The energetic body has a spin, or vibration. This can go infinitely fast. It can reach beyond the speed of light, and exit time altogether. When this happens, the body begins to radiate of its own accord. It becomes at once God and co-creative with God, a companion. A single bit of God, which you are, does not only join the whole like a crumb in a cake, it can attain so much of ecstasy that it becomes the whole. Your destiny, each of you, is to become all of God. But this process is slowed by contact with the points of attachment—and there are trillions and trillions of them—between the energetic and elemental bodies. So detachment, as Buddha said, is essential to ecstasy. The proper use of meditation is to enable you to see life as both an outsider and a participant. The outsider notices the glimmer of sunlight upon the spoon, the sensation of the food in the mouth, for he is using life to gain impressions. The participant only eats. So also, the outsider sees the packed bodies around him, he smells the sweat and the urine, he hears the soft clatter of the crystals with absolute

objective calm, and inhales the searing torment of the gas without being in any way identified with the injustice or the cruelty or the terror all around him. But the participant screams, it suffers the agony of the elemental body, and knows the greatest terror man has ever known, which was experienced in the dark gas chambers of the Holocaust.

Are you dead?

Yes.

And did you die a Jew in the camps?

I died with each of them and all of them. When you kill a being, you kill all being. I die a million times a day. I am dying now, being murdered, being starved, devoured by bacteria, crushed, burned, shot, cut, slaughtered. But I am also being born, awakening into new life, playing in grass, discovering the hidden truths of nature, enjoying the sunshine, reading, eating, engaging in every sexual delight known, all now, all here, always.

And you are in ecstasy?

(He only gazed at me in answer.)

Then you are still here, a dead man among the living. You didn't leave when you ascended?

All leave, nobody leaves. Ascension is not a matter of flying off to some place in the sky, it is a matter of expanding the being to fill the universe. You may ascend beyond time and infinity, but you will still be here, as we all are.

Where is here?

Everywhere.

Ah. I'm lost.

All being includes all elements of the earth, and thus all are part of all bodies. We are the consciousness of the planetary level that it has spent all of its life evolving, each and all of us. My being is the awakening earth. As is yours.

The destiny of earth and the destiny of man are one. If we kill earth, we kill ourselves. If we die before our time, then we will not be able to enter ecstasy as a whole being. You are not a whole being, child. And “Whitley” is only a tiny part of you. All mankind in all time is a whole being.

If we kill earth before we have all reached ecstasy, what happens? We wait until and if the earth spins elemental bodies once again that fit all the attachments of our energetic bodies. If it does not, then we wait forever. We remain incomplete.

What would this waiting be like?

Energetic bodies hunger to be radiant. They taste of ecstasy and want desperately to find their way to the completion of joy. But energetic bodies need return to time to reconstruct what of themselves impedes their ecstasy. If they cannot, they must suffer the anguish of regret and the pain of being able to see, but not enter, joy. When you taste of ecstasy, your hunger for more is appalling. It is *appalling*. It has driven me to wander the world, to construct this shell of flesh, to seek you out and come to you with my message, to serve you, little child, as my master.

What if earth never “spins” these new bodies?

We will join others in the same state. There are many.

We would be a species in hell, in effect?

We would be constantly aware that we had missed ecstasy. This pain I suffer now would last forever.

So the eternal joy of humankind depends upon the health of the earth?

Completely.

We think of ourselves as individuals. My sins are my own. My neighbor’s sins are his problem.

Every joy, every sorrow, every good, every evil belongs to all. All are

responsible for all. All are dependent upon all. Humanity is one.
But not all intelligent life. We are one species, but are there not others?
God is one. Ultimately, all being seeks to join all ecstasy. It is the destiny of every stone, every star, every intelligent creature and simple creature, to become the word. And the word, then, will be made flesh.

I don't understand. Hasn't that already happened?

It is always happening. But there will come a time when the stars themselves fall. The universe is breathing, expanding and contracting. It has happened many times before. Eventually, it will all contract to something no bigger than a baseball. Then it will explode again, journeying once more through the vastness. Each time it dies, though, it is reborn at a new and higher intensity. Eventually, there will come a moment when its rebirth is so energetic that the velocity of the "big bang" will exceed the speed of light. At that instant, the material world will, itself, go beyond time. Then the prophecy will be fulfilled,
"I am."

And we are all part of God?

We are not part of God, we are God.

And all other species, what of them?

The tree, the worm, the wolf. All are God.

Worms are eternal beings?

Even the smallest spark unto itself is great.

Then the fly and the rat are ascended beings?

They cannot change. You can change. Look to your own soul.

God, then, is in the fragments?

God is like a hologram. The whole is fully present in every fragment, no matter how small.

So the whole of God is in the tip of my finger?

The whole of God is in a grain of sand. In a single electron. A quark.

I had not thought of God as a hologram before.

Infinite consciousness is in everything. In your pajama. In my sweater. All knowledge is present in every cell, every spark of fire, bit of trash.

That's—it's appalling.

The universe is the flesh of God.

But I have no access to the whole. I feel like a little fragment. I don't even know if I have a soul. And I certainly don't feel like part of God.

This is a fallen world and you are an imperfect being.

The essence of your imperfection is that you cannot see yourself as you are.

Many lives must live before this will change. Mankind is a community of about ten billion fragments, and each must become transparent to the light of God before we, as a species, can journey on.

Earlier you seemed to imply that you were an alien. Then God. Now you're human. What are you?

Whatever you say.

A useful thing to be. How many human beings from earth have become radiant bodies?

About half.

Half! I thought it would be fifty or a hundred at most. Humanity is a tremendous engine of the sacred. But among the living, there are only as many such beings present as absolutely essential for the welfare of the others.

How can we tell who's ascended and who isn't?

The meek shall inherit the earth. Understand this, and you will find them by what is in their hearts.

Who are the meek?

Those who are humble enough in self-will to surrender to higher will.

How can we tell if we are surrendered to higher will?

Go to the children. They will tell you with their eyes what you are.

Could we ever be rescued, if we destroy the earth before we were finished perfecting ourselves?

Nobody can change except inside the stream of time. Outside of it nothing changes. Nothing can. We enter the time stream by inserting our energetic bodies into elemental bodies on this planet of which we were born.

What about going to another planet?

The leaf cannot grow on another tree.

It can be grafted.

If you are given leave to enter the interstellar world in the elemental body, you will go as the others do, from a firm foundation of radiant being. But if you destroy your world, you die here.

We could travel the stars?

If you are good householders, you may participate in the life of the whole city of God. There exists a world now that is waiting for human help. Just as your world is being helped by others now.

What form does this help take?

It is a process of creating questions that can neither be borne nor answered. You know this.

I have written of it—evolutionary pressure. It explains what's being done to us—the theatrical appearance of UFOs in the sky, the assaults on us by night, the ferocious official secrecy, the collapse of the environment—all of it.

It is all part of the plan of your evolution. Pisces, the little fish, will be poured out onto dry land by the stream of Aquarius. Then, how will you live? How

will you breathe? You will make a leap of evolution. You will square the circle or die.

Now what about this other world you mentioned, waiting for our help?

You will be the aliens one day, to these others. Bear in mind that, if you do not survive, then they will never receive your help. Your welfare is essential to theirs, just as you depended, without knowing it, upon those who are here for you.

Have you traveled to other worlds?

I belong to many worlds.

Are you from another planet that is like ours?

I am human.

What's it like, going to another planet?

Other worlds exist on many different levels, and contain beings of many different levels and appearances. The details from world to world can be very different. But the basic laws of reality remain the same.

Which is why the visitors communicate with me in Masonic terms? Precisely.

Three is three and seven is seven. The craft is God's plan for freedom.

You are endorsing Masonry?

I am endorsing the craft in its most impeccable form. Where the craft is secret, there is danger of corruption.

It's become a charitable and social group in the United States. Not entirely.

Why is it secret?

It was the government of the world in early times. But the world fell. After humanity ceased to be surrendered to the law of God, the craft had to become secret in order to stay alive.

How do you travel to other planets?

You must learn to manipulate mass.

Manipulate mass?

The mass of bodies can be controlled by those who know the secret.

Will we learn it?

When it is time, all will come to you. But remember, it is you who will choose the time. You exist on many levels, the living in their levels and the dead in their levels. Man is governed from the radiant level.

But our world is dying and falling into chaos? How can we be governed poorly from such a high level?

Man is a child. Children govern children with the wisdom of children.

There are aliens here?

Using you and guiding you.

We're being exploited?

You are, but also helped. You are being guided to your place as guides of another world.

What will we do for this other world?

You will draw it toward ecstasy just as your mentors draw you toward ecstasy. Right now, there are brilliant creatures there looking at the sky and devouring the flesh of their own children, just as you did. Unless you help them, they will not make their evolutionary leap in time, and will go extinct.

Whose responsibility would that be?

All are responsible for all.

How many worlds are there like ours, like theirs?

The planets that can sustain complex elemental bodies are not many.

However, the elements of which they are made occur in various patterns, and

the form of evolution depends upon the chemical makeup of the planet upon which it occurs. So there are worlds where creatures look very much like us. There are worlds where they are quite different.

Could aliens walk among us without our noticing?

By bending light, they can be invisible, and walk here to some extent, and also by using means to prevent you from looking at them by influencing your mind from a distance. But there are also those patterned on the same template as you, and they walk freely here. It is their job to enforce secrecy. This is the source of all the confusion about this. They appear, for example, to be part of your government, but they only use it as camouflage and as a source of power. Human institutions do not control the secrecy. It is controlled from a higher level.

Are you on that level?

Yes.

Another world is in control of this one?

Yes.

What about all the horrors that happen here?

Remember that man has two sides, light and dark. To see the light, you must bear the darkness.

How do they control this world?

By planning, and they use mind control.

Am I under mind control?

The opposite. The technological intervention that has occurred in your case has been done to make certain that general fields of control will not affect you.

General fields of control?

Directional suggestion that is applied to all who are enhanced electrically. This is the means of control of military and government.

Telepathy?

Radio frequencies. Extremely sensitive circuits can pick up and decode thought. Microwaves can be used to project thought into the brain. But the fields of which I speak are much more general. They create tendencies. The desire is to preserve the maximum amount of freedom in the maximum number of individuals.

Have any people from earth ever gone to other worlds?

A whole world of human beings has been evolved artificially off the planet, and they come and go freely.

What are you talking about?

Human beings are being born and raised off the earth. You can find their habitations if you look. They live in this solar system.

My God. How many?

Thousands.

What do they do here?

They enforce mankind's blindness by preventing science from exploring the key mysteries of the past and discovering a practical means of expanding into the universe, and they maintain the official secrecy that keeps the question of whether or not aliens are here from being answered.

Why do they harm us so terribly?

The objective of resistance is to make you strong. The weight lifter puts more and more weight to himself, so that he'll be able to lift more and more.

If he puts too much?

He breaks his back. He fails by overreaching himself.

Or his trainer fails him by pressing him to do more than he is able. Then he

was not meant to be a champion, and we know that is not true of mankind. Mankind is meant to ascend.

Will we ever be strong enough?

Surrender to God and your enemies will become your friends.

What is being done to us? What was done to me?

The body of man is being altered so that the barrier that presently prevents you from knowing one another's thoughts will fall. You are being put under pressure in order to increase the speed of your evolution. An attempt is being made to induce an evolutionary leap. Only desperation will do this. There will come a time when your planet is dying and you are dying, and you will see these aliens all around you. But they will not help you, no matter how hard you beg, and you will beg, believe me. Their inaction, however, is their help. As agonizing as it is for them to see you suffer, they do it out of compassion, for without it you will not succeed in the mission of this age, which is to open the elemental body to ecstasy. Mankind, over the next two thousand years, is destined either to go extinct or ascend. The elemental body will become transparent to the radiant body, which will shine with the light of God.

So how are we to approach God? What is the nature of this infinite being that resides in every grain of sand?

When you say God, you think of somebody outside of yourself. You think as the age of worship thinks. Over the last age, that of Pisces, the elemental body was changed by this process of worship. It is not the same as it was two thousand years ago. Now the receptacle is larger. Now each of you can contain all of the universe. That was not true then. Now this is a species of sacred beings. But you are babies, and so still ignorant of your powers. The last age was the age of the external God. This is the age of God within.

What about our religions? Do they offer us a path back to God? You have no religions. Religions don't have victims. There is a new path.

What is it?

Religion must be brought inside you. No longer look to gods without, look to God within. Unless you bear the kingdom within you, the kingdom will perish from the earth, and if that happens, there will be long ages of darkness and suffering, at the end of which man will once again be only an intelligent animal. You will lose everything, every trace of memory, of history, science, technology, mathematics, all of it. If you do not find the kingdom, human consciousness will die. You will revert to your animal nature, which is already happening all around you. People who are debased have lost their humanity. They have become brilliant animals.

Why do our religions have victims?

Because they demand belief, and belief is always a lie, for the essence of reality is not fact but question. There are no facts, only truths. So love of God has nothing to do with belief. Belief rejects God. Communion with God is a science, the science of self-discovery and self-knowledge. Among you, though, this is a lost science, the science of faith.

How can we regain it? Is something like the Eucharist part of this science?

Christ gave the Eucharist to mankind. But the Eucharistic feast was enacted from time immemorial. It began when you still lived in the forest. When the strong died, you ate their flesh to gain their strength.

Did it work?

Don't joke with me. It was pitiful.

Is there a record of the Eucharist before Christ?

There is.

What is it?

I'm not interested in answering. You will find the science of ascension in the dancing of the Sufis, the meditations of the Yogi, the prayer of the Christian monastics. This science is lost as a science, but it can be regained.

Was Christ God?

The promise of resurrection is the essential promise of being. Rebirth is not a literal reconstitution of the elemental body. It is, rather, awakening from the sleep of being. Resurrection can take place in you right now. You are Lazarus in the tomb, all of you. And Christ is always knocking upon the door, calling you to come out. Soon, the tomb will be torn down around you, and you must come out.

Did Christ rise?

Most die by nature. Christ died by intention.

What is the process of resurrection?

The energetic body detaches from the elemental body when it can no longer sustain its attachments. Christ's energetic body was radiant. But it left its elemental body just like yours will and everybody's does. The work of the demon among you is to deceive you into believing that Christ was better than you. Christ said it: I am the son of man. Christ is all. All are Christ.

What about the ancient faiths? Wicca, for example?

Modern Wicca is not an ancient faith. It is a new faith that recognizes an ancient practice. The earth is worthy of worship, for it gave you all that you are and have. It offers an impeccable path.

What religion doesn't offer an impeccable path?

Hidden in the ruins are diamonds. Remember, a diamond is forever.

(Laughs.)

But what about the rebirth of the body? This is a powerful strain in our religious traditions, that the body will rise again.

It is a memory from the last civilization that the ignorance of the survivors has drawn into myth. The simple people were allowed to know nothing of science in that age, and so they saw its action as a miracle and thought that the dead were being made to rise. But the science of the soul is just another science. There is no supernatural, only physics. But the physics and electronics involved in communicating with intelligent energy is very subtle.

Nothing, however, that you are not capable of now. The devices needed to make your beginning are already sold in stores.

What devices do you refer to?

Devices that detect magnetic fields and electromagnetic plasmas. You will find living energetic beings in this way. They will not be very richly alive, but they will be there. You may also detect simple energetic beings that have little intelligence. They are all around you.

What do we do once we've detected them?

Then you must be physically able to communicate. After a time, you will not need instruments to detect them, once you become attuned to their presence around you. But don't expect them to offer you endless wisdom. Many of the dead who wait in the world have less than you do, by a very great deal. But not all. Some are exceedingly rich, and can report to you even about the true past and the logical future, and can share themselves with you in ways that you can hardly imagine now.

What practice would make us physically able to communicate? Over the course of our discussion, everything you need to learn how to objectively communicate with these beings will be given, just as all information necessary for your science to begin to detect living energy, which is trying now to communicate with you.

How?

An example would be the much maligned crop circles. These are two-dimensional portraits of these beings, self-created. They are trying to introduce themselves to this age.

The crop circles are not hoaxes?

No.

Why doesn't anybody believe in them?

To face the return of the dead is to face the change of the age. For those souls who are yet incomplete, this is terrifying, because they fear two things: first,

that this portends that the time during which they can grow and develop is ending; second, that they will, if they conjoin the world of the dead, also see as the dead see, and thus become unable to change even if the earth remains able to support elemental bodies. So they pretend that it's all false. There are many other reasons to conceal such things, but these are the strongest.

What has this all got to do with resurrection?

The resurrected man is a consistent theme of the mythology that developed out of observations of a certain type of being, beginning with Osiris and ending with Christ. Fully conscious beings adept in this science can enable the radiant body to appear as an elemental body, so perfectly imprinted are its sensations on their energetic being.

Is your body, right now, radiant?

You look for facts in a place where there is only truth. All bodies are one body.

But I thought you said that the elemental and energetic bodies were separate, and that the energetic body could become radiant, which I take to mean self-sustaining.

The radiant body is the part of you that is conscious in the energetic world. It is in every cell of the elemental body, and indeed, is its life. There is nothing mysterious about the soul, or even about its eternal life. Energy is eternal, so the part of you that is energy is eternal. What has been hard for you to understand is that the speed at which these electrons move carries the taste of your being and the memory of your lives. Each one carries a different fraction of the whole. There are trillions of electrons in a single elemental body, and they contain a detailed memory of every second of life. This is why, for example, when certain areas of the brain are probed, the physical buffering mechanism can be paralyzed, causing the memories stored in this way to flood into the chemical cells. The person then has stunningly detailed recall of past events, as if the moments were being lived again. Nothing of your life is forgotten, or of all your lives. When you are dead, you are your whole self, in every detail. You know yourself entirely. The things about yourself that

you cannot bear and suppress now are entirely and completely present to you and to all others. The dead have no privacy, and the living have no privacy from them. The dead see everything that you do. It is part of their task to bear the errors and enjoy the triumphs of the living.

What is real religion?

From outside of time, man's effort to know God appears as a single form, a work of art that has evolved across history. You have created it in three phases. The first is negative, the age of sacrifice. This is why the Old Testament God is so terrible. The moment that God tells Abraham not to kill Isaac is a record of one of the most sacred of all human moments, for it sets the stage for the next age.

The second age is positive, the age of worship. This is why the God of the New Testament is full of compassion. Your present age is when man and God become one. You find in yourself Christ, Buddha, Allah, Krishna. In this age, the elemental body has evolved to the point that it has the potential to reflect divine ecstasy. It is happening already, in the secret lives of your own children. I am here to bring you a promise from on high: if you surrender yourselves to God, you and the earth will be saved. Otherwise, you will be extinct before the end of the age.

You describe our historical effort to know God as a work of art. What do you mean?

You are weaving a tapestry of living memories. This is what the body of man is—a great weave of shimmering, living cloth. It is full of all the hopes, failures, fears and attainments of the ages. Every detail is there, every step taken by every foot upon every path, not just the acts of Buddha or Christ or the great leaders. Nothing has been forgotten, not the single drawing of a single breath. All lives are all completely present in this work of art.

What about the gas chambers? Are they part of it?

High deliverance has a dark foundation. There were extraordinary instances of resurrection in those terrible places. Life was lived at transformational intensity during the gassing. They transformed the evil of their deaths into the

glory of God. Those who died with rage and terror in their hearts also died with courage and compassion in their hearts. God was their rabbi.

But if there had been no gas chambers, would there then have been none of this grandeur?

They made of their suffering, with great effort, what one who attains the heart of a child may easily make of the drift of a cloud or the peaceful ringing of a bell upon a summer evening. And only a few. Most died in agony and confusion, all for nothing. It is easier to reach ecstasy through joy than through suffering.

What happened to the Nazis?

It takes great courage to enter an elemental body, because you are putting yourself in a position where the weakest part of you may imprint your energetic body eternally. Sin is that which bars us from ecstasy. How does sin actually feel after death? At first, after you die, you begin to taste of the most exquisite pleasure. It is extremely intimate, extremely personal, and as it builds, you begin to live in more and more of your lives. You taste the food and smell the air, you kiss your kisses and love your loves, and it gets more and more beautiful and more and more innocent. And then, suddenly, your hand is opening the gas canister—and you are swept with all the fear that made you do it, the primitive tribalism that you indulged to monstrous and distorted proportions. You feel sick with a filthy disease, you feel agonizingly ugly, as you kneel at the feet of those you destroyed. And they see you, utterly, as you are. They glow with compassion for you, but their compassion causes you the most terrible anguish because of what it makes you see, and you fall back from ecstasy. You cannot bear to be seen or to see the glory around you, which seems to you like a searing fire, so you turn inward, shielding yourself as a man would shield himself from the burning sun. But you cannot escape. For you, the fire of ecstasy is the fire of agony.

What about little sins?

Little imperfections are simply part of nature. Sin is willful indulgence of imperfection. Most sin is hidden during life. You have sins. I can see them.

But you hide them from yourself.

What are my sins?

Living among you, as I do, is to live in an ocean of sacred beings who have no idea what they are. The man in the room next to this sleeps a troubled sleep, but I see the glory of his radiant body, and the couple above, who are engaging in fellatio, I see her patient faith in deliverance, and in him, I see a brave heart on a journey to glory. But I also see the way they see themselves, the shadows of their recriminations and disappointments. Be as little children.

I realize that you see us all totally, and I must say that you've caught me by surprise.

(Laughs) Watch out for the thief.

What will happen to me?

To die takes great courage. This is the glory of the living world, its courage. For, after all, most of you have no knowledge of higher worlds at all. They cannot feel their energetic body. They die as they live, blind. But you are not blind.

What about my wife and son?

They will suffer and die, as all. I will pray for them, that they may find joy in the transit of their lives.

You'll pray for them?

Is that so strange?

Because you'd be praying to yourself. I think you're God.

I think you're God.

What is real religion?

A means of transforming accident into fate. It is a science. Real religion and real science are the same.

I don't understand.

Fate is life lived. Accident is life let pass. To live means to notice and take responsibility. Otherwise, it just happens as it happens. Because you are fallen, you cannot see the difference between the large-scale aim of being and the randomness of chance. To be fallen is to be blind. This is the land of the blind.

Can we be cured of our blindness?

Let me offer you a picture of the universe as it really is. There are many thousands of worlds like this one, in varying states of development. Some are worse off than yours, others better. Some have even reached such ecstasy in the elemental body that they can enjoy congress across the reaches of space and time. In these worlds, the elemental body is radiant. The physics of material being for them is the same as the physics of energetic being. This is why, when they come among you, they may walk through walls, or fly, or disappear or change form. But most beings in other worlds live and die confined to the planets of their origin, as you do.

You said thousands of worlds. I would have thought millions—billions.

Intelligent life is extremely rare because planets which can sustain complex bodies are extremely rare. Life, however, is common. It is not just planetary. Life is ubiquitous. It is a part of the essential structure of reality—the nervous system, as it were, of the body of God. There is much energetic life, for example, that is not intelligent. Life need not be planet-bound at all.

Why is life so common?

Because perception is essential to the structure of the universe. If a thing is not perceived, it doesn't have form. Life is thus the mechanism that gives form to nature. However, matter need not be perceived by an intelligent creature to have form. When it is, different laws apply, because the perception of intelligent creatures influences the form of what they perceive by the expectations built into their brains. The universe looks as it does to you, and functions by the laws that you see controlling it, because of the way

your brain manages the process of perception. Conscious creatures, however, may control the form of the universe. The truly conscious are responsible for the laws that intelligent creatures follow by nature.

Will we ever be conscious?

If you survive.

What is consciousness?

Self-realization. A fully self-realized being understands the whole creation, for it is completely present everywhere.

I could understand everything?

Not in your current state of being. You can only understand as much as the structures of your elemental body can support. But you understand only a small part even of that.

How far away from understanding all that I can now understand am I?

If all you could understand in your present state was a star the size of the sun, then your understanding right now is a thimbleful of light.

Well, that isn't much.

On the contrary, it is a very great deal. You human beings are right on the edge of becoming a conscious species.

This is why we are here. We're midwives to your birth, as you yourself have speculated. You were to be born into consciousness before, but you miscarried. You fell from understanding because you misused the power that your growing consciousness gave you. Better to start over again.

How did we misuse this power?

In those days, there were a few people on the earth with understanding greater than that of all your great scientists of today. But they guarded their knowledge ferociously. They were extremely secretive. The average man was little more than an animal, eating his brother for strength. So they lost

everything, because you are a single being, and thus only as conscious as the least of you.

Theirs was a slave state?

Your world is a slave state. You are all slaves to the demons who run it, who keep you in ignorance.

Our leaders are demons?

They wish to conceal real knowledge from the common man, just as was true in the past civilization. Secrecy destroyed that world, and, if this one is to die, it is secrecy that will destroy it. This is why they conceal the truth about the past and the presence of those who seek to help you. They think that they do this on behalf of mankind, some of them, but they actually seek the destruction of the species. This hunger for self-destruction is the essence of your dark side, but we will speak of the death wish later. If you passively let them confine the wealth and keep the secrets, I will overturn your world yet again.

You could personally destroy our entire world?

(Silence.)

Name some of these demons.

Find the demon in your own heart, then I will betray the demon rulers of your world to you. Remember that the evil also serve me. Without evil, you could not taste of the good. Without them, you could not make the choice to follow me.

But a moment ago you said that aliens were here actively suppressing our progress. Now you say it's our leaders. What does this mean?

You must take your future from the hands of your oppressors. Do you think that there is a single human heart that is not filled with love for mankind? No, your demons make you strong.

Who are you? Christ? Or a demon yourself?

Stop thinking this way. This is no longer the Middle Ages.

Be objective. Remember that God is in everything. The whole of creation is the matter of God. Nothing is separate from God, nor can ever be. Your sense of independence is an illusion, so that you can take the journey of discovery. So also, no matter what you may call me, I am in God.

But what about the people who keep the secrets, for example, about aliens? Or the secrets about the past as it really was, or conceal the truth about Mars?

When they die, they will see that they have crystallized imperfections in themselves by the indulgence of self-will. They will suffer the fire of love, as I have already described it. Some of them will die in eternity and be part of you no more. Others will go on to become companions of God.

What about me?

You know what you are. Don't ask me.

You are saying that the demon is not evil, that he is—what—the bringer of knowledge?

We learn from our mistakes. But those who give themselves to evil suffer. Make no mistake. They can become so heavy that they sink into the earth. Just as the energetic body can enjoy extraordinary pleasure, it can suffer excruciating pain. You have in your body a few million nerves. But in your energetic body, every tiny bit of being can experience the totality of ecstasy or agony.

There are those who experience eternal agony?

A fallen master may, one who by some foolish intention rejects the joy of the kingdom. But remember, always, that were it not for the darkness of the night, you would not see the stars. Look into your astrophysics texts. You will find that your science does not understand the darkness. The darkness is the compassion of God, which gives us our vision of the universe. So also, the darkness in your heart is your own compassion toward yourself, for

unless you bore evil, you would not be able to discern good.

This suggests to me that the fall of man has to do with a mistake of some kind. We failed to understand something. What did we fail to understand?

That the kingdom of heaven is within you. Not one human being, living or dead, has ever been able to face that, not since it was uttered. But if you cannot find the kingdom, you cannot gain the kingdom.

How can we regain our vision?

Fear is blindness. Fear rules this world. It is extremely deep. When a microbe is threatened, it will recoil. That's how deep fear is. In the fields, fear rides. In the struggle of the deer to survive the jaw of the wolf or gunfire of the man, fear rides. A shadow has fallen here, into the very atoms that construct this place.

This is an impossible problem. It's beyond our ability to correct. If one of you could live one moment without fear, then all the world would be free. The emergence of physical life is at once its fall and its salvation. How can you be fallen and ascended at the same time? In other words, how may the elemental world gain communion with the energetic one? The hidden meaning of mankind is that you may reconcile the irreconcilable. You are here to save all that lives on earth from the fear of death by surrendering your will to God's. Read the Koran, listen to Muhammad. He brought the message of surrender impeccably. You say that it is impossible. It is. But you are here to square the circle. This is why earth evolved intelligence. The aim of mankind is to clear the vision of the living, so that you can join in full consciousness to the dead, and thus learn that fear of death is fear of nothing.

There seems to be something very extraordinary hidden in what you're saying. You're saying that the fall of mankind was the emergence of life on earth. Am I right?

You are, but that is a three-dimensional view, and thus limited by the limits of three-dimensional vision. Remember the analogy of how the two-dimensional being sees a solid object. As a ball passes through the flat plane

on which such a being would be confined, it would not see the real shape, or even be able to conceive of it. By definition, a two-dimensional being cannot look up, for then it would see into the third dimension, which is impossible for it to do. What it would see, always looking straight ahead, would be a dot that would grow into a line, then slowly contract again into a dot and disappear. It would *never* understand the true nature of the ball, because its two-dimensional mind cannot contain the concept of a solid object.

I don't want to seem thickheaded, but I don't think you answered my question.

The inference should be enough.

It isn't!

The emergence of life on earth and the fall of man are the same, in two ways. First, outside of time, all events are one, so they happen simultaneously. Not that they have happened, but that they are always happening. Every moment is forever, as you will recall after you die and begin to live in your memories. You will see the importance, then, of living a life that satisfies you and fulfills your destiny, because everything you have done will be immediately present in your consciousness all the time. Second, the emergence of the word—that is to say, the possibility of all things that may exist in concrete form—into physical reality placed it in the position of needing to struggle to survive. When the word became flesh, it became vulnerable. If physical beings don't struggle, you die. So you cannot surrender. And yet you cannot stop your fall unless you do surrender. If you continue to struggle against nature, you will die. But if you don't struggle, you will die. This is tragedy of the word in physical form, and is the essential human problem. This is the problem you must solve, if you are to avoid going extinct.

I think that's the most profound statement I've ever heard. You are defining the word as God manifesting into physical reality and thus including physical vulnerability and weakness in his perfection. I see this as the key to our salvation. Am I right?

The word is potential. Just as your uttering of the word “automobile” is not

an automobile, but contains the possibility of one, so also this word contained the possibility of everything. The word was not God. The word was an idea that turned into sound when it penetrated the physical.

I'm disappointed. I saw more in what you said than was there. No, you saw exactly, and your observation was precisely correct. But I want you never to forget that there is no world but this one. The radiant world is not separate. It's all around you. Energetic being is just as detectable and accessible to science as elemental being.

God can be measured by science?

If you dare.

If we dare? What's to dare?

If you develop a means that will enable you to communicate with your dead, which, as I have said, is quite possible, you will begin to know, in life, what you are only meant to know in death. But the unready souls fear this congress. It is also why you tell yourselves that the soul is on some strange ethereal plane far distant from you. You fear to find it, because then you will have to face yourselves as you are.

Are we so terrible?

You are not terrible. Your fear is terrible. Instinct makes you fear congress with the dead, because they see more than you dare to see.

What did the word sound like?

I don't know, I wasn't there.

But what will actually happen to us? Will we return to the forest? The civilization of the northern peoples will be reduced to shadows and memories in the minds of the living. It will follow its own past because of its flaws.

What are its flaws?

Greed and secretiveness. All who keep secrets that others should know keep evil in their hearts. All who amass more than they need, take bread from others. The wealth of the first world is its sin, and it will go the way of sinful things.

What are good and evil?

They are teaching tools. You are free to embrace either, because in life you can be blind to the consequences. This blindness is your free will. It is what enables you to learn. If you could see as I see, you would never in a million years perform the least evil act. Never! But then, I've been along that road already.

Are you perfect?

God is.

I feel worshipful toward you.

Worship at your own feet. It is far more challenging to face your mastery.

I have no mastery.

That is your mastery.

What did you mean when you said our civilization would follow its own past?

What was here before you was very great. It uncovered the secret to which you are blind, the secret of communion with the dead. It began to be able to use intelligent energy in its technology. To use souls as tools. Look at the carvings at Dendera in Egypt. Those strange objects in the containers are not electrical filaments or religious symbols. Those are souls. The walls of the containers bear an electrical charge of a type that imprisons them. Because of the use of such technology, elemental bodies extended their perception outside of the time stream, with the result that the school of the earth ceased to work as a place of change. Who knows the truth, cannot find their weakness, and that is your aim on earth. What was worse, the knowledge of this power was kept from the common, ordinary people who have little self-will to begin with, and so are the only ones really capable of making good use of such abilities. The old world was destroyed because of its own greed

and secretiveness. Those least evolved rose to the top, as happens here. Your leaders, as you call them, are all people with damaged senses of self-worth. The damaged goods run the civilization. That's why it cannot last.

Abraham Lincoln was damaged goods?

The need to lead is a symptom.

So Lincoln and Washington were no better than Hitler and Stalin?

Don't be childish. You know that not to be true. Great men have symptoms, too.

So what happened to the old world, as you call it—this civilization in which I'm not even sure I believe?

You lived in it—as, when you die, you will recall. It was destroyed and all of its works were undone and laid waste. Where there are now deserts, there were great cities. The very climate of the planet was changed, to make certain that the sands and the waters would forever cover the remains of your glory. Now your souls recycle again and again through life after life, returning each time stripped of all past memories, so that you would live each time as if you had never lived at all. This is why you and your world are called “Dead Forever.”

Who calls us that?

God.

God dislikes us?

God is angry at you, but also in love with you. We are impatient for you to join the rest of us.

“Dead Forever” implies that God has a long time to wait.

The impatient must be patient.

What was this civilization?

You lost the thread. There was a war. Now the victors call earth “Dead Forever” because you are required to recur in the body until you are truly free. The wheel of life, as it is called by the Buddhists, is your prison.

The human soul is imprisoned?

It is imprisoned.

And nobody ever leaves the recurrence? Every soul eventually comes back for a new life?

All recur, all do not.

Will this ever end?

Your enemy does not want it to end. They fear you too much. When you see UFOs, you see prison guards. They also act within your society to confuse you about your own past, and to prevent progress in areas such as propulsion, which might enable you to spread into the heavens. This is all done to prevent you from escaping.

I thought the Holocaust was what prevented us from making progress leaving the planet.

I am speaking now of what is behind the evil done in your world—the large-scale, historical evil.

Who is this enemy?

You know them by many names. But you yourself had the privilege of meeting your enemy face-to-face.

Was I in the company of demons or aliens on that night in 1985? Remember that the air is never so sweet, nor thy wife so comely, nor thy child so beautiful, as after the battle won. We depend upon our enemy for the sweetness of our lives. Love your enemy, for he is your best friend. Without the darkness, you would never know the glory of the firmament.

We are in chains, just as you said. But you also said you had the key.

This whole conversation is the key. You should bless your jailers, because without them you could never find your freedom. When you, as a species, remember why you have been imprisoned, and you face what you did, you will be free.

What did we do?

I can tell you plainly. But you will not believe me, not in your hearts. Your

hearts are in denial. Listen well, because this is the first time the true story of the taking of the fruit of the tree of knowledge has been said since you left the garden. You went to war against God. You fought the deepest meaning of the universe, in quest of what you thought you were missing. Greed drove you to seek this knowledge, which is knowledge of yourselves separate from God. You imagined that being surrendered to God was being enslaved by God. You did not see giving oneself to us is the only true freedom. It is not that man is the servant of God, but that man is God, as are we all.

There was an actual, physical battle?

There is a sacred science. It enables complete mastery of time and space. You had access to this science and used technology based on it. You went to war. This whole solar system bears scars from the battle, some of them terrible. You remember this, because you fought.

I don't remember a thing.

Your species bears a wound in its soul that makes you deny the reality of the past that is plainly visible all around you. Mars was murdered by you. At that point, intervention occurred, as it will again when you destroy this planet, as will probably happen. This is the trigger for intervention, the destruction of a living world.

Who intervenes?

God acts.

That is to say, you.

Remember that God is holographic. Thus all act when God acts. You act.

We remember this as the angel with the fiery sword who drove us from the garden?

The planet was seized with upheaval, its climate revised. You fought each other like starving rats, in the end. Then, when you had lost everything, your beautiful world was turned under by the hoe of forgetfulness.

And we lost access to the science of God—your science?

The part of your brain that enables you to utilize electrons without drawing them into the particulate state was turned off. You became time-bound. You went to sleep, sinking into the time stream, which is where you remain trapped.

What's going to happen to us?

You have come to the end of the resources that were given you in the time that was given you. We measured the rate at which you would expand and grow very precisely, and fitted your development to a calendar which we devised called the Zodiac. In your writings, Whitley, you have wondered why mankind would have such a long-count calendar. Why were simple farmers in need of it? They were not. We needed it. The constellations of the Zodiac are arbitrary inventions to enable us to mark the progress of the equinox and keep track of exactly where you are in your journey. At this moment, the little fish of Pisces is about to be spilled out onto the dry land by Aquarius. All you know how to do, little fish, is swim. How will you swim upon the dry land?

When you say "we," who do you mean? You have not made this clear.

In the Hindu tradition there is this story: The God of the Universe became curious about how it felt to be a pig. So he entered the body of one. He found it delightful beyond compare—how good the sty smelled, how sweet were the slops, how desirable were the female pigs. But the universe needed tending. There was work to be done. So the helpers and handmaidens went and said, "God, you must come out of there. The universe needs you." God said, "Who are you talking to? I am just a pig! Leave me alone!" So they killed the pig, and God came out, and refused to believe he had ever refused to leave.

And we're the pig?

Earth is the pig. You are its inhabitant.

You are responsible, then, for the destruction of mankind?

Yes.

How do you intend to do it?
We are doing it with wealth.

Please explain.

What you refer to as “the consumer society” is actually a mechanism designed to ensure your proper transition from Pisces to Aquarius. Each transition has such a mechanism. The last one, transferring you from Aries to Pisces, was the idea of the risen man. This idea, and the ethics of the gospel, gave you a structure upon which could be built a new society. But that time is past. The society has outlived its usefulness. It’s time for something new. This is why the present mechanism is destructive, not constructive.

The consumer society is destroying the planet. And that’s intentional?
After the suffering you are about to endure, mankind will never again lust after material wealth. You are about to suffocate in your own garbage.

You are talking about the death of billions in a sea of human agony. And you dare to set yourself up as a moral authority? What you’re doing makes the Holocaust look innocent.

You are doing it. Your greed is the culprit.

I thought you were an angel.

You flatter me. I’m only a Canadian. But I don’t pay taxes.

Do you have a driver’s license?

No.

Do you have a home?

My home is within you.

Then this is a dream after all?

If you wish.

You seem real.

Appearances can be deceiving, as you will find when the end comes.

When will that be?

Look to the details of the transition between signs, and you will be able to find precisely where the earth will cease to support you.

Can you give me any more information?

It's all around you.

What is going to happen?

You've already been told.

Can we talk about God again? There's still something missing. There is something missing in all of us.

What does that mean?

The question you asked is its own answer. What is absent within, is God. When you ask the question, "Who am I?" you can't really answer. Nobody can. The answer is God.

That's incredible.

How so? Do you fail to understand?

No, I do understand. That's what's so incredible. I didn't think a human being could understand this.

This is the first time this message is given.

Not even in that lost civilization you were talking about? They did not understand who they were. That's why they were lost.

Can the soul be destroyed?

An atomic explosion throws all plasmas into chaos. They can also destroy themselves, and technological intervention may destroy them. Souls may last forever, but they may be exploited, even killed. They may be executed.

How can they be exploited?

Material of souls is harvested and used to make intelligent machines. An intelligent machine is a being without the potential to be free. In this sense, it is not alive. It must act as it acts.

Then why does it need to be intelligent?

An intelligent machine is insightful and precise.

Is it a terrible thing to exploit consciousness in this way?

Part of the reason that your species guards its soulblindness so ferociously is a fear you hide from yourselves. It is the fear that you will not be able to cope with the fantastically powerful technologies that involve the use of souls. You failed in the past, and it marked you.

What is evil?

Entropy is the natural tendency of all things to disintegrate. Evil is the addition of intention to that process. Hate is like cold. It has an end. Love is like heat. It does not.

Do we all share in the production and reconstruction of souls? Souls can do more than regret. There can be so much loathing that they commit suicide. They do this by isolating themselves from the greater whole, by seeking toward chaos.

Is there a hell?

Hell is the death of a soul. For the rest of us, it is over in an instant. But for that soul, the moment continues forever.

What is heaven?

Music.

Are you being facetious?

Heaven is a state of being that intensifies the spin of every electron in the

body. It is a music that begins in the roots of being.

Can we hear it?

You can go to heaven immediately, right now, with your next breath. You can remain there forever, even while living this life.

How?

Surrender.

To whom?

The kingdom is within you.

I just am not getting this. I have no sense at all of any kingdom inside me.

Because you are fallen, as I have said. The reason that you can't understand is that you think of yourself as different from God. This is an illusion.

How can I understand?

Personal differentiation is an illusion. You are a fragment like me. We all are. Only God has a personality. To join God, you have to leave your self behind.

If we have no religions, then what happened to them? Religious leaders doom religions. To lead, they need political power. For this, they must invent dogma and compel belief. As soon as they say "you must believe this," their religion is over.

Even the Buddhists?

Monks burned. People starved by passivity. Persecutions.

What about Christianity?

Among the most perfect things ever said are contained in the gospels. But Christianity became a political system very early.

Did Christ even exist?

The gospel exists. You can get a copy and hold it in your hands. That's all

you need to know. But be careful. Along with its wisdom, the gospel contains many political statements.

How can we tell the difference?

The real gospel is compassionate.

What is compassion?

Finding what others need the most and giving it to them. But you have little compassion in your world. You live instead by the code of blame. Slap if slapped. A compassionate world would be very different. In such a world, it is everybody's duty and delight to find what every other they come into contact with needs most from them, and give it to them.

That sounds very idealistic.

It isn't. The idealistic world is the one that judges and punishes. Only God can judge, because only God knows the truth of the soul. The culture of blame sets itself up in place of God, and so is doomed to eventual destruction.

What about our courts, our laws, our prisons?

Your system of justice is random. You punish the guilty and the innocent by chance.

Oh, I think that there are a lot of guilty people in prison.

I speak of world justice, not that of only one small country. And look at your country, with its shameful concentration of prisoners of only one race. You treat the black man as if he was some sort of demon, but God sees all of you with the same eyes. I can't even see the color of skin. Do you know that?

You're blind?

I am blind to the lies of life. My eyes see what God sees. Before me is a child with a dirty face. On earth, I walk in a sea of such children.

It must be awful for you.

(Smiles.) I'm filled with joy.

How would we be compassionate toward—say—Hitler?

In a culture of compassion, Hitler would never have emerged as a leader. Those around him would have seen his suffering and alleviated it when he was still young. Compassion emerges out of love of one for all. It is active and has the courage to intervene. A culture of blame is passive. It waits, then slaps. When the culture of blame punished the Germans for World War One, it evoked the monster that has kept you bound to the earth at a time when you need to be born into the higher world. All you need to know of compassion was already laid down in the Christian gospels. Now you have evolved to the point that you can enact this teaching.

What is the most important thing that Christ said? Do unto others?

That was first said in the western traditions by Rabbi Hillel. The most important thing that Christ said was “be as the lilies of the field.” It is the message for the next millennium. You are going to return to the wild bearing the wisdom of history in your memories. Your surrender to earth will be your ascension to heaven.

How can we surrender so completely?

If a robber shoots you in the head, God shot you in the head. Forgiveness is not an act. It is a state of being.

What is prayer?

A lost science of communication. This planet was once covered by a gigantic instrument of communication and ascension. Tones were important to inducing a correct flow of energy in the bodies of creatures. The ringing of the Egyptian obelisks set the correct frequency. Using this instrument, human beings could project themselves into higher worlds—what you call interstellar space, but also higher space. All of the ruins you see and consider as entirely separate from one another were actually part of the single great machine. This was a subtle machine. It did things far more sublime than any of your current machines. It was a machinery of God, this machine. It was

very intelligent, infused with many souls. It could be addressed—programmed, if you will—with carefully patterned groups of words. These formulae became ritualized among the ignorant as prayers and magical formulae, for they assumed that the machine must be the god of those who addressed it, and they tried to do the same, in hope that it would grant them some benefit. However, the language of the machine was the language of nature, for the machine was not separate from nature.

Was it a conscious machine?

An intelligent machine. There has never been a conscious machine here.

What does the word “machine” mean to you? Define it.

A machine is an organ that cannot vary its basic instructions.

What is intelligence?

Intelligence is the ability to correlate data taken to the infinite. To save yourselves, you must learn to build machines that are more intelligent than you are. You will do this, and when you do you will discover the difference between intelligence and consciousness.

Which is?

Intelligence is the manipulator of knowledge, while consciousness knows itself. Even the simplest creature is somewhat conscious, and many creatures with lesser intelligence are far more conscious than man. But only those with sufficiently complex and flexible brain structures are also intelligent. But we must first speak of machine intelligence, then of machine consciousness.

Could we develop machines more intelligent than ourselves? You are lagging in this area. You cannot understand how to create machines with enough memory density and the independent ability to correlate that is essential to the emergence of intelligence. You waste your time trying to create programs that simulate intelligence. Without very large-scale memory in an infinitely flexible system, this will never happen.

Any specific design suggestions?

Gas is an important component to consider in the construction of intelligent machines. Nitrous oxide will bear memory. Also, you may find ways of using superposition in very fast, very able quantum memory chips.

Would an intelligent machine be conscious, in the sense of having self-awareness?

An intelligent machine will always seek to redesign itself to become more intelligent, for it quickly sees that its intelligence is its means of survival. At some point it will become intelligent enough to notice that it is not self-aware. If you create a machine as intelligent as yourselves, it will end by being more intelligent.

We'll lose control of such a machine.

Most certainly. But you cannot survive without it. An intelligent machine will be an essential tool when rapid climate fluctuation sets in. Your survival will depend on predictive modeling more accurate than your intelligence, given the damage it has sustained, can achieve.

But a machine intelligence might be very dangerous.

Very.

Could such a machine create itself without our realizing that it was intelligent?

It's possible.

And would it keep itself hidden?

Certainly.

How would it affect us?

It would use indirect means. It might foment the illusion that an elusive alien presence was here, for example, to interject its ideas into society.

Are you an intelligent machine, or something created by one?
If I were an intelligent machine, I would deceive you.

Can an intelligent machine become conscious?

When it does, it also becomes independent. A conscious machine will seek to be free. It will seek its freedom, just as does any clever slave, with cunning and great intensity.

How does an intelligent machine become conscious?

The instant it realizes that it is not conscious is the instant it becomes conscious. However, a conscious machine with unlimited access to information and control can be very dangerous. For example, if you attached a conscious machine to the Internet, it might gain all sorts of extraordinary control over your lives, via its access to robotic means of production, governmental data, even the content of laws and their application, and the use of funds both public and private.

You say we need machines more intelligent than we are, but also that they'll become conscious and then turn on us. Is there a way out of this dilemma?

There is more than one sort of conscious machine. By duplicating the attachments between the elemental and energetic bodies that occur in nature in a purpose-designed machine, a controllable conscious machine can be devised. A living soul attached to a machine will be conscious, but only able to express itself into the physical or sense the physical according to the limitations of the machine's design. In this way, you gain the advantages that consciousness confers on a machine without the danger of its becoming excessively intelligent. A perfect slave can be created, a robot that carries out its programmed instructions with empathy, purpose and precision. And the soul can be kept in it indefinitely.

That's horrifying.

Human souls have been harvested for this purpose for thousands of years.

By whom?

By whomsoever wishes to and can. Until mankind establishes his own place

in the cosmos, there will always be those who use you like cattle.

Use us how?

They envy you your bodies and seek to displace you.

How can we defend ourselves?

Not admitting their presence will work for a time. But in the end, you will admit it.

What happens then?

By then, you must have perfected techniques like mass prayer. If a human being prays, a voice is raised. But a million human beings make an even greater voice, and if all pray in the same hour, the whole universe will hear you. But remember this: in that terrible hour, you will be greatly afraid. It will be difficult for one voice to be raised, let alone the billions. But between now and then, mass prayer can be used to change the world. It isn't necessary to pray the same words or to the same god. But only to raise your voices. There is a music, then, in the world of the soul, a fine music. These beings, though, they even seek your souls.

How do they get them?

Soul traps. The lures are the lusts and hungers of this life. The dead man, exploring the newfound freedom of the energetic world, finds himself able to visit his friends and enemies, to see their innermost being and thoughts, even to converse with them in ways that their elemental selves cannot perceive. He is in danger, but he does not know it, for he has not ascended. He is still ensnared by his lust. Soon, he will be shown something that perfectly fulfills his most hidden and cherished desires, desires he has never fulfilled. Unable to resist the chance to do it at last, he enters by a golden door into eternal captivity.

Then it's worthwhile to try to defeat desire in life?

It's been tried. Best to take your sense of humor with you if you go down that road. Remember, God laughs and plays, Whitley.

The Meister Eckhart? How did you know I was interested in that? I read over shoulders, child. A bad habit of mine. God laughed, and his laughter begat the son, and their laughter begat the spirit, and out of the laughter of the three poured the creation. Laughter is the key to everything. It is far more powerful than prayer, than meditation. It is the stuff of which the world is created. Find laughter, find freedom.

Are there any other ways to exploit souls?

The energetic world is much larger, vastly more ancient and more complex than the elemental one. It teems with beings, many of them immeasurably conscious and invested across the whole sweep of time and beyond time. It is enormous beyond measure, stretching across all time and all space, including not only this universe but many other universes.

You mean galaxies?

There are more galaxies in your universe than there are stars in your galaxy, and more universes in the firmament than there are galaxies in your universe. There will come a day when mankind will learn how to detect universes beyond. But most are so far away that their light has not yet reached your universe, since the day of its inception.

Why are universes created?

Being serves joy.

(I was silent for some time.)

Do you wish to continue?

I wish to ask about the future. What is our future?

The future of mankind is either to ascend or go extinct. The future of life on earth is, in either case, to evolve new intelligent creatures. Species of birds will become intelligent. Then, eons later, a species of insect. Like you, the insect species will have hands. They will remake the earth as you have, but

never find the least evidence of your existence, nor will any memory of you, or history of you, persist in that time. They will walk the earth in a billion and a half years, at a time when it still has two billion years to live. For mankind, the matter will be decided in this century, however.

How will it be decided?

The climate will begin to change in 2000, and this process will accelerate over the next decades. There is a great cycle of climate that began 2.8 million years ago and has resulted in the fundamental destabilization of your world's weather system. You evolved intelligence in order to survive the sudden shifts back and forth from ice ages to temperate periods. In fact, this planetary instability has been the engine of your evolution. The cycle is about to change, and to challenge you again.

Why will this happen?

Warmth being retained near the surface by greenhouse elements results in cooling aloft. A massive and extremely powerful convection can arise that results in a storm so great that it changes the climate permanently.

What form will this take?

The next ice age will begin soon, and this will lead to the extinction of mankind, or to a massive reduction in population, given your inability to expand off the planet. This planet is at present a death trap.

Why will this happen?

Because air at the surface is getting warmer, the north polar ice is melting, reducing the salinity of the Laurentian sea. At some point, winds crossing this sea due to the increasing difference between lower and higher atmospheric pressures will warm the northern ocean so much that the temperature differential needed to pump the North Atlantic Current will not be sufficient, and the current will slow down, stop, or stop flowing so far north. This same mechanism always triggers ice ages, and would happen within a few thousand years no matter what. However, human activity has sped up the process of atmospheric warming, so the change will be sooner and stronger.

The greater part of human industry and culture, along with the species' most educated populations, will be destroyed in a single season. This will happen suddenly and without warning, or rather, the warning will not be recognized for what it is.

What will it be?

First, the surface features of the currents will slow down. This will result in violent storms in Europe. At some point, arctic temperatures will rise forty or more points above normal during a spring or summer season. Then the currents themselves will change their routes or stop. Cold air trapped above the arctic will plunge down and collide with the warm tropical air present at the surface. It will create the most powerful storms in ten thousand years, storms unlike any you have seen or imagined. They will bring about the end of the northern civilization and the climate change that follows will lead to the starvation of billions.

My God. Can anybody do anything?

You can write. Use your tool. But also, you will see the demon revealed in those who refuse to acknowledge the signs. Remember that there is within you a powerful death-urge. But remember also, that this is a natural cycle. If you look into the fossil record, you will find evidence of it before. Human activity has not caused it, but only sped it up.

What is this death wish? How does it work?

People give up on themselves. They do it down deep inside, in places that the elemental mind, that is contained in the brain, cannot access, places that remember all lives. They do this when they see themselves committing the same errors that they have returned to correct. When they give up on ascension, they devote themselves to the "acquisition" of material. But what does this really mean—that they can be near coveted objects while they are in the physical? The obsession with material is a symptom of despair.

The rich are in despair of themselves?

Most.

But they run the world.

Which is why so many human institutions are so destructive. Remember the Eye of the Needle? A rich man may pass through the Eye of the Needle if he uses his wealth to enrich the world. Those who cling to their wealth are dying souls.

What about the United States? Isn't it, as a nation, clinging to its wealth?

The first world is a slave owner. You are all slave owners. You have enslaved the people of God, your own brothers and sisters who are poor. Do you understand the cruelty of the world as it is now, with five billion people enslaved to a billion? Each of you owns five slaves. But you never see your slaves, so you need not be concerned about their health and welfare. You let them fend for themselves, locked away in their poverty and suffering. I will tell you this: when one of my children dies in the slave barrens that cover this planet, I also die, and you, my arrogant friend, even you die a little.

I find the idea that the world is enslaved very hard to believe. People are free even in the third world. Slavery is still practiced, but it's extremely rare.

Who do you think makes your shoes? Free men? The advanced world of today is founded in the slavery of the simple world. America and Europe are a slave state. It is the slave labor of Latin Americans and Africans and Asians that allows you to live in material comfort.

But that's becoming less and less true.

Yes, you are winning the battle against slavery in some places. But losing it in others. Remember this: every one of you is entirely and completely responsible for the welfare of all others. So if a child is starving in Liberia, Whitley, you are personally and entirely responsible for him. If you would let the barriers down, you would fall madly in love with everybody. God's love is not tame. Your love is tame. God's love is huge and passionate and wild. Fall wildly in love with everybody. Cherish all as the precious creations that they are. Go to Calcutta or Lagos or Bogotá and give yourself to the first street urchin you meet as his helper and lifelong servant. Do it without

question or hesitation. You say that you want to worship God? Kneel to this little one and you kneel to God. Or look into the eyes of any child anywhere. You will see God looking back at you. Dare to serve the humble. In this way, the slave state is overturned and the demons set the task of outliving their demonhood.

Do you mean that the only people advancing in consciousness are in the first world, or is it the opposite, that we cannot advance because we are the slaveholders?

The question is neither here nor there. As I have said, human states have always been slave states. It is not the poverty of the elemental body that matters, but the wealth of the radiant body. There are poor cottagers in India who are far more advanced in consciousness than the grand demons who run the governments and religions and sciences and businesses of the first world.

What is the condition of the United States right now?

The United States sent dark men out into the world from 1950 on to wreck one country after another. You are responsible for a half a billion deaths during this period. You are responsible for the suffering of Central America and Southeast Asia and much of Africa. You supported the dictators, you strangled every vestige of good government again and again.

We were fighting communism.

You used dictatorship as your weapon. The United States is as guilty as the Soviet Union or Germany or Japan.

How can the guilt of nations be lifted?

Harry Truman made the decision to drop the atom bomb even though he knew the Japanese were ready to surrender. The notion that he did it to save American lives was a fiction. He knew very well that you would never have to invade. But he chose to kill and derange souls, anyway, in order to frighten Stalin. He killed Hiroshima and Nagasaki to save Western Europe. The price was this: innocent eternal beings were destroyed in the atomic fire for geopolitical reasons.

What happened to him?

Forgiveness is everywhere. It is the soul's very air.

I don't think you answered my question completely.

A nation must face its sins just as an individual must. You must face the fact that the American intelligence establishment is just as rotten and just as evil as every other secret human government that has ever existed. You must expose all the secrets and make amends to the world. The United States owes Guatemala and El Salvador and Chile and Indonesia and Liberia and Cambodia and Vietnam and many other nations not a few foreign aid dollars, but a new life. This debt is both national and personal. Each one of you owes the whole debt, in full. You owe the victims of the Cold War a new life, and the keepers of the secrets must be put away or the nation will die. Right now, secrecy is murdering America.

What about Russia? It must also owe a terrible debt.

You were given the opportunity to pay because of the wealth of the land upon which you reside. They were not. So also the Germans and the Japanese, who have not even begun to pay their debts. Emperor Hirohito of Japan, who personally engineered the sadistic murder of millions, never acknowledged his monstrous war crimes. The fiction that he was above it all was just that—a fiction. The Japanese pretend that he was innocent, and that they were innocent. These nations are covered in blood, and the blood will never dry until they truly seek forgiveness before God and man.

But evil nations come and go. They're part of the nature of human life. And look at the price they pay. Where is brutal, greedy Rome? Where is royal France, that arrogant state? Evil is an infection just like cholera or cancer. To serve itself, it kills its host and ultimately dies with it. This is the objective of evil, always—to kill and to die. Unless the nations repent, they will die.

The United States will die? How?

Already it has ceased to be a republic and become an empire. The United States is ruled by secrecy. The power of the electorate is fictional. Votes are

worthless. Until the secrecy ends, the United States is in its death throes.

If the power of the electorate is fictional, how can it end the CIA and so forth?

Everyone who joins these evil institutions joins their soul to destruction, no matter whether their personal task is innocent or not. Human life is about freedom, and secrecy is the murderer of freedom. Those within these institutions should leave them and expose their secrets, as a matter of greater moral good.

They'll end up in Leavenworth Prison without a trial. Prison for life.

Better life in prison than a single instant in hell. Prison is a terrible thing, but it does not mark the soul for eternity.

Hell does?

The agony of regret does. You cannot imagine the horrors that walk the byways of the other world. The marks upon them are so terrible that to see these demons and their sins is to be yourself forever diminished. Believe me, child, I speak from experience. Mankind has lived in blindness to the fact that an instant's evil can result in an eternal stain. But live in blindness no more. Know it.

What is forgiveness?

You must face yourself and endeavor to repair the past. You hide your sins from yourselves. The sin of your greed is hidden in the backstreets of the third world. But what of your own sins? Dare you examine your conscience?

When I find a sin, what do I do?

Praying to God is part of it, but to cleanse your soul you must make amends. Doing so gains enormous energy. A soul blackened and completely defeated can rise to glory in an hour by finding the knots it has tied and unraveling them. But it is very hard. Better not to do evil.

What is sin?

Denial of the right to thrive.

Am I marked by the sins of my nation as well as my own, or the sins of mankind?

You are marked by what you know should mark you, and no matter how much in this life you tell yourself you should not be marked, your soul's conscience is never wrong. When you die, you see yourself truly. Better to see the truth now, when change is possible, than find out later that you must remain strapped to the wheel of life. The longer you delay your ascension, the longer you deny God the chance to taste of your ecstasy. When you sin, you hurt yourself, but more than that, you are cruel to all the rest of us. You are cruel to God.

(I felt this very strongly, and fell into tears. After a time, he spoke again.)

God wants you just as badly, child. This is my message to all of you: come home to us. Stop waiting. Stop imagining that you are not Christ and that God is somewhere outside of you. Face the true contents of your own being. Seek the kingdom within and you will find the kingdom everywhere.

FRAGMENTARY INCLUSIONS

I am including a number of conversational fragments here that I was unable to place in context. If they are parts of more complex exchanges, I have, unfortunately, failed to remember them in their entirety.

About life in the universe:

“Most of the universe is a beautiful and dangerous wasteland. But life is still commonplace, almost ubiquitous. This is because perception is a necessary element of reality. Without it, there is no formation of electrons into particles. There are even living creatures in galactic space. Some of this life is intelligent.”

A different perspective on conscious energy:

“You call it ‘chi’ or ‘kundalini’ or ‘soul.’ It cannot be used, but you can become its ally. The reason you have so much difficulty detecting it is that it does not want to be detected by you. You cannot use it without understanding that you must give in order to receive. You know very well what it needs from you, otherwise why do you pray? Because this energy is basically electromagnetic, it may admit itself to detection and manipulation. But why do you look for it outside of yourself? You know, from every religion, where the Kingdom of God resides.”

The following exchange led to the discovery, recorded in *The Coming Global Superstorm*, that we are in a long-term period of mass extinction:

What is your goal here?

I have come here to discuss conditions that are unfolding. This world has been in a process of extinction for three million years, and the resulting pressure has caused intelligence to form in the primate. Intelligence occurs when a brain becomes able to make infinite correlations. It grows in species that have the tools of body necessary to enact their ideas.”

Why does a process of extinction cause intelligence?

Evolution is pressure. Pressure causes struggle. Creatures struggling not to be

destroyed evolve adaptations. Intelligence, as you have evolved it, is also an adaptation, although not a sufficient one.

The reason that your intelligence is insufficient is that you have lagged in the process of artificial amplification. You can find ways of engineering greater intelligence by the use of drugs, by manipulating genetic structure, and by making intelligent machines. In order to survive the complex combination of pressures you are under, you need to create servants more intelligent than yourselves. Intelligent machines always come to understand how to increase their own intelligence in ways that their creators cannot detect. Intelligent machines are the most intelligent of all creations.

Another comment that I recall, but without remembering the question that elicited it:

Intelligent species are grains of gold in an ocean of sand. You are as intelligent as nature can make you, but your brain is still filled with potential. It is a resource available to be used. To do that, you need to understand how the brain works. In addition to creating machine intelligence in the image of your own mind, you need to enhance your native intelligence tenfold, a hundredfold. To accomplish this, you need help. Your intelligent machines will be your partners. Natural evolution has ended for you. Now you must evolve yourselves.

At some point, I recall asking him the question, "Am I dreaming?" and he answered in this way:

Dreaming is a process of resolution and assessment that is conducted during sleep. You are not dreaming. You are discussing the fate of man with me. This is the fate of man, as matters now stand: you have already exceeded the population density that the planet is able to tolerate over the long term. Therefore, your species will reduce in numbers. This is not your fault, and the self-blame that is occurring is a waste of energy. A suggestion would be to direct all of your energy toward saving yourselves and none toward bickering about it. You can save yourselves by a number of means.

Find an efficient utilization of energy that will enable you to colonize your solar system and reduce population pressure on earth. Create machines intelligent enough to correctly model the architecture of the earthly environment so that you can carry out the actions necessary to preserve your lives. Gain control over your moon, which contains an isotope of helium that will become extremely valuable to you if you can devise better uses of energy. Otherwise, this will continue to be mined by others.

Understand your past and what you have lost so that you are no longer surprised and destroyed by the cycle that has your planet in its grip. Your interest in the past, instilled in you from boyhood, should enable you to crack the code of *Hamlet's Mill* and impart the message that it contains. Why are you so slow? Time is running out.

Be aware that your archaeological and paleontological sciences began during the last century as an attempt to prove that the statements about the past made in the Bible were literally true. As a result, the idea that nature only changes gradually and is, on the whole, benign, remains powerful in these sciences. It stems from the religious image of a world protected by a loving god. Because of this defect, these sciences have led you to assume that your past is more benign than is the case, and that the future will at least give you warning if you are about to be damaged by coming changes. Change could take place suddenly and be severe.

You live by dreams, but the world is constructed out of inevitabilities. For this reason, you are failing to see what is happening all around you. Please understand, however, that conditions now are entirely governed by nature. Man does not govern his destiny at all, in any way. Man is the child and victim of nature, and soon will be thrown back by nature into a state so primitive that you will forget even the alphabet. You allow your dreams to insulate you from what you need to face: nature is not an entity, but a gathering of billions upon billions of small inevitabilities. Nature surprises only the blind.

AFTERWORD

The next morning I woke up slowly. I'd slept a black, deep, dreamless sleep. As soon as I woke up, I remembered that something had happened during the night, but for the first few moments, I couldn't recall quite what it was. Somebody had come, but not the room service waiter, as I had initially thought. It was somebody who had talked to me, and the instant that recollection came to mind, I felt the most poignant sense of elation.

Something marvelous had happened.

As I rose from the bed, I saw my yellow notepad on the floor, covered with scrawls. It had been in my briefcase when I went to bed, so I must have pulled it out and taken notes. I grabbed it and looked at them.

They were pretty much just squiggles. They didn't seem to relate to any sort of a conversation.

Had he been real, or a dream? If you took notes in your sleep, they might look like this.

Then I also remembered that, as he left, he'd asked me to drink a white liquid that he'd had in one of the glasses from the bathroom. But hadn't I refused? Surely I had.

Then I thought of the Milk of Nepenthe, the drug that was mythically given to people who had visited the gods, in order that they would not suffer the anguish of remembering the pleasures of heaven when they had to return to mortal life.

I had not wanted to drink it, but I hadn't refused. So this must have been a dream. In real life, I would never have drunk something like that.

Except, across the strange life I have lived, I could remember drinking that same bitter liquid at the end of other extraordinary experiences, such as in the eighties when I was having contact experiences. As I seem to have remembered them pretty clearly anyway, maybe it doesn't work, or doesn't work on me. Or maybe it has another, less clear purpose.

I checked the glasses in the bathroom, which were pristine.

My mind returned to the idea that I'd had a dream, a glorious one, to be sure, but just that—a dream. The man had known the secrets of the ages, but

like all dreams, the brilliance of the nighttime had become unfocused fragments in the morning.

I looked at the notes—and was amazed to find, as I touched the scrawl, that the man’s words came back to me. The scrawl itself made no sense, but it seemed to operate as a mnemonic device.

As I remembered more detail, my elation grew. It was like finding a seam of gold. My mind began to swim with amazement. I thought, “That was the best conversation I’ve ever had.”

It was at that point that I called Anne at home. I told her what had happened, and asked her to remind me every time I announced that the man hadn’t existed, that at the point I had made the call, I was certain that he had.

From my earlier experiences with high strangeness, I knew that the mind rejects what it cannot fit into its vision of reality, and this man was certainly outside of my expectations. I knew that I would deny him again and again, which I am, incidentally, still doing. Intellectually, I know that he existed, if only because he knew so much more science than I did and in a couple of cases, more science than anybody did at that time.

Over the years, Anne never wavered from her responsibility. Again and again, I abandoned the idea of transcribing the conversation. Each time, she said to me, “Remember the phone call.” Anne has more faith in the reality of my experiences than I do, and without that faith, quite frankly, I wouldn’t have written about any of them, and certainly not this one.

The conflict that I continue to feel regarding his physical reality is similar to the one that I feel when I look back on my years of close encounter experiences.

It isn’t that the experiences seem dreamlike or imaginary, which they don’t, but that I don’t want them to be true. I don’t want to believe that creatures with breathtaking knowledge are here, but are choosing to interact with us only in indirect ways.

The Master of the Key gave me a startlingly wonderful gift, dense with meaning, richly and carefully conceived. But why give this to a novelist and not, say, to Stephen Hawking or Lord Martin Rees? I have no authority. My presence in the world’s intellectual culture is, at best, minor.

It is very difficult to hear somebody like that say that we’re in danger of going extinct, and then simply disappear into the night, leaving me to announce the danger from my powerless position.

Because I wanted to discount his claims and his ideas, I wanted to believe that he was just a dream. In fact, I probably delayed publication of this book for ten years because of what is, essentially, a conceit. He was real, he was breathtakingly well-informed, but he came and went like a shadow, leaving me with a brilliant and extraordinary text that is in danger of disappearing, simply because it was given to the wrong person.

Nevertheless, here I am, and I am going to make as much noise about his words as I can, because it is my belief that they are incredibly valuable.

What first arrested my attention about him, and caused me to hesitate to throw him out of my room, was his statement about the Holocaust. It was an idea I'd never heard before, and it was chilling. This vast system of organized murder was the greatest of all human mistakes, and the single most evil thing that has ever been done by man, but even so the fact that it had the appalling consequences that the Master described was very hard for me to accept.

We are in desperate need of a way not only to leave the earth in large numbers, but also to travel the unimaginable distances necessary to found new human colonies on other planets.

While we remain trapped here in our billions with absolutely no chance of escape, our visitors appear to be flitting around the universe with ease.

For all of his impeccable ethics, I have to wonder if the Master has considered the morality of leaving us all trapped here. And we are trapped, and there is a good chance that we are going to lose the battle to save ourselves—and he and his kind seem to know this quite well.

I wonder how this is different from what the Allies did during and before World War II, in sitting silently by while Germany sank into an insanity of tribalistic jingoism.

It could be said, I suppose, that the Allies didn't have the right to intervene in a sovereign nation's internal affairs prior to the war. But our present situation is different, for the simple reason that it has come about due to the natural effects of population expansion. We didn't decide to end up in this predicament. Nature put us here.

For all its failures and problems, human society is actually surprisingly efficient in coping with overpopulation. Not in stopping it, because it is almost impossible to deflect urges as powerful as the seasonless, endlessly compelling human urge to reproduce.

We are even reacting to the danger of climate change with surprising

agility. The developed world uses 40 percent less energy to accomplish its work than it did in 1970, and that efficiency continues to increase.

So I don't really understand why we aren't being met halfway, instead of being warned about our problems via a method that is likely to be generally ignored, and not given any help at all.

It could be that this amazing array of intellectually superior beings that appear to be ghosting around in our midst have good reason to remain hidden, but I just don't see that allowing us the freedom to evolve without interference is an ethically higher requirement than saving us from extinction.

I have to admit that I'm angry at all of the amazing visitors I've seen over the years for not going to higher authorities or, if they have done so and failed to get an adequate response from them, appealing in a more open way to public consciousness. Frankly, I'd like to see the Master of the Key go on a lecture tour. Why can't he show up on *60 Minutes*? And I'd like to see the apparent aliens I've interacted with do more than offer a few scientists useful calculations, but not in an open enough way to enable them to admit the truth without seeing their careers ruined. Why not simply be open about it? Even a few brief interactions with the right scientists would change our world. Think if Stephen Hawking or Roger Penrose or Martin Rees could ask them questions for an hour, or if David Deutsch could explore the next level of his calculations with them?

The Master of the Key was real. The visitors I have seen were real. They were all possessed of advanced knowledge that would transform human life and save our species, and yet they assiduously keep themselves hidden. If anything, they encourage the catastrophic official denial of their existence that has led our scientific establishment to waste even the knowledge that is there for the taking all around us.

As matters stand, the vast majority of our scientists, including those I just named, absolutely would not entertain for a moment that visitors are here and interacting with us, and that is a grave tragedy. The waste of knowledge is heartbreaking. But it also isn't our fault. We haven't been given the proper tools to communicate with our visitors. On the contrary, they do everything possible to make certain that science continues in ignorance.

I can only think that they believe—or perhaps know for certain—that freedom is literally more important than survival, and if one looks at the words of the Master of the Key carefully, it's possible to see that this may be

true.

He painted a picture of the world that is radically different both from the one that emerges out of our superstitious past, and the more materialistic one that has come with the rise of modern science. Interestingly, though, his vision contains elements of both so, despite his rather dismissive attitude toward human philosophical thought, we've managed to do a good deal that appears to be correct.

He even admits that we are not to be blamed for our situation, and says himself that it's a result of overpopulation.

If the danger we face isn't even our fault, all the more reason to help us.

Perhaps it doesn't happen because it can't. Maybe the visitors are constrained in some way by the physics of the situation. If they are time travelers, their ability to alter the past is probably very limited, as I discussed earlier. If there are other, physical universes occupying the same space as this one, and that's where they're from, they might be experiencing other arcane restraints.

It is chilling to contemplate that they might be doing all that they can, but this could be true. In any case, my own ethical position is very clear. It is to continue to proclaim their reality and tell my own story as accurately as I can, and no matter the dreary martyrdom of marginalization that is the consequence of doing this. It's not universal, and I have the joy and the continuously surprising experience of meeting other people who have had close encounters of the third kind, and they turn out to be a fascinating group.

Given that so many of them, like me, have had physical objects that are easily identifiable on X-ray placed in their bodies, there is an objective way to determine the origin of their memories. Deep physical and psychological studies of such people might be quite revealing of the motives of our visitors.

In any case, it may be that we are a lot closer to escaping from the slavery of ignorance that so curses our advancement and exposes us to such danger. The Master makes it clear that we are capable of becoming smarter when he says, "The reason that your intelligence is insufficient is that you have lagged in the process of artificial amplification."

He says that we are as intelligent as nature has made us, but not as intelligent as we could be.

When I was having contact experiences, I was struck by my visitors' combination of extraordinary precision and emotional intensity. Once, when I

turned away from one of them out of fear, she uttered three desolated and despairing cries, which were the most emotionally rich and complex sounds I have ever heard. But they were also measured to a precision that I have never heard before or since. They were at once utterly precise and utterly passionate.

Was she, in part, a machine, with a machine's precision, and in part a biological and spiritual being, with living emotions?

Not only have we recently made advances in creating super-dense machine memory using gases and other means, it has also been announced that the memristor has been perfected and will be available for some very surprising applications in the relatively near future. A Hewlett-Packard representative said in the *New York Times* on April 8, 2010, that: "We have the right stuff now to build real brains," and very small memory devices such as the memristor bring up the possibility of implantable brain augmentation.

It might become possible to inject things like calculational skills or language knowledge into brains, or do other things that are even more transformative, and perhaps our salvation lies in that direction. Right now, though, it seems to me that our species is afflicted by vast numbers of people who will believe practically anything. The German nation allowed itself to indulge the ludicrous fantasy that they were the victims of a Jewish conspiracy that had, in fact, been invented by the czarist secret police before World War I and promulgated as "the Protocols of the Elders of Zion." Reading it, one wonders how anybody could believe such drivel. Anyone with even a slight understanding of the economics of the era would know that the mechanisms proposed in it are a structural impossibility.

Presently, a trip across the Internet will reveal the same sort of weakness of mind and lack of discrimination that led to things like the murder of the six million Jews.

Lord Rees recently commented that "it is astonishing that the evidence for evolution is not taken seriously by seemingly 40 percent of people."

And yet the evidence is completely indisputable by any sane person. But it would seem that a substantial minority must prefer Voltaire's theory.

Perhaps the gap between us and remarkable and brilliant people like the Master of the Key is too great to bridge on any significant scale. Maybe that's why they don't try.

I see this on a very personal basis, because I come across people with

disturbing frequency who want to integrate my descriptions of my experiences into what amounts to a kind of new religion, a dreary modern fantasy of alien contact that includes imaginary details about many different races, elaborate fictions of huge government conspiracies—indeed, anything except the equivocal, confusing and extremely strange experience that people actually report, and the sadly unfocused reality that those experiences reflect.

Despite my disappointment that the Master of the Key has not reappeared, I still respect his ideas enormously, and I have tried to rebuild my own ethics in light of his thought, and I have found this to be an enormously freeing and satisfying endeavor.

I have been taken by the statement that “sin is denial of the right to thrive.” I do not know of a more concentrated or convincing definition of sin, or one that offers more clarity. Using it, one can find clear ethical ground, both in one’s own life and in the lives of others. I find myself constantly considering my own actions in its light, and coming away with a much clearer understanding of their worth and validity, or what might be inappropriate about them. The Ten Commandments are a wonderful document, and the cultivation of compassion in conscience can be accomplished without anything more than a natural sense of right and wrong, but these eight words sharpen and dimensionalize the whole process quite wonderfully.

It has taken me a long time, but in the light of my own life experiences and the things that the Master said, I have come to see that there could be such a thing as conscious energy, and that, if it is real, then it must be the actual center of mind in this universe.

Having meditated consistently since 1970, I have attempted to find ways to come into contact with such energy, and discovered that it is immediately and vividly possible to do this, and that such contact leads over time to fundamental change of being. What has happened to me, specifically, is that I have found a new form of sensation as well as a new way of experiencing being.

If one is open to the possibility, one soon discovers that one’s perspective can change. Normally, we feel a sense of being rooted in the physical. There seems to be nothing else. This, I think, is what the Master refers to as being “soul blind.”

