of harmonic—or, no, was he crazy, he'd figure the damn thing out later!

The creatures swirled around with their mouths open and their hands on their cheeks. They were not menacing looking. In fact, far from it. They looked scared, too. Then one of them thrust the earbud at him—not toward his ear but toward his hand.

He looked down at it. They hovered and wobbled their heads.

Please, came a sort of nice-sounding voice, the same one he'd heard in his head during the encounter with Paulie.

No, it wasn't on, not out in the woods with no explanation. He ran back toward the house as fast as he could go.

What can we do to help you stop screaming?

He's not screaming, you fool, he's running!

He ran faster, his legs pumping. "Dad! Mom! Help me! Help me!"

The creatures buzzed around him like giant flies. The one with the earbud buzzed along ahead of him, face to face, holding out the earbud.

The house was farther away than he thought. It was hard to make progress in the snow.

Then the creature made a sort of thrust at his head. *Sorry! Sorrrysorry!*

The earbud was in again and he was all of a sudden running in midair. He yanked it out and hit the ground and got up and ran again, his feet crunching in the snow.

He got to the front walk, vaulted the gate, landed in the snow, fell and got up, then slipped on the icy stones and fell harder, rolling off into the drift-choked front yard. He went slipping and sliding up the walk, his feet stinging from the cold. He reached the door, pulled on the handle.

Locked. He rattled it. "Mom! Dad!" He dragged at it. "Oh, please, please . . ." He saw the doorbell under its little light, and moved to press it.

We have to!

We can't!

Conner, come on!

Go in him, you idiot! NOW!

Conner then felt something that few human beings have ever felt. He experienced the sense of something moving inside his own body, slithering up from his gut as if alive.

OF COURSE, THE THREE THIEVES could have turned him off with a little whiff of gas, and taken him wherever they cared to take him, but that was not what this was about. The collective had known that Conner would need to be tamed.

HORRIFIED AT WHAT HE WAS feeling, Conner looked down at himself. His chest and belly were visible, his pajama top having blown open in the wind. Something glowed through his skin, and it was coming up from his chest toward his head. Bright light shone out of his body in the shape of the thing, a snake that twisted and turned inside.

He cried out, he clutched at his chest—and the thing shot into his head and the cry was stifled. His head glowed for an instant so brightly that the whole front yard was lit up. The icicles on the windows reflected blue light brighter than a flashbulb.

Then it was dark. *Real* dark. Because Conner was not anywhere anymore. He was not looking out of his eyes, it didn't feel like. What it felt like was so odd that he could hardly believe it, but the truth was that he seemed to have been swallowed by his body, as if he'd gone down into his own stomach.

This was all so totally new that he could not even think about it, let alone explain it. In truth, he was being affected by a simple electromagnetic field that was being applied with great care to about two million specific neurons in his brain. It wasn't magic. There is no magic. There is only the unknown—in this case, a very old and experienced science possessed of a great knowledge of how bodies and brains work.

Objectively, he recognized that it must be some sort of illusion. Even so, the fear was a claw clutching his heart.

He felt his body turn and begin to move away from the house. No amount of effort would get him back into his head or enable him to regain

control of his movements.

He tried to call to Dad, then, in his rising panic, to the police. Nothing worked. He could not make his voice turn on. Despairing now, he thought of how very, very sad his parents were going to be, never knowing what happened to him like this.

Somebody help me. Please, somebody!

We are helping you.

He felt himself turn, felt his feet dip into the snow, felt it blow against his chest.

Now I will remove myself from you, the voice said. Do not run again.

In a moment, he began to go up through his body. In another moment, he was seeing through his eyes again.

The wind blew, the pines moaned, snow flew. He had been taken deep into Lost Land, so deep that there was nothing around them but pines. No lights, no houses, just the pale glow of the snow.

We're the Three Thieves but we didn't steal you.

Yes we did.

Shut up!

“Okay . . . I hear you.”

Nobody moved.

He was well aware of the mystery he was facing. Remarkable, indeed. Then he saw movement in the woods, and a fourth gray appeared. He was not squat and kludgy like these three. He strode on long legs and his head was more in proportion. Coming through the snow, he was as graceful as a dancer.

He stopped behind the three and raised a long, thin arm, sort of like an Indian chief or something. Conner noted: no muscles. Therefore the skin itself must contain millions of micromuscles.

He took a step toward him. Conner took a step back. He came closer.

Conner yelled as loud as he could: “Get away! Get away from me!” Then he clapped his hands over his mouth, actually surprised at himself. But there was more than one Conner in here, and the other one, the little child alone in the woods, was still really, really scared and did not care about the fact that this was contact, it was historical and damn awesome that it was *him* doing it or any of that.

The other Conner took over and ran, he just ran, he didn't care where, deeper into Lost Land, past the great, frowning trees, into the tangled places

where nobody ever went.

The more he ran, the more the panicked Conner replaced the curious Conner, and the wilder and more frantic his flight became.

Soon he began to feel his feet burning. He was getting cold. When he wasn't around the grays, he needed more than just pajamas out in this blizzard. Something they did had been keeping him warm. Curious Conner thought, *Heat without radiance or forced air or anything. I wonder how they do that?*

And he slowed down a little. Now his breath was coming out in huge puffs and his feet were really burning and it was meat-locker cold.

Sobbing like an infant, he stumbled to a halt. He forced the tears down, and finally stood trembling from the cold, rubbing his shoulders.

The wind roared in the trees, and a big gust stung him head to toe with snow. Cold this cold felt just like being burned and he screamed into its howl, but his loudest cry was so small against it that he could hardly hear it himself.

This was idiotic. He was here to think, not cry like some idiot. So okay, he turned around and around, trying to get his bearings.

No bearings.

He hopped from foot to foot to keep the agony down. But it didn't work, he was barefoot in the snow in the middle of a blizzard and wearing cotton pajamas. He was quite familiar with the dangers of hypothermia. If he'd known the temperature, he could probably have calculated to the second just how long before he lost so much reason that he could no longer hope to survive.

He had never thought much about dying before, but he thought about it now because it appeared that it was going to happen to him. He was already getting numb and that was a really bad sign, it was a sign of death coming, he knew that. The next step was the final sleep.

“Dad! Mom! Hey, I'm lost out here! Hey, HEY!”

Ridiculous, meaningless effort.

“Grays! Hey, I'm here! I'm willing to negotiate! HEY!”

Nothing.

How could such a smart kid turn into such a moron? He'd just blown contact, and probably frozen himself to death in the process.

When he tried to walk, his legs wouldn't move. Muscle spasm due to advancing hypothermia.

He did not want to die before he'd kissed a girl or had a paper published,

or even driven a damn car.

His pajamas snapped in the wind, his face got more and more caked in frost, and he prayed his usual prayer, “Any God who happens to be real, this is Conner Callaghan and I could use some help. Thank you! Uh, *really* use it!”

The world around him seemed to grow quiet. He looked down at his right hand. He could see the snow hitting it and bouncing off, but he could no longer feel anything. But he did feel something really funny, a sort of jittering in his heels. It spread through his feet, and he noticed it in his hands, too. Then it went up his arms and legs, bringing with it wonderful warmth like a really good blanket would if he was cold and Mom came in and tucked him in.

Then a face popped out from behind a tree, huge eyes, tiny mouth communicating surprise, fear, concern all at once. *Boy*, Conner thought, *do they ever look like bugs.*

Oh, no.

“I won’t run, relax. As long as you keep me warm, consider us friends.”

What’s he saying?

I have no idea.

Striding out of the snow on his long, thin legs, came the tall gray. As he came closer, Conner could see that his body shimmered with light, as if he was swathed in flickering, ever-changing rainbows. His eyes gleamed with bright reflections of the trees around them even though it was night, almost as if they somehow enhanced light. Then he saw this beautiful figure in the creature’s eyes, a person blazing with light of a thousand different colors.

He looked around him, trying to see this person. Then he moved his hand, and saw that it was him. He looked down at his own arm, and the glow wasn’t there. Only in the eyes of the gray. He knew about auras, that they were a faint electrical field emitted by the nervous system. The gray’s eyes were somehow amplifying its visibility.

As the tall gray came closer, the three short, squat ones buzzed nervously around him.

Okay,” Conner said, “my name is Conner Callaghan and I’m going to do this. I hope.”

Talk to us in your head. Form the words in your mind, but don’t speak them aloud. We will be more easily able to hear you, then.

He sounded actually sort of okay. An ultra-precise voice that appeared

right in the center of your head, as if you were wearing earphones. He felt for that earbud, but it was gone. “How are you doing that?”

I can't hear you!

“WHAT—no. Uh . . .” *How do you do this?*

I don't know. You're the only person we've ever managed it with. With the others, we have to use pictures. They can't hear us talking.

He was quite close now, so close that Conner could see that he had faint, white hair on his head and a wrinkled face.

I am old. We are all old.

Where are you from?

Endless time. We are so old we've lost our history.

What is your mission?

You are my mission.

What does that mean?

There was no response . . . except there was. He hung his head.

Are you . . . crying?

I think so.

Why?

He shook his head, then held out his hands. They were long and the fingers were like snakes tipped with claws. Slowly, his own hands shaking, Conner reached out to him. They stayed like that, their fingers an inch apart, both of them trembling.

The three others came closer. They hovered around the taller one, bouncing slightly in the air when a gust of wind came.

The tall one touched Conner's cheek with the softest finger he thought you could ever feel. It did not just touch you, it made vibrating electric contact with your skin.

Little colt, not ten minutes ago, my touch would have made you run again. But you do not run.

Am I going to get to go home?

Home . . .

You're crying now.

The gray lay down in the snow. The three others hovered over him. Something then happened that was completely beyond comprehension to Conner. They had a black object that turned out to be a jar, which they opened, screwing the top off in a flash. Out of it they drew three gleaming butcher knives.

As Conner watched in stunned astonishment, they cut open the tall gray like Dad gutting a fish. The knives made a ripping sound.

He struggled. They were killing him.

“Stop it,” Conner shouted. “*Stop it!*”

One of them turned toward him, brandishing his knife, and Conner backed away, holding out his hands, trying to convey that he would not interfere.

They opened the gray from his featureless groin to the top of his head, splitting his whole body in half. Inside was a swirling mass of lights in a million, million colors, and Conner recognized them. They looked like an immense star field imaged by the Hubble Space Telescope. They looked like the whole universe, somehow contained inside the body of this gray.

They lifted it out, and it wobbled in the air between them, the universe in the shape of a gray, snow swirling around it, flakes blowing into it and away into the vastness of the stars.

There was humming, voices that sounded both innocent and wise, and the notes were so beautiful that Conner gasped aloud, and wanted to cry because this was the richest, the most lovely sound he had ever heard. It was a sound with a scent, almost, as if the flowers of heaven had bloomed.

THE LITTLE GROUP OF GRAYS with Conner were by no means the only ones who were witness to what was happening. On the contrary, there was vast witness in the huge device that carried the main body toward Earth. The gigantic sphere was now two light years away and had been decelerating almost since 1947, when it had turned in the direction of Earth. Large though it was, with its thousand-mile diameter, it was still far too small to be detected by earthly telescopes. In fact, it probably wouldn't be noticed until it was actually in orbit around the planet, because its surface was black, designed to absorb any and all light energy that might reach it.

Inside, a tiny sun glared in a strangely constricted sky. In fact, this was a miniature star just six hundred feet across, built by the grays and capable of shining steadily for a million years, at which time it would explode and instantly vaporize the whole sphere. If they hadn't made it long before then, it wouldn't matter anyway. There would be nothing left in the sphere but dust.

Its inner surface was landscaped to an exact replica of the grays' desert home, with cities made of white houses, domed and looking like adobe. A shield moved around the central sun, bringing fifty hours of darkness every

fifty hours to each part of the sphere, the same amount of day and night that the grays had known at home.

As they needed nothing and ate nothing, the grays had no economic life. They had freed themselves from sexual reproduction an epoch ago, then discovered that pleasure is founded in desire, and without reproductive needs, desire fades.

They would have gone collectively mad in this trapped chamber, had they not been able to venture with the earthly triads into the mind of man.

They watched now, sitting in their houses, their heads bowed in concentration, as Adam gave his whole being, all of his experience, all of his knowledge, all that he was, to Conner.

An outline of the child's body stretched across their strange sky, a body filled with stars, and with it came the wind and the night and the snow.

Slowly, as they listened and felt, one of them and then another, then more and more, raised his head and came to his feet. The tall, gracile ones, the short, squat ones, all of them in their unimaginable billions, raised their heads.

Then they ascended from their white cities, rose into the air, and began to fly like so many soaring eagles, and it became clearer what was happening. These creatures, who could neither laugh nor smile, were doing the only thing they could to express an emotion they had not known in many a long age: they were dancing with happiness.

THE STRANGE FIGURE WENT ROUND and round Conner, its head getting smaller, its legs and arms thicker, its body like a fluid of stars, taking on a different shape, the shape of a human being, and getting brighter, too.

Each snowflake that touched the thing now went up in a tiny puff of steam, and it was beautiful, the smoking snow and the brightness, and the humming of the thing as if the wind itself had learned to sing.

Conner began to quake down inside his stomach and up his spine and everywhere, even in his toes and in his eyes, and he realized that the thing was vibrating, too.

“Momma . . .”

The thing came closer to him.

“MOMMA!”

Then the humming was all around him, it was in him and his chest was vibrating with it, and he felt as if he had risen off the ground or gotten very

large, and for an instant the snowflakes that had looked like stars around the thing were around him, and were, instead, a whole tremendous universe of stars.

Then it was dark again and Conner had fallen down in the snow. He could not rise. He was completely weak, and when he closed his eyes, he saw the universe in his head, and he saw it, too, when he looked at his palms, in his hands, stars swirling inside his skin.

The three grays pushed at the tall one until his body closed up again. Then he rose in the air between them, and the four of them ascended, wobbling and buzzing, into the storm.

“Hey! Hey, you! I am *still willing to negotiate!*”

It got cold again. Conner could no longer see stars inside himself. The wind howled around him and he screamed in agony and clutched his pajamas around him.

Whump whump whump whump.

Up in the snowy sky, a shadow, black and huge. Then light shining down, a glaring blue-white searchlight beam.

The light shone so bright on Conner that he could hardly look into it. He knew that it was a helicopter, and that it must be here to rescue him, and he got up and wallowed in the snow, into a clearing among the pines, waving and waving and yelling with all his might, “I’m here, I’m here!”

Wind from the rotors hit him and with it came ferocious, lung-shattering cold. He screamed, covered his head, and turned away from the blast.

“Conner! Conner Callaghan!” a voice shouted, barely audible over the churning of the helicopter blades and the screaming of the wind.

It was a man in a helmet, not a gray, coming down a rope ladder from the chopper. He had on a faceplate so you couldn’t see his face, but he sounded strong and, above all, normal.

The helicopter roared off into the storm and was gone. The guy knelt before Conner on one knee, and quickly wrapped a space blanket around him. “I’m going to take you home, boy.”

Conner threw his arms around the man, who held out his big gloved hands. “Come on, buddy.” Conner was not a small kid, but the guy was really tall, and picked him up easily. “We need to warm up those feet real quick.”

It felt so good to be carried that Conner just leaned his head against the guy’s shoulder, and let himself be cozy in the space blanket. As the guy strode along, he watched the woods slip away behind them.

“Conner, lots of new things are going to happen to you, I suppose you’ve realized that.”

“I’m sort of getting that feeling.”

“You’re going to have a teacher. You met her earlier tonight. Lauren Glass. I want you to know that you can count on her absolutely.”

“Who are you?”

“Somebody else who’s concerned with your well-being.”

He could feel that it was true, that there was goodness radiating from this man like heat. “Man, I’m glad you found me.” He closed his eyes.

“Sleep, child,” the man said, and held his head against his shoulder.

Then somebody was shaking him. He stirred, pulled at the blanket—and shot straight up in bed. “Dad!”

“You’re having a nightmare, son.”

“I was . . . outside. I was outside and—” It felt so good to see Dad there that he just threw his arms around him. “Listen, it was no dream. *No dream!* I was out in the woods, with—”

Conner no!

“What?”

“Conner? Out in the woods? Go on.”

“I mean, uh, in the dream. Obviously. Look, let’s go back to sleep.”

Conner lay back in the bed. Dad lingered. Good, let him stay.

Why not tell him? Conner asked.

In time, Conner, in all good time.

The voice was different, Conner noticed, bigger, somehow, echoing.

Who are you?

The collective.

Okay. What is the collective?

Conner, we are nearly seven billion, and we need your help.

“You’re kidding!”

Shh!

“What? Kidding about what?”

“Let’s go to sleep, Dad, okay?”

“Sure, Conner . . . of course.”

He could hear singing, then, the same tune that he had heard in the woods. He sensed, but in an indistinct, unformed way, an immense shadowy sea, that seemed to be made up of numbers and words and this deep, fleeting song. It was knowledge, he decided, so high and fine that it was a music,

totally simple, utterly pure.

“Something’s happening to me, Dad.”

Dad had tears in his eyes. “Conner, you look like stars.”

“I do?”

DAN COULD NOT UNDERSTAND. HE saw his son, but his son now appeared to be a child made of the stuff of the night sky, a child whose body was somehow shining out of the planetarium of his own boyhood, and he heard a song from his boyhood, a beautiful voice humming “*Suo Gan*,” the song by which his own mother had seen him off to sleep when he was scared, just come back from a journey into the dark.

He sat on the bedside, and met the music with the words in the old Welsh tongue of his mother’s people: *Huna blentyn yn fy mynwes, Clyd a chynnes ydyw hon . . . sleep, my child, at my breast, ’tis love’s arms around you.*

Slowly, as Conner fell into sleep, the stars in his body faded as if with the coming of morning, and Dan was left with his boy gently breathing, lost in the deep sleep that blesses and heals childhood.

Katelyn came, and he stood up. “A miracle,” he said. “Katelyn, a miracle.” He embraced her.

“What do you mean?”

He could not explain it, not as it had been. “I just think you gave me such a grand kid.”

She leaned her head against his shoulder. Arm in arm, they returned to their own bed.

Outside, the storm howled wild, and the footprints of the man in the mask, who had carried Conner home all unseen, and entered the house by stealth and returned him to his bed, slowly filled with snow.

TWENTY-FIVE

AS THE WEE HOURS WORE on, Mike drove the car yet again out of the snow, and went to check the Keltons. He was very annoyed with this family, who were so damnably late to bed. But this time, there was only a single dim light showing out of the upstairs bathroom window.

He trotted out into the broadness of the road. In the distance, he saw a flash and thought perhaps he heard a shout carried away by the wind. A long minute's careful watching and listening brought only the hissing of snow and the moaning of the wind.

He glanced up at the sky. According to the radio, the storm would not abate until morning. That was important to him, because his tracks had to be covered.

He proceeded up the rougher edge of the property, where there would be flower beds in a few months. Any remaining suggestion of tracks would be harder to spot here. He moved to the back of the house, then examined the doors and windows. He found an unlocked window. Carefully, he examined it for any sign of an alarm system. Finding none, he slid it open and pulled himself into the house.

He closed the window behind him. Standing absolutely still, he got used to the sounds of the place. He prepared some ether. His first challenge would be the dog. It was awake now, but would soon fall asleep again, as long as his odor didn't reach its nostrils. The reek of the ether would cover it, however.

He closed his eyes and listened. He had to locate that animal or he had to back out of here. He moved farther in, through the dining room, to the foot of the stairs in the front hall. It was sleeping on the landing. The instinct of the watchdog is to block the path.

He took a step, another. Could he get around it? He took another step. Now he was on the step just below the landing, looking down at the animal.

The step across it was too long. So he had to use the ether. He came down on his haunches and laid the soaked cloth ever so gently over the

animal's muzzle.

He waited. The dog's breathing deepened. Now it began to rattle in its chest. He could kill the dog. He'd enjoy that, he detested dogs and their reeking shit and their brainless fawning over people who weren't worth a damned glance. Like this family of fatsos. But the dog was too useful. First, the grays couldn't control the minds of dogs. Second, he could—and to great effect.

More confident now, he went to the top of the stairs. The parents would be the lightest sleepers, so he implanted and hypnotized them first. This hypnosis was a simple process, taking only a few moments. The secret of it was that the words were chanted in a rhythm that caused them to be perceived by the subject as his own thought. These people would wake up in the morning thinking violently about Conner. When they came into range of his transmitter in town, the irritation to their temporal lobes would cause the anger to become an uncontrollable obsession.

He went next into the boys' room and did them with equal efficiency.

Just like that, and very neatly after the agonizingly slow start, his mission on Oak Road was accomplished.

THE THREE THIEVES ALL HEARD it at the same time: breath sliding through nostrils, getting louder. Then they saw Wilkes leave the Keltons' house. *Very well*, the collective said, *let him go*. There was a flicker of suspicion, however, when no soul drifted out of the structure. If Wilkes believed that the Kel-ton child was his target, why had he not killed him?

Of course, he would want to attempt to deceive the grays. He would not want them to know he had done the murder. He would have created some sabotage within the structure that would make the death seem an accident.

The collective had one of the Three Thieves physically observe Wilkes depart in his car. The Two listened to the brown moaning of his mind as he drove away. And then the world was once again silent, and he rejoined his brothers in carrying Adam into Conner's sleeping form.

Adam was not yet fully depleted. There remained in him structures of thought that would organize Conner's mind. These structures were the core of him, held in immensely complex fields of electrons that rested in permanent superposition. As such, they were both in Adam and were Adam, and were also everywhere in the universe, and potentially capable of tapping all knowledge. This core could not be implanted in Conner until the rest of

Adam's being had settled in him, or the core would burn the boy's nervous system like an out-of-control nuclear reaction.

The transfer of this last material would result in the permanent annihilation of Adam—in fact, this was the essence of Adam, the part of him that felt real and alive. Here and now, is when Adam would feel actual death.

He was scared. In fact, so were the Thieves. This was the unspeakable thing that, as emotionless as they were, every gray still feared, the final end, wherein even the memory of self disappears and all the long years lived without emotion and thus without meaning, slide away into useless nothingness.

The whole collective watched, breathless and sorrowful, each one hoping that Conner would find a way to save them, that after this death there would be no other.

The Thieves crossed the yard and slipped into the house via the basement door, and rose quickly through the darkness to Conner. They spread Adam's body, now thin and as pale as a wraith, and guided it over Conner.

Adam had wondered how this would be, to die into another. He'd feared it, and out there in the woods, he'd cried. *Do it.*

He felt himself dwindling into the boy, sifting downward as lightly but as inexorably as dew. All that had enabled him to relate to and understand man, what he had learned from Eamon Glass and Lauren Glass, slipped away into the sleeping child.

He had given Conner all he knew, and his ancestors knew, of the universe. Now he gave him himself. As each tiny bit of his being detached and flowed into the hungry new nervous system that was spreading like a fire through the boy, he felt not regret but an abiding joy, an emotion that he had not known he *could* feel.

Thus, as he died, this ancient creature regained all that time and age had taken from him, the once-rich spirit of the grays with its love of truth and appreciation for the glory of the universe.

It had been eons since a gray had *felt*. Now, though, Adam's experience hummed across the gulfs of space, and the whole collective felt with him the anguish and joy of his death.

They sang in their chains, the grays, as they felt, each of them, a taste of hope that they had not experienced since the day they left their planet and began this long dark journey through the nowheres of the sky.

Simply because they were there, water in the vast desert of his heart, the

first tears Adam had ever shed—and his last—were tears of joy.

IMAGES FLASHED ON THE WALLS of Conner's mind, of the long and improbable histories of man and the grays, dancers in a secret dance whose steps were measured in eons. He saw that we, as a species, had lived before, that we'd had another civilization and another science that had worked by different laws, in a time when the light of the human mind had been brighter. He saw the tragic, lingering evening that we have named history, and heard along it the forlorn chanting of the Egyptians as they built boats that would never reach the sky, and the grim, rising roar of human voices that signaled the onset of the modern world, and the ignorant hordes that now marched the Earth, sucking every green blade and morsel. As this vision swept through him, he listened to the booming drums of time.

And so it was done; Adam, ancient in his days, fulfilled a destiny that was also a tragedy: he died. The last light of the wraith flickered in the air above Conner's bed.

Then it was dark.

FOR BETTER OR FOR WORSE, this phase of the grays' mission was complete. They searched for memories in Conner's mind that would shield him from the huge thoughts that now lay hidden within him. Time would be needed before he could bring them forth and put them to work.

Looking through the house, they saw where he had put most of his effort, into his splendid trains. They planted his consciousness in one of his own superbly painted plastic figures. This would give him an unforgettably vivid dream.

CONNER FOUND HIMSELF IN HIS own toy railroad town, under his own streetlights, and everybody else was horrible and plastic, staring at him with painted stares. The sidewalk under his feet was plastic, the trees made of foam. A shrieking rose, and his own train screamed past, impossibly immense, electric fire roaring under its wheels.

He was right in the middle of the street and he couldn't move. The plastic faces of the people around him stared, expressionless. Then he saw a huge, glaring giant looming back in the shadows of the sky, saw his own hand, now gigantic, come down. He heard a length of track screech as it came loose.

He was trapped in his own train wreck, somehow part of one of the plastic people, as stiff and still as they were. He wanted to run, he was desperate to get off this street because he knew what would happen. But he could not run. He watched in fixed horror as the train's headlight flickered among the trees to the left, as it came roaring around the bend, and with a curious grace leaped off the track and sped toward him, its wheels churning, the headlight a cyclops eye.

Then a warm hand was on his forehead.

Mom was there.

"Hey, mister," she said, "you're gonna wake everybody on Oak Road if you don't stop running that train."

"I—oh, wow, I dreamed I was in the train set during the wreck!"

"*In the train set?*"

"I'd become one of my figures. I couldn't move and the train came right at me!"

She hugged him. "Oh my love," she said, "Mom and Dad are always here for nightmares."

He felt the depth of her love, then, with a power that he never had before. He adored his mom, she was the most beautiful, the smartest, the nicest—she was like Dad, very much the best.

Unseen now, the Three Thieves guided his mind back to a memory of a certain spring day long ago, when the lilacs were bobbing on the lawn and the leaves all were new, and he had come from glory, a tiny, secret spark, and gone gliding down into the house and saw her sleeping, her belly big, and gone closer, and entered into her, and lay, then, in the cradle of her womb.

"I love you, too," he said. It felt so good to hug her, it felt like floating halfway to heaven.

DAN ALSO REMAINED AWAKE ON this restless, uneasy night. He was determined to prevent the aliens from abducting his son. As he listened to Katelyn speaking softly to Conner, he felt an isolation that made him sad. She had been trying to forgive him, he knew, but there was a coolness in her now that even his most tender efforts—kissing her, speaking to her of love—could not seem to cure. He loved them, both of them. And yet, he did not feel free to join them across the hall, when they were in such intimate communion.

To avoid dealing with his couple crisis in the middle of the night, he

turned his mind to what the Air Force people had said. Strange, strange stuff. Lies, of course, on some level.

He would protect Conner from them until they told him the truth. There were dark corners in this world, and Conner was not going to fall into one, not as long as his dad had anything to say about it.

Too bad Katelyn couldn't handle the idea of being an abductee. What of it, it happened to all kinds of people, just read the books. The notion that people only remembered their encounters after being hypnotized by UFO researchers was, he had discovered, a lie, and a sinister one at that.

And yet, she had a point. No matter that he now believed it, because these two officials had confirmed it, how could anything like this be real?

He closed his eyes, but sleep did not come. Sleep was far away.

His mind returned to Katelyn. She had said that she was past it, that she understood. They had made love again, and it had been sweet, but not as sweet as ever. There was a thin sheen of emotional ice that just would not melt, and he thought now, at this vulnerable hour, that maybe it was the beginning of saying good-bye.

Too bad he hadn't been able to keep these thoughts away. He opened his eyes again. She was singing in there now, in her high, haunting voice, a lullaby. It was better than the one *he* had sung, and he was sure that it was helping Conner more.

Did she secretly want separation, perhaps even divorce? No—and yet, maybe yes. Maybe she hadn't articulated it to herself, not thus far. But she would. He feared that she would. She was the best person he had ever known. How had he *ever* busted this up? You were not going to find another Katelyn, mister, not in this lifetime. And Conner—how could he live without Conner? Conner claimed a huge part of him, would of any father. He couldn't give that up. Fatherhood and husbandhood had become his meaning.

He heard her stirring out of Conner's room. Rather than confront her now, he feigned sleep. He heard her come close, felt her sit on her side of the bed, and heard her sigh. Then she slid in beside him. She turned her back. He lay in silence for a time, then reached over and touched her shoulder.

She didn't offer any sign that she was even aware of his touch. The night drifted on. In a little while, though, he was aware of movement in the room. When he opened his eyes, he was surprised to see Conner.

Silently, his son came to the bedside. He looked down at them. Dan had seen him before as a child made of stars, but he was ordinary enough now.

“Conner?”

The boy smiled a little, said nothing.

Katelyn stirred. “What’s going on?”

Conner reached over and took her hand, and then took Dan’s hand, and held their hands together. They remained like that, silent in the deep night, a family sailing the ocean of the unknown.

PART EIGHT

SECRET SOLDIERS

Or ever the silver cord be loosed, or the golden bowl be broken, or the pitcher be broken at the fountain, or the wheel broken at the cistern.

Then shall the dust return to the earth as it was: and the spirit shall return unto God who gave it.

ECCLESIASTES 12:6-7

TWENTY-SIX

CONNER HUNG AT THE EDGE of the playground, as far from the other kids as he could get. He'd left message after message at home and on Mom and Dad's cells, but they hadn't responded yet and the bell was about to ring and he'd have to go back near the other kids, and he could not bear that.

If he got close to the kids, like, three feet away, he could hear extra voices that were extremely disturbing, because he knew the voices were the kids thinking. What was worse, they hated him, a lot of them, and that hurt his soul.

He remembered last night perfectly well. He'd had something done to him by the grays, using a science so high that he couldn't even begin to touch its meaning. They had changed him, though, and he was marked, and would forever be marked, by the greatness of that hour.

Will had said as Conner came out onto the playground: "Hey, Conner, how's it hangin'," smooth and easy, but his inner voice had screamed, *I'd like to get a knife and cut your heart out, you stupid asshole!*

Look at them playing around now, laughing, horsing around . . . and glancing at him from time to time, sly glances from Will and Kevin and David Roland, from Lannie Freer—even sweet Lannie Freer—who had imagined, that she was going to come up behind him and tap him on the shoulder and spit in his face when he turned around.

She'd done it, too, she'd tapped him on the shoulder and he had run, it had been like a nightmare knowing what she was planning.

Not all the kids had those thoughts. Paulie didn't, thank God for little blessings. He was only thinking how scared he was of Conner. He was thinking how to convince his parents to move, and feeling sick inside every time he so much as glanced Conner's way. Then he'd smiled and said, "Hey, pal, I ditched the busters, okay? They're gone." He'd snapped his fingers and said, "Poof!" and his mind had said, *Get away from me, you're a monster, get away!*

Then a familiar car appeared at the end of the street. It turned, came this

way. Conner tore through the gate and down the middle of the street. The moment Mom stopped, he jumped in.

“Honey, what’s the matter? Do you have fever?” *He doesn’t look sick, he looks terrified. If they’ve been hassling him, that damn Paulie, my poor little guy, he’s too damn small for eleven, the baby . . .*

He looked at her. Most of the time, her mouth hadn’t moved. He pushed up against the door, but it wasn’t good enough, he could still hear that sorrowing voice and he didn’t want it to be that way, he wanted his mother to see him as strong and confident.

“Conner?” *What’s the matter now? Oh I’m so tired, the damn kid . . .*
“Honey, what’s wrong? Why are you looking at me like that?”

Her face smiled but that was no smile, he knew the truth of it, he knew that his mom wasn’t close to being as happy and contented and full of energy like she wanted him to think. She was terribly upset and so tired that last night she’d dreamed about her own funeral.

“You won’t have a funeral!” he shouted.

“What? What funeral? Conner, what’s the matter with you? Why do you want to go home in the middle of the day?”

“Mom,” he whispered, “I love you so.”

“Oh, honey, I love you so, too! What happened, honey, why do you want to leave school?” *Why can’t he get along, oh but I do love you, I do love you my gray eyes.*

How could he tell her that the kids wanted to kill him? The thoughts came back to him, the ones imagining that they would shoot him, the ones imagining that they would kick him to death, knife him, choke him, but smiling, always *smiling*. How could he tell her about that?

Mom pulled the car over and stopped and turned toward him. “Honey,” she said, reaching out her hand, “honey, now, what’s the trouble? Why do you need to go home, what happened? What happened at school, Conner? Did Paulie and his friends give you a hard time? Because if that damned kid —”

The angry thoughts that accompanied these words were like brands burning into his skull as she talked. She wanted to slap Paulie, to shake Maggie Warner until she broke her neck, to wade into the class slashing with a sword.

“Mom! No, Mom! It’s not that, it’s not Paulie. Paulie was okay to me today. It was better than it has been, actually.”

“Then why aren’t you on your way into English Lit? Why did you tell me it was an emergency, Conner? You terrified me! I adjourned my seminar and came over here as fast as I could. But you’re not sick and you’re not hurt and you’re not in trouble with the kids. So why am I here, Conner? Please tell me.”

He tried not to listen to her thoughts, but he did listen, and she was thinking *what is wrong with my child?* and that thought was making her scared.

“Mom, I need to be home.”

“Then it’s not an emergency? You’re just—”

“I need to be home!”

She sighed, then put the car in gear. Then she turned around, heading back toward the school.

“It’s an emergency!”

“All right, tell me what the emergency is.”

He could not tell her he could hear thoughts, hers included. How could he? He said, “I’m afraid I’ll go insane on you, unless I can go home and get some private space.”

She took a sharp breath. Then she stopped the car again and sat there for a moment in silence. *Look at his face! He looks insane! Oh, God, he looks like his great-gran. Could it be that he’s schizophrenic, too, will we be cursed now with that? Help him, help him God.*

He smiled a glaring, hollow smile.

“Come on,” she said, “whatever, you can take the rest of the day off. Let’s go home and game together. Would you like to game with me?”

They played a lot of *Myst: Uru* together but he didn’t want to. “You never told me we had schizophrenia in the family.”

She was silent for some time. When she talked, her voice lilted like it did when she was trying to hide something. “What makes you ask that?”

He had to watch her lips to see if they were moving, or he was going to keep giving himself away. If Mom knew he could hear her thoughts, she was going to withdraw from him. Not right away, but over time. Anybody would, because of the invasion of privacy. He hunched close to the door, stared out.

“What makes you ask that particular question right now?”

“Uh, it was in science.”

“They were talking about schizophrenia in science? Why was that?”

“Abnormal-psych module.”

“Dan would be fascinated.” *Oh, my Dan, I need you now.*

Conner clapped his hands to his ears and forced the scream that urged to get out to become a hiss through his teeth, ssssss!

Mom’s neck flushed, she gripped the steering wheel, she glared straight ahead. Then she sort of shook it off. She started the car and they continued home.

“Mom, it’s not Dad’s fault.”

“What isn’t Dad’s fault?”

“Mom . . . you know. It’s not his fault.”

She almost ran the car off the road. Then she looked at him with her eyes bugging out and her face bright red. *What is this?* Her hand came out and she grabbed his shoulder and she turned him to her. “What did you say?”

“Nothing. I’m sorry.”

She stared at the road, tears rolling down her cheeks. “Conner, I think I know why you’re feeling so bad. You’re feeling so bad because you know about Marcie.”

He did not exactly know, not the name. But now he did, because the instant she uttered the word Marcie, a huge complex of thoughts and feelings had poured out of her. They were frightening adult thoughts about sex and things he knew little about, and they made him feel like he was prying into his mother’s deepest privacy, and he didn’t want to but could not help it.

“Conner, has she been at the house? Has she been there when I was gone?”

He shook his head. She’d turned onto Starnes, which meant that they would be home soon and he could get away into his room and get out of this hell of *thoughts*.

“She has, hasn’t she, Conner? You answer me!” *He better not lie because if he lies, he’s not my son, not anymore!*

“Oh, Mom, no! NO! I’m not lying and I am your son, I love you so much, Mom, you have no idea!”

She looked toward him. Her eyes were full of tears, now. “You’re reading my mind.”

He could not lie to her, he would not do that to his mother. But he wanted to, he wanted desperately to. He remained silent.

“You know what I’m thinking!”

He still did not answer.

In her face there were suddenly other faces, flowing one and another to

the front with the lazy assurance of carp drifting up from the shadows of a pond. She was a shimmering mass of changing eyes and lips and shapes and hair. She whispered in a voice quite different from her ordinary voice, that he recognized as her soul's voice, her *real* voice, "I know what you're doing and we don't do it, Conner, we hide this. This is a secret of the soul."

Just then they turned onto Oak and then into the driveway, and Conner was very, very glad to open the car door and get out of there, and run downstairs and get some space and not have to listen to thoughts.

"Conner?"

"Gotta go to the bathroom, Mom!"

He raced into the kitchen from the garage, then headed across the family room toward the door to the basement. He took the stairs three at a time and dashed across to the bathroom and shut the door.

His mother followed him. "Conner, are you okay?" *If this is locked . . .*

"Fine, Mom!"

He is not. "I'm coming in."

"Mom, I'm on the pot!"

"Oh, for goodness sake, I'm your mother."

The handle turned, and in the gleaming of the brass he saw people moving in bright rooms. His vision focused and then he was *in* one of the rooms. The Keltons were there and they were in a state of rage, fighting and screaming and pushing each other around like battling animals. Pictures were falling off the walls and their dog was all contorted trying to bite itself—and then Mom came in and she came down to the floor where he had fallen, and he saw a boy walking away down a lane lined with flowering trees and dappled by golden sunlight. He knew, then, what had thrown him to the floor, what agony. That was the lane that led to the land of the dead.

"Mom," he whispered, "I'm in danger."

She held him close to her, and he knew that he had seen something that was going to come soon. When the sun was low in the sky and the bare trees shuddered in the wind, everybody on Oak Road, him and Mom and Dan, Paulie and the Keltons and everybody, even the animals—everybody who lived here—was going to face death.

TWENTY-SEVEN

“THEY’RE FINISHED,” CREW SAID. “I observed it to completion, then took the boy home myself.”

“When did it happen?” Rob Langford asked.

“Last night, just at two. They instilled Adam’s content into the child. It looks like it went well.”

“So Adam is gone?”

Crew heard Lauren’s grief. “You and Adam have a long future together. You’ll find him in Conner. He’ll seem like a sort of shadow, I’d imagine, a little like seeing the ghost of the parent in the child.”

“But he’s . . . in there?”

“Adam is no more. What’s in Conner is his knowledge, and the structures of his mind.”

“Then my friend is dead.”

“I don’t think you really have a word that describes his state. He’s not alive. He hasn’t possessed Conner, he’s given himself to him. But there is so much of him in there, of his personality, his being, his—well, essence, I suppose is the closest word—that you’re going to feel, when you’re with Conner, that you’re also with your friend.”

“Is that reassuring?”

“It’s meant to be.”

“Then that’s how I’ll take it, but what does it mean to Conner? What’s he experiencing? He seems like such a very intense child.”

“He’s confused and afraid, I would think. He’ll have powers he doesn’t understand, and that’s going to really throw him. Knowledge that seems to have come out of nowhere. It’s probably going to be about as stressful as human experience can get. The whole family will be stressed. Extreme stress. Psychotic breaks are possible.”

“Have the grays factored that in, do you think?” Rob asked.

“That’s a hard one. What do you think, Lauren? What sort of insight do they really have into the human mind?”

She thought over her time with Adam, remembered how profound the communications difficulties had been. “Anything might happen,” she said. “My guess is that he’ll go into meltdown.”

“Then you’ll have to help him keep his sanity. He’ll be able to communicate smoothly with you, while he’s going to find fear in every other mind he touches.” Crew glanced at his watch. “I had a little conversation with Dr. Jeffers this morning. Unless this alien sensation is quieted down, Conner’s going to have a really rough time.” He turned on the TV. “That boy has to have the chance to grow up in peace.”

The local station came on, and there sat Dr. Chris Jeffers, blinking into the lights like a disinterred mole. They ran what had become known in the media as the Oak Road Video. It had been on CNN, Fox, even ABC and the BBC. It was all over the Internet, of course.

DAN SAT BEFORE HIS TELEVISION watching *Local Edition*. After Chris had called him, he’d come straight home to see it. Chris had said that his appearance would be a big surprise, but he scarcely believed what he was seeing, his good friend blithely lying like that on TV. The spot might be on a local afternoon newsmagazine buried at 3 P.M., but it would be picked up worldwide. The media had committed itself a long time ago to the notion that the grays were nonsense. They had not liked being shown to be wrong when the Keltons’ video was broadcast. The backlash would be ferocious.

Their own dear Chris had become a voice of authority, and he was lying. It also made Dan jealous as hell, but that he suppressed. Firmly—or, in any case, fairly firmly. “Hey, Katelyn, you think this’ll get him a better job?”

“Nancy says that CalTech is reconsidering him.”

“Now, that is impressive.”

“You don’t sound impressed.”

“He’s lying for dollars, here.”

“Well, I—”

“Don’t you think that people have some sort of right to know this? My God, he’s dirtying his soul, and look at him smile. It’s revolting, Katelyn.”

“If he tells the truth, what happens to him? The press went to him, remember. They demanded a statement from the head of the physics department. He has no net and a baby to feed.”

“He’s the believer, and now listen to him.”

She went into the kitchen, kicking the door closed behind her. He

listened to it swing, and it surely felt like rejection.

IN WILTON, MIKE WILKES BRACED close to the wall of the convenience store. Stinging snow blasted him as he fumbled to make his call. He didn't want to do this again, but he had to. "Hello, Charles."

"Mike! Is this line secure?"

"I'm on a pay phone. I tossed my cell. Any word about this investigation, Charles?"

"I don't see a thing from this end. I'd say that there isn't one."

That was wrong. "I saw them, Charles."

"Well, they weren't from any investigative body I can tap, and I think I cover pretty much all of them, Mike."

So the danger was still out there, and it was beyond the ability of Charles Gunn himself to detect.

In that instant, Mike decided that he had to cut off all contact with Charles. Without another word, he replaced the receiver. He would not communicate with him again until the operation was complete.

He glanced at his watch, then stepped away from the phone. Time was wasting. There was work to do.

He drove through the streets of the town. Too bad this car didn't have tinted windows. A little thing like that could have been so helpful.

He approached the grain elevator carefully. The snow had not been plowed in its drive, only on the road in front. He got out of his car and surveyed the situation. There would be tracks, no matter how he approached the entrance. If a gust of wind blew snow over them, that would simply be a matter of luck. Time was flying, though, and soon these people weren't going to be concerned about a few tracks in the snow.

IN THE OFFICE AT ALFRED, Lauren considered again what Crew had been saying. It looked as if the grays had won . . . whatever that might mean. "So, if Conner—if he's now this extraordinary person, does that mean that Mike's finished? That Conner will always be able to stay ahead of him?"

"Conner is like a newborn baby, confused and frightened and in need of support. Right now, he's more helpless than he was before it happened." He glanced at Rob, who said, "I've had my team in the Mountain burning satellite time looking for Mike. So far, no joy."

Crew took a cell phone call, listened for a moment, then disconnected.

The two of them waited, but he said nothing.

AT THE CALLAGHANS', KATELYN RETREATED into the kitchen, largely to get away from watching Chris. He'd warmed to his subject, lying so well that it became agonizing.

Dan came in. "You know, the wonder of the whole thing is that they really are here. I mean, what a thing to know."

"I wish we knew what they wanted with us and I wish especially that those strange military people weren't involved. They make me think it's all terribly dangerous, and Conner is vulnerable in some way that I can't quite understand and that scares me. It's affecting him, too, Dan, and it worries me. I almost thought he was reading my mind this afternoon."

"In what sense?"

"He kept answering my thoughts. It was terrifying."

"Was it—do you think . . ."

"I don't know!"

At that moment, Conner appeared. His hair was a mess, his eyes were swollen, he shuffled along in a bag of a T-shirt. Katelyn tried to hug him but he stared at her fixedly for a moment, then shook her off.

He looked from one of them to the other, frowning.

"What?" Katelyn asked.

"Don't be afraid," he said.

"Are we?" Dan asked.

Conner was watching this sort of darkness that kept flickering between them. He could hear Dad moaning inside himself. Mom's inner voice was crying and crying, like a little lost girl. The darkness flickered, grew more intense, seemed to come out of them, then toward him like a shadow full of claws.

He clapped his hands to his head and shut his eyes and screamed with all his might.

"Conner!"

"You have to stay married, you have to! Mom, Dad, don't you end this family, don't you dare!"

Katelyn stared at him, too amazed even to try to comfort him. His face was bright red, his eyes were swimming with tears, but his voice—his *voice!*

Dan stood slowly, staring at Conner as if he could not understand what he was seeing. "Hey, there, Conner. Take it easy, son."

“You’re not leaving me, either one of you. I need you, do you understand? I NEED YOU!”

“Conner, hey! You’re outta line!”

Conner pointed at him. “No. You are out of line. Both.” He turned and ran from the room. A moment later, music came roaring up from his basement.

“Two-thousand-one time,” Dan said. Katelyn came to him. They stood, staring toward Conner’s door, silent. He wanted to kiss her, but he was afraid he would feel that coldness again.

From downstairs, Conner’s voice came again, a boy’s voice but full of something else, something that neither of them could really identify—a strident roar, fierce and brooking no opposition. “Do it,” he cried. “DO IT, DAD!”

“How does he know?” Dan whispered.

She shook her head.

Dan kissed her hard and clumsily, like a scared teenager.

She did not close her eyes. When he stopped, he saw tears welling and rolling down her cheeks, and reached up and touched them away.

They embraced, but not like lovers, like people in a small boat in great waves.

IT WAS FREEZING ON THE roof of the grain elevator and Mike was concerned about frostbite, as well as slipping due to numb fingers.

He had waited until the light was leaving the sky to come out here. This time of year, the sun hung low in the west by four, and he hoped nobody would chance to look up and see the figure on the roofline installing an antenna.

When the transmitter was up and running, he got off the roof, sliding badly at one point, so far he thought he’d go over the edge. But he caught himself in time.

Even back inside the structure itself, it was frigid. Also dusty. He coughed a little, and held a handkerchief to his face. Leaving the conveyor running overnight had been more effective than he’d thought possible. He was in a haze of dust, and since the temperature wasn’t much above ten at the moment, the humidity would be effectively zero. He should have picked up a face mask at some hardware store. Well, he hadn’t, so he’d just have to live with it.

He hoped that nobody would make the Volvo. As far as satellite surveillance was concerned, they had probably located his cell phone by now, so they'd be certain he was here.

He wished he believed that this was all going as well as it seemed, but he had been dealing with the grays for too long to be anything but extremely uneasy about doing something they did not want done. If they'd been more open in their opposition, he would perhaps have felt better. This way, he could not know where he stood.

ACROSS TOWN, HIS FIRST LITTLE experiment came to fruition. Gene Ralph Petersen had run Petersen Texaco for thirty-one years, and his dad had run it before him. Before it was a garage, it had been Petersen-Michaelson, a stage stop, livery stable, and smithie. Just now, Gene was in the kitchen of his house behind the station. He was rustling up some coffee and fried ham. Ben, his dog, paced nervously. "You want out again, guy, in all that snow? It's ten degrees out there."

Ben stared at him, stared so hard that he stopped what he was doing and stared back. "Ben? Boy?" Was the dog having some kind of a fit? "Hey, Ben!"

When Gene took a step toward his dog, its lips lifted, it let out a window-rattling growl and it leaped at its master like a wolf leaping at a fawn.

Gene was not in any kind of shape at all, and he fell back against the stove, his arms windmilling. He hit the frying pan and the ham flew up in a mess of scalding grease, and he felt fire searing his back as the dog came at his throat.

Like a volcano that had been building pressure, Gene erupted. He grabbed the hot frying pan and slammed Ben with it, but Ben was filled with unstoppable rage, and got a piece of his neck and shoulder before he beat him off.

Screaming, his own teeth bared, he lunged at the dog, and the two of them went down fighting.

They fought and blood flew, and fingers were torn off, and the dog's muzzle was shattered with the skillet, but finally the dog won. Gene lay on the floor, his eyes glazed, his face gray. Ben, his companion of fifteen happy years, bent down and pressed his bloody muzzle into the face of the master he had adored, and ripped it to pieces.

PART NINE

A CHILD IS DYING

Because I could not stop for Death—
He kindly stopped for me—
The Carriage held but just Ourselves—
And Immortality.

—EMILY DICKINSON

“Because I Could Not Stop for Death”

TWENTY-EIGHT

TWENTY-FIVE-THOUSAND MILES OVERHEAD, an event that would have riveted the attention of every man, woman, and child on Earth—had they known—was taking place. A large and complex satellite, totally black but visible in the brutal light of the sun, was approached by a small, egg-shaped object. This object shone silver, but it was not what it appeared to be at all, a small spacecraft. It shimmered as it approached the satellite, changing into another, much more complex shape. This swung around the satellite and fitted itself neatly over the end that pointed toward Earth.

Inside the satellite, relays sparked, and on its surface tiny rocket nozzles spat bursts of flame. The orientation of the satellite turned away from the snowy center of the United States and toward the line where the land ended, and the coastal waters of the Atlantic began. Then they turned it farther, out over the Atlantic, far from where it could do any harm.

The object released from the satellite became an oval once again, and darted away.

LEWIS CREW BREATHED HARDER THAN he would like, a lot harder. Earth's air had just a half percentage point less oxygen than home, but that difference had a definite effect. Also, his lungs were not accustomed to the pollution here, and they had been deteriorating for years. Now they boiled and bubbled when he ran. He knew that Wilkes had come in here within the past half hour, the kids in the Mountain had called him and confirmed that. Wilkes's car had been identified as a rented Volvo early this morning, and located via satellite ten minutes later. Since that moment, his every move had been tracked.

But why in the world was the man in a grain elevator? Crew had tried to understand but he did not understand, and that frightened him badly. He stood gasping, watching Wilkes climbing down a catwalk from far above.

Still trying to catch his breath, Crew squatted, tightening the muscles in his legs and back, concentrating his energy into his solar plexus—then let go,

springing up, the wind rushing past his face, leaping at Wilkes.

He grabbed the catwalk, felt it shake, heard it clatter. Wilkes stared from the far end, wary, ready . . .

And then he shook the catwalk violently. A wave came down it, causing it to collapse under Crew's feet. He tumbled through the air and hit on his back. The catwalk wouldn't have collapsed like that unless Wilkes had done something to it. It had been a booby-trap and Crew had fallen for it. Wilkes jumped lightly down.

They had been sixty feet apart, one as ready as the other. Now they were thirty feet apart and Crew was on his back, struggling to catch the wind that had been knocked out of him.

Wilkes straddled him. Crew thrust himself to one side and rolled out from under his feet. Wilkes stumbled and shook his head—and moved off, disappearing into the murk of dust that filled the huge chamber.

Crew peered after him. This was a catastrophe. He prepared to be shot. He had lost. He took the warrior's posture, legs apart, ready. He peered into the dust, tried to listen over the maddening clatter of the conveyor.

Strangely, Wilkes didn't shoot. But why not? He was alone here. Had Mike not realized that?

"Okay, men," Crew said just loudly enough so that he would be sure that Wilkes heard him. "If I go down, fire into the flash."

To his left were the four huge storage vats, each fifty feet high with a diameter of thirty feet. To his right and soaring overhead was the elevator itself, an enormous contraption of pulleys and chains driving the bucket conveyor, which rose to a height of about seventy feet, and could be directed into each of the storage vats. Farther off in that direction was a locked office that contained the elevator's controls. The conveyor was running. Why was not clear.

Slowly, Crew began turning around. If Wilkes didn't act, he would head for the door he had come in. The dust would conceal him, too. He was fast, he might make it.

He went deeper into the way of the warrior, gathering his energy along his spine. He had a small pistol in his side pocket, but the grain elevator had been a clever choice, given that he couldn't see four feet in front of him.

Mike must realize that the longer he delayed, the greater Crew's chance of escaping.

Then he saw him, and not two yards away. Wilkes's eyes were baleful,

sparkling, rock steady.

Crew leaped at him, extending a powerful punch as he did so. Mike took it in the face and lurched back. But he righted himself, and before Crew realized what was happening, Wilkes's hands slid around his neck. His fingers felt like steel cables, crushing into his neck, making his head pound, pinching off his breath. He sucked as much air as he could manage, and then his windpipe was closed. Wilkes must have seen him gasping. He had targeted this weakness.

Crew got an arm free from beneath Wilkes's weight, reached up, and tore at his ear. For a moment, nothing happened. With all the strength he possessed, he pulled harder. Wilkes growled through his bared teeth. His head twisted to one side, slowly, slowly. Then, suddenly, Crew could not breathe. He saw blackness coming around the edges of his eyes, deep, warm blackness.

Eight thousand miles away in Cairo, the pyramids lay beneath a night sky choked with smog. Around them, the city roared, an onrushing cataract of light and noise. A furtive jackal that haunted the edge of a nearby slum raised its head, cocked its ears, and whined. Dogs in the flat houses that hugged the pyramid compound began to pace. An old man who had been tending a smoky kerosene heater paused, looked up, then got a ladder and climbed up to his roof.

Crew drew up both his legs, and kicked Wilkes so hard that he flew into the air. He hit hard but rolled, moving with distressing agility. Crew fought for breath, managed to pull himself to his feet. His throat was partly crushed. He cut off the pain as best he could, concentrating his attention in his crashing heart, willing it to beat strong and steady. He waited, watching for movement in the dust, insisting to himself that he would not die here.

After a time, he began to hope that the silence he was listening to was the silence of death. Had he won? He watched a last shaft of sunlight creeping across the part of the floor he could see, sunlight that rendered the wheat dust golden. The smell of this place, the dry, faintly sweet odor of grain, reminded him of home.

He closed his eyes and concentrated on getting strong enough to get out of here. Only after some moments did he become aware that there was breathing that had not been there a moment before, and that it was very close.

Wilkes hammered him in the face so hard that Crew saw an explosion of lights, immediately followed by a curious sort of darkness. He tried to raise

his right arm but it would not come up.

Fingers explored around his neck again, this time with tremendous speed and power. With a shuddering crackle, his windpipe was collapsed.

In Cairo now, feral dogs howled, jackals yapped and paced, and the old man in his white soutane and fez crossed his arms over his chest in a gesture that would have been familiar to the pharaohs, and bowed his head toward the Great Pyramid.

Closer to the structure, a guard looked up from his charcoal brazier and frowned. He called to his companion. Both turned toward the pyramid. They saw, along its vast side, a spatter of pure white sparks. Coming as if from the throat of the Earth itself, a vibrating hum shivered the two men from within.

They ran.

Crew was dead. He was still moving, but nothing would enable him to breathe again. Mike watched him, smiling with an artist's gentle amazement at his completed work.

Crew's air hunger increased. His thoughts were distant and unreal. The anguish of suffocation made him frantic, made his sphincters release, and he shat and pissed himself, and rolled in agony on the floor.

Mike positioned himself and kicked Crew so hard that his head, flying back, caused his neck to snap. He looked down at the sprawled body, then pushed at it with his foot to confirm the obvious.

He went to the door, opened it, and took two small bottles out of his trousers. One was cracked and oozing. Carefully, he collected the thick liquid in the palm of his hand. He poured the dark purple contents of the other bottle onto the floor, making a tiny hill of the crystals. Then he poured the glycerin from his palm over the potassium permanganate. He stepped out through the door and was gone.

As he sailed the ancient lays of the Earth, Crew felt absolutely nothing. Objectively, he knew that he was dead, but this had lost its importance.

In Cairo, the pyramid flickered with blue light. People came out onto the roofs of houses, stopped their cars in the streets, stared at the midnight spectacle. Dogs barked wildly, jackals sang, tourist camels boomed, and horses tossed their scruffy manes.

Crew knew he had reached the place of ascension, he felt it as a warmth caressing him. All pain fell away and all memory of pain.

A tourist who had bribed the guards to let him spend the night in the king's chamber leaped out of the sarcophagus as it filled with blistering

incandescence.

The old man on his roof moved round and round in an ecstasy of graceful concentration, dancing a dance that had been handed down across the generations, not among the Arab invaders of Egypt, but in the secret Sufi ways that were drawn from the old religion, the hidden science that had last sent souls across the chasm of space when Akhenaten and Nefertiti had gone home.

A light so great that it dimmed the glare of Cairo itself then filled the air. The very stones of the pyramid glowed as if on fire from the inside.

People screamed, dogs howled, the jackals writhed in agony.

Then, darkness.

All returned to normal. The old man bowed again toward the pyramid. Smiling a toothless smile, he went back down to tend his broken heater.

An image formed in Crew's memory, of the scents and lights and caresses of home. He turned his face heavenward, following the golden thread of love more and more swiftly. Soon he saw a gentle rain of stars, and knew that this was the passing void of heaven itself. For a few timeless moments, he traveled the perfect physics that was long ago devised for the journey of souls.

Then he saw the wheeling immensity of the galaxy, a crystal conflagration of stars in blue, white, red, yellow, green, large and small, spread across the silence.

Below him came the gigantic horizon of a planet, as he sailed out of darkness into the sunlit side. Now he saw broad lands, farms in silver morning.

He let the weight of his love draw him downward. Soon he could make out individual farmsteads, their thatched roofs clustered together beneath ancient trees. Then he could see, far away, the White City shimmering on the horizon, and carts in the roads going toward it laden and returning empty. Dropping closer, he could hear the great auris singing as they passed one another on the road, and their drovers humming the tunes that gentled their raucous dispositions.

He came to his own farm, saw it spread below him, its fields rich with bowing wheat. The love he felt was so great that it made him glow, and he heard voices rise below. They could see him coming, a shaft of light dropping down out of the sky. He heard his sons' shrill voices and his wife's cries of alarm and joy.

Then he was over the cool room, set partly in the earth, where his return would take place. He dropped down through the roof, which felt like a sort of smoke of straw. Below him now was a body on a stone table. It was his own body, indistinguishable from the one the humans called "Crew." It was naked, this body, lovingly groomed.

The next thing he knew, he was looking out of its blinking eyes. The room was lit by flickering candlelight. He inhaled. Perfect air, clear, faintly scented with the odor of his wife. He lay naked on the familiar stone table. His wife, looking tired in her sweated muslin work clothes, gazed down at him.

She bent to him, then, and kissed him long, and he was home.

TWENTY-NINE

A FLASH FILLED THE AIR, as if a gigantic flashbulb had gone off in the sky. Conner began to count, “One, two, three, four—”

“What the hell?”

“Shh! Six, seven—”

A long roar rolled in, full of thuds deeper than thunder.

Conner looked from Dan to his mother. “The grain elevator just exploded,” he said. It had to be that, unless somebody had dropped a very large bomb on little Wilton, Kentucky. Nothing else in town was big enough.

The phone rang. Conner snatched it up. “Hey, Paulie! I know. Okay!” He pointed out the kitchen window. Katelyn saw a great mushroom of smoke rising in the direction of Wilton.

Within a couple of minutes, a horn started honking out front. “It’s the Warners,” Conner yelled. As he stopped at the hall closet to get his jacket, Dan grabbed the video camera.

Katelyn did not want to be trapped in a car with the Warners. She went out behind Dan and Conner. “We’ll take our car,” she called. But Conner jumped into the Warners’ backseat with Paulie and they were off. She and Dan went into the garage and got in their car.

“Thank you,” he said. “I consider that a rescue.”

“What in hell happened in town, and how do we know it’s the grain elevator? What if it’s terrorists?”

“In Wilton, Kentucky? Anyway, Conner’s always right.”

He stepped on the accelerator, seeking to stay close to the Warners’ speeding van.

MIKE WILKES WAS JUST STARTING his car when the blast took place. There was a gigantic roar and a flash like a sheet of silver-white filling the whole world. Frantically, he switched on the ignition. The car was already

in motion when a large piece of the elevator's tin roof struck it, smashing the windshield and caving in the roof to the point that Mike was lucky even to get the door open. As he crawled out of the ruined car, a segment of conveyer buckets slammed into the snow a foot away. He slid under the car, then, and waited while debris rained down.

When it finally stopped and Mike came out, he saw that the car was a complete wreck. Worse, he could hear sirens. He had to get away from here.

The elevator was burning furiously now, the fire heating his back even from this distance. At least he had accomplished his objective. In a little town like Wilton, a spectacle on this scale would draw everybody who could move, and especially the kids. As he had intended.

He loped in the direction of a line of abandoned stores across the street from the elevator, and ducked down an alley. As he did so, a small fire engine came up and stopped, its horn blaring, its siren whining. It stopped beside the Volvo. As the siren ground down, firemen jumped out and examined the car. An instant later they all looked up—directly toward Mike.

His tracks, of course, his damned tracks in the snow.

He turned and ran, ducking down an alley and out into a disused rail yard. A glance backward told him that the antenna still stood, taped as it was to the tank farthest from the collapsed roof of the elevator. The transmitter would be doing its work, now, and would continue until the tank itself disintegrated.

He threaded his way across frozen tracks. He could not escape, of course, not slowed by the snow and chased by men who were not injured.

It had been Crew in there, *Crew!* They would find the body. With arson and murder charges against him, the Trust would disappear from his life. Worse, nobody would know for certain if the kid had survived.

CHARLES GUNN'S PHONE RANG. HE picked it up, was told by a young voice that there had just been a major explosion in Wilton. He input his code into a satellite access node on his laptop and chose the correct satellite, then zoomed until he had a clear shot of the town from above.

There was smoke pouring out of a large building. He recognized three circular storage tanks. A grain elevator. He sat staring at it for some minutes.

What might it mean? Was Mike in trouble or was he succeeding? He was not reachable by phone, so there was no way to tell.

At that moment, his six-year-old daughter came in. "Mommy says to ask

if you want coffee.”

He drew his little girl close to him. As he nuzzled her flaxen hair, he punched numbers into his phone. “Mr. President,” he said, “the time is now.”

“Is it?”

“Yes, sir, we needed it some time ago.”

“And it’s going to be a purely localized thing?”

“Oh, absolutely, sir. Minimal damage.”

“Thank you, Charles.” The president hung up.

Charles looked at the phone. What did this mean? He hadn’t cancelled the order, surely. No, he would have said something to that effect . . . wouldn’t he?

His daughter asked, “Was that the *president*?”

He kissed her.

“Mommy says you’re very important. Are you very important?”

“What’s important to me is being your daddy, punkin.” He lifted her into his lap. She gazed into his eyes.

She frowned. “Are you upset, Daddy?”

He hugged his little girl.

MIKE WILKES NOTED THAT FIREMEN were not only chasing him now, they were making radio calls, and he could hear a higher-pitched siren, then another. They were getting the police.

He’d run out of options. He pulled the plane’s remote out of his pocket and activated its GPS. He stopped long enough to input the code series that brought the plane to life. At each stage, he got a positive response. It was out there, thank God, and intact. Then the ETA came in: four minutes and twelve seconds before it could reach this location. *Way* too long, damnit!

LAUREN WAS FAIRLY SURE THAT she could sense Conner in her mind. What was amazing about this was that he was nowhere near this base, he couldn’t be. She’d been able to perceive Adam’s mind from no more than a few feet away. “I sense something,” she said to Rob. “The boy is . . . agitated.”

“He’s seen the explosion. How do you feel him?”

“It’s like remembering somebody in present tense, if that makes any sense.”

“Is he in jeopardy?”

“I’m not sure. He seems agitated.”

He called Crew’s cell phone again and again got his terse recorded message. Then he phoned Pete Simpson.

“We identified Wilkes’s car. We located him in the town. I told Lewis immediately. The Mountain says that Wilkes’s car hasn’t moved from behind the grain elevator.”

Rob thanked Pete and hung up. He gazed out the window. On the horizon, there was smoke. “Look, I’m going to go into town.”

“I’m going with you.”

“Not with Mike at large. I need to get this situation into focus for me first.”

She let him go.

BEYOND THE RAIL YARD MIKE could see the center of Wilton. Cars came this way, and twenty or thirty people hurried up the broad street that crossed the rail yard and went past the elevator. At least one or two of them were bound to be among his human bombs, and they were walking right into the range of the signal that would trigger them . . . as indeed, was the whole community.

His bait was working efficiently. There was now little question in his mind but that the child would die.

Outside, the crowd came closer to the burning structure. Nobody could see the antenna, let alone imagine that it was there, or how extraordinarily dangerous it was.

The streams from the firemen’s hoses made sleet, which slicked the ground. Sliding, Mike ran toward the crowd, picking out a woman who was hurrying along with her daughter.

“Hi there,” he said as he trotted up to them.

Her eyes widened as she looked at him. “He’s hurt,” the little girl said.

“Oh my God—here, I’ve got my cell.” She began to rummage in her purse. A police car roared around the corner and came straight toward them across the rail yard.

He grabbed her shoulder, drew his gun, and thrust it into her face. “Shut up,” he yelled. “Don’t move!” He glared down at the little girl. “You move and your mommie gets her head blown open.”

The little girl began making a shrill, desolate noise.

Two minutes and eight seconds before the TR would arrive. Getting

aboard would be a near thing. He'd have to carry the kid.

"Take it easy," one of the two cops approaching him called.

"Don't move an inch! One inch and she's fucking dead!"

The woman gobbled in her throat.

The cops froze.

The little girl screamed at the cops, "Help my mommy!"

They stayed like that, and a standoff was just what he needed.

Finally, a warning warble came from the plane's remote. Mike was brushed with warm wash from its fans. There was no frost visible, because the dehumidifiers would be working to remove every trace of moisture from that exhaust.

With a swift and controlled motion, he reached around the mother and wove his fingers through the girl's hair. She howled and kicked and turned red as he dragged her. The remote was chiming, two discordant notes. He thumbed the hatch control.

"Jesus Christ," one of the cops yelled as the stair came down, apparently out of clear sky. But then, of course, with the eye drawn to it, they could see the plane, a faint outline, its lines visible where the camouflage worked imperfectly. It wasn't designed to be invisible from this close, not if you were aware of its presence.

Dragging the little girl by the hair, with her mother walking along, her hands out, begging, her eyes wild, full of tears, he backed up to the ladder.

The child scabbled at his hand in agony. An odor of urine rose from her twisting, struggling body.

All in one motion, he dropped the girl and climbed into the ship. He jammed at the remote, but not fast enough, he had a cop on the damn ladder. The man was looking up at him, trying to bring his gun to bear.

Mike fired directly into his face, which exploded like a smashed pumpkin when the jacketed magnum bullet blasted it. The body dropped away and the ladder came up as Mike slid to the cockpit and dropped into the seat.

He hammered buttons, preparing one of the twelve diversions the plane carried. It would eject in ten seconds. Outside, he heard a shot. The plane was not armored in any way and that would do damage, for certain. Immediately, he got an alarm on one of the sixteen exhaust fans. As Mike took the ship up two hundred feet at a sharp angle, the damaged fan shut down.

The diversion ejected. This was an extremely bright plasma, which

would draw the eye of everybody in the area. Gunfire erupted as the cops, deceived into believing that the glaring orb was the ship, shot into it.

Resistant to the Earth's natural electrical charge, the coherent plasma shot off into the sky faster than a bullet.

“Holy God,” a voice yelled.

“That was a Goddamn UFO!”

Every eye was scanning the sky in the direction the diversion had gone. Mike turned the ship and moved off, quietly working his way out of town.

THIRTY

ON THE OTHER SIDE OF the building, where the main fire deployment was under way, the firemen continued unrolling and charging hose. A burning grain elevator wasn't going to be extinguished. It was a matter of standing by, making certain it didn't spread, and letting it burn itself out with as little damage to its surroundings as possible. So their main interest was the roof of Martin's Feed Store nearby, and the John Deere tractor dealership across the street, not the elevator, which was sending flames at this point well over a hundred feet in the air.

"Captain, we gotta go in there," one of the firemen said.

"Don't do it, Harry, that's an order. You're gonna see the walls go any minute." He grabbed his bullhorn. "Okay, folks, back it up! Get those cars outa there!"

CHARLES GUNN CALLED THE WHITE House. "Mr. President, I need that scalar pulse, sir. I don't understand why it hasn't gone in."

"I don't want to do it, Charles."

Charles's heart quietly skipped a beat. "Excuse me?"

"Charles, I'm not going to pull the trigger on Americans just on your say-so. It's not enough, Charles."

It was as if he was talking to a different man. "Mr. President, the whole future of mankind is riding on this."

"You didn't tell me the truth, Charles. I know the kind of damage this is going to cause, and I'm just not going to do it. How dare you lie to me like that."

"Sir, I didn't—"

"You lied and you were willing to destroy the lives of millions and wreck the country! You're gonna have to find another solution, Charles, this one's too expensive, and I have to tell you, I've got a problem—a major problem, Charles—with your even recommending such a course of action. You don't walk in here and do a thing like this, ask me to wreck my country

and try to trick me into doing it.”

Charles hung up the phone. He had to take a tremendous personal risk if he was going to cut false orders. There was plenty of precedent for it. Dean Bracewell had done it in back during the cold war when he'd moved elements of the Sixth Fleet from the Mediterranean to the Black Sea in violation of *détente* in order to pull an asset out of Roumania. The problem was, there was no real way to accomplish it without getting caught. Reagan had been furious at Bracewell, yelling at him, “The next time you try to start World War Three, mention it to me, first!”

Given the magnitude of what Charles was going to do, there would be more than a White House tantrum. At the least, he'd go to jail for life. Maybe he'd even suffer the death penalty.

So he'd get Henry Vorona to do it. It would be easier for him, anyway, given that he was active CIA. He'd tell Vorona that the president approved, but wanted the orders to flow this way.

Problem solved.

DRIVING TOWARD TOWN, KATELYN AND Dan had fallen into another silence. Despite Conner's pleas, she was beginning to feel that Dan had just sort of slipped out of her soul. She should have found forgiveness for him, but she simply had not been able. Halfway to town, with the smoke now towering before them like a storm in the evening sky, Dan silently took her hand. She let him, but could not think why.

IN THE WARNERS' CAR, CONNER tried to keep the thoughts of others out of his head, but it was hard. He kept feeling like somebody else, also. One moment he was himself, the next he seemed to have a huge, complicated memory of things that had never happened to him, of flying in the stars, of being hideously lonely, of something that was terribly, terribly wrong. Except one thing was not wrong: he remembered Amy who was sitting right beside him, as if he'd known her for a thousand years. He remembered her in life and between lives, in the green rambles of death, planning this life together.

He shuddered. How could he be thinking about things like this? He knew the secrets of the dead and the ages, knew them certainly. In a flash, he could see back huge distances in time, to bright inexplicable fortresses and death-serpents swarming ancient skies.

And he could see the people around him, really *see* them, and it was wonderful and terrible, it was very terrible, because their secrets were as much a part of him as were his own.

It was like spying on their souls, he decided, looking across the walls they had built around their soft central needs.

“That is so awesome,” Paulie said, looking at the rising smoke.

“Yeah,” Conner agreed. It was an act, though. To appear to be himself as he had been, he had to pretend.

His memories of last night were foggy but he knew that something very incredible had happened.

“Dad, can you step on it please?” Paulie asked.

“We gotta watch the snow.”

At least they weren’t all full of hate. They were thinking about the grain elevator. Mr. Warner was worried about not getting there in time for Paulie to take pictures. Mrs. Warner was making plans to keep the boys from going too close. She was telling herself that she’d yell at them if she had to. In Paulie’s mind there was nothing but smoke, fire, and eager excitement.

Conner put his hands over his face and totally relaxed, blowing out a long breath. His bones seemed to tickle, and the feeling of the air on his skin changed. He had to learn to tune this stuff out. He’d messed up with Mom and Dad, shouting at them about their marriage secrets.

He could hear their inner voices especially well, Dad’s perfectly. He knew that this was because of Dad’s implant, and he felt a question now: somebody—was it called the collective?—was asking him if he wanted others implanted. They would implant anybody he wished, and he would be able to hear their thoughts perfectly, no matter where they were.

He shook it off. It hadn’t been a voice, but more thoughts entering his mind that were not his own, like smoke joining other smoke.

He tuned in to Dad by simply wanting to hear him. There came a tremendous burden of woe, a river of Mom’s face and her skin, long streams of memories, such happy memories, of walking down Oak Road in the summertime, of moments in bed that he modestly turned away from, of a train trip they must have taken before he was born . . . and then this sad, sad thing that had happened with Marcie Cotton—

—and he saw why: the grays had needed the family to stay here in Wilton, and they had made certain that Marcie would give Dad tenure. He saw the two of them whirling round and round in a dark place together, saw

sparks of golden soul mingling, and understood what had happened.

It made him angry at the grays, because they had hurt Marcie and Mom and Dad just to get what they wanted. *You better understand that I'm calling my own shots now*, he said in his mind.

Instantly, there flashed before his eyes a vast wall of gray faces, eyes gleaming, arrayed in rows as far up and as far down as you could see.

He cried out in surprise.

"What's the matter?" Paulie asked. "Scared?"

"Nah."

As Mr. Warner, stuck behind a truck, slammed his hands against the steering wheel the color around him changed. The air flickered with red and then took on darkness, especially around his head. He hammered on the horn and flashed his lights.

"John!"

Purple light filled the car, gushing off both Paulie and Amy. Conner saw it coming out of himself, too, pulsing out of his chest with his heartbeat. He looked down at it and told it to go away, and as it did, so did the fear he had felt at Mr. Warner's outburst.

"Sorry, sorry, folks. That guy was intentionally hassling me, he—Jeez, it's Len Cavendish, too. He must have gone nuts. I hope he can still unstop sewers."

Conner watched the familiar Cavendish Plumbing truck weave off down the road. Tim Cavendish had been in the passenger seat, and he had locked eyes with Conner, and Conner had heard a thought, *kill*, directed at him.

He shook his head, trying to shake away the feeling of it, and the memory it had evoked of the awful time in the playground at recess.

Since it was impossible to hear thoughts and see emotions, both of which he was doing, he decided that when he got home he would go online and learn everything he could about schizophrenia. *If you're schizophrenic*, he thought to himself, *you have to diagnose yourself and figure out a treatment protocol. If you need medical attention, you have to tell Mom and Dad.*

He would start at the *New England Journal of Medicine* and read all the recent monographs on childhood schizophrenia. Then he would go into the neutraceuticals literature. If there was a cure or a useful treatment, he would find it.

As the sun dropped lower, the western sky turned dull orange behind the

skeletons of trees.

A car coming toward them suddenly sped up and smashed into the rear of the car in front of it. As they went on down the road, Conner could see the two drivers get out and start fighting like maniacs. There was a lot of black haze around the cars, the evil smoke of their rage.

He had the strange, sickening feeling that it was somehow connected to him, as if the cars had been . . . after him. On their way to Oak Road.

That must be part of the schizophrenia, a paranoid aspect. There were drugs that controlled schizophrenia itself, but not paranoia. Paranoid-schizophrenia was still difficult to manage.

He had known for years that he might be susceptible to problems like this. He squirmed in his seat next to Paulie. He did not want to see his beautiful mind destroyed. He watched purple fear gushing out of his chest like a waterfall, and disappearing down through the floor of the car.

He decided that he was definitely going around the bend.

They got to the fire and Paulie practically threw him across the street getting out of the car. He was tremendously excited, racing toward a cluster of their friends, waving his new camera, and yelling.

Conner noticed more of the black haze, and saw that Will Heckle was as black as night. Was he coated with smoke or something?

Conner was afraid of Will. That was not right, that he would look like that. He stayed close to Paulie. “Awesome,” Paulie breathed, looking up at the massive structure with flames shooting out of it.

It was a marvelous fire, but Conner really did not like the way Will and now Steve Stacy and another of the older kids were looking at him. A lot of people sounded crazy, their thoughts roaring like a maddened troop of chimpanzees screaming at each other in the zoo. He began to look around for his parents, to cast for his dad’s thoughts in the screaming turmoil around him. *Dad* he said in his mind. But, of course, Dad couldn’t hear him, that was just the schizophrenia talking.

KATELYN HEARD A CRACKING SOUND a good deal louder than the fire. Then she saw, at the far end of the elevator, that somebody was down, and a cop, young Tory Wright, was standing over him. “That looks like Dr. Bendiner,” she said.

“It is Dr. Bendiner. I wonder what in the world—”

Tory Wright skullwhipped the old man with his nightstick, and Dr.

Bendiner's head flew from one side to the other with the blows.

"My God, he's going to kill that old man!" Katelyn yelled. She started to run toward them. The rest of the crowd totally ignored what was happening. Then two townies started fighting, and a fireman suddenly threw down his hose and stalked away, leaving it spraying like some mad snake, the brass head a lethal projectile.

"What is going on here, Dan?"

"We've gotta get Conner." He looked around, but it was hard to see through the icy haze being generated by the spraying hoses. "Conner!"

Katelyn saw Marcie about fifty feet away. She froze, not knowing if she should go to her or what she should do. Marcie looked at her. A slight smile trembled in her face, vulnerable, ashamed. She took a step forward.

Katelyn did the same.

"Katelyn, forgive me. I don't know what happened. I can't explain it and I'm deeply ashamed, Katelyn."

As the fire roared and the water thundered, the two women embraced.

"Something happened, Marcie," Katelyn said

Sleet swept over them. "I know it, I had—oh, Katelyn, what's going on? Something is *not right!*"

Without warning, the hose the fireman had abandoned seemed to rear up before them like a cobra. Katelyn leaped away, but it smashed into Marcie's face and slammed her to the ground.

"My God, it hit her! Help her," she screamed at the firemen. "*Help her!*"

Dan saw she was badly hurt and ran to her, and found her jaw shattered and blood bubbling out of her mouth, and her eyes filmed and uncomprehending. "Marcie," he cried, going down to her. "Help me, this woman is dying! She's dying!"

Katelyn saw a fireman staring . . . but not at Marcie. He looked off into the crowd, into the blowing ice haze. She looked around again for Conner, still did not see him. She ran to Dan. "Dan, we've got to help her!" But Dan heard something, he heard it in his left ear, as clearly as if a radio had been turned on there. It was Conner's voice: *Dad, I need you!*

The implant—he realized that it was there for Conner, to help Conner. He went to his feet. "She's beyond help. Katelyn, Conner is calling us, I can hear him, it's the implant, Katelyn. We've *got* to find him!"

CONNER STOOD ABSOLUTELY STILL, STUNNED by what he was seeing. Kids, adults, a lot of people, were looking not at the fire but at him. They were stealthy but they were very definitely surrounding him. He could hear a sort of grumbling whisper, as if they had lost all humanity, and turned into snarling animals that had only one enemy on this earth . . .

This was not making sense. It had seemed sort of understandable at school, but not here. Nobody should care. They were here to see the fire of the century, not to go after some kid. Turning slowly round and round, he watched them. Any moment, one or another of them was going to jump him. *Kill*, he heard, once or twice, but most of the thought was more primitive than words, it was an incoherent snarling, and every time he moved, it rose, got more sinister . . . and they came closer.

AS CHARLES GUNN REACHED THE flight deck of TR-A4, the control surfaces flickered to life. Immediately, he turned on the plasma engine and watched the batteries charge. Because it was daylight, he'd need to use camouflage the whole way. He was going to Wilton himself. He wanted to be low and close, there just wasn't any other way. Also, there was a possibility that he might be able to reach Mike using the ship's super-secure sideband system that was capable of keeping TRs around the world in touch with each other, and was not accessible to outside tracking.

Henry was working on the scalar weapon orders. He'd probably be able to start pulsing in about an hour—unless, of course, the president, who was by no means stupid, had taken steps to close the many back doors into the Pentagon's operations system.

“Charge,” the plane said in its soft female voice.

“Deploy shield.”

“Done.”

He hit the button on his throat intercom. “How do I look?”

“You're ready to proceed, sir.”

“Open the doors.”

As he watched the monitor, the huge hangar doors opened. He would move out, then go straight up to minimize the number of people who would observe a very strange phenomenon—a gigantic triangular shadow, apparently cast by nothing. A close look would reveal the ship, but protocol required daylight takeoff to use full plasma and all fans to ascend to fourteen

hundred feet immediately. At this altitude, the shadow would be too diffuse to be seen except from the air, and the air above Andrews was, because of this operation, at present entirely clear of aircraft.

“Sir,” came a voice in his earphone, “return to the hangar, please, sir.”

It was base ATC. What in the world were they doing interfering?
“Excuse me?”

“We have new orders, sir. TRs are grounded effective immediately.”

The president had closed the operation down. Charles acted with characteristic speed and decision: he immediately took the TR up. Inside of thirty seconds, it was completely undetectable, not by radar, not visually, not in any way at all.

Incredibly, his cell phone rang. For a moment, he was furious. Voices inside the TR were damped, but if Andrews had deployed its sonic scanners, they might pick up that ring. He fought it out of his pocket and opened it.

“Charles, I’m being arrested,” Vorona’s voice said. “He’s pulling us in, all of us.”

Charles thought fast. Then he saw, instantly, just how to contain this.
“Henry, stay calm. Do you have the scalar’s codes?”

“Yeah, but they’re busting in my door right now!”

“Give me the codes.”

“This isn’t a safe line, this is—”

“Do it!”

“Code of the day is B Bravo C Charlie Z Zero G Gremlin N, then one niner one in six three three eight nanosecond timed sequence.”

The line disconnected. Okay, his next act was to activate sideband. He had the TR moving away from Andrews at its top speed of 320 mph. “Mike?”

He waited. Nothing. He punched up the signal-seeking equipment. “This is TR-A4 for TR-A1. Mike?”

There was a carrier out there, but Mike wasn’t answering. Maybe he wasn’t aboard the TR.

Charles decided that he had to trust Mike to do his job. His first priority now was to save the Trust.

A TR was richly endowed with communications. In fact, an entire subset of controls for the scalar weapons would turn on as soon as it was fully deployed. This way, a TR could stand in close and watch the effect of scalar pulses that it was triggering, and make fine adjustments in their strength and angle while remaining entirely unaffected by the earthquakes they were

causing on the ground just a few feet below.

Charles went into the plane's operational manual and read as he flew, pressing buttons on a console.

Far overhead, rocket servos on the scalar weapon began once more to fire as his commands redeployed it. He had no idea that the grays had sabotaged its previous deployment, but this didn't matter because it would seek to its new coordinates from wherever it happened to be. As he worked, its long, black snout swept back across the blue of the ocean, back to the land. It stopped, then, and with tiny bursts of the servos, began to move about as if it was hunting for something.

When a city appeared below it, the motion stopped.