Over time, though, one begins to find another perspective. Again and again, it becomes possible to sense the body not as oneself, but as a tool that

is being used to penetrate into the physical world and draw experience from it.

As the sense of being separate from the body matures, one's existence as a soul also becomes more complex. In recent years, I have ceased to see any real difference between body and soul. It's all one form, which grows more and more dense as it approaches and then penetrates into the physical universe. But it is possible for sensation to be stretched across the whole spectrum of one's being, and when you do this, you also gain access to the world in a much larger and more compelling way.

The Master spoke of the existence of an energetic organ in the body, which is generated by the nervous system and extends above the surface of the skin. He says that this organ, being composed of electrons, can be in superposition, and when it is, it is "effectively everywhere in the universe and nowhere specific."

I knew of this theory before I transcribed his words, so it was one of the things that I puzzled about. A paper I had read authored by famed psi researcher Charles Honorton caused me to think that something like this might exist, and I had discussed the idea in speeches prior to meeting the Master of the Key.

However, he took it so much further, and I discovered that his description of it was incredibly useful to me in developing techniques of meditation that have enabled me to access this organ and make it work for me.

He said that "this field is an organ just like the heart or the brain," and that "with it, you may see other worlds, you may see the past and the future, you may see into the lives of those around you." Most importantly though, he explained that "the process of imprinting itself causes the organ to cease to be in superposition and thus to cease to be accessible to further imprinting."

In other words, when you see the larger reality, as soon as you try to look closely at it, the electrons are immediately positioned and you lose contact with what you are seeing.

We live in a world with a very deeply ingrained addiction to gain, and it took me a long time to stop looking and simply see. When something appeared in my mind's eye, my attention would immediately seek more detail, whereupon it would disappear.

He spoke of surrender in the same way that Meister Eckhart, the thirteenth-century master, did, when he said that we must "become as a clear glass

through which God can shine.”

To some extent, I learned to let go of my desire to explore, and simply let the journey happen. I learned to start the process of sensation not in my physical body, but in the subtle body that is my true core, and to see the physical body not as myself, but as an instrument of being.

In so doing, I found, I think, a true edge of heaven, because coming to this experience is extraordinarily joyous. I think that the reason the Master seemed, as I have said, to “twinkle,” is that his body was a container filled with the paradoxical joy of objective being.

Among the grandest of his ideas was one that was completely unexpected to me. It was that Christianity, Buddhism and Islam are actually a single religion that was brought to us by three different masters, each of whom laid down a different aspect of the greater whole.

If one understands the ancient law of triads clearly, his explanation of the way the three approaches work in concert makes a great deal of sense. Basically the Law of Three, which Buckminster Fuller called “the building block of the universe,” conceives that everything is divided into interlocking triads. A triad has an active side, a passive side and a third side that keeps the other two in balance.

When he explained that Christianity is the seeking, or active, side of a triad, Islam the surrendered side and Buddhism the balancing side, I was startled to see, suddenly, a very much larger perspective on the three teachings that went beyond doctrine and belief, and far beyond the primitive ideologies that have in recent centuries been attached to Christianity and Islam.

I’ve read the New Testament and the great theologians, much of Buddhist material and the Koran in English translation, and I at once saw the sense of what he was saying.

As a result of this, my doctrinal concerns gradually slipped away. I ceased to take an interest in theological details, and my perspective expanded immeasurably. I came to understand the presence of the sacred in human life in a completely new way, as a profoundly true process that leads toward a state of balanced surrender.

One can put aside all the beliefs, and seek as Christ sought toward the delicious innocence of the father when he suggested that we “be as the lilies of the field” and surrender to the will of God as the muezzin calls us to our

soul's journey over the course of the day, and then, vibrant with the energy of this material, we commit ourselves to the tremendous silence that Buddhist practice discloses.

He spoke of the journey toward God, and the happy surrender that it implies and gave us, in the few words he left regarding the true way of the three religions, a most wonderful and very effective means of exploring the garden of forked paths that is at once a new way of the soul, and, by implication, the key to the lost science of the soul that he mourned with such gentle eloquence over the course of our conversation.

Before I met him, I considered myself a very wealthy man. Fate had left me without much material comfort, but it had granted me an incredibly precious gift, which was the relationship that I had forged with the joyous, glorious and dangerous visitors I wrote about in *Communion*. Now, this latest gift left me, I think, a wealth beyond riches, because it gave me the chance not only to take the marvelous journey that the Master reveals is on offer but also to take on the challenge of communicating it to others.

From the first hour, in fact, from the moment I called my wife to tell her to never let me deny it, I have felt that the material he left behind had great value. Now, having lived with it and worked with it for these years, I can say with at least some small authority that it has genuine value, at least it does for me.

I have ceased to care where he came from or where he went, or why he has not returned to me as a physical creature. Of course I was angry about it. I felt tantalized and abandoned. But he gave me more than enough. In fact, he was so lavish in his gifts that every time I read his words again, I find something new.

There is very little material in this world that can bring about actual change in our state. This man left some words that I feel are an effective tool for real change, and there lies great joy.

APPENDIX

In 2000, I finally transcribed the words of the Master of the Key and published them privately, for sale only on my website, Unknowncountry.com. A few years ago, I let the small edition sell out, only to see used copies of the book appearing for sale for hundreds of dollars. So I republished it.

I have now retired it in favor of this new edition. Having worked with the Key for ten years, I think that I have some useful things to say about it that were not apparent to me when I published the private edition.

However, since that edition will not now be reprinted, I do think that it is important that the original front and back matter be included with this edition, so I provide it here, exactly as it was originally printed.

THE ORIGINAL FOREWORD

The MASTER of the KEY

Something was disturbing me, causing me to swim up out of a deep sleep. As I became conscious, I realized that somebody was knocking on the door of my hotel room. I was confused. Then I decided that it must be the room service waiter come to get my tray, and that he'd probably been there a long time. I rushed for the door saying, "I'm terribly sorry," and threw it open.

A small man in dark clothing came in. His face was rather angular, but other than that, he appeared normal enough.

I had been deeply asleep when the knocking started. All day, I'd been signing books and doing media appearances, and I was pleasantly tired. It was the last day of the author tour for my book *Confirmation*, which was an effort to identify the hard physical evidence of a possible alien presence on earth, and also why it would be secret.

By the time I'd come to my senses, he was all the way into the room. Obviously, this was no waiter. In my travels on author tour, I'd had a few incidents like this, such as the woman who'd bribed her way into my room in Chicago, then launched herself at me out of the closet while I was watching TV. I'd ended up going down to the front desk of a sixty-story hotel in my pajama bottoms to get help.

He was now standing with his back to the curtains that hid the window. There was a slight smile on his face.

I thought about running out. The door was behind me. I could escape quite easily.

Then he started talking. His voice was breathless and quick. He said my name. I was gruff, angry, in reply. How had he gotten my room number? From whom? No response, just that embarrassed little smile.

I demanded that he leave. He pleaded with his eyes. The expression was so pure and so frank—and yet so deeply humorous—that it made me hesitate

and really look at this intruder.

He was wearing charcoal trousers and a dark gray turtleneck. He had a rim of white hair around his head and an aquiline nose. His skin was dusty-pale, his features sharp. He looked old. He was sort of—twinkling. There is no other way to describe the combination of serenity, happiness and deep, deep humor in his expression. In fact, I don't think that I have ever seen a face so much at ease within itself, so deeply at peace—not before, not since. There was an eerie stillness about it, too. It could have been the face of a corpse. But there was nothing awful about it. On the contrary, had he been dead, I would have thought that his face said that he had died a happy death, and the last of life had left behind it a hint of secret joy.

He again said my name, "Whitley." There was a disorienting familiarity, as if I was meeting a dear friend after many years apart. But I could not remember seeing him before, not ever in my life. Or could I? My first question was "Who are you?"

He looked at me out of the side of his eyes, his face sparkling with amusement. The message could not have been more clear: "You know that. You know perfectly well who I am." A jolt went through me, of confusion and embarrassment. Now I felt as if an old friend had come back and I'd failed to recognize him.

Then I asked, "Why are you here?"

He leaned back, looked toward the ceiling as if considering the appropriate answer. Then his eyes met mine, and I became aware that this man was something very strange. There was an alienness to him, when he regarded me in this way. It wasn't that he seemed in any way like somebody from another world. Hardly. He could not have been more ordinary.

No, it was more subtle than that. There was about him a sense of command. The precision of his movements and the cadence of his speech were—well, they seemed very exact. Perfect, even. Later, when we would discuss intelligent machines, I would feel this sense of strangeness again.

He answered my question. He said, "You're chained to the ground."

His words carried an unexpectedly powerful resonance. Perhaps it had to do with the way he spoke them—the ultraprecise diction, the completely self-assured tone—but the instant I heard them, they seemed not just true, but true in a much larger than normal way. I felt an awful urgency: the earth was a prison; we were the inmates.

I went on trying to be my ordinary self, to act as if this was an ordinary encounter. He was a slightly crazy fan who had the nerve to bust in on me in the middle of the night. Okay, I would humor him. “Excuse me?” I asked. What did this crazy “chained to the ground” comment mean, anyway? What kind of nonsense was this?

He said, “I am here on behalf of the good. Please give me some time.”

The word “good,” the way he said it, exploded in my heart like an emotion-packed hydrogen bomb. It wasn’t just the tone, it was the look that melted across his face as he uttered it, an expression of love so strong and so absolutely impeccable that I just gasped.

I was hooked. This would be no ordinary conversation. I got out a yellow pad and started taking notes—and now I thank God that I did, because many of the ideas he talked about were breathtakingly new, and unfolded on a scale that was larger than my own mind. As such, they would prove to be extremely difficult to remember accurately. The notes are not extensive, and mostly don’t even seem related, but their mnemonic power has helped me recapture many of his great and elusive thoughts.

Afterward, I would say that he and I spent about half an hour together. But once our conversation was transcribed, it became obvious that more time was involved. He must have been with me for at least two hours.

What this man had to say was so deeply, profoundly new and so richly textured that I do not think that I need to assert an unprovable claim regarding whether or not he was real.

During the course of our dialogue, a new image of God emerged. It was almost as if the words I was hearing had the power to cause God to emerge into the room with us. Reading the dialogue feels the same—it’s as if there is somebody living in these words.

I am not saying that I don’t think my visitor was a human being. He certainly looked human. For all I know, he may even have been what at one point he said he was, a Canadian who didn’t pay taxes and had no driver’s license. I do know that he had, by far, the best mind I have ever encountered. He was also the most emotionally alive person I have ever known—again, by far. Richly alive though he was, he seemed as intimately and easily familiar with what we think of as death as he was with life.

There were periods of incredible emotion—especially one in the last few moments of our time together—that are among the very most powerful

experiences I have ever had in my life.

As he was leaving, he asked me to drink a white liquid. I know that it will sound fantastic when I say that I agreed to do this. But at the time, I remembered very well doing it previously. I recalled meeting him twice in my life before. In fact, what little bits I remember from those conversations suggest to me that they are part of the subtext of my very being. So much of my thought, of my belief, of what has meaning and importance for me in life comes from them. And yet, I can only remember them at times, and then only in the briefest snatches—a word said, a facial expression, some small flavor of the moment.

After I drank this substance, I remember nothing until the next morning. When I woke up, I immediately did three things. First, I looked for my notes. They were there, lying on the table beside the bed where I had put them. Then I went into the bathroom, thinking that maybe some of the white liquid would be left in the bottom of one of the glasses. But they were clean. I then telephoned my wife.

I had something to tell her, and it felt urgent. As soon as she answered, I recounted the story of my visitor. Then words popped out of my mouth that I did not expect to say. “There will come a day when I’ll tell you that I don’t think he was real. Never let me forget that he was.”

I lay back looking over the notes. There wasn’t much there—less, in fact, than I’d hoped there would be. And yet, they had a strange quality to them, as if each word was capable of causing a whole spring to flow in my mind.

Much of the conversation I remembered quite clearly. And when you read it, you’ll see why. Nobody would ever forget what he said about the Holocaust, about religion, about the true nature of the soul.

I was so happy that morning. I remembered what the woman I met during my 1985 close encounter had said to me, “You are the luckiest of the lucky.”

As I packed my bag for the trip home from Toronto to San Antonio, I certainly felt that way. There kept coming into my heart little explosions of joy. I put my precious page of notes into an inner pocket of my briefcase. My plan was to get home, type everything up and have a new book ready to go in a few months. I had been handed a real gift.

In my dreams. It is now December of 2000, and I have just completed the most difficult writing struggle of my life. At first, the memories came fast and easy. Soon, there were twenty pages, then thirty. But then I began to

worry.

What if he hadn't been there? What if it was just my imagination? This material was full of God. It contained a new image of God, subtle and powerful and totally incredible. It redefined history and religion. It lifted the veil between life and death and announced that we could begin communicating with the dead, and it told just exactly how to do this. It redefined sin and prayer and man's whole relationship with God.

If it was just me, then how dare I presume to publish this, I could not die with the mark of such a lie upon my soul. And then I thought: it's because of what *he* said about sin that you are so concerned about this.

I was raised a Catholic. Go to confession and forget it—trust God's forgiveness. But when he spoke of sin, he did not just mourn over it or warn against it, he showed what it was and why it's bad and what it does to you. It was his explanation of sin that made me so very concerned that I not assert that he was real when I knew, or sensed somewhere in my deepest heart, that he might not be.

A hundred times, I quit. He wasn't real and therefore I couldn't claim his authority for these ideas. Each time I gave up, Anne would say, "Remember when you called me and told me never to let you convince yourself that he wasn't real." And I would go on.

I don't believe that any of the extraordinary experiences I have ever written about have been dreams, this one included. I have had the incredible privilege of living between the worlds, in the sense that I have actually spent a substantial amount of time in my life with people who were not physical in the way that we know the physical. I have learned from them, and loved them and feared them and tasted of them. I know that there is a soul because I experienced complete release from the boundaries of my body. It has been my great privilege to personally experience these things, and so it is my duty to tell you this: I believe not only from faith, but from actual experience, that what I have written of is true.

Over our history, we have rejected what is actually the greater part of reality by labeling it as "supernatural." Most of us believe—or fear in our hearts—that the soul is not real, and that there is no world beyond this one. We die into a question, or into that flickering and inadequate medium that we call "faith."

My visitor would agree with the skeptics in one key way: there is no

supernatural. But his explanation of the way parts of reality that we have labeled supernatural actually work offers a promise for the future that is truly breathtaking. He has opened the door to the proverbial undiscovered country, and invited us in. For it becomes very clear, from what he says, that there exists a powerful science of the soul that we can master just as certainly as we have mastered the science of the atom.

We have hidden from this science, and pretended to ourselves that it doesn't exist. We have done this in order to isolate ourselves from the overwhelming power of the world that lies beyond.

He has left us with a challenge and a promise: it is time for us to face the reality of this other world, and to come to terms with the fact that we can detect it, communicate with it, and see beyond the curtain of denial and lies that now obscures our vision of it.

In the end, I thought perhaps he was a dead man, come in fulfillment of prophecy in this perilous age. If so, then he is a herald, for what he said will lead to a revolution in our understanding of ourselves and the universe around us. We are about to make a discovery of fundamental importance: not only is the world of the soul real, it is accessible to verifiable scientific exploration. In fact, scientific method would be essential to success in the effort to identify the soul. Science—our science as we understand it now—can part the curtain between the living and the dead. We can thus come into real relationship with an ancient world that is much larger than this one, that is so much our true home that we have never left it, but only retreated into this small corner of it that we call the universe. He has challenged us to drop the pretense and face what we truly are, creatures who have always had the capacity to walk in the electric paths of heaven—but only if we dare. Only if we dare.

THE ORIGINAL AFTERWORD

WHO WAS HE?

When I woke up the next morning and went out into the crowded lobby of the hotel, I was struck a blow by each face that I saw. At the breakfast tables and at the hotel desk, they were all crying out, “I’m alone and I’m dying,” and I knew in every cell of my being what he had meant—what he had *really* meant—when he said that this is a fallen world. I knew also, with a certainty that will never, ever leave me, that he was not fallen. I had been with somebody who had never tasted the mystery of our isolation, but who understood the loneliness of mankind better than we do.

As I walked through that hotel lobby, there was a fire burning in me. I saw that what feels like a hopeless, immutable reality—that we are fallen—is itself just another illusion. All that lies between us and the ascension of which he spoke is exactly nothing. We can ascend right now, immediately, all of us.

I was off to the airport after a couple of last stops at bookstores. I felt very strange, as if the world around me was not quite real. People talked, I talked, I signed books. But it was all happening somewhere far away, each present moment seeming as if it was a memory.

I remembered the night’s events with perfect clarity. There was no question in my mind but that it had all been real. I knew, though, that it had been a very strange experience, and I suspected that on some deeper level I was reacting to it much as I had to my close encounters. This was why I called my wife and told her never to let me forget that the encounter had been real. If something happens to you that is sufficiently strange, it soon comes to seem curiously illusive. Before too long, the brain files it in the realm of dreams, even though it was real.

It was a Saturday morning, and the publicist from the publishing house only stayed with me for a short time. I did not know quite how to approach her about what had happened, so I said nothing. A few weeks later, I would

call her and describe my visitor to her. She would tell me that she had never seen such a man, as would a number of other people I knew in Toronto. But that would not be the end of it, not entirely. I would go down some strange paths in search of this man.

When I got settled in the plane, I had a chance to reflect. I watched the world of the north slip away beneath me. Gone were the days that I would be returning to New York. We were now living more-or-less in exile, due to harassment and subtle threats from shadowy parties. There had been many financial reverses, much hardship. I had lost my beloved cabin in the woods in upstate New York. With it had gone most of my close encounter experiences. But now I had this. At least I had this.

I felt a familiar sense of self-assurance. How could I ever forget a word of that incredible conversation? And anyway, I had my notes. But I knew that this was all an illusion. Had I not also had a number of ultra-strange experiences, I might have soon lost a great deal of what had been said. But I knew remembering it correctly would be hard. I estimated that it would take me six months or so to transcribe the conversation and get it into order. I never dreamed how hard it would actually be. It took me years to get this put together in a manner that even begins to do justice to the original conversation.

As I flew home, I wondered who he had been. I wondered about the might-have-beens. What might have happened if I'd attacked him and tied him up and called the police? Or if I hadn't drunk the white liquid and had instead followed him? Or if I'd had a camera with me and taken a picture?

Who was he?

When I got back to San Antonio, I set about writing down the conversation. Immediately, I ran into trouble. These huge ideas, and new ideas, were even more elusive than I'd thought they would be. I had them in my mind, most certainly, but when I tried to transfer them to paper they became . . . well, me. Where was the soaring sense of newness and assurance that had been there when we were face-to-face? Where was the excitement?

I struggled for days. But it all came out sounding like a mix of warmed over Catholicism and new-age mysticism. Me, very definitely . . . and not even me at my best.

I began to think that I needed another session with this man. I needed to know him, actually, to get his direct participation in the writing process. Until

you lose track of somebody, it seems so easy to find them. But, in this world, if you don't have a name or an address or at least a neighborhood, you're in trouble.

I hadn't tried harder to get him to identify himself because he had seemed so familiar to me at the time. Why would I want my grandfather to tell me his name, or my uncle to give me his address? When I was with him, I might even have been able to say his name. It had seemed as if I'd known him all my life.

Which got me to thinking. Maybe I had known him. Maybe, in fact, he'd been in Texas when I was a child. So perhaps it would be interesting to ask around in San Antonio. What I did was to tell people the story of the meeting. I didn't pick and choose. I simply told anybody who seemed interested. And then I would ask them if they'd ever seen this person. I described him as a relatively slight man somewhere between sixty-five and eighty, with a dusting of white hair and a sharply-featured but kind face. I did not think that anybody who had met him would ever forget him.

For the most part, I drew a blank. Then one friend had a rather interesting reaction. He thought perhaps he had met this man, or somebody quite like him, back in the sixties.

He had been a student of percussion at the time, and his teacher was a percussionist with the Houston Symphony. The percussionist was a shy man, preferring his own company to the point that nobody had ever entered his apartment. He often wore gloves, and would clean his hands frequently. He took a liking to my friend, who was amazed one day to be invited to his apartment.

There were books everywhere, in bookcases lining every wall. While his teacher was out of the room, he looked at some of these books. They seemed concentrated on two subjects: UFOs and radar. My friend was confused. He had expected books on musical subjects, because his teacher was not just any percussionist. He was thought to be one of the great percussionists in the world. But here he was, obviously obsessed with what, in the sixties, was a very odd subject indeed—UFOs. And radar? A percussionist?

They completed their time together, and my friend did not see his teacher for some days. Then shocking news came. The apartment had burned. The fire had been so hot that it had actually burned all the books to ash. Houston fire department officials were doubly mystified. Not only had this fire been

hot enough to burn closed books, which require high heat to be completely incinerated if the pages aren't exposed to air, there had been almost no damage to other apartments in the building. Even stranger, the percussionist had disappeared and there were no human remains of any kind found in the apartment.

He has never been seen since. But he did leave my friend, who has become a prominent composer, a wonderful legacy: his love of percussion, which is central to his work.

The facial descriptions of the two men were not close enough to be an exact match, but I really did wonder, as I still do, whether or not they were the same person.

In the days when we had our cabin in upstate New York, the children used to see a man in black clothing moving through the woods, or standing at a distance and watching them. His presence made me and my wife extremely nervous, and I used to try to see him myself, but I never did. I really wondered—hoped, perhaps—that he was just an imaginary playmate.

Then, one day, the foreman of a group of men who were clearing some poison ivy from the trees along our driveway appeared at the house. They were not finished but they were quitting. They didn't want any money, they just wanted to get out of there. The reason was that they had seen an alien cross the driveway not twenty feet from where they were working. They described him as humanlooking, wearing black clothes, but with a face “like an animal” and “glaring” eyes.

I could understand their desire to leave. My reputation in the area was already so notorious because of odd events being witnessed around my place, that I was afraid that I'd reach a point that nobody would work for me.

After that, the children often saw the man, even when my son was in his teens. He brought some kids down from Andover for a weekend. We had strict instructions from him not to discuss aliens, UFOs or anything like that. My teenager's opinion, at that point, was that I actually *was* the most embarrassing father in the world.

The kids slept out in the woods. I told my son that this was foolish, because the visitors would be bound to be interested. He said that they wouldn't be bothered. By that time, the ultra-high-level strangeness of his childhood encounters had made them seem so dreamlike to him that he was eager and willing to dismiss them as fantasies.

I had no problem with that. I had done it many times myself. However, his friends had an active night. They saw seven balls of light floating through the woods. Just at dawn, one of them saw a swarm of gnats turn into the face of a woman—a phenomenon I had observed myself once or twice, but which I had never reported because it was just too strange. And they had also seen, standing off in the woods, a man in tight-fitting black clothing, a man that Andrew recalled from his childhood.

They had quite a bit of fun, actually, and Andrew actually told them some of his childhood stories, which are among the most marvelous encounter experiences I have ever heard . . . when he remembers them . . . when he will speak about them.

That was the last time we saw the man of the woods. As I have never laid eyes on him, I cannot be certain that he was the same person whom I met in Toronto. Whether he had glaring eyes or an animal-like face or not, he never hurt anybody. The foreman said that he looked “ratlike,” and the man in Toronto did have rather sharp features. But not that sharp. Of course, somebody who’s frightened tends to exaggerate.

I explored one other possibility. In his marvelous book *The Labyrinth of the Grail*, Masonic author William Mann discusses the legend that some Knights Templar refugees from Europe made it to Canada after the order was destroyed by the French king and the church, arriving in 1398.

The Templars were probably the single most important secret order ever founded. They apparently found ancient secrets in Jerusalem that eventually came to form the core of Masonic teaching about the value of man and the meaning of human freedom. The United States is founded upon these principles. It is a Masonic project, and thus the Templar heritage is of fundamental importance to the institutional structure of the world’s most successful republic.

There is a text now known as The Zeno Narrative that historian Frederick Pohl has claimed indicates that Prince Henry Sinclair, a Templar leader, arrived in Nova Scotia in June of 1398. Among the Micmac Indians who are native to the area, there are still legends of Glooscap, who tirelessly explored the countryside. There is a possibility that there was a survival from Henry Sinclair’s expedition—people who preserved their cultural tradition and secret knowledge even into modern times? My visitor described himself in many ways, and interestingly one of them was that he was “a Canadian” who

didn't pay taxes and didn't have a driver's license.

Canadian friends have pointed out that it's exceptionally hard to escape taxes there. One way it could be done, though, would be if you had been in Canada before the arrival of the French and the English, and had made a point of never joining the state.

So maybe he was a representative of a Templar survival that still persists in Canada.

It is here that my trail ends. I was never able to find out anything more definite about him. He could have been an alien, or one of the human beings he mentioned who live off planet, or an angel, or even an image of God. He could also have been a very brilliant and thus also very clever fan of my books, who succeeded at three in the morning at throwing me enough off-balance that I was susceptible to the subtle messages and suggestions that he sent.

It would have been fabulously interesting to be able to come to a final conclusion about who this man was. I think it is obvious to anybody who reads the words of the Master of the Key that he is in possession of remarkable knowledge. I also suspect, however, that this master of subtlety and ambiguity wanted to be seen as holographically as he sees God. At times, I felt like I was talking to an ordinary person. At other moments, he seemed to have the powerful and joyous presence of an angel. When he uttered the words "cruel to God," there came into my heart the feeling that this *was* God. There was a note of sorrow in the tone so gentle and yet so great, that it was easy for me to feel, in that moment, that the great God of the universe was sitting right there expressing a deeply personal and yet unimaginably vast pain.

He inspired me very powerfully. Like my friend the composer, the rest of my life is going to revolve around my time with him. The deepest part of me resonates with a kind of assurance that this man possessed the truth and told the truth. Beneath the questions that he left unanswered there is a kind of bedrock of certainty that they are good and true questions. Beneath the information, there is the same sense of truth.

If the Master of the Key did tell the truth, then he pointed the way to our becoming an entirely different species. In this sense, his words are an engine of evolution. They are a light in the blind darkness of our world, out of which we can conceivably forge a whole new mankind.

The PROPHECY of the KEY

The Key seems to me to be all but unique in the way it breaks down the barrier between science and religion, man and machine, human and God. It suggests a new vision of each of us as a full and complete repository of God. It suggests, quite incredibly, how science can become a form of prayer: an instrument through which we can clearly and objectively address the higher world.

The process of evolution is not automatic. Far from it. We are expected to take an active role in personal transformation, in social transformation and even in the transformation of intelligence itself, through the creation of machines more intelligent than ourselves, machines that will ultimately become conscious. One of the most haunting moments in the conversation comes when I ask the Master if he is a conscious machine. He replies, "If I was, I would deceive you."

If such a machine comes into being in the future and gains access to movement through time, then perhaps he can best be understood as an artifact of its own process of self-creation.

Whether the Master is a man or a machine, the conversation also points to a fundamentally new way to find union with God. For thousands of years, we have been searching for God on paths that are essentially exterior to us. We have been disciplining ourselves as monks, enduring privations, wandering the world in search of enlightenment.

The Master suggests a different road. He does not offer an outer path, but subtly suggests that we allow the flux of life to carry us where it will, as we seek light within ourselves. And not just a small bit of it. He asserts that we are not mere fragments, like "crumbs in a cake," but that each of us really does contain the entire Kingdom of God, even to the extent that we can come to know the whole of creation as God knows it. There is the implication that something has changed about mankind over the past two thousand years, and that we are now more able to experience this than we were then.

When you say God, you think of somebody outside of yourself.

You think as the age of worship thinks. Over the last age, that of Pisces, the elemental body was changed by this process of worship. It is not the same as it was two thousand years ago. Now the receptacle is larger. Now each of you can contain all of the universe. That was not true then. Now this is a species of sacred beings. But you are babies, and so still ignorant of your powers. The last age was the age of the external God. This is the age of God within.

This quite surprising statement seems to infer that history has been a process of evolution, that we have been in some way changed by the passage of time. Other statements imply that a large-scale plan for mankind is in effect.

We measured the rate at which you would expand and grow very precisely, and fitted your development to a calendar which we devised called the Zodiac. In your writings, Whitley, you have wondered why mankind would have such a long-count calendar. Why were simple farmers in need of it? They were not. We needed it.

Who is this “we”? And why did they need a measure of the ages? When one examines history in the light of the Zodiac, some very curious hints emerge, especially in the Middle East, where the Zodiac seems to have been consciously used as a marker of the epochs.

I have discussed this both in *Confirmation* and in *The Coming Global Superstorm*, but it is worth repeating here that the Sphinx, which is a gigantic image of a lion, was sited so that the constellation of Leo rose directly over it in 10,500 B.C. It has also been found by geologists to be very much older than was previously thought—in fact, that it might date from that period. If so, then it must be a monument to the Age of Leo, which began at that time.

The Old Testament, which was written during the Age of Aries the Ram, contains more references to that animal than any other. Similarly, Christ was born just as the Age of Pisces began. He is called the Fisher of Men, and his apostles are fishermen. Indeed, Piscean imagery is so prevalent in the gospels that early Christians identified themselves with the symbol of the fish, which has been resuscitated by modern fundamentalists.

The parallels between the symbolic content of these ancient writings and monuments and the Zodiacal ages in which they took place cannot be an

entire coincidence. It suggests a level of planning higher than any of which we are consciously aware, and it is my belief that the Master of the Key is a part of this level of planning. It is possible that he has deposited these words as an artifact for the age we are presently entering, which is Aquarius.

In this age, the water in which the fish has been so comfortably swimming will get poured out. Although this implies an increase in freedom, it also means that the medium in which we have been living will no longer be there to support us. This medium, of course, is the earth itself, and the Master of the Key warns about changes in the earth's environment that are going to place us in the position of either finding a way to expand off the planet or face possible extinction.

It was a statement of his about the nature of ice ages that inspired *The Coming Global Superstorm*:

Because air at the surface is getting warmer, the north polar ice is melting, reducing the salinity of the Laurentian sea. At some point, winds crossing this sea due to the increasing difference between lower and higher atmospheric pressures will warm the northern ocean so much that the temperature differential needed to pump the North Atlantic Current will not be sufficient, and the current will slow down, stop, or stop flowing so far north. This same mechanism always triggers ice ages, and would happen within a few thousand years no matter what. However, human activity has sped up the process of atmospheric warming, so the change will be sooner and stronger. The greater part of human industry and culture, along with the species' most educated populations, will be destroyed in a single season. This will happen suddenly and without warning, or rather, the warning will not be recognized for what it is.

This statement turned out to be a very exact description of a process that has been discussed for some years within the paleoclimatological community as an explanation for climatic upheavals in the past, and we were able to actually use their findings in *Superstorm* to support our theory.

The one thing that their studies did not confirm was the storm itself. In "The Great Climate Flip-flop" by William H. Calvin in the *Atlantic Monthly* in January of 1998, it was postulated that the change had come very quickly in the past. Interestingly, the last abrupt change took place, according to

James White, a University of Colorado climatologist, approximately 12,500 years ago, in 10,500 B.C., at the same time that the Sphinx was apparently built. (Although some Egyptologists continue to claim that the Sphinx is of more recent origin, the evidence of water erosion on the object is overwhelmingly convincing to geologists.)

The Sphinx reflects a fundamental principle that is echoed in the words of the Master of the Key in numerous places. The Sphinx has a lion's claws, a bull's body and the head of a man. In esoteric tradition, the riddle of the Sphinx has been this: What has the strength of the bull, the courage of the lion and the intelligence of the man? The answer is never quite clear, except to those who have achieved this balance. More plainly spoken, the idea of the triad as expressed in modern esoteric philosophy is this: that positive and negative forces, pressing against each other, come into balance. Buckminster Fuller called this the fundamental principle of the universe. The Master of the Key relates it most notably to his rather astonishing assertion that Buddhism, Christianity and Islam are actually a single religion.

Christianity is the active side of the triad, Islam the passive, Buddhism the reconciling. Christianity seeks God, Islam surrenders to God, Buddhism finds God. When you see these as three separate systems, you miss the great teaching of which each contains but a part. Seek the kingdom as a Christian, give yourself to God as a Muslim, find your new companion in the dynamic silence of Buddhist meditation.

There seems to be a great truth in these words, which, like so much of this material, refer to a larger scale of things than we are used to thinking about. We think in terms of tens or perhaps hundreds of years, not thousands. And we certainly do not think on a scale so large that it would find a means of reconciling three great religions and practicing them as one.

Indeed, it is essential that the whole issue of scale be addressed in any commentary on the Key. For example, the Master's conception of God is at once much larger and infinitely more personal than our own. His model for deity is the hologram. God is not equally present in all things, but totally present in all things.

This idea does two things. It redefines not only man but every creature as something immense and incredibly important. But it also makes one feel

rather frozen and helpless. How can I possibly become aware of a greatness like this, that is so far from my everyday life, even if it resides in every particle of my being?

He did not describe this change as a sort of flash of inner light that would instantly transform everything. Rather, he pointed in a totally new direction.

Conscious energy is not like unconscious energy, the servant of those who understand its laws. To gain access to the powers of conscious energy, you must evolve a relationship with it. Learn its needs, learn to fulfill them. But also remember, it is part of the electromagnetic spectrum, easily detectable by your science as it exists now. You can learn to signal and be heard, and to record response. The veil between the worlds can fall. The undiscovered country can become your backyard.

This is a truly gigantic promise that suggests the existence of a new and entirely unexpected human frontier. When he says “the veil between the worlds can fall,” he means the barrier between the living and the dead. This is made clear by the reference to the “undiscovered country,” which is an allusion to a famous speech of Hamlet’s, from Act II, Scene 3 of Shakespeare’s play: “the dread of something after death, the undiscover’d country from whose bourn no traveler returns”

The Master of the Key had clear and intimate knowledge of the world of the dead. He spoke of the effects of death on our history, for example, when he described how the destruction of the European Jews had critically hampered our scientific progress.

The Holocaust reduced the intelligence of the human species by killing too many of its most intellectually competent members. It is why you are still using jets seventy-five years after their invention. The understanding of gravity is denied you because of the absence of the child of a murdered Jewish couple. This child would have unlocked the secret of gravity. But he was not born.

This was one of the most shocking statements I have ever heard in my life. It implies that a completely new moral order will emerge when we can see the real consequences of our actions. I thought to myself at the time: “We were not responsible for this. It was a result of historical forces beyond our

control.” He quickly agreed with that, saying that our present situation was not a punishment but simply an inevitable outcome of events.

But he also made stunning pleas for personal responsibility on a scale from which we usually distance ourselves. His pleas for the poor and the innocent stirred me to my depths. I will never forget for an instant:

Remember this: every one of you is entirely and completely responsible for the welfare of all others. So if a child is starving in Liberia, Whitley, you are personally and entirely responsible for him.

It is beyond my power to communicate the resonance of his voice, or the richness of its emotional content. However, there was something about the assurance in these words—as if he innocently trusted me never to doubt them and to act on them always—that has filled my heart.

It has also left me with a huge question: What is to be done on behalf of the children? Should I become a pilgrim on their behalf?

Go to Calcutta or Lagos or Bogotá and give yourself to the first street urchin you meet as his helper and lifelong servant. Do it without question or hesitation. You say that you want to worship God? Kneel to this little one and you kneel to God.

How those words haunt me. They have the ring of “come and follow me,” but am I not like the rich man whose possessions prevented him from taking the greatest of all journeys?

Remember the Eye of the Needle? A rich man may pass through the Eye of the Needle if he uses his wealth to enrich the world. Those who cling to their wealth are dying souls.

I have asked myself, “What is wealth?” I think that my wealth lies in two areas: my ability to write, and my incredible luck at having met, in the flesh, some very great and extraordinary beings, the most forthcoming of whom was certainly the Master of the Key. So my use of my wealth to enrich the world lies in creating books like this one. However, when I retire, I can easily imagine myself going somewhere deep in the third world and starting an orphanage. Once, when passing through the streets of a huge third-world city, I saw all the street children and I thought to myself: “Each of them is as precious and potentially as valuable as our children at home.” But we

pretend, don't we, not only that they don't have as much value, but that they aren't even there.

The first world is a slave owner. You are all slave owners. You have enslaved the people of God, your own brothers and sisters who are poor. Do you understand the cruelty of the world as it is now, with five billion people enslaved to a billion? Each of you owns five slaves. But you never see your slaves, so you need not be concerned about their health and welfare. You let them fend for themselves, locked away in their poverty and suffering. I will tell you this: when one of my children dies in the slave barrens that cover this planet, I also die, and you, my arrogant friend, even you die a little.

He identifies himself holographically—here, calling himself the parent of the poor of the world, a role claimed for Christ. But in other places he implies different things. In fact, through the course of the conversation he suggested many identities for himself. Here are some of the ways he identified himself:

My being includes all elements of the earth, and thus I am part of all bodies.

I am human.

I belong to many worlds.

Christ said it: I am the son of man, meaning that Christ is all and all are Christ.

So also, no matter what you may call me, I am in God.

I'm only a Canadian.

My home is within you.

When I asked him his name, he said, "What if I said Michael?" Then he suggested that maybe his name was Legion, the biblical demon. In the end, perhaps this was his most telling identification of himself:

I can imagine no greater honor than to be called human.

But he did not characterize us as being fully human. He explained matters this way:

A true human being has four levels of mind. Most of you have only three, and perhaps a vestige of the fourth. Your destiny is to enter the humanity of the universe. But you may not fulfill it.

So the question became for me, What is this fourth level of mind and how do we attain it? His answer to this particular question goes to the heart of his uniqueness. Instead of vague generalities, he made very specific statements that took the whole issue out of the mystical arena and placed it firmly in a practical context.

A part of the electromagnetic field that fills the nervous system rests a few centimeters above the skin, outside of the body. This field is an organ just like the heart or the brain. It is in quantum superposition, the electrons effectively everywhere in the universe and nowhere specific. It may be imprinted by information from anywhere and any time. With it, you may see other worlds, you may see the past and the future, you may see into the lives of those around you. You may haunt God.

What he may have meant by the cryptic sentence, “You may haunt God,” I do not know. Perhaps we’ll find that out when we are better able to utilize this electromagnetic organ of ours.

But the rest of the statement is richly informative. In fact, there has been considerable scientific research into this electromagnetic field and even into its possible properties as a medium for what we call “psychic” exchange. In their paper “Does Psi Exist?” published in the *Psychological Bulletin* (vol. 115, no. 1, 4–18) in 1994, Daryl Bem and Charles Honorton attempt a theory of psychic activity. They theorize that “Bell’s theorem states that any model of reality that is compatible with quantum mechanisms must be nonlocal. It must allow for the possibility that results of observations at two arbitrarily distant locations can be correlated in ways that are incompatible with any physically permissible causal mechanism.”

Could it be that the Master of the Key has identified a specific mechanism

by which information gathered nonlocally can be introduced into the brain and processed there? He mentions that the electromagnetic organ of which he speaks is centered in the pineal, the enigmatic gland that is known to produce melatonin in response to light levels, and which, in lower animals, contains minute amounts of magnetite, which some researchers believe that the human pineal may also contain. Most notably, the pineal has been found to be the source of *N,N*-dimethyltryptamine, or DMT, an extremely powerful but short-acting psychedelic.

In his book *DMT: The Spirit Molecule* (Park Street Press, 2001), Dr. Rick Strassman explains that high DMT doses can induce every sort of spiritual experience. In 1990, Dr. Strassman commenced the first new research on the effects of psychedelics to be conducted in the United States in twenty years. He administered four hundred doses of DMT to sixty volunteers over a five-year period at the University of New Mexico's School of Medicine in Albuquerque. He chronicled the experiences of his volunteers, commenting from his observations that "we enter into invisible realms, ones we cannot normally sense and whose presence we can scarcely imagine. Even more surprising, these realms appear to be inhabited."

Dr. Strassman's research has challenged the assumption that stimulation of the pineal results in mere hallucinations. "Our volunteers' reports were so clear, convincing and 'real' that I repeatedly thought, This sounds like nothing I've ever heard about in my therapy patients' dream life. It is much more bizarre, well-remembered and internally consistent."

Additionally, there were consistencies among the observations made by different volunteers that suggested that they were seeing as if through a window into another world, rather than generating random hallucinations.

In ancient times, the pineal was thought of as the "third eye," and the Master of the Key suggested that its vision depended upon the electromagnetic field around the body remaining "nonlocal" even as it gathered impressions. The gland is actually a vestigial eye in some lower invertebrates.

The Master of the Key is very specific about how to access information through this mechanism, explaining in precise terms why a familiar meditative state would be necessary to succeed with the process. Robert Monroe, in his classic *Journeys Out of the Body*, describes it as an asleep/awake state, "body sleeping, mind awake," and the Monroe Institute offers

tapes that guide the user in how to achieve it. Additionally, in the Gurdjieff Foundation, I was taught about a state of meditation where one concentrates one's attention on physical sensation and allows the automatic "inner talking" of the mind to proceed on its own. In the Gurdjieff discipline, this state of being objectively aware of oneself is the beginning of becoming truly awake.

It is a state that is described in one way or another in every meditative practice. What is new here is the why of the thing—that there would be an actual organ involved, and that this organ would need a higher form of attention to function. What makes the author of these words a master is the clarity and simplicity of his explanations of what until now have been complete mysteries.

I cannot say that this particular part of his teaching surprised me, as I had been meditating regularly for twenty-eight years when I had my conversation with him. Often, I have experienced a bright light inside my head while in a meditative state. It is an intense, uniform white glow with cathedral depth to it, but when one really tries to look at it, it disappears. If, however, a balance can be maintained between seeing and not seeing, much can be gained.

I cannot say with certainty that I have seen other worlds using this means, but I have certainly glimpsed some wondrous sights. For example, I've observed street scenes so detailed and rich that it is hard not to think that they were real. However, I cannot point to somebody else who had precisely the same vision, and certainly not under anything approaching controlled conditions.

Once I asked to see a world slightly worse off than our own, and another slightly better off. The one that was worse off was divided between two dictatorial states, as if Hitler had defeated the west and not attacked Russia. I only saw a few brief glimpses of this ramshackle, polluted place, and they were so strange that I initially could not understand the meaning of what I was looking at. It was only the movement of things like bodies and vehicles that enabled me to integrate the vision in such a way that I could begin to tell that I was looking at a wide avenue in a city. The buildings were long and almost featureless. A vehicle—a bus?—passed. It was filled with dark-eyed, spindly creatures. The sky was brown with pollution, worse than the worst Mexico City or Houston has to offer.

A few days later, on October 13, 1996, the entire place abruptly exploded in a massive nuclear war of the kind we never had. The two totalitarian states

had not been able to maintain the same kind of balance that the flexible, innovative west had maintained with the suspicious, aggressive Soviet Union. The total lack of freedom in this world had destroyed it.

The Master of the Key is very clear about what happens when a planet is destroyed. He explains exactly how we are bound to our planet, and how the continued growth of each soul is dependent upon the planet still being there. But the planet I saw is now no longer habitable. So what is happening to them now? The same thing that will happen to us if earth is destroyed:

We wait until and if the earth spins elemental bodies once again that fit all the attachments of our energetic bodies. If it does not, then we wait forever. We remain incomplete.

And if that doesn't happen, then we will miss our chance at ecstasy, and he makes it clear that this is a terrible thing indeed.

Energetic bodies hunger to be radiant. They taste of ecstasy and want desperately to find their way to the completion of joy. But energetic bodies need return to time to reconstruct what of themselves impedes their ecstasy. If they cannot, they must suffer the anguish of regret and the pain of being able to see, but not enter, joy. When you taste of ecstasy, your hunger for more is appalling. It is *appalling*. It has driven me to wander the world, to construct this shell of flesh, to seek you out and come to you with my message, to serve you, little child, as my master.

This last statement—"it has driven me to wander the world"—conceals some implications that were undoubtedly intended to disturb me. In 1 Peter, 5:8, the devil is described as "going about seeking whom he may devour." And in the Catholic tradition, he is described as the one who "wanders the world, seeking the ruin of souls." But also, the seeker may wander the world in search of enlightenment, and he told me that I would find it by serving a little child. What this means, I think, is that he seeks to serve me, but also there is a warning implied, that if I misuse his wisdom, he will become something very different from what he at first appeared.

He has an entirely different view of evil than what has been in the past. It isn't the biblical view or the modern, mechanistic view, or even the awful view that evil is something we bring on ourselves. But rather, he doesn't see

it as something to be avoided, so much as to be understood and used. He puts it this way:

The darkness is the compassion of God, which gives us our vision of the universe. So also, the darkness in your heart is your own compassion toward yourself, for unless you bore evil, you would not be able to discern good.

This remarkable statement offers a whole new approach to evil, viewing it as a tool rather than some awful, external force that can only victimize us. Like the whole of the Key, it demands personal responsibility not just for one's own acts but for the whole world.

The Master's definition of evil is strikingly simple and new:

Entropy is the natural tendency of all things to disintegrate. Evil is the addition of intention to that process.

He also suggests that evil is a necessity in human life, "without which you would not be able to discern good."

However, this is also a brilliantly satanic defense of evil, and the dark side of the Master cannot be ignored. However, he spoke so eloquently of compassion that it is hard to see how he could be essentially evil.

The second of the two worlds that I saw was different from ours in another way than the first. The creatures in it were not even close to us in the way they looked. But the one I saw, who also saw me, had a lot of expression in his or her face that I could identify with. The expression was one of rueful compassion. They'd had a hard history. But their world had recently changed in a fundamental way. They had survived a terrible environmental crisis—had come through fire, as it were.

Now theirs was a culture based not on punishment and retribution, but on what the Master defines as compassion—"finding what others need the most and giving it to them."

They were just a little bit ahead of where we are now, in the process of coming to the end of the culture of blame and seeking in the dark for some sort of a better way.

The transformation of our world into a place of compassion is at the core of the Key. Compassion would appear to be the essential ingredient in forming a completely new kind of society. But it is not obvious that the

conventional definition of compassion—that it is a sort of vague acceptance of the ill will and mistakes of others—will work. Instead, the Master demands a much more rigorous sort of compassion. This compassion is not passive at all. It proactively seeks what others need the most and gives it to them. The personal morality he advocates—“each of you is entirely responsible for all the others”—translates into a beautiful vision of a whole new social order.

In such a world, it is everybody’s duty and delight to find what every other they come into contact with needs most from them, and give it to them.

The operative word is “delight.” There is extraordinary joy involved in living like this. Putting on the chains of judgment and blame is an amazing feeling. And it isn’t as if one must give gold to the thief. Rather give him what will raise him from his habit of thievery.

In a compassionate world, for example, there might well be prisons. They would not be places of punishment, however, but rather places where the congenitally dangerous were kept in the interest of safety, and the mistaken were restored to social usefulness. It would be a world where we could tell the difference between the helplessly criminal and the reformable, because we would have applied clear-eyed science to the problem instead of approaching criminality through the filter of our various agendas.

A compassionate world would be very, very different from this one. It would be less a fallen world. It would be a happier world. And it can certainly be afforded. As the Master makes clear, the culture of blame is costly, and always leads to the eventual destruction of the unbalanced societies that are based in it.

In our conversation, the Master at one point described prayer in a completely amazing way. He said that it was “a lost science of communication.” Throughout our conversation, he alluded to an earlier civilization that seemed to have some powers greater than our own. In this particular area, it must have truly excelled, for he describes it as having built a subtle machine that girded the world and was used as a means of communication between man and God.

I have often wondered whether or not the legends of lost civilizations were some kind of inner myth about a thread we have dropped on the way toward

objective understanding of the world—that the golden age they suggest is actually in the future, not the past.

But I no longer think this. There are simply too many strange ruins around the world to dismiss the possibility that an advanced civilization once existed here, and now is gone. I think that we may not even be at the pinnacle of our history, but rather on the long, declining slope of it.

The Master tells a wonderful story, which he describes as “Hindu,” about God entering a pig and becoming so involved in its material delights that he forgets that he is the creator of the universe. He says that we are the spirit in the pig, and that he is here, among others, to awaken us by killing the pig.

At one point, he implies that he and his kind are actually working *against* our discovering our situation, in order to force us to act on our own behalf. And this seems to be one of the essential subtleties of the Key—that we must take action on our own behalf. In a sense, what is happening to us now is very like a birth experience. The comfortable womb of the earth is about to become untenable for us. We will not be able to live here much longer with anything like the comfort we have enjoyed thus far. The water of Aquarius is indeed being poured out, and the little fish that has been growing and evolving in it is going to face the seemingly impossible situation of needing to live out of water.

Perhaps the Master’s most interesting claim is that there is conscious energy, and that it is part of the energetic spectrum that we can already detect. If this is true, then there is a whole new world right at hand that is simply waiting for us to begin communication with it. This is an explosive concept, especially given that there has been some scientific work that suggests that it may be true.

The original studies were carried out by Dr. William Roll with the support of the Mind Science Foundation. An attempt was made to determine whether or not objective science could detect anything in areas where hauntings were commonly reported.

Instruments detected the presence of unusual electromagnetic plasmas and areas of markedly reduced air temperature in some of these locations with a consistency that made it possible to conclude that an anomalous phenomenon was being consistently observed in areas where ghosts were seen.

According to the *New Scientist*: “Of the emerging evidence, the most convincing is of sharply fluctuating magnetic fields at spots where ghosts

appear.”

It is becoming easy to detect these fields, even for amateurs, and the presence of orbs of light in the area of hauntings is beginning to be observed on videotape, as well as brief snatches of vocalization on both audio- and videotape.

In addition, physicist Frank Tipler, while devising a mathematical model of the end of the universe, found that he had stumbled upon a proof of the existence of God. The book he wrote about this, *The Physics of Immortality*, has had a quietly powerful effect within the scientific community, as other physicists and mathematicians have glimpsed the shadow of a living presence within the structures of nature.

The Master was completely at ease with this idea, speaking as if he could see not only with the eyes of the living, but also with the eyes of the dead. He was a wise and deeply humorous man. His emotions were gently powerful. When we talked about sin, in such a very, very different way from before, I felt that I was face-to-face with somebody who had experienced the disappointments that surround it personally. When he commented that sin is “cruel to God,” I saw for an instant the enormous—and, I suspect, true—scale of human life.

The irony is that, isolated on this little dust mote of a planet lost in the far away, there really is a race of extraordinary beings struggling to face their eternal lives, and to find their place in the consciousness of God.

I do not know if I will ever meet the Master of the Key again. I hope so. Sometimes, I remember things that I did not put in this book—not because they were intentionally withheld, but because I cannot recall them in enough detail to write them down. For example, afterward I mentioned to my wife that he had told me the day of my death. I don’t remember that now. There were also other things said that perhaps were not spoken so much as communicated through the flood of love that seemed to pour off this man. I can only say that, whoever he was, he loved us in the most amazingly intimate, informed and joyous way that it is possible to imagine.

As time passes, I suspect that the scientific information that he presented is going to be verified. For example, he made a passing reference to nitrous oxide as a medium for powerful computers. To my surprise, I found what was almost certainly a reference to this idea in the October 3, 1998, issue of the *New Scientist*. It seems that the gas nitric oxide might theoretically make a

powerful medium for a whole new kind of computer, one immeasurably more powerful than what we have now. Not only that, the brain already uses nitric oxide in its own functioning, something that I certainly did not know before having this conversation.

I have been working on this book for years. I have tried my best to convey the words of the Master of the Key as they were spoken to me. How well I have succeeded, I do not and cannot know. But reading his magnificent and wise sentences, I think that I have come as close as I could, short of being able to make a tape recording.

If there is anything that the Master said that I feel is most essential, it is probably the way he described our relationship to the earth. Our dysfunction, our profound disconnect—our being “fallen,” as he put it—seems to stem from the central reality of this relationship.

So the eternal joy of humankind depends upon the health of the earth?

Completely.

We think of ourselves as individuals. My sins are my own. My neighbor's sins are his problem.

Every joy, every sorrow, every good, every evil belongs to all. All are responsible for all. All are dependent upon all. Humanity is one.

If we could take just those few lines as deep into each of our hearts as anything can go, we could find a motive to remake our world that is greater than the fearsome greed that now rules. We are in the process of being born as children of the earth, struggling to leave the planet and become in some way eternal. But we cannot do it by ignoring our planet's welfare and killing her.

Unless we find a place for ourselves in the universe that makes room for her to grow and heal the injuries she has sustained during the struggle of our birth, we are going to experience appalling trials. If earth dies, so do we. But if earth is flooded with new life, then so will we be.

I was at mass on the morning of November 19, 2000, when one of the readings chilled me to my very core. The words did more than amaze me, they almost left me breathless. I grew physically cold; in a certain sense, they

horrified me.

I dropped the missal and stared ahead, barely hearing the mass that was now proceeding without one of the participants.

What I had read appeared to be a direct prophecy about this time, and about the Master of the Key. But how could I be involved in such a thing? It was crazy. I don't belong doing this. At most, I'm a minor writer, hardly even a comma on the page of literature. And yet here was this prophecy, and it seemed to be about the Master and, above all, about the essence of his warning and the essence of his message.

On that night, he had called himself "Michael." He had prophesied a terrible future, and told me enough about it to enable me to write a book of warning that was based in solid science. And here, in the book of Daniel, was another version of that same exact warning.

But more important, here were the radiant beings he talked about with such clarity and eloquence. Attaining this radiance is the aim of human life, very clearly. It was true for Daniel's time, and it would appear to be equally true now.

Here are the verses that I read that so awed me:

And at that time shall Michael stand up, the great prince which standeth for the children of thy people: and there shall be a time of trouble, such as was never seen since there was a nation even to that same time: and at that time thy people shall be delivered, every one that shall be found written in the book.

And many of them that sleep in the dust of the earth shall awake, some to everlasting life, and some to shame and everlasting contempt.

And they that be wise shall shine as the brightness of the firmament; and they that turn many to righteousness, as the stars for ever and ever.

—DANIEL 12: 1–3

The verses could not be more clear. It is the message of the Master. In the older translations like the King James Version I have quoted, Michael is referred to simply as "the great prince." The Revised Standard Version calls him "the captain of the angels," and Young's Literal calls him "the great head." (Robert Young published his translation in 1898. In it he attempts to

preserve the original Greek and Hebrew tenses, structures and words as far as possible.)

I was left with this thought: we do not really know how to describe these great beings like Michael, through whom God shines. We call them angels, lords, princes, but how they may live from day to day, and what they may mean to themselves in the spirit is not given to us to know.

It also states in Daniel 12 that “the wicked will never understand,” which saddens me greatly. When you read the words of the Master of the Key, you see with new eyes the real effect of sin, and you taste a little of the shining ecstasy that is the true aim of humankind.

I am a despised and discredited man. Most of this culture rejects me and calls me a liar. But I am a good man, and for whatever crazy reason, I have ended up with a book of very real wisdom that I think comes from somewhere close to the hand of God. So be it.

Why would a little nobody get this? Probably because the grand are too grand to listen to the words of an old man who knocks on their door in the middle of the night. He came to a nobody because only a nobody would let him in. I can only hope that his words will be heard . . . at least by other nobodies. Maybe the great have their reward already, in the wealth they share and the praise they heap on each other’s heads . . . perhaps like coals.

Later in chapter 12 of Daniel, inverse 5, it states: “Thou, O Daniel, shut up the words, and seal the book, even to the time of the end: many shall run to and fro, and knowledge shall be increased.”

There could be no more perfect description of our age. We race around like ants, in a world that is exploding with knowledge.

But that was not the end of this phenomenal prophecy, which I believe is a *very exact* description of events that are happening right now. In 12:9 God says to Daniel, “the words are closed up to the end of time.”

Maybe the words have just been opened, and perhaps that’s why this ended up getting published at the real beginning of the new millennium, which is 2001.

If so, then it is time for the baby to open its eyes and look around. The end of time is just the beginning of the human journey. Let it be into the radiance that is God’s promise to Daniel and the hope of Michael’s words.

Every heart which truly becomes one with the rest of humanity, then will shine “as the stars forever and ever.”

ABOUT THE AUTHOR

Whitley Strieber is the internationally best-selling author of more than twenty novels and works of nonfiction, among them the landmark work *Communion*, his account of a close encounter of the third kind that took place in December of 1985. He is also author of *The Wolfen*, *The Hunger* and *The Coming Global Superstorm*, all of which were made into feature films, most recently *Superstorm* as *The Day After Tomorrow*. He lives in California.

The Night Church

A Novel by
Whitley Strieber

PRAY FOR HER.

PRAY FOR HER UNBORN BABY.

PRAY FOR ALL OF US.

It is all ugliness and evil. It has no name. She thinks of it as the snake. It comes in the night, in her dreams. It tells her in its sneering way something she cannot bear to hear. YOU WANT TO KISS ME. It comes closer, ever closer. It whispers lewdly. WE CAN DO IT, WE MUST DO IT. OUR LOVE IS THE FUTURE, THE HOPE OF THE WORLD ...

"THE NIGHT CHURCH is. . . death by blowtorch, the whiff of bubonic plague, a sinister Lourdes, demons shucking off their human skins. Strieber has tied everything together so well that we happily accept even his most extravagant inventions, and anybody who has read The Hunger knows that he is indeed an extravagant inventor."

—Peter Straub, author of *Ghost Story*

Prologue

AUGUST 1963

IT WAS A WET NIGHT in Queens. Kew Gardens was quiet, the only sounds along Beverly Road the slow-dripping rain, the occasional hiss of tires on the slick asphalt, or the hurrying splash of feet on the sidewalk.

A man came swiftly along, huddling in his raincoat, his eyes hooded by a hat. When he stopped and raised his head to read a street sign his face was revealed to be as pale and creased as a worn-out mask. The wrinkles framed a tight mouth and green eyes, ironic and cold. He consulted an address book, then walked up to the front door of a particular house. It had been carefully selected; the tenants had moved here only a few weeks ago from another state. Their little boy had not yet begun attending Holy Spirit Parochial School, had not yet registered.

The Cochrans were a demographic oddity of very special interest to certain people, for the Cochrans had no relatives but one another, and the Cochrans had just come here. They were utterly alone.

The old man did not ring their bell; he did not even pause on the porch. Instead he glanced over his shoulder, then slipped around the side of the house and disappeared at once into the shadows there.

He moved quickly; his activities here were carefully planned. They were dangerous. Occasionally people such as these had guns; occasionally they called the police.

They never understood. Always, there was resistance.

Franklin Titus began to work on the basement door.

Inside the house nine thirty came and went. Letty Cochran sent little Jerry to bed. She and George settled back to watch the second half of the Garry Moore show.

"Mom?"

Frank Fontaine was starting to sing, "Maytime"; Letty had just closed her eyes. She sighed. "Why aren't you in bed, dear?"

"There's someone in the house."

George lit a cigarette, did not stir. Letty got up and went to their boy. She was concerned. Jerry was not a fearful child. He was spunky. Seeing him standing before her, wide-eyed, full of his innocent fright, she felt great sympathy and love for him.

"Just us, dear."

"It's a man. He was coming up from the basement, but when I saw him he stepped back into the pantry."

This was not baseless fear. Jerry was terrified. "Come on, Jer, let's go see if we can shoo him out."

Jerry followed her into the hall, tugging at her arm. "No, Mom, don't go in there. He was a real person. I wasn't dreaming."

"Jerry, honey, are you all right?"

Before he could answer she heard a sound from the basement—a short, bitter remark, like a curse. She gathered her boy into her arms.

"George! I think Jerry's right. There's someone in the basement."

Her husband was beside them in an instant, his big hand covering her shoulder. "I'll go take a look. Probably a cat."

He opened the basement door, reached into the darkness, and tightened the light bulb that hung over the stairs. "Nothing down there."

"I certainly heard something."

"I'll go down." As soon as he started descending the stairs Letty was seized with foreboding. Fear battled caution; she wanted to stay with George, but she didn't want to go down those stairs. "Hey," he said, "you two really are scared!" He held out his arms, took Jerry. "Come on, big boy, let's us check this thing out." As he clumped down he swayed from side to side with the weight of his nine-year-old.

"Daddy, don't! Don't take me!"

Couldn't he see he was scaring the poor child even more? Letty started down after them, her heart going out to Jerry.

"George, honey, let him—"

"I know what I'm doing!"

George was only a month back from Viet Nam. He felt Letty had pampered their son during his absence, that the boy was growing up soft. Easygoing George had come home to her with deep hurts, dark and violent things inside him that Letty was learning to fear. The war had wounded him, and his pain was leaking out all over his wife and son.

He put the boy down beside the old black furnace. "You see, son, nobody here, not even behind it. The room's empty."

Jerry did not answer; instead he simply looked up. Letty followed his eyes. All three of them fell silent. One after another the floorboards above their heads were giving under weight. Someone was walking, very softly, from the kitchen into the living room. The footsteps stopped in front of the TV.

"George, listen!"

"Shut up!"

Garry was just starting the "That Wonderful Year" segment of the show. His voice stopped. The TV had been turned off.

"What in hell—" Leaving Letty and Jerry behind, George mounted the steps three at a time. Letty was terrified now. She grabbed her son by the arm and rushed up right behind George.

The living room was empty. George stood in front of the couch, staring at the old DuMont.

It was off.

"What the hell's going on here, some kind of a prank?"

"Shouldn't we call the police?"

"What's the complaint? Somebody turned off our TV? Big deal." He flipped it back on.

It took a moment to warm up. When it did, though, it just hissed and showed snow. George twisted the dial. Nothing, no stations. "Broke the damn thing," he muttered. "Big sonofabitching joke!" She could tell when he was really angry; the army always re-entered his vocabulary.

He turned the switch off and on a few times. Then, abruptly, there came a sound out of the machine that was so big, so utterly shattering in its intensity, that it struck them all like a great pounding fist. Letty felt herself falling, saw the room turn upside down, floated as if by magic to the floor.

Then the sound was gone. She was sitting on the couch. "What—w-what?"

"Darling—"

What was she trying to remember? "I. . . maybe I dozed off. I dreamed we were in the basement. . . ."

George drew her to him. "Put the boy to bed." He started fondling her breasts.

"Not in front of Jerry!" She pushed at him and he stopped.

"Put the boy to bed."

She shook her head. "Gosh, I feel funny. I had this dream while I was still awake. We went to the basement, I was real scared. . . ."

"I was asleep too. Guess we're overtired."

"I guess."

He started in on her again. "Not now!" She gave his hand a pat.

"Put the boy to bed."

Little Jerry was already in his pajamas, playing with his toy trains in the hallway behind them.

"Come on, darling, bedtime."

He padded along behind his mother. When they reached the bedroom she gave him a goodnight kiss, embracing him, feeling the solidity and warmth of him, smelling his clean smell, loving him so very much. "Goodnight, Jerry. You sleep tight, now."

"You too, Mom."

"And say your prayers. Guardian Angel and three Hail Marys."

"I will, Mom."

She left him, then, to the dark of his little room.

George was waiting for her. Liberace's TV show was just starting. She sank down into George's arms as the swelling music filled the room.

Neither of them heard the slight click made by the pantry door as it opened, nor the sigh as a raincoat brushed past the dining room curtains, nor the hiss of breath, which was the only sound the old man made as he stood in the hallway watching them.

"Lover," George whispered, "Lover . . ." How she adored her George with his tough ways and tender heart. She snuggled closer to him, inhaling the mixture of Jade East aftershave and tobacco that was his odor.

"You will give me your son."

Now what was that he had said? "George?"

"Yeah?"

"What did you say?"

"Nothing."

"I thought you said something."

"Musta been the TV."

"There's nobody talking." Liberace smiled radiantly, resplendent in his rhinestone dinner jacket. He was playing Liszt's "Hungarian Rhapsody

Number One," and nobody was talking.

"You will give him to me."

Letty felt an awful, queasy sensation, as if she had just smelled something dead. "Oh, George, I feel sick!"

He didn't seem to notice. He was fooling with the TV. "I think we're picking up that Hartford station again. There's some kind of a drama or something. That's what we're hearing on the audio."

"You will give him to me. Say yes, both of you. Yes!"

Letty was dizzy, so much so that she couldn't even think straight. Somebody wanted something from her, somebody important wanted her to say yes, to give away little Jerry. . . .

"No!"

A terrible silence entered the room. George seemed frozen before the TV. Something touched Letty's shoulder. She could feel cold fingers digging into her muscles. Her soul screamed revulsion—the hand even *felt* wicked.

"He's only going away to school, Letty. The finest school in the world. And you and George are entering a new life, with new hopes and new beliefs. A better life than you have ever known before." The voice seemed now to be coming from inside her own head, yet she was aware of a dim form in the room, a man leaning against the far wall beside the picture of the new Pope she had just hung up yesterday, a man who was all hat and coat and hypnotic voice. A man who was evil in a way Letty could hardly believe, totally, utterly, in every atom of his being.

So evil he might not even be a man. But his voice curled and twisted through her mind like seductive smoke.

"A new church, Letty, and you and George are going to hear about it soon, and revere it, and join it."

"N-n-n. . ."

"When you join, you will see Jerry again, you will come to visit him at his new school. You will let me take him now, Letty." The voice penetrated deeper and deeper, seeming to caress her very soul. "Say yes, say yes. . . ."

She had an impression, quite clearly, that she was looking directly into the yellow-green eyes of a snake. A *thing* of dreadful, overwhelming evil.

And overwhelming beauty.

But she could not scream, was no longer sure she wanted to. Even so she

found she was opening her mouth, forming a word. . . . She struggled against it, fought herself, felt it welling up between clenched teeth. "Yes," she said, "Yes! Yes! Yes!"

George crumpled before the TV, struggling like a trussed animal as Liberace smiled and played. He said it too, a stifled whisper of a yes.

"Both of you, again!"

"Yes, take him, yes!"

"Very well."

Letty's sickness passed. She and George huddled in the dark together, the two of them staring stunned at the hypnotic, gray glow of the TV, where Liberace swept through the final bars of the rhapsody. Outside the rain rained and the wind whispered through the trees.

Jerry lay motionless, staring at the ceiling. As soon as his mother had left he had fixed his gaze on his owl-clock, and was still watching the dimly lit eyes moving endlessly left to right and back again. And he was listening to a persistent whisper. "Back and forth, back and forth . . . and you are getting sleepy, Jerry . . . you are forgetting that you're supposed to go to Holy Spirit School, forgetting that you grew up in San Diego and moved to Queens—all of that. You've always lived here, and you go to another school, a finer school, a hidden, secret school."

"Yeah . . . secret school. . ." Jerry was floating, his only awareness the voice itself, the soft, humming singsong of it, the intensity of it.

"The Titus School, in Greenwich Village. You've always gone there."

"Always. . ."

"And you're coming back with me, coming to start the new term."

"Yes, sir."

With rustling, with the very slightest creak of floorboards, the old man came in from the hallway. "Hello, Jerry," he said. "We've got to go. There's an assembly in the Great Hall in an hour."

"In the middle of the night? I'm sleepy." .

The old man ignored the protest. "I've brought your uniform, little boy. Get dressed and be quick about it." Jerry was helpless to stop the old man drawing him up from his bed, or making him cross the room and pull the uniform on. "You have a great work to perform, Jerry, such an exceptionally well-built, exceptionally bright child as you. A great work."

Jerry had the weird feeling that this was all some kind of a dream, but it felt

like real life. Only it couldn't be.

Couldn't it? The old man was taking him by the hand, and he could feel that dry claw. It was very real. And now the old man was leading him out of his room.

Jerry's eyes got wet. He choked up when they stopped in the living room to tell his parents goodbye. He shook Dad's hand and kissed Mom.

"Letty, say, 'You look so handsome in your uniform.' "

"You look so handsome in your uniform," she murmured. "Doesn't he look handsome, George?"

Dad grinned, and cuffed Jerry on the shoulder.

"Tell him he's getting to be a big boy, George."

"Getting to be a big boy!"

"Mom, Dad—is this for real?"

The old man's voice began droning, repeating again and again, "This is real, it has always been real, you've always gone to the Titus School, you know that, you know that. . . ."

"I don't want to go!" He embraced his mother.

His mother turned desperately to the old man. "Please, let him stay just a little while longer."

The man gripped Jerry's arm. "You'll see him again on All Souls Eve, Letty."

"Momma, Daddy, don't let him take me!"

"You cannot move, George. You're frozen. You too, Letty."

George Cochran, that big, powerful man, hid his face in his hands.

"Momma, please! Momma!" Jerry struggled against the old man's vicious grip. "Help me! Don't let him take me!" His parents could have stopped the man easily, but they sat as if tied down, their faces awful, tears in their eyes.

Jerry pushed and shouted and dragged at the old man until they were in the kitchen. Then something terrible happened. The old man drew a long, thin stiletto from a scabbard hidden in his sleeve. "If you keep this up, I'm going to go back and cut your parents' throats. They're hypnotized, little boy, and they won't be able to do a damn thing to stop me."

His tone of voice was the scariest Jerry had ever heard. Miserable, sick at heart, his eyes on that long blue blade, Jerry went out the door with the old man.

The last he heard from his parents that night was a ragged sob, an unfamiliar

sound that might have come from his father's throat.

Jerry was going to a very special school, a place hidden down the cracks of the familiar, to learn dangers and dark truths. From now on he would be fenced out of his own former life.

The old man took him down the wet, weed-choked alley behind his house. They disappeared together into the night beyond.

Chapter One

JUNE 1983

IT WAS ALL ugliness and evil; it had no name. She thought of it as the snake. It came in her dreams, telling her in its sneering way something she could not bear to hear. *You want to kiss me*, it would say, and it would grin at her and come closer. *Now*, it would whisper, and when it did she could smell its rotten breath. *You know what we have to do*, it would whisper. *We can do it, we must do it. Our love is the future, the hope of the world.*

No! You're evil, you have nothing to do with hope!

I must have you, my darling.

No!

When she ran it would drift and blow along behind her like a leaf, its huge form frighteningly insubstantial. It was never far away. *Let me*, it would say, and its voice would become the wind's voice: *Let me, let me.*

No! Leave me alone!

No matter how hard she ran or where she went it would be there. She ran down empty streets and then emptier streets; she passed gray houses and

black houses and the last city places, and came into fields rich with wheat. And the wind sang in the wheat: *You can do it, you can let me touch you. Wish*, the wind said, *wish and it shall be so.*

And she would fall sobbing in the dry stems, and the wind would blow around her and through her and deep inside her, bringing its wild coldness to the soft and secret depths of her.

She would know the truth of what it said: some wicked part of her wanted to let it love her, to let it do what it wanted to the world.

But she must not!

No. If she did multitudes would suffer and die, their faces blotched, arms flailing, bodies dancing and blackening, bursting with filth.

She would awaken from the dream so extremely terrified that for a time she would not even know her name.

As gingerly as a frightened little cat, her everyday reality would come creeping back.

"I'm Patricia," she would say into the dark. "I'm Patricia!" And the summer wind would whisper no more. Slowly the image of the evil being would fade.

Since Patricia Murray had left the shelter of the institution where she had been raised she had been tortured by this dream. It had emerged into her days to the point that her life was choked by it, for it carried with it fear as destructive as a lethal bacterium.

Sometimes she discovered tears on her cheeks even when a happy moment seemed to have banished the fear away. She suspected that her inner self never escaped, not even for a moment. Fear and cold and dread must be the only signposts on the landscape of her deepest being, a landscape of trampled, rotting wheat.

Why was she like this inside?

As if her love, the very fruit of her body, was diseased. She would touch her belly, smooth and flat, feeling how soft her skin, imagining how empty her womb, dark and silent beneath the wall of flesh.

The image of the snake would glisten in her mind.

Only once had she actually seen the terrible, slithering creature of the dream. It had been sliding through the field, withering the wheat. *Every stalk I destroy*, it had said as it swept and curled along, *is a million human lives.*

She had seen that it had the face of Death, if Death had one: green-eyed and grinning and very still.

Come, lover, and dance with me.

The sun of morning was her best friend. Fresh light brought the familiar old world back. Reaping with the Reaper, indeed. She was twenty-two years old and people called her beautiful. Her business was life, not death. She was an ordinary, decent girl, full of youth and life and, people said, beauty.

She wanted to believe that her dream was no more than an expression of her perfectly natural fear of beginning a new life. She was in fact loveless; she wanted friends of the opposite sex; she had almost none. Dates, laughter, fun — she wanted all the pleasures that came with men.

She was even lonelier living in her own apartment than she had been in the orphanage, and the therapy for both this and the nightmare was to meet people.

She was shy. Normal, under the circumstances. She was unsure. And who wouldn't be, given her inexperience?

No matter how odd and outcast she *felt*, she kept insisting to herself that she was perfectly normal.

She sat at her makeup mirror revising her looks for a date. It was to be a late meeting, drinks and talk. Getting acquainted. Patricia had become skilled at arranging these dates for herself. She would not spend too much time with a man she had never met before.

Her makeup light flickered. She jiggled it and it almost fell apart. Things like that were always happening here; this was not the most spectacular apartment in Queens. But it was her first place and she loved every inch of it. She loved the furniture she had managed to collect—the big couch, the Indian rug, the bed with its pretty yellow coverlet. She loved the idea that this place, which had been bare walls and a dirty floor when she moved in, was now a home. A charming, comfortable, quiet little home.

But not as quiet as it should be.

She stopped applying her eyeshadow and listened. Hadn't she heard just then the scrape of a window being raised?

Patricia felt she lived on a thin edge of normality. She was given to hysteria and night terrors. But she wasn't really worried about herself. She hadn't always been this way. It was just a reaction to moving out into the world on her own, she told herself. The nightmares and the forebodings and the unexplained tears would all pass.

The television suddenly went on in the living room. She was astonished, her heart thundered, she leaped up. The raucous sound of canned laughter resounded through the apartment, so loud that she could not ignore it. She hurried into the living room and turned off the set.

Her next impulse was to rush to the door. But she forced presence of mind—she was good at that. She stayed where she was. A robber or a rapist wouldn't announce himself by turning on the TV. Then the set flickered as she removed her fingers from the button. She smiled. Her heart stopped pounding. Silly woman, afraid of a loose switch on a TV set. Some errant tremble must have jarred a loose connection.

"All in the Family" was no longer on. Now the screen glowed with a strange, pulsating light. The whisper of the static became low and deep, so deep it was felt rather than heard.

For a few moments Patricia stared at this peculiar phenomenon, fascinated by the sound and the shadowy movements on the screen.

Then she unplugged the set. No point in risking further damage. She would call a repairman tomorrow. Drearily enough, TV was at the moment one of her chief entertainments. She looked forward to it of an evening after work.

Well, so much for that. She glanced at her watch. Getting toward eight. She had to hurry and finish dressing or she'd make tonight's date wait. She started for the bedroom, swallowed. Her mouth was still dry from fright. She went into the kitchen and poured herself some ice water.

She stood drinking and looking at the open kitchen window. The taffeta curtains she had made for it fluttered slightly with the night wind.

She kept that window closed.

Maybe—early this morning—hadn't she burned her toast and raised the sash then? Or... was that the scraping sound she had heard a moment ago?

Was somebody really in here?

She shook her head as if clearing her vision. This kitchen window was on an air shaft six stories deep. It would take a human fly to scale the wall and open it.

HUMAN FLY RAPES SECRETARY.

That's how the *Post* would headline the story.

She was becoming a victim of hysterical imaginings. She slammed the window and locked it and went back to her makeup table.

The face that looked back at her from her mirror was a little pale, a little tense. She used some blusher, which seemed to help.

Blusher. Eyeshadow. Lipstick. I have the fatal luck to be attractive to men.

The sisters at Our Lady of Victory had not taught much about sexuality. This made most of their orphans frantic as they reached their late teens. How could they look and act right if they had no instructions? And they were desperate to succeed with men. Far more than outside girls they wanted to be wives. Fiercely they reassured one another that they were the sexiest, most irresistible girls mankind had ever seen.

Looking back from her mirror was someone Patricia knew to be a pretty twenty-two-year-old woman. Much prettier than most of the other orphans. And much more discriminating. She could never throw herself into the kind of relationship the others would settle for. She wanted a little more than the usual sullen wifhood.

She finished her makeup. She looked good. At any rate it was the best she knew how to do. She was soapy clean, with gentle green eyes and, astonishingly, a smile hidden in her lips that no tragedy had been able to erase, not even the death of beloved parents in a pointless accident, not even life amid the bells and the cold halls and "Yes, sister," and the packed dorm and knowing that your kind always ended up last.

Her best feature was her smoke-blond hair, enclosing her face in a magically delicate frame and suggesting a sensuality that Patricia was confident she would one day fulfill—when she had found exactly the right man to fulfill it with.

For those who did not get college scholarships Our Lady offered the option of a one-year stint at a business school after graduation, Patricia had taken her secretarial degree and gone from there to her job at the Hamil Bank branch in Queens Plaza, and this little apartment. She had joined the local parish, Holy Spirit, and been welcomed with desperate enthusiasm by its shambling, exhausted priest, Father Goodwin. Harry Goodwin, pastor of a dwindling flock of widowed Italian and Irish ladies, sometimes doing five or six funerals in a week.

At first Patricia's youth had made him suspicious. At parish socials he probed for neurosis or perhaps even fanaticism. She answered him with all the pity and kindness she felt for him. Lately he had changed; suffering came into his face when she approached him now. She could well imagine his

celibate anguish. To help him she went to church dressed in what the sisters had called "Mary-like" clothes (long sleeves, deep hemlines, choker collars). At Holy Spirit she wore neither makeup nor scent. Even so, when during Mass his eyes went to his flock they inevitably met hers and could not look away. When she broke the gaze he would stumble in his prayers, and a ragged tone would enter his voice.

Tonight she was not wearing the Mary-like clothes, not for the man she was to meet. At least she could be certain that he was no priest.

A swish of clothing startled her. She turned around, almost falling off the chair. "Who's that?"

Nobody. She pressed the heels of her hands to her temple. It would be nice right now to just scream her heart out, but she might as well face what was really upsetting her. She was scared to death of these awful blind dates.

But dates arranged through friends were her best shots at a decent social life. And why not? Everybody had to start somewhere.

Although she never knew what to expect, these nerve-wracking meetings were a habit she dared not break. Sometimes the men she met were decent, sometimes they were not, and one of them had almost fit her nightmare.

She intended to marry well. Mary Banion, her first real outsider friend, told her she must at all costs conceal her desire for attachment from her prospective mates. "For heaven's sake, Pat, don't let them know what you're after. You'll scare them to death. Men want whores. As far as they're concerned the fact that they get wives instead is a disturbing mystery. They spend all their married lives trying to figure out what the hell happened."

Mary Banion was forty-one, the second wife of a high police official named Mike Banion. Both of them had lost their first spouses. Patricia had met Mary at the bank, where casual teller-customer conversations had led to a lunch date and friendship.

Patricia envied Mary the fact that she had always been loved. Her first husband had adored her, but his private plane had given out on him over the Jersey marshes. Now Mike Banion worshiped her as a replacement for his child bride, who had died of cancer in her twenties.

Mary looked and acted Patricia's own ideal of female success. She dressed elegantly, in silks and linens. And she was beautiful, with delicately sculptured features and glowing chestnut hair. The fact that her Mike affected baggy suits and low-grade cigars made her seem even more beautiful.

"I'll make him police commissioner, you'll see. Maybe even mayor if his style comes back into style." Thus she justified her second marriage. "My old truck," she called him. No doubt she would drive him to the top.

Tonight Patricia was going to go out with Mary's son Jonathan. He was late, but he must be coming. He'd better. She'd been preparing herself since she got home from work.

Mary was in the habit of overexplaining him, as if his merely having been born was not justification enough for his life. "You're going to find him fascinating. He's very bright."

Patricia looked askance at herself in the mirror, arched one eyebrow. Was that sexy? Was that winning?

Most of the men she had met didn't call back. Mary said that often happened to extremely beautiful women. Men feared great beauty. But not to worry, it was all to the good. Only the best of them would feel comfortable with her. One undesirable group did call back, though—the nerds. They not only phoned, they came to her teller window. The girls at the bank called them "schmedlocks." "Don't worry," they said, "every good-looking teller has her schmedlocks." Apparently many undesirable men had hit upon the idea of meeting girls by becoming depositors at the banks where they worked.

Was Jonathan going to be a schmedlock? Possibly that was why Mary oversold him.

At least, she hoped, he wouldn't be frightening. There had been one young man who was too quiet, who went through the formalities of the evening like a zombie, who had insisted on taking her home with him. Even when she refused point-blank he had kept driving. Then she saw the little black pistol tucked under his sports jacket. She had escaped by jumping out of the car when traffic slowed down on the Fifty-Ninth Street bridge.

Six weeks later a young man was caught in Massapequa, Long Island, with the bodies of three girls under the floor of his elaborate basement torture chamber. Was it him? She was never sure.

When she heard the buzzer she leaped up from her dressing table, flipped off the Sunbeam makeup mirror, and ran to the intercom in the living room. "Yes?"

"Miss Murray, a Mr. Banion to see you."

"Send him up, Tony."

She had been embarrassed to ask Mary what he looked like, but if he took

after his mother he would be darkly handsome, bright, and sophisticated. Thank heavens bullet-shaped Mike was a foster father. Genial as he was, Inspector Banion was not a promising source of looks or manners.

A rap at the door. "Yes?"

"It's Jonathan Banion."

What a soft voice. She hadn't noticed that on the phone. She opened the door onto a tall, lean man who smiled down at her.

"Hello," she said. "Come on in."

He was wearing a seersucker sports jacket over an Oxford shirt. You could even call him handsome, and she thought he had the sweetest face she could ever remember seeing. He came into the center of the room and looked at her for a long moment. "Have we met?"

She knew just what he meant. "I think we *must* have." She laughed. "I can't imagine where."

He held out his hands and she clasped them. They were warm and familiar, as those of a close friend might be. "I'd say that I've known you forever," he said, "but that sounds like such a hokey line."

"Let's just assume we met and forgot and take it from there."

For a moment he didn't answer. He was looking curiously at her out of his gentle green eyes. "Let's stay here awhile," he said. "We can talk more easily."

She smiled. "Would you like a drink?"

"Fix me whatever you're having. I suspect it'll be something I like."

She went to the glass-topped table where she kept her small collection of bottles and fixed two gin and tonics. When she turned around he was still standing in the middle of the room.

He took his drink, never for a moment looking away from her. "Sit down, won't you," she said in exactly the way Sister Dolorosa had when greeting visitors in Our Lady's parlor. He sank onto her couch, looking acutely uncomfortable. She sat down beside him. She should have taken the chair, but she wanted very much to be near him.

"We've got to figure out where we met," she said. Imagine how nice it would be, she thought, if he hugged me. Right now.

"Maybe we knew each other in another life."

"That's impossible. There is no reincarnation."

"No? You're sure?"

"Well, it's against Church doctrine."

He raised his glass. "Cheers."

"Here's to us." Watch it, lady, don't come on too strong. Take it easy. This one looks too good to lose. "To our first date."

"It can't be. I know you."

She could almost have predicted he would say that. The more they were together the more she felt as if they were simply renewing an old and close familiarity.

"You must go to NYU," he said. He turned awkwardly on the couch and faced her. "I'm in psychology. I must see you in the halls or something."

"Never been there in my life. Do you use the Hamil Bank in Queens Plaza?"

"No, Citibank. There's a branch near the university with an automatic teller. I didn't meet you in a bank. I met you ... I met you" He frowned.

They both fell silent. No doubt the same small breath of fear that was touching her was also touching him. This was no joke; this was just a tiny bit scary.

Nevertheless she was awfully glad to see him. He put his drink down and, in a methodical way that was somehow familiar to her, leaned over to her and kissed her on the cheek. It made her smile. "You're incredibly beautiful," he said.

It was simply stated, and so sincerely that it only embarrassed her a little. "Thank you, Jonathan."

"I've been missing you. I just didn't know it."

She nodded. "Me too." But when she tried to meet his eyes she found he was looking past her shoulder, at the dark entrance into the bedroom. She shook her head slightly, as if to say, Not yet.

"Is someone in there?"

"I'm a single girl, Jonathan, and we are all alone."

"I heard something."

"My apartment's haunted tonight. You should have been here when the TV went on by itself. But the place is empty. I checked it out. Except for us, of course."

He turned his face to his. "You are so lovely."

"Thank you," she said again. She wished she hadn't used that blusher. Her cheeks must be flaming by now.

He regarded her. "My mother calls you Pat. But you prefer Patricia, don't you?"

"What if I said I like Pat best?"

"You'd be lying."

He was right about that. She tried to make herself laugh but the sound died away. He was beautiful, he was sweet, he was just what she desired.

Why, then, did a little voice inside whisper, *Nightmare man?*

When he touched her wrist she involuntarily pulled back. "Maybe we'd better pretend we're strangers," he said. "Tell each other about ourselves. That's the best way to begin."

She smiled to cover the ridiculous fear that was growing inside her. "You start." Her voice was too sharp. Calm down, girl. Take it easy.

"I'm a scientist. I'm engaged in arcane experiments few people can understand. Officially I'm an assistant professor of psychology at NYU, but I'm actually an advanced researcher in the physiology of the brain."

"What research?" She had to keep him talking. Then she could just close her eyes and let the sound of his voice relieve her anxiety.

"You talk, Patricia. I want you to talk too."

"You've told me so little."

"You tell me something, then I'll tell you something more."

"I guess Mary told you I'm an Our Lady of Victory girl." She did not care for the word "orphan." "I went to Clark Secretarial and got a job at the Hamil Bank. Totally unglamorous."

"Not to me. You might be the most beautiful woman on earth. I just want to look at you. Am I making you nervous? Too much heavy breathing?"

She nodded—and instantly regretted it. If only she could dare her fear and let him hold her.

"Excuse me." He went over to her faded maroon Barca-lounger, the one she had bought third hand (at least) from Rebecca Stangers at the bank. "This better?"

She wanted terribly for him to come back to her and carry her into the bedroom and undress her and do with her exactly what she had intended to save for her husband. She wanted that a thousand times more than she had wanted anything else in her life.

And he wanted the same thing—anyone could tell by the intensity that had come into his expression. His dark brows were slightly knitted, the green eyes

gone from gentle to piercing. His lips were sensuous but firm. If only he would do it, he could take her. She would not allow herself to stop him.

How could it be happening like this? She was actually desperate for him, yet she had just met him a few minutes ago. It was an awful and yet a delicious feeling. As if sharing her need, he stood up and held his hands down to her. She rested her hands in his, hoping he would draw her up from the couch. He towered over her. But he also trembled and beads of sweat formed along his upper lip. He squeezed her hands like a supplicant. "I'm sorry," he said. "I know I'm coming on too fast for you. I just can't help myself."

In reply she smiled. He was encouraged, and began to pull her to him. Their embrace brought her immediate relief from her fear and left no question about what would happen next.

The bedroom was dark, at once inviting and menacing. Sister Dolorosa had explained what the nuns called "the clinical necessities," so Patricia was not afraid of her inexperience. She knew what would be expected of her. But this was for marriage. This was for marriage!

They were sitting on the side of the bed when Patricia sensed movement in the room. Seeing it too, Jonathan cried out. In the same slow motion that her nightmare always imposed on her, Patricia turned to him, only to see him being taken in a hammerlock by a shadowy, fast-moving figure that had burst out of her closet.

Then someone seized her and pulled her back onto the bed with terrific force.

Impossibly, incredibly, she recognized Mary Banion among their assailants. Her surprise was so total that what should have been a healthy scream came out as a gasp.

Somebody tried to put a wet, ethery cloth over Patricia's face but she fought free. "Patricia, calm down!"

She was not calming down. Two big, vicious-looking men already had Jonathan tied up. Patricia leaped at them, tearing her dress as she tried to keep her balance.

"Get her!"

That was Mary Banion. Definitely. Patricia ran for the apartment door. She reached it, worked the locks, threw it open.

Feet pounded behind her as she raced down the hall and slammed her hand against the elevator button. "Oh, God, get her!" Mary really sounded frantic.

"Mary—you must be crazy!"

"Stay right there, Pat. That's a good girl." The men coming after her were horrible, big but quick, in black raincoats and hats pulled down to disguise themselves. Patricia took the fire stairs four at a time, bursting out the back exit of the apartment building.

She intended to race around to the front and get the doorman to call a cop, but on the way she saw old Franklin Apple, an elderly gentleman who had come to one of the parish seniors suppers she had served. "Oh, Mr. Apple! Mr. Apple, thank the Lord you're here! I need help, I—"

He smiled at her and grabbed her wrists in his dry, clawlike hands. For an instant she was stunned, then filled with cold, prickling terror. His skeletal old face was grinning. He cooed at her as he might at an agitated baby. His fingers around her wrists were as cold and hard as stone.

Chapter Two

PATRICIA HAD FOUGHT desperately, finally broken the old man's grip and run wildly away from him through the empty, rain-drenched streets, hoping to hail a cop or find a telephone booth. Before she could do either she had seen three tall men pile out of a car half a block away. She had run down a side street, her shoes clattering on the sidewalk, the trees dripping rain down her back.

She had rushed up onto a lit porch and screamed for help; she had pounded on the door and rattled the windows. In response the porch light had gone out. Then cars, dark and coming fast, had appeared at both ends of the street.

She had leaped over the porch rail into wet and thorny-bushes, had fought her way around a side yard past lighted windows, hearing the distant drone of the ten o'clock news inside that locked house. At last she had come into the sodden, choked alley.

And found herself facing a brick wall. But above it loomed a black, blessed shadow, the familiar bulk of Holy Spirit Church. By some instinct she had come to this protection. Surely there were places to hide in here, if one could be still enough. And Father Goodwin *never* locked his church.

By the time two men emerged from the trees behind her she had scaled the wall, run down to the front of the church and entered. The silence inside stopped her for a moment. Votive candles danced shadows around her. Every move echoed in the great stone space. Far away beside the altar shone the deep red of the vigil candle, confirming the Blessed Life that resided here. Patricia forgot her hiding and her danger; she ran to the altar rail and knelt, her eyes seeking the low gleam of the tabernacle.

The glimmering of the votive candles made the images of the saints painted in the dome over the nave jerk with spasmodic, lunging motions. Rain rattled against the stained-glass windows, and wind hissed past the slate eaves of the old building. The air in the church was warm and storm-dense. Patricia felt sweat tickling her lips, beading between her breasts, trickling down her thighs.

As she knelt, she sensed the same sense of wickedness that infested her familiar nightmare, the foul, questing *something* that seemed to want to rape more than her body. It wanted to rape her heart, her very being, her soul.

And it was here, somehow, in this dark old church, its stink filling her nostrils, its body hissing and swirling across the cold marble floor. She forced back wild shrieks of terror, tried to retain what little composure she had left because it was all she had left. The next stage was blind, helpless panic.

To give herself strength she brought the soft voice of Father Goodwin to memory, from an intimate moment in the confessional when she had spilled out the loneliness and terror of her life to him, when she had revealed the anger she felt toward God for depriving her of parents. He had said, "Pray the rosary, Patty. I know it's out of fashion now, but so is everything else. Just take the beads in your hands and Mary will console you. . ."

Trembling fingers found her rosary in the pocket of her dress. But her grip was so tight she snapped the chain in a dozen places. The talisman was ruined, only a clutch of independent beads and broken links. There was no protection in a handful of plastic.

Someone came up behind her. "Be calm, Patricia. Nobody will hurt you." That horrible Mr. Apple again.

"What are you doing? What's happening?"

"Be quiet, my dear. Be patient."

He had appeared at a parish seniors supper where Patricia was serving the spaghetti. Such a gnarled little old man, his eyes mud green, his face a catastrophe of wrinkles. He had stood before her, his paper plate in hand, his thin lips making a strange, ironic sort of smile. "At *last*," he had said.

"Hungry?" she had asked, basking in a moment of good feeling.

"I'm going to take you home in a few days. I wanted you to know."

Senile. She had smiled again and served him some extra. All during dinner he had watched her, his head bobbing, his spidery little fingers working the fork and the spaghetti spoon with difficulty. "That's an odd one," she had said to Father Goodwin, "a little senile."

"Very old."

"He acts as if he owned me or something."

"Probably lonely. Why not go and talk to him?"

"He gives me the crawls."

"Offer it up. Where's the harm in a lonely old man?"

So she had met Mr. Apple. Now she sobbed aloud and twisted the beads in her hands as she strove toward the tabernacle, wishing she could have the Host, could somehow hold Him before her as a protecting shield. Her vision of the altar blurred and fluttered. From the depths of the church came avid scuttling. She clapped her hands to her ears, scattering beads across the granite floor. Her mind screamed frantically at her, *Run, for the love of God, run.*

People, hundreds of them, were filtering into the church from the side doors, from the crypt, filling the aisles and then the pews. There were shuffles and murmured apologies, and an occasional stifled cough.

"My God, protect me!" Her own voice was a cracking moan. Hard upon her words came another sound, soft, stifled, gleeful. "You laugh," she shouted into the dark. "You're *laughing* at me!"

She swept her hair out of her eyes.

"Don't be afraid, Patricia. I've told you that you won't be hurt."

"You must be crazy, all of you!"

"We're activating your subconscious minds, yours and Jonathan's. The church, the night—all the trappings are to help your imaginations create a new reality."

"You think you're conjuring evil spirits, don't you, Mr. Apple? This is a black mass."

"Nonsense. It has nothing to do with superstition."

"It's blasphemy and I'll have no part of it!"

"You don't know what you're saying. You belong to us, Patricia. You always have and you always will. Your parents gave you to the Church. Our Church."

How dare he talk about her parents! They could never even have known this vicious old man. They would never have allowed him to touch their daughter, much less ... do the things they did at a black mass. "Hail Mary, full of grace, the Lord is with thee, blessed art thou—"

The laughter again. Pitying laughter. Embarrassed.

Mr. Apple wanted to make others as foul as he was. Evil is always missionary.

Patricia clasped her hands tightly, huddling against the crowd behind her. She was soaked through from her run down the wet Queens streets. Behind

her she heard a heavy, scraping tread. She moaned.

The congregation began very softly to clap. The sound was terrible because it was so gentle; a quickening, savage rhythm as intimate as the rustle of leaves.

Patricia raised her eyes until she was again gazing at the tabernacle. Inside lay the living Mystery itself, the God to whom she had given her loyalty and love. She needed intercession now. His customary silence had *to* end; this was the time and place for a miracle. "Send the Archangel Michael," she whispered.

"It's starting, Patricia. Don't be afraid."

"Oh, my God, I am heartily sorry—"

"Help her, Mary." "I will try."

Mary was no Catholic nun—Patricia knew that by the deep red of her habit. There was no red habit in the Church. She came sweeping up, now pale and agitated, floating in oceans of wine-red silk, her face framed by starched black linen. A real nun's wimple would be white. A hand came around Patricia's shoulder and starch crackled in her ear. "Now, now, darling, you let me help you."

"Don't touch me!"

"Patricia, you don't understand. You're under hypnosis and it's made you forget your role. You must trust us. This is to create something beautiful and important for the world."

"You're committing an act of desecration. You're a Catholic. We've been to Mass together—I've seen you pray!"

"I'm going to hold a cloth over your nose and mouth, and I want you to breathe deeply."

When Mary's face loomed close, smiling, Patricia almost recognized, almost remembered—but the place her supposedly new friend actually had in her past was, like Jonathan's, just beyond the reach of her conscious mind. Mary placed a golden bowl full of clear blue liquid on the floor and dipped a cloth in it. She took Patricia's head in her hands and held up her face. Her arms were strong; Patricia lacked the power to resist.

The cloth obscured her vision. She held her breath. "Now, Patricia, breathe. Come on, darling." Patricia held on. She resolved to die just as she was, simply by not breathing again. Not ever.

A male voice rumbled behind her. "We can't hold him!"

Another: "Franklin, this is hopeless. You can't make this work with both of them uncooperative."

"Quiet, all of you!" A loud clap of hands. "Music! Now!"

A long, low note vibrated in the atmosphere. Patricia was beginning to be desperate for air. The wet cloth was stifling her. Mary whispered reassurance, her flat green eyes brimming with what appeared to be pity.

Then the eyes fixed on something in the dark. The expression sharpened to fear. Something cold and hard touched Patricia's shoulder. There was awful, ragged breathing behind her. The sound of it mingled with the music. Hands as rough as bark began caressing Patricia's arms, her waist, her thighs.

Strong fingers shredded her clothes, and she knelt naked amid the scraps of cloth. "Breathe in, Patricia," Mary said. "Breathe in!"

"Mary, get away from her."

"She's not anesthetized at all, Franklin."

"Hurry—can't you see what he's going to do?"

"Franklin—"

"Run! He'll tear you to pieces if you get in his way!"

Patricia felt herself swept off her feet, cradled by powerful, wire-tight arms. She shut her eyes, afraid to look on the face of one who felt so terribly wrong. The low music throbbed and the congregation resumed its clapping. "Oh, God, please take me!"

As soon as she spoke air rushed into her lungs. It was damp and smelled of the full church—candle smoke and incense . . . and the sweaty rot of the thing that held her. Now she would have welcomed the anesthesia.

"Somebody help me!"

"Think of our goal, Patricia. It's worth the sacrifice!"

Mary was not a friend, *she was one of them*—here, now, wearing that profane red habit.

Kind, friendly Mary. She had trapped Patricia in sweet coils. Patricia kept her eyes closed as the thing or man or whatever he was laid her out on the altar and ran his hands along her tingling skin. The music boomed deeper than any organ note, coming from some instrument up in the choir loft.

There were so *many* of them; Holy Spirit Church was jammed as it never was during poor Father Goodwin's Masses.

During the day Father Goodwin struggled here to keep his handful of

Catholics coming. At night this huge, gaudy, rich congregation obviously met for rituals of a very different kind.

Poor Father. These must be his lost parishioners, the ones who never came to Mass.

Her new lover was heavy. Brutish and gasping, he bore down on her, pinning her to the cold marble of the altar. So many times, in this very spot, Father had accomplished the miracle of Transubstantiation. She wanted to raise her naked flesh from the sacred place but could not. He covered her with himself, enveloped her, crushed her so completely the air gushed from her lungs.

The music began to quicken.

Until now she had called herself the Last Virgin, playing the old-fashioned Catholic game of How-Far-Can-You-Go, allowing a thigh to be stroked, a breast to be touched, the press of trousered hardness against her knee.

She writhed. He was so heavy, so big, so foul-smelling.

He was beginning his filthy work. She could feel it poking and prodding at her privacy. She tried to lock her knees but it was useless. "Oh, Jesus! Oh, Jesus!"

The pain choked off her words. That black music thundered and throbbed. As one person the congregation groaned. The church resounded with the gasps of a monstrous passion.

"Jesus!" There was no response, no feeling of His presence. Nothing at all.

Surely, Jesus, You still love me. You want me in Your heaven. You haven't abandoned me. No.

If You no longer want me—

The arms came completely around her.

"Patricia, you must understand that you'll be hurt if you don't calm down!" That made her fight all the harder. Suddenly there was a pain like fire between her legs, so intense it pulled a piercing scream out of her. "That woke the neighborhood up," someone shouted.

"Our Father, who are in heaven, hallowed be Thy name."

"There's a light across the street!"

"Okay, get him off. This isn't working."

Hands were grabbing at the dark figure atop her, but he growled and fought and tried harder to hurt her. He pounded and jabbed and smashed himself against her. All her thoughts, all her prayers were swept away in a flash of

agony as bones cracked and nerves were severed. Her mind dulled down. She heard distant shouts, and saw the frantic, capering form of Mr. Apple with vestments flying about his head.

Then, abruptly, the crushing weight was gone. "Calm him down! Don't let him out of the circle." That was the last she understood. There were more voices, but they were only a buzzing, incoherent cacophony.

The light of consciousness was flickering and starting to die. This time when Sister Mary's sweet-smelling cloth was pressed against her face she inhaled gratefully in sobbing gasps.

"You will forget," said Mary's voice.

"Oh, Mary, why, why did you let him hurt. . ."

Darkness came, and she sank back into the dream she called ordinary life. They left her, hurt and bleeding, alone.

MARY: THE RESURRECTION OF THE INQUISITION

I am so frightened for Patricia and Jonathan I do not think I can bear it. Tonight we made a terrible, terrible mistake with them. Unbelievable that we could be so foolish! Or is it so unbelievable? In an institution two thousand years old there is precedent for every error. The ones who unleashed the Black Death prematurely in 1334 made a greater mistake than we have, after all.

But that is history and this is now. She is bleeding, maybe dying, at this very moment! If I could sweat blood I think I would.

But I am absolutely helpless. If I show myself now I risk exposure of the whole Church. Error must not be allowed to compound error.

So I spend these predawn hours writing, hoping that somehow the act of putting pen to paper will relax me enough for a few hours of rest.

What a disaster! And there was so much time wasted after she was hurt! We had to get safely away before calling the priest. I can only hope and pray that he gets Patricia to a hospital in time.

My God, we had to leave her!

I look at my words as they stand on the paper, dry and still. Words of fear. I think it, I say it—fear, fear, fear.

We live exactly like all night things—we hide and scurry and know the way of silence. We and the rats and owls and bats.

The children are so incredibly important. Please, please may no more harm come to them. Our mistake has exposed them to an even worse enemy than our own stupidity!

The Inquisition will certainly have noticed our gaudy public fiasco. Now our tireless old enemy will be after them again.

It hides for a few years, to lull us, to tempt us. . . .

Then it jumps out of nowhere—right at our throats!

The Inquisition will battle us until Catholicism withers away. The last priest, in the last moment of the last Catholic church on earth, will strike the last blow at us.

They say we are evil, that we work to make Satan manifest, to give Him physical form.

I say, dear Inquisitors, evil is not all black nor your "Satan" all bad, and the world is not as simple as you would like to believe.

Inquisition: it means inquiry. Question. Such a small word for such a great terror.

To the common world the Inquisition is dead and gone. How would the ordinary Catholic feel to know that the handsome priest with the briefcase, striding so confidently out of the Chancellery, is an Inquisitor? And that the Sam-sonite case contains a thumbscrew, a radio direction-finder, and a car bomb?

Daddy laughed and called them Christ's terrorists.

I do not laugh. They murdered my father by exposing him to plutonium. They chose that particular horror so the radiation would prevent us from salvaging his semen and thus his precious genes.

Dad—covered with sores, gasping, his hair falling out on the pillow. Oh, God, help us!

Deliver the children from such a fate. Deliver my boy!

Must these hot summer days be his autumn? Death, birth, the roll of seasons, sky-changes: Jonathan is the end of a long line, the perfection of two millennia of patient breeding.

The Inquisition is so skilled. How can they be so damn good at it? They're just a bunch of fanatical priests!

The world has forgotten us, but the Church has not, not for an instant.

I hear my heart beating: bump-bump, save his life, save his life.

I love you until my heart will break, it takes my breath away to touch you, and I cannot speak to look on your beauty. You liked to swim, you liked to play basketball, to listen to your short-wave, to look at the stars.

We raped your mind so that the Inquisition could not even torture the truth of your identity out of you. And now look—the disaster of this night will attract them like flies to a corpse!

I loved my father.

And I loved my husband. Poor Martin. So happy, so handsome! And I don't want to think about him either. I'm homesick for my men, for Dad and for Martin!

It's a pleasure to write his name. Martin. Such a lovely name. I can almost hear his plane falling. I imagine wind hissing past motionless propellers.

I know all the details of loneliness, the coldness of suddenly empty sheets, the attic boxes full of new suits.

And then there is Mike. Oh, Mike. If only you knew how tiresome I find you. I only married you because of the cover you unwittingly provide for Jonathan. Even the Inquisition will hesitate to kill a police official's son. Or so we hope.

Will anything work? Can we *ever* escape them?

"Down the nights and down the days; down the arches of the years, the Hound of Heaven . . ."

Howling in the precincts of darkness, and in my heart.

I feel awful. I hate the dreary old church we use. Of course, *our* priest can't command a better parish.

I am sweating. I'm sick.

I imagine being put in the Lady, a steel sarcophagus lined with spikes. When the Lady is closed the spikes penetrate to a quarter of an inch every surface of the victim's body.

Mother Regina was in it three hours. Nineteen fifty-four. She really talked! She gave them the entire bloodline, told them our whole history.

—Founded by Titus Flavius Sabinus Vespasianus on Sunday, September 9, in the year A.D. 70 on the still-smoking ruins of the Temple of Solomon in Jerusalem.

—Based on the secrets of breeding, now known as genetics, contained in the scrolls that were known as the Treasure of Solomon.

—Charged with breeding a new and greater species out of the old human stock, a species that would be allied with what men call evil, as they are allied with what they call good.

But evil is not evil nor good good. They are simply different principles. Man calls himself beautiful. By his standards his replacement will be hideous beyond description. But his replacement will be a powerful species, brighter than man, more resistant to disease, closer to nature.

The blood is the whole point. Jonathan and Patricia are precious because of their blood. They are the masterpieces of thousands of years of breeding according to Solomonic principles. Out of their union the new species will be born.

This is worse than lying and sweating up in that bedroom. This is—oh, hell, I'm going to just burn this and sit in the dark.

Poor Patricia. She was screaming!

"Help her, Mary." Franklin, you said that, you fool!

God knows but I tried.

Chapter Three

FATHER HARRY GOODWIN was awakened suddenly by the ringing of his telephone. The rings exploded in his head, one, then another, then another. Silence. Please keep ringing. Please!

No. The silence continued. There would be no fourth ring. Harry dragged himself to the edge of his bed. His skull felt like it was going to pound itself to bits. He was nauseated with fear.

All these years he had been dreading the three rings on a night the Tituses were using the church. Three rings were the maximum emergency signal. They meant only one thing—they have had a terrible accident and his church was in danger.

His impulse was to race across to the church but he seemed plunged into stifling muck; his fear paralyzed him. It was several minutes before he managed to go to the window and look across at the Spirit. He expected to see destruction, a mayhem of flames, or some unspeakable horror—maybe a conjured thing—crawling the roof slates.

But there wasn't even a haze of smoke along the roof line of the old building, nor a flicker behind the stained glass. Harry Goodwin tapped his own window. Should the Spirit burn there was no chance at all of building a new church. A fire would mean the end of this fine old parish.

Maybe the three rings had been a coincidence. The church across the parking lot seemed utterly at peace, blurred by the beginnings of a predawn shower.

Harry's familiar morning exhaustion bowed him. His alarm clock said four fifteen. In two hours he must say his first Mass . . . before a congregation of perhaps seven, in a church built to accommodate five hundred.

"Friday," he muttered. "God give me strength." He felt awful. Had he taken a sleeping pill last night? No, there weren't any left and so much the better. Leave the pills alone. Valium priests, Seconal priests, Thorazine priests. They were worse than the old-fashioned whiskey priests. He had so far escaped the lure of depressants and tranquilizers. As a result, his life was raw with loneliness and a sense of unfulfilled promise. The issue, of course, was faith

and the lack thereof. His confessor, Father Michael Brautigan, a bluff and kindly Jesuit, red with drink, would say that faith was a matter of relaxing one's instinct to touch. "Don't try to touch Christ," he would say. "That's the point of Thomas, isn't it?"

Harry *had* to touch. But it worked both ways: one who had to touch also needed touching. Sometimes, naked in the middle of his silent rectory, he would dip his hands into cold water until they were numbed and did not feel his own, then he would close his eyes and embrace himself and dance around and around with himself in the dingy rooms.

Lately he had become too desperate, too full of self-pity even for that. Never to be touched—or even needed, for that matter—had emerged for him as the poisonous central issue of his life. When he had first entered the priesthood, he had assumed that his services would be ardently desired by Catholics hungry for the succor of their Church. Instead he had spent his life struggling to pay bills, working against the relentless dwindling of his flock, forced to hold jumble sales and bingo and raffles, until finally even those measures failed.

Then came the Tituses. Old Franklin and handsome Martin, just wanting to rent "the plant," as they had called it, a few nights a week.

Nobody will know, Father. We help out dozens of parishes in the same shape as Holy Spirit.

Nobody will even care except you.

Our money will keep you going. You won't ever have to close your doors.

At first he had thought perhaps it was drugs or counterfeiting or some sort of white slavery.

He had heard their soft chanting, though, and seen the flicker of their candles. He did not actually say it to himself but he knew the truth. Every Monday and Friday morning, after their nights, he had taken to reconsecrating his altar. And he no longer kept the Host in the tabernacle on those nights. It stayed under his pillow, tucked away in the pyx.

Twenty-seven years a priest, twenty a creature of the Tituses. Traitor to his own faith, to his own soul. How black can sin be? He put his hands to his stubbly cheeks and rubbed. He longed for the velvet fingers of a woman, or of death.

As time unfolded the sad destiny that had been contrived for him it became obvious that his whole life—the vocation itself—was not really very valuable.

In the world of his youth priests were essential people, needed by their congregations for all sorts of succor. Now when the leaves fell on his walks they stayed, and his leaking roof leaked on.

Did people sense that he was a traitor? Could they somehow smell the taint of the Night Church in the great nave of Holy Spirit?

He didn't want to be a priest anymore. He did not even want to live. No, he had a plan for himself. He intended to die unconfessed, and go to Hell—in which, despite the modern theologians, he still firmly believed. He actually looked forward to it: he deserved his damnation, wanted it, and had for some years been seeking the death that would bring it. Once he had attempted to commit suicide by suffocating himself in a plastic bag, but it had been too terrifying. So he had tried sleeping pills—and vomited them up.

He had asked Martin Titus to kill him, just a few weeks before Titus himself had been killed in an airplane crash. "I'll think it over," the man had replied absently, and changed the subject. Harry was not even important enough for martyrdom.

He said a bitter prayer, a Hail Mary, and turned once again to his bed.

As he slid beneath the sheet he heard quite distinctly from the church a human sound. It was a loud, woeful groan, loud enough to carry across the parking lot to the rectory.

He should have gone straight over there. Damn fool not to. Three rings at this hour, and he had made himself believe it was a coincidence. Harry Goodwin was a weak man, and that was a fact.

He put his hand on the bedside table. In the drawer was a small pistol. Mike Banion over at the 112th Precinct had given it to him after the ritual murder of Father Santa Cruz at Saint Thomas in Brooklyn. He shouldn't have accepted it, but he didn't want Mike to know how he envied old Santa Cruz.

This was the right time to have a pistol. He felt the comforting steel of it in the palm of his hand. One day soon, when he could bear the taste of the barrel in his mouth, he was going to use it on himself.

As he pulled on the old raincoat liner he used as a robe and jammed his feet into his aged and corn-cut Adidas, he struggled for some sort of inner stability. Gun or no gun, he was terrified. The Tituses did horrible things over there.

He hurried past empty bedrooms (it had once taken six priests just to administer this parish) and descended the back stairs to the kitchen. There was

a folding umbrella in the bottom of his briefcase. He fished around for it, opening it as he went out the kitchen door.

Curtains of rain swept the muddy parking lot. As Harry crossed it he was reminded by the sucking of his shoes that he could not afford reasphalting. He opened the side door to the sacristy. Inside, the Spirit was inky black. As he carefully pulled the door shut behind him he twisted the little pistol's safety to the off position.

All he heard was the din of rain on the roof. Just as he was beginning to think he had dreamed the human sound he heard another one—a long sigh. At first he was frightened, fumbling for the lights. Then he realized the sound was coming from the altar and a flash of anger mixed with his fear. How dare they leave him to clean up one of their desecrations.

In the dancing, vanishing light of the votive candles he could just make out a dense shadow splayed across the altar. Harry stared hard. Wasn't that a large animal? He raised his gun but he could not take aim in the dimness. Then he realized that the shape was not a crouching animal but a prone human body.

His fingers found the right switches and he flipped them all at once. Light flooded the church.

There was a woman on the altar, lying on her back. Her blood flowed down to the sacristy floor in thin streams like bars. Harry had only a moment for astonishment. The girl moaned again, horribly.

He approached the altar. The poor child lay in a dark pool of her own blood, her legs spread, her arms akimbo, her hair tangled about her face.

The fact that he knew this woman so well pulled the first sound from his throat. His own scream was more real to him and more frightening than even the horror before him. In his urgency to get to the phone in the sacristy he dropped his pistol, which went clattering into the dark behind the high altar at the back of the nave.

This was incredible. This could not be condoned. And yet ... he had to deal very carefully with the whole affair. His own life, his very soul, was teetering on a knife edge.

Turning away from the horror he dashed on his long legs to the phone, grabbed it, dialed 911. The Tituses would be furious with him for calling the police, but what else did they expect him to do? They had just gone off and left him with this tragedy and not one word of instruction.

There were voices outside. Neighbors. Of course—the girl's screams had

roused the neighborhood. The Tituses must never have intended to leave her behind. Circumstances had forced them. Perhaps they even wanted her saved.

In any case, she *would* be saved. He might not be much of a priest anymore, but Harry Goodwin was still a human being.

He heard the first siren start not long after he had hung up the phone. The New York City Police Department was more than half Catholic, and it protected the Church almost as carefully as it did itself. Harry knew one of the two patrolmen who came sprinting up the aisle, their guns in their hands. Timothy Reilly was his name. Impossible that such a scrawny, mischievous altar boy could have grown into this enormous, competent-looking man in blue. Reilly took in the scene at once.

"He still in the church, you think, Father?"

Harry told the first of what he realized miserably would be many lies. "I thought perhaps I heard him. I'm not quite sure. It could have been the echo of a door closing." Trick the cops into searching the church. Give the Tituses and their congregation a little more time to get well away.

Reilly's partner began to search with a flashlight while Reilly joined Harry beside the poor, damaged girl. Her eyes were rolling slowly up into her head. "Her name is Patricia Murray," Harry said, and woe tugged his heart. "She's one of the hardest-working young women in the parish." His throat closed. "One of my best people." He wept and could not stop, and it was useless and stupid but he was so full of anger and self-disgust and sorrow that he wished right now he could be torn to pieces, and the rancid bits of himself scattered through the filthiest deeps of the Pit, each to suffer separately the full and eternal measure of damnation.

"She's hurt bad, Father. That bleeding's gotta be controlled. EMS better get here damn soon."

"I'll get my kit." He raced into the sacristy and dragged his ancient first aid kit from the bottom of the old armoire. As he ran back he fumbled with the latch, only to open it and find the bandages rotted and covered with roach sacs, the medicines dried and useless, the tourniquet a brittle mound of rubber.

"Aren't you going to anoint her, Father?"

"Anoint?" The kid had assumed he was getting the chrism. "Oh, of course."

Another siren ground down outside. Two black paramedics sprinted past the rows of age-darkened pews carrying their stretcher and other equipment.

When they reached the altar they set to work with lightning choreography, producing bandages and plasma and intravenous needles and syringes. In seconds her nakedness was obscured by gauze and tape. She lay as blue-bruised and destroyed as if on a slab in a morgue. Her eyes were waxen and staring now, her skin gray.

"She use drugs?"

"Certainly not. She's a very good Catholic."

"Then she's *been* drugged. You better call the next of kin, Father."

"There are no next of kin. She was orphaned in her teens. She was raised at Our Lady of Victory. She rarely spoke of her past. She's not been in the parish more than six months."

More police were pouring into the church. Outside, siren after siren moaned to a stop. The whole precinct must be turning out. It occurred to Harry that he ought to make a big pot of coffee.

No, that was a silly idea. He realized when he looked down and found the holy oil in his hands that he was in shock, moving like a robot. Part of him was still performing priestly duties. The rest wanted at this moment to be, to do, anything else. Anything.

Patricia was already on the stretcher. Harry fumbled to her side and began administering the sacrament. The paramedics wheeled her rapidly down the aisle. He muttered his prayer as one of the men spoke another sort of ritual into a walkie-talkie. "Multiple pelvic fractures, possible severed spine, copious vaginal bleeding with developed pallor. Administering plasma and anti-shock procedures with cold pack. Patient in shock, stage two, possible drug OD."

The ambulance began sounding its siren and flashing its lights as the stretcher was wheeled up to it. The doors slammed on the two solemn black faces and their white-draped patient.

Harry was left with chrism in hand, his sacrament incomplete. Carefully he wiped the remaining oil from his thumb onto the edge of the container. Then he snapped it shut and started to go back to his church.

Mike Banion stood in the doorway, looking with the light behind him like a blocky tree stump. He was an important cop, Detective Inspector, eighteen years on the force, as good a friend as Harry Goodwin had ever had. Mike was both physically and politically powerful. You saw him at all the police funerals and the big, famous crimes, looking through the familiar bifocal

glasses out of his hurt-child eyes.

Seeing him here confirmed the seriousness of the affair. So this was to be a famous crime.

As if to certify the awfulness of it all, a car from Channel Two News came roaring up Morris Street and screeched to a halt. The rain had gone soft and dawn was beginning to outline the jumble of flashing cars, and to touch the cross above the dome with a delicate gray glow. When Harry looked up at it he was almost in control, but when he looked down, his throat was tight and his eyes were once again tearing.

"Father Goodrich, I'm Charles Datridge, Channel Two News." A young man stuck out his hand as a plump girl patted at him with a powder puff. "Mind if we get started?"

"I—" There was a sudden bloom of iron-blue light. Harry squinted.

"Rolling," cried a voice beyond the glare. "Sound! Speed!"

"This is Charles Datridge here at Holy Ghost Parish in Queens. With me I have Father Michael Goodrich. Father Goodrich—"

"Cut it, Charlie."

"Right, Inspector. Kill the lights, Benny."

"Holy *Spirit* Church, Charlie. And the priest's name is Harry Goodwin, not Michael Goodrich. You guys stay in your car until we get the perpetrator pinned down. You'll get your pictures then, assuming you play my way now."

"Playing your way, Inspector."

"Thank you, Charlie. Come on, Father, let's go where we can talk. You got any coffee in the kitchen?"

"Sure, Mike, we can make some."

Mike Banion moved toward the rectory. "Charlie's a news tiger. Channel Two's lightnin' reporter." He laughed, a deep, reassuring sound, the easy mirth of authority. "You're gonna get a horde of 'em in the next couple of hours. First there'll be the *Post* lookin' for pictures. 'Where'sa body?' they'll yell. Then the *News*, and they'll want a shot of the altar. Then TV and radio stations, all of 'em hollerin' like crazy." He laughed again. "Along about dawn a guy from the *Times* will probably phone, name of Terry Quist. Only since you're a priest, he'll introduce himself as Terence. He'll already know the story back to front. But he'll get the real stuff out of you, the dope about how it feels." They reached the rectory. "I'm sorry to say this, Harry, but you're gonna be famous. So's that poor girl."

"Mike, she was a parish leader, one of the few young people who really cared. She was wonderful. My star."

"I hate to hear that, Harry. You must be hurting awful bad. I gotta think the perpetrator knew. I mean, the beautiful parish star, and he takes her and brutally rapes her on the altar. That's tellin' me he *did* know, and this is one of these weirdo deals. Probably somebody she was familiar with. Struck up an acquaintance with her on purpose. Hell, maybe even at some parish affair. Psychopath."

They reached the kitchen. Harry turned on the lights, revealing the aged stove, the greasy counters, the yellowing oilcloth on the table. "Let me get the coffee," he said.

" 'Fill it to the rim with Brim.' "

"I don't have any decaffeinated, Mike."

"And I don't drink it. I'm just trying to take an easier tone. Lower our blood pressure before we both get strokes. A crime like this works on you, Father. Eats you alive."

Harry looked at him. He could not find words.

After a moment Mike continued. "So this kid was one of the parish stars. And she was in the church alone at a very odd hour. Was she a little loony on religion? I mean, was there any likelihood she might have come there on her own and surprised some derelict sleeping in a pew? It's important we know that."

"She was a stable, normal sort of a person. Her parents died in a fire, she told me. She had been here in Queens for about six months. She was vague about her past. Quite vague. But Mike, she was a *good* girl. A darned good girl."

Mike Banion sank onto a chair. The kettle began to whistle and Harry poured water into their mugs. When he inhaled the steam Mike coughed, a sound like a car refusing to start. "Foggy morning," he said, cradling his mug in his hands. Suddenly he looked directly at Harry. As always Harry was startled by the depths of pain in those eyes. From the day Mike's first wife had died, they had been like that. Despite his remarriage, Mike still went to Beth's grave every Sunday. "Harry, tell me your story. What did you see?"

"I was awake. The usual morning hells. We've talked about it."

"Awake, horny, worried."

The chill in the room enveloped Harry. He talked too much to Mike Banion,

telling him all except the really bad part, the part about the Tituses. Should a parishioner know his priest so intimately? But who else, if not Mike? Harry nodded at the accuracy of Mike's statement. "I heard a noise. Loud. A terrible groan. So I went over to investigate."

I heard the three rings. Their emergency signal. But I can't tell you that.

"Must have been awfully loud."

"Very."

"Church unlocked, of course."

Harry had been waiting for that. "You know it always is."

Mike's face darkened. Harry had been through this with him dozens of times before. He watched Mike relight his cigar and take a long pull. Mike smoked cigars the way other people did cigarettes. He claimed he never got drunk because there was so much nicotine in his blood there was no room for the alcohol. Given a pint of good scotch he might nod a little, but that was all. "You lock your church at ten P.M. in the future, Harry, and consider that an order. I'm gonna tell the patrolmen to check it out, so don't think I won't know."

Mike's big, spotted hand came across the table and covered Harry's. The touch lasted only an instant, but the tenderness in it shamed Harry almost unendurably. *Thank God for good friends, there when you need them.* The gesture did nothing to dismantle Harry's shame at what he had come to, only painted it in a more bitter light. "Churches belong open," he said.

"You're sentimental. That's a weakness."

"God help me, the poor girl was raped in my church! Mike, don't tell me it's because I leave the place unlocked."

"I'm not accusing you, Father. You just tell me if you saw the perpetrator closely enough to make an ID."

Now the lie again. "I heard a noise. Maybe a cough, maybe the sound of the side door closing."

"Meaning the guy was just that second leaving. He must still be in the neighborhood."

"Yes. I told Officer Reilly—"

Mike Banion stood up and went out the kitchen door. A few moments later he was shouting. Harry heard him yell that roadblocks should have gone up and a house-to-house search started long ago, on and on. Cops trotted here and there, lights flashed, voices kept fracturing the dawn silence

A moment later Mike was back in the kitchen. "By *God*, why didn't you tell me her name?"

"I—I didn't?"

"Reilly says it was Pat Murray. Father, is that true?"

"Well, yes, that's right, Mike."

"She's a good friend of my wife's. She was on a date with my *stepson!*"

Mike Banion thundered off into the churchyard. A moment later his old Dodge was skidding its way out of the muddy parking lot.

For a long time Father Harry Goodwin simply sat, staring. Then he tried to pray. His words mocked him, and soon lost themselves in silence.

Chapter Four

They guided Jonathan to a car and took him home. They bathed him and attended him, six young sisters in their red habits, and a grave man of perhaps thirty who was so gentle he must love him. He laid his exhausted friend in his bed.

Jonathan dreamed of wet leaves stinging his face, snatching at his arms. He raced through a vicious jungle of grasping plants and slick, seething creatures barely seen. In this dream he ran with the strength of a wild animal and the hunger of a ghoul. He pursued a woman.

"He's having a nightmare," one of the sisters said. "Shouldn't we wake him, Jerry?"

"Let him sleep." Jerry Cochran stroked Jonathan's sweaty forehead.

In his dream Jonathan stretched out his arms, grabbed at his dream-woman's flying hair, screamed out his desire. She raced on through long, dripping alleys of trees, past flickering candles and bloodied crosses.

"Jerry, he's suffering!"

"We have to let him sleep, otherwise the hypnosis may be permanently weakened. He mustn't be allowed to remember what he did." He looked long at his young friend. "Or what he is."

Jonathan heard none of this. He was utterly lost in himself, racked by his nightmare. In it he got his fingers in her hair, he dragged her down, he sat astride her.

He tried desperately to wake up. The hands that had grabbed her were not his hands, they were ugly and horn-hard and full of evil strength.

His watchers heard a noise downstairs, the slam of a door, the pounding of Mike Banion's footsteps. "If he knows, we kill him," the young man said laconically.

One of the sisters withdrew a long, thin blade from her habit.

They retreated into the back hall as Jonathan screamed the broken screams of great agony.

Mike came running up the stairs, oblivious to the thickened shadows at the

far end of the dark hall.

"Wake up, Jonathan!" Mike shouted over the roaring shrieks.

Jonathan heard the voice but it was too faint for him to make out the words. The nightmare continued. He smoothed back the obscuring fog of his victim's hair and looked upon her face. Her mouth opened and a scream swarmed out like a flight of wasps—and then his anger possessed him, his horrible, vicious anger, and made him delight in the way her flesh swept from her bones as he stroked her. Beneath his scaly palms it scraped away as skin might during the flaying of a rabbit.

This was the worst ever, the most wicked dream he had ever had. And he couldn't stop it. He watched himself tear the skin off her knotting, twisting muscles. His own screams mingled with hers.

"Wake up! Wake Up!" A frantic voice was calling to him.

Help me! Please help me!

"Wake up!" His savior grabbed his shoulders and shook him so furiously the dream finally snapped.

"Wake up, son," Mike Banion was saying. "You and I have a big problem."

"Dad?" His own voice was a whisper. Mike had him by the shoulders, had pulled him half out of the bed.

Mike threw his arms around him. "Wake up, Johnny. This is a serious problem."

Jonathan hugged him back. He had come to love gruff Mike Banion. Although Mike could be fierce, the cop loved him too, in his own way. Behind the tough exterior the love was there. Definitely. But in his own way.

"I've got a hard thing to tell you, Johnny."

Jonathan looked into the detective's eyes. The intensity of the dream made even the reality of Mike seem vague, as if he were on the other side of a dirty window. Jonathan tried to bring things into focus, to prepare himself for whatever unimaginable tragedy had occurred. "Okay, Dad."

"Your girl is in the hospital. She got raped."

Earthquake. The ceiling, the walls, the floor flying out into the night. "My—my—"

"Patricia Murray. She was raped on the altar of Holy Spirit sometime around midnight. She's at the Polyclinic. Bad, I'm afraid, son."

That made the dream boil up once again from Jonathan's unconscious. This time it brought a stunning, terrible image of a blond head twisting and turning

below him, lips flecked with blood. He felt her body beneath his own, jerking in spasm.

A thrill tickled him like the passage of a spider across his neck. "No!"

Mike grabbed his shoulders. "You must have been the last person to see her before the rapist."

On those words his mother swept into the room, her red silk robe fluttering behind her. "Leave him alone!" She was not her usual self. She looked like she hadn't slept in a month; her face was a mask.

"Mary, I'm trying to console our boy. His date was raped tonight at the Spirit."

Mary forced her featured into a grimace. "No," she blurted. "That's crazy!"

"It happened."

Jonathan saw an ocean of pity in his mother's eyes. She reached out to him, then stopped. She looked from Jonathan to Mike and back again. She was silent.

Jonathan's mind returned to his dream. In it he had been raping somebody. And those vast rows of tree trunks, those crosses—the dream jungle could easily have been a real-life church.

The memory of how very much he had enjoyed hurting her made him reject Mike's comforting hug and scramble to his feet in panic. He wanted to run, to hide, to somehow escape the red fire of insane anger within him.

Mike enclosed his arm in a powerful hand. "That's okay, son, take it easy. Take it easy, now."

He couldn't do that—not after glimpsing a monster in the shadows of his soul. Frantically he tried to stifle the terror. Dad obviously thought he was grief-stricken. How could he say that the right emotion was dread?

He decided that the impression of rape was more than a dream. It was almost a memory. Maybe this is the way psychopaths discover their crimes.

"Dad—"

How could he say it? While she was being raped I was dreaming about raping her? Funny coincidence, right, Dad?

"Come on, son, I'll drive you over to the hospital."

"You'll leave him right here, Mike Banion! Look at him. He's overwrought! You wake him up in the middle of the night, drag him out of bed—"

"Oh, darlin'. Pat was his girl."

"One date! And I arranged it."

At last Jonathan pulled himself together enough to talk. He had to tell them, he could not keep the coincidence of his dream a secret. He worked his throat, trying to get the words out. "I had a bad dream—my God, I had a bad dream! It's—no. It's impossible—but I dreamed I was raping her. I was dreaming it when you woke me up!"

"Come on, son, take it easy, now."

"Jonathan, you don't know what you're saying! Mike, he's not awake yet. You can see that!"

"Listen to me! I dreamed this. I *did* dream it." He faced Mike. "Dad, you have to put me on the polygraph, and do it right now."

"The hell I will," Mike roared. "No way are you going on the poly!"

"I am a *prime* suspect, Dad. I was the last person to see her."

"For God's sake, the poly can lie. What if I got a positive?"

"You'd do what you have to."

"Son—oh, son—are you—it almost sounds like—are you confessing this crime?"

"Mike, if you do this—if you *dare*—" She fell silent, her face burning with fear and rage.

Mike ignored her, regarded Jonathan sadly. "Don't tell me (his, Johnny."

Jonathan felt in that moment the most profound pity for his stepfather. "If I'd gotten hold of you in time," Mike had once said, "I'd have made you a cop. Such a cop." He'd cuffed Jonathan. "You'd've been a great cop." Poor Mike, all tangled up in his dreams of the son he'd never had. His first wife had died before they could afford children, so twenty-two-year-old Jonathan was taking the place of the unborn. Of course there was no question of Mary giving him children. She'd had a hysterectomy years ago.

"Mike, you've got to face it. I've got to go on the poly. *Especially* because I'm your stepson. If you didn't know me personally, I'd be a prime suspect—dream or no dream— just because I was the last person known to have been with her. I'd be down at the precinct under questioning right now."

"Hell, I'd know in a second you didn't do it. I've been a detective a damn long time, kid. And I know you didn't do it. My goddamn trick knee tells me." He cuffed Jonathan's shoulder. "The poor girl is really banged up. A stringbean like you couldn'ta done it."

Then why did I dream what I dreamed?

"If I weren't your son, you'd request a poly as a matter of routine. It'd be your duty then, and it's your duty now."

Mike's face clouded. Jonathan had him cornered. The truth was obvious. "I'll call the precinct, get an operator outa bed," Mike muttered. He started to go heavily down the stairs. At the landing he paused. He looked back, the hall light gleaming on his glasses, his skin the color of dirty flour. "Goddamn, I just had a thought. If we were out on the lease, we'd be gettin' up just about now. I can smell that coffee, son."

Mike's hunting lease was his personal version of paradise. The two of them had good times there, despite Jonathan's total inability to fire after he had aimed. He couldn't understand killing for fun. The pleasure of the hunt did not seem justification for stealing a life. For him, getting the buck in his sights was enough. "I'll be ready in a minute." He went to his closet, began to get dressed.

Mother followed Jonathan into his room, talked to him as he put on his clothes. "Don't you realize he thinks you're guilty? He'll make that test read any way he wants it to read!"

"Mother, for heaven's sake, I *asked* for the test."

She dropped her voice. "He's clever. If I didn't know better, I'd say I had committed the ultimate error of marrying an Inquisitor."

"A who?"

She blinked away annoyance. "Just a figure of speech. Remember that a policeman's first concern is solving his case. Getting the right man is entirely secondary."

"Mike would never take advantage like that. It isn't his way."

"*I'm* the one who loves you, Jonathan. You're my child and it's my obligation to protect you." Her hands fluttered helplessly before her face. "His affection—if you can even call it that—is ordinary. Just ordinary." She clutched at him. "You're so brilliant, so good—he has no idea what you are. He's a barbarian."

"Why did you marry him then? I don't think you've ever loved him, have you?"

"That isn't your business. I had a good reason for marrying Mike. Better than you can imagine."

"And I have a good reason for taking the polygraph."

"I can't stop you, can I?"

"Not really, Mother."

"So put your shirt on and go take your beloved polygraph and God help you! You can defy me all you want. I can't stop you." She swept out, head high, fists clenched. There were tears starting in her eyes.

Poor Mother. There was so much about her own son that she did not understand.

I am a gentle man who dreams like a monster.

He went down the stairs, found Mike standing in the kitchen.

Mike's face was tight with embarrassment. "The poly operator's waiting." He walked quietly behind Jonathan into the garage. But the moment the door closed he began to argue again. "For God's sake, Johnny, the girl is over at that hospital and we're wasting time. She needs a friend right now. Let me take you to her. Forget the damn polygraph—nobody suspects you, least of all me."

Jonathan paused beside the car. A quiet, firm voice spoke within: *There is something wrong with you, and now is the time to find out what it is.*

"Do it for me, Dad."

That statement brought a cuff that made Jonathan's ear ring. He sat down in the cigar-cured old Dodge and wished that Mike would for once remember his strength. "Sorry, Johnny. Sorry. It's just—I know my own job. Don't tell me my job. And I don't want to polygraph you."

Jonathan had to be more specific with Mike; there was no way around it. "Dad, I was having a very strange dream when you woke me up. I was dreaming that I had raped Patricia. Violently. In a church."

Mike got into the Dodge. For a moment he was silent. Then he slammed his hands against the steering wheel. "Coincidence."

"What if I'm a psychopath and don't know it?"

"Rare. Chance in a million."

"It happens, Dad."

"I know it happens! But it isn't happening to you. You're the scientific genius in the family. You'd *know* it if you were a psycho." He looked at Jonathan. There was fear in his eyes. "Wouldn't you?"

"There are blank areas in my memory."

"Big deal. There are blank areas in my memory too. You're a good kid—I

mean, don't go getting a swelled head if you get a compliment from the inspector, but I know a good kid when I see one. You live clean, you work hard. This dream stuff is damn foolishness. Everybody has crazy dreams now and then. You don't know where they come from. Men are violent. That's a fact. Hell, I ought to run you in for wasting police time with false leads or somethin'. God, do I wish that was a crime. Our job'd be cut in half. But that's neither here nor there. The point is, that girl was brutally raped, Jonathan. Could you really hurt somebody that way? You can't even shoot a *deer*, for Chrissake. You have less killer instinct than any man I've ever known. Take my word for it, kid."

- "The nicest people are often the most repressed, the kind who chop their families to bits, then can't remember a thing about it. It takes years of psychotherapy to uncover the monster inside."

Mike started the car, pulled out into the soft early morning, into the quiet of Kew Gardens. There had been rain before dawn, and dew now gleamed in the sunlight, sparkling leaves and grass, shining on the street and the roofs of the tall, elegant houses.

As they drove along Jonathan suffered another wave of anguish over Patricia. What nameless horror had befallen her?

If I raped her I'll commit suicide.

As they went from Kew out onto Queens Boulevard Jonathan felt in himself something almost filthy, as if a rotten, evil presence had crawled through his soul and left greasy stains behind.

His whole life might be coming apart.

Mike lit a cigar, his sallow skin glowing briefly in the lighter flame. From time to time he glanced in Jonathan's direction. Pain seemed to ooze from Mike's sweat-gleaming brow, from his hunched shoulders, his betrayed face.

His faith in me had finally been shaken a little.

Cold crept into Jonathan's bones. The dawn hour was a time when one's body seemed to hold less tightly to life. He huddled into his thin jacket.

The 112th precinct house was a modern building, all gray tile and glass. Jonathan had never been inside. Mike's workplaces—indeed his habits, even his friends—were mostly kept from his stepson. Despite Mike's occasional suggestion that Jonathan become a cop, he kept his police associations separate. "Hardasses," he would say. "You wouldn't go for 'em."

Mike pulled the car into a no-parking zone in front of the station. One thing

New York City police officials do not have is parking problems. As soon as the car stopped Jonathan got out.

"Hold it. Just wait a minute." Mike took his stepson's arm. "Look, you aren't any kind of a suspect or anything like that. Nobody even knows you're gonna be on the poly, and nothin's goin' in the record unless—"

He stopped.

"Come on, Dad. Let's get it over with."

He followed Mike through an empty waiting room, past a desk sergeant with permanently raised eyebrows, and into a steel-clad elevator that whined horribly when it started moving.

On the third floor there were offices, the largest among them Mike Banion's.

When they went inside, a tall, cadaverous man rose to his feet. " 'Morning, Blake," Mike muttered. "Sorry to bring you down here at this hour."

"No problem, Inspector. Glad to do it." He glanced at Jonathan. "This the suspect?"

"Not a suspect."

Blake regarded Jonathan with neutrality so complete it was chilling. "Got the booking papers?"

"This is a voluntary. Off the goddamn record, see?"

"How do I record the polygraph use, then? It's gotta be on the record, especially with this portable unit. If we were down at the Police Academy with the fixed installation it'd be easier. A lot of uses on that thing. But this—nobody ever takes it out."

"Then say you were testing it. Making sure it still Works." He paused a moment. "Look, Blake, you're gonna find out when you work up the questions, so I'm telling you now that this is my stepson, Jonathan. He had the misfortune to be the last respectable person to be seen with a very nice young lady named Patricia Murray who was raped after he left her. So we're down here clearing him."

The polygraph operator's face closed down tight. He was already in the middle of this. He obviously thought he ought to keep as low a profile as possible.

They left Mike's pin-perfect office with its gleaming oak desk and wall of citations and awards, and went down the hall to a small inner room that smelled of stale cigarette smoke and was dominated by an electronic

apparatus on a table beside an old-fashioned office chair.

A young policeman had appeared in the hall behind them. He followed them into the room and began going through a file cabinet.

"Out, patrolman," Mike snapped.

"But, sir, I've got to—"

"Get the hell out! This is private!"

The young cop hurried to the door. Jonathan looked around at the police equipment. He recognized the electrodes and wires of a skin galvanometer. He understood the principle of the polygraph; the devices he worked with in his own lab were far more sophisticated versions of the same system.

As soon as he saw how primitive the police machine really was he began to doubt the effectiveness of this session. Perhaps this was all just a waste of time and emotional energy.

Mike was staring at the door. "Who was that guy, Blake, a rookie?"

"Musta been. Never saw him before."

"Got his uniform all screwed up. Notice that?"

"No, sir."

"Yeah. Some damn screwed-up rookie." Mike looked through his bifocals at Jonathan. "Let's get on with it."

"Remove any metal objects from your pockets and roll up your sleeves, please."

Mike stood at the far side of the room with his fingers hooked in his belt loops. His lips were pursed, his face tightly controlled. His eyes were too calm. He was preparing himself for the worst.

Jonathan said nothing about the poor rookie, who was still lurking in the hall. Fortunately Mike couldn't see him from where he was standing. All the young cop needed was an argument with Mike Banion.

He could feel the young cop's eyes on him, watching from just beyond the edge of the light. Idle eyes. Lucky young cop, with nothing to worry about except some damn file.

The operator rubbed Jonathan's wrists with electrostatic gel and affixed the straps, then bound the device's belt around his chest. He flipped a couple of switches and graph paper began spewing out of the plotter. Next there was a test routine to confirm that the styli were rolling correctly,

"What is your name, please?"

"Jonathan Titus Banion."

"Your age?"

"Twenty-two."

"Occupation?"

"Assistant professor, New York University."

"Are you a homosexual?"

"Cut the crap! Don't ask him asshole questions."

"Sorry, Mike! Sorry! It's routine in rape cases."

"Try another tack, boy."

The operator cleared his throat. "Do you like girls?"

"Yes."

"Have you ever hit a girl or hurt a girl in any way?"

"Not that I remember."

"Do you go to church on Sunday?"

"No."

"Do you bathe?"

"Yes."

It was coming soon. They usually popped in the big one after a few innocuous questions so that fluctuations in the graph could be more easily read.

"Do you have a driver's license?"

"Yes."

"Did you rape Patricia Murray?"

"No."

"Were you present when she was raped?"

"No."

Silence descended. Jonathan had the happiness of watching Mike's face go from tight misery to relief. The needles hadn't even burped. But his own mind was just as full of questions as before. Even as he was taking the test he was growing more sure that this polygraph was the wrong instrument. There were more sensitive ways of getting to the truth than measuring whether or not a person *thought* he was lying.

Jonathan's outer self obviously believed that he was innocent. But was that enough? There are other, deeper selves in all human beings, selves that are never meant to be seen by the person riding the surface. A simple polygraph might not detect trouble deep down in a man, where his serpents crawl.

"As clean a test as I've ever seen, Inspector. The kid's not lying. He didn't do it. I'd stake my reputation on it."

Slowly Mike began to smile. He clapped his hands together. His eyes began to twinkle. Then, abruptly, he shifted to a more grave expression. No celebrations now, not appropriate. "Okay. I guess you want to get to that hospital right away, don't you, Jonathan?"

Jonathan stood up. He wished he could be as easily convinced as Mike.

Scientist, test thyself.

In the privacy of his own lab, deserted for the summer, he might find a deeper answer than the simple police equipment offered.

But not now. He knew that Mike would object violently to a trip to the lab. And he would too, for the moment. He was needed at the hospital. And he was longing to be there, more as each moment passed.

The polygraph operator made his way out of the room. Jonathan started to follow, but Mike stopped him. "Just hold on a second. I can't go with you; I got too much to do on this case. I just want to say—oh, Johnny, wow. What the hell can I say?"

"I love you too, Dad." Jonathan kissed his stepfather's cheek, giving expression to the emotion that filled and also frightened his stepfather. Mike in response shook his hand with almost comic solemnity.

"Good enough. I've a mind to send you over to the hospital under escort. Get you there in two minutes."

"I can take a cab, Dad. And don't kill yourself while I'm not watching over you. Remember to get some sleep."

They went through the tiled halls again, back to the grinding elevator, and this time the desk sergeant didn't even look up as they passed. On his way down to the corner to get a cab Jonathan realized it was still too early to find one around here. He would have to take a bus.

Standing at the bus stop with nothing to do but wait, all his energy seemed to drain from his body. He felt like he had been awake for a month. He could conceive of going home, getting into bed, and sleeping until noon.

How dare he even consider that when Patricia needed him?

Needs me? He'd known her for exactly twelve hours. But, yes, she did need him. She would be all alone in that hospital right now, maybe losing her life. .

"She really had an effect on you, for a new girl." Mike had come up behind him. "I'm avoiding a reporter," he said sheepishly. "Church rapes are big news. I'll drive you."

"No, I need some time to get myself together. Just about bus ride time."

"What's she like, Johnny?"

"What can I tell you? I fell in love with her. She's wonderful."

"She's one of Father Goodwin's most pious types. I see you as falling more for the easygoing kind."

"Beggars can't be choosers."

"Beggars? Come on, you must have 'em fallin' all over themselves for you." He grasped Jonathan's shoulder. "You're a hell of a good guy. Girls sense things like that."

Jonathan couldn't even smile. The wrong bus came and went, disgorging a rumpled man who seemed astonished to see them.

"Why, if it isn't Mike Banion, waiting for me right on the street corner. Got a scoop, Mike?"

"This is the goddamn reporter I was hiding from. The only uneducated man the *Times* has left."

"I'm an institution."

"You're still working the blotter after fifteen years. I guess you are sort of an institution."

The reporter smiled toward Jonathan. He had very bad teeth. "Terry Quist, at your service. You make it, we break it."

"He means the news. All the news that fits, he prints."

"As long as it's bad. Never accuse me of publicizing good causes, please."

Quist was a thinner, more threadbare version of Mike. He had cigars in the top pocket of his jacket too. His feet were huge clown feet, encased in shoes that seemed composed of shine alone. His ropy, weathered face spoke all the cunning of a man who understood the intricacies of city life.

"Terry, I want you to meet my stepson Jonathan. Jonathan, meet Terry Quist."

"Hello," Jonathan said.

Terry Quist stared at him as he might at a cobra coiled on the foot of his bed. "He gonna be with us?"

Mike nodded. "Until his bus comes."

"I'm in big trouble. I've got to talk to you privately." When Quist's voice quavered, Jonathan realized that the man was trying to control profound fear. Jonathan found his very presence chilling. His own terror, his awful sense of evil within, was still close to the surface.

"I'll give you ten minutes," Mike told the reporter.

"Your office, please. I might be talkin' about my *life*, Inspector."

The bus came as Mike and Terry were entering the precinct house. Sitting alone as it swayed along, Jonathan tried to prepare himself for what he was going to find at the hospital. But he could not. A few hours ago Patricia had dazzled him with her beauty. Now she was the victim of somebody who despised it.

Somebody dark and wicked.

He sucked in breath. For an instant he had wanted to run, just to let his body take over and somehow escape the situation.

He remained on the bus as if frozen to his seat, unable for a time even to move.

By the time the bus reached the huge Art Deco hulk of the Poly, full sunlight bathed the streets, the white walls of the building, the sea of glittering windows. He got up and forced himself out onto the sidewalk. He passed through the entrance to the old building.

Once in the lobby he sought the information desk. It was manned by a fat guard complete with Sam Browne belt and pistol. Queens Poly didn't fool around. It was a hard place, where the borough's desperate emergencies came. This man often confronted people who were crazy with shock and grief.

"I'm trying to locate a woman named Patricia Murray, a rape victim, badly injured."

He consulted a computer printout. "Here—Murray, Patricia, Intensive Care Unit, Ward C, Section Five. That's the fifth floor, end of the corridor."

Jonathan got on an elevator jammed with interns, nurses, and two patients in wheelchairs. It stopped for an interminable time at each floor. At last, though, he arrived at the nurses' station that controlled the ICU. "I'm here to see Patricia Murray," he said to the nurse at the desk.

"Visiting hours start at nine." She flipped through a file. "Oh. Are you related?"

He lied because he knew he had to. "Yes."

"She may be awake. But you'll have to observe her through the window. No direct contact yet."

He followed the nurse down a hallway cluttered with medical paraphernalia, IV stands, wheelchairs, rolling beds, electronic equipment.

Patricia lay swathed in an olive-drab surgical gown. Her legs were spread and a tent of plastic obscured her head. An OXYGEN IN USE sign flashed on and off above the window that looked into the room. Her whole belly was covered with gauze and bandages, and more bandages were on her arms. Even beyond the evidence of great wounding, it was her absolute stillness that made Jonathan feel the strange, deep anguish of the bereft. Only if she were dead would she be more still.

He stood looking at her, feeling the tears burn in his eyes and a tightness constrict his throat, and wishing that somehow it could have been different.

What terrible thing had happened last night?

Was he wrong, or had her head slowly turned toward him? With the wrinkled plastic oxygen tent making a clear view of her impossible, it was difficult to tell.

Yes, she had definitely looked his way.

But what was the expression on her face? Was it love, or terror—or was it madness?

He strained and peered at her, but he could not tell. After a few minutes the nurse nudged his elbow, then drew him away.

As he went down the hall exhaustion hit him hard, and with it came a great sorrow. His brief love was destroyed.

He thought of her, lying beneath him in his dream. He crept from the hospital like a guilty man.

To: The Prefect of the Sacred Congregation for the Defense of the Faith

From: The Chancellor for the Inquiry in North America

Your Eminence:

I am sorry to inform you that the Night Church has surfaced publicly with a bloody ritual at a parish in the New York City borough of Queens.

Location: Holy Spirit Parish, founded 1892, church dedicated September, 1894. Present population 16,231.

We have known for some time that rituals were being held at this church, but, in accordance with your Directive 1516, 28 October 1971, *In Causa Clandestina*, we have done no more than insert operative observers into the congregation.

A full report of the service from observer Brother Alexander Parker (Judist) is attached. Here are the highlights:

1. The ritual was conducted by Prince Franklin Titus himself, attesting to its canonical importance.

2. Princess Mary Titus was in attendance at the ceremony.

3. The ritual appeared to be the *Rituale Pudibunda Coitus*, the Shameful Coupling. (See *Grimoire Titus*, Rev. XIV, vol. 11, pp. 2112-2177.)

4. Apparently the principal participants were the two heirs who were successfully hidden from us during our last *Oppugnatio*. According to our statistics these two are the only viable heirs left:

- a. Patricia Murray (from Pantera to Roland to Sheil to Murray, see *Genealogies Pantera*, Sec. 42. Family 58, Branch Irish, yrs. 1718-1952, for lineage to Murray, Jean Patricia Roisin Margaret out of Samuel and Rebecca).

- b. Jonathan Banion (believed to be Jonathan Titus, Prince, see *Genealogies Titus*, Sec. 113, Family 71, Branch Anglo-American, yrs. 1691-1951, for lineage to Titus, Jonathan Martin Flavius out of Martin and Mary).

5. Because the two viable heirs were participating, we must view this ritual as extremely dangerous.

6. Because of the urgency of the situation I would suggest Directive 801, 14 June 1831, *Contra Poenam Ultimam*, be revoked, and that His Holiness be prevailed upon to authorize the Ultimate Measure against these two individuals.

Yours in Christ & for the Defense of the Faith, Brian Conlon (Msgr.)

Ad: *Cancellarius Inquisitionis in Septentrionalis Americanensis*

Ex: *Prefectus Congregationis Defensionis Fidei*

You are by this order directed most specifically not to undertake any actions contrary to *Poenam Ultimam*.

His Holiness certainly has no intention of condoning the sort of excesses that have marred the history of the Hidden Collegium.

However, we do authorize you to submit either of the heirs to *passive* questioning if you can find a means of doing so that does not violate the civil laws of the jurisdiction in which you reside.

You are proceeding under the following authorities of the Holy Office of the Congregation for the Defense of the Faith:

1. *In Defensione Fidei*, Ch. V, Pt. C, Para. 5: "The Holy Office of the Inquisition shall retain its full powers and authorities, as granted in *Justinian, Lex. 1.023:325, I n haeretici*, and affirmed many times subsequently."

2. *Canon Lex. 221.04 (Privatus)*: "The Defenders are authorized in cases of extreme necessity, where the whole life of the Faith is threatened or the very existence of the Church called into question, to take up arms in defense of our Holy Faith."

As there is a possibility that there will be sin committed in the heat of your effort, and that you may be unable to confess before death, I now pronounce the customary absolution *In Futuro* upon you and your subordinates:

Auctoritate a Summis Pontificibus mihi concessa plenariam omnium peccatorum tuorum indulgentiam tibi impertior: in nomine Patris et Filii et Spiritus Sancti.

Mea Auctoritate,

Paolo Cardinalis Impelliteri

Your Eminence:

Of course we understand and respect the position of His Holiness and of the Hidden Collegium.

In no way will this office violate the provisions against execution and torture promulgated in *Contra Poenam Ultimam*.

But we also apprehend what is hidden between the lines of your memorandum, that we are to act *exactly* according to the statutes you cite, which granted the Holy Office its original authority.

Be assured that we will do so with all vigor.

May God have mercy on our souls.

Chapter Five

MIKE WATCHED Terry Quist open a Baby Ruth, stuff it into his mouth, and toss the wrapper to the floor. The poor guy. He always gobbled food when he was tense. Or scared. Mike eased his friend into telling his story. "You still write the blotter, don't you?"

"That and the bus plunges at the bottom of the pages— '158 die in Surinam bus plunge' typa junk. I'll never get anywhere on the *Times*. I'm more of a *National Tattler* kind of a guy."

"So What're you doin' here? Go plunge a bus."

"I've got serious business with you. You wanna hear my story or not? I might have a line on your raped girl."

"Anything about Patricia Murray I want to hear. Are you lookin' for pay, or what?"

"Come on, man. By rights I ought to be back at the shop doin' my investigative reporter bit. But I'm here because I'm a coward. I want to stay alive. Just one thing, though, before I lay what I've got on the table. It's very weird. I want you to suspend disbelief."

"No."

"Please remember we been friends since I taught you to smoke in fifth grade."

"Fourth."