On the TR, Charles watched a screen. He pressed buttons, and the image became clearer. He zoomed again, and the image was clearer still: he had pointed the scalar weapon directly at Washington, D.C.

He turned the plane on its axis and headed directly into the D.C. no-fly zone.

THIRTY-ONE

INSIDE THE GRAIN ELEVATOR, THREE figures, all dressed in silver protective gear with full hoods and gloves, moved carefully across the broad floor. Nobody on the outside was aware of the presence of Colonel Robert Langford and this specialized crew.

Dr. Simpson had phoned him while they were driving into town. “If he’s dead, you will need to collect tissue, Colonel Langford. I want cell-rich tissue. Do it the way the grays do, take the eyes, the lips, the genitals. We are going to need to build a clone of him.”

He’d wanted to ask why, but knew that he had no need to know, and therefore didn’t waste his breath. So what he had said was what duty demanded: “Yes, sir.”

“We’re looking at imminent structural failure, sir,” a voice crackled in Langford’s ears.

“I know it.” He lifted an electronic bullhorn to his lips. “LEWIS! LEWIS CREW!” His loss, in Rob’s opinion, would be greater than the loss of the gray that had departed the Indianapolis facility. Adam was so deceptive and complicated, there was no telling what anything they got from him really meant. But Lewis was as straight as they came, and he knew many secrets. Maybe his story about coming from another world was even true.

A rumble from above drew his attention. Like a gigantic missile, a flaming beam arched down and hit the floor in a shower of sparks. “Careful, guys,” Rob said, “we can’t afford any attrition, here.”

“I’ve got an organic mass.” Captain Forbes raised his viewer away from his face mask.

“Oxygen-level warning,” Airman Winkler announced, meaning that he had five minutes before compulsory withdrawal.

Langford moved through a forest of fallen, burning beams to reach Forbes. At his feet was a corpse. “Okay, let’s collect tissue and pull out.”

It was so badly burned that it looked more like a black log than a body.

“Holy moly, Colonel!”

“Take it easy! Gentlemen, let’s bag this.” It affected him deeply to see Lewis this burned. The poor guy was almost unrecognizable, but not completely. What a way to go, what a rotten death for that good man.

High above, a roar started.

“Move it! Now!”

PAULIE AND CONNER STOOD SIDE by side. Conner stayed close to the Warners, because they were not having these weird thoughts, not like the others, and they didn’t have shadows around them. They were shimmering with what he had come to see as normal colors of life.

The others came closer. He looked for his mom and dad, didn’t see them. The haze from the spray and the smoke was like a fog bank full of looming shadows, the roar of the fire and the rumble of hoses, and strange, echoing cries.

He dared not move, dared not call out. In his heart, though, he begged for his mom and dad, begged them to get him out of here.

Paulie and his family had no idea that anything was wrong. He innocently pointed his video camera at the burning elevator. Amy took pictures with her cell phone.

The whole wall of the building was now smoking. It shuddered and made a sighing sound.

“HE’S CALLING US,” DAN SAID. “I hear him clearly.”

“You can hear him? How can you hear him?”

“Katelyn, I told you, it’s the implant, and I’m sure that he’s in terrible trouble.”

“I can’t hear him! Why can’t I hear my child?”

“You don’t have an implant.”

“But that’s—”

“We’ll sort it out later.” He moved off, trying to see ahead through the smoke and haze and gathering dark. “Conner! Conner!”

CONNER DECIDED THAT, NO MATTER how it looked, half the town could not be coming after him. They didn’t even know him, most of them. So this was paranoia. He would not allow himself to react to a symptom as if it was real, he wasn’t *that* paranoid . . . yet.

Nearby, two people leaped into their cars and began driving this way.

Harley ushered the kids away. “They’re pulling out too fast in this ice,” he said.

Then one of them skidded into the other, and they both went spinning around, slamming into each other and bouncing off amid a flying shower of glass.

“DID YOU SEE THOSE CARS?” Dan yelled to Katelyn. “Conner! CONNER!”

They moved through the nightmare murk, both calling his name again and again.

As she walked beside him, struggling with him in this bizarre nightmare situation, she thought, *If he has to, he will give his life for his family.*

As if the sudden, deep love this realization made her feel had opened a door, she remembered being in a dark space, remembered it quite clearly. At her feet there was a round opening. Far below, she could see water in the moonlight. A boy was beside her, his dark hair scattered across his forehead. His eyes were scared, but he was so attractive that a shiver went through her when she saw him. She remembered reaching out to him, and in that instant knew it was Dan when they were children. She felt then the most exquisite, most deeply poignant sense of memory that she had ever known. Without being able to put it into words, but just feeling it, she saw the role she and Dan had to play in what she perceived as a plan of some sort that she could not even begin to understand, but that involved Conner.

“Dan, we have to find him!”

“I know it.” Then he pointed. “Katelyn, there!”

He was not thirty feet away, just visible through the swirling ice haze. And Kenneth Brearly, a Bell tenth grader, was standing in front of him pointing a pistol at him.

Conner disappeared behind a billowing mass of haze from one of the hoses. “Conner!” Katelyn bellowed, “Conner, run!”

DESPITE THE DANGER OF BEING seen by Wilkes or somebody under his orders, Lauren left the office and moved closer to the base perimeter. She had no car and dared not draw from the motor pool.

She had to get to Conner, she knew that, but how? It was miles to the town, there was no bus. She’d tried to call the cab company, but there hadn’t been any answer. Everybody was at the fire, no doubt.

That fire was bait, she was certain, set by Wilkes to draw the whole town. Conner was a twelve-year-old boy, he would be there. Mike would kill him and make it look like an accident.

She pulled out her cell phone and called Rob again. It was a futile gesture. She tried to somehow reach out to Conner, attempting to communicate with him via her mind.

Maybe he heard her and maybe he didn't, but she certainly felt no response. She looked down the long road that led to the town, to the gigantic smoke cloud, magnificent in the fading sun.

FOR THE FIRST TIME IN so long their memory of it was nothing but a few dim sparks, the Three Thieves felt love. They felt it fiercely, hanging over the burning building, for the child down there in the mist, who glowed gold in the dull, swirling crowd of other souls.

They saw, also, the antenna and the signals flaring off it, impacting the red flaring implants in the heads of people in the crowd. That antenna was connected to a transmitter, it must be, but the live voltage would be too low to make the wire visible to them. They hung far above, their small oval ship out of sight above the smoke, watching Conner. And they saw, suddenly, somebody with a gun.

Help me, they heard Conner's mind saying.

They felt something strange within them, the beating of the heart. And they understood at last why Conner was calling for help, what all these strange signals meant: Wilkes had used a primitive form of mind control to turn dozens of people into assassins.

KENNETH WAS AN HONOR STUDENT, an Eagle Scout, and a very proud young citizen, and he was absolutely terrified at what he was doing. He remembered some kind of a nightmare with this strange, whispering man in his room and he had woken up crazy like this, and he knew it was crazy, but he could not stop himself, he'd been turned into a killing machine, and the worst of it was that he just needed to kill this geeky middle schooler and do it NOW!

He kept losing him in the haze, but just for a second or two, so he was getting closer fast; then he found a clear shot, he raised the pistol, he aimed—and, Jesus. What the hell was *that*? Or no, he hadn't disappeared, he was still there. He was four feet away. He could not miss. He pressed the trigger,

which did not go back. He stopped, cursed himself, thumbed the safety off, and raised the pistol again.

Conner looked into his eyes, down the barrel of the gun—and felt his body begin making tiny movements, very quick, tiny movements that seemed somehow linked to the kid’s vision.

Kenneth started to pull the trigger—and this time Conner cleanly and clearly disappeared right before his eyes. There was no obscuring haze. He was just gone.

Then he saw him again, flickering back into existence as he shook his own head, as if that had been enough to make him visible again. Now he would not miss.

Dan tackled him from behind and he went down without a sound. The pistol flew off into the murk, and the next thing Kenneth knew, the world was dark.

“Dan, don’t kill him!”

“He’s just knocked out. Where’s that pistol?”

“Oh, God, Dan, *look!*”

Linda Fells did not know why she had brought her dad’s deer gutter. She loathed the ugly, hooked knife, hated it when he brought home does to carve up. But now she had to use it, and she knew on who and even though she was screaming in revulsion and fear, she marched toward Conner Callaghan, raising it as she went.

She screamed and shook her head, trying to get rid of these thoughts, but the thoughts only got stronger and stronger.

Dan ran toward her with all his might, but he tripped on a hose and went sliding in the ice, screaming for Conner to watch out, that she was behind him. Katelyn howled, “*Conner, Conner,*” and struggled as if through mud, crossing the slick of ice, hoses, and fallen people that lay between them and their boy.

THE THREE THIEVES MOVED DOWN toward the roof of the grain elevator. They had to reach that antenna and the transmitter connected to it, but the collective was horrified to see that they could not reach it unless they descended into flames and certain death. But they couldn’t die, they mustn’t. No other triad was prepared to replace them. This had not been anticipated.

The One said, *We have save him.* The Two said, *We have to save ourselves.* The Three leaped out of the craft and dropped down through the

air. As he fell, a great mass of fire enveloped him and the whole collective howled his pain and his loss. He saw fire all around him, a red haze. He felt his bones growing hot, felt essential processing systems in his body begin to boil.

He reached the lip of the great tank. The whole structure was unstable, he could feel it shaking, could see the flames licking at it. It would not last long, but even another moment was too much time. He ripped off the antenna, pulling it away from the concrete lip of the huge tank to which it had been affixed.

As he looked for the transmitter, a great tongue of fire enveloped him. His skin began to pop and shatter, his limbs to shake, then to gyrate wildly as millions of micromotors lost control of themselves. He broadcast, *Alarm, alarm* as he felt himself ceasing to function. He dropped the antenna, which went sailing off into the flames. His left eye exploded in a shower of sparks. He fell farther.

The One went after him, dropping also into the flames, attempting to save him, struggling against the fire. And he, too, caught fire. His head exploded in a flashing mass of sparks.

The antenna was gone, but not the transmitter. It remained taped to the lip of the tank, its red diode gleaming, still sending its signal—although weakened—to every one of Wilkes's killers.

The Two took the craft up fast, faster than a bullet, all the way to the edge of space.

CONNER FELT THEM LEAVING HIM. *Don't go*, his mind cried, *don't cut me off*. But he was cut off, there was now no sense of the presence of the collective within him. He felt it as a silence at the center of his being. "Come back to me," he screamed, but the Thieves could not hear him, not the dead, not the frightened, confused survivor far away.

DAN AND KATELYN REACHED CONNER at last.

"Mom, Dad, something's wrong, we have to go!"

"Oh, Conner, dear God, Conner, I couldn't find you!" Dan said. Katelyn threw her arms around him. "Let's go home now," she said. "Right now!"

"Hi, Mrs. Callaghan."

Katelyn backed away from the girl. She knew what was in her hand, she had seen it.

“Stay right there,” she told her. “Don’t you come near him!”

The girl stepped closer. She was a pretty girl with a sweet, open smile. “There’s nothing wrong, Mrs. Callaghan.”

“Then what do you want?”

“Nothing.”

“Why are you carrying that knife?”

The girl raised it and leaped straight past Katelyn. Conner stepped to one side and she slashed down where he had been standing. Snarling, she raised it again, looking around as if she couldn’t see him.

Katelyn grabbed her arm, then Dan leaped on her from behind and got the knife out of her hand. “Who are you? What the hell’s the matter with you?”

The girl crumpled, bursting into tears. Here and there other people, freed by the weakening signal, began screaming, holding their heads, throwing down weapons.

ON THE ROOF OF THE grain elevator, the metal skeletons of the two grays smoked and sparked in the licking flames. They moved, though, flickering and twitching, as if they wanted to stand. High above, the Two concentrated, his head down, his hands over his face.

One skeleton actually rose a few inches, stretched an arm toward the transmitter, trembled, and fell back. The bones fell into the the maelstrom. Now the other moved a little—its hand scraping along the lip of the tank, then touching the edge of the transmitter, the black claws scrabbling at its power switch—then falling to a jumble of gleaming metal bones and black claws. The tiny red diode on the transmitter remained lit.

At that moment, the grain elevator collapsed, leaving only the three enormous tanks standing. The light on the transmitter flickered, went out—but then came on again, glowing steadily. Huge pieces of concrete began falling off the tank.

INSIDE, ROB AND HIS TEAM threw themselves into the cellar where the elevator’s motors were housed. A massive tongue of fire roared at them from above, coming through the hatchway like a living, questing monster, grasping for their lives. The space was long, the far end collapsed and burning. The floor above them groaned, ready to buckle. He thought he had perhaps twenty seconds to get these men out of here.

THE CALLAGHANS BEGAN MOVING AWAY from the debris, Katelyn and Dan shielding their son as best they could.

As they headed for their car, Jimbo Kelton came over to them. He was smiling.

“Hey, Jimbo,” Dan said, “watch our backs, we—”

Jimbo lifted his arms over his head and brought a rock down on Conner.

Conner ducked, but not fast enough to avoid getting hit in the shoulder. A stab of pain went through him and he cried out.

Jimbo raised the rock again. Then another rock hit Conner in the neck and bounced off. It had been thrown by Mrs. Kelton, and she and Jimbo were both gathering more projectiles, fragments of lumber, of tin—anything to throw at him. Their faces were gray, their eyes watery and crazy.

As a third rock hit Conner, he ran toward the car. Now Terry Kelton tackled him and tried to drag him down, but he pushed him off. Catching up with him, Katelyn grabbed his jacket and dragged him toward the car as Dan fought off the Keltons, screaming and kicking, backing toward the car.

“Dan, John has a rifle!” Katelyn shouted as she and Conner reached the car. “Run!”

Conner jumped into the back of the car and crouched down on the floor. His head and his back throbbed where he’d been hit. Katelyn and Dan got in and slammed the front doors. As they pulled out, a rock hit the back window, transforming it into a haze of cracks.

“What in damn hell is the matter?” Dan yelled.

“Look, please, I’m sorry, I know I did something, and I’m so sorry.”

“You didn’t do a damn thing, son.”

As they drove away, Conner came up from the floor. He sat hunched against the door, staring out the window at the bizarre scene, which faded quickly into the gathering winter evening.

They went toward Oak Road, turning up Wilton, taking the lonely way.

“This is a mistake,” Conner said.

“What do you mean?” Dan asked.

“The lonely way.”

THIRTY-TWO

LAUREN WAS ALMOST INSANE WITH worry and fear when at last a two-car convoy appeared at the main gate. Rob's car was in front, a Cherokee behind full of specialists in fire control gear.

As he pulled up, he opened his window. "We're not out of the woods, and I need you right now."

She ran around and got in the car. The Cherokee headed off into the base.

"Why in hell didn't you call me? My God, I almost lost my mind."

"You had orders, Colonel."

"Orders? Dear God, the military mind is—oh, forget it. What's our situation?"

"Crew is dead and Wilkes is at large. He may have made an escape in a stolen TR."

"What's a TR?"

"Classified vehicle," he replied tightly.

"He killed Lewis Crew?"

"Details later, we've got a hell of a situation back there. I don't know exactly what else he's done, but we've got to get that kid to safety or we're gonna have another dead body on our hands right away."

At that moment, the base siren sounded and the guards began closing the gates. Rob turned the car around and headed back toward town.

"What in the world is going on?"

"It seems that Wilton is rioting."

"You're kidding."

"They're killing each other."

She closed her eyes, playing move after move, and came to a conclusion: "Wilkes couldn't identify exactly which child, so he did something that would turn the whole place violent, in hopes that all the children would be killed."

"One possibility. Another is that he did identify him but was scared to

take direct action because of the grays, and is using this as a diversion.”

“But the family—they’re miles out of town.”

“They came to the fire, I know that, I identified the car. They are not there at this time, however.”

“Oh, boy.”

“Yeah, we’re in trouble.”

“And you’re certain about Mr. Crew?”

“He’s in a bag on his way to Wright-Pat.”

“Was he really from another world? Is that true?”

He glanced at her. “You might as well accept that there is no final truth in this thing. Not ever. This reality, more than any other, changes depending on the way you look at it. As far as I know, the man could be from Chicago or Denver or anywhere. But he was a good man and a useful man, which is the bottom line on Lewis damn Crew.”

Rob stopped the car. They had come around the curve in the highway which opened onto Main Street. Smoke rose from at least four different fires. A man shot a rifle from the roof of a store. Groups of people ran through the streets, most of them armed with hunting rifles. Sirens howled, and, as they watched, a garbage truck backed at full speed into the front of the First Church of Christ. Its steeple, bells pealing, tumbled over the truck and into the street.

Rob flipped open his cell phone, speed-dialed a number. “The situation in the town is deteriorating fast. You’d better get the governor on the horn, General, because the place is gone. He needs the National Guard out here, the state cops won’t be enough.”

A Buick packed with kids snarled toward them, its tires leaving smoke in the street.

Rob turned the wheel full right and jammed the gas pedal to the floor. A second later, the Buick passed behind them and raged on, swerving to snap fireplugs. Screaming laughter could be heard, full of terror.

Rob pulled over to the side of the road. “We can’t drive through that.”

“No.”

“We’re going to have to cross the town by helicopter, locate the child on the other side. And I think we need to just move him. Get him out of here.”

“What about Mike? What about the group? Won’t they keep trying?”

Rob looked at her for a long moment. “I never said this would be easy.”

DAN DROVE HARD, TRYING TO get back to Oak Road before the craziness spread there if it was going to. He would defend his family with his pistol until they could leave this place. For the Callaghans, Wilton and Bell College were history, and to hell with his precious tenure. Bell would probably fall apart now anyway. Who would send their children to a place like this?

“Conner,” Katelyn said, “do you have any idea what’s happened to these people?”

Dan thought it was a fair question to ask this child who had changed so much. You could see it in his face, a new steadiness in his eyes.

“It has to do with me.”

At that moment there was a snap and the car shook.

“What was that?”

Conner knew that it was a bullet, he’d felt the hate of the person who’d fired the gun. He pressed himself down below the level of the windows.

“Conner?”

“It hit the left fender just above the tire.”

“What did?” Mom asked.

“A bullet.”

Dan increased their speed. “Conner,” Katelyn screamed, “*why?*”

That wasn’t the right question, he knew. They needed a different energy to survive this. Fear would not save them.

He needed the Three Thieves. Now that they were gone, he saw how they’d been his link to the collective, and how important the collective would be to him in the future. He also saw how they helped him now, watching over him, doing the small, essential things that had saved him.

Giving their lives for him.

There was a bang in the front, and the car swerved over to the side of the road. Dan tried to keep it going, but it slurried all over the place.

“That’s a shot-out tire,” Conner said.

“I know it,” Dan snapped.

Mom turned around, and he had never seen her look like that. Her eyes were like shattered glass.

Mom and Dad were panicked. He had to get away from them, he could not let the bad decisions they were going to make kill him.

“Stop the car, Dad.”

“I can’t do that, my God we’re being fired on!”

Conner breathed hard, bit his lips to keep the sobs in, then opened the door and threw himself out into a snowbank. He rolled like you're supposed to, and proceeded to hit Mr. Niederdorfer's fence so hard he saw stars. He heard the car growling, and as he got up he saw it skidding around in the snowy road, its right front tire now also in shreds.

A whisper flashed past his face, followed by an echoing crack. Far down the road, he could see a car with somebody standing on it. That person had a rifle, and he was lifting it to aim again.

He needed to get to the trees on the Niederdorfer land. He hopped the fence and trudged off in snow up to his waist.

Mom burst out of the car. "No, come back! Conner, no!" She leaped the fence, surged ahead like some kind of raging lioness. Then Dan came plunging through the snow behind her. He closed the distance even faster than she did.

"You've got to get back in the car! In the car, Conner, it's our only hope."

"Trust me," he said, reaching for her hand. He looked to his father. "Trust me, Dad."

Then he heard somebody else coming fast, their breath whistling.

A glance over his shoulder revealed Jimbo Kelton surging through the snow with superhuman power. In his right hand was a big axe.

Conner ran. He could only hope his parents would do the same. There were thousands of acres of forest out here that would significantly improve the odds. Staying with a disabled car was obviously not the best move.

Then the trees were around Conner and he could dart and twist and turn and get through them fast. But Jimbo was bigger and faster, and Conner knew that it would not be long before he caught up.

He got to a clear space and ran for all he was worth, then veered off, trying as much as possible to avoid dislodging snow from the branches of the pines all around him, and stepping in places where the snow on the ground was lightest.

LAUREN SAT BEHIND ROB AND the pilot as the chopper moved quickly over the mad town. There was a sharp snap, then a ping, then another.

"Incoming," the pilot said.

"Bastards," Rob muttered.

A vibration started. "Sir, I took rotor damage off that rifle fire," the pilot said into the intercom.

"Keep it in the air."

"Sir, I need to return to base immediately."

"Keep it in the air!"

"I'll go down, sir!"

"Even if you end up crashing this thing, you have to get me where I'm going."

"This is my bird sir, and I've got to return to base!"

"Captain, our lives are not as important as this mission. None of us."

"Sir—"

"This is the single most important thing this Air Force has *ever done!* We cannot, I repeat, *cannot* fail! We must put at least one effective on the ground in the right place and nothing else matters, do you understand!"

"Yes, sir! Losing altitude, sir!"

"Down there," Lauren shouted over the roar of the chopper.

He saw it, an elderly blue car smashed into a fence by the roadside, and the trenches of runners leading off toward the woods. Three trenches, the one in the middle smaller. From another direction there came a fourth trench.

"I don't like the look of that," Rob said.

"The family's being stalked."

"Exactly. One—no four. Four other tracks." He pointed, and Lauren saw them, too, four distinct lines in the snow, all coming from the direction of a station wagon parked about a quarter of a mile behind the Callaghans' vehicle.

"Sir, I am losing control of this bird!"

FIGHTING HIS OWN CONTROLS, MIKE Wilkes managed to move the TR over Wilton Road. At this point, it was the only route to Oak Road, because County Road Four forked off from here. If the Callaghans made it out of the maelstrom in town, he was going to have to take the boy out personally, and damn the consequences. The problem was the TR. It was leaking gas, losing lift. At some point, the computer would conclude that it was going to crash. It had a self-destruct mode that would vaporize it in seconds, and anybody inside as well. In the operational models, there was an elaborate escape mechanism that could fly the pilot hundreds of miles to safety, but it was not present in this stolen prototype.

Then he had seen two cars coming. The one in the rear was the Keltons' wagon. Ahead of it had been the Callaghans.

When the Keltons had fired on them, he had experienced a surge of relief. This might yet work, and work well . . . or so he had thought.

Now, he wasn't so sure. He slid slowly over the woods, looking down, unable to determine the exact situation.

There was a distant roar as the last of the elevator tanks collapsed like great, drunken giants, leaving a pall of white dust on the golden western horizon.

So the transmitter was done, now. How much longer would his assassins last? Maybe as much as an hour, some of them, but most would revert to normal almost immediately. The nice ones.

He unbuttoned his holster and dropped the ship to ground level. He moved slowly past the Callaghans' car, making certain that it was absolutely disabled. As he was ascending again, he noticed that the Keltons' wagon was occupied. Their dog was in the back, barking to be let out. The animal would not revert. Unlike a human being, it would remain savage for the rest of its life.

He climbed down onto the road and opened the wagon's rear door. He didn't need to break the glass, nobody had thought to lock this car.

The animal snarled at him, then began to come forward. Quickly, he returned to the TR, and turned toward the forest. Alarms were tinkling in the cockpit.

He would stalk Conner and watch, and if the Keltons failed, he'd go in for the kill.

CONNER, DARTING THROUGH THE WOODS, heard a helicopter. Then a shot clipped a tree beside his head. He threw himself down as another three bullets hit all around him. Jimbo, about a hundred yards away roared, "Way to go Dad, I've got him now!"

Very suddenly he was swooped down on and arms went around him. "Mom!"

As Katelyn's arms closed around him from behind, she cried out with joy.

"Mom, no! Mom, we have to keep on!"

"Honey, it's the Keltons, it's our friends, honey."

Then Dad was there and he was not confused at all. He scooped Conner

up and ran like hell.

But a shot crackled and Conner felt his dad's whole body lurch. With a gasp, Dad went down. Conner disentangled himself, but not before Jimbo arrived, his face purple, the axe flashing. Light the color of pus flowed out of his eyes.

"Get back in the woods," Dad said.

Jimbo hurled the axe, which slammed into a tree, its handle ringing from the vibration of the blow. Then Conner heard the helicopter again, this time very loud. He looked up.

INSIDE THE CHOPPER, LAUREN REALIZED that it was counterrotating. She knew that this was the worst possible thing it could do short of losing its blades and falling like a rock. The forest whirled, then she was thrown against the window and almost out the open door. The world was racing now and she could hear Rob howling in rage as the pilot made the engine shriek, and the trees came closer and closer. She watched, mesmerized, until finally they were sweeping past twenty feet below, all immaculate with snow.

In herself she became quiet. She was not afraid. She thought, *It's a perfect world*, and peace overcame her.

"Go! Go! GO!"

"What?"

"Jump, woman! Jump or burn!"

There was fire all over the place. Where had that come from? Then she knew that the chopper had hit the trees and she'd been stunned. The pilot cried out and began to struggle, and was enveloped in flames.

She leaped out into a frigid cacophony of snapping pine boughs and sighing snow, snow that took her into itself like a freezing womb. In summer, the fall would have killed her, but she went down now in a curtain of snow, and struck the ground almost silently.

She got to her feet, looked around. "Rob?"

Then she saw him. He was bleeding from his back and both arms and his hair was burned off, but he went charging off anyway. She started to follow him—and then saw out of the corner of her eye a blue flicker as small as the flutter of a bird's wing. It was not spring, there were no birds.

It was a child's blue car coat, over there through the trees. "Rob, this way!"

Lauren ran out into a small clearing, and there before her was a tableau, for the instant frozen as if by the cold: a boy kneeling in the snow, his face flushed, pleading silently toward a much larger boy, who stood with froth on his mouth like a mad dog. In his hand was an axe.

A man lay in the snow, the red of blood around him. Dan.

Lauren ran toward them.

THE AXE CAME DOWN, CAME with blinding speed, like the striking head of a snake.

Katelyn saw Dan grab the handle of the axe in both hands, and in doing so give Conner time to get to his feet and stagger toward the deeper woods. Jimbo roared with frustration as he took off after him.

She ran to Dan, knelt over him. His eyes met hers. “Help him,” he said, “help our son.”

She looked toward the woods, got up, and ran on.

Rob struggled frantically for his gun, and Lauren saw that he was fighting an arm so broken it was almost snake-like. His lips twisted, his face went ashen, but he used it anyway, getting to the weapon, dragging it out of the holster.

“Your left hand,” she screamed. “Rob, your *left* hand!”

He raised it past his body so she could see the useless hunk of meat that dripped there. She saw his chest heaving, saw a froth of bile appear between his lips, but saw him still struggling, still trying to raise that pistol.

WHEN MIKE SAW ROB APPEAR at the edge of the clearing where this thing was coming to climax, he pulled the TR back quickly. Rob was familiar with the TR and he just might spot it despite all the optical camouflage. As he maneuvered the craft, a soft female voice began a countdown. “Alert. Destruct in thirty seconds. Alert. Destruct in twenty-nine seconds . . .”

Mike hammered at the controls, increased the velocity of the plasma, the speed of the fans, and brought the lift level inching back up. “Countdown ends.” For a moment, he sat absolutely still, hardly breathing, but the countdown did not resume.

He activated the secure communications system. It didn’t matter much if the Air Force found him now. They were going to be too late, and he needed to let Charles know the situation. “This is TR-A1, I am going to burp coordinates.”

“Negative that.”

“Charles! Can you reach me?”

“Three hours.”

“I’ve got progressive damage. This thing is going in sooner than that.”

“Do you have the kid?”

“Just about.”

“Mike, the president’s arresting the Trust. Until further notice, consider yourself a fugitive.”

What in hell had happened? The president couldn’t arrest the Trust, could he? Mike wasn’t sure, but he was sure that he had a battle to fight, so he forced the issue out of his mind and instead concentrated on working the TR closer to the boy. He took out his pistol.

CHARLES GUNN, STILL OVER WASHINGTON, did not like that “just about.” To him, that meant that the child was not secure, and if that was true, he might never be secure. Charles must not end up in the situation that had destroyed *der Wolf* in the forties—a two-front war. For the Trust, one front would be this monster of a child, using his powers of mind to stay ahead of them and undermine their plans. The other front would be the president and his powers of arrest.

He had hesitated to do what he now knew he must. He’d hidden the TR by hanging in a wooded draw in Rock Creek Park. He rose up to the level of Glover Bridge and headed down Embassy Row. He cleared his vision. It was as if the plane around him had disappeared, except for the three control panels and his immediate seating area. He moved low over the buildings, stopping above the Prince Mansion. Just a few voices. Very well, the president was in the White House.

As he aimed the TR down Massachusetts Avenue, he opened a small cover under his right hand, revealing a black button. He adjusted his altitude, then activated listening devices. Much clearer voices filled the small area, a press officer on the telephone, two Secret Service agents chatting about their house cats, the First Lady discussing colors with her dressmaker.

Finally, he heard the president’s voice in the Oval Office talking to somebody through an interpreter.

He pressed the button. He held it down.

THE WHITE HOUSE KITCHEN WAS organized pandemonium. Last

night had been the Thai prime minister. Tonight, it was the sultan of Qatar, the second state dinner in a row. The pastry chef was the first to notice something awry: a meringue was shaking wildly. Then he realized that he was shaking, too.

In the press room above, Press Secretary Roger Armes said, “We appear to be—” as ceiling tiles began to come down. Then the lights went out, immediately replaced by emergency lighting. Voices rose, shouts and screams, and some of them terrible screams.

In the Vermeil Room, the portraits of all seven first ladies fell at once. A moment later, the ceiling followed. In the Oval Office, the president, his chief of staff, and two, then three, then four Secret Service agents were thrown with ferocious energy to the floor along with the elaborately robed sultan and his translator. The Resolute Desk, made from the timbers of the *HMS Resolute* and used by such presidents as FDR, Kennedy, and Reagan, now crashed with a crackling thud into the floor. A moment later, the walls came in, and the whole contents of the office thundered through into the Blue Room below.

From thirty feet away, Charles watched the carnage, directing pulse after pulse toward the building. The private apartments on the roof shuddered and caved in, then the whole West Wing sank away into a cloud of dust.

Charles traveled over the mess, heading for the Mall. He moved just inches above the Reflecting Pool, aiming toward the Washington Monument.

High above, the long snout of the scalar weapon now glowed bright red. Every time Charles pressed the button in the TR down below, the red fluttered brilliant white, and a ball of light shot toward the Earth.

Tourists screamed and ran across the Mall as the worst earthquake to strike the area since the Mississippi embayment in 1811 rumbled and rattled. The Washington Monument swayed, its sheer marble facing dancing with cracks. Inside, more tourists scrambled down the stairs.

The monument came down almost gracefully, sinking into its own base as it disintegrated. Marble is a soft stone, and does not stand up well under stress.

Charles circled the collapsing monument, then moved toward the Capitol. Far overhead, the scalar weapon’s servos emitted flashes as it made fine adjustments.

Congress was in session when the balconies swayed like hammocks and crashed down into the house chamber. Fortunately for all except the

observers, few representatives were actually in attendance.

The Senate was not so lucky. A ceremony honoring a retiring senator was under way, and three-quarters of the senators were present when the chandeliers began to fall, exploding into the chamber with horrendous loss of life.

The quake, finally finding a fault line, spread through the area. The tunnel to the Senate Office Building caved in. Then the Anacostia Bridge fell. Everywhere, people strove to keep their feet, tried desperately to avoid falling monuments and falling ceilings.

Charles continued his mad ballet, paying special attention now to the Pentagon. Inside, people held onto their desks or clung to doors and walls, but the tough old structure would not come down.

Finally, Charles took his finger off the button. At monitoring stations around the world, the pens of seismographs returned to normal. But the record was clear: an earthquake measuring 7.3 on the Richter scale had struck Washington, D.C. Strangely, the epicenter was located very close to the surface, rather than the three to ten miles beneath it that was normal. Stranger still, no fault line was known that could account for the highly localized event, which had been centered, for all practical purposes, on the White House. And yet it appeared to be entirely natural.

Henry Vorona, who had been in a car on the Anacostia Bridge when it collapsed, drowned with the two men who had arrested him. He died furious at Charles and at life, but also relieved, because he knew that the Trust would now certainly survive.

The president died, too, crushed beneath the desk he had so proudly accepted as his own, never dreaming that he would come to his end behind it—or rather, under it.

Charles grabbed altitude and headed off west-northwest as a flight of F-16s scrambled from Andrews screamed past him, their engine noise practically blowing out his ears.

“Mike, are you still up?”

“Just about on the deck.”

“What’s the status of the kid?”

“Unknown.”

“Goddamn you.”

TERRY AND JOHN KELTON CAME out of the woods, both with high-

powered rifles. As they strode past Dan, Terry knelt and fired into the trees.

Lauren leaped through the snow—which here had drifted as high as her chest—leaped and struggled in a slow-motion nightmare, feeling the cold of it sear her in places where she had never been cold. She clawed on anyway, because she knew without fully understanding that this was one of those tiny, secret moments on which a whole future turns.

She saw John laugh and stride forward so powerfully that the snow seemed to part for him like the Red Sea, as if he was helped in some way by the purity of evil itself.

“Rob,” Lauren screamed. “Rob, *shoot!*”

Rob struggled to raise his gun, his whole body shaking with the effort.

Three of the Keltons zeroed in on Conner. Lauren saw that they were converging with a fourth, a boy of about fifteen. She recognized him from that last session with Adam: he had the hair, the face, the build of the image of the boy that Adam had put in her mind and that she had described so carefully to Mike.

“Oh, Mike, you are good at what you do.” He had turned the grays’ own decoy into one of Conner’s assassins.

She broke free of the drift and ran hard, but all the hunters except the fifteen-year-old were too far ahead of her. “Rob,” she shouted in his direction, “Rob, stop them!”

Rob stood as still as if he had frozen, and Lauren feared for a moment that he had done just that, but that limp, flopping arm still came up, still carried the heavy pistol. He grimaced in agony, his face now lined with bars of frozen blood.

She watched the shattered arm rise impossibly higher and higher, the gun wavering in it. Then she launched herself in a final burst and took down Jimbo. He exhaled with a whoosh and fell, and she grabbed his shoulders and kept smashing his head into the ground as hard as she could, so hard that it soon packed the layer of snow beneath it and began to make thudding sounds, and his eyes began to roll.

Rob raised the gun higher. Higher. And kept raising it up right *past* the hunters. “ROB! ROB, WAKE UP!”

Rob’s face worked, his eyes rolling. She looked up to where the gun pointed and cried out, astonished, a red-hot knife of terror stabbing her heart as she saw just a few feet overhead, a gigantic shimmering triangle that looked so much like the sky above that she hadn’t noticed it before.

The gun blasted and Rob hissed through bared teeth in his agony as the kick flashed torment down his arm. With his mangled left hand he shoved snow against his face to force consciousness back, and fired into the thing overhead again and again.

“Alert. Auto destruct in ten seconds. Nine. Eight—”

As Mike twisted the controls, the TR wheeled away from the clearing, its huge wing skimming the treetops, leaving behind billows of snow.

“Five. Four.”

He slid down to the hatch. The treetops were five feet below him.

He leaped. As he did, he felt a fierce blast of heat from the dying TR. He crashed down among the wide pine branches and landed hard in a billow of snow. He checked himself, got to his feet—and realized that his ankle was broken.

Rob Langford stood not ten feet away. Mike’s pistol was gone, but he began to hobble toward Langford anyway.

“Rob, you’ve got to help me.”

“I can’t do that, Mike.”

“Rob, you don’t want the whole human race loaded with chains. You’re too good a man to want a thing like that.”

“They’re not loading us with chains, Mike, they’re giving us wings.”

“How the hell would you know?”

As Rob stood staring at him out of filmed eyes, Mike dragged himself closer.

He watched as if in a balletic nightmare as Rob’s pistol slowly rose from his side, clutched in a hand that looked like gnawed meat, and braced by a burned claw.

The pistol came to bear. He saw Langford’s teeth grinding, his eyes squinting with effort. He was almost on him now, just a couple more feet.

But the hammer went back, and he knew he had lost.

THIRTY-THREE

THE GUN WENT CLICK. AGAIN, click. Langford dropped it into the snow and Mike reached him, shoved him back, and pounded him in the face with all his might. But Langford was also a powerful, resourceful man, and he fought back, finally hurtling Mike off him with his feet, sending him sprawling in the snow.

Mike tried to get up. He pushed at the ground and struggled with all his strength to raise himself but he could not. More than just an ankle was broken, he knew that from the blood frothing his lips.

Then a fist came down, and the lights went out.

Somehow, Rob got to his feet. Somehow, he moved toward the clearing. He hoped that Wilkes would be out, at least for a couple of minutes. But he knew the colonel. The colonel was one to be reckoned with.

Screaming in agony, he forced his mangled hand into his pocket. As he got a fresh clip into his pistol, he gagged, bent double, and retched from the agony of using the hand.

Step by agonized step, he moved toward the tableau in the clearing. His uniform hung in tatters, blood gushed down his right arm and left a frozen trail in the snow. Now the gun came back up, this time pointing toward John Kelton.

John raised his rifle but he was not a military man and Rob got off the first round, which sent him flying back thirty feet into the trees. It hadn't been a fatal shot, Rob saw, as John clutched a bleeding shoulder.

Snow cascaded down around Terry, who cried out when he saw his dad go down. Mrs. Kelton came rushing through the woods screaming.

Good, Rob thought, they were distracted. He prepared to shoot them both the moment he had clear lines of fire.

Dan lay in the sanctity of his wounds, looking into the peace of the darkening sky. He remembered Katelyn on the catwalk in the secret world of their childhood, when the grays had stitched their lives together. He remembered her thin summer nightgown, and that face, Katelyn in the

summer of her girlhood, became what he would take with him if now was when he traveled on.

Lauren got off the inert form of the Kelton boy she had taken down. In that moment, Rob appeared. He looked through his one unswollen eye. Like a stone, the pistol dropped from his hand. His head lolled to his chest. “The others are coming,” he slurred. “Got to stop them, Lauren.”

As he toppled forward, Lauren shouted, “Somebody help him!” But there was nobody to do that. Rob was so caked with frozen blood he looked like he was wearing the uniform of a butcher.

She went down to him and embraced him, telling him that she would save him. She ripped off her own parka and put it under his head. He smiled a little. “You’re gonna freeze your ass,” he said. Then his eyes closed in the way people’s eyes close when they are dying and she cried out again, “Help us, somebody help us!”

Suddenly, the eyes opened. They bored into hers. “You’ve got work to do, soldier.”

Crying, begging God for his life, she picked up his pistol and ran to her duty in the woods.

It was dark and silent in among the trees. She peered ahead. Every time she moved, snow came in cascades off the pines. But the movement of others was easy to follow, because their passing had done the same thing.

She listened.

At that moment, a shocking and, she thought, totally inappropriate thing happened. She was plunged back into her babyhood, and was walking again for the first time.

That was Adam’s signature!

But Adam was dead, so—

She saw movement in the woods—a shadow back among the branches that had a great, soft eye like a deer.

At that instant, Conner, who was running blindly, saw Lauren’s face in his mind just as clearly as if she’d been on a TV screen five feet in front of him. Her eyes were full of a very special sort of light, pure blue as the sky, tinged at the edges with a million other colors, the richest, most beautiful light he had ever seen.

She saw him, also, in that moment, as if at the end of a tunnel of light that wound through the trees.

She struggled forward in a haze of cascading snow and whipping

branches, and the light gleamed on the snow, elusive, disappearing at moments, then coming again.

Before she could reach Conner, though, a figure was there. The older of the two teens. He had a rifle and he was pointing it. Then Conner came into view. The kid turned toward him.

Lauren raised Rob's pistol and in one motion fired, and the shooter flew into the snow and lay still. Then she moved toward Conner.

He turned toward her, looked from her face to the pistol—and literally disappeared before her eyes.

She still saw him, but only in her mind's eye, standing there staring fixedly at her. Like Adam had done, *exactly like Adam!*

She went down on one knee, put the pistol in the snow, and said, "Conner, Conner, I won't hurt you." She projected an image of herself hugging him. Instantly, an image came back into her head from Conner, of him begging silently with his hands. *I won't hurt you*, she said in her mind, in exactly the same way she had talked to Adam.

There was a flash of movement before her, then another, this one more clear. Then he was standing there again. She threw her arms around him and lifted him to her. Her mind and his mind seemed to swirl together, and it was sheer pleasure and joy, like counting every number to the highest number, and knowing that there would be ever more perfect numbers ahead.

Katelyn came out of the woods.

As Conner went to his mother, Lauren asked him, "Where are the other shooters? Can you tell?"

"Close your eyes," he said.

She saw an image of a man lying at the bottom of a ravine with his shoulder bleeding, a woman bending over him. They were huddled together, obviously desperate, trying to keep warm. John and Mrs. Kelton had given up the fight and moved to safety.

Conner asked Lauren, "What's happening?"

"It's going to end, honey. Very soon, it's going to end."

His face turned red, he grabbed her shoulders. "*What is it? Why do they hate me?*"

"Conner, it's going to end, it has to end."

He pushed back from her, his eyes rolling back into his head. "Dad needs us."

They began running, then, all three of them coming out of the shock of

the moment, realizing that lives still depended on them.

They found both Rob and Dan, and Terry Kelton nearby huddled in the snow. As it turned out, Lauren had missed and he wasn't even wounded, just in shock. His eyes were glazed with fear and he kept shaking his head. "What—what," he whispered, "what?"

He'd come out of it, whatever Mike had done to him, whatever evil, evil thing.

Dan was still alive and conscious, and as they lifted him Conner took off his own jacket and tucked it around his father.

Lauren hurried to Rob. The moment she looked at him, she began to weep. She reached out and touched his graying face. The eyes stared, the lips lay open as if amazed by a death that had been, also, a discovery. With trembling fingers, she closed the eyes. Then she doubled over, gasped, and began to grieve.

Conner came. "He's not dead," he said, as if that was the strangest idea in the world. He laid a hand on his forehead, and Rob's eyes flickered open. "See?"

Rob gazed up at her, silent. She looked to him, then to Conner, then back to Rob.

"Help us," Conner said. Katelyn was trying to get Dan to his feet.

"Let me look," Lauren said. She'd had standard survival and first-aid training, and she saw that he had a bullet-pierced shoulder. The bones were intact. The shoulder, while dislocated, had not been shattered by the bullet. There was blood, though, a lot of it. "You need a hospital," she said. "Right now."

On the way to the car, she saw more movement in the woods beside them. She whirled—but there was nothing there. To her horror, she realized that she had left the pistol behind. That had been stupid but it was also a warning that she was in shock. She had be careful, now, force herself to stay rational for them all. Survival, always, was in the details.

The movement came again.

Dan saw it, too. "A deer," he gasped.

"Conner?" she asked.

He waved her to silence.

They continued to the car, the five of them, following the tracks that had been laid in madness and terror. Dan cried out in pain, but they managed to help him across the Niederdorfer's fence.

Once on the other side, he leaned on it. “Give me a second . . . a second . . .”

“We need an ambulance,” Katelyn said.

Lauren opened her cell phone. Fortunately, they were close enough to the town for a signal. She called Alfred, got through to Rob’s adjutant, and reported Rob as severely wounded and the pilot as a KIA to a very saddened young man. Then she arranged for air evac. Because of the trouble in the town, it might be delayed, but there was nothing more they could do.

The Air Force would come and gather its dead pilot and take him home in a box, where he would lie in honored earth and the memories of those who loved him. But maybe Rob would live to fight another fight.

Are you gonna marry him?

She actually laughed a little. “If I can.”

Katelyn gave her a questioning look.

“Terry,” Conner said, “your mom and dad are okay.” He looked at Lauren. “There’s another one out there.”

“I know, Rob.”

“No, alive. Near Rob. He’s crawling. He’s trying to get to me.”

“Can he, Conner?”

Conner shook his head.

“What are you talking about?” Dan asked

“Nothing,” Conner said quickly.

Lauren heard in her mind, *Don’t tell them I can hear their thoughts.*

No, Conner, I won’t.

Dan touched the implant in his ear. It almost seemed as if he had heard Conner talking again, his voice curiously gentled, coming from the center of his own head. He would have to understand this, but not now. Now he had to save his family. He leaned on Katelyn as they walked, and she whispered, “I love you, Dan, I’ve remembered it all, and I love you.”

He turned to her. As much as he hurt, those words filled him with a torrent of swirling, strengthening relief. He raised his arms and held her, felt her against him and felt in his depths the love that defined his soul, for his Katelyn.

She raised her face to his and kissed him, and the kiss seemed to give him new life—until a wrong movement sent a firebrand of agony through his shoulder.

Tears in his eyes, he managed a smile as he went toward the car. “The

spare,” he said. “I’ll change the tire.”

“We’ll change it,” Lauren said.

The light was almost gone, now, but they weren’t but two hundred feet away from the car.

“We’ll drive straight out the Wilton Road,” Katelyn said, “and take you to the hospital in Berryville. Unless this insanity is all over the place? Is it, Lauren, do you know?”

“Hold it.” Lauren could not believe what she was seeing. “Don’t move.”

An enormous dog had jumped onto the roof of the Callaghans’ car.

THIRTY-FOUR

THE DOG STARED STRAIGHT AT Conner, a long string of drool sliding out of its panting jaws.

“Jesus,” Dan said.

“That’s Manrico,” Katelyn said. “That’s the Keltons’ dog.”

“Conner, what’s happening?” Lauren asked.

Conner took a step back.

The dog jumped off the roof, came toward him.

“Don’t look in his eyes,” Conner said.

Manrico started toward them.

As he had with the people who had gotten like this, Conner tried to send Manrico calming thoughts, but the dog kept leaping through the snow, coming right toward him.

At that moment, a deer—a graceful, careful doe—came out of the woods. Her appearance was so unexpected, her form so exquisite, that even the onrushing Manrico paused and turned.

She had great, soft eyes and long lashes, and a face like a deep song. She walked forward, her narrow legs pushing aside snow that gleamed gold in the sun’s long, final rays. Then she sounded, the vaporous whistling that signals alarm in that peaceable race.

Manrico’s ears pointed toward her. She came closer, her delicate nose questing in the air, her eyes as calm and dark as midnight lakes.

The Two felt sure that the dog could be drawn away, now that the transmitter was no longer broadcasting its order to kill. He did not understand that the animal’s savagery would not end. While he knew he could not control the dog’s mind, he could distract it the way he was doing, by appearing to be a succulent deer. He went closer, projecting every single detail of a female deer that he could recall.

Conner’s voice said, *Be careful.*

The Two went closer yet.

“Is that really a deer?” Lauren asked.

“Of course it is,” Terry said.

Conner took Lauren’s hand.

The deer came closer. Manrico looked from her back to Conner. He growled softly, a deadly sound. The deer sounded again, then began limping as a mother deer will when her fawn is threatened.

She was close now, just beyond the fence. Manrico’s haunches stiffened, his ears pricked forward, he whined a little. She sounded again and limped, lurching in the snow. That did it: he leaped the fence, barking and howling as he reached her and tore into her throat.

She screamed, then, and suddenly she was not a deer at all, she was a gray and in terrible trouble, being torn apart by the maddened dog. It leaped away from Manrico, one arm dangling, its head wobbling horribly.

Conner screamed and ran for the fence, but Lauren tackled him. “No!”

Sparks like fluid began spewing out of the gray. As the dog screamed and twisted against itself, the gray whirled faster and faster, until it became a dervish of sparks and flying fire.

Then it was gone, nothing left but a melted area of snow, some smoking earth, and the seared body of Manrico.

“Get in the car!” Lauren shouted.

They did, but they could go nowhere. “We have to change that tire,” Lauren said from the backseat, where she’d gotten in with Conner. “You three stay here, I’ll do it.”

“I’ll help,” Conner said.

“No,” Lauren said.

“I’ll *help!*”

Lauren responded: *No, it’s too dangerous.*

Why are you so good at this?

I’ve been in training for years to be your teacher.

He looked up at her and frowned. “I find teachers extremely boring.”

I won’t be.

Mike was still out there somewhere, maybe incapacitated but maybe not. She could not expose Conner to the long, clear sightlines that led back to that concealing wood.

Overhead, a dark helicopter appeared, a red cross on its belly. Katelyn and Lauren got out and waved and shouted, but it set down behind the trees, in the clearing where Rob and dead Jimbo Kelton lay.

Terry Kelton, who had refused to get in the car, began to cry, standing

on the roadside, holding his head in agony.

Another car appeared, coming from town.

“Careful,” Katelyn said.

“Conner,” Lauren whispered. “Can you tell?”

“How can he possibly tell?” Katelyn snapped.

Conner closed his eyes and found that he could go racing down the snowy road and look into the car. *It’s Paulie. They’re okay.*

Thank God.

The grays made me like this?

Yes, they did.

It’s never gonna end, is it?

She smiled at him. “Do you want it to?”

He met her eyes, and she found it hard, very hard to look at him. She missed Adam.

Conner suddenly got out of the car.

“Conner!”

“It’s okay, Lauren.”

The Warners pulled up behind them.

Conner started to walk toward their minivan.

“No,” Lauren said, coming up to him, putting her hand on his shoulder. “No.”

“Listen,” he said, “it’s okay. They’re not—not affected.” He whispered to her. “Let me go.”

She released him.

He got into the van.

“You missed it, didn’t you?” Paulie asked.

“I got a picture on my phone.”

“Mom! Dad! I told you and told you, they missed the riot!” He regarded Conner, his face alight. “There was a whole huge riot in the town and the National Guard’s there in Humvees, and it’s gonna be on the network news. It was totally incredible, and *you* missed it, lil’ fella. Momma had to take you home.”

Katelyn leaned in the window. “Dan needs a hospital, we’ve got to take him to Berryville right now.”

FAR ABOVE, A SMALL SILVER dot glittered in the rising light of

evening. The worn space inside the little craft where the Three Thieves had lived through so many long ages now was empty. The iron bedsteads where Katelyn and Dan had had their souls mingled, where Marcie had been laid, and Conner, and so many thousands of others over the centuries, stood still and silent.

As if it was alive—which it might be—the little vehicle turned round and round, looking for some place to go. The collective, at a loss, tried to understand how to replace the last triad. But who could do the work of another without training? Their minds were not flexible enough.

There was no place for the little machine, nobody to replace its triad. It hung there, left empty in the sky.

CONNER SAT QUIETLY BETWEEN PAULIE and Amy in the van's third row of seats. In front of them, Mom and Lauren helped his dad.

He could feel his dad suffering, could hear whispers of fear coming from the implant that connected the two of them, but he intended to be very, very careful in listening to what it broadcast, to use it only if it was absolutely necessary. He wanted his dad's love, not his fear.

As he listened to the humming of the tires and the soft voices of the adults, and Terry's miserable sobs, he kept feeling an absence in him, and the more he felt it, the more he came to understand that it was the absence of the collective. For a little while, being part of it had felt like a kind of music in him, and he knew that he could conduct that music, could make it bright and great and true.

One day, perhaps, he would be strong enough to reach the collective on his own, to join it to his mind. Until he could, though, he would be in the most profound sense blind.

He needed the Three Thieves, they were woven into his being, part of him. Without them, he could feel the vague, distant presence of the collective calling to him, *Conner, Conner*, but he could not answer, not without the mind of the Three Thieves to amplify and relay his response.

Conner swept out of his body and through the snowy woods, following a glowing silver wire that connected him to a burned place near the Niederdorfer's fence, where lay a pitiful little mess of rags and sticks and empty black eyes.

Wake up, he said in the secret air of the mind, *come back to me*.

There was stirring in the snow, but only a little, for the damage the Two

had endured was very great.

A sentence came to Conner, *Or ever the silver cord be loosed, or the golden bowl be broken . . .* and he knew that it was the love written in the bible, a secret code for those who know.

“Behold,” he murmured, “he comes leaping on the mountains . . .”

And in the field, broken flesh fluttered in the night wind.

In the seat in front of him, Terry Kelton sobbed, his head hanging low on his chest.

Conner thought, *I can help him*. He did not know how it was or why it was that he could leave his body so easily. He knew all about out-of-body travel, of course, he’d experimented with it, as he had with remote viewing and all such things, because he understood the physics of superposition, and how it was that the electrons in the brain, during meditation, would become ambiguous, no longer in any one place, and you could use that to prowl in hidden pathways.

He slipped upward and outward, and saw, in his mind’s eye, four Air Force guys with two aluminum gurneys in the snow. He looked at the faces of the victims, and saw that John and Mrs. Kelton were alive. “Your mom and dad made it,” he told Terry. “You lost your brother and Manrico.”

Terry turned around. “How do you—”

Conner met his eyes. *Your soul knows*, he said inside himself. Terry blinked, then looked away and was silent for a time. Finally, a whisper: “Thanks for telling me.”

Conner had work to do. He brought to mind the Three Thieves as they had appeared last night, dumpy and scared, hiding behind the trees and terrified of making a mistake. He imagined them bobbing along in the night the way they had, so upset about scaring him, so unable to understand how not to.

I need you, he said in his mind.

His thought was met by silence.

They pulled into the Berryville Hospital emergency room. Medical personnel in green oversuits ran up, their portable stretcher rattling on the concrete driveway.

The Air Force helicopter roared into view, dropping down onto the hospital’s rooftop helipad.

Can you see who’s in it? Lauren asked in his head.

Conner went out of his body again, traveling up to the ceiling . . . and

found that he could go through it . . . he saw up the legs of people, then went higher, up through the next ceiling. He was on the roof now, and he could see the Keltons lying strapped to their stretchers.

There was another man there, Lauren's friend, the handsome officer with the mangled hand and the burns.

Then they brought out a fourth man. He had a narrow, careful face and rusty gray hair. He was in agony, his teeth bared, his head turning from side to side as he forced himself not to scream.

He raced back into his body. "It's him," he said, "he's up there."

"Who?" Lauren asked.

Conner knew what she wanted to know. *Your friend.*

Lauren burst into tears.

"Conner, what's the matter with her?" Amy asked.

He shook his head. How could he explain?

"Conner," Lauren whispered. Then, between their minds, *You healed him, didn't you?*

I don't know.

Amy's hand slipped toward his—hesitant, trembling a little. He took it. She closed her eyes and leaned her head against his shoulder.

Paulie shook his head. "My sis is a piece of work, buddy."

They sat side by side on blue plastic seats in the emergency waiting room. She smiled a little, and he saw one of the silver threads running between the two of them. He looked down at it where it disappeared under his shirt. With his free hand, he tried to touch it, but his hand went through it.

He met her eyes, and saw there a sparkle of love and hope. She closed them, and he saw her face change. She threw back her head and laughed, and he put his arm around her.

"Oh, boy," Paulie said.

"Shut up, little boy," Amy snapped. She kissed Conner on the cheek and giggled.

Mom and a doctor came out of a double door across the room. The doctor said, "Your dad's going to be fine."

Terry went to his feet. Behind the doctor, his parents had also come out. He ran to them, and the family embraced.

Mom sat down beside Conner, and put her arm around him. As he felt the comfort of the two women, his eyes closed.

"He sure goes to sleep fast," Amy said.

“He’s your little boyfriend,” Paulie said.

“He’s been through a lot,” Katelyn responded, “he’s real tired.”

Behind them, a group of uniformed Air Force personnel ran into the emergency room.

“Who are they?” Paulie asked.

As they hurried through the double doors into the emergency room proper, Lauren saw Rob on his stretcher. Uttering a little cry, she went running to him. She held his face in her hands. He opened his eyes. A weak smile came. “You’re a hell of a sight,” he said, his voice a bare whisper.

She tried to smile. “Is that good or bad?”

“Good, lady. Real good.”

She kissed him then.

“Sir?”

Rob turned his head away from her. “Yes, Major?”

“We’re detailed to detain Colonel Wilkes.”

Lauren said, “Was he in the evac?”

“Yeah,” Rob said faintly. “Oh, yeah.”

AT THAT MOMENT, CHARLES GUNN was half pulling, half carrying Mike down a hallway. He heard voices behind them and went faster, pushing through an alarmed exit door, setting off a steady beeping behind them.

Charles’s TR was there, its hatch glowing with amber light from within. Otherwise it was invisible.

He helped Mike up the ladder, then drew it in behind them. The Air Force officers swarmed out of the hospital exit and began fighting to get into the TR. Charles mercilessly shot one of them, and they all fell back. Leaving Mike in the access tunnel, he slid into the cockpit and hit the stick, causing the fans to whine for a moment as they revved.

Below him, the officers were drawing their guns. He knew how vulnerable the TR was to gunfire, and twisted the flight controls, slamming the power switches all the way down as he did so. The world outside whirled wildly and critical maneuver alarms sounded.

But the hospital spun away below, and the shots that were being fired did no damage. He headed the nose of the craft toward the dark, and was off into the night.

SLEEPING BETWEEN AMY AND HIS mom, Conner dreamed of when

the bluets would rise out of the ground along the roadsides and the warblers would come back to Kentucky, and he saw his own backyard going green again, and his dad filling the pool with the garden hose. He dreamed then of the days of summer peace. He woke up a little and murmured, "We're going to be free, all of us."

"We are free," Amy said. "Sort of. Aren't we?"

"Sort of," he said. "But there's a lot more to come."

But in his heart, he despaired, calling, *Come back to me.*

Silence continued to be the only response.

"Look here, Conner Callaghan, if you're gonna be my boyfriend, you have to pretend not to be totally geeky. Can you do that?"

He smiled a little. "I'll give it a shot." His eyes fluttered closed and he tried again to find the mind of the collective.

The snow, dark now, slowly covered the body of the Two, and in the ashes of the grain elevator, the curious metal bones of his brothers, also, were dusted with it, deep in the black ruins.

EPILOGUE

LATE AT NIGHT, WHEN THE DEMONS COME

THEY'D COME HOME, HE AND Mom. Dad had to stay at the hospital for a few days. Lauren was with them, and Conner knew that she was going to live here, she had to, he needed her here.

Late that night, Conner lay wide awake, letting his silent tears flow. He was down in his basement room. Mom was in her bedroom upstairs, and in his mind's eye, he could see her sleeping. Lauren was awake.

He went upstairs. She sat in the living room, sipping from a tall glass.

"Conner!"

"Hi."

"Can't sleep?"

"I'm wide awake."

"Me, too." She held up her drink. "Want a sip?"

He shook his head. "They make me drink wine at dinner. One of Dad's many theories. Every time you do that, did you know that you kill about six thousand neurons?"

"I've heard that."

"I need all my neurons."

"Come sit beside me." She patted the couch and he came close to her. "Are you scared, Conner?"

"Oh, yes." He looked out the dark glass doors that opened onto the deck. It was bright outside now, a low moon making the snow shine softly.

Conner.

"I want to just talk, okay? I don't like to do that mind stuff."

"I didn't."

"Yeah, you did, you said my name."

Conner.

“I heard that, too, but it’s not me.”

Could it be? But no. He sighed. “My friends are dead.”

“Your friends? The Kelton boy?”

“Yeah, him too. But I mean—you know—the ones we’re not supposed to talk about. I need them, Lauren. I’m lost without them.”

“I feel that way about my friend. He was a gray, but they’re not really monsters at all, they’re full of need and hope, and—” She stopped, looked down at him. He was so small, just an ordinary little kid, narrow shoulders, soft, unfinished face, all promise and potential.

“You miss him, then?”

“Earlier, I could feel him in you, sort of, and that was nice. It was like being home again, a little bit.”

He thought about that. “Boy, if people heard us talking about this stuff, they would think we were weird.”

She sensed that he didn’t want to address the matter of Adam. And why would he? Adam had died for him, and that would be very hard to face. “I’m in the military,” she said. “My friend, he was in his military, sort of. The grays’ military of the spirit. I mean, they have no actual army, as such. In the military, though, we always know that death is part of it. Oh, you don’t think about it, you think about life. But death is part of it.”

She had to stop. She did not want him to hear the tears in her voice.

Conner?

He blinked, sat up straighter, stared toward the deck. That wasn’t Lauren, she was leaning over with her eyes closed and full of tears, almost about to spill her drink.

He got up.

“Going back to bed?”

He hardly heard her. He went out on the deck.

“Conner?”

The night was huge and hollow, the sky aflame with stars. It was cutting cold, but it felt good, somehow, as if the winter night belonged to his grief.

She came out behind him, and then Mom did, too. Mom brought his coat. He had big lamb’s wool slippers on already. “What are we doing at three A.M? May I know?”

Then, through the skeletal trees, there came a glow. It flickered and was gone.

“Is that a flashlight?” his mother asked.

But Conner was off, racing down the deck stairs and across the hard frozen yard. “You guys,” he yelled, his voice slapping the deep silence.

He plunged through the woods, pushing twigs aside, getting scratched by branches. Then he stumbled into the stubbly field and saw hanging there just a hundred yards away, the little ship that had started the whole thing.

It wasn’t glowing much now. In fact, there was just this flickering blue light playing across its skin. As he approached it, he saw that it was bigger than it looked.

“Conner! Conner, be careful!”

Take care of her, Lauren. Tell her I’m okay.

Are you?

I have no idea.

He went closer to the thing. It was making a sort of rattling sound, like ball bearings clicking together in something that was turning slowly, just ticking over. There was a round opening, not a hatch, just an opening. Inside, he could see the wooden framework that held the thin outer skin. He pushed at it, and it wobbled slightly in the air.

He peered in.

Then his mother was there. “No,” she said in a voice harsh with terror, “we have to get away!”

“Mom, hey.”

“Conner, Conner run!” She pulled at him, she started to drag him away.

“NO!” He shook her off. He lifted himself inside, and saw, sitting on a little bench, three very tattered and bedraggled grays.

“You guys?”

They stirred, backing away.

You guys.

Thank you, came a nervous reply in that innocent, mechanical-sounding voice of theirs. *Thank you for our lives.*

I brought you back to life?

Conner, we’re part of you.

“Conner! Oh, God, Conner!” Mom came pushing and crashing in. Her eyes were filmed with tears, glaring, her face pouring with sweat despite the cold. She bared her teeth like the wild animal Conner knew she had become. “I remember this thing,” she hissed, “and it’s terrible, Conner, it’s *evil*.”

The Three Thieves had backed against the wall. Inside his mind, they

moaned and cried.

Stay calm, Conner projected to them. Then he said aloud, “Mom, I want you to sit down.”

There were two narrow black gurneys against the far wall.

When she saw them, she went practically rigid. The hands of the grays went up to their cheeks, the mouths opened. They pressed themselves against the wall as hard as they could.

“Conner, this place—this is where—” She looked at the narrow iron gurneys. “Oh my God.” Then her face changed. “It was always a sort of nightmare. I didn’t think it was . . . this.” She went to the gurneys, touched one of them. “I remember,” she said in a suddenly loud voice. “I remember it all.”

Conner saw her change and become a girl again, just as Amy had become a woman before his eyes a few hours ago. She was a beautiful, blond girl, freckled, in a white summer nightgown.

And then there were stars all around her, and he saw a boy on the gurney beside her, and the stars surrounded them both.

When the vision ended, Mom was sitting on the edge of one of the gurneys, stroking the ugly black metal. “Conner,” she whispered, “this is where your dad and I were brought together. Right here.”

He went beside her, put an arm around her shoulders.

“If they hadn’t done this, then my whole life . . . I never would have found Dad.” She shook her head. “Conner, they made us, they made our family.” She looked at him, and now her eyes were soft mother’s eyes. She hugged him to her.

Slowly, carefully, or rather, as carefully as the clumsy Thieves could manage, they came out of their hiding place and drew closer.

Conner heard the one say, *Let’s touch her*.

The Two replied, *We can’t do that!*

The Three asked, *What do we do?*

“Mom, put out your hand.”

She tried to, but it was shaking too much. Conner took it in his hand, and together they reached out to the Three, and their hands touched.

Mom snatched her hand back. “It shocked me!”

Don’t do that!

We’re scared!

“They won’t do it again,” Conner told her.

This time, she reached out and touched the face of the Three, and he, with his own hand shaking like a leaf, touched her face, and the One and the Two came close, and the five of them formed a circle.

A sound rose in Conner's mind, the great humming song he had heard before, the voice of the collective raised in hope and joy.

Then there came ringing. The Three Thieves rushed to the far wall. The voice of the collective faded.

What's going on in there? Lauren asked.

"Mom, answer your phone."

The Thieves looked at each other. Katelyn fumbled out her cell phone, listened for a moment. "We'll be there," she said. She closed her phone. "Dad's awake and he wants us." She started for the hatch—and looked out on a field racing away, houses spinning in the starlight, then darkness. "Conner, they've kidnapped us!"

Then there was a thud outside, and light came in the opening. Another thud, and more light. Conner joined his mother at the edge of the opening. "You know what this is?"

"No, Conner! Is it another planet, because your poor father—"

"Come on, Mother."

He helped her down onto the hospital helipad, which had been flooded by automatic lighting as soon as the Thieves' craft landed on it. The thuds had been the switches turning on the floodlamps.

They had not gone two steps before the body of the craft blazed bright and the Thieves shot off into the night.

Conner heard faintly in his head, *Where are you? Conner!*

They took us to the hospital, Lauren.

An orderly came out of a door and trotted across the helipad toward them. "Where is your emergency?" he shouted. He looked around. "Excuse me, but what's going on here?"

"We're here to see a patient," Katelyn announced. "Dan Callaghan."

"But what? Uh, oh, okay. Did you come by medevac? Where's the chopper?"

"He was in a hurry," Katelyn said. "And so are we."

They went down then, along a green-tiled corridor and into a room filled with equipment, and there in the bed was Dad.

Conner let Katelyn go to him. She bent and gingerly kissed him. His eyes met hers, and they kissed more. Then Conner went close, and the family

was whole again.

High above, three others—people also, but of a very different shape—came together, also, arm in arm.

Lauren drove like a madwoman along snowy roads, skidding into the hospital emergency entrance. She left her car where it happened to stop against a curb and sprinted into the building.

She ran down a hallway, vaulted stairs, then turned a corner and burst into Dan Callaghan's room breathing hard.

She stopped, stunned by what she saw.

The Callaghan family had come to the end of something. Instead of huddling together, perhaps weeping, cursing God and their fate, they were all asleep. On the bed, Conner lay beside his father, who snored softly. Katelyn sat in a chair beside the bed, her head back, her mouth open. Her hand lay along the sheets, her fingers touching her husband's bandaged arm. His good arm was around his son.

As she stood in the doorway, she thought how very innocent they still were, even after all they had done and seen. And that boy, with his dusting of beard just barely visible along his lip, what dreams must he be dreaming in the ocean of thought that he now contained?

She came into the room, went to the bedside, looked down at them. How extraordinarily resilient people were. Had she been asked before this, she would have said that they'd have needed sedatives or even straitjackets, but that underestimated the power of the human heart and the simple, central thing that is the family.

She bent over and kissed Conner's downy cheek. He made no move, no sigh of awareness. She tried to make herself quiet in her mind. The Callaghans might be at peace, but in her mind there lived demons, the demon of fear-of-future, the demon of distrust, the demon of danger-of-deceit.

She got the one chair that was not in use and stepped across to the doorway. She sat down, angling the chair so that she could see both the Callaghans, the dark window behind them, and the gleaming, silent hallway.

"May I help you?" a passing nurse asked.

"No, no, I'm fine."

"His vitals are good."

"I know."

The nurse smiled slightly, then walked off, her footsteps clicking on the gray floor. Lauren watched, methodically, first the hall, then the window,

then the Callaghans. For what, she was not sure. Perhaps for nothing. Perhaps the fight was truly ended, and Conner would be able to enter his training.

But where would it lead? What was she to do?

She laughed a little to herself. How absurd that question was. It would lead beyond imagination, past the edge of the known world.

Three o'clock, an alarm beeped in another room, and nurses hurried past. Half past, the wind came, rattling the window. Conner sighed and muttered words that brought to Lauren's mind the tone of prayer. She prayed, then, to Conner's favorite god—that is to say, whatever one happens to be real.

The spirit of man had triumphed this day. Ignition had been achieved. Now, the ascent.

She watched through the deeper hours, watched and waited for the dawn.

The horror classic from the #1 *New York Times* bestselling author

WHITLEY STRIEBER

The Hunger

"Vampire fiction at it's best." —*Kirkus Reviews*

**CRITICAL ACCLAIM FOR THE WHITLEY STRIEBER
HORROR CLASSIC THAT STARTED IT ALL**

THE HUNGER

“Vivid, skillfully written.”

— *The Washington Post*

“Fast paced . . . intriguing.”

— *Publishers Weekly*

“Read this one with all the lights on.”

— *Hudson Sun (MA)*

And for the long-awaited follow-up

THE LAST VAMPIRE

“Whitley Strieber has done more than recapture the magic that made him a modern master of horror literature — he has surpassed himself. This is a wonderfully imaginative book, one that defies the reader to put it down.”

— Peter Straub

“With a sensual ascent to an erotic crescendo, this vigorous sequel restores the vampire’s power and mystique. Strieber’s luxuriously soulless realm of the undead is disturbingly plausible.”

— Katherine Ramsland

Man comes and tills the field and lies beneath,
And after many a summer dies the swan.
Me only cruel immortality
Consumes . . .

Tithonus, ALFRED, LORD TENNYSON

There was an awful rainbow once in heaven:
We knew her woof, her texture; she is given
In the dull catalogue of common things.

Lamia, JOHN KEATS

The Hunger

PROLOGUE

JOHN BLAYLOCK CHECKED his watch again. It was exactly three A.M. — time to move. The small Long Island town was so quiet he could hear the light change at the end of the tree-lined street. John put his watch back in his pocket and stepped softly from his place of concealment in the shrubs. He paused a moment in the cool, private air of the empty street.

His target lived in the middle of the block. John's well-trained senses fixed on the black bulk of the house, testing for any flicker of life. As far as the Wagners were concerned, Kaye would just disappear. Within a month she would become another statistic, one of thousands of teenagers who walk out on their families every year. Kaye had good reason to run away. She was being expelled from Emerson High, and she and her boyfriend, Tommy, were facing a cocaine charge in JD court in a few days.

Both would disappear tonight. Miriam was taking care of the boyfriend.

As he walked, silent and invisible in his black jogging outfit, he thought briefly about his partner. He wanted her as he always did at moments of tension. Theirs was an old love, familiar and comfortable.

At two minutes past three the moon set. Now, only the single street light at the end of the block provided illumination. That was as planned. John broke into a trot, passing the target house and pausing at the far end of the grounds. No light appeared from any angle. He went up the driveway.

To John, houses had an ambience, almost an emotional smell. As he drew closer to its looming silence he decided that he didn't much like this house. For all its carefully tended rose bushes, its beds of dahlias and pansies, it was

an angry place.

This confirmation of the Wagners' misery strengthened his resolve. His mind focused with even greater clarity on the task at hand. Each phase had been timed to the last second. At this level of concentration he could hear the breathing of Mr. and Mrs. Wagner in their second-floor bedroom. He paused, focusing his attention with fierce effort. Now he could hear the rustle of sheets as a sleeper's arm stirred, the faint scratching of a roach moving up the wall of the bedroom. It was difficult for him to maintain such intense concentration for long. In this he and Miriam were very different. She lived often at such a level, John almost never.

He satisfied himself that the household was asleep, then began his penetration. Despite the dark, he quickly located the basement door. It led into a furnace room. Beyond it was a finished playroom and Kaye's bedroom. He withdrew a length of piano wire from a pouch concealed under his sweat shirt and picked the lock, then worked back the spring catch with the edge of a credit card.

A rush of warm, musty air came out when the door was opened. The night was only slightly chilly, and the furnace was running on low, its fire casting faint orange light. John crossed the room and went into the hallway beyond.

He froze. Ahead he heard rattling breath, not human. His mind analyzed the sound and concluded that a dog of about sixty pounds was sleeping at the end of the hall, approximately seven feet away.

Nothing could be done about it now. He was forced to use his chloroform. He removed a plastic bag from the pouch and took out a cloth. It was cold in his hand, dripping with the liquid. He was not as quick as Miriam, he needed chloroform to subdue his victims. The thought of the danger he would now face made his throat tighten.

His friend the darkness began to work against him; he stepped forward, calculating his distance as best he could. One step. The dog's breathing changed. Two steps. There was a shuffling sound, the beginning of a growl. Three steps. Like an explosion, the dog barked.

Then he had it, his fingers twining in the fur, his chloroformed rag going over the muzzle.

There was a furious struggle, not quite silent.

“Barney?”

Kaye’s voice was bell-clear and edged with fear. John was aware of how much his odds were worsening. The girl was wide awake. He could sense her staring into the darkness. Normally, he would have retreated at this point but tonight he could not. Miriam was an absolutely intractable killer; she would not miss the boyfriend. The essence of the deception was that they would disappear together. Both gone and the police would figure it for a runaway and file the case somewhere below lost kittens. Only one gone and there would be much more suspicion.

As soon as the dog stopped struggling, John moved ahead. There would be perhaps ten safe minutes while the dog was unconscious. There must be no further delays; maximum efficiency was essential.

Kaye’s bedroom was suddenly flooded with light. She was beautiful, sitting on her bed in a nightshirt, her hand still touching the frilly lamp.

John felt the light like fire. He leaped on her, lunging to stifle the scream he knew was rising. Then his hand was over her lips, his arm pushing her onto the bed.

Kaye smelled faintly of cologne and cigarettes. John fought her, his body shaking above the dismal fury of her struggle. The intensity of her resistance conjured up anger in him. Both his hands covered her mouth and nose, his knees pinned her elbows.

The room was absolutely still, the only sound that of Kaye’s legs thudding against the mattress. John looked at the pleading, terrified eyes, trying to gauge how much longer they would remain alive. He felt the girl’s tongue darting against the palm of his hand. Careful, don’t let her bite.

The five minutes it took to suffocate her stretched on and on. John fought to

keep his attention on his work. If she got away from him . . . but he wouldn't allow that. He had, after all, years of practice. Just don't let the mind wander, the grip loosen — not for an instant. He was watching for the hemorrhage in the whites of the eyes that would be the sign of death. Kaye responded typically. She pleaded with her expression, looking desperately into his face.

Finally, her eyes screwed closed with the failure of consciousness. There came a series of frantic convulsions — the unconscious trying to escape what the conscious could not. After a moment of motionlessness the eyes opened again. The whites were the correct shade of pink now. The eyes slowly drifted to the right, as if trying to see the way. A deeper stillness fell.

At once John released his grip and leaned across to her chest, pressing his ear between the warm softness of her breasts, listening for the last thutter of the heart.

Perfection. She was just right, hanging at the edge of death.

All obstacles were removed. Steel discipline could give way now to his real feelings, to the raw truth of his hunger. He lunged at her, unhearing of his own excited cry. She exploded instantly into new life within him. His mind clarified as if he had plunged into deliciously cold water on a stuffy day. The achiness that had been threatening swept from his muscles. His hearing, his eyesight flooded him with impressions of almost supernatural intensity.

He soared from height to height. As always at such a moment, a vivid image of Miriam appeared in his mind's eye. He could taste her lips, feel her laughter in his heart. He longed for her cool flesh, the love within him growing rich with desire.

Then it was finished. He barely glanced at the remains of Kaye Wagner, a dark lumpy thing almost lost in the bedclothes. Time had to be addressed. He forced himself back to sordid necessity, slipping the frail husk of the girl into a black plastic bag. Briskly, he consulted his watch again. In exactly two minutes he must be at the pickup point.

Into the bag he also tossed the girl's wallet and hairbrush and some of the cosmetics scattered over her dresser. Then panties and bras and a stack of 45-

rpm records from the floor. He stopped in the bathroom for toothbrush, hair spray, more cosmetics, shampoo and a somewhat clean blouse he found hanging on the shower-curtain rod.

In fifty seconds the car would come down the street, Miriam was always on schedule, so John hurried out the way he had come, pausing only to lock the cellar door behind him with his piano wire. He moved swiftly down the driveway and waited in a flowering dogwood.

His body tingled; his awareness seemed to extend into every detail of the world around him. No effort was needed to concentrate now. He could feel the peaceful presence of the dogwood, hear even the smallest sounds, the rustling of a beetle, the ping of a slowly cooling engine block in a car across the street. Above him the stars had resolved into myriad colors: green and yellow and blue and red. The breeze seemed to stir each leaf with a separate touch. John felt a sharp and poignant sense of the beauty around him. Life could not be sweeter.

The appearance of their car made him smile. Miriam drove with the caution of a blind octogenarian. Accident obsessed, she had chosen the Volvo because of its safety record and innocuous appearance. Despite its sturdiness, she had it equipped with a heavy-duty gas tank, truck brakes, an air-bag restraint system as well as seatbelts and a “sun roof” that was actually an extra means of escape.

Dutifully, he trotted over to the slowly moving vehicle, tossed his burdens into the backseat and slipped in beside her. There was no question of his driving, of course. She never relinquished the wheel unless absolutely necessary. It was comfortable to be with her again. Her lips felt cool and familiar on his cheek, her smile was bright with pleasure and success.

Saying nothing, she concentrated on the road. The entrance to the Long Island Expressway was two blocks away and John knew she would be worrying about the chance of being stopped by the local police before they reached it. They would have to answer embarrassing questions if that happened.

Until they reached the ramp neither spoke. As they pulled onto the freeway,

however, he felt her relax. The last bit of tension broke.

“It was just *beautiful*,” she said. “He was so strong.”

John smiled. He husbanded his own exhilaration. Despite his years at it, the kill itself never pleased him. He was not excited by the actual act, as was Miriam.

“Yours went well, I hope.” It was a question.

“The usual.”

She was staring at him, her eyes twinkling like those of a pretty doll. “I had such a nice time. He thought he was being raped by a girl.” She giggled. “I think he died in ecstasy.” She stretched, luxurious with postprandial ease. “How did Kaye die?”

He supposed the question was her way of giving him support, to show interest, but he would rather forget the ugly little act and concentrate on the joy that was its reward.

“I had to use the chloroform on a dog.”

Miriam reached over and kissed him on the cheek, then took his hand. She was so sensitive; she knew from that one remark all that had occurred, the difficulties he had endured.

“They all end up the same sooner or later. I’m sure you were very humane. She probably never really understood what was happening to her.”

“I miscalculated. I should have anticipated the dog. That’s all that’s bothering me.”

But it wasn’t, not quite. There was also this feeling, strange and yet remembered. He was tired. It had been a very long time since he had felt so.

“You can never give a perfect death. There will always be suffering.”

Yes, that was true. And even after all these years he did not like to inflict

suffering. But it shouldn't weigh on him like this. Feeding was supposed to make you feel vital and alive.

This could only be a passing phase, the result of his having been thrown off-balance by the dog. He decided to dismiss it from his mind. He turned to the window, stared out.

The night was magnificent. He had always seen a great truth in the dark, a kind of joy, something forgiving of such violence as his. Thinking of it brought a welcome sense of justification.

The lights of towns came and went. John felt deeply in love with it all. He allowed himself a little of the pleasure of the kill, reflecting how he was fundamentally happy in his life.

Before he quite realized it his eyes had closed. The humming of the car began to mingle with the voices of memory, distant memory.

His eyes snapped open. This was not normal. He opened the sun roof to let in some cool air. The pattern of their lives was extremely regular. You slept six out of twenty-four hours, and it came upon you about four hours after you ate.

What, then, was this?

He was drifting, half-asleep, into a very pleasant sensation, his mind possessed by a soft sigh of remembrance, of dream . . .

For a flash it was as if he were in an enormous, cold room lit with candles, a fire crackling in the grate. He was surprised. He had not thought of the ancestral home of the Blaylocks since he had left England. And yet now he remembered his own bedroom so well, the incessant dampness, the grandeur, the familiarity.

Miriam was as beautiful now as she had been then. He would have touched her, held her, but she did not like to be disturbed while she was driving.

He remembered the tall windows of his room with their view of the North

Yorks Moors, where gypsy fires flickered at night. The faces and voices of the past flooded into his consciousness. Drowsily, he watched the strange modern landscape pass the car, the endless lights, the cramped, scruffy little houses. How alone he was in this world.

He closed his eyes and was at once transported to a wet, gray afternoon at Hadley. It was a special afternoon — or would be within the hour. He remembered himself as he was then, a fashionable lordling just finished with two years at Balliol College. He had been dressing for dinner, his valet hovering about with stockings and cravat and shirt. His assumption was that the guest would be some ghastly political acquaintance of his father and the evening would consist of sanctimonious discussions about the mad old king and the profligate regent. John didn't give a damn about court. He was much more interested in bear-baiting and running his hounds on the moor.

As he was dressing, a carriage rattled up the drive. It was a magnificent equipage, drawn by six stallions, attended by two footmen. Their livery was unfamiliar. When a lady in white silk emerged from the carriage John snapped his fingers impatiently for his wig. It had been too long since his father had brought a whore to Hadley. Despite all his infirmities and his frequent confusions, despite the goiter, the dim eyes, John's father retained a superb taste in females. When he sought a woman's company, he usually cast about among the shabbier edges of the aristocracy for some physically attractive, charming creature without sufficient property to interest his son.

Except they usually did.

"The master's away," he sang softly as Williams adjusted his cravat and sprinkled a bit of scent in his wig, "we shall have a merry day."

"The master is here, sir."

"I know that, Williams. Just wishful thinking."

"Yes, sir."

"The usual preparations, Williams, if she is appealing."

The man turned and went about his duty. He was a good valet and knew when not to respond. But John could be certain that the halls from the sitting room to this bedroom would be empty of servants at the appropriate time, and the lady's maid would not follow her mistress.

That is, if his father could be sotted with enough brandy to make him forget his plans, and enough bezique to bore him to sleep.

Yes, indeed, it promised to be an interesting evening. John went down the gallery that connected the two wings of the house, feeling the humid coolness of the evening beyond the windows, passing beneath the portrait of his mother that his father insisted remain outside her old room.

The stairway had been lit as if for a ball, as had the front hall and the large dining hall. Servants were setting three places at the massive table. Why his father had not chosen the more intimate yellow dining room John could not imagine. His father's voice could be heard beyond the great hall, in the formal parlor. John crossed the hall and paused as the door was opened before him.

Then he knew why the pomp. And he knew no amount of brandy would addle his father this night, nor bezique send him off to sleep.

There was no word to describe her.

Skin could not be so white or features so perfect, surely. Her eyes, as pale as delft, as pellucid as the sea, flickered to him. He fought for some appropriate word, could only smile and bow, then advance.

"This is my son, John."

His father's words were as distant as an echo. Only the woman mattered now. "I am charmed, ma'am," John said softly.