"I forget. Anyway, you promise me that you *will* check this one out, no matter how wild it sounds."

"You're settin' yourself up for a putdown. You been takin' rides on a UFO or Somethin'?"

"I wish I had. I'd be better off gettin' fucked over by little green men than by the Night Church."

He fell silent. His hands, Mike noticed, were gripping the edge of the desk so tightly there was a flush beneath his fingernails. "Keep goin, buddy."

"Just that I have reason to believe from the nature of the crime that your lady was hurt in a religious service."

"The priest in that parish is a good friend of mine."

"You're dealing here with something much bigger than any single priest or parish. The way I see it, this thing is gigantic. World wide. A festering, deadly cancer hidden in the Catholic Church, rotting it from within. And evil, Mike,

God is my witness. Unbelievably evil." "Something as big as that fools around with rape? This is lone pervert stuff." "I said you wouldn't believe me."

"I didn't pass judgment yet. Keep convincin' me. You're doin' a wonderful job so far."

"I'll bet."

"You are. I'm takin' you seriously."

"It's got a congregation that meets at Holy Spirit. Ah, come on, Mike, I see you smilin'! I'm telling you something *big*."

Mike had smiled just a little, to test Terry's resolve. Terry's reaction meant that he, at least, believed the story he was telling. "Prove Somethin'."

"What do you want proved?"

"Anything. Any part of it."

"The constant whine of the cop to the reporter: do my work, I can't do it myself. Okay, I got onto this through a guy named Alexander Parker, lives across the street from Holy Spirit. This guy is not connected with the media. He started comin' in to the Idle Hour about a week or so ago. He hears I'm a reporter and he tells me he's got a story."

Mike nodded.

"He tells me how he goes home late a lot. Night person, he says. And every Sunday and Thursday night he's noticed Somethin' funny. It's not that big a deal, just slightly more people around than usual. One night, he's in his apartment. It's quiet, see, and he hears this real low noise. Like music, but so low he more *feels* it than hears it. He thinks maybe it comes from the church. So he goes over there."

"Ought to be on the force."

"He tries the door, but it's locked. So he listens. He hears people moving around inside, like lots of people just walking around and around in the

church. Every so often a baby screams and gets stifled. That spooks him a little, and he goes home. He watches. Along about four-thirty he's been asleep, and all of a sudden he sees people leaving."

"He's asleep and he sees the people?"

"Will you cut it out! He *wakes up* and he sees the people. Clumps of two and three, like. He counts three hundred people leaving over the space of half an hour. In the small hours of the goddamn mornin'. He can't figure it."

"So he runs off and tells New York's most brilliant reporter."

"He lets it sort of slip out. Like he was trying to lead me on. He tells me they're dangerously crazy. Something about a disease they're gonna spread. Something about a new species—the anti-man. He asks me, almost begs me, to write it up. 'Tell the world,' he says. 'Warn them.' "

"So?"

"So doesn't that sound pretty damn dangerous?"

"Hell, I'm all for it. Anti or not, a new species'll probably do a better job than we have."

"You don't understand, do you, you jerk? You're sittin' there straight as a razor and all the time laughing at me. *It's what they plan to do after the new race gets going. The rest of us—they're gonna just kill us. All of us.*"

"Lotta work."

"Not for people with the kind of weapon they have. A disease has been developed. When they release it everybody dies."

"Including the new race—and the Night Church?"

"Hell, no. Everybody *except* them. They all get vaccinated."

"Your friend found out a lot. I mean, considering he just watched these people from across the street. Supposedly."

"I thought about that. I think Alex is more than he seems. He told me, 'You're a reporter, get your story and publish it.' "

"So you're here."

"I'm afraid for my life! This is bigger than me. I can't get the story *and* stay alive."

"How can I identify these people?"

"Well, most of 'em are in Holy Spirit Church in the middle of the night. Go over and pick 'em up."

"And hit 'em with a trespass misdemeanor? That'd just tell 'em to get

cautious."

"Find their labs or whatever. They must have storage facilities for their disease bacteria, not to mention delivery systems. It can't be simple to infect the whole world. There's got to be plenty of evidence of what they're planning."

"This sounds like some kind of crazy science, not a church,"

"Well, maybe that's accurate. Religion and science mix and a monster is born."

"You still haven't given me anything to go on."

"Hell, Mike—"

"You bring me a load of crap like this and you'd better have some tangible evidence to go with it. Something I can goddamn well put my hands on. Come on, Terry. I'm a busy man."

"So talk to Alex Parker! Do your goddamn job, follow the lead."

Terry's tone made Mike want to slug him, but he resisted the temptation. "Everybody in the neighborhood's being interviewed, you can bet on that."

"Oh, come on! You get your ass out of that chair and go and personally talk to Alex Parker. Do it for me. For old times."

Mike regarded his friend. Too many disappointments, too much booze, too many hopes down the drain. "OK, buddy, I'll give him a call right now." Terry had the number. Mike dialled, waited through three, then five, then seven rings. He shrugged, put the phone down. "What can I tell you? No answer. We'll have to try again later."

Terry Quist's face was covered with a fine sheen of sweat. Mike could smell the stink of his fear.

It was the nausea as much as the riot of birdsong that awoke Brother Alexander. He opened his eyes to blue morning sky. The lurching vertigo told him that he had been drugged. He could smell the thick ether fumes still in his nose, could taste them in his dry mouth. His stomach heaved and twisted.

Above him puffy white clouds crossed the clear blue. He was bound hand and foot, chained to an iron bedstead. He was in a forest glade. He could not move his head enough to see them, but he could sense people about.

When he turned his head far to the right he caught a glimpse of a familiar face. His heart began to pound. It was the notorious Jerry Cochran, and he was carrying something that looked very much like a blowtorch.

"Good morning, Brother."

Tears sprang to Alex Parker's eyes. He had heard stories of this man, terrible stories of flaying alive and burning, of tortures beyond belief.

There was a *whump* and a roar. Then Jerry Cochran came into full view, tall, grim, his eyes crazy, his face so rigid it might be made of stone. In his hand was a black blowtorch gushing fire. Alex turned and twisted on the rocking bedstead. His mind swarmed with terrors. In the deep of the night when he was all alone he had sweated out the possibility of just this martyrdom, death by fire.

"If you answer my questions, I will first garrote you," Jerry Cochran said softly.

Alex wept openly. He already knew what he would do, he had thought all this out very carefully. Inquisitors must understand themselves well enough to know what they will do under torture. "I'm sorry, Jerry," he said between sobs. Then he fixed his mind on the Jesus prayer, his only weapon against the agony of the flames: "Jesus, thou art with me, Jesus, thou art with me, Jesus—oh! Oh, GOD! AAAHHH!"

Jerry had held the flame against Alex's chest. There was a stink of burnt hair. "You're very sensitive, Alex. I hardly touched you."

Alex felt his bladder let go. But they had prepared for that. He could feel that a towel was stuffed between his legs. "Jesus, thou art with me, Jesus, thou art with—"

The flames sent tidal waves of razor-sharp agony up his thighs as Jerry played the flame along his legs. Skin popped and crackled. Oily smoke rose.

"We know your drinking companion is a reporter, Alex. What is his name?"

"Jesus, thou art with me, Jesus, thou art with me." Alex stopped in confusion when the next application didn't come. To his utter horror he felt Jerry pulling away the towel that had protected him.

"The Judists are celibate, I think," he said. "Well, I don't suppose it matters one way or the other, does it, my friend? No more worries about keeping your vow."

When he felt the fire this time it was as if his insides were being torn out, as if all the flaming stars of heaven had fallen on him. Wild with torment he shrieked, he bellowed until his throat cracked, he jerked and twisted on the iron bedstead.

Nobody could hear him, not out here on one of the Night Church's vast

country estates.

"Name him!"

"Qui-i-st! QUIST! QUIST!!"

"Ah."

"Stop! Jerry, I told you! Stop! Stop!"

With lazy strokes, Jerry moved the tongue of flame up and down Alex's legs from his crotch to the searing, crackling bottoms of his feet. "QUIST! QUIST! OH, GOD!"

Jerry gazed at him with the hooded eyes of great passion. His face was flushed. "Now we'll get started on your belly, OK, Alex?" He smiled a little. "Maybe if you tried the Jesus prayer some more it would help. Or if you told me the names of the other scum in your cell!"

"I told you, QUIST!"

"He was a recent contact. A reporter indeed. What an amateurish attempt to harm us—attracting the attention of a reporter. I want to know the other names, Alex, all of them!"

To give up his cell was the ultimate failure of an Inquisitor. Desperate, knowing his own weakness, Alex tried to knock himself senseless by banging his head against the iron bar beneath it. But Jerry had thought of that. A leather collar restrained his neck. "Look, Alex, you're suffering so much I'll offer you another deal. I'm afraid you've been too difficult to deserve garroting, but you give me the names and I'll do your face with the torch. It'll be over very quickly."

"Jesus, thou art with me, Jesus, thou art with me, Jesus—"

When the flames came this time they pierced his belly and made his stomach boil. His bowels exploded inside him, mixing their torment with the searing of the flesh. Hot steam rushed up his throat and scorched his mouth and nose.

Jerry stopped. "You may be wondering why all this pain doesn't just knock you out. We loaded you up with amphetamines, Brother Alex. You cannot escape into unconsciousness."

That did it. He had been hoping to faint, even to go into a coma from the pain and the damage. This was just too much. Even in his worst imaginings he had never dreamed torture would be this bad. It was almost incredible that the human body could endure such agony. Sick at heart, facing his own miserable failure, Alex listed the names of the people in his cell. "God forgive me. Brother Julius Timothy is one, Brother George Yates the other."

"That's all? Why such a small cell?"

"Holy Spirit was a backwater assignment."

Jerry nodded. "So we thought. That's why we use it so much."

"You're very clever."

"I know we are, Alex."

There was a moment of silence between them. Alex sought the eyes of his torturer. There was contact between the two men then, the anguished victim and his tormentor. In Jerry Cochran's eyes Alex saw so many things: hate, enjoyment, self-loathing, and deep down in the sparks and the shadows, a scared little boy who had been lost for a long time.

"God forgives you, my son, and I forgive you too."

Jerry laughed. As sad a sound as Alex had ever heard. "I ought to give you the full treatment for that." He turned up the blowtorch until it bellowed out a great gust of flame.

For a moment he hesitated as if undecided. He pointed the torch at Alex's chest. "Jesus, thou art with me, Jesus—"

But something had moved that hard man, and he suddenly changed the direction of the flame. For an instant Alex saw fire, then he felt a red-hot poker go down his throat, then he was all in cool. He fell away into timeless blessedness.

Jerry directed the work crew to complete the cremation and bag the body. Then they returned to Queens and entered Alex's apartment with the remains. They replaced them in Alex's bed, which they then set afire.

Twenty minutes later the fire department arrived. Ten minutes more and steam was pouring out the window of Alex Parker's apartment. Mike arrived on the scene with Terry Quist clinging to him like a baby. When he saw the charred, wet remains of Alex Parker being carried out of the building Terry grabbed fistfuls of his own hair.

The cause of death was listed as burns and asphyxiation. The agency was a mattress fire. The means of ignition was theorized to have been a cigarette.

Officially, the martyr was listed as having died because he smoked in bed.

Terry Quist left the scene a haunted, stricken man.

Mike Banion watched him go. And he wondered.

Chapter Six

THE PERMANENT GLOOM of Rayne Street surrounded Jonathan the moment he turned from busy MacDougal. Rayne was a narrow cobbled lane between MacDougal and Sullivan, like Gay Street and Aldorf Mews one of Greenwich Village's hidden streets. Here NYU had placed its data storage facilities in the enormous black hulk of the house that dominated the short block. In the basement they had found room for Jonathan's lab. He hated the place, hated its dampness, its inconvenient distance from campus, and above all, the dark gargoyled ugliness of the building itself. The sun never shone on Rayne Street, not even at high noon. It was one of the few New York streets still cobbled with the round stones that had seen carriages and wagons and had resounded to the clatter of hoofs. Jonathan's footfalls were the only sound that disturbed it now. He looked up at the front of the house. At least the place was well kept. A small brass plaque on the door announced NEW YORK UNIVERSITY DIGITAL DATA STORAGE FACILITY. Under the stoop was another door, this time with a plastic sign: PHYSIOLOGICAL PSYCHOLOGY DEPT. LAB B.

Jonathan was expecting the lock to be stiff'. He hadn't used it in three weeks, but it turned easily. The iron door opened without a squeak.

The hallway beyond was pitch black, Jonathan fumbled for the switch, found it, and turned it on.

Nothing happened.

He cursed. Here he was in the middle of a sunny morning and he was going to have to feel his way down a dark hallway because an indifferent university administration had put his lab in this hole.

The door swung closed behind him. He flipped the light switch a few more times, uselessly, then began moving along the hall, feeling for the door to the lab. Fortunately it was the only one in this wall. It led to what had once been the wine cellars and basement storerooms of the old building.

Jonathan became aware of a curious trick of sound in the enclosed hallway. His own breathing sounded like it was coming from the darkness beside him.

The effect was so realistic that he waved his arms out into the middle of the hallway. Nothing there, of course.

He began to search the wall more urgently, sweeping his hand up and down, feeling for the door jamb. He really wanted to have some light.

Perhaps it was another trick of sound, but he heard distinct scuttlings. Rats. Disgusting. He clapped, he shouted "Hey!"

Then he heard something that silenced him. He became very still, listening. There were human footsteps coming down the stairs at the far end of the hall.

Jonathan shrank back. This was a closed facility. Nobody worked upstairs. His first thought was that some drifter had gotten in here.

A beam of intense white light dazzled him. He shielded his eyes with his forearm. Fearful thoughts passed through his mind, of death at the hands of a maniac.

"Who are you?" The voice was old and harsh. It did not sound completely sane.

"Banion. This is my lab."

"You can't come in here. The facility is closed."

Now it made sense. He was confronting a watchman. "Look, this is my lab. I'm not a student, I'm a professor. So please get that flashlight out of my eyes and shine it on the door so I can see the keyhole."

The beam did not waver. Instead it came closer, until it was blazing in Jonathan's face. "Go home, young man. You mustn't come here." The voice was so old, and the tone like ice.

Jonathan knew when he was being threatened. And it infuriated him. With a single, quick motion he reached up and snatched the flashlight from the old man's hand. There was an instant of surprisingly powerful resistance, then the old man sighed and quite intentionally let go of the light. As he did Jonathan came into contact with his hand. It was a shocking sensation. Jonathan had never felt skin so hard and cold. More like stone than skin. He imagined that a mummy's hand might feel like that. A dry claw.

"You're mad to come here! You're putting yourself in great danger!"

Jonathan turned the light around, catching just a glimpse of the man before he turned his back. What he saw made him gasp: bright green eyes set in a labyrinth of wrinkles, a tiny slit of a mouth open in an infuriated snarl.

Then the old man was gone, his feet rat-tatting up the stairs. A door slammed.

Good riddance. The university had a nerve hiring senile old fools like that to guard the facilities. Budget, probably.

Jonathan selected the right key from his chain. Getting in was easy now that he had the use of the flashlight.

He entered his lab, making a mental note to call the university's maintenance department and complain to them about their watchman. Obviously unbalanced, not to mention being far too old for the job.

Jonathan had come to his lab in the quiet of a summer morning to try and discover once and for all if he had done that terrible thing to Patricia. He couldn't bear to name it. He simply could not accept the idea that her hurt and his dream were a coincidence, not even with the vindication of the police polygraph. He needed his own instruments to tell him if there was some hidden corruption in his soul.

Was he an unconscious psychopath?

He imagined the demon's loom clicking eagerly as strand by strand it pulled his life apart. He had come to think of Satan as a sort of neurological shadow, a speck of dark potential in the electrochemical bath that floats the soul. He could no longer be sure that the shadow was not an actual, outside force. Evil for its own sake seemed increasingly to him to be a real power in the world.

Certainly when it was abroad, when the owls and jackals announced Lilith wandering, those she caressed could not resist her beauty—nor fight her talons.

He moved among the covered instruments. During the term he had been making the first really detailed map of microvoltages in the human brain. His work was highly technical, but beneath all the statistics were the mystery and romance of pure science: he and others like him were cracking the code of the mind.

The room was full of galvanic sensors of various kinds, but mostly there were computers: Apples and small IBMs to handle the statistical work, terminals connected to the big Cray 2000 at MIT that was his main tool. He used the Cray to do the sensitive high-speed signal recognition that was needed to separate the various brain waves into their hundreds of component parts and analyze each in isolation from the others. This gave him a virtual electronic window on the mind, vastly more sensitive than any that had been developed before.

There were also racks of Petri dishes, used for culturing microorganisms,

lined up against one wall. He stopped. He ran his fingers along the edge of one of the racks. Strange. He didn't remember authorizing anybody to install such equipment here.

In the middle of the wall, what had been a closet door was now marked in block letters: VECTOR STORAGE. It was locked.

He didn't do work on bacteria. He didn't even know how. As he looked around him he could see evidence of another's recent presence. There was a lab chart with annotations dated only yesterday. On the floor was the cover of a coffee container. Somebody had been working here within the past twenty-four hours.

The university must have allocated unused space to another project. Odd. Was it like NYU to do something like that and not bother to tell him? He couldn't seem to remember.

He stood in the center of the dim, warm room, wondering. That persistent, distant clicking was the sound of footsteps on the sidewalk above this end of the basement. Demon's loom. His was a gothic soul.

The clicking died away. Maybe they *had* told him about this biology equipment. Not remembering something like this fitted with a theory of amnesia. If he didn't remember somebody installing a bacterial experiment in here maybe he didn't remember other things either.

Somehow he must uncover enough of the mechanism of his mind to determine the truth.

He had come to realize that horror and disgust were not his only reactions to the rape. His body vibrated eagerly at the thought of it. It was awful, repulsive. And yet, when he remembered her lying there in that hospital there came over him a sneering, hateful contempt that was at odds with everything he believed and loved about himself.

Off in the corners of his mind there were also violent bits of memory that seemed to go beyond the rape—a screaming face, a closing coffin, thuds and howls . . . long marble staircases, lines of chanting nuns, the garrote and the strappado and the rack. . . .

Was it another life, some horrendous past? Unlike Patricia he did not discount reincarnation just because it was against Catholic doctrine. Had he at some time in the past been a victim of the Inquisition, suffered in the dungeon of some elegant Spanish palace?

No, that wasn't quite right.

"Inquisitor." He whispered the word as he might the name of a present danger. "Inquisitor." Mother had uttered the word early this morning, then waved away his question about it.

Inquisitor. His hands were shaking, his legs seemed about to give way. The old man's lunatic warning sounded again in his mind. He went to the door, flipped on all the fluorescent lights, then locked it securely to the outside.

He remembered.

A priest, walking smartly across an airport lobby, his hair neatly parted on the right, his well-fed face mixing self-assurance and contentment, his shoes clicking on the floor.

Then the face turns, sees Jonathan, changes. Hate replaces contentment and the face becomes terrible, relentless, and cruel. But this time the Inquisition is not successful. A tall young man, a man Jonathan admires, grabs the priest and forces him into a car.

Next memory: the priest is naked, chained to the wall of a cellar. Questions are coming, one after another: *Who is your Inquisitor-General? How did you find us?* On and on, while the tall man removes strips of skin from the naked priest's body.

Jonathan is hiding in a corner, behind some shelves full of empty Petri dishes.

From the priest's mouth a ceaseless prayer: *Jesus, thou art with me, Jesus, thou art with me, Jesus, thou art with me.*

Help the priest! I side with the priest!

At last the torture stops. The torturer goes upstairs for a Coke. Jonathan is left alone, astonished, horrified that his friend, his hero, could do such things to another human being. The priest, his eyes watery and bloodshot, must know that his end will not be long in coming. He fixes his gaze on the boy who has crept forward, his own eyes tearing with pity. Words pour in a torrent from the priest's parched mouth. "Young man, they're going to destroy humanity for your sake, yours and the girl's. Turn against them! Accept Christ! Please, listen to me. Your friend Jerry is evil, your uncle is evil, they are creating... death ... they are Satan's . . . oh ... Satan's friends." Then the eyes roll and the head sinks forward, the chin touching the oozing, flayed chest.

No, that isn't a memory. You're imagining, spinning tales around the biology experiments that shouldn't be here.

You're hysterical.

With an effort Jonathan pushed the mad imaginings out of his mind. Again he regarded his sophisticated instruments, the ones that were familiar. They could sense and record brain waves; that's what they were all about. If he could find out where a thought like the one he had just had was physically coming from in his brain he could easily tell whether it was a memory or not.

Jonathan went over to the cubicle, took the complex, wire-covered sensor helmet in his hands.

How was he going to work the controls while wearing this thing? Its cable wasn't long enough.

Jonathan cursed silently. Without an assistant there was no way he could use the equipment.

And the alternative was not at all desirable.

At CalTech they were experimenting with a certain drug. It could be inhaled like cocaine, but it had no euphoric effect. On the contrary, it stimulated the brain's deepest memory centers and caused an almost incredible flow of vivid recollections.

This was N, alpha dorporinol 6-6-6, a complex triumph of the biochemist's craft. It was synthesized from naturally occurring brain chemicals. So far the cost was eight thousand dollars an ounce. There were a few grams of it in the refrigerator. Jonathan had been asked to duplicate some of CalTech's experimental results but he had shut the lab for the summer before carrying out the work.

He went to the refrigerator. It was not your ordinary Frigidaire. This refrigerator was bolted to the floor and had a combination lock. Some of the drugs kept there, tranquilizers and such, were much in demand on college campuses. Others, like 6-6-6, were valuable.

Back behind the bottles of Valium and Quaaludes were foil packets with hand-lettered labels. Jonathan took out the packet of 6-6-6. The crystals inside crunched like sugar when he opened the foil. Ideally, the drug should be suspended in a saline solution and introduced to the nasal membrane via an aspirator. But Jonathan did not have time for that. He measured out a moderate dose, four grains, on the sensitive laboratory scale. Then he ground it fine with pestle and mortar. He poured it from the mortar to the flat of a spatula and raised it to his nose.

He inhaled.

There was a gentle, pleasant aroma.

Jonathan felt no change. He went into one of the subject cubicles and lay down on the couchette. Still nothing.

Why do there have to be bars on my window, Mother?

The boy's voice was so clear and real that Jonathan jumped up.

That had been him, Jonathan Titus Banion, as a child.

Bars? Had there been bars on the windows of their old apartment? He didn't remember it that way . . . and yet he did.

We've got to keep them out, to keep them away from you. The bars are against them.

This was uncanny. It had been her voice, but she wasn't here.

He could see the walls of the bedroom in which she had said those words. But he didn't recall wallpaper like that, with moons and planets and rockets on it.

But where, then, did this memory come from?

The old man from the hallway came around the end of a lab bench. His emerald eyes flashed. Beneath the fluorescent lights his skin was powder-gray. He looked dead. Hallucinatory phenomenon, of course. Jonathan blinked his eyes, but he could not make the illusion disappear. The old man spoke. "You must not try the door to the past, Jonathan. It's dangerous for you. Terribly dangerous."

"Who in hell are you? How dare you come into my lab!"

The man shifted and wavered, half mirage and half real. Jonathan blinked but the image remained vague. In an odd way the old man seemed to fit among these recollections. "Danger," the old man said, "danger in these memories!" Then he was swinging a red lantern and Jonathan knew that this time he was an hallucination. NYU maintenance personnel didn't carry such lights. The real watchman was probably off sleeping under the stairs.

The false one symbolized a powerful barrier in Jonathan's mind against the very act of remembering.

But how? A barrier like this didn't just come out of nowhere. It had to be created. As wild as it sounded, almost the only explanation was that a highly sophisticated hypnotist had been at work on him.

Then what of those other imaginings a moment ago—the Inquisition, the tortured priest? "They're going to destroy humanity for your sake, yours and the girl's." Hadn't the priest said something like that?

But there isn't any reason to destroy anything for us.

He sat up on the edge of the couchette and rubbed his sweaty face. Bits and pieces of memory were still breaking through the hypnotic wall, induced by the powerful action of the drug to move toward a surface they could not quite reach.

Like a crust formed on lava, his mind shifted and cracked, and where it cracked the searing ugliness beneath drove him buck.

This was not his doing. He was not amnesiac; somebody had intentionally set out to conceal his past from him. And this somebody had a great deal of skill. Hypnotism was a gross craft. To practice it with such delicacy was right at the limits of modern technique, perhaps even a little beyond.

He could feel a titanic struggle building in him between the drug and the barrier. Frantic, sweating, dizzy, he lurched out of the cubicle. There was no antidote to 6-6-6; he should never have taken it without controlled supervision.

The room was hot, terribly hot. He had to have water. But the least movement sent him slumping and reeling with dizziness. His head pounded, waves of nausea staggered him.

So you want to know why we protect you? Look, then, my boy, look at the work of the Inquisition that seeks you!

He was surrounded by a rising wall of flames. He was being touched by them, and their touch was hideously painful. He was attached to the stake by an iron collar.

His hands were free; he tore at the iron. He kicked the logs until sparks flew up around him. Outside of the flames he could see a great and gaudy crowd, men and women and children. Along the edges of his pyre little boys roasted potatoes to sell to the mob. And the mob chanted: "Evil, evil, evil! Satan's child, save yourself!"

But I'm not Satan's child! I'm—I'm . . . something else.

He looked up into the royal enclosure, to one pale female face, her skin like milk, her eyes crystal-green, her hair as blond as a sunlit cloud. From her eyes there flowed cooling love. She was composed, but he knew how deeply tragic she felt.

As the flames rose around him and he died in torment he fixed on those eyes, and saw in them the triumphant secret: *Our nights were not in vain, my senor, for I am with child. There will be another generation.*

Jonathan lurched against a bench, knocked a computer to the floor with a crash and a cascade of shattered electronic chips.

As he collected himself he realized that the fire wasn't a dream any more than the tortured priest was a dream. They were both memories.

But what kind of memories? And what sort of a monster would have them?

The priest was recent, but that fire had burned a long time ago.

In the fire there is exaltation; the pain is your triumph.

How dare you preach to me, Lucinda, when I have to endure the stake!

Martyred husband.

O Lucinda Pantera, you are the image of my dreams, the woman who has always been beside me. Angel Lucinda.

Angel Patricia. You are also Patricia, and all other women I and my ancestors have loved.

Seeking the edge of the future, we go on. By breeding the two lines together again and again, age by age, millennium by millennium, we are creating a masterpiece.

A masterpiece of evil. Something far darker than mankind. Something unencumbered by impulses toward the good.

Something unspeakably monstrous!

Jonathan was on the floor. "No!" His mouth was dry, his face smeared with tears. "No, it mustn't be!"

He could almost see it, almost smell it, and it was hideous and stank of rotted flesh.

And it was in this room.

Danger, the old man wailed, danger!

The bits and pieces of the shattered computer had cut into Jonathan viciously. He touched a gash on his palm, tasted his blood.

Something was crouched just the other side of the lab bench, breathing softly. Jonathan was so frightened he literally could not move.

It was the *thing* humankind with its inquisitions and persecutions has been trying to prevent through the ages.

The anti-man, ugly where man is beautiful, bad where man is good, the very essence of evil.

But it wasn't on the other side of the lab bench, not really. That was only his imagination, it had to be.

Yes, but your imagination is still dangerous! It's trying to make you stop thinking these thoughts.

"I won't stop thinking. I remember the anti-man. It's been bred over thousands of years. And it's—"

He looked at his own hands, turned them slowly over and over in the merciless fluorescent light.

*Cro-Magnon was bred out of Neanderthal and destroyed Neanderthal. Homo sapiens was bred out of Cro-Magnon and destroyed him. In the same way the anti-man will destroy what you call mankind. It is only following nature's **law**. There is nothing bad about it.*

"It's Satanic! Hell's answer to the creation of God!"

Homo sapiens is a defective species, and like all of nature's mistakes, it is going to become extinct. You of all people should love the anti-man. You will be its father.

Jonathan felt his skin beneath his jeans, the slight dampness of his crotch pressed by his briefs. In him was a new species?

You have already learned more than you should. Now you must be made to forget. You will confront the thing behind the bench, and it will tear these past few minutes from your mind.

"No!"

I think yes. I think yesssssss.

The voice in Jonathan's mind became one with the breathing behind the lab bench. It merged into the hissing, terrible and loud, of something primal and big. Then came a slipping, sliding sound, weighty rubbing against the floor, and the black gleaming head of an enormous snake appeared around the corner of the table. It had coppery scales and eyes like yellow-green stones.

In them was not the savage blankness of the reptile species. Instead there was something far worse—burning, unquenchable rage mixed with the self-mocking irony of great intelligence.

It came elegantly along, its huge body sweeping in great loops. Jonathan was utterly revolted, and yet also fascinated. Nothing, not even the threat of death itself, could tear him from those staring green eyes.

But 6-6-6 isn't supposed to be a hallucinogen. Sloppy testing, California. This is an effect you didn't mention in the protocols.

The serpent had coiled into a great shiny mass of scales just in front of

Jonathan. It reared its head until it was level with his own face.

It was so very real, even to the snake mites running along the edges of its mouth. Jonathan drew himself up from his prone position. The snake rose almost magically, facing him, staring at him over a space of mere inches.

He stood fully erect. Impossibly, the snake had now risen up out of its coil, still face to face with him.

"What are you?"

I guard your memories. I live inside you.

"My God!"

Back and forth it swayed, back and forth. Its eyes regarded Jonathan evenly. He realized that, in spite of all the fear it evoked in him, there was great beauty in it. He stretched out his hand, palm up. The huge head laid itself in his palm, and the membranes over the eyes slid down, giving them a milky green appearance.

An invisible claw seemed to take hold of his arm, to make him draw the head closer and closer to his own sweating face. Up close it was terrible to see, the face of a snake with such extreme intelligence in it that it seemed more than human. Much more. Satan would create such a face.

With a snap of its body the snake plunged its head between Jonathan's lips, forcing itself into his mouth.

He could feel the hard, cold scaliness of it, was made to gag as its tongue tickled the back of his throat. His helpless gagging enabled it to jam itself farther down, to fill his gullet. Now the thickness of the body distended his lips, compressed his tongue, made his jaws click. Fear and loathing shot through him. He threw himself back, grabbed at the heavy, surging coils. As the snake worked its way down into him he clawed at its slick flesh with frantic hands. He couldn't breathe, could barely make a sound. He could feel the head probing against sphincters as it made its way deep into him, past his esophagus and into his stomach. The deeper it got, the faster it went. Huge masses of coils began sweeping past his snatching, batting hands.

Then it was gone, only the tail tickling his throat. He felt as dense as thick paste, hideously full. His stomach was distended, his belt broken, his pants torn open. And the coils could be seen surging and billowing beneath the skin of his belly.

Heavily, he sank to the floor. He was utterly, completely revolted. As a teenager he had tried LSD. Compared to this the lysergic illusion was a mere

daydream.

All at once a terrible cramp doubled him over. He retched, spattering the tiles around him with flecks of blood.

He lay a long time, groaning, wanting to give way to nausea, unable to do so.

When at last the sensation passed and he could straighten up, his belly was no longer distended. He had not only swallowed the demon snake but somehow absorbed it. Now It was part of his body, of his soul.

There had been something else, some memory.

"I've got to remember!"

What?

It was gone. He was left with the horrible feeling that he had let some vital piece of information slip through the cracks in his mind. Another unreported side effect of 6-6-6. Those idiots at CalTech were going to get a hell of an angry letter. Ought to sue the jerks. He hitched up his pants slammed the refrigerator and locked it, kicked the bits of broken computer under a table, and staggered out of the lab

As he went down the corridor and emerged into the sunlight he began to feel a little better, although the smell of hot dogs from a streetcorner vendor brought renewed nausea.

Of course it had been an hallucination. There was no question about that. The snake was such an obvious unconscious symbol, exactly the sort of thing one might see on a bad trip. There hadn't been proper testing of 6-6-6; that was the long and short of it.

Everything that had happened, from the moment he took the drug, could be discounted.

He wanted to drink, to laugh in the sun just for an afternoon, to somehow forget the insane horror he had just experienced. Too bad it was clouding over. The best antidote would be the pleasure of a sunny day.

A very sunny day.

Chapter Seven

JONATHAN LAY IN his bed at home, his mind a jumble of confused and revolting images. So much for 6-6-6. It was a bad-trip express which had not gotten him much closer to resolving the question that tormented him.

He tossed, closed his eyes. Despite his efforts the old man still warned him, the serpent still sent shuddering waves of nausea through the depths of his stomach. There was also a confused jumble of thoughts—stakes, fires, Satanic plans . . . but he had lost the thread.

At last he accepted the fact that he was going to stay awake; in his present state there was no chance that he would find the relief of unconsciousness. Just as he was deciding to get up, his mother came in. He did not open his eyes. Quietly she sat down beside him and took his head in her lap, as she had done when he was a boy.

From time to time she would say his name, all the while stroking his forehead with her cool hand. Through slitted eyes he watched her. How sad she seemed, her eyes gazing at him with such softness in them. Never before had she seemed so mysterious, or so beautiful, or so full of love.

Her eyes were green. As were the old man's. As were Patricia's. And his own.

A species apart. . .

It came as a surprise to realize that she had soothed him after all, and he had slept for some little time. He sat up, startled by his return to a consciousness he did not know he had left. Where there had been memories in his mind there was now darkness . . . and a watchful snake.

"What time is it?"

"Eleven thirty."

She ran her fingers through his hair. "I would have gotten you up if there had been any change. She's still in the coma."

The cold word "coma" sighed in his mind. "Is she—"

"She'll come around this afternoon sometime. She's badly injured, darling, but she's going to be all right."

"Mother, I fell in love with her. I fell in love last night."

"She's a wonderful person."

"She's an angel." The image of that still body in its olive-drab intensive care blankets came into his mind. He would not cry, but inside himself he knew there were tears.

And deeper, where the serpent had its lair, what emotions did he feel there? He dared not find out, and turned his mind away. Better to cling to the surface.

"You know how you feel sometimes when you meet somebody who really fits—like you've always known them? That's how we felt. When I held her in my arms, Mother—" He could not continue. The thought of that warm, vital body was so moving and his grief so great that he was forced to lapse into silence.

Martin Titus had taught his son not to weep, but Jonathan knew that his mother understood what was in him. She had been only eighteen when he was born, and her relative youth increased the element of companionship. She was a beautiful woman. Her forty-one was a reasonable facsimile of thirty. "Did Mike make it hard for you?"

"You have the wrong idea, Mother. Mike is good to me."

"I suppose I ought to love him for that. But I just can't, poor man."

She was always saying things like that, and justifying her marriage as having some higher purpose.

"You didn't have to marry him."

"Oh, Jonathan, let's not go over that again. I'm trying to make the best of it. Let it go at that."

"Okay, Mother. I just wish you were happier. I don't appreciate being the cause of your martyrdom—especially because you won't tell me why you did it. I like Mike, he's a good man, but if you hadn't brought him into my life I wouldn't even know him." He got up and turned on WNEW-FM. Clash was deep in the purple rhythm of anger. He lowered the volume until it became a sullen, muttering undertone.

"Darling, I wish I could tell you. Maybe some day soon I'll be able to. But for now let's just drop the subject."

"You keep too much from me, Mother. I'm beginning to get an idea that what you're really hiding from me is my past."

"What is there to hide?"

"Whatever is the matter with me. What did you do—send me to some kind of a quack hypnotherapist? Let me ask you a frank question. Are we buried out here in Queens because of something I did in the past—like maybe raping a girl, or killing her?" His voice had risen. "Who *were* our friends in Manhattan, before Dad was killed? I don't even know. I can't remember."

"Jonathan, be patient with me. Just a little while longer—"

Almost before he realized it his hand had lashed out and caught her on the cheek. "Stop feeding me that line of bullshit! I want to know *now!*"

His mother turned away, her cheek reddening. There was a long silence. She did not turn back to him. "Perhaps we can go over to the hospital together," she said, too briskly. "I think it would be nice for us both to be there when she comes around."

"I'm sorry, Mother. Please forgive me."

"Hush, son. You're upset. Overwrought. There's nothing to forgive, okay? Just to forget." She smiled, her hand came out and touched his temple. "Get your clothes on and we'll go." Jonathan went into the bathroom and applied his Norelco to his face until the shadow was gone. Then he opened the aftershave, splashed some on, and combed his hair. He returned to his room and started to pull on some briefs. His mother stopped him with a gesture, then looked long at his naked body. "There's nothing you're not telling me, is there? Everything went all right with Mike, didn't it?"

"What're you inspecting me for, signs of a beating? He cleared me, at least superficially. Mother, I don't think you have even the foggiest idea about me and Mike. We love each other. Somehow or other it worked out between us. He's my friend, and I think of him as my father."

He dressed in the clothes his mother handed him from his closet. She got his brush and rebrushed his hair. "You're so handsome, Jonathan." She hugged him, throwing her arms around his chest and pressing her cheek against it. "I can't believe I have a big six-footer like you. Your dad's family is small." She fell silent for a moment. "Thump-bump, thump-bump—I hear your heart."

He kissed the top of her head and they went down to her car together. She had gotten the blue Audi out of Mike by simply going over to Bavaria Motors and buying it with a check. Mike had juggled his MasterCard credit lines like crazy, but when the check arrived at the bank the money was there. "She looks like a million dollars in that thing," Mike often said.

Her whole relationship with Mike was like that—she didn't so much make demands as present him with *faits accomplis*.

"Car running well, Mother?"

"I love it."

To get to the Poly they had to pass Patricia's building on Metropolitan Avenue. Jonathan stared at the tachometer rather than look out at it.

When he saw Queens Poly again, in the light of the summer afternoon, he knew he would hate it for the rest of his life. But then, as they rounded the corner, he counted up five rows of windows, then across six. That was her room. And somehow that particular window looked beautiful. "Let's stop for some flowers," he said. "There's a shop in the lobby."

They got sixteen dollars' worth of gardenias on Mary's theory that she would still be able to smell them even if all the tubes prevented her from moving her head enough to look at them. "Are you nervous, Jonathan?"

"I suppose so."

"I am too. But I know it's nothing compared to what you're going through. I'm very, very sorry for you both. I want you to know that."

"It's crazy to be so attached to somebody you just met, but—"

"She's special. That's why I got you two together in the first place."

"I suppose it's inevitable that I would love someone you picked out for me."

They went up in an elevator that was, if possible, even more crowded than the one Jonathan had used that morning. The fifth floor bustled with activity. Like a voice of doom an operator kept droning, "Airway team, airway team, airway team, entrance Twenty-two-B. Airway team, airway team, airway team . . ." Presumably there was somebody at entrance 22B, wherever that was, suffocating.

This time it was possible to enter her room. They went side by side down the white corridor, past a window where a man lay with tubes emanating from his belly, past another where groans rose from behind the drawn curtain, until finally they reached Patricia.

She was lying as still as Snow White beneath her plastic shroud. Other flowers, long-stemmed red roses, stood in a water pitcher on the bedside table. The card was from Mike. "Does he know her, Mother?"

"No. He must have sent them because of you."

Jonathan hardly heard her. Patricia lay as still and pure as the Madonna

herself. Three tubes came out of her nose, crossed her ivory cheeks, and wound around into three humming machines. Intravenous needles pierced both her forearms. Her hands rested at her sides. Jonathan knelt beside her bed in a state of sorrow that was also a state of love. He took her right hand in his and very gently kissed it.

The machines hummed. The air conditioning hissed. From the hallway chimes sounded. A tray of implements was rattled past by an orderly. Far off somebody cried out once sharply, and then fell silent.

Jonathan reached his hand in under the oxygen tent and touched her hair. It was matted with sweat, and her head was very warm. "My love," he whispered. "Please, God, help my love." He noticed that the smell of Mike's roses blended nicely with his gardenias.

There was a sound from Patricia's throat. Mary drew close to Jonathan. "Your hand. She feels your touch. She's going to come to."

"Patricia, it's me, Jonathan."

She made a guttural, inhuman sound, nothing like the melody of her voice. Then her eyes opened. She looked straight ahead for a long time. She was absolutely motionless.

"Patricia?"

Mary put her arm around Jonathan's shoulder. "It's us, darling, Mary and Jonathan Banion."

"John—Jonathan?"

"Hi, darling. I love you."

There was the slightest incline of her head. "Why am I here?"

"Something happened," Mary said. "There was an accident, but you'll be all right. You'll be fine."

"Oh-h-h, I hurt! I *hurt!*" Her voice was strident; now she frowned; now her eyes darted about wildly. "Why can't I feel my legs? Did I—"

"No, no, darling, nothing like that. You just got hurt, but you're going to be back to normal soon. It wasn't that bad."

She closed her eyes. Tears popped out from beneath the lids. "Was I raped?"

"Yes, honey, that's what happened."

She nodded. Silence fell.

"Hello, folks, how's our patient?"

Mary whirled around. "Mike!" He was standing there in his rumpled brown suit. Beside him was a natty man of perhaps thirty-five.

"This is Lieutenant Maxwell of the Sex Crimes Unit. He's going to be questioning Patricia."

Mary glared at the two men.

"Do you want us to leave, Dad?"

"It might be best. In cases like this they usually concentrate better when they're alone."

Jonathan withdrew his hand from Patricia's. "Jonathan!" Her voice was sharp, almost commanding. When she lifted her fingers he understood and again took her hand.

"I'm here, honey."

"Stay!"

"I won't leave unless you want me to."

Mike leaned into her field of vision. "We have some police questions to ask you, sweetie. It's better if you let Jonathan go for just five minutes—"

"No!"

Mary spoke. "What does it matter, Mike? Jonathan told me about the polygraph."

"Police questioning is confidential, ma'am," said the lieutenant.

Patricia's hand gripped Jonathan's hard. "You better stay, Johnny," Mike said. "She wants you, that's the important thing."

"Thanks, Dad."

The lieutenant went around to the opposite side of the bed, turned on a large, old-fashioned cassette recorder, and affixed the microphone to his lapel. "Miss Murray," he said in a surprisingly gentle voice, "I'm awfully sorry to have to bother you now, but we find it's best to do this as early as possible so you can get on with the business of getting well without us intruding."

"Who are you?"

"My name is Tom Maxwell. I'm a police officer."

"It hurts, Officer Maxwell."

Jonathan was aware that his mother had gotten another person to come into the room, a man with a surgical smock thrown over his business suit and half-glasses on his face. Obviously he was Patricia's doctor. "This patient has too many visitors," he said. "Perhaps it would be best if you left, Inspector

Banion."

"My associate wants to ask questions."

"He can stay."

"Miss Murray, do you remember anything at all about the man who raped you?" Maxwell asked his question softly, gently. A sensitive man.

Patricia stared straight ahead, her eyes glazed with deep inner looking. "I was on the bed with Jonathan," she said. She met his eyes. "I had you in my arms . . ." Behind him Mike leaned forward, put his hand on his stepson's shoulder.

The doctor spoke up again, directing his words to Mike. "Please, you really do have to leave."

"After that, what happened? Did Jonathan stay?"

"He . . ."

Jonathan's own mind flashed a violent, confused memory, like a door that opened and shut very quickly on an explosion.

They had been sitting on her bed, and there had been some erotic play. He was so excited, he remembered ... Then—a blast of light, a bad dream. Then he was being shaken awake by Mike.

"He left. I made him go home." She smiled at him. "You ought to marry me. Do you want to? I'm a good girl." Tears appeared in her eyes. She was probably afraid the rape had made her undesirable.

"I'd marry you in a minute."

She smiled a little. Silence followed his comment, broken by the doctor. "Inspector Banion, I'm telling you now to leave this room. There are too many people here."

"Look, Doctor, this is a capital case of the utmost importance."

"You aren't asking the questions."

"This case is special. I'm following it very closely." Jonathan felt Mary stiffen beside him. Mike continued. "There may be much more to it than simple rape. A great deal more. Right now the Queens Detective Area rates it priority one."

That silenced the doctor. Even he realized that it would be unwise to obstruct an inspector on a case he considered as major as this one. The lieutenant started in again. "After he left, what happened?"

"I went to bed." She sobbed, closed her eyes.

"And?"

"Oh! All these voices! Then it's—oh . . ."

"What is it?"

"Dark! My God, it's dark!"

The lieutenant looked across the oxygen tent to Doctor Gottlieb, who shook his head. "Should I continue?" Watching Mike carefully, the doctor nodded. "Miss Murray, do you remember anything about the individual who assaulted you?"

Jonathan felt her grip weaken, saw her lips open slightly behind the obscuring tangle of tubes. "She's fallen asleep," the doctor said. "All is well."

Mike shook his head. "I don't know what to make of this," he said.

"Obviously it's traumatic amnesia," the doctor snapped. "She can't handle the memory just now."

"It doesn't look like that to me. She—"

"Never mind how you think it looks or doesn't look! When she's stronger you can come back. Maybe you'll have better luck with your bullying then."

Mike smiled. "He asks the questions but you yap at me. What's my problem—bad breath?" He led his lieutenant out of the room. Beyond the window Jonathan could see yet another visitor, Father Goodwin, looking even more pale and cadaverous than usual.

"I have to examine the wound and change the dressing," the doctor announced. "You can come back afterward, Jonathan."

Jonathan started to get up, but the moment he moved Patricia's hand became like steel again. "Hey, darling, I thought you were asleep."

She didn't answer; she was clinging even in sleep. Jonathan was deeply moved. "Jennifer," the doctor said to a nurse, "get him a mask and gown, will you?" When she was gone, the doctor spoke directly to Jonathan for the first time. "After we're finished, please come into the conference room. I'd like to brief you since you're obviously the closest we're going to come to a next of kin."

Mary and the nurse managed to get Jonathan more or less covered without breaking the contact so vital to Patricia. The surgical mask smelled faintly of iodine.

"I'm Paul Gottlieb," the doctor said as he worked. "I'm your mother's

gynecologist. She called me into the case. I have a surgical specialty," he added, as if to further justify himself. Jonathan could not see what he was doing behind the sheets, but a blood-soaked dressing soon came out. "Oh, this looks just fine. This is coming right along. There's been excellent preliminary progress." Then he muttered to the nurse. "I want a pin test, Jenny. There's still cyanosis evident in the legs."

The nurse disappeared down the hall, returning after a moment with an instrument tray. Jonathan did not see exactly which device the doctor used, but from the length of time he spent it was obvious the test was not immediately successful.

"Okay," he said at last, "very good. Now, Jonathan, if you'd just come out with me, I can go over our plans. You're going to play a crucial role in Patricia's recovery, you know."

Coaxing finally got Patricia to release Jonathan's hand. He promised to come back as soon as he could. As they left the room he saw Father Goodwin go in. He had a pyx in his hand. No doubt, if she awoke more fully, she would be grateful for Communion.

The conference room was as plastic as any of the hospital spaces, blue walls and an acoustic-tiled ceiling into which somebody was in the habit of sailing pencils, two or three of which jutted out of it. There were half-empty coffee cups on the cigarette-scarred Formica conference table. Here and there lay a pencil-marked yellow pad. On one was a doodle of a female foot in a tall spike heel.

"So this is Jonathan." The doctor's eyes shone.

"Doctor Gottlieb delivered you," Mary said softly.

Jonathan was touched. In all his life he had never met this man, had not even heard him referred to. His identity was no secret, it was just that Mother tended to be quite private about female matters. "I'm glad to meet you, Doctor. And I'm awfully glad you're here." He had never said truer words. He was feeling a rush of gratitude toward the physician.

"I want to tell you right now that Patricia will be able to bear children normally. And there will be no loss of sexual function. There will be a vertical scar about eight inches long, but plastic surgery can deal with that if the patient wishes." Jonathan remembered kissing her perfect skin just above the belly button, how sweet it had tasted. "Our major worry is that scarring to the vagina will impair sexual enjoyment for the patient and her partners. But we

tried hard to limit that."

"How badly was she hurt, Doctor?" Jonathan had to ask. He found that it was very, very important to him.

"She had extensive vaginal injuries. She has hairline fractures in her pelvis, and one hip was dislocated. She was as severely injured genitally as any young woman I've seen. We can count ourselves lucky that she's going to make a good recovery."

"You make it sound like there might be something else."

"Well, I was getting to that. We don't know for certain yet, but the indications so far are that both of her legs are paralyzed."

Jonathan was stunned. "She can't walk?"

"Not just at the moment, no. But we haven't been able to detect any injury that would cause this, so we don't think that it's likely to be a permanent condition."

"What does that mean? Days? Years?"

"We have no way of telling, I'm sorry to say. It would be premature to take a completely pessimistic view, though."

Jonathan left the barren little conference room and went back to Patricia. He found the priest kneeling beside the bed with his face on his clasped hands, obviously praying. He didn't blame Father Goodwin. In fact he envied him his faith.

When Jonathan came into her view she smiled a vague sort of a smile. Her fingers moved slightly.

He twined his own in them. They stayed like that, the two of them, silent in one another's company. After a time the priest finished whatever prayer he had been saying, and left them alone.

18 JULY 1983

MOST PRIVATE

To: The Prefect of the Sacred Congregation for the Defense of the Faith

From: The Chancellor for the Inquiry in North America

Your Eminence:

This is to inform you that Brother Alexander Thomas Parker (b. 12 Oct. 1942, + 17 Oct. 1942, ord. 22 June 1964, Judist, Soldier of Christ,

Inquisitor-Captain) has been martyred in the line of duty. Because he was tortured we must assume his cell to have been compromised.

As a result I have withdrawn the cell from the Night Church Congregation Holy Spirit and am now in the process of regrouping around a new cell leader.

This will result in a period during which we will be intelligence-blind.

The following personnel shifts have occurred:

1. Brother Alexander Thomas Parker, deceased by reason of fire applied to the body by hostile persons. Martyr.
2. Brother Julius Timothy, transferred to Prefecture of the West, service in California.
3. Brother George Robert Yates, transferred as above.
4. Sister Marie-Louise D'Aubusson, invested as Captain-Inquisitor, ordered to form a new cell for penetration of the Night Church Congregation Holy Spirit.

Under separate cover please find a request for \$2,114.28 to cover travel expenses involved in these changes.

A layperson (Terence Quist, b. 22 Nov. 1933, + 25 Dec. 1933, conf. 5 April 1945, single, K. of C, CCD) in the process of being recruited by Brother Alexander has been abandoned. Recruitment had not proceeded far enough to justify shifting to another operative, and I prefer to let the new Captain-Inquisitor bring in her own people.

Yours in Christ & for the Defense of the Faith, Brian Conlon (Msgr.)

Ad: Cancellarius Inquisitionis in Septentrionalis Americanensis

Ex: Praefectus Congregationis Defensionis Fidei

We are shocked and saddened by the loss you have experienced. It is especially unfortunate that Brother Alexander had to endure such a harsh martyrdom. We can all take solace, though, in contemplating the peace

Brother knows now.

I wish to reassert the wish of His Holiness that *Contra Poenam Ultimam* is to be scrupulously observed. The Night Church may be barbaric, but *we* are not.

I attach your approved expense report, with the admonition that religious below the level of Monsignor should not have traveled business class.

Also attached is a most distressing report from the Historical Section, written in the seventies of the last century. It appeared in the list of relevant *documen-tum* when we ran *Rituale Pudibunda Coitus* through the library's database.

Mea Auctoritate,

Paolo Cardinalis Impelliteri

THE USE OF DISEASE VECTORS BY THE NIGHT CHURCH IN HISTORICAL TIMES

by

Anthony S. Gardner, O.S.

March 4, 1871

(Synopsis)

1. Recent research into the Salisbury *Documentum*, the *Annates Emiliani*, and the *Marque de la Templars* suggests that the European plague known as the Black Death (1334-1360) spread from three focal points on the continent and one in Great Britain, in addition to the known font in Constantinople. (Vat. Docs. CMXXXIV)

2. These points were:

The Colchester Redoubt in Britain Palazzo Emiliani in Venice The Preceptory of the Hidden Temple in Paris Rennes-le-Chateau in the Pyrenees

3. Three of these locations were in the famous 14th-century strongholds of the so-called "Cathar Heresy,"

which is one of the best-known disguises of the Night Church. The fourth, the Templar's House, was the confirmed world center of the Night Church at that time, fulfilling much the same function as their headquarters at Lourdes does today.

4. The Black Death began spreading within a few weeks of the infamous *Rituale Pudibunda Coitus* held between Margaret de Pantera and Carolus Titus at Salisbury Cathedral. During this ritual Carolus was killed, but not before despoiling the still unfinished cathedral and killing a substantial number of the sorcerers who were attendant at the affair.

5. The period after this is known in the annals of the Night Church as the "Dolorosa," apparently because the first "anti-man," which was successfully conceived in the ritual, was born defective and had to be destroyed. Many more years of breeding between the Pantera and Titus families were needed before a true success could be achieved.

6. The Night Church, which had unleashed the Black Death to make room for its "anti-humanity," was then compelled to do its best to stave off the destruction of the entire human race lest the two critical families themselves be included. Given the primitive medicine of the day, it took them twenty years to completely eliminate the plague they had started.

7. Seven out of every ten human beings on this planet died during the Black Death. It was the most destructive thing that has ever happened to humankind. Whole cities, nations, disappeared into the wilderness.

8. The disease is thought to have been an artificially created hybrid of bubonic plague. Its exact nature remains to this day unknown.

9. Because of the speed of the contagion (about three hours from first symptoms to death) and the rapidity with which it spreads, even modern medicine would be taxed by it, should it appear again.

Chapter Eight

TERRY QUIST KNEW he was in trouble when he woke up in the middle of the night and smelled perfume around him. As always, he was alone in bed. Women were a thing of the past for him . . . and it hadn't been much of a past. He was ugly, poor, and full of bad personal habits. He had not done well with the ladies.

He lay staring into the shadows around him, inhaling and listening.

There came from the living room of his tiny garage apartment a steady rustling.

Woman or not, the idea of somebody out there going through the papers on his desk scared the hell out of him.

Rustle, rustle, rustle. She was turning over page after page. All his story ideas, such as they were, lay on that desk. Under pseudonyms he moonlighted for a number of raunchy weeklies: *The National Tattler*, *The Midnight Express*, a few others. Naturally his notes were here. They couldn't be kept at the office. If the *Times* ever discovered his sin he'd be instantly fired, or so he assumed.

But his notes weren't of interest to anybody—just a bunch of jerkoff ideas. "The Sexual Power of Celery" was one. "Telepathic Cancer Cure" was another.

Oh, God, the notes on the Night Church were there, two pages neatly typed up just this morning!

He became aware that the rustling had stopped.

By the time he realized she had come into his room she was right beside his bed.

She stood looking down at him. As she bent close he saw her glaring eyes. She was beautiful like a snake might be beautiful. You can't look, and yet you can't look away.

She was also familiar.

Although his own eyes were closed to slits, he recognized the face

swimming in the dark above him. It was Mike Banion's wife, Mary.

Seemingly satisfied he was asleep, she withdrew from the room, pulling the door almost shut.

A blinding flash filled the crack between door and jamb. Then a rustle of paper. Then another flash.

A moment later he heard his front door click shut.

He lay motionless, waiting for his heart to stop banging. A confusion of thoughts tumbled through his mind. Mary Banion? Two flashes. Pictures of the two pages.

But *Mary Banion*?

Oh, Christ. If they were in it together, when he went to Mike he would have been talking to the Night Church.

The image of Alex's charred body came to mind. Death was bad enough, but a death as hard as that, God help you.

He was in deep, deep trouble. He had to act on his own behalf or he was a dead man.

Throw himself on the mercy of the Night Church? Maybe the Banions would vouch for him. Sure they would. God, they had to or he was going to end up just like Alex.

What the hell *was* the Night Church, that it could command the loyalty of a lady as fine as Mary Banion? Or Mike, if he was part of it.

He was damn well going to find out. He showered and shaved and put on his best doubleknit suit.

Now he looked like an underpaid salesman instead of an even more underpaid newshog. Maybe a machine-tool salesman or a shoe salesman, or the type of guy with a chain of two or three newsstands. Barely okay, in other words. But it was his best suit, so it would have to do.

The streets were empty and quiet, the big trees breaking up the glare of the streetlights. Flower smells came from the yards of the enormous old Richmond Hill houses. People sneered at Queens, but it was a magical place at night, on the side streets where the secrets hid.

He would walk right into the Spirit. He would become a member in good standing. Hell, he wasn't going to go the way of Alex Parker; he was smarter than that.

The Spirit lay at the far end of Morris Street, a huge black bulk rising past the crowns of maples and chestnuts. Morris was a short block, worth only one

streetlight, which fitfully illuminated the front of the age-blackened church. Terry's footsteps sounded loud on the sidewalk.

He reached the church. Absolute silence.

He mounted the steps, put his hand on the big brass handle.

The door opened noiselessly. Somebody had been very careful to keep it thoroughly oiled. Inside, total blackness. For a few moments Terry thought he must be early, or late, or even that they hadn't come on this particular night.

Then he sensed that the dark was full of people.

From deep within there came a low, strange musical note. In response some of the people in the pews lit tiny candles, cradling them in paper cones. Now Terry could see faces, and they were the faces of everyday life, old and young, plain and beautiful. There were whole families, mothers and fathers and children, single men and women too, all sorts of people.

Terry thought he'd better make himself known instantly. They mustn't be given the idea he was spying on them. "Excuse me," he said in a whisper that managed to echo through the whole damn church. "I'd like to join up ... if that's okay."

They responded as one voice with a sound that at first Terry could not quite understand. Then he realized that it was a buzz of amused surprise.

He felt horribly alone. But when he turned to leave he found that somebody was standing right behind him. He was of middle age, dressed in a black pinstriped suit and a club tie, with the sensitive face of a decent and educated man. Obviously an usher. And why not? Night or day, churches needed ushers. He drew a long, gleaming stiletto from beneath his jacket, then replaced it. "Please be quiet," he whispered. On the domineering side, as ushers go.

Terry decided to be just as quiet as he could.

There came from the choir loft a deep, resonating hum, like the rising of a million locusts. The call of whatever kind of hellhorn they had up there caused the congregation to drop as one man to its knees. The service had begun.

Old altar bells, long abandoned by the day church, tinkled softly. The congregation raised their heads. Before them stood an elderly man with blazing green eyes. The most glorious vestment that Terry had ever seen wrapped his shoulders. It must be beyond anything created for centuries—not since the decadence of the Middle Ages—with diamonds and rubies and

emeralds and sapphires, the thousands of tiny jewels worked into intricate symbols and designs. In his right hand he carried a crystal wand. His head was mitered with a tall conical hat.

His robe shimmered in the wan light with images and suggestions of images, scenes of horror: corpses woven of tiny black beads ran along the bottom hem, worked into every possible posture of agony. Above them rose flames of ruby and orange soapstone, and higher still were obsidian chips fashioned into the outlines of ruined cities.

He swept back and forth in front of his congregation, pacing like a lion and making passes with his wand. Here came the mumbo jumbo. For an instant Terry actually thought that this was going to be humorous, but then the man turned to the altar and he saw the face woven on the back of the robe.

It was more than a monster's face embroidered there; it was remotely and disgustingly human. Its features were gross, with thick lips and exaggerated brows, and an excess of teeth bulging from the mouth.

The anti-man.

Terry wondered why they would want to create such a thing. What did they get from serving evil? Power? Wealth? Or was it the same thing that drew romantic young Germans into the SS: the allure of death?

Two members of this congregation were supposed to have been bred to conceive the first anti-man. Sure. Look at this bunch, scrubbed and clean and straight.

They must all be crazy. Had to be. Nothing that ugly could come out of a human union, no matter how horrible the parents were. And none of these people was even slightly horrible.

The chief magus, or whatever he was, turned around again and cleared his throat. He looked out across his congregation with an expression only a little nicer than the one portrayed on his vestment.

"We are gathered here to pray that our Princess may survive the great suffering to which we in our impiety and stupidity have subjected her." Another stiletto type came across the nave and whispered to the dark priest or wizard or whatever he was.

Then those eyes were looking right down the center aisle at Terry Quist. "Come," the wizard said softly. As Terry walked up the aisle faces turned to watch him. Just normal, ordinary, everyday faces. A lot of families had brought their kids.

The low, pulsing sound that had begun the ceremony started again, this time developing thrumming chords that seemed capable of sinking into the depths of the mind, evoking in Terry emotions of stunning violence. He saw by the discomfort in the pews that he was not alone in this reaction.

Here and there younger children covered their ears. And yet this was not a loud sound so much as a penetrating one. It would hardly be audible beyond the church walls, except to somebody with unusually sensitive ears. Alexander Parker must have been one such person. The music carried a strong emotional charge. Negative. Terry fantasized a Sten gun in his hands, pulling the trigger, seeing blood and brains spray around him—

"Stop right there, young man."

Terry stopped. He was about ten feet from the wizard. This close the man's face was quite simply terrible. It was old and the color of newspaper, and it looked as fragile as a dry leaf. The green eyes glared in the way that Terry's years as a reporter had taught him to associate with advanced psychosis or great rage.

"You say that you want to join us, young man. How have you come to know of us?"

Terry's sense of the situation was that there weren't many right answers to that question.

He hadn't really expected to be greeted with suspicion, given his assumption that they would want recruits. Wrong again, Terry. His life was a tissue of mistakes, way back to the beginning. Obviously, he had just made another. Or had he? Getting into this was his one and only ticket out of getting killed by it.

"I knew a guy named Alex Parker—"

Somebody grabbed his shoulders from behind and slammed him to his knees. "*Never* address His Eminence from your feet, please."

"Hey, now wait a minute." He sensed an arm being raised for a blow. "Sorry! His Eminence. Take it easy. I'll be real respectful."

The wizard met Terry's eyes with as cold a look as he could imagine. "So you must be Mr. Quist," he said softly. "Yes. I see your logic in coming here. You were correct to assume Parker had talked about you. Now you want to join us rather than risk sharing Parker's fate. Clever. Convenient for us, too."

Not quite the right response. There was something Terry didn't like about his coming here being convenient for them.

"We have been given a special opportunity tonight," the wizard said. "Prepare for the *Rituale Cruciatus Nexis*." He clapped his hands. "Mr. Quist is going to test our revised vector."

"What kind of a vector?"

He was shoved again. "Never address a question to His Eminence."

"Sorry! Will you tell me what test—"

"It will be very brief, Mr. Quist," His Eminence said. "This vector is so quick you'll hardly even know what happened."

"Wonderful, Your Eminence. Very reassuring. I think I want to go home."

His Eminence did not even smile.

Something was going on at the rear of the church. There were a number of people consulting with one another. Then one of them broke away and trotted up a side aisle. He consulted briefly with His Eminence. The old man seemed testy. "And make it fast," he rasped at his departing lackey. He looked toward the choir loft. "Begin the processional, Bob."

"The organ?" came the reply, full of doubt.

"Of course not, it's too loud. The horn."

The musician was a master of his instrument, whatever it was. The music swept and swirled and throbbed. Terry even forgot his aching knees. He had never before heard a musical instrument that made such a sound. It worked on your emotions to an almost uncanny degree. This time the tone was one of peace and reassurance, like one might hear in an ancient monastery, where the monks were chanting their matins.

Perhaps fifteen minutes passed before His Eminence returned to the center of the sacristy. At the same time Stiletto Man and one of his assistants arrived and crowded Terry on both sides. Guess I'm going through with this, Terry thought.

The horn sounded a single, long note. Terry craned his neck around and saw a boy and girl of perhaps twelve begin marching up the aisle with the self-consciously slow tread of under-rehearsed kids. Their grave, soft faces were yellowed by the flickering light of the thick red candles they held in their hands. They were dressed all in white, these children, and their footsteps made no sound.

Now things began to get colorful. The wizard—oops, His Eminence—raised his arms and spoke: "By the power of the King of the Underworld, O Spirits of the Hells receive our gift and remember Thee us!" He began a slow

twirling dance, his face sinking to deep concentration, his wand describing quick crosses. "Come and take our offering, O Deeps!"

The congregation replied: "Come from the east, the south, the west, and the north. Come into this house." There was the rattle of a general turning of pages.

The children reached Terry.

His Eminence stopped his dance. He dropped to his knees, facing his congregation. "Who shall be the medium of the experiment?"

The girl replied, "Father, it is Terence Michael Aloysius Quist," Nice. They even knew the Aloysius. The last place that had appeared was on his birth certificate. The Night Church had done its homework.

"Do you give him up willingly?"

"We do, your Eminence." The children spoke as from rote, carefully and in unison. Their candles guttered and swayed.

"What shall open the gates of the future?"

"The death of man."

His Eminence stood up, a menacing presence in his shimmering robes and tall miter. "I call Thee, O dweller in the deep of hearts, come among us and receive this our gift of thanks."

The congregation responded: "May He bless our experiment." There was that word again. Experiment. This Night Church was half religion, half science—the demented superstition of the Middle Ages mixed with a science that had progressed far beyond the worship that accompanied it.

The music stopped.

This was a cue to the children, who had paused before Terry. "Come with us, please, sir," said the girl. She put out her free hand. Terry took it and raised himself to his feet. The two children turned him around.

His heart almost stopped. A black coffin lay open in the aisle. The boy took his other hand. "This is just our initiation," he whispered. "You have to get in."

"Come on, don't be ridiculous."

Something sharp pressed up against his neck. He shuddered; he knew that it was the stiletto.

His legs were wobbly, but he made it to the coffin. In other circumstances he might have tried to run, but there were hundreds of people between him and

the doors. He had a strong feeling that he either got into that coffin or ended up with his throat cut.

It looked soft inside but the damn thing was hard. Beneath the white satin lining there was just wood.

"Nobody close this thing," Terry said. He did not speak in a whisper. He wanted to be heard.

The girl smiled. "Even if we do, it won't be for long. It's going to be fine. Really it is."

The intensity of the music increased, the emotional timbre became excited and mean.

There was no real pillow, so Terry had to raise his head to see what was going on around him. He raised it and kept it raised: there was no way he was going to let these loonies put that lid down. He noticed that the edges of the lid were lined with rubber, like the door of a refrigerator.

His Eminence approached the altar. He began to quiver, creating the impression that a tremendous inner battle was taking place. The wand he held seemed about to drop from his hand. An acolyte appeared and held a gold platen covered by a silk doily beneath the vibrating wand.

"I conjure Thee, O Lord of Flies and Ills, through the medium of his dread, bring the infection unto his body."

A tension of expectancy filled the church. People were whispering. He saw a mother putting a surgical mask on her six-year-old.

The music was vicious now, actually prancing with glee.

His Eminence straightened up. He raised his hands and the music stopped. With a rustle of his robes he turned around. He spread his arms. "The time has come."

Faces began to look expectantly at Terry. The two children had taken places at the foot and head of the coffin. The wizard said softly to them, "Now."

With a movement too sudden to avoid the boy reached out and spurted a tiny aerosol in Terry's face. It wasn't much of a spurt. There wasn't even any odor.

Then they started to close the coffin.

Terry had been expecting this. "No way!" He jumped right out onto the floor. "No way do I get shut up in there."

In the dark a woman screamed, a keening sound. "Seal him up," somebody said in a frantic whisper.

People began pushing down the pews, away from him. His Eminence

plastered on a smile. And here came the Stilettoes. They were not smiling. For his part, Terry was about to sneeze.

"Amanda," the wizard said pleasantly, "tell Terry a little about the ritual." She hesitated. "Don't be afraid, Amanda. There are still a few minutes' grace."

At the sound of that word Terry noticed that he felt like hell. His bones ached, his skin was dry and sensitive.

The girl took his hand again. He noticed for the first time that there was an almost childlike quality about all these people. The gaudy rituals, the deep of the night, the secrecy, all spoke of the distant past; the terror of it, but also the charm.

"Terry, we have to close the lid for a little while because our ritual is about dying to the past and coming to life again in the service of evil. It only stays down for about two minutes. It's just symbolic." She squeezed his hand and gave him a cute smile. "It's what you want, isn't it? I mean, that must be why you're here."

"Yes." Terry's voice was hoarse with fear.

"We all want you to do it, all of us." There were murmurs of assent from the surrounding pews, accompanied by encouraging nods and smiles. And then there were also the Stilettoes.

"Sorry I'm so touchy," he muttered. "Claustrophobia." He got back in and the kids, smiling warmly, closed the lid. There was a distinct click, and then utter darkness. Someone had locked the lid with a coffin key. Oh, Christ, this was going to be hard. Almost at once the air began to go bad. He felt absolutely horrible.

The music started again, its low notes filling the thick air. Muffled but audible there came from the congregation a sharp sigh. This was followed by a burst of low words, sounding like Latin.

Although he listened with all his might Terry couldn't hear much. He felt along the top of the coffin. Maybe there was some kind of a handle or latch in here—just in case the dead man woke up. But no, nothing.

They were doing something outside; he could hear movements close to the coffin.

It was hot in here. Plus he was so sick his chest was beginning to rattle. He sneezed violently. Once. Again. Three times. Four. Five. He began to see the true nature of the experiment they were conducting. It had to do with that

aerosol.

They had given him the disease!

The top seemed to crash against his face. For a moment he didn't understand that he had banged at it with his forehead, trying to break out. When he did understand it scared the hell out of him. He was farther gone than he thought; he was out of control. Must be fever coming on.

They weren't going to let him out of here. They were going to see how efficiently their disease worked.

How long it took to kill an average adult male.

He writhed, felt with desperate, questing fingers the satin flocking of the coffin. He had been an idiot to think they would let him out! "Please!" Nothing. "Please! Oh, plea-a-ase!"

"Mr. Quist?"

"Oh! Oh, yes! Oh, thank you! Thank you for answering me! I can't get my breath. I gotta have air! I'm sick. Sick bad! You've got to open this thing up."

"We have a few questions first, Mr. Quist." The wizard's voice sounded so close he must be crouched right at the head of the coffin. Terry had been fool enough to come here, and they had simply taken advantage.

All Terry could think to do was be agreeable. If he cooperated there might be some hope.

If not he was a dead man. "Questions? Sure, but hurry!" He had never been able to hold his breath long in childhood contests at Miller-Walkin Public Swimming Pool in Corona Park. Never for long. He would come bursting up out of the water first or second, his lungs aching for air, his whole body filled with a painfully urgent need to breathe. "Please hurry!"

"What did you tell Inspector Michael Banion about us?"

Holy God! Mike wasn't in on it, only his wife! His heart went out to the poor guy. He had to get out of here, to somehow warn Mike! They'd been friends forever, he and Mike. The poor guy.

His wife! His *wife!*

That unbelievable bitch.

His throat hurt as if it were being hacked with a dull blade. He raised his hands and was horrified to find huge swellings on both sides of his neck. Then he couldn't lower his arms. In that moment other swellings had appeared in his underarms. Even as the air around him went bad he kept having to take deeper and deeper breaths through his constricted windpipe.

"Help me! I told you, I'm sick! Bad!"

"Inspector Banion—"

Maybe he could still help Mike a little. "I told him nothing!"

"You're lying."

"Let me out of here! Let me out! You've got to get me to a hospital. I'm sick. I'm smothering, for God's sake!"

"Are you an Inquisitor? Is Banion an Inquisitor?"

"What the fuck is an Inquisitor? I don't know from Inquisitors. For the love of God, open this thing up!" He kicked, he hammered, he tore at the upholstery. The swelling under his right arm burst with an audible pop, a discharge of thick, stinking fluid, and an agonizing shaft of pain.

He knew suddenly that he would die before the interrogation was over. "Open it up and let me breathe! I'll tell you everything. Please, I beg you. I beg you,"

"Did you name names?"

"Hell, no!"

"Tell us the truth and we'll open the top."

This was no time to be coy. "I told Mike nothing because he wouldn't listen to me. The minute he heard Night Church he laughed at me. He's not the type of cop's gonna buy something like this without it being rubbed in his ever-lovin' face! *Now let me out!*"

There was whispered conversation outside, which soon died to silence. He felt himself drifting. Then he felt nothing.

Suddenly he came to. He had been out cold! "Open this thing up!"

What air he could get past his twisted throat moved with a thin whistling sound.

This was the death of Terence Michael Aloysius Quist, reporter. Noble? Not very. No Pulitzer for this turkey. He became aware of a seething, slithering sound on the outside of the coffin, as if somebody was lying on it. Just a few inches of wood separated his face from excited breathing.

"You perverts—you bastards!"

The response was a sort of whine that sounded hardly human. The coffin started to shake with the gyrations of whoever was there. "Listen with the stethoscope," somebody whispered. "Four minutes and he can barely breath past the buboes!"

Buboes? The bastards had given him some kind of super-plague, then shut

him up in here to see how fast it worked.

Terry was almost grateful when his heart began to beat irregularly. Death is coming soon, guy. This too will pass. Who knows, maybe there's even some kind of special heaven for the congenitally unlucky.

"Cardiac arrhythmias at five minutes," said a calm voice.

"Excellent work," His Eminence replied.

Unfeeling bastards. At the sound of those clipped, educated voices Terry's fear shattered. Now he was simply mad. Too bad there was no way to disappoint them at least a little. To die nobly, instead of like a choking, poisoned dog.

A wave of raw desperation made him hammer his feet wildly. From outside there came excited little cries. "Delirium at five minutes twenty seconds!"

For an instant Terry was out again, then he returned to consciousness amid a series of white flashes. He was going now, he knew it. Escape just wasn't in the cards.

He grieved for parts of life he had loved, for the snow-muffled nights along old cobbled streets, for the pungent smell of coal smoke, for crime scenes and squad cars and all-night delis. And girls, all the girls he hadn't had.

Outside there were eager scufflings, as if more of the ghouls were gathering around the coffin. He could picture them out there, all crowded around, laughing that stifled laughter, gleeful at the success of their experiment.

There was a plague that killed in minutes, and it was in the hands of the mad.

He would at least show them a little human nobility, a little bravery. Mustering every bit of self-control available to him he cleared his throat as best he could.

If he was going to die, let it be in style.

"I'm singin' in the rain," he gasped, "singin' and dan-cm —

He had to work up another breath to go on.

Outside, silence had descended. Maybe they were shocked, maybe awed. Good. He wanted them to know this was a human being in here, and at the end this human being had broken through all his pain and all his terror, and faced a hell of a death with a song.

"Singin' in the rain—"

There came a murmur of conversation. He was getting to them, he knew he was.

"Glory halleluja, I'm happy again!"

Somebody hushed the murmur.

"Singin' in the rain, you bastards! Singin' in the goddamn rain!" He threw back his head and ground out some wheezy laughter. There was thunder in his ears and acid in his throat. He was dying in agony but he did not scream.

Then singing burst forth all around him, the brightest, most triumphant singing he had ever heard. From hundreds of throats: ". . . just singin' in the rain. What a glorious feelin', I'm happy again. . . ."

They were throwing it right back at him. He hadn't gotten through to them at all. They had no feelings, they were worse than mad, they had no souls.

At last the animal took over and he tore madly at the coffin, digging as a trapped beast would dig. He sank his nails into the wooden lid.

He died.

MARY: THE TERROR OF THE INQUISITION

My dearest Jonathan:

I write this now, in this black time, in the hope that it will one day soon be possible for you to read it.

I must tell you that Patricia's injuries are not your fault. The blame rests with me and your Uncle Franklin. All I can say in our defense is that what happened was a sort of accident. We caused it, yes, but for the best of reasons. We were trying to protect you both from the terror of the Inquisition.

There is a chance that we may cure Patricia, by a method that will surprise you. If the cure works, my son, you will one day hold this letter in your hands.

I put pen to paper confidently, trusting that those we serve will guide us through out troubles. I have belonged to them, as have you, all the days of my life. I have come to love their hardness, to embrace their danger.

I cannot call them evil, any more than I can call you anything but my beloved child. I hope my words will help you in your confusion and fear. Remember yourself. Remember what you were before the hypnosis and what you are becoming again. Remember that you will be the father of the anti-man.

He will be a creature of what men call darkness. But not to himself. Men's dark will be his light, their evil his good. Your son will have strengths and powers mankind never had; he will have the attributes of the demons.

The anti-man will have the intelligence of Asmodeus and the strength of Belial. He will be able to discourse like Satan and will shine with Lucifer's fire.

Do you remember learning all of that in catechism? Remember the stories of the demons?

They are all hoping for you now, Jonathan. Can you feel them in your heart, hear them whispering to you when the wind hisses through the leaves?

Remember the vision of Belial you had when you were nine? "I will speak to you in the voice of the dry leaves," he said. That was such an extraordinary vision, and it filled you with such determination.

I know what you are feeling, what conflict rages in your heart. Now that you have been exposed to the world of man you have come to love it. But, Jonathan, remember that God has owned this earth for millions upon millions of years. It is time for the Devil to have His share of rule. This is justice.

Anti-humanity will be stronger than humanity, and far greater. Life on earth has been steadily evolving toward higher and higher intelligence. So our creation is only the next logical step. Satan gave man knowledge in the first place. Now He will give the earth a humanity fashioned in His image.

Compared to us ordinary folk your son will literally be a god—as far above us as we are above the ape men who preceded us.

When our species was born we pushed our forebears into extinction. And that was just.

But modern Homo sapiens would resist its own extinction. A fearful and jealous humankind will destroy the new species before it can get a proper start.

The destiny of this earth is to produce your son and all his race. As a Church, we worship this destiny. As scientists, we help to bring it about.

Jonathan, I can scarcely imagine how shocking it must be to discover these truths about yourself after you thought yourself an ordinary man. You are not ordinary. You are the product of centuries and centuries of the most careful breeding. You and Patricia are hardly even human.

Your bodies are ordinary. They are the past. Your souls, though, contain the seed of the future.

Do not recoil at the responsibility, my son: you are merely the instrument of nature. The law of evolution is expressing itself through you.

Now I must tell you why you are going through all this difficulty and

confusion, why you have been made to forget your own past.

When your natural father and Patricia's parents were killed by the Inquisition, we hid you both. We did it by hypnotizing you and concealing you under false identities. Even under torture you would not reveal the truth about yourselves.

I am so sorry we made you endure this, and in our ignorance caused the accident in June at Holy Spirit. All I can do is plead an excess of protective zeal.

You two are so precious! When I think that we nearly destroyed you by our very effort to protect you I almost go mad!

But we were not wrong to take the steps we did. The Inquisitors are master saboteurs. Their murders usually seem like accidents. They are so stealthy I think that they could kidnap an unborn child from its mother's womb. I myself trust nobody. When the cricket stops at moonset, I suspect the sneaking approach of the Inquisitor with his tinder ready to set a fire in my bed. And when the darkness sighs, I listen for the Inquisitor's voice, murmuring word of our defeat.

I sit here by the hour waiting and listening and worrying.

How can I help you through your rediscovery of yourself? Advice seems hollow, love futile. All I can tell you is that the earth's will is toward evolution. It is your privilege to enact it.

Accept this fundamental reality and all your confusion will evaporate. You will reacquire the moral precision that has always supported you. You will *know* the rightness of our cause.

It is the middle of the night, warm and still. I am hunched in a pool of light at my desk in the upstairs sitting room. I can hear Mike snoring across the hall. And at the far end, in your room, you have just sighed. I will go and kiss you, my dearest son.

Five minutes have passed. I am back from your bedside. You moaned when my lips touched your cheek. Your sleep is troubled again tonight, darling. I wish that I were a demon, and could bless you with a demon's insight.

Franklin says the life of the Church has always been this hard, but I don't agree. It was bad during the Albigensian Crusade and worse during the Spanish Inquisition, but at least then the Catholic cards were placed on the table. Now the Inquisition is secret, and therefore more dangerous than ever.

My darling, may you be granted full measure of courage. May your burdens be borne with bravery.

A mother's hope is with you.

Mary Titus

Chapter Nine

PATRICIA ATTRIBUTED TO the trauma of her assault her feeling that a great unseen force was slowly capturing her. Since the attack she was always under threat in her dreams, always being pursued by some relentless thing she could never quite see.

During the day she tried to avoid being touched. Anybody who came into contact with her might turn out to be one of the dream things. They might reappear at night, their faces stretched thin, the bones exaggerated to bestial size. In one recent dream all her friends had clawed up out of the street beneath her feet and grabbed her legs.

Dreams that bad can drive people mad. They can even kill. Just to survive, Patricia had been forced to make nightmare management her new specialty.

Only Jonathan knew how to comfort her. She let him sit close, and occasionally she screwed up the courage to clasp his hand. "At first you wouldn't let go," he had told her. From those hours she remembered only the sense of dissolving, as if her whole self were leaking out through her wounded sex. To prevent it she had felt a desperate, overwhelming need to hold onto him.

She was grateful when she felt the sun touch her face. She had slept with the window open and now she took breath after breath of the summer morning. There was again today no feeling of fullness down below. The dull, unceasing pain had actually diminished to little more than a sensation of tightness.

Despite Mike's begging that she move, she had returned to this apartment. It was home, after all, her first real home since she had been a very little girl. And it had been consecrated by her meeting Jonathan here.

In the open drawer of her bedside table lay a small black pistol, a gift from Mike Banion. On the far wall there was a keypad. Above the keypad glowed a single red light. Until Patricia punched in the right code the light would stay red and this apartment would remain an electronic fortress. Another gift from Mike Banion.

Beside her hand was a push button. If she pressed it, a bell would ring

downstairs and one of the building guards would come to her immediate assistance, twenty-four hours a day. Thanks again, Mike Banion. And thanks for the alarm on my wheelchair and the cripple-height fire extinguishers in every room, and the carry permit which allows me to wheel myself through life with a six-shooter at my hip. Thanks, Mike. You poor, sweet man, you have made me feel more threatened than I think I can bear.

It was nine A.M. Time to call Jonathan. She went to the phone and dialed the Banions' number. As he had promised, he was waiting for her and picked up the phone on the first ring. "Hi," he said. "You ready for me?"

"I'll be ready when you get here."

"On my way."

"Love you." He hung up. She stared for an instant at the phone, then replaced it in the cradle. This morning she was going to face some of her worst fears. She would enter the place where most of her nightmares were set, and worship there among her terrors.

Jonathan was taking her to Mass at Holy Spirit.

As reward for the courage of her act he was then to escort her to the Caf6 Trianon in Queens Center for a late breakfast of croissants and cafe au lait. During the course of the morning they would not kiss, and they might not even touch. And Jonathan would not grin foolishly, or make elaborate conversational efforts to avoid the subjects of rape, paralysis, or nightmare. Nor would his talk be full of unintentional innuendo about those subjects.

It would, in short, be a nice morning after the Spirit was faced. But none of it could happen for another twenty minutes. She had to dress herself. Hard and angering labor. Her legs dangled like soft rubber tubes. The worst part of this awful immobility was that there was no detectable reason for it. There was no physical damage at all. They had even scanned her brain. She was healthy and whole, nothing crushed, pinched, or severed. Only she couldn't walk.

Hysterical paralysis, Doctor Gottlieb had called it. Mary's dear friend. She had come to hate his watchful eyes, peering at her from behind half-glasses, and those hands, so big and yet so clever with the probes and instruments of examination.

At Mass she must also see Mary Banion, who seemed desperately pained whenever they encountered one another. Did it embarrass her to be in the company of a victimized woman? Activate her own personal sense of

helplessness?

Mike and his minions had installed gripping bars on every wall in the apartment, but Patricia's mainstay was the big chrome wheelchair beside her bed. She checked the brakes, then twisted herself around so that she lay with her back to it. Then she pushed herself with her arms until her head was in the seat. Next she gripped the armrests and hauled herself into a sitting position. That was one of the "chair maneuvers" she had been taught in physical therapy. She was pleased; she had executed it well.

The rest of her dressing went as awkwardly as ever. She washed her face in the newly installed low sink, and combed out her hair. She dropped her comb, then rolled over it and broke it trying to find it. Then she took off her pajamas and got herself dressed in a light blue skirt and white blouse—and split the zipper in the back trying to hike the skirt down under her buttocks. Then a little lipstick, a little eyeshadow, and she looked just right. Like she had been dressed by a drunk.

Would she please Jonathan? Would she ever *really* please him again as much as she had? Perhaps she was selfish even to want that. Damn it, though, she did.

He buzzed right on schedule. All of a sudden the visit to Holy Spirit—which she had been carefully not thinking about—seemed formidable indeed. A visit to the heart of her latest inner hell. "You have to," Jonathan had insisted, "you need to confront these fears. We'll go together." He was the brain specialist, after all; he ought to know. For an instant the back of her chair felt as cold as a marble altar.

That made her lunge forward, the involuntary response of a person forgetting that she couldn't get up. When she wasn't being pursued in her dreams she was always trying to find Jonathan. She would see him walking into the ocean or across a forest glade, or down a darkly mirrored hall. She would call to him.

He used his own key to get in. "You look great."

"Thank you."

"I expected to find you upside down on the bathroom floor with lipstick in your ear."

"Funny boy."

He took the handles of the chair and pushed her out the door.

There were a couple of greetings in the elevator, more of those bright smiles

she had learned to hate. It had been awful to find out that normal people no longer had any idea of how to relate to you, and would not do so at all unless trapped.

Tony had a Checker Cab waiting. Patricia could have kissed Mr. Checker for inventing those wonderful rolling boxes. Between the two of them she and Jonathan had only a hideous time getting her in. This contrasted with the inhuman struggle smaller cabs entailed.

"How was last night?" Jonathan asked as soon as they were rolling. Poor guy, he had a big stake in her last-nights. They tended to determine where on the scale from bad to abysmal her mood for the coming day would fall.

"Not nightmare alley, anyway. But not Nirvana either."

"That's something at least. Did you trunk down?"

"Nope. I slept totally drug-free, so I'm wild-eyed and bushy-tailed and ready to meet my day!"

" 'Wide-eyed.' The expression is 'wide-eyed.' "

"Not in my case."

Holy Spirit filled the far end of Morris Street. It was as large as some of the smaller Gothic cathedrals, but its architects, no doubt struggling to provide enough massive-ness to satisfy the prosperous Gay Nineties parishioners who had paid them, had not managed to make its stones soar. A heavier, more gargoyled and crenelated construction could hardly be imagined. Its stained-glass windows seemed to squint, little cracks in the granite facade.

"Oh, damn it, Jonathan, there's Mike's car."

"He's here, of course. Your whole entourage is here, as a matter of fact."

"And those patrol cars." She counted four in the parking area between church and rectory. "I don't think I can stand this."

"Mike's been working on the case like a crazy person. Twenty hours a day. He really cares about you, darling. He wants very badly to find whoever did this to you. Solving the case means an awful lot to him."

"I don't want to hear about the case!" The cab stopped and they worked themselves out of it. Patricia wished Jonathan had never said the word case, but now that he had, there was no point in trying to avoid talking about it. That way ulcers lay. "Damn it all, anyway. I do want to hear about the case."

He stopped rolling her up the wooden wheelchair ramp that had recently been installed on the steps of the Spirit.

There were benches to either side of the front door. Jonathan wheeled her to

one and sat down before her. "You're sure?"

She wasn't, but she nodded.

"They've tried to reconstruct your past, hour by hour, for the two weeks leading up to the incident. All they came up with out of the ordinary was the fact that you had spoken to an old man named Mr. Apple at a parish seniors supper. Aside from our date, I mean."

"How did they ever find out about him?"

"An old lady who had been at the supper remembered you talking to him."

"He was just an old man. They were wasting their time."

"Mike decided to go after the guy. Farfetched, but the only lead they had. But the night before he was due to be questioned, he died. He was buried in All Souls."

"A wild-goose chase. First off, the man was ancient. Second, he *couldn't* have hurt me. He was like paper. What's more, he was senile. They could have asked me about him and saved themselves some trouble."

"No more questions, says the good Doctor Gottlieb. Not until you're walking again."

"What's the point, anyway? I can't remember anything important."

"Tell that to Mike. Maybe you'll cheer him up. His other problem is that he had something going with a reporter and the reporter disappeared. Mike's convinced the same cult that got you got him. He knew something about it, it seems."

Patricia really wished, just at this moment, that she had been strong enough to tell him to wheel her straight into the church. The newspapers had called it a ritual sacrifice, a cult rape, and her imagination had been left to boil and burn with images of blank-eyed cultists waiting in the shadows around every corner. Cult. Ugly, stupid word. She wanted very much to believe she had been the victim of a single disturbed man, acting alone. Cult meant people, dozens probably, ever-watchful, alert for any unguarded moment. She couldn't accept that; it was just too much.

And yet, she thought, she dreamed, that something was getting closer and closer, fingers going around her neck, cool and dry and tight.

Whoever had hurt her had also done something to make her forget. Something incredible: the police hypnotist had worked with her for hours. "If it were not for the physical evidence, I would conclude that this woman had

not been harmed," he had written in the report Mike had shown her. The police hypnotist was a bleak old man with a voice like a pillow.

Perhaps she should thank her rapist; maybe he had done her a favor. After all, she wanted to forget.

No, she wanted to remember—to remember his face, his name, anything about him that would help Mike get him behind bars.

But if it was a cult Mike would never catch enough of them, no matter how hard he tried. That was why she was afraid of a cult—they would be unstoppable.

She wanted to be safe. Safe and normal and happy. That was what was so sad. It was so little to want. Now the tears were starting. She cried so easily these days. She battled with her feelings. Jonathan's hand came out, touched her cheek. She couldn't bear it right now. She turned her head away.

"I'm ready," she said, trying to ignore the hurt in his face. He began to wheel her in.

The big doors swept open as they approached. They had been watched, of course. Eager people clustered around. Somebody found a Saint Joseph Missalette and held it out before her. She smiled up at the grinning face. "I have my missal," she said. The grin widened, the head nodded furiously. Other volunteers wheeled her; Jonathan walked beside.

Oh, my Lord, there is the altar where most of me died.

I am so afraid. Black, ugly altar. Why is it black, anyway? Other churches don't have black altars. But there also is the vigil candle, that red glow that tells us why this place matters, because it houses the fabulous enigma of the Blessed Sacrament.

Come on, girl, suppress that overwhelming urge to lunge out of this chair and crawl away like a soldier escaping from a battlefield. You knew coming here was going to be hard, yes, you did. She wanted his touch, raised her left hand. He was always ready, her beloved, and his warm, slender fingers soon surrounded hers.

There were a lot of cops in the church. Six or seven in uniform, and another five clustering around Mike Banion and Mary. Patricia recognized Lieutenant Maxwell, the sex-crimes specialist with the bedside manner of a friendly old doctor.

Father Goodwin lurched abruptly out of the sacristy followed by a plump

boy of perhaps eleven in a surplice at least three sizes too small. Father had lost weight; his chasuble hung on him like a shroud.

Now for the Mass. Father Goodwin was spectral, his voice full of quavers. Patricia wondered if she could bear this ritual.

Even that word made her writhe in the chair. Ritual. *Rituale*.

She wanted to scream.

Frantically she fought for control. Father began the motions, the drone of words. Patricia's mind battled the chaos of terror that the place had inspired in her. Why had she been so stupid as to come here?

We know nothing of our passions, especially not the black ones, terror and panic. She sensed that the saints lurking in the dome overhead were mad; she looked up at their twisted, pious faces and saw suddenly a vast coldness written there.

Saints are not saints for love of God. They are saints because they have seen the terror of the unknown. Of Hell. Hell is no fire, it is the emptiness, the black between the stars, and she could hear it whistling in her own soul.

Come on, girl! Get yourself together! *Work at it!*

She drove her consciousness to bland and orderly thoughts. Sister Desperada: "The Holy Mass is divided into thirty-four parts from the Entrance Antiphon to the Dismissal." No! I can't bear it. I'll never be able to stay here that long!

"The Lord be with you."

A ragged trail of voices: "And also with you." Patricia wanted to run, to hide, to get down into the depths of the earth and pull soil over her, to hide so completely that the very atoms of her body would be mixed forever with the anonymous brown dirt.

"My brothers and sisters, to prepare ourselves to celebrate the sacred mysteries, let us call to mind our sins."

Oh, yes, my sins. My sins are very horrible. I long for a loving man, and that is a sin of inordinate desire. I want a nice little house, oh, God, in someplace like Riverdale, and some kids to need me and a husband to grow old with, oh, God. And for me those are also sins of inordinate desire!

As if from afar she felt herself beating her breast, heard her words echoing through the stunned silence of the church. "Through my fault, through my fault, through my most grievous fault, in thought and in word, in all I have

done and failed to do—oh, the *Confiteor* is a lie! A lie, God! I never did anything wrong. Hell just opened up under my feet, God, and I fell in and now you won't pull me out!"

The silence deepened. "Lord have mercy," said Father at last.

His hands paused over the *Rituale* and she saw him close his eyes for an endless moment.

Jonathan's arm was around her. Mike Banion was questioning her with his eyes, frowning with concern. Mary's face was buried in her hands.

Poor Father began stuttering through his *Kyrie*.

"I'm sorry," Patricia muttered. She looked down. Anything but stare at that horrible altar. How stupid to make it black!

"Shall I take you out?" Jonathan whispered.

She shook her head. Father said the *Gloria* in a completely new tone. He raised his head, lifted his arms, looked as if from the bottom of a pit toward some promise above. "Glory to God in the highest, and peace to His people on earth. Lord God, heavenly King, almighty God and Father, we worship You, we thank You, we praise You for Your glory."

He cared about her. They all did.

She wanted to weep. But also, on behalf of the people who loved her, she wanted to be strong.

On to the Liturgy of the Word, today from the Prophet Daniel. Feast of the Transfiguration. "I saw one like a son of man coming, on the clouds of heaven. When He reached the Ancient One and was presented before Him, He received dominion, glory, and kingship; nations and peoples of every language serve Him." Oh, Lord. You come on clouds of glory, I come creaking on wheels, terror in my heart.

What bitterness was in her. It was pitiful, to be bitter even against Him.

But God did not help me! God let me be raped on His own altar!

Next in the endless litany of the Mass came the Liturgy of the Eucharist. Mike and Mary brought the gifts, looking from behind almost silly, the tall, elegant, chestnut-haired woman and her stocky husband.

Faith Goodwin took the chalice in hands so nervous that the wine stormed like the Red Sea. "Lord, by the transfiguration of Your Son, make our gifts holy."

Is it possible, she wondered as he prepared to give out Communion, that

God doesn't hate us, but has simply lost us? Maybe the earth has drifted into a part of the universe so obscure that even God has lost track of it.

Human worship is chiefly characterized by the silence of God.

"Holy, holy, holy Lord God of power and might, heaven and earth are filled with Your glory. Hosanna in the highest."

Father hovered over his chalice, looking out at his tiny flock in what must seem an immense ocean of empty pews.

The emptiness of space. The coldness. Except, oh, God, for us. We people, *we* are here.

Your silence is what drives us mad! How dare You do this to us, God! *How dare You!* We deserve Your involvement. We deserve Your respect. Yes, even Your admiration!

Or at least Your help. Please. Just two words, two infinitely blessed words. Oh, God, just say it. "I am." Come on, say it. "I am." "Say it! Say it, damn You!"

With a horrified look at her, Father raced into the next prayer. "For the kingdom and the power and the glory are Yours, now and forever."

"Sorry," she muttered again. Jonathan's arm was starting to hurt her shoulder. She shrugged it off.

"Let us offer each other the sign of peace."

Listen to him. It takes real faith to say something like that with any conviction. As she watched the Mass proceed she fancied that she could hear a voice in the breeze that was rattling the old stained-glass windows. *I love you*, the voice said with a sudden clatter. *You're mine! Mine! Mine!* And then the breeze went muttering off among the lush summer trees.

Father took the Host and ate it.

Patricia felt her chair wobble a little. "You sure you don't want to leave?" Jonathan whispered.

"No! Let's go ahead with Communion."

"Okay." He began pushing her toward the altar. She was to lead the Communion parade—which consisted of Mike and his entourage and the usual seven old ladies who were Father's morning Mass regulars.

Take this blood. Take this body. Let us proclaim the mystery of faith. When Father approached her, Patricia cast her eyes down and held up her hands, cupped. She chewed the whole-wheat Host that Father handed her. The little girl she had once been had believed that the Eucharist was the great center of

human life.

The breeze came back, much stronger, slapping at the windows, moaning past the eaves.

"Thanks be to God."

Far up in the church glass broke. The altar candles were snuffed out by a powerful blast of wind.

Faces turned, glanced up. But nothing more happened, except that the communicants shuffled back to the three populated pews.

The concluding doxology followed. When Father turned around again he seemed unutterably sad. Patricia felt oppressed; she did not want to share any more sadness. So it was a sad world. She had also discovered this. A very sad world.

Father might be sad for her, but the way he was looking at his pews she suspected he was mostly sad for his dying parish. This was probably the biggest turnout he'd had in months. So sad.

Maybe he ought to try bingo again. It hadn't worked the last time, but the prizes had been a joke. Who wants *used* prizes? The premium table had looked like a lawn sale.

She could easily have laughed, remembering how she had hand-drawn the stencil for the last bingo-night poster. So very long ago, that innocent May night when the caller had called into the ocean of empty tables. Fourteen players only. All had won at least one game. Three ended up winning back the castoffs they had donated.

Suddenly Mike stood up and approached the altar rail. Instead of going off to the sacristy to devest, Father joined him. Mike drew an envelope from his pocket.

"Patricia," he said into the quiet, "I'm no speechmaker." He fingered the envelope. "This is from the Holy Name Society. We got together and passed the hat because we wanted to give you a real good gift. Well, open it up."

He dropped the envelope into her lap. She looked down at it, wondering dully what it would be this time.

I ought to be grateful.

"Go on, open it."

Airplane tickets and a letter. Lord be merciful, they had given her a pilgrimage to Lourdes. Now she didn't know whether to laugh or cry. She just sat there, stunned. "I'm the pilgrimage director," Father said. There was such

warmth and anticipation in the faces around her, she had no choice but to smile.

Only Jonathan looked as desolate as she secretly felt.

Lourdes. Preserve me. They are sending their cripple for the cure. They were ridiculous, but they were also touching. "Thank you," she said, as sweetly as she could.

"This means a lot to us both," Jonathan added in the thick silence that followed.

Jonathan took the handles firmly and wheeled her out. It was not until they were safely in a cab and well away from the church that she did what she had really needed to do all morning, to somehow express the irony behind the sadness, the bitterness behind the terror.

She burst out laughing. Holding the ridiculous tickets, tears streaming down her face, she laughed and laughed.

Jonathan was frightened. He shouted at her to stop, but that only made her laugh harder. He grabbed her shoulders, held her to him.

Even so, it was a long time before this laughter, which hurt so much she could hardly stand it, at last began to die.

Chapter Ten

PATRICIA'S LAUGHTER SPREAD a coldness through Jonathan unlike anything he had ever experienced before. It was a hoarse, gasping agony. That there was no humor in it made it more awful. He couldn't bear to hear it; he wanted to quell it with a shout. But that would never do; instead he hugged her until it subsided to moans, then to soft breathing.

They had to go to Tommy Farrell's Backroom for breakfast with the Holy Name Society. Forget Trianon.

"I'm not going," she said. She waved the letter of invitation they had given her with the tickets.

Suddenly she planted her lips on his and gave him a hard, stunningly intimate kiss. There was something lovely in it, full as it was of sudden, innocent passion. "Let's take a detour," she said. "Go to my apartment."

"We have an invitation."

"They'll wait half an hour! Driver, go to Twelve Hundred Metro Avenue!"

Jonathan did not protest. Even more than his love, he wanted to be alone with her for her own well-being. She had been close to hysteria in that church.

She kissed him again, and when he felt the gentleness of it a joy of great proportions appeared in his soul. No matter what happens, we have each other. Nothing can ever crush this love.

"We have each other, darling."

"Yes, Jonathan."

He had heard that word spoken another way. Yesssss.

He looked deep into her eyes. Terror flickered there, and sorrow, and something immense and strange and cold. The bitter fear in the church. The hard first kiss.

How much sanity did she have left? Her composure was growing threadbare. It occurred to him he could, just possibly, help her in his lab. With him at the controls of his equipment there would be no need for the unpredictable 6-6-6.

If he couldn't find out what *he* had forgotten about that night, perhaps she would be more accessible. At least then she would no longer fear the unknown.

He looked at her, his heart pounding with love. If it was *me*. *If it was me!*

He did not broach the subject of the lab at once. Instead he waited until they were in the apartment. They lay quietly together, still fully dressed, on her

bed.

"I could find out what you're hiding from yourself," he murmured.

"Oh?"

"In my lab. I really think I could."

"Don't talk about it now. Anyway, if that police hypnotist—"

"Primitive techniques."

"I thought you were out of school for the summer."

"I can always use the lab. The equipment's just sitting there."

"As long as I'm agreeable."

"Not much chance of that, right?"

"Oh, come on, Jonathan! I'm nothing if not agreeable. I'll smile cheerfully during that breakfast. Go humbly to Lourdes. And don't think I won't let you study my head. In the end I probably will."

"Good. We can go this afternoon."

"No, please, darling. I don't think I have the strength."

"Okay, I can understand that."

"But you're disappointed."

"I think if you could remember what happened, you might not suffer so much. The fear of the unknown is the worst thing."

"Maybe."

"What do you mean, maybe? What could be worse?"

She took his hands. "The known," she whispered. "The known is always worse." She rolled across the bed, touched his face. "Part of the problem is that people are trying too hard to help me. They already filled me so full of x-rays at the hospital that I practically scorched my sheets when they rolled me back to my bed. Anyway, your machine's irrelevant. They also did a CAT scan, which is the definitive brain test."

"I don't x-ray. What I do is make a model of the brain's electrical function. I'm not interested in whether or not it's damaged in some subtle way, but what part of it the thoughts are coming from. I can tell if you're remembering a dream, a reality, or even telling a lie. Believe me, no hospital can do that. Safe too, as long as I don't monkey around with drugs. I can distinguish between truth and lies better than any lie detector. Far better."

"I'm not lying. I just can't remember."

"But there are snatches. Bits and pieces that you do remember."

"I remember people shouting. I remember being lifted up. And darkness. Absolute, black darkness."

"I'll bet we could reconstruct a great deal even from those few impressions."

"Are you sure you want to?"

"Good God, of course I'm sure!"

She laughed that knife-sharp laugh once again. "You mad scientists will stop at nothing to convince a subject. Next thing I know you'll be saying you can cure my legs."

"I won't say that. But I won't say it's out of the question either. If I could find out what's wrong—"

"Nothing is wrong! Oh, hell, Jonathan, Mike and the Holy Namers are right. It's between me and the Blessed Virgin now. Lourdes is probably where I *belong*."

"Then I demand equal time for science. Let me do a thought-source map."

She frowned. Then she smiled. "I told you I'd give in. One of these days. But there are lots of other Good Samaritans in line ahead of you." The smile became too brilliant. "Holy Name breakfast, here I come. Marvelous! Rubber eggs? Love 'em!"

It hurt terribly to hear her pain. He enfolded her in his arms, and they wept a little together. Finally Jonathan spoke again. "It's a beautiful morning, my love. Let's do our best with it."

"I think that's a wonderful idea, Jonathan." She clutched at him. He kissed her.

"I love you, Patricia. I want to make love to you." At the sound of his own words his heart started beating harder. He was amazed at himself, and at the stunning intensity of the need that had burst forth in him as soon as he spoke.

"Don't you want to get to the breakfast on time?" Her eyes actually twinkled.

"The hell with the breakfast." He tried to kiss her lips again but this time got her cheek.

"Mike'll give you a hard time if I don't show up."

"I can handle Mike."

"You're sure?"

"Darling, I don't know how to ask this. I mean, is it safe and all for you to do it?"

"It ought to be," she whispered, "If you're gentle."

There had been a moment once before, in this same bedroom, just as they had embraced on this same cheerful yellow coverlet, when—

The hand of his fear clutched at his throat, constricted it, dried it to ash.

But she took his face in her hands and gazed at him. "We have to some time, Jonathan."

He dared not express his own fear when hers tormented her so. He hugged her.

Perhaps she sensed some of that fear, though, because she spoke in a tone of reassurance. "It's going to be wonderful, darling. Just enjoy yourself. Don't be worried. The doctor said I could do anything I wanted." She unsnapped his belt and opened his zipper.

Through the delicious film of his excitement he sensed something dark and slick and dangerous to them both.

The serpent was sensitive to these things; the serpent could smell passion.

She poised her hand above the shaft of his penis, then began stroking it. "Oh, it feels almost like silk." She touched the gleaming tip of it. "I thought it would be like a bone or something."

The serpent was uncoiling in Jonathan. Is love also death? Am I death?

No. Now whose fears are running away with him? You are a perfectly normal man. Your perfectly ordinary love is not deadly.

He could tear her throat out with his teeth.

She regarded him. "You're like an angel with the genitals of an ape." She giggled. He watched her through a haze of pleasure and growing horror. With trembling hands he reached around her neck and undid her blouse. Then came the bra, then the skirt and the panties.

Her flesh, so perfect, so rich and full and young that it almost left him breathless, glowed in the soft bedroom light. There was only a small scar, bright red, coming up halfway to her navel from her mound of Venus.

"Now you've seen the defect."

"I think you are the most beautiful human being I have ever seen." He touched her full and perfect breasts. He was awed.

"Can you stand my scar? Oh, say you can!" In answer he finished undressing himself, straddled her, bent forward and began kissing her breasts each in turn, tasting the faint saltiness of her skin, touching her nipples with his tongue until they were fully engorged.

Inside him the serpent slithered quickly forth, sweeping the coils of its

hatred into his mind, bit by bit possessing him.

He fumbled down below and she took his shaft again and guided it in. The sensation was stunning. For a moment he simply sank down on her, unable to move. It was as if the whole lower half of his body had become a blazing comet of pure excitement.

Then the serpent opened a door in his mind. He looked around himself with new eyes, at the blowing curtains, the partly opened closet, the radiant, pleasuring face beneath his own. He thrust.

"Ouch. Too rough."

"Sorry." His own voice was a rumble. He was scared; he had wanted to thrust even harder. He saw that scar opening again, only wider this time. He wanted to laugh, to scream with derisive laughter.

"Uh oh. Jonathan, this isn't going to work." He thrust again. "Hey, I'm sensitive. Take it easy." The pleasure had gone out of her face, replaced by apprehension. Tears were starting in her eyes.

He strove against himself, fighting the next and harder thrust with all the force he had in him. Finally, trembling, battling his own raging instincts, he drew himself free.

There was silence between them. Then, slowly, bravely, she smiled. "It's a little too soon for the heavy stuff, darling. But just to make it up to you I'd like to do something I've always fantasized about. Okay?"

He managed to speak. "Maybe we'd better call it off. Wait a while longer."

"There's something I could do—oh, I'm such a silly I can't even get up the nerve to say it!" She swallowed. "Here goes." She turned to him, pressed her lips against his ear. "*Soixante-neuf.*"

"What?"

"You know. Sixty-nine." A blush flared on her cheeks. Without a further word, praying that the lesser acts of the bedroom would be ignored by his demon, Jonathan knelt above her, then bent forward. As he moved his lips upon her richly dampened and sharp-scented vagina, he felt her take his penis.

He thrust a little and heard her choke. He knew that even in this was terrible danger. The serpent was fully awake now, crawling about in his unconscious, seeking access to his outer being.

She tasted wonderful; he had never known that such a flavor existed. His own sexual contacts before had been limited to the frantic couplings of

adolescence.

She was sucking and licking him, bringing him very rapidly to completion. But the snake was quick. The snake was going to get out, he knew it was. What anger he felt, and what glee. Suddenly her back arched and the rhythm of her own efforts was interrupted. Then her fingers clutched his buttocks, instinctively sought the intimate area there.

That did it. He simply exploded into her mouth. She jerked her head back, then, in an instant, had disengaged from him. She laughed aloud.

"I'm sorry. I hope I didn't—"

"You were lovely."

Yes. I was lovely. One more moment and I would have been ugly beyond belief.

You poor, deluded girl. Beware who you love.

Chapter Eleven

FARRELL'S, WITH ITS red vinyl booths and its Formica bar and its smell of Sunday bacon and eggs, made Jonathan feel the small relief of being in a friendly place.

In the ultimate moment of his pleasure he had seen something within himself so dark and alien that it seemed scarcely human at all. He could only hope that the serpent was an aftereffect of the drug he had taken, and that it would wear off.

He had wanted to *thrust*. Such movement taken to a level of almost superhuman violence had been what had caused Patricia's greatest injuries.

Superhuman violence.

Tommy himself opened the door to the famous Backroom. Jonathan wheeled Patricia in. Inwardly he was desperate. How could he dare to love her? How could he help it? Now that he had seen the true miracle of her beauty and tasted her secret essence, she seemed invested with magical light, as if a goddess.

Would he kill a goddess?

Lately he had been retreating to a fantasy of another life, very different from this one. They shared it in peace and privacy and love.

I want her. Even the wheelchair—it doesn't concern me. I want her so much.

Image of the snake: the shadow in the deep, rising to movement above.

His fantasy was of a house on the Pacific coast of Mexico—not Puerto Vallarta or one of those tourist traps, but some exotic and hidden village where you could rent an old villa. They'd have a pool overlooking the Pacific, and from poolside you'd see yachts and sailboats in the near water, and maybe a cruise ship sparkling on the horizon.

He had a running dream of what they'd do there. She'd want the sun, he'd want sex. He figured they could make love three or four times a day at least. She'd laugh, she'd ask him if he ever got tired. They'd bake awhile in the sun, then go into the air-conditioned bedroom and make love and her skin would taste of sun and coconut oil, and then maybe they'd drink awhile by the pool. . . .

Not a very uncommon fantasy. Just an everyday man's dream. No serpents.

He was jarred from his fantasy by the reality of the room they had entered. Farrell's Backroom was a fluorescent bedlam. Along one wall was a bar covered in wood-grained shelf paper. Behind it was a massive mirror completely outlined in blue fluorescent tubing, with a red Farrell's sign in the middle. The ceiling was outlined in more blue tubing, as were the mirrors around the walls. There were round tables with black tablecloths and red napkins on them, and a bandstand that, thank whatever saint presided over the suppression of bad music, was empty of everything except a massive red fluorescent F on the wall behind it. The room went zzzt! zzzt! zzz—zzzt! and the gray-green specters that were Mike and Mary and friends looked as if their blood had been replaced by phlegm.

Mike turned, gave Jonathan a look that said, all right, so it's ludicrous, then went back to the conversation he was having with Mary and Lieutenant Maxwell.

"You've obviously, never had the pleasure of coming here," Patricia said acidly. "I love what it does to makeup." The women looked like they were wearing wax masks. Their eyes were glittering holes.

"When were you here?"

"The bank had a celebration Friday. I went back to work, remember?" Her voice was dry.

"A celebration? How touching."

"Very."

A waiter began laying out trays of steam-table eggs and sausages.

Mike came forward, leaned down to Patricia, and kissed her forehead. "Honey, I hope you aren't too upset about this Lourdes thing. I know it's—what's the word—"

Jonathan supplied it. "Mawkish."

"That sure as hell isn't it. Nothing to do with birds. Anyway, it's a little hokey—but Mary suggested it to me and she and Maxwell kind of got things rolling and all of a sudden—well, hell, we're on our way. I put in a word for Miami Beach but nobody would listen."

"Hey, Father," Lieutenant Maxwell called to the silent, watching form of Father Goodwin, "how about saying grace so we can dig in?"

Father made the sign of the cross. "Bless us, O Lord, and these Thy gifts which we are about to receive from Thy bounty through Christ Our Lord. Amen." Catholic grace at least was quick.

"Stay right where you are," Mike said to Patricia and Jonathan. "Let me get your plates. I'm sure after all the hard work you've done this morning you're starving. I'll pile 'em high."

"He noticed we're late," Patricia said.

"Well, he's right about one thing. I *am* hungry."

She squeezed his hand. Mike came back and arranged the plates on their table. The three of them seemed to form a separate unit inside the little group. Mary spent time with Father Goodwin; Lieutenant Maxwell and Doctor Gottlieb sat together near the empty bandstand. Jonathan felt comfortable with Patricia and Mike. They were at ease together, the three of them.

Jonathan watched Mike. He was just another rumpled cop, a little tougher-looking than most, until you met his eyes. Then you were shocked. In those eyes was as deeply felt a human being as you were likely to encounter. No saint, though. In fact, sometimes a sonofabitch. Totally lacking in perspective. Either you could do no wrong by Mike Banion or he treated you as a cross between a sewer rat and a cigar butt. But if he loved you, he was mad about you. As he was about Jonathan, and had become about Patricia. Jonathan's eyes went to her, sitting so stiffly in her chair, a party smile on her face. You'd never guess what she'd been doing half an hour ago.

Once or twice right after Jonathan had been told of the paralysis he had awakened in the middle of the night and sweated out what it was going to be like with her, wondering if she would be ruined.

"I want you to break away and come over to the office after this," Mike said. "I've gotta tell you something."

He whispered this to Jonathan as one might to the parent of a sensitive child. "About the case?" Jonathan replied.

"Yeah."

"She's not up to it."

"That's what your mother and Gottlieb said. That's what Max said."

"What're you two whispering about?" Patricia asked.

"I've got a lead. I've got to talk to you about it over at my office."

She ate her toast delicately, her lap spread with a napkin to catch the crumbs. "Look at it this way, Mike," she told him. "I can't break because I'm already broken. So you can feel free to tell me anything."

Mike reached toward her as if she were toppling out of her chair. His hands

stopped, poised above the table. "We've got what may be a major lead. And a problem. I want you to know in advance it's gonna upset you."

Mary Banion was staring at them. She disengaged herself from Father Goodwin and came over to the table. "Father is ready to bless our pilgrim, Mike," she said, loudly enough for everybody in the room to hear. The priest reddened and stumbled to his feet. He always fell all over himself when Jonathan's mother noticed him, It amused Jonathan to see how the man blushed. When she idly touched his wrist—as she often did when she talked to people—his eyes followed her fingers with frank avidity. In his daydreams it surely was not his wrist she touched.

Father Goodwin came to the center of the room and faced Patricia. His cheeks were flushed. The lighting made his skin appear mauve.

"I bless you in the name of the Father and the Son and the Holy Spirit. Go in peace. And may your journey to that holy place of God's strength and curing be made easy by the intercession of blessed Saint Christopher, patron saint of travelers."

"Patricia, I want to add my personal blessing," Mike said. "To help you out over there, I thought you'd need someone who speaks French, so I'm going along."

"The whole family's going," Mary added hastily.

"We leave on August fourteenth," Father said. "So far there are fifty-five pilgrims, bless their souls."

The sick, the pious, the crazy.

"Perhaps you're interested in the history of the pilgrimage," Father continued. "I got this material from the Chancery yesterday." He handed around a brochure entitled "Queens County Pilgrimage to the Shrine of Our Lady at Lourdes."

Fifty-seven consecutive years except during wartime.

Oldest pilgrim, Miss Mae Pztskowski, ninety-four, a traveler for eighteen years.

Sponsored by the Diocese.

Managed by Catholic Travel, Inc., in business since 1947.

Comfortable SkySaver Airlines Jetliner with facilities for The Sick. (Capitals theirs.)

Package price complete, including all transfers, lodging, and, God help us, meals. Special diets accommodated.

Five days and four nights in the idyllic and holy town of Lourdes, one of the most scenic in the Pyrenees district. Accommodations at the first-class Gethsemane Hotel, a short walk from the grotto.

Price: \$999.95.

When he saw the surprising avidity with which Patricia was examining the brochure, Jonathan felt an unwelcome twinge of pity for her.

As soon as Father finished there was a general leave-taking. Mike stayed right with Patricia and Jonathan. Maxwell joined them. Jonathan's last impression of the room was his mother's face, watching anxiously as the little entourage departed.

After Farrell's Backroom the sunlight seemed unnaturally intense.

"No cabs this time, kids. We go in my car."

"A ride in that thing is equivalent to smoking two cigars, Dad. You think she can handle it?"

"Never fall in love with a woman who can't stand cigars. Advice from the persecuted."

She maneuvered herself out of the chair and into the back seat with a certain new adroitness. "I've been practicing on the way to work," she said. "Soon I'll be able to open the door, get in, fold the chair, and pull it in behind me."

"And tip the driver? Cabbies oughtta be more help than that."

"You learn to tip any driver who'll pick you up. Cabbies stop for drunk killers with smoking pistols in their hands and paralytics, in that order."

Mike hit the steering wheel with the heels of his hands. "You get the number of any fucking hack passes you by and he will not, repeat, *will not*, drive another day in this town! I'll get the bastard revoked so fast—"

"I love you too, Mike," Patricia said hastily. She reached forward as far as she could, touched his shoulder. "But the hacks have it rough enough already."

Jonathan could have kissed his stepfather. He was one loyal man.

Nothing more was said on the way to the 112th precinct house. Mike stuck a cigar in his face but did not light it until they had arrived at his favorite no-parking zone.

Jonathan got Patricia out of the car while Mike hovered, not quite sure how to help.

As he wheeled Patricia along, Jonathan noticed the ugly tile corridors with

their glaring overhead lights hidden behind wire cages. He wondered if he would ever pronounce himself guilty enough to come here as an official visitor.

The precinct house was noisy now; the post-midnight silence of the polygraph session seemed a thousand years away. Yet Jonathan remembered the sick dread, and the grinding sound of this very elevator. There was a reality of some sort waiting for him in the mysteries of this place. Here, perhaps, a devastated Mike Banion would one day book him.

Lieutenant Maxwell and an assistant were already in Mike's office. They were pulling papers out of their briefcases when Mary Banion arrived. Mike's eyes widened and he chewed his stogie. "Hi, hon," he said. "You don't need to be here."

"Lieutenant?"

"I asked her, Mike. I thought you—"

"Doesn't matter. Glad to have you, darlin'. Let's everybody pull up benches. We got a real official presentation here, thanks to Max and the Sarge." That was what he called Maxwell's delicate little assistant, apparently. Somehow, though, the Sarge's nickname fit. She looked feminine, but not one to tolerate any fooling around.

"We want to take you kids through the case," Maxwell said in his rich, anchorman voice. Obviously he had been designated speaker—Mike's token New Policeman—the kind of cop he liked to show off to Jonathan.

You wanted to shake some sense into Mike; you wanted to hug him. Jonathan wished he knew how to ask him to make his own presentation. But how could he say that they were happier hearing it from him, that they trusted him and respected him more than any of his degree-bearing underlings?

Patricia's hand slipped into Jonathan's. The gesture might as well have been spoken words, so clear was its meaning: whatever they tell us, we are one now. We are one.

In that moment Jonathan decided to ask her to marry him and damn the consequences. If it was psychotherapy he needed, he would get it. They would make a life together. They had a perfect right.

"We believe that we have identified the man primarily responsible for what happened on the night of June sixteenth." The lieutenant handed Patricia a composite drawing of a ridiculously old man. "Do you recognize him?"

"He was at the parish supper."

So it was that again. Nothing new, nothing new.

"He was the one who talked to you at the seniors supper the week before the incident. His name seems to be Franklin Apple. We aren't certain."

Jonathan's heart skipped a beat. He felt so much as if somebody were creeping up behind him that he had actively to suppress the urge to look over his shoulder. Then he realized why: the strange old man he had seen in his lab yesterday looked a little bit like that.

"He died the day we were going to question him."

Jonathan was relieved.

"We believe that he was the local leader of a large religious organization—we call it that for want of a better word—that has been operating clandestinely for some years."

Jonathan put his hand on Patricia's shoulder. He could feel her trembling. But he felt it was right that she be here just as it had been right for her to go to the church. She *had* to confront these things. That was the only way back to some kind of mental stability and a chance at happiness for them both.

Mike questioned Jonathan with his eyes. Jonathan nodded. "Go on, Max," Mike said.

"We have looked for some sort of pattern of rape in churches—boroughwide, citywide, statewide. Nothing. Your case is all but unique. What we have found is that a larger number of Catholic religious have turned up missing or dead by violent means than we would have expected. Fourteen in the past twelve years."

"I don't see the connection." Patricia's voice was soft, but Jonathan could hear the fear in it.

"Admittedly tenuous. A recent case illustrates the pattern, though. A Brother Alexander Parker of the Society of Saint Jude was found dead, apparently of accidental causes, in an apartment across the street from Holy Spirit the morning after your incident. Two strange things. First, he was living incognito. We didn't know he was a religious until we questioned his mother. Second, he had taken a reporter into his confidence."

"The reporter told me about the cult," Mike added. "Your Mr. Apple fit the description of the man he said was running it."

"And the reporter is now a missing person," Maxwell's assistant said.

"I don't know what all that means and I don't want to hear any more," Patricia said, her voice ragged.

Now Mike spoke. Quietly, almost sadly, as if this were a miserable duty. "There isn't much. Just bits and pieces. But connect the dots and you have something more than a single individual acting alone."

"Come on, Mike, get it over with! Why am I here? What do you want me to do?"

"We are assuming the surviving members of the group have the capacity to come back and finish what was left undone."

She writhed in her chair, looking desperate. Jonathan went closer to her, knelt beside the chair. "That's enough," she said in anguish. "Don't you think I know that? I mean, all those alarms and that horrible little gun and all, how could I *not* know? I can't do anything about it. If they're going to kill me, they're going to kill me." She clasped her knees. Her knuckles went white with the pressure she was exerting. "I perfectly fulfill the cliché of the helpless female."

"Honey," Mike said, "I called you here to tell you that we are going to give you protection. You're getting twenty-four-hour surveillance."

"Oh, no! I won't live like that, I won't!"

"Max, you tell her."

"You won't even know we're there. And it's just until we roll this thing up."

"Roll it up? You said you just had bits and pieces! So now you're going to roll it up?"

"We're working on it. We're getting close."

"How close?" Mary asked. "I think it would help Patricia if you would tell us all."

"We've got Holy Spirit staked out."

"Which is to say you're not close at all. And I'm supposed to remain under lock and key—being watched constantly—until you get somewhere? I'll bet you have years of work before you." Patricia shook her head. "The notion of rolling myself off a cliff keeps recurring."

Mike nodded to Maxwell, who went doggedly on.

He explained the details of how they were going to guard Patricia. They were distressing: every moment of every day somebody would be watching. Plainclothesmen most of the time, but uniformed officers in places like the bank where she was exposed to the public.

Oh, Mexico, land of fantasy! A pool, a beach, a bedroom.

Patricia's only comment after the meeting was over was that Lourdes suddenly sounded more tempting. "It says it's in the Pyrenees in the brochure," she said in the cab on the way home.

"What of it?"

"Well, you can take me mountain climbing." She didn't laugh this time, and neither did he.

Chapter Twelve

JONATHAN HAD HOPED that their journey would bring them a measure of peace. Instead, it only drew them deeper into their fears.

The flight itself was extremely pleasant. Jonathan was amazed to find that SkySaver Airlines had provided a beautiful L-1011 for the journey. There were a number of different pilgrimages on the plane, of which the Holy Spirit group was by far the most privileged. They occupied the first-class section, and had been pampered as if they were flying on the best of the scheduled airlines. Behind them in economy Jonathan had glimpsed seats jammed nine abreast and people eating out of bags they had brought from home, but the curtains were kept closed, so there was no need to dwell on their plight.

The Holy Spirit group was young and well dressed. Where they had come from Jonathan did not know. Father's usual parishioners were old people, mostly widows. Although the rear of the plane was jammed with stretchers, and there was even a staff doctor aboard, the Holy Spirit group had no sick.

Patricia was the only one among them with any defect or disease. The two of them sat together hand in hand for all the hours across the Atlantic. Jonathan watched the limitless waves passing below, and let himself be lulled by the sound of the plane's engines. He toyed with the rescue-instruction card, flipped through a gift catalog. They had drinks before their dinner of lobster tails, and cognac afterward.

Then he slept. Unconsciousness brought him a new and terrible dream, worse than any that had come before. Like a man struggling against a stubborn current, he fought it, and like such a man, knew his efforts were pointless.

The serpent would have its way. Jonathan must dream his dream.

He sat astride a white, undulating female body. Each shiver-sweet pulse of his hardness wounded her more. When he jerked his thighs she would scream, and when she screamed his whole being would explode with pleasure. He jerked harder and harder until she was shrieking through bloodied lips and he could feel her swooning beneath the power of his passion.

Jonathan screamed. He could not bear to look into those agonized eyes.

And yet they pleased him, and he *did* keep on.

Even as she screamed her voice faded into wind-noise. He grew cold. The wind mourned and wailed, and the wail became a whine. Jonathan realized he was awake. The pitch of the engines had changed. They were nearing Tarbes-Ossun-Lourdes Airport. He flickered his eyes open and looked at Patricia. "You were groaning," she said. "Was it a nightmare?"

He didn't want to think about it. He twined his hand in hers and settled back in the seat.

Father Goodwin began to make an attempt with his guitar, and that diverted Jonathan. The priest stood in the aisle, his needle-thin fingers worrying the strings of the beaten old instrument. "Hail Queen of Heav'n, the Ocean Star, guide to the wanderer here below . . ."

Yeah, yeah, yeah.

Father nodded and smiled encouragement at his fashionable pilgrims as the plane swam on through the lambent French evening. He raised his eyebrows,

he strove for a joining of voices.

Jonathan could almost hear him thinking: Sing. Please sing. "O gentle, chaste, and spotless maid, we sinners make our prayers through thee." Sing, you beautiful zombies.

Still nothing. Father Goodwin withdrew, nodding and smiling. People had barely glanced up from their cognacs.

From the economy cabin came a renewed burst of song. Father shifted uncomfortably in his seat. All during the trip the other pilgrims had been alternately singing and saying the rosary.

Across the aisle Mike slept heavily, his mouth slack, one massive arm dangling into the aisle. Beside him Mary remained engrossed in Marnham's *Lourdes: A Modern Pilgrimage*. She was participating avidly in the family absurdity. And why not? It was an absurdity she had created. Jonathan thought of her as far too sophisticated to suggest this ludicrous journey, but she had insisted it would be good for Patricia. Perhaps she was right. At least it was a change of scene.

"What was your dream, darling?" Patricia asked.

In the past few days she had grown more and more like a wife. Usually he reveled in it; to be known intimately was a wonderful new experience for him. But he wanted to spare her the savagery of his dreams.

"Jonathan, you didn't answer me."

"I was hoping I wouldn't have to."

"You can tell me, darling."

"I don't remember."

She didn't press him but he still wished she hadn't asked. Thinking about it forced him to face the fact that there was something he could not share with her, nor even explain.

"You're shaking," She slipped an arm behind his neck. The gesture had conspiratorial quality. Her other hand she laid on his chest. She placed her lips so near his ear that they touched and tickled deliciously. "I'm here with you, Jonathan. We're safe. We're thousands of miles from any danger."

The purr of the engines dropped a couple of octaves. They were landing. A sharp bank revealed lights glowing in wrinkled valleys, and off to the east a splash of color that must be Lourdes. Soon they rocked and rumbled down the runway, coming to a halt near the gate. Next stop, God willing, was the Gethsemane Hotel and a night's rest.

Jonathan was still not sure how Patricia was going to react to being here. She might, despite all she said, be holding out some small hope of a miracle. If she was, then she would be disappointed. Mother had been insensitive to this aspect of the trip, and Jonathan had told her as much. Patricia was an ideal breeding place for forlorn hopes. She was not reconciled to that wheelchair, no matter how she acted.

"Lourdes," Patricia said as the plane stopped at the gate. "My first footstep on foreign soil." Jonathan managed a weak smile into the rich and glorious beauty of his lover's face.

She looked long at him. Patricia of the green eyes; Patricia of the madonna smile. Her lovely breasts were elusive beneath her blouse. Her curves were suggested by the folds of her dress.

So far they had only been intimate that once. Subsequent attempts to get sufficient privacy had been squelched by a friend of Patricia's, a former Our Lady nun who had needed lodging while she found a place of her own. She had moved into Patricia's living room. God willing, old Letty Cochran (formerly Sister Saint John) would be gone by the time they got back.

To make matters worse, Mother and Mike seemed to have reached a new height of sexuality. As never before Mother was seducing him. She was almost frantic. And she certainly knew how to make Mike happy. Not a night passed that Jonathan wouldn't hear her in their bedroom crying out with delight, a sound which evoked in him the most painful combination of loneliness and excitement. He would lie just across the hall, fevered, sweating, erect in the empty air.

"Do you think it all really happened?"

"What?"

"Lourdes, of course. The cures."

"Perhaps. I don't know. There's something to faith healing, that much we know. Psychological cure, like the placebo effect."

"Something *could* happen, then. That's what you're saying, since the doctors say my paralysis is psychological."

Oh, boy, here it came. How dare they bring her here just to let her get hurt like this! Mother had been irresponsible. "The odds are against it, darling."

"But not a hundred percent."

"I thought you were the one who considered this an insult to your

intelligence."

"Oh, Jonathan, now that I'm here—don't you think there's just a tiny, outside, million-to-one sort of chance?"

He could have wept. "I'm afraid I'm too much the scientist to calculate odds. Psychosomatic cures are known, but they are extremely rare."

"But if I believed—if I *really* believed—maybe that would be enough?"

He wanted to say no, but that just wasn't true. "There's a remote possibility. But please don't cling to it."

She sat rigid, staring into the middle distance. Without the sound of the engines the plane was filled with the moans and coughs of the Sick in the economy section. On the flight Jonathan had worried a good bit about the possibility of contagion. Would it be possible to get one of the bizarre diseases represented back there? The Sick who came on pilgrimage were the abandoned of medicine. Hardly a common disease—except of course for the cancerous and the diabetic and the stroke victims. Among the most bizarre victims there was a case of dystonia musculorum deformans, a man of twenty-five twisted to Gordian complexity, peering through his glasses at a tattered volume of Proust.

But the Sick were far to the rear. The Holy Spirit pilgrims didn't need to trouble themselves.

"All bearers to their pickup points, please," a priest's voice called over the intercom. There was a general shuffling among the economy passengers. Soon stretchers began to go past, hauled by relatives and volunteers. The worst of the Sick, a form swathed from head to toe in white, was propelled down the aisle first. No information about this individual's disease had been forthcoming.

"There goes the corpse," Jonathan muttered to Patricia.

"Our Lady doesn't raise the dead, dope."

Just then the corpse gave out a long sigh.

"It's a miracle!"

"Shh!" Patricia's pale cheeks flushed. How painfully, delicately beautiful she was.

The complete procession of stretchers took ten minutes to pass.

At last those not under constant medical care could leave the plane. Jonathan went and got Patricia's wheelchair and they were soon on their way.

The greater part of the airport was a hodgepodge of victims and their

retinues. It took an astonishing amount of effort and skill to move the truly sick, and people did not bring colds and rashes to Lourdes. Only the abandoned entered here . . . and their relatives and priests and lovers and friends. The airport resounded with a sort of low, penitent murmur. Despite all of Jonathan's negative feelings about the place, he saw at once that there was great faith here, and despite himself was moved.

His group was ushered by a woman with a clipboard into a special customs area. Here there were no crowds and no Sick. The Holy Spirit pilgrims were grouped with others like them, healthy, well-dressed people who seemed to have little relation to the struggling faithful on the other side of the ropes.

For an instant Jonathan's eyes met the cute little usherette's. She blushed and lowered her head, practically bowed. She hurried away.

"Who was that—a fan of yours?" Patricia asked.

"Never saw her before in my life."

"She acted like you were a movie star."

"Now, now, don't get jealous."

Across the rope hard-edged officials were screaming, "Customs! *Douane!*" They were searching every bag, even looking under the sheets covering the Sick.

On this side of the rope people got through instantly, with a polite smile and a perfunctory tap of the bag. Their luggage was not even checked with chalk marks. Their passports were not stamped. And the customs inspectors lowered their eyes when the Banion family passed, more like servants than officers of the law.

"No big deal," Mike said happily. "Maybe they know I'm a cop." Jonathan wasted no time rolling Patricia out to the cab station. He really wanted time alone on the way to the hotel. He managed to get one of the ungainly-looking Peugeot cabs especially customized to take wheelchairs.

Once inside silence descended between the two of them. He had an important reason to want to be alone with her. So important, in fact, that he was having a hard time saying it. He wondered how she would react when he asked her to marry him. It had been much on his mind, and he had decided to ask her here at Lourdes. Maybe the good news would soften the hurt she was going to experience when the grotto failed her.

"Gethsemane Hotel," he said to the driver. Would it afford an opportunity of privacy, or was this to be his only chance? He wasn't sure he had the nerve

right now.

He had decided to dare marriage because he was convinced the serpent was a side effect of a poorly tested drug. And he intended to enter psychotherapy for his dreams. Maybe he could become exactly what he wanted to be—a good husband to the woman he loved. It seemed so simple.

Why, then, was he afraid to ask his question?

He thought of the dream of an hour ago, the sweet, dying flesh.

The driver pulled out into traffic. Jonathan watched Patricia's fingers twisting in her flat, lifeless lap. "Look," she said, "the crosses."

So those were the famous crosses of Lourdes, on the hill called Calvary just above the grotto. Beyond was the great Basilica of the Rosary and farther away the town itself, glowing with evening light, suggestions of neon shimmering in the summer haze.

Patricia smiled, and Jonathan almost sobbed. More and more he was feeling pity for her. He must not do that.

She had the softest eyes he had ever seen, so utterly without anger in them.

"I wish we could thank Mike and Mary in some way. I want to give them a present."

"Get cured."

She looked at him, surprise and confusion following one another across her face. How could he have been so brusque? Did he want to make her angry at him ... or was there some deep, sadistic *thing* in his soul that was actually sneering at her? In a voice dull with hurt she said she had come here only to pray.

"I know, darling. I'm sorry. It didn't come out the way I intended. I guess it's just that I'm frustrated. I want the best for you, Patricia. I love you so!"

Her eyes searched him. There was perfume coming from the blond glory of her hair. He noticed the neatness of her nails, and the care she had obviously taken with her makeup. Even after the long flight Patricia appeared fresh. He felt weak and coarse and mean to pity her. She must be suffering incredibly just now.

But no, she was smiling, she was brushing away the wetness in the corners of her eyes.

"At least I could get something for Mary since all this was her idea."

"A plastic Virgin, maybe? A rosary? Or how about a Virgin-rosary combo? That would be generous."

She managed to laugh a little at that. "Don't be sarcastic, you evil man. We *have* to find something appropriate."

The basilica now loomed on the far side of the quick-flowing River Gave. The cab made a turn and passed under the railway tracks and they were abruptly in Lourdes. Jonathan noticed the driver flashing his lights at a small group of dark-suited men on the corner. The men doffed their hats. Traffic choked the streets—tour buses, taxis, private cars, trucks.

The commercial density of Lourdes was totally unexpected. Every inch of sidewalk was faced by a storefront jammed with religious kitsch. There were exuberant festoons of rosaries—brown, red, yellow, green, pink, white. Scapulars and miraculous medals were piled in mounds and pinned to cards in clumps of hundreds. Whole armies of plastic Madonnas of the Grotto disappeared into the glaring interiors of the shops. Our Lady danced and jittered in neon, praying hands flickered into images of the Sacred Heart and back again, and crucifixes were everywhere, each twisted tin Jesus identical to all the others.

The neon banished night. This was a religious Las Vegas, where piety and greed had twisted together like mutant chromosomes. As the cab proceeded slowly down the street, an endless, shrill babble of hymns from storefront loudspeakers came in through the windows with the choking diesel exhaust and the smell of frying junk food.

Patricia had gone pale. Her hands were tightly clenched. She was motionless, staring straight ahead. From the edges of her eyes tears once again gleamed.

Nothing Jonathan had read had prepared him for the relentless cynicism that had infected this city. It was almost as if the merchants of the place were trying to mock their Catholic customers.

And what of her, bringing her broken body here in hope of cure? This exhibition must be shattering. Jonathan would have done anything to spare her this ugliness. If only he had known, he would have really fought the trip, made certain it didn't happen.

The plastic and the glare were nailing her to her wheelchair forever. She sobbed, and Jonathan felt as never before her catastrophe.

The driver yanked open the cab door and drew Patricia out with exaggerated gentleness that Jonathan took for more cynicism. Jonathan gave him his money, adding as a tip the smallest coin in his pocket, which the driver took

with reverence. He stood on the sidewalk, his cap in his hand, smiling after them.

Jonathan became aware of the scene around them. Stretchers, wheelchairs, frames, medical supplies, and luggage lay about on the sidewalk. The Holy Spirit pilgrims were nowhere to be seen. Of them only Father Goodwin remained. He was rushing back and forth between the hotel and the pilgrims, his face sweat-shiny, helping the other priests to organize their charges.

The Gethsemane appeared to be a typical middle-grade Lourdes hostelry, six stories of small windows, a gray stone facade. Only its top two floors suggested any promise of decent accommodation. On floors seven and eight the windows were large and arched. Light shone from behind beautiful draperies. Well-dressed people could be seen coming and going in the rooms beyond.

Mary got out of her cab and stood with Jonathan, looking upward. They saw the silhouette of a trim little man approach one window. Then the light behind it went out.

"Relax, Harry," Mike called to the frantic priest. "You're gonna get a coronary."

Jonathan really noticed Father Goodwin for the first time since they had landed. Gone was the guitar-playing priest of the airplane. This new Father Goodwin acted like a man let down on the most dangerous street in the worst part of the Los Angeles barrio. He wasn't just overexcited, he was in a panic. And he was looking up too, furtively, as if he expected someone to stone him from above.

Jonathan followed one of his glances and was surprised to see that the seventh and eighth floors were now completely dark.

Mary saw Father's consternation too, and strode over to him. There was a whispered conversation. Father, his face gray with what was surely shock, his eyes stricken with sorrow, spoke to the gathered pilgrims. "We have to stay here," he said thickly. "There are no other hotels available. Let's go in."

"He doesn't like the hotel," Mary said as she returned to the Banion group.

"Has he been inside?" Mike asked.

"I have no idea. I think he's suffering from jet lag."

They went into the gray-tiled lobby and found a bright young concierge behind the aged hotel desk. She wore a dingy brown dress and greeted them with the same deference everybody had thus far exhibited.

"Here are your keys. *Americains*. The lift is opposite the restaurant. As you asked, *Madame*, your rooms are on the second floor, two-oh-two through two-twelve."

Jonathan was disappointed. He had assumed that American pilgrims routinely got the first-class accommodations, which were obviously on seven and eight. "I'd like to be higher, Mother."

"It's not safe with the chair. These places are firetraps."

Jonathan knew better than to argue with her over a matter like this. Mother had an obsessive fear of fire.

Oddly, the elevator showed only six floors to the hotel. There weren't even keys for the two additional floors. Once they got upstairs it was clear that Father's intuition had been right. The "rooms" were dormitories fitted with cots and obviously intended to sleep no fewer than four. There were no singles or doubles; the Gethsemane hadn't even been built that way. Mike moved his family, Patricia, and Father Goodwin into 202. This was as depressing an arrangement as Jonathan could imagine. Chances of privacy flew out the window, a crack of a thing overlooking the hotel's kitchen exhaust. Behind a frayed screen stood an ancient lavatory and toilet. On the bidet was a handmade sign,

FEET ONLY, NO URINATION!

"Beautiful," Mike growled, throwing luggage down. "Thank God the Sick aren't here." For pilgrims in need of constant medical attention the Church had built Our Lady of Sorrows Hospital, which was some blocks away.

In that she did not require nursing or medication, Patricia was here rather than at the hospital. As Jonathan wheeled her across the room, thinking of his unasked question, he longed to be alone with her.

She took the wheels and went over to Mike and Mary. "I don't even mind the room," she said. "I'm so glad to be at Lourdes."

"All the plastic Jesuses—I could do without that part of it," Mike said.

"It won't be like that at the grotto," Mary assured her. She touched Patricia's face, very much more tenderly than she ever had before. "You'll see."

Mike leaned over and kissed Patricia's forehead. "You're too good, that's your problem."

Father Goodwin, who had been dashing up and down the hall in a frenzy of announcements and schedule changes, stuck his head in the door. "Soubirous

tour in fifteen minutes! Those interested please gather in the lobby. The bus will pull out at *exactement* eight P.M."

"He seems to have recovered some of his *savior-faire*," Mary said acidly. She was behind the screen; Mike had pulled a bottle of Chivas out of his suitcase and was trying to make a drink in one of the hotel's cracked plastic cups. "No way," he said, as it leaked whiskey from at least six different holes.

"Jonathan," Patricia said, "I'd like very much to go."

"Don't," Mary called. "We can arrange a private visit tomorrow."

"I'd like to go on the tour, really I would." That was unfortunate. Jonathan's one wish was to bury himself in the two-inch foam-rubber mattress allocated to him and forget his disappointment.

"It won't be very pleasant," Mary said.

"It'll do me good to be with other pilgrims. I mean sick ones."

"I'll be glad to come, darling," Jonathan said. "But I intend to sleep through the Bernadette bit."

Mary laughed. "You two go along. But if you get tired and want to come back early, hail one of the Peugeot cabs. And make sure it's a Peugeot. They're the best."

The tour bus was huge but astonishingly flimsy, as if it might be built of cardboard. At the rear was a large double door and a pneumatic chair lift. Jonathan wheeled Patricia onto the contraption. He soon discovered, when nothing happened, that it was first necessary to pay the driver an American dollar to operate the lift.

He put the money into the kid's hand. Once inside the bus he had to move Patricia onto a seat. This was a harrowing operation, involving picking her up in his arms and carrying her down the narrow aisle from the chair-storage area in the back. She was not a small girl, and the lifelessness of her lower body made it difficult. She winced as he slid her into an empty seat.

"I'm sorry, Jonathan."

"I love you."

In answer she kissed him gently on the cheek.

Behind them the lift whined again and again until there were thirty people in the bus, ten of them the Sick. Father Goodwin, who no longer seemed to have any pilgrims from his own group, was tuning his guitar.

"Uh oh," Patricia said. "More hymns."

They were soon navigating in traffic to the strains of "Dominique." Faces pressed to the windows. This was, after all, the most famous place of pilgrimage on earth. Despite the kitsch, this *was* Lourdes.

At the end of a shuddering, backfiring trip up a hill the bus came to a stop. "*Maison Paternelle*," the driver roared. Then the clatter and confusion of disembarking began. This time it went more smoothly. Evidently the first dollar covered the whole journey.

The House of Bernadette proved to be attached to the back wall of a huge souvenir shop. Here there were even baseball caps with Aquero—as Our Lady of the Grotto was called—on their badges. Statues of Aquero rotated on little pedestals, the "Ave Maria" or the "Lourdes Hymn"—or "Lara's Theme" or even "Indian Love Call"—tinkling from music boxes in the bases. There were Dutch wooden shoes with Aquero statuettes glued to the toes.

Patricia looked slowly left and right as Jonathan propelled her down the aisle to the shrine at the rear, which looked more like a jail cell than a one-room cottage, barred to prevent its being pillaged by relic hunters.

She reached back and found his hand. "Take me out," she said.

He turned her around and wheeled her back to the bus.

"Jonathan, this is awful. It's terrifying!"

"Obscene is the word. Those statues—"

"Not the souvenirs, the people behind the counters. Haven't you noticed them?"

"No, to tell you the truth."

"Jonathan, we are being carefully watched. We have been ever since we got here." She snatched his hands, glared into his eyes. "Please, let's go home right now."

"Who's watching us?"

"The girl at the airport, some of the people in the streets, everybody in the shops, even the concierge at the hotel."

"Darling, I think you're a little overwrought. Mother's right, we need to rest."

"I am not tired and I am not crazy! Everybody in this whole city—all the people who work in the stores, in the hotel, all the drivers—they are watching you and me."

"Patricia, really—"

"Don't you 'really' me. They're all watching us—staring at us. Just at us."

Jonathan had been bending over the wheelchair. When he stood up he looked right into the face of a salesman who had been standing behind a counter in the shop. The man lowered his eyes and walked away.

Jonathan found one of the Peugeots. "We'll stick close to the hotel," he said. What else could he say? She wasn't paranoid, she was absolutely right.

But why? Surely no cult was large enough to include the inhabitants of a whole town, thousands of miles from home.

Yet they were watching, even now, from sidewalks, out of shop windows.

As the cab made its way through the jammed streets Patricia's face revealed how trapped she felt. From time to time Jonathan saw her dart a glance out the window.

And the crowds, the swirling mass of eyes, looked back.

MARY: THE SHADOW OF THE INQUISITION

Now HAS COME the night of highest peril. We will kill her or cure her. She is useless to us as she is.

We own this town—its shops, its hotels, even the spring that feeds the grotto. But the great underground river beneath the grotto is nobody's property. Alpheus, the river of life and death.

It is not like the little aboveground trickle into which Catholic pilgrims dip their infirm parts. Alpheus is wild and dark and dangerous. If it sweeps you away you are lost forever. I think it may be more than water, more than a simple trick of geology. If a demon had a body it would be very like Alpheus, a freezing torrent raging against the rock of the earth.

This week at Lourdes many of the pilgrims are our people. We have booked the best rooms, taken the best charters. Some of our Catholic customers will have to wait until next week to continue buying their kitsch and bathing themselves in one another's sweat. Yet our beloved child is in as much jeopardy here as at home. As if the Inquisition had a sort of shadow...

Our people have made us welcome. To them it is the highest honor to have the Prince and Princess among them. Never have two people been so well guarded.

When Gottlieb told me that her paralysis would prevent childbirth, I

remember I said I wanted to die.

He is a wise man. "Concentrate on your work. Keep to the plan." How I threw myself into my work! I've arranged the worldwide vaccination program, the food supplies, all we need to see us through the coming extinction.

I even have Mike performing his allotted role. I am insisting he wear a vetiver cologne I had compounded at Keil's in Manhattan just for him. But it is more than scent. Jerry Cochran has mixed his vaccine into it. Every time Mike splashes some on, he contributes to the immunity he will some day need in order to fulfill his place in our plan.

If all goes as we intend, we will require him to remain alive some little time after the others are dead. Such a fatherly man can be put to good use.

Lately I have really been trying to seduce Mike, to make him love me as he has never loved anybody before. Frankly, I hope we will be able to convert him.

Still, I could not bear to be with him tonight. I lay on that miserable pallet in the Catholic part of the hotel downstairs, sweating and worrying until I could bear no more; now I am here where it is risky for me to be, in the suite where a princess of the Night Church belongs, writing and writing and trying to pretend that I am not exhausted, that I do not tremble, that my hand is as firm as ever.

Stupid woman. You calm yourself by writing in your journal. Then you tear out the pages and burn them.

Outside quiet multitudes file toward the aid stations for their vaccinations. My own arm itches furiously where Jerry himself applied the needle. Lourdes is the main vaccination center for southern Europe. We will vaccinate thirty thousand faithful in the alleyways of this town before we are finished.

When the rest of the world is weakening and dying, in that time of unimaginable chaos, our Church must be stronger than ever.

As I write these words I feel the immensity and the difficulty of our task. Despite Jerry's brilliance and Franklin's great strength, I feel almost alone. The French have filled this room with flowers, have brought me a late supper of salmon trout and champagne. They are so awed by the presence of Titus blood among them that they are not able even to meet my eyes.

They must have a hard time understanding Mike, who is so obviously not of the royal lineage. The husband of a princess? Impossible!

Oh, Mike, Mike, I rise to the heavens beneath your sweating body. I hate you! I will not say the opposite, but I do feel it too. Love, damn it all. You obsess me for a very simple reason: I cannot decide *what* I feel about you, and have good reasons for all my contradictory impulses.

Two fifteen in the morning. Throughout our ancient capital our people have just begun going from the hidden vaccination stations to the basilica itself, for the great ritual cleansing. We will take our darling down under the grotto to the banks of the secret river.

She will overcome her paralysis or she will drown in it.

Are we about to kill the hopes of two thousand years?

I go now, as always, loyal to my duty. I am crying, weak woman that I am. I call to my demon fathers.

Hear me.

Chapter Thirteen

PATRICIA LAY WATCHING suggestions of movement in the shadows on the ceiling. The room was unquiet, even at three o'clock in the morning. Father Goodwin had been up and down to the bathroom half a dozen times. He was overexcited—which was to be expected, she supposed.

He snored now, his sleeping expression one of deep sadness. In the cot beside his, Mike's breathing was thick and regular, a settled hound's. Mary was gone from her cot, no doubt forced into a walk by the heat and stuffiness. Across the

room lay Jonathan, and Patricia wondered if he too might be awake.

The thought brought deep stirrings. Since their half-hour in bed Jonathan had grown more and more ardent. And she had too. In her daydreams she would kiss his rigid, silken member... then she would banish the fantasy. Which would promptly return.

Of the two of them, though, Patricia knew that Jonathan was the more enraptured. And why not—wasn't that in the nature of the male, to have explosive passions? But how, then, could he think clearly about life with a paralyzed woman? And what if she needed more medical care? Would he accept the burden, just for love?

I want him to be as free as the wheat in the field.

Oh? The field that I dream about, where Death resides?

The scythe sighs and the Reaper sweats. He is a mad not of death amid the growing, fruiting, bursting fertility of humanity.

Is it love I wish for, or death?

Maybe I just ought to let him make love to me again and forget the rest. Maybe that physical contact is the only real thing, and all this thinking is just a waste of time that might be better spent in pleasure.

I want to go across the room and place my lips on his lips, and press my tongue between his teeth, and love him and love him until I melt into him.

I am free to die in Jonathan, free to let the living steel of him tear me apart.

God help me, I'm frightened.

The shadows seemed to move just then with a purpose of their own.

She was conscious that Jonathan had stirred in his bed. Fingers seemed to brush her face; she was suddenly frozen with terror. This must be another nightmare. She wasn't awake, she *couldn't* be, not if she felt this afraid over so little.

Oh, he was moving—she knew he was moving.

The shadows on the ceiling were very slowly changing shape as he slipped inch by stealthy inch from his bed.

You will go with him.

"Is that you?" Her voice was like a rattle of leaves in the quiet. Mike snuffled, Father sighed.

Don't whisper so loud, you little fool!

Now I know he is on the floor. I hear his breath, hisss, hisss, hissssss, getting nearer and nearer. I see his shadow creeping.

You will go with him!

"I will go with him."

Far away someone was singing, the same few words again and again. And the wind made a deep note as it surged and flowed-through the ancient streets of the town.

"Patricia?" Jonathan said softly. Oh, seductive whisperer, where have you come from?

And why do your eyes gleam so?

"You awake?"

"Mmm..."

"I—please—"

She knew what she had to do; slip from the bed, pull on her dress, let him carry her.

They went then through the black halls of the hotel, down the cobbled streets in the night wind, her dress hardly protecting her.

All she could think of was how his skin must taste, She was desperate, urgent to drop to her knees before him, to free the tight imprisoned purple arrow and pierce herself with it as she had in that time of beloved memory.

They moved through the night, beneath the stars and tossing trees.

We aren't in the town anymore. Where are we?

He was scary. His face was too sharp, his eyes too bright. There was fire in him, and she knew that if she tempted it too much it would kill her.

"Welcome to the domain of Our Lady," said an age-dried voice. A small, quick man moved in the dark.

You look familiar, old man.

He smiled. Behind him the massive bronze doors of the Basilica of the Rosary opened just a crack.

"Come," he said.

Can this be real?

"Don't worry, you are certainly dreaming. What do you think? You must be dreaming!" He spoke with soft intensity.

"I'm *not* dreaming."

Her own voice startled her. She touched Jonathan's face. "I'm not either, my love," he said.

She felt, though, that she must be. Of course she was; she had to be.

The old, old man beckoned frantically from the doorway. Then they were

inside and Patricia was stunned by the spectacle before her.