She extended her hand.

"The Lady Miriam," his father said, his tone revealing just a trace of irony.

John took the cool hand and pressed it to his lips, lingered just an instant too

long, then raised his head.

She was looking at him, not smiling.

He was shocked by the power of that glance, so shocked he turned away in confusion.

His heart was pounding, his face was blazing hot. He covered his upset with a flourish of snuff. When he dared look, her eyes were merry and pleasant, as a woman's eyes should be.

Then, as if to tease him, she looked at him again in that shameless, wild way. Never before had he encountered such brazen effrontery, not even from the most primitive scullery or back-street whore.

To see it in such an extraordinary and obviously refined beauty made him shake with excitement. His eyes teared, involuntarily he extended his hands. She seemed about to speak but only ran her tongue along the edges of her teeth.

It was as if his father had ceased to exist. John's arms came around her, around Miriam, for the first time. The embrace electrified him, inflamed him. His eyes closed, he sank into her softness, bent his head to her alabaster neck, touched her salty and milky flesh with his open lips.

Laughter sprang out of her like a hidden blade. He jerked his head up, dropped his arms. In her eyes there was something so lascivious, so mocking and triumphant, that his passion was at once replaced by fear. Such a look he had seen —

Yes, in a panther some East Indians had been displaying at Vauxhall Gardens.

The light, furious eyes of a panther.

How could such eyes be so very lovely?

All of this had happened in no more than a minute. During this time John's father had stood transfixed, his eyebrows raised, his face gradually

registering more and more surprise. “Sir!” he burst out at last. “Please sir!”

John had to recover himself. A gentleman could not so dishonor himself before his father.

“Do not be angry with him, Lord Hadley,” Miriam said. “You cannot imagine what a flattery it is to be attended to so fervently.”

Her voice was soft and yet it filled the room with vibrant intensity. The words may not have pleased John’s father, but they foreclosed any further disapproval. The old lord bowed graciously and took the lady’s hand. Together they strolled farther into the great room, pausing before the fireplace. John moved along behind them, his manner outwardly deferential. Within, his heart was seething. The woman’s manner and appearance were the most wonderful he had ever known, a thousand times more wonderful than he had imagined possible. She trailed behind her an attar of roses. The firelight made her skin glow. Her beauty made the dank old room blaze with light.

At a signal from his father, a piper began to play on the balcony. The tones were stirring, some Scottish air at once beautiful and fierce. Miriam turned and looked upward. “What is that instrument?”

“A bagpipe,” John said before his father’s mouth could open. “It’s a Scot’s device.”

“Also Breton,” his father snapped. “That is a Breton piper. There are no Scotsmen in Hadley House.”

John knew differently, but he did not contradict.

They ate a brace of grouse, high and sour, followed by lamb, pudding and trifle. John remembered that meal well because of how surprised he had been when Miriam did not partake of any of the food. Course after course went past untouched. It would not have been polite for them to inquire why their guest did not care for the food, but at the end of the meal John’s father seemed sunken in dismay. When she at last took some port he brightened.

No doubt he had been afraid that his physical appearance was so unpleasant to her that she was not going to stay the night. John almost laughed aloud when he saw how his father grinned when she drank, his loose dental plates making it look as if he had a mouthful of stones.

During the course of the meal, Miriam had glanced twice at John and both times had communicated such warmth and invitation that he himself was greatly encouraged.

When the evening ended he went to his room full of eager anticipation. He dismissed Williams at once, dropping his clothes off, tossing his wig aside, standing at last naked. He went close to the grate, warming first one side of himself and then the other, and then jumped into bed. The sheets had been swept with a fire brick until they were warm and so the bed was quite comfortable. He lay sleepless, astonished that he had taken to his bed without his nightclothes, deliciously excited. On the nightstand he left three gold sovereigns gleaming in the candlelight.

He lay listening to the wind and the rain, warm and safe beneath his quilts, waiting. Hours passed. His body, fixed in the tension of extreme excitement, began to ache with need.

Without knowing it, he fell asleep. He awoke suddenly, dreaming of her. The room was no longer absolutely dark. Fumbling on the night table, he found his watch and opened it. Almost five A.M.

She wasn't going to come. He sat up. Surely any sensible whore would have understood the meaning of the glances that had passed between them. The three sovereigns lay untouched. The fool had not come to claim her own.

By now his father must long since have been done with her. Bracing himself for the cold, he swept his covers aside and rose from the bed. He could not find where Williams kept his nightclothes and so was forced to put on his pants and blouse of the night before. Grabbing up the gold coins, he hurried down the corridor.

A bright fire burned in the grate in the guest room. The bed was occupied. John went to it, placed his hand gently on her cheek.

He felt rather than saw her smile. There was no confusion, no befuddlement of awakening. “I wondered if you would come,” she said.

“My God — you should have come to me!”

She laughed. “I could hardly do that. But now that you’re here, don’t catch cold.” She let him into the bed. He tried to control his shaking but could not. This was like bedding the daughter of the greatest lord of the realm. There was nothing whorish about her now. Usually, they were at least a little coarse, their eyes hard with the truth of the word. But here was all innocence and fluttering purity — and the most blatant lust.

She allowed him to undress her. Naked, she drew him to her and deftly removed his own clothing. “Come,” she said, rising from the bed.

“Come?”

“To the fireside.” Their arms about each other’s waists, they walked to the fire. The room was warm because her maid had obviously laid this new fire within the hour. “Be truthful,” she said. “Am I not the first?”

“In what sense?”

“The first you have really loved.” She touched him most shamelessly, most wonderfully. He looked down at her hand, amazed that so simple a gesture could bring such pleasure. It was all he could do to keep his feet.

“Yes! I love you!”

Her body, perfect in shape, pert and yet voluptuous, overwhelmed him with its beauty. She lifted her face to his, brought her arms around his neck, parted her lips. He kissed her, kissed into her open mouth — and tasted sour, oddly cold breath.

“Come back to the bed,” she said. She led him by the hand, paused, and held him at arm’s length. “Let me have a good look at you first,” she added. Her hands ran down along his chest, touched his hard-muscled belly lightly, and did not hesitate to examine his private parts. “Are you ever ill?” she asked.

“The whited sepulcher? Certainly not!” He was astonished by her impertinence. What business was it of hers if he had the infection?

“It is a disease communicated from body to body,” she said absently. She was talking nonsense. “But it doesn’t matter. I was curious about the general state of your health.”

“I’m quite well, madam.” He brushed past her, got into the bed. She looked down at him, laughed lightly, and twirled about the room, her body full of the grace and beauty of youth. John was entranced but he also was growing impatient.

Suddenly she leaped onto the bed. It was a tall four-poster and her jump was so high that it seemed almost uncanny. He tried to laugh, but something about her movements stopped him. She seemed almost angry as she came into the covers. “You know nothing of love,” she said in a loud voice. Then she was beside him, squatting. A pixie smile came into her eyes. “Would you care to learn?”

“I should say so. You’re already tardy with my lesson.”

Without warning she grabbed his cheeks and kissed him fiercely. Her tongue pressed between his teeth. It felt as rough as a broom besom and he drew back in surprise. How could such a thing be in a human mouth? It was quite horrible. He looked at the door.

“Don’t fear me,” she said. Then she laughed, bright, ringing through the gray predawn.

John was not a superstitious man, but he wondered about the gypsy camps at this moment. Could this be a gypsy witch, come to claim Hadley for her own? She must have seen the expression in his face, because she all but flung herself onto him. Her hands moved across his body, her flesh touched his, her face presented itself for his kisses.

And he did kiss her. He kissed her as he had never kissed anybody before. He covered her lips, her cheeks, her neck with kisses. Then she took her breasts in her hands and offered them. Before this moment John had not known the

pleasure of kissing a woman there. His heart welled up with happiness. Gypsies forgotten, he lost himself in the pleasures of the flesh. She pressed his head downward until he was kissing her most secret intimacy.

The pleasure of it amazed him. She moved with quick dexterity, and before he knew it he was also being kissed in this way.

In a few minutes she had awakened feelings in him he had known nothing of. Waves of exultant happiness swept over him. He could feel her excitement rise to match his own. Never had a woman made him feel so wonderfully competent, so *good*. Then her mood changed. Gently, insistently she moved beneath him until they were face to face. Her legs spread, her eyes invited. A little sound, half joy, half fear, escaped her lips when he slipped into her. Then her hands came up and grasped his buttocks and they began.

John fought manfully, but his excitement was so intense that it was only moments before he was pounding into her, pounding and shouting her beautiful name, shouting without a care for the ears of servants, shouting in great and glorious love.

He sank down on her. "Marry me, whore," he breathed. Her fingers scraped slowly along his back, the nails digging into his skin. Her face remained impassive. Her nails hurt but he would not cry out. He was too happy, too far transported. "Lady Miriam, you must be my wife."

"I am not a real lady."

He laughed. "You *must* be!"

In that moment he had married her. Their spirits would not again be parted.

He remembered those first wild years of love, the wonder and the horror of it, the sheer blaze of lust. So much had been gained and so much lost.

They raped the estate. The peasants ran away. The gypsy fires died. The old lord withered and also died. John was lost in her, lost and not yet found. Lost in love with her.

* * *

Miriam was worried. John's head lolled, his mouth hung open. He was obviously dozing. For them such a thing was abnormal. Either they were awake or they Slept, the deep revitalizing trance peculiar to their kind.

He shifted restlessly. There was only one thing that could be wrong. She shook her head, refused to accept it. Not so soon, surely not!

She slammed the car into fourth. Lights flashed by as they hurtled toward New York.

"You're going too fast," he said over the roar of the wind.

"We're the only car on the road." The speedometer hovered near eighty. Miriam threw back her head and laughed, bitter and angry. He could not fail so soon. She loved him so — his youth, his freshness. She slipped her hand into his, felt him return the pressure.

"You were dozing, weren't you?"

She felt his eyes on her. "I had a dream."

"Like Sleep?"

"A sort of daydream. I was only half asleep. I was dreaming of when we met."

She could have shouted with relief. A daydream! Now the glorious feelings that followed feeding reasserted themselves in her. The bumpy old highway, the crumbling city, all revealed secret beauty. In her heart the sense of relief was followed by the familiar love, a sort of gratitude for the existence of humankind.

Her thoughts went to little Alice Cavender, whom she would soon transform. When John's winter actually came — many years from now — Alice would be rising to summer. As he withered she would flower, and Miriam's love would slip from one to the next with none of the agonizing sense of loss she

had experienced in the past. To reassure herself she sought a *touch* with Alice. It came promptly — Alice’s warmth, her smell, the fierceness of her heart. Then it was over, the bright little storm blowing away. A *touch* with Alice . . . how good. The girl was coming along well.

As they crossed Flushing Meadow Park with the enormous Mt. Hebron Cemetery on the left and the World’s Fair Site on the right, Miriam watched John as closely as possible without ignoring the road.

“Remember the Terrace Club,” he said.

“How could I forget?” That was in 1939; the Terrace Club had been at the old World’s Fair. She could picture the cheerful beauty of its yellow and white walls and svelte stainless-steel furniture.

“We danced there.”

“That’s not all we did.” She well remembered John’s outrageous kidnapping of a girl from the powder room while she herself consumed the little creature’s date.

Manhattan began to appear and disappear ahead as they rolled through Queens. How recent it all looked to Miriam. It seemed just a week ago the whole area had been swarming with builders. This had been a cobbled road; the air had been scented with the odor of tar and raw lumber. In those days the Long Island Expressway was not yet built and an electric tramway ran to Ozone Park. The bedroom suburbs beyond didn’t exist then. They had ridden the tram often, sitting on the rattan seats as it clicked and sparked and shuddered along, a raft of light in a great dark ocean.

Soon the procession of cemeteries began: Mt. Zion, Calvary, Greenacres. A musty, cool odor filled the air.

John turned on the radio, and her mellow mood was interrupted by a long, sorrowful tale being told by an old voice from nowhere, some used-up insomniac pouring his losses out to a talk show host.

“Please.”

“I like it.”

“Then your taste is more bizarre than I thought.”

“I like to listen to the old. I gloat over their infirmities.”

That she could understand. She could well imagine how it must feel to John to have defeated the curse of aging. What an absolutely perfect man he was. She also began to enjoy the presence of the old voice in the air. It became a kind of counterpoint to John’s youth and vigor, making him seem more wonderful, a more inspired catch, than ever before.

She drove swiftly through the Midtown Tunnel, up Third Avenue and across to Sutton Place. Their house was on the corner of a cul-de-sac, a small but elegant structure that revealed no sign that it was also a fortress. Miriam loved the sense of protection it gave her. She had lavished time and money on the security system. As technology advanced she had seized on every breakthrough and added it to the system. The window boxes full of petunias concealed a microwave perimeter alert. Each window and door was protected by an electrostatic barrier powerful enough to render an intruder unconscious. Even Miriam’s bed was protected by a new system which would drop steel shutters around it if anyone approached. In the back garden, among the roses, were sensitive motion detectors that could pick up the step of man or animal, and tell the difference. Cameras with light-intensifying lenses watched the alley and the area near the garage, the computer that controlled them vigilant for human shapes moving within their range.

Once there had been a secret tunnel under the alley and garden, leading to a private dock on the East River, but the building of the East Side Drive had changed all that. Now protection was more important — and easier — than escape.

She stopped the car, turned out the lights, and pressed the dashboard button that closed the garage door behind them. John got out at once, heading for the furnace room to burn the bags containing the remnants of their victims. He was hurrying so that the smoke would be gone before dawn.

Miriam was embarrassed. She had allowed Alice to stay here alone this night,

violating her own strict rules. Now John would have to know lest he make too much noise in the furnace room. “Don’t wake Alice,” she said.

“It doesn’t matter, I’m up.” Alice stood at the top of the stairs that led up from the basement. Her blue-gray eyes were directed at John and his two big plastic bags.

“Stay upstairs,” Miriam said quickly. Alice ignored her, coming down the steps with feline grace.

“I dreamed about you,” she said to Miriam. The eyes quested for more information. Alice had sensed something unusual about the dream. Miriam smiled at her. When Miriam *touch*ed Alice dreamed. On such beginnings great loves were founded.

“Since she’s here she might as well help me,” John said acidly. “What does it matter, it’s just garbage.” His anger was quite justified — and yet Miriam was so glad that Alice was here, she found she didn’t care.

“Fine,” Alice said into the silence that followed John’s remark.

Miriam went upstairs. In spite of herself she felt a pleasing thrill at the harshness in John’s voice. He was interesting when he was a little mean. Sometimes she even evoked it deliberately. That, she supposed, was part of the reason she had invited Alice over on a forbidden night. That and the love she felt for the girl.

John watched Alice come down the steps. He disliked her seductiveness, her forceful personality, and most of all the effect she had on Miriam. It was infuriating to realize to what small degree Miriam belonged to him. All of these feelings made him want to consume Alice, to let his body do its will on her, and not incidentally remove the threat, relieve the corrupting jealousy. At least it would be easier to bear tonight, with the hunger in abeyance.

“Why don’t you just leave your garbage in the alley like everybody else?”

A typically bothersome question. Miriam certainly couldn’t claim that she needed the companionship of this girl. John felt that he was more than

enough himself, and she had said he would be with her forever. Accident was supposed to be all that could harm either of them. He almost laughed at the thought that now entered his mind. This sullen little creature was going to be his backup, in case he got himself killed.

“Why don’t you?” she repeated. Alice never let go of a question.

“They don’t pick it up often enough.” He tossed her the bags. “Hold these while I get the fire going.” There was little time left before dawn. They did not burn evidence during daylight hours.

“They’re so light.”

“What can I tell you? We were hungry.” He pulled the lever that controlled the specially installed high-pressure gas line. There was a pop and a roar and the firebox was filled with blue flames.

“What is this stuff anyway, paper?”

He snatched the bags away from her and stuffed them into the furnace.

“Count it as another of our mysteries.”

“You bring garbage home in the car?”

John glared at her. “We had a picnic. How you managed to miss it I cannot imagine.”

She smiled, too sweet. “You didn’t invite me. I’m not the kind of person who tags along without an invitation.”

“I hadn’t noticed.”

“I bet Miriam wanted me along. You probably wouldn’t let her ask me.”

“Sorry to disappoint, but your name never crossed her lips.”

“She loves me.”

It was said so simply and with such force that John could find no reply.

Furiously, ignoring the girl, he tended his fire.

Miriam moved to the night table and began preparing for Sleep. She worked as quickly as she could, taking out the lenses that deepened the color of her eyes, washing off the makeup that concealed her pale white skin, finally stripping away the wig. She ran her fingers through her wispy dusting of hair, then stepped for a few minutes into the shower.

The voices of Sleep echoed more and more loudly.

John was sitting on the side of the bed when she came out. “Why did you let her stay here tonight?”

“Her parents are away.”

“She saw me burning the remnants.”

“She’ll be helping you soon enough. Aren’t you ready to Sleep?” She sank down on the bed.

“What you want with her I cannot imagine!”

“She keeps house. Aren’t you going to Sleep?”

“I feel wide awake.”

She concealed the thrill of fear that this statement evoked in her. He *must* Sleep! She raised her hand, touched him, tried to form a question. But her own Sleep would not be denied another moment. The last thing she was aware of as she sank away was his restless stirring. Then a dream captured her, as vivid as life, more a memory relived. She Slept.

1

ROME: 71 B.C.

SHE HATED THE CITY and hated it most in August. The streets burst with filthy life; rats and flies and the sneering, diseased poor of the Empire. Carts piled with everything from sausages to silks poured through the gates, choked the narrow alleyways, jammed into the forums. Exotic crowds from the edges of the world shoved and brawled and stole in every corner. Over it all a blue haze of smoke from countless sausage-stands and bakeries hung like dead fog. Rome was drowning in humanity: naked slaves, nobility preceded by lictors and followed by streams of clients, soldiers in creaking leather and clanging brass, aristocratic ladies held above the mass on litters, all surging around the gaudily painted temples of government, religion and wealth.

She drove her chariot like a centurion. Two slaves walked ahead of the horse and chariot with whips to force the crowd aside — she didn't give a damn how it made her look, she had no time for the effete ministrations of lictors with their delicate rods. She was in a hurry and Rome was just going to have to move.

As she proceeded along the Nova Via toward the Appian Way the crowds thinned somewhat; nobody was going out the Capenian Gate today.

The lush palaces on the Palatine Hill and the brightly painted Temple of Apollo disappeared behind her. Now her slaves were trotting. Soon she would flail her horse and burst past them. She was growing frantic, the heat made time short.

On this day she would find one of the strongest men on earth and make him her own. She passed under the Appian Aqueduct and through the Capenian Gate. Now that she was outside she thrashed the horse, rattling past the

Temple of Honor and Virtue and over a little hill. With shocking suddenness the horror was before her.

Even in this age of cheap life it stunned her.

A dense, roaring mass of flies darkened the sun. Lining the Appian Way for miles, rising and falling over the gentle Campagnian Hills, were twin rows of crosses. The entire army of the slave rebel called Spartacus was being executed. They had been here for three days. The question was, could she find one still living?

Such a man would have to be incredibly strong. Miriam's father had theorized that selecting only the very strongest might be the solution to their problem. In the past they had too often chosen badly, and the transformed had always died.

Miriam needed this man. She longed for him, dreamed about him. And now she arranged her veils to keep out the flies and prodded her horse to find him. The shadows of morning stretched before the crosses. At least Miriam was alone on the road; travelers were detouring along the Ardenian Way as far as Capua in order to avoid this disgusting mess. Miriam's slaves came up behind her, gasping from their run out from the city, batting at the flies that settled around them. Her horse snorted nervously as flies alighted on its face.

"Groom," she said, motioning with her hand. Her slaves had wrapped themselves in cotton soaked with gall. The groom came forward. For an instant his costume reminded her of better times, when she had watched the people of the desert going forth in the sun with similar turbans on their heads. In those days her family had been nomadic, traveling up and down the desert, capturing strays on the fringes of Egypt's fertile plain.

She moved slowly ahead, enduring the sweet stench and the ceaseless energy of the flies, past corpse after corpse. A knot of loathing burned in her stomach. Rome was madness enthroned. And it would get worse. The city's rise to a world-empire was now inevitable. In time it would pass, but not soon. Many hard years lay ahead.

Every few minutes she stopped, lifted her veils, and stared long at one of the

victims. With a flick of her wrist she would send a slave to test him by prodding him in the ribs with a stick. A feeble groan would be the only protest and she would continue on. Behind her one of her slaves had begun to play a flute to soften the ordeal. He played the plaintive music of Egypt, sad notes well suited to the situation.

She noticed one man from a long way off and stopped a moment to watch him. There was organization to his movements. Tied to a cross, a man must keep his legs straight or suffocate. To stay alive takes every human resource. Only sheer terror of death keeps a man struggling on a cross.

This man must have been at it steadily for nearly seventy-two hours. Yet he must realize that nobody was going to have mercy on him.

She clapped softly to signal the groom. It was all she could do not to whip the horse to a gallop, but then her slaves would have to run again. She was no Roman, she despised indifferent cruelty. So they walked to the prize. As they drew closer she saw that he was Greek or Middle Eastern, filthy and brutally wounded from whipping. His eyes were closed, his face almost peaceful in the extremity of his effort.

The next moment he straightened his legs and she heard an awful, ponderous intake of breath. Then the legs slacked again. One eye had opened a little, staring down at the approaching observers. But he was beyond caring about them, all his energy was devoted to his struggle.

He did it again without a cry or moan, and settled as quickly as he had risen. Then she noticed that his feet were moving back and forth beneath their seething mass of flies. He was actually trying to loosen his bonds!

And the flies were eating the blood on his ankles.

“Demetrius, Brusus, take him down!”

Two of her slaves ran to the cross and began shaking it, removing it from the ground. The man on the cross grimaced, showing his teeth.

“Be careful, you’re hurting him.”

They lowered the cross and she dismounted her chariot and ran to him. She ignored a distant noise, the clatter of hooves. There was no time to worry about soldiers now. She had gall and vinegar, and bathed his face with the liquids while the slaves untied him. The damage was appalling, there were even nests of maggots in his ears. His skin was cracked and black, his body bloated. Only the shallow rattling breath told her that he lived — that and the open eye.

He stared at her. She spoke as soothingly to him as she would to a son. The eye unsettled her. It was incredible that he could be so alert after such an ordeal.

“My Lady —” one of her slaves whispered.

She looked up. Standing like sentinels of death were three soldiers with drawn short swords. They were in the middle of the road, almost hidden by the clouds of flies. These soldiers guarded the crosses, their mission to see that nobody took down any of the condemned. Not a few might try. Motives were many — relatives, sympathizers, slavers after the quick profits of contraband.

“Get him to the chariot — be quick!”

He groaned when he was moved. Her slaves laid him with his knees to his chin on the floor of the chariot. There was no time to lose; even as she stepped up and grabbed the reins, the soldiers were coming forward. “Tell them I’m Crassus’ wife,” she said to her groom. The lie would make them hesitate. Roman soldiers would never impede the activities of the wife of Rome’s current dictator. She snapped the reins and the horse broke into a gallop. She would allow it to gallop back to Rome; by now Victrix was desperate to return to her stall. As for the six slaves, they would make their way home more slowly. No doubt they would convince the soldiers of their innocence, they were sophisticated Egyptians and the troopers were only simple boys from Latium.

The man screamed when the chariot jerked and Miriam screamed with him. He was such an incredible find, it would be utterly desolating to kill him while trying to save him.

She had searched half the world for a man such as this, who clutched life with every whisper of strength.

They reached the Temple of Mars and she swung off the Appian Way. There was no sense in returning through the Capenian Gate; it would be certain to arouse the suspicion of the guard. She drove around the temple on a carter's track, moving close beneath the city wall. There were huts and holes in the shadow of the wall, and the track was stinking and awash in sewage. Floating in it were corpses in every state of decomposition. Dozens of people of every race on earth huddled on both sides of the track, migrants who had come to Rome only to find that strict laws controlled their right to enter the city. If they were not citizens, enrolled freedmen or slaves they could not pass through the gates. A woman came forward brandishing a stick. Miriam showed the short sword that was scabbarded on the chariot. Most of these people were extremely weak and would be unable to subdue her, much less stop the horse.

There was a motionless mass of carts and wagons at the Naevian Gate. Miriam whipped the horse ahead. It was best to take advantage of any confusion.

She used her voice and her whip liberally, thrashing carters and their horses out of the way and making the soldiers guarding the gate roar with laughter. Nevertheless, her efforts got her through quickly, and the condition of her passenger made her desperate for haste. Nobody looked into the bundle on the floor of the chariot.

She passed the Circus Maximus and wheeled toward the Quadrata, an area of wealthy mansions and luxurious insulae. Miriam owned the Insula Ianiculensis and lived on the ground floor. Her upstairs rents paid her taxes and left her enough to maintain her apartments, a villa at Herculaneum and fifty slaves. Hers was a modestly well-to-do establishment, comfortable enough but unlikely to attract any notice.

She found her way through the labyrinth of side streets behind the Circus. Soon the Aemilian Bridge appeared and she crossed it into the stillness of the Quadrata. At this time of year the suburb was quiet, its inhabitants away at Capua or Pompeii for the summer.

At last she arrived at the Insula Ianiculensis. As soon as she came around the corner slaves rushed out, a stable boy taking the reins of the exhausted horse as the assistant master of conveyances stepped up to the chariot. Her Egyptian physicians came forward and took the crucified man into the house. She followed, not stopping even as the maid of the outer garments fumbled with her fibula and removed her fly-spotted cloak. They crossed the Atrium and went through the Peristyle with its flowers and lotus-filled pool and beyond into the suite of baths which had been converted into a hospital in anticipation of this arrival.

At her instructions the tepidarium had been salted and the frigidarium filled with equal parts water and vinegar. A bed had been installed in the solarium with a movable awning above it. Supplies of medicinals and such chemicals as saltpeter and alum had been brought in. Miriam would use all her medical knowledge — far more extensive than that of the idiotic Graeco-Roman “doctors” — in her effort to nurse the man back to health. She had learned medicine in Egypt, combining the ancient knowledge of her own people with that of the priestly cults.

She waved away the bath attendants, who were trying to wash her face and arms, and told the physicians to lay their burden on the bed. The three of them had worked for her long enough to follow her orders without argument; they considered themselves students in her service.

Only now, with the sunlight full on his naked body, did she really feel the presence of this man. Despite his wounds and sores he was magnificent, fully six feet tall with huge shoulders and arms, but surprisingly delicate hands. His face was covered with stubble; he was perhaps twenty years old.

The Romans had been as vicious as ever. Hardly any unmarked skin remained. Suddenly, he made a rasping sound and began to heave weakly on the bed. She lifted him by the shoulders, her fingers breaking through to the blood-wet skin beneath the scabs, and held his head between his legs. Great black masses came from his mouth.

“Gall him,” she said. “He stopped breathing!”

With a funnel the physicians forced the sourest gall down his throat. He

retched and gasped and vomited more, but when she lay him back down he was breathing again.

She had him soaked in the hot salt water and sat forcing cold fruit juice down his throat while the bath attendants scummed the water. Afterward her physicians rubbed into his wounds an ointment she had prepared from the fungus *Aspergillus*. Then they soaked him in the frigidarium and gave him hot Falernian wine.

He slept twenty hours.

For much of this time she sat at the head of his bed listening to his breathing. When he awoke he ate six dates and drank off a flagon of beer.

His second sleep lasted fifteen hours. He awoke at three in the morning, screaming.

She stroked his face, made soft sounds in her throat. “Am I dead?” he asked before lapsing once again into unconsciousness. His sleep, deeper than ever, continued until morning. Miriam saw that he had swollen to bursting. He looked like a wineskin. His flesh glowed red through the fissures opened up by the stretching skin.

He stank of death. His body grew hot and dry and she had him moved to the frigidarium. He became delirious, speaking elegant Greek, talking of the Attic Hills. She knew those hills, had watched evening purple them from the Akropolis of Athens. She knew also those breezes of which he spoke, fragrant with hymettus, bearing the music of shepherd’s pipes.

A long time ago she had walked there, when Athens was the center of the world. In those days the huddled confusion of empire lay at Athens’ gates, when her blue-sailed ships called at all the ports of the East. In such a place as that — or this — Miriam could most easily go about her business.

Against the expectations of her physicians the swelling subsided and the fever declined. Soon he could raise his head for wine or broth of *Aspergillus*, or the boiled blood of chickens and pigs. She knew his name from his ramblings of his delirium, and one day when she called “Eumenes,” he

smiled.

She spent hours gazing at him. As his wounds healed he became more and more beautiful. She taught her cosmetician to shave him and, when he was well enough to sit up, went out and bought him a body servant and a boy of his own.

Slowly a new feeling began to fill her. She ordered artisans in to mosaic the floors and paint the walls, just to give the house a fresh appearance, to fit the new mood. She clothed Eumenes in the finest silks, like a Babylonian prince. She dressed his hair with unguents and applied ocher to his eyes. When he was strong enough she converted the whole Peristyle into a gymnasium and hired professional trainers for him.

Her own beauty blossomed as never before. Her male slaves became awkward and silly in her presence, and if she kissed them they blushed.

No household in Rome could have been happier, no woman more gay. Soon Eumenes was strong enough to walk, and they began to venture from the Insula. Pompey filled the Flaminian Circus with water and ordered mock sea-battles for the entertainment of the public. They spent a day in a private box, drinking wine and eating cold meats: peacock and dove and pork seasoned in the Euboean manner. It was now September and ice had begun to appear for sale in Rome — at fifty sesterces a pound. She bought some and they took their wine cold, laughing at the mad luxury of it.

She watched Eumenes fall in love with her. It was, from beginning to end, a triumph. His ordeal proved his extraordinary strength and his intelligence could not be questioned; he was the third son of an Athenian academician, sold into slavery to ransom his father's library after the Roman conquest.

“I've got to go to Babylon,” she said one day to test him.

The announcement stunned him, but he recovered himself. “I'll accompany you,” he said.

“I've got to go alone.”

For a day her announcement hung heavily in the air between them. Outwardly all was as before, but the strained moments, the increased silence of his contemplative nature, told her that he could not forget what she had said.

Finally, he entered the trap. In the small hours of a morning he came to her, moving softly through the sleeping house, his passage causing oil lamps to gutter in their pots, coming swiftly to her bedside. "I dream only of you," he said, hoarse with need. She received him with a cry of joy that echoed through all the years. It was a love that she remembered always, even after time proved her father's theory wrong.

That first extraordinary night, his passion, the intensity of his hunger, his pounding, relentless sexuality, that first night had been unforgettable.

She had searched eternity for a better moment.

She remembered the avid love in his eyes, the smell of his skin, sour and hinting of her own perfume, and his humid breath mingling with hers.

All of the tragedy and despair of subsequent years did not quell the remembrance of that moment, or of the joyous times they had shared then.

She remembered mostly the flowers and evenings, and the limpid beauty of the night sky in the imperial city.

Also, she remembered his initiation. She had imbued herself with an authority she did not feel, drawing him on. She invented a goddess, Thera, and called herself a priestess. She spun a web of faith and beguiling ritual. They slit the throat of a child and drank the salty wine of sacrifice. She showed him the priceless mosaic of her mother Lamia, and taught him the legends and truths of her people.

They lay together, mingling their blood. This was the hardest time; she was beginning to love him. In the past the mingling of blood had often killed. Only much later did she learn why this is so. She counted herself fortunate that it did not kill Eumenes.

Quite the contrary, he had thrived.

But in the end he had also been destroyed, as they all had been destroyed.

The Sleep lasted six hours. For most of that time John lay beside Miriam watching the shadows. Now sunlight was beginning to creep across the ceiling. It was as if the dozing in the car had been a herald of some change in him. He had dreamed vividly, as was characteristic of Sleep, but there had been no trance.

Beside him Miriam breathed more loudly, beginning to rise from her own trance. John grew afraid. He could not recall a time when the Sleep had not come to him when it was supposed to.

It was necessary to eat only once a week, but Sleep required six of every twenty-four hours. It was essential and it could not be delayed. Almost as absolute as death, it was the key to the renewal of life.

His arms and legs were tingling, his neck ached, his temples throbbed. He slipped out of bed and went into the bathroom, thinking only that he was thirsty for a glass of water. As he bent over the sink his reflection flashed in the mirror.

He stopped drinking, slowly put the glass down. The room was dark. Perhaps what the mirror had revealed was a trick of shadow. He flipped on the lights and looked again.

The tiny lines extending from the corners of his eyes were no illusion. He touched his cheek and felt a delicate dryness, a subtle stiffening. Weren't there also circles under his eyes, and even more lines around his mouth?

He took a shower. Perhaps the drive home with the roof open had chapped his skin. He let the stream of hot water sluice over his face, forced himself to spend fifteen minutes in the bath. He slid his hands up and down his torso and was reassured to find his body as lean and taut as ever. But he didn't feel lean and taut, he felt sapped.

After toweling himself he went back to the mirror. It seemed that his youth

had returned. He found himself almost laughing with relief. Having cheated time for so long, the idea that it might suddenly reassert itself had come like a freezing blast in midsummer.

Then he saw them again. They were visibly deepening. It was like some kind of hideous hallucination. He drew back from the mirror. The fear in his own eyes revolted him. In an instant his hand had smashed into the surface of the mirror and the glass was flying about his head.

The crash surprised him into stillness. Such anger! He looked at the shards of mirror strewn in the sink, each reflecting a tiny section of his face. There was a final crash as the mirror's metal backing came off the wall.

He tried to calm himself, closed his eyes, forced himself to rational thought. It was, after all, only the slightest of changes. Yes — but he couldn't Sleep. He couldn't *Sleep!* Miriam had always said that everything depended on that absolutely deep, absolutely perfect Sleep. Never mind that you dreamed. It was not like the dreaming of ordinary people; it cleaned the cellars of the mind. It was renewing, youth-giving, miraculous. When you awoke from it your whole life began again. You felt absolutely and completely perfect — and you were!

What was happening to him? Miriam had assured him that it would all last forever. Forever and ever.

He looked at her lying so still, the fluffy pillow framing her face. Only that bare motion of breathing said she was alive. Nothing could wake her. The beauty and peace of it fascinated him. The Sleep was so sweet. But it was also a state of complete vulnerability. John could not remember a time when Miriam had been like this while he himself was awake.

He went to her, kissed her. There was something pleasing about her helplessness, something that excited him. The pressure of his kiss parted her lips a little. They stayed parted, the edges of her teeth just visible. He looked into her stillness, feeling rapacious. The thought that he could do his will on her — even murder her — made sweat pop out all over his body.

He took her pearl-white flesh in his hands and squeezed it. She was cold and

dry. His lips dusted along her neck, tasting the bland flavor of the skin. She was so slick, like a plastic creature; as still as the dead. In a stately charade of anger he slowly shook her by the shoulders, watching her head bend back and her throat present itself to him.

He made a nervous decision. He was feeling powerful sexual needs, an urge almost to steal something from her. Thus, in guilty secrecy began a most awesome and terrible experience. He lay down on her and began to make love to her entranced body.

Physically, Miriam was perfect. She was firm and subtly muscled, always responsive. Yet when he took her in his arms now she was hideously pliant. He ran his fingers along her belly and down her thigh. Her absolute indifference only increased his urgency. Then he grabbed her face and forced his tongue into her mouth. Her own tongue was startlingly rough, like that of a cat.

He wanted to break her with love, to disembowel her with it. As he thrust into her he groaned aloud. His fingers were around her throat. Sweat ran down his body. His thighs pounded and he slid in wetness. He hardly noticed his thumbs pressing her throat, closing tighter and tighter as his body kept on, moving of its own accord through rising stages of pleasure. It crossed him in waves, almost rendering him unconscious. He strangled her harder and harder. His excitement rose. He gauged his motions carefully to prolong it. Her mouth opened, her bristled tongue crept between her teeth.

Then he exploded into her, pounding frantically, and was spent.

He sat down, burying his face in her breasts, sobbing. Her body convulsed and he heard her draw a choking breath. Her throat was angry red, her face gray.

The voices of children echoed from the distant street, the hall clock softly chimed the hour. With her usual sense of the moment, Alice began running the vacuum cleaner downstairs. John hid his face in his pillow. Life was suddenly, absolutely empty.

He wanted to cling to somebody, to a living woman.

There was a gasp, then her hands came up to her throat. If only she had awakened a little earlier — or a little later.

She made an inarticulate noise. A prolonged silence followed. He opened his eyes. He was startled to see the rage that was in her face. As soon as their eyes met, the look disappeared. He tried to reject his impression of it, the inhumanity.

“I feel like hell, I haven’t Slept,” he said.

She got up, went to the bathroom, and turned on the light. Without commenting on the mess, she examined her neck in the full-length mirror on the door. She came back and sat on the edge of the bed, crossed her legs, and smiled.

“You bastard,” she said.

It was chilling to hear those words through such a tender smile. He laughed nervously.

Then she turned to him and gathered him into her arms. Her fingers dug into his back, she made a sound like the rasp of a crow. He tried to twist his head but she was much more powerful than any human being. His only choice was to lie in her arms and wait. Suddenly, she withdrew and held his shoulders. Her face seemed to ask a question, almost to plead with him.

She dropped her hands to her sides and went back to the bathroom, shutting the door behind her. After a moment he heard the crunching of glass, Ever careful, she was cleaning up the wreckage of the mirror so she wouldn’t get cut.

He found himself wanting something from her, a scream of anger, a threat, any sign of relationship. But he heard only the water being turned on. Now she was preparing for her day, keeping her feelings to herself. He got up, went shakily to the dresser and started putting on his own clothes. Still in his shorts, he was splashing cologne on his cheeks when he realized that his face was covered with heavy stubble. He didn’t even know if there was a razor in the house. In a kind of wonderment his hands traveled over his cheeks,

touching the hard little ends of hairs. From the bathroom he heard Miriam humming as she toweled herself dry, her familiar melody.

He dressed quickly and left, eager to get away from the pressure of the situation. There was a barber at Fifty-seventh Street and Second Avenue. He would walk up there and get himself shaved.

The shave was actually quite pleasant, the barber cheerful. In the pleasure of the moment he also got his hair trimmed and his shoes buffed.

He was feeling somewhat better when he left. The sun was shining, the streets were crowded with hurrying people, the air was almost sweet. For the first time in many years John enjoyed watching a woman other than Miriam. It was a relief after the fierce tensions of this morning. She was just one of the crowd, a girl in a cheap skirt and sweater hurrying to the bus stop with a paper cup of coffee from Nedick's in her hand. Her hair was dusty brown, her face too heavily made up. But there was such sensuality in her movements, in the way her breasts lay beneath her sweater and in the determination of her stride. Suddenly, he looked again at the face. He was horrified.

It might have been Kaye.

His heart thundered, he gasped for breath. Her eyes met his. They were deep with the mysterious sorrow of mortals, an expression he had been able to see in others only after it had disappeared from his own face.

“Was that a Number Two?”

She was speaking to him.

“Mister, was that a Number Two bus?”

She was smiling, her teeth yellow with neglect. Ignoring her, John hurried back to the security of the house.

As he approached he heard voices through the open window of the living room. At once he felt the hollow despair of jealousy — Alice and Miriam were chatting, no doubt waiting for him to appear so that they could begin

practicing the Handel Trio.

He mounted the stairs, moved softly across the hallway, past the hall table with its spray of roses, and entered the living room. Miriam looked magnificently fresh and beautiful in a bright-blue dress. A blue ribbon was tied prettily about her neck. Alice lay on a settee nearby in her usual jeans and sweat shirt. He felt Miriam watching him as he went across to his place. Until he was settled, Miriam's body remained tense, as if ready to spring.

"John," Alice said, leaning her head back, "I didn't even hear you come in. You always sneak." Her thirteen-year-old smile made him catch his breath. She was indeed a marvelous toy, fragile and succulent.

Miriam crashed out an arpeggio on the harpsichord. "Let's get going," she said.

"I don't want to do that trio again. It's boring." Alice was in a typical sulky mood.

"How about the Scarlatti we were doing last week?"

Miriam went through some fingerings. "We could do it if John can keep up."

"All the music he knows is boring."

Miriam's fingers flew across the keys. "I know Corelli, Abaco, Bach —" She tossed a thick book of music at Alice. "Pick whatever you want."

There was a silence. "I barely know the Handel," John said. "It's hard for the cello."

Miriam and Alice glanced at each other. "We'll do the Handel," Alice said. "It's either that or finger and bow practice, right, John?" She picked up her violin and tucked it under her chin.

"I'm one of the few musicians who can do Chopsticks on the cello, dear."

"As you always say."

Before he had even tuned they were starting. He entered raggedly, rushing after them, overtaking and then struggling to keep his place for the rest of the piece.

They played for an hour, repeating the trio three times. John eventually began to enjoy the way it became coherent, finally beautiful. He liked the music. It seemed to fit the moment, the rich quality of the sunlight, the beauty of the women.

“Well,” Alice said when they were done, “that’s that.” She was flushed, which accentuated her incipient womanhood. A pang passed again through John’s heart.

He knew all the things Miriam was able to do to people. It was impossible to tell exactly what treatment was intended for Alice. Miriam could bless or destroy. Sometimes she would compel them to violence as a cover for her own activities. Other times, there could be unimaginable bliss.

Miriam was practical; she did what was most useful. Alice, for example, would inherit a considerable fortune, as John had. That could be the motive for Miriam’s interest. She was always short of money, and those who loved her gave her everything.

“Let’s have a drink,” Miriam said. She picked up the Madeira from the bar. It was an 1838 Warre, bought from the old Berry Brothers Stores in London. As it had aged it had become first strong and sweet, then full of subtle overtones. Now it was almost light, but possessed of complex and ancient flavors. It was certainly the finest Madeira in the world, perhaps of all time.

“I’m not supposed to have liquor.”

Miriam poured Alice some of the wine.

“It’s very light. Only barbarians would refuse their children the right to a glass of wine.”

Alice swallowed it at a gulp and held out her glass for more.

“That’s a sacrilege,” John said. “You’re drinking it like tequila.”

“I like the way it makes me feel, not the way it tastes.”

Miriam poured her another glass. “Don’t get drunk. John molests the helpless.” The remark came unexpectedly and shocked John.

Alice laughed, her eyes regarding him with taunting appraisal. Rather than endure that, John retreated. He gazed out the window, forcing himself to concentrate on the view. Across the street was a block of cooperative apartments. It seemed such a short time ago that houses such as their own had lined both sides of the street, it was hard to believe that vines could already be growing up the front of one of those new buildings. The cries of children came as always from the street. John was touched by the eternal shrill excitement of those voices, a sound that belonged to all time. Maturing was the horrible process of losing immortality. John felt his face. Already the whiskers were coming back. He had inexplicably entered the deadly shadow; it could no longer be denied.

Alice came to his side, her shoulder just touching his elbow. No doubt she told herself that she ought to conquer him, to include him. But he suspected it was really a simpler and more morbid interest: she wanted to see him suffer. In that sense she was as natural a predator as Miriam herself — or as John.

“What are they playing, Alice? Ringolevio?”

“Ringo — what?”

“Ringolevio. The game.”

“They’re playing Alien.”

Miriam watched her destroyed man. He could have killed her this morning. Killed. The thought of it made her feel cold toward him, but only for a moment. She had fought hard to make him perfect. It was so sad to see him disintegrating even more quickly than his predecessors. Eumenes had been with her more than 400 years, Lollia nearly as long. Until now not one of her transformations had failed to last 200 years. Was she getting worse at it, or

was the strength of the human stock in decline?

She took another swallow of the Madeira, held it in her mouth. Time itself must taste so. In wine time could be captured and in life delayed, but not forever. In John's case not even for very long.

There was much to do and possibly only a few days of grace. She had been moving slowly, capturing Alice by careful degrees. Now it was an emergency. She had to prepare for the storm that was going to break when John discovered his predicament, and at the same time prevent Alice from knowing what was happening to him. As Alice was to be his replacement it would be most inconvenient if she learned the consequences of transformation.

Especially in view of the fact that, this time, there might be no consequences. Miriam would have to approach Sarah Roberts much more quickly now. The research she had done already into the woman's work and habits would have to suffice.

If anybody on this planet could discover what went wrong with the transformed it would be Dr. Roberts. In her book *Sleep and Age* Miriam had seen the beginnings of a deeper understanding than Roberts herself could possibly realize. The work that Roberts had done on primates was fascinating. She had achieved extraordinary increases in life-span. Given the proper information, would she also be able to confer real immortality on the transformed?

Miriam put down her glass and left the room. She would have to risk being separated from Alice and John for a few minutes. His violence was still sporadic. And there was a task to be faced in the attic, a dreary task of preparation, amid the sad ruins of her past loves. Unlike the dusty and disused appearance of the rest of the attic, the door to this room was perfectly maintained. It opened soundlessly as Miriam unlocked it. She stepped into the tiny, hot space. Only when the heavy door was closed and she was safely hidden did she give voice to the turmoil of fears within her. Her fists went to her temples, her eyes screwed shut and she moaned aloud.

Silence followed, but not absolute silence. As if in answer, there came from

the darkness around her the seething of slow and powerful movement.

Miriam hesitated a moment before beginning her task. "I love you," she said softly, remembering each person who rested here, each lost friend. Perhaps because in the end she had failed all of them she remained loyal to them. Some, like Eumenes and Lollia, she had carried across half the world. Their boxes were black with age, bound with leather and studded with iron. The more recent ones were as strong or stronger. Miriam pulled the newest box to the center of the little room. This one was about twenty years old, made of carbon fiber steel and locked by bolts, bought and stored on John's behalf. She lifted off the lid and examined the interior, then took the bag of bolts from inside. There were twelve of them, and she fitted them around the lid. Now it could be closed and locked in a matter of seconds.

She left it open, however, the lid gaping. When she brought him to this place, there might be very little time. With a last glance at the other boxes, pausing in the room's rustling silence, she whispered goodbye.

The door hissed shut on her tragedy. She secured the locks, which were there for two reasons: to keep danger out, and to keep it in. She went back downstairs, assured that she was well prepared for the worst, uneasy at leaving Alice unprotected any longer than necessary.

2

THE HOLLOW SHRIEKS of a terrified rhesus brought Sarah Roberts to her feet. She ran down the hall to the cage room, her shoes clattering on the linoleum.

What she saw when she peered into the cage of their most important animals made her feel cold. Methuselah was brachiating madly through the cage screaming as only a rhesus can scream. On the floor lay Betty's head, its monkey face frozen in last agony. As he shot around the cage Methuselah brandished Betty's arm, the little hand open as if waving goodbye. The rest of Betty lay scattered across the cage. As she rushed from the room to get help Sarah almost slipped in the blood that had run down to the floor.

Before she reached the door, it swung open. Methuselah's shrieks had brought the whole Gerontology group.

"What the hell did you *do*, Methuselah!" Phyllis Rockler shouted. She was the lab's animal keeper.

The monkey's face was as crazy as any Sarah had ever seen, and a psychiatric internship at Bellevue had given her a look at a good number of crazy faces.

Charlie Humphries, their resident blood expert, pressed his face to the cage. "God, how ugly!" He stepped back, his sneakers squishing. "Monkeys are bastards."

"Get Tom down here," Sarah said. She needed him for her own sanity, forget the ape. Moments later he came rushing in, his face gray. "Nobody's hurt,"

she said, seeing the fear in his eyes. “No human body, that is.”

“Is that Betty?”

“Methuselah tore her apart. He stopped sleeping two days ago and he’s been getting increasingly irritable. But we had no reason to expect this.” There was a flurry of activity behind them as Phyllis set up the videotape equipment. She would record Methuselah’s further behavior for later analysis.

Sarah watched Tom react to the catastrophe. She could practically see him calculating how this affected his own career track. Number One was never far from mind with Tom Haver. Then he turned his eyes on her, full of wonderful, totally genuine concern. “Is this going to hurt you? What’s the latest on the blood runs?”

“Still indexing to the same curve as before. No change.”

“So there’s no resolution. And Betty’s dead. Oh, Christ, you’re in trouble.”

She almost wanted to laugh at the obviousness of his emphasis on the *you*. He didn’t want to seem like what he was, to come right out and say it: my damn career rides on this too. She held out her hands, suddenly realizing that Tom was even more upset than she was. He took them, stepped toward her, seemed about to speak. She spoke first. “I guess I take my dead star performer to the Budget Committee tomorrow.”

He looked sick. “Hutch was going to recommend against extension anyway. Now with Betty dead —”

“It means that we have to start all over again. She’s still the only one that had actually stopped aging.”

She stared at Methuselah, who stared back as if he were wishing he could repeat his little trick. He was a handsome ape, with his spread of gray hair and his powerful body.

Betty, who looked like an adolescent, had been his mate.

“Pardon me while I break down and cry,” Sarah said in her most sardonic

tone. But she meant it. She went gratefully into Tom's arms.

"Now, now, we're still on public property." That was old reticent Tom, embarrassed by any show of emotion.

"We're all family here. We're going on the unemployment line together."

"That'll never happen. Some other facility will pick you up."

"In a couple of years. Meanwhile, we lose all our apes, disrupt the experiments, and *waste time!*" It made Sarah crazy just thinking about it. Ever since she had accidentally discovered the blood factor that controlled aging while doing blood counts on sleep-disturbed rats, she had been a woman with a mission. In this laboratory they were seeking the cure for man's most universal disease — old age. And Betty had been proof that the cure existed. Somewhere in the rhesus' blood some hidden key had been turned on by their application of drugs, temperature and diet. Whatever it was had deepened her sleep almost to the point of death. And as sleep had deepened, aging had slowed. The same set of conditions had worked for a while with Methuselah. Last week his sleep had abruptly stopped. He had dozed a little, then — a monster.

Betty might have been immortal, if Methuselah hadn't killed her. Sarah would have shot him if she had a gun. She went to the gray-painted wall and hit it a couple of times. "We're dealing with a degenerating gene pool," she said softly.

"Not the apes," Phyllis answered.

"The human race! For God's sake, we're about to find the mechanism that controls aging and we're going to lose our budget! I'll tell you all something! I think Hutch and that whole crowd of senile appendix poppers on the board are jealous. Jealous as hell! They're already terminal geriatrics and they want to make sure the same thing happens to the rest of the world!"

The anger in Sarah's voice caused Tom to feel a familiar sense of frustration. She was and remained blind to the problems he experienced as an administrator. In part that was a proper professional attitude, but not the way

she allowed it to sweep aside even the slim chance of survival that the politics of the situation might allow.

Yet he found himself seeking alternatives on her behalf. Her lust for success was contagious. There was something almost visceral in her belief, in her will. No doubt her faith in the value of her work mirrored that of others who had approached discoveries with great impact on humankind. But there was some deep thing in Sarah, a kind of cruel yearning, heedless of herself and others, that swept beyond the norms of duty or even scientific curiosity and colored her hope with the tint of obsession.

Tom looked at her, the brown hair, the frequently pretty face, her curiously flat pallor, and the rich, unquenchable sensuality of her compact body. He wanted to hold her again. After she had broken his last embrace she had hidden her feelings in gruffness.

He wished that she did not feel victimized by her femininity. To his way of thinking, her tough, brilliant mind should be satisfactory compensation for all that was wrong with what she referred to as her sexual conditioning. But it was not enough, not for her.

Tom was embarrassed for her. More, he felt sad. With the rhesus dead she was seriously set back. She couldn't possibly make a case for continued project funding before the budget committee. She was a small, fuming woman, her eyes flashing prettily as she faced the cancellation of an experiment to which she had given five years of her life.

Something ungenerous — a kind of glee — seemed to be hiding beneath Tom's genuine sorrow. He knew it was there; it had been a long time since he had taken his own surface feelings at face value. The destruction of her project would hurl Sarah back into the depths of her relationship with him, would make her seek the comfort of being a junior partner again — and a part of him welcomed the power her need would confer.

"I've got a meeting with Hutch now," he said. "We're reviewing the allocation requests." His mouth was dry. The stench of the apes was sickening. "Sarah," he said. He paused, surprised. Why had he used such a bedroom tone of voice? She whirled at him. Defeat had made her pugnacious.

He wanted to comfort her, knew the condescension of it would outrage her. The touching a few minutes ago had been an unwilling concession.

“Well?”

For an instant the bluster in her eyes gave way. Then, with a tilt of her chin she was off, ordering a tranquilizer for Methuselah so they could get the cage open and pull out Betty’s remains.

Tom left unnoticed, going slowly through the equipment-cluttered lab. Every item, every inch of space, had been pried out of Riverside Medical Research Center by the force of Sarah’s determination. Her discovery had come as an accident, incidental to some conventional work on sleep deprivation. The fact that the inner rhythm of the sleeping process also contained the key to aging was a totally unexpected result. Her initial findings had been published in her book, *Sleep and Age*. It had caused certain stirrings; the rigor of her methods could not be questioned, nor could her skill in her experiments. The implications were so large, though, that they hadn’t really been appreciated. Sarah’s view that old age was nothing more than a disease, potentially curable, was just too enormous a change. Her book had brought her much congratulation, little support.

Tom exited into the wide tile hallway of the lab floor and took the staff elevator to the Sleep Therapy Clinic above. He occupied a small office beside Dr. Hutchinson’s suite. The old man had founded the clinic ten years ago. After eight years the board had hired Tom Haver to step in “when the director elects to retire.” It had been nothing more than sales talk; Hutch had not so elected. They had wanted a scientist-administrator with powerful credentials to draw more funding to the clinic.

Lately, Tom had begun to catch himself looking hopefully for some sign of senility in the old man.

Hutch sat in Tom’s office, his angular form folded into one of the old chairs. It was an affectation of his to scorn his own sumptuous quarters. “Dimethylaminoethanol,” he said in a reedy, amused voice.

“She’s far beyond DME research, you know that. Aging Factor is a transient

cellular protein. DME is nothing more than the regulating agent.”

“The philosopher’s stone.”

Tom went to his desk, forcing a thin smile. “More than that,” he said quietly. He refused to acknowledge the sarcasm. Hutch tossed a typed budget survey sheet on his desk. It was hard not to resent the man’s style. He picked up the summary. “What am I supposed to say, Doctor — ‘no gerontology appropriation’ and fall to my knees?”

“You can if you want to but it won’t work.”

Tom disliked smugness; it was poison in a scientist. “If you cancel the project, she’ll leave.”

“Well, of course I’d hate to see that. But there just aren’t any results. Five years and no progress.”

Tom tried to contain himself. If only Methuselah had waited another twenty-four hours! “They’ve developed a damn good schematic of cellular aging. I’d call that progress.”

“Yes, for a pure research facility. The Rockefeller Institute would love them. But they don’t belong in a place like Riverside. Tom, we’ve got to justify every penny to the City Health and Hospitals Corporation. How the hell does a hospital explain the purchase of thirty-five rhesus monkeys, even a research hospital? Seventy thousand dollars’ worth of brachiating boobies. You tell me.”

“Hutch, you weren’t born yesterday. If we lose Gerontology, there goes ten percent of the clinic’s overall budget. For that reason alone she should *not* be cut.”

At once Tom regretted what he had just said. If Hutch was told to cut a budget he did it the hard way, by firing people and selling off equipment. He knew little of the reality of administration. To him the concept of maintaining functions while cutting dollars was a contradictory impossibility.

“You’re going to tell me we ought to cut by charging for paper cups and installing pay toilets, I suppose.” He tapped his worn class ring on the edge of Tom’s desk. “I can’t see it that way. They give me a dollar figure upstairs. I’m going to meet that figure and have done with it.” Like an aging crane he rose out of the chair. “The committee convenes at ten A.M. in the boardroom.” He sighed, suddenly wistful, betraying his own losses.

Then he was gone, striding down the hall, a sad, fierce old warrior in the declining castle of his hopes. Tom ran his fingers through his hair. He knew how Sarah felt; he wouldn’t have minded hitting a wall himself. The Health and Hospitals Corporation was so intractable, a bureaucracy of desperation. It worried about keeping emergency rooms in business, not obscure research projects. How ironic that man’s fate, the very secret of death, would be almost found — and perhaps forever lost — in the rubble of a bureaucracy’s dissolution.

Tom looked at his watch. Nine-thirty. It had been a hell of a long day. Outside the sky was gray-black. There were no stars. It would rain soon, the promise of spring. Tom got his jacket and turned off the lights. Maybe he would beat Sarah home and fix her a nice dinner. It was the least he could do in view of the fact that he had lost her a career. It would be years while the bureaucrats at other institutions picked over the bones of her work and waffled about taking her on.

Meanwhile, Tom would have to watch her vegetate in the Sleep Clinic, back to her old job processing incoming patients for physical disorders before they entered the therapeutic track — if she could even be convinced to return to such work.

The sky was lowering as Tom walked down Second Avenue toward their apartment building. Gusts of wind lifted paper and dust around him and brought big, cold raindrops. Lightning flickered in the clouds. It was fourteen blocks from Riverside to the apartment building. Usually the walk was relaxing, but not tonight. He wished he had taken a cab but there were only a few blocks to go, no sense in getting one now. The rain came faster, and the brightly lit lobby of the building was a welcome sight when it appeared in the distance.

As he went through the door into the lobby Alex the doorman nodded greeting. Tom planned his dinner as the elevator took him to the twenty-fifth floor.

The apartment was freezing cold. This morning had been mild and they had left the windows open. Now the weather had changed and the wind was rising. It whipped through the living room dense with smells brought from far away, of darker country. Beyond the windows the lights of the city glittered, now obscured by a scudding tendril of cloud, now twinkling brightly.

Tom closed the windows and set the thermostat to 85° to warm the place up. Then he made the dinner. It turned out to be a lonely and unexpectedly tiresome job. He was a more than serviceable cook — his father had seen to that — but there was something about the lateness of the hour and the bitter disappointment; he just wanted to go to bed and forget the whole damn day.

By ten-thirty it was ready. It looked cheerful enough despite the way he felt. He finished tossing the salad and turned on the fire under the pasta. The only thing left to do when she came home would be the veal. That was a matter of the last moment. He went into the living room and had a drink.

At eleven he called the lab. It rang six times before there was an answer. “What’re you doing?”

“Watching Methuselah not sleep. Even the tranks didn’t put him down. We’re trying to plug him in but he tears out the electrodes. So far we haven’t got half an EEG.” Her voice was leached of expression.

“Who’s helping you?”

“Phyllis. Charlie’s downstairs doing slides on Betty.”

“Come home. I have something for you.”

“Not tonight, darling.” She was sad, of course. That was why her voice sounded so empty. There, he felt it again — that ugly little stab of glee. Soon enough her nights would belong only to him.

“I mean dinner. And it’s raining, so take a cab.”

“I can tell if it’s raining, Tom.”

“You might not notice. Look, you can always go back after we eat.”

Coaxing Sarah out of her lab was never easy. He could only wait and hope tiredness and hunger would overcome her determination long enough to get her out the door. Salad, pasta, veal. Fruit and cheese afterward. Plenty of wine. By dinner’s end she’d probably be so close to sleeping that she wouldn’t try to go back. “There has to be room for more in life than a laboratory,” he thought.

Sooner than he expected, the familiar footsteps clicked down the hall, Sarah’s usual quickstep. Then the door banged and she was home, hair wet from her walk in the rain, mascara running down her cheeks, and still wearing her lab coat. She looked lost and boyish. Her small mouth was set in a stern line, her eyes were startlingly alive. Tom went to her.

“Careful, I’m covered with monkey shit.” She threw off the lab coat and only then let him hold her. It was so comfortable to feel her in his arms, even if it was only for an instant. “I’ve got to have a shower.”

“Dinner’ll be on the table when you come out.”

“Thank God for administrative personnel who still have energy at the end of the day.” She kissed him on the nose and broke away. “That damn rhesus is in bad shape,” she said as she headed for the bathroom. “His hair’s falling out and his bowels are loose. He’s agitated and all of a sudden he *cannot* be made to sleep. Won’t even doze. Poor thing.” He heard the clothes hamper squeak. Then more words, drowned by the sound of running water. It was obvious that it didn’t much matter to her whether he heard or not. The angry words themselves were all the comfort she demanded.

Tom felt isolated. People in love were supposed to be at the center of each other’s lives. Sometimes it was hard to tell if she wanted to be in love, or simply to be loved.

As he cooked his veal scallopini he heard the roaring of the wind and thought how he loved her. It made him believe in her love also. And it made the fact that he was going to fail her, see her dropped from the budget, make him feel as caged as one of the experimental animals.

“Honey, thank you.” She had come up behind him. She was wrapped in the blue silk robe he had given her for her birthday. Her skin was flushed from the shower, her eyes now shimmering gently in the candlelight. She looked altogether fetching. Sarah’s miracle was the purity of her womanhood. She was not conventionally beautiful — eyes too big, chin too prominent — and yet men’s eyes always followed her. One moment she would be aggressively neutral, and the next more a woman than any other he had known.

They ate quietly, relying on their eyes for communication, Tom and his magic lady. By the time the meal was over. Tom was ready to carry her into the bedroom, avid to possess her. He was delighted that nothing more had been said about Riverside. Let Sarah bank her fires for a few hours, let the problems wait.

When she stood up from the table he saw his chance. Tom was easily big enough to sweep Sarah off the floor. He knew it was an assault on her dignity, in a way a dismissal. But it was a loving dismissal. She made a little sound in her throat, drew her arms around his neck, fluttered her eyes at him. It was a parody, but of the kindest sort, an affirmation of her love and respect for him. He would not have been surprised to be damned for what he had done. The fact that she had not done so was deeply pleasing, almost as if his physical strength and his need granted him rights with her that usually he did not have.

He put her down on the bed. She didn’t speak. It was their customary way, honored from the beginning of their love.

He stripped in the dark, with only the glowing clouds outside to reveal him. Then he went to her, slipped the soft robe from her body, and climbed into bed beside her.

In their years together they had established few conventions; both were avid experimenters. But tonight imagination would rest. Tom sensed she also

wanted the solace of simplicity, and they took one another's offering with the gentle acceptance of familiar lovers. She pressed herself close as he entered, and they sighed with the enjoyment of it. This was a lesser act of love, but it fulfilled its purpose and left them drifting to sleep in one another's arms. Tom's last conscious thought was of the wind, how it howled past the windows. A spring storm.

Francie Parker awoke suddenly. She was shocked motionless; she felt something crawling between her legs. Too late did she realize that she should have moved. The ropes tightened, she was tied to the bed.

An awful shudder coursed through her body. That was it, rape in the night. You heard about it on the news, talked about it in the office. She fought the wild terror, tried to keep her cool. The intruder turned on her bedside lamp and shined it in her face. He wasn't going to allow himself to be seen.

The blade of a surgical scalpel appeared in the light, hung there a moment, and was withdrawn. Francie felt tears pop into her eyes. A strange, low noise filled the room.

“Shut up!”

She hadn't realized she could make such a sound. Desolation filled her. Nevertheless, her mind kept working, trying to come up with some appeal that would save her.

It smelled as if there were something dead in here. She was aware of movement behind the light, then she could feel him at work on her nightgown. By looking down her front she could see his hands as he used the scalpel to cut away the cloth. That awful instrument could only be for one purpose; she just knew he was going to kill her. When she felt his hands pushing away the nightgown, exposing her nakedness, she moaned in misery — but also felt a horrible, unwanted tingle. This nightmare had another aspect. She began to anticipate seeing him, she visualized his sweating body plunging into the little pool of light. It made her angry. She had never imagined she could feel this debased, this betrayed.

As he bent toward her she caught a glimpse of him. At that moment Francie Parker, twenty-two years old, the frequent object of male desire, capable of eighty words a minute on an IBM Selectric, saw something that instantly and utterly shattered her.

The shock stopped her heart. All that escaped of the wild cry her mind had formed was a gurgling sigh.

When she died like that, before she should have, he growled his rage and stabbed wildly, hoping to get her before the last second.

He failed. Then he took her as best he could, keeping at it until she crackled like paper.

At four o'clock on a wet morning, Sutton Place was empty. Elegant windows were dark. Nothing moved except when an occasional gust of wind from the night's storm stirred some bit of paper or a broken leaf. Behind one window in one of the charming little houses that line the east side of the street a figure stood, absolutely motionless. Miriam was rigid with concentration, feeling the eerie echo of a distant *touch*. It was a facility she shared only with her own race, and some of the higher primates. Man, while capable of learning *touch* from an adept, was normally mute. But this *touch* was real, pulsating on the darkness.

One of her own kind?

Since the bloodbath of the Middle Ages the remaining members of her race lived solitary lives, each wrapped in his own longings and tragedies, an autumnal species too frightened of persecution to dare to foregather.

"We are not evil," she thought as the strange *touch* rose higher and higher, "we also are part of the justice of the earth."

Fifty years ago she had seen one of her own kind, a tall figure alone at the railing of the liner *Berengaria*, looking toward her on the dock. For an instant they had *touched*, sharing their private hungers, and then it was lost, the ship's whistle sounding, the wake disappearing in the moonlight, journey without end.

Her tragic human companions were her only comfort. They could not conceive of the loneliness that drove her to transform them, to create her own image within them.

She loved them — and had destroyed each of them.

It could not continue, not any longer. She could not stand to live with Alice, knowing all the while that she was going to end up like the others, like John.

The *touch* interrupted her thoughts again, running like thunder in the mountains, as huge and wild as night.

So it was an animal. And it was in agony. Absolute agony. The kind that would be felt by one deprived of Sleep. But there were no transformed animals.

Or were there?

Sarah Roberts, blindly experimenting, might have accomplished some rough approximation of transformation. So one of her beasts was meeting its end in a filthy cage. She felt the lost forests in its *touch*, the wide leafy spaces and the strength of the iron bars.

Her eyes widened, her hands snapped to the bars that protected her own window, closed around the cold iron. The window, its frame and the whole wall shook.

Soon after dawn Tom Haver opened his eyes. He had been trying not to wake up, but it was no use. The room was suffused with dull light. He looked at the clock. Seven-ten. Past time to get up. He swung out of bed and lurched in for his shower. The night had been spent sleeplessly in a fog of strategies, trying to find some way of extending Sarah's appropriation. Every road led back to the Budget Committee and Hutch.

He paused in the door to the bathroom and looked back at her. There came to him a feeling so strange and tender that it seemed as if it had entered from another personality, not his own. He found that he wanted very badly for her to succeed.

He went about his shower in a sort of fury, lathering himself, rinsing, drying, all the while wretched for her and angry that he must suffer on her behalf.

When he opened the door the smell of breakfast drifted faintly in. None of the usual singing, however, arrived with it. She was not such a cheerful riser today. He wished that he didn't feel so sorry for her; it reduced her, enlisted a kind of professional distance. A doctor's habit to withdraw one's emotions from the reality of pain.

"Happy meltdown," she said when he arrived in the kitchen.

"Meltdown?"

"What's happening to my lab is the equivalent of a reactor meltdown. Reaches critical mass and sinks to the center of the earth. Buried. Gone."

There were a hundred encouraging lies he could not tell. "I'll call you as soon as the meeting's over," was all that came out.

Once again he was cheating her. Why not simply let her know how he felt? Why was that such a frightening thought? Emotions confirm things, that was the trouble. Death, for example, always seems like a lie, a game of disappearance, until one's grief makes it true.

The phone rang. Tom blinked at the intrusion, snatched up the handset. A strange, whispering voice asked for Sarah. Her face puckered with details of concern; she was obviously hoping that some miracle had happened at the lab. "Luck," Tom said as he handed her the receiver.

She grabbed it, her expression now avid. After a long pause she murmured an assent and hung up. Swallowing the last of her coffee, she ran into the bedroom. "More trouble with Methuselah," she said as she pulled a raincoat from the closet. Her eyes were cold, bright.

"He's not dead?"

She glanced away. "No," she said with unnatural loudness, "something else."

"Who was that on the phone?"

“Phyllis.”

“She sounded like a zombie.”

“Thirty hours on the job. I don’t have a very clear idea what’s going on over there, but —”

“Maybe there’s some hope. A last-minute breakthrough. Am I right?”

She laughed, a sniff, a toss of the head, and then strode past him without a further word. The front door slammed. He located his own raincoat, crumpled amid jeans and coat hangers on the closet floor. By the time he reached the elevator bank she had gone.

Alice was listening less than carefully as Miriam read to her from *Sleep and Age*. That didn’t matter, the girl’s mind was wonderfully absorptive. Miriam glanced at her, full of the pleasure of being near her. Miriam loved her sullen intelligence, her youth and haunting beauty. “ ‘The key to the relationship between sleep and age appears to lie in the production of the transient protein group associated with inhibition of lipofuscins. At the molecular level the buildup of lipofuscin is responsible for the loss of internal circulation that leads to cellular morbidity. Thus, it is the prime factor in the overall process called “aging,” being responsible for effects as subtle as the reduction in the responsiveness of organs to hormonal demands and as gross as senile dementia.’ ”

“Why do you think I read you this material, Alice?”

“You want to test my boredom threshold?”

“What if I told you it might mean you would never get old. Never get gray hair. Stay young forever.”

“Not thirteen!”

“No. It wouldn’t interrupt the process of maturing, only getting old. Would you like that — staying twenty-five or so forever?”

“For my life? Sure.”

“And your life would be forever. You should thank Doctor Sarah Roberts. She’s discovered a great secret.” It was extremely tempting to go on, to tell Alice the truth: that she could choose immortality right now, that Miriam could confer it.

If Dr. Roberts’ data were correct, she might even be able to make it a lasting gift.

Alice sighed. “I’m not sure I’d want to live forever. I mean, it’s not all that great, is it?”

Miriam was surprised and a little sickened. Never for a moment had she considered that Alice would hold such an opinion. The will to live was universal. Her own race, as ancient as it was, had fought valiantly through the persecutions of the Middle Ages, had fought despite their low birthrate and probable extinction. The very last of them willed only one thing: to continue. “You don’t really mean that, do you, Alice?” There was anger in her voice, anger she had not intended.

The girl reacted. “You sound funny, Miriam. I wish you’d act normal.”

Miriam did not reply directly. Instead she returned to the book. ““The mystery of how and why lipofuscin inhibition declines as a cellular system ages is the core of the problem. We have determined that the duration and depth of sleep are related to the amount of lipofuscin produced, with deeper sleep producing the greater level of inhibition.””

“OK, I guess I’m supposed to ask a question. Why are you so strange?”

Miriam laughed at the audacity of it, felt herself flush. “You have a lot to learn. A lot. Just don’t doubt me. You’ll find everything I do is for a purpose.” Alice smiled, her face suddenly filled with an innocence so beautiful that Miriam involuntarily *touched* her.

There was a moment’s silence. Then Alice clasped her hands around her knees and giggled. “You and John really are strange. You make me feel

weird.”

John’s name, intruding so suddenly, broke Miriam’s mood. She got up and put the book away, then went to the bay window that overlooked the garden. These cool, wet springs favored the strains of roses she had developed in Northern Europe, but not the Roman and Byzantine ones. They would require careful attention if there wasn’t some warmer weather soon.

She longed to be among them now, pruning them and forgetting her tragedies. If only John had lasted a few more years the discoveries suggested in *Sleep and Age* would have saved him. Miriam had hoped once to find an antidote for John and apply it before it was too late. She was convinced that some substance such as lipofuscin must be responsible. In her own body the immunity was permanent, but in a human being the Sleep only delayed it for a time. Then all the familiar symptoms appeared: Sleep ended, and with its termination came rapid aging, desperate hunger, destruction.

Her throat was tight, she could not help but sink into the grief of the situation. She forced her mind back to her roses; once she had created an arbor all the way to the river. They had had their own dock then and kept a pretty red-and-black steam launch with a furious little brass engine. What fun it had been pounding along in that hilarious boat with its clattering steam valves and gushing torrent of black smoke . . .

They had gone on fine afternoons to what used to be called Blackwell’s Island. When evening fell they hunted couples in the woods.

Miriam heard Alice shift in her chair. Thank God for her, such an ideal replacement. She had a truly predatory psyche, something that was rare in humankind. John’s unexpected decline greatly increased her significance. As had been the case with them all, it would be unwise to explain very much to Alice. A confrontation would eventually occur, but it must wait for the right context. The truth was somewhat horrible to them, of course, but that was only part of the problem. More than inducing them to accept its ugliness, she had to teach them to see its beauty.

They had to want what Miriam had to give, to want it as they never wanted anything before, with their minds, their souls, every cell of their flesh.

Miriam was good at helping people discover their true lust for existence. Layers of inhibition had to be sloughed away until, unexpectedly, the subject found his deepest craving exposed to the raw light and air. Then the ancient instincts would come pouring forth. Beside them all aspirations, all experiences, would seem embedded in dark amber, utterly dead, not even worth the forgetting.

It was a beautiful and undeniable truth. If she wished to possess one of them, she had only to *touch*, to caress and cajole. Eventually, the savage inner being would rise to the stroking and Miriam would own somebody new. “It’s a marvelous afternoon, isn’t it?”

“It’s OK.”

The flat little reply ignored all the magics in which Miriam knew how to swim. It saw only passing time, the hours. The magnificent secret was context. Miriam perceived time as a vast caravan containing the richness of all moments, luxurious with the soft hours of the past and the fair future too.

It was tempting, very tempting, to take a first step with Alice this very moment. But prudence must reign, John came first. And the question of the science . . . Miriam must make her approach to Sarah Roberts, must find the link that would complete her chain. There was a matter of responsibility, after all. She drew them with a promise of immortality. The full truth was hidden until they could not turn back. For all these years the lie had been a clanging note. Now it might be changed, made harmonious with the whole. Alice would be the first one to join Miriam forever and fully.

The first one. She looked at the soft blond features in a rapture of the most poignant love. Alice came to her and they stood arms entwined at the window that overlooked the garden.

Miriam had been angered when Alice went earlier to the front window with John. The girl should not take such liberties. Miriam looked forward to the time when Alice would want only her, care only about her, live for their life together.

As she and Alice stood there, Miriam’s eyes searched the garden. She was

sure that she had seen movement. Had Alice noticed it? The girl was looking up at her, a question forming on her lips. “What’s there?”

Miriam forced a smile. “Nothing.” But that wasn’t true, not at all. John was standing behind a hedge, his face turned toward this window. Miriam sensed menace. Her skin prickled beneath her clothes. “We ought to keep working on these ideas, Alice. Don’t you agree?”

“I thought I saw someone out there. Where’s John?”

“Not out there! You can see the garden’s empty.”

“Yeah.”

“So don’t change the subject. I asked you a question.”

“And I ignored it. That was an answer.”

Miriam turned from the window. “You’ll find out soon enough how important these sessions are. You’re learning a great deal. Later, it’ll all be useful.”

“You’re the only person I know who cares about such weird stuff.”

“You’ll come back tomorrow, then?”

“Why are you acting so funny, Miriam? Course I’ll come back tomorrow. I come every day. I don’t even need to go now.”

“You’d better. I’m expecting a guest.” For the briefest of instants her fingers smoothed the girl’s hair.

It was a mistake. Furious, she snatched her hand away, quelling the explosion of raw hunger that the contact produced. Then Alice was out the door, scampering down the steps, promising to return the next day. She would be such a good companion. For variety Miriam was in the habit of alternating men and women. Their sex was a matter of indifference to her. Miriam turned back into the house, to face John. This was going to be a painful confrontation. He would be returning once again from the hunt. His forays

would be getting frequent now, and desperately less satisfying.

The garden appeared empty, but she knew he had not gone. She closed her eyes, hating so to fear her beloved. The fear, though, was appropriate. No longer the love. She moved swiftly through the rooms, striving to prepare herself for the return of her poor hunter, broken and furious, from his paths of hell.

The lab was dark, silent except for the soft *whoo-who* of the ape on the video monitor. Sarah had put it all aside — budget committees, allocation requests, threats — to concentrate on the spectacle being replayed on the videotape.

“Effective age thirty-five years at this point,” Phyllis Rockler said. She was hoarse with exhaustion, she had been at work a long, long time.

“The curve starts accelerating now,” Charlie Humphries added.

Charlie himself appeared on the tape and drew a sample of blood. The ape’s protest was violent, but weak with age. “Effective forty,” Phyllis said. “It’s been seven minutes.”

“That’s a rate of one point four years a minute.”

The ape’s mouth began to work. First one, then another, then a cascade of teeth fell out. Its face was a study in black fury.

“Effective age fifty-five.”

“What’s the human equivalent of a fifty-five-year-old rhesus?” Sarah asked. They had logged the equivalences only as far as thirty years. Older apes of the species were unknown.

“I figured it at about ninety-two if the scale is a straight linear regression,” Phyllis replied. “That would mean he gets to a hundred and thirty-seven equivalent age before death.”

Long gray hairs were falling like rain around his head and off his shoulders.

Slowly, a hand came up to touch the sinking lips. As the hand moved, the fingers grew disfiguring arthritic knobs. The monkey began to sway, and his body started curving to the right.

“That’s scoliosis of aging,” Phyllis said.

There came a heartrending, infuriated howl. All three of the viewers stirred. Sarah wondered if the feeling that they were intruding into something forbidden affected the others as well. The ape had been a good and loving friend to the whole lab. Had those he loved the right to bring him such suffering? And yet . . . and yet — Sarah wondered if death was such a certainty, if the gates of Eden were really locked forever. It was simple, wasn’t it? A matter of finding the key. Once the gates swung open, man’s ancient, lost war with death would be won. ‘*We need not die,*’ Sarah thought. She folded her arms and looked with cold determination at Methuselah’s remarkable destruction. His life was a fair price for such an enormous gain to humanity.

“Effective age seventy. Rate one point nine five years per minute. Equivalent age one hundred twenty-one.” A last, despairing grimace of defiance crossed his face.

Then it happened on tape just as it had in reality two hours ago. Methuselah fell onto his side, a terrible look in his eyes. His mouth worked, his arms slashed the air.

Wrinkles and fissures raced through his skin. The face withered like a drying apple. The eyes glazed over with layers of cataracts and then closed to slits. Hands and feet balled to fists. The skin began slackening on the bones.

The whole skeleton, slowly moving, was visible beneath the loose skin.

“Effective age eighty-five. Rate two point four zero years per minute. Equivalent age one hundred twenty-nine.”

There was a long, rattling sigh.

“Life signs terminate,” Phyllis said.

Sarah was stunned yet again by the power of the unknown. The now-dead ape's skin cracked along the bones and began to fall like tissue to the floor of the cage. Soon the skeleton, still held together by tendons, lay amid a pile of rubble. Then it also collapsed, and what had been alive just minutes before was reduced to dust. "The process of postmortem decay accelerated approximately two years of dry-air degeneration into seventy-one point five six seconds." The dust in the bottom of the cage became finer and finer and at last was whisked away by an errant breeze.

At this point there was a sudden series of thuds on the audio track, then the brief clanging of an alarm. That had been Phyllis sealing the room to prevent spread of a possible disease vector.

"Methuselah remained awake one hundred nineteen hours," Phyllis said. "I noted the first overt degenerative changes after the seventieth hour."

"His lipofuscin accumulation rate started an exponential rise in sample two thousand one hundred forty-one, taken at the seventy-first hour," Charlie said. "Subsequently, his blood cells began to lose their ability to uptake oxygen."

There was a long silence. "I don't know what the hell to make of it," Sarah said at last.

"That's putting it mildly."

"Let's see. The time is now eleven-fifteen. My guess is that the board is just about to approve Hutch's budget appropriation. Us not included. What say we just crack the quarantine on the cages and go home."

"Don't get a heart attack," Charlie said softly, "they'll find the money for us now."

Sarah sniffed. She folded her arms. "As a matter of fact, I don't feel *one bit* like a heart attack. I'm enjoying thinking about the trouble this tape is going to cause him."

"The physical sciences are going to be in an uproar," Phyllis muttered.

“There’s something in the old body we don’t know nothin’ about.”

“Hutch is going to be forced to go right back to the committee and ask for a review.”

“Let’s hope.”

“Look, I’m director of this lab, so get ready for some directions. I want to get a thousand K of the computer *under key*, access limited to us three. We need a nice roomy memory bank to foodle our numbers in.”

“How do we set it up for billing?” Charlie asked.

“Don’t worry about it. The administrator will fix it up.”

“You mean Hutch?”

Her voice gentled. “I mean Tom. Hutch might not survive this.”

Charlie applauded expansively.

They laughed. Sarah looked at the glowing TV screen. The mystery represented by the empty cage was awesome. It meant that the body did indeed contain a secret clock, and the clock could be tampered with. If age could speed up it could also slow down. It could stop.

All three of them continued to watch the cage even though there was nothing more to see. Sarah found her mind racing from question to question. It was a high moment, the kind of discovery few scientists ever encounter. She was acutely aware that they had made history. Schoolchildren, if such would still be birthed after immortality, would read about this moment. Models of this very lab would stand in museums.

She stopped herself with a shudder. It was not healthy to think about such things. Her mind turned back to the more immediate questions but the chill remained, a feeling of disquiet that must mask, deep in her heart, the sick dread she suspected was there.

“The sleep deprivation was the triggering mechanism for the aging

acceleration. But what caused him to stop sleeping in the first place?”

“His whole system collapsed.”

“That’s not an answer.”

They lapsed into silence. Sarah suspected the others felt much as she did. She brushed aside her fear, told herself the situation wasn’t threatening.

The cage on the TV screen had a dark and evil cast to it, almost as if some inhuman spirit now possessed it. Sarah did not believe in old-fashioned notions of good and evil; she told herself that she did not. But she wouldn’t go near that cage unless absolutely necessary.

There was a noise and a stab of light as the door to the hall was opened. Tom’s angular form appeared, backlit by the cold fluorescent glow of the hallway. He came in quietly, a doctor among the sick, and put his hand on her shoulder. His stoop told her all that he planned to say. He did not yet know of the tape, and the triumph represented by Methuselah’s destruction.

Miriam’s worst fear surfaced when she realized that John had entered the house. In all time and in all the world, this was the most terrible thing. He would be fiercely angry in his aging, dangerous as he died. She breathed a charm against him, calling on the ancient gods of her species, seeking in her heart their embrace.

She hunted him through her cheerful rooms, happy places each. Warm memories of their long time here flooded her. She ran her hand lightly along the back of the rosewood love seat, touched the mahogany elegance of the side table. On it were gold candlesticks. They still enjoyed that courtly old light and often lit the house with it.

She heard, distinctly, the soft hiss of a door opening across a carpet.

The house was so still that she could sense the faint rustle of her own dress as she breathed. She stood in a corner of the room. To her right was the hallway and the front door. Ahead the arched doorway into the dining room. She knew now that he had come up the basement stairs and must be at this

moment standing between the pantry and the dining room. Then she heard a sound, a much aged voice, singing. “Sweetest songs of saddest thoughts, of times we’ve lost and loves forgot.” The voice sank to a mutter and stopped. That song had been a popular tune of his youth. She remembered well singing it with him.

Then he came into the light. She concealed her surprise; he was naked. “Please,” he said softly. “Please, Miriam, help me.”

The firm, young body that had so delighted her was gone. In its place was this thinned form, with liqueous pouches where muscle had been.

“Look at me, Miriam!” He sounded so pitiful, she hated to hear him.

“Put your clothes on.”

“They don’t fit!” Now he spat the words. Sudden rage was one of the most common characteristics of the disease. This time it declined as quickly as it had risen, leaving him only his despair. Before the reality of his suffering, Miriam’s thoughts seemed to move slowly, her body to be stilled. Hesitant, not sure he would be tolerated, he came to her. His breath was so foul that she turned her head aside. Her mind, revolted by the ugliness, used as an antidote an image of Alice’s bright face, of her creamy young skin. As his lips touched hers she took solace in this image.

“Don’t you enjoy me? Please try.” His face, spotted, sunken, bearded with hard white stubble, bobbed before her like the glowing image of death itself. He squeezed her shoulders, his hands sliding up to the base of her neck. “*You’re just as young as ever. You look marvelous.*” Suddenly he stepped back, blocking the door to the hallway. “Don’t leave me,” he said. His eyes were wide. “Don’t leave me!”

She stood, head bowed, wishing that — just once — she dared surrender herself to another being. But she remained wary. The rage may come upon him again at any moment. Her throat was still a little raw from yesterday’s episode. She looked up, met his eyes. “I won’t ever leave you, John, not ever.”

“Miriam —” He sobbed, wretched, obviously furious with himself for being so blatantly emotional. She could no longer ignore the plea in his voice. Against her own best judgment she went to him, put her arm around him, and guided him to the leather library sofa.

He leaned his head against her shoulder. “I’m so old. How did I get so old?”

“Time —”

“*What* time? It’s been two days!”

“A great deal of time concentrated in a small space.”

He looked at her, eyes stricken. “Where does it end?”

This was the hardest part. How do you face it, the fact that the seed of death, hidden deep in the body, has started to grow? She could not speak. Overcoming her revulsion, she stroked his head, held his hand. There was a low, awful sound from his throat. “I loved you,” he whispered. “I trusted you so.”

It hurt most terribly.

3

JOHN RUSHED BLINDLY down Eighth Avenue, heading toward Forty-second Street. It was four the next morning. He wore an overcoat, a wide-brimmed hat to shadow his face and carried a Samsonite briefcase. Energy was leaving him like light from the sky. He kept the hatbrim snapped low over his face. Occasionally, he attracted some interest from a dark doorway. A boy woke up long enough to make a few disinterested sucking noises, a thin girl muttered again and again, “wanna bj, wanna bj,” like a grotesque machine, stopping the instant he had passed her doorway.

He was here because he was desperate and this was fast. The people on the streets now were more ruined than he was, too damaged to compete with the dirty glittering mob of the early night — or, perhaps, with him.

Then he saw what he was looking for, sitting in the window of the Mayfair Pancake House. The Mayfair was the hub of the neighborhood and John knew it well. In times past it had been a nickelodeon. A man would buy a paper flower and hold it in his lap while the latest epics from Union City jittered across the screen. When a girl took the flower he had a date.

His victim came out, having been summoned by his tap on the glass. She sidled to him like a dog, her face looking upward and to the right. “Ain’t I great,” she said. “Twenty bucks. You don’t see the bad side.” Her good profile was pure Cincinnati. But she had only half a dream — acid had melted the rest of her face into a glaring scar.

“Five bucks all the way,” John said.

“Hand job money if you come fast.”

“Ten bucks, that’s my offer.”

“Mister, you don’t look at the goddamn scar. I got my moves down. You never see it.”

“Ten.” They had to be bargained with; he would end up getting attacked in a dark hall if he bore the scent of the victim.

She grabbed his groin. “Fifteen.”

He pulled away.

“Anything for fifteen,” she hissed. “You can do anything.”

He hesitated. They stood as still as cats.

“SM,” she said, “beat shit outa me.”

“I don’t like that.”

“Man, you don’t want extras?” She came close again, her half-face smiling. “I thought you wanted extras. I’ll go ten, just a fuck.”

They went through a doorway on Forty-third Street, down a gray-painted hall disfigured with graffiti, up some low stairs to a damp-smelling lobby. A black man slumped in a broken chair. John put the ten dollars in his open hand.

They went up a steeper staircase. She stopped before a tall wooden door. The room was tiny: a dresser, a folding chair and a lamp with a melted plastic shade. The bed was a mattress on the floor with a wadded yellow sheet on it. “The laundry ain’t been in this early,” the girl muttered. “Get your clothes off, we got ten minutes for ten bucks, that’s house.”

Blaylock took off his hat. Even though the room was deep in shadow, its window overlooking an air-shaft, the girl could see enough of him to be startled.

“You got somethin’, man?”

“I’m well. Just thin.”

She moved slowly away. “What’s the matter with you?”

He took his scalpel out of his pocket. The girl was grimacing as if in pain, backing toward the window. “Come on, honey,” John said. “You belong to me.”

Her good eye widened, the good side of her mouth twisted. Her hands came fluttering up to her neck. From her mouth there was a sort of barking sound, midway between terror and madness. When her back touched the wall she crouched down, bark bark bark, like a whispering dog. The eye kept looking around and around, unable to focus on the face before her.

John raised his scalpel with swift expertise and plunged it in behind her collarbone. It popped through the viscera and just touched the artery. In an instant he was upon her.

At last. This.

He felt life filling him again, purple and rich. He knew he could now walk the streets without attracting attention, no more decayed than any other old man. In the past he had felt the hunger perhaps once a week. Since this — whatever it was — degenerative disease started, his need had risen and risen. When would he be hunting again? Six hours? One?

Now the Samsonite briefcase came into use. Inside was half a gallon of naphtha and some simple incendiary materials. He laid the girl — so light — on the bed and soaked her with naphtha. Then he put an ashtray full of butts beside her. Carefully, he poured potassium permanganate crystals into a matchbox and soaked them in glycerine. In three or four minutes spontaneous combustion would cause the potassium to catch fire and explode the naphtha.

After placing the matchbox in the ashtray, he left.

The fire would be a furious one. Ten minutes from now only bones would be left. If the fire went much beyond that everything would be destroyed.

When John reached the street dawn was already beginning. A few day people were about, a girl in a white leatherette car coat clopping toward the W. T. Grant Building, a young man with a shade of moustache getting out of a cab. The second edition of the *Times* was being tossed off a truck at the corner newsstand.

Nobody noticed him. For now. His whole body was relieved as if of gravity itself. Later would come desolation as the new blood died, but for the moment he felt as if he could leap up into the spreading sunlight. As he proceeded along Forty-third Street the last of the night people crept away. There sighed from them all a weariness completely at odds with the spring dawn slipping down the office towers. They dragged themselves away while pink clouds glided westward in a luminous sky.

A fire engine blared past, the firemen clinging to it. Their faces were bored and determined, frozen with the expression common to men who are intimate with death.

Manhattan began to come alive more rapidly. People were pouring out of the Seventh Avenue subway, coffeeshops were getting crowded, buses were swinging past with windows darkened by the crush of passengers.

John could feel her in him. Her past seemed to whisper in his veins, her voice to jabber in his ears. In a sense, she haunted him; they all did. Was the hunger satisfied by their being or just their blood? John had often wondered if they knew, if they felt themselves in him. From the way he could hear them in his mind, he suspected that they did. Miriam angrily dismissed the notion. She would toss her head and refuse to listen when he brought it up. She would not accept that you could *touch* the dead.

As he walked he counted the hours since last he had closed his eyes. Thirty-six at least. And during that short time he had needed three victims. Their energy was some compensation for the lack of Sleep, but it couldn't go on forever. Each one had less impact than the last.

He found that he could almost hate Miriam if he wished, she who had made him. It was not so much the fact that she had lied to him about his life-span as that she had trapped him in an isolation even more awful than her own. He

had come to terms with his cannibal life, accepting it as the price of immortality. Even for that the price was high. But for this? His hunger had cheated him. For this he had paid too much.

He went on foot to Sutton Place; there was no percentage in risking a cab. When he turned onto the street there were shafts of sunlight between the buildings, well-dressed people hurrying to work, cars pulling up before elegant foyers, doormen whistling down cabs. The innocent brightness of this world assaulted his conscience, made him feel the blackest shame. Their own little house with its green shutters and marble sills, with its red-brick facade and window boxes full of petunias, contrived an atmosphere of warmth and joy. A repulsive falseness. It seemed to John like a newly cut tree, its leaves still robust, the message of death not yet risen up the trunk.

“Morning,” Bob Cavender said. He was a naturally ebullient man, the Blaylocks’ neighbor, Alice’s father.

“Morning,” John said, affecting a slight accent.

“New on the block?” Cavender did not recognize this suddenly aged version of his neighbor.

“Houseguest. Staying with the Blaylocks.”

“Oh, yes? Good people. Music lovers.”

John smiled. “I am a musician. With the Vienna Philharmonic.”

“My daughter’s going to love you. She spends half her life at the Blaylocks. She’s a musician too.”

John smiled again and delivered a courtly Viennese bow. “We will meet again, I presume,” he said.

Cavender passed on down the street, trailing a hearty goodbye. How normal men could maintain their confidence and good cheer amid the chaos of life was one of the most fascinating mysteries that John had encountered. The Cavenders of the world never realized the truth of generations, how short was

their time and brief their ways.

There was a hush inside the house. Miriam had opened a pomander jar and the front hall was full of its rich scent. John went upstairs. He was eager to examine his face in a mirror. But when he got to the bedroom he hesitated. A deep, dead cold spread through him. He stood in the sunlight beside the pink-curtained window, terrified of the mirror on the back of the bathroom door, afraid to take another step.

For so long he had been balanced at the age of thirty-two. Along with the sudden aging of his body there had come a black flood of confusion as his brain atrophied. The assurance of youth was rapidly evaporating, and in its place was this preoccupied stranger, rapt only to the betrayal of the flesh. He found himself unable to remember dates, names, events. Things were colored by an unsettling newness, even things he must have seen many times before.

A tiny sound broke the stillness, the drip of a tear on the floor. “Coffin,” he said. His voice had changed so, deepening into age. All the years he had cheated were taking their revenge on him at once.

At the end of the last century he had visited a medium, planning to take her when the lights were out. But just as her fingers twisted down the gaslight something awful happened. With a sound like a tearing curtain dozens and dozens of different faces appeared in her face, like a crowd at the window of a burning house. All were known to him — his victims. The medium screamed, her eyes rolling, head lolling.

He had run from that horrible place, literally staggering with fear. A day later the *New York Evening Mail* published an item to the effect that the body of Mrs. Rennie Hooper had been found in her parlor. Her fingers were still on the key of the gas lamp. They assumed it was heart failure. Miriam insisted there was no *touch* with the dead. But she wasn't human, she didn't know anything about the relationship between a man and his dead.

The dead world glowered forth at him. Suddenly, an image of the whore exploded into his mind's eye, her flesh blackening in the flames.

His stomach twisted until it felt as if it were ripping out of its body and he

clamped his fists to his eyes, willing with all his strength that the vision of death before him, of deliverance into the hands of his victims, would dissolve. But it did not, rather it focused and confirmed. He realized that the demons of hell were not demons at all but the men of earth without their costumes.

To Sleep in safety, Miriam had gone to her attic room. John might well be able to penetrate the security system around the bed. She huddled on the hard floor fighting a nightmare. But it came relentlessly on, bursting through the Sleep like fire through straw, grasping her mind, forcing it to see:

A foggy morning near Ravenna. She had come here with the other citizens of property, when the Emperor fled Rome fifty years ago. Dew lies on the marble sill of her bedroom window. From deep in the fog comes the singing of rough-voiced Vandals on their way to raid the Imperial Palace. They move slowly through the mist, marching along just beyond the herb garden, their horned helmets making them look enormous. They will not pass this great house without plundering it, not even on their way to the palace of Petronius Maximus.

Keeping her voice steady, she calls Lollia. The girl comes swiftly across the marble floor, her slippers hissing on the stones. Miriam does not need to speak. "It is finished," Lollia says. "He hasn't made a sound in hours." Miriam takes Lollia's white face in her hands and kisses her full on the mouth, feeling the trembling fervor of a kiss returned. "My love," Lollia says softly, "the barbarians —"

"I know."

Miriam drops her nightclothes on the floor and strides naked across the room. The smell of the oil lamp guttering on her night table mingles with the sharp scent of the leather cloak she removes from her chest. She dresses in traveling clothes, aided by her lover, who has kindly taken the place of the dead servants.

Then Lollia goes off to her own room to change. They have hidden the horses and carriage in the Peristyle. Distantly, there is a crash, the sound of merry

laughter: the Vandals are at the stables. Miriam races across silk carpets, her cloak swelling behind her, and goes down the stone stairs to the basement where in olden times slaves attended an elaborate furnace. With the coming of inflation those slaves were sold, and the dying convulsions of the Empire diminished the amount of coal available. As for the slaves who remained — Eumenes saw to them.

Miriam had stationed Lollia beside the great oak door all night. Only an hour ago had she reported silence. Now Miriam feels safe in opening the door. She throws back three bolts and pulls with all her strength. Slowly it swings wide.

She screams.

The shriveled *thing* attached to the door by its finger and toe nails is unrecognizable as Eumenes. The room reeks of new blood. On the floor are the husks of his last five victims. Around him is a puddle of blood, having run out through his dead digestive system. His skeletal form is gouged; at the end he was terribly weak, his victims were almost too much for him.

Miriam swallows, forces self-control. She grasps the thing by its shoulders and peels it off the door.

Her ancient and beloved companion, her Eumenes. Odysseus returned at last, neither dead nor alive, somehow still attached to this ruined corpse — a spirit perhaps unwanted among spirits and forced to remain in the dead house of its body.

She pulls his knees to his chin and forces him into a box of the hardest wood, feeling the quivering pulsations of his body. The box is fastened by brass and reinforced with iron. Hefting the precious burden on her shoulders, she mounts the stairs. She will never abandon him, she murmurs, never, never. In the hallway Lollia is dancing with agitation. She is a simple girl, accepting without question Eumenes' "sickness," never imagining that she must one day follow. The elegant rooms are filling with smoke. The girl's eyes dart toward the rising Gothic shouts. Despite her terror she helps Miriam; together they take the chest to the carriage. They throw open the gate and Miriam snaps the reins.

Behind them the ancient villa fades gracefully into mist and past times.

It is slow going along the unrepaired roads. They must not approach Ravenna, not at any cost. Two women in a carriage loaded with baggage and gold coins are as vulnerable as it is possible to be.

“Constantinople,” Miriam says, thinking of the boat waiting at Rimini and the terrors of the sea. Lollia huddles against her.

Before her she saw a dark wooden wall. She was in the ship, hearing the wind shrieking in the rigging, hearing —

A pigeon coo.

Her eyes opened. She did not move at first. Then she remembered, she was in the attic. Her mouth was dry, the dream clinging like a rotten flavor. She sat up. Close beside her was the new steel chest.

She hated these dreams. They did not interfere with renewal; indeed, they might be part of it. But they hurt so very much.

Well, she'd have to put it out of her mind. She had a great deal to do. She had been methodically preparing for Alice's transformation. It had taken all year to sift through the literature of sleep disturbance and aging research until she had pinpointed the most knowledgeable person in the field.

Her approach to Sarah Roberts was to have been subtle and slow. Over time she would have befriended her, made Sarah's knowledge her own, then slipped out of her life as easily as she had entered.

She had never expected John to die so soon. Even after transformation Alice would have grown to maturity. The three of them were to have shared those years.

But no more. Alice *had* to last, Miriam could bear nothing less. She ran her fingers through her hair. With the coming of the sun this little room under the eaves turned into an oven.

Miriam left, taking care to cross the attic on the beams so that the ceilings

under her feet would not creak. While John was still strong she could not afford to let him know where she Slept. He felt cheated and betrayed; they always did. The next time his fingers might well close around her throat for good.

As soon as she opened the door to the attic she knew that he was home from another hunt. From their bedroom came a rasping sound that tore at her heart. He was crying. His intelligence, his sweetness, his exuberance — and above all the truth of his love — remained as alive as if the old John still existed. As she entered the room he fell heavily, thudding against the wall.

He began to pull himself up on the dressing-table chair. She watched the wheezing struggle appalled — he had weakened badly in these past hours. The gray skin was cracked, the hands reminded her of the claws of an animal.

His eyes, yellow and watery, sought her. He looked at her. She could hardly bear his face. “I’m hungry,” said a screeching, unfamiliar voice.

She could not reply.

He managed to pull himself to his full height and stood swaying like a hobbled buzzard. His mouth opened and closed with a crackling sound. “Please,” he said, “I’ve got to eat!”

Without the Sleep their hunger became unendurable. The flawless pattern of life was broken, and the delicate balance crumbled.

“John, I don’t understand this, I never have.”

He leaned toward her, gripping the chair tightly. She was relieved to see that he dared not launch himself in her direction. It was unlikely that he could hurt her, but not completely impossible. She preferred distance between them. Her control of any situation had to be flawless. “But you *knew!* You knew it would happen!”

There was no point in lying, the truth was obvious.

“You must help me. You must!”

She was unable to look at the accusation in those eyes. Before the truth of what she had done she could not find words, either of comfort or denial. She was lonely and human beings gave her the love that pets give. She sought companionship, some warmth, the appearance of home. She rejected her tears, her shame at what she had done to him. After all, did she not also deserve some love?

John had heard her from the first moment she had moved. The fact that she had been sleeping in the attic locked away from him decided it. For him it was a surprisingly cool decision and it admitted no room for reconsideration. He was going to hurt her. He was going to take her throat in his hands and crush it until she admitted the evil of what she had done.

He watched her come warily into the room and feigned weakness, pretending to fall against a table. It was clear that she wouldn't come near him if she thought that there was the least danger. Miriam was obsessively cautious.

He was agonizingly hungry. Miriam was so healthy and beautiful, literally ablaze with life — what would happen if he took her? Would it be enough to cure him? Her odor was dry and lifeless, like a starched dress. She did not have that wonderful, rich smell that John had come to identify with food.

Maybe she was poison.

His anger poured out in everything he said to her, he could not prevent it. She told him she did not understand what was happening to him. He wanted to believe that she was a passionless monster. He tried not to think of her as human. But he loved her, and now he needed her. Why wouldn't she understand that?

He stretched out his arms, pleading for help.

She moved back toward the door, the silken gesture of a cat. Her eyes regarded him as if there was something she was about to say. He realized how great the gulf between them had really been all these years.

“I'm dying, Miriam. *Dying!* Yet you go gliding along, perfect and untouched. I know you're much older than me. Why are you different?”

Now her face clouded, she seemed about to cry. “John, you *invited* me into your life. Don’t you remember?”

This was too much. He launched himself toward her, growling his rage, his arms extended toward her neck. Miriam had always been able to move fast, and she slipped away easily, retreating to the hallway. On her lips was a sad half-smile. The one thing that gave him hope was her eyes. They were glazed with fear, swimming with what could only be sorrow. As he approached her she turned, quick as a bird.

He heard her feet drumming down the stairs, then the front door slammed.

He was desolated. She had left him. Now he regretted his attack. Yet he hadn’t been able to stop himself, the urge was so sudden. Sooner or later she was bound to come back, though. She couldn’t bear to Sleep in hotel rooms for fear of an intruder or a fire. This place was so thoroughly equipped that a match couldn’t smoulder without being noticed, nor a burglar touch a window. No, this was her haven and she would return.

John would be waiting.

For fifteen minutes he lay on the bedroom floor trying to reach Sleep. But the hunger was there, insinuating itself into his veins, making him tremble with need.

He pulled himself to his feet and went downstairs, paused at the door to the library. Books and papers were strewn about. Miriam was normally obsessed with order. He slumped down behind her desk, thinking that he might prolong his strength if he didn’t move so much. It was going to be damned difficult if he had to eat in broad daylight, and in this condition.

There was a magazine lying open on the desk. *The Journal of Sleep Disorders*. Some project of Miriam’s. It was laughable, Miriam’s silly faith in science. The magazine was opened to an article with the wildly exciting title of “Psychomotor Dysfunction in Abnormal Dreaming Response: The Etiology of ‘Night Terrors of Adulthood,’” by S. Roberts, MD, PhD. The article was an utterly meaningless mass of statistics and charts, interspersed with sentences in the incomprehensible language of technology. How Miriam

managed to make anything of such material was a mystery to John, and what she expected to do with it was just as obscure. Science, which so involved and excited her, seemed fearful to him, the work of the mad.

John pushed the magazine aside, staring blankly. He had begun to hear a sound, a sort of high-pitched noise like a siren. It was a moment before he realized that it was coming from inside his right ear. It peaked and then died. In its wake was nothing: the ear had become deaf. He had to act, the deterioration was now very rapid.

He went to the daybed, a place where he had Slept many times, and lay down. He closed his eyes. At first there was bone-tired relief. Again he did not Sleep. Instead, bright geometrical shapes began to appear before his eyes. These resolved into burning images of Miriam's face, of Miriam standing over him during the agonizing time of his transformation.

His eyes opened almost of their own accord. Other faces had been about to replace Miriam's.

The sound of a raging crowd evaporated into the soft morning air. Where, after all, do the dead go? Nowhere, as Miriam said — or is there a world beyond life, a world of retribution?

“You can't blame me,” he growled.

He was surprised to hear a voice answer. “I'm not! You can't help it if they forgot!” Alice.

John turned his head. She stood frowning, her violin case in her hand. She was here for her music lesson. Her odor, rich beyond description, poured into the room. “Good morning,” John said as he clambered to a sitting position on the side of the daybed.

“I do music with the Blaylocks at ten. But they're gone.”

She did not recognize him.

“Yes, yes — they had some kind of a bank meeting. They told me — told me

to tell you.”

“You must be the Vienna Philharmonic musician. My dad told me about you.”

He got to his feet, went to her, bowed. He dared not touch her, dared not even brush his hand against her. The hunger had become an inferno the instant he had caught scent of her. He had never experienced so much concentrated need, had never wanted anything so badly.

“Are you a regular with the Vienna Philharmonic?”

“Yes.” His hands shook, he clutched them together to keep from grabbing her.

“What’s your instrument?”

Careful here. He couldn’t say cello because she might ask him to play. It was completely beyond his capacity in this condition. “I play — french horn.” There, that was good.

“Heck, I was hoping you were strings.” She looked at him with her soft, intense eyes. “Strings are a lot of fun. They’re hard, though. Do you have your horn?”

“No — no, I prefer it does not travel. The tone, you know.”

She glanced away. “Are you all right?” she asked in a small voice.

“Of course,” he said. But he did not feel all right, he felt like splitting her in two.

“You look so old.” Her voice was low and hesitant. The knuckles of the hand gripping the violin case were white.

John tried to lick his lips, realized that they were stretched dry. The faces of other children swam into his memory. Miriam had insisted he take them when he was a beginner because they were easier. In those days homeless, unknown children were commonplace.

Taking human life had slowly lost its significance for him. He no longer remembered the number of murders he had committed. She had sucked every cell of humanity out of him and left him as he was today, at the end of his life with this to face.

“Have a seat,” he heard his voice say, “we’ll talk music until they get back.”

His hand touched the scalpel in his pocket the instant she accepted his invitation and came through the door.

That was all he needed, he was on her. Screams exploded from her, echoing flatly through the house. Her lithe body writhed, her hands tore at him, she slapped at the cracked skin of his face.

He pulled at the scalpel, twisting her hair in one hand, yanking her along the floor. Her arms windmilled, her feet scraped and banged. Her screams were high pitched, frantic, incredibly loud.

The damn scalpel wouldn’t come out of his pocket.

She managed to bite his arm, her teeth crunching out a half-moon-shaped hole in the loose skin.

Her eyes rolled when she saw the damage she had done. A column of black vomit shot from her mouth, splattering on the floor. She threw herself back and skittered along, trying to reach the door. He leaped at her, finally ripping the scalpel from his pocket. Everything except the hunger disappeared from his consciousness. His mouth opened, he could already taste her. It took all of his strength not to gnash his teeth like a famished dog. She was on her back, pushing herself away with her feet. He grabbed her ankle, held it with all the strength he could find. She sat forward and began batting at his hand.

He drove the scalpel down behind her collarbone. The pain threw her head back and made her shriek wildly. Then he was lying on top of her. Her breath rushed out of her lungs with a *whoosh*. She lay jerking in shock, her tongue lolling, eyes growing filmy.

With his mouth wide he covered the wound. He probed with his tongue. It

hurt, it always did. Unlike Miriam's, his soft human tongue was not adapted to this.

After what seemed an endless amount of probing, the blood burst from the vein, filling him at last. He sucked hard, lingering until the last drop. Only when there was nothing left but a dry rattling did he stop. His body felt loose and easy now, his mind was clearing. It was like waking up from a nightmare, or like the time as a boy when lost on the dark North Yorks Moors he had finally discovered a familiar path. He sighed deeply, then washed out his mouth with a glass of Madeira from the library stock. The wine seemed to contain a million delicious flavors, and he sensed each one individually. It was so beautiful he wept. His hands went to his face, feeling the softening skin and the warmth. He lay back on the daybed again and shut his eyes. The wine had been a fitting complement. Unlike other food, alcohol remained delicious to him. He tried to relax, savoring the immense relief.

Alice, as serene as a goddess, appeared behind his closed eyes.

It was so real that he shouted. He jumped up from the daybed. A sweet scent filled the room. It was every beautiful memory he had ever known, every kind voice, every loving touch.

He remembered when he was fourteen, waking on a summer's morning at Hadley House, knowing that he would meet Priscilla on the other side of the lake as soon as she had served morning tea to himself and his parents.

He remembered the humid woods, the swans in the lake and wildflowers. There was a hurting, queasy tickle when she touched him. By now she was dust beyond dust.

He sat down beside the rumpled clothes that hid the remains of Alice Cavender. The perfume was strongest here, it must have been something she was wearing. Gently, he touched the red T-shirt with its decal of Beethoven.

The perfume faded as quickly as a departed mood of love. It left him feeling as if he were already dead. He sighed. There was an ugly chore just ahead that wouldn't wait. If Miriam found any evidence of whom he had taken — he couldn't allow that.

He forced himself to pick up the little bundle and carry it down to the basement.

Miriam had walked the streets, sorrowing at the ugliness of what John had become. Despite her caution he had nearly . . . she couldn't even think about it. She was going to have to capture him soon. As soon as she dared. Even with his present weakness he was still too strong.

She returned home after an hour, unwilling to expose herself more than necessary to the random accidents of the city streets. When she turned the corner onto Sutton Place she stopped in surprise and stared. There was smoke rising in a thin trail from her chimney. John was burning evidence, and in broad daylight. The fool must have hunted right in this neighborhood, he hadn't had time to go farther away. No doubt he had taken some local child.

Toward the end they always lost all caution. She wanted to be angry at him, but she pitied his desperation too much. She ought to count herself lucky that he bothered to destroy his evidence at all.

Although she did not relish the prospect of confronting him, she was going to have to re-enter the house. It was hers, after all. And it was a safe place to Sleep. Somehow, John would have to be restrained. She could not allow him the freedom of house and streets much longer.

She marched up the front steps and went in. The rumble of the furnace was audible. The poor man. At least it told her his whereabouts. The high-pressure gas lines that fed the thing couldn't be left unattended.

She paused in the hall, savoring for a moment the peace and life of her house. To her it was like a well-rooted rose bush, lively and enduring. Soon it would contain a new voice, that of Alice, light and golden. Miriam's tiny infirmary was prepared for the transfusions. The approach to Dr. Roberts had begun. The good doctor herself would in the end be Miriam's assistant. For an instant her mind remembered John as he had been and she experienced a quick sinking of the heart. But she pushed it aside.

She began to move toward the library. The pomander was too sweet, it was

getting rotten. And the ceiling needed some plaster work; the house had settled a little recently. She had to prune her roses. It would soon be a necessity as well as a pleasure. And she was crying all over the hall rug. There was no use trying to stifle her feelings. Her despair broke through in a torrent.

John, you loved me.

You loved even the sound of my name.

He had been so happy with her, always laughing, always full of delight. She sank into a side chair and rested her chin in her hands, shut her eyes tight against the tears. She wanted so for him to hold her once again. She had been his prize, his adored one. In the end that was all that mattered, that was life itself, to be needed.

His aging was so ugly, she couldn't remember that the others had been that ugly.

There had been such good times.

The night she first met him, for example. She had only recently returned to England. She hadn't seen one of her own kind in twenty-five years. In those days she still hoped that they had migrated to America, seeking a less organized community. She was miserable with loneliness, an unwanted creature in a world she could not love.

That night it had been cold, the rain pounding and the wind blowing. She was toying with Lord Hadley, a foolish old man. His estates were vast and full of itinerant workers and others of the dispossessed. She longed for the freedom to roam unhindered in such lands. She had accepted his invitation gladly. And this glorious young man had appeared at dinner. He had about him all the important signs: the arrogance, the determination, the intelligence. A predator.

She had drawn him to her feet that very night, to teach the poor inexperienced thing a few secrets. The rich hunting of the estate could wait now that she had the opportunity to possess its heir.

She had taken rooms in the town of Hadley and visited him each night. Two weeks later she had started his infusions. If only she had known then how weak he really was; he had been intended to last the longest. Look at him now.

In those days she used india-rubber tubing and the hollow needles made for glassblowers. It was a great advance over the past method, in which she simply used her mouth and hoped for the best. Although she knew nothing of immunology then and would never have thought to test him for tissue rejection, John had not died. His wound had become infected, but that always happened. He had gone pale, but they did that too. Unlike so many, he survived. Together they had depopulated Hadley. The old Lord had hung himself. The estate had reverted to the wild.

He was a delighted child in those days. They went to London to join the bright social whirl of the declining Regency. God, how times had changed.

John. She remembered the time he had burst in on her disguised as a policeman. And the time he had chosen their victims in Glasgow and the next morning she discovered it was the Lord Mayor and his wife.

They used to ride to hounds. He had taught her that there was a thrill in challenging fear. She had accepted a little bit of the lesson to please him. How fine he had looked mounted, his boots gleaming in the morning sun. She remembered the mad dash of the horses, the smells and the noise and even the unaccustomed sweetness of danger. He had once leaped onto her horse at full gallop and tumbled them both off into a ditch — and made love to her with the bracken bobbing about their thighs and the huntsman's horn echoing in the distance.

She sighed and tried again to forget. Nostalgia was useless — she had to get down to that basement and deal with the poor man.

4

TOM SAT IN HIS OFFICE in the gathering dark. Although it was late he was crackling with energy. Hutch had just turned down Sarah's application for a funding review. Even better, he had ordered the project closed down, its records sealed.

Battle was joined. Tom could now challenge Hutch directly by demanding a Board of Directors' meeting himself. If Hutch was reversed it would break the old man's authority. Tom could then move in on him, shoulder him aside. Welcome to the next Director of Sleep Research.

He took out a cigar and held it between his lips, then put it away. One a day was his limit. If he smoked this one he would break that limit and force himself to confront his own iron rule: smoke two and go without any for a week.

He saw a shadow appear on the frosted glass of his door. The knob rattled. "When's the review?" Sarah asked as she entered. "We're ready to go."

"Not tonight. The board goes home early."

"Board? You mean the Board of Directors — of the Center? I thought we were dealing with the Budget Committee."

"We're not. Hutch blocked a committee review. I'm left with no alternative but to go to the board itself."

"I'm not prepared for that."

“Don’t quaver so when you talk, my dear. You’re prepared — brilliantly so, knowing you. And you can prepare me.”

“I’ve never even *seen* the board.”

“I have. They’re formidable as hell. Exactly what you’d expect of three world-class tycoons, a retired governor and two Nobel prize winners.” He smiled. “Pardon my intimidation. I’m just challenging you to do better than your best. Give me what I need to impress the hell out of them.”

“Yes, sir.” She snapped off a ragged salute. “Shall I get a new dress? A permanent?”

“You just get the data. I’ll confront them alone.”

“Thank God!”

“Confidence.” He leaned back, being careful not to allow the old chair to fall off its base. It was going to be quite a pleasure, and a deserved one, to allocate himself some decent furniture. Part of Hutch’s psychology was to make sure he had the worst office, the most decrepit furniture in the whole clinic. Transient interns rated better space.

“You seem curiously happy.”

“I should be. I think this might get me the directorship. If the board starts dictating policy to Hutch, he’ll have to go. There’s already board sentiment to that effect, I suspect.”

“Tom, you’re using me again.”

“You’re useful, lover.”

She laughed, shook her head. Tom disliked the moral tone of her position. Operating to mutual benefit wasn’t using somebody, not in the way she meant. “I’m saving your career.”

“To further your own.”

That was unfair. He felt wronged. “I’m getting what we both want, Sarah. That’s all that’s important.”

Her eyes were closed, she looked pained. “It’s just that I don’t like this side of you. It scares me. I don’t like to think you walk over people.”

“Then delude yourself. I don’t mind.”

“Tom, I guess what scares me is that I love you so much. I feel so vulnerable.”

He wanted to hold her, to somehow reassure her. They sat silently, the space between them making movement seem impossible.

“What if you fail?” she asked in a flat voice.

“Now who’s the betrayer?”

Her hand went to the desk between them. She must want him to hold it, he could see the sparkle of tears in her eyes. “We both have a lot to lose,” she said. “You’re making this thing into a life-or-death crisis.”

“It’s been that all along. I’m just trying to use it to our advantage.”

“That’s what I hate about you! You use everything. Me. Even yourself. Sometimes I see you as so — so dark and frightening. You’re somebody I don’t know, somebody who would do anything — too much — to get what he wanted.”

They had often had versions of this conversation. Originally, Tom had dismissed it as the histrionics of an insecure woman but recently had begun to suspect that it was more deeply felt than that. Sarah’s insecurities did not extend to her career, despite its precariousness. Tom wondered how long they would last as a couple. Would she leave him over such an issue? He reached out and took the hand. He knew that she was waiting, but for what he was not quite certain. Probably she wanted him to protest, to deny the truth of what she had said. It was like Sarah to see a truth and try to enforce a more palatable illusion in its stead.

“It’s the way I am,” Tom said. “I won’t deny it. I want his job. It’s that simple. I’m better qualified. And I’ll get it too. He won’t be able to stop me.” Saying the words offered him a satisfactory illusion of confidence. Actually, what he was conscious of was fear. He might get himself fired or, worse, might end up stripped of all power, condemned to be Hutch’s batboy until the old man died.

“Let’s go someplace and drink. It’s that time.”

“This is you talking? Leaving the lab at seven P.M.? Maybe you *have* given up.”

“They’re running statistics on the changes in Methuselah’s blood composition. There’s nothing for me to do.”

“You have computer access? I thought that’d be cut off by now.”

“Charlie broke the codes. We’re patched in through his home computer.”

Tom smiled. You couldn’t help but be proud to work with people such as Sarah and her group. She wasn’t one to be stopped by something as minor as having her budget cut and the door slammed in her face. “How can you get the memory space? Won’t the computer alert the Programming Group?”

“It’s an assembly from dozens of different files. A little here, a little there. Not enough to notice — from any one file.”

“How much space do you have?”

“Ten thousand K.”

He burst out laughing. It took a supplementary request to the Programming Group, six weeks’ wait and a special budget allocation to exceed 500 K. So much for bureaucracy! “How is this getting billed, for the love of God?”

“It’s going on Hutch’s personal account. The effective cost is eighteen hundred dollars an hour.”

“I hope that’s not true. He’ll end up going to jail for stealing computer time.”

“That would be delicious. Unfortunately, the truth is more prosaic.”

“May I know?”

“Nope.”

He could respect that. She was into a substantial bank of Riverside’s enormous computing power. The fewer who knew, the better. Not to mention the safety there was in ignorance.

They didn’t talk on the way down in the elevator. The lobby was quiet as they crossed to the door. He hailed a cab on York Avenue. “How about making this a catered affair?”

“Chinese food?”

“It’s a deal.” He couldn’t face some depressing bar right now. He wanted Sarah very badly. The thought of losing her came cold into his mind. He loved her so much. Right now he wanted to slide across the seat, to put his arm around her, to melt the barrier between them. During the day she was so crisp and professional and cool. At night he wanted another Sarah, one who would shelter him. He watched her gentle, tense face, the soft curve of her bosom, smelled her faint perfume and longed for her.

The harsh words she had spoken in his office returned to mind now. ‘You use everything. Me. Yourself.’ Was it really true? Did he have to think that about himself? If it was true, it was not something he could help.

“I love you,” he said softly so the cabdriver wouldn’t hear. Public intimacies annoyed Sarah.

She smiled briefly, allowed him to cover her hand with his.

“Love solves problems,” he said.

She was silent a long moment. “It survives them.”

He wished so very much for her happiness and success. She had made an extraordinary discovery, he was sure of it. He wanted her to taste the

sweetness of recognition, to receive all the benefits such a thing could bring. “I want to help you, Sarah,” he said, “I want to so badly!”

She smiled broadly. “I wish Hutch could hear you. He’d be terrified.”

“Left side or right side,” the cabdriver asked.

“Building on the left. The high-rise.”

The big blue “Excelsior Towers” sign glowed in the deepening night. An elderly woman with a dog came out, the spiderlike creature trotting along beside her. Alex seasoned a cigar at his post by the door. He lit it, took a deep puff. Tom watched with the avidity of the denied, envied the man his indifference to his health. They got out of the cab.

“Good evening, Doctors,” Alex said around the cigar. Tom couldn’t bear to smell the billow of smoke that came toward him. At least it was a cheap one, it lacked the fetching aroma of a good Montecristo. Thank God.

“A habit is an agonizing thing,” Tom said as the elevator doors closed behind them.

“I wondered how you were taking that.”

“Badly.”

“How many have you had so far today?”

He raised one finger. She reached up, took his hand and shook it. “It’s surprisingly hard to do,” he said. “The body demands its fix.”

“I know. It took me two years to give up cigarettes. That and my father.”

Tom had never met Samuel Roberts. His death had occurred before he and Sarah really knew each other. Lung cancer, she had said.

Sarah followed him into the apartment, pausing to put her raincoat in the closet. He turned on the lights in the living room. She came up beside him. “I like our place,” he said. She nodded. “Sarah, can I kiss you?” She turned to

him, put her hands on his shoulders. He bent to her, looked for a long few seconds into her eyes, then sought her lips. The warm sweetness of her kisses always renewed him. It was as if his body wanted to do what his heart could not, and once and for all seal their love.

“Do you really believe I love you?” he suddenly asked. The question had popped out before he had even thought about it. He wished that he didn’t do things like that. It was a question he might not want answered.

“I know you do.”

He tried to kiss her again but she turned away. His impulse was to force her. Angry with himself, he quelled it. She had sensed his anger, though, and stood still and small, her chin jutting out, her hands twisted together. “Now now,” she said.

“I won’t hurt you.”

She laughed as if to reassure him that she trusted him. “Tom, if our careers didn’t mesh the way they do — if mine was in the way — what would you do?”

He reached out, took her hand. “They do mesh, so why worry about it? We’re in a perfect position. By saving your career I’m going to make my own.”

“But what if it was the opposite? That’s the question you won’t answer.”

“I’m jeopardizing myself as it is.”

She shook her head. “I love you, Tom. God help me but I do.” She came to him, her forehead was at eye level. He kissed it, then drew her to him, feeling the smallness of her body, disturbed by her vulnerability, obscurely pleased.

She let him lift her off her feet, bend to her upraised face. He kissed her long and hard, as if to kiss away the space between them, wishing he could, wanting his love to sweep her doubts aside and draw her to him forever.

“Oh, Sarah. You’re so beautiful. I can’t believe a woman so beautiful would be interested in me.”

“Put me down, and don’t sell yourself short. You aren’t exactly ugly.”

He smiled. “Not exactly.” Gently, she brushed his cheek with her hand, an admonitory gesture. “I wasn’t referring to my physical appearance. I can’t quite —” He stopped, found he didn’t want to say that he could not command her love.

“I do love you. That isn’t something I say lightly.”

He nodded, kissed her briefly. “Let’s go to bed,” he murmured into the warmth of her hair.

“I want to order up Chinese food. Then we can do it.”

“Now.”

Laughing, she pushed him away. “Prolong our pleasure. Let’s anticipate a little.”

He felt subtly rejected. “I’ll go take my shower,” he said, covering his hurt. If she really wanted him, she would not have been able to resist his invitation. Leaving her to work out the menu for their Chinese meal, he went into the bedroom and stripped off his clothes.

He felt better when he was standing in the warm shower, clouds of steam coming up around him, making his skin tingle. In the shower he could forget his disappointments, his problems, his fears. His mind went back to the clinic, however. Was her discovery going to grow and grow until it consumed her and eclipsed him? Their love had never seemed so frail, or so terribly important.

A shadow moved on the other side of the shower curtain. Then she was there, happiness again, slipping in naked, water bouncing against her marvelously beautiful body, running down its curves, flowing between her breasts, bouncing off her nipples. “I thought you might need a little help,” she said, taking the soap from the dish and picking up the washcloth.

She had come to him. He almost laughed aloud. But he didn’t, instead he let

himself fall into the familiar little game they played in the shower. “Only one part of me is dirty.”

“What part?” Prim, eyebrows raised, face glowing.

He had been hiding himself behind his hands. Now he removed them.

“Oh! It looks like a bratwurst.”

“Then eat it.”

“And get my hair wet? Not on your life. I’ll clean it up, though, since you say it’s dirty.”

He enjoyed these showers enormously. She washed him slowly, sensuously, concentrating on the most sensitive parts, on her face the gentlest, sweetest expression imaginable. And when he washed her, touching her whole body, feeling the life of her flesh beneath his hands, it was like a miracle.

Afterward she was flushed, her eyes sparkling. He knew that she was terribly excited and he teased her. “Did you order the Chinese food?”

“Sure. Oh, *damn*. I guess we’ll have to wait.”

“Really?” He went to her, lifted her up and leaned back.

“Tom, don’t,” she said. He noticed that she didn’t struggle. Doubtless she was afraid he’d lose his balance if she did. “To-o-m.” He entered her standing, his legs spread, his arms around her waist. Her feet dangled inches from the floor. “Tom, you madman, let me down!”

“The Chinese food’s going to come.”

“Oh, *Tom*.”

He couldn’t stand it anymore. He put her down, but only because it was impossible to remain standing together as they were long enough to consummate the act. “Get in that bed,” he said gruffly. She ran to the bedside.

“Tom —” She put her hands on his cheeks. “Never think I don’t love you.” She kissed him hungrily, drew him down on her. They made love slowly for a few moments, then became more intense. The act grew more fierce by stages. Sarah sweated, screwed her eyes closed, cried, and dug her fingers into his back. He went on, driving, relentless, pacing a steady rhythm. At last she shouted aloud, stared wildly, her legs pumping furiously, cried out again, and was quiet. He followed her in this surging, innocent act, sinking down into her hot, sweaty flesh, calling her name in an ecstasy of completion and . . . longing.

The barrier remained.

He looked at her, now lying by his side. “Sarah —”

“*Sh!*” She giggled a little, kissed the tip of his nose. She also must feel the barrier; there were tears in her eyes that proved it. “Tom, I love you.”

It could be repeated forever, this invocation of a false magic. He wanted to ask, to demand she tell him, what was missing. It hurt like hell to think how very much of himself he had given, how very much of herself she had given — and this was what resulted. A good time in bed, a lot of fun together. Fine, but if they loved each other, why didn’t either of them really believe it?

Tom was grateful when the buzzer rang. “We just made it,” he said. “Here comes the food.”

“We should have waited.”

“We couldn’t.”

She laughed, got up, and threw on a robe. “Where’s your wallet? I haven’t got a penny.”

“In my pants.” He watched her rummage on the floor, take out the money. She got the food and laid it out on the table in their small dining room. He followed her in, still naked. They were hungry and they ate all of it even though she had as usual ordered too much.

Tom got cold and put on his robe. They sat awhile after dinner trying without success to watch TV. “You’re very quiet,” he said at last. He was obscurely afraid, almost unwilling to break the silence. Yet he was more afraid to let it go on.

“I’m thinking about the lab,” she said, drawing her knees up to her chin and clasping her hands around them. “Thinking about what in the name of God happened to that rhesus.”

“Even now?”

She looked at him, her face wide with curiosity. “Why not now? We’re finished making love, aren’t we?”

“If you say so.”

“Tom, I’m always ready for you. Don’t you ever think I’m not.”

“I know I’m more physical.”

“Yes, but that doesn’t mean I don’t welcome your love. It’s just that we were finished. Naturally, I want to talk about the lab. It’s the rest of my life. And if Hutch —”

“I’ve got him beat. This thing is so big they’re going to roll right over him. You’ll get your appropriation.”

“I hope.”

“Trust me. I’ll put it all back together again.”

“I trust you.” She slid along the couch, snuggled into the crook of his arm. “I trust you implicitly.”

There was such sincerity in her tone that his fears were almost defeated. “You have every reason to,” he said. “I’d rather die than let you down.”

She kissed his hand. “That’s what’s so beautiful about you. That’s really true, every word of it.”

At that moment, at least, he did not doubt it. “It is true,” he said.

They sat in silence, close together. The only sounds came from outside, sirens in the distance, an occasional horn, the sighing of the wind. “I think we’ve sort of been avoiding talking about the lab,” Sarah said at last. “I know I have.”

Tom knew exactly what she meant. The lab was a place of death. He nodded, remaining silent.

“I still can’t believe it. As a phenomenon, I mean. What agent could have caused such profound decay? And it was so fast! It was a horrible thing to see.”

“It’s going to be a great breakthrough, Sarah. A great advance.”

“Yes, but toward what? At the end — before he died, I mean — that ape was the most totally brutal thing I have ever seen. I saw the look on his face. I looked right into those eyes. Tom, the hatred I saw there wasn’t an animal hatred — not a human hatred either. It was something alien, something beyond all that we know or have ever experienced. It was the hatred of the monster for the normal.”

“Aren’t you imagining just a little?”

She shook her head vehemently. “I turned that rhesus monkey into something savage. I’d hardly call that imagining.”

It was three A.M. when the Sleep released Miriam. Once again she was in the attic room, its door locked. She opened her eyes. The room was thick with darkness. Absolute blackness, but not quite absolute silence. There was creaking movement all around her, whispering, shifting sound, the noise of ceaseless tiny motions. It was horrible to think of them in their chests, of how close to them she had Slept. She turned on the light.

Despite the bright light and the obvious tightness of the chests, claustrophobic fear overcame her. She clambered out of the tiny room, crossed the attic, and hurried downstairs. Now she paused to listen. Before

she continued farther she had to locate John.

Miriam's hearing was acute. She had no doubt that he was gone. The firebox in the basement was not yet cool, and he was off hunting again. She glanced at her watch. It had been less than eighteen hours since he had taken the neighborhood child. Soon he would be as frail as paper, and easily confined in his chest.

She hoped that he would be more responsible on this hunt. The first rule of survival was to take only the unwanted. Otherwise the police just never let go. It was especially foolish to take young children of this era.

She went down to the library and opened the wall panel that gave her access to the security system. The perimeter alarms were on but the electrostatic shields were not. She activated them. If he slipped up and tried to come through the door they would stun him long enough for her to do what had to be done.

Now she pulled out some information about Excelsior Towers she had obtained from the renting agent. She looked carefully at the floor plan of an apartment identical to Sarah Roberts', memorizing the layout.

The next step in the infiltration of Sarah's life was to *touch* her. The human sense of *touch* had atrophied. They called it extrasensory perception, wrongly assuming it to be a means of reading thoughts. It was rather a means of sharing emotions. *Touch* could be a beautiful communion of hearts, or if the controlling partner wished it, the meeting of nightmares.

To awaken Sarah's sensitivity to *touch*, close physical contact, the kind that around passion, would be necessary. Miriam folded up the floor plan and mentally reviewed her intended access to the building itself. Except for the extraordinarily difficult few minutes in the apartment, the whole entry and exit would be routine.

Miriam walked to avoid the exposure that a taxi or bus would entail. At this hour the risk of accidents in the streets was low, the risk of being remembered by a driver high. As for muggers, she was indifferent to them. Occasionally, she had consumed them while they tried to rob her. Man was

rarely a threat to her, at least not on a simple physical level.

Dawn would come in two hours and fourteen minutes, first light about twenty minutes earlier. She walked briskly, keeping to a schedule that would get her back home just before sunrise. Her black hat and raincoat gleamed with mist, her boots splashed in the dark puddles. The walk would take half an hour. Fifteen minutes would be spent getting into the building. She would have another fifteen minutes in the apartment itself. It was going to be just a little close; she might have some light on the way back. She went under the Queensborough Bridge, leaving Sutton Place and going north on York Avenue. The sound of a lone truck crossing the bridge echoed in the street. The blocks swept past; she kept up a quick pace. Once a figure appeared far ahead, but aside from him the street remained empty. She passed dark stores, locked doorways, parked cars. Overhead the moon had given way to heavy clouds. Although the air was motionless, the clouds raced northward, their bottoms sweeping the pinnacles of the city. Another storm was coming, this one from the south.

It was easy to break into these “secure” luxury buildings, and she quickly established a good method of penetrating this one. There was a maintenance door at the end of a narrow alley. It was locked, of course, but Miriam would have no trouble with the familiar Loktite spring-loaded bolt.

She slipped into the pool of light before the door, working swiftly until she heard the click of the lock. She entered the building’s machine room. It was dim, almost dark. Holding her hands out at eye level to ward off low-hanging pipes, she moved carefully until she was across the room, then let herself into the basement proper. Here the light was bright and harsh. She climbed the stairs for a few floors — calling an elevator to a basement at this hour would certainly alert building security. She felt the fourth floor was high enough not to cause suspicion and took an elevator from there.

When she got to Sarah’s floor she opened the door to the fire stairs so that there wouldn’t be a click if she had to use it. The hallway was silent. Her feet whispered on the brown carpet, her shadow preceded and then followed her as she passed under the lights.

She leaned close to the door of the apartment and took out her cylinder pick,

a three-inch length of Number Two piano wire. With her eyes closed she worked the wire into the lock, lifting the tamper shields and rolling the cylinders. A lock such as this was somewhat more delicate than the crude mechanism on the back door. She could picture the structure of any model of any brand of lock used in the United States. Some of them might slow her down and a few would even stop her. But most yielded soon enough, as this one did.

Next, she slipped a credit card into the crack between the door and the jamb and used it to press back the tongue of the lock. The door swung partway open and she replaced the credit card with duct tape. Now for the night latch. Another length of piano wire, this the heavier Number Six, was used to work around the end of the latch and move it along its track. As it slid she pulled the door closed. After a moment there was another click and a rattle. The night latch had fallen out.

At once she got out of the hall, remembering to remove the duct tape so that nobody passing would see the edge of it. She followed her long-established procedure on entering an occupied dwelling. First, she shut her eyes tight and listened. She heard breathing off to the left. That would be Sarah and Tom in the bedroom, and in stage three sleep judging from the rhythm of their breath. Sarah's own book had taught her that. Next, she looked around. In the time her eyes had been closed they had adjusted to the darkness. She made a note of a chair in the way of a fast escape via the living room, noted the lab coat on the hall floor. This was a simple one-bedroom apartment with a separate dining room. Sarah and Tom were alone in it, as she had already ascertained they would be.

She carried out the last test of her surroundings: smell. She inhaled deeply, identifying the faint odors of Chinese food and wine and sweaty bodies. They had banqueted and made love.

She moved toward the bedroom, pausing every few steps. Absolute care was necessary. Mistakes could not be covered up by killing the victims of this intrusion. She knew a good deal about Sarah Roberts, right down to her height and body weight. But there had been no time to study her personal habits. About Tom Haver she was even more vague. Hopefully, she had enough information to serve her purposes. He was not useful to her because

he lacked the deep bloody instincts of the true predator, but he would have to be dealt with. Like many of his nature, he covered his inner softness with a cloak of aggressive bluff. As she reached the bedroom door she could smell the powerful musks of human sex. Their lovemaking had been intense, full of passion. She cursed it. Sarah was needed for other loves; the presence of Haver was a distinct inconvenience.

Miriam went to the bed, sat down beside it, and contemplated her victim. She was like a ripe little apple, this one. Very carefully, Miriam slipped back the bedclothes and revealed the woman's neatly curved body. She longed to draw the life out of it but rather she hovered close, inhaling its sharp, humid aroma, listening to its little sounds: the breath soughing in and out, the heart beating slowly, the slight shifting of the torso on the sheets. Beside Sarah, Tom Haver stirred, but it meant nothing. His sleep remained undisturbed.

To begin the *touch* that would enter Sarah's dreams, she took her hand, which dangled off the edge of the bed, and ran her lips across the back of it, kissing lightly, brushing it with her tongue. Sarah inhaled a long breath. Miriam stopped awhile, then leaned close to Sarah and breathed her breath, smelling its sharp warmth, mingling it with her own. Sarah's head moved and she moaned. Her right breast was exposed and Miriam held it briefly in her hand, then slid her palm back and forth across the nipple until it became erect. She took the nipple between two of her long fingernails and squeezed until Sarah tossed her head. The girl's mouth hung slackly opened. Miriam covered it with her own, pressing her tongue against Sarah's with the utmost care. She remained like that for fully half a minute, feeling the faint movements of Sarah's tongue that indicated her unconscious excitement. She drew back and listened once again. Tom was still in stage three sleep. Sarah was nearly awake, making little noises as she dreamed. Miriam now felt powerfully drawn to her, could almost see her glowing dreams in her own mind's eye.

Soon Sarah's sleep deepened again. Slowly, gently, Miriam slipped her hands between Sarah's thighs and parted her legs. Moving quickly, ready for an immediate departure, she bent her head and kissed the hot, odorous flesh, pressing her tongue once hard where Sarah would feel the most intense pleasure. Sarah arched her back and cried out, and at once Miriam retreated to the living room.

Her heart was pounding. She glanced quickly toward the front door. In a few moments, after they settled down, she could escape. But not now. The least sound would alert them both.

“Tom? Oh . . .”

“Yeah?”

“Oh, I love you —”

“*Mmm.*”

There was a creak, the sound of one of them shifting position. Miriam’s mind now *touched* Sarah’s, sensitive to the recent contact of their bodies. She could feel the blazing intensity of the passion she had awakened in her and could also feel the confused question that surrounded it.

“Tom? Are you awake?”

“If you say so.”

At that moment a shaft of light burst across the room, hitting Miriam in the face like a blow. Instantly she stepped into shadow. The little fool had turned on her bedside lamp. She could have slapped her.

“I feel odd. I had a funny dream.”

“It’s four A.M.”

“I feel kind of sick.”

Sarah got up and came down the hall, throwing another light on in the bathroom. She was a handsome creature naked. Miriam liked her a good deal more than she had thought she would. There was a certain quality about her — an obvious hunger for pleasure that Miriam found very appealing. She felt more comfortable around people who could not control their lusts, because they could most easily be brought within her power.

She watched Sarah sitting on the toilet, her chin cradled in her hands, staring

with a frown at the wall before her. In the fluorescent light Miriam could clearly see the blush of excitement in her face.

After a moment Sarah spread her legs and laid her hand over her vagina. Sensuously, rubbing her legs back and forth, moving one hand over her vagina and with the other stroking her breasts, she masturbated.

From the darkness six feet away Miriam *touched* and *touched*, forcing images of soft female flesh, smooth flesh, into Sarah's mind, making her writhe with longing even as she satisfied herself. At the end Sarah threw back her head and whispered, "Kiss me." Then, hunched, her robe clutched at her neck, she hurried back to bed with Tom.

So that was what lay beneath the brilliance and the independence. Hunger, raw and unfulfilled, for a truly passionate lover. Miriam was proud of herself. This had been a most successful beginning. Now that her inner self had been aroused, Sarah's hunger would grow and expand, as beautiful in her heart as a flower, as relentless as a cancer, until her present life would seem like a desert.

Then Miriam would come to her and Sarah would feel as they always felt, that she had met the most wonderful, the best friend of her life. John had said it many long years ago, standing in the abandoned ballroom at his ancestral mansion, naked amid the rotting silks, shivering as the evening wind came down the moor and through the gaping windows: "Miriam, you make me feel as if I've come home."

Sarah awoke just before the alarm buzzed. Knowing Tom as she did, she let it ring. He fortified his head with pillows. Throwing the covers off them both, she got up and began to get dressed, leaving him to cope with the clock.

After about thirty seconds he groped out and turned it off, then sat up in bed. He emitted a groan, complex with woes. They had had wine with the spicy Chinese food and then spent a restless night.

More or less dressed, Sarah went to the kitchen and put on some coffee. She stood amid the details of their world: hissing old percolator with charred

handle, Chinese food cartons tumbled in the sink, the refrigerator humming, the wind rattling the kitchen window. Her mind slipped suddenly to a chilling memory, the intense residue of a dream.

It was disquieting to have dreamed with such lust of a woman. All that remained was an image of bright flesh, sultry eyes and wet lips, and the sweet smell of her. Sarah shuddered. She poured an experimental half-cup of coffee. Still weak, but she wasn't willing to wait. Cup in hand, she went back to the bedroom to busy herself with preparations for the day. At least the dream had given her an urge to plunge with even more than usual energy into her work, if only to forget the damn thing.

"Hurry up, Doctor," she yelled at the closed bathroom door.

"I need a cigar," he said coming out.

"So eat one."

He took her in his arms. She was not sure of him; his eyes seemed angry and loving at the same time. With elaborate nonchalance she drew away from him, went to brush her hair and put on some makeup.

"I really would like a cigar."

"You're on your way to a neoplasm of the mouth. Anyway, a cigar will make you sick on four hours of sleep."

"I love you, damn you."

He would say it at such a moment, as a means of walling off the anger beneath the banter. Love seemed to Sarah more and more an urge to containment, a hunger to fill oneself with another. As she pulled her brush through her hair she wondered if there could ever be anything more than the desire to fill the hollowness inside. She winced; she had brushed too hard, pulled out some hair. "I love you too," she said. Her voice was quick with duty. She remembered how she had recited in school the responses to prayers in which she had no faith. He came, trying to seem gently forceful, sexy. He appeared behind her in the mirror, lifted her hair, and kissed the back of her

neck. How wooden could a man get? He needed her, though, which was fascinating. They kissed, his lips crushing hers. She felt deep twinges of response, the secret pleasure of the thief. He was trembling, his hands feverishly caressing her back. Then he lifted her off the floor and she felt a wild thrill of helplessness, a powerful urgency to let someone do his will with her. Someone . . . beautiful.

By abandoning herself to him she closed herself off. He carried her, as easily as he might a child, to their rumpled bed. When he put her down she slipped dutifully out of her clothes. "I'll be quick," he said with the assurance of the beloved.

As they swung together in their groaning bed she allowed her mind to drift, and it inevitably drifted to that glowing dream-body. When her imagination was at last possessed by those smooth and exotic images, when she could taste the taste of that dream-skin and smell the dream-being's musty secrets, she experienced a moment of pleasure, rare and stunning. He kissed her afterward, assuming that her wide look of surprise belonged to him.

Tom's heart continued to swell with love as they dressed and went to the kitchen. It seemed so simple and so right. Last night and now this morning had banished all his doubts and angers; he was in a kind of ecstasy. If *she* needed, then *he* would offer. He felt that they belonged to each other. It was incredibly good to think, 'I belong to her.' He watched her pour him coffee, butter some toast for him. He almost hoped that he would have to give everything up for her. The nobility of it fascinated him. An awesome proof of love. This thought led him to the problems he was going to face at the clinic. It was time to discuss the board meeting. Almost past time, as a matter of fact. "It occurs to me," he said, "that you ought to give me something to work with at the meeting. Some kind of definite statement about what you think happened to Methuselah."

"You don't need it. Just show them the tape."

"Give me something — even the raw computer printouts. Show them you're on to something."

“You know what’s available.”

“Sarah, your work is precious. Let’s not allow any chance of failure. None.”

“In other words, you’re getting cold feet. If the board turns you down, if it doesn’t reverse Hutch, you can’t bear the humiliation. You’d have to resign and you’re afraid. I thought you were so sure you’d win.”

“I’m doing this for you,” he said miserably. He couldn’t explain it better than that.

“Finish your toast, we’ve gotta get moving. Who knows, maybe a miracle occurred and the statistics prove something. Best thing to do is get down to the lab and find out.”

The tonelessness in her voice was almost cruel. She was still punishing him for his ambition. The growth of love he had felt apparently meant little to her. She didn’t really understand the situation. Perhaps it was beyond her understanding. Her every gesture, every look and movement, radiated betrayal. The jeopardy that he had accepted in going over Hutch’s head to the board was a matter of indifference to her.

He ran his hand along the table, closed it into a fist. “I should have squeezed Hutch out a long time ago. Before I met you.”

She nodded, barely glancing at him. “You’ve got to be careful, darling.” There was something obviously false in her tone. He was seized with a desire to explain.

“If Hutch wins, I’m out. I don’t see any other alternative.”

“You wouldn’t.” She pecked him on the cheek, smiling too brilliantly. It seemed at least possible that she was not indifferent to his sacrifice at all, but rather so guilty about it that she couldn’t bear to acknowledge it. Perhaps he was fooling himself, but it felt better to believe this than the other, cold thing.

“Let’s get going,” he said. “We’ve got a lot to do.” An image from the past floated into his mind: school play, eighth-grade year. Before them all he had

forgotten his lines. He remembered his silence, and the way the faces of his jealous and resentful audience lit up when it was realized that the faculty's darling was failing, and the roar of delighted laughter when his silence did not end.

Miriam's visit to Sarah Roberts had worked well. A vestige of what Sarah had experienced remained in Miriam's own heart. It had been a strong *touch*. The next phase of the plan was very much more problematic.

She would have to "meet" Sarah, and the only fast way she could do it would be to become a patient at the Sleep Research Clinic. It would be the most dangerous thing she had done in a very long time. For the first time in history human scientists were going to get a chance to study a member of her species. They didn't exist in human scientific literature, only in mythology. What would the scientists do when they tried to take the measure of her mystery?

Most of all, she dreaded captivity.

She was terrified by bars, such as the ones that surrounded Sarah's ape, the one that had *touched* so powerfully as it died.

Miriam did not like the feeling of being menaced by humankind. And the thought of being studied by them was even more disquieting. They might consider her to be without human rights and cage her just like an ape.

The risks were frightening.

But Sarah could solve the problem of transformation, could make it permanent. That made all the risks seem trivial. If Miriam could only have known what was going to happen to John, she would have captured the doctor earlier. There might have been some small chance . . .

At the thought, her mood shifted to gray sorrow. But she refused to live in grief. Her life must be rebuilt. She would comfort John and protect him if she could, but she would not obsess herself with his suffering. Life was full of tragedies. You buried the dead.

The *touch* that had been broadcast through the vast emotional babble of the city by Sarah's experimental ape was like a beacon to Miriam. It told her how very close Sarah had come to inducing transformation, and therefore to understanding it.

Miriam's next move had been carefully planned. As soon as she successfully *touched* Sarah she went home and made an appointment for an interview at the Sleep Research Clinic. Now that Miriam had hidden a part of herself in Sarah's heart the next step was to engage her mind.

A part of Miriam might have enjoyed the danger of all this, just as she might have enjoyed fox hunting with John. There was something exhilarating about jeopardy. Safe air was stale, but dangerous air was silver clear. Love your enemy, her father used to say, for without him you would never taste the flavor of victory.

Yes, the noble sentiment of the past.

Forget the past. Go upstairs, change clothes; you'll be late for your ten o'clock appointment. She had made it of necessity at the last minute. "We'll fit you in, but please expect a delay."

She wore her blue silk Lanvin suit for the occasion. As she dressed she reviewed all she had rehearsed for the sleep clinic interview. She would enter as a patient suffering from night terrors of adulthood. Before branching off into gerontology, Sarah had specialized in this rare disease. Even yet she was the clinic's only expert. The three or four cases they got in a year didn't justify a full-time staff position. Sarah would certainly be called in.

Sarah. Miriam thought of her, huddled in her robe, shaking with passion that she could not possibly have understood. It was going to be most interesting to contend with somebody as intelligent and spirited as Sarah.

Miriam did not scorn human intellectual achievement. She had developed a keen interest in science. She had identified her own animal ancestors. She belonged to mankind and mankind to her, just as the saber-toothed tiger and the buffalo had once belonged to each other.

She put the finishing touches on her outfit. It would do: she looked beautiful, just a bit tired, eyes rather sad.

Eyes rather sad.

Time was passing, time could not be stopped. If only . . . but it was no use thinking about it. John was a dead man. “Dead.” What mockery there was in that word.

The doorbell rang. Miriam looked through the peephole, observed a man in uniform. Her chauffeur, appearing at nine thirty-five as requested. When she had to do any driving in the city she used a limousine. Her own car would be an inconvenience and taxis were too unsafe; she used them only when necessary.

As she walked out the front door, she noted with approval that the car provided was a dark-blue Oldsmobile. It was foolishly risky to use the more pretentious cars; they only attracted unwelcome attention. The driver, who was young, clear-eyed and sober, opened the car door for her. She fastened the seatbelt and settled back, locking her door but leaving her hand near the catch in case it was necessary to exit quickly. Her analysis of automotive design led her to conclude that this make was safer than most, and less prone to explode if hit from the rear. The driver started the engine. She sat well back, relaxed and yet attentive, ready if her luck ran out and there was an accident. Her ride was so pleasant that she found herself envious of those who could afford such transportation full time.

The medical center was swarming with people. Miriam rode to the twelfth floor in a jammed elevator, trying not to inhale their scent. Unfortunately, the waiting room of the Sleep Research Center was also crowded. The smell and feel of so much human flesh was unnerving.

Nevertheless, she waited with the others, thumbing through a well-worn copy of *Book Digest*. Ten became eleven, then eleven-thirty.

“Blaylock,” intoned the receptionist, at last. “Desk three, please.” This was the only facility of its kind in the city. The crowding and impersonality of it indicated that there ought to be more. Miriam was interviewed by a pleasant

young man in shirtsleeves who took her name and asked her to describe her problem.

She knew what the effect would be when she mentioned the intensity of her “nightmares.” He looked at her with renewed interest. Most of their cases must be common insomnia, cured by teaching the patient how to cope with stress.

Medicine knows night terrors of adulthood as one of mankind’s most frightening problems. Miriam could have quoted Sarah Roberts: “These terrors arise from the primordial depths and induce in the sufferer perhaps the most intense fear that a human being can know. In quality and intensity they are to nightmares as a typhoon might be to a spring shower.”

“How often have you been having these . . . troubles, Mrs. Blaylock?” The interviewer’s voice was calm but his eyes regarded her sharply.

“All my life.” How pitiful that every word was true. The vividness of the experiences she had during Sleep were probably even worse than night terrors. But she had long ago learned to endure them. They went with Sleep and therefore must cleanse the soul.

“When was the last one?”

“Last night.” She watched his face flicker at that. This was working well. Mrs. Night Terrors Blaylock was going to become a priority case, she suspected.

Now his voice dropped and he leaned closer to her. “Can you describe it?”

“The ocean was chasing me.” It had just popped into her head, but she thought it a lovely night terror for the spur of the moment. Much nicer than the one she had planned, about hands choking her.

“The ocean?”

“Huge, towering black waves that stretch up forever. Roaring and crashing over me and I’m in the sand, I’m running, I can hear it over my shoulder, it

comes right up the dunes, nothing's going to stop it. You can see a shark cruising in the waves. Everything smells horrible, like it had all gone rotten." Goose-flesh had broken out all over her body as she talked. Her hands were grasping the edge of the table. She was surprised at the intensity of her feeling. It ceased to be an act. Had she ever experienced such a dream? Perhaps it was *behind* the dreams she remembered, perhaps there was something in her, coiled like a snake, spitting out recollections so monstrous that her mind dared not touch them directly.

The worst of it was something she didn't tell the shiny young doctor: she was indeed the woman running from the ocean. But she was also the shark.

5

JOHN WAS RUNNING through the early morning, running like a slowed-down movie past the blooming flowers, the tulip trees with their buds, and the new-sprouted grass of Central Park. His hunger made him feel as if a living thing were moving in his stomach. His eyes bulged, his mouth opened wide as he ran. He must be hideous in his flapping raincoat and dirty blue suit, with the fingernails of a demon and the face of a corpse. People shrank from him, children shouted alarm. He felt like a hermit who had been knocked out of his hiding place by a wrecker's ball.

His heart skipped and thuttered. Pain shot down his shoulder. He staggered. Then the beat started again: food, foodfood, food, FOODFOODFOOD! He coughed, running along the Bridle Path, lurching past Cleopatra's Needle, finally plunging into the shrubbery beside the path.

He could go no farther, his breath was fire, his heartbeat a confused rattle. This place was redolent of hot, strong flesh. Every few minutes another jogger passed. He listened to one, a big man breathing easily. Too strong. Then another — lighter but still not tired enough. His victim would have to be practically exhausted, just at the end of a long hard run. Yesterday little Alice had nearly gotten the better of him. Today he was even weaker. In his extremity he began to recollect an almost forgotten time of his life, which he now saw as the best time — before he met Miriam. He remembered the grassy slope at Hadley where he and Priscilla lay intoxicated with the smell of the heather on windy spring days. The clouds rolled madly down the sky. God, what wonderful times! He was ceasing to love the drama and speed of this age, and to cherish the quieter time before. Even old Hadley was gone now, the ruined house rebuilt and turned into an orphanage by the strange populist state that had followed the Empire.

Without warning, a cough burst out of him. He found himself pitching backward, almost losing consciousness. Above him he saw the sky through a tulip tree. And the clouds in it were the same! The same as that day at Hadley! “Oh, Johnny, my pladies awa’,” Priscilla had cried, “awa’ with the win’!” And there bouncing across the heather went her fluffy plaid skirt. How he had run! Run in the wind and the kind land, run for that plaid with all the might of his young years.

Another cough, not his own. He struggled up, heard it again. Thud-thud on the gravel, thud-thud, thud-thud. Here came a girl who had put on a little extra during the winter, jiggling along in a purple sweat suit, gasping like a tophorse at a coach stop.

He connected with her right side as she jogged past. She let out a surprisingly shrill scream for one so heavy.

A pack of crows took flight, their voices echoing in the sky. The wind tossed the trees and the clouds scudded past. John grabbed her hair and pulled her head back, jammed his scalpel in until he felt the “pop” as it penetrated the pectoral muscle. He fell on her, clasping his hands behind her neck, adhering to her with desperate energy. She staggered and flounced and shrieked for help. Pain flashed through his joints as she struggled, but he had a good hold. He placed his mouth over the wound and sucked with every last whisper of energy. Slowly the life oozed into him. As her movements weakened, his became stronger and more assured. She grew lighter and he expanded in size, filling his slack clothes, gaining pinkness in his cheeks and sharpness in his eyes. Her screaming lowered to a hoarse rumble, then a growl, finally a rasp across a dry and withering tongue, past lips become strips of leather. The skin sank to the bones and the lips cracked away from the teeth. After a moment the girl’s jaw snapped open, her gums contracting. Her hands had become black claws, the flesh tight and splitting on the bones. The eyeballs sank into their sockets, collapsing in on themselves.

John jumped away from her. Stiff and light, she toppled to the ground like a papier-mâché toy. He was bloated and flushed, his eyes ablaze. He pounded his temples in an ecstasy of relief. Snarling with his victory, he snatched the remnant up and threw it high into a tree where it caught and fluttered in the wind.

He gnashed his teeth, he was far from satisfied. Without the Sleep, his body demanded ever more energy. The longer he remained awake the more he needed.

“I’ll never need more than I can get,” he said aloud, testing to see if the softness of youth had returned to his voice.

What a delightful surprise *that* was! He hadn’t sounded like that in days. “O mistress mine,” he sang, listening to the sweet smooth tones, “O mistress mine, where are you roaming? O stay and hear, your true love’s coming!” And then he laughed, rich and deep and full, and ran with a firm step down the path after stronger, better, even more enriching prey.

Behind him shouts were rising, feet thundering past Cleopatra’s Needle. (Miriam always laughed to see that thing here, occupying such a place of honor. She said that the Egyptians had considered it the worst obelisk in Heliopolis.) Young men were bearing down on him. On the roadway to his right a scooter cop stopped and got off his machine, looking with a frown in the direction of the shouts. He began to trot up a low hill to the scene of the crime. John moved toward him, down the same hill.

With the strength he had gained it was just possible to take the strapping young policeman. As they were passing each other he slammed his fist into the side of the man’s head, sending him reeling, his cigarette flying from his mouth and his cap sailing into a bed of begonias. He made quick work of the struggling, cursing man. In another twenty seconds he was fitting the remnant back onto the scooter. The devil take caution, let them figure this one out. He could see the headlines: COP TURNS TO MUMMY; RADIUM DIAL WATCH TO BLAME?

Now he felt really wonderful. He might as well be flying above the roadway, above the lawns, above the trees — flying and free.

Others only thought they were alive. They never knew *this*! His heart was beating perfectly. If he looked at a building he could hear the sounds behind the windows. People talking, TVs going, vacuum cleaners roaring. And he could hear the clouds like a great song, not meant for the ears of man.

Sirens were rising to the north and the south. A patrol car came blazing up the roadway.

John spent the rest of the morning in the Metropolitan Museum, lingering for hours in the costume exhibit, looking at the bustled dresses and frock coats, remembering his own time, so utterly lost and far away.

It was a relief when the interview was completed. Miriam was beginning to feel a need for Sleep. She returned to the house in her rented limousine. A test — called a polysomnogram — was scheduled for tonight. And Sarah Roberts would surely be there. *Must* be there. Night terrors indeed. If they knew the real depths of fear they would not be able to live. Mankind was in the bland middle of the emotional spectrum. Miriam lived at the extremes.

She was let out of the car. “I’ll need you again at six-thirty,” she said as she went up the front steps. The Sleep was coming upon her, right on schedule. She heard a faint tinkling from inside the house. The telephone. She fumbled with her keys and rushed in. A bad moment to take a call. Her time awake was now limited.

“Miriam?”

“Yes. Who is this?”

“Bob.”

For a moment she was blank. Then it came back. They hadn’t seen the Cavenders for months. “Oh, hi! It’s been a long time. I hardly recognized you.”

“Miriam, we’ve lost Alice.”

She doubled up as if she had been hit in the stomach. Then she straightened and took a deep breath. “How long?”

“Since yesterday when she left for your place.”

“She never came here, so far as I know.”

“Amy saw her go in.”

“She came in here?” Miriam’s mind turned to John, to the — no. No matter what state he was in, he would never do that.

“She usually comes home for lunch after she sees you. Yesterday she didn’t.”

A trembling shock coursed through her. “She’s not here.”

Not in the hallway, not in the music room. Oh, don’t let it be, not in the furnace.

Don’t hurt me this much, John, please!

“I know that. I just wanted you to be on the alert.” He paused. There were a series of stifled grunts, the sobs of a man who doesn’t know how to cry. “On the alert,” he said again. “I’ll call you with any news.” The line clicked, the cutting of the wire of life. The phone slipped from Miriam’s hand, banged on the oak floor. She closed her eyes. Snarling pain gripped her temples. Ice-cold air seemed to enclose her. She craned her neck like a woman seeking to rise from the bottom of the sea.

She ran her hands along the fabric of her suit, bowed her head. When her clock tolled one, she looked, startled, at its ancient face.

Impulses raced through her mind: kill John, kill herself. She rejected them both as beneath her. He was helpless in his actions, driven by forces beyond his control. And she had no intention of voluntarily giving up life.

Bit by bit she regained her composure. There came into her heart a new feeling toward John. His suffering mattered less to her, his potential for destruction more.

How dare he take Alice. She belonged to Miriam, not to him. Rage blazed up in her. It was lucky for him that he was not home. At this moment she would have faced knives, guns, tearing claws to get at him.

Yet he had given her all of himself that he could give. For love of her he was paying an exorbitant price. He was losing much more than life, facing an end

more terrible than even the worst death. She could not let herself hate the damnable creature.

She was alone again.

In all the world there was not one friendly soul, not one being with whom she could share anything.

She ran into the library, the place where she habitually did her planning and thinking. "ALICE!" With a moan she yanked the heavy drapes closed and sank into her desk chair. The only sound in the room was the steady tinkle of the old Roman water clock.

Her whole future had been planted in Alice. The possibility of losing the girl had simply never occurred to her. Oh, what plans she had made!

She had always loved her life with joyous intensity. Over the years she had ruthlessly blotted out every memory of her family, had shaken off all the tragedies, and pressed ahead. She had seen humanity rising out of the muck, had learned to respect it as the rest of her species never could, had come to anticipate the future with zest, especially now that overtones of barbarism were re-entering human culture.

In one mad instant John had taken the future away.

Tears she would not allow, even for an extinguished love. She and Alice were made to be together. And now instead there was this pit. A black pit. The room around her was cold. The paneling, grown rich with years, frowned ominously, making the dark even blacker.

She opened the curtains. It was such a bright day, the storms of dawn blown on their way. Her petunias were thriving, choking the window box with at least a hundred blossoms.

She found that she could not bear to look at the street, it could not seem more empty. She shook herself — the Sleep demanded her.

She didn't want it now, not after this. It doomed her to terrible dreams, she

was sure of it. How could she bear this! She groaned and ran out of the room. Her body was slowing down, her eyes growing heavy. Where could she go? Not the attic, not enough time to get all the way to the top of the house.

The floor waved beneath her feet. She couldn't Sleep here! But it was intractable, nothing would stop her. In moments she wouldn't be able to lift her arms. She thought of the basement. It might still be possible to make it down.

With long, shaking steps she went to the door. There was a place, uncomfortable but safe, that John had hopefully forgotten that led to the secret tunnel they had built to the East River. Years ago it had been destroyed by the FDR Drive but the basement entrance and the section under the garden still remained. She hoped she could find the right stone in the basement floor.

By the time she got there the world around her had receded as if to the end of a long corridor. She knew that she was still moving but she was absolutely out of contact with her body. Her hands felt the slate floor of the basement, pushing for the slight looseness that would tell her she had found the place.

Looseness — somewhere . . . she felt something hard and cold hit her. Hard and cold and wet . . . she had fallen to the floor. Sleep came, and dream . . .

The lamp was bobbing, flashing in her eyes with the roll of the ship. As it creaked, water spurted in between the planks. "Father?" The lamp shook wildly and then fell to the floor, plunging the little cabin into green half-darkness. What was happening? When she had gone to bed the sky had been clear, the wind just strong enough to snap the sail.

What was that horrible shrieking?

She got up and wrapped a cloak around her silk tunic. "Fa-a-ther!" The ship began shaking from side to side as if it were being worried by a sea monster. Miriam staggered to the cabin door, pushed it open.

Wake up! You're in danger!

The door . . . was so hard, so hard — but she pushed it open and struggled out

into the raging green hell of the storm.

The voice of the wind mixed with the deep thunder of the waves. Perhaps twenty feet overhead great clouds seethed. There was no mast, no sail, only a deck strewn with tangles of rigging and bits of red sailcloth. Sailors, naked, lashed together, staggered here and there on what task she did not know. “FAAATHER!”

Powerful arms grabbed her from behind. He took her to his bosom, pressed his mouth against her ear. “This ship is doomed,” he said, “we’ve got to save ourselves, my daughter.”

“The others —”

“The other ships made landfall in Crete. A great disaster has occurred. I did not foresee it. An island has exploded. I think it must have been Thera. You must go to Rome now, leave the east alone. Greece will be in ruins —”

“Father, please help me, save me!” She clung to him with her legs and arms and sobbed into the wrenching wind.

His head turned. “It’s coming,” he said. She felt it rather than heard it, a deep pulsing throb like the heart of a giant. At first there was nothing to see in the black mist, then, far up in the sky, a white line appeared. Her father’s arm clutched her until she could hardly breathe. His face terrified her, it was wretched with anger, his lips twisted into a grimace, his eyes glaring horribly.

“Father, is that a *wave*?”

He only clutched her more tightly.

The ship began to rise, its prow lifting higher and higher. There commenced a great fusillade of explosions as the hemp lashings that held it together snapped and the boards sprung straight. The hiss of water rose from the hold, and with it the hideous screaming of the oar-slaves. Sailors threw themselves to the deck. Behind them, on the low forecastle, the captain was staggering about trying to organize another sacrifice to Nereus, god of storms.

The ship rose higher. It felt as if it had taken wing. Behind them the surface of the sea shook and boiled. Before them the great black leviathan bore on.

“We must jump! We’ll have to swim.”

He dragged her to the side. She had swum only in the Nile, never in an ocean. And this — it would swallow them!

Her father ignored her frantic protests.

John will come! Wake up!

The dream held her as surely as if she were bound to a rack.

The bubbling, inky water closed over their heads. Even beneath it there were noises, a deep boo-o-om bo-o-om. Was there really a sea god down there bellowing his anger?

Her head popped to the surface. She felt her father’s arms come around her again. Not ten feet away the ship slowly upended and fell backward with a tremendous explosion of foam. It wallowed, its black bottom exposed briefly to the air, and was gone.

They were swimming on the side of an enormous wall of water. And they were being swept higher. The white line at the top had grown to a maelstrom of roaring breakers.

They came rapidly closer. In them she could see fish and branches of trees and bits of wood. Her legs drove like pistons but the current grabbed at her, pulling her down and down. Her head was in a vise, her hands grasping water. She was ripped from her father’s arms. It got cold and dark. Great creatures were moving in the deep, their cold flesh sliding against her. Her arms and legs thrashed but still the powerful flow dragged her down. She was being crushed, like the death of stones inflicted on her kind by the Phoenicians.

Something had grabbed her hair. It yanked her so hard she saw flashes. The current lost its hold on her. Even though she knew she was rising — it was

getting warmer and lighter — her mouth was going to open in a moment and she was going to breathe water. She would die.

She clamped her jaws shut, finally clapped her hands over her mouth and nose. Perhaps the sea-thing that was dragging her upward would break the surface.

And then she was tumbling in the white water, gasping gulps of wet air, swimming like a demon. She heard her father's own ragged breath in her ear.

He was the thing that had saved her.

Then she was through the breakers. Before her was a limitless plain of water, rolling gently. She understood that she was now on the back of the enormous wave that had destroyed the ship. On the horizon there stood a vast black pillar of cloud full of red cracks. Enormous tendrils of lightning coursed ceaselessly through it. It grew steadily, a great dark finger poking into the sky.

“Father,” she gasped, trying to point.

She swam in a circle.

The empty waters did not look back.

“Father! Father!”