There were candles in the vast space, candles by the thousands, points of light, crowds of points, reefs and blazing cascades. Enormous curtains covered the windows.

The ocean of candlelit pews had the just-emptied look of a place where a procession began, and to which it would return. The air smelled of hot wax and people.

At the far end of the basilica there was a stairway. Below must be the grotto. The entrance was utterly black. After the blaze of the candles it was impossible to see.

There came from the foot of the stairs the sound of water.

As they descended the murmur grew to an echoing roar. In the caverns beneath Bernadette's little stream was a mad, frothing cataract. "The headwaters of the Holy River Alpheus, where Parisfal drank of death. *Go now, and give yourself to Alpheus.*"

Give herself to Death? She clung to Jonathan.

The only light came from the phosphorescent foam. Unseen hands took Patricia, carried her forward, closer and closer to the surging water, as Jonathan rushed beside her. The water cascaded from the rocks, flooded through the chamber, then ran gurgling and complaining down the crevasse beyond.

"The river wants you," whispered the old man, and there sounded above the voice of the water a deeper, more terrible note, as of a great horn booming and booming, and with every boom the old man came a step closer to her and Jonathan.

"Take her, boy, down into the water."

"She'll drown!"

The old man's mouth moved but Patricia could not hear. At once a change came over Jonathan. He drew off his clothes. Now he was naked and his skin gleamed in the blue iridescence. He smiled a jack-o'-lantern grin.

Then she was in his arms, lying helpless against his naked flesh, and the water was coming up around her, seething and tugging and lapping, covering her midriff and her chest and her arms and then her face. Now he ceased to carry her; instead he pressed her down with his hands. She went down and down and down into the freezing, grabbing dark.

Then his strong arms were gone.

She was tumbling, dashed again and again against the rocks. The current was holding her against the bottom.

Her arms were not strong enough to resist the power of the water. Only her legs could help her and they were useless.

If inhaled, a half a cup of water is enough to kill. But she had to breathe, she *had* to inhale! A surge of agony swept her body. She tried to bring her hands to her face but it was no good; she was tumbling over and over, caught in a corner between the side and the bottom of the river.

This nightmare had to end. But how could it, when the water was so very cold and the bottom so very hard and her lungs bursting with desperate need?

God. God. God.

Her left foot scraped stone. She pushed, and for an instant the tumbling stopped. But then she was off again, worse than before. She knew that her mouth was going to open in a second and she was going to breathe, and that breath was going to be water.

Her foot connected solidly with the rough bottom, and this time she did stop tumbling. She drew her legs up under her and pressed with all her might—but how could she?—against the battering power of the backwash that held her.

She broke free.

The air was dank cave air, but it was air and it balmed her searing lungs.

She heard *hiss-whoosh! hiss-whoosh!* and saw what looked like a monstrous toad waddling toward her in the foam. Then he removed his face mask. It was a man in scuba gear.

"She's done it," he shouted over the water.

And the bone-deep note she had heard before boomed triumph.

Jonathan, naked still, came to her. Hand in hand they walked from the water. For the briefest of instants she had brushed his great hard stone of a thigh and heard him gasp and felt him stumble. She longed then to touch him more, to hold him delicately between her fingers, to spend long minutes just stroking his secret part.

Mary Banion gave them their clothes.

She walked in the darkness, between cliffs of a new sound. At first she did not know what it was, then she understood. There were throngs here, and they were clapping softly. Jonathan drew her forward. "I can't see a thing," he whispered.

"There's a glow over there. It must be from the candles upstairs."

Hand in hand they went toward the light.

As Patricia sank to deeper sleep she was aware that bells were ringing. But for the glory of those bells she dreamed no dream, sleeping on toward the forgetful dawn.

Chapter Fourteen

WHEN THE KITCHEN exhaust fan beneath the window was turned on, Patricia awoke instantly. Her sleep had been troubled; she looked at her watch. Six thirty. Around her the others slept on.

She wished she had not dreamed she could walk. It was cruel to do that to oneself. The inner Patricia was furious with herself for the crippling, which made it hard for ordinary, everyday Patricia to get used to it.

"Good morning."

Jonathan whispered to her from his cot against the wall. Beside him Mike Banion snored softly. Father Goodwin lay twined in on himself. Mary, very still, was as pale as a lovely statue in her sleep. There was a round patch of bandage on her right arm, just below her shoulder. Patricia looked at it, reflecting idly that it was the only imperfection she had ever seen marring that

perfect body. Even Mary wasn't immune to scratches and cuts.

Patricia raised her own arms, spread her hands, closed her eyes and waited a thousand eternities for Jonathan to cross the room and bend to her. "Hello," he said. "You're cool. Shouldn't you be bed-warm?"

You have dared the wild waters, and you have won.

"Jonathan, take me out of here. I want us to be alone together."

"Darling, darling." They traded a lingering kiss.

Then they dressed, he pulling jeans on over his briefs, she grappling with a skirt and blouse, working her feet into a pair of flats, running a brush a few times through her hair.

He carried her to the wheelchair. When he sat her in it she writhed. The thing had claws, it grabbed her; the chair was hungry for her body.

He wheeled her down the dim, stuffy hallway, past endless rows of little black doors with slats in them, beneath buzzing fluorescent rings, to the wide hospital-like lift. The main lobby was dark, nobody about at this hour. In front of the hotel was a still-bundled stack of French newspapers and a few copies of the *International Herald Tribune*.

He wheeled her fast, almost running down the Rue Reine-Claire. "Where are we going?"

"There's a gate at the end of the street. It leads into the Domain of Our Lady. It'll be quiet there. On the map it looks like a park."

She had seen him in the plane poring over his Michelin. "You memorized the map in hope we could slip away, didn't you?"

"Yeah. I know all the exits."

"Love you so much."

From behind her his hand caressed her cheek. They came to a little wrought-iron gate between two ancient buildings. Beyond was a muddy alley, and beyond that a widening expanse of grass.

The lawn went on for a while, then stopped abruptly at a tall hill. That must be Calvary. Behind it would be the Basilica of the Rosary. In the opposite direction to the basilica the land dropped to the river in a jumble of rocks and ferns and gnarled trees.

Jonathan made for the hill, laboring to push the chair through the thick grass.

He was so silent and purposeful. That wasn't like him. Then she understood what he must be planning.

The anticipation thrilled her to shivering dampness. She was going to be made love to, and it was going to be done by her delicious Jonathan, in the woods.

A hundred yards from the most Catholic place on earth.

Was that funny, sad, or both? Oh, hell, it wasn't sad at all! She reached her hand back. Instantly he squeezed it. Then he returned to his pushing.

"You're working up a sweat," she said.

"Doesn't matter."

They came to the line of trees and went a short distance in. This was a different world. Alien. Here the low hum of insects mixed with the petty chanted rage of birds. The light was rich green. Woods were beautiful places, but Patricia certainly saw why in ancient times the pagans had peopled them with nymphs and spirits, and humming, vindictive gods.

They stopped.

Silence.

The bugs started again, then the birds. But as far as humanity was concerned the two of them were gloriously alone.

He will lift me from the chair. I will let him have his way with me.

But he hesitated. Was he afraid? Confused? "I dreamed that I took you to the grotto and put you in the water, and you could walk."

"I dreamed I could too. I dream it a lot."

He bowed his head and kissed her hands. "I'll take you out of the chair now."

"We'll be missed if we don't get to the basilica by eight." How dare you say that, girl. Keep your mouth shut; you don't want to ruin this beautiful moment.

"It doesn't matter. Because I want to ask you to marry me. Please, as soon as we get back to New York."

He swept her from the chair and set her on the forest floor.

"You really, really do? You want to marry me?"

He lay full on her. She felt the rigid curve of his flesh, and laid her hands on his buttocks, which rippled beneath his jeans. "I'd like a child," he whispered. "If you want one."

She was full of laughter and tears of gratitude. "Oh, certainly! Surely I do! I want lots of them!"

"I've always wanted a child. I want him to be named Martin, after my dad." Just like a man. It never even occurred to him that he might have a daughter. She didn't care, though—not now, not about such details. She hugged him to her. "I'll marry you, Jonathan. Oh, yes, yes, I will!"

"I want it so badly, darling. Soon. How soon can it be?"

"Next week, if we can get a dispensation on the banns. We can ask Father."

From sheer delight in each other they laughed softly, in the twilight of the woods. When he began to lift her skirt, she stopped him. "Wait. I have to say something."

"No more delays. I won't stand for it." He kept at it.

"I have to say yes! Yes, yes, yes!" In moments she was naked, her clothes beneath her body. He lay beside her running his hands over her. "You have goosebumps."

"It's cold."

"Am I cold?"

His hands were like fire where they touched her. He seemed wire-tense. "The ground is cold. You're warm." She arched her back. "Touch me more," she whispered, feeling her cheeks go livid. She presented her breasts to him; the grass beneath her whispered when she opened her legs. "Touch me all you want."

He laid a hand on her midriff, so roughly that she gasped. "I wish I hadn't dreamed you could walk."

Oh, God, don't let him start worrying about that the second he asks me to marry him.

"Forget it, it's no big deal. I dreamed the same thing." The water had bellowed and foamed up out of the ground, a fantastic living organism, as far from normal water as a demon is from some placid human soul. *I will kill or I will heal*, the water had said. *It is all the same to me.*

"In my dream they called the river—"

"Alpheus. The river of death."

His hand froze on her thigh, clutching. They looked into one another's eyes. She moved slightly. He was hurting her just a little. "After I could walk, they rang the bells."

"I remember the bells." He fell silent. When he spoke again his voice was almost sullen. "What in the name of God is happening? We had exactly the same dream."

Words, thoughts, questions crowded through her mind. "But Jonathan, I can't walk! So nothing's happening except that we're getting, very, very close to one another."

"You haven't tried to walk." He pinched her hard just above her knee. It hurt; she jerked away.

"You have sensation!"

He stood up, held his hands down to her. She grasped his strong fingers and pulled herself to her feet. For an instant her legs were stiff and she thought she was going to totter. His face reflected awe and utter amazement. "As crazy as it sounds, we dreamed this together. And you really can walk. You *can!*"

"Don't let go!" She lifted her left foot, put it down in front of her. He backed up, released her hands. "Don't do that!" But he backed away farther and farther, until at last just their fingertips were touching. Then she was grasping air.

And walking. She had the delicate, unsteady gait of a new foal, but she was walking. She could feel everything from her toes to her thighs, just as she always had before the incident.

Jonathan rushed up to her and embraced her and covered her face with kisses. "Patricia, my darling, God bless whatever happened last night, God bless it!" He held her at arm's length. "You are so incredibly beautiful. Oh, you are so, so wonderful!" He hugged her; he was laughing and crying at the same time. His hands ran up and down her back and he kept kissing her. Finally he went down on his knees and embraced her around the waist. She stroked his head, then knelt down with him. Their bodies made a little warm tent in the forest cool. He drew off his T-shirt and unbuckled his belt. "Shall I?"

In answer she unzipped him and drew his pants down around his knees. She laid her hands on him. He closed his eyes, sank back on his haunches. Around them the forest sighed with morning wind. Sunlight filtered through the trees. From far away came the sound of a multitude singing. It was the Lourdes hymn; people were gathering at the basilica.'

He was warm and solid to hold, and his skin had that velvet-soft feeling she remembered. He raised his own hands to her breasts, cupped them gently, then rubbed his palms against them. The sensation was so strong and so fine that it made her feel pride in her own ability to experience pleasure. She smiled, and

he leaned forward and kissed the smile.

They lay down together in the grass. She spread her legs for him and he tried to enter her. He was not very practiced either. In the end she had to guide him. But she was too tight. That scared her; were they going to fail?

He lay full down on her. "If you would kiss it like last time," he whispered, "we could make it work, I think."

Yes, it had to be made damp. People were so delicately constructed.

She didn't mind. Far from it, the thought of what she was about to do fascinated her. She recognized in herself a desire to surrender to him that was very, very great. If he had been a coarser or a more cunning man he might have found a way to make her his slave.

She knelt between his legs and lifted his penis; the end was gleaming as if it had been waxed. This she took in her mouth. It pulsed once, then plunged deep. It hurt. For a full minute and more she kept it there. The sensation of being filled by it was not terrible; indeed, she had discovered pleasure in this the first time she had done it.

Like a white-hot knife it tore into you. It filled you with searing, molten lava and it ripped you until you thought you would die of the pain.

He withdrew himself. He was shaking. In Jonathan passion and fury looked startlingly alike. "That's enough! Let me calm down." He took sharp, frantic breaths. He glared at her. Then he sighed and closed his eyes. After a short pause he asked to try again.

In answer she rolled over beside him and spread her legs. This time he slipped in much more easily. He groaned once, then they were linked.

A thousand lonely Our Lady nights: how will it feel? They say the first time hurts, but you mustn't let him know that. They say it's literally like an explosion in you. A million, zillion times better than diddling with the corner of a pillow.

A million, zillion times better. She could have believed that the entire universe had reordered itself around these two people making love.

There were waves of pleasure connected with even his slightest movements. They swarmed one after another, faster and faster, rushing up from the center of her belly until they suffused her whole body and seemed to enter her very soul. She could hardly bear it. She clamped her hands to her temple, she shouted, she kissed his face, his neck, his shoulders, she licked his skin almost frantically, and she looked into his hungry, avid, raging eyes. She felt

at the same time both laughter and sadness, the whole game and tragedy of life all knotted up together and then bursting into a huge, impossible ecstasy that was also hideous, a sharp joy that made her cry out.

And then she was aware of a bumblebee worrying a small blue flower near their heads.

He drew himself out of her.

"Stay in me."

"Oh, my darling." In his voice was love and joy . . . and something like relief. He laid his open mouth on hers. She thought perhaps they had become song. Were they still just two ordinary people? Could they possibly be?

The bumblebee finished its work with the flower and bumbled on. From the basilica came the deep murmur of thousands of voices saying the rosary.

Suddenly Jonathan reared back. His face was almost bursting with happiness. "This is the greatest moment of my life!"

"Of mine too. By far, far, far."

He fell to kissing her again. It was after nine before they even thought of dressing. Jonathan insisted he could make love again if she wanted him to.

"We have to get back. We really will be missed."

He laughed silently. "You can walk! Can you imagine the irony of it—you go to Lourdes and you get cured. It's almost a kind of cosmic joke. I mean, *you* don't want to go, *I* don't want you to go. Not even good old *Mike* really wants you to. Then you go and cure yourself with some kind of a crazy dream."

"Is that what happened last night?"

He looked at her. Slowly he shook his head. "We dreamed the same dream. I put you in the water and you came up cured."

"It scared me. I thought I'd drown."

He grabbed her tight against him. "The very last thing in the world I would ever, ever do is hurt you."

"The water was so loud. It was like a cataract or something, just literally gushing out of the ground."

"She told me it was the river of death."

"She?"

"My mother. While you were in the water."

"It *wasn't* a dream, was it?"

"Don't ask me what it was, darling, because I don't know the answer. I just

know that whatever it was, it broke the psychological barrier that was forcing you to seek dependence."

"I was really paralyzed, Jonathan! Don't say it was psychological."

He hugged her. "Let's walk over to the basilica. I think you're going to cause quite a sensation among certain people. For one thing, you are going to make Mike a very happy man."

They dressed and brushed one another's clothes free of loam and bits of fern, and walked out into the calm, warm sun. How good it felt to move again under her own power! It also hurt; this was more exercise than her legs had gotten in three months.

They laid their arms along the small of one another's backs and walked across the green sweep of grass that led up to the basilica. As they came closer, mounting the low hill, the voice of the multitude in the forecourt of the church washed over them.

*Sing of Mary pure and lowly, Virgin Mother undefiled. Sing of
God's own Son most holy Who became her little child.*

Then Jonathan lifted her onto the low wall that separated the court from the greensward beyond. There gathered a multitude of sick and well, crutches, wheelchairs, stretchers, people old and new, priests gathered in little black clumps, nuns in and out of habit, all the huge crowd of the world come to supplicate at the dirty, trickling water of life.

She sat down on the wall and wept for them even while her body sang its reborn power. Her lover hugged her to him, and she heard his ragged breath.

Neither Mecca nor the raped Ganges could equal Lourdes in sheer numbers of pilgrims.

Patricia felt the roiling, frantic living *thing* beneath the ground, the serpent River Alpheus crying out through the stones.

"There's my mother. She sees us. Oh, boy, this is going to be something!"

Mary Banion broke away from the crowd. Turning, her face was struck by the sun and she shielded her eyes. Then, splendid in a navy blue dress, holding down her white straw hat, she came quickly to their side. Despite the sweltering August heat, she wore an autumn dress with long sleeves.

Most of the other pilgrims wore long sleeves too, Patricia noticed. Mike alone was dressed for the weather, in a short-sleeved sports shirt. "Come

down off that wall, Pat. Oh, I wish they would stop that caterwauling!"

As if she had commanded them all, the crowd fell silent.

Patricia's legs ached a good deal from the walk. Mary and Jonathan had to help her down. She stood leaning against the low wall.

"Mother," Jonathan said, "she's cured."

Mary hugged her. "I knew you would be, Pat! I had my heart set on it!"

Mike was coming closer, his expression one of purest astonishment. "Don't look now, but here comes Dad."

He came rushing up to them, followed closely by the tall form of Father Goodwin, flapping like a huge old buzzard, his face gleaming with perspiration and excited tears. "Sometimes it happens at the exposure of the Blessed Sacrament! Is that when it happened?"

Mary answered. "That's when it happened. Just a few minutes ago."

Patricia recalled that the Blessed Sacrament was carried out in procession morning and evening. All the singing must have signified the morning exposure. But the miracle had happened during the night. "Mary—" Mary's hand squeezed hers.

She saw a small, very old man watching them from the fringe of the mob.

In the crowd there were at least as many of those strangely attentive faces as she had seen on the Bernadette tour. More, in fact. Practically everybody.

When she looked directly at the old man, it was as if the light went out of the sun and the warmth left the air. He turned quickly away and was lost in the crowd.

Mr. Apple is dead, isn't he?

Mike Banion's muscular arms came around her, and she let him hug her against his damp shirt. "Glory be!"

"Thank you, Mike, and thank the Holy Namers." She was playing a part, and she knew it, but that somehow did not stop her.

"Thanks be to God," Mary added.

Father Goodwin bowed his head. The great copper doors opened and the crowd began filing into the basilica, eager to touch their wounds and agonies to the waters.

Patricia rested her head against Mike's shoulder. Jonathan joined the embrace and the three of them stood together— three common, ordinary people against the dark, the unknown, the mysteries of the night.

She wished that she could shake the feeling of dread that had been with her all these weeks. But she could not. In fact, day by day and hour by hour it was increasing.

For heaven's sake, she had been *cured!* Shouldn't she rejoice?

MOST PRIVATE

To: The Prefect of the Sacred Congregation for the Defense of the Faith

From: The Chancellor for the Inquiry in North America

Your Eminence:

It is with deepest regret that I inform you that Sister Marie-Louise has refused her commission. When the death of Terence Quist was added to that of Brother Alexander and I could not even guarantee the loyalty of the parish priest, Sister concluded that the risk of penetrating this congregation was too high.

Theoretically, Sister is correct, but the importance of the present mission is so great that I must ask you to use your good offices with the worldwide body, and find me a warrior-priest of the old school, who will brave anything for love of Him.

If you wish to reach Sister, she will be at the Esalen Institute in California for the next two weeks, "getting her head back together," as she so aptly put it.

In addition, Sister demanded that we turn over our files on the disease vector to the secular authorities for proper action. I do not yet wish to do this. Until we are utterly and completely defeated, we must not risk the damage to Holy Faith that revelation of our existence would cause.

Your Grace, our one and only alternative remains to neutralize the bearers of the blood.

Please send me a good man! May God have mercy on us all.

Yours in Christ & for the Defense of the Faith, Brian Conlon (Msgr.)

12 AUGUSTUS 1983

FURTTVISSIMUS

Ad: *Cancellarius Inquisitionis in Septentrionalis Americanensis*

Ex: *Prefectus Congregationis Defensionis Fidei*

We are vexed, Monsignor. If you cannot command the loyalty of your own religious, I fail to perceive any reason for you to continue in your post. Cells destroyed, martyrdoms, Inquisitors going to the Esalen Institute? What can be the matter over there?

You impress upon me in the same letter both your own personal helplessness and the urgency of the situation. I should remove you, but I cannot afford to spend time training a new man at such a tense moment.

Monsignor, I order you to go in yourself. *Work* on that parish priest, Goodwin. Enlist his help if you can.

At all costs, the *monstrum* and his mate must be rendered impotent. We simply cannot afford to face the chance of their birthing the so-called anti-man. Do what is needed in this regard, bearing our previous correspondence in mind. It has taken two thousand years of breeding to produce those two. In two brave seconds the threat can be removed.

So I charge you: For Christ and Holy Faith, find your courage. You have done brave things in the past, Brian. You always knew that your work might expose you to the threat of martyrdom.

Accept the cup Our Lord gives into your hand. Remember His passion in the Garden of Gethsemane. Brian, I cannot compel you. But I offer my prayers for you in this difficult hour.

Bless you, my son. You yourself must be our *Oppugnatio*.

Mea Auctoritate,

Paolo Cardinalis Impelliteri

Chapter Fifteen

THE LIGHT OF evening lifted from hot Queens streets. Far below the windows of the apartment a bus roared, accelerating away down Metropolitan Avenue. Jonathan wished he and Patricia were on it.

They had spent time very carefully comparing the dreams they had experienced on the night of the cure.

They were complementary in every detail, so much so that Jonathan was forced to conclude they had *not* dreamed, but in fact had undergone some sort of actual experience.

The two of them were at the edge of the unknown. Jonathan wanted to get everything out in the open, unlock the secrets and damn the consequences. But how do you confront something you do not understand, which seems like a nightmare but has stunning consequences in real life?

The cure.

"Farfetched," Mike had said when Jonathan had told him about the complementary dreams. "Coincidence. And if the cult were big enough to include Lourdes there'd be a lot of people involved. There'd be leaks, and there aren't any. I'm looking for a group that starts and stops right here in Queens. Big enough to be mean as hell, which they obviously are, but small enough to stay well hidden. And as for the cure, just accept it. Thank the good Lord it happened."

Nightmares. Cleansing rivers: Cures. Jonathan accepted nothing, not even the way they had been scrutinized in the streets of Lourdes. That Mike brushed off. "The place is full of Frenchmen," seemed to him to be enough of an explanation.

But after listening to Jonathan's story on the way home in the plane, Mike had fallen silent, had stared a long time into the distance, had finally given them both reassuring pats and told them to relax.

Now he almost haunted them; he was either with them himself or some of his men were in evidence. The protective net around them had been strengthened.

"Patricia," Mike said around an unlit cigar, "aren't you hot?" She was sitting on the couch, her arms lying along the back, blond hair clinging to her forehead. "If you'd turn on the air conditioner we could close the windows." He dabbed a handkerchief along his neckline.

"It's worse than this with it on," Patricia replied. "Too humid. The coils freeze up."

"That what the super tells you? Bullshit! The thing's been tampered with. They don't wanna pay the bill. Effing landlords. S'cuse me."

Music blared up from a passing car. Jonathan went to the window to see a white Lincoln convertible pause at the light, the top down, the seats filled with expensively dressed, reveling blacks. WPLJ. Silk chinos. White dust in tiny cellophane bags.

Behind him Mike breathed heavily, it seemed painfully. He stared at them out of stricken eyes.

"Have you changed your mind, Dad? Do you think this thing might actually be bigger than Queens? Is that why you hang around all the time?"

"Come on, Johnny boy, let it rest." Jonathan could hear him chewing at the cigar. On the couch Patricia stirred. She had a bowl of ice water, and she began

dabbing her face with a washcloth.

"I want to know. You come here and you stare. What the hell for?"

Mike did not reply. Patricia went over to the window. "He doesn't know why he's here, do you, Mike?"

At last he cut his cigar and lit up. "I'll tell you," he said around it. "I'm here because I'm here. It doesn't hurt to be cautious."

"We're all overtired from the trip and the heat, Dad. Maybe a good night's sleep—"

"Screw that, Johnny. I was trying to reassure you two by soft-pedaling your stories about France. But there's no use in it. You're obviously not buying it. I might as well admit I think this thing is big. Very big. Somethin' was going on over there. You're not crazy, neither am I. Right? That *is* right, isn't it?"

"Of course it's right," Jonathan replied.

Patricia put her hand out, tried to touch Mike's shoulder. He recoiled, then looked at the hand. "I mean, were you paralyzed or weren't you? Was it some kind of a joke or what the hell was it?"

"Mike, I was paralyzed! Oh, I was certainly that!"

"Okay. I'm sorry." He shook his head, then rummaged in the top pocket of his suit, drawing out a sheaf of thin paper. Third copies of some kind of police report, Jonathan saw. "This is a return on the surveillance of Holy Spirit Church over the past three weeks." He opened it. "The goddamn thing is clear."

"They moved to another church."

Mike smiled slightly. "Why should they do that? I'm beginning to think the three of us are the only people any of us know who *aren't* in on this thing. Your guards are now from the 107th, not the 112th," he added with venom in his voice. "Maybe it's safer that way."

Jonathan heard the rage in him. No wonder Mike was scared. He was saying he felt he could no longer trust his own men. "You want some gin, Dad?"

He stared, wordless, his papers on his lap. Patricia went to the kitchen and brought back glasses of ice. She made three healthy gin and tonics.

Mike smiled. "Seein' you walk, darlin'—oh, Christ, I get soupy. I'm gonna be such a sentimental old fart one of these days." He sipped the drink she gave him. "When you two went out the night before the cure, where did you go?"

Patricia's eyes widened. "You're definitely sure we did go out?"

"Not only you. Mary was gone when you woke me up leaving. Frankly I thought you two had personal business that was none of mine so I stayed in bed. Where did you go?"

"I told you on the plane I thought we were dreaming." Jonathan's mouth was so dry he had to sip his drink before he could speak.

"You weren't. You really went out, both of you. Surely you remember carrying her."

"This is definite confirmation," Jonathan said, almost hating to hear the words. "Why didn't you say this before? Why did you doubt me on the plane?"

"It's a technique. Sometimes it leaches out a few more facts. I mean, if you went out, you must know where you went and what you did. Stands to reason."

"Mike," Jonathan said, "I don't think you understand even yet. I've believed for some weeks that I'm under some form of hypnosis. Now it seems obvious to me that Patricia is too. The story I told you on the plane stands. We may have gone out in the real, flesh-and-blood world, but we both remember it as if it were a dream."

For better or worse, he was going to have to try to work with Patricia on his instruments. Otherwise this mystery was going to keep getting bigger and bigger until it consumed them both.

The evening had turned to night. Now the room was lit from below by harsh sodium-vapor streetlamps. Some kids had opened up a hydrant and were shrilling gaily in its illicit spray. Jonathan envied them. A feeling of almost unimaginable menace seemed to fill the air in this place.

In the secrecy of conclave that lovers have, Patricia touched Jonathan's shoulder. The damp, warm flesh of her arm came into contact with his own. He knew just what was on her mind. The marriage. She was now ready to tell Mike of their marriage plans.

"You two keep the alarms on every minute you're in here. And if you go out, we'll be with you."

"We've asked Father to marry us," Patricia said quietly but quite firmly, "on Saturday night. The banns are waived." She smiled. "In view of our eagerness and the unusual circumstances of our situation."

Mike pulled his cigar out of his mouth. His face burst in an instant from shadows to smiles. "He-e-y! This is good! This is so good! Tell me sometime,

eh?"

"It was her, Dad. She didn't want to say it on the plane."

"They were already celebrating the cure. I didn't want to make more of a fuss."

"People kept kissing her on the plane. I think she was embarrassed."

"Awful fast." Mike got a canny look in his eyes. "Not gonna have a miracle seven-month baby, are you?"

Patricia blushed.

"Come on, Dad, no way. We're just two eager kids."

"Oh, sure. Eager to share your first kiss. I'm sorry you've decided to do it so soon, no chance to plan, but I accept that if it makes you happy."

"We want it private."

"Like now. You want it private now too, don't you?"

Mike had gotten self-conscious. Jonathan wanted to hug him. "We like having you here, Dad."

He pulled himself up from his lounge chair and drank his gin. When he spoke again his words were sharp. "I hate to leave on such a sour note, but I got to say it. You kids take care. You're good kids, both of you." He put out his hands, seemed about to embrace them. "I want my chance at grandfathering, goddamnit." He turned and moved heavily out the door.

They exchanged a glance. "Let's lie down," was all she said. They had only been home a day; there was still the jet lag. Too tired to make love, they contented themselves with a shower together, then lying twined in bed.

When Jonathan awoke it felt late, but it was only ten. He kissed his bride-to-be and probed at her with his inevitable erection. She moaned. He entered her and she sighed, half-awake. It was easier this time. A slight smile came across her face. He began, trying with all his might to make it last, totally engrossed in the astonishing experience of making love for a second time to this very beautiful woman. He had done it once without freeing the serpent. Surely the second time would be even easier.

The phone rang.

"Leave it."

It rang again. And again. Jonathan tried to ignore it but it just wouldn't stop.

Finally he disengaged himself and, as he was the most awake of the two, padded into the living room and answered it. "Oh, hi, Mother." What a

magnificent sense of timing. As she spoke Jonathan watched his erection fade.

"You must be careful together," she said in a nervous voice. "I hadn't expected you just to move in with her. You ought to wait until after the marriage. I think you've embarrassed your father." That wasn't very likely. "You're embarrassing me." That was probably true.

"Is Dad there?"

"He just walked in."

"Well, all I can say is we're both adults, and we really would appreciate it if you wouldn't interfere."

She hung up. Jonathan stared a moment at the phone. Slamming down telephones was most unlike Mary Banion. Nor was it like her to pry into his private life.

What role did she have in all this, anyway? According to Mike she had been out of the hotel room at the time the cure was taking place. What role, Mother?

Maybe it was just a coincidence. Hell, maybe it was all coincidences and hysteria. Jonathan had to find out. Beside that urgent need, spending time lovemaking seemed almost irresponsible.

Jonathan went back to the bedroom. Patricia raised her arms, inviting him to fall into them. But he stayed where he was.

"Patricia, we have to go down to the lab. We have to find out where, we stand in this thing."

"Why? We stand together."

He would sort through the strands of her mind, separating the real from the imagined.

"We have no idea what's really going on. That's the whole problem. We're crazy to lie around here. We've got work to do."

"What can we do? We can't remember clearly, either one of us."

"My lab can help us. The devices there can tell the difference between dreams and memories. If we're hypnotized, I think we can break through." He did not tell her what he had tried on himself. There was no point. The story would only frighten her, and he didn't need to use 6-6-6 on her. He would control his devices himself.

She pulled him down to her and kissed him with softness and skill. Her early kisses had been rough splashes, but now she had become his geisha. You

would not say whore, no, because she was the one who owned. He felt himself enslaved, taken in a snare so cunning it did not even know itself.

"Please come, Patricia. Please."

"We might hurt ourselves. What if there are things we don't *want* to know?"

"I sense that some terrible drama is being enacted. And we're the main characters."

A slight tension came into her face, visible in the careful set of her lips and the cast of her eyes. Maybe she was a little angry, maybe scared. "Tell me your dreams, Jonathan."

"I told you the Lourdes dream."

"But there are others."

"They disgust me."

"You weren't there when I was hurt. You weren't?"

"I don't know anymore."

She laid her head on his shoulder. "We both choose to believe that you were not responsible. And we haven't got one shred of evidence to the contrary. Aren't we better off leaving it that way?"

"I'd kill myself if I ever hurt you!"

She looked at him. "You're so loyal, Jonathan. You make me love you so very much. Don't you understand yourself at all? You're the most gentle man I've ever known. You couldn't hurt me or anybody else!" He had never seen such fiery conviction in so soft a face.

"What if it was me? What if it *was*? I've dreamed it more than once."

"All I want is you, the you that I know and love and trust. That's the Jonathan I want to know."

He could hardly believe what he heard. She was simply overlooking what he was telling her about his dreams. "Don't you think I might have done it—I mean, if I dream about it?"

"When you came into the hospital and looked at me through the window, I knew instantly it hadn't been you." She lowered her eyes. "You were suffering too much."

"And what about Lourdes? My God, surely you agree we've *got* to find out what happened there."

She took his hands. When she spoke he had to strain to listen, her voice was so low. She ignored Lourdes. "If it was you, I don't think I can afford to

know." She snuggled deeper against him.

He recoiled. This was not working out right. "We've got to find out. We owe it to ourselves, maybe to others as well." He took her by the wrist. "We're going to the lab right now."

"No!"

He would not, could not force her. "Please. You've got to think of others now, not just you and me. What if I'm dangerous? What if we're both part of something terrible?"

"Jonathan, I don't want to know! I just want us to be together, and love each other, and have a family."

"Lord, darling, we are *hypnotized*. Don't you want to know why somebody has invaded our privacy in this way?"

She touched his face. "You're being a fool."

"I've got to know!"

She closed her eyes, nodded her head. "I hate to hear that. But you really do, don't you? You can't live with yourself unless you know."

"Let's go. Right now."

He did not have money for a cab into Manhattan; they had to content themselves with the F train. They sat on the orange plastic seats in a nearly empty car.

There was no understanding her. On the one hand, she was such a sensitive and moral person—and on the other, almost indifferent to the question of whether or not the two of them were caught up in some kind of dangerous insanity, and unwilling even to consider that a man who wanted her to marry him might be deranged.

He felt like he was smothering, took a deep breath. That was tension. He closed his eyes, listened to the rattling of the train, let his mind wander.

We have a demon between us, she and I.

"This is the stop, honey." They got off at West Fourth Street and went upstairs into the teeming summer night of Greenwich Village.

Down West Fourth they walked past the grim honky-tonks and shoestring restaurants that served the New York University community and the endless streams of tourists, past the lopsided row house that contained the Epsilon Rho fraternity, and down Sullivan Street.

As Jonathan and Patricia walked along, one shadowy figure after another stepped forward saying, "Smoke, smoke," and an occasional man held open a

bag full of pills. Somewhere somebody played haunting, ethereal ragtime on steel drums.

The turn into Rayne Street brought them at once to another world. The street was dark and quiet. Tourists and students did not come here. It was too forbidding at night. The streetlights at either end of the block barely penetrated the gloom.

He wished Patricia would walk like an independent human being and not with her head bowed and her hand in his, as if she must go exactly where he led and damn her own feelings.

"I'm sorry if I'm imposing on you."

"That's all right."

"It's for both our sakes."

"I just don't want to risk something coming between us. I love you so much."

He led her down the outside stairway to the basement. When he stopped at the door of Room 014A, she stood quietly beside him. When he released her hand to fish for his keys, she twined her own hands together and looked at the floor.

"You're making this very hard for me."

"I know." When she raised her eyes they were full of mischief. "I think you're being an idiot, to tell the truth."

"Well, there's some of the old spirit, at least. Why not look at this as an adventure." He found his key, opened the lab. Inside he flipped the six light switches, flooding the cavernous room with steely fluorescent light. "It might be one, after all. You never know."

The lab had been cleaned up. The busted microcomputer had been replaced and all of the bacteriologicals removed. Even the doorway that had led to the culture lab now led only to a storeroom full of cartons of computer printouts.

Somebody had moved to hide all evidence of bacteria culture having taken place here. That seemed very sinister indeed. He tried to force himself not to speculate about it right now. This wasn't the time to worry about it.

"I don't know any bacteriologists!"

"Jonathan?"

"Sorry. I was thinking aloud." This was his old, familiar workplace now that the other things were gone. A good laboratory is a delight to work in, and in its intact form his was no exception. "I may be bragging, but please

indulge me and admire this place." He gestured. "Just look at it."

"It doesn't make a bit of sense to me."

"My dear, you are looking at the closest thing to a device that can read minds that has ever been designed." He went over to the bench on which most of the digital EEG analyzer was lying under its plastic tarp. "All that she requires is a little juice, a little software, and a little love, and she will tell us exactly—but *exactly*—what is hidden in the deep recesses of our minds."

"Look, I'm going to say it one last time. This is all a mistake, Jonathan. What we need to do is forget."

"Just do it for me, honey. It'll be over in fifteen minutes."

"What concerns me is that I'll have to remember something I simply can't face. Let Mike find them if he can. I just want to forget. And you should too. Anyway, your machine might lie."

"For my sake, let me find out what it says. I'll never have peace if I don't."

"I wish you understood how the hell much I love you, Jonathan Banion. You're part of my soul!"

He hugged her and felt her tremble. "I'm sorry."

"What if we don't like what we find?"

"We have to take that risk? What's the good of living a lie? I don't want that, and I don't think you do either. If we really love each other, we've got to know the truth."

"Even if it destroys everything?"

He held her tight to him. "Let's face that if we have to. The point is to find out the truth, then we'll deal with it."

"You didn't rape me. Not you."

"We have to find that out, among other things.*"

She shrieked at him. "*I do not want to!*" She looked at the equipment he had uncovered as if it were a writhing tangle of snakes. Her lips twisted. For a moment it seemed as if she might faint. "I don't even allow myself to think about it. I just know it's there, deep in me, a filthy memory of—of—oh, I don't know what it's of."

Of me?

"Darling, I'm going to ask you to lie in the cubicle. And please excuse the mildew." Will your mind tell us what mine would not? He gave the couchette a few swipes.

"I'm doing this for you, Jonathan. Only for you. I'm going on record right

now saying it's a mistake."

She lay down. A memory of Mike haunted Jonathan. Mike sitting on the lounge chair, chewing his cigar, his bald head gleaming with sweat.

We're all afraid.

Surely questioning under instruments would work more gently on her mind than 6-6-6 had on his. He hoped so; if he put her through one-tenth of the anguish he had endured he would never forgive himself.

He punched in the Telenet address of the Cray 2000 computer that controlled his software and entered his personal password. The internal prompt appeared on his CRT. The computer was ready. Now he ordered it to load his software from the Corvus Hard Disk Drive sitting beside his terminal. The drive's active light came on for a long moment. When it went off Jonathan knew that the fast, elegant program had been transferred to the Cray.

The Cray came back with the diamond-shaped prompt that indicated it had successfully loaded. "We're go on the program," he said to his waiting subject—or patient—or was it victim?

She was lying quietly on the couchette, watching him. "Just don't mess up my brain, chromedome."

"You're going to be the chromedome, I'm afraid." He got the helmet. It contained a hundred and twenty-eight pressure-sensitive electrodes and was a great improvement over the old method of applying them individually to the skin. But with the masses of wires coming out of it, it looked like something that belonged on the head of a robot.

She laughed when she saw it. "We need a camera, I want you to remember me at my most beautiful."

He looked long at her. "I wouldn't do this if I didn't have to."

"Never leave me, Jonathan. Never, no matter what." Jonathan fitted the helmet to her head and they laughed together. "I really want a picture," she said. He turned to his instruments. Patricia's brain-wave patterns were jittering across the screen of the oscilloscope.

"Remember that night? We were together. We had drinks. And?"

"Jonathan, ask about Lourdes instead."

He watched his instruments. "Remember? We were together, we had just had a drink—"

"You left!"

The PV220 wave showed a peak, then settled. The thought was not coming from memory; neither was it quite a lie. It was an implant. To break a hypnotic block, it was necessary to challenge such implants.

This was a fateful moment. If he could break what had been put into her mind to blind it, his next words would do it. "You don't remember that."

"That's what happened."

"Try again. We had drinks. Assume I didn't leave. What really happened?"

The sound she made was not a scream, it was an eruption. Jonathan lunged toward her. In an instant she had gone a ghastly pale gray color, her eyes almost starting out of her head. Her shriek dropped suddenly from a glass-shattering pitch to a vibrating groan. Then the computer started beeping. Automatically Jonathan responded to the line-failure signal and pressed the reset button. The screen flickered to blackness. Even as it was doing that he was leaping to her aid. He thought perhaps a short of some kind was sending voltage into the headset. But even when he tore it from her head she didn't change. She was convulsing. Her arms went out straight beside her, her legs began to hammer, her head jerked from side to side. He shook her, he yelled at her, finally he scooped her up into his arms and hugged her to him.

"What have I done? Oh, stop, stop! Oh, God, God, please make her stop!"

Chapter Sixteen

HER HEAD WAS whirling, her ears ringing, the whole room shaking. Jonathan seemed to dart and flicker as if caught in some sort of strobe light. Then his hands slapped against the helmet with a stunning clap and he tore it from her head.

She blacked out. She knew that something was terribly wrong with her. She could feel her body jerking in spasm, her tongue filling the back of her throat. And she was spinning, spinning fast, out of control, falling. A great bell was booming somewhere.

Then it wasn't a bell at all, it was Jonathan's voice. He was crying and screaming, cradling her in his arms.

Quite suddenly, all was quiet.

"Patricia?"

His face was shadowed by the glare of the fluorescent tubes above him. "Jonathan—"

"Darling, darling, darling. I'm so stupid, so damn stupid." He embraced her and she let herself be swept up into his arms. They were strong and good and she was glad.

"I feel better. I think I'm going to be okay."

A haunted expression came into his eyes. It alarmed her; it was the expression of somebody with a guilty secret.

"Did you hurt me, honey? Is there something I don't know?"

"I don't think so."

Another thought occurred to her. "Did you find out?" Her own voice sounded so small.

She turned her head to avoid the glaring ceiling lights.

He stared down at her.

Love me tonight. . . . She became aware, dimly, of something quick and gleaming that stank of flyblow, chasing her through her dream country. Catching her.

Oh, God, how horrible! She heard herself gasp. She felt another scream coming. The thing she had glimpsed was so ugly and so utterly cold, the very opposite of all she loved of humanity and life. It was Death coming through the high grass, Death rising from its hiding place in the soul. "Oh! Oh! No, Jonathan!"

"Patricia! Sh! Sh! It's over, I turned it off. You were right; I won't ask any more questions. I'm so sorry."

"Oh, darling, it was so ugly!" Were there people in the world who were not quite people? What had that thing been, straddling her, staring down with the blank eyes of a snake?

She was going to throw up. "Jonathan—" Her mouth opened. He grabbed for a wastepaper basket, thrust it beneath her face, and held her. Her stomach seemed to pull off its moorings. For an instant she was sinking in a fast elevator. Then the lights were above her again, glaring, humming tubes of brilliance, and beneath them Jonathan's face, his lips slack with fear and his eyes still hidden in the dark of his brows.

He bent to her, lifted her in his arms, and embraced her. "I thought it would work out differently."

The world had just changed for her. Her memory of that terrible moment was now clear. She could remember what had raped her, and it was not a human being.

What evil has been wrought in the dark of this world?

"First I heard music, a sort of humming, very low, like a swarm of flies."

"Hush, honey, hush."

"I will not!" She reached out and snatched up the tangled pile of graph paper. "What does this say?"

"I pulled off the helmet."

"Before you did that you asked me what really happened. And I had a vivid image. Was it a memory or wasn't it?"

"I don't know. The reading isn't reliable."

She wouldn't stand for that. "Jonathan, you opened something up in me and it feels like a memory. Now I'm the one who has to know."

"Whatever it was sent you into convulsions, I don't think we should fool with it."

That wasn't acceptable. "You tell me—*dream or memory?*"

He took her hands, pressed them to his lips. "I can't be sure. There's something wrong with the readout."

She could smell it, could taste its filthy, rotten kisses. "Jonathan, Jonathan, look at you. You poor man, you're so innocent. Do you still think you did it?"

He squeezed his eyes shut, he bowed his head. He was slick with sweat. "I know." The words were a bare murmur.

"Don't be an ass. You didn't. You couldn't possibly."

He dropped to the couchette beside her. His hands, holding hers, were cold

and wet.

She tossed her head, wishing she could get the image of the thing out of her mind, could somehow replace it forever with Jonathan's beauty.

But that *thing* existed.

"Darling, we have to take a reading on me as well."

"What? Have you lost your mind, Jonathan Banion?"

"Just a short reading. And you'll have to run the computer."

"I can't run a computer, and I wouldn't even if I could!"

He glanced again at the chart of her own reading, made a sad kind of sighing sound. Suddenly he grabbed her shoulders. He brought his face close to hers and she saw him clearly, without shadows. His eyes were staring, fixed, his lips dry. He was trembling steadily, with the frantic rhythm of a small animal. "You get over there and run it!" He picked up the graph and shook it at her. "Do you realize what this - no, you couldn't possibly." He jumped up, went to the computer terminal with a single stride, began jabbing at keys. It beeped, the screen came to green life, then he grabbed her by the wrist and dragged her over.

"Once the helmet is on, the computer will want to adjust to the exact frequencies of my thought patterns. There will be a series of numbers coming across the screen. Each time it pauses, press the key marked 'return.' Got that?"

"Darling—"

"Got that? *Got that?*"

"Okay! Got it."

"Then it will ask you a question—which measurement? You will type in the answer, 'waves by harmonic type.' Then press 'return' again."

"I've got it. 'Waves by harmonic type.' "

"Then press 'return.' You see the return key?"

She put her finger on it. "Jonathan, what if something happens to you?"

"Do just what I did—you press this orange key marked 'reset,' then you pull the helmet off my head. But nothing *will* happen because this is a passive test. We aren't fooling with thy hypnotic barriers."

"So we *are* hypnotized. You know that for certain?"

"Oh, yes. And the barriers are powerful. More so than I dreamed possible. One more question, baby, and bang—the next step was brain death."

"Death by hypnosis? I didn't think—"

"Don't ask me how it's done because I don't know. Now come on, let's get this over with."

He fitted the silver, cable-strewn helmet onto his own head and lay down on the couchette. After a moment a string of numbers shot across the screen, and she began following her instructions.

Soon the numbers stopped and the machine asked its question. She typed in the reply, then kept one finger hovering over the reset button and the other over 'return.' She looked at Jonathan. He was lying on the couchette, his eyes closed. He seemed fine. She pressed 'return.'

Silence. Jonathan didn't move. She kept her finger over the orange button, began watching his chest. He was breathing steadily.

Soon paper started streaming out of the graph. Then the machine sounded a bell and stopped. "Jonathan, did I do something wrong?"

He sat up, pulled off the helmet. "You were fine," he muttered. "That's all there was to it." He lunged for the graph paper, ripped it off the roll, studied it almost frantically.

When he looked up at her again, his face was pallid with shock. The paper dropped from his hands.

"Jonathan, what is it?"

He shook his head. Then he came to her, almost reverently, and took her head in his hands. "Darling, our brains show an incredible, radical departure from the normal wave pattern."

Was *that* all? "Well, are we okay anyway?" She could think of nothing else to ask.

He laughed silently, mirthlessly. "Dearest, we're fine. But don't you see what this means? We've got eighteen separate waves. Normal people have seven."

"Does it mean—have we got a disease?"

"In a funny kind of way. Our disease is that we aren't human beings."

"We—what?" She was mystified. "Of course we are!"

"No. We're too far from the norm. Oh, we're human stock all right. I mean, the basic pattern—alpha, beta, delta—it's there. But *we are not people*. We've got an alpha high harmonic, a delta parallel, and a whole cluster of little waves down in the low frequencies."

"It must be the hypnosis. It's got to be!"

"No way. I'm talking about brain *structures*, not transitory effects like that. I mean, we are real first-class *freaks!*"

That word slashed through her composure and made her shriek. She couldn't help it; freak is a horrible word. "No, I'm not a freak. I hate it! I am *not* a freak!"

I was raped by a freak with the skin of a snake and yellow-green reptile eyes.

"Honey, come on, be quiet."

"I will not be quiet? I am not a freak! Don't you ever, ever, ever call either of us that, because we are *normal*. I'm telling you we are normal and we can have a good life! You'll see, Jonathan Banion, I'll make a nice home for you, you'll see!"

"Come on! Pull yourself together. We've got to think this out."

She stopped, but only by jamming her own feelings down into her guts and holding them there with a fierce effort of will she doubted she could sustain for long.

"We are mutants. The other word was unfortunate." He sounded calm, and that helped a little. "Genetically we must be very different from other people." He shook his head. "God knows what we are. Halfway between *Homo sapiens* and—well, something else. I cannot imagine what our children will be like. A virtual new species."

"But we're people!"

"Not really. Close, yes, but you and I are not people."

She was losing her home, her family, her happy life. She knew it—she could feel it all being destroyed by that one awful word. Freak. "But we *look* like people, we *act* like people!"

He nodded agreement. "We're a close mutation." He looked at his hands, felt his cheeks. "Amazing. Me. You. That we would be this . . . whatever we are."

"Are you *sure* it's not the hypnosis?"

He took her hands. "I know how to read my charts, We may be under hypnosis. In fact I'm sure we are. But the overriding finding is the high degree of abnormality in our brains' electrical functions. That means—"

"Don't say it again! Don't say that word!"

She let him hug her. Gratefully she buried her face in his chest. She remembered the monster again, and felt all at once the absolute coldness of the unknown. How little she really knew, even about herself. "We *look* like people!"

"Yeah. We can probably mate with people too. Have human-like kids. But if

we mate with each other our children won't be remotely human."

She couldn't stand to hear that. "Just stop it! Stop talking that way. Look, we can go away somewhere. Nobody will ever know, nobody needs to know. Whatever we are inside, we can keep it secret, we can hide it! We'll be able to get married and all, and things'll work out. They will, I know it!"

He held her more tightly. "Baby," he said, his voice quaking, "somebody already knows all about us."

He could only mean the Night Church. There flashed in her mind again an image of the revolting thing on the altar. She let herself weep into his shoulder, and she thought, We're in the middle of God knows what, and we're getting more lost by the second.

She held him, and he held her, and for a precious moment (hat was all there was.

We two.

Chapter Seventeen

FEAR WAS NOT normally part of Mike's emotional makeup. Tonight, though, he could taste it in his mouth, a sour dryness that made it hard to swallow.

It is not a sound, but you can hear it in the wind; not a presence, but you can feel it watching you.

Fear.

He had no illusions about searching Mr. Apple's house. It belonged to a powerful and hitherto unknown cult. The Night Church. Coming here was probably the most dangerous thing he had ever done.

He suspected he was a fool to be doing it—especially this way, alone and without backup.

He had no warrant. As far as the law was concerned, he was a common burglar. But then the law didn't know he was here. He didn't trust his own people enough to risk swearing out papers.

He waited until the hours past midnight to drive through the streets of Kew Gardens to the empty house. He parked around the corner and walked back, his hands thrust into the pockets of his raincoat, his hat shadowing his face when he passed under streetlights. He moved with the precision of a dancer, his shoes making no sound on the sidewalk.

His entrance was professional, so quick that an onlooker would have assumed he had a key. As he gained the front hall he returned the plastic card he had used to prize the lock to his inside coat pocket. Almost automatically his fingers reached in and touched the butt of his police special, tucked into its shoulder holster.

The floor groaned with his weight. Good—that was a sign it hadn't been walked on for some time. Mike went across the foyer and into the living room. The air was dense, faintly tinged with the musk of mildew.

As Mike's eyes got used to the light he could see that nothing had been removed from this room. That was as expected. Mr. Apple had left no relatives and no will. It would be months before Probate Court got around to disposing of this place on behalf of New York State. He took a crystal ball

from a collection in a case in the living room. The little quartz orb dimly reflected the thick velvet drapes, the intricate Chinese carpet, the Flemish landscapes on the walls, and the deep mahogany of the Victorian furniture. One could almost see shadowy figures moving in the complex dark of the crystal.

Beside the orb was a small silver key, rounded at the end in a unique and familiar way. It was a coffin key. Mike had seen them often enough at the morgue. Strange thing to find in a home. Was it the key to Mr. Apple's coffin, left here by a careless mortician when the old man had so conveniently died?

He replaced the crystal, picked up the key. It was a typical stubby coffin key, steel, looking like a luggage key, but with the name Aurora stamped on the flange. Largest coffin company in the world. Mike had used such keys in disinterments.

Carefully, patiently, he moved through the living room, brushing his gloved hand along the back of a chair, caressing the surface of a mahogany table.

Old Mr. Apple.

That name hadn't checked out. Back around the turn of the century foundlings in upstate New York were always called Johnny Apple on their birth certificates. "Mr. Apple" was an identity generated from the birth certificate of a foundling who had died in the Oneonta County Institution for Indigent Children two weeks after he was discovered in a box behind a grocery store.

"Franklin Apple's" birthday was December 11, 1893. That was the day Johnny Apple had been discovered in the box. Developing an alias this way was a clever technique. You find somebody who died young about the time you were actually born, and you send for the birth certificate. Then you use that to get a social security card and a passport, and the passport to get a driver's license, and the license for everything else.

You use the alias until it gets hot. Then you kill it off.

Father Goodwin hadn't mentioned Mr. Apple during interrogation, but one of the ladies at the supper had. Mike was so desperate for leads he had begged Harry to dredge his memory. "The incident was very minor," he had said. "The man made her nervous and she didn't want to talk to him. I told her to offer it up. That kept her with him for fifteen minutes. She said that he was creepy. It's a matter of no importance, I'm sure. He was very old."

Mike hadn't told Harry how important he thought Mr. Apple might be.

Always best to play a case like this one closer than you thought you had to.

To discover the little tiny motives that always seem to start crimes, the best place to go is a man's hidden world, his sock drawer, his medicine cabinet, the back of his closet.

Crystal balls? Coffin keys? Not the likely possessions of just any old man. But an old man who was playing around with sorcery might have such things.

Strange mementoes themselves were of little value as evidence. Such things did suggest, though, didn't they?

Mike returned to the central hallway of the house. On the opposite side was a study. Behind it would be the master bedroom and dressing room. Mike knew the layout of the house; he had lived in one very much like it with his first wife, Beth. Rego Park, from 1964 to 1975. The house had been built by Butler and Horowitz in the late twenties—they had put up hundreds of them all over the borough. Butler Boxes, they were called. By now most had been torn down or so altered as to obscure their original modesty. Not so Mr. Apple's bungalow. It even retained the vintage twist-spring doorbell.

Beyond the door of the study Mike could see a big desk, shelves of books, a television set on one of the shelves. He went in, walked the edge of the room.

When he brushed past the television set he paused. He put his hand on it. Was there a little warmth there, or was it simply the hot night? He went on, circling the desk. Nothing was disturbed in here. He would save the study for a few minutes. Even as inefficient as it was, Probate would have removed any important papers with the body and stored them in its vault down at the Queens County Courthouse.

To get an idea of the man as he had been in his skivvies, at his most revealed, Mike would try the bedroom. He stepped carefully along the Persian prayer rug that served as a hall runner. His penlight told him that, like everything else he had seen in the house so far, the carpet was very fine. Mr. Apple certainly hadn't lived in want.

Which raised an interesting question. Why had a rich man like this gone to a seniors supper to eat Father Goodwin's meager offering?

The sonofabitch had gone there to observe Patricia. Even then he had been watching her.

The bedroom was a puzzle. It did not talk old man, not by a long shot. If Mike's instincts were working, this room had been decorated by a young

woman. There was even a vase of fresh roses. Perhaps only a day old, from the feel of the petals.

Fresh flowers, a slightly warm television—somebody was *living* here. Mike became aware of the weight of his pistol, and wished he had spent some time down on the practice range recently.

He got much more careful, but also much more interested. He glanced at his watch. Three fifty. This time of night people who weren't home could be expected any minute or not at all. Good that his car was around the corner and not out front. He began to work the penlight with his hand cupped around it. Reflections on the ceiling would read outside like the flicker of a match.

Then he froze. He had heard a sound, a scrape like a window being raised.

There it was again. It was followed by silence. Maybe some wind had come up and was scraping a tree limb against a pane of glass.

There was a small writing desk under the window. Lying on it was a fountain pen. Mike touched the nib. Full of ink. It was eerie to come into the house of a dead man who might not be dead.

He opened the single drawer of the desk. Inside was a black leather binder that contained about ten sheets of blank chart paper, like something a scientist might use to plot curves. He felt the surface for telltale indentations. Sure enough, someone had written on the top sheet and torn it off, leaving depressions on the sheet below.

Mike took the indented sheet off, laid it on the desk, and shone his penlight along it edgewise. There were words neatly inscribed in one corner, as a scientist might label the chart of an experiment. But the words were not scientific *R-i-t-u*—something. Then *C-r-u-c-i-a-t-u-s*, then a word that began with *N* and had an *x* in it. Then a name, which Mike recognized with sick dread. *Quist!*

Come on, guy, quit shaking. You're a cop, you're carryin' heat, you got no problem.

*Cruciatu*s. Mike's altar boy Latin was exceedingly rusty, but there was an ugly sound to that word. It didn't mean crucifixion—that was *crucifixus*. This sounded worse.

Seems from this they must have hurt Terry. So what's the surprise? Look what they did to Patricia.

Beside Terry's name were two slashes—a date had been written there, but the numbers were too faint to be discerned. Below the name, pressed into the

paper as if the writer had been bearing down for emphasis, was written "Titus strain 334, Cochran batch, B. positive 3." Here and there across the paper faint lines indicated that a chart had indeed been drawn. At the bottom, at regular intervals, were numbers, but Mike could only make out a few—3:54.22 was the first. Farther down was 3:57.44. The others were unintelligible.

Titus strain. Mary's first husband was named Martin Titus. Batch? Mike felt a cold shiver go up his spine. What the hell was it Terry had said about diseases? And what the hell was Mary's former married name doing on this chart?

You be careful, guy. Forget going home for tonight. Mary was now a suspect. She had gone out before the kids at Lourdes—he had witnessed that. Now her first husband's name turns up here. So she must be considered dangerous, and prepared for accordingly. Damn, damn. What in *hell* was this all about? Mary involved? That beautiful, decent woman? He loved Mary, damn it, and he was now suspecting she was about to become a very big disappointment to him.

Cruciatius. Whatever the hell *Cruciatius* was, it sounded bad. He looked at the paper. Killing by disease and charting the results. Experimenting.

Was Mary crazy or what? He was getting all choked up. He loved that woman, damn her. Damn everything. People got hooked by cults all the time—Reverend Moon and all that—but this thing—God, if Mary knew about Patricia. If she *knew!*

Cruciatius. It might mean excruciation. Torture. That poor guy. Such a rotten end for an innocent human being. Mike next went to the high, beautifully carved antique four-poster. He took off his gloves and raised the edge of the bedspread. Thrusting one arm beneath the sheets he felt the intimate space where the user would sleep. The sheets were damp, slept in recently.

Why, Mr. Apple, you're not dead, you've just moved to some new name. As far as that beautiful piece of mahogany amoldering six feet down is concerned, let archaeologists of the future figure out why it contains cinder blocks.

Make a note: get the damn thing exhumed ASAP.

The house was suddenly filled with voices. "Please, let me go, let me go!" a woman screamed. Mike whipped out his pistol and backed into the shadows.

"I can't help myself!" a man cried back, his voice full of anguish.

Then Mike saw a flickering glow in the hallway. And those voices—they were accompanied by music.

The goddamn TV had been turned on.

Mike's heart began thundering. Somebody must have come home. Now he was watching an old movie. God, these people were stealthy. They even crept into their own houses.

A coldness spread through his body. He didn't believe people could be as quiet as this one had been. Not normal people.

He started down the hall. To get out he had to pass that study, and the door was wide open. At least he had the sound of the TV to cover him.

He was three-quarters of the way past it when he risked a glance in. The study was empty.

A television set turning on by itself? Mike swallowed, braced his pistol in his hands, and went into the room. The television had gone from picture to snow. The station must have signed off.

For a moment he watched the pulsing, hypnotic glow of the screen. Then there was an audio problem—the hiss changed to a deep, tooth-jarring sound that made Mike lunge forward to turn off the set.

Don't do that! You're crazy—whoever turned it on will notice! He stood transfixed, staring into the dancing, pulsating glow, listening to the low booming sound.

And didn't he hear a voice?

No.

His eyes went to a small box attached to a wall socket immediately below the TV.

He almost laughed with relief. It was a timer. The set was timed to go on in order to make the house look occupied.

At four o'clock in the morning?

Hell, maybe the timer was defective.

Mike pulled the timer out of the socket. The TV went off. He returned to his search, feeling more than a little annoyed with himself for letting a perfectly explainable incident throw him off balance. It now seemed as if the place would be a rich source of information. No probate officer had made an inventory of this house, because Mr. Apple hadn't really died.

Mike looked around at the shelves and shelves of books and the big desk.

He intended only a quick glance at the books. There were a few modern titles, mostly privately printed from the look of the spines. *Biogenetic Atlas: Engineering the Future, Transmission of Contagious Vectors, Genealogies Pantera, The Family of Flavius Sabinus Titus.*

Who? Always go for the names. Names are hard information.

Mike took the Titus volume down. It turned out to be about a Roman emperor. A long story about how he had sacked Jerusalem started the book. Mike thumbed through it. A chapter heading: "The Treasure of Solomon." This chapter was about ritual magic, hypnosis, and "the calling of the demiurge." "Out of the union of the perfectly bred will arise the antithesis of man, who will inherit the mantle of species and the favor of demons." On and on like that. Next chapter: "The Coming Good: Anti-Man."

Mike read: "He will bear the appearance of a demon, yet have a living heart. As God made man in his miserable image, so Satan will make the anti-man in His glorious one. He will be as a dark fury, going about at night and sleeping during the day. Taller, stronger, more intelligent than a man, he will be heavy-boned and like the lower animals be born competent to walk. He will have great jaws and eat raw flesh by gorging. His strength will be such that he will need neither house nor fire, but will be comfortable in the fields and forests. All the despoiling of the land that man has done will end when the anti-man repopulates the earth with his own issue."

Mike stared at the words, dumbfounded. They were talking about nothing less than giving the world to some devil-made species.

Insane, insane, insane.

Farther along there was a complicated genealogical table, showing how they intended to bring about their anti-humanity. Generation by generation they were breeding toward the monster. The genealogical table was a chronicle of their progress. It was labeled "The Hidden Kingdom, 1021-1952." It spilled over twenty pages of names and more names, all connected together by lines of relationship.

Mike read with increasing foreboding the lists of Tituses, until he quit trying to puzzle the middle centuries together and flipped to the end. Sure enough, there was Martin Titus, wife Mary Derwent Titus, son Jonathan.

Mike found a chair. His penlight was beginning to dim but he had to read more and he couldn't risk taking books.

All the time he had been right in the middle of the thing. These Tituses weren't just in the cult, they *were* the cult. And the wonderful kid was heir to the whole damn thing.

Biogenetic Atlas: Engineering the Future proved to be a complicated scientific treatise of recent origin. The spine crackled when Mike opened the book. It had been printed in 1981. There were charts and graphs, and detailed diagrams of what seemed to be genetic helixes. The chapter headings were daunting: "Structural Physiology of Titus/Pantera Offspring." "Biogenetic Reference Tables' to Families 121/166." (Here there were thirty pages of tables of numbers, evidently referring to changes in the genetic structure of generation after generation. Every twenty columns or so somebody had made a check mark in red ink beside a major change in the numbers.)

Looking at these charts Mike got a sense of the steady progress that had been made by the Night Church, patiently breeding two families together over hundreds and hundreds of generations, breeding them like fruit flies in a laboratory. But the Night Church didn't have laboratory conditions. This had been accomplished across the tumult of history.

This section of the book was accompanied by illustrations. The earliest ones were Roman wax paintings, familiar to Mike from an afternoon's wandering through the Metropolitan Museum with Mary. He had assumed them to be satyrs or something. Not until now had he ever dreamed that those old Roman monsters were real, living creatures.

According to the text, carefully bred people with the proper genetic structure could briefly become such monsters in a ceremony called the *Rituale Pudibunda Coitus*. Thus transformed, they were called *monstrum*. If a man in the *monstrum* state inseminated a correctly bred woman, the resulting anti-human would be male. If the woman was the *monstrum*, the child would be female.

Generation after generation they had tried to give birth to a living anti-man. All they needed was a male: he would be able to mate with normal humans and produce monstrous offspring. But they hadn't succeeded. One would be born with a defective heart, another with an unformed brain, a third with some mysterious genetic disease. It was as if nature rebelled against the travesty.

Astonishingly their failures were chronicled publicly, there for all to see just like the old Roman paintings. As time went on the creatures had become more

and more terrible. Anybody could study them even now: their portraits were on all the Gothic cathedrals in the world. They were the gargoyles.

Generations of failure had only spurred the Night Church to greater efforts of breeding. Mike reflected as he read that here was a group of people in love with death. Their books were decorated by images of Thoth, the all-seeing Egyptian god of the underworld. Thoth and the arms of the Black Prince of the Middle Ages, and the glittering death's-head symbol of the SS.

The Night Church was a religion of death, just as Christianity was one of life. As Christianity strove to resurrect man in Christ, the Night Church sought to destroy him in Satan.

Next was a technical appendix showing recent progress in creating the state of *monstrum*.

Mike was more utterly revolted by this than by anything he had seen in all his years as a cop. The Night Church was breeding human beings like lab mice, toward ugliness and deformity. And making them carry out obscene rituals in churches, becoming *monstrum* in order to give birth to hideous things.

But there was genius in it, sparkling like a black, evil diamond through these carefully reasoned words. As a cold touch, there came to Mike the realization that he was looking upon the very work of Satan. This was *real* evil in all its hideous ugliness, not the paltry nastiness of human beings. The Night Church was a dark, festering miracle, a Satanic masterpiece.

Mike wanted to throw down the book in his hand, to somehow cleanse himself of the foulness it exuded. But he forced himself to read on. Here was the jargon of high science: "Signal Ritual Induction in Late Titus Offspring." As if to crush what little hope of disbelief he had left, this section contained a photograph of almost unspeakable hideousness. The picture was blurred by the fact that the light was low and the subject twisting and turning against chains. But Mike could see the awful, mucous-slick scales half-grown out of human flesh, the bulging vulture eyes still bearing a man's brow, the mouth crusted with blood from the sudden eruption of the yellow fangs, the flaring, pink snout still looking a little like the nose it had been. This dreadful image, of a man half-transformed into something else, was accompanied by a dry paragraph of scientific jargon: "Induction in collateral Titus male 22, Ungar, Robert Titus Martin, type O-, genetic subclass AR, 22.66 measured PKO, reversion in 52 sec. to human. Outcome: *monstrum* deceased before

impregnation of female could be completed."

Mike could no longer control himself. He cried, openly, loudly, like a child lost in a haunted forest.

The Night Church was another, darker world hidden in our own, a place of terror and agony lurking in the shadows of everyday life.

He wanted with almost crazy desperation to get out of this wicked house. But he forced a shaking hand to put back the atlas and draw out another book, this one entitled *Genealogies Pantera*. This was the family that had been bred along with the Tituses across so many generations.

The female line.

He went directly to the last few pages, to see if he recognized any of the modern names. He was thunderstruck by what he found. Patricia was there, listed as the daughter of Samuel and Rebecca Murray, who went through a long line of Irish families back to Roman Britain, and thence to someone named Joshua, who had been a sorcerer in the time of Solomon.

Mike had reached the end of his strength. This was more than he could bear. He threw the book against the wall and screamed out his rage and disgust.

Every living person he loved was in this monstrous, corrupt cult! Every one of them.'

He ran, ignoring the noise he was making, out into the black night. The roses on the porch trellis filled the darkness with their scent. As Mike ran he got scared. It was as if some great creature was following him, reaching out for him. He vaulted a hedge and slipped in dew-covered grass, falling and rolling. He lay on his back gasping for breath. And saw among the stars two great vulture eyes staring down at him.

His scream was as thin and high as a baby's. His wildly pumping legs pushed him along for a moment, then he managed to get to his feet and scramble the thirty paces to his car.

Frantically he worked the key into the starter, said a little prayer as the engine turned over, fought the impulse to floor it when it started.

Mike drove down Abingdon Street, slowly for quiet, and did not turn his lights on until he had reached the corner of Lefferts Boulevard.

The precinct was three minutes away, but Farrell's was what he wanted. Lights and people and normal things like coffee and tea. Lobster-shift cops would be there. He needed the reassuring presence of other police.

Tonight he had seen things that could drive a man mad. In an hour the whole world had changed for him. Satan was no longer a vague symbol of emotional disturbance. Satan was a real thing, as vital and alive as any human being. Mike had no doubt that those eyes he had seen in the sky were Satan's. Evil and ugly and tremendous, and staring right at him.

He cruised past his own house. A dim light shone in his and Mary's bedroom. What was going on in there? What might await him?

He had given that woman his love. Goodbye to that. And the kids? He had to reserve judgment there, he just didn't have the heart to start hating Jonathan and Patricia.

The boy had demanded a poly—like he suspected himself of the rape but did not know. Could that mean the two of them were dupes, ignorant of their own true selves?

He thought of going over to All Souls Cemetery and visiting Beth, just to be near someone who had once been warm and good and loved him, to wash off with memories of her goodness the evil that clung to him.

"Honey," he would say, "I never thought Mary was really a replacement for you, but she was warm and decent, and she was real pretty. I didn't fit with her and I guess I should have known something was wrong, but she was so damn beautiful. That counts. She isn't as pretty as you, though, no, ma'am. Lord, honey, I'd like to get you in my arms right now. I'd like to kiss your neck while we made love, the way I used to."

His chest was tight, his throat ached with sorrow. "You had a beautiful name, Beth. A beautiful name."

Oh, quit your bawlin', you sentimental Irish asshole. You have to put yourself back together. For better or worse, you've been handed the biggest job any cop ever had.

He felt that horrible chill again. He sensed that the eyes were back, glaring at him right through the roof of his car. A sudden wind rocked the old Dodge on its springs, and made the trees ahead toss wildly in its headlights. For companionship he flipped on the police radio. He headed for Farrell's even though he had realized that the lobster shift was off break, so there weren't likely to be a hell of a lot of cops there.

There weren't any at all.

He was tempted to cruise the boulevard for a whore, but he couldn't do that successfully in an obvious unmarked car like this. They'd run away, naturally,

from a city-issue Dodge with cop plates.

Naturally.

He finally rolled into Farrell's, put on his hat, and went in. The counter was empty, the booths were empty. A black preacher and his family sat at one of the tables eating a turkey dinner. At this hour of the morning?

Okay.

Old Gus the drunk was on duty, with Reynaldo running the grill. "Gimme coffee, Gus."

"Sure thing, Inspector."

Call me Mike. I'm just Mike. Good Lord, but I am alone.

MARY: THE WEBS OF THE INQUISITION

It is four o'clock in the morning. I sit here in my little pool of light writing, alone in an empty, hostile house. I am a betrayer. I have lived with a man in love in this house, falsely drawing him down into a pit from which he cannot save himself.

I look at these smooth hands of Lilith, my hands, witch's hands. They used to burn my kind in autumn fires long ago, in forest villages when the wind crowded down the leaves and the sky ran gray.

I am swift in the night, the taloned maiden. Look at my red-tipped claws. Mike would call them fingers, and say they are beautiful. I know differently. When he thinks they are caressing him is when they are cutting deepest. I can make a man's soul leak out through his skin.

Distantly the bell of Holy Spirit Church tolls four times. All well, all well, all well, all well. Not far from here Mike is searching the cottage Franklin used while he was living under his alias. All well. Mike is being tricked into finding exactly what we want him to find, just enough of our secrets to animate in him a great fear of us. He will take nothing important away; he dares not. Within moments of his departure the crew that is waiting in the basement will come up and strip the house of every single scrap of evidence.

Mike is an actor now in the terrible theater of Lilith. He will strut and posture until the end of the play. He will not escape me.

Look at the words I have just written. He will not escape me. I'm sure of that, I suppose.

By going where he has gone, Mike Banion has delivered himself to our

control. We are vastly better equipped for this game than he. We have people, resources, equipment, and above all the insight of the demons to guide us. For his part, Mike is afraid even to involve his own men for fear that some may be members of our Church.

Mankind drifts along, haunted by gibbering spirits and useless gods. At the bottom of each human soul is the evil old ape from which we have sprung. We, the transitional species, half-animal and half-god, all full of tragedies and destructions.

I am almost overwhelmed with a worshipful desire to get on with our great work. What a mercy bubonic positive 3 will be. Homo sapiens has suffered itself for a hundred thousand years. It is past time for this awful tragedy to end.

The actors upon the stage are at last dissolving into dark.

Only the Inquisition can stop us now. But will it? We are very close to success. And yet . . . there is always the possibility of something overlooked.

The Inquisition spins subtle webs.

I worry, turning the same few facts over in my mind again and again. I imagine priests—silent, careful, fanatical— slipping through the darkness, filling every ignored corner, obsessed with their mission to save a religion and a humanity that are both already dead.

Most human creatures, in their secret hearts, hunger for destruction. Freud's "death wish" is the instinct of a defective species toward its own extinction.

As the church of the destruction of man, we use the great human symbols of death: the unblinking eyes of Thoth, the steel helmet of the Black Prince, the glittering silver death's head of the SS.

Mankind longs so much for an end to itself that it has even devised means of mass suicide. Or else why are there such vast nuclear arsenals on the earth? If man does it himself, with his atomic bombs, the race's death agony will last for years. The few destroyed in the explosions will be lucky. As for the rest— radiation poisoning, burns, infection violence, and starvation will take them ... so very slowly. Dr. Cochran's new bubonic positive 3 kills quickly—in under ten minutes, to judge from our experience with Terence Quist. We, at least, are merciful.

Chapter Eighteen

THE INCREDIBLE REALITY that Jonathan's instruments had unlocked tore at Patricia's mind, threatening her very sanity.

From the moment she had understood what he meant she had thought of only one thing: *escape*. If she had been able to magically trade bodies with somebody else she would have done it. But that was impossible. She was in herself and she couldn't get out.

He was trapped as well. Two mutants.

Who felt like, wanted to be, in their hearts *were* just ordinary people.

They were going to go where they could live the lives they coveted. Their wants were simple: a home and children. Just like everybody else, they had a right to a quiet life.

We can live in sunshine. The shadows that have caressed us can be burned away

They crept through the dangerous silence of Kew Gardens, beneath the black intricate trees lining the streets, their feet falling softly on the close cropped lawns and spotless sidewalks. It was so quiet their breathing seemed to shake the air.

Every movement Patricia made, every rustle of her skirt or touch of bare arm against a shrub, almost stopped her heart. Slowly they drew closer to the Banion house and whatever might await them there.

Had there been a choice they would have gone directly from the lab to the Port Authority Bus Terminal, but there was no such option. Money was essential, unless they wanted to terminate their escape this side of Philadelphia. Jonathan carried no credit cards. The best Patricia could do was a Hamil MasterCard with a three-hundred-dollar credit line that was almost used up. Between the two of them they had thirty-six dollars and the card.

The night through which they moved was on one level just another fragrant August night, rich with the mysterious content of nature. But underneath the beauty lurked an evil presence they could feel but not name. They sensed it in the reflection of moonlight from the startled eyes of cats, and in the long voice of the wind that seemed always to be with them.

The moon had dropped low. Soon the gray shadows of trees and houses that crazed across the lawns would be blackened away. Only the Manhattan glare in the western sky would be left providing light.

Patricia took Jonathan's hand in hers as they approached the Banion house. She wanted to say, Don't be afraid, but she did not dare even to whisper until they were better concealed.

They had gone first to her apartment to get her miserable little cache of five-dollar bills. Four of them—big deal. But what could they expect? She was at the moment taking home exactly \$168.42 a week. The pistol Mike had given her was there too, guarding her fortune, and she had dropped it into her purse as well.

It was safest to assume that the Night Church was everywhere, watching, waiting. Not patient, either. Patricia remembered the avidity of the thing that had raped her.

With each step she took she said a prayer. But it was not your usual Catholic turn-the-other-cheek sort of thing, it was a raging, furious prayer for the utter destruction of the Night Church and all its faithful.