Please, gods, please, we need him. We have a whole family! Please, gods, we cannot survive without him.

You cannot kill him!

She pounded with her legs and slapped the water with her hands and spun around and around. She screamed for him.

A shadow rolled in a low wave not far away. She dove after the snatch of blue, beside herself with terror and grief.

Then she saw it, the vision that would never leave her again: his face, mouth

distended, eyes bulging, disappearing into the abyss.

“Please! Ple-e-ase!”

A wind like a Titan’s breath burst from heaven and the waves came on.

The salt water made her throw up again and again. Her father, her beautiful father — the family’s wisdom and strength — was dying. She dove beneath the waves seeking him as he had sought her, swam deeper and deeper until she felt that ice-cold current — into which *he* had plunged without regard for his own life, to save his daughter.

She was the oldest, the others needed her now. Alone in Crete, their Akkadian barely passable, they would certainly be destroyed. Her life was precious. She must choose to preserve it. Her father would certainly have demanded it. As hard as it was she closed her mind to him.

She turned toward the dim gray light of the surface and swam. Once there she began to plan her own salvation. The very morning they left she had taken food and Sleep, so she knew that she could go on for at least three or four days.

She opened her eyes in a chilly dungeon smelling of damp stone. Her mouth tasted awful, she had vomited in her Sleep.

The dream had left her sullen with grief, remembering her father’s face in the waves. “I could have saved him,” she said into the darkness.

“But it’s too late now, isn’t it?” screeched an answering voice.

John!

Something gleamed before her eyes, then she felt the cool pressure of a blade against her throat.

“I’ve been waiting for you, my dear. I wanted you to be awake for this.”

Tom glanced at the admission recommendation on top of the pile. Dr.

Edwards had quite properly marked it for special handling. Procedure required Tom to initial any priority admissions. The clinic had a waiting list three months long.

He called Sarah. “How would you like a case? There’s a lady with night terrors of adulthood waiting for admission.”

“Are you nuts?” she roared into the phone.

“Just do an evaluation and workup. It’ll take a couple of hours. Think how it’ll look with the board. Brilliant researcher, and so dedicated she keeps her finger in the clinical pie as well. That’s heroine stuff.”

“Oh for God’s sake!”

“If you will be true to this your oath, may prosperity and good repute —”

“Hippocrates doesn’t enter into this. Night terrors, you say?”

“That’s what I like about you. You’re so damn curious. I like that in a scientist.”

There was a moment’s silence. “When’s she due to start?”

“Seven-thirty tonight. She’s on priority.”

“I should hope so.”

They rang off. Tom had almost laughed aloud. Sarah was so predictable. Her willingness to pitch in tonight was typical. Complaining and protesting all the way, she went through life doing the work of three people. It would be good for her to have contact with a patient again — a real, hurting human being. She needed the perspective.

He snorted at that thought. How the hell did he know what Sarah needed? She was so complex and mercurial, with a dark depth to match every bright height. All he could really do was offer her what he thought might be appropriate. But to assume that he could ever really know her heart, even as her lover, would be very foolish.

It took him another hour to go through all the admission recommendations, initialing some, sending others back for follow-up evaluations, noting a few of special interest for routing to Hutch. But not the Blaylock case, not that one. He had a strong feeling that it would be useful to Sarah. In any case, it was hers by rights. She had written brilliantly on night terrors of adulthood and had achieved a couple of cures that lasted beyond the imposition of sedatives and tranquilizers. The case belonged to her. There was no sense in letting Hutch in on it, he would just assign it to somebody else to prevent her getting points with the board.

When Sarah appeared at seven her mood had lifted considerably. She came around his desk and kissed him on the forehead. "Methuselah's beta-prodorphin levels were dropping like crazy at the end," she said in a voice rich with excitement. "We are on our way."

He gave her a hard kiss. It felt good to do it, all though his body. "You're wonderful," he said.

"I might have that breakthrough you've been looking for," she said, obviously not even aware of the kiss. "I think we just might be able to establish a viable level of control over beta-prodorphin production. We won't be able to stop the aging process, but it'll give us the ability to slow it down, or even turn it back."

He looked at her, right into the directness of her eyes. He was absolutely stunned. "What are you saying?"

"I'm on the threshold. I'm going to get the key." She tossed her head, went on. "It isn't a matter of a drug at all. We can achieve our results by controlling the depth of sleep and the temperature of the sleeping body. Just with what we know now we could probably add ten or fifteen percent to the life-span of the average individual. With no pharmacologic side effects."

"My God."

"The data is falling together, I guarantee it. You were worried about the board. Don't be. You'll win in a walk."

Tom was too relieved to be elated. He took her cheeks in his hands and kissed her again. This time she responded, making a pleased sound in her throat, drawing a leg up behind his, slipping her arms around him. Behind it all was this simple love, the cherishing of each other's dreams. She was so close!

He remembered the case he had imposed on her. "I really am sorry about this patient," he said. "If I had known what was going on I never —" She touched his lips, smiling.

"The patient needs me. I'm the best choice in a case of night terrors." It was his turn to smile. At least she wasn't holding it against him as she had so many other things recently, in that stubborn way he found so hard to accept.

Wordlessly, he handed her the computer printout on the night terrors victim.

* * *

Miriam's arm flashed up with stunning speed and knocked the cleaver from John's hand. Instantly, he realized what a mistake it had been to wait for her to wake up. He had stood here, stupidly exulting as she Slept, her body glowing softly in her silk suit. The cleaver had felt good in his hand, the blade was honed to slice deep with the lightest stroke. He could almost hear it singing through the air, almost feel the soft *chuck* of it connecting with her neck, almost see the awful awareness flashing and then fading in her eyes.

The hand closed around his wrist like a manacle. He tried to pull away, to pry back the fingers. Miriam rose to her feet, snatched his other arm and held them both out before him. He twisted away but she raised him off the floor. He could see her face inches away from his, her teeth gleaming, her eyes darting like a crow's eyes.

He threw his head back and pushed against her belly with his feet. It was useless, she might as well be a stone statue. His heart bumped in his chest and pain radiated down his arms. "You're killing me!"

Then she said something that astonished him, especially after what he had

seen in the attic. He was certain he had heard the words correctly: “I love you.” She asked his forgiveness and hissed out a prayer. Whenever she was about to enter danger, she called on the gods of her species.

She dragged him to a far corner of the cellar. There came a grating sound: she had lifted with one hand a slate block right out of the floor.

He was still trying to understand what she was doing when he was tossed like a rag into the space beneath the block. He fell hard, landing in six inches of freezing water. With a crash that made his ears ring the slate block was dropped into place above him.

Absolute dark. Dripping water.

John now felt a sweeping wave of despair. He wasn't going to be escaping from this place. She had buried him alive!

He screamed, he hammered on the slate, he cried out her name again and again. His hands clawed the cool stones until his fingers tore. Death was going to catch him here, jammed into a space barely as large as a coffin!

“Please!”

Dripping water.

Panic. Images of home. Clear sky. Spring meadows. Off to westward, the huntsman's horn.

Hands clutching him, tearing at him, pressing his face into the muddy, stinking water. Crushing, agonizing weight. Stones. Stones and utter helplessness.

Consciousness left him. But it was not replaced by oblivion. Instead, he was back in the attic, where he had been earlier, searching for Miriam.

The terror of what he had seen there now exploded out of his unconscious into a madness of clutching, leathery fingers and ivory nails, and the foetor of dead breath. The sound that issued from him, reedy and mad, did not bring him back to consciousness.

He remained still, knees jammed against mouth, nose touching the surface of the water, back screaming with the pressure of the stones, mind dancing through the peering dark of hell.

Sarah met Mrs. Blaylock in the receiving lobby. Until recently, it had been a dreary institutional waiting room with brown walls and plastic chairs. But Tom had insisted that it be redecorated to offer the patients the kind of supportive atmosphere they needed. Now it looked at least livable with wallpaper of pastel green, easy chairs, even a big couch.

Sarah picked Miriam Blaylock out instantly. She was easily six feet tall, blond, with eyes so gray they looked white. There was a sort of fierce inquisitiveness about her face, something that made you want to look away. She sat on one of the more rigid chairs. The other patients being admitted tonight stood in a little knot near the door, like nervous mice.

“Mrs. Blaylock,” Sarah said in a loud voice.

The woman fixed her with that stare and moved toward her. Their eyes met, and Sarah found herself in the presence of something much more profound than physical beauty, and yet the sheer magnificence of the woman’s body and the serenity of her expression were remarkable. There was also a sort of wary grace about her, a way of moving that wasn’t quite right, an atmosphere of absolute — and therefore strange — self-assurance.

“I’m Doctor Roberts,” Sarah said, hoping that her expression hadn’t betrayed her surprise. “I’m going to be managing your case.”

Now Miriam Blaylock smiled. Sarah almost laughed, the fierceness of it seemed so misplaced. It was not the smile of a stranger at all, but something else, almost of triumph. Sarah was tempted to make a professional judgment about such inappropriate behavior, but she felt she needed more data. Carefully, she infused professional neutrality into her voice. “First, we’ll go on a short tour of the facility and I’ll explain our procedures. Follow me, please.” She led her into the observation room. For companionship’s sake, Tom intended to stay and operate the equipment. He slumped in a chair

before one of the computer consoles. “This is Doctor Haver,” Sarah said.

Tom turned, his face registering obvious surprise when he first saw Mrs. Blaylock. “Hello,” he said. Sarah found herself obscurely annoyed at him. He didn’t have to look so appreciative.

“Doctor Haver will explain our monitoring system.”

“Will it hurt?”

“Hurt?” Sarah asked.

“Any part of it.”

Her voice seemed to fill the room with its rich, sultry timbre. Yet there was an uncanny intonation, almost childlike. “No, Mrs. Blaylock, it won’t,” Tom said. “You’ll find that nothing we do will be in the least uncomfortable. The facility is designed to insure you a good night’s sleep.” Tom cleared his throat, whipped his fingers through his hair. “This system will read and analyze the electrical impulses that your brain makes when you sleep. It’s called Omnex and it’s the most advanced computer system of its kind in the world. As your sleep progresses to deeper and deeper stages, we’ll be watching and we’ll know not only where you stand but how your sleep compares to the various models we’ve developed here at Riverside.”

“He’s telling you it’s very advanced and wonderful,” Sarah said through a smile.

“If the computer analyzes the polysomnogram, what do you two do?”

Quite a well-informed question coming from a patient. Sarah was tempted to answer with the truth — they sat around and drank coffee. “We watch the graphs and try to form an overall picture of your personal sleeping pattern. And of course we watch for signs of your problem.”

“I’m not afraid to refer to it, Doctor Roberts. It’s called night terrors. Will you wake me up when they come?”

There was a plaintive note in her voice now that made Sarah want to comfort

her. "I can't promise you that, but we'll be here if you do awaken. Let's go down to the examining room, then you can use the patient's living room for the evening or go to your cubicle, whichever you prefer."

A glance inside the examining room told Sarah that it was properly prepared for the job she had to do. "Please take off your blouse Mrs. Blaylock. This will take only a few minutes." Sarah put on her stethoscope. It was to be a cursory examination, over in a few minutes, intended to uncover only the most gross disease process.

Sarah was astonished to find Mrs. Blaylock naked when she turned around. "Oh, I'm sorry, I didn't make myself clear. I just wanted you to take off your blouse."

Miriam Blaylock looked directly into her eyes. The moment was filled with tension. Mrs. Blaylock opened her mouth, seemed about to speak. The room was incredibly claustrophobic.

Before she realized she would do so, Sarah had herself spoken. "What do you want?"

"Want?" Miriam Blaylock parted her lips. "To be cured, Doctor." There was something mean, almost a sneer, in her tone.

Sarah was embarrassed. "Just sit up on this table." She gestured toward the examining table. Miriam slipped onto it, leaning back against her hands. Her legs were spread wide. It would have been obscene if the woman hadn't seemed so utterly oblivious.

As Sarah prepared her test tubes for the blood work, she realized that she could actually smell the faint musky scent of the woman's vagina. She turned around, syringe in hand. Miriam made a sound in her throat and moved one of her legs. The whisper of flesh against the examining table sheet was disturbing. "I'm going to be taking some blood, Mrs. Blaylock," Sarah said in what she hoped was a thoroughly professional tone. Miriam extended her right arm.

The arm was beautifully shaped, the hand delicate and yet strong. A frightful

and sensual image flickered in Sarah's mind, so disturbing that she shook her head to suppress it.

Something made her own flesh crawl when she began stroking Miriam's skin. "I'm trying to raise a vein," she said. "Make a fist, please." She inserted the needle. Miriam made another noise, one that was familiar to Sarah. It was her own little chortle, the one she always made when she was penetrated. To hear it under these circumstances, in the throat of another woman, was faintly revolting. Sarah had to concentrate every ounce of attention on what she was doing just to avoid tearing a hole in the woman's arm. Mrs. Blaylock's hand lay palm up in hers. Perspiration blurred Sarah's vision as the syringe filled. She longed to be free of Mrs. Blaylock's touch. It was undeniably pleasurable and the very delight of it was what was so awful. She looked down at the palm, noticing its bizarre preponderance of vertical lines.

At last the syringe was filled and Sarah could withdraw it. "Don't drop it," Mrs. Blaylock said.

Her tone was so light, so kind, but so chilling. With as much calmness as she could muster, Sarah set about filling six test tubes with the woman's blood.

"I've got to examine you," she said in what seemed a silly little voice. "Please lie on the table." She fingered her stethoscope.

Mrs. Blaylock lay with her legs bent at the knee, hands folded across her abdomen. Her nipples were erect.

Sarah was transfixed, she had never seen such supple perfection. The woman's flesh was as fair as gold. She turned her face to Sarah and with the gentlest, the sweetest of smiles, murmured that she was ready.

Sarah applied the stethoscope to the center of the chest. "Breathe deeply, please." The lungs sounded as clear as a child's. "You don't smoke?"

"No."

"Good for you."

She continued the stethoscopic exam, exploring the heart sounds from the front, then asking Mrs. Blaylock to turn over and completing the procedure for both heart and lung on the back. As she worked she regained some of her composure. She was a doctor after all, and this was a patient. Women held no sexual attraction for her. “Turn back over, please.” She placed her hands around the crown of the woman’s left breast and gently felt downward to the base. “Any pain or discharge from your nipples at any time in the past three months?”

Mrs. Blaylock’s tongue glistened behind her teeth. Sarah saw Miriam’s hands come up, felt them cradle her face. She did not move, more from amazement than anything else. Her stunned mind thought only that she had never seen such pale eyes before. The hands guided her head downward and her lips touched the nipple.

The shock of pleasure was so great that she nearly collapsed across Mrs. Blaylock’s chest. Something within her, which she had been utterly unaware of, awakened in joy and gratitude. Her mind screamed at her — Doctor, Doctor, DOCTOR! For the love of God, this is not *you*!

But she had kissed the breast, she could taste its salt-sweetness, remember the tickle of the nipple against her lips. Mrs. Blaylock’s fingers brushed against her cheek.

Sarah’s heart sank. This was awful. Mrs. Blaylock lay almost indifferently on the examining table. “You’d better dry your face,” she said. “You’re sweating.” And she gave her a mischievous look.

As Sarah splashed water on her face and toweled herself dry, Mrs. Blaylock dressed. “Are breast exams part of the procedure?”

Sarah was startled. Until this moment the thought hadn’t even crossed her mind. Of course they weren’t part of the procedure. It was strictly blood, lungs and heart. Her cheeks grew hot, she could sense the woman staring at her back.

“I thought not,” Mrs. Blaylock said. Sarah hadn’t needed to speak, her silence was sufficiently eloquent. Mrs. Blaylock’s hands touched her shoulders,

turned her around. She pulled Sarah to her and hugged her closely. Sarah had never felt quite this way before. The power in Mrs. Blaylock's arms sent shuddering waves through her whole body. She was unable to move, she lay like a rag in them. The woman was strong, she easily lifted Sarah off the floor, then lowered her until she rode her knee. Intense little shivers coursed through her as Miriam moved her back and forth. "Open your eyes," she said.

Sarah was ashamed, she could not look at Mrs. Blaylock. "We have to stop," the woman said, "you'll get my dress wet." She slid Sarah down her leg a couple of inches, until her feet reached the floor.

Her heart was soaring, yet her mind was filled with shame.

"You've got to show me where I'm supposed to go, Doctor Roberts."

If only there had been some scorn in that voice. But it was neutral and pleasant. There wasn't a whisper of response to the emotional explosion that had occurred in Sarah.

"You're going to five B," Tom called from down the hall as they appeared in the corridor. "New room assignment."

"Now I'm beginning to feel like this is a hotel," Mrs. Blaylock laughed. When they reached the cubicle she was amused again. "Talk about small! It's more like a Pullman berth."

"You can spend the evening in the patients' lounge," Tom said.

Sarah was utterly miserable.

6

MIRIAM SAT in the grimly cheerful patients' lounge with the other patients. She faced the television screen but her thoughts were elsewhere. The visitation had changed drastically in significance since Alice's death.

She felt so wronged, so betrayed. Not since she had crawled exhausted up a beach in Ilium had she been this lost in the world. Even after her father's death, wandering in strange lands, she had reconstructed her life. She intended to do it again. The little doctor was her new object. Before, Sarah Roberts would have been used and discarded. Now she would be kept.

In a way it was good; it would have been a pity to destroy such a person. Sarah was bright, full of kindness, and possessed of the rare avidity for life that was so basic to the development of hunger.

Miriam would think more on this during the next few days and weeks, but she was resolved to transform Sarah. If the choice had imperfections, they would have to be faced later. At least Sarah's motive to solve the problem of transformation could not be better. Her own life would be at stake.

A sound behind her made her start. Miriam felt like an animal in an open cage in this place, waiting to hear the clang of the shutting bars. By revealing herself to them she would certainly draw Sarah's total and absolute interest — but it was a dangerous technique. She could imagine herself strapped to some table, the victim of rampant scientific curiosity and the fact that human laws would not protect her once they discovered that she was not one of them. Sarah's was a ruthlessly predatory personality. She, the one who had so indifferently destroyed Methuselah and no doubt dozens of other primates, would capture Miriam. Intelligence might or might not convey rights in the

mind of such a person. If their curiosity was intense enough, their ambition sufficiently excited, Miriam had no doubt that Sarah and her colleagues would not hesitate to commit her, or simply confine her as an experimental animal “for the good of humanity and the furtherance of science.”

The thought that she might be confined, unable to serve her hunger, was terrifying. She had seen up close what extremes of suffering that involved. Such anguish lived in her own attic, stirring restlessly in the boxes.

The more she considered Sarah, the more certain she became that she had a companion — or a jailer. The trick would be to excite hunger in Sarah before she could fully understand what was happening to her. Hunger would ride like the red moon over her psychic landscape. Sarah would be ripe then for whatever harvest might suit Miriam’s needs.

It would be a matter of exploiting Sarah’s need for love. Each age and each human being betrayed itself with a characteristic falseness. The Romans had their decadence, the Middle Ages its religion, the Victorian Era its morality. This age, so full of equivocation and guilt, was much more complex than the others. It was the age of the lie. Its nations were built on lies, and so were the hearts of its people. Miriam could fill the hollow that a lie leaves in a human being. She could fill the hollow in Sarah.

She remembered the trembling shoulders, the humid touch of her lips on her breast . . . she breathed deeply, closed her eyes, tried to *touch* Sarah’s heart.

There was an impression of an empty forest. Here was Sarah, desperately lonely, rushing into the details of her outer life to avoid the secret emptiness within.

Miriam could bring Sarah the gift she most craved: the opportunity to fill that void, absent as it was of real purpose, bounded by the terror of a pointless death. The forest could be peopled with meaning and love and direction. Miriam sat, her eyes narrowed, looking inward. Sarah had despaired of ever really being loved. She wanted Tom, enjoyed him sexually, but the old hollowness asserted itself, the reality once again emerging. Miriam could work in the forest of Sarah’s emotions. She knew well her role in this age: the bringer of truth.

Tom scraped his mug as he stirred his coffee. To Sarah the small sound was like screeching chalk. The horrible, unbelievable pleasure of the thing that had happened in the examining room made her want to retreat from any sort of intimacy. Tom turned toward her, kissed her cheek. To escape she shuffled the Blaylock computer printout. "Let's check out the cubical again." She couldn't endure kissing him right now, facing his love of her.

"You enjoy that? We've already done it twice."

"So let's do it again. I don't want any problems. I can't afford to spend another night up here."

"You were invited, Sarah, not commanded."

"I had to come. The woman's got night terrors."

"You aren't the only doctor who can treat night terrors."

"I'm the only one —" She broke off. She had been about to say, the only one who can treat *her*. But why? What was so special about her? What made Sarah react to her like a confused adolescent? She jabbed the checklist code into the computer console. Instantly, the screen printed a list of functions: electroencephalogram, electrocardiogram, galvanic skin response, electro-oculogram, respiration monitor. Each was confirmed functional. Next, she opened up the intercom and turned on the TV monitor.

"It's all perfect," Tom said, "just like it was ten minutes ago." There was an edge of humor in his voice, as if he was amused by what he assumed was her oversolicitousness. He laid his big hand on hers, his familiar gesture. She looked down at it, felt its weight. It might as well be the hand of a statue. Earlier Sarah had wanted him here tonight to keep her company. Now she wished that she had let one of the regular console operators do the job.

"I really want to get this over with," she said.

"I hope she has a night terror, then. For your sake."

"Tom, will you do me a favor?"

“Sure.”

“Please don’t touch me.”

He snapped his hand away, glaring needles of hurt anger. “OK, what did I do?”

Instantly she felt a wave of regret. Why do that, why be nasty to him? The devil of it was, she felt under a compulsion to do it. The thought of Miriam Blaylock burned in her mind. She told herself that what had happened between them was a sort of accident. She was under pressure; she was exhausted. And yet if she had observed such behavior in another she would have considered it an intolerable professional lapse. She tried to be as hard on herself, but explanations kept demanding attention. She hated herself for it, perfectly well aware of what she was doing. “Honey? What did I do?” He was pressing for an answer, his face full of wounded decency.

She clung to him, to the faint smell of Old Spice on the stubbly face, to the scratched-up glasses nobody could possibly see through, and most of all to the patent honesty of his attempt at love, his flawed attempt.

He hugged back, no doubt not understanding at all what was happening, but willing to accept whatever part in it she might choose for him. Her own disdain for him, her angry rejection of the way the various parts of him used one another with ugly facility, now seemed extremely ungenerous. The man was trying to love. He wasn’t good at it, never would be. He was not free enough for it; the goodness of his heart was corrupted by his overweening ambition. So be it. He was no girlish dream, though, he was real. If you kicked him he hurt. If you felt sorry for him he was diminished. If you loved him something might — or might not — come of it.

“Ten-thirty and I’m tired,” she said at last. She wanted to close the curtain, go on to another act. The situation obliged her: a chime rang in the patients’ lounge. Time for the sleepless to seek their rest. People began filing past the open door of control room three. The other staff members followed them, intent on their charges. “I’d better go tape her up,” Sarah said. “I’ll be right back.” She glanced away from him as she left, unwilling to meet the eyes that sought hers.

Miriam Blaylock lay in her cubicle in a magnificent and wildly inappropriate silk dressing gown. It was pink and white, embroidered with the flowers of some past and distant place. In this austere little room it looked like a museum piece. So did Miriam Blaylock, for that matter. Her face had the closed, secret look you see in old photographs. It was a face from another time, when people hid out of social necessity all that was in their hearts.

“Do I get undressed for you again?” There was just the edge of a smirk in her tone.

“That won’t be necessary, Mrs. Blaylock.”

She sat up in the bed, her eyes wide. Incongruously, Sarah recalled the black Statue of Isis in the Egyptian Section of the Met. “You needn’t sound like ice,” Mrs. Blaylock said. Sarah felt herself flush. The professional distance of her tone had been used by Miriam to do exactly what Sarah didn’t want, to create intimacy. She was suddenly aware of the smell in the room, heavy and sharp but with an underlying vulgar sweetness.

“I’m going to apply a group of connectors to your forehead, the sides of your face and around your heart. They don’t hurt and they won’t give you an electric shock.” She used the litany remembered from her clinical days, even took a certain pleasure in it. To begin she applied conductive gel for the facial group and then taped down the electrodes one by one. “I’ll have to ask you to open your clothes.” Miriam removed her robe.

“The nightgown goes over my head.”

“Raise it, please.”

Mrs. Blaylock laughed, touched Sarah’s wrist. “You really mustn’t be so afraid, dear. It was just an accident. We don’t ever need to think of it again.” Her eyes twinkled. “It doesn’t mean a thing.”

Sarah was absurdly, ridiculously grateful, but she controlled the hot embarrassment. “Let me apply these connectors, and then you can try to get to sleep.”

Mrs. Blaylock took off the nightgown. The electrodes went on quickly. Sarah told herself that this was just another female body, no different from all the others she had seen and touched in her career. As soon as she was finished she turned to leave. Mrs. Blaylock's hand came up, took her wrist. Sarah stopped, did not move.

“Wait.” It was a command, beyond resistance, delivered as softly as a plea. Sarah turned and stood before her. Despite the forest of electrodes and her nakedness Mrs. Blaylock seemed no less imperial. “Your generation has no respect for what is sacred.” Sarah glanced at her. Whose generation? Miriam Blaylock was easily five years younger than Sarah herself. “Love matters, Doctor. It cannot be imprisoned.”

“Of course not.”

Very slowly, with the exaggerated humility of a bad actress, Mrs. Blaylock inclined her head. It should have been laughable, the set piece of some dreary melodrama, but instead it moved Sarah deeply, making her feel brutal and indifferent to the delicacy of the human heart.

What gave this woman the right to make her feel so awful about herself!

Sarah snatched her hands away and went back to the control room. The moment she entered it she realized how very alien Miriam Blaylock really was. This seemed such a welcoming, familiar place, cozy with a purpose she appreciated. There had been something in that cubicle, some indefinable thing, that reminded her in an odd way of the evil in Methuselah's cage. As in the cage, there was a dirty scent in the cubicle, but sweet rather than sour — and the raw seductiveness beneath the cloak, almost of majesty, as wild as Methuselah's rage . . . A demon — if such a thing existed — would, like Miriam, be too beautiful. Methuselah had been another manifestation of a demon's evil: naked and real, screaming hate even as he died. But Sarah didn't believe in evil. Rather she believed in the shadowed inner world of man, where to lose is to win and to win is to fail to see the truth. “She'll have a night terror, all right,” Sarah said. She was absolutely certain of it. No one like Miriam Blaylock could pass a night without one.

Tom was amazed at what he had seen on the monitor. There was something between Sarah and Miriam. His own reaction to Miriam Blaylock was now established: she was not the kind of patient he liked to treat. And he wished he hadn't gotten Sarah involved. She didn't need the kind of psychological warfare that the Miriams of the world indulged in. "That's a rich little bitch in there. I don't like her."

Sarah nodded. Tom could see how upset and distraught she was. She had been ever since she had first seen Mrs. Blaylock. The poor girl was terribly insecure as it was. Put on the pressure and she lost all perspective.

"Let's get this show on the road," he said. Tom had decided to let the coolness Sarah had shown him earlier dissolve of its own accord. The mature thing would be to make himself accept it. He knew that he wasn't more than average as a lover, not good at all as a friend, but he wanted to give Sarah what he had. To keep the interest of one such as she, Tom had accepted that he would have to concede many things.

Sarah leaned her head against his shoulder. "You've gotten awfully laconic." It was an opening, and Tom almost threw his arms around her with gratitude.

"I'm worried about you, darling. You seem upset."

Sarah nodded at the monitor. Miriam lay reading a magazine. "I am."

"What don't you like about her?" He thought of the murmured conversation between them, the strange gesture of the holding of hands.

"She's — I don't know how to express it. Perhaps the old definition of a monster, the Latin one."

Tom smiled. "I have no idea what it is. To me a monster is a monster."

"A divine creature. A *thing* of the gods. Irresistible and fatal."

Tom looked again at the monitor. It seemed a great distance between the gods and the woman with *McCalls* in her hands. "I just don't like her," he said.

"Bored, selfish, rich, a little on the compulsive side, judging from the

fastidiousness of her clothes. Probably collects dicks like shrunken heads.”

He was delighted to make Sarah laugh. It always relived him, like discovering that a gift has been appreciated beyond one’s expectations. “Sometimes,” she said, “you have a way of cutting through that’s just priceless.”

“Thank you, ma’am. Now I hope you won’t worry instead of kiss me.” Her eyes at last seemed happy. He kissed her lips, puckering them with the heels of his hands.

With an annoyed little jolt he realized that she was staring past him, at the damn monitor. “My God, Tom, what did she just pick up?”

It was a book. Tom knew it perfectly well. “Was there a copy in the patients’ lounge?”

“Of my book? *My* book? Certainly not, it’s not for patients.” She looked wildly around the room. “This is crazy! What kind of game is she playing?”

Miriam lay reading, her bottom lip caught prettily between her teeth, her eyes avid with concentration. Sarah put her head down on the desk and let out a long, racking sigh, almost a sob. Tom leaned close to her. “I’m too tired for games,” she said. “A stupid woman and her stupid games.”

“Honey, why don’t you just knock off. Go home or go back to the lab. Let me deal with Mrs. Blaylock alone.”

“I ought to be here. I’m the expert.”

“This place is loaded with good doctors. Me, for example.”

Sarah sat up, shook her head. “I accepted the case,” she said, “I can’t think of one valid reason to abandon it.”

Miriam closed her copy of *Sleep and Age* and lay back. The bed was tolerable, but best of all was this wonderful feeling of safety. Her own house was a superbly designed refuge, but a hospital with its large staff and twenty-

four-hour operation was almost as good. No night clerks drowsing while fire spread up the stairwells as in a hotel. No robbers prowling the halls or defective wiring electrocuting the unwary bather. Hospitals were safe enough for a Sleeper. Even after burying John in the tunnel, she did not feel completely comfortable at home. He must yet die more completely, he knew the house's security system too well. She relaxed into welcome peace. Maybe this time she would dream as she once had, of the sylvan blessings of long ago, or of the endless promise of the future. The unquiet dreams were most frequent during bad times. Her Sleep was more persistent when she was tense. She might need it as often as every twelve hours at the height of a crisis instead of every twenty-four. The harder things got, the more it interrupted.

She snuggled down into the bed, smelling the starched sheets, quivering with delight at the safety and thinking of Sarah, poor girl, who was about to walk through the fire.

The patient interrupted their conversation; professionalism demanded that personal matters now be put aside. The electroencephalograph, monitoring brain waves, was showing a pattern characteristic of drowsiness.

"There goes a roll," Sarah said as the electro-oculograph jiggled. Mrs. Blaylock's eyes were rolling into her head, an indication of stage one sleep. Sarah cleared her throat and swigged some coffee. Tom had to admire her. She was bursting apart inside and he damn well knew it. But you couldn't tell it now. That was a pro. The alpha-wave arrhythmias that indicated dozing sleep appeared. Then the skin galvanometer jumped and the heart rate increased.

"Oops. Must have gotten stuck with a pin. She wearing any pins?"

"The electrodes must be bothering her."

After a moment the electro-oculograph indicated left-to-right motion. "She's reading again."

Sarah shook her head. Tom wished he could find some way to lighten Sarah's

mood. “At least she respects your work. She’s reading it.”

“I wish I knew more about her, Tom.”

Behind them Geoff Williams from the blood analysis lab cleared his throat. “I hope I’m not disturbing any lovey-lovey, dears, but I have a problem for you. You got the wrong blood.”

“What wrong blood? What’re you talking about?”

“The blood you gave me marked 00265 A-Blaylock M.? It isn’t human blood.”

“Of course it is. I took it out of that patient right there.” Sarah pointed at the monitor.

Geoff pulled out his computer printout. “You’ll note from the machine’s attempt to analyze it that something is amiss.” The sheet showed the blood’s ID and then a list of zeros where the component values should have been.

“Machine’s on the fritz,” Tom said, turning back to the monitors. “Another roll,” he said. “She’s trying again. Sweet dreams, dearie.”

“No computer problem, Doctor. I ran the test program and then ran other bloods back to back with yours. You did not give me human blood. Whatever this is, the machine cannot analyze it.”

Sarah looked up at him. “You know, I seem to remember a time when blood analysis was done by hand, when it was between a man and his centrifuge.”

“I did it by hand too. Here’s what I found.” He thrust a sheet of numbers at them. “It isn’t a human type as far as I’m concerned. It has a whole extra component of leukocytes, for one thing.”

“Could a human being survive with it?”

“It’s a better blood than ours. Very similar, but more disease resistant. The cellular material is more dense, the plasma less. It would take a strong heart to pump the stuff and there might be some minor capillary clogging, but

whoever had it in their veins could forget about sickness if their heart was strong enough to pump the stuff.”

Tom gestured to the screen. “We have a patient right before our eyes who is clearly thriving with it in her veins. Before we draw any further conclusions I think we’d better retest.”

“Of course.”

“It’s her blood,” Sarah snapped. “I didn’t make a mistake.” Tom blinked — he was surprised at the ferocity in her voice.

Geoff must have heard it too, because he paused a moment before speaking again, and then went on very gently. “This cannot have come from that patient, Sarah. If it did then she isn’t a human being. And I can’t believe that.”

“It could be a congenital defect, or a hybrid.”

Geoff shook his head. “First off, we’re dealing with a very dense blood. A human heart could pump it, but just barely. The component mix is all off. The counts don’t make sense. Sarah, it cannot be human blood. The closest would be one of the great apes —” “It’s not from one of my monkeys,” she said woodenly. “I don’t make mistakes that simple.” Her voice lowered. “I wish I did.”

She took Geoff with her and got another sample. Mrs. Blaylock had fallen asleep only a few minutes before. When the needle entered her arm her lips parted but her eyelids never flickered. Tom watched the graphs for some sign of disturbed sleep. After taking samples from rhesus monkeys Sarah must be a true expert. Certainly it wasn’t waking up Mrs. Blaylock.

Tom was about to turn away from the graphs when he paused. A thrill, as if of danger, had coursed through him. He found himself wishing that Sarah would hurry up and get out of there. When she did return he nodded toward the readout.

“There’s nothing right about her pattern, is there?” she said promptly.

“I’d say she was in coma except for those voltage bursts in the delta wave.” Delta was the indicator of conscious mental activity. “It’s like a dead brain that’s somehow retaining consciousness.”

“Isn’t that a very muted sleep spindle in alpha?”

“It could be background noise. A passing radio cab, for example. We’ve had that problem before. It’s too low-level.”

“Respiration’s almost nil. Tom, it’s quiet in that room. So very quiet. It’s rather horrible.”

“Don’t go in there again.”

He felt her eyes on him. “OK,” she said softly. This time she put her hand in his and they looked steadily at each other. There was no need to speak.

LONDON: 1430

Yellow light filters through the curtains. She had drawn them against the noise and stench of the street. Although it is May, sullen, cold rain sweeps from the sky. Across Lombard Street the bells of St. Edmund the King ring the changes. Miriam has been almost mad with the damp, the filth and the endless ringing bells — and the fact that Lollia has been taken to the torturer.

She rushes out into the garden behind the house to escape the ringing. But here resound the bells of St. Swithin’s across the reeking waters of the Lang Bourne. Rats slither away as she moves among her beloved roses. Six of the plants are already aboard ship, these others must be left behind. She sobs as she paces, horrible images of that poor, wonderful girl lying in a rack, her hands bulging purple in iron pilliwinks.

They have overstayed here; long ago they should have left London, left England. There are places in the wild east of Europe where it is still possible for Miriam’s kind to thrive. They had been planning, considering and suddenly here was Lollia, captured as a witch.

A witch, of all the superstitious blather!

“Lady, farthing, please farthing.”

She tosses some copper to the ratcatchers who have begun to creep up from the Bourne. Swarms of them live off the rats of the open sewer. She has seen them devour rats raw. She has seen them drain the blood of rats down the throats of their children.

She has heard their songs: “He that will an alehouse keep, sing hey nonny nonny . . .”

Occasionally, the King’s men come and kill some of them. But they multiply in the benighted ruin that is fifteenth-century London. Everything is wrong here. Death and disease stride through the populace. Houses burn nightly and the rains bring the roar of buildings collapsing. The mud is always ankle deep and full of rotting garbage. The streets are sewers. Wild pigs, pickpockets and cutpurses seethe in the markets. At night come the cutthroats and the shrieking mad. Over it all there hangs an endless brown pall of peat smoke. The city does not rumble as Rome did or clatter as did the marble streets of Constantinople, but rather it breathes a great moan, as winter wind coming down a moor. Occasionally, amid a flash of silk and the rickrack of a gaily painted coach an aristocrat passes by.

The sundial tells her that four hours have passed since Lollia was taken away. The bailiffs will be heard in Lombard Street soon, bearing their burden in its black muslin shroud. Then Miriam must be ready, for Lollia will have “confessed.” Oh yes, Miriam has seen them at their art of torture. Beside it the other arts of this age are but pale shadows. Men are skinned amid jovial crowds, their parts tossed as souvenirs to putrid children. The victims howl out any calumny or sorcery, whatever is wanted of them.

Miriam cannot find the depth of her contempt. She goes through the night streets with real pleasure, a thousand times more dangerous than the quickest knifeman, stronger, faster and more intelligent.

Her belly is always full. Or was, until the soldiers of King Henry began to organize a competent night watch.

Lollia was netted like a plunging doe in the Crutched Friars by St. Olave and dragged off to the gaols. She had been a child of the streets, a Byzantine Greek whom Miriam discovered in Ravenna in the Clothmakers Market near the Palace of the Emperor, working as a weaver of linen. How long ago that was! Nearly a millennium. Miriam had been staggered by her beauty, uplifted from her despondence at the loss of Eumenes. As Rome died they went to Constantinople but left when the old, familiar signs of imperial decline began to appear there as well: whole quarters deserted, palaces left to ruin, arson and corruption and wildly escalating prices.

London had been a good choice — populated, chaotic, growing. They had come with nothing but a single Venetian gold ducat and six Burgundian pennies.

The ducat bought them a year's lodging. To obtain more money they scavenged the palaces of the aristocrats.

A hundred years of love and prosperity passed like a winking dream.

Then Lollia changed. Her youth evaporated. She ate weekly, then daily and of late every few hours. Recently, she had been going on night-long frenzies, giving herself up to the hunger until she becomes bloated. And her beauty, once so great that it made men bow their heads, has dissolved into memory. She has grown horrible, her voice shrilling through the house, her eyes agleam for blood. And now she has been captured, dragged gnashing and growling to the Assizes. Miriam raced down Eastcheap to Tower Street — just too late.

She waits for whatever they are going to bring home. She cannot look at the gowns, the street-worn slippers, the brown ringlets Lollia had bought for her hair. They lie now in a little paper box beside her wig fork. Miriam gathers handfuls of coins from their cache, pouring them into a leather pouch and lashing it under her breasts. She will take a boat from Ebgate down to the docks. Because of Lollia's certain confession, all of this is lost, and Miriam also will be seized if she waits too long. Three days ago she placed her chests aboard a Genoese galley, all except Lollia's. The ship sails tomorrow or the next day and she will be on it. But she will not leave without Lollia. To keep them safe has been her promise to all, and to herself.

The girl's resting place is ready, a squat box of oak and iron sitting in the middle of the room, its newly rubbed wood smelling faintly of fish oil.

If Miriam cannot escape, she will be burned at the stake.

Now she counts her coins — fifty gold ducats, three gold pounds, eleven ecus d'or. It is enough to keep all of Cheapside for a year or support Cardinal Beaufort for a week.

They come.

She bites her tongue when she hears the blaring crumhorns of the Waits that precede the cortege. This must work, it *must!*

If only she could leave Lollia — but she would never forgive herself. There is a powerful morality in her relationship to her lovers. By vowing never to abandon them, she gives herself the right to deceive them. She rushes into Lombard Street, pushes wildly through the crowd toward the squat figures with the black-shrouded body on their shoulders.

She has a fistful of silver. It will take at least two silver pence to get Lollia's body and another one to save herself. In one man's hand she sees a flutter of seals — the writ ordering that the body of one woman called Miriam, accused of being a witch, be brought with all haste —

"I have silver," she says over the roar of the Waits, "silver pennies for my poor mother!"

"Oho, pretty, we've got to take thee too!"

"I have silver!"

The big man with the writ comes up and jolts his hand down on her shoulder. "The King cannot be bought with a scrap of money."

The Waits have stopped. All is silence. The crowd is fascinated as Miriam pleads for her life. She displays two silver pennies on the palm of her hand.

"That's what you have?"

“It is, all in the world.”

“Then three it must be!” And he laughs, the whispering cackle of a man with diseased lungs.

“All my monies in the world,” Miriam wails. She takes out another little coin and holds the three in cupped, trembling hands.

They are snatched up and Lollia is dropped onto the stone stoop of the house. The Waits melt into the throng, the bailiffs march away, the writ is lost in the mud of the street.

Miriam can hardly bear to unwrap the shroud. Lollia is bright red, tongue like a purple, blistered flower, eyes popping half out of her head.

They have boiled her in oil. Some of the stinking stuff still clings to her distended flesh.

And there is a tiny noise, the sound of skin breaking as her hands slowly unclench.

“It’s a nightmare,” Tom murmured.

Sarah was mesmerized by the racing graphs. “I know,” she said distantly. The blood had astonished her. Tom was no doubt waiting for some error to emerge, but Sarah knew that the sample Geoff was testing now would only confirm the unbelievable. Her mind rang with the question, what is she, *what is she!* It made her almost dizzy, her own voice shouting in her head, confusion threatening to become panic.

“I’m going to wake her.” Tom started to get up.

“Don’t! You — you’ll disturb the record.”

His eyes searched her face. “She’s obviously suffering —”

“Look at the graphs! You don’t want to disturb a unique record. We don’t even know if it’s a nightmare. It might be a dream of paradise.”

“The REM readings are consistent with a high-intensity nightmare.”

“But look at respiration and skin conductivity. She’s practically comatose.”

Sarah was relieved when Tom’s eyes returned to the monitors. Their place right now was here, recording phenomena. Mrs. Blaylock’s extraordinary sleep pattern continued to flicker across the displays. Sarah tried to add it up — low-intensity delta waves, alpha waves curving as in a trance state. This was the intercranial activity pattern of an injury victim or perhaps some kind of meditation master. “Let’s do a zone scan,” Sarah said slowly.

“You think there’s something we’re not picking up?”

“We’re getting too many nil readings. Yet her eyes are moving as if she was in an intense dream.”

“Maybe it’s the hippocampus. You can get intensive hallucinatory effects when it’s stimulated. They’d cause REM.”

“That’s a good idea, Doctor. But to pick up electrical activity from that deep we’re gonna have to move our electrodes.”

“So let’s do it.”

“You’re elected, Thomas. You told me not to go back in there alone, remember?”

“OK.” He started for the door, then paused. “You’re better at placement than me, darling.”

“One on each temporal bone and two side by side just above the lambdoid suture. If we can’t read the hippocampus from there we need a probe.”

“How the hell can I get to the lambdoid suture? I’ll have to lift her head.”

“Tom, the woman is immobilized with some incredibly powerful equivalent of dreaming sleep. She’s not going to know if you lift her head.” Sarah felt her stomach turn. The very idea of being near that creature again made her feel queasy. This brain activity was no more human than the blood.

Tom left, but there was a long pause before he appeared on the video monitor. He wasn't hurrying. She watched him move the electrodes. At first the graphs went absolutely straight. No pickup. Sarah was adjusting electrode sensitivity when all hell broke loose. The four electrodes were switched into two different needles in case pickup was better from one region than the other. But it didn't matter, the voltage surges were tremendous.

"God damn," Tom said as he returned.

"It's brain damage," Sarah said. "Has to be."

"If it is, then there aren't any gross effects."

A hand dropped to her shoulder. Leaning her head back, she saw Geoff standing over her, the rims of his glasses glittering in the fluorescent light. "You were right," he said, "she's a freak."

Sarah looked at the woman on the video monitor. She was a stirring beauty, there was no doubt of it. But she was also this other thing, what Geoff called a freak.

The needles swung wildly across the graph paper. Sarah remembered the hippocampus from her studies. It is one of the deepest brain areas. When it is stimulated electrically, patients sometimes relive their past in every detail, as if it were happening again. It is the seat of ancient senses, the most hidden country of the mind. It is perhaps the place where the unconscious stores the remembrances by which we are ruled. Certainly dragons march there, and deep creatures crawl. When it is destroyed by injury or disease, the victim's past disappears and he lives forever in that disoriented state that is felt upon waking from a particularly terrible nightmare.

The graphs hissed in the silent room. Geoff dropped a yellow sheet of paper on the desk space before the computer console, his new workup on the blood.

"The woman must literally be reliving her life," Tom said. "It must be a thousand times more vivid than a normal dream."

"I hope it's been a nice life." Geoff was fingering his workup sheet.

“It hasn’t,” Sarah said. She knew that it was true.

7

JOHN SAW DIM PATTERNS against his closed eyelids. He could not tell exactly when he had become conscious, but he knew that he had ceased to dream in the past few minutes and returned to the agony of his body.

What a fool he had been to stand over her like that, savoring his victory, waiting for her to awaken. But he had wanted her to *know*.

He could still hear the carbon steel blade of the cleaver ringing on the slates.

He had to move! He longed to stretch out, to feel fresh movement in his joints. Panic started again, but he quelled it. He felt his tomb's walls and low ceiling, touched the mud beneath the puddle of water he was in. And he heard that dripping, steady, echoing, as if it were in a larger space.

He shouted. Also an echo. He took a deep breath. The air was fresh and cool. In such a small space as this even a few minutes would have made the air heavy.

Unless there was an opening.

He couldn't turn around, there wasn't enough room. His feet rubbed along solid stone, however. Plunging his fingers as deep into the mud as they would go also brought no results — until he clawed at the place where the wall before his face met the water. Here there was no mud.

A current went under the stone, through an opening about eight inches deep. Perhaps he could push himself under. He leaned down as far as he could without immersing his face in the water and waved his hand in the opening.

He could not feel a surface to the water, but he could feel a distinct flow. If he stretched his arms full length and pushed with his feet he could get his head and shoulders through the opening. There was no guarantee that he would reach an air pocket but even drowning seemed like a relief compared to this.

He plunged his face into the water, pressing himself as far into the mud as he could, found purchase with his feet, and shoved. In order to get through he had to turn his head to one side. Water poured in his nose, seared his throat and lungs. He screwed his eyes shut, fighting the impulse to gag, and shoved and kicked and twisted. Pressed tightly between the mud bottom and the stone, his head pounded. The ear that was scraping against the stone felt as if it were on fire. He realized that it was being torn off, so tight was the space.

The mud seeped between his lips, poured into his mouth. He began to need air. Helpless, he convulsed, felt a rush of bubbles pour from nose and mouth, gagged. Somewhere far behind him his feet were kicking, drumming impotently in the shallow water. His hands, stretched before him, clutched water.

Then his ear stopped hurting. He could lift his head! More frantic jerking and his eyes were out of the water. He pushed against the mud, heard bones crack as he pulled his legs up under him, heaved again and again.

Bright red flashes filled his eyes, his mind began to wander. The withering sensation of air hunger coursed through his body. He felt himself urinating, a hot stream in the freezing water.

His struggles were becoming more sporadic. The pain was giving way to a kind of release, a relaxed drifting. He hungered for the peace that seemed to lie just beyond the last of his struggles.

He remembered Miriam, saw her face glowing before him, her lips parted, teasing him to passion.

Mocking his love.

He couldn't let her win! She had lied to him from the beginning. For weeks

after their first encounter she had come to him nightly with her evil little kit and sat stroking his head as her blood ran into his veins and the fever raged. It nearly killed him, but he recovered. And when he did he was a new man, impervious to sickness, ageless, with new needs and an extraordinary new lover to fulfill them.

He also had a new hunger. It had taken him years to get used to it, to reach a point where his moral revulsion was at least equaled by his sense of acceptance. At first the hunger had propelled him, wild with need, through the streets of London.

She had caused that.

Finally he had learned, bitter and desperate and trapped, to satisfy the demands of his hunger.

She had taught him how.

He had to reach her!

A last frantic heave brought him clear of the water and he sucked in air at last. He could hear his heart clattering, feel exhaustion in every muscle and bone. For how long he did not know, he lay where he had fallen, his head and arms entangled in a thick mass of roots, his legs still in the muddy water.

But he was free of Miriam's tomb.

Free. An image of the steel box waiting for him in the attic flashed in his mind. He gasped air, coughed, spat froth from his lungs. A cold steel box in a stack of such boxes.

And in each — one of his predecessors.

She had always said that he was her only one.

Now that he saw the truth, he was horrified by the sheer coldness of the creature, the depths of its indifference, the extent of its power. Some of those boxes were *old!* The thing itself must be ancient, some dreadful exponent of Satan himself. He no longer thought of it as male or female. It chose to call

itself “Miriam” but that was doubtless only a matter of convenience.

John’s hands clutched up among the roots, seeking some further passage out of the prison. Everything that he believed about Miriam had proved to be false. All that she had told him was a monstrous lie.

One among many. Miriam had been doing this since the beginning of time.

He had to break the chain of destruction in some way. His revenge was due him a thousand times over. The very earth around him seemed to seethe with the restless souls of those he had killed in service to his own immortality.

Indeed. The 180-odd years he had lived seemed only a moment now that the end was near. Certainly there were no eternity. If he had known that he was only delaying the inevitable he would never have wasted the lives of others. “Or so I tell myself,” he said aloud.

Something brushed past him. He remembered the awful sense of movement in the attic. Clawing frantically at the roots that surrounded him, he screamed. This was a wet, stinking grave if ever there was one. It wasn’t quite as confining as the stone chamber, but it was just as deadly in the long run. He pushed at the roots, trying to progress toward the surface. His mind contracted to a single thought: hurt Miriam. If possible, destroy Miriam. If not, then die trying.

In his final effort, at least, there would be some small nobility. He was the last of a great line, after all, who had fought in many a noble war. There had been brave men among his forefathers. He would remember them now. His hand reached ancient, sodden brick, the vaulting of their old tunnel to the East River. So that’s where it had put him. He pulled the bricks down easily. The mortar was rotten, the bricks themselves crumbling.

Suddenly, he found that he could stand to full height, even raise his arms above his head.

It took him a few seconds to realize that he had broken through into the old tunnel, not out of it. The echoing water was much louder, so loud that he could hear it even with his injured ear. His hands clutched mud, flailed, found

a curved brick ceiling a few feet above. It was rank, the great roots twining everywhere. Waving his hands ahead of him in the total blackness, he began to move forward.

After ten steps the tunnel ended in a jumble of bricks and concrete chunks. Roots formed a slick forest. Above the dripping there rose another sound.

Was it the tide, perhaps? Their house was not far from the East River. Then it hit him all at once — he was hearing traffic on the FDR Drive.

This old escape tunnel was built back when the recently formed New York City Police Department seemed a threat. It had been covered over with the construction of the highway thirty years ago. That slate she had lifted was the door to the tunnel.

He began to claw at the dirt. Not so far above must lie the garden. Maybe it wasn't over yet, maybe he would get another chance after all. Roots tore at his fingers, scraping them raw. Only by digging around them and pressing himself up between their strands could he make progress. He worked with the furious strength of rage. He must not fail now. When he felt this same strength surge in the bodies of his victims he knew they were at wit's end.

There came a blaze of light. John recoiled — had he shorted some kind of buried electrical cable? As his eyes grew used to the brilliance he also found he was covered with flat flakes of a pink material. For a moment he was utterly confused, then he smelled the flowers.

He lifted his head into Miriam's garden, right into the midst of her treasured roses. They were her own special hybrids, created over God knew how many years of patient grafting. Some blossoms were enormous, others tiny. Some plants bore thorns, others none. And they ranged in shade from delicate pink to deep red. Most of the thorns were strictly ornamental, soft to the touch. Five of the larger blossoms at high summer would fill a substantial vase, and the fragrance would cover a dozen rooms.

Only his face and one arm were worked out of the earth. The house was invisible behind him, but he could feel its menacing presence. He hoped she wouldn't so much as glance out a window — Miriam had the eyes of a

falcon.

The roots clutched at him, impeding every movement. He was tiring quickly now that the rush of panic had ended. His heart bounded raggedly along and his lungs bubbled.

It was a triumph when both arms lay among the rose bushes and he could press against the ground. Inch by inch he freed himself. At last his hips jerked through the final impediment and he pulled himself out. He lay beneath the sky of morning, feeling the hunger rising yet again, barely able to move, save only to tear blossoms from their branches. When he was done he rested, then pulled himself to his feet. The house stood in its garden, somber to John's eyes. He looked high to its roof, to the tiny window of the room where Miriam kept her dead.

There was something he could do there, if he dared, if he could bear it. The house was silent. Taunting. Daring him to enter. He would, when the moment was right. If she captured him first he would lose his revenge forever. And if she did not? Then it would not matter.

The whole clinic was electrified with the news of Miriam Blaylock. By six-thirty A.M. a stunned, hollow-eyed crowd was huddled around Tom and Sarah, watching the monitors. At seven Sarah pressed a button that sounded chimes in the sleep cubicle. Miriam had been awake but motionless for two hours; her sleep had lasted exactly six. She stirred, stretched luxuriously, and opened her eyes. She looked directly into the monitor. Sarah was surprised, it was one of the gentlest, most beautiful expressions she had ever seen. "I'm awake," said the rich voice.

The whole group stirred. Sarah knew that the others felt as she did. "I'm gonna get on the horn," Tom said. "I'd better get things moving." He headed toward his office to call specialists — geneticist, physiological biologist, cellular biologist, psychiatrist, and half a dozen others.

It hadn't taken long for them to realize that they were in the presence of a potentially marvelous discovery. The gross abnormalities of the blood and the completely alien brain function left no room for doubt: Miriam Blaylock was

not a member of the species *Homo sapiens*.

Sarah's intense reaction to her was partly explained. There must have been some awareness on an unconscious level and a corresponding attempt to compensate. The unconscious reaction to a living, intelligent being of an unknown species was itself unknown. Now that the alienness lay uncovered, the woman — female creature — seemed subtly less threatening. Unknowns were the familiar ground of Sarah's work, and Miriam was a confluence of unknowns. Although an extraterrestrial origin could not be ruled out, it seemed unlikely in view of the physical similarity between Miriam and a human being.

In spite of her position as a scientist, Sarah could not shake the feeling that she was in the grip of some enormous mechanism of fate, something pulling her toward some destiny, and that it was not blind at all, but rather entirely aware of her smallest response.

“Good morning, Mrs. Blaylock,” she said into the intercom. “Would you care for some breakfast?”

“No, thank you. I'll eat later.”

“Coffee, then?”

She sat fully up in bed, shook her head no. “Come tell me, Doctor, what you've learned. Can you help me?” Suddenly even through the filter of the TV monitor, the eyes were fierce.

Sarah felt no further reticence. She marched right to the cubicle. It was warm and smelled of Miriam's sweetness. “May I call you Miriam?” Sarah sat on the edge of the bed trying to feel neatly enclosed in herself. “We learned a great deal. You're a unique person.”

Miriam said nothing. A tiny doubt crossed Sarah's mind. Of course Miriam herself knew what she was. She must. So they had assumed.

“Did you sleep well?”

She looked surprised. “Don’t you know?”

They both laughed. “I’m sorry. I’m sure you remember a dream. A particularly vivid one.”

Miriam’s face grew solemn. She drew herself up, dangling her legs over the side of the bed. They were beautiful, outlined under her nightgown. “Yes, I had a vivid dream.”

“I’d like to know about it. The information will be very helpful.”

Miriam glanced at her, said nothing. That look stabbed Sarah deeply. She felt in her own heart a glint of Miriam’s pain. The thought came that someone ought to take Miriam in her arms and hug away that loneliness. It would be a noble thing to do, a bridge across worlds.

Sarah opened her arms, turning toward Miriam with invitation, oblivious to the gleaming lens of the video camera attached to a corner of the ceiling. Miriam clung, it struck her, as a child. “There, there,” Sarah said through feelings of awkwardness. She wasn’t really very *good* at this sort of thing.

Miriam sobbed, quickly cut it off. Sarah stroked her soft blond hair, made soothing sounds in her ear.

The loneliness was palpable, as real as an odor. When Sarah felt her stir she released her grip. Miriam sat back against the wall, took Sarah’s hand in hers, and kissed her fingers.

Now Sarah did think of the monitor. Embarrassed, she withdrew her hand. “Perhaps we’ll talk again after you’ve dressed,” she said as calmly as she could. “I’ll beep you when I’ve turned off the video.” She tried to smile. “You’re allowed to get dressed in private.”

Miriam seemed about to say something but Sarah did not wait to hear it. She was not at all sure why the creature seemed to compel such intimacy, but this was not the time to probe further. She retreated to the observation room, determined to be more careful in the future. Other patients were being awakened and the group around Miriam’s monitor was smaller. Phyllis

Rockler and Charlie Humphries had arrived, however. They were talking heatedly with Geoff Williams, who waved his now-wrinkled sheet of blood component statistics as he spoke. When Sarah reappeared Geoff called out that Tom had gotten his core group together and a meeting was scheduled in the conference room.

Sarah followed standard procedure in killing Miriam Blaylock's monitor during her dressing period. Mrs. Blaylock would have to be processed further by a resident. Sarah and Tom both had to attend the core conference. "Just don't let her get out of here," Sarah said to the eager kid who was assigned to the job. "She's precious. *Precious*. I want the standard post-observation interview right off the form. Then stall her. Say we need her here for another twenty-four hours." When she left for the conference the resident was scribbling on a clipboard. For an instant she allowed herself a privilege reserved for the successful, delighting in the fact that he was obviously a couple of years older than she. Life on a fast track had its compensations.

Sarah walked into a packed room. People looked disheveled, bleary-eyed. She wondered what Tom had said to pour so many senior men out of bed so early. Tom sat playing with an unlit cigar, which disappeared as she entered. She took the chair that Charlie and Phyllis had saved for her. Around the table were twelve people ranging in age from thirty to seventy. Hutch sat straight, his lips a thin line, his face frozen in a manufactured expression of curiosity. Underneath it Sarah sensed something else. Their eyes met and his sadness surprised her. So Tom's assault was progressing. Hutch had not called this meeting, he was here by invitation only.

"OK," Tom said, "thank you very much for your time, Doctors. I'm sorry to get you out of bed so early in the morning. I must say, however, I think you'll be glad I did once we review the record. Just briefly, the subject in question is named Miriam Blaylock. She appears in excellent physical condition, aged thirty years, and she has received a working diagnosis of night terrors. That diagnosis has been revised to include grossly anomalous brain function."

"Doctor —" It was Hutch.

Tom held up his hand. "Doctor Hutchinson hasn't been briefed because of the need for haste," he said. Sarah blinked. The riposte was deadly. Now Hutch

must remain silent. He had been neatly exposed as being among the uninformed. A figurehead of department. Tom took his blood in drops, but each one counted. “We’ll get our first report from Doctor Geoffrey Williams, who did the blood grouping and analysis on the patient.”

Geoff rattled papers, pushed his glasses up on his nose. “Put simply, the woman’s blood is completely mutated, to the extent that she might well be a varietal species and not a member of *genus homo* at all.” The few preoccupied faces came to attention.

“It could be a genetic defect,” Hutch said. He had leaned forward in his chair, his face full of interest and concern. Sarah realized a truth — he did not view the clinic as a possession, but himself as the property of the clinic. Of course he would continue to talk, he saw no humiliation in being relieved of the captaincy as long as he remained in the group.

“It isn’t a defect, the blood —”

“You don’t have a chromosomal yet, you couldn’t. I think you’re being quite hasty —”

“Hush up, Walter,” a deep voice said from the back of the room. All eyes turned. Sam Rush, Riverside Medical Center’s Chief of Research Staffs, leaned against the door, his arms folded before him. Sarah raised her eyebrows. He counted for more than the entire board. Considerably more.

Geoff cleared his throat. “Mutation, even parallel evolution, are the appropriate concepts. The kicker is in cellular detail. First, the erythrocytes are off color, practically purple. Yet there is no indication that the patient is suffering from any oxygen-uptake problems. The cells are also less than half-normal size. Second and perhaps most important, we observe seven varieties of leukocytes instead of five as in a human body. The two new ones are among the most extraordinary cellular structures I’ve had the pleasure of observing. As a first guess, I’d say that the purpose of number six is heightened control of invasive organisms. It is active against all test cultures so far, including *E. Coli* and salmonella. And it shares a totally unexpected property with number seven in that it resists death even in a saline solution.

“Now, the number seven. This is the reason I mentioned the possibility of a parallel evolution. It is literally a factory, consuming dead blood cells of all kinds and birthing new ones, including its own type.”

The room was silent for some time. Finally, Dr. Weintraub, the cellular biologist, spoke. “Doctor what kind of breakdown process occurs?”

“This blood sample is exceptionally resistant to morbidity. I suspect it would even cause such diseases as virally induced cancer to be self-limiting and transient events in the life of the organism. If this blood was flowing in the veins of a mortal being, subject to time and accident, it might itself be immortal.

“Structural detail of the seventh leukocyte?” Weintraub’s eyes were tightly closed, he was deep in concentration.

“Complex tripartite nuclei. The structure appears to change according to the type of cell being consumed and reproduced. They birth living versions of the other types as fast as the originals die. The blood is in the lab now, six hours old, still as fresh as the moment it was taken.”

“Doctor, surely that’s a side effect of preservation —”

“Doctor Hutchinson, the sample I am referring to is being held at a temperature of fifteen degrees Celsius. It ought to be dead and decaying by now. But in fact we could reintroduce it into the donor’s veins if we wanted to. It’s quite self-maintaining.”

Sarah could hear the rustle of suppressed movements. She looked around the table and was at first perplexed by the uniform woodenness of the faces. Then she understood that they were all holding themselves in, restraining every outward manifestation of their excitement. All except Hutch, who was beginning to look like a little boy attending a carnival. Tom’s power play seemed more and more superfluous. Sarah suspected that Hutch’s type was that most dangerous of opponents for the Tom Havers of the world: a truly committed man — or truly clever — or both.

A face appeared in the doorway behind Dr. Rush. Sarah excused herself; the

resident she had detailed to hold Mrs. Blaylock looked upset.

“She left,” he said with a squeak. “I waited a few minutes for her to dress and when I went to the cubicle she was gone.”

Sarah restrained her first impulse, which was to shake him. “Did reception see her go? Try to stop her?”

“She never went through the reception area.”

“Then how did she leave?” He said nothing. Riverside was a labyrinth of nineteenth- and twentieth-century buildings all thrown together, she could have gone in any number of directions. Sarah clutched at a possibility. “Maybe she’s gotten herself lost.”

“Her stuff is gone. She intended to leave.”

Sarah closed her eyes. This was going to embarrass Tom. She thought of Hutch and found she wasn’t exactly displeased by that. “Call me out of here if there are any developments.” The resident turned and hurried away. As Sarah went back to her seat she contemplated whether or not to interrupt the proceedings with the bad news.

“To my way of thinking, the first order of business is tissue sampling,” Weintraub was saying. “I really can’t go very far without some cellular material, and I don’t think genetics can either.” Suddenly he opened his eyes wide. “Between us I think we’ll be able to examine the larger questions pretty thoroughly.”

Bob Hodder, geneticist and one of Riverside’s young Turks, spoke up. “Obviously, a chromosomal analysis will give us a definitive answer as to whether or not this is a human organism we’re dealing with.” He was almost handsome, Bob was. Sarah could remember his big tan body, his rippling muscles . . . he had been one of her more miserable affairs, prior to Tom. A good lay and a good date, but a man barricaded in a fortress of unfeeling. He knew genetics and sex and could order well at a restaurant. But he was as cold as death itself. Not nearly the breadth of old Tom, who sat leaning tautly into the conference, his glasses down his nose, his cigar now clamped

between his teeth but unlit.

She took a deep breath and delivered her news. “The patient left.”

Hutch reared back, seizing his opportunity with an almost audible *chomp*. “That was stupid.”

“It’s nobody’s fault,” Tom yammered. “We’re not equipped to hold people. This isn’t a secure facility.”

“Who the hell was in charge?” Hutch’s voice was strident. He intended to use the mistake to embarrass Tom in front of Rush. He knew how to score when he had the opportunity. Neither he nor Tom so much as glanced at the impassive face of Sam Rush. If he hadn’t been there, however, Sarah doubted there would have been more between Hutch and Tom than a mutual glare.

“That’s not the point! They followed procedures — did more than that, as a matter of fact. But she slipped out. You know what this place is like. You can exit Sleep Research in a dozen different directions. Anybody who wants to can get out no matter how careful we are.”

Sam Rush spoke. “Doctor Haver, you’ll have to locate your patient at once. I really do think it’s essential that we get her into confinement.” Tom’s eyes sought Sarah. The message was clear: ‘*You let her go, you get her back.*’

Sarah shook her head. She wouldn’t take the responsibility. Her own attitude toward Miriam Blaylock was not quite clear to her: the woman — thing — was frightening and dangerously seductive. She had the power to call up desires best left sleeping. Sarah wanted no part of her.

“I’ve got to ask you, Sarah. You know her best.”

She looked down at the table. There was no way to refuse such an open request.

“I don’t know how to go about it.”

“Call her,” Tom said.

“Visit her. Don’t risk a call. Bring her back.” Hutch’s voice was full of sincerity and concern.

“Your director is right,” Sam Rush said. Tom looked down at his papers.

“I don’t know where she lives,” Sarah muttered desperately.

“We have her address — don’t we, Tom?” Hutch sounded almost as if he hoped “we” didn’t.

“Of course,” Tom snapped.

Sarah fought to control herself. Her hands twined and twined together, until she snatched them from the table. All eyes were now on her. “Yes,” she heard a small, unfamiliar version of herself say, “we’ve got to get her back. I’ll go at once.”

Miriam Blaylock’s home was unexpectedly charming. Sarah got out of the cab before the compact red-brick row house with its white marble trim and window boxes full of flowers. It was so fresh and light. The windows were open and cheerful rooms could be seen beyond them. Private house on Sutton Place, Lanvin suits — Miriam Blaylock’s *genus* certainly had no difficulty coping with the human milieu.

Sarah mounted the steps and pressed the doorbell. From within she heard a chime. A policeman strolled past whistling. Across the street a group of children huddled together talking quietly.

The door swung open on Miriam Blaylock. She wore a pink-and-white dress. When she smiled, any thought other than that of being welcomed into a lovely home by its charming owner instantly left Sarah’s mind.

“May I come in?”

Miriam stepped aside.

“Oh, I love pomander,” Sarah found herself saying. “It reminds me of my childhood.” The richly antique scent evoked an image of her grandmother’s

front hall, of sun slanting in the windows on just such a day as this. She inhaled. “That really does take me back.”

“Would you like to sit down?”

Sarah followed her into a marvelous living room. Morning light poured in the windows, which overlooked a garden. The room was furnished with Regency antiques, lightly graceful chairs and couches. On the floor was a silk carpet from China, depicting many of the very flowers that bloomed in the garden. Blue silk curtains hung at the windows and the ceiling was a trompe l’oeil rendering of a summer’s sky. It was the kind of room that almost made you laugh with delight. Sarah stood in the doorway, her hands folded under her chin. She knew she was smiling like a little girl. Miriam turned, met her eyes and burst out laughing. Her eyes sparkled with true and unrestrained warmth.

Sarah came into the room and sat on one of the two facing love seats.

“May I give you a cup of coffee? I’ve just made some.”

“That would be lovely.”

Miriam’s voice floated back as she went to the kitchen. “I’ll bet you didn’t get a wink of sleep. It’s lucky I just happened to be making some coffee.”

She handed Sarah a cup. It was rich and smooth, altogether extraordinary. Its taste was all the aroma promised. “This is nice,” Sarah said.

Miriam sat beside Sarah, placing her own cup on the mosaic-covered coffee table. Sarah’s eyes were attracted to the mosaic’s delicate beauty. It portrayed a goddess standing on a rainbow with sickle moon above her head. “Lamia,” Miriam said as Sarah’s fingers caressed the tiny stones. “Her food is youth. Her symbol is the rainbow because of her beauty and elusiveness. She is one of the immortals. The mosaic is from the lost city of Palmyra.”

“What happened to it?”

“Greed. Like the rest of the Empire. It was a Roman city.”

“This must be worth —” She stopped, embarrassed. How crass to gush about

the value of somebody's art objects.

"I'll never sell it. Can you see why?" With loving grace Miriam ran her finger along the outline of the face.

The resemblance was amazing. "I certainly can! It could be your twin."

Miriam looked suddenly toward the windows, her mind seemingly drawn to something outside. Dropping the conversation, she got up and went over to them. Sarah had conflicting impressions: Miriam had seemed delighted to see her at first, but all at once had apparently lost interest. Sarah began to want to get it over with. It was as if Miriam were waiting for somebody else. This place, so ruthlessly pleasant, began to contain the suggestion of nasty shadows.

"Your coffee's getting cold," Sarah announced in her most cheerful tone.

"You drink it. I had a cup before you came."

"I won't turn you down on that. It's so incredibly good. I mean, I know it's just coffee, but —" She was gushing again. Calm down, girl. Bring up Riverside and get thyself gone. "Listen, if you're busy I'll get right to the point. Obviously, I came here for a reason. Riverside —"

"It's such a beautiful day. We get the nicest breeze when the wind is off the river."

"Your garden is wonderful. We at Riverside —"

"I have over ten thousand plants. The roses are my real prize."

Sarah went over and stood beside her. There wasn't a rose to be seen. "Where are they?" Obviously Riverside would have to wait until the damnable garden was praised.

"Behind the stand of snapdragons." She became very still. "Good gods, why can't we see them?" Sarah noticed that she was glaring like the rhesus did when you surprised them. Miriam went out the French doors and across the brick porch. Sarah walked behind her. The whole garden was redolent of

flowers. The invisible roses could certainly be smelled. Beyond the garden could be seen the glimmering water of the East River. A sailboat passed, its white canvas flapping in the sun. The full roar of the FDR Drive rose as an undertone. Miriam swept down a winding garden path and past the stand of snapdragons. When Sarah caught up with her she was squatting on the ground, her fingers clutching torn flowers. “My ROSES!” she shrieked. Sarah was amazed. Before her was a horrible sight, a vandalized flowerbed. Even the petals of the destroyed plants had been ground into the earth. The leaves had been stripped off and the stems split. Some of the smaller plants were uprooted. There was a powerful attar, the blood of the flowers.

Miriam stiffened, slowly standing up, facing Sarah. It was somehow a terrifying gesture, one that made her step back. Then Miriam was past her, crouching down again, her hands flitting over a hole in the earth. When she shouted down it Sarah heard a deep echo. Slowly Miriam got to her feet. Her lips were moving and Sarah strained to hear.

She said, “*He’s out!*” and whirled like a tiger in a cage.

Her head snapped toward the house. With a sharp intake of breath she was off, racing up the garden path, toward the open French doors. “Come on,” she shouted, “*hurry!*”

Her obvious fear infected Sarah. She began running as in a nightmare toward the door. It seemed more and more distant, the flowers spreading for acres and miles.

Miriam’s eyes were bulging with fear more raw than anything one saw in a human face. Her arms stretched out, the hands clutching and opening like those of an infant seeking help. “*Sarah, hurry!*”

Sarah’s progress was dreamlike. She felt heavy, she thought of sleep. Every detail of the flowerbeds she was passing stood out. There were daisies bobbing, zinnias spreading to the sun, snapdragons and many more exotic varieties. She saw a bee standing on the stipule of a pansy, its pollen sacs dusted gold. Behind her there arose a great crackling, like a bear coming forth.

Miriam's arms twined about her, the French doors closed with a bang. With a snap of her wrist Miriam locked them, then pulled the curtains. She opened a box on the coffee table and began to press buttons inside it. The row of red lights that winked on suggested it was a burglar alarm.

Of all things, Sarah found herself getting woozy. The lack of sleep was really hitting hard, despite the coffee.

She let Miriam hold her, watched fascinated as the woman's expression shifted to absolute calm. That was iron control, considering the fear. "Did you see him?"

"Who?"

Miriam looked away as if struck by some new realization. "Mine were the best roses in all the world. Did you know that? Do you know roses?"

"I'm sorry, Miriam. They must have been beautiful." Sarah wanted to calm the woman, wanted also to sit down. She was really quite tired.

"There is no word in this language to describe them. They were — *amoenum*. It's Latin, it refers to the heartbreaking beauty of nature. Vergilius Maro used it to describe Aeneas' last vision of Ilium. Such flowers are like that. A last vision, the hurting beauty of a rainbow."

"I see." Sarah knew some Latin, mostly as a professional language. "Why don't we sit down? I feel a little off." She smiled. "The excitement." Nervously, she touched Miriam's shoulder — and snapped her hand back in surprise. The skin was as hard as stone, for God's sake. Was it an artificial limb?

"Get some more coffee," Miriam said. "It's in the kitchen." Wishing Miriam would get it for her, but wanting it badly, Sarah found her way through a dining room that had been made over into a den. The kitchen told why; it was completely empty. Nobody ate in this house, not ever. Sarah checked a couple of cabinets. Absolutely pristine. Stove, ancient but perfectly clean. The only litter was on the counter — an open half-pound bag of coffee beans, a grinder and a Melitta pot containing the cooling coffee.

This wasn't a home.

She didn't have a chance to think about it, she had noticed a shadow on the curtains of the kitchen window. It moved away, then appeared again before the door, sharply outlined against the white chintz that covered the glass. There was a whisper, but Sarah was too startled to reply. When the doorknob began to rattle she found her voice and called out.

Instantly, Miriam was beside her. She stepped right up to the door. "It's locked," she shouted, "locked and set!"

The shadow disappeared.

Sarah began to want very badly to get out of here. But she couldn't just leave the woman, not like this. "Call the police," she said. Her speech was actually slurred. Despite the obvious danger she felt curiously calm.

"No!" Miriam grabbed her shoulders and shook them. It rattled her teeth in her head, it was like being gripped by a powerful machine.

Remember, she is not human. *Not human!* Whatever might be going on here, it could be very different from appearance. Sarah must not allow herself to forget that. And for the love of heaven she must not fall asleep. What was the matter with her?

"I — I'm sorry," Miriam said. She found some Kleenex in a drawer and took a couple of sheets, blew her nose. "Let's go to the front of the house. He won't bother us there."

Sarah was led into a library, somewhat darker than the other rooms. "History," Miriam said, waving her arms at shelves and shelves of books, "do you believe in history?"

Sarah was beyond answering complex questions. With the clarity of exhaustion she heard a horn honk outside. The shadows were deeper here. There were ancient-looking volumes, and glass-fronted boxes containing stacks of scrolls. It was not a pleasant room. In a way, with its musty smell and black old books, it was quite horrible. Sarah wished Miriam would just

get out of this place with her. “We would like you to return to the clinic.”

Miriam’s look was almost coy. “Why should I? So you can put me in a freak show?”

“So we can relieve your suffering.”

Miriam came over to her, took her hands. This close the woman seemed almost larger than she should be. Sarah wanted desperately to take a step back. But she couldn’t move, she was just too tired.

Miriam’s speech was measured, her eyes watching Sarah closely.

“Sarah, we have a great deal to learn from one another, but I’ve just sustained a shock and I need some time to pull myself together. Please forgive me if my behavior seems strange.”

“I still don’t understand why you don’t call the police. They would give you some protection —”

“For a time. But what happens when they go away? And they will, sooner or later.”

“OK, it’s your decision. I’d do it, though. You’re being menaced. Whoever it is could get in here at any moment.”

Her words made Miriam flash a glance toward the hallway that led to the back of the house. “An alarm will go off if he comes in. I’ll have plenty of warning.”

“But what if he does something else — sets the place on fire while you’re asleep, you never know what such a person might do.”

“He won’t — surely!” She looked around as if in a cell. “No —” She seemed very much afraid.

Summoning up the last reserve of unclouded consciousness, Sarah tried to press the advantage. “I’m sorry to keep returning to the other subject, but I suspect it fits in.”

“I’m not going back to Riverside now, Sarah. You and I have a great deal to discuss and we can do it right here.”

“The equipment and the people are at Riverside, and at the moment it’s a little early for discussion. That’ll come later when your therapy gets under way.”

“And who will be my therapist? You?” Miriam took a step toward Sarah and this time the menace did not come from outside. “We have a great deal to discuss.”

“Please, Miriam.” Now *that* sounded downright pitiful. Pull it together, girl! She closed her eyes, opened them with surprise. For an instant she had been asleep on her feet.

Miriam snatched her wrist. “Surely you’re willing to give me some of your time.”

Sarah couldn’t stand it, all of her carefully contained emotions were exposed by the steely power of that grip. “You let me go,” she mumbled, twisting weakly, feeling sharp pain in her wrist.

Miriam laughed, a brittle twinkling. For an instant the truth flashed in her eyes. Sarah saw abject, heartrending terror there, the awesome fear of a cornered animal.

Miriam enfolded her in strong arms, pressed her against the pretty pink-and-white dress. Sarah’s sheer exhaustion overcame the panic that wanted her to kick and scream. She was vaguely aware that Miriam had lifted her off her feet.

Only the rocking, pleasant motion of it reached her consciousness as Miriam carried her out of the room and swiftly up the stairs.

8

THERE WAS SINGING somewhere far away. Its purity drew Sarah from the comfortable warm place where she had been hiding. She rose swiftly into red fog. Beyond the fog was the source of the song. Sarah almost wept, she had not seen her mother since she was fifteen.

— her mother, who sang as she braided Sarah’s hair.

— singing on the car trip to Yellowstone.

— the voices of the church choir, her mother’s rising clear.

— her mother dying, the memory of her voice fading.

“Open your eyes, Sarah.”

The booming resolved into a headache, the red fog dissipated. Sarah was in a high old bed with satin sheets. A canopy of blue lace hung between her and the ceiling.

There came the hiss of a faucet. Then Miriam was handing her a glass of water. “It’ll make you feel better.”

Sarah took it. The liquid would certainly be welcome. When the coolness touched her lips she was brushed by a small memory. “I ought to go,” she said.

“Yes. It’s nearly noon.”

Sarah looked at her watch, hesitating an instant because of a dull pain in her

right arm. “Why am I in bed?” she asked.

Miriam threw back her head and laughed. It was reassuring, so open and innocent that it made Sarah want to laugh too. Miriam slid close to her and put her arms around her shoulders, looking into her face with a chummy smile. “You fell asleep, Doctor. You’re not good at staying up all night.”

Sarah couldn’t find a thing in her memory to contradict this. “Fell asleep?”

“You wanted to try the bed. What can I say? You’ve been there an hour and a half.”

A breeze billowed the curtains, bringing with it the scent of the garden. “It’s so hot,” Sarah said. Her skin was warm and dry.

“Take a shower before you go.”

As she stated to dismiss the idea, Sarah thought of the long day ahead at Riverside, the turmoil of work awaiting in her lab, all the other tensions and problems. She probably wouldn’t get another chance until midnight. Miriam went toward the bathroom.

“I’ll turn it on. You can leave your clothes in there.”

Sarah got up, grabbed the bedstead as mild vertigo passed through her system, then unhitched her skirt and tossed it on the bed. In a few moments she was naked, walking toward the roaring of the shower. Miriam looked pleased. Her sleeves were rolled up, an old-fashioned bath brush dangling from her hand. The room was filling with a marvelous rough-sweet scent. Sarah hesitated, suddenly aware of what she was doing, astonished at her own nakedness. But the scent was so appealing, it seemed to draw her on. “Is that your soap? I love it.”

“Brehmer and Cross make it up for me. I send them my own flowers to mix the perfume.”

Sarah stepped into the tub, moving the showerhead so that her hair wouldn’t get wet.

“Is the temperature right?”

“Maybe a touch warm.”

Miriam turned back the hot water handle.

“Perfect.”

“Open the window, you can look out on the garden while I do your back.” While Sarah hesitated Miriam laughed. “It’s OK, it’s perfectly private.” Sarah raised the sash. The breeze was delicious coming into the shower, and the only way she could be seen would be with a telescope from a boat on the East River. She leaned against the sill and looked down into the flowers as Miriam first massaged her neck and shoulders and then washed her back and buttocks with mountains of heady lather. The delicately bristled brush tickled delightfully. It was most relaxing. She didn’t stir as Miriam did her thighs and calves, then sluiced her with water. There came a gentle tug at her shoulder and Sarah turned around. She let Miriam bathe her, feeling a little embarrassed and more than a little touched. It was very, very pleasant to feel the brush on her abdomen, then sweeping down her legs amid all that wonderful yellow-green soap. “Close your eyes.” Miriam did her face with a lighter brush and with brief flutters of a cloth, her breasts. Sarah did not move until she heard Miriam’s voice and realized that the shower was over, it was time to dry off.

Miriam rubbed her down with a coarse towel, then followed it with a very soft one, moving it smoothly against her skin. “You can use some of my powder if you like.”

“I already smell like your flowers.”

“So does my powder.”

“I’m going to have to go to Brehmer and Cross. Where is it?”

“They don’t have a retail store, unfortunately. But if you’d like to order something I’ll give you their address.”

“It’s probably horribly expensive.” Sarah had fluffed some of the powder on and was redoing her mascara and lipstick.

“You use makeup? I don’t think you need it.”

Sarah smiled. “It’s just a habit. I don’t use a lot.”

“People used to paint their faces with lead pigment. The women looked like Chinese porcelain. Can you imagine?”

“That must have been before my time. Lead is poisonous.”

Miriam smiled. “How Tom must love you.” She said it with such feeling that Sarah turned in surprise. The kiss that came was small, little more than a peck, but it was on the lips. Sarah chose to take it as a gesture of friendship and smiled into it. “You’re just trying to smear my lipstick.”

She sat watching as Sarah dressed. To be admired so openly was pleasing to Sarah and she found herself adding a touch of grace to every movement. Miriam made her feel beautiful, and as she regarded herself in the dim mirror that hung above the vanity, a little proud. Her mother kept coming to mind. She had not felt this sense of intimate female friendship since she was a child.

Miriam walked her down the stairs. “When you get back to Riverside, they’re going to want to know what you accomplished. Tell them I’m still trying to make up my mind.”

“You?” For a moment Sarah was utterly confused, then she remembered the purpose of her visit. “Oh! Yes. I’ll tell them that.”

Miriam took both of Sarah’s hands in hers. “I called a cab. It’ll be here any minute.”

How considerate, Sarah thought.

Miriam leaned toward her, smiling. “You smell like a —”

“A rose?” Sarah offered.

A dark look crossed Miriam's face. "I never use them in fragrances." Her voice was harsher, almost strident. Then it all evaporated into another of those wonderful, warm smiles.

On the way to Riverside as Sarah lay back in the cab, she thought of how long it had been since she had enjoyed the special friendship of another woman, how very long.

Tom looked up as Sarah came slowly into his office. He had been developing a table of organization for the Blaylock project — if only he could find a way to split it off from Hutch's control. He had been about to greet Sarah, but her condition silenced him. Her clothes weren't on straight, her hair was tangled, and she smelled like a cathouse. When she saw his expression she returned a guilty look.

"I took a bath," she said. He heard a lot of strain in that voice.

"You sick?"

She shook her head, then dropped to the couch. "I feel hot. Is it hot in here?"

Maybe it was, a little. He pushed the window open the inch it would go. "Did you see Mrs. Blaylock at all, or just go home?"

He was stunned to hear her laugh, bitter and raucous. "I took the shower at her house."

He was at a loss for words. Her house? "You mean — Miriam Blaylock's house."

Sarah smiled mirthlessly. Her face dissolved by anguished degrees. He knew how she hated to cry. To see her cry not to was more painful than if she had done it. Tom went to her, sat down beside her. The smell was quite sickening this close. It was one of those foul covering perfumes that must have been popular in the days before people bathed.

"I'm sorry. Very unprofessional of me." Now she broke down, grabbed his shoulders, and buried her face in his chest. Twisting as far as he could, he

managed to kick the door closed. He wasn't entirely sure why she was so agitated, but he didn't try to find out more details. That would come later. Right now she needed reassurance and a little tender care. He held her, stroking her hair. He would have kissed her but for the repellent odor. Despite himself he just could not get that close to it.

The funny thing was, he had smelled it before. Somewhere, in the mists of the past. Perhaps it was the perfume one of Granny Haver's friends had favored.

Despite the smell it still felt good to have Sarah in his arms. "I'm so glad you're back," he said softly. She only clutched him tighter. The bitterness of her tears made him wish that he had not made her go to Miriam Blaylock. Obviously, she was way out of her range of skills. But who wouldn't be, given the circumstances. "Will you take a Valium?"

"I don't want a Valium."

"Sarah, this is clearly a stress syndrome." He held her by the shoulders. Her face was red and swept with tears. She refused to be held away from him and took him around the neck, hugging him so tight that it hurt. "I love you," he said.

"Oh, Tom, I'm so glad."

He squeezed back, wishing that she had repeated his words, wondering why she hadn't. "I'm going to go get that Valium. You put your feet up here, darling." He had no trouble getting her to lie back on the couch, then hurried down the hall to the dispensary to sign out the pill. Never, ever should he have sent her on such a dangerous mission. He could be so damn ruthless when he felt threatened, and Hutch had really been putting him on the spot. Now Sarah was hurt, hurt bad. He had a mental image of Miriam Blaylock, strange, sexless creature, beautiful without being the least bit attractive.

Did Sarah feel the same way? Hadn't Tom seen a curious moment of intimacy between them on the sleep cubicle monitor? Certainly, it wasn't sexual, not in the usual sense of the word. But there must be something between them, some attraction. Tom shuddered, thinking of being touched by

that . . . thing.

Sarah's clothes, though — had she only taken a shower? What if Miriam had come to her, run those beautiful hands down her thighs, touched Sarah where she so enjoyed being touched. Yes, what if she had done that?

Poor Sarah! Above all, she treasured her professionalism. If she and Miriam had gone to bed together it meant that Sarah had violated every professional standard in the book — and right at the start of the most important case she or anybody else had ever had.

No wonder she was distraught. She might well have good reason to be.

He returned to his office to find her lying in a more relaxed pose, with eyes closed, one arm loosely across her face.

“I have the Valium.”

“No.”

“Why?”

“I dislike weakness, you know that.” She sat up, a rush of motion. “Tom, she's very beautiful. Almost magical. A magical being.” She smiled. “Can you *believe* this?” The tears of a few minutes before still shone on her face. But now she smiled.

“No. But I have no choice. The data is there.” Tom could hardly believe it was the same Sarah. Were the contradictory emotions she was displaying even real? Was this how Sarah broke down — swinging between extremes?

“It's been quite a week,” she said with enthusiasm. “First Methuselah, then this. I keep thinking there must be a connection.”

He had wondered that himself, refused to entertain such a seductive and unscientific notion. “No, Sarah. Don't start thinking like that.”

“Perhaps there's something about what happened to Methuselah that . . . attracted her.”

“Moth to flame. What was the mode of attraction? Scent?”

“A mode we know nothing about. She is an unknown, after all.”

She was being cryptic. Tom wished that he didn't always have this sense of sparring with her. “Telepathy, then. But why? Methuselah was maybe a relative of hers?” Sarcasm. Did she deserve it? Possibly.

“Come on, be serious. Help me.”

“You won't accept my help.” He held out the Valium. She was under extreme stress. This latest mood swing proved it, or so he willed himself to believe.

“I don't like palliatives. I'd rather face myself.”

“Noble. Just don't go bathing around. It doesn't help your reputation. Not to mention the fact that you seem to have gotten perfumed in the basement of Kleins.”

“Kleins is out of business.”

“My point exactly.”

She grasped his hands, intense, an undertone of fear in her face. “Tom, am I in danger?”

The question had a nasty impact. He wanted to push it away but it remained there, demanding an answer. “Of course not,” he said and instantly cursed his own guilty lie. How could he be so sure? Paradoxically, he was angry with her. She had confused and upset him. He wanted his hard-driving professional back again, not this vague, dreamy creature off taking baths in the homes of her patients and failing to serve the vital interests of Riverside. Especially with Sam Rush peering over their collective shoulder.

“I *feel* like I'm in danger. I feel menaced. That incident at Miriam's was very odd, Tom. I haven't told you the half of it.”

“Is that an opening?”

She told him all that had happened, her voice curiously absent of emotion. “I think your own supposition was right,” Tom said when she was finished. “We’re dealing with an unknown. There isn’t yet any way to evaluate Miriam Blaylock or her behavior.”

“But it’s directed at me.”

“You don’t know that.” Why did he lie so? To make her feel better, or perhaps to delude her into staying with it? Yes, that was it. He needed Sarah to keep after Miriam — she was their only established link. That, beneath it all, was his true motive. He felt dirty and crass, seeing such a thing in himself. But he didn’t try to change it.

She grew silent. He waited through a minute for her to respond to him but she only sat there, hunched, almost contemplative. He wanted to press her for more information, but hesitated to do so. There was very little to be gained by cross-examining Sarah, he had long since learned that.

“I *do* know it,” she said at last. “Miriam Blaylock’s actions *are* directed at me.”

“Yes,” he said, hoping to draw a little more out of her. He became aware of a tension in the room, almost a charge, as thick as the air before a storm. In his mind’s eye he saw sick green clouds shot through with lightning. Sweat tickled his eyebrows and he wiped it impatiently away. She sat forward on the couch, grasped her hands around her knees.

“I feel like a kind of tentacle just reached out and touched me. I hate to say it, Tom, it’s so subjective that it’s embarrassing. But I do feel it.”

“Miriam Blaylock is hostile to you?”

Her eyes widened, all innocent surprise. “No, not at all. She’s part of it, but so is Methuselah. It’s not a coincidence. I feel almost as if Miriam — I know that this is a subjective way of putting it — Miriam in some way sought me out after Methuselah. As if it’s somehow very important to her.”

“I thought we discounted telepathy a second ago. As of this moment only a

few people knew about Methuselah, and Miriam Blaylock isn't one of them."

"Tom, what is she?"

Now he smiled. "You're the genius in the family. You tell me."

"Not from another planet. She's too close to human. Another species, living right here all along. An identical twin."

"Does that wash? Five thousand years of civilization and nobody's noticed?"

"Maybe and maybe not. What about the Amazons? What were they?"

He raised his eyebrows, thinking of large, domineering blondes. "Maybe she ought to run for office. Keep the mobs in line."

"You're a master of the extraneous comment, you know that. It's perfectly possible that a twin species would go unnoticed. Maybe they don't want to be noticed. If I was hiding and you didn't even know to look for me, you'd never find me — unless I wanted you to."

He kissed the top of her head, knelt down beside the couch. The odor was less strong, or perhaps he wanted her more. "I love you," he said again. The intensity of the past few days was still very much with him. The sense of devotion he was beginning to feel was a very new thing for him. Almost absently she stroked his head, pulling it down into her lap. He crouched there, afire with this terrible need for her that left him feeling utterly alone.

"Tom, I'm frightened."

"It's a frightening situation."

"Something brought her out of hiding. Something about me." The hand stopped stroking his head. He reached up and grasped it, then raised himself and slipped onto the couch beside her. She snuggled into his shoulder.

"I won't let it happen."

"What?"

“Whatever it is you feel might happen. I’m slow but I feel it too.”

“Don’t let’s both panic!”

“I’m not scared. Concerned and protective. You’ve got my primitive male juices flowing.”

“Not here in the office.” She arched her back, ran her hand along his thigh. He kissed her. The office was quiet, the hubbub outside far away. Beyond the windows small white clouds sailed through the sky. Tom extended the kiss, finding an urgency in himself that he had not expected. There came a sweeping, aggressive wave and he took her in his arms and laid her on the couch. There was barely room enough for the two of them. Her face, framed by brown curly hair, caught in the crook of his arm, looked up at him happily. “Not here,” she said again. “Anybody could walk in.”

“Don’t you like danger?”

“I’m not the type.”

“I find it exciting.” He opened his trousers, let her see his eagerness.

“Tom, really, this is crazy!”

“We need it.”

“What if Hutch comes in? You’ll look like a fool.”

Her resistance drove him on, created in him a compulsion to the act. “Let him come. Exposure to a little human love would do him good.” He slipped his hands under her skirt and rolled her panties down.

“Tom, this is *crazy!*”

“You sound like a broken record.”

“Well, it is — oh —”

The relentlessness of his thrust excited him more. Her face flushed, she shook

her head from side to side. “I love you,” he breathed, and whispered her name with the rhythm of their bodies. Voices rose outside the door but he chose to ignore them. When her eye flickered concern he smothered her with kisses. Then he pressed his lips close to her ear and whispered the sort of things she liked to hear, the words that excited her. It was silly, perhaps, certainly childish, but Tom knew that there had to be a certain dirtiness, a sense of evil, for Sarah to really enjoy herself.

He brought her to a climax, her thighs pumping, her face sweaty and surprised. He lost himself in the quivering pleasure of his own love, barely aware that the voices in the hall had not gone away. “For God’s sake, it’s Charlie and Phyllis out there! Hurry!” He pumped frantically. There came a tapping at the door. Sarah cleared her throat, changed her tone to one of businesslike precision. “One moment, please,” she sang out, “he’s on the phone.”

“You’re not a phone.”

“Hurry up! You’re a man, you’re supposed to be fast!”

“Don’t whisper so loud, they’ll hear you.”

Never before had he made love under such circumstances. Every movement, no matter how small, bore with it a sense of stolen delight. Taking Sarah here on the couch, with the door about to be opened on them, was delicious beyond belief. ‘A little of the exhibitionist in you,’ he thought.

They knocked again. “Who’s he talking to, God? We’ve got important business.”

“I know that, Phyllis,” Sarah said, her voice wobbling with his thrusts. She was now rubbing against him with all her might, trying to speed things up. The couch, the whole office was shaking. “Hurry dear, hurry dear,” she breathed in rhythm to their movements, “let it go, let it go —”

And he did, like stars exploding, huge and rich with a thousand wild tickling joys. They lay still an instant, both breathing hard, a moment’s deference. He rose off her, closed his pants over his still-enormous organ. “I’d better hide

behind the desk, my love,” he said as she smoothed her skirt and went to the door.

“Sorry,” she said, swinging it wide, “come on in.”

Charlie and Phyllis glanced at each other. Tom controlled himself carefully. Sarah was sweating and flushed, obviously trying to control her ragged breathing. “Some phone call,” Charlie said in a nervous voice.

“Let’s get on with it,” Tom growled. “I haven’t got all day.”

“No,” Phyllis murmured, “obviously not.”

“Come on, come on.” He was pleased to see Sarah blow a kiss at him, roll her eyes in an exaggerated pantomime of ecstasy. He began to feel rather proud of himself.

“Briefly,” Charlie said, “we’ve been doing a little comparative analysis between Methuselah and Miriam Blaylock.”

“Why?” Sarah’s voice was sharp. She stood up and came to the desk where Charlie had laid out some glossy color photographs of various blood cells.

“We noticed that Mrs. Blaylock’s erythrocytes were the same color as Methuselah’s, when he was in his terminal phase.”

“Which means?”

“The color of his deepened right before the end. His need for oxygen seemed to be declining at that time.”

Sarah was literally sparkling. Maybe Tom ought to hit her under a restaurant table next time. She appeared to like the threat of exposure very well. “What are you driving at? Was the same pigmentation factor present in both bloods?” There was the brilliant scientist Tom knew and loved.

“It sure as hell looks like it. But that isn’t the whole story.” Charlie pulled out some more glossies. “Here you see Methuselah’s erythrocytes in a time series. They get darker and darker.” In the first photograph they were deep

purple and misshapen. “Remember that Geoff took another blood sample after Mrs. Blaylock had been asleep a couple of hours? Well, look.” The purple pigmentation of her blood cells had faded to a healthy pink-white.

“Conclusion,” Phyllis added, “Mrs. Blaylock slept off something similar to what destroyed Methuselah.”

Tom spoke quickly, trying to cut the edge of panic that had flickered in Sarah’s eyes. “At least this means that there is no further question of the Gerontology budget being cut. I doubt if we’ll even need a meeting of the board now.” Nobody smiled. “Clap clap clap. I thought you’d be delighted.”

“We’re not surprised,” Charlie said. “It was obvious as soon as we compared the bloods.”

“Tell me, what does it all imply?”

“How should we know, Tom?” Sarah’s voice was high, nervous. “It suggests a lot of things.”

“Some of them downright strange,” Phyllis added. “Like why Mrs. Blaylock came here.”

“Smart girl,” Tom said. “That is indeed what Sarah and I have been trying to understand. It seems as if she somehow discovered Sarah’s work and was drawn to her — for some reason we do not know.”

Sarah’s face had become waxlike. Concealing. Sarah hid her feelings. “Your thoughts, Doctor Roberts?”

“That’s an unfair question, Tom.”

“You thrive on unfair questions.”

She tossed her head, her chin jutting up. Her lips were set in a line, her eyes glaring defiantly at him. It was pitiful to see how hard she had to work to hide fear.

“I think we’ll have to pull together,” Tom said. “I’m going to declare Miriam

Blaylock a special project and get myself appointed director. We'll budget it from the general fund, go around Hutch."

"Why is that necessary? Hutch'll cooperate completely. He might not agree with everything we say and do, but he's a scientist, he sees the importance of this work."

"Thank you, Sarah. May I remind you who it was just about destroyed your Gerontology lab? I can settle it all with a single telephone call to Sam Rush. He'll confirm our request before he even thinks of Hutch."

"Hutch founded this lab!"

"He's as good as dead. I'm very sorry, but it happens."

"I'm going to tell him —"

"No, ma'am. You have your job and I have mine. Let's not let our differences come between us." He held out his hand. "You don't know a thing about front-office politics."

There was a silence. "I get the impression that this meeting is concluded," Charlie said into it. He gave a nervous laugh. "You can count on me boss."

"I won't talk to Hutch," Sarah murmured. "I don't have time."

Charlie and Phyllis gathered up their materials and left. Tom sat, trying to feel the impassivity of a Buddha. He expected to get a real chewing-out from Sarah, but instead she went over to the couch and flopped down with her arm once again over her eyes.

Tom seasoned and lit a cigar. Now was a good time for his one shot of the day. He reached up and opened the window so that Sarah wouldn't complain too much.

But she didn't complain at all. Tom was surprised to see that she was asleep. So suddenly, poor, tired Sarah. He got his raincoat from the hook on the door and covered her with it. He would let her sleep, call Rush in an hour or so. There was no need to hurry. This latest discovery propelled him into a very

strong position. Obviously the Blaylock project should be under a special administrator. He had no illusions about getting Hutch to resign, but he was sure that he could capture for himself management of the project, and take Gerontology along with it. That would leave Hutch on the trailing edge, administering the conventional parts of the clinic, the parts that were of absolutely no interest to the Dr. Rushes of this world.

Tom sucked his cigar, inhaling deeply, feeling the warmth of the smoke in his lungs. He exhaled. All forbidden, all dangerous. It was so typical of the human predicament that something as pleasurable as a cigar would have to be so damn unhealthy.

Largely to stop feeling guilty about the cigar he turned his mind to the more puzzling aspects of Miriam Blaylock. She had certainly had a hell of an effect on Sarah.

There was something about Miriam that recalled Granny Haver after her husband and all of her friends were dead. Granny had seemed as bright and spry as ever, laughing all the time, raising her flowers, baking pie after pie. And yet, if you really looked at Gran Haver — looked beyond the tantalizing hints of former beauty and the present ruins — you got a hell of a chill.

Late one winter she screamed horribly. Tom's first waking thought was fire. By the time they had gotten upstairs she was dead, not of fire but of something else. Her eyes were wide, her hands like claws. Had she had a nightmare, died of fright?

Tom had helped his father carry her to the parlor. The wind had howled and he had felt presences. A nightmare — or a night visit?

Afterward he had always assumed that Gran Haver had died with some hidden thing on her conscience. That scream had been her last utterance on earth, her first in hell.

“Who are you, Miriam?” he asked softly, chuckling to himself. ‘OK, scientist,’ he thought, ‘here you are ready to believe that she can hear you, read your mind.’

Well, why not?

What was “this world”? The hospital? This office? The warm taste of the cigar? What, really?

Tom reassured himself that he was grounded in the practical. It was possible that this planet did indeed hold two species who were superficially similar. The perfect predator would be indistinguishable from his prey. That would be beautiful. Once in college someone had asked the question, what if the essence of reality is belief? That which is believed is real. What if real witches flew on wings of belief through the nights of fourteenth-century Europe and consorted with demons in a real hell? Or if the gods really walked among the Greeks?

Or Miriam Blaylock among us?

Sarah believed in Miriam, that was the source of her fear. Perhaps Miriam was what you wanted her to be — *whatever* you wanted. Perhaps that was the definition of a monster.

SWABIA: 1724

It is freezing cold in the carriage. A candle guttering in a socket is the only light. Thick fog chokes the way. Trees pass like shadowy towers, their branches swishing down the sides of the coach.

Across from Miriam sit her three sisters. Her brother is in her arms. She found them in Paris, half-starved, subsisting on the flesh of diseased beggars, constantly on the run. The girls huddle in their broadcloth cloaks, their faces the color of stone. Her brother leans stiffly against her. She touches his cheek, wiping away the dew that has settled there.

Her hand snaps back, she comes fully aware. Trembling, she touches him again.

The skin is like a mask stretched on a skull. And the mouth is opening.

She screams, but the sound is choked by a violent lurch of the carriage. The driver has whipped the horses up. Wolves stand beside the road, dozens and dozens of them. The horses bolt, the carriage careens.

Without a word, their faces fixed in grief, Miriam's sisters open the door and throw out their brother's body.

Miriam protests. They are not yet animals! She unlatches her own door and jumps from the carriage. Her silks splash in the muddy road. The carriage sways off.

Suddenly, quiet. Ten feet away lie his huddled ruins. She can see the blowing breath of the wolves. There is such serenity in their faces. That, and death. She can smell it in the wet air, an exhalation of demons. One of them dashes up and worries her brother's filthy gabardine cloak.

She drives it off, drags her brother from the sucking mud. Bearing him in her arms, she begins to plod down the road. Her heart is dull with hopeless sorrow. Ahead the carriage has stopped, rising enormous in the fog. She can hear the driver singing some lament of his wild Carpathian people.

Without a word she returns to her place, hugging the withered remains close to her. Her sisters sit bowed, their shame too great for them to bear looking at her.

A little before noon they arrive in a village. The driver climbs down and doffs his filthy cap. "Zarnesti," he says. Miriam hands out a silver florin, holding it between her fingers so that he can take it without touching her.

Zarnesti is a poor place deep in Swabia. They have come here following rumors that their kindred have found a measure of safety in these wild regions. The village reeks, it is sick and starving. There are wattled houses here and there and in the center a church made of logs. Behind the church is a long building, an inn. On all sides the forest threatens. In the shadows of the closer trees there are ruined cottages. Miriam's sisters cross the clearing, their cloaks trailing in the muck. They are followed by hungry pigs.

Miriam leaves her brother in the carriage and hurries to catch up with his

sisters. They are so desperate that she is afraid they will ignore her careful plan of attack.

They are negotiating with the innkeeper, their high voices mingling with the screams of birds in the forest. The innkeeper grovels when he is given a gold penny. He pulls back a greased cloth that covers the doorway, and the four of them stoop to enter. The odor forces Miriam to breathe in gasps. She sees that her sisters' nostrils are dilating toward a young woman who is stirring a stewpot. Wicks gutter on the two tables in the room; the walls are slick with grease. When she notices them the young woman drops her spoon and comes over. She is covered with boils. Her mouth hanging open, she kneels before them and stretches out her arms like a suppliant. She is asking to take their cloaks.

One of her sisters inclines her head, her eyes avid. Miriam frowns furiously. Would she really take this vile thing?

Her sisters ignore her. They move like shadows in the smoky darkness. Silently she pleads with them. Their hearts do not feel her *touch*. They continue searching the darkness for hidden treasure. Knives and eyes and teeth gleam in the flickering light.

It is a dance, Miriam moving from one to the other. Both turn away.

A shout of furious pain is suddenly stifled. The innkeeper has been taken. Then the coachman, too late in rushing for the door. Then, in a filthy corner, they descend on the girl. But something is wrong. A struggle starts, the girl squeals and skitters, knocking one of the wicks to the floor, spreading coals across the dirt to roll under her attackers' dresses.

While they are jumping away from this danger she tears a hole in the wattled wall. Her gray form bobs among the ferns as she disappears into the forest behind the inn.

Now they must hurry, before she raises the alarm. All of this country lives in terror of their kind. Packs of them have been ranging through Swabia, Transylvania, Hungary, Slovakia, falling on villages and taking whole populations. They Sleep in graves to deter the superstitious, who will not

approach a graveyard at night without much priestly preparation. When a village is depopulated they pull it down and throw the remains into the river, going on to the next town up the road.

Rumor has spread through the mountains. The whole region is obsessed with them.

It is a bad time for their kind. They had grown used to anarchy in the centuries that followed the fall of Rome. Now that government is returning to Western Europe they have been forced to the hinterlands.

Not a day passes that they do not have news of disaster. Ancient names are dying, names taught Miriam by her father: Ranftius, Harenberg, Tullius. All Europe is inflamed against them. Idiots creep about with crosses and garlic, spouting bad Latin.

Idiots though they be, the Inquisition is winning. Not a town west of the Oder has not burned at least a few.

The church bell begins to peal.

There is a horrible shriek at the door. Miriam's sisters, now wild to escape, throw back the greasy cloth. A crowd of thirty or forty people is outside, standing around the overturned brougham. Her brother is being handed among them, his clothes being ripped from his body.

Suddenly, there is a shaft of light — other villagers have broken into the rear wall of the inn. Miriam moves quickly. She digs herself into a pile of hay in a corner. The roar of excited voices fill the room.

Heartsick and terrified, Miriam huddles in absolute stillness. The voices drown the frantic shrieking of her sisters.

Protect them, her father had said.

How can she face his memory now? And what of her mother, who died during the birth of the triplets? Was her death pointless?

Miriam is stronger than the three of them together because she has for a long

time been better fed. But is she strong enough to free them from these maddened villagers?

The voices have become joyous as the villagers loot the carriage and rob the captured sisters. They are finding a few pitiful gold pennies, to them the treasure of kingdoms.

Suddenly men and women bustle over and pull away some of Miriam's cover. She prepares herself to face them, but they rush off. The straw is to start a fire. They have not noticed her.

Against one wall of the inn stands a great iron spit, used no doubt when this village had porkers large enough to roast. There is crackling as the straw blazes up around logs.

Realizing what is going to happen, Miriam's sisters begin to bellow her name. "MIRIAM! MIRIAM!" A part of her is secretly glad that they do not know where she is hiding. She tells herself over and over that she cannot save them, she cannot prevail against fifty people. She lies amid the fleas and lice, feeling rats run over her from time to time, listening as her siblings bawl their pleas for help.

She has never been so needed. Again she remembers her father. He was a hero.

She begins to remove the straw, starts to sit up. But she freezes, the spectacle before her is so awful. Her youngest sister is naked. They lash her to the spit. Then she is laid across the flames.

A great sizzling starts, like parchment burning. She shrieks and shrieks, her urine steaming into the flames, her head shaking, her hair smoking and red with fire.

They damp the fire and slowly begin to turn the spit.

Her screams continue a long, long time. After an hour her voice breaks and all that issues are hisses.

Miriam's other two sisters slump in a corner, tied as tightly together as two geese on market day.

It is night before all three are roasted.

Miriam has bitten her lips raw to keep from screaming. Her whole body buzzes with the pain of a thousand flea bites. Until late at night the room is filled with the sharp odor of cooking flesh and the gay shouts of the crowd. Of course they are gay, they have captured gold and been sated with her sisters, more meat than they have eaten in years. As dawn threatens, the villagers drink their foul black beer and have their couplings. Then they sleep.

Miriam bursts from her hiding place and runs. She lifts her brother's body from the mud where it has been thrown and carries him into the forest, rushing as fast as possible through the trees, wild to escape this horrible place. Her heart aches for her lost sisters, but she dares not even approach their bones.

Soon she is in a dawn-filled glade. Flowers bob at her feet, the Carpathian massif rises in the clear sky. Before that majesty she shouts her grief. The sound is absorbed.

She is flooded with an agony of loneliness. Perhaps she should deliver herself to the villagers. But she cannot go back, cannot give herself to the flames. The beauty of life remains. Let the dead be their own heroes.

With her brother in her arms she sets out to cross the mountains, intending to seek a better land beyond.

9

JOHAN HAD WAITED to return until Miriam was gone. It was the safest way. It was easy to defeat the electrostatic barrier. He came in through the disused tunnel he had used for his escape. He had a mission here. He went through the silent rooms. Scattered around the library were newspapers, all containing sensational stories about his crimes. He sneered at her caution. This was a big city. The police had a long way to go before they brought him to ground.

He paused, shut his eyes. Another hallucination was beginning. This time a healthy girl of about fourteen swam into view before him. John ignored the delicious figment, impatient with this latest side effect of his desperate hunger. She stepped forward, her smell filling his nostrils. It was maddening; he swiped angrily at the empty air. The hunger cloyed and strained within him. Soon he must take to the streets again.

He went upstairs, paused in the door of their bedroom. Although he was on his way to the attic he wasn't in any hurry. There was something to be savored in how he intended to harm her.

Tom had coaxed Sarah out to a celebration after his conversation with Sam Rush. She had wanted to stay with her lab group, but he had managed to convince her that the project could go through its next phase without her in attendance. Her failure to get Miriam Blaylock to return to Riverside had stopped much of the work anyway. Without a subject, they couldn't very well make observations.

"You're celebrating a man's destruction," Sarah said as they sat down to a

Mexican dinner at Las Palmas on Eighty-sixth Street.

“I’m celebrating nothing of the kind. Hutch still has his job.”

“The biggest discovery in history, and you took it right out of his lap. You.”

He winced. “OK, I’m an ogre.”

“Ambitious bastard.” She smiled. “I wish I could punish you, Tom. God knows you need it. But the truth is I’m so damn relieved, I can’t see straight. Knowing that we’re out from under Hutch is — well, it does deserve a celebration.”

“I’m only an ogre when it comes to protecting your work.”

“Wipe that sincere smirk off your face, my love. It makes you look like a card sharp.”

“I think I resent that.”

“You love it.” She lifted her glass of beer. “Here’s to you, you bastard.”

“And to you, bitch.”

“Don’t call me names. *I* don’t deserve it.”

He could see a real argument developing out of this, so he said no more. The waiter returned and they gave their orders. Tom was surprised to hear Sarah order the biggest dinner on the menu; she normally subsisted on nibbles and snacks. Sometimes he thought a handful of birdseed a day was all she really needed. “At least you’re really hungry for once. That’s a good sign.”

“Developing neurosis. I’ll be as plump as a pigeon in a few years.”

“You don’t care?”

Her eyes flashed. “Tonight I want to eat. There’s nothing the matter with that.” She paused. “I’m ravenous, as a matter of fact. A second ago I felt like taking a salad right off that tray.” She gestured toward a waiter wheeling

among the tables.

Their food was served promptly. For five minutes Sarah was silent, digging at her enchiladas and tamales. “Care for more?” Tom asked.

“Yeah!” He signaled the waiter and she ordered another round. An appetite was fine, but she was going to turn into a sausage if this kept up. “Got a pencil and paper?” she asked. “I’ve had some insights.”

“I’ll memorize them. Tell me.”

“One. We’re correct to assume that Miriam is evolved from a primate ancestor. She’s too close to us not to be. Two. We therefore need skeletal X rays so that we can determine which primate line is involved. Three. One thing is certain, she and her kind are in some sort of symbiosis with us, otherwise why would they keep themselves hidden? They take something from us we wouldn’t otherwise give.”

“Why does that follow?”

“What else would be their motive for secrecy? And it’s not a matter of being overlooked. It is deliberate. It must also be hard to do. It can’t have been easy to remain undetected for so long.” She paused, ate a couple of bites with birdlike speed. “I wonder what they take from us. I wonder if we’ll find out.”

Tom envied her the clarity of her mind. She had reduced the whole affair to two important questions.

Suddenly she stopped eating. She dropped her fork on the plate and looked up at him, her face pallid. “Let’s get out of here.” Tom obediently paid the bill and they went out into the crowds thronging Eighty-sixth Street. Smoke billowed from chestnut stands, radios under the arms of geeks blared disco music. They passed a Chinese restaurant, a German restaurant, a Greek restaurant. Only when they had rounded the corner onto Second Avenue did the crowds thin.

“I’m going to lose my lunch, I’m afraid.”

“OK, honey.” He wasn’t surprised, the way she had eaten so much spicy food. “Can you make it —” She let go in the gutter. Fortunately, their building was just at the other end of the block and Herb, the late-shift doorman, had seen it happen. He trotted up with a towel in his hand. “Doctor Roberts,” he said in a gruff, surprised voice. “Jeez, you must have got the stomach flu, ma’am.”

Tom was holding her head. He brushed her sweating face with the towel. Cars rushed by three feet away. Pedestrians passed up and down the sidewalk. A fire truck, complete with balancing Dalmatian, roared by. Sarah coughed mightily.

“Oh, I feel *awful*,” she moaned. “Tom I’m so cold!”

“Come on, let’s get you to bed!”

“Can you make it, Doc? You want I should carry her?”

Sarah staggered to her feet. “No thanks, Herb.” She tottered into the lobby on Tom’s arm. His mind inventoried the various types of food poisoning it could be. The onset was too sudden for botulism. They hadn’t had mushrooms, so it couldn’t be that. Probably old friend salmonella, or just plain overeating. He’d keep her quiet and warm, she’d be on her feet in no time.

“Gonzalo,” Herb said into the housephone, “come watch the door. I’m goin’ upstairs with the Docs.”

They rode up quietly, the only sound in the elevator Sarah’s breathing. “Tom, it’s going to happen!” Her voice quavered.

They were at nineteen and rising. “Just another second, honey.”

Herb looked miserable, he was about to get one messed-up elevator. But he didn’t, she made it as far as their foyer. Tom was half angry with her, half pitying. She didn’t have to eat like a hippo, after all. But she was suffering for it, and he suffered with her. “C’mon, honey,” he said, “it’s bed and bucket time.” All he got was a moan.

He left her sprawled on the bed with their mop bucket on the floor beside her and strict instructions to use it. Then he went about cleaning up the mess in the foyer without getting sick himself. Herb had slipped away while he was bedding her down. The man couldn't be blamed.

When he returned to the bedroom he was surprised to find her sitting up. "I'm better," she said. She glared, as if daring him to contradict her.

At that moment the doorbell rang. "God damn, they never leave you alone — who is it!"

"Herb again. You got a package."

Tom pulled the door open. "A Fleet Messenger come up and delivered it while Gonzalo was workin' the door, Doctor Haver." It was a compact box wrapped in beautiful blue paper and tied with a ribbon. It was addressed to Sarah. With a shrug Tom took it to her.

"Who could have sent me a present?"

"Open it, maybe there's a card inside."

She shook it and listened.

"Expecting a bomb, sweetheart?"

With a slight smile playing across her face she tore it open. At once powerful perfume filled the room. There were six cakes of yellow-green soap.

"Good God, throw it out, throw it out!"

"Miriam sent it."

"Don't you think it's a little sweet? As a matter of fact —"

"Come on, honey, it's nice." She held a bar to her nose and inhaled.

"Wonderful. I told her how much I liked it while I was at her house. She's just being considerate."

“All right already, seal it up in something for now. Let me get used to the idea.” Then a thought struck him. “Good God, I *know* that soap!” He took a bar in his hand. Sure enough, a label was imprinted on it, *Brehmer and Cross, to the Trade*. Tom burst out laughing, tossed the soap on the bed.

“What the hell’s so funny? She has it made up specially.”

“Oh, yeah! Sure she does! You know what that stuff is? Mortician’s soap. They use it on corpses. That’s where in hell I’ve smelled the damn stuff and why it makes me sick. They used it on Gran Haver when I was a kid. Kept her from stinking up the living room.”

Sarah touched the bar of soap, withdrew her hand. Tom came close to her. “Her thought processes are different from ours.”

“But she said —”

“Who knows what she said? You shouldn’t assume you understand her motives. Maybe it’s some kind of joke.”

After a long silence Sarah said that she supposed it must be. There weren’t any arguments when Tom threw the soap away. Her nausea appeared to have stopped and she didn’t have any significant fever so they contented themselves with doing nothing for now about her sickness.

“You probably don’t even need electrolyte replacement,” Tom commented.

“Good. I really don’t even want water right now.”

“Wait till you feel thirsty. Hey, look at this.” He was glancing through *TV Guide*. “‘Great Performances’ is on thirteen at nine. It’s nine now.”

While they were watching, Tom noticed Sarah rubbing her right arm. “You OK?”

“Yeah.”

“Maybe you sprained it in the street.”

“It’s hurt all afternoon.”

Midway through the show she turned on her bedside lamp. “Tom, look at this.” There was a pinhole lesion on her forearm.

“Did you give blood?”

“When would I give blood? Maybe something stung me. I’ll bet that’s what made me sick.”

Tom examined the wound. The bruise running along the vein, the redness of the wound itself — it looked for all the world as if Sarah had been given a transfusion.

“A spider bite,” she said.

Tom noticed a rasping undertone. Sarah was scared. He touched her shoulder. “If that’s what it is, not to worry, it’s a mild one.”

“Yeah. Mild.”

“That’s right, darling. No myalgia, no cramps. Those are both present when you have a serious spider bite.”

She sighed. “It’s disgusting, but I’m incredibly hungry again.”

Tom didn’t know what to say. His mind moved through the catalogue of her symptoms. He thought of suggesting that Sarah check into the hospital but immediately dismissed the idea. The symptoms were too minor. Thousands of people suffered slight cases of food poisoning or insect bite and never went to a hospital. Yet Tom worried. He looked at her face. Its color was poor, and its unusual roundness indicated slight edema. Her skin felt cool and rather dry. “Hungry or not,” he said at last, “I think you ought to try to get some sleep. We’ll eat a big breakfast in the morning.”

She didn’t argue but her eyes were pained. They took off their clothes, settled into bed. After five minutes with *Time*, Tom turned out the light. He patted Sarah’s bottom, then listened to her tossing and turning for what seemed a long time. Only when her breath became regular and deep did he begin to

relax. A last touch told him she had no fever. Finally, sleep took him as well.

* * *

Thunder rolled and blue lightning flashed against the ceiling. Sarah stared into the darkness that followed the flash. Hadn't that been a silhouette in the hall? Sheets of rain fell. The wind moaned past the building. She lay absolutely still, barely breathing, waiting for more lightning so she could see.

When it came the hall was empty. Her heart began to beat more slowly. She had been about to wake Tom. Now she withdrew her hand and threw her forearm across her eyes. Her skin crawled, she ached, she was freezing. A vision came to her, of a Big Mac and double fries and a huge, cold Coke. Disgusting, she hardly ever ate that sort of stuff. Yet it remained there, a powerful temptation. Her eyes went to the clock on the dresser. It was hard to read the dial from here but it appeared to be about two-thirty.

A bad time to go outside in New York City. She visualized the McDonald's on Eighty-sixth Street: a few people huddled over coffee, maybe a couple of cops taking a break. She could almost smell the place, a scent of heaven.

She slipped out of bed slowly and very carefully. If she woke Tom she sure as hell wouldn't be able to do what she intended. The McDonald's wasn't far. She would probably be fine. She pulled on jeans and a sweat shirt and laced up her jogging shoes. As she left the apartment she noticed that Tom — typically — had forgotten to lock up. She paused to lock both the dead bolt and the mortise lock with her key and then went to the elevator. For a supposedly ruthless type Tom was surprisingly absentminded.

The elevator doors opened onto an empty lobby. There was a stentorian rattling sound — Herb asleep at his post. The lobby doors were locked to the street so Sarah would have to let herself in when she got back.

Outside the air was storm-fresh, smelling wet and green. But for the souging of the wind the street was quiet. Sarah found the emptiness of it all quite wonderful. She strode along feeling as if she had acquired a sort of secret power just by coming out at this hour. She went two blocks down and turned

east on Eighty-sixth. The McDonald's was open, as she had known it would be. There were many more people inside than she had visualized. In fact the place was humming. She had to spend five minutes in line, finally all but hopping from foot to foot with hunger.

She ordered two Big Macs, double fries, a pie and a jumbo Coke. Cradling her food, she found a seat across from a hulking young man who ignored her. After a couple of annoyed tongue-clicks he got up and pranced off to another table. For the first time Sarah really looked around. She almost laughed, everybody in the place was gay except her. There were transvestites huddled over milkshakes, leather boys devouring Steakburgers, men in all variations of straight and drag dress, all engaged in a slow dance among the tables.

Sarah was left alone, which was fine with her. The hamburgers seemed unusually good, rich with flavor, aromatic, cooked just right. Better than Big Macs usually were, far better. Even the Coke and fries were wonderful. What did this place do — serve gourmet junk food after the moon went down?

The only thing that prevented her from getting another couple of hamburgers was the memory of what had happened earlier. She didn't feel full but good sense told her not to overeat. At least Tom had promised a big breakfast. She pictured eggs and hot, spicy sausages and a mountain of buttered toast, and maybe pancakes on the side. Her mouth watered. The big clock above the take-out counter read 3:00. It was at least four hours until she could taste that breakfast. She got up, forced herself to leave the restaurant. She'd pass the hours walking, she had no intention of cooping herself up in their bedroom until dawn.

Her earlier indisposition seemed to be gone. There was more rain threatening, but she didn't care. She would welcome the bracing cold of it. Her hunger was still with her, but it only added intensity to the glorious way she was beginning to feel. She found herself walking east past empty shops and dark apartment houses, and with a more rapid step into the quiet stretch between York and East End avenues. Here the buildings are older, the lights dimmer. Across East End lay the darkness of Carl Shurz Park. With its few old streetlamps lighting the paths, and the mist that hung beneath the tall trees, the park reminded her of a scene from childhood, from her teenage years in Savannah. She had a vivid memory of Bobby Dewart, the sour smell of his

skin and the lovely, adolescent hours they had spent touching one another among the headstones in the old Savannah City Graveyard. They had walked along the docks afterward, smelling the salt breeze that came up the Savannah River at night, watching the last tourists leave the Pirate House Restaurant, and declaring the eternity of their love.

Being fourteen, she had known nothing of the ways of time. Soon her father had been transferred by International Paper, next stop Des Moines. And Bobby Dewart? She had no idea.

At this moment, as she crossed East End, drawn by the sensuality of the night park, she remembered that love in all its timid eagerness. It had been young and doomed — and yet hadn't it also in a sense been eternal?

There came into her heart a painful longing for all her lost secret places: night and empty benches and abandoned paths. She went slowly down the tarmac sidewalk, recalling with this same delectable pain her great loves, Bobby and the others, and yes, Tom too. He ranked as a great love, she could not deny it. She went through the park until she came to the esplanade that stretches beyond it. Bordered on one side by buildings and on the other by the East River. The current, always swift, hissed in the darkness below. Far out in the river a small boat was defined by its bobbing lights. Along the esplanade the benches gleamed, still wet with rain. Immediately behind the benches rose the apartment buildings. The terraces of the lower floors jutted out perhaps ten feet above the walk. In their darkness these buildings acquired something that they did not possess during daylight hours. Sarah could not define it exactly. Certainly it wasn't menace. More a sense of mystery.

Their blank windows were . . . interesting. It didn't seem impossible, the way she had begun to feel, that she could climb to one of those terraces.

Then what would she do?

She could taste a peach breaking in her mouth, its juicy sweetness filling her with delight.

People lay sleeping in those buildings, thousands of them, each locked in his own dreams, vulnerable and quiet.

Sarah walked softly along, full of an obscure and subtle longing. She felt a lust for all things beautiful, reflected that there was no such thing as an ugly human being.

She wanted to get into one of their apartments, to touch their belongings, to listen to their soft breathing.

She found herself standing on one of the benches. With her arms raised to their full length the lowest balcony was three feet above her. She crouched down on the bench. By springing straight up she might just be able to catch the edge of the balcony.

Do *what?* This was absurd. Aberrant behavior. Psychopathic. Still, her muscles were tensing, her hands stretching to grasp, her eyes measuring the distance. There wasn't a trace of psychopathic behavior in her personality. If anything, she was too civilized.

Then she was hanging on the edge of the terrace, her fingers grasping, her legs swinging. It was impossible and yet she had done it.

Her arms and fingers did not ache as they should. Rather they felt like steel. She raised herself to the edge and looked onto the terrace itself. There was a barbeque, a couple of canvas chairs, a tricycle. Her right hand grasped one of the iron bars that formed the railing of the terrace.

She was beginning to feel a strange aggressive anger, an eagerness to get in there and —

She dropped to the ground, the thud echoing up and down the esplanade. The image that had made her release her grip now made her hunch her shoulders and clasp her arms around herself, hugging herself against its ugliness.

She didn't feel things like that! She loved mankind, that was the foundation of her life. How could she possibly, even for an instant, have wanted to kill innocent human beings, to crack them open like — like she had imagined.

It was as if somebody else was living in her body, some wild being, driven by needs of which she herself was ignorant.

“Has this always been in me, deep back behind the me I know?”

Yes. Hidden, but there.

Now given life. Something enormous was stirring and waking in her, she felt. It was as old as life, perhaps, but also new. It was what had driven her out here in the middle of the night, had converted a simple thing such as hunger into a gluttonous lust, had made her so abnormally interested in the people in the apartments.

She began to walk quickly along the esplanade, seeking a more open area, a place where she would be less tempted to this behavior.

As she moved she had the uncanny sensation that somebody or something was moving with her, walking as she walked, breathing as she breathed.

Something not quite of this world.

It was tall and pale and as quick as a hawk.

She started to run. Her footsteps whispered on the pavement; the sneakers deadened the sound. But not the fear: she grasped her hands over her head and crouched low.

Great wings seemed to rise into the sky.

Hallucination.

Abruptly, the needle mark came to mind. That was, of course, what it was. Not an insect bite or some other innocent wound. Miriam had given her something with a needle.

The pale thing moving, rubber tubing, blood packs, red blood —

Dark-red blood, like that of a reptile.

Sarah ran wildly through the park, passing the motionless swings, the places where children played ball, the slides, the sandbox, the tall dripping trees.

'I've been infused. She gave me blood. Her blood.' Memory: Miriam drawing blood from her own vein with a primitive catheter.

Sarah unable to move. A voice, Miriam's voice, saying again and again, you cannot move, you will not remember, you cannot, will not.

But the voice did not come from Miriam. It came from that strange unhuman creature, the statue with the catheter in its arm, the catheter that led to a blood pack.

When it was bulging with black blood it had been applied to Sarah's arm. She had watched it go in, the warmest, most delicious feeling making it impossible for her to stop it, impossible to pull out the needle.

Help!

She was in the streets now, running through familiar intersections, past stores she knew well, but also through a strange and unfamiliar world, a planet of the dead that was also this planet.

She stopped, suddenly winded. Her heart was knocking, her breath was coming in gasps. 'I'm not meant to know this,' she thought. 'This is unbelievable. But it's true, it must be true.' She felt her arm, could feel the hard knot of tissue where the needle had entered. When she pressed, it hurt.

It was real.

Right now, this moment, Miriam's blood was in her veins, mixing with her own.

Black blood? A hideous thing with Miriam's voice? A nightmare? Some kind of trick?

There were a hundred desperate questions, and at the moment not a single clear answer.

For example, it could be that her mind had broken through a hypnotic block, but it could also be that the block was meant to come down.

She tried to calm herself. Breathe deeply, remember your own strengths. She could think, she could apply reason and science to the situation. She could save herself with her knowledge.

Her first impulse was to get home as quickly as possible, get Tom, and go over to Riverside for some tests. But instead she sat down on the curb. To do this right she was going to have to collect her thoughts, organize her mind. If she wasn't careful it was all going to come across to others as some kind of irrational aberration.

There was peace here in the empty street. A nearby building had planted tulips and they glowed in the light from the streetlamps. Trees spread new leaves overhead. This little corner of New York could have been a small town, so quietly did it sleep, so sweet did it smell.

Sarah looked up. Clouds moved past, glowing yellow-red with the lights of the city. Here and there a star shone through. To the west the moon rode in the rushing sky.

There was a stirring in the air all around her, like the sound of enormous wings.

Hallucinatory phenomena again.

It recurred, as if a large bird were flying restlessly back and forth just overhead. Suddenly, Sarah had a vivid impression of Miriam, her face utterly serene —

She jumped up, stifling a cry. That face had been *real*. But it wasn't here. Sarah was alone. It was only another symptom and would have to be accepted as such.

Methuselah's dying howl filled the air.

Sarah clapped her hands over her ears, feeling in her right arm a sharp stab of pain from the needle mark. Another symptom. In fact, all of the night's experiences were nothing more than symptoms, from the vomiting to the hallucinations to the cloying hunger. And all could be dealt with once the

parameters of the problem were known.

She set off, this time walking with resolute intention. She would not fall victim to transient psychosis. She would approach this as a professional and overcome it with the assistance of one of the best research institutes in the world.

Miriam's motives, whatever in heaven's name they might be, could wait until later.

They would have to take that one well in hand. She was dangerous, she needed careful observation. Fine, there were involuntary commitment procedures for just such situations.

When she reached the Excelsior Tower, she had more or less regained her composure. She fumbled for her keys rather than wake poor Herb at such an hour. He was huddled, a snoring bundle, on one of the lobby couches. Poor guy probably held down two or three jobs.

Despite the urgency she felt, she found Herb curiously interesting. He looked so helpless. But when she drew near she found his smell overpowering, like rotting meat. She went on to the elevator bank and rode to her floor.

The apartment was silent. From the bedroom came the faint sound of breathing. Obviously Tom hadn't missed her. Sarah went into the bathroom and turned on the light.

It was definitely a needle mark, and slightly infected. The first problem must be to test for type-incompatibility. If Miriam's blood did not interact normally with her own she could easily lapse into irreversible shock.

They would have to act fast. The fact that nothing had happened during the past eight or ten hours was cause for hope but it proved nothing. Shock could set in at any moment.

"Tom!"

He shifted in the bed, groaned. She put her hand on his shoulder to shake

him.

It was like an electric shock. Lights flashed before her eyes, an agonizing thrill ran through her body. She staggered back, astonished by the furious clash of sensations.

His skin was so good to touch. A strange, evil tickling made her break out in gooseflesh. Her nipples swelled against her sweater. There came a feeling not unlike the one she had experienced hanging on the terrace, a sort of aggressive longing, something related to her new lusty appetite.

She noticed a strong — quite wonderful — smell. It wasn't food but at the same time it was. Had he gotten up and taken some food to the bed? That would be just like him, to get up for a snack and never even notice that she was gone.

Tom woke to the sound of excited breathing. Startled, he sat up. At first he was afraid. His eyes could not penetrate the darkness.

“Sarah?”

“Yes.”

What the hell was going on? “Are you up?”

She turned on the bathroom light. Not only was she up, she was fully dressed. He couldn't see her face with the light behind her, but her hair looked wild.

“Sarah, are you OK?”

When she didn't answer he got out of bed and grabbed for her. She moved, it seemed very quickly, back into the bathroom. “Give me a second,” she said in a hoarse voice.

“You sound funny.” He didn't add that she also looked very strange now that she was under the light: eyes wide and glistening, face smeared, sweat shirt smeared, muddy sneakers. “What the hell have you been doing?”

She seemed about to run as he moved toward her. He went into the bathroom, held his hands out to her, stood over her reasserting himself if only by their difference in size.

Suddenly, she sank to the floor, clapped her face into her hands and twisted back. A choked sob. He went down beside her.

“Darling, are you in pain?”

“My arm!” The sob became a moan, warbling and crazy. Tom touched the proffered arm, looked at the ugly mark just below the crook of the elbow. A needle track. Sarah’s eyes searched him. “She infused me with her blood. Now I’m hallucinating.”

“Fever. Transfusion reaction.”

She nodded, tears popping out from behind her tightly closed eyes. He took her by the shoulders, his own heart pounding. A transfusion reaction, caused by blood of an incompatible type, could range from nothing more than mild discomfort to vascular collapse and death. “Let’s get over to Riverside.” He went to the phone, called Geoff’s home number. They would need the best blood man available. Geoff’s voice, sleepy and a little confused, sharpened when Tom told him what had happened. They agreed to meet at the blood analysis lab in ten minutes.

Tom phoned ahead to send Herb scurrying out after a cab. By the time he had gotten some clothes on and Sarah in a coat, a Checker was waiting at the door.

They hurried through Riverside’s main lobby, at this hour empty and quiet. With a wave to the night guard, Tom propelled Sarah to the elevators, jabbed at the eleventh-floor button.

Geoff was waiting, his face sallow and tired. As they entered the lab Phyllis Rockler rose from behind a workbench where she had been preparing the necessary glassware. She took Sarah by the hands. “Let’s get you in a pressure cuff,” she said, her voice urgent.

“Do you live here?” Sarah asked. Tom was reassured to hear strength, even a touch of acerbic humor.

“Geoff and I —”

Sarah smiled softly, looked a moment at Tom. Phyllis pushed up the sleeve of Sarah’s sweater and applied the blood pressure indicator as Geoff examined the other arm. The four of them waited while Phyllis took her reading. “One hundred and twenty over eighty. We should all be so lucky.”

“My pressure’s always been good.”

Tom closed his eyes, felt some of the tension creep out of his neck. The blood pressure would have been abnormal if vascular collapse had been imminent. Phyllis then counted Sarah’s pulse and read her temperature with a digital thermometer. “Here’s something. One hundred and one degrees.”

“There’s a slight subcutaneous infection connected with the lesion,” Geoff remarked. “The fever could be from that.”

Sarah closed her eyes. “Aside from the fever and the lesion, my gross symptoms are psychological. Extreme restlessness. Odd hallucinations.”

“Orientation problems?”

She shook her head. “Consistent with fever and loss of sleep. I’ve been up all night.”

Tom asked a question that had been much on his mind. “How did she do it?” He couldn’t imagine Sarah sitting still for such a thing.

“When I went to her house we had coffee, then I woke up in her bed in a . . . state of confusion. I took a shower and left. But tonight I remembered more — a — a — sort of thing standing over me with a blood pack — quite strange.”

“Hypnosis and drugs.”

“I agree. The combination fits my symptomology.”

“Phyllis, why don’t you draw a couple of hundred ccs and we can get to work.” Phyllis prepared a syringe and withdrew the blood from Sarah’s unwounded arm.

“It looks good.” In gross blood disease there is sometimes a change of color or consistency. Sarah’s blood was a rich purple-red, completely normal. Tom found himself hoping for the first time that nothing was *really* wrong. So far the symptomology was reassuring, except for those hallucinations. But there was something about Sarah’s tone of voice he didn’t like. He couldn’t get rid of the feeling that she was holding something back. “What kind of hallucinations?”

“Visual, mostly. I went out, I was terribly hungry. If you can believe it I went up to McDonald’s on Eighty-sixth at three.” She sighed. “I’m hungry now, as a matter of fact.”

“What kind of hallucinations?”

She flared at him. “I told you! That creature with the blood pack! God, Tom, you can be persistent. Let’s talk about it later, I really can’t deal with it right now.”

Phyllis had transferred Sarah’s blood to ten test tubes. “One through eight are treated with anticoagulant,” she said. “Nine and ten are clear.”

“I’d like to pitch in. I can’t just sit here waiting, it’s making my flesh crawl. Let me do the centrifuging.” Phyllis handed Sarah two tubes of blood. She placed them in the centrifuge, adjusted the rpm gauge, closed it, and flipped the switch.

“Listen,” Geoff said, “it’s harmonizing with Mozart.” He had turned on his radio a few moments before. Tom almost screamed at him to get on with it, then forced self-control. Geoff was right to treat the situation lightly. Panic and professional standards of practice don’t mix. He looked at his Sarah, bending over the centrifuge, still a bit pallid, perhaps slightly swollen, her face sharply intent on her work.

Phyllis prepared slides, placing a drop of blood on each and smearing it to a

thin film. Each slide was numbered and slipped into a rack beside Geoff's microscope. "I'll do a reticulocyte count first," he said. That made sense to Tom, it would tell them at once if any internal bleeding was taking place. If the blood was type-incompatible, hemorrhage was certainly a possibility.

"Set up a Westergren tube," Sarah said. "We'll want the sedimentation rate."

As Phyllis prepared the tube, Tom mentally ran down the list of reasons for doing a sedimentation study. He couldn't understand why Sarah would feel a need to know about possible infection and inflammation. "It takes an hour," he said, "and it'll mean two hundred ccs just on that. I think we'll have apparent pathological signs if the infection proceeds out of the arm." The beautiful arm.

"Methuselah showed an elevated sedimentation rate before the end."

So that was it. She hadn't forgotten about the connection between Miriam Blaylock and the dead ape. She must be thinking that she was about to go the way of Methuselah, poor woman. He wished to God that he could somehow reassure her. But it would be a waste of effort with Sarah. Once she got an idea it took a lot more than reassurance to convince her she was wrong. The worst of it was, he didn't feel so certain himself. The physicists had long since dispensed with commonly held notions of coincidence, replacing them with more elegant and truer ideas of space-time as a whole event, a woven continuum. In the light of such concepts the relationship between Miriam's appearance and Methuselah's death was not only accidental, it wasn't even coincidental. It followed as certainly as one brick after another in a wall, or the spewing of radiant poisons beyond the horizon of critical mass.

The centrifuge wound down and Sarah removed the now-separated tubes of blood. "Is there somewhere she can lie down?" Tom asked. She was rapidly losing all color.

"I'll tell you if I need to be admitted," she snapped. "I know this place has hospital facilities." She put the tubes in a rack and started drawing out the various blood components with a pipette.

"Let me see a slide of whites," Geoff said without moving from his

microscope. Sarah quickly prepared one, placed it in the scope's receiving tray. Tom admired the superb laboratory technique being displayed by the three of them. By Sarah in particular. All of his caring and love was surfacing. What bravado she had. "I want another slide," Geoff murmured. "Wright's stain, please."

There was a silence while he examined it. "I observe foreign leukocytes." Tom felt a wave of new anxiety: this was confirmation, ugly and real. Miriam's blood was actually running in Sarah's veins. "The eosinophilelike cell is present at a concentration of about three percent. Pseudopodial activity is high. The cell is thriving."

"What is the concentration in Miriam's own blood?" Sarah asked. Her tone was clipped. She was forcing calm.

"Eighteen percent."

"You mentioned pseudopodial activity. What's taking place?"

Geoff leaned back from his microscope. The fluorescent lighting overhead threw his face into shadow. His forehead glistened. "It appears to be consuming your blood," he said carefully, "and reproducing cells of its own kind."

10

MIRIAM AWOKE FROM THE first peaceful Sleep she had experienced in days. It was nine A.M. At once she *touch*ed, sensing for John's presence. Her whole body jerked with the intensity of the feeling. He was here, and in a highly charged emotional state.

He was exultant.

She frowned, confused. The clarity of the *touch* told her that he was nearby, probably inside the house. She shrank against the head of the bed, looking desperately around the room. But it was empty. His happiness apparently wasn't because he had managed to defeat her defenses and get into the house. She checked the control panel in the footboard of the bed. All the alarm indicator lights were green. He hadn't used any conventional mode of entry. And the electrostatic barrier hadn't been activated. The motion sensors told a different story. There were indications of movement in the basement at 3:52 A.M., in the front hall two minutes later, in the attic at 4:00. They revealed a slow progress from the bottom to the top of the house. And from 3:59 to 5:59 the steel shutters that protected her bed had been closed, responding automatically to the unexplained motion in the house.

So he was in the attic. As well that she had abandoned sleeping there. When the time came she wouldn't have the difficulty of hunting him down. But why did he exult so?

She decided to *touch* again, hoping to catch some emotional clue to what he was doing. Of course, care would have to be taken. John was sensitive to *touch*. She didn't want to alert him to the fact that she was awake.

She cleared her mind, closed her eyes, opened her inner eye wide. Then she sought John's place in her heart. The *touch*sprang out of her, connecting with powerful and complex emotions. John was overwhelmingly sad, angry, but most of all he was filled with wild glee.

He was savoring the fruits of victory.

Why?

She inventoried the possible reasons for his happiness. He had successfully entered the house against her will. Not sufficient cause. He had gotten to the attic, perhaps to the room where the chests were kept.

She almost laughed aloud when she realized what he must be planning. Let him do his worst. How ironic that what he must perceive as a great threat was actually going to be helpful to her. John, waiting for his big moment in the attic, could safely be forgotten. And that was well. She had much more pressing matters to attend to.

It was going to be a difficult day.

She set about turning off the various devices that protected her during Sleep. In the past, finding safe places to Sleep had been an obsession with all of her race. During the greatest period of persecution, when they were being hunted down by experts, burnt, garrotted, walled up in tombs, they took to hiding in graves, lying among corpses to avoid detection. As often as not, they were followed even there, dragged from their hiding places, and destroyed by having wooden stakes hammered into their hearts.

Miriam turned off the electrostatic barrier and the alarms, then deactivated the steel shutters that surrounded the bed itself if danger threatened. Her theory was that hiding was a far less effective deterrent than fortification. Before electronics Miriam had kept a kennel of killer dogs.

She dressed quickly, unlocked the bedroom door, and looked out. Dawn filled the upper parts of the house with golden light. She was beginning to feel hunger again, but she had no time for it now. She wished that she was already with Sarah. Without Miriam's help the woman would go mad, unable

to satisfy her own hunger, unable to stand the agony.

Once the transfusion was completed the body reacted in a predictable way. Before the advent of modern medical techniques the transfusion was a slow process, subject to the collapse of veins and infection from the crude apparatus available. Now it could all be done at once.

The physical effects would devastate Sarah's body, but the psychological impact, as a new set of needs and instincts replaced her established human ways, would be catastrophic.

Miriam had nursed many of them through the agony of it and she intended to do the same for Sarah.

It would mean returning to their hospital, possibly to danger. They might try to capture her, even to kill her. If she was not very careful indeed she was likely to become their prisoner once she went back to Riverside. They would have ample justification to commit her, and the legal machinery was certainly available.

She could picture herself starving in agony as they prodded and sampled and tested. The trouble was, you didn't die. You just got weaker and weaker until you ended up like the ones in the chests.

It took months to starve. King Charles IV of France had walled up twenty of her kind in a sewer where they were hiding in May of 1325. It was November before the last muffled wail was heard in the streets above. And even after that, they suffered.

She was clammy, trembling. For the first time in many years she was genuinely terrified. It had always been hard to do this, and Sarah Roberts was proving to be especially difficult.

But worth it. Well worth it.

She descended the steps. There was no time to call a limousine. She would have to break one of her rules of safety and take a taxi. Moving through her house, she checked the rooms for damaged belongings. John had left things

alone, it seemed.

She examined the mosaic portrait of Lamia carefully. Miriam kept it with her always, to look into those resolute eyes and remember. Her mother had been strong. She devoted herself to the incredibly dangerous process of childbearing, for the good of the race. Miriam could still remember the last pregnancy, her mother gushing blood, her father trying to cauterize the wound, the puddles horrible on the floor. Her mother had died in a hide tent on a desert night when Egypt was still young.

Miriam opened the front door onto a luscious spring morning. She hurried up to Fifty-seventh Street. The first two cabs she saw she rejected. Too many rattles, drivers too tired. A third one was acceptable. She got in, sat well back, felt compulsively for seatbelts she knew would not be there.

Sitting in the cab, she considered what must be done. In her previous *touches* Miriam had experienced Sarah's fierce will directly. The woman would not cease making efforts to save herself until she was beyond rational thought.

And yet it was that fine will that could blossom into a true hunger. Nothing less would suffice. Of course, it was going to be a struggle. Miriam consoled herself that she had never yet failed. True, some had died during the transfusion process, but not one who lived through the kiss of blood had long resisted her. And yet . . . she had never taken one with so much will or quite so good a mind.

Would she succeed this time?

Sarah must be made to realize that she could not save herself. When they were together Miriam could *touch* her deepest being, guide her, comfort her. It was not hard to transform a body, but the matter of capturing a heart was much more difficult.

Even with *touch* it was going to take time. She shifted uneasily in her seat, watching nervously as the cab went straight through a changing light, thinking of all the different kinds of danger she was being exposed to today.

For a long time she had known that her own mind was delicately balanced.

She was so profoundly alone. She believed in her vulnerability to accident, but she had constantly to remind herself that humankind was also a threat. She had once seen a film of a tiger being captured in a net, and it had made a profound impression on her. Despite the gravity of its situation, the beast had remained calm and confident until the ropes actually sprang up around it. The men laying out the net seemed of little danger to the tiger, it having eaten one of their number the night before. That they might actually capture it was so far beyond its belief that they were able to do so.

The tiger spent its remaining years in a six-by-ten cage, the property of a circus.

What would she do if they brought out guards with guns to capture her?

Her heart began thundering as she considered the choices she would have. Die before the bullets or accept imprisonment.

She longed to abandon this whole endeavor, but she could not risk it. Sarah already knew far too much to be allowed to remain free.

She was fighting a wave of raw fear when the cab pulled up in front of Riverside. She paid her \$3.50 fare and got out. The entrance that yawned before her was so prosaic, so human, it could not possibly be a portal of death.

No?

She pushed through the revolving doors into a crowded lobby and was immediately assailed with the odor of human flesh in great quantity. Automatically, she evaluated the members of the hurrying throng: this one too strong, this one too small, another too sick. It was hard to bring herself into such a crowd with even the slightest hunger. The passing of perfect specimens kept distracting her.

She crossed to the elevators, pressed the button for the twelfth floor. As soon as the doors were closed she began to experience an agony of unease. She stood near the control panel, pressed by a solid mass of humanity, waiting through anguished moments as the thing stopped at every floor.

When the doors at last opened on twelve she popped out with a gasp of relief. But the doors closed behind her like the entrance to a tomb. And she was on the inside. A bell rang somewhere, a doctor was paged, two interns strolled past without glancing at her. To the right was the waiting room with its inevitable crowd and questioning receptionist. A black door to the left led back into the suite of offices for executives and medical personnel. During her night here Miriam had been careful to memorize the layout of the clinic, and she took this door rather than face the receptionist.

Before her was a gray institutional hallway lined with more doors. Each practitioner working at the clinic had a small office. At the end of the hallway were the offices of the executive staff. Miriam went to Sarah's door, third down on the right. She placed her hand on the knob, paused to prepare herself for the confrontation, then went in.

But the office was empty. There was, however, a powerful feeling of Sarah in the room. The desk was piled high with file folders and rolls of graphs. On the floor was a two-foot-high stack of computer printouts. Three soiled lab coats hung on the door. A poster of a grinning rhesus monkey was the only decoration. A stupid choice no doubt to many eyes, but to Sarah it must be a symbol of her triumphant research.

Just being in the room, Miriam realized that she was already beginning to love the woman. She didn't want Sarah to suffer unnecessarily. Miriam was giving her a gift, after all, of something humanity had been trying to attain through all of its history. The great human religions all involved an assault on death. Man thought of death as a helpless concession to evil, and universally feared it.

Miriam must not forget the impact this gift had had on Sarah's predecessors. In his heart each man feared and loved death. The release from such a contradiction was in itself an offering of great value.

She felt Sarah's chair, her desk, fingered her nibbled pencils, stroked her lab coats, all the while trying to get a sense of her emotional state.

It came, thin and distant, a vapor of fear, hardly a *touch* at all.

One could tell very little from such a weak *touch*. There was nothing else for it. She would have to confront her directly.

‘If they try to keep me here I’ll need her loyalty,’ she thought as she went down the hall to the secretarial pool to locate Sarah. Physically, she was much more powerful than they. She could outrun, out-climb, and outmaneuver them. She also had her intelligence, which was greater than theirs, especially in the speed with which it could assess rapidly changing situation.

“I’m trying to locate Doctor Roberts,” she said to the secretary, who looked up, cracking gum.

“You a patient?”

“I’m expected.” Miriam smiled. “I’m not a patient.”

“They’re down on the lab floor,” she said. “I think they’re probably in Gerontology by now. You know the facility?”

“Oh sure. I’ve been up here a number of times.”

“Want me to say who’s coming down?”

“Don’t bother, I’m already late. Let’s not call too much attention to that!” She smiled again, backing away, turning to go to the elevators.

“I understand,” the girl said, laughing, “just want to edge in.”

Miriam took the stairs beside the elevator bank to save time and ascertain if there were any inner doors that might impede escape. Large signs indicated that all the floors below ten were locked for security reasons. Useful if not helpful information.

Contrary to what she had said to the girl, Miriam did not know the plan of the lab floor. When she emerged she found the whole layout was different from the floor above. Riverside was a hodgepodge of old buildings connected by unlikely passages and confusing hallways. This floor had halls going in three directions from the elevator bank. The lighting was poor and the large gray

doors were unmarked. Each door opened on a separate laboratory. To find the one you wanted you simply had to know where it was.

With no choice, Miriam opened the first door she came to. Before her was a vast array of electronic equipment. The air was crackling with ozone, and motors hummed through the silence. “Excuse me.”

“Hey?” A voice from within a forest of equipment.

“I’m looking for Gerontology.”

“You’re at the opposite end of the wrong hallway, if that helps. This is Gas Chromatography.”

A face appeared behind a virtual wall of wires leading from a lab bench to a shelf of equipment above. “I’m trying to locate Sarah Roberts,” Miriam said.

Excitement registered in the face, which was concealed by welder’s goggles. A hand pushed the goggles up. “Welding a feeder line. No assistant. So you’re looking for Sarah. You involved in the project?”

“Which one?”

“There’s only one project around here at the moment. A hell of a project. Incredible. You a reporter?”

“No.”

“Well, I don’t think I’d better go shooting my mouth off anyway.”

“I’m from the Rockefeller Institute. Doctor Martin. Are you involved in the Blaylock project?”

“Look, I really can’t talk about it. If you want info go to Sarah or Tom Haver. Gerontology’s to the left past the elevator bank and four doors down. You’ll be able to locate it by the smell of the rhesus colony.”

He returned to his welding and Miriam left the lab. Too bad he hadn’t been more forthcoming. At least it was reassuring to know that they were keeping

the details secret. No doubt they didn't want information leaked until she was thoroughly measured.

She went down the hallway counting doors. 'Very well,' she thought, 'measure me. The more you poke and prod, the more time I'll have with Sarah.'

The technician had been right, you could certainly smell the Gerontology lab. Miriam opened the door, fully expecting the confrontation.

Instead, she found herself in a small outer office not unlike the one Sarah kept upstairs, but even more crowded with records. A computer terminal, glowing with numbers, stood on an old desk. Miriam spent a moment watching the display but it was useless. She couldn't understand.

Miriam passed through the room to an inner office which contained rolled-up cables, television equipment and stacks of empty cages. There were two exits beyond. Miriam chose one and went through.

There was a thunderous uproar. She was in the rhesus colony. Monkeys leaped about their cages, gesticulating, posturing at her. Many of them had sockets embedded in their skulls so that electrodes could be plugged in at the researcher's convenience.

How would it be to wear such a socket in her own head? Would they go that far if they had the chance?

The monkeys were made frantic by her presence; the odor of a strange animal disturbed them. She backed out of the room. The other door would certainly lead to Sarah. Once again she prepared herself, blanking her mind, opening the inner eyes to receive and evaluate Sarah's emotional state. Even now she could feel it fairly well, but not well enough to understand it. Years of training were necessary before a human being's emotional field extended much beyond his own body, years of loving someone with *touch* and wanting desperately to please him or her.

She turned the knob and swept the door open. Marshaling all of her confidence and power, forcing back the hunger their scent evoked, she strode

into the room.

The warm emotional flow that emanated from Sarah Roberts was not what she had anticipated. It was the most delicious *touch* that she had experienced since her own family was alive. Sarah's heart was full of eager curiosity and love for her coworkers. The edge of fear was still there, but in her laboratory, among friends, Sarah obviously felt secure despite the blood running in her veins.

Miriam had hoped that Sarah would be a good choice, had come to be sure of it, but had not dared hope for anything like this. If only these emotions could be redirected toward herself!

But not at this moment. As Sarah looked up from her work and saw Miriam the emotional atmosphere changed to anger and wary fear. The face was haggard too. Sarah would have had periods of great difficulty by now. She had the sunken cheeks of one who was ignoring the hunger. From now on, each time it came back it would be stronger.

"Hey," Sarah said into the hum of voices, "a problem just arrived." Miriam noticed that they were working with another computer terminal.

"Let's see what happens if we standardize the baselines," Tom Haver said to a woman, who punched the keyboard. The graphs glowing on the screen jiggled and changed shape.

Sarah grabbed his shoulder, turned him around. "Hey, folks," he said in a quavering voice, "we have a visitor."

A small, fat man, bald and sweating, said in an undertone to the one Miriam assumed was the computer operator, "Match the curves to standard deviations ___"

"Charlie, Phyllis — heads up."

"Oh."

Miriam moved toward them. They drew together, four frightened people.

“Sarah said yesterday that I was supposed to come back.”

The computer warbled and the woman Tom had called Phyllis turned it off. As did all moments of great importance in her life, this one brought Miriam a flash of understanding. If things had been just a little different, she realized that she would have been able to simply tell Sarah to come along and that would have been that. Sarah thought her beautiful. Her mind was full of avid fascination, guilty passion. Fear must be an aphrodisiac for Sarah.

Fear, then, would be the key.

Tom Haver went to a telephone. Miriam spoke, trying for every bit of authority she could muster. “Stop. I have a proposition. You may study me if you promise to let me go free at the end of the day.” Haver responded smoothly. “We have no intention of keeping you against your will. For that matter, we haven’t got the right.”

Miriam ignored that issue. If it was obvious to her that they could commit her it must be obvious to them too. Human courts were not set up in the expectation that situations such as this might arise. Miriam felt safest assuming that they would grant her no rights at all.

“Why did you do it, Miriam?” Sarah’s eyes were steady, cool. Behind them Miriam could sense the conflict and the turmoil, but the surface was admirably unruffled.

“Do what?”

In answer Sarah extended her left arm, the one Miriam had chosen for the transfusion. A purple blotch disfigured the white skin. Because of the need to create a maximum effect fast, the transfusion had been very large. Seeing its result, however, made Miriam want to help Sarah, to save her. Unbidden, a *touch* rose out of her heart. Sarah blinked and averted her eyes, her face flushing red. This *touch* was like a kiss, the kind that follows a first admission of love. Tom Haver’s arm came around Sarah, and she huddled against him. Miriam’s extended hand was not taken.

“Mrs. Blaylock, she asked you a question. I think you’d better answer it.”

There was real menace in Haver's voice. It told Miriam that he was very much in love with Sarah. Would he die for his love? Did he understand that it might well come to that?

"I came here to help you," Miriam said gently. "I think you know why."

Sarah shook her head. "We do not know why. We'd like very much to know."

Miriam didn't like that "we." It was a wall between her and Sarah. "I want to share myself with you. I have read your work. I have reason to believe that my physical makeup may be of interest to you." "Is that your motive?" Haver asked.

"Is that why you contaminated her with your blood? Don't you realize how dangerous that is?"

"You could have killed me, Miriam!"

They were like two shrieking crows.

"I am the last of my kind," Miriam said grandly. "What I gave you was a great gift. You should take it in that light."

"The last?"

Miriam nodded. It perhaps wasn't true, but it fit her needs at the moment. "I knew you would never take it voluntarily and I may have very little time. At the least, Sarah, it will double your life-span."

Haver was becoming less menacing. There was also a slight reduction of tension in Sarah's face.

"We have a battery of tests," the fat man blurted. "We'd very much like to run them."

"I'm ready." There it was; the price and the payment. Now she must enter their dull catalogues, be weighed and analyzed. She, who soared so far above them, must submit to their machines. But what would they learn? Machines

only gather facts and must therefore lie.

“I’d better get the bureaucracy rolling,” Tom said. “What shall we start with, Sarah?”

“X ray.”

“I’ll set up the appointment.”

Sarah nodded. She spoke gently to Miriam, a tone she might use with a frightened child. “We’d like to do an epidermal biopsy, which just involves scraping off some surface tissue, take some more blood, and run electrograms of various types. Would that be acceptable to you?”

Miriam nodded.

Sarah came to her, seemed about to touch her. “Why are you the last?”

Miriam hesitated. As an individual, she was so powerful that it was hard to think of herself as a member of a failed species. And yet, if she was not the last, she was certainly one of a very few. “I don’t know,” she said. The sorrow and the truth in her own voice surprised her.

“We have half an hour in X ray,” Tom said, putting down the telephone. “Let’s get going.”

Miriam followed them down the hallway feeling somewhat more confident. They hadn’t done anything violent to her yet. And Sarah was not in a state of panic. In fact, there was even some warmth there. A crack such as that in somebody’s resistance was to Miriam the same as a chasm. If she was bold and careful she had a very good chance with Sarah. She watched Sarah walking along, her gait a little heavy, her hair gleaming softly in the corridor’s shadows.

It would feel so good to take Sarah in her arms, to comfort her as a lover, to teach her as she might teach a daughter.

Perhaps the secret of why her species had dwindled was hidden in emotions such as these. If one loved human beings, how could one also kill them and

still be happy enough with oneself to love one's own kind, and bear young?

Sarah dropped back until she was walking beside Miriam. They did not speak. Miriam *touched* and found friendly interest.

Her face revealed nothing of her triumph. She knew now that the two of them were going to walk many paths together, and serve the hunger well.

Sarah's earlier symptoms had disappeared during the course of the morning. Despite not having slept all night she was beginning to feel extraordinarily alert. They had left Geoff an hour ago working on a method of removing Miriam's blood from Sarah's body, but as time passed it was beginning to seem less necessary. If there was going to be any damage, it would surely be happening by now.

She walked along beside Miriam, her mind full of the test protocols that had been developed yesterday afternoon. This was an extremely excited place. Sam Rush had called Miriam history's most important experimental animal. That reflected the thinking of the whole institution. And Sarah's as well.

Obviously, they wouldn't be keeping her in any cages, but the paperwork had been started for an involuntary commitment to Riverside's Psychiatric Center. The board wasn't too worried about the details. Legal didn't feel that Miriam Blaylock could successfully press a suit to win her freedom.

They had a nice room all ready. Sturdy, well locked. On the violent ward. Sarah felt like ordering flowers for it, she was so delighted that Miriam had returned.

Only God knew what this was going to mean. Prizes, grants, extraordinary breakthroughs. The kind of incredible chance that scientists don't even dream about.

As they passed people in the halls eyebrows were raised, smiles opened up, Sarah got a few quick arm squeezes. As soon as Tom had called Marty Rifkind in X ray word must have spread through the institution. People thought of Miriam as the find of the century, perhaps of all time. And rightly so.

Rifkind bustled around his equipment making fussy, excited preparations. The receptionist had directed them to his best suite. When they came in he was all but dancing with anticipation. Sarah watched his reaction when he first saw Miriam. He suddenly became very serious, almost wary.

It reminded her of the way fodder mice acted when placed in a snake's terrarium.

"Miriam," Sarah said, "we're going to want you to lie on this table."

"It's quite comfortable, really," Marty blurted.

"It'll be moving around a lot, but you won't fall off," Sarah continued. Was she the only one here capable of dealing with Miriam? Rifkind was scurrying around all over the place, completely forgetting the requirements of the profession. Miriam got up on the table. "I'm sorry," Sarah said, "but you'll have to take off your clothes." Miriam began to comply. "Not everything," Sarah added hastily. "Just your outer garments and any metal objects." Miriam's eyes met hers, gay, laughing. It was an awful moment.

Rifkind controlled himself enough to affix the straps that would restrain Miriam as the table moved from position to position. She allowed herself to be strapped down, but Sarah noticed the rigidity of her face, the watery stare. Miriam was frightened. Somehow it touched Sarah. "You can unbuckle those yourself if you want to," she said. Miriam looked at her, the relief obvious.

Rifkind plastered on his most ingratiating smile. "We're going to do a full-body scan. One picture for each quadrant of the body, one for each skull view and two for the legs. That way we'll have a full record of your skeleton."

"Minimal dosage. I don't like X ray."

Rifkind grinned, his face popping sweat. "Minimal dosage it is. That's a promise." He beckoned the group into the control room. With the X-ray head on a tracked grid and the table fully mobilized, all of the pictures could be aimed from the control panel. Once the patient was positioned there was no need for the radiologist to enter the room until the session was over. Thus, staff dosage was kept to a minimum and sessions were greatly speeded up.

“She wants minimal dosage,” Rifkind said when the control room door was closed. “Too bad we’ve got to fry her.”

“Don’t you dare hurt her, Marty!” Sarah wanted to hit him, pulp his fat face.

“What?”

“I’m sorry. I mean, let’s keep the dosage to the minimum necessary. She’s valuable, remember. No risks, however remote.”

Without replying, Rifkind flipped the switches that controlled the table and started aiming the X-ray head. Sarah was surprised at the intensity of her own feelings. Was it really appropriate for her to want to protect Miriam? She did not know the answer to that question.

The woman remained absolutely motionless, her lips parted, eyes staring straight at the window into the control room. Those eyes seemed to seek Sarah’s and she allowed them to meet. All through the skull series Sarah let Miriam stare into her eyes. It was a wonderful, mesmerizing experience, like being naked before one you truly loved.

Tom was watching Sarah carefully. “I’m not so sure that Miriam isn’t dangerous,” he said. He was beginning to think that Sarah hadn’t heard, when she swung around, her face flushed, her eyes blazing.

“That’s an unprofessional statement!”

“She drugs you, transfuses you with foreign blood, and you defend her. I’m afraid I can’t understand that.”

“She’s precious. I admit that her behavior is highly unpredictable. But there’s so much knowledge to be gained! Think of the recognition, Tom.”

“Thank you. I’m just glad Miriam Blaylock has a nice secure place to spend the night.”

“Look at it from my standpoint. I want you to understand what I feel about her —”

“Do you?”

“I almost halted the aging process with Methuselah. And now what drops into my lap but this . . . female being with blood characteristics similar to his right before he died. The only difference is she’s perfectly healthy.”

Sam Rush had come into the room behind them. His voice startled Tom. “Just don’t let her get away from us again. Consider her continued presence your most critical responsibility.”

“Very good, Doctor.” Tom thought of the Psychiatric wing with its burly guards — carrying only night-sticks. He made a mental note to post an armed guard as well on Miriam’s cell.

“Doctors, please, let’s keep it down so I can concentrate. I’m going to make a fluoroscope run of the skull, if anybody’s interested.” Rifkind spoke into the intercom. “Mrs. Blaylock, turn your head to the right, please.” He adjusted some knobs, then turned on the fluoroscope. “Abnormal,” he said in a tight voice. “Wonderfully abnormal!” Into the intercom: “Open your mouth, please. Thank you. Close it. Swallow.” He was almost jumping with excitement. “Look at that inferior maxillary! Jack, give us the lowdown,” he said to the osteologist Tom had called earlier. He turned off the fluoroscope. “Don’t want her to glow in the dark.”

“There are a number of gross variances,” Jack Gibson said. He was a resident in osteology, attached to the hospital, and obviously pleased to be invited to a project in the elite research section. “The angle of the inferior maxillary is significantly more pronounced than normal, and the symphysis is more apparent. The whole structure is developed to a more powerful jaw. You could see the compensation in the heavier malar bone and much more developed zygoma. I also noticed more curvature to the cranium. We’d have to measure, but I’d say the brain case was larger than normal by a good twenty percent.”

“So you’d say it’s definitely not a human skull.” Tom knew the answer, but he had to ask the question just in case. If his Christmas candy was going to be taken away, he wanted to know it now.

“Humanoid, certainly. I’m sure it’s a derivation of the primate line. But human, in the strict sense of the word? No. It’s a completely valid structure, though, not the result of some deforming process.”

That was the kind of supporting observation that would eventually wind up in the paper Sarah would already be planning on Miriam, a paper that would stun the scientific community, not to mention the outside world.

Miriam’s voice crackled through the intercom. She wanted out. Rifkind took a final series of the skull and neck. They would have to pursue more detailed work later. But this had been an excellent start. “She sounds angry,” Tom said. “Sarah, you try to pacify her. We don’t want her walking out of here again.” She went into the X-ray room. “We’re finished, Miriam,” she said in what Tom hoped was a calming tone, “you can get up now.” The Velcro straps could easily be removed by the patient, but Miriam seemed to be having trouble. Tom watched Sarah help her. As she drew near he saw Miriam gaze fiercely at her. The look was deep and personal. Intimate. Much too intimate. Sarah assumed a posture Tom was familiar with. She put her hands behind her back and bowed her head, almost as if to say “do with me as you will.” Tom had seen it in their bedroom.

Miriam’s lips moved. Tom turned up the intercom, hearing only the last words, “. . . need help.”

“What was that?” Charlie Humphries said. Tom shook his head. Had Miriam been reassuring Sarah?

Tom resolved not to allow the two of them to be alone for even ten seconds. There was something hypnotic about Miriam Blaylock and it was his Sarah who was the victim. Already Miriam had inducted enough bizarre behavior in her to last the rest of her life. There was no way to tell what more might happen.