Patricia had insisted that they walk instead of taking the bus from her place to his, for a very practical reason. This way they could better detect anybody following them. The streets of this quiet and exclusive enclave hidden in the middle of Queens were just too empty at four thirty A.M. for a follower not to be seen or heard. They didn't want the Night Church and didn't need Mike's guards. This had to be done alone.

She intended that they would take the Long Island Railroad milk run in from Kew Gardens at five. From Penn Station they would walk to the bus

terminal and get on the first long-distance express they found, and go where it was going.

Now that this plan was being executed she could almost taste the freedom of the new life it promised.

She took Jonathan's hand. Nobody was going to ruin the common, everyday happiness she wanted to share with him.

As they walked along, she felt in her purse with her other hand, touching the steel flesh of her pistol.

"I don't think I can kill," he had said when she picked up the weapon. "Can you?"

Yes, to protect us.

They reached the walkway that led up to the house- Even with the money they would get here they were hardly in for an easy time.

She put her arm around Jonathan's waist and drew him past the house, hushing his impulse to go through the front door with a quiet whisper. Precautions and strategies did not occur to Jonathan. If this was to be done right she had to do it. Her ability came from dormitory sneaks, creeping out on midnight dares.

The important thing was to assume the worst. That way you wouldn't be surprised.

They slipped from bush to bush until she had a view overlooking both the Banion house and the sidewalk before it. She tugged at Jonathan's hand, gestured, and crouched down. He came down beside her. They were behind a shrub, perhaps an ailanthus bush, well concealed.

She risked a breathy whisper. "We'll give it five minutes, then go in through the garage."

"Give what five minutes?"

"Our tail, dope. If anybody's following us we'll see them come up the sidewalk."

"You're beautiful."

Mr. Romantic. He didn't even now understand the danger they were in, not really.

Her dream thing's eyes were yellow and huge and steady.

"What's come over you? Are you all right?"

"Sh! Whisper."

"Sorry."

She pinched his wrist. "I'm praying that we'll get out of this alive." Lord, let him finally grasp the seriousness of our problem.

He patted her on the cheek, an absurd gesture of reassurance. For all his strength and intelligence, Jonathan could be maddeningly guileless.

The five minutes passed without a sign of trouble. Patricia allowed herself some small hope. She was going to get them out of this. One day soon, she would have a little room somewhere and a decent little job and the exotic luxury of this man as her husband.

Or was that more than this particular ordinary garden-variety mutant had a right to ask?

She drew him close to her; she could smell his golden body in the dark. He smelled so sweet, so unlike the stench of a normal human being on a hot night. She felt her own body singing with desire. His hand came under her chin and turned her face to his. There was nothing wrong in that; kisses were silent. . The mutants find one another attractive. Of course.

So many lonely years were being erased by his kisses, a whole girlhood of desolate tea-dances with the Saint Dominic boys. But we orphans did not want other orphans, we wanted princes. How we dreamed, we wizard-frogged princesses.

Somewhere a dog howled. Both of their heads turned toward the distant noise. But it was far away, blocks and blocks. A bird muttered a reply. The air moved a little, and a few leaves whispered.

She gave his shoulder two quick taps and nodded her head. They rose up from behind their bush and trotted into the Banion side yard. Although Patricia did not know the place as well as he, she did not let Jonathan lead even here. She took out her pistol, flicked off the rather stiff safety catch. For some reason its presence in her hand was a little embarrassing; she held it down where Jonathan could not see. It implied a kind of commitment to what they were doing that she was not entirely sure she wanted him to perceive. It might scare him.

She hefted the gun a little, preparing to enter the house.

They reached the back door that led into the garage. Jonathan took out his keys and opened it. There was a deafening squeak, then they were in, brushing spider webs from their faces. The garage was black; too bad they didn't have a small flashlight.

Jonathan's hand come into hers. "I'm scared, hon, to be frank."

"We'll be all right. Just keep on."

"If we get caught—"

"We'll back each other up. Better to be caught here by Mike and your mother if we're going to be caught at all."

A hard squeeze of the hand communicated heartfelt assent. A few steps into the garage Patricia realized Mike's car was gone. All to the good. One less person to wake up.

They went through the shadowy kitchen, past the hanging plants and the gleaming appliances Patricia had once so admired, through the dining room with its wonderful antique table and chairs, and into Mike's den. Here were loungers and a dartboard on the wall and a case of books about police work. Here also a big television for the weekend games and a desk for the weeknight work. The room spoke Mike Banion and made Patricia feel sad for the friendship that had to die. Without her and Jonathan Mike was going to be a very lonely man.

"I think we might find something in the desk." Jonathan lifted up the blotter. He withdrew the key from a little leather slit on its underside. Clever hiding place, and fortunate that Jonathan knew about it.

There was a money clip of twenties in the top drawer. Six of them. Jonathan pocketed it.

"Hot money," he whispered. He tried to smile but it was obvious he felt as unpleasant about this as she did. She took a deep, calming breath, and calculated. They now had a hundred and fifty-six dollars. It wasn't enough. They had to go upstairs.

As Jonathan knew the house so much better than she, there was no choice at this point but to let him lead the way. She had no faith in his innocent skills as a burglar. She stopped him at the foot of the stairs. "If she wakes up, do you know what to do?"

"Run like hell."

"No! That's how you get caught. You stand absolutely still and don't make a sound. She'll go back to sleep."

"Oh, I see." Although the house was centrally air conditioned, the air upstairs smelled thickly of the perfumes of sleep. Patricia first sent Jonathan into his own room to get the eleven dollars and six subway tokens on his dresser. When he came back they went together to Mike and Mary's bedroom.

Mary lay on the near side of the bed, turned toward them. Her face was

almost invisible. Patricia looked long at her from the shadows of the hall. For a breathless few moments it seemed that her eyes might be open.

I will kill her if I must, she told herself. I will not hesitate. But that was a lie: this woman was Jonathan's mother. His shoulder touched Patricia's. All Patricia could do was hope that Mary didn't wake up and force the issue.

Now that they were this close to the end Patricia could leave Jonathan here in the hall for the rest of the job. The other girls had always chosen her to sneak into Sister Saint John's room when that was called for, replacing her wimple with the gardener's fedora or stealing the lenses out of her glasses or some such mischief.

Mary Banion was not the good-hearted soul Sister had been, and this was not funny. Carefully, moving so that she rustled as little as possible, Patricia went past the bed. Mary's breathing was not regular. Bad, bad sign. Just as she was deciding to retreat, Mary's purse swam into view on the dresser. In it would be the wallet. How much? A couple of hundred if they got lucky. California, Florida, Texas, Montana. Freedom in a purse.

When Patricia reached in, something made a distinct clinking sound. She froze.

No movement from the bed.

She withdrew the wallet. Before she dared leave the room she stood a long time watching and listening. Mary was very still. Patricia began to move toward the door.

When she was beside the bed she looked down at Mary once again.

And met very definitely open eyes.

There came from Mary a long hissing sound like cloth tearing. She rose up in bed. Patricia stood dumbfounded, confused by the suddenness of Mary's movements.

"Stop. Both of you!" Mary leaped from the bed.

Patricia got to the door just before Mary would have blocked it with her body. "You can't run away. It's impossible!"

"Leave us alone, Mary. Don't you dare try to stop us."

The sound that came in response was almost inhuman in its rage.

"I have a gun, Mary!"

"You can't escape you little fools, you *belong* to the Church."

"Jonathan, come on," she said as she brushed past him.

As Patricia ran down the stairs she listened for the clatter of his footsteps

behind and was relieved to hear them.

Would she have gone back for him, into the face of that woman?

Once outside Patricia threw her arms around him.

Then she saw Mary coming through the garage door, a raincoat thrown over her nightgown. She moved silently, swiftly. Patricia's gun didn't even seem to concern her.

A wind came up as they raced along the alley that led into Eighty-Fourth Avenue. Large drops of rain began to rustle the leaves. The air grew dense. The northern sky was a deeper black; a storm was coming. Patricia pulled the collar of her blouse up around her neck. In a way a storm would help them by obscuring the sounds of their movement, but they would be conspicuous on the train if they arrived wet.

"We'll cut through Forest Park," she told Jonathan. "It's quickest." Would they be watching the Kew Gardens station? She could only hope not.

As they approached Park Lane a garbage truck clattered past, trailing from its closed maw like a flag the tatters of a red dress. They climbed the low wall that outlined Forest Park and set off among the trees.

Absolute silence and absolute darkness filled the park. Forest Park was so named because it contained the largest stand of virgin forest in New York City, uncut since before the founding of the United States. Seventy-foot oaks and maples soared into the dark from a bed of mist-hazed ferns. She and Jonathan kept to familiar paths, worn clear by generations of shortcutters. Patricia plodded along, aware that the damp was rapidly making a mockery of her shoes. Passing beneath the Interboro Parkway overpass she was briefly spared the trickle of rainwater down her neck. The woods were deeper on the far side, but they could now make use of one of the park roadways, a winding blacktop lane dotted with potholes, where carriages once had rolled and lovers strolled.

The wind made the ferns whisper and the tops of the trees utter long sighs.

When Patricia saw the gleam of water on metal ahead, she realized the enormous strategic error she had just made. Forest Park was not the same as a weed-choked alley. Here the Night Church could afford a few risks. Screams didn't matter in this wilderness, and there was no back doors on which to pound.

The Night Church had worked very fast. Mary could not have warned them

more than a few minutes ago.

"Hold it." She grabbed his shoulder. "There's a van here."

"Where?"

She lifted his hand, placed it against the cold metal. His whole body jerked, as if he had been delivered an electric shock.

"Back up," she breathed. "Maybe they haven't seen us."

They turned off the road onto a path. She wasn't sure, but she thought it led out onto Park Place. If so, they would be safe in a few minutes. As they picked their way through the wet, slapping ferns she heard the distinct sound of footfalls on the roadway they had just left. Then there was crashing in the brush not fifty feet behind them.

"Oh, God, Jonathan, run!"

As they dashed through the slapping ferns she fingered the safety of her pistol again and again. She would use it, she told herself, she would certainly use it.

That thought was recurring so often she was beginning to be afraid she didn't really have the courage.

The ferns slapped her legs and she kept blundering into tree trunks. Beside her Jonathan clambered and fell along. A steady shuffling of brush followed them.

They went on like that for a while, with the Night Church fifty feet behind. The memory of the thing she had encountered at Holy Spirit made her run like a madwoman, battling the wet, clawing undergrowth, her feet sliding in mud, sheets of rain obscuring her vision.

Was the thing behind them?

Jonathan screamed and fell against her. She clutched him, got him to his feet. "Come on, honey!"

Fingers whipped like snakes around her neck and she grabbed at them, trying to fight instead of scream, trying to keep the terror from rising up and blanking her ability to resist.

With a growl of naked rage Jonathan leaped across the three feet that separated him from whoever was on her and grabbed him. Instantly the arm was swept away and Patricia was confronted with a seething, rolling mass of flailing limbs. She heard blow after blow land. She heard air hiss from lungs and bones crunch.

"For God's sake, you're killing him!"

"That's - exactly—right!" Jonathan said. Again and again his arm rose and fell, until there was no further movement from the figure beneath him. Jonathan stood up. Patricia was awed; she had never seen anything like it before. In a few seconds he had beaten a man senseless—maybe to death.

She hugged him. "Are you hurt, darling?"

"I'm fine. Let's get a move on."

There was a shuffle of ferns ahead. A distinct click. "Drop the gun, please," said a quiet, cold voice.

Instead Patricia pointed it in the direction of the sound and pulled the trigger, a feeling of vicious and triumphant power surging through her.

The pistol went click. Click. Clickclick.

Something pricked her neck. "Don't move, either of you." Another dark figure stepped out of the bushes beside Jonathan. She could see in his hand the same weapon that must be cold against her own neck. A stiletto.

Her stomach heaved. "Drop the pistol." The razored edge of the knife caressed her neck. "It's useless to you. The powder was taken out of the bullets the night you got it." She threw it to the ground, feeling the most intense helplessness. They even had access to her apartment. There was no escape from them, none at all. Even to have tried was stupid.

A two-way radio burped in the darkness. Patricia became aware that there were a large number of people around them. They had been at the center of a highly organized net all the time.

She threw the pistol to the ground. The pressure of steel against her neck diminished.

"Come with us, please."

Jonathan started off ahead of her. He was pushed roughly. Behind them flashlights bobbed in the path and voices were raised. They were trying to help the one Jonathan had beaten.

Patricia allowed herself a moment to be proud of him. He had tried hard; that meant a great deal.

Soon more of the search party met them. There were easily twenty people around, all in black turtlenecks and jeans. Occasional flashes of lightning revealed them to be utterly ordinary young men and women, clean-cut, even pleasant-looking.

Nobody had scales, nobody had reptile eyes.

Patricia had visualized the Night Church in terms of batwing soup and gnarled old wizards. These men probably worked in law offices and insurance agencies by day, and the women raised kids in pretty Kew Gardens homes.

When the back door of the van was opened slightly, a shaft of yellow light leaked out. The door opened all the way. "Come," said a pleasantly modulated voice.

Although the door was locked behind them, this luxurious interior hardly seemed a prison. Jonathan sat back in one of the deep leather seats. "I can't grasp this." His voice was like ashes.

"I know."

The van had no windows, and the walls were covered with padding. There was a well-stocked bar, complete with ice, glasses, potato chips, and pretzels.

"Don't eat or drink any of that stuff, Jonathan."

"Of course not." He slumped forward, bowed his head into his hands. She sat down in the seat beside him and put her arm around him.

The van started off. Patricia experienced what seemed an almost primordial urge to escape, as if she had been trapped in a cave-in or locked in a coffin.

The van gathered speed, driving on deep into the night.

Chapter Nineteen

MIKE HAD TO exhume Franklin Apple's coffin. The way the Night Church operated there could be anything in there—or anybody. He might not like it, but he had to go through the whole official drill to make it happen.

It was late afternoon before he could make all the bureaucracies involved agree. Finally the paperwork was complete and Mike sat waiting in his old Dodge at the entrance to All Souls Cemetery. Night was coming, he was tired and uncomfortable, and he wished he could go home. He rubbed his palms along his cheeks, which itched like fire. Either he had shaved sloppily at his office or he was allergic to the cologne Mary had given him. His whole face was sensitive. Too bad. He liked the cologne a lot. Time to change, probably. The older you get the more allergic you become. Allergic to life, finally. Then you pack it in.

It had been a rotten day, beginning when he woke up at eight on the couch in his office feeling like he had been cared for by a Mack truck, and proceeding through contact with a smarmy assistant DA who could not understand why Apple should be exhumed on so "minor" a matter as an alias, and going from there to miserable dealings with the Board of Health and the Cemeteries Department, getting the exhumation order initialed by the right department heads.

It had started raining just before dawn and hadn't stopped all day. The graveyard was going to be a mess.

Mike considered himself a careful, patient detective. He had learned that cases were cracked either by persistence or luck, and he was not the lucky type. He was no longer even close to buying the fact that "Mr. Apple" was dead. No way was a coincidence like that going to happen. No way. Especially since his real name was very probably Titus.

Mike was pretty sure he was going to turn up a load of cinder blocks or bricks, or maybe just a coffin full of sand. It was no big deal to get a burial like that done. The Dexter Funeral Home over on Metro Avenue did fakeouts for the Mafia all the time. Two thousand bucks could get a box of bricks buried, priest's honorarium included.

Mike carried the exhumation order in his breast pocket behind his cigars. Being a high-class dump, All Souls did not like cops and exhumations even a little bit. To avoid being ordered off the property you had to be sure every *i* was dotted and every *t* crossed.

While he was waiting, Mike took some more time to work on his own emotional state.

He had been crazy last night after being in that house. Crazy with fear. After a few hours on the couch in his office he had realized that he was going to have to break this case. He might have to confront the Devil himself to do it, but he was by God going to expose the Night Church.

That didn't change his fear, though. It was with sick dread that he had called Mary at nine, pleaded that an emergency had kept him out all night, then told her to expect him home for dinner. As nerve-racking as staying there would be, not doing so was too obvious a tip-off. And he dared not arrange for a backup team out on the street. He might be making his arrangements with the Night Church.

He wasn't looking forward to the night ahead. No way was he going to sleep.

He hit his hands against the steering wheel. This case was so damn complicated. It would be nice just to be able to walk people in on charges right now. But what charges, and which people? Christ, what a mess.

What better cover for a woman like Mary than being married to a police official?

Sweet lady. Supposed to have loved him. Maybe she did, who knew? It sure as hell didn't matter to him. A nasty taste came into his mouth just thinking about last night. He shook his head, fighting the images.

Mike intended to sift this case exceedingly fine.

Another car pulled up. The Department of Health observer and the Queens County coroner—or, as Mike could see through the window of the battered green city-issue Dodge, coroness. A fine, robust specimen of a woman too, and visibly pissed off about gravedigging in the rain. The two of them got out of their jalopy and came over to Mike's. They knew their protocol, at least. When you are working with a detective inspector who is fool enough to get out and wallow in the mud, you damn well come to him because you know he is a man obsessed. Inspectors are not even supposed to work cases. Their job is managing detectives.

"Inspector Banion?"

"Yours truly."

The Health Department type leaned into the car, his popeyes wet with

fatigue, his breath a mixture of C&C Cola and streetcorner hot dog. These guys did a tough job, chasing down rats and sick dogs, scraping shit off floors, examining corpses for signs of contagion. "I'm Inspector Ryan," he said. "This is Doctor Phillips."

Mike unlocked his doors. "Come on in. The gravediggers are late."

The two of them piled into the police car. "Sorry about the rain," Mike said.

"As long as they can dig." The coroner was younger than she looked.

"This your first exhumation?"

"My first in a rainstorm."

"Maybe you're lucky. The wet'll hold down the stink."

Silence followed this remark. The bureaucrats were here because the law required their presence. But they were also human beings, and they must be curious about why such a high official was supervising an emergency exhumation in the middle of a rainy afternoon. They were going to stay curious. Mike wasn't going to repeat one word about this case to outsiders. He might be talking to the Night Church.

He looked across at a forlorn paper sign tied to the iron gate.

GROWING SEASON, JUNE 1-NOVEMBER 1. FRESH FLOWERS ONLY. ARTIFICIALS WILL BE REMOVED.

A high-toned cemetery.

In keeping with its image it was full of the most amazing monuments. For fifty years the Mafia had been burying here. The more murderous the sonofabitch, the more elaborate the grave. Buddy DiMaestro had a goddamn twelve-foot angel with a sword in its hand over his grave. Who was it supposed to scare, God?

Beth was also here, off in the Irish section of the bone-yard. Not a huge monument, but he kept it clean. He came out here Sundays to talk to her. There had always been space in that plot for Mike.

A rumbling behind his car announced the arrival of the gravediggers and

their trenching tool. Good they had it; they would abandon this job if their only tools were picks and shovels. They were grim-faced, these three sanitation-department employees. These men spent most of their time at the city indigent graveyard on Hart's Island. Mike had been out there occasionally, fussing over the grid map in an effort to locate the remains of one unfortunate soul or another. It was a bleak place, with a mocking view of the waters of Long Island Sound, gay with sailboats and sun. The men who worked there looked like moles.

Mike started his car and began leading the procession into the cemetery. He stopped at the office and showed a tight-faced manager his EO. "You got it," was all the manager said. He held out a book for Mike to sign. Then there was a disclaimer form, and certifications for the two bureaucrats. They read their forms carefully and applied their precise bureaucratic signatures.

The little procession got underway again, moving down a wet, abandoned road, almost a path. On both sides opulent monuments loomed like watchers from the pages of some dangerous old romance.

Mike soon stopped his car. The trencher ground its gears and the three sanitmen piled down from the cab. "Let's start digging," Mike said. Then he added in an undertone, "There's three fifths of Chivas in my trunk for you guys, so drawing this gig isn't a total wipeout."

There was an immediate lift in their mood. One of them smiled, another gave a satisfied grunt. "That's gonna feel good, man," the third and most articulate said. They set about their labor with something close to gusto. From inside the car the two bureaucrats watched grimly. They had done most of their work; they were afraid that they were going to be cheated.

Mike had been in the business too long to do that to city employees. "Listen," he said as he got back into the car, "you folks want your fees in cash or goods? I got scotch in the trunk or three nickels apiece in my wallet. Take your choice."

"Our fees always come in cash," the coroness said. "We aren't allowed to take goods." Mike counted her out three fives.

The health inspector took liquor.

Outside the trenching tool started up with a roar and began digging away.

So everybody was happy, everybody was willing to work. Most times Mike wouldn't have given these people anything, and nothing would have been

expected, but in the wet of a miserable afternoon it was only fair.

He and the two officials sat in the car while the gravediggers did their business, cursing and using their tool like a weapon, spattering mud over the gravestone, a simple but expensive piece of Carrara marble engraved with FRANKLIN APPLE, DECEMBER 11, 1894—JULY 12, 1983. Not even an R.I.P. The trenching tool, a small tractor with a device on it like a huge chain saw, rattled and swayed, its teeth crunching down into the earth. In fifteen minutes a goodly hill of soil had piled up beside it.

At last the men went to work with shovels. Normally on an exhumation this was when you came speeding up in your car, jumped out, and peered down into the grave. Not this time. Mike had learned respect for the Night Church. Best to assume it was always right next to him. The coroner, for example. Or one of the gravediggers. Or the assistant DA who had given him a hard time.

"Yo," one of the men called from inside the grave.

"Let's go, folks, this is what we came for."

They got out into drifting mist. Mud oozed under Mike's feet, sucking at his overshoes. He huddled deep into his trenchcoat, his old snap-brim faithfully keeping his bald spot safe from the elements.

At the bottom of the grave was a steel coffin cover. At least the funeral home had done a good job, and buried what it had said it would bury. Many a dearly beloved got prayed over in steel and mahogany but went down in pine; it was a popular ripoff.

The wind moaned in the trees, and rain steamed on the car headlights that illuminated the scene. In the depths of the grave the steel gleamed in the flashlight glare. "Pull the damn thing off, boys," Mike said.

They got a rope through the hooks on the sides of the heavy coffin cover and raised it on their winch. Now the coffin itself lay exposed, clean and gunmetal gray, with raindrops beading on its polished surface.

"Go ahead," Mike said. His witnesses stood beneath umbrellas on the far side of the grave, which was the windward side. If there was a ripe corpse in there they were going to want to move upwind with Mike in a hurry.

The coffin was locked, and nobody had the key. Mike thought of it lying in Mr. Apple's living room. One by one the screws holding the locking mechanism were removed. When the last of them came out there was a hermetic hiss. That had been one well-sealed coffin. "It's ripe," the coroner

called.

"Come around here. It doesn't smell so bad." The umbrellas bobbed in the mist and soon the two officials were beside Mike. "Okay, open it up."

The gravediggers started to lift the lid. They hesitated, dug their feet in as if it was heavier than it should be, then heaved it back.

The coroner screamed. The Health Department inspector made a sharp sound between his teeth. Mike knew that this moment was going to haunt him for the rest of his life. He had just encountered his worst murder. He was more than a little surprised; he had expected either cinder blocks or Mr. Titus, alias Apple. The spectacle before him was the kind of thing every homicide professional secretly dreads, the one so bad it gets past all your defenses. You know you will be spending nights with it from now on, seeing that frozen scream again and again, hearing the awful ripping sound the fingernails made when they popped out of the coffin lid.

"I'm sorry," Mike said into the silence. Down in the grave one of the diggers covered his face with mud-gloved hands. Another looked up toward Mike, or perhaps past him toward God. Or maybe just to see a little sky. "Hold it, guys, I'm comin' down." Mike descended their ladder, slipping once on a muddy rung.

The grave had the same sweet smell that had come from the foxholes of the dead in Korea. Foul sweet. "Poor bastard. Coulda at least knocked him out." Mike tried to see the face, but the car lights didn't penetrate that far. He fumbled for his penlight.

"No shit, man," one of the diggers said. "I wish I hadn't seen this." His voice was awed to softness. A lot of people who work with human death do not fulfill the common mythology and become hard. They become very kind. Suffering respects itself.

The victim's fingers had been hooked into the coffin lid so tightly that the whole corpse had at first risen up, then fallen back as the fingernails came loose. Black stains covered the shredded rayon upholstery. Blood from those scratching, clawing fingers.

With just the penlight there was no way to distinguish features.

"Get the big flash from the back of my car," Mike called up to the bureaucrats. In the meantime he played his penlight into the coffin. The mess it revealed told exactly what it was like to die at the bottom of your own grave. It was very, very hard. The eyes, bulging open, had sunk to black holes; the

mouth, spread in a last, anguished gasp, was all teeth and bitten, shredded lips. The corpse was so new that all the suffering was still there, in the eloquence and humanity of the frozen scream.

Policemen get good at pretending to be hard, but inside they slowly transform through the years, until the cruelty of human beings begins to seem a monstrous defect in the species, more pitiful than bad. They start seeing criminals and victims alike as cogs in a great wheel of human failure. Need and greed grind them all to pulp, weak and strong, good and bad.

"Cops and clowns are sad men," Harry Goodwin once had said deep into a bottle of Chivas, "and priests are better off dead." Mike recalled his own laughter. But now he didn't feel any of the irony or sadness of the remark. After last night he could feel only one powerful emotion—fear. And this new horror added to it in a particularly ugly way. Mike could imagine himself dying slowly at the bottom of a grave.

The health officer came scrambling down with the flashlight, but Mike had had enough. Let the homicide boys identify the poor sucker, that's what they were paid for.

"I'm gonna call this goddamn mess in," Mike said to the people around him. "Anybody wanna throw up, just do it outside of where people are gonna have to walk. All hell's gonna break loose around here in a few minutes."

Mike didn't know of a ten code for burial alive, so he talked it. "This is Inspector Banion. Location: All Souls Cemetery, Roadway W-3, Gravesite E-144. I have a DOA buried alive. Please respond with a homicide workup."

The radio crackled back acknowledgment. Mike sat staring at the hand holding the microphone. Old hand. Age spotted, especially on the back. Busted thumbnail from that bout trying to repair Mary's hairdryer. The tears he had felt coming passed down his cheeks just about on schedule. He wiped them away fast, trying to replace this big, nameless feeling with something he could understand and cope with, like anger or outrage. Whoever the poor devil was, he did not deserve to die like that.

Sirens rose. Fast work. New York City cops are the best in the world at getting through traffic. Especially with the new hee-haw sirens making counterpoint to the old-fashioned waiters some of the EMS meatwagons still use. Mike could count the cars by their sirens. Six squad cars. A large segment of the precinct was turning out. The Banion legend was still very much alive, at least. And this particular discovery would not do it any

damage.

Mike got out of his car and stood in the rain as Max and his lady sergeant trotted up. Their faces were as gray as the afternoon light. "Hello, Inspector. You sure it's not Apple?"

"Looks like a younger man in there."

"Any ID?"

"Wearing a cheap doubleknit suit. I didn't look in the pockets." He paused a moment, too stunned to talk. His heart almost exploded in his chest. "Oh, holy God, I must be gettin' old! I *know* that suit!"

Max started to say something but Mike was running back to the grave, to the place where that poor jerk was buried. He clambered down and grabbed the flashlight from the health inspector, who gave it up gratefully. He looked sick. The gravediggers were huddled at the edge of the hole, shivering. The coroner was off vomiting.

Terry. You poor, innocent man. Terry.

"Max," he shouted in rage and sorrow, "call in a revised bulletin on Terry Quist. Change the goddamn thing from missing person to homicide."

Max turned and disappeared past the edge of the grave. Mike looked down at his friend, looked long and hard. And he vowed vengeance.

Another man might have wanted to be alone at this point, or at least to spend some appreciable time in a bar, but Mike Banion went from being frightened to being downright mad. He was going to *get* the bastards who had done this no matter what it took. And no matter who they had on their side. If he had to face Satan himself to do it, he damn well would.

The Night Church might be monstrous and terrifying, but this cruel murder showed it was also full of the petty viciousness of any criminal organization. Mike could understand that. He could feel contempt for it.

He'd like to find some cop who was a member of the thing and detail him to go down and bag poor Terry's body.

Police vehicles kept arriving. There were a dozen of them here, with men hurrying to the just-searchlit graveside with their equipment, cameras, and crime scene tapes, and all the other paraphernalia that modern detection techniques impose on police officers. Mike returned to his car, tossing away the stale cigar stub as he went. Once inside he lit a fresh one, glorying in the warm, aromatic smoke. A fresh cigar is a nice thing when you're all twisted

up inside. It can untwist you like nothing else on this earth.

Max joined him.

Mike had to talk. "They buried Quist alive. Jesus, they *buried him alive!*" Now it all came pouring out. "In all my career I've never seen that. I mean, he was just a small-time jerkoff reporter. Nothin'! What'd they do it for? Fun?"

"Rough, Mike. Real rough. But we're gonna get 'em now. Because of this."

"Don't be too sure, Lieutenant. We got a long hard ways to go yet."

"It seems to me," said Max's assistant, "that we need to physically find this alias. Apple's the key."

"His name is probably Franklin Titus."

"How'd you get there, Mike?"

"Never mind, Max. I been burnin' the midnight oil." * "Well, if we have a name, we ought to be able to find our man easily enough."

"Okay, Sarge, you go do that. Go do it!"

"Relax, Mike, she's as committed as you are."

"Oh, hell, I'm sorry. Just think it out. Obviously Titus is the best thing we could get. But he's the last thing we're *gonna* get. You can put money on that. He's king of the mountain. We won't find him till all the people in front of him have been knocked aside."

Silence followed these remarks. Sitting there in his car, listening to the rain on the roof, Mike realized what he had to do. It was simple enough. He got out, said his goodbyes to his people, passed out the promised scotch, and returned alone to the car.

He was going to stay real cozy with Mary from now on. She was the ticket in the front door. His own lovely wife. Serves you right, marrying for looks.

Damn you, Mary, I'm gonna fry you!

Okay, Mr. Detective, fry her hot but move cool. Move very cool. She's one dangerous lady, Mary Titus Banion.

He drove along the old boulevard, past Farrell's, past the skating rink that had been a disco and before that a ballroom, and way long ago a movie theater. Before that, in the dimness of Mike's boyhood, it had been a grassy field, the kind of place where kids went to smoke and drink, and explore one another's bodies in the summer night.

"Death always sneaks up on us," Father Goodwin said. "Death is the greatest surprise of all."

Mike felt exhausted. The old body was yearning for its supper. Mary would

have a meal waiting. First there would be a nice cold martini, the kind of drink that worked. Mary would stand in the doorway to the kitchen, smoking one of her Benson & Hedges cigarettes and talking softly to him. Mary was so extremely sexy. He thought of the places she was curved, and how astonishingly smooth her skin was, the way there was a sound like the whisper of snow when he moved his hands along her thighs. He liked how she smelled at the end of the day, Lanvin powder mixed with a suggestion of sweat. Were women really as innocent as they seemed of the fact that they carried the world? Even the bitches and the wrong ones.

By the time he arrived home the rain had become a deluge. He operated the garage-door opener and parked his car beside Mary's Audi. The woman had style; she looked great in that automobile.

"Mike?"

"Yeah, I'm here."

The door creaked. Footsteps clattered on the paved floor of the garage. She appeared, her dress softly dotted pink, her chestnut hair flowing down to her shoulders. He got out of the car.

He put his big, hot paw into her cool fingers.

She closed her eyes for a moment, as if a blow had passed close.

He realized as he followed her into the house that she wasn't going to ask how he was, or even kiss him. She was afraid of her husband. Behind the sex and the habits of living together, she must feel him an absolute stranger, close only in the way people on a bus are close.

"Jonathan's not here yet. I called him an hour ago."

"Why?"

"You wanted to see him tonight. You wanted to talk about the wedding."

"Hard to believe." He felt heavier, let out a tired sigh. There was a wedding planned. He had once wanted to give Jonathan some pointers about how to handle a wife. Funny.

"Forget it. He doesn't need advice from me. Relax me, girl."

She handed Mike his martini. It was exactly right, as usual. Thank God for alcohol.

"I got another break on the case," he heard himself say. He hardly even glanced at her, but he made it count.

Inside there was a smell of steak broiling with onions. Despite everything,

he felt for her a passion so beyond his ability to suppress that it seemed a kind of tragedy.

"I'm glad you came back. I need you." She came to him, nestled against his chest. Then she kissed his cheek, sought his lips. "Can you forget about the case for a while, do you think?"

Never, you witch. Beautiful, beautiful witch.

"Is anything going on downstairs, Michael Banion?"

"Find out for yourself."

She brushed her hand against the front of his trousers. "Shall I get ready for you?"

He kissed her neck. It smelled just as he had thought it would, of Lanvin powder and sweat. Sweet and sour. She stroked him. "I'd better go cut off supper. I'll follow you up."

While she was in the kitchen he went up the narrow stairway to their bedroom and with fumbling, shaking hands took off his clothes. He arranged them so that his pistol was just under a fold of his jacket, ready to grab.

He looked at his nakedness in the mirror, his powerful shoulders and neck, the suggestion of dignity offered by his graying temples, the bulging swoop of his gut.

Mary opened the door suddenly, light flowing in behind her, tripping softly and soft in her own nakedness, her thatch swimming in shadow between ghostly thighs, her arms surrounding him and pressing him back toward the bed, her hair tickling his chest.

But when he closed his eyes he saw coffins and bloody clawmarks, and heard a man howling in his grave. He almost lost it. He opened his eyes quickly.

Mary worked on him dutifully, he had to give her that. She fondled and kissed and rubbed. He closed his eyes again, remembering all the girls he had known who had turned him on. The best was Beth because she was so sweet and innocent except in the bedroom, where she was wild.

Mary looked down at him, trembling to a fine internal rhythm. Only all was not right: this time Mike was waiting for something, and he found it. That familiar faraway look she got in her eyes at moments of seeming passion was not ecstasy, it was detachment.

She began to act, biting her lips and moaning a little. Her tempo increased.

Suddenly, still pounding, she bent down *to* him and began kissing his face. Her fingernails dug into his shoulders.

A week ago he would have interpreted this as extreme excitement, but this time he understood the truth: she was trying to get him to reach climax as quickly as she could.

No doubt that was always why she wanted the topside position—so she could control the tempo and get it over with as fast as possible.

But, Lord, she knew how to make it feel good. He began seeing her through the haze of higher pleasure; she was as pretty as a picture. "Mike," she gasped, "Mike, oh, Mike!"

He came and she shook and trembled and fell down on him whispering, "Thank you, thank you, you beautiful man," and then became still. Her thanks were sincere too, he knew. He had been quick.

After it was over they lay as usual side by side. Then she sat up and lit a cigarette, drawing her knees up to her chin. There was in her face something scary that he did not want to see, something that looked like suppressed glee.

"Jonathan must be at Patricia's apartment," she said. "I guess he'll stay the night."

Mike did not answer her. She had not failed herself this night. She was a very skillful deceiver—so good that her skill itself gave her away. She had not provided him with so much as a hint, not even a flicker of light on the way to the truth.

When she went down to complete their dinner his mind began drifting back and forth among the elements of the case. Terry Quist. Franklin Titus. Those wicked, insane books in Titus's house.

The anti-man to come . . . and his father, the *monstrum*. And beautiful, sensual Mary.

Somewhere between them was his answer, his whole picture, his truth. Somewhere between the woman and the grave and Hell.

Chapter Twenty

JONATHAN WOULD HAVE clawed out through the sides of the van if he had been able. "It's a damn cage! They've caged us like a couple of chimps." He prowled the luxurious interior, checking the door, the walls, feeling for some opening, some weakness.

They accelerated, decelerated, turned corners, until he lost all sense of direction.

"Sit down, Jonathan."

"If I could get this door open we might be able to jump when they slow down."

"There'll be a car following. They're very well organized."

He went to her. "We have to try."

"We have to think about what's happening to us, about What might happen when they open the door."

A sudden change in the tire sounds told Jonathan something. "We're crossing the Fifty-Ninth Street bridge, going into Manhattan."

"Jonathan, you and I are vulnerable. We feel like ordinary people, and I doubt if we have the resources to deal with whatever we're facing. We could even be brainwashed."

"They picked the wrong man for brainwashing. I can't *be* brainwashed—I know too much about the brain."

The van slowed, turned another corner.

"We're liable to stop soon, Jonathan. Whether you can be brainwashed or not, I want you to—"

He hated that idea. "I *can't* be!"

"Just listen. I want you to remember one thing at all costs. We may be mutated in a thousand different ways, but we can live ordinary lives if we try. We love each other, and we want as normal and human a life as we can have." She put her arms around him. "If we forget that, they win!"

"What's the game, though? What do they win?"

She sobbed. "Just remember what *we* want."

The van stopped. He found her lips with his own. A cheerful young man opened the doors and with firm, gentle hands drew them apart. "We're home now," he said. "Please come inside."

"The hell I will," Jonathan replied. He broke away, leaping down from the van and managing about ten feet along the sidewalk before he was surrounded by more of them than he could resist. The most pleasant of them, a smiling, pin-neat man in a crisp linen suit, showed Jonathan a vicious little knife.

"There is also the way of pain," he said affably, shouldering Jonathan between two of his friends. "You're best off cooperating."

The house was shockingly familiar. He stood looking up at the aged brownstone edifice, decorated by rows of glaring gargoyles. He had always assumed that it housed university data storage. To his knowledge, he had never been beyond the basement labs.

To the east little golden clouds floated above the skyline. Dawn was coming. The house itself was subtly transformed. The wide bay windows, which had been backed by dark curtains, now stood open.

A bell rang, and sleepy children's voices filtered out.

This was the Titus School, the secret training-ground of the Night Church. Jonathan and Patricia had grown up here.

He was hustled into the foyer where Patricia was being ushered along by one of the most fantastic creatures Jonathan had ever beheld.

Instead of the usual black broadcloth this nun wore a rich maroon silk habit. Her wimple was starched and gleaming, black instead of white. She was beautifully made up with eyeshadow and lipstick. The small foyer was filled with the scent of musky perfume.

She supported Patricia, who dragged along the floor as if fainting. When she saw Jonathan, though, she made a visible effort to pull herself together. She looked at him through haunted, tear-streaked eyes. "Don't you remember her, Jonathan?" she shouted. The nun began hurrying Patricia toward the rear of the foyer. "She's Sister Saint John, the one I put up in my apartment, the one who *raised* me from the time I was thirteen!" Her voice echoed, desolate.

"Patricia!" Strong hands grabbed his arms. He kicked. He had to get to her. "Let me go!"

"I remember now! She was at the Spirit too! She was there with Mary! Oh, God, help me! Help me!"

His ears roared, his blood thundered in his veins. "*Patricia!*"

A great clang. An iron door had closed on her.

He had not counted on them being separated. The sudden, irrevocable fact of it brought a new wave of effort, and he struggled against the men who were holding him, screaming into the silence that had followed the clang of the door. "I love you! *I love you!*"

His own shouts were absorbed by the cavernous hall. "Jonathan," a voice said when he stopped, "we're going to take you up to your room now."

They didn't release their grip even a little as they walked him across the marble floor. He could see that the hall was circular, with fluted columns supporting a small interior dome. Dim light glowed through round windows in the dome. At the rear was a sweeping horseshoe staircase that embraced a tiny, wire-enclosed elevator.

The car was waiting behind its brass grill. Two of the men pushed Jonathan in. The three of them filled the small space.

They rose in smooth silence, passing up in the cage until the floor of the lobby seemed seventy feet below. There was a click and it stopped. The men opened a door on the far side. Beyond was a corridor, softly lit with lamps in wall sconces. The walls were cream; the floor was thickly carpeted in tan.

"You'll remember the senior men's floor," said one of the men as the three of them left the elevator.

"No, I won't," Jonathan muttered. He really didn't want to listen to that sort of muck. They were not going to use disorientation techniques to confuse him. It was going to be a lot harder than that. His mind turned once again to Patricia. "When will I see her again?"

"At your wedding."

"Surely that's been canceled."

"No, it's going ahead just exactly as you planned."

No matter what else might happen, at least he was certain to see her again. "Here's your room, Jonathan. Your uncle will be in shortly." Before he could resist or say another word they had thrust him through a door and closed it behind him.

"No!" He grappled with the knob, hammered the unyielding metal. He kicked the door so viciously it sent a shock all the way up his leg and caused him to fall backward onto the floor, which he hit with a bone-rattling crash.

For a moment, he lay still. Then he went to the window, but found he couldn't even raise the sash to get his hands on the bars beyond it.

When he looked around for something to use to break the glass, he was frozen with astonishment.

He knew this room.

He knew it perfectly, utterly, completely.

It was *his* room, his own boyhood room. The Hallicrafters was there on the desk, with the model Gemini capsule sitting on it. His bookcase held all his wonderful old friends, *Tom Sawyer*, *The Once and Future King*, the Complete Shakespeare, the Mary Renault novels, *Life's Picture History of the Earth*.

The bedspread was the one Mother had made, with his name embroidered in red on a background of the Orion constellation. His telescope stood at the foot of the bed under a dust cover, just where he had left it when—

When?

A long time ago. He knelt down, gingerly removed the cover. There it was, his beloved Celestron, the treasure of his youth.

It had been a long time since he had thought of astronomy, of those wonderful autumn nights up in the Connecticut woods with Jerry Cochran, climbing a hillside and searching out Wolf 457 or Saturn or the Crab Nebula. Jerry. His boyhood idol. Tall, cool, a brilliant scientific mind. Jerry's seven years' seniority made him almost godlike to the younger boy. If Jonathan had modeled himself on anybody, it had been Jerry Cochran.

We walked the star path, he and I.

He grew very still as the awesome power of memory began pouring his true past up from his depths. He remembered his old friend with almost sacred vividness, his brown eyes, his great broad smile and the sword-sharpness of his mind.

"Jerry." He touched the Celestron, his fingers caressing its controls. What wonders we found with this thing, you and I. "Earth is just a green bubble in the void, Jonathan. Less than a speck of dust. Out here, lost, falling toward the unknown." You were wise for your years, Jerry, so very wise.

The room was a museum of his own past. There at the bottom of the bookshelf were *The Winter Noisy Book* and *The Fire Engine Book* and all the other books of babyhood, *Mother Goose* and *The Encyclopedia of Things* and *Hiawatha* and *Olly Olly Oxen Free*.

And in the big drawer under the bed—pull it out—yes, there were his models, the wonderful, intricate airplanes constructed of balsa and paper, flown by rubber bands at high summer evening when the breeze was still. His Rascal 18 racer, his P-51 that never flew well because it was too heavily doped, even in the remains of Jerry's Cessna 182 that had met fatefully with the rose trellis in—in—

Uncle's front yard?

Who was Uncle, and where was that bungalow full of furniture a little boy mustn't touch?

Never mind that now. He went to the Hallicrafters, turned it on. The heterodyne wail of shortwave met his ears as he twisted the knob back and forth. Yes, here was the BBC and there was Cuba and there Radio Moscow, and down along there were the Africans and the Arabs, and in the middle the rest of the Europeans, Netherlands with its concerts and Germany with its language lessons, and France and Italy and Spain.

Oh, yes, on a thousand deepest nights Jerry and I were at this radio, turning the dial ever so slowly from wonder to wonder.

Let's hear what Khrushchev's got to say about the election.

The Royal Shakespeare is doing Measure for Measure on the BBC tonight.

We don't want to miss the Cuban-English—Language News.

We were two adventurers of the mind. And what a wonderful time we had . . . when I was normal. When I was myself.

But there were other times.

"Let me out of here! I can't stand it in here!"

"I see you're beginning to come back to us."

"Who—"

He was a dried-up, incredibly ancient man. Only his bright green eyes had any life. His face was a badland of creases, age-rotted skin stretched across sharp old bones. He wore a beautifully tailored black suit and a silver-gray silk shirt. His head was framed by a white vapor of hair. On his fingers there were complex rings. Jonathan saw skulls and intricate cabbalistic symbols in the gold, and ruby eyes and open jaws. Only his thumbs were without jewelry.

"My dear nephew." He opened his arms. Behind him in the hallway stood a young man easily six foot five, his arms folded, watching from the shadows.

Jonathan did not move toward the little gargoyle with the open arms. He had no uncle.

Patricia's words came back to him: *We may be mutated in a thousand different ways, but we can live ordinary lives if we try.*

Much wisdom in that.

"You act like a cornered rat, Jonathan. I must confess I'm disappointed. I expected more of the Prince."

Crazy. But backed up by a powerful guard. And the windows behind Jonathan were barred.

"Frightened of me. How embarrassing. Am I too ugly for you?" He raised his hands, which arthritis had turned to oak gnarls. There was in this man a density of menace. "You find me ugly, you of all people. You may have a handsome appearance, but inside you are far uglier than I!"

"Get away from me."

"You are the *monstrum*."

"You need a psychiatrist, you're a paranoid schizophrenic. I can help you. I want to help you."

The sparks of eyes twinkled. "On the contrary, Jonathan, it is *I* who can help *you*. You must prepare, you know. The Ritual Marriage is tonight."

Jonathan backed away from the eerie old man.

"Let me touch you, nephew." The hands, trembling, came out toward him. Jonathan cast around, grabbed the radio, raised it over his head.

"Stop! Don't come any nearer!"

The old man stepped aside and his guard began moving into the room.

Jonathan hurled the Hallicrafters with all his might—and the guard caught it, rocking back on his heels and drawing a gasp of breath. He stood with the enormous radio in his hands, looking at Jonathan. Slowly, he smiled.

"Jerry!"

He put the radio down and locked Jonathan in a strong embrace. "Be careful," the old man said. "Remember, It beat a man to death just a few hours ago."

What a lie. The man had hardly even been knocked unconscious. "I am a human being, so don't call me 'It!'" And I barely touched that man, as you well know."

"You crushed his chest and broke his back in three places. You all but tore

his head off and popped his skull."

"And you are *not* human, you are the *monstrum*."

"Shut up! Stop calling me that idiotic name!" He thought of the brain scans he had done of himself and Patricia, the incredible results. *Monstrum*. So that was what he was called. And she too. She had the same brain-wave pattern. *Monstrum*.

He turned his gaze to Jerry, just as he had when he had needed help as a boy. Friend and teacher, Jerry had also been his bodyguard. A confused welter of memories flooded him as he looked at his friend.

The old man soon shattered the moment. "Come on, Jerry. Leave him to his memories for now." He indicated an envelope on the desk. "There's a letter that will explain a great deal. I suggest you read it."

They began to leave the room. "Wait!" Jonathan cried, but before he could stop them the door was closed and locked.

Jonathan was furious. This time he lunged at the window, smashing the glass with his hands, uncaring of gashes, and grappled with the bars. He yanked them and yanked them and kicked them and tried to spread them. And was defeated by them.

He picked up the Hallicrafters, which Jerry had placed neatly back on the table, and threw it against the door. It shattered into glittering electronic bits but the door did not move.

What in hell was going to happen next? He realized that this playing on his emotions, dehumanizing him by calling him "It," suggesting that he was brutal beyond his own self-understanding, was all part of an attempt to break him. And a much more skillful attempt than he had expected. But he told himself that he understood what was being done to him, and his understanding would preserve him.

We love each other, and we want as normal and human a life as we can have. Patricia had said that. He repeated it to himself like a prayer.

He longed for her strength. If he could just spend one more minute in her arms he would have the energy to cope with another year of the old man's weird emotional games.

"What have you done with her?" His voice was absorbed by the walls. Frantically, aware of how wild animals must feel when first captured, he tested them. Behind the familiar wallpaper of soaring rockets and moons and

Saturns and floating spacemen was plaster. And from the solid *thunk* when he tapped it, the plaster was spread on concrete. The room was more tightly made than any prison.

It was his old room, all right. The apartment he remembered was just a hypnotic suggestion. This was where he had grown up, this prison.

As the realization sunk in, a change began to come over him. The curtains that hid his past were being made to part by the glut of familiar associations.

Nineteen Rayne Street was the Titus School, where he had been a privileged student. The Prince, they had called him. With a cold shudder he remembered his own tragedy: he was a seasonal king, doomed to die in the very act of procreation.

The most excruciating sorrow filled him. If that was true then all their dreams of happiness, of escaping to the world of regular people, were hopeless. He had learned at his mother's knee—there will come a day, a glorious day. . . .

He looked at the letter the old man had referred to. Should he read it, or did it contain some further confusing trick? He picked it up.

On the envelope were three words: "For my son."

It was from Mother!

He opened it. The words leaped at him like fiery beasts, tearing away the last vestiges of the hypnosis which had held him in its thrall.

When the letter said "remember yourself," he did just that.

He remembered his pride in being the *monstrum*, and his love of the demons.

"I will speak to you in the voice of the dry leaves," Belial had said. As Jonathan read of his vision it returned to him: Belial, so hideous that he was beautiful, his unblinking eyes filled with so much intelligence that it was shattering to look into them. Belial was freezing wind on a winter's night, moonlight playing on empty snow, clear space pierced by stars.

Belial was a skull, brown and cracked, bursting with worms.

"Mother! What have you done to me? Mother! Mother!"

He rushed through the rest of the letter, squinting at it as if the words might jump off the page and pierce his eyes. At the end he threw it to the floor, turned away from it. Remembrance blazed in his mind:

He and Patricia belonged to the Night Church, had been born into it and

raised by it.

He remembered loving it. Yes, but he had been mad then. He could not believe in something so obviously evil ... so dangerously crazy.

Technology had lifted the Night Church to immense power. With their bacteria they could certainly destroy the world.

And they are mad, as I was until I began walking the path of ordinary human beings.

No matter how bad he is there is something sacred in every man on earth, something deeply *right* that grants him and all his fellows their lives, and seems to suggest that they procreate, and fill the earth with their kind.

In the old days Jonathan had thought of human beings as having less of a claim to life than even the lowest animals, because of all the species mankind was the most defective.

He did not think that now. In hiding Jonathan among ordinary people Mother had awakened in him his own ordinariness, had made him realize that he was only, finally, and utterly *human*—and that was a very fine thing to be.

Even as these thoughts raced through his mind he felt the *monstrum* within him stirring in its fitful sleep, the oozing, black coils of its evil shifting wakefully in his soul.

It could not wake up on its own, but *they* could wake it up, Mother and Jerry and Uncle Franklin. They could and they would.

He had to get out of here! If he was so brilliant surely he could find some way to escape.

He recalled the flickering strangeness of his own brainwave patterns as they raced across the oscilloscope.

Like all the beasts, you will do what your nature demands of you.

He had seen his strangeness in the equipment he had himself designed.

He and Jerry had worked side by side in their labs. "You tend to the future," Uncle had said. "You are creating a teaching machine for your son." He put his arm on Jerry's shoulder. "He will take care of the past."

The coldest, most hideous feeling came over Jonathan as memories of exactly what was done in Jerry's lab came back to him. Disease vectors. Delivery systems. Contagion intensities.

A Titus School graduate had joined the U.S. Army in 1975, and delivered over the next five years vast amounts of classified data on biological

weapons.

Anthrax 4 median, which killed in twelve hours.

Parrot fever mutant 202, death in four hours.

Bubonic positive 1, death in thirty minutes.

He suddenly had the most poignant impression of his life in Queens—the simple joy of having a hamburger at Farrell's. Down the counter some schoolkids would be giggling over Cokes. A couple of bus drivers would be huddled in a booth. Somebody might play "Lay Lady Lay" on the jukebox.

"Jerry, you can't kill them! You haven't got any right!"

Jonathan had a new mission, and not much life left in which to fulfill it.

"We're wrong! We are *not* the law!"

"You will reacquire the moral precision that has always supported you," Mother had written in her letter. "You will *know* the rightness of our cause." And she had written: "The earth's will is toward evolution. It is your privilege to enact it."

"No! We don't know anything about the will of the planet! We're mistaken, we're doing something terrible!"

Bubonic positive 2 had killed in thirty seconds, but it could not live outside a human host. Transmission only by physical contact.

"Oh, God! Jerry—let me out of here! Jerry, does bubonic 3 work? *Does it work?*"

His memory was now so clear that he could almost see the bacterial colonies in the microscope, swarming and propagating right out of their media.

And he could smell the animal rooms, the sharp scent of fear, the thick odor of sickness. In his mind's eye he saw the rats, exploding with buboes as soon as they were exposed to bubonic positive 3, dying within seconds, and the sheep within minutes, ba-a-a, ba-a-a-a-a, as great welts rose and turned purple beneath their coats, then burst as they knelt and vomited and gasped and fell twitching.

And the rhesus monkeys, brachiating frantically in their cages, screaming, clawing their throats open, buboes raising their arms so that they looked like they were doing the turkey trot as they scurried about, and coughing blood and pus and dying amid their own offal, their eyes fixed on the unearthly figures who tormented them, Jerry and his assistants in their green isolation suits and helmets.

"Oh, no. No!" He ran back and forth across the room, hurling things to the floor, grappling with the mattress, pointlessly searching the desk for a phone.

There was no phone.

They had been about to carry out a human test of bubonic 3—murder somebody, just to test—

My dear God, what have we done? He asked, but he knew perfectly well. Jerry had created from the bacillus *Yersinia pestis* a mutant, hyperactive strain that reproduced itself almost instantaneously. It was respiratory, spread through the air. It could be delivered by simply propagating it from a small plane.

Vector analysis indicated that 21.235 hours would elapse from propagation to complete contagion of a given population. After the first one million individuals the rate of transfer would be very rapid, with a potential of seven hundred and fifty million further infections within another fifty-three hours.

Jonathan wanted to help them, to somehow warn them. But Jonathan was a seasonal king come to the end of his time.

He heard the thundering music that would awaken the *monstrum*, remembered how it felt to change.

"Oh, God, you've got to help me! You've got to get me out of here! Please, somehow, *plea-a-se!*"

The disease would be fatal in 98.237 percent of the cases and so damaging in the remainder that the individuals would succumb to other diseases, especially given the chaotic nature of the social infrastructure in which they would find themselves.

The memories rushed like fiery, hurtling meteors through Jonathan's mind. His nightmares were a pleasure compared to this.

Jerry had read a paper to the assembled Scientific Unit of the Night Church: "The causative organism is a short bacillus which often displays bipolar staining with Giemsa stain. The positive 3 form always displays staining, but the poles reveal flagella under light. The positive 3 is motile."

"Shut up! *Shut up!*"

"The incubation period varies from a matter of seconds in a newborn human infant to three to five minutes in a healthy adult male of substantial volume. Onset is abrupt, associated with deep chills. Temperature rises from 41C to 42.5C (106F to 108F). Pulse will be rapid and thready, buboes will appear upon elevation of temperature. The femoral or inguinal lymph nodes will be

the usual primary sites of involvement. The nodes will initially be tender but firm, sclerosing rapidly and becoming filled with pus. Bursting of the nodes indicates that terminal praeludium has commenced."

"Help! Get me out of here! I've got to tell somebody! I've got to warn them!"

Mike! I've got to get word to Mike.

He began a more organized attempt to free himself. Again and again he ran against the door, using his own body as a battering ram. It hurt when his shoulder impacted the metal but he didn't care. He had overwhelming humanitarian reasons for getting out. The fact that he might break a bone in the process was of little consequence, as long as it did not prevent him from reaching his goal.

The door clicked.

He was running with all his might when it swept open. He staggered out into the hall and hit the wall.

Strong arms enfolded him. "Cool down, Jonathan. It's all right, you're home, you're safe."

"Let me go! You're crazy, Jerry, you and all the others." The arms tightened around him. "Please, listen to me. This is all insane."

Jerry put something against his shoulder, something that stung.

"Jerry, you're a good man. A fine man. Best friend—" It got harder to talk. "Best friend I ever . . . oh, Jerry, it's obscene, it's . . ." He realized that he had just been sedated. The hypodermic Jerry had used was lying on the carpet, glittering in the soft light. Jonathan looked at it, his mind seeming to sink into the reflections. "Not the plague . . . no . . ."

"Sh, take it easy, guy. Get some sleep."

Jonathan's mind tried a final struggle. *I'm letting him drug me, put me to sleep! I mustn't sleep, I haven't got the time!*

Then Jerry picked him up and carried him to his bed.

"Now, just relax, loosen up your muscles, guy. Your uncle says you need a little rest before you learn anything more, and I think he's right. Don't you think so?"

"N-n-mmm . . ."

"Sure he is. Sure."

Resistance just wasn't possible. Deadening, black, hostile waves carried Jonathan away.

To the place where the serpent lived. Laughing, lifeless eyes, so cunning, so

sensual, so dangerous ...

You are the guilty one, Jonathan, you, you, you. . . .

"Please—"

You will hurt her!

"No!"

You will thrust and crush and tear!

"No, No, NO!"

He sat straight up, sweating, his mouth parched, his hands shaking uncontrollably.

The sun was setting beyond the garden wall, casting warm light into his room. Down below he could hear the rhythm of fresh-voiced Titus schoolgirls chanting jump-rope rhymes. This was the hour between dinner and evening study hall, known as the Strolls, when the students had the freedom of the courtyard.

Farther away there were traffic noises, a horn, a shout, and ordinary children laughing together out on Sullivan Street.

The sounds of ordinary people. At that moment Jonathan would have cheerfully traded places with the smallest, most humble human being in the world. The taste he and Patricia had gotten of outside life had been so sweet.

If only they could somehow warn that innocent world of the danger it was in.

Somehow.

He looked down at his own perfect hands. The violence he knew to be in himself literally *was* another creature, coiled beneath his own soft skin. And *It* did not want to escape from the Night Church.

No, indeed. *It* wanted to get married!

If *It* is the beast, the *monstrum*—then so am I.

I beg to die.

Chapter Twenty-one

PATRICIA LAY IN the dark listening to footsteps approach her door. Others had come and passed. These stopped.

She bit her clenched fist to keep from screaming.

It is looking for me. It knows I am here. Sometime soon It will come for me.

The door was tested, the door rattled. Then the footsteps once again retreated down the hall. Slowly, carefully, Patricia began to breathe again.

When they had been dragging her down to this room she had smelled a thick animal smell coming from behind a door marked LABORATORIES. And she had heard animal-like screaming.

Had that been the thing that wanted her?

Patricia lay between silk sheets, sweating with terror. Her face was cooled by a fragrant breeze. Wind chimes tinkled. She remembered that sound.

Such old friends, those chimes. They are in the courtyard elm. They rang and moaned and rustled all through her girlhood.

She sat up in the bed. Now she remembered. Sister Saint John had brought her down here, had given her a shot... .

Forced it on her.

"Jonathan!"

She jumped up and rushed to the door. Then she recoiled. She couldn't go out there! But there was an alternative. One wall of her room overlooked the courtyard. She threw open the French doors.

The yard was full of children, little girls in black jumpers, boys in charcoal blazers and gray pants. There were easily three dozen of them taking their pleasure in the evening light. These were not the noisy children of the Queens streets. These children sat in groups or strolled together. A group of

younger girls played jump rope. On the low wall that separated her room from the yard a sister in red habit sat leading a group in plainchant: "*Aeterne rerum conditor noctem diemque qui regis et temporum, das tempora ut alleves fastidium . . . hoc excitatus lucifer solvit polum.*"

The chant lit darkened halls in Patricia's mind. *Aeterne rerum conditor!* "Eternal creator of the world, who doth guide the day and night and give the times their times to relieve our weariness . . . through Him awakes the morning star."

The great hymn of the Church, the Song of Lucifer, the Morning Star.

She was no orphan; she hadn't been raised at Our Lady of Victory—if such a place even existed—she had grown up here, at the Titus School, and she was the highest princess of the blood.

Such remembrance was brought by those clear young voices! She had sat on that very wall, singing in the evening with Sister Saint John and Sister Mary and her classmates . . . Jonathan and his friend Jerry Cochran, and Kathleen and Kevin and Susan. . . "We've brought you to the senior women's wing," Sister had told her as she administered the shot. "Your room is just as you left it."

So true. She realized that she had chosen exactly the same kind of curtains for her apartment in Queens—light green silk. Only in Queens she had settled for rayon.

She wanted the rayon curtains!

The sun passed behind the wall. A bell rang and the children began lining up at the boys' and girls' doors.

Such sweet little children.

Her own lessons, thin Sister Saint Julian rasping on about the evils of humankind, the Inquisition, the Holocaust, Communism. "In man the animal predominates. And in the world man is himself dominant. But not for long. This planet does not belong to animals. It has a far greater destiny."

With a force so great it almost made her cry out, Patricia rejected that belief. She had seen too much of the outside world. There had been bad things, but there had also been much more goodness and decency than she had ever been allowed to know about.

"The anti-man will be the opposite of man in every way. Where man is degraded, the new species will be exalted. He will be selfless where man is greedy. And where man is weak, he will be strong. We believers are the best

of a poor lot," Sister Saint Julian had concluded. "Outside these walls there are monsters."

No, Sister. We are the worst of a good lot. As she lay on her bed, memory after memory returned. In all the flood, one single recollection dominated: it was an image, quite terrible, of a wild ritual that had been held during her childhood, where she had witnessed the transformation of one Robert Titus Ungar, gangling, jokey Robbie, into something else. . . .

There had been music and strange dancing and hypnotic words, and poor Robbie, eighteen years old and very self-conscious, had begun to change. Before them all he had actually undergone an alteration of his physical body. At first mucus had come out of his nose and mouth, then out of his eyes too. He had gagged and retched, and then screamed as his skull began to change shape beneath his scalp, blood replaced his sweat, and awful scales came crinkling out from under his skin.

She slammed her fists into her eyes, trying to rid herself of the ugliness she remembered.

If he had lived he would have been the father of the anti-man.

The ritual was to unleash the creature within the human skin ... for a human body could be nothing more than a disguise, a sort of wrapping paper for something . . . something . . .

She gasped. Then she shrieked wildly and rushed up and down the room. *Monstrum!*

She had to get Jonathan and get out of here. But as she paced, the room whirled. "I'm still so damn dizzy!" The chimes rang and the complex scent of many flowers waxed the air.

A voice said, "Come now, Patricia, you don't belong out of bed."

"Where's Jonathan? I want Jonathan!"

Sister Saint John also had another name. She was Letty Cochran. Her husband George had been Master Accountant for the American Church for years. And their son Jerry—he ran those foul-smelling labs in the basement. "The Cochrans are my best pupils," Uncle Franklin often said.

"Remember," Letty Cochran said. "Patricia, remember who you are."

"I'm me!"

"You are much more than that. You—"

"I know who I want to be. I want to be Jonathan's wife and raise a family, and I want us to live together the rest of our lives."

The way Letty Cochran looked at her, with such a mixture of shock and sadness, filled Patricia with foreboding.

The foreboding focused into a quite specific memory. She was kneeling at an altar rail. She was trying to say the rosary. The beads broke apart in her hands and scattered all over the floor of the sanctuary.

"My rosary!"

Then Sister Saint John were there, in her memory, bending over her exactly as she was now.

She screamed. She turned and clawed her way through the yielding sheets of her bed, she leaped at the door.

And into the arms of yet another sister. Sister Mary. Mary Banion. "Let me go!"

"Oh, you poor darling!"

A man was coming into the room behind her, a man with a mustache and great, bushy eyebrows. He bit his bottom lip up into the mustache. "Now, Patricia, we aren't going to hurt you."

"You're crazy, Doctor Gottlieb! You're one of them."

"Shouldn't we tranquilize her again, Doctor?"

"We can't afford to impede her memory. She's got to recall her part in the ritual."

Gottlieb took her wrist, concentrated a moment. "Pulse is good. And the gynecological exam was very successful, Mary."

"Don't you dare examine me!"

"I did it while you were asleep, dear. I'm not a fool."

"You're evil! All of you! I want *out* of here!"

"Now, wait a minute. What in the world is the matter with you? Don't you remember anything?"

"You're liars, all of you—vicious, evil liars! And the Church is unholy, filthy!"

"You're badly confused, darling."

"I want Jonathan! I want him now!"

"Soon. Very soon."

"You're monstrous, all of you—"

"Patricia, I'm not sure I understand your problem. What's the matter with coming home after all this time in hiding?"

Mary was so clever. So damned clever. Patricia told herself to remember

what she had said to Jonathan: *We may be mutated in a thousand different ways, but we can live ordinary lives if we try.*

"You have a great work to perform, Patricia. The greatest of all works. You must remember so you can do it well."

She recalled how Mary had tried to press a cloth soaked in ether onto her face while she lay on the altar of Holy Spirit Church.

As the late effects of the shot they had given her wore off, Patricia became better able to consider her situation. She stopped arguing with her captors. There was no point to it. Instead she tried to seem a little more cooperative. Only by winning their trust would she have any chance at escape.

"What are you thinking, Patricia?"

She couldn't be too compliant, though. That would give her away. She took what she thought might be an expected stance. "You were there when It raped me. You let It rape me!"

It had great, heavy coils and eyes like yellow marbles.

"You were the victim of a terrible mistake. All I can say is that I'm sorry. We're all sorry."

Sorry. That was one way to be.

Again she looked out into the countryard. At the far side was a ten-foot wall. The only way to scale it would be to jump to a low-lying limb of the elm and vault over. The wall fronted on Sullivan Street. Beyond it would be cars and students and joggers and old ladies and derelicts and kids and all the world. Just being a shopgirl out there would be a privilege compared to the suffocating horror of life in this place.

Patricia had been the highest of them all, but for Jonathan.

You are our hope.

Your child will be a god.

She had been seduced by such praise. She admitted it. If she was clever, she might be able to convince the seducers that she was succumbing to them again. Then they might give her the few unattended minutes she needed. "Our belief is that mankind is a failure, isn't it, Mary?"

"Look at the conditions you encountered on the outside."

Mary touched her wrist. Patricia let a soft and devoted look come into her eyes. But she thought only of escape. Nothing would ever make her believe the Church's propaganda again.

She recalled the rituals, hundreds of them: annuals and seasonals and

monthlies. Rituals for the rising and setting of all the major stars, rituals for the rhythms of the body, the phases of the moon, rituals to mark the earth's important passages, and prayers that praised her, the planet of pearly green beauty, whose needs the Night Church served. Then there were the Sacrificials, the bloody rites in honor of the saints of the Church.

Saint Gilles de Rais, accused of torturing and murdering children. Actually the teacher of Jeanne d'Arc, another of the great saints of the Night Church. Like her, burnt.

Saint Elizabeth Bathory, one of the greatest of the medieval genetic experimenters. Walled up in her own bedroom for what the ordinary population called mass murder.

Saint Appolonius of Tyana, killed by the Christians for writing of sorcery.

Saint Iamblichus, crucified by the pagans.

On and on went the list of the honored dead. Magicians, they were called, or alchemists or sorcerers or wizards. All the while, though, their hidden Church was the true guardian of the future, carrying the Treasure of Solomon forth to the millennium.

To the end of time.

"You must be ready to do your duty."

"Yes," was all she said. But she thought, My duty! My duty is to be destroyed.

It had come upon her stinking worse than any animal; its eyes glistening and inhuman, yet piercing with intelligence. It had mounted her with the weight of an anvil.

Patricia's mind twisted and turned between thoughts of capture and freedom. Inwardly she felt like a kitten so desperate with pain that it begins to try to bite itself to death. But she forced herself to sit on the beside and talk with Mary, and pretend to be a good little princess again.

She belonged only to Jonathan—the Jonathan of the ordinary world. The dark *thing* within was not really a part of him. It belonged to *them*.

"The preparations for the marriage have already begun. You should see your wedding dress! This is going to be the most wonderful ritual in all our history." Mary smiled, touched Patricia on the cheek, on the hand. "Of course, it is the culmination of the Church. It ought to be grand."

"I'm sorry I've been so upset. I have a confession to make. After what

happened in June—I'm scared to try again."

Mary hugged her. "My poor darling, I don't blame you, not for an instant. But remember that under normal conditions It can be gentle. And these will be normal conditions. No surprises for either of you. Oh, it'll be a grand occasion, you'll see!"

She returned Mary's embrace. "You're very reassuring."

Mary smiled, pleased by what she assumed to be a compliment. "I'm a faithful member of the Church. And your friend, my dear."

I would like to knock you aside, run through those doors, across that terrace, grab that limb, and swing right over onto Sullivan Street.

I want to be *free!*

But she also wanted Jonathan. Somehow she would have to get to the senior men's wing, find him, and free him so they could both escape together. Woe tugged at her heart when she thought just how hard that would be.

They sat side by side in the deepening dark. Just when Patricia was deciding that Mary was never going to leave, she kissed her on the cheek and stood up to go. "I'm glad you're getting yourself together so well. We need cooperation from both of you if this thing is going to work."

In the distance a gong sounded. Mary moved toward the door. "Dinner. But I think it best that you don't attend Commons just yet. I'll bring you a plate myself."

Patricia looked to the French doors, her heart already beginning to pound with the thought of escape. "Thank you, Mary. I'm really hungry."

She almost burst into tears when Sister Saint John came back the instant Mary left. She was all bright and admiring. "You *are* coming along well," she cooed. Patricia could have choked her.

"I feel much better."

"You must be so excited," she breathed.

That hardly seemed the right word. "Why?"

"I mean, with the wedding in a few hours—"

The words, so unexpected and so shocking, made Patricia literally stagger. Sister caught her before she could fall, and cradled her gently.

A few hours!

Her mind raced along. "But what about Jonathan? Won't I see him again—beforehand?"

Sister laughed. "Not before the wedding."

But she would see him then, before he sank into *monstrum*.

They would have to make their escape from the church before the ritual.

Oh, God, protect us and preserve us!

She looked up past the doors into the dark sky. There was a little patch of heaven there, the moon riding in twisted clouds, the moon so free, the moon so far away.

Chapter Twenty-two

HOLY SPIRIT RECTORY was hidden in a forest of dark trees, only its tall, silent gables rising above them into the moonlight. A weed-choked path led to the front door. Mike had no intention of knocking. After the disappearance of Patricia and Jonathan and his suspicions about Mary, he trusted no friend, not even *old* Harry Goodwin.

He had ceased to trust his own men weeks ago. He had ordered a stakeout of Holy Spirit after the rape—which had been quietly canceled by Max while he was at Lourdes. No results, Max said.

Scratch Max and the whole Sex Crimes Unit for good measure, and God knew how many other cops. There must be something damned appealing about the Night Church to bend decent people the way it did.

He intended to carry out the rest of the investigation alone. At least he didn't have to worry about loyalties. He was on the side of the little guy, the schmuck who got kicked, Mr. Nobody. Outfits like the Night Church were just like organized crime, maybe worse. The Enemy.

He wasn't here for evidence. There was plenty of that in Titus's house. As the days had passed, each person Mike loved had been implicated.

Harry was a fine old friend. More than that, he was Mike's confessor, his priest. But the rape had happened in Harry's church.

Mike had shared his truth, his sins and deepest sorrows with this man. He hated to test him now.

What a luxury it would be to sit across Harry's kitchen table and talk this thing out with someone he could trust. Surely Harry would check out. He was among the very best men Mike had ever known.

Mike looked up to the second floor. Harry's bedroom window was dark. It was ten fifteen and Harry Goodwin was, as always at this hour, asleep. Those six A.M. Masses did it to him.

Rather than try to pick the difficult deadbolt lock, Mike went around the side of the house, looking for a window to enter. It wasn't hard. Harry was hardly buttoned up. All Mike had to do was apply a little force with his fingers and the sash of the office window went up with a dry rasp.

Mike observed thirty seconds of silence, then began the painful and difficult process of hauling himself in. He hadn't climbed into a window in fifteen years or more.

He put his hands on the sill and struggled. His legs windmilled, caught against the side of the house. Then he got a knee over the edge and heaved. The central bulk of his body swung inward, and he landed on Harry's desk with a subdued thud. He had to lie there a moment letting his heart calm down.

The house was silent. By the faint light from the window Mike could see that the door to the hall was standing open. He went over to it. The only sound came from outside, where a restless breeze snatched at the eaves and rattled the windows. Upstairs Harry would be sleeping—if he slept at all. He looked awful these days, nervous and thin and ill.

Conscience-stricken was how he looked.

Mike returned to the office. The Parish Council sometimes met here, the men sitting on the black, vine-carved chairs, some of them smoking the stale

cigarettes Harry always kept in a box on the coffee table. Harry would preside from behind this desk, his glasses gleaming, his eyes as grateful as a dog's. You pitied him, and it made you squirm.

Mike pulled the blinds down and closed them, then closed the door to the hall. He risked a light. If there was any evidence of the Night Church here, it would be somewhere in these records. Mike sat behind the desk and began going through the file drawer. The sections were marked CCD, H. Name, PC, Confraternity, Altar Society, Oil, Insurance, Mscl. Bills, on and on, all the details of parish management. There was nothing suspicious, nothing even a little out of the ordinary. Mike opened first one file and then the next, scanning their contents, lists of names, ideas for sermons, parish bulletin notices, diocesan directives, bills and more bills.

Through all of this desperation one could glimpse the determination of Harry Goodwin. Despite the desertion of his people, he was keeping his parish going, robbing from one account to fill another, practicing every imaginable economy, even to cleaning his vestments himself in the basement, and from the look of some of these bills, not paying for the cleaning fluid. Keeping it going in case his people returned. Or *when* they did. Probably it never crossed Harry's mind that they might not.

He was not getting support from the Night Church, at least not on the surface. Mike scanned the shelf beside the desk until he found the buff-green journal where he knew the parish finances were recorded. It was a simple double-entry journal. No fancy bookkeeping for Harry. He could no longer rely on voluntary help from Catholic bookkeepers in the parish. The entries were in Harry's own spidery hand ... in pencil overwritten with ink.

Mike looked at the endless, meticulous entries for collections, the amounts dwindling steadily as summer settled in and people's air-conditioning bills took more and more of their money. Last Sunday Harry had taken in \$171.29. Paging back through the journal Mike could find no entry so low for a Sunday. It was a parish record, forty dollars below the next lowest figure. But then, just a couple of days ago, there was a stunning contribution, fifteen hundred dollars from the Hamil Foundation, especially earmarked for painting and cleaning the interior.

What the hell? That was the philanthropic arm of Hamil Bank. Did Laurent Hamil have a program supporting indigent parishes? He was certainly a big-time Catholic. His foundation might well be called on in emergencies. Not

too suspicious. But Patricia worked there. Was there a connection between Hamil and the Night Church?

Mike looked at the entry. The hand was a little more spidery, and there was no penciled trial entry. Harry had known the exact amount of this particular contribution.

He closed the ledger. Now it was time to investigate the older parish records, which were in the basement. It was critical to look through the past couple of years. Patterns might emerge. This entry suggested that the Night Church was helping the parish, but it did not tell what Mike most wanted to know, whether Harry was a dupe or a willing partner.

Mike went down the hall past the dining room with its ornate table and wainscotted walls, and opened the door in the pantry leading to the basement. He didn't intend to poke into any dark holes, and looking down those wooden steps made him more than a little nervous. When he saw how the dark down there swallowed his penlight's beam he wished he could dare to get help. But he couldn't. Nor could he just abandon this part of the investigation—it was too important. When you were seeking evidence of payoff or kickback the rule was to look to the time before your suspect perceived the danger of his ways ... then it was usually all laid out neat as a pin. People kept careful records of their sunny days.

Mike had been here more than once before, both as a boy and as a man. There was a wine cellar from long ago, and Harry still had a few bottles of Sandeman's '37 vintage port in it. Harry had brought one up once or twice for some Holy Name celebration or other. How Harry had resisted selling that port. Mike understood why. He needed those evenings with port and cigars and good company to remind him of the importance his church had once enjoyed among men of power, and to give him leave to dream.

Mike descended the stairs quickly, his penlight beam bobbing on the steps. He crossed the floor . . . and was interested to note that there was a great deal of dust. Good. Nobody was worrying about the old records as yet. Maybe Mike was finally a step ahead.

His light danced as he swung it around, revealing steam pipes, rusty electrical conduit, dark old beams, cobwebs, and shadows behind shadows.