He saw that Sarah was still fumbling with the damn Velcro straps. He followed her into the X-ray room.

Miriam had done nothing more than stroke Sarah’s arm. But it was

nevertheless the warmest, most reassuring thing Sarah had ever felt in her life. She was so close that she could smell the pungent sweetness of Miriam's breath. "I transfused you for both of our sakes," Miriam said very softly, her lips barely moving. "But you're going to need help." Then she smiled and Sarah wanted to laugh with delight at the radiance of it. Her whole being seemed to rise to higher and higher levels as Miriam continued to look into her eyes. It was as if she could feel Miriam's feelings inside of herself, and those feelings were pure and loving and good. She became acutely conscious of her body and almost laughed aloud when she noticed how she was standing. She folded her arms and tossed her head, breaking the gaze. Miriam rose from the X-ray table and at the same moment Tom appeared.

Sarah felt like an angel who had just fallen from some high grace. She could have choked Tom!

"Your Doctor Rifkind broke a promise," Miriam said to Tom. It was a timely interruption. Tom's interest was deflected from Sarah. She was grateful for Miriam's perceptiveness.

"Broke what promise?"

"He said he was going to 'fry' me, I think. It wasn't exactly a minimal dosage."

"I don't recall —"

"I read his lips, Doctor Haver." She smiled again, nastily. And strode into the control room. Tom followed her and Sarah followed him. There was something extraordinary about the way Miriam dominated situations. Sarah envied her that skill.

When they reached the control room Marty Rifkind was looking quite chastened. Sam Rush was speaking, his voice as smooth as a mirror. "There won't be any dangerous tests, Mrs. Blaylock. You're not an experimental animal. Nobody at this institution would want to cause you the least harm. I'm sure I speak for the whole staff when I say that."

Sarah thought again of the room that awaited Miriam in the Psychiatric

Clinic. She thought of the commitment papers in process right now. She found that she could not think of Miriam as a prisoner. And there was no other way to think of her, or wouldn't be when the commitment was approved.

They ought to let Miriam go home. The more Sarah thought of it, the more outrageous and high-handed this whole thing began to seem. Miriam had come back voluntarily, after all. That fact ought to be respected.

"We've got to get moving," Tom said. "There are four more labs to go." He glanced at Miriam. "If you're agreeable, Mrs. Blaylock."

All through the morning and into the afternoon they worked on the tests. Sarah moved in a sort of dream of fascination. Miriam was so very beguiling, as mysterious and beautiful as a jewel.

As they left the Brain Studies Lab Sarah noticed a security guard in the hall. Two more guards were in the elevator. Everybody except her and Tom and Miriam dropped back as they entered the elevator. When the doors closed, the three of them were alone with the guards. Tom punched the sixteenth floor. There was a key in the manual override control and one of the guards reached forward and turned it.

So it was to be now. Miriam had just been netted.

She saw the guards, she saw their guns. With a supreme effort of will she did not bolt as they passed the fire stairs. She was confident of her ability to go to the top of the building and escape across the roofs, or break down one of the lower doors if necessary.

But it wasn't going to be necessary.

"Where are you taking me?" she asked, playing out her role. "I thought we were finished." She imagined how it would be to satisfy her hunger with Haver.

"We'd like you to stay the night," he said. If all went as she hoped, there was going to be an interesting fate reserved for him. Miriam disliked him

intensely.

The elevator doors opened. Miriam knew at once that they must be on the psychiatric floor. The walls were white and there were heavy screens on the windows. She felt quite sick at the sight of it all. Everything on this floor would be locked. Her last chance of escaping was now gone. It all depended on Sarah. Such a thin cord bound them. Was it strong enough?

“I want to leave,” she said. The guards came closer. Other men appeared from behind a door with a tiny window in it. One of them took her firmly by the arm. “I’ve decided to go home.” She put all the frantic terror into her voice that she could. Sarah’s instincts had to be mobilized. “Let me go! I want to go home!” She sought Sarah’s eyes, capturing them, *touched* with as desperate a plea as she could feel.

Sarah clapped her hands over her face. Tom Haver’s arm came around her. Miriam was pulled forward. She moaned, sank in the arms of her captors, and allowed herself to be dragged sobbing through the ugly little door and down the hallway beyond.

The cell was not padded, but it was no hotel room. It stank of despair and madness. There was no further need to act. Miriam sat down on the miserable little bed. She closed her eyes, *touching* for any faint contact with Sarah that she might pick up.

She thought of the French king and his dungeon, and the sounds of the starving.

* * *

Sarah was upset. Tom had become virtually monosyllabic. Now he was forcing her back to Geoff’s lab just as certainly as he had forced Miriam to the Psychiatric Clinic. “I’m fine, Tom. I feel marvelous, as a matter of fact.”

“You look rotten. You’re gray. There must be some sort of cyanosis setting in.”

“Maybe I’m a little shocked! This place is turning into the Third Reich. You just threw that woman in a cell without so much as a trial!”

“We need her. Anyway, the commitment is perfectly in order.”

“She’s sane!”

“Define your terms! I don’t think so. Sam doesn’t think so. In view of the fact that she’s not even a human being — and we have proof that she carried out a totally irrational assault against you — I think we’re doing the right thing. Now come on.”

When he tugged at her arm, anger flared in her. Before she could think, she had slapped him so hard she all but lost her balance. He gasped, shook his head. For a long moment he was absolutely still. She thought he was going to hit her, then he seemed to shake it off.

“If you’re up to it, darling, I think you’d better come.” She didn’t argue further. She was too astonished with herself.

Geoff hardly greeted them. He simply started talking, bringing them up to date.

His eyes were red from the hours he had been spending at the microscope. He extracted a smeared yellow sheet from a pile of papers on his lab bench. “I’m calling this the curve of transference. It shows the amount of time by blood volume that it will take for the native blood to be completely replaced.”

“What’s that supposed to mean?” Tom’s voice was sharp. Sarah tried to take his hand but he moved away.

“The transfused material will replace the natural blood. No question about it. The native blood is now nothing more than a nutrient bath for the new tissue.”

“The body produces blood. Replaces the whole volume eventually.”

“New blood is the stuff’s food supply. It’s a parasite except that it carries nutrients and performs gas transference.”

“Poorly. She looks gray.”

“It isn’t very efficient yet. But the receptivity is changing. A gas chromatograph shows oxygen uptake subnormal but improving.”

This was bizarre. Sarah rubbed her fingers against her face. Her skin was slick and cool, like Miriam’s. “What color are the leukocytes?”

“Purple. Deep, as if they were oxygen gorged.”

“Miriam’s leukocytes were deep purple before she slept. Methuselah’s were before —” She stopped. Methuselah had torn his cagemate to pieces.

“I think we’ve got to deal with it as an invasive organism. Parasite. I can’t see how we can avoid the conclusion that it’s going to come to dominate your system.”

“Get it out of her!”

“We might try a blood replacement. If we do it right away it just might work.”

“So do it!”

“I intend to, Tom! But I’ve got to get more blood. It’ll be a few more hours. That’s the best I can do. I hope we’ll be in time. I think we will.”

Silence fell. A few more hours. Tom’s arms came around her. She felt his trembling body, saw the fear in his eyes. “I feel just fine,” she said. “I’m sure it’ll all work out perfectly well.”

But when he clutched her more tightly, she let him.

11

MIRIAM STOOD AT THE barred window of the dingy little room. Evening was becoming night. She was growing more and more hungry. Her fingers touched the bars once lightly, then ran along the sill. If only Sarah would come!

Miriam had allowed them to lock her up to give Sarah the chance to come and free her. Sarah's loyalty was the issue. Miriam wanted it, and the best way to win it would be to get her to volunteer herself on Miriam's behalf.

Miriam was relying on the strongest aspect of Sarah's personality, her sense of independence. Surely Sarah would not be able to countenance the idea of someone being unjustly imprisoned.

Miriam shook the bars. The more hungry she got, the more the minutes counted. She imagined the hunt, the kill. Her head throbbed, her body began to feel heavy. Without quite realizing it she had examined the whole window frame. The bars were bolted into the brickwork on the outside. The frame itself was hardwood.

As she was now, Miriam could probably bend back the bars. But in another two hours she would be too weak. Is that how the victims of Charles IV had died, by waiting too long for deliverance from outside? Miriam threw herself onto the bed, then jumped up and went to the door. All she could see through the barred peephole was an expanse of white wall on the opposite side of the hallway.

A powerful, delicious scent was entering the room through the tiny cracks around the door. There must be a guard posted just out of sight, probably

sitting in a chair beside the door. That would be another of Haver's precautions.

At first she had discounted Haver as a threat to her relationship with Sarah, but the more she understood about him the more formidable he became. Deep inside that man there was something strong. That was the part of him Sarah loved.

Such a love was powerful. Miriam could see why Sarah endured the outer man with his arrogance and his manipulative nature, as long as there was hope that the inner man would eventually emerge and sweep the rest aside.

She wished that the guard would leave his post and give her some peace! She dreamed of the hunt — where she would go and whom she would take. There was a couple living in the top floor of a house on West Seventy-sixth Street, in an apartment Miriam had entered a few years ago. By now the last disappearance from the place was forgotten. It was time for another couple of tenants to jump their lease. No advance planning would be necessary. Miriam already knew her route and the locks she would encounter.

“Please, Sarah,” she moaned. She *touched*.

In the emotional silence, there was an angry stirring. Somewhere in the building, Sarah was upset.

The attic grew darker as evening took the last glow from the westward-facing dormer windows. John had been lying on the floor of the tiny room that contained the remains of his predecessors, listening for Miriam to return to the house. He was almost too weak to stand. For hours he had been motionless.

This was going to be his last act. The steel box that would contain him stood bulky and black in the center of the room. Slowly John's hand rose until he could grasp the edge of that box. Then he pulled himself up to full height, tottering, fighting to keep his balance.

Dizziness washed over him. The room retreated farther and farther away. Only his burning hunger remained, like a fire in the center of his body.

By slow degrees the room swam back into focus. He felt like stone. His head lolled as if his neck were broken. His knees wobbled, forcing him to lean heavily against the wall of sealed boxes.

It took him an hour of agonizing effort to break the locks on five of them. The others were too strong. Those he had been able to break were at the bottom of the stack, the most ancient ones. He threw his weight against the ones on top, sliding them to the floor, allowing the ones below to open.

The room was now pitch dark and choking with dust. But it was not quiet. Everywhere there was seething, hissing motion. John threw himself out the door and closed it. He leaned back against it and turned the lock. After a few minutes the door began to creak, then to groan and rattle, finally to shake.

Sarah stared sightlessly at the electroencephalogram. The mass of complex lines would not become clear. She was so tired. But she was also terribly angry. Her mind was in turmoil. Time after time she had looked up from her work startled, thinking that Miriam was coming into the office.

They had wronged Miriam. The trumped-up commitment was an evil thing. It made Sarah question the real value of her own work, but more the truth of what she loved about Tom. He had conceived of the idea, managed its realization, and executed it with the dispassionate precision of a police officer.

Through it all he had been as cold as death. And now that poor creature sat up there, her dignity — her very rights as an intelligent being — stripped away.

Sarah glanced up at the clock. Nearly eight and time for the so-called Blaylock Group to meet and share findings. The Cytogenics Lab was preparing a chromosome analysis. Osteology was working on bone structures, Cardiology on heart and circulatory systems.

Sarah tried again. She had to have something to show at the meeting. The EEG was radically disturbed. It offered few real comparisons to a human encephalogram.

Sarah could not stop thinking of Miriam, nor could she stop wanting food. It

was absurd, but her hunger was really getting obscene.

When Miriam had been near her, she had felt greatly comforted. There was something kind about that woman. Of course, it had been stupid for her to carry out the transfusion, but one should not forget that Miriam's thought processes were not human. In her mind it was probably a perfectly logical act.

Until now Sarah had not allowed herself to consider whether or not she would really stop aging. Was that the effect of Miriam's blood?

If so, it was a gift not only to Sarah Roberts but also to all mankind. Miriam had said that she was the last of her species. The more Sarah thought of it the more the nobility of the act became clear.

Noble captive. What suffering Miriam must be enduring right now, four floors above.

Ten minutes to the meeting.

Her mind had to come back to the problem at hand. The EEG was a mess, she realized, because Miriam's brain had more than one voltage level where a human brain displayed only one. The needles of the EEG machine had each been picking up at least two signals; thus, the hodgepodge.

Sarah swept the graphs off her desk. She had her damn conclusion. Most of a human brain was inactive, mysteriously turned off, apparently unneeded. Not so with Miriam. This was a picture of a fully functioning brain, so active it was beyond the capacity of the instrument to record.

What an extraordinary mind must be there. The commitment was more than a moral lapse, it was the blackest of sins, an obscenity. Sarah was ashamed for them all.

The Hutch that now sat across from Tom was a changed man. Miriam Blaylock had been severed from his control and there wasn't a thing he could do about it. Too late he had realized the importance of the case. Not only had he lost status at Riverside, he had lost something else — something Tom

himself couldn't have borne to lose — his authority.

“I want to help,” he said.

Tom was shocked. In Hutch's position he himself would have resigned on the spot. “OK,” he said, “be my guest.”

“We'll pretend to be teammates for a little while longer, if it's all right by you.”

What was he implying? “Of course,” Tom said with an assurance he no longer felt. He never underestimated the enemy. That was his cardinal rule.

“I worry about Sarah,” Hutch said.

“So do we all.”

“Why doesn't she check in for observation? Let's not forget that we have a top-flight hospital attached to this place.”

“I've discussed that with Geoff and we both feel it would be better not to alarm her. Anyway, she'd never go.”

“Intervene. You can convince her.”

“Short of an armed guard —”

“Then get one! She's in trouble. I'd expect that you of all people would want to help her!”

“What's that supposed to mean?”

“Don't you realize what's happening to Sarah?”

“Sarah's busy with her work. And she's not reporting any symptoms. Geoff's going to do a blood exchange within the hour.”

“Didn't you see the effect that . . . thing had on her when they were together?”

“She was awed. I think that’s a very appropriate reaction. Miriam Blaylock is awesome.”

“She was seduced! It wants her, Tom. Surely you can see that!”

“Wants?”

“Didn’t you feel it? Sarah was being hypnotized or some such thing. I’d put Sarah in the hospital for observation and I’d post guards —”

“Commit them both? Come on, that’s absurd.”

Hutch leaned forward, gripped the edges of the desk. Tom had never seen him so agitated. “I would post guards to keep that creature away from her. At all costs!”

Tom could only shake his head. He had always suspected Hutch of a paranoid streak. Now, under pressure, the weakness was surfacing. That was always the way when people faced pressure. Some of them caved in, others did their best work.

“Look, I’ll take all this under advisement. But the project group is due to meet at eight and I want to make sure everybody’s on schedule.”

That was enough of a dismissal to make Hutch stalk out. Fine. Calling the labs could wait five minutes. Tom needed some time alone. So many contradictory thoughts were pouring through his mind. It had been a matter of pride to reveal nothing of his feelings to Hutch, but in truth he also was frightened. Sarah had a much more serious problem than she would admit, that was obvious from the tests. Geoff’s analogy comparing Miriam’s blood to a parasitic organism was proving to be correct. Soon Sarah would be suffering from all the effects of massive parasitization. Terminally, if it came to that, she would starve, her body overwhelmed by the nutritional needs of the parasite.

That possibility, however, was not what most bothered him. He had almost unlimited confidence in Riverside. If all else failed, they would save Sarah. The thing he could not understand was why Miriam had done it. He

remembered that she had been reading Sarah's book in the sleep cubicle two nights ago. Numerous times she had made reference to doing "research" on them all.

The more he considered the situation, the more obvious it became that Miriam's appearance here was planned right down to the claim of night terrors, which had been used to draw Sarah's interest.

The approach was subtle, to be sure. But Tom was himself quite good at designing plans that bore a superficial appearance of accident. Such was the nature of the political mind. He had to admire Miriam's expertise.

It had all led up to the transfusion. Surely it was not simply a crazy attempt to kill. Why go to such pains? There were a thousand easier, less detectable ways of killing a person. That blood running in Sarah's veins was far more identifying than a fingerprint. No, there had to be another reason.

As to what it might be, Tom simply could not imagine. Possibly it was too alien even to make sense to a human being. They had only just begun to study Miriam. The most distant reaches of her mind might elude them for years — or forever. Yet they had to try to understand. He could see a situation in the near future — if Sarah became seriously ill — in which her very life might depend on their insights.

He pressed his intercom, hoping that his secretary hadn't left for the day. There was no response. It was his own fault, he hadn't asked her to stay. With a tired sigh he returned to the schedule and began to call the various labs.

Phones were answered by bright, excited voices. What irony. Here he was in the center of one of the most extraordinary discoveries ever made, right at the core of the event, and all he could feel was foreboding.

He called Sarah last. She pleaded for more time. He had to tell her that the others would all be ready at eight.

"No doubt you're saying that to everybody."

He supposed that he deserved such suspicions. “I’m not, it happens to be true.”

“I’ll just have to be there, then. These EEGs are an unholy mess. Not only are the alpha and lambda waves close to unreadable, nothing else follows any established patterns. I suspect that we’ll have to relearn brain function before we can figure out what’s going on here.”

“You feeling all right?”

“I’ll tell you when and if my symptoms require more attention. I don’t want to hurt your feelings, Tom —”

“You’re sure? Wouldn’t it be just a little fun?”

“Feeling sorry for yourself? I was trying to be kind. Just let me do my work. If I have any more problems, believe me I’ll tell you.”

Sarah was in agony. She forced herself to appear interested in the meeting, but all she could think of was eating. Soon there would have to be some kind of reckoning.

They all looked so evil — or so blind. “We have a most interesting picture,” the geneticist droned. Sarah couldn’t even remember his name. He fumbled with the overhead projector, finally casting a karyotype of Miriam’s chromosomes on the meeting room’s whiteboard.

Poor Miriam, she was becoming a bunch of charts and graphs. But what could they tell of her beauty? She was the most free spirit Sarah had ever known. Free, and also brave. Sarah had decided that the transfusion had really been an act of courage and love. Miriam wanted to transmit her gift to mankind.

She had chosen Sarah as the recipient because Sarah knew so much about aging. There was brilliance in such a choice. They were all making a great mistake about Miriam. In a sense they had not the right to disturb the experiment any more than they had the right to imprison Miriam. She was a genius, perhaps even beyond that. They owed her trust, not suspicion and the

violence of involuntary commitment.

The transfusion was an act of courage. As the recipient, was she not also called to courage?

How dare they consider a blood wash.

A wave of hunger made Sarah gasp. Tom and Hutch were both looking at her. She managed a smile. 'Miriam will know how to take care of me,' she thought. 'She would never have done such a thing in ignorance.'

The geneticist's drone reached her ears again. "To complete the cytogenic analysis, we stained for G-banding and Q-banding. The specimen presents the longest chromosomal chain yet observed in a higher animal: sixty-eight chromosomes. No trisomes or other identifiable translocations or breaks are observed."

Sarah could hardly sit still. If they had been more cooperative Miriam would probably already have helped her with this terrible feeling. It was greater than a simple appetite. Sarah didn't want food. This felt like some kind of addiction. Hunger. God help her.

"Both 'p' and 'q' arms are of equal length, an unusual finding. There is superficial resemblance to a human chromosome, but only in the most general terms. The broad primate characteristics can be observed, however."

Shut up, you long-winded bastard.

"The sexual component presents another sort of problem. I would doubt that the sexual functioning of this species parallels our own, or the rest of the primates, for that matter. The ambiguity of the sixty-six, XXY tripartite structure certainly implies both male and female components in the same personality. I would recommend a thorough examination of the sexual organs as the next step in this study."

That did it. She could not abide the idea of Miriam strapped to some table with this bastard examining her sexual organs. She found herself on her feet. Tom started to rise as well. For an instant she was desperate, cornered. She

had to get upstairs! “Relax,” she said as calmly as possible. “Does it have to cause a panic when I go to the bathroom?”

Only Hutch followed her out of the meeting. They walked down the hall side by side. It seemed that he had to go to the bathroom too. Sarah waited for him to disappear into the men’s room and then headed for the stairs. She paused on the landing. Sure enough, Hutch appeared a few moments later in the doorway. She realized that he would have to be dealt with. They were standing face to face. He held out his hand. She wasn’t really sure it would work, but she had read somewhere that a blow to the side of the head could stun.

She hit him above the temple with her closed fist. His eyes rolled and he sank to the floor. “I’m sorry,” she said. She hated violence. Always, she had been a person of the deepest humanitarian ethic.

She took the stairs three at a time.

Tom could not contain his own excitement as finding piled on finding. These results were marvelous. There was going to be recognition for everybody. Extraordinary discoveries. Fame. It was like the best of Christmases. No, better.

All it would take would be a few more weeks of intensive testing of Miriam and they would be ready to make everything public. The discovery of the new species could be announced at the same time they announced the antidote for aging. During her deep sleep, it seemed, Miriam’s body generated the same lipofuscin inhibitor that had been briefly present in Methuselah’s blood before he broke down. The difference was that for Miriam there were no breakdowns. It was only a matter of time before they understood why.

He thought of that cell on the Psychiatric Ward. Involuntary commitment. Unpleasant, but unavoidable.

Hutch reeled into the room, shattering Tom’s thoughts and the whole meeting with the sound of the door crashing back against the wall. Hutch didn’t have

to speak, they all knew that something had gone wrong with Sarah.

“Which way did she go?” Tom heard Charlie Humphries ask.

Tom waited until he heard Hutch breathe the word “stairs” before he was off.

He headed for the sixteenth floor. Bursting into the reception area, Tom caused the attendant to vault his desk, his nightstick in his hand.

“Is Doctor Roberts up here?”

“Jesus! You goin’ to a fire?”

“IS SHE!”

“Lessee. She signed into room fourteen ten minutes ago. Signed out three minutes later.”

“Goddamnit!” He signed himself in, waited for the attendant to buzz him through the door to the ward, rushed down to Miriam’s room. The special guard sat with his chair tilted against the wall. “Open it.”

The man looked up, recognized Tom. “Hasn’t been a sound since Doctor Roberts left.” He unlocked the door, swung it wide.

The room was cold with the night wind. The window, its bars gone, gaped darkly. “Sarah left here alone?”

“Yeah! Not five minutes ago. She didn’t say a damn thing about this.”

Tom went over to the window. He couldn’t have climbed up or down from there. But Miriam evidently could, because she was gone.

Miriam went swiftly through Central Park, heading for the West Side. She was literally wild with hunger. By the time Sarah had come she had already pushed the bars off the window. It was just as well. Sarah had wanted to be held. Miriam did not trust herself so far, not in this state. She reassured the suffering woman that there would be relief, and told her to meet her at her

house in half an hour. Then she had climbed down to the sidewalk, with Sarah leaning far out the window, watching her progress.

She ran across the Sheep Meadow with the soaring cliffs of buildings sparkling beyond the dark trees. She had much to do in half an hour.

Only when she emerged onto Central Park West she did break her run. Now she walked swiftly, crossing to Seventy-sixth Street and counting the houses to the one she would enter.

She chose a house four doors down from the target in case she was seen on the stairway. Taking the steps four at a time, she passed the doors of apartments, the sounds of television, the smell of frying steak. When she got to the top of the house, she climbed the ladder to the roof and let herself out. New York building codes require that tenants have free access to the roof. This made things much more convenient.

These old row houses were connected by shared walls. Miriam passed silently across the tar-paper roofs until she reached her objective. The landlord of the target house had been clever. He had gained an extra apartment by building a bedroom on the roof. The apartment was a duplex, fashionably provided with a spiral staircase to connect sleeping and living quarters. Miriam considered it an ideal early evening choice because you could get into the upstairs bedroom and await your chance at the top of the spiral stairs. From there you had a view of the whole living-dining room below.

The bedroom had a door to the outside, locked by a spring-loaded dead bolt. You could open it from inside, but not from the roof. Or so they had assumed. The lock hadn't been changed. It was still the same substandard mechanism that had been there six years ago. She was inside within thirty seconds. There were three steps down to the bedroom floor.

Looking down the spiral stairs from the darkness above, she evaluated both occupants. The girl was the lighter, she would be the one to be taken alive. Miriam watched the man. He fit her personal needs very well. The last time she had been here all had been as now: a young couple, dinnertime. The only difference was that John had been with her then, and they had shared their

meal on the bedroom floor.

Miriam used the same ploy she had before: she hissed. Dinner stopped downstairs. She did it again, louder.

“Is that a cat?”

She repeated the sound.

“Frank, there’s a cat upstairs.”

“Goddamn it.”

She did it another time, imagining herself to be a cat in pain.

“Frank, go see. It sounds like it’s hurt.”

His chair scraped. Instantly, Miriam stepped back into the bathroom. A moment later the bedroom light came on and Frank’s heavy tread sounded on the stairs. She watched him from the shadows, tensing for the kill. He did exactly the same thing his predecessor had done: looked around and, seeing nothing, bent to peer under the bed.

Miriam had no need of a scalpel. Nature had given her race a tongue proper to its uses and she penetrated the flesh instantly. He sucked in his breath, kicked once against the floor, and was dead. In ten seconds she filled her body with the fire of his life.

“Frank? What’s that sucking?”

Miriam removed her chloroformed rag from its Ziploc bag and once again withdrew to the bathroom. She took with her the loose bundle of clothing that had been the male.

“Frank?”

She made the hiss of the cat again. Then she stomped on the floor.

“Are you killing that animal? Frank, that’s probably Mrs. Ransom’s cat, you

realize that!” Another strangled hiss. “Frank, don’t!” The scrape of a chair, patter of feet.

Miriam knew the type very well. With this one she would step out into the light, stunning it into momentary immobility. She got to the top of the stairs. “Fra-ank? Oh!” She stood, mouth gaping with surprise, eyes darting in confusion.

“I’m a policewoman,” Miriam said, crossing the room with one bound. “It’s perfectly all right.”

The girl lurched and mumbled in the chloroformed rag, but soon went limp. Miriam put the remains of Frank in the usual black plastic bag. The unconscious girl was more of a problem, but Miriam had thought carefully about that. Getting her home would be the riskiest part of the procedure. If anybody came out of one of the other apartments while they were on the staircase, she would have to kill again.

She went downstairs quickly. Nobody appeared. There were a few people in the street, but women in the human culture are shielded by their position from any expectation of violence, so she was only mildly concerned that she would raise suspicions by assisting her woozy “girl friend” into a cab.

They got home without incident, Miriam alternately comforting the half-conscious girl and threatening her. But until the girl was locked in the bedroom closet Miriam remained vigilant. With the turning of the key in that lock, all was at last prepared. It was now nine-thirty. Miriam herself was fed and once again able to be among human beings without the constant temptation of the hunger. And Sarah’s first victim awaited her.

Tom sought Sarah with increasing desperation, in her office, then in her lab, then in Geoff’s lab where the blood wash was to have been done. Geoff was there and he had all the fresh blood he needed.

But he did not have Sarah.

Tom finally had to accept the truth. She had left Riverside in spite of her condition. “How much time does she have?” Geoff’s expression said it all.

“I was afraid of that.”

“I did all I could, Tom. I practically had to rob the Red Cross to get this stuff.”

Tom rushed down the halls, blind with sorrow and terror. How could she have done this? The thought crossed his mind that Miriam might have kidnapped her, but he dismissed it. Even Miriam could not have negotiated the drop from her window with Sarah on her hands.

He came to the conference room, saw Hutch slumped in a chair. Phyllis was nursing him with wet paper towels. “Hutch,” Tom said, “any idea at all where she might be?”

“As soon as I tried to stop her she hit me so hard I was stunned.”

Tom bolted from the room, went to the elevators, hammered at the button. He felt nauseous, he was shaking. But he knew now where she had gone. The only place she would have gone.

Sarah. Please, darling. *Please!*

The night air was damp and sharp as Sarah ran down First Avenue. Never had she experienced such a wild sense of freedom. Her body felt incredibly *capable*. She was moving fast, not even breathing hard, enjoying the wind in her face.

For a brief moment she had embraced Miriam in the Psychiatric Ward. In that instant she was filled with gladness and wonder. She had seen into Miriam’s mystery. How dense they all had been. Not one of them had noticed the ecstasy that could be drawn from Miriam’s gaze, or the joy of her touch.

These feelings could not be explained by science. The effect Miriam had on her was beyond measurement. How could you weigh the difference between a spirit imprisoned and a spirit free?

A thrill went through her. Two blocks ahead a lone figure had come out of a coffee shop. She increased her pace, her feet drumming on the pavement.

There was a delicious sense of precision about her movements.

That figure seemed so delicate as it strolled along. It would be like digging into a honeycomb and tasting its hot, secret sweetness.

Did she want to hit that man? No, it was worse than that. She imagined his head flying like a melon beneath the wheels of a passing bus, saw the blood spurt from his neck.

She stopped running.

These were not her thoughts, could not be.

The man stopped at a corner and lit a cigarette. Sarah saw the white neck exposed as the head bent forward, then the profile in the glow of the match.

The man straightened up and stared back in her direction, seemingly aware of her sudden change of pace. His bland, haggard face regarded her with the mildest curiosity and then he went his way.

His very gentleness enraged her. She took a few strides toward him, then stopped herself. A radio was playing in a passing car. Two children came out of an apartment house lobby and dashed off into the night.

There was no reason to be enraged at the old man.

Miriam. She would know, she would understand. The thought brought all the glee back and Sarah started running again. It was wonderful to feel so free in the streets like this, so utterly unafraid.

She found herself passing Carl Shurz Park. Why exactly she had come this far east she could not say. Mist was starting to fall, blowing like smoke in the streetlights, making the park's paths glisten as they had last night. Sarah slowed to a walk.

The little park had lost all its mystery and terror. A Baby Ruth wrapper clung to a gatepost, a dismal loop of kite string hung from a tree. In the distance the East River muttered with the rising tide and tires hissed on FDR Drive.

This was the real world, Sarah's world. She came to the gate she had entered last night, saw the path leading up into darkness. If she went in, what would she find?

Empty benches and silence. Nothing more.

Last night had been a bad dream. She moved on, going more slowly toward Miriam's house. She was left with a single, practical wish: find out what she could do about this awful craving. It was beyond an appetite.

As she went down East End Avenue and turned west to York she passed the exhaust fan of a restaurant. Cooking odors poured into her face.

She was revolted.

People were willing to eat garbage these days. Her mind seized on the familiar image of the peaches they used to get from their backyard tree down in Savannah. They had been rich and yellow-red. She wished she had one now.

"Please, Miriam," she said aloud. "Help me."

By the time the house finally appeared she was livid with need. Try as she might she could not discover what it was she wanted. It was as if life itself was the food she required. But what nutritional need could possibly translate into such a desire?

Sarah rang the doorbell. Instantly the lock clicked and the door swept open. Miriam stood in the dark hallway. Arms outstretched, Sarah ran forward, attaching herself with a gasp of relief. Miriam made no sound closing the door, her own arms coming around Sarah. Miriam could be so very tender.

When Sarah calmed down enough to talk she began to babble thanks, to explain that she understood now what Miriam had given her, she knew that it was the very longevity she had been trying so hard to achieve in the laboratory.

"That isn't all it is."

No, that was true. Despite her relief and happiness there was still this awful, cloying need — and with it a growing revulsion for normal food. Until now she hadn't thought about Miriam's diet. Her confusion must arise out of the fact that she had no instinctive craving for what Miriam ate, and what must now also be her own food.

“Come.” Miriam took her by the arm, led her upstairs. The stairway and hall were brightly lit. Miriam opened a door to a dark room. “This is my bedroom,” she said, “you were here yesterday.” Sarah allowed Miriam to lead her in, close the door. The darkness was absolute. It would be a few moments before Sarah's eyes adjusted to the rapid changes in light intensity. Miriam pushed her by the shoulders, sitting her down. “Wait. I am going to relieve your hunger. Be prepared, Sarah. This is going to be quite unexpected.” Sarah obeyed the calm reassurance of the voice. She thought with childish delight, ‘she's glad to see me.’ There was a high-pitched sound, like the scream of a dying rabbit. “Open your mouth!” Miriam's tone was now strident, demanding that Sarah do as she was told. A hot stream sluiced down her throat, hot and pumping, while the reedy little scream got lower and lower and finally died away. For a horrible instant Sarah had thought that this was a stream of urine, it was so hot and saline, but the effect it had on her dispelled that fear almost at once.

Sarah and Tom had occasionally taken a little cocaine. It lifted one, in the first instant, to what had up until now seemed the pinnacle of pleasure. It was nothing compared to this.

Sarah kicked, threw her head back, lost the stream, then lunged forward in the dark, seeking more. A fleshy something was thrust into her mouth. “Suck!” More came when she did, better than what had come before. Each time a new swallow of it entered her mouth stars exploded in her mind. Angels were singing around her, singing the most glorious euphonies.

Then the pulsing hotness was withdrawn. Sarah lurched forward, sobbing, trying to find it again, her body and soul blazing with pleasure beyond intensity. In her mind she felt the cool clarity of spring rain, but it was in her heart that the greatest pleasure rested. “Welcome to the kingdom,” Miriam said. She turned on the lights.

Sarah screamed. The sound was like exploding bells in her own ears, not a shriek of fear, but of delight wild beyond words. Miriam did not look a thing like a human being, but she was *beautiful!* “I thought I would take off my makeup.” This was the Goddess Athena, Isis — Sarah could not find a word, a name . . .

The eyes were not pale gray at all, but shining, golden, piercingly bright.

The skin was as white and smooth as marble. There were no eyebrows, but the face was so noble, so much at peace that just seeing it made Sarah want to sob out the petty passions of her own humanity and have done with them forever.

The hair, which had been concealed by a wig, as gold as the eyes, was soft, almost like smoke, finer than the hair of a baby. Angel’s hair.

The majestic being that had called itself “Miriam” now spoke. “You shall learn secrets,” it said in a new tone, the voice of authority absolute. Sarah had to suppress an impulse to shout with delight.

Suddenly, Miriam’s face seemed to jump at her. She heard words, quavering, concentrated with effort, inside her head. “Sarah, I love you.” Then they were gone, as if the speaker had released a desperately difficult effort.

“Oh my God! You —”

“Projected my voice telepathically. Yes, I can *touch* your heart.”

Sarah wasn’t so sure. There was little scientific grounding for notions of telepathy.

At this moment, however, she didn’t much care. As her stomach digested the mysterious new food extraordinary perceptual changes were taking place. First, she became aware of a new sensation in her body, one she had never felt before. It was strength, the profound wellness that must be experienced by powerful animals. She found that she could also call upon a sense of smell so improved that it was virtually a new addition to her body. The room, in fact, was a maelstrom of odors. She could smell the cool scent of the silk

coverlet on the bed, the mustiness of the carpet, the faint sharp-sweet odor of the beeswax that had been used to polish the furniture.

And there was something else, something familiar and yet not familiar — a terrible odor, meaty and strong, but also by far the most exciting scent in the room. It was under the bed. She bent toward it.

“Not yet,” Miriam hissed. In an instant she was beside Sarah.

“It smells wonderful.” Childishly, she felt petulant at being denied access to whatever was hidden there. Miriam drew her close, pressed her face to her white skin. This diverted her. The new sense of smell drew in an aroma that brought music to mind. As befitted someone so beyond the stunted nature of men, Miriam’s scent was more than addictive. Sarah rested her head there, vowing that never as long as she lived would she move, never would she be denied this — this heaven — again.

Miriam heard pounding at the door below. If Sarah had seen the look in those golden eyes she would have thought no further of angels.

Gently Miriam detached herself. Obviously, Haver had sorted things out sufficiently to come here. Sarah moaned as Miriam laid her on the bed. Sleep would soon overwhelm Sarah after the relief she has just experienced. It was well that she Sleep. There was no need for her to see the events that were about to occur. John, hiding in the attic, was about to make the move against her that Miriam had anticipated.

And Tom Haver was about to take the full force of it in her place.

12

JOHN WAITED UNTIL HE WAS sure he heard two voices, then he put his hand on the lock. He closed his eyes. When he turned that lock his life was going to come to an end. He would never, by his own free will, move again.

But at least he would be able to take this magnificent revenge with him — for as long as he must remain aware.

The lock clicked. The door slammed open, smashing John against the far wall. He fell to the floor, his dry skin tearing like paper. Dark shapes tumbled out into the attic. There was a dry, old odor, like the smell of ancient leather.

For a long time only faint rustling sounds were heard. John had not known exactly what they would be like, but he had assumed that they would move faster than they did. Miriam must not —

Something touched his foot, came slipping up his leg. He kept his eyes shut tight, he did not want to see it. There was a tiny sound, the remains of his own voice, crying.

They soon discovered that he was useless to them. He heard the scraping as they pulled themselves toward the door to the lower part of the house, the thuds as they went down the attic stairs.

“Open up!” Tom pounded on the front door. He hadn’t expected to be ignored. All the more it confirmed to him that Sarah was in there and his presence was not appreciated. “I’ll kick this damn door in!” His voice echoed up and down the street but he didn’t care. Let somebody call the police. He would welcome the help. He stepped back and gave the door a hard kick —

and almost fell into the hallway. The door had opened on its own.

The entrance gaped black. A whispering sound abruptly stopped. Tom could see somebody back in the shadows, crouching low. "I want to see Sarah Roberts," he said as he strode across the threshold. He had intended to leave the door open to get some light from the street, but it closed as soon as he was inside. The smoothness of its motion and the decisive *chunk* of the lock made him suspect that it was being controlled from elsewhere in the house. "All right, Miriam, enough is enough!" he flailed, seeking the wall, then began to slide his hands along its smooth surface trying to find a light. He pressed an old-fashioned button switch but no lights came on. "Oh, for God's sake!"

The whispering began again, closer this time. He recoiled. There was something awful about it, something avid. He pressed back against the front door. The handle would not turn. "Get away from me!" He kicked, met air. The whispering grew louder and louder, becoming a frenetic chatter. It was not a voice at all but rather the sound of movements, as if a swarm of insects were crawling down the hallway.

Tom twisted the handle of the door, threw his weight against it, hammered on it. It might look like wood but it felt like steel.

To his left was an archway leading into a living room.

Windows.

He stepped forward. Something came around his right ankle. He yanked his leg free but now it attached itself to the other ankle. He stamped his feet but it was no use. Both ankles were grasped. "*Sarah!*" The pressure became pain, searing, excruciating, forcing him to his knees. He clawed the darkness before him, grabbed toward his agonized ankles, and fell forward into a tangled, ropy mass. His legs kicked, his arms flailed. Every movement seemed to entangle him further with whatever it was. Thin fingers groped in his hair, slipped around his neck. He screamed and screamed, pulling at the ropy substance as best he could. A fingernail popped into his cheek and cut through all the way down to his chin. The pain made him bellow, but he managed to move so that it missed the critical blood vessels behind the jaw.

“Sarah!”

Tom’s hands connected with something solid — a head. He pushed back with all his might. There was a crackling sound and the fingers released his hair. Again and again he smashed at the thing, feeling it break like glass beneath his blows.

He pulled himself to his feet and lunged past it into the living room, rolling across the floor, brushing the stinking dust it had left on him to the floor.

His cheek, his ankles and his hands screamed in pain. He stared into the darkness. Had he killed it?

What the hell was it?

“Sarah, it’s me! Come back! You’ve got to get out of here!”

He saw the shadow of somebody standing at the far end of the room, a tall, thin individual with a bobbing head. It did not look any more human than the thing that attacked him had felt. Its outline was dim in the light from the street.

He didn’t understand at all what was happening in this place. Only Sarah was here — somewhere. Every fiber of his body screamed at him to jump out a window, to escape, to get away from whatever monstrous evil had infected this house —

But Sarah was here.

“You! Where is she?” He took a step toward it. Another. Its head stopped moving. Abruptly it dropped to the floor.

Another one appeared in a doorway that led into the rear part of the house. He could see it marching like a man whose knee joints had been fused. Then it too dropped to the floor.

The scrabbling sound began again.

“Sarah Roberts!”

The sound rose as the things crossed the floor. Tom's hand went to his cheek, touching the open wound. In that instant he knew that he had to leave this place. If they reached him again he was going to die.

To his left was a sun porch with French doors leading to a garden. He stumbled toward the doors, grabbed the handle and jerked it at it. Locked.

He didn't try to unlock the door, but took a chair and hurled it through.

He ran wildly across the garden, flailing in the shrubs, seeking some kind of a fence. At last he came to the edge of the property and climbed the brick wall he found there, cutting his fingers deeply on the shards of glass embedded in the top.

Atop the wall he paused, looked back at the house. There were no lights. Not far behind him the shrubbery was waving madly as something struggled through it.

He jumped six feet to the sidewalk.

Back in the world again. A woman walked toward him leading a dachshund. He brushed past her to the corner and hailed a cab.

"Riverside emergency," he gasped out.

"You bet."

They stitched him in the brightly lit emergency room and bandaged his hands. He told them a window had fallen out at his apartment.

What had actually happened he did not know. Perhaps it had been real, perhaps some kind of complex illusion designed to frighten him away.

He had them call over some detectives from the Twenty-third Precinct. Half an hour later he met them in his office.

"So you want us to go this house and get out your girl friend?"

"That's right, officer. I have every reason to believe she's there against her

will.”

“Kidnapped?”

“Psychically kidnapped. Influenced.”

“It doesn’t sound like a crime. She’s not under age —”

“Of course not! You’re telling me I can’t get help.”

“Doctor Haver, you haven’t reported a crime.”

He let them leave. When the door closed he could contain himself no longer. In his defeat and loss he wept, muffling his face in his hands to deaden the sound.

Sarah had been at peace until she heard somebody call her name.

Tom?

She was drifting on the softest of waters, in the moonlit sea . . .

He screamed.

She opened her eyes. In her mind was a vivid image of Tom. “I love you.” The screams peeled again and again, so frantic that Sarah clapped her hands over her ears.

Abruptly it was over. After a moment Miriam’s voice drifted through the door. “It’s all right,” the voice said, “sleep now.”

“Thank you,” she replied. But she thought, ‘please don’t let him be dead.’ She had to go to him. For that she somehow had to get out of this bed. She swayed when she sat up, shook when she put her feet on the floor, had to grab the bedpost for support when she tried to move.

Helpless, almost overcome with sleep, she sank to the floor.

She lay her head down, wishing she had never left the bed. It was so cold!

Her eyes opened, she tried to gather enough energy to pull herself back up.

It was some time before she realized that she was staring into a face. Somebody was lying under the bed, still and silent. Sarah sighed, all that escaped of a scream.

It was not a peaceful face, but a sad one.

So this was Miriam's "food." Sarah gagged with the memory of it. And yet it sang in her veins. Slowly she extended her hand. Her own eyes closing as if she were under the influence of some opiate, she stroked the forehead of the person whose life she had taken.

She Slept.

Miriam moved about the house struggling with her failures. The body of Tom Haver was nowhere to be found. She was not really surprised at his escape. His attackers were fierce but they had little real strength. Poor man. All his survival had gained him was a harder death. He could not be allowed to survive, not with what he now knew. If she was clever, his death could be arranged in such a way that it served a purpose.

She followed a trail of broken plants to the garden wall. There was Eumenes, arms outstretched, mouth lolling open, lusting toward food he could never swallow. Astonishingly repulsive.

She remembered lying with her head in his lap on the slopes of Hymettus.

She returned them all to their resting places, forcing their remains into the chests. At last there was John, slumped against the wall of the attic. She picked him up, holding the wrists together with one hand, carrying him with the other. "I know you can hear me, my love," she said as she placed him in his container. "I'll make you the same promise I made the others. Listen well, because you must hold this in your memory forever. John, I will keep you beside me until time itself comes to an end. I will neither abandon nor forget you. I will never stop loving you."

She pressed him down into his steel tomb until his knees were against his

chest and slid the cover closed. Weeping, she spun the bolts one by one.

Tom lay in their bed alone. Each time he had dropped off, shouting terrors had jolted him back awake. His face was a dull haze of throbbing pain, his left eye was swollen closed.

He kept trying to understand what had happened to him. No matter how he worked it out, however, there just wasn't a satisfactory explanation.

He thought of Sarah and cried aloud. She was in the hands of a monster. It was as simple as that. Perhaps science would never explain such things, perhaps it couldn't.

And yet Miriam was real, living in the real world, right now. Her life mocked the laws of nature, at least as Tom understood them.

Slowly, the first shaft of sunlight spread across the wall. Tom imagined the earth, a little green mote of dust sailing around the sun, lost in the enormous darkness. The universe seemed a cold place indeed, malignant and secret.

Was that the truth of it?

Something tickled his unwounded cheek. Tears again. He threw back the covers and got out of bed. All at once he froze. This room was the only one with any sunlight in it. The rest of the apartment was still dark.

He was frozen with terror. He could not move from the place where he stood.

It came at him shrieking, tearing with its long knives of fingernails, its jaws snapping —

And was gone.

He shook his head, went to the bathroom, splashed his chest and neck with cold water. He must not let the image of that thing creep into his mind again. It was not outside the realm of possibility to be driven catatonic by fear. That had to be guarded against if there was to be any hope left at all.

He looked like hell. One eye was an angry purple mass of flesh. The other was black. He badly needed a shave but the bandages were going to get in the way.

Suddenly, the sound of the intercom broke into his thoughts. How long had it been buzzing? Turning on lights as he went, he moved to the foyer and answered it.

Three minutes later Geoff and Phyllis stood at the door. They had food and coffee and they didn't buy any stories about broken windows. They wanted to know what Miriam had done with Sarah.

Miriam stood beside the bed watching Sarah, waiting for her to wake up. The transformation was working well. Miriam touched Sarah's cheek, feeling the cool dryness of the skin. That was another good sign.

It was a happy moment.

The only barrier left to complete transformation was the emotional one. Loyalty was, as always, the issue. Sarah must be made to realize the truth of her situation. She now belonged to a new species and must leave the values of the old behind.

Miriam turned her thoughts to Tom Haver. She could see a good way to use him to further Sarah's change of allegiance. He would be the medium.

A slight variation in Sarah's breathing pattern alerted Miriam to the fact that the Sleep was about to end. Very well. When Sarah awoke, she would find love waiting for her.

An ugly dream receded. Sarah opened her eyes. The thing looming over the bed startled her for an instant. Miriam, of course. Her eyes were glaring, the stare avid. Sarah's impulse was to run.

She thought of the body under the bed, the dead skin dull and dry.

"Don't," Miriam said. "You can't change the past."

“You’re a murderer!”

Miriam sat on the edge of the bed. It made Sarah shudder when Miriam stroked her face, but she was afraid to turn away. As a child in Savannah she had captured a baby rabbit. She remembered how it had huddled so quietly in her hand, and she had thought, ‘I’ve tamed it with my touch.’ But it wasn’t tame at all, it was in a rapture of fear. She had cuddled it to her face and, giving it a friendly snuffle, found that it was dead.

Sarah almost wished something similar would happen to her. But it did not. Instead she remembered last night. “Tom —”

“He’s quite well.”

“I’ve got to call him!” Some of her old self was returning, it seemed, as she recalled Tom’s screams. “Where’s the phone?”

Miriam’s expression was hard to read. She seemed at once angry and curiously at peace. “I don’t think you should phone him. Go to him instead.”

Sarah hid her amazement. She had assumed herself a prisoner. “Can I go now?”

“Certainly. You’re no prisoner.”

At once Sarah got out of bed. She could stand up easily. The hunger, the grogginess, were gone. Her body seemed unusually light and healthy. The sense of physical well-being was remarkable.

Then the image of the dead girl swam into memory again. Her own experiences crowded out all happiness. She remembered the blood hot in her throat, the delicate sadness of her victim’s face. She moved away from the bed.

“The room is clean,” Miriam said. “We remove evidence very quickly, you’ll find.”

Sarah couldn’t stand to hear it. She clapped her hands over her ears.

“You took a life. That’s what you feel in you now. Her life. She was a healthy young woman of about twenty-five, about your size and build. She was wearing jeans and a brown sweat shirt when I captured her.”

“Shut up!”

Sarah’s heart had started pounding, her temples throbbing. She longed somehow to expel what was in her. All she could do was escape. She ran from the room, down the hallway toward the stairs.

Miriam’s strong hand grabbed her shoulder, spun her around. “Get dressed,” she snapped. “You can’t go out like that.”

“I’m sorry.”

“Your clothes are in the bedroom closet.”

Sarah hesitated. She didn’t want to go back in that bedroom. Miriam pushed her. “Face it, Sarah. You killed. *You*.” She pushed again. “And you’ll kill others. You’ll keep killing.” Another hard shove and Sarah stumbled through the door. Miriam rushed past her, strode to the windows and swept back the heavy drapes.

Dawn was spreading up from the east, the red sun gleaming on the East River, sending a spear of light across Miriam’s garden. Such beauty hurt.

“You haven’t got any reason to cry,” Miriam said. “You should be rejoicing.”

“You said I could go.” How small her voice sounded.

In answer Miriam swept her clothes out of the closet. Sarah threw them on, thinking only of Tom and the salvation she would find in his arms.

In a few more minutes she was setting out into a magnificent spring morning. The door of the house swung shut behind her. As Sarah walked down the street she was conscious of Miriam’s face at the window of the library. Only when she was able to turn a corner and get out of that line of sight did she begin to feel free.

Never, as long as she lived, would she return to that house.

She was actually going back home. She felt all the delight of one who escapes from an unjust imprisonment. She was going back to her place as part of humanity. She was resurrected.

Tom shared as much of his tragedy as he dared with Charlie and Phyllis. He could not tell them of the things he had seen. They might have thought he was hallucinating, which would only confuse matters. Phyllis wept a little when Tom told her that he did not know what had happened to Sarah. She was Sarah's closest associate and a good friend, and she shared some of Tom's anguish.

Tom didn't know if he would ever see Sarah again. He suspected she might be dead. This black thought was in his mind when the lock clicked and Sarah came in.

She burst in. Tom was astonished and glad, and yet somehow assaulted. There was something about the total surprise of the arrival and the quickness of her movements that made him want to retreat.

He refused to accept such a feeling. Her poor, small frame was shaking with tearful joy and he was afraid of her. Or was it joy that moved her? What was that look in her eyes?

"Sarah!" Phyllis' voice rang through the silence.

Sarah glared. Tom had never seen such an expression on her face before. For a moment he was afraid she might strike Phyllis.

"Tom, please hold me!" She came toward him, then paused. He did not understand her hesitation. Her expression became almost desperate.

"You're home now," was all he could think to say. "You made it home." His emotions were beginning to overwhelm him. He wanted to sob. Never again would he let her go. They circled one another, a slow dance.

He recalled their past: lying on a beach in Florida, Sarah holding forth on age

vectors in the baking sun. He had laughed aloud at her intensity. Sarah in her lab, her voice strident, the atmosphere charged with her energy. Sarah in bed, loving.

As the shock of her arrival wore off she became more real to Tom. He kissed her. Her mouth was sour and he drew back. Tears appeared in her eyes. “I have a confession —”

“Not yet.”

Her eyes widened. Her fingers came up to his bandages. “She hurt me,” he said.

“Don’t call her ‘she.’ Miriam isn’t a ‘she.’ That’s a human word.”

“What, then? Woman?”

“A female of another species. A woman is a human being. Miriam is a mockery of humanity. Women stand for life, Miriam stands for death.”

“You’re pale,” he said. He didn’t want to pursue any conversations about Miriam right now. Not until they both felt a lot better.

Phyllis and Charlie had drawn close, instinct making them seek the comfort of the group. Tom could not blame them. He felt it too: something black and cold was in this room.

“I may look pale but I feel good,” Sarah said. “I wish I didn’t feel like this.” Tom detected more than a little desperation in her voice. He began to wish Phyllis and Charlie would leave. He wanted Sarah alone.

“We didn’t understand how dangerous she was,” Phyllis said.

Sarah turned to her. “I failed, Phyl. You believed in me, but I failed.” She was starting to back away, as if their closeness disturbed her.

“We got a lot of data, Sarah.”

“Not enough. You don’t know the half of it. She didn’t let you have anything

of real value.”

Sarah kept backing away. Tom made a gesture to Phyllis and Charlie, nodded toward the door. “Yes,” Sarah said, “it’s best if they leave.”

“Sarah,” Phyllis said, “I don’t want you to think you failed.”

“Please, Phyl.”

“I’ll go, but just don’t think you’ve failed. It isn’t over yet. Remember that. We haven’t even begun to work on that data.”

“Yes, Phyl.”

“I think you’d better cut it short,” Tom said at last. Sarah looked as if she were about to explode. When the door closed behind them at last, Sarah took a ragged breath. She was now on the far side of the room, poised like a cornered animal.

Sarah had known from the moment she entered the apartment what Miriam had done to her. Another trick.

They smelled so good.

She wanted to handle them, to caress their warm, moist skin, to draw them close to her.

How accommodating Miriam had been. And why not, when she knew what this was going to do to Sarah. She wanted to run . . . and then again she didn’t. There was something very pleasing about them, about Tom especially, the slow way he moved and the trust in his eyes. This odd feeling isolated her from them, forced her into a kind of loneliness she had never known before.

When the door closed behind Charlie and Phyllis, Sarah knew that Tom was endangered. He should not be alone with her. Not when she was like this.

She strove for control. “Stay on that side of the room,” she said.

He looked across at her, a question in his eyes. The wall was directly behind her. She could not get farther away from that wonderful scent. If she opened her arms, called to him, he would come. She must not allow herself to do that.

“Darling?”

“Tom, don’t come any closer!”

“You’re joking.”

“I am not.”

“Didn’t you come here to be with me?”

There was such hurt in his tone. She wanted to go to him, but she did not dare. He took a step closer. Her flesh crawled, but her arms came up. Another Sarah, mean and evil, smiled, another voice welcomed him. She could hear his pulse as he approached, hear the whisper of his breath, the faint liquid sound as his lips parted.

“We had good times. Don’t you remember?” She did remember, as he had no doubt intended she should. Sweaty hours banging away at one another. Such innocence and pleasure.

“Tom, *stop!*”

Thank God it had finally come out. The shout stunned him. He stood still, his smile fading. “Why?”

“Just do it. Don’t come a step nearer. Not one step!”

He bowed his head, remained motionless.

“Go into the bedroom and close the door. I made a major error coming here. I’ve got to get out and I can’t possibly make myself do it unless you leave the room.”

“What are you talking about?”

“Tom, I can’t stand it much longer! Please just do as I say, even if you don’t understand.”

“I think we ought to talk about it.”

“No! Go away!”

He was moving closer again. In a moment she was going to open her arms once more and this time she would not be able to stop.

Miriam called it hunger. A mild word.

“*Please!*” She cast her eyes down, felt her muscles tensing for the kill. Her body was preparing to spring at him. Hot, anguished tears poured out of her eyes. Very softly, she made a last plea. “Don’t touch me.”

“You’re serious. You’re absolutely serious!”

She looked up at him. He was four feet away. She could not warn him again.

“OK, I get the point. But why, Sarah?”

“Just do as I say. Do it now.”

At last he began to move toward the bedroom. For a horrible moment she thought she was following him, but she managed to go out the front door instead. Her movements were sinuous and quick. She reminded herself of a rat questing through a maze. There was another person in her, powerful and evil, and she was losing control.

The hallway was empty. That was a small miracle, and Sarah was grateful. She could smell them all around her, behind the doors of their apartments. The moan of need that came out of her mouth was hardly human.

Sarah knew where she had to go, where it was intended she go. There was only one place that did not smell human, only one being who did not tempt the hunger. Miriam had made her point. For Sarah the only thing that now mattered was getting back to that house. Doing it through the crowded Manhattan streets was going to be hell. She clung to the notion that she

would not kill another human being.

As the elevator descended, she tried to prepare herself for her ordeal. She had moved in the streets before, after all, and hadn't eaten at all the last time. She remembered the man on the sidewalk whom she had nearly killed, the apartment balcony she had climbed.

That was with the streets empty. Now they were going to be jam-packed. 'I am a human being,' she thought. 'I will not harm my fellow man.' Will all the willpower left to her, she resolved to remain a human being. The hunger she felt, after all, was not her own.

It belonged to the creature's blood. The need to kill was not her need, it was Miriam's. She resolved to keep telling herself that. Then the elevator doors opened and she saw Alex at his post. 'Miriam's hunger,' she repeated, 'not mine.'

She managed to slip past him, get through the front door and out onto the sidewalk.

Madness. People everywhere, more even than she had imagined. She made an involuntary lunge at a passing businessman, managed to dash past him into the middle of the street. Brakes squealed, horns blared. A cab swerved, slurred to a stop. The driver was cursing, the passenger staring terrified from the backseat.

There was no time to waste, no opportunity to miss. She got in.
"Whassmatter with you? I got a god-damn fare in here!"

"Emergency!"

"Call a cop, lady. You nearly got yourself run over. Now get outa here."

"Somebody's about to die. I'm a doctor."

The driver rolled his eyes. "OK," he said, "where to?"

Sarah told him Miriam's address and opened the window. The fumes from the street would perhaps mask some of the smells within the cab. She listened

as the driver reassured his passenger that all was well, the detour wouldn't take long. Many drivers would have refused to budge, she knew that. But she had gotten lucky. This guy had a heart.

As soon as the house appeared Sarah leaped from the cab, raced up the steps and began hammering the knocker, pressing the buzzer, trying the door.

She could feel Miriam standing just the other side of the door. "Please," she said softly, "please open it." She did not want to shout. Attracting the attention of the neighbors was dangerous.

After the longest thirty seconds of Sarah's life the door clicked and swung open. She staggered in and slammed it shut behind her, on all the bustle and beauty, and the hideous temptation, of the world of man.

Miriam knew at once that Sarah's will had proved stronger than her need. She sighed with displeasure, let the poor thing into the house, waited for the inevitable recriminations.

Sarah's hunger would eventually break her will, but until it did Miriam would have to endure this annoying independence. She hardly heard Sarah's wails of anguish, her roaring anger, hardly felt the clawing and the pummeling as she pulled the girl up the stairs and back into their bedroom.

"I'll return when you're feeling more reasonable," she said. "Try to calm yourself." There was little point in saying more. Sarah was stronger than the others, a lot stronger. Too bad. It was going to make things that much more difficult for her. She had a romantic vision of herself as the great healer. A fool's vision. The world has forgotten that romance has two aspects, that of love and that of death. Sarah didn't know it, but she had moved to the side of death.

The walls of the apartment were closing in on Tom. He stood in the foyer, his mind racked with indecision. He should follow Sarah, go back to that house again.

But he could not. That pretty little house held nothing for him but terror. Pink

brickwork, window boxes, romantic white shutters, all seemed evil and grotesque, like makeup smeared on some sneering face. The screaming terrors of last night seemed to come close to him. His hand touched the bandages on his face. Had they been demons? Were such things real? His belief in science had evaporated. All the grand procession of knowledge now seemed nothing more than smugness and ignorance.

In the face of something such as Miriam, had a man any power at all? There was no place to turn. Prayer meant nothing to him. His childhood prayers had gotten only silence in reply.

If that silence was sacred, he had not known it until now, and he felt it was too late to challenge the rock of his disbelief. He could not turn to God for strength.

There seemed nowhere to turn. He just didn't have the courage to break the spell of Miriam. Or did he? He imagined taking Sarah in his arms and shouting out his love so loud it would penetrate to the depth of her soul.

That love, that was truth.

That was his weapon.

He took a step toward the door. One step, no more. He remembered the look in Sarah's face as she had pleaded with him not to come near her. "I love you, Sarah! I love you!" His voice echoed. Sunlight echoed across the living room. He saw little clouds beyond the window, white and fluffy. He screamed the scream of nightmare.

Miriam decided to wait a bit before telephoning the victim. It would be best if he could get up the courage to come on his own. That way she could let him force his way to Sarah, to succeed where he had failed last night. It was doubtful, however. Human courage had its limits.

She went to the garden to pick flowers. It was a soothing pastime and it would be best if the house appeared as cheerful and sweet as possible. The windows must be opened, the curtains drawn back. There should be music on the stereo, something soothing, perhaps Delius' *Florida Suite*, or the overture

from *The Land of Smiles*. Perhaps there should be some fruit and wine set out. No, just wine. Fruit was too much trouble. She didn't even know if they still sold natural fruit, it had been so long since she had noticed.

Carefully avoiding even a glance at her destroyed rose arbor, Miriam clipped until her basket was heavy with marigolds, snapdragons, iris, all the wealth of her garden. She loved the exuberant life of the flowers. Nature demanded nothing more of them than that they open each morning to the sun. Miriam's race was not so lucky. From her and her kind much more was demanded. Not all that nature wants from its children is innocent.

She carried the cut flowers onto the sun porch, laid them on the table which contained the portrait of Lamia. She looked into her mother's eyes, rendered by the artist as pale blue. Before the invention of contact lenses and shaded glasses Miriam's species was marked as having the evil eye. The artist had not wanted to offend his client by giving her eyes their true color.

The portrait was a source of peace and reassurance to Miriam. The eyes said to her, 'Go on, never stop. For me, be immortal.'

Tom had managed to get as far as Miriam's front door. The house stood before him, the vortex of a deadly whirlpool. He was reminded of the flowers that eat flies, using their nectar and their beauty as bait. Tom hated most the beauty of the place. It should have foreboded somehow of the danger within. Must Miriam always smile?

It was a sunny morning, the sky now clear blue. Before him the house glowed in sunlight dappled through budding trees. The green shutters were open. Behind them silk curtains billowed in the fresh breeze. He heard music and saw shadowy movement in the living room.

For an instant he was ready to run, but the music seemed at odds with danger. It was happy, rich music, the kind of thing he might have heard drifting up from the bandshell on a summer night of his boyhood. He supposed that he had been seen, and the music was meant to make him feel just as he did.

He had imagined how life was going to be without Sarah, and had wound up

here, telling himself how he loved her. Still, it was going to be hard to get to that front door to ring the bell. If anything the obvious musical attempt to soothe him made him more uneasy than ever.

Either he go in that house now or face the fact that he would never see Sarah again.

How desperately she needed him. When somebody you loved has nowhere left to turn, you help. If there was such a thing as a human compact, that was part of it.

Sarah had to be gotten out of there and taken by force to Riverside. And as for Miriam — she belonged in a specimen container.

A face appeared at a downstairs window. Miriam smiled at him.

In a moment she opened the front door. He mounted the steps and went in. It was as simple as that. She stood before him, blond and beautiful, smelling of flowery old-fashioned perfume, her expression welcoming. As the door closed she regarded him with concern. “I’m so glad you came. I was just going to call you. Sarah needs help.”

“I’m aware of that. I came to get her.”

“I had hoped she would stay with you this morning. When she came back I just didn’t know what to do.”

“I want to take her to Riverside.”

“That would be best, Tom. I’m afraid I’m at my wit’s end. Sarah’s reactions have been all wrong. I — I never intended to harm her.” The gleam of a tear appeared in one eye. “Now she’s up in that bedroom and she won’t unlock the door!”

“Upstairs? What room?”

“First door on the right at the head of the stairs.”

“You lead the way.” Tom had absolutely no intention of wandering around

this house on his own. Miriam walked ahead of him, down the very hall where he had been attacked the night before. It was nothing but beautiful now, with flowers on the tables and a cheerful coaching print on one wall. The room's innocent appearance only intensified his caution.

Miriam seemed aware of his feelings, as if the act downstairs had been little more than a formality. "Sarah," she said, "Please let me in. I have a surprise for you." She turned to Tom. "I've got a key, but I hate to open a door somebody else has locked."

"Why don't I just bust it down," he said caustically.

She used her key.

It was the most beautiful room Tom had ever seen. The windows opened across a magnificent garden. He could see thousands of flowers, and there were more arrangements of cut flowers on the desk and nightstands. There was something a little obscene about the profusion of flowers. They were a kind of overstatement of an innocence that did not exist, and Tom was beginning to see them as the exact opposite of what they were obviously intended to suggest. They seemed to confirm Miriam's guilt.

The breeze blew past gossamer pink curtains and sunlight poured in the windows. Tom found himself estimating the distance to the ground, and then saw in the garden something that chilled him. There was a path of broken shrubs and upturned earth right across to the brick wall on the garden's far edge. He could see from here the brown scuff marks his shoes had left on the wall.

Sarah lay in a magnificent rosewood bed. She was not asleep, but in a sort of trance-state. Her eyes followed him from beneath half-closed lids. She looked languid, but he had the impression that she was far from it. The eyes hardly blinked.

A fly came in the window, buzzing energetically. Tom watched it spiral up to the ceiling. For a moment he was stunned. He had not noticed that the ceiling was magnificently painted to resemble a blue, cloud-flecked sky. Clouds billowed and larks soared in that magical, ineffably romantic air. The fly,

crawling across the painting birds and clouds, was the only thing that disturbed the perfection of the illusion.

Sarah moaned. Tom went beside the bed. Gone were the protests he had heard in the apartment. Her face, beaded with perspiration, became almost sensual. Her eyes were dreamy, softened by desire. Her arms opened wide. He bent close to her, kissed the tears that stained her cheeks.

The next thing he knew her arms had come around him and he was lying beside her on the bed, drawing the delicate silk sheets away from her body. She was more beautiful now than he had ever remembered her.

He was vaguely aware that Miriam had retreated to the hall and pulled the door closed behind her. He feasted his eyes on Sarah's body. It was smoother, softer. He touched her cool breast, felt the heart beating there beneath the firm flesh. Only her eyes told him that she was conscious of his touch. What turmoil was in those eyes. They looked at once delighted, avid with need, and as deeply troubled as any eyes he had ever seen. He tried to comfort her with soft sounds, soothing caresses. This was what he had longed to do at home. This was the truth of love. Surely this would reach her.

* * *

Sarah was anguished. She could not even speak, much less cry out. Her body screamed with silent need, her mind hummed with excuses and justifications.

She had determined to lie here until she died. Then Tom had appeared. She hoped at first that it was a hallucination. Then their eyes met and she knew that he was real.

How could anyone be so foolish.

She hadn't the strength for both of them, not anymore. Every cell of her being demanded action. This hunger was not the slow desperation of starvation, it was something far worse. Where starvation was dreamy and sad, this was quick and cunning and frantic.

“Sarah, we can conquer this thing together.”

He lay close to her, unendurably close. She let her arms twine around him. It felt so good to give in. So very good. “Yes,” she said, “we’ll do it together.”

His body was growing tense with passion. She noticed his eyes flick to the door.

“Miriam won’t bother us,” she said. “This is exactly what she wants.”

She ran her hands under his shirt. She knew just what Tom liked. Deep within, a voice shrieked at her to warn him, to drive him away once again. She purred and arched her back, offering herself to him.

She knew just how to excite him and he found himself responding to her more passionately than ever before. The beauty of the surroundings, the quiet, the warm sunlight combined to encourage him to forget the horrible problems that were besetting them, to forget for just a few minutes. He caressed her breasts, her thighs, sought her lips with his own. ‘It’ll help,’ he told himself, ‘it’s healthy and normal and positive.’

She unbuttoned his shirt, touched his nipples with her deft little hands. Their delicacy had always delighted him, and he kissed them now. He felt himself growing erect and guided her hands to his zipper.

“Yes, Tom,” she said. She was smiling now. He burst out of his unzipped pants.

He hugged her. “We’ll be free again,” he said, “you’ll see.”

“Oh, Tom, I hope so!”

He entered her. Every tiniest move brought intense pleasure. This was what they had needed. They should have trusted love more.

Tom closed his eyes, heard her whispering his name to the rhythm of their movements. Her voice merged with the hypnotic buzzing of the fly on the ceiling. He nuzzled close behind her ear and buried his face in her hair, where

it was as soft as the fur of a rabbit.

A new feeling entered him, one that hurt like the contemplation of great beauty. He held her to him, riding her.

With every bit of concentration remaining to her, Sarah tried to resist her need. He lay atop her in his disheveled clothes, sweating out his passion. Beads of perspiration glittered on his forehead. His cheeks were red, as if he had been running.

She was emptied of hope.

Tom's passion rose. She loved him, she realized, as she might love a child. His sexual significance, in the past few days, had dwindled to nothing.

Bang-slap, his body went as it plunged against her. She felt his heat, smelled his breath, tasted the salt of his hot flesh as she waited.

She knew perfectly well what Miriam wanted. And that she wasn't going to do. She couldn't, even if she wanted to. Miriam had forgotten one simple thing. There was no weapon in this room, and without one she could not make Tom's blood flow.

She had almost called out to Miriam for one. But now she was sure she wouldn't do that. Her suffering became a kind of hypnotism. She was lost in it when a flash of light on her face made her open her eyes.

Miriam stood at the foot of the bed, holding up an object so bright it dazzled Sarah.

Tom went on making love, his human senses oblivious to the silent drama being enacted around him.

Miriam was closer now. The object in her hand was a gleaming knife.

A scalpel.

Miriam placed it on the bedside table and departed at once.

Sarah touched the sharpness of it with her fingers.

“Oh, Tom, Tom!”

“*Sarah!* I love you, love you! Oh, *God!*”

His pumping shook her. The scalpel dazzled in her hand. So light, so strong.

His face, melting with love, gazed down into hers. She closed her eyes, held her breath. ‘No, I will not,’ she thought, a chant within her. ‘No, no, nono, no no.’

It came rolling from the depths, the *thing* within her.

The scalpel belonged to it. Had always belonged to it.

No no no no.

This was her truth. She pushed it into him.

“SARAAAAAH!”

She took it out, shoved it in again. It whispered through his flesh and all at once the purple miracle of his life was pouring into her.

Alive again. She heard a song that hurt like a memory. Somebody was sobbing. She was sobbing.

Why? She was happy.

His head bobbed, his jaw went slack. To escape his collapsing weight she wriggled out from under him, slipped from the bed. He shook horribly, huddling in the sheets. Blood spread. Then she touched him, bent to him, made believe she was kissing him. She took his life out of him.

She twirled slowly around and around, her whole body rapturing with a fine pleasure. She spread her arms in the warm air. The world had become dream-golden, touched with every beauty she had ever known. She could feel everything — the gentle movement of air past her body, the slow warmth of

the sun, the secret pumping of her own blood.

She could feel Tom.

Feel him!

Her eyes went to his dead body. Something extraordinary was happening. Emotions almost seemed to pour from him like some healing water: sorrow, pity, peace.

Such peace.

She heard his voice in the air around her, saying her name in the rhythm of their lovemaking. It got fainter and fainter. More than anything she had ever wanted, she wanted the sound of that voice.

She was desolated.

* * *

Miriam cringed at the scream that pealed in her ears. It was an incandescence of grief. She could not remember measuring such sorrow as this before. The intensity was too great, much too great.

Miriam went to Sarah. As she hurried through the silent halls to the bedroom she felt a twinge of concern for her own safety. Anguish such as Sarah's could turn easily to anger. Killing anger. Miriam could be endangered.

She paused at the bedroom door, listened to ascertain Sarah's position. The long, ragged sounds of her breathing came from the far side of the room. Miriam fitted her key into the lock. After an instant the mechanism made a soft *chunk* and the door swung open. Its weight of steel faced with ordinary wood panels was perfectly balanced, and it moved silently.

A glaring pillar of sunlight dazzled Miriam's eyes. Sarah was standing near the window, staring into the dawn-lit garden. The remains of her lover lay in the crumpled sheets of the bed.

Miriam put all her affection into her voice when she called to Sarah, trying to speak as a mother to a child, as lover to lover and as friend all at the same time. Sarah gave no indication that she had heard. Miriam began a slow approach, aware that Sarah might at any moment lunge at her.

“Sarah, I know exactly how you feel.”

“You have no idea.”

“You may not believe me now, but you’ve got more to live for than you ever did before.”

“Miriam, I just killed the man I love! You don’t seem to understand that. I haven’t got more to live for. I have nothing to live for.”

“Don’t say that! You have me, Sarah.”

Sarah looked at her, then bowed her head. Her shoulders shook. She wept silently.

“All you’ve done is trade one way of life for another.”

“You’re obscene, do you know that? Obscene!”

“You’ve joined a new race. We have our rights too. And we never kill more than we need.”

Sarah tossed the scalpel aside as if it had burned her. Miriam took the opportunity to get closer. They needed physical contact.

“Stay away!” Sarah twisted away from her. “Don’t you dare touch me.” There was warning in the tone. Sarah was unarmed now, but still capable of inflicting an injury.

Miriam circled her, trying to maintain contact with her eyes. “You’re more than human now. You’ve acquired the right of life and death over human beings.”

“You disgust me!”

Closer and closer Miriam moved. From the depth of such despair, Miriam felt sure a new Sarah would soon emerge. Tenderly, Miriam spoke again.
“You’re alone without me. All alone. Come to me.”

The look of revulsion that crossed Sarah’s face hurt Miriam more than any blow. She guarded the kindness in her own face carefully. In a moment Sarah was going to break. No matter what her feelings might be, instinct would take her to loving arms.

Until now Sarah had not realized how unpleasant Miriam smelled. She was revolting, sweet and touched with rot. Sarah kept edging away from her, thinking only of what a fool she had been to toss that scalpel aside, wishing she could cut Miriam open exactly the same way she had Tom.

Miriam kept coming closer, her movements swift and obsessive. On her face was an expression that made Sarah long to kick it, to feel her foot connecting with that condescending smile.

Although she tried not to look at him, Sarah’s eyes returned again and again to Tom. His face was half-hidden by the sheets but she could see the staring eyes, filled even yet with surprise and sorrow.

He had died in agony. Her heart beat hate for the one who had so corrupted her that she would have done that to him.

“You don’t deserve to live, Miriam.”

“But I *will* live. And so will you.”

Sarah did not reply. ‘Oh no we won’t,’ she thought. ‘No we won’t.’ Her eyes searched for the scalpel. Miriam stiffened slightly, stopped moving toward her.

“Sarah, please try to understand me. I’ve given you a new life, and it’s worth living. Believe me when I say that. It’s a better life than you could ever imagine.”

Sarah stilled her urge to scream insults, to howl out her rage. Her whole soul

concentrated on one thought: how good it would be to cut into that evil being, to push the knife deep and feel the heart shake the blade.

“I love you,” Miriam said. “Love is beyond price.”

That was too much. Sarah could not restrain herself in the face of such overbearance. “You love only yourself! You’re worse than a monster. Much worse!” Her words reverberated in the small room. “You can’t love me or anybody else. You’re incapable of it!”

Miriam’s arms opened and she once again came close. Sarah slapped wildly, connected with Miriam’s cheek. As if shot, Miriam leaped away. On her face was a look of raw fear.

Then control reasserted itself. She stood near the door, nursing her cheek. “You surprised me,” she said. “You have no idea how dangerous it is to do that.”

Nor did Sarah care. All she knew was that before the hunger came over her again she would be dead. And so would Miriam. She swore it to herself and the memory of Tom.

That slap had hurt. Miriam’s cheek was burning. It had been a long time since a human being had successfully struck her. Before this, none had done it and lived.

What spirit this woman had. Life with such a person would be fascinating. Sarah would become an equal in every sense of the word. She had all the needed attributes. The next feeding, Miriam would be most careful to make sure all the life was absorbed. Unless she did that Sarah could not obtain enough energy to feel the true wonder of her new life. Sarah must touch the glory.

“The hunger has to be served very carefully, Sarah. You need to learn the technique —”

“Technique! You talk about it like it was a sport or something. You’re barbaric.” She tossed her head, proud, her conviction unassailable. Miriam

admired such control, but it was time Sarah broke down and vented her rage. That would make it much easier for them both.

“In some ways it is a sort of a sport.” She tried to make herself sound happy. “And it does indeed have a technique.”

“I don’t want to hear about it!”

“But you must! Don’t you understand that you’re going through the process again? You’ll Sleep and then you’ll feed. There’s no way out, Sarah. It’s going to happen.”

Sarah clapped her hands to her ears as if to deaden the sound of the truth. A low moan started in her throat and rose to a wail of anguish. She grabbed wildly at Miriam, tried to claw her. But Miriam was not to be surprised again. She took Sarah’s wrists in one hand and forced her head back by grasping her hair with the other.

Sarah’s eyes were wild, her mouth flecked with foam. Her wail broke to a hoarse growling. Lunging and twisting, she tried again and again to reach Miriam. Miriam kept her arms extended, bearing Sarah’s weight easily, letting the rage spend itself. In every silence Miriam spoke softly. “I love you,” she said each time, “I love you.”

Finally Sarah hung limp in her arms, sobs trembling through her body, her head bowed. Slowly, carefully, Miriam drew her close. “Sleep,” she said, stroking the brown curls. “Sleep and all will be well.”

She carried Sarah across the hall to a little-used bedroom. The door was stout enough to contain Sarah when she awoke, and the window was barred.

Sarah had not realized that she was losing consciousness until she felt Miriam pick her up. She tried to pull away, but experienced a wave of dizzy stupor. Dimly she was aware of Miriam’s soothing words. Although her heart rebelled, her body accepted Miriam’s embrace.

She tried to keep her eyes open, was only dimly aware of being placed in a clean bed.

She plunged into a new reality. It was worse than the worst nightmare, more realistic than the most perfect dream. Tom was sitting on the foot of the bed. His expression was rigid with anger. With a jerk of his head he turned and stared into Sarah's face. "YOU KILLED ME! KILLED ME! KILLED ME!" His voice scratched high and desperate notes.

Then he looked at her with such sadness she wanted there and then to be dead. "I forgive," he said.

Suddenly it was high summer. They were in Vermont together. It was last summer's vacation again. Sarah was lying in the grass. So happy. She knew that this remembrance was a gift from Tom. So very happy.

When she opened her eyes she saw into the sparkling leaves of the tree they were sitting under. A breeze rustled the grass beside her ear. There was a sudden pop and a froth of champagne splashed her. She sat up laughing. "You did that on purpose."

"Of course. Lunch is served."

They ate, enjoying themselves enormously. Sarah watched the day soften and fade along the distant range of the Green Mountains. Soon they made love and lay naked in the rich air of summer.

They witnessed the westward march of the sun, the appearance of the first stars, and cuddled close in the night wind.

"YOU KILLED ME!"

She ran. The summer hill became dark and cold, the grass congealed into stones.

His voice echoed and re-echoed behind her, lost and far away.

Miriam watched Sarah Sleep, evaluating her state. She felt the pulse, then opened one eye and looked long at the pupil. As a last test she ran her fingertips carefully along the skin of Sarah's cheek. The Sleep was true.

Sarah was transformed.

“Welcome,” Miriam said, “welcome home.”

When awareness returned everything was changed. Sarah sat up. She was in a bed in a dark room. The day had become night in the time she had been asleep. Beyond the window she could see a crescent moon gleaming over the East River.

She wasn't alone.

Miriam stood at the foot of the bed, a shimmering being. Sarah could not take her eyes off that strange, radiant figure. Miriam was exceedingly beautiful without her disguise. The moonlight made her skin seem white, made her eyes gleam golden. For an instant they shone like an animal's eyes, then she turned her head.

“You've Slept eight hours,” Miriam said. Her voice was song.

Something moved in Sarah's stomach. She must have gasped because Miriam smiled. A tickling sensation in her throat made Sarah momentarily nauseous. Then her whole body began to tingle.

Hunger slammed into her with a force that made her cry aloud. The fiery pain of it caused her to jump from the bed. She had to have help! Unbalanced by the suddenness of it, she bellowed need, clawed air. Miriam stepped deftly away from her, was at the door in an instant.

The lock clicked with a heavy sound of steel and Sarah was alone. She rushed at the door, grabbed the knob, and shook it with all her might. It didn't even rattle, it was so strong.

Despair washed over her.

Just when she thought she would lose her mind with the need for food the lock clicked again. Miriam entered the room, carrying a limp human form.

Sarah hardly even noticed the sex. Never before had she wanted so much to

touch something, to caress moist skin, to possess.

Miriam laid the body out on the bed. “Control yourself,” she said in a clipped tone. “And listen to me. You’ve got a few things to learn before you start.”

Sarah watched a hand slip off the edge of the bed and dangle. She saw the face in the moonlight, grave and pretty, a common-enough young woman’s face. Her lips had an almost humorous cast to them.

Sarah could imagine this girl dancing.

“She’s been stunned and she’ll come to in a couple of minutes. You’ve got to be ready for her.” Miriam spoke matter-of-factly about inserting the scalpel and popping the vein, opening one’s mouth over the wound, letting one’s body absorb all the life. “All of it,” she said. “That way you’ll need to feed only once a week at most.”

Miriam’s every word was a harmony, her every gesture purest grace. What a beautiful form evil had assumed. Standing there, frantic with hunger, Sarah did not think there could be hatred greater than the hatred she felt for Miriam. It was a white fire.

The girl moaned, then gasped and coughed herself awake. Her eyes opened, looked with longing at the moon, then turned to the two figures standing over the bed. Miriam stepped back, not wanting, Sarah supposed, to frighten the girl with her undisguised presence.

‘You killed me,’ Tom had said in another world.

In this world Sarah was about to kill Miriam. “Give me my scalpel,” Sarah said.

“It’s on the night table.”

So clever. To reach the night table Sarah had to put the bed between herself and Miriam.

She had to get that blade into Miriam, had to feel it deep within her. She imagined herself ramming it home with the heel of her hand.

The scalpel was light between Sarah's fingers. Such a delicate instrument. The girl made a miserable little sound in her throat, clutched the sheets.

"Don't move," Miriam said to her. "Don't you dare." Sarah felt Miriam's eyes on herself. "Straddle her and make sure your knees pin the arms." The girl groaned miserably when Sarah came onto the bed. Her eyes followed the knife.

Sarah thought only of Miriam. Now she was just a few feet away Sarah raised the scalpel. Miriam leaned forward. "Don't jab, just slip it in." The girl began shaking her head. "Hurry up, Sarah!" Miriam snapped. The girl screamed. Her eyes were bulging now, her mouth wide.

With a single motion Sarah slashed out to her right, toward Miriam. She lost her balance on the writhing girl and fell to the floor. The scalpel hadn't connected. Miriam was now across the room. Sarah's heart sank. It was hard to understand how she had missed. Miriam was so fast.

The girl jumped up, scrambled from the bed and made for the door. Almost indifferently Miriam slammed her against the wall so hard the whole house shuddered. The girl slid to the floor.

"You have a great deal yet to learn," Miriam said to Sarah. "Perhaps you ought to starve for a few hours." She picked up the girl, moving quickly to the door. Sarah was coming toward her, trying for another chance with the scalpel.

Miriam was through the door and had it locked before Sarah had taken three fast steps. Unless Miriam was completely surprised there was no hope.

Sarah hurled the scalpel at the door and snarled the rage that consumed her.

She grabbed at the door handle, yanked angrily, knowing in advance that Miriam's doors were all of steel.

Her heart weighted with disappointment, Miriam took the victim across the hall and stuffed her into a closet in her own bedroom. The girl's skull was

crushed so there was no need for caution. The coma would last perhaps three hours. Sarah would have to feed before death occurred or the girl would be wasted.

Drawn by her concern for poor Sarah, Miriam went back to the locked door and listened. The sounds within were hideously reminiscent of those made by her own kind in the dungeons of Paris. Sarah's will was quite extraordinary. There was howlings and screams on the other side of that door, but not a whisper of a plea. Here was one whose will was great enough to do battle with the hunger.

But not forever.

Sarah shrieked out her suffering. Miriam was unkillable! So fast and so strong. If only there was a telephone in this damnable room, even a tape recorder.

She opened drawers, searched the closet. There was nothing except ancient, rotting clothes and a stack of theater programs from the last century.

The room grew stifling. Sarah's whole body hurt. She felt as if she had a blood infection, which in a sense she had. Her tongue was hard and dry, her eyes watering. Her guts churned and she was momentarily doubled over by the pain.

Her medical background told her that Miriam's blood, finding no other nutrient, was beginning to feed on its host body. She was literally being eaten alive from within. Her mouth jerked open. A spasm choked her until darting black shadows filled her eyes and the room seemed far, far away.

When the spasm passed she found herself lying on the floor, the weave of the carpet crawling beneath her as if she were lying in a mass of worms.

She managed to get to her feet. Somehow she had to reach Miriam. Her mind screamed at her, 'last chance, *last chance!*'

If only she had told Tom earlier. There had been time back in the apartment. Just a few words and he would have known the whole truth.

He would never have come here then, not without help. Perhaps even at that late hour Geoff's blood wash would still have worked.

Sarah could have saved herself, she saw it clearly.

'Why not, you fool?'

Even this morning she was still half-convinced she wanted Miriam's "gift." She remembered well the thought that had revealed her truth: 'I could live forever. Actually live forever.' And she had tried to imagine it. 'Me. Still alive in a thousand years.'

Or two thousand.

What was death but a disease, she had asked herself. And she had told herself she would break the secret of death from within the shelter of immortality and give the secret to humanity. What a lie that had been!

That was before she killed Tom. Not until her victim was someone she really loved had she come to her sense about the evil of it all.

She longed for hot life in her throat, for the salt of deliverance to fill her belly. The scalpel gleamed in her fingers, waiting.

Astonished, she dropped it. "My God, look at my *hand!*"

It was a claw, withering before her eyes. "Oh my God!" She darted to the dressing table, stared into the mirror there. By moonlight she saw a sunken thing, eyes black sockets, cheekbones stark in a famished face, teeth prominent behind shrinking lips.

Malnutrition, sped up beyond the wildest nightmare. "MIRIAM! BRING HER! BRING HER!!" She clasped her hands in her hair, threw back her head and screamed. "FOR THE LOVE OF GOD!"

The scalpel. The scalpel. She looked wildly across the floor, saw its gleam, pounced on it.

The door clicked.

No.

‘You’ve failed at everything else. But don’t you feed the hunger again.’

She drew the scalpel across her wrist, drew it deep to the bone. Bright red blood poured out. Instantly she was staggered by an overwhelming weakness.

As the door swung open she fell to her side. ‘Tom, I love you.’ Her heart rattled and shook her whole body, then stopped.

Silence.

Miriam was bending close to her. “You can’t die!” she said in a high, frantic voice. “Now that you’ve let out your blood you can’t live either!”

Can’t die? I must die. *I am dead!*

Miriam was cradling her head in her lap, crying bitter tears. “You’ve gone right to the end of my world,” she said, “and missed all the beauty that comes before.” She stroked Sarah’s head again and again, a sorrowful gesture. “My poor, dear Sarah.” She breathed sharply, as if trying not to cry. “What an evil irony.”

Sarah became aware that Miriam had picked her up. With slow steps Miriam was carrying her up a stairway, to an attic.

Miriam took her to a tiny room, one wall of which was stacked with chests of various ages. Sarah writhed when she realized that she was being put in a similar chest that lay open in the center of the room. Her mind rang with pleas but she found she could not speak. The top of the chest came down and a heavy latch was closed.

Sarah was in total darkness.

“It was futile, my darling. You were too much changed for mortal death, and now you’ve got eternal death. Sarah, you missed it all! It’s so beautiful and you missed it all. You poor woman. I’ll make you the same promise I’ve made all the others. I will keep you with me for all time. I will never abandon you, and you will always have a place in my heart.”

‘God help me.’

Even the hunger was still here, tormenting her. The least movement resulted in minutes of weakness.

Time began to pass, but in a different way than it had in life. She knew only that it was passing, not how much was gone.

Little rustlings and sighs filled the air around her, coming from the other chests. So Miriam had done this before. The thought of what must be in the other chests terrified Sarah. How many were there?

Some of them must be hundreds of years old. Some thousands.

Thousands of years like this.

No. Impossible.

She pushed as hard as she could at the top of the chest. She clawed at its sides. ‘I have to get out. I’m so hungry.’

The chest was unyielding.

She remembered what she had done to Tom and what she would do if she did get out. She was glad she was here. At least she could count herself a human being still. No matter what she must suffer, this was better than being Miriam’s thing.

So much had been at stake. She found she could look within herself and even in this hell find riches of peace and love she had never known were there. She was full of grand memories, and she possessed a great love as well. Tom was with her in spirit. No matter how long she must remain here, she came to realize that in the end there was going to be a place even for her, where Tom had already gone, on the far side of the river of life, where the lost of this world are found.

EPILOGUE

MIRIAM ABANDONED NEW YORK. She dared not remain in her house or in her old identity. The disappearance of the two doctors would be investigated.

She wept for Sarah. The poor woman had not known the pleasure of her new estate, only the pain. Before this experience Miriam had never imagined the heights that could be reached by a human being who was groping toward the truth of love.

She went often to Sarah. The boxes were kept in the coal cellar in her new house, and she would speak softly to her lost friend in the cool and dark.

Such a person would have been a grand companion, more than worthy. But Miriam now realized that the gift she could confer was not above one such as Sarah, but beneath her.

“I miss you,” she said into the darkness. It was the hour after evening and the shadows were deep in her new living room. A fog was rising out on the bay, and she heard the buoys sounding. She enjoyed the beauty and the safety of the fog in San Francisco.

“Did you say something, my dear?”

Miriam smiled up at her new companion, who had appeared with glasses of Madeira for the two of them. “Only that I love you. I’ve never loved anyone but you.”

He sat down, sipped reverently at his glass.

“That’s an 1838 Madeira,” Miriam said. “I hope you like it.”

He kissed her, putting his glass down near the portrait of Lamia that was framed in the table before them. It was like him not to cover the portrait. His devotion was total, to Miriam and to all she had revealed of herself.

She had sought him carefully, looking for loyalty and intelligence and the old hunger for life that she understood so well. She closed her eyes, welcoming his excited kisses.

She would always miss the courage of Sarah, and the nobility. But he would bring contentment, and she doubted Sarah would ever have offered that. As in the past she would dream her dream of his immortality and tell herself that here at last was her eternal companion.

Time would pass and nature would come and shatter the dream. So she would find another companion. And another. And so on until time itself slipped away.

No matter how her loneliness tempted her to find one who would last forever, she resolved never to attempt the transformation on another like Sarah, not this time or the next time, or for all time.

*The Last Vampire***

EVERYONE KNEW the sins of Miriam Blaylock.

Her crime, and it was an unforgivable one, was to enjoy human beings as friends and lovers, rather than to simply exploit them. She could kiss them and find it sweet, have sex with them and afterward sleep like a contented tiger. To her own kind, this was perversion, like a man with a sheep.

The fact that this prejudice was nonsense did not make what she was doing now any easier. She pressed herself back against the seat of the pedicab, instinctively keeping her face hidden, not only from man, but from her own kind. The *samlor* moved swiftly down the wet street, spattering through puddles left by the last storm. From the shadows of the passenger compartment, she watched a concealing fog rising from the moat that surrounded the ancient Thai city of Chiang Mai.

How could she ever do this impossible thing? How could she ever face her own kind?

The other rulers of the world were now just shadows hiding in dens, their numbers slowly declining due to accidents. They called themselves the Keepers, but what did that mean nowadays? Gone was the time when they were the secret masters of humankind, keeping man as man keeps cattle.

Truth be told, the Keepers were in general decline, but they were far too proud to realize it. Conclaves were held every hundred years, and at the last ones Miriam had seen a change — Keepers she had known a thousand years had followed her mother and father into death. Nobody had brought a child, nobody had courted.

Despite their failure, Miriam valued her kind. She valued herself. The Keepers were essential to the justice and meaning of the world. That was why she had come here, why she had tempted the humiliation and even the possible danger involved: she wanted to continue her species. Miriam wanted a baby.

The last of the four eggs that nature gave a Keeper woman would soon leave her body unless she found a man to fertilize it. For all that she had — riches, honor, power, and beauty — her essential meaning was unfulfilled without a baby. She was here for her last-chance child.

Not only did she enjoy human beings, she took pleasure in human things — painting and sculpture, writing and music. She had been an opera buff from the beginning of the genre. She had been at the opening night of a dozen great operas, had been transported by everyone from Adelina Patti to Maria Callas to Kiri Te Kanawa. She remembered the haunting voices of the *castrati* echoing in the palaces of the Old World.

The rest of her kind lived to eat. She ate to live. She spent heavily, just as her family always had. She consumed money without thought, like so much candy or caviar. Her club, the Veils, was the most exclusive in New York. In a strong month, and most of its months were very strong, drugs and liquor would bring in a half-million-dollar profit. There was no cover charge, of course. If you were important enough to enter the Veils at all, you certainly weren't the sort of person who would be expected to pay a cover.

Miriam had been the friend of kings for two thousand years. She had seen their generations rise and fall. She loved them in their pride and momentary lives. She loved their finest things, the jewels and whispering silks, the attention paid to the very rich.

When the wallets of her peers opened, you could practically hear creaking. She had fun; they had their careful customs and their dreary, conservative habits. She wanted meaning from life, they wanted only to keep breathing.

But now, for all their rejecting ways, she needed them. Her plan was to travel to all of the current conclaves at one, charming and, hopefully, seducing a man.

She was at the end of her choices. Either she would find someone or she would never, ever give another Keeper to the world.

Miriam had drifted into the habit of taking human lovers because she was lonely and they were satisfying and the emotional commitment was not great. You found a cute male or a sweet, sensual female — the sex mattered not to Miriam, both had their charms — and you seduced, softly, gently, with the caressing eye and the slow hand. Then you put them to sleep with hypnosis and opened their veins and filled them full of your blood, and magic happened: They stayed young for years and years. You told them you'd made them immortal, and they followed you like foolish little puppies. Like the dear creature who now kept her home and business in New York, who warmed her bed and hunted with her . . . the dear creature, so lovely and brilliant and torn by her silly human conflicts. She had almost lost Sarah a few years ago, but had brought her back. The girl should be grateful and compliant, but that was not always the case. Sarah made mistakes. Sarah lived much too dangerously. She was haunted by what she had endured, and Miriam could not blame her. Indeed, she could hardly imagine what it would be like to lie in a coffin like that, slowly deteriorating but unable to die.

Sarah knew that one day the torment would certainly come again. She strove to save herself, using all of her considerable knowledge of medicine to attempt to defeat the process of aging that must slowly consume her, despite the fact that Miriam's blood now flowed in her veins.

To live, Sarah had to prey on man. She was even more tormented by this than Miriam's other lovers had been. Her Hippocratic oath haunted her, poor creature.

Miriam stopped herself. Best not go down that path again. She was always troubled by the tormented lives and horrible deaths of her lovers. The delicious little things were her guilt, her pain.

But not now, not on this nervous, excited night, the opening night of the Asian conclave. At least a proper lover would never die as the human ones did, pleading for deliverance even as their flesh became dust. But she would have to submit to him, obey him, live in his cold cell . . . at least, for a time.

Her body was her life — its rich senses, its wild desires, the way it felt when strong hands or sweet hands traveled her shivery skin.

There would be none of that in her future, not when she was part of one of *their* households, as she would be expected to be, at least for the duration of her pregnancy. Long, silent days, careful, creeping nights — that would be her life behind the walls of their world.

But that was how it had to be. She could almost feel that little body in her belly, could imagine hugging it after it came out, while it was still flushed and coal-hot. Only a newborn or a freshly fed Keeper was ever that warm.

The *samlor* glided along Moon Muang Road, heading for the Tapae Gate and the temple district beyond, moving through the murky, soaked night. How did the Asians stand this wretched climate? And yet, the heat was also nice. She enjoyed sweaty beds and long, druggy nights doing every decadent thing she could imagine.

Well, all that was going to change. She was going to become a proper wife, and she certainly didn't need drugs for that. She wasn't addicted, so it wouldn't be a problem.

She could imagine her man, tall and silent, his face narrow, his skin as pale as a shadow. She could feel him, muscles like mean springs, long, curving fingers that could crush a human's bones or caress her plump breasts. She took a deep breath. These thoughts made her feel as if she were drowning and being rescued at the same time.

The wind rose, sweeping through the dark trees, sending ripples shivering across the puddles that were like lakes in the street. Much lower now, the clouds raced and tumbled. Voices rose from a little market, two girls singing some popular song, oblivious to the *samlor* that whispered past and to the being within, who was carefully listening to the patter of their heartbeats from a thousand feet away.

Her interest in them told her that the hunger was rising within her. She felt it now, a faint gnawing in her belly, a hint of ice in her veins.

This was bad news. Most of her kind could detect their hunger coming for days, and they could prepare carefully to do a hunt. She'd never been able to prepare. One second she was fine, the next it was starting.

She noticed that the smell of the *samlor* driver was washing over her, blown back by the breeze. She took a deep drag on her strong Thai cigarette, attempting to blot out the delicious scent.

It did not work. Okay, she thought, I'll go with it. She looked at the driver's sweating back. A thirty-second struggle and she'd be fed for another couple of weeks. The thing was, the hotel had written down her destination in Thai for him. He would not deviate from the route. She needed to get him to go down some darker side street. "Speak English?"

He did not respond. So she'd have to jump him right out here if she wanted him, and that would never do. You did your kills in private, and you destroyed all trace of the corpse. Even Miriam Blaylock followed those two essential rules.

She closed her eyes, arching her back and stretching, forcing his smell out of her nose with a rush of air. Think about opium, she told herself, not blood. Later, she would smoke to relieve this damned hunger. She needed to get back to familiar territory before she fed. It wasn't safe to do it in an unknown place.

Too bad her flight to Paris, where the European conclave was held, didn't leave until tomorrow evening.

This Asian conclave would end with dawn, and she'd have liked to have gone straight on to Europe. She could feed easily in Paris; she knew the city well. She'd hunted there recently — no more than fifty or so years ago, when it was swarming with Germans.

Of course, she might meet a man here in Chiang Mai. If she did, her new husband would attend to her need for prey during the pregnancy. If she wasn't leaving tomorrow, she'd be staying in Asia a long time.

She gazed up at the racing moon, thought of New York. It was about noon at

home, so the cleaning crew would be at work in the club. Sarah and Leo would be asleep at home, probably in one another's arms . . . probably in Miriam's own bed, a curtained, canopied heaven made for Nellie Salter, cane-mistress to Sir Francis Bacon, and William Shakespeare's Dark Lady. She'd drunk too much before she died, had Nellie. She'd made Miriam positively giddy.

Maybe the thing to do would be to convince her husband to come back with her. Or, if that proved to be impossible, maybe she would break even that taboo, and bear the child without a male's protection.

An odor struck Miriam with the force of a slap. Involuntarily, she hissed. The driver's head snapped around, his eyes wide and white. The scent of human blood had invaded her nostrils, raw and still very much alive. Then she saw why: there was an accident ahead.

A powerful instinct urged her to leap out of the cab and suck the bodies dry while the life force was still there to consume. But this was another instinct that had to be stifled.

As they passed the site, she held her breath. She could not trust herself with the scent of raw blood, not when the hunger was spreading through her body. Her skin was already cooling, making her feel heavy and slow. She'd be as pale as ashes when she got to the conclave. They'd all think, *Look at her, she can't even feed herself.*

The moon burst out from behind furious clouds. Lightning flickered on the spire of Wat Chedi Luang. The temple spires here in Chiang Mai were so lovely and exotic. She was used to the canyons of Manhattan.

Again the smell of the driver reached her nostrils. This time her body started to prepare to eat, her muscles growing tight for the assault, her mouth swimming in the mucus that would anesthetize her prey.

She took a long, last drag on the cigarette. If you pulled their blood into your gut with sufficient strength, your feed ended with delicious dregs.

"Be sure and get the organ juice, dear," her mother would admonish her. "It

makes for strong bones.”

Mother Lamia was hard to remember and hard to forget. When Miriam needed to fall out of love with a human, she would use her memory of what humans had done to her mother to help her along. It had come as a great surprise, the capture. When Keepers slept, their bodies reached a state near death. They were entirely helpless. So sleep was carried out in deep hiding, or — in those days — in great and protected palaces.

A man they had thought a friend had betrayed Lamia. He had been a faithful partner at cards, had been the Graf von Holbein. But it evolved that he was not a petty count but a powerful priest, and his name was not Holbein but Muenster, Father Deitrich Muenster.

Miriam had escaped across the roofs of the little town where they were living. She had not been able to take her comatose mother, nor to hide her. Miriam had expected to remove her from their prison either by bribery or by brute force.

But they had not tried her. They had not even imprisoned her. They had wasted no time. Mother Lamia had awakened already chained to her stake. She realized instantly what was happening. But all of her struggles and strength did not break the chains or topple the stake.

Mother Lamia had stood proud on the pyre they had made for her, her hair flaring sparks into the night. She had stood there for a long, long time, because Keepers could only die when their blood stopped completely.

They had laughed when she screamed, and when they realized that she was dying so unusually slowly, they were even more delighted. Mother had been burned for a witch in 1761, in a village near Dresden. She had been the most alive, the best person Miriam had ever known. She had a fabulous sense of humor. She loved to have adventures, and she loved to dance. Mother introduced Miriam to music — sackbuts, violas . . . her beloved viola da gamba. Miriam had been taught to sing, to read and speak many human languages, so many that she'd lost count. The languages of the ancient world had been works of art, Sumerian and Egyptian and Zolor, among many others. They had been supplanted by Greek, with its sublime verbs, and

Latin, which was too rigidly constructed — somehow crude. English was a practical tongue. Of the modern languages, Miriam thought that French and Mandarin Chinese stood out as being the most satisfying to speak.

Unfortunately, she had never learned Thai, so she was at a disadvantage here. “Will you hurry, you stupid creature,” she growled at the driver in English. He sped up. Her tone needed no common language to make itself understood.

The spires of the temple district rose all around her now. The district bore an ancient enchantment, for it was sacred to her kind, too. Here in the deep eons they had met, ten thousand years ago, fifteen thousand . . . when the world had been their toy and man a mute race of cattle. Look at the pavements left by her kind, still perfect after all this time. Look at the foundations of Wat Phra Singh and Wat Chedi Chet Yot — no human engineer could fashion such precision in stone. Stars curse what had happened among her kind, to make them vagrants in their own world. Give me opium, let me smoke. Let me forget.

She touched the golden key that lay at the bottom of her new purse, the key that would let her into the sanctum in the cellar of the Moonlight Bar. The purse was a Gucci bought at the local night market for 2500 baht. It was a luxurious item and finely made. She didn’t need another purse, but she loved to shop and she’d been unable to resist. Every Keeper loved exquisite leather, and calfskin was deliciously close to human . . . which was *very* taboo to wear outside the home. The prey might notice something — the remains of a tattoo or a human birthmark on your gloves or your pocketbook. Personally, she never wore leather from human skin. They might be prey, but they were sensitive, conscious beings and that had to be respected. But their skins tanned *très* softly, the flay off a smooth back or buttock.

The *samlor* driver hunched forward as if some deep instinct was drawing him away from her. The thought again crossed her mind to just jump him. She’d ride him like a little bullock. He would shriek and buck, and it would be a thrill.

His living scent stung the flower-sweet air. Then he turned the *samlor*, going down a narrow street. It was little more than a passageway, very quiet.

She shoved another cigarette into her mouth and lit it. Closer they came to the ancient temple of Wat Chiang Man, the *chedi* within it buttressed to the four corners of the world by four gilded elephants.

The *samlor* stopped. Beneath the *chedi*, in a cellar no human being had ever entered, was the ancient *ho trai* of the Asian clans, a place founded before Siddh^hartha was Buddha, indeed before Siddh^hartha was born. “Stay,” Miriam said. “Wait.”

An eye took her in. The slightest of nods. She knew that this temple had a reputation among the ghost-conscious Thai. He sat with his head bowed and his feet clicking his pedals.

Her heels clattering on the wet paving stones, she crossed the short distance to the temple, then entered the *chedi*. Here, it was suddenly quiet. There was a scent of sandalwood and smoke from the single guttering lantern that hung from a rafter, shining on the great Buddha that reclined in the center of the ornate chamber.

She paid respect to the Buddha, drawing her hands together and bowing. Had any of her peers seen her, they would have scorned her utterly.

She ran her fingers along the cunning mortise work, then tapped softly three times, causing the concealed mechanism to give way with a soft click. It was a little surprising, the way the mechanism felt. It was almost as if the lock were sprung. She thought she might have been able to open it just with a push. You’d never find this kind of carelessness in Europe or America.

She went down the steep, curving steps. She didn’t need illumination, of course. There was a nocturnal species . . . miserably enough in this electric era. How her father had moped when the humans had discovered electricity. “We should have kept it from them,” he’d said.

Keeper men and women did not live together except during pregnancy and, to some extent, child-rearing. But the love between them could be great, and he had never recovered from the loss of his Lamia. “I find myself searching the world for her,” he would say. He’d persisted in doing dangerous things — climbing mountains, dueling, and traveling, endlessly traveling. It was death

he sought, when he sought the far hills.

Her father had died in the explosion of the Hindenburg in 1937 — taken like his Lamia by fire. He saved human beings from the flames, and those he helped can be seen in the newsreel film scrambling from the windows as the ship descends. He comes out last, and his form disappears in the fire.

Over and over and over again, she watched that film, longing for one more rolling murmur of his voice, one more touch from his kindly hand.

She stopped on the fourth step. There was sound down below, definitely. Good, the conclave was in session. For most of the Keepers down there, this would be the first contact in a century with any of their own kind. Lovers met in sweet battle, and mothers lived with their children. But for the most part, they were a species as solitary as the spider.

A little farther along, she stopped again. Something she was hearing below did not seem quite right. Her people didn't laugh. She'd never heard anybody laugh except her mother and herself. Not even her dad had done it.

She went a little farther — and then she saw something incredible. On the dark wall there was a figure drawn. Or no, it was painted — spray-painted. She had to raise her head to see the whole of it. When she did, she saw that it was a crudely sprayed painting of a human penis in full erection.

Graffiti?

Farther along yet, there were paper cartons from a restaurant, still smelling of pepper and garlic. Nobody ate human food. They had no way to digest it. Inside, they were not made like humans at all. Liquor, however, was a different story. They could get drunk, fortunately. The others disdained alcohol, of course, but Miriam enjoyed fine wines and adored every form of distilled liquor from Armagnac to Jim Beam.

She moved a few more steps down, getting past the odor of the cartons. Her nostrils sought scent ahead.

Then she stopped. Fear did not come easily to her kind, so she was not

frightened by what she smelled, only confused. She smelled humans — the dense odor of men, the sweet-sharp scent of boys.

A shock went through her as powerful as one of the lightning bolts that had been tearing through the clouds. She saw, suddenly and with absolute clarity, that the reason for all the odd signs was that there were human beings in this secret place. She was so surprised that she uttered an involuntary cry. The sound shuddered the walls, the moaning, forsaken howl of a tiger at bay.

From below there came a rush of voices, then the wild flicker of flashlights. Footsteps pummeled the stairs, and suddenly two Occidental men and three Thai boys came racing past her, cursing and pulling on their clothes.

Behind them they left a greasy silence, interrupted after a few moments by the scuttle of roaches and the stealthy sniffing of rats. Treading as if her feet were touching sewage, Miriam descended into the sanctum. She growled low, striding about in the filth and ruins.

They must have moved the sanctuary. But why hadn't they told anybody? Keepers might be a solitary lot, but ancient custom dictated that everybody be informed of something so basic as this. Unless — was she really *that* shunned, that they would move a place of conclave and keep only her in the dark?

Surely not. They were far too conservative to alter an ancient convention. So maybe there had been an emergency. Maybe the sanctuary had been discovered and they'd had to move it suddenly.

That must be it. She hadn't gotten the message because there'd been no time.

But then she saw, lying in a corner beneath the ruins of a shattered bookcase, a familiar red shape. She caught her breath, because what she was seeing was impossible. Her skin grew taut, her muscles stirred — the predator sensed danger.

She picked up the red-leather book cover and held it in reverent, shaking hands. From the time their eyes came open, Keepers were taught that the Books of Names were sacred. By these books, a whole species knew itself,

all who lived and had died, and all its works and days.

That red leather was unmistakable, as was the inscription in the beloved glyphs of their own tongue, glyphs that no human knew. *The Names of the Keepers and the Keepings*.

They called themselves Keepers because they kept herds. If the rest of the book had been here, there would have been descriptions of the various territories that belonged to the different Asian Keepers and who had the right to use which human herd.

She ran her fingers over the heavy leather. It had been cured from the skin of a human when they were still coarse, primitive creatures. These books were begun thirty thousand years ago — a long time, even in the world of the Keepers. But not all *that* long. Her great-great-grandfather, for example, had been able to imitate the cries of the Neanderthals. Buried in the Prime Keep in Egypt were careful wax paintings of the human figure going back to the beginning.

She crouched to the crumbled mass of paper, tried to smooth it, to somehow make it right. When she touched the pages, roaches sped away. She spread a crumpled page to see if any useful information remained.

The roaches had eaten the ink, what hadn't been smeared by the vile uses to which the paper had apparently been put. She laid the page down on the dirty floor, laid it down as she might lay to rest the body of a beloved friend.

She made another circuit of the chamber, looking into its recesses and crannies, but not a page remained.

She was face-to-face with what was without a doubt the greatest astonishment of her life. Some of the richest and most ancient Keepers were Asian. There had been — oh, easily a hundred of them.

She slumped against a wall. Had man somehow done this, simple, weak little *man*?

Keepers could be hurt by man — witness her mother and father — but they

couldn't be destroyed by man, not this way. They *owned* man!

She looked from empty wall to empty wall and fully grasped the fact that the Asian Keepers must have been destroyed. If even one was left alive, this book would be safe.

When she grasped this enormous reality, something so rare happened to Miriam that she lifted her long, tapering fingers to her cheeks in amazement.

Far below the crazy streets, in the fetid ruin of this holy place, a vampire wept.

INTRODUCTION

MEETING *the* MASTER *of the* KEY

I did not know it at the time, but on the night of June 6, 1998, one phase of my life was going to end and another begin. At around two thirty in the morning, I had a most extraordinary conversation, indeed a life-changing conversation, with a man I have come to call the Master of the Key.

It has now been more than a decade since the half hour or so I spent with him, and I can say that his words, if embraced with care and decision, are profoundly transformative. He made no call for devotees, but rather gently suggested that it would be of value to make use of his ideas. Some are new. Those that have roots in what has come before shed new light on the ancient human journey toward meaning.

I was in a hotel room in Toronto, having just spent a day touring for my book *Confirmation*. It was my last day of a month-long tour and I was exhausted. I'd eaten a room service dinner and gone to bed, and when there came a knock at the door, I assumed that it was the waiter, returned to get my tray.

Not realizing that it was already long after midnight, I opened the door and let him in. He ignored the tray sitting on the desk and began talking. For a moment, I was confused, then I understood that this was not, in fact, the waiter. My next thought was that somebody who wanted to engage with me because of my book had found my hotel room. A reliable rule of thumb is that no stranger who calls or arrives after midnight is going to be somebody you want to talk to, so I immediately began to try to get him to leave.

He said something about mankind being in chains, then he offered the arresting thought that, because of the murder of a couple who had been killed in the Holocaust, the person who would have cracked the mystery of gravity was never born, as a result of which we remain trapped on a dying planet.

Thus began the most extraordinary conversation I have ever had in my life.

Although I took notes as we spoke together, it was another two years before I published our exchange, and then I did so only privately. In part, this was because I worried that I might have gotten parts of what he'd said wrong and I hoped he would read the book and come forward with corrections.

The reason for this was that, after that meeting, I had not been able to find him again. I had no name or address, only a description and the few things he'd said about himself during the conversation. When he was right there before me, leaning against the window frame, it had not crossed my mind to ask him his name or address, or request a card. I was busy jotting my notes and asking questions.

The next morning, though, I realized that it was liable to be difficult to find him. After I saw him out, I immediately went to sleep, which seems odd in view of the extraordinary nature of what had just happened, but at the time it all seemed quite normal. There wasn't the slightest thing about him to suggest that he was in any way unusual.

As soon as I woke up, I realized that I'd had a very strange experience, but I was unsure about what had happened. By the time I was ready to leave, though, I had definitely remembered that there had been a conversation. I had a few notes, but they were indecipherable—at least, so I thought at first. I telephoned my wife, Anne, and asked her to never let me deny that the man had seemed real to me. From long experience of extreme strangeness, I knew that, sooner or later, I would deny it.

That morning, I saw the publicist for the book a last time, and described the man to her. She had no idea who he might have been. I asked her how many people in her office knew where I was staying, but she didn't know. There was no reason to keep such information secret. Authors are not the sorts of celebrities who attract annoying fans. In fact, most authors are delighted to attract any at all, and I was no exception to that rule.

So any number of people might have known the hotel I was in, but they would have had to ask at the desk to find my room number. She didn't know it herself, in fact.

I knew that nobody had inquired after me, because the first thing I'd done on dressing was to go down and ask the clerks if anyone had made such a request. The hotel's rule was not to give out that information without telephoning the guest, and not to make such calls at all after midnight unless the inquiry was urgent.

However, it's not difficult to get past rules like that in a hotel, so perhaps my visitor had simply slipped somebody a tip, gotten my room number and gone up. He wasn't even slightly dangerous-looking, so he wouldn't have seemed a threat.

Over the next two years, I tried various ways of finding him, but without success. Finally, I hit on the idea of publishing his words privately, in hope that this would lead to him getting back in touch with me. The book was sold on my website for ten years, but this did not cause him to come forward.

So I am left with a question about what exactly happened on that night. Was he a real, physical person or imaginary?

As I look back now more than ten years to that night, I cannot truthfully say that I am certain that this man who has so profoundly influenced my life was a real, physical person. However, at this point I also can say with some authority that he was not simply a figment of my imagination, which is why I'm publishing this book to a general audience now.

The reason is that too much of what he said was beyond my imagination at the time, and there are a number of statements that later proved to be scientifically true that I would never have thought then had any basis in fact. As I transcribed some of them, I can well remember how tempted I was to leave them out altogether. For example, when he announced that "gas is an important component to consider in the construction of intelligent machines," I recall how peculiar I thought that statement was. He went on to claim that "nitrous oxide will bear memory." Nitrous oxide is laughing gas. So, I thought at the time, is this some sort of eccentric attempt at a joke?

It was not a joke. My research between 1998 and 2000 when I actually produced my private publication of the Key turned up a few hints that there might be something in his statement, but in 2005 a very specific discovery was announced, to the effect that reoxidized nitrous oxide could be used as a gate dielectric for charge-trapping nonvolatile memory. So he was right. Nitrous oxide will indeed "bear memory."

Back when I was researching the many scientific statements he made in our conversation, this was one that I could not directly confirm. In 2005, however, it was confirmed.

During the same exchange about intelligent machines, he added, "Also, you may find ways of using superposition in very fast, very able quantum memory chips."

In 2010, yet another use of gas as a memory medium was announced, and this time it has been connected with this last statement. It seems that high-density, ultra-cold atomic gases have been found to be a promising medium for the storage of individual photons in quantum memory applications.

Unless he comes forward again, however, I doubt very much that I am going to be able to solve the mystery of who he was. To this end, I have withheld some identifying characteristics that he would certainly remember about himself, so any claimants will need to pass a verification test. Although I cannot think that I wouldn't recognize him immediately, I don't want there to be any confusion about this after my death.

The conversation was not long, but it was the richest I have ever had, and, quite frankly, I think of it as a kind of treasure trove. Certainly, it has been one for me.

While I cannot imagine that he was something as science-fictional as a biological robot, it did occur to me to ask him about intelligent machines.

He responded by first saying that we were reaching a point in the development of complexity in our civilization that we needed them, and then continuing in this vein: "An intelligent machine will always seek to redesign itself to become more intelligent, for it quickly sees that its intelligence is its means of survival. At some point it will become intelligent enough to notice that it is not self-aware. If you create a machine as intelligent as yourselves, it will end by being more intelligent."

Of course, this struck me as dangerous, and he agreed that it was potentially very dangerous, and in the June 2010 issue of *Scientific American*, the advent of self-aware robots was discussed as a matter of concern. The article states: "Once a machine can understand its own existence and construction, it should be able to design an improvement for itself." Will Wright, the creator of the SimCity videogame series, is quoted as saying, "Personally, I've always been more scared of this scenario than a lot of others. This could happen in our lifetime. And once we're sharing the planet with some form of superintelligence, all bets are off."

When I asked him outright, more or less jokingly, whether or not he was an intelligent machine, or something created by one, his reply was delightful: "If I was an intelligent machine, I would deceive you."

The exchange continued on to cover a very wide range of topics, and over the years since, I have managed to verify so many of his claims, including

some that were quite improbable at the time they were made, that I have thought it would be ethically appropriate to extend publication of his words to a wider audience.

Over my career, I have made other improbable claims, and argued as best I am able for the validity of the underlying experiences as genuine mysteries. Along with doing this there comes a powerful moral obligation to limit those claims only to what has definitely been observed, and to strive always to provide any verification that might become available.

At this point, I think that I am right to assert that I cannot make conventional sense of this man, whom I have come to call the Master of the Key. This is because his words were a key for me that unlocked many doors, and his mastery lay in the fact that they were often either brilliant distillations of complex ideas, or were entirely novel, and they were delivered with calm assurance.

He was humble and displayed a twinkling good nature. His hair was white and close-cropped, and his eyes were a light blue. He wore a dark gray turtleneck and charcoal trousers. He seemed rather slight to me, perhaps five foot eleven, weighing maybe a hundred and seventy to a hundred and eighty pounds.

While he appeared to be an ordinary physical individual, he does not seem to have been a person like me or like the rest of us, embedded in this place and time in the same way that we are. Otherwise, how could he have spoken so cogently about obscure topics such as memory-retaining gases long before there was any evidence that such things existed?

Of course, there might have been papers on this subject available somewhere, but not that I was able to locate at the time, and I looked quite deeply. I do not think, though, that the specific applications he identified were known then.

His comments on intelligent machines seemed so assured that I have wondered if he might not have had direct experience of such things. If so, then maybe he was a visitor from the future.

Or is that just a fantasy? We know that movement through time is possible, but it involves dramatic physical effects, such as faster-than-light acceleration, so one would think that it could hardly be accomplished in a hotel room, or indeed could involve anything more than subatomic particles or photons.

However, a hundred years ago there were only a few thousand automobiles in the world and just a handful of fragile and inefficient airplanes, so it would obviously be silly to discount this as a possibility, especially if superintelligent machines are used in the future to find ways of accomplishing it.

Nevertheless, if he was from the future, then it is difficult to see how he could have had as much freedom of action as he did. This is because the principle of least action, which seems universally true in nature, would seem to prevent anyone from the future reaching back to change the past. This is the principle that states that nature never expends more than the minimum amount of energy that it must in order to do what it must. That is to say, water always seeks the lowest place it can run, and likewise, you cannot create contradictions in space-time, such as killing your own grandfather.

Interestingly, though, it might well be that you can do some things in your own past, maybe quite a few things, if you don't affect your own life. We can only speculate about the extent to which the grandfather paradox impedes the ability of the future to alter its own past. In fact, if time travel is possible, then there is also an extensive science devoted to safely altering the past for what is, to the time travelers, present benefit.

It might work to slip ideas like these in through the back door of an outsider like me, then nurture them along. The closer awareness of them proceeded to the time that they actually originated, the more generally they could be dispersed. So perhaps my initial refusal to accept that the Master of the Key was real, the delay of two years before I actually even transcribed the conversation, and my long hesitancy about publication, have actually been governed by the grandfather paradox. Therefore, my various objections and hesitations are an outcome of the fact that, on some deep level, I am unable to act in any other way.

If this is true, then maybe I will meet the Master of the Key again someday when the natural progression of my life has reached the present from which he went back to engage my younger self. The other possibility, of course, is that he came from a time after my death. But if his extraordinary remarks about the soul are true, then I might still meet him in such a future. In fact, I might even *be* him.

He said something in passing that suggests an awareness of the constraints of movement through time when he said that an intelligent machine "might

foment the illusion that an elusive alien presence was here, for example, to interject its ideas into society.”

If it also came from the future, it might do this, as well, to gain greater latitude for its penetration of our era. It might be that the principle of least action could to some extent be defeated if observers were deceived into believing that what was, in fact, a time machine was an intrusion from something that is completely outside of our reality, such as an alien presence.

If this is true, then Stephen Hawking’s famous response to the question of whether or not time travel is possible, “Where are the tourists?” is answered. They’re here in droves. It’s just that they’ve misled us into thinking that they’re aliens, and their time machines are spacecraft from another planet.

Of course, as a person who has been enmeshed in the issue of alien contact, this notion has caused me much thought. It has been obvious to me for some time that the events I described in my book *Communion* were probably beyond anybody’s ability to narrate correctly. When I woke up in the midst of bizarre and inexplicable, but obviously intelligent, creatures in December of 1985, it appeared to be alien contact. But after listening to and reading tens of thousands of other narratives of such contact, and having more experience with it myself, I wouldn’t be surprised at all if it was some sort of elaborate illusion being undertaken to conceal something else entirely.

I had already come to this notion in 1998, so I found his statement about the apparent alien presence around us being a form of deception quite thought-provoking, and I still do. Like most anomalous experience, though, nothing he said brings cloture to the question of what is actually behind the curtain. It just adds another layer of possibility.

What a shame it is that more people aren’t open to this speculation. As long as one keeps developing the question without drawing conclusions, which seem, in any case, like a *fata morgana*, to recede forever into the future, it is an enormous intellectual challenge and pleasure. For this reason, I remain grateful that I had my close encounter experiences, despite the social isolation that has resulted from my discussing them.

He also made some statements about the environment that had a strong effect on me. When I met him, I was already conversant in environmental science, having coauthored a book entitled *Nature’s End*, a speculative mix of fact and fiction that addressed environmental concerns.

I had also read a number of books about catastrophic climate change,

ranging from Charles Hapgood's *Path of the Pole*, to Rose and Rand Flem-Ath's and Graham Hancock's books on this subject.

The Master of the Key did not discuss crustal shift as a causative factor in sudden climate change, though. He took a very different approach, addressing it instead as an outcome of distortions in the atmosphere that lead over time to a breaking point, and sudden catastrophe.

Although this process is fluently visible in the fossil record, the mechanism that leads from sudden upheavals of climate to ages-long planetary entrapment in ice remains much debated, so I was quite interested when he said, "The next ice age will begin soon, and this will lead to the extinction of mankind, or to a massive reduction in population, given your inability to expand off the planet. This planet is at present a death trap."

I try never to allow myself to forget that every single person on earth is as valuable and important to themselves as I am to myself, and so I found this statement profoundly disturbing. I immediately wanted to sound a warning. I wanted to save us all.

At that time, the great danger of global warming was thought to be a continuous rise in temperatures that would cause earth to become so hot that it was uninhabitable—but it was also something far off, a problem to be debated now, solved later.

The Master of the Key suggested that it was a very much more immediate problem. He said that, as polar ice melts and floods the northern ocean with freshwater, the North Atlantic Current would fail, leading to a radical climate change that would unfold over "a single season."

If such a thing happened, it would obviously bring massive suffering to mankind. Even worse, the disaster would strike hardest at our most economically active and well-educated populations in North America and Europe.

But was it the truth? In those days, I still didn't have much in the way of verification of any of the man's ideas, and this one seemed particularly radical. I was still extremely unsure about whether or not the whole encounter had simply been imagined. To keep me from just dropping the whole thing, my wife had to constantly remind me of the phone call I'd made to her.

In those days, while there was controversy about what caused ice ages, it was generally agreed that the change was a gradual one. However, I did find an article in the January 1998 *Atlantic Monthly* called "The Great Climate

Flip-flop,” by William H. Calvin, that suggested that the change might be very sudden.

This same suggestion appeared in commentary about ice cores taken from Greenland and the Antarctic, but there seemed to be no clear mechanism that would cause such a dramatic change so fast.

Putting what I had been told by the Master together with the research I was doing, I came to write *The Coming Global Superstorm*, which was turned into a film by Roland Emmerich called *The Day After Tomorrow*.

The film was a terrific success with the public, and served to cause many millions to consider for the first time that the abstraction called “global warming” might have unexpected and serious consequences.

For the most part, though, the press and the environmental movement condemned the film for compressing the period of change into too short a time.

A hundred and thirty-seven million years ago, there was an event that caused dramatic and sudden climate change, which must have severely impacted animal populations on earth. Thirteen thousand years ago, a sudden dump of freshwater into the North Atlantic from a gigantic glacial lake in Canada triggered a return to ice age conditions known as the Younger Dryas.

What happened on both of these occasions, and has happened on many others, is now clear. It is exactly what the Master of the Key warned might happen. The process is this: carbon dioxide levels rise, causing warming. This warming melts permafrost, which releases massive amounts of methane into the air. The methane is a devilishly efficient heat trap, and global temperatures rise dramatically. This results in rapid polar melt and a flood of fresh melt water into the ocean. Because freshwater heats and cools much more quickly than salt water, ocean temperatures rise. This reduces the difference in water temperature from north to south, weakening the natural heat pump effect that draws warm water into the north, in the form of the Gulf Stream.

It subsequently stops, while at the same time the methane, which, unlike carbon dioxide, breaks down quite quickly, disappears. The result is a very dramatic shift in climate, first to extremely hot conditions, then plunging into extreme cold, a change that can take place over a very short time.

In 2008, Dr. Achim Brauer, of the Potsdam Center for Geosciences, and colleagues analyzed sediments from a crater lake that are laid down annually,

and found that the Younger Dryas thirteen thousand years ago began over a single season, which is ten times faster than previously believed, and exactly in keeping with the Master's dire warnings.

As this is being written, earth is in the process of experiencing the hottest month of June on record, June 2010. What lies ahead is even more dramatic heating, and if the methane hydrates now frozen in arctic waters should melt, that heating is going to spike just as it has in the past, and the results will be precisely the same.

The Younger Dryas is not the only time in recent epochs that an aggressive climate shift has affected earth.

Five thousand two hundred years ago, there was a lesser cooling event that caused glaciers to form so suddenly in Peru that deciduous plants at their bases are found to have been frozen so quickly that their cell walls remained intact. For this to happen, the temperature change must have taken place in a matter of no more than a couple of minutes. In other words, the temperate climate that these plants enjoyed changed extremely quickly, certainly in less than a day. The glaciers that formed on that terrible day are still there, 5,200 years later.

Also 5,200 years ago, Ötzi, the Ice Man, whose remains were found consequent to melt in the Schnalstal Glacier in the Italian Tyrol in 1991, was buried by a snowstorm in an alpine meadow. He only reappeared when the glacier melted. In other words, the snowstorm that choked that meadow did not melt again for over five thousand years.

My conclusion is that I was being warned of the presence of natural forces that we do not understand, or do not wish to understand, and, if anything, that warning has grown more and more urgent as our climate sets up in precisely the same way it has in the past just prior to such an upheaval.

He left the subject with this admonition: "The greater part of human industry and culture, along with the species' most educated populations, will be destroyed in a single season. This will happen suddenly and without warning, or rather, the warning will not be recognized for what it is."

I suppose that the clearest warning will be the appearance of methane bubbles in arctic waters.

In July 2010, Professor Igor Semiletov of the International Siberian Shelf Study, said, "Methane release from the East Siberian Shelf is under way and it looks stronger than it was supposed to be."

This could well be the warning that he referred to, and I would be very surprised to see it heeded in any way. We will, however, find out what it means, most likely under conditions of extraordinary upheaval and human suffering.

If the Master of the Key would be heeded, we might at least be able to develop contingency plans that would to some degree ameliorate such a disaster. But he will not be heeded. In fact, most people who might be in a position to act on the warnings he has given us will not do so, because the existence of the man cannot be explained and he apparently cannot be recontacted. Even if he could, I doubt that the importance of his message would be acknowledged.

Despite the general denial in science that there could possibly be anyone here from another world, be it another planet or some other seemingly impossible place, I know quite prominent scientists whose work has benefited significantly and in useful ways from contact with inexplicable visitors, perhaps from other worlds. But if even scientists this prominent were to come forward with the truth, they would be drummed out of their careers.

This is a misfortune, but it is also, I believe, something that has been constructed by the same presence that is behind the whole mystery, be it alien or human, or even nonphysical in origin.

Whatever it is, quite clearly its knowledge is far in advance of ours, and this is probably why it is so secretive.

In the May 6, 1977, edition of *Science*, T.B.H. Kuiper and Mark Morris offered the speculation that aliens coming here would keep themselves well hidden, because the only motive of people so advanced as to be capable of such a journey would be to discover what new knowledge we might have to offer, and “by intervening in our natural progress now, members of an extraterrestrial society could easily extinguish the only resource on this planet that could be of any value to them,” which would be the uniqueness of the human experience.

Even if the only difference between us and visitors from another world was that they possessed a technology that could control gravity, the gap between us would be very great. But there could be other things that would make it even greater.

For example, my experience between 1985 and 1993 with creatures that appeared to be alien was associated with a surprising side effect, which was

simultaneous contact with the dead, who would appear along with the visitors, and not as ghosts. They would seem to be completely physical.

Perhaps, if we had a clearer understanding of the soul, the gap between us and this mysterious other intelligence would narrow, and perhaps that's why the Master talked so much about the soul, attempting to get me to understand it in a new way.

He said that "souls are part of nature," and that "the science of the soul is just another science. There is no supernatural, only physics."

Science does not believe this. Science believes that we can't detect the soul because there is no soul. But the Master saw it as part of nature, even to the extent of being exploitable as a resource by those with the skill to do this.

Modern western culture has a schizophrenic relationship with the soul, very much as was true during the Roman Empire, when an educated elite developed that included the soul among the superstitions of the uneducated, and dismissed it, along with the gods, as nonsense.

Similarly, few western scientists and intellectuals consider the soul a viable idea. Where is it? What form might it take? How could anything bearing consciousness continue to exist after the seat of consciousness, the brain, has ceased to function?

The Master of the Key takes a completely novel approach to the whole idea. He denies the existence of the supernatural, saying that only the natural world exists, some parts of which we understand and some parts of which we don't.

It is a characteristic of human thought and culture that we deny the parts of nature that we don't understand. Voltaire dismissed fossils as fish bones tossed aside by travelers. The existence of meteors was once considered an absurd fantasy. Eight days before the Wright Brothers flew at Kitty Hawk, the *New York Times* published the opinion that it was time to stop nattering on about the absurd notion of flight using heavier-than-air machines. Both the *Times* and *Scientific American* initially claimed that the flights must have been a hoax.

Such denial is a human habit of mind, and it remains as deeply ingrained in us as it always has been. Despite the many experiences I have had with ghosts and such, I myself have always been skeptical about the soul. Where would it get its energy? What sort of material reality could it possibly possess?

For this reason, as I sat face-to-face with my visitor, I initially found his commentary on the soul off-putting.

The reason was that, despite all the evidence I had in my own life, including an extraordinary moment of out-of-body travel that had taken place in 1986, I had no way to understand why anything would survive the death of the physical.

However, he took an entirely unexpected approach. First, he used the phrase “soul-blind” to describe us. I’d heard it before, and I couldn’t disagree. But were we soul blind because there’s nothing to see, or because of some appalling human insufficiency?

When he said that the soul was, simply, a part of nature, I found myself thinking that things like radio had also always been part of nature, but for a great long time we couldn’t even conceive of them, let alone detect them. And he was saying, essentially, that the issue with the soul is also one of detection. This would correspond with his assertion that “conscious energy” is essentially electromagnetic in nature.

But how would that work? Are such fields plasmas? If so, what holds them together? What are the physics of the soul?

In the mid-nineties we were living in San Antonio, Texas, and were invited to the home of a friend who was taking many photographs of what are known as “orbs” in ghost-hunter and parapsychological circles. I thought that the great masses of objects that were appearing on random shots he was taking inside and outside his house must be condensation or dust, or something else along those lines, that was very close to the camera lens. But when I went to the house and we took shots of exactly the same spot with two different cameras from different angles, the objects showed up in both pictures. This means that they were not tiny specs near the camera, but larger objects three or four feet away, which was very perplexing.

Later, I went out into the back garden and felt an absolutely distinct presence. It was my mother, long since passed away. It was as if she was right there. It was palpable. I stood there, my eyes closed, communing with her. I didn’t know it, but another member of the group took a picture of me at that moment.

In the picture, above me and perhaps ten feet in front of me, is a glowing orb. It isn’t enormous, more like a sort of a spark, but why does it happen to be there? Is it an indication of the persistence of the soul after death? It is

certainly true that it seemed to me that my mother was there.

The Master of the Key made an interesting case for souls being part of material reality, basically for the idea that consciousness could remain coherently structured while in an energetic form.

Over the years, there has been so much evidence gathered that ghostly apparitions are associated with magnetic fields that there is little point in my advocating on its behalf.

Listening to the Master appears to have broken a barrier in me. I became much more sensitive to the presence of the dead than I had been before I listened to his ideas about what they were.

I began to see the dead quite frequently and would find myself communicating with them. Recently, for example, my wife's father came to mind in away that felt more like a sort of penetration of my consciousness than an ordinary thought or memory. I told her that I could feel his presence, and that he wanted badly to communicate with her. When he was alive, their relationship had been seriously strained, and he seemed to want to make amends.

There was also a woman with him, but it wasn't Anne's mother or her father's second wife. Anne told me that there hadn't been any other women in his life.

Her father then said to me, "Tell her it's Marcelle," so I did so. Anne was genuinely startled. She said, "He *did* have a sister. That's my aunt Marcelle. I met her only once in my life. I haven't thought about her since."

I would be remiss if I said that I could prove that Anne had never mentioned Marcelle to me, but she says, I think correctly, that she never did.

If this was the only incident in my life of a communication with the dead, I would take it with a grain of salt. But it is not the only one.

We have an Australian friend, Glennys MacKay, who is quite a powerful medium. She's strictly no-frills and she asks only that she be given something belonging to the person who wishes to have a reading. She doesn't want to know anything about the person, not even their sex.

Seeing a chance to make a test, Anne gave her a lock of our hairdresser's hair. She held it for a moment and then said, "I hear somebody calling, 'Howie, Howie.'" There was a bit more, which Anne dutifully wrote down. But since the hairdresser's name is Jay, it seemed a waste of time.

Nevertheless, she let Jay know the outcome. When she did, he said, "Oh,

my God, that was my dead sister. She always called me Howie. My real name is Howard.”

I thought of the Master’s explanation that the soul is conscious energy, and also his disturbing suggestion that such energy is accessible to technological manipulation, and that it can be exploited by those with the means to do so, and I remembered the way that the dead and the visitors seem to show up together.

Once a man telephoned me and explained that his seven-year-old boy had awakened with a number of these creatures in his bedroom, and his older brother had been with them. The older brother had said to tell their parents that he was all right. Moments later, his wife had observed a huge light race away from the house.

He had gotten through to me via my literary agents, desperate to know if this had ever happened to anybody else.

I was able to tell him that it was a commonplace of the close encounter experience, although undocumented by UFO investigators, because it obviously suggests that something quite unexpected and very little understood is actually going on.

The reason that he was so eager to know this was that the older brother, their seventeen-year-old son, had been killed the previous week in an auto accident.

Another incident took place, also involving Glennys MacKay, that convinced me once and for all that the Master’s detailed explanations of the soul must in some sense be correct. It does persist after the death of the body, perhaps not as a disincarnate version of the person who lived, but in some coherent manner.

Anne and I were driving Glennys and her husband to dinner. I asked her if she always saw the dead. She said that she did. So I asked her if there were any dead with us at that moment. She said yes, that a dead person was with me. He was wearing a tuxedo and he had played the piano. Then she added, also the violin.

As a lover of classical music, that could cover a pretty broad range of performers I’ve enjoyed. But then she added, “He says his name is Milton.”

I was so surprised that I almost drove off the highway. She had asked no leading questions—in fact, none at all. She’d simply said what she saw.

When I was a child, an older boy who lived across the street had played

both the piano and the violin. He had become a violinist with the local symphony orchestra, and wore a tuxedo during performances.

His name had been Milton. I was aware that he'd died in the early seventies, but I had not thought of him, not at all, in at least thirty years.

Something is out there, something alive, and it is exquisitely aware of our lives and associations, and I am going to let myself believe that the situation is as the Master of the Key has claimed.

When I asked him what the soul was, he replied that it was a "radiant body," potentially. "Formed out of conscious energy."

He said that it is not passive to manipulation, but that a relationship must be formed with it if one is to really engage with it. He added that "it is part of the electromagnetic spectrum, easily detectable by your science as it exists now."

Researchers like William Roll have presented evidence that plasmas are associated with ghostly presences, and done this using relatively straightforward instruments. The Master offered a marvelous inducement to further study in this area: "The undiscovered country can become your backyard."

Our world would change in very fundamental ways if this happened. It seems to me that our species is actually severed into two parts, one physical and the other in some sort of plasmic state. It's as if two halves of a single brain had been severed, as in a cerebral commissurotomy.

In the end, I have come to accept that the soul is, indeed, part of the physical world, in exactly the same sense that an electromagnetic field is part of the physical world. However, I don't think that it's clear what, exactly, this means. It has advanced the question in my own mind from "Does the soul exist?" to "How are we to understand the existence of the soul?"

Perhaps the dead can assist us from their side in repairing the fissure between us, and if so, maybe then the gap between us and whoever else is here can be closed enough for them to have meaningful interaction with us.

In any case, if the dead exist and can be made accessible to reliable and repeatable communication, that would be in itself a revolution of world-historic proportions.

He described ours as a "fallen" world and said that "because you have no plan for yourselves, there is no plan for you." Although he didn't say it outright, there was the strong implication that the reason we cannot see the

world as it is, and continually deny the existence of an afterlife, is that it forces us to face the raw and unbearable truth of our own sins and insufficiencies.

Throughout the conversation I had with him, this remarkable man promoted a powerful and consistent morality, as if to say that leading a moral life frees us to see ourselves as we really are.

He offered a strikingly original definition of sin: “denial of the right to thrive.”

I have found that taking this definition to heart has increased my moral precision. One can see much about oneself by applying those words to one’s own actions. They are really quite powerful and useful to anybody striving to lead a moral life.

His attitude toward social responsibility was uncompromising. “All are responsible for all.” Like the visitors I engaged with in the mid-eighties, he regarded humility as absolutely essential to a moral life, and as well, essential even to an ability to see the world clearly.

Ego does battle with our mortality and, above all, with our smallness. An astronaut I knew years ago stated the position of the scientific and intellectual communities with memorable eloquence when I pointed out to him that he knew me well enough to know that I wasn’t lying about my contact experiences, and that they were not an outcome of some sort of disease process or delusion. He said, “I know that’s probably true, but I have to tell you, I want us to be at the top of the food chain even if we have to lie to ourselves to stay there.”

He also said, “I don’t want the path to Mars to be wellworn,” and I find that very understandable. I also think that it illustrates a subtle but important danger that is inherent in opening one’s eyes too wide. It is the same thing that has disempowered so many indigenous cultures when they have been exposed to western technological civilization, which is a sense of futility and irrelevance.

If the veil between the world should fall, the implication is strong that we are going to discover that we are a footnote in a super-conscious vastness that we can hardly even begin to comprehend, but which is chiefly characterized by a kind of absolute knowledge that makes such things as discovery and innovation superfluous.

Read with care; the words of the Master of the Key have a darkness

concealed within them. There is a suggestion that souls can be subjected to exploitation, and even that, while everybody is to some extent participant in conscious energy, not all possess the “radiant body” that requires attention to maintain.

Could this be why the great majority of the dead just seem to disappear? Usually, after somebody I know dies, I will see them for a few days, and then they are gone. Rarely they may return, seemingly perfectly intact, years later, but not often. When they do, it often seems more as if I am dealing with something that has been gathered into a certain form in order to engage in communication, and that what lies behind it is, in a sense, focusing itself into this particular form only so that it can be understood.

However, in my mind, there are certainly dead people who have a continuous and discreet presence of some sort. Between 1989 and 1993, I meditated almost nightly with such people.

One summer night in 1989, I was in the guest bedroom where I meditated around eleven each night when I suddenly felt a presence so palpable that I could not ignore it. Finally, I said aloud that if I couldn't see whoever was there, I had to leave the room. A few moments later, I did so.

After a period of what could charitably be called disquiet, I fell asleep, only to be awakened at about three by a familiar blow to my shoulder. Many times over the past few years, I'd been woken up like this, usually to face some bizarre experience or other. But this time what happened was completely incredible.

I saw, sitting on the foot of the bed, a small man wearing a tunic. He slumped against the bedstead like a rag doll. I threw off the covers and went down to him. Up close, he was compact. His eyes were deep set but his appearance was human. I took his hand in mine. It was as light as air. From experience with such apparitions, I attempted to anchor myself by smelling his skin. He was startlingly ripe, as if bathing was not a custom he was familiar with.

An instant later, he disappeared. I went down the hall and began meditating. Soon, I could hear breathing behind me, as regular as if it was being generated by a machine.

For the next three years, we meditated together regularly. He would appear with a great clatter of noise on the roof above the meditation room, and we would begin. Often, he would come into the bedroom around three, and we

would meditate together.

Once, my wife came in to meditate with us, but when the clatter began on the roof, she said, “I’m not ready for this,” and left the room.

Because I had been made such a public laughingstock, people were becoming embarrassed to buy my books and my financial situation was deteriorating. On the night before we left the cabin forever, I asked to see him as he really was. Obviously, someone who seemed to use his physicality in the same way that we use clothes could not be, in the end, like us and subject to the same rigors that constrain us.

I waited, but nothing happened, and finally I went back to bed. Suddenly there appeared in the front yard a terrific light. It was so bright that I thought for a moment that the house had caught fire.

I rushed to the window and there glided out from the meditation room and across the yard what was probably the most magnificent thing I have ever seen. It was a bright light, like a huge star floating twenty feet off the ground. Out of it there came piercing rays that I could actually feel as if they were pinpricks. It was as if they were penetrating my skin, and where they entered me, I felt a sweet sense of another human presence, as if I was being embraced by a dear old friend—which, of course, is exactly what was happening.

In 1998, when the Master of the Key described the radiant body, I knew exactly what he meant, because I had seen a person in this state and had lived and worked with him for years. It is endlessly interesting to me that he could control the degree to which he was physical.

When I asked him, once, what he was, he indicated a book in my library called *Life Between Lives*, and I suppose that is where he was from. Often, I have wondered if he eventually reentered the state of the living, and what that experience was like for him.

I began by discussing some thoughts about who and what the Master of the Key might have been, and now will conclude it by reposing that same question but in a new context.

I know what he was. He was one of us. No matter the mystery of his identity, his humanity was immediately familiar. Had I asked him, though, I suspect he would have revealed himself, also, in radiant form. I do not think that he walks the streets of Toronto, that he eats his dinner and reads his book. I think that he is either a man who has, in life, attained the ability to

live and see beyond the limits of the physical, or somebody from beyond the physical who has perfected the skill of walking among us when he wishes.

How often my mind is drawn to memories of the extraordinary beings I have been privileged to know. But of all of them, the most articulate and forthcoming by far was this gracious master you are about to meet, knowledgeable, wise, deeply humorous and morally impeccable in ways I have not seen in any other person. Certainly, I met a great man on that night, who slipped in and out of my life so skillfully and so swiftly that I let him go without the slightest protest, only to be left as I am now, in gratitude and wonder, but also with a sense of frustration. Not a day passes that I don't think of another question I would like to ask him.

Since I first became an advocate for rejected knowledge by publishing *Communion*, I have always tried to bear witness to these extraordinarily important experiences with the greatest accuracy and integrity that I can bring to bear. They are things that people have great difficulty accepting, because they mean that the vision of reality that we have built up over a painful history of superstition, confusion and struggle is profoundly inadequate.

The Master of the Key offers clarity where there is now confusion, and if one is open to his message and the new ideas it contains, unexpected vistas of discovery present themselves, as one is led toward the promise of new knowledge, where questions beckon that are as yet scarcely imagined among us. But they come at an opportune time, because the human world and human civilization face a profound bankruptcy of vision that is sorely in need of renewal. We have done all we can with our ideas of reality as they exist now. If there is to be another step taken in the human journey, a step upward, new visions are essential.

***The* CONVERSATION**

Why are you here?

You're chained to the ground.

Excuse me?

I am here on behalf of the good. Please give me some time.

Who are "the good"?

Those whose lives are directed toward ascension.

You mean, like, religious types?

Belief impedes release. The ascension I refer to is a process of finding God within and the universe without.

Meaning?

Mankind is trapped. I want to help you spring the trap.

What makes you able to do this?

The key I offer you consists of a new way of seeing yourselves that will free you.

There's nothing new under the sun.

There are thoughts unthought and words unspoken. For example, I have a message for you about the next age, and the one just passed.

Dare I ask?

The most important thing about the last age was the Holocaust.

An “age” means what?

An age is a bit over two thousand years.

The length of a Zodiacal sign?

Yes.

And the Holocaust was the most important event in the past two thousand years?

You were meant to have acquired the ability to leave the planet by now. But you are still trapped here. You may be irretrievably lost. This is of absolutely fundamental importance, because the earth will soon be unable to support you, and yet you will not be able to leave. This is because of the Holocaust. The destruction of six million may well lead to the destruction of six billion. So it is the most important event, by far, of the age.

Why has the Holocaust prevented us from leaving the planet? The Holocaust reduced the intelligence of the human species by killing too many of its most intellectually competent members. It is why you are still using jets seventy-five years after their invention. The understanding of gravity is denied you because of the absence of the child of a murdered Jewish couple. This child would have unlocked the secret of gravity. But he was not born. Because his parents went, the whole species must stay.

You’re saying that the catastrophe we’re facing now—too many people and no ability to leave the planet—is punishment for the Holocaust?

What is happening is consequence, not punishment. The Holocaust was triggered when economic disorder combined among the Germans with a feeling of being trapped due to overpopulation. The resultant explosion drove the German tribe to lash out against other tribes, especially the one that lived in its midst. Unfortunately, they murdered the bearers of the intellectually strongest genes possessed by your species.

Why are we so blind?

At deeper levels, you are a very different species than you appear to

yourselves. Just as the biblical story of the fall of man and the banishment from the garden is really an allegory of the destruction of the previous civilization, so also the story of the fallen angel is an allegory of your fallen heart. The demon is the part of you that hungers for destruction.

Why do we do these things?

This is a fallen world.

What is a fallen world?

Be as the lilies of the field. When you hear that, you think: how can we possibly do that? We need to make shelter.

We need to gather food. You are at war with your fate.

A species at war with God's plan?

Because you have no plan for yourselves, there is no plan for you. God wants companions, not supplicants. Become the friends of God, and you will find your plan.

What is God?

An elemental body is a mechanism filled with millions of nerve endings that directs the attention of God into the physical.

That didn't answer my question.

It did. Very precisely. If you were a friend of God, you would have understood. There is a much larger world behind your backs. It is this world to which man is blind. Man is soul-blind and God-blind.

How can we change?

Surrender to God.

What about free will?

Free will is only possible in God. The will of the fallen is slavery.

How do we surrender to God?

Return to the forest. Otherwise, you will destroy the earth and yourselves.

Six billion people can't return to the forest. The forest can't possibly support us.

I agree. It's impossible.

But if we destroy the earth, we end up dead. So what happens to us then?

You go forth even though you aren't ready.

Go forth? To where?

To another state of being. Your access to elemental bodies ends.

What is an elemental body, anyway?

A body formed out of chemical elements, something drawn from the dust and made alive.

What sort of body would we have without elements?

A radiant body, potentially. Formed out of conscious energy.

What is this? How can we put it to use?

Conscious energy is not like unconscious energy, the servant of those who understand its laws. To gain access to the powers of conscious energy, you must evolve a relationship with it. Learn its needs, learn to fulfill them. But also remember, it is part of the electromagnetic spectrum, easily detectable by your science as it exists now. You can learn to signal and be heard, and to record response. The veil between the worlds can fall. The undiscovered country can become your backyard.

But how can we do this?

By first realizing that you are not cut off. There is no supernatural. There is only the natural world, and you have access to all of it. Souls are part of nature.

I don't feel that we have access to the whole of the physical world, then.

We're trapped here on earth, for example. Our space program has lead feet. When you were challenged from the outside, your government chose the path of public denial and secret defiance. This is the path to failure. It must change its policy to one of public admission and open defiance.

You speak of secrecy concerning the alien presence here?

Until you take your place, you will remain trapped. The threats that have been delivered to your government in secret are a test. To pass it, you must defy them. Your place will not be given you. You must be strong enough to take it.

I have the impression that the government knows very little. Then you have the wrong impression. But remember that government is very complex, and a good deal of it is not what it seems at all. Much is hidden from your public officials. This world is run in secret.

Government is not what it seems?

Form an assault on secrecy. You are right to fight against official secrecy. It is the greatest present evil.

Not even most people in the government understand this, and when it comes to aliens, the culture of denial is total. Look at this book I just finished—a few thousand people will buy it, nobody will act.

You must find a way, because the alternative is to be denied your place in the higher world.

What is this higher world?

What difference does that make to you?

I am trying to find out our relationship to it.

Not all human beings are radiant bodies. But all may become such.

You are saying that we don't all have souls?

I am saying that you are not all discreet radiant beings, but all participate to some degree or other in conscious energy. To remain a separate being after death, there must exist the ability to maintain the structure of the radiant body by the action of attention. This is why we have been so insistent that you meditate. Otherwise, we will lose you when you die and we don't want that. If a being cannot self-maintain after the elemental body no longer does it automatically, it is absorbed into the flux of conscious energy. You go into the light, as it were.

Isn't this going to heaven?

There is an element of ecstasy, but it is not complete.

When another elemental forms that fits the pattern of that particular fragment, it will return to the physical in search of more sensation. Or, if one never does, its unfulfilled desires will remain forever as a part of the tapestry of memory.

Would the person perceive this? Feel happy? Feel trapped? These memories are somewhat self-aware. But they do not know themselves as beings. Just as your memory of your childhood games with Mike do not have a being of their own, but rather are part of a greater whole.

You remember my childhood?

I do, of course. But we will return to that later.

How does a person evolve this radiant body?

The imprinting of essence with experience requires effort and attention. It is the object of all "paths" and "ways" to higher consciousness. It is the object of real prayer. To begin, you must meditate. Who does not meditate, disintegrates.

Any specific recommendations?

Paying attention to physical sensation is paying attention to energetic sensation. Being awake to oneself and one's surroundings increases the intensity of the impressions so that they affect the spin of the electrons that

are present in the nervous system. In this context, being awake means being aware of one's own self while at the same time absorbing impressions from the outside. The increase in spin and enrichment of the complexity of the pattern of being that results brings more and more form to the radiant body. You will remember yourself after your death—who and what you were, why you existed, and what you intend for your future. You will, in short, acquire a true aim, and join the companions of God in their journey toward ecstatic and conscious union with one another and all that is. It is the difference between being a plant and being Rembrandt. The plant has a certain fragment of self-awareness, but Rembrandt is vastly complex, a being rich with fully realized talents and self-awareness that makes him a worthy companion in higher form.

Rembrandt was a saint?

Rembrandt was conscious. As far as his being a saint is concerned, though—forget it. Radiant being and sainthood are not the same thing, believe me.

So he persisted as a radiant being? Where is he now?

That's his business.

What about those who don't acquire this ethereal independence? After death you cannot be blind and therefore you cannot change. There, you wait.

Wait for what?

To understand that, you must first understand that the living and the dead share the same world. Your dead are not off somewhere in space. Their lives and beings are intertwined with yours. They see all that passes here, but can only affect it indirectly, if they can make themselves heard in the minds of the living. However, you the living are changing now. As this change proceeds, you are better and better able to feel the presence of your dead. You will find your dead in the immediate surroundings of their lives, for the most part, clinging to what they can of their memories, attempting to preserve their selves despite the magnetic attraction of what would envelop them.

So the light is not our friend?

The light is the fate of sleeping man. Awakened man makes his own light, as part of the radiant choir who sing forever the song of God, which is the word.

But what about people from the distant past? Surely they don't linger here. There is no other place for you to linger. If you are not an independent being after death, you remain engaged in the life of the earth, awaiting your chance to recur and increase your being. Lives in elemental form change the patterns of the electrons that form the soul and intensify their spin. The great dead have lived lives consciously devoted to the evolution and growth of the radiant body. But most of you, in the state of death, bear only fragmentary bits of what you were in life. Simple patterns, weak spin, no clear form to the radiant body and no ability to maintain it. You are subject to a process of recurrence so powerful that there are none from the distant past, except the radiant.

How do we access past lives?

All may remember all. You do not realize what you are.

And what of death itself? What should we expect?

A death is as unique as a face. You die into your expectations. But you generally survive them.

Somebody who doesn't believe in the soul?

They make a great discovery.

So some become radiant bodies, some linger and try again, and some enter the memory of God? Who enters the memory of God? Those who have no further potential and have not grown into anything. But recall that their experience does not go anywhere. It dies with the elemental body because it is insufficiently potent to survive. What survives is generally nothing but a tiny essence, a spark that would be barely recognizable as the person who had previously existed.

What is essence?

Taste. The way a certain specific being tastes. Essence is foundation.

So the bad essences go back to God. God gets the dregs? Every life is an experiment. Not all succeed. But most do, to enough of a degree that the being-body will remain coherent, clinging to the earth in the region of its memories. When a body is created that fits its essential attachments, it will be drawn to that body by a magnetism that it cannot resist. Birth to this world is death to the other, and vice versa. The recurrence is a great breathing.

What do these souls do while waiting?

They experience peace, some of them, only coming slowly into an awareness of what they need to continue on. Others are frantic, because of the nature of their lives. There can be great anguish, as loved ones are witnessed in the nakedness and, often, the horror of their own lives. There can be obsession, and the lusts of life can be endlessly indulged but never satisfied, for the physical world can be seen but not touched by these beings. However, there is also kindness among them. In a world where there are no secrets, only truth, the compassion of one for another is very great.

Can the dead influence the living?

Not these little ones, not much. They have not the knowledge or wisdom to make themselves heard.

What are psychics?

A part of the electromagnetic field that fills the nervous system rests a few centimeters above the skin, outside of the body. This field is an organ just like the heart or the brain. It is in quantum superposition, the electrons effectively everywhere in the universe and nowhere specific. It may be imprinted by information from anywhere and any time. With it, you may see other worlds, you may see the past and the future, you may see into the lives of those around you. You may haunt God. However, the process of imprinting itself causes the organ to cease to be in superposition and thus to cease to be accessible to further imprinting. In psychics, there is either an

inborn or learned ability to balance the attention in such a way that these impressions do not cause this organ to become focused into particulate form. The ability to control this organ can be developed.

How?

Many practices will work, but the best is to meditate in such a way that the mind is concentrated on physical sensation. This relieves the pressure of impressions incoming from the physical world on the electromagnetic body and enables it to expand.

How far can it expand?

Anybody can become God.

In life?

In life.

How can a mere imperfect human being become the master of the universe?

What is imperfect is your vision. You can find your perfection right now, this moment, always.

What is this seeing? This marvelous seeing you allude to?

You must understand the difference between sight and imagination. Real inner vision unfolds with an unmistakable spontaneousness. What is seen, also, is the same from person to person. But the universe is so vast that only the most adept will be able to see the same thing one as another. It is even hard to go back to a place you have seen once before, unless there is a line of communication opened between yourself and somebody who is there.

This can become a scientifically valid means of communication? It already is, even here. Although you do not presently understand the true meaning of indeterminacy, what you refer to as quantum physics offers a useful partial view of the inner workings of the physical world. Quantum instruments of communication, as your scientists now understand them, depend upon the

entanglement of particles. You think now that you must separate two photons physically for them to be entangled, so your faster-than-light communications are limited by how far apart you can physically place the photons you entangle. But there was a time when all particles were in communication and so all are entangled. When you realize this, it will also be true that your quantum communications devices will be able to communicate instantaneously across all worlds. But until you realize it and understand it, it will not be true for you. Vision, in the manipulation of quantum reality, as in the perfecting of your being, is everything.

You seem to be referring to scientific progress and spiritual growth in the same breath.

They are the same. Your science progresses toward communication with all worlds only as fast as your spirit evolves. Animals may not leave their worlds, because they lack the ability to see the needs of others.

We are animals?

A true human being has four levels of mind. Most of you have only three, and perhaps a vestige of the fourth. Your destiny is to enter the humanity of the universe. But you may not fulfill it.

Are there such things as alien abductions?

As you grow in fourth mind, you see more.

Many of these encounters are brutal.

The kitten is terrified of the veterinarian. To subdue the little creature, violence is unavoidable.

But the slaughterhouse is also brutal.

Yours is not the destiny of the steer.

We aren't fodder for a higher world?

I know that you can ask clever questions. Don't try to play with me, Whitley.

That's an even more clever answer—what's your name, anyway? If I said Michael?

An archangel in a turtleneck?

Legion, then?

I think you're a perfectly ordinary person with an ordinary mother and an ordinary name.

I can imagine no greater honor than to be called human.

Let me go back to the quantum issue, because I see that as something concrete that we can understand. You started by talking of using superposition as a means of communication, then changed to talking about entangled particles. What role does superposition play in higher communication?

The tiny layer of electrons that lies outside of the skin is an organ in itself just like the eyes or the blood. It is a sensory organ, but not one that operates naturally, except in a few, as I have stated before. Even in them, it cannot be used very effectively without higher consciousness. It is the organ of higher consciousness. You must be able to watch and not watch at the same time. When you learn this, it will stay in superposition even as you take the imagery that it is receiving into your brain and process it.

You are speaking of opening the third eye?

The nervous system delivers these impressions to the area of the brain closest to the pineal gland, which is where this organ is centered.

Can machines be created that "see," using an artificial version of this organ?

Machines are already being created that communicate via entangled photons. These machines will be the first that detect the voices of other worlds. It is also possible to create machines that mimic the action of the organ we have been discussing. But these machines must be conscious to work.

Conscious machines?

We will return to that later. There is a question lingering in your eyes that you have not asked. Ask it now.

You mentioned monsters in the world of the dead.

The acts of life affect the appearance of the dead in every tiny detail. Everything is imprinted upon the soul, often in surprising ways. Most dead appear as innocent children, longing for sensual lives and hoping that a body will be sparked that fits them. Some are aware enough of radiant being to try to ascend, but they always drift back, or if they become lost, are returned to earth.

By radiant beings?

Yes.

This creation of radiant bodies doesn't sound much like surrender. On the contrary, it is total surrender. The unfocused fragments of lives barely lived do not contribute to the ecstasy of God. God seeks true companions. Ecstasy is not ecstasy unless it is shared.

Can radiant bodies enter the physical world?

Radiant beings may be born into elemental bodies if they wish, but these are acts of intention. Or it may be requested that they do it, and they go on life-missions into the elemental world. These can be dangerous missions that cause them to fall from radiance, but also that may greatly increase their ecstasy. So they go on these adventures. It is happening a great deal now, which is why you have so many glorious children among you. In addition to entering the physical by means of being born, some high beings may so perfectly create an image of the physical bodies they once possessed that they can walk the streets.

Can they have babies?

This would be an act of God, but certainly it is possible.

Does it account for the birth of Jesus?

Jesus said that he was the son of man. Take him at his word. He was God,

though, a radiant body fully aware of who he was and fully invested in all and everything. He entered the elemental body consciously. But I remind you, all are God, all are Christ. The difference was that he knew it.

Was he a product of recurrence?

God is.

What of Jesus? What of Buddha?

Those are two different, but intertwined, questions. First, you must understand that the teachings of Buddha had reached the community of Hellenized Jews in which Jesus lived. So they form a part of Christianity. He was a spiritual revolutionary who brought a message of mercy and compassion and the dignity of man to a world of unimaginable terror. The Roman rule was blind and brutal and unspeakably greedy. Ancient knowledge was being murdered by Roman ignorance and Roman power. This knowledge consisted of how to consciously form a radiant body so that you would not recur into the physical, so that you would be free. Christ was here to preserve this knowledge and pass it down. But even his deposit was corrupted by Roman politicians, who transformed his practice into a religion after he died.

There was no resurrection, then?

No, that's just the point—there was. But you lost the understanding of it. The gospels describe what happened with great fidelity. He was seen. He did walk after his death. It was not his twin.

How?

His radiant body was under his conscious control. He could project an image of his physical body as he wished. Understand that there are practices of meditation and concentration also among the dead. When the angels sing, this is what they are doing, engaging in one of the disciplines of ecstasy. By releasing thought, they can themselves come into superposition, where they are not in any one place. Their consciousness can ride the infinite. They can see all worlds then, and participate in the ecstatic union that fills the universe.

God will share all with all.

Could Christ appear again?

He has, many times, and Buddha. But remember that he comes as a thief, in the little shadows. His radiant body normally fills the cosmos, as I have explained, but it can be transformed into a form that is, in every respect, physical in appearance. The great error of the present is the way your religions externalize Christ. You are always calling on Christ. But you had better call on your own heart, for it is in your heart that his mansion is founded.

And Buddha?

He opened himself to the radiant world and gained its teaching, which he transmitted accurately. But let me rephrase it in the terminology of this more informed age: the purpose of meditation is twofold. It is to organize the energetic body so that it will not lose its integrity after it can no longer depend upon the structure of the elemental body for its form. Then also, and in an interconnected manner, it is to fill the energetic body with objective sensation. Objective sensation is consciousness. You are within life, but not entirely absorbed in life. Part of you observes yourself from a distance. Remember this: if you do not watch, you do not see, and what you do not see does not impart any change in spin to the electrons that make up the energetic body. The parts of your life that you do not see are not carried with you into ecstasy, and it is ecstasy upon which the formation of the radiant body depends.

There are parts of my life that I would like to forget.

No. All life is potentially ecstatic, no matter what suffering or sin is involved. All life, child.

Why do we have elemental bodies?

They are essential to growth. The aim of mankind is to enter ecstasy. But to do this, you must be at once fully realized—that is, to carry with you into death all of your potential harvest of experience—and to be objectively conscious of this experience—not to be weighted with recriminations and

regrets.

If we have hurt others in life, as we all have, then how can we ever be free of regret?

God forgives. But this does not mean that you should pray for forgiveness from some old graybeard in the sky. You must find who within you bears you forgiveness. An energetic body that bears such regrets bears them as areas of darkness, and if that body manifests its memory of its elemental self, the manifestation bears sores.

And we live again and again—why? What is the reason for recurrence?

To row the boat of being toward ecstasy. You must live many times in order to build up a radiant body that is complete. To be born into this world takes but an hour. But to be born into the next takes many lifetimes. Unless you follow your own real path, then you can do it more quickly. Remember this—path within, signposts without.

What are the signposts?

You find your own, in life, in love, in religion. But understand this: the teachings of Buddha, Christ and Muhammad are interlinked. They are one system in three, not three separate religions. This has been hidden from you for a long time.

Three in one? A triad?

A triad. Christianity is the active side of the triad, Islam the passive, Buddhism the reconciling. Christianity seeks God, Islam surrenders to God, Buddhism finds God. When you see these as three separate systems, you miss the great teaching of which each contains but a part. Seek the kingdom as a Christian, give yourself to God as a Muslim, find your new companion in the dynamic silence of Buddhist meditation.

Then a true seeker seeks in all faiths?

These three masters created one system. But there are many systems that have evolved in other ways, that have grown rather than been created.

Hinduism, for example?

The gods of the Hindus are the structures of personality purified into their essential meaning. Hinduism is the path of soul-knowledge, for knowledge of the gods is knowledge of the soul. The great systems of self-knowledge were the Egyptian religion and Hinduism. No amount of scientific knowledge of the “unconscious” will provide as much food for the energetic body as true relationship with the Hindu gods.

Who were Muhammad and Buddha?

Exactly who history portrays them to have been. But to understand what happened to them, you must understand that your entire pantheon of deities is you. God is you. The gods are you. Angels and demons are you. So it was mankind who spoke to Muhammad in his cave. So also, to Buddha under the Bhodi Tree, and to Christ in the desert. Who do you think showed him the cities of the plain? Satan is man, just as God is man. Satan seeks, God waits. But you do not surrender. Not even Muslims. Although the great Sufis have, some of them, somewhat, surrendered to God. As long as you defy God by self-will, Satan finds you and captures you.

Why don't we surrender?

Self-will, the illusion that you can act and must act on your own behalf, prevents you from entering the will of God. And the God of which I speak is not a distant being off in some heaven. You yourself are the distant being you seek.

But if the self is God—

No, please, listen. God is not this “self” of yours which your western culture imagines. God is all being. To surrender to God is to make your energetic body transparent, so that the light of God shines through you. This “self” that so fascinates the west is only your brain-filtered concept of you as you appear to yourself in this life. It is very small. It does not include any of the experience you have amassed in other lives. Many human beings, at this point in history, are immense. But your concept of self is constricted. It

relates only to this one life. It is tiny. The God within you is unimaginably vast.

You speak of a journey toward self-perfection. But isn't perfection impossible for us to achieve?

You can become perfect. Buddha did. Muhammad did. Christ did. Many have, hidden to history, done the same. You may find Buddha sleeping on a park bench, Muhammad pumping gasoline, Christ starving in the backstreet.

But if Christ was God, and God is perfect, why would he need to become perfect?

Christ was not perfect or he would not have been human. His humanity asked that the cup be taken from him, his divinity died a conscious death. But you must understand that his imperfect humanity and his perfect divinity were the same thing. That seems irreconcilable, but it isn't, because even when Christ suffered, he was in ecstasy. I am here to get you to recognize yourself as divine—that is to say, as a participant in ecstasy even during elemental life. The new man will live in ecstasy, even though he lives in chains.

Define ecstasy.