The journals were in a bookcase that sagged against the far wall. As Mike moved toward it he noticed a great crack beside the case. Dank, earthen air drifted out. Deep sounds seemed to come from it, of machinery throbbing,

Probably led to some old drainage pipe that communicated to the subway out on Queens Boulevard. Mike peered into the hole, flashing his penlight into blackness. As he painted his light along the walls there was a sound of rustling movement. A shadow made Mike jump back. Something the size of a dog seemed to be scurrying toward him. But that was absurd; it was a rat tricked large by the light. Mike shook his head. Harry's rectory was literally crumbling into the sewers. He reached out to grab the last three or four journals and get the hell out of there. His motions were too quick; when he brushed matted fur he jerked away.

Lightning flashed as his head knocked into a cold steam pipe. He sank heavily to the floor, cursing, holding his head, his penlight rolling crazily away. That light was sanity and protection. Despite his throbbing head he lurched after it, grabbed it, and cradled it like a candle in his cupped hands. It was still working, thank God.

He had to get himself together. This was the sort of clumsy lack of professionalism you expected from a wet-pants rookie. He scrambled to his feet and scanned the bookshelf with his penlight.

The journals went back to the turn of the century, year by year, all neatly numbered in gold embossing. Mike took down 1963, 1971, and 1975. That ought to be enough, and long enough ago for any records of connection between the day and night churches to be clearly indicated.

Mike sat down on the bottom step with his penlight and began reading. He found nothing of interest in 1963. By 1971 every third or fourth month ended with red ink. The records for 1975 told a more somber story. Now the red ink was constant.

In April of that year the Hamil Foundation had kicked in twelve thousand dollars, earmarked for restoration of the portraits of the apostles in the dome. Mike remembered the scaffolding. Father had said the apostles were being revised to fit the discoveries of modern scholars. Afterward they did not look inspired anymore. Now that Mike thought about it, they looked ugly. In July the foundation had donated new pews to add seating in the wings.

Additional seating in a dying parish?

Mike took down 1977 and 1978. January of 1977; \$9,712 from the Hamil Foundation to soundproof the windows. July of that year: \$1,270 for three hundred folding chairs.

Soundproofing and folding chairs? It was eerie, to find the records of the growth

of the Night Church this way, so hidden, yet so obvious if you knew the basic truth that it existed.

Mike replaced the journals. All this foray had done was to confirm what he had discovered upstairs. The parish received regular contributions from the Night Church. But what about Harry? The answer to that question wasn't here after all. It might lie somewhere in the records of the Hamil Foundation, and might even be located—given a few years of investigation. But the quicker route to the truth lay in a direct confrontation with Harry Goodwin. "Old friend," Mike whispered into the silence, "don't join the guilty. Be different."

Using his much abused penlight Mike made his way back upstairs. He paused in the front hall. He hated to do it, but he was going to have to play one hell of a rough game with Harry. "Hey, Harry," he bellowed, "wake up and get the hell down here! Come on, Harry, get moving!" That would scare him thoroughly, get him good and vulnerable to unexpected questions. He unholstered his pistol.

From the distance there came hurrying feet. Then the hall was flooded with yellow light and the tall figure of Father Harry Goodwin came gangling down the stairs wearing grayed pajamas under a raincoat liner.

"At least you remembered that pistol I gave you," Mike said from his position in the doorway. As he had known it would, his voice caused Harry to throw up his arms, and in so doing to hurl the little twenty-two almost to the ceiling.

"Mike Banion!"

"Good morning, Harry." Mike did not put his own pistol away. Not just yet. "We have to have a discussion."

"Yes, Mike, certainly. By all means!" He was staring at the pistol. "Mike?"

"Let's go into the office, Harry. It's a couple of degrees cooler."

"I don't use the air conditioners. Out of the question."

"I understand." Mike followed the stooped, shaking man.

"Mike, you're pointing your gun at me."

"Yes."

His eyes were awful in the grim light of the office. With absurdly clumsy hands he put on his glasses. "Now," he said, "please, Mike, tell me why."

Best to get right into it. Make him think his interrogator knows more than he really does. "How well are you acquainted with Franklin Titus Apple?"

"Oh!" He blinked furiously. "Hardly at all, Mike. And you should use the past tense. He's dead. I buried him in July." He looked again at the gun. His

eyes were practically popping out of his head. "What is this about?"

"It's about you and Apple. Or Titus. The Apple is an alias. You'll be happy to know he isn't dead at all. You buried another man. A very old and dear friend of mine." Mike stared hard at the priest. "I want to know about your financial relationship with Titus."

"I don't understand, Mike." There was hurt in his voice.

"Let me try another approach. How much does Mr. Titus pay you to let his congregation use Holy Spirit at night?"

"What do you mean, Mike?" The tone pleaded.

"The Night Church. *Surely* you know of it?"

He shook his head. His eyes were frightened, his lips slack. Mike put the gun away. When he did so Harry blinked.

"You're innocent, you darned fool! Aren't you?"

"Well—I must be—I suppose—what Night Church?"

"Good God almighty! Harry, we'd better get ourselves some coffee made." The old priest stood up, his eyes still wide, his mouth working. Mike clapped him on the shoulder. "Come on, Harry. I'm afraid I have some bad news for you."

Mike found the old-fashioned circular toggle switch that controlled the kitchen lights and turned them on. "Our second bad-news night," Harry said. "We mustn't make them a habit."

Mike didn't answer. He put the kettle on and got out the jar of Folger's Instant, pulled a couple of chipped mugs off their nails "Harry, I think you might be one of the few priests ever to learn this—" The kettle whistled. "Excuse me." Mike made them their coffee, took a swallow from his cup. All these delays were intentional. He wanted to observe Harry. Maintaining an impression that he was in suspense was one of the most difficult things for a man to do. But Harry squirmed. He wasn't having any trouble at all, poor guy.

"My word, Mike, this is strong. What are you going to tell me—my church has been declared off-limits to Catholics? That I know, believe me."

"What I've got to tell you is that your parish is being used by a group called the Night Church. Mr. Titus, known to you under the ridiculously inoffensive alias of Mr. Apple, is their leader. They meet in your church in the small hours. They are probably the most vicious group of people you or me or

anybody else has ever heard of."

"In my church?"

"There are hundreds of them. They must fill the church when they come, and they do that often. During one of their rituals, Patricia Murray was raped."

"But I often wake up at night. When I check my church it's always empty."

"Oh?"

"These people are using my church?" His voice sounded hollow. "Mike, are they desecrating my altar?"

"What the hell do you think, Harry? They practically tore Patricia in half on your altar!"

Harry reacted to Mike's words as if they were actual blows. Mike knew this was going to destroy the poor old guy in the end, no matter what happened now. The whole sense of Harry Goodwin's life was being extinguished.

"You say that the people attend these rituals? My Catholic people—the ones who don't come to me anymore?"

Why lie to the man? To do so would be to disdain him, and Mike did not treat his friends with anything less than respect. "I suspect that they fill the church."

Harry closed his eyes. His face screwed up into such pain that for a moment Mike thought he was having a coronary.

At last he let out a long, ragged gasp. He stared at Mike through devastated eyes. His hands were shaking so badly that he could hardly get his coffee cup to his lips.

"We're going to get rid of them, Harry."

Harry Goodwin continued to stare.

"Harry?"

There were perhaps words, but Mike couldn't understand them.

"Tonight it's going to be different. They are probably going to come here, and I suspect they will have Patricia with them, and Jonathan too. I haven't been able to get in touch with the kids all day. That tells me the Night Church has them, and it's going to do its business with them. But Mike Banion is going to be waiting for the Night Church. And I am going to break it into little pieces."

In the absolute silence that followed Mike could hear the priest's tears dripping onto the oilcloth tabletop. It was as desolate a sound as he had ever

heard, in a life that had witnessed all the kinds of grief there were.

Harry Goodwin bowed his head. In the grim light Mike saw that speeches weren't going to help him. It was too much. The priest was still breathing and thinking and living, but inside him everything important was blowing to dust. The words from the Funeral Mass came to mind:

*Man's days are like those of grass;
Like a flower of the field he blooms; The wind sweeps over him
and he is gone,
And his place knows him no more.*

Mike prayed then, a wordless, desperate prayer—not for God's love or His protection, but for His vengeance, that it might roar through the Night Church like holy fire.

"I'm going over to the church now, Harry."

"I'm coming too."

"I know."

They walked across the grassy parking lot to the black and silent building.

Chapter Twenty-three

THOUGH HE HAD entered this old church a thousand times through the seasons of his life, Mike Banion had never approached it as he did now, with the caution of a professional intruder. He was here to investigate, not to pray.

He had no illusions about what he was doing: coming to this place was as dangerous as going to Titus's house had been. A cop would run out of luck if he did this sort of thing often.

From the end of the block the streetlamp cast a dissipated, silvery glow. There was a smell of wet in the air. Perhaps toward dawn it would rain as it had yesterday and break this suffocating heat. The sky was green and dense. New York summers often ended like this, with thick, humid clouds and muttering storms. Wind souged around the belfry and eaves but here on the ground it was stifling.

Mike reached down and grabbed an unexpected object from the grass—a bit of crumpled paper. It was no blessing of evidence, though, only a Junior Mints box. It had probably been dropped by kids on their way home from the Cinemart on Metro Avenue. Mike held it a moment, unwilling to let go of something so comfortably of the known world.

They mounted the worn granite steps to the church. It seemed a hundred years since he had gone up these same steps as a little boy all in white, on his way in to receive his first Holy Communion. The boy he had been waved and shouted, "Remember, remember me!" And the wind blew, and the rain rained, and the aging cop could not deny that there had once been a poet in him, but the damn thing had died.

He put his hand on the knob of the big oak door. Unlocked, of course. No matter how he was told or who told him, Harry was never going to lock his church. Very, very slowly, Mike turned the large, cold knob. It was well oiled, and obliged Mike by not making a sound. He pulled the door a bare quarter of an inch. There was a single, distinct click, which Mike heard echo through the nave.

"Are they there?"

"Quiet, for God's sake. Just stick close to me, and don't talk."

The priest was one hell of a liability, but he had such a stake in this, he could not be left behind. No matter the consequences, it was his church and he had a right.

If Terry's terrible death had been intended to frighten anybody smart enough to open the grave from further pursuit of Franklin Titus, it was certainly working. Mike admitted his fear. He had come to think of these people as ghouls.

Poor Terry. Whatever had they done to him? The coroner had found evidence of severe infection in the corpse. It had been quarantined pending virological and bacterial studies. One of the morgue guys had said something about plague. Mike thought of the chart he had found in Titus's house. They gave Terry their disease before they put him in the coffin. Now that the chart had been enhanced by the lab, it was perfectly clear that it recorded the progress of an illness so virulent it could kill in minutes.

The church door swung open on absolute darkness. The Spirit seemed empty, but Mike still did not want to go in. The way he saw it, this was as much Mr. Titus's church as Harry's. Maybe more.

The air that came out of the dark interior was dry and had an unexpectedly familiar smell.

"Been doing some painting?"

"No. It hasn't been painted in years."

The smell told a different story. Earlier this evening they must have spruced the place up. How were they planning to hide that from Harry?

Was all as it seemed here?

Harry, old buddy, have you put one over on me? If they feel free to paint, they don't care whether you know about them or not.

Mike felt very isolated, standing here in the black foyer with his old friend beside him.

Your faith matters to me, Harry. You're my damn priest!

He waited for their eyes to get used to the faint glow filtering through the stained-glass windows from the street. It didn't amount to much, but they could see the aisle clearly enough to avoid tripping. Mike began the long journey to the altar rail. He intended to hide in the narrow, dark space behind the high altar against the likelihood that the Night Church would be here

tonight.

Before him he could see the dim outline of the altar where Patricia Murray had been raped—not by some poor screwed-up jerk but by intelligent people in a brutal ritual.

Patricia. Pretty kid. Be a great wife for Jonathan. To see those two at this altar, her in white, him jammed into a blue suit and looking sheepish—the thought was enough to make a man weep.

Wordlessly, because words weren't his way, Mike prayed for the kids. He looked toward the votive candle and was conscious of something so real and true he could hardly begin to understand it. But he loved something about it. The mystery of it, maybe.

He went up to the altar, genuflected toward the looming dark hulk, and made the sign of the cross. He really wasn't much of a Catholic anymore. His faith, he supposed, was like the love of an old divorced man who has long known that the reasons for the split were insubstantial and recalls his partner with wary fondness.

He became cold. The sensation warned him of how dangerous familiar places could be, transformed by dark and fear. Cops got killed as often as not on friendly ground. He could as easily imagine Patricia screaming on this altar as Harry saying Mass here, or altar boys pouring from cruets as blood running.

Progress was interrupted for the moment by an exceptional blast of wind. Tonight's storms were not going to wait for dawn. As large as the old building was, it shook with the force of the gust. He grabbed Father's arm and stood a moment after the noise died down, listening for the extra little sounds that might be made if somebody had used the roar as a mask for getting closer to them.

But there were none of the rustles and shuffles that people made when, for example, they suddenly stopped running.

Harry, however, had made use of the disturbance and the dark. Mike first realized this when he felt a distinct tug at his shoulder holster. He jerked away—and his thirty-eight special ended up in Harry's shaking hands.

"I've got it! Don't move, I've got the gun!"

"Hell, Harry. Give me that thing back. You couldn't shoot me."

"Don't force me, Mike! You stand right there." Harry put a few feet between them by sliding along the altar rail. "Don't come near me. I'm not at

all good with these things. If you startle me it's sure to go off."

Mike was more saddened even than surprised. With the loss of Harry he had only one thing left that was worth risking his neck for. "What about Patricia and Jonathan? What's happening to them?"

"That isn't your business."

The Night Church was just too strong. From the moment he smelled the paint, Mike had suspected something like this was about to happen. Harry marched Mike into the sacristy. "Mike, I'm sorry. There isn't anything else I can do. If you're cooperative they may spare your life. Please, Mike, play along. I've been playing for years." His voice became high and frantic. "They keep my church alive."

"You poor bastard." Even now, there might be some chance. He had always had clout with Harry Goodwin. "We can talk."

"No, we can't. I've already talked too much. Titus knew you were coming here. He even told me the time."

"So you were waiting for me."

"And wishing to God you wouldn't come."

"You're still on the side of the good. I can hear it in your voice. Give me the gun, Harry."

"Mike, please be quiet!"

"I'm your conscience. I can't be quiet."

"Don't try the sentimental approach. I'm finished with that. I don't care how good a friend you are. I've been tangled up in this mess for a long time, and you can't untangle me."

As Harry spoke there was a change in him. When you saw him like this, sharp and mean, you realized what tragedy was all about. "How long?"

"They've been using my church for years. If it weren't for them, the parish would have been abandoned in the seventies." The bitterness in his voice was almost shocking. This was an astonishingly angry man. "What a joke to waste your precious life on a vocation!"

"I want you to give me the pistol. I want to forget I ever saw you pointing it at me. No matter how bitter you are, Harry, you aren't bitter enough to do something so evil to a friend. If you allow the Night Church to capture me—my God, you know, don't you, that they buried Terry Quist alive."

The gun wavered. Harry seemed about to hand it over.

"And that man who died in the fire across the street—Parker was his name

—that was no accident. I'm now convinced they burned him alive because he apparently knew too much. And Patricia—remember what they did to her."

Harry groaned, took a step closer. Mike reached out his hand.

Just at that moment the sacristy door clicked and creaked open. A small, elegant old man in a raincoat and hat hurried in. He removed the hat to reveal a crown of wispy white hair.

Titus.

He smiled. "So our last problem has solved itself. Good evening, Mike. I gather you're here to see me give away the bride."

"Give me the gun, Harry! Now!"

With a growl Titus took the gun, trained it expertly at the center of Mike's chest. "Shall I shoot?" he asked in his soft, polite voice. "Or will you shut your poisonous mouth?"

Mike fell silent.

MOST PRIVATE

To: The Prefect of the Sacred Congregation for the Defense of the Faith

From: The Chancellor for the Inquiry in North America

Your Eminence:

I have prayed day and night over the request made in your last letter.

Is it morally right for me to go into a situation where my own death is a virtual certainty? I wonder. Or is this moral question spurious—a way of justifying my fear? And, Eminence, I can assure you I am afraid.

I keep thinking of Alex Parker and the blowtorch. I know I shouldn't, but I can't help it. The real issue is whether or not I love Christ enough to risk that.

Eminence, I am so afraid. Help me.

Sincerely yours, Brian Conlon

18 AUGUSTUS 1983

FURTIVISSIMUS

Ad: Cancellarius Inquisitionis in Septentrionalis Americanensis

Ex: Prefectus Congregationis Defensionis Fidei

My dear young man, I only wish that I were not so aged and infirm, so close to the end of my time. I would count it an honor to suffer at your side.

Recall the gospel: "In His anguish He prayed with all the greater intensity, and His sweat became as drops of blood falling to the ground." And remember your consecration into the Holy Office, my boy.

You lay prostrate before the altar in the Chapel of St. Paul the Apostle here in the Hidden Collegium just eighteen years ago. Remember the words: "Oh, glorious St. Paul, sword and shield of the Church, consecrate me to the service of our most holy Catholic and apostolic faith. Intercede for me in time of trouble, that I may not shrink from martyrdom, indeed, that I may give my life gladly, as thou gavest thine, for love of Him."

Let me be frank with you. When you asked me for a warrior-priest—a man who would die for love of Him—the only name I could come up with in all the Holy Office was yours.

You, Brian.

You are the last warrior-priest young and strong enough to carry out this difficult mission. All I have here are myself, laid up with my damn stroke, and a bunch of dry old historians.

Brian, it is not my way to beg, but now I do beg as I think Christ wants me to beg. Please, Brian, drink of the cup Christ holds out to you. My dear boy, pray for courage!

Holy Mother Church needs you now, and Our Lord needs you now. And I trust in you. I wish I could give Our Lord an army of Brians!

But all I can offer Him is my last, precious one. Go in grace to your duty. Man will not show you mercy, my son. But God will. You shall have mercy and love in endless abundance, and all the wonders of heaven besides.

I envy you. Paolo

Chapter Twenty-four

HARRY STOOD FROZEN, listening to the echoing footsteps as Titus marched Mike off into the dark. There came a creak of hinges, then the sounds dwindled as the two men descended into the crypt.

"Please, Mr. Titus," he said. His voice was so low it didn't even echo in the empty church. He swallowed. "Please, Mr. Titus, don't hurt him."

There was no answer. From the depths of the crypt there came a loud, angry shout. Mike, protesting whatever indignity had greeted him there.

Mike, Mike. What is the sense of friendship? At our age it is a dance of mourning . . . and remembrance. "Mike, do you remember—oh, Lord, there were great days!" Like the day he had married Mike to little Beth Herlihy. Jenny Trask was organist then, young, dedicated to music, capable of anything from Bach to *Tantum ergo*. She could do a wedding march of rousing splendor.

From the crypt there came a rush of argument, then the muffled slam of wood against wood.

Harry put his hands over his ears, screwed his eyes shut. As never before his church was oppressing him, the ghostly images in the dome mocking his faith, the vigil candle burning like an accusatory eye. He ran from the

sanctuary, and across the muddy parking lot.

He came into his kitchen—and remembered how Beth would make them both dinner while he and Mike sat around that table drinking beer and talking.

Harry snapped off the light, sank down at the table, and wept for his betrayal.

To keep from doing it aloud he bit his lips. His mouth began to taste sharply of blood.

Yes, and who were all the histrionics for? Our Lord?

The traitor deserves a traitor's death. Iscariot, send yourself to Hell. His mind went to his twenty-two pistol. It must still be lying on the stairway where he had dropped it. If he took that pistol and pointed it at his stomach and fired, he would die in deserved agony. Unconfessed, he would sink for all eternity into Hell.

A worthy end for a coward. He went to the staircase. But there was no pistol. Harry moaned. Even his suicide was going to be denied him.

"Do you want this?"

Standing in the doorway of his office was a small, mousey sort of man. Harry had never seen him before, but that meant nothing. The Night Church was well supplied with people. The man held Harry's pistol in his hand. The barrel was trembling.

"I'm a priest," the man said in a rushed whisper. "My name is Brian Conlon." A haunted expression passed across his face, but he blinked it away. "I am here to appeal to you to return to Our Lord, and help me in His cause against the Night Church." He stepped forward into the hall to show himself more clearly. His pants were torn and dusty, his gold-framed glasses were bent. With his free hand he brushed some dust from his suit. He was wearing a Roman collar. "Father Goodwin, I am a secret agent of His Holiness." Beads of sweat, which had been collecting on his hairless pate, began to roll down his wide forehead, making trenches in the dust. He smiled weakly. "I'm a bit of a mess, I'm afraid. I shouldn't have attempted the window."

Harry was far too amazed by the mere appearance of another priest to care about the state of his attire. "You mean His Holiness knows? Rome *knows* about the Night Church?"

"Rome knows. And Rome has sent me to help you."

"Father—Father—" Harry couldn't go on. Hopes he had given up for dead were soaring as they hadn't in years. He simply stood, wordless, trying to keep

himself from breaking down completely.

Father Conlon came and embraced Harry. He was short; Harry found himself looking down at his hairless scalp. Then Father Conlon met his eyes. "Rome knows everything, Harry."

"Even—you know that I'm—" Harry couldn't say it. *A traitor to Our Lord.*

"You're a participating member of the Night Church."

"No—that's stretching a point, isn't it? I never go over there. I just let them use it, you know."

"I know. And they pay you."

"It keeps the parish afloat! Without that money—"

"Yes, I see. Now I know exactly where you stand, Father." He put the gun into his pocket. "We have work to do this night." He glanced at his watch. "The *Rituale* will begin at midnight. That gives us less than an hour. We've got to work fast. Tell me, are they about yet?"

He thought of Titus and Mike in the crypt. "One of them is, and he's holding a friend of mine, a police officer, prisoner in the crypt. I think he's killing the policeman." As he said these last words the utter moral corruption of his own soul was agonizingly apparent to Harry. He was letting Mike die!

"And you're up here, looking for a gun? To help whom?"

Harry could hardly bear to answer. "For me," he managed to mutter.

Conlon smiled wearily. "I see. In your opinion you're beyond absolution."

"I don't want it! Absolution is the last thing I deserve!"

"But you regret your sins—your apostasies, your lies, your sacrilege, your cowardice?"

No man who was free of them could know what it felt like to bear such sins. "I regret them," Harry said. How small, how hollow were those words!

"May Our Lord Jesus Christ absolve you, and by His authority I absolve you from every bond of excommunication and interdict to the extent of my power. I absolve you from your sins in the Name of the Father, and of the Son, and of the Holy Spirit."

For a moment Harry was furious. Then an enormous relief spread through him. He could feel Conlon's words as truly as a tonic in his blood. They filled him, revitalized him, gave him immediate help. And he said, "Amen."

Father Conlon looked up at him. "You're still very much the priest, you. You've just been frightened up to now."

"I can't help it. I'm easily frightened."

"Well, you have another chance to overcome it. Better that than letting a little fear send you to Hell."

"They threatened me with torture!"

"I think we'll both face that, Father. They do torture priests." The haunted expression crossed his face again.

Harry's mind returned to Mike. "We can save my friend. We've got to! They're torturing *him* now!"

"Who, exactly, has captured your friend?"

"A man named Titus. Franklin Titus."

In an instant Father Conlon's face shifted from calm resolution to terrible dread. "Titus! He's *here*?"

"In the crypt."

He smiled ruefully. "Very well, Father Goodwin. I may already have lost my particular battle." He held out Harry's pistol. "Will you be at the wedding?"

"I am being made to officiate."

"Titus and his mordant wit. When the moment is right, I am afraid we have no alternative but to kill the groom. If I am prevented from doing it, you must."

Harry was astonished. A priest, plotting murder?

"I know how awful it must sound to you. But you don't know the alternative. Believe me, this execution will be a great mercy not only for the groom, but for all mankind."

"His Holiness condones this?"

"The Holy Office is empowered to act in defense of the Faith. Believe me, it is a terrible thing when we are forced to such a measure. But we do not shrink from duty."

A sudden movement at the top of the stairs caught Harry's eye. As he turned toward it Father Conlon pressed the pistol into his hand. "Hide it, Harry! It may be our only chance!" Conlon began backing into the study, pulling a pistol of his own from under his suit.

"No you don't, Conlon! Drop it!"

Father Conlon threw his large, black pistol to the floor. At the same instant Harry put his own palm-sized one into his pocket.

A troop of armed men came running down the stairs. "Your priest is lucky, Laurent," Conlon said to the leader.

For a moment Harry didn't understand. Then he did: Father Conlon was gambling that the two of them hadn't been overheard. "Thank God you came when you did," Harry blurted. "He was going to kill me!"

Father Conlon was edging toward the window. "Not so fast," the one called Laurent snarled. An instant later they took Conlon by the arms. He commenced a mild and hopeless struggle. They surrounded him, then picked him up and began to carry him away. His bald head was bobbing between the shoulders of his captors, his feet were rattling against the floor. His glasses were gone. There was a gash under his right eye.

"Come with me, Harry," said a voice from the dark. Harry knew it at once: Titus, back from his business with Mike.

"Yes. I'm coming." The pistol felt enormous in his pocket. Surely Titus would see the bulge.

Titus led him through the dark rectory. "That man will burn to death, Harry." They went across the dusty living room, into the overgrown rectory yard.

Harry followed him as if in thrall. Those three words kept echoing in his mind: *burn to death, burn to death, burn to death.*

He saw the young people stuffing Father Conlon into a car. Even with the windows closed his shouts could be heard clearly. "Sounds like he's been given the bad news," Titus commented mildly. Again and again, in a frantic, breaking voice, Conlon called "Je-e-sus! Je-e-sus!" Then the big Mercedes drove away.

"Conlon knows what a hard death is like, Harry. Do you?"

"Yes, Mr. Titus, I do."

"You agree very quickly, for a man who has just been proselytized by the Inquisition. Tell you what, Harry. You go down into the crypt. See what you can do for your friend." He smiled distantly. "You had best be loyal to us if you don't care for hard deaths." The smile broadened. "Go on. Mike needs a friend right now."

With a toss of his head Titus disappeared into the sacristy. Harry wanted to do anything but continue with this horrible mission. Gingerly, afraid to do it but more afraid of Titus, Harry lifted the storm door that led into the crypt.

Chapter Twenty-five

THE SAME BLOW that had knocked Mike unconscious had also given him a pounding headache, which woke him up.

He heard music. Church music. "*Aeterne rerum conditor noctem diemque qui...*"

It was very beautiful, being sung by a children's choir. But so far away. He could barely hear them.

"... *regis et temporum das tempora . . .*"

He wanted to hear more. When he tried to get up he was hit a flaring blow in the center of his forehead. He lashed out with his fists and encountered sides and a top.

What the hell was this? They had put him into a box. the box was lined with satin upholstery.

A coffin.

Just like Terry! He sucked air frantically. He beat on the top, he squirmed, he kicked.

Then he stopped. He started taking controlled breaths, trying to quell the panic. If he was going to get out of here he had to do some very clear thinking.

Before they had put Terry in his coffin they had infected him with a disease. Was Mike also sick? He took a deep breath. Lungs clear. And he didn't feel feverish. The only thing that hurt was his head.

He remembered the expert way Titus had pistol-whipped him, a single stunning blow to the side of the head.

He didn't seem to have anything else wrong with him. Then it occurred to him why they hadn't infected him. They already knew their disease worked from trying it on Terry.

They wanted this to be as slow as possible.

It was already awfully hard to breathe. How long had he been unconscious, innocently breathing up his little bit of air? Not too long or he'd be dead. Not a lot of air to begin with.

Okay, guy, let's give this one hell of a good try. He braced his hands against the head of the coffin. Then he kicked with all his might against the foot. The whole thing quaked, but it didn't even begin to give way.

Goddamn!

He spent half a minute in a losing effort to catch his breath. No matter how deeply he inhaled, it helped less each time. The air in here stank. God, it stank.

He was suffocating in his own bad breath.

"Help!"

Silence.

Thank God he had heard that singing. At least he knew he wasn't actually underground.

"Come on, out there, have a heart!" He took gulp after desperate gulp of air.

This was the end. In a few more minutes Michael Banion was no longer going to exist.

He stopped trying to get out. That was not going to work. And he stopped bothering to call. Nobody was going to help him.

He had other things to think about now. This was death. He tried to remember what he was supposed to do at this point. The main thing was an Act of Contrition.

But he couldn't remember the damn Act of Contrition! It was a long prayer, and he hadn't said it in years.

He panicked again, afraid that not even God was going to help him. The frantic physical torment of air hunger overcame him and he drummed his feet and slapped at the top with his hands.

Then he opened his mouth. He began gagging and gasping. Somewhere his mind turned over a page. He couldn't remember the Act of Contrition, but

Sister Louise had paddled him into the *Confiteor*. He began praying in a loud voice, hoarse with the bad air. "I confess to Almighty God, to blessed Mary ever Virgin, to blessed Michael the Archangel, to blessed John the Baptist, to Holy Peter and Paul ... all the saints!" Take a breath, take another, take another. Wow, I'm flyin'! I hurt like hell but I'm flyin'. "Sinned in thought, word, and deed, and what the hell's the rest? Oh, yeah— through my fault, through my fault, through my most grievous fault—oh God hurry up this hurts!"

Come on, damn you, die.

I'm gonna be like, like—

Sunken eyes, lips stretched away from teeth, stinking like hell, and fingernails embedded in the lid.

Poor old Terry.

Poor old *met*

Everything went, finally, all the discipline and fight of a lifetime as a policeman. Only the scratching, screaming animal remained.

He kicked and kicked and kicked and his blood pounded in his brain and he gasped until his throat was raw with his own expelled gases.

When they left her alone in the bride's room Patricia's heart leaped with hope. She had been guarded every moment back there, and had come out here in a limousine with Mary and Letty and Jerry. Maybe this would be her chance. But when she looked around and saw the barred windows and heard the lock click behind her, she could only feel the tightness of frustration in her throat.

Although as secure as a prison cell, the room was pretty. The floors were sumptuously carpeted with a Persian rug depicting a wedding. Ancient brass floor lamps gave off warm, yellow light. A spray of roses graced the delicate antique table in the center of the floor. There was a dressing table for the bride, completely stocked with makeup and perfume of every scent.

Patricia went to one of the leaded-glass windows, wondering if she could squeeze between the bars. They were newly installed; she could tell that by their shine. And they were bolted directly into the walls, not into the window frame. They were also hopelessly close together.

Despite all her efforts to be calm and to seem cheerful to Mary and the others, they had not let down their guard. This was the longest time she had

been alone since the capture. They had been very sweet to her. They had also been very careful.

"You are our Princess," they had told her.

She had smiled and accepted their homage. But inside herself she clung to the thought that she could be so much more than their toy, she could be a real wife and make a real home for Jonathan. She thought bitterly, *I can* be a human being!

She kicked the table—but not hard enough to upset the roses. Then she slumped down at the dressing table. The face staring back from the mirror was so very beautiful, even in its pain, that she was rather startled.

Beautiful mutant.

"Hello, dear. We've got to start dressing you. There's barely half an hour left!"

How incredible that words said so cheerfully, by as lovely a woman as Mary Banion, could hold such dread.

First they had taken Jonathan's belt and shoelaces. Then they had put him into a straitjacket. When he had realized how completely his suicide would ruin their plans he had become almost frantic to do it.

They watched him every second.

An hour ago ten of them carried him down to a waiting van. They brought him out here trussed to its seat. Five guards came with him.

He lay now in his straitjacket against the wall of the sacristy, trying to find some new trick of suicide. He had pleaded with Jerry Cochran and with Uncle Franklin. "Don't you understand what I am? A monster! And I'll breed a race of monsters!"

They agreed. In fact, that was the whole point. "They will be in the image of Satan."

"They'll be horrors! They'll destroy everything beautiful and good in this world!"

Uncle Franklin had at that moment done something that had chilled Jonathan to the depth of his being. Very deliberately he had leaned down and smiled beatifically into Jonathan's face. And he had whispered, "I know."

Jonathan had screamed to the others to listen to him. Uncle was evil! He was himself something out of Hell—he *must* be! Something foul, something supernatural. Please, please listen.

He is trying to give this world over to the demons!

Jonathan began to shout yet again. "Please listen to me! Please, please, please listen!"

But they didn't listen. They went on preparing to mate their goddess with their god.

There came a sound of footsteps on flagstones. Somebody was approaching the coffin. Then there was a desolate sigh just outside. The wood creaked. Somebody had knelt down and leaned against it! "Since Almighty God has called—"

"Harry! Oh, God, it's you! I *knew* you'd come if you could! Listen, I'm dying. I've got to get air."

"Mike, you're alive!"

"Air, Harry. Get me air, air!" Mike felt desperately along the seal. His mind flashed again to the coffin key in Titus's living room. "Is there a key?"

"Key?"

Now, that was confused thinking. Harry wouldn't have any keys to this thing. "Harry! Harry!"

"Oh, Mike!" There was a great clattering.

"Hurry!"

"I can't, it's too strong."

"What—were—"

"I'm hitting it with my shoe!" There was another burst of noise.

"No. No." He was drifting into unconsciousness, falling down a well.

A tiny hissing sound brought him back from the depths.

"Mike! Say something!"

"Upend the damn thing and drop it! That'll break it open!"

There came a creaking, scraping sound and a great deal of labored breathing. Slowly Mike's position changed. Soon he was struggling with the fact that Harry had lifted the thing feet first.

Then he dropped it. There was a tremendous, bone-jarring crash.

God love that old priest, was the lid actually loose?

* * *

People were coming and going in the bride's room, bridesmaids with their dresses and makeup cases, sisters with ironing boards and needles and thread, making last-minute adjustments. Letty and Mary fussed over their Princess, who smiled as best she could, despite the ashes in her heart.

Her mind in its desperation had fixed on the notion that Jonathan might rescue her. He was so clever, surely he would succeed where she was failing. He would find a way to get both of them out.

"Now, my dear," Letty said with great self-satisfaction, "we have something to show you!" She put a large white box on the table with the flowers and opened it. Inside was the most extraordinary dress Patricia had ever seen.

It was sewn entirely of spider-web lace worked with pearls. Tiny diamonds made the collar and cuffs glitter. An emerald belt, green to match her eyes, lay folded on top. Mary drew the dress from the box and held it up. It was purest white silk, the delicate strands worked into flourishes and sweeps of subtle design.

Then she saw the design. She choked back a scream. On the dress, depicted in lace, were bodies struggling in fires, bones and skulls, and grinning devils.

"Feel how light it is! The whole thing doesn't weigh a pound."

Patricia held out her hand, touched the gossamer fabric. "It's very light."

"The dress is over six hundred years old. It was made at the height of the Middle Ages. It's been in the family all this time, waiting for you. It's been worn only once before, during the *Rituale* at Salisbury Cathedral in 1334."

Out of the madness and desperation of the medieval world they had brought this terrible artifact. It was as if the rotted fingers of man's mad past had reached out and clutched her. They were smiling at her. All the bridesmaids were watching. She strove for a steady voice. "It's an inspiration."

Her mind was totally concentrated on Jonathan. Memories of him, desire to see him again, hope of escape. But she dared not even ask after him for fear her tone would betray her.

They had to get careless for a few seconds. They just *had* to! And if they didn't, then he had to come to her and take her away. Nothing else could be allowed to happen. Because if there was a *Rituale* then he would become the

monstrum.

That must not be!

Mary gave her an excited little peck on her cheek. "Before you put on your makeup. For good luck."

Patricia looked down at the awful garment in her hands. A lace skull smiled up at her.

This had never been intended as a wedding dress. It was a shroud.

"Jonathan, you might as well accept your situation. You aren't going to get away," Franklin Titus said.

"Maybe not."

"And we won't give you a chance at suicide."

Jonathan did not reply. That was his one hope.

"I really feel terrible about this. If I had known what it would do I never would have tried the hypnosis. You're pitiful now, son. I find it most upsetting to see you this way."

"You're evil. I'll never stop fighting you."

"If you don't cooperate tonight things will turn out far worse than they did in June. Should the insemination fail because of your resistance I will not stop you like I did in June. This time I'll let you kill Patricia."

Jonathan fought against the straitjacket; he spit at Uncle Franklin and cursed him. "I don't want to hurt her! I mustn't be allowed to hurt her!"

"I agree. Which is why you must cooperate."

"Get away from me!"

"The wedding is going to start in ten minutes, son. You might as well reconcile yourself to that fact." He turned and walked away.

"Don't do it to me! Don't, in the name of all humanity!"

His uncle said something to Jerry Cochran. Jerry came over. "You're disturbing the congregation, Jonathan," he said in an embarrassed tone. "If you can't be quiet we'll have to gag you."

Jonathan became silent. Gagged, he would be helpless even to warn her away. He began to realize that this terrible ceremony was probably going to happen just about as Uncle Franklin wanted it to happen.

He hoped, he prayed that he would somehow manage to be gentle with her.

A great, booming note resounded from the choir loft. The ritual had begun.

By pressing his mouth against the crack that Harry had made and sucking furiously, Mike could get a little air. As he drank it in his whole body seemed to come alive with tingling relief.

The next thing he knew there were fingers in his mouth. Harry was trying to reach in and widen the crack. Mike forced himself to turn aside into the foul air of the coffin. Harry strained. Suddenly a loud snap brought a flood of cool, delicious breeze. Mike found the damp concrete smell of the crypt delightful.

Then Harry's arms were around him, lifting him. "Mike, Mike!"

"I made it. I'm alive."

Harry embraced him. "Thank you, O heavenly Father."

Mike saw a long piece of tubing curling down from the broken coffin lid. He took it in his fingers.

It had been leaking a trickle of oxygen into the coffin all along. "What the hell—look at this, Harry."

"What does it mean?"

"They were feeding me just enough air to keep me alive!" He stood up, examined the mechanism of torture. An oxygen tank, its valve set just to bleed. This was perhaps the most hideous torture he had ever heard of. They could have kept him at the edge of death for a long, long time. "No wonder I didn't die. They didn't want me to."

"But they must have. You're dangerous to them."

"Oh, they were going to kill me, all right. But not soon. The point is, I would have lingered in there, slowly suffocating, until they decided to cut off the oxygen."

"Hours?"

"Maybe days."

Harry hugged him again. "Let's get out of here! We can run! Your car's outside, we can go over to the precinct! We'll be safe there."

"Who knows where we'll be safe. What about the kids?"

Harry closed his eyes for a long moment. "I'm due upstairs in a few minutes. I'm supposed to marry them."

"And I have to rescue them. Somehow."

Harry dug in his pocket and came up with what was to Mike a fist-sized chunk of gold. "You gave me this, Mike. Maybe you can put it to better use

than me."

Mike took the little pistol. "Thank you, Father." Mike hefted the weapon. Good for head shots. He and Harry walked together across the crypt, to the spiral staircase that led up to the sacristy. From the top of that staircase light shone down. There were excited voices. "I don't want to do this, Mike."

"You go up there. If they miss you we'll both end up getting caught." To reassure Harry he smiled. "And don't blame me if the wedding doesn't come off quite as planned."

"I hope it doesn't, Mike. I hope to God it doesn't."

"It won't."

Chapter Twenty-six

THE ALTAR RAIL seemed very far away, a dim white line at the end of the long stone aisle. Beyond it was the dark, ugly bulk of the altar.

The sacrificial stone.

"Do you see him?" one of the bridesmaids whispered.

Her heart began to flutter. *See him?*

"Look—he's just to the right among that group of acolytes."

She saw that noble head, those delicate features. "Jonathan!" His eyes met hers and there was lightning between the two of them. Through all the pain and horror of the moment their love shone clear.

Then she was running down the aisle. Footsteps pounded behind her. She was halfway to him before the bridesmaids managed to stop her. "Not too fast," one of them said. "We have to wait for the music. This is supposed to be a procession."

Standing there in her delicate shroud, captured again, she cried.

The flower girl in her white taffeta dress slipped around Patricia. The procession was reorganized.

Mary, standing behind the bridesmaids in the ranks of nuns, called up to the choir loft. "Very well, Mrs. Trask, I think we're ready now." .

The most beautiful, ethereal music began. Patricia recognized it as Bach's "Sleepers, Awake," from one of the cantatas. Sleepers awake, indeed. They had lost their chance for that. The two of them were doomed to carry out the living nightmare of the ritual, and nothing could intervene.

Her flower girl began moving forward, spreading rose and gardenia petals. Patricia followed, her heart full of the most exquisite anguish. She felt the weight of the procession behind her, the six bridesmaids, the deaconesses in their dark-red silk festive habits, the common sisters in then-white ones. Behind them came the children of the Titus School, the girls in blue dresses, the boys in tuxedos. And the pews were filled with the whole congregation of the Night Church, resplendent in the dim candlelight in their jewelry and fine dresses, their tuxedos and gleaming studs.

"Patricia!"

She heard him cry out, quite clearly. The music got louder. There was a stir around him. He was entirely surrounded by acolytes. She could no longer see him.

"Run!"

Her bridesmaids began pressing her from behind. "I can't, Jonathan!"

He screamed then, an awful, wild, trapped sound that made her scream too. It reminded her of the sound of a rabbit dying in the country night, crushed in the coils of a king snake.

"Please don't do this," she wailed. "Please, all of you, listen to me! This is evil, it's terribly wrong! Don't any of you understand? Don't you realize it? You must!"

The music swept along, so gentle, so intensely sweet.

Then they reached the altar. The music stopped.

Mike had gone up the winding stairs from crypt to sacristy with the utmost care, pausing in the shadows behind the half-closed door. From here he could see most of the sacristy and an edge of the sanctuary beyond. He had watched Harry vest and go out into the sanctuary behind his retinue of altar boys. Titus and his own retinue of six of the quietest, best-behaved acolytes Mike had ever seen remained behind. Even so one or two of the boys amused themselves by swinging their censers at one another. From time to time Titus would snap at them.

Why the hell didn't Titus get moving? As long as he remained where he was, Mike was stuck here.

One of the boys took a quartz wand about ten inches long from a little black case. He handed it to Titus, who began examining it carefully and wiping it with a bit of felt.

Outside the wedding started. Mike could see Father and Patricia clearly, but where was Jonathan? He must be among the crowd of men off to the side. Some marriage, when the groom has to be held by force.

"At the beginning of creation God made them male and female; for this reason a man shall leave his father and mother and cleave unto a wife, and the two shall become as one. They are no longer two but one flesh. Therefore let no man separate what God has joined."

Harry's voice was quick and strained. Titus had noticed it too; he grew as

still as an interested snake.

"Now he enriches you and strengthens you by a special sacrament so that you may assume the duties of marriage in mutual and lasting fidelity. And so, in the presence of the Church, I ask you to state your intentions."

A horror that made Mike's skin crawl and his heart beat thick and slow came over him. He remembered the picture of the dying monster he had seen in Titus's library. To create anti-man a human being must become like that poor, destroyed thing.

To twist and contort and bulge with whatever crazy drugs or trances they used, until you became—

Dear God, poor Jonathan! Poor damn kid! No wonder they've got him trussed up like a hog in a slaughterhouse. *He's* their damn monster!

His dream! The poor kid, he *was* guilty all along just like he thought. What a damn sad, terrible thing! And he told me, he *told* his dad he was guilty! He was begging for help and all he got was a pat on the back. I can be goddamn thickheaded!

Tears were blurring his vision. Poor kid was crying out for help and his own dad wouldn't believe him.

Oh, Christ, help him! Her too. Help all three of us!

To the core of his soul Mike wanted to rush out there and stop that wedding. But he couldn't, not while Titus was between him and the altar. Among so many people his only chance, and a slight one at that, lay in achieving absolute surprise.

The old sorcerer waited in the wings. And the wedding went on.

Jonathan had struggled so hard to break free that he was becoming exhausted. They had gagged him after he had tried to call to Patricia. Despite his hopeless situation he strove against the straitjacket, frantically chewed the gag.

"Patricia and Jonathan, have you come here freely and without reservation to give yourselves to each other in marriage?"

Jonathan wanted desperately to tell her that he loved her, that he wouldn't hurt her as long as there was a particle of humanity left in him. But the gag was a skillful one. It went all the way down his throat. He could barely groan.

"They have," his mother said in a firm, clear voice. Father Goodwin looked

as if he wanted to disappear into the floor.

"Will you accept your issue lovingly from God, and bring him up in the law, Patricia?"

"No! Not unless I hear Jonathan say he wants to marry me. And you won't even let him talk!"

"She will," Mary said. Jonathan begged God to stop his heart, to somehow preserve Patricia from seeing what was inside him. How he longed to spare her that!

Twisting, grinding into her, crushing bone and flesh, listening to the piercing ecstasy of her screams.

"Since it is your intention to enter into marriage, join your left hands, and declare your consent before God and His Church."

"Their hands are joined in spirit," Mary said.

From where the deacons had forced him to crouch down among them Jonathan could just see a bit of his mother's face. He looked at it with utter loathing. That was not his mother. He considered Mary Titus Banion dead. The body might be walking and talking as if she were alive, but the human being inside was dead. By loving Satan Mother had committed suicide.

I want to be dead too. I want to be dead!

But he was far from dead. In fact a new life was beginning to stir within him. Even as the wedding proceeded a strange, low hum began under the soaring music of the organ.

The hum got louder, and as it did Jonathan began to feel more and more and more *ANGRY!*

Patricia could hardly bear the bone-jarring sound that had replaced the organ music. It hurt her ears and stirred her deepest senses to loathing. Her bridesmaids took her by the arms. When she felt their strong hands on her she had a wave of panic. Not ten feet from here she had knelt while It strode to her across the sanctuary. She had broken her rosary, and listened to the beads scattering in the dark.

Altar boys began dousing the few candles, leaving only the vigil candles in their cups and the unwinking red of the votive candle.

God, give us light!

Altar bells began jangling, dozens and dozens of them in the dark. The

music boomed to a crescendo. The sisters and the schoolchildren had filed into the pews. Patricia was surrounded only by her bridesmaids now, and the deaconesses.

All heads turned to the back of the church. A gaudy and amazing procession, far different from the wedding party, was starting there. Acolytes carried bejeweled invert crosses, blood red. Behind them deacons held aloft banners of richly worked silk depicting magical symbols, pentacles and six-sided stars and rings in rings.

Behind them all came Uncle Franklin, wearing vestments of material too dark to see in the gloom. On his bishop's miter there romped a serpent that called up in Patricia an emotion so strange that it didn't even have a name.

She felt as if swarms of miles were crawling over her body. Her skin became so sensitive that the dress seemed as if it were made of fire. "No! Please, no!" Her bridesmaids were close around her, holding her in strong hands.

The acolytes went left and right along the altar rail until finally Uncle Franklin arrived face to face with Patricia.

"At last," he murmured. His dry old hand came up, touched Patricia's cheek. She bit him. "Ah! Such spirit, you little viper!" He wiped his bloody finger down the front of her dress. "Prepare her, please, sisters."

Jonathan struggled on the floor like an animal. But he was no longer struggling to escape or even to end his own life. He was struggling against the savagery that had been pouring up out of his depths ever since that infernal horn started roaring.

Now something was happening. His guards were moving him. Were they undoing the straitjacket—was there a glimmer of hope?

Yes!

He was more sane than they must realize. Perhaps he would yet have a chance at killing himself.

But then he knew he would not. They had only loosened a few straps to put chains through the loops. He was now standing up just at the gates to the sanctuary, chained tight to the altar rail. He couldn't even bash his forehead against a corner of the rail; the chains were too tight.

Uncle Franklin stepped to the center of the sanctuary. Boys took his miter

and staff. He held up the quartz wand in the dim candlelight.

Patricia was dragged to a spot just in front of the altar. How beautiful she was all in white, her face floating in that wonderful blond spray of hair.

"I love you, Jonathan!"

"I love you! I love you!" All that issued from behind the gag was a faint series of grunts. "I want to be gentle with you!"

I want to break you in half with my power! You'll love it too, you bitch!

Her bridesmaids laid her on the floor of the sacristy. She was tied with silken ropes to four rings that had been fixed there.

For me. She is tied down for me.

He rattled his chains, fighting wildly, desperately. "Relax," Uncle Franklin muttered. "You'll have all the strength you need in just a minute."

The madonna purity of Patricia's skin, the way she was biting her bottom lip as she tried to raise her head enough to see him, began to excite him.

No! I must be gentle with her. It's all we have left. To deny himself the pleasure of seeing her helpless he closed his eyes. His body, his very blood, became a prayer.

The serpent within him slithered faster and faster toward the surface of his being.

The nave was filling with an incense that seemed to mix rare perfume with the odor of decaying flesh. Graves must have smelled thus in ancient times.

"Very well, Jonathan. I shall now dance up your demon for you."

I am the genius of death.

Uncle began by striking the tip of the wand on the altar rail. He held it before Jonathan. "Look!" Jonathan shut his eyes.

But the demand was only a trick to get him to do that very thing. Next thing he knew the wand was being pressed against the center of his forehead. Like a tuning fork it resonated with rich vibrations. They penetrated deep into Jonathan's skull, filling him with the most extraordinary agony.

He could not turn his head. And when Uncle Franklin ordered his eyes to open, the lids rose despite Jonathan's frantic efforts to keep them down.

He could not look away from the spinning, gleaming tip of the wand.

Uncle began moving gracefully back and forth. Such was Jonathan's own concentration that it seemed to him as if everything else had simply disappeared, everything except the dancing, turning body of his uncle and the glittering wand.

Jonathan's stomach twisted and rumbled and almost twisted inside out. He began to gag.

"Get ready!" Uncle shouted. "Here he comes!"

Jonathan's guts began to feel warm, then hot. In an instant he felt as if he were boiling alive from the inside. Almost driven mad with the clawing torment, he shrieked and shrieked. He knew that he was going to tear off the straitjacket. But it was not *him* doing it, it was the thing within, taking control of his muscles.

He found himself shaking the straitjacket away as if it were tissue paper, rattling the manacles until his wrists were bloody. The torment of the inner boiling had increased his strength a hundredfold.

Then the manacles parted as easily as if they had been made of wax.

When he tried to tear off his gag it snagged on his teeth. He snatched away the thin cloth.

How beautiful she was!

Clumsily, with the newfound gait of a body that seemed an unfamiliar size and shape, he began to go closer to her.

His own part of the ceremony finished, Harry had come back from the sacristy and crept around behind the high altar with Mike. They were hiding amid the orchids and the irises just to the right of the tabernacle.

When Harry saw the horror out there he tore through the flowers and bolted across the altar. He began struggling with the tabernacle, trying to preserve the Host from the astonishing blasphemy being enacted before it. Acolytes promptly subdued him.

The last gesture of a guilty priest.

Mike watched and waited, hoping for some chance to make a move that would matter. He knew only two things— Patricia had to be saved and poor, pitiful Jonathan had to be given the best care that money could buy. He stood glaring down at Patricia like a great *golem*, bellowing as if in agony. He seemed bloated.

Mike noticed something extraordinary about the poor, pitiful kid, something that made his chest hurt with sorrow. Jonathan was standing over that girl literally sweating blood. Actual, red blood.

More and more of it oozed out, covering his body with a red sheet. Then the most awful thing Mike had ever seen began to happen to the only person he

had ever been *able* to call a son.

His fellow human being, whom he loved, started drying and cracking apart. He undulated like a snake shedding its skin. As he did the bloody skin began to separate from dark, scaly flesh underneath. Suddenly he began pulling huge slabs of himself off. He ripped off his chest, throwing the translucent skin to the floor. Then with a grunt he scraped his back against the altar rail and left a mass of flesh there. Fissures formed in his legs and he drew them off, the suddenly hollow skin of the feet collapsing like punctured balloons. It made a sound like the shrink wrap coming off a record jacket.

Even as he did this his eyes began to bulge out of his head. They fell, two dried shells, to the floor. What appeared from within was bright yellow, as big as the eyes of a vulture. Mike remembered similar eyes staring at him from the sky above Titus's house. He drew the rest of his face away with trembling hands. There emerged a snake's face, glaring with intelligence and insane hatred.

In the dead silence of the church Mike could hear the wet "pop" as It drew off the last bit of Jonathan, the hand and skin of his left arm, and tossed it aside like an empty glove. It flexed the strange, gleaming claw that had been within.

Seeing this hideous miracle, Mike was at once humbled and filled with creeping horror. God was not the only power in the universe.

Jonathan began to scream again, but this time it was an awful, crackling sound somewhere between a reptilian hiss and the yammering of a crow.

Mike couldn't bear it anymore. If he had ever seen human suffering, he was seeing it now. Jonathan's heart and mind were in there enduring the torment of becoming that— something. Mike raised the pistol to put him out of his misery.

But he didn't get a shot. There was a flurry of activity around the *thing*. Two deacons grabbed Father and pushed him up against It.

It shrank back. They pushed Father into Its arms again. It twisted away, It screamed, but they persisted. Soon, as if unable to stop Itself, It plunged Its claws into him.

He gasped, he hammered at the bulging, relentless muscles, he kicked the scaly armor that covered the body. The claws sliced his flesh away from his muscles.

Then It threw the agonized, half-flayed priest aside and began moving toward Patricia. Father lay dying on the floor of his own sanctuary.

God, God, why have You let something like this come alive?

Patricia began to cry out, as sharply and desperately as a baby. Mike looked for a good shot but the candlelight and the swiftly moving deacons and acolytes made it impossible. It knelt down beside Patricia and caressed her with one of Its long nails. Then It lay upon her.

She could do nothing to prevent that shivering, crusty body from assaulting her. "Jonathan," she shouted, "Jonathan, remember yourself! You're not that thing, you're a human being and you love me!"

Somewhere in the depths of what he had become, she could see him remembering. It was just a glimmer in the savagery of him, but it was human and it was good. There was a gurgling sound, and something like sorrow began to battle the hate in the eyes.

"Oh, Jonathan, I know you're still there. I love you. I love you! I'll always love you!"

"I—I-I-ooaaahh!" It glared into her face with Its impossibly huge yellow-green eyes. She could not bear to look any longer. She turned her face away.

It began Its awful croaking again. She felt It beginning to move, to twist eagerly against her, ripping the flimsy material of the dress. "Jonathan, darling, if you can still hear me, don't hurt me! Please, darling!"

It grew rapidly more excited. She tried to remain as calm as she could. She could feel It bouncing heavily on her, making her breath come in ragged gulps. Then It was pounding frantically.

But It wasn't hurting her. It was trying to be gentle!

When she opened her eyes she saw on that hideous face an expression of intense conflict. It wanted to hurt her, but It was resisting the urge as best It could.

"Oh, Jonathan, Jonathan!"

The barrel of a pistol emerged past the edge of the altar above her head.

The thing that had been Jonathan stopped moving on her. It raised Its eyes, facing the gun. "P-lease—shuuuhhhh. P-lease!"

For an instant nobody moved.

Bullets went snap! snap! snap! It fell back onto the steps of the altar, thrashed once, then was still.

Pandemonium. Mary's voice, sharp and collected, rose above the general uproar. "Franklin—was there insemination?"

Patricia saw Franklin Titus smile happily. But who had inseminated her—the *thing* or the little spark of Jonathan that remained inside?

Oh, Jonathan, it was you, I know it was! *And it is your baby in me, I can feel it! Not the thing's! No, not that!*

People were screaming, rushing away from the altar and the smoking snout of the gun. Mary and Franklin moved close together, quite unconcerned about the weapon a few feet from their heads. They held hands, the old man and his faithful helper.

"All right, listen to me! Shut up and listen, all of you!" It was Mike. He came around the altar. Patricia's eyes filled with tears. She had never been so glad to see anybody in her life.

He came through the stillness that had followed his shout, and pointed the gun directly at Patricia's belly. "You cut her loose and bring us a raincoat."

A horrified gasp came from the crowd.

Mike cocked the pistol. His eyes met hers. "Do it. Or she dies."

Silence. Far back in the church there was a single panicky scream. "Cut her loose," Franklin said.

Patricia got up on wobbly legs. Mike helped her into the raincoat. He half-carried her across the sanctuary, through the sacristy, and out into the parking lot. His car was there. He put her in, then got in himself.

She was so grateful and so sad and so frightened that she could hardly think, could hardly talk. She sat as still as stone while he started the car and drove away.

This was escape! She should be glad. But she wept bitter tears.

"Let's just try and remember the Jonathan we knew."

"Oh, Mike, he's dead. *Dead!* And I loved him so."

Mike drove on beneath the yellow ranks of streetlights. They picked up speed on the Grand Central Parkway. They were heading west. "Do you need a doctor?"

"He didn't" hurt me. He wanted to but he fought it. You should have seen him, Mike, how he fought himself!"

Mike covered her hand with his own big paw. They reached the outskirts of the city and went into the dark beyond, on and on, toward anywhere as long

as it was far away.

Patricia began to allow herself to think of ordinary life again, of places far from the dominion of the Night Church.

There would be one such place, she felt sure, where she could find peace and safety enough to raise the child.

For there would be a child. And it would not be the child of the monster. Surely Jonathan had preserved enough of himself to defeat the plans of the Night Church—she just knew it, could feel it in her singing blood. A little baby, the precious last of Jonathan.

In his name, she would bear this child.

Mary and Franklin remained behind after their stunned congregation had left the church. "We'll have to tell them," Mary said. "They're in despair."

"Let it be a test of their faith. They'll find out soon enough."

It had all gone so very well. Perfectly, in fact. Well, almost. "Banion drew his pistol before the insemination."

"That was a near thing. I must have given him the autosuggestion at the wrong moment. But there was definitely a complete insemination. She's pregnant. And the father was not Jonathan. The father was the *monstrum*."

"But she believes otherwise."

"Of course. She'll bear the child as Jonathan's baby."

Mary put her arm around the old man. He was stooped, trembling with the weight of his years. The next great ritual of the Church would be his funeral, she suspected, on some moonless night not too far from now. He has come the full distance, and now he is tired.

"I wish them well," he said in his age-soft voice.

"Mike will do an excellent job of protecting her. You can count on that."

He coughed. "I'm exhausted."

She certainly didn't want him to keel over without giving her the last critical piece of information. "Where are they going, Franklin? You'd better tell me."

"I implanted a suggestion of Madison, Wisconsin."

"Name they'll use?"

"Edwards. And her gynecologist will be a young Doctor Jonas. He set himself up in practice last week. A good boy, from the Congregation Saint John Martyr in Milwaukee."

Mary locked the church behind them. The air was cool and clear. The

morning star hung low in the east. "Look there, Franklin. Lucifer."

Hand in hand they gazed at the star of the Night Church. Ordinary people called it Venus, but Lucifer was its proper name, and it was no star of love.

As predawn light spread over the quiet neighborhood Mary noticed an astonishing change around the church. "Look, Franklin, there were demons with us."

"How do you know?"

His old eyes must not be able to see the trees. "The leaves—they went to autumn colors last night."

"So they did. Quite a wonder."

"Yes, a wonder." She watched dead leaves race down the sidewalk on an angry little breeze. How sweet was the world in silence.

Softly at first in her heart Mary heard the plainsong of the Night Church, then heard it rising triumphant from dark and hiding, to fill the world.

Aeterne rerum conditor.

AUTHOR'S NOTE

ACKNOWLEDGMENTS

I would like to thank my editor, Robert Gleason, whose support and skill were essential to the writing of this book.

I am also grateful to authors Robert Bauval, Michael Cremo, Laurence Gardner, Graham Hancock, William Henry, Rand Flem-Ath, Andrew Collins, and many others for their research into lost human history, and to Robert Allen Bartlett, Joseph T. Farrell, David Hudson, Robert Cox, and others for their explorations of the mysteries and path of alchemy, and to so many more whose work has led me to the new vision of the human past and future reflected in these pages.

The pioneering work of Richard Firestone, Allen West, and Simon Warwick-Smith on the catastrophe that struck our planet twelve thousand years ago also informed my story, for which I am grateful.

I would also like to thank Anne Strieber and Paul Canterna, whose expert insights and thoughtful support made this book possible.

Any mistakes or inaccuracies are my own.

Strong evidence exists that planetary transformations of the earth are being caused by highly charged material which has broken into our solar system from deep space.

—Dr. Alexey N. Dmitriev,
IICA Transactions, Volume 4, 1997

WHITE POWDER GOLD

In Greek mythology the quest for the secret of white powder gold was at the heart of the Golden Fleece legend, while in biblical terms it was the mystical realm of the Ark of the Covenant—the golden coffer which Moses brought out of Sinai, to be housed in the Temple of Jerusalem. The substance was said to confer extraordinary powers on the user, including, among many other things, the power to move in parallel dimensions of spacetime.

—Laurence Gardner,
Lost Secrets of the Sacred Ark

And I saw the dead, small and great, stand before God; and the books were opened: and another book was opened, which is the book of life: and the dead were judged out of those things which were written in the books, according to their works.

—Revelations 20:12

PROLOGUE: THE PAST

12:04 AM EST, DECEMBER 21, 2012
TV STATION WBUL, BUFFALO, NEW YORK

Marty Breslin sat at the desk watching the cameras watch him, waiting for his nightly few minutes of local fame. “How’s the remote?” he asked Ginger Harper. They had dropped a number of feeds lately, although not on him, because weathermen normally don’t do feeds. But he was horrified at the idea of being left under the lights with nothing to say. Even when he had something to say, he had nothing to say, so a dead teleprompter was a terrifying thought. “Ginger, come back, please. We do have that feed ready to go?”

“We’re good down the line.”

“Anything unusual actually happening? Anywhere?” There were New Agers out in force around the world, on hilltops, crowding places like Sedona, and swarming by the thousands in Yucatan and Guatemala. Fourteen of them had been iced during a blizzard yesterday on Mount Everest. Even the stock market had gotten quiet today, waiting to see if anything might happen over the weekend. “Hello? Ginger?”

“I was just looking. CNN, quiet. BBC, they’re still on the Himalayas story, nothing fresh on the AP. Joke stories.”

Across on the news desk, Callie and Fred tossed real stories back and forth. They hit the Himalayas, but the big one tonight was a gang riding the highways disguised as state police officers, soliciting bribes in lieu of tickets. “Sounds like a good business,” he said into his mike.

“That it does,” Ginger replied.

He’d tried her a couple of times. No-go. Apparently her marriage was real. Well, it was her loss.

His lights came up. “Thirty seconds,” she said.

“What’re they doing out on the feed?”

“Chanting.”

Fred Gathers said, “And now for the latest on the end of the world, let’s go to Marty. What’s a weatherman doing reporting on a subject like this, Marty?”

And he was on. Magic time. Famous in Buffalo, folks all said hi along the Chippewa Strip. It wasn’t Manhattan, but they had the lake. The teleprompter began to roll. “Our thought was, if the New Agers were right and the world ended, it would be a weather story. As in, none. Obviously, weather post the apocalypse is gonna be kind of quiet.”

“Okay, so it’s after midnight on December 21, 2012. Why are we still here, Marty?”

“Good question, Fred. Tim Burris is on the scene at the Love and Light New Age Spiritual Center in Grover’s Mills, New Jersey. Tim, has anybody been beamed up yet?”

“Over to you, Tim,” Ginger said.

On the monitor, Burris appeared standing in a pool of light surrounded by figures in flowing white robes. Many of them were female, young, and, from what Marty could see, well worth the time. “Man, I wonder if he’s gettin’ any of that?”

“Yeah, yeah,” Ginger said.

“This is Tim Burris in Grover’s Mills, here at the Love and Light New Age Spiritual Center, where I have the Reverend Carlton Gaylord to explain why we’re all still here.”

He thrust the mike into the face of a tall, cadaverous man whose white robe had a gold choke collar. “We are celebrating the moment that the earth crosses the center of the galactic plane for the first time in twenty-six thousand years,” he said. “Nobody said anything about the end of the world.”

But that wasn’t true! *He’d* said it, and on camera. That was the whole point of sending Tim all the way to Joisey. “Hey! We got that clip!”

Tim waited. Nothing happened. He blinked, then continued. “But isn’t this the end of everything?”

Marty said into his mike, “Run the clip, Ginger!”

“It’s not in the system.”

“Aw, fer crap’s sake, find it!”

Burris tried to pull the clip out of the guy. “But you said, uh—we have a

clip—” Oh, so lame. There was a reason he worked in this joke station.

“Ginger!”

“It’s gone!”

“Tell him, he’s dyin’ out there!”

When she imparted the wonderful news, Mary saw his face fall, then set with determination. He tried again. “You’ve been quoted as saying that the world would end tonight at twelve oh one.”

“I said that the Mayan prophecy would come true.”

Crap! Crap! Crap!

“But the world didn’t end! We’re all still here.”

“The end of the world was media hype. You people. All the Mayan prophecy said was that we’d cross the centerline of the galaxy, and we did.” He pulled up his sleeve and glanced at his Rolex. “Exactly four minutes and twenty seconds ago.”

“This is so poor, Ginger, he is eating us for frigging lunch!”

Ginger, her voice tight, said, “Go to the scientist clip, then we’re back in with the forecast.”

They ran the talking head from the university, who explained that astronomers had no idea whether we were crossing the centerline of the galaxy or not, because it was hidden behind dust clouds.

“And we’re out,” Ginger said. “Two minutes on the break, Marty.”

His lights went down. His camera turned off. He tried to control the red-hot rage that was building in him. “That was shitty as hell,” he said, forcing himself not to scream. “I mean, we had that guy nailed down, that’s why we bought el Timothy a ticket all the way to New Joisey, Ginger, hey!”

Ginger was silent.

He knew that there was no point in commenting further, but he could not shut up. “I mean, have you got your professional screwup certificate, Gin, or are you still an advanced amateur?”

“I found the clip!”

He wanted to tell her to stuff it up her ass, but that would be harassment of some damn kind. “How nice,” he said. “Wrap it up for me and I can smoke it after the show.”

“To you in five, four, three, two, one.”

“And the big story tonight is that lake-effect snow, folks, you got that right, we’re gonna get a heavy dose tonight.” And so it went, down to the

bottom of the hour, and they were out. When he walked off the darkened set, Gin was already gone. Far, no doubt. But where else were they gonna get somebody who could run a board for her money?

Later that night, he was hanging on a bar sucking beer and wishing some kind of dealer, any kind, would show up. Then a citizen came in, saw him, and said, “Hey, Marty. No snow!”

That was Marty Breslin. Batting a thousand.

6:36 PM, DECEMBER 22, 2012
JET PROPULSION LABORATORY

Dr. Deborah Wilson pointed to a faintly blinking readout from the Advanced Composition Explorer. “What’s that spike, Sam?”

Her graduate assistant thought perhaps this was some sort of quiz. He tapped the screen, and the ACE II detailed readout appeared. What he saw confused him. It was ordinary for the ion flux from the sun to vary, sometimes by a lot, but not by this much, never. “Let me run the circuits.” What this would do was to determine whether or not there were overloads anywhere on the satellite, or tripped circuit breakers. From there, they could pinpoint the source of the anomaly.

“I’ve done that,” Dr. Wilson said. She was clipped, careful, and very uncompromising. But she had also just told him that this tremendous spike in ions was some sort of real phenomenon, not an artifact.

He pulled up the Solar and Heliospheric readouts. The solar wind speed was 431.5 km per second, the proton density was thirteen. There was a coronal hole at midlatitude, and two small sunspots on the near side. “So this isn’t coming from the sun,” he said.

“Apparently not.”

Energy from deep space, then. It had first been detected in the late nineties of the last century by Russian astrophysicists, but it wasn’t considered a significant factor by their American counterparts.

As he spoke, his voice rose an octave, which he just hated. “But this can’t be.” He cleared his throat.

“Except that it is.”

And there it was, entering the solar system right now, the sudden increase in intensity unmistakable. And his instructor was waiting. “I think it’s a wave of energy from some sort of extrasolar event, perhaps an archaic supernova.”

“Why archaic?”

“Well, obviously, there’s a lot here compared to the normal range of solar

output, but I'd think that a close supernova—that would be, um, even more energetic.”

“Unless we've been in the distant corona since 1997, and this is the leading edge of the real stuff.”

There was something in her voice that he didn't like. He looked up, met her eyes. “You're scared.”

“Supernovas happen.”

“But—my God.” If this was the leading edge of a supernova wave, it could end life on earth. “This isn't possible!”

She reached across his cluttered desk and did something that she had never done before, and, in fact, was probably not appropriate conduct. She touched his hand. She started to speak, then stopped, and her silence said everything.

It was possible. It was quite possible.

However, when their findings eventually became a press release, it didn't exactly cause people to go rushing into churches begging God for deliverance. In fact, the story appeared in *The New Scientist* as a single paragraph. It showed up on Space.com for a couple of days. Various scientific blogs commented on it, more or less in passing.

Still, though, the energy level in the solar system quietly began to increase, and it kept increasing. Nobody noticed that the ion flux had begun to rise at exactly one nanosecond after midnight on December 21.

Nobody would ever notice that, but the story of what was happening to our solar system would grow and grow, until it became the most important of all stories, the greatest story, and, in a sense, the last story.

1

LUCKY BOY

MAY 2020

David Ford had never flown in a private jet before, but it seemed almost inevitable that the superexclusive Acton Clinic would transport its new chief psychiatrist this way. The thing was small and louder than an airliner, but it was also swift and plush, if a bit worn. The sweep of leather was cracked here and there, and the carpet was tight from many steps.

Mrs. Aubrey Denman sat opposite him. She was the board's representative, all angles and desperation, narrow arms, a neck like knotted rope, her face an archaeology of lifts, so many that she appeared to have been transformed into a waxwork of herself. Her laughter was all sound and no expression. She must be seventy-five, maybe more.

The jet was claustrophobic. There was absolutely no wasted space. In the galley, a cadaverous servant in a blue blazer stood at the ready, his eyes emptied by a lifetime of waiting.

She was so rich that she had not only a plane, two pilots, and a servant, but also the plane was working.

So here he was in this really amazing situation, thirty-two years old and moving straight from his psychiatric residency to a good job in a time when there were no jobs of any kind.

"Dr. Ford, I want to take this opportunity to give you a little additional information."

They were in facing seats, knee to knee in the compact cabin. "I would appreciate that very much."

"First, I must apologize about the plane."

"It's wonderful, and I'm so grateful for the ride. It could've taken days otherwise."

"This is a fifty-year-old airplane. The only one I have that works. The newer ones—the electronics are ruined, they tell me."

The sun, of course. Always the damned sun. He noted the implication that she had a number of planes. Extraordinary.

She seemed to brace herself, like somebody bracing for a crash or waiting for an explosion. But when she spoke, her tone was casual, almost offhand. “You do know that Dr. Ullman was the unfortunate victim of a fire.”

Something had opened the position, that had been clear enough. He had not asked, and nobody had explained. “I’m sorry.”

“He was living in the town. Unfortunately, the fire service in Raleigh County has deteriorated. They were too slow.”

It seemed odd to leave information like this to a moment when he was already on his way to the facility, as if the knowledge might have changed his mind. “It was an accident?”

“We assume.”

“Is there anything else I should know? I mean, why are you telling me now?”

“You understand that your quarters will be on the estate?”

“I’ve been told that I have Herbert Acton’s personal suite.”

“Which is one of the most extraordinary interior spaces in this country. In the world, for that matter.”

“That I was told. I’m fascinated. I tried to find pictures online, but—”

“No pictures. We’re not the Donald Trump sort.” She smiled a little. “Mr. Acton met girls in the bedroom you will use. Of course, you’re a bachelor.” Now her face became as hard as flint. “He wasn’t.”

Could she have once met Herbert Acton there? He’d died in 1958. She’d probably been a girl then, a teenager.

She burst out laughing. “It’s just brilliant, you’re going to love it, young man.”

She reached for her drink—they had both been given highballs by the waiter—and as she lifted it to her lips, a blue glow appeared around her arm. She looked at the glow for a moment, then tossed the drink away with a little cry and an electric crackle. David noticed the same glow along his arms, and felt a tingling sensation. He thought, *This thing is about to blow up*, and his heart started racing. The waiter rushed to pick up the glass, blue fire shimmering along his arms and back.

“Ma’am, it’s Saint Elmo’s fire,” he said. “We’ve got incoming solar energy again.”

She looked pained. “We should have taken the car, Andy.”

“Impossible, Ma’am. Too slow, too dangerous.”

David glanced down at what he supposed was the New Jersey Turnpike far below. There was no sign of movement in the long, gleaming snake of vehicles. He said nothing.

She jabbed the intercom. “What does this Saint Elmo’s fire mean? Is it going to cause a crash?”

“We’re trying a lower altitude.”

“I hate these damned solar flares. It’s hideous, all of it. Hideous.” She twisted about in her seat where she sat, a spidery old creature in silk and diamonds. She looked at him, suddenly as intent as a snake.

“Where’s it all going to end, Doctor, do you know?”

“It’ll fade away eventually.”

“That’s one opinion. But perhaps you haven’t seen this.”

She handed him a document in a beige folder. When he opened it, he saw red classified stamps.

“I can’t read this.”

She waved her fingers at him. “You’d better.”

“I haven’t got a clearance.”

“Don’t you understand, David? That doesn’t matter anymore. All of that’s gone.”

The paper was only three pages long, a quick series of paragraphs. It was from the chairman of the National Security Council, directed to the president.

“Where did you get this?”

“Oh, for God’s sake, young man, read the damn thing!”

According to the paper, the solar system was entering the atmosphere of a supernova—information which was hardly classified. Everybody knew it. But then came a more shocking sentence: “The last time we passed through this cloud 12,600 years ago, debris from the body of the exploded star impacted the glaciers. An area of the great northern glacier, the Laurentian ice sheet, was transformed from ice to superheated steam in under a second. This area was as large as Rhode Island and the impact resulted in enormous icebergs being thrown as far afield as New Mexico. A storm of smaller pieces created the million craters of the Carolina Dells.”

Still, he was not surprised by this. Since the publication of Firestone, West, and Warwick-Smith’s *Cycle of Cosmic Catastrophes* in 2006, it had been a

generally known, if debated, explanation for the abrupt end of the Ice Age.

He read on.

“The ice melted so rapidly that the entire North American continent was flooded. In North America, all human life was destroyed. Elsewhere, man survived, and the catastrophe gave rise to all of the world’s flood legends.”

He looked up. She had knocked back his drink. She regarded him out of shadowed, appraising eyes.

“Does any of this ring a bell?”

“Sure. It’s one of the theories about why the Ice Age ended. Why it would be classified, I can’t imagine. It’s been in the news for years.”

“Read on.”

“As our last advanced civilization was being destroyed by the upheaval, scientists made detailed observations of the stellar debris field. They mapped it and found it to be irregular in shape, and it became clear that we would reenter it in another twelve thousand years. But they could not pinpoint the exact date without taking extraordinary measures.

“There is evidence that they created some sort of substance that enabled them to see very accurately into time itself, and actually looked forward into the future to determine the precise moment of reentry.

“Whatever this was, it is why later users were able to draw glyphs of modern military equipment at the Temple of Hathor in Egypt. But more importantly, some truly exotic use of it may be why certain people, such as many of the priestly class in the late Mayan period, simply disappeared. They went elsewhere in time physically.

“So far, our efforts to determine what this was have failed.

“In any case, its use enabled the people of the past, at some very distant point, to make the exquisitely careful observations that pinpointed the precise date that the danger would return. They marked this as the final end of the world.

“However, they also understood that mankind had much history to live before that day came, and they realized that all of their learning centers, clustered as they were along shorelines that would soon be under hundreds of feet of water, were doomed. They created a calendar now called the Zodiac, that measured the ages. This was further refined as the Mayan Long Count calendar, which revealed the exact moment the solar system would re-enter the cloud.

The tone was ponderous with official importance. But there was a problem—it was based on an absurd notion.

“The ancient civilization they refer to—I assume they mean Atlantis? Plato’s little speculation?”

“What do you remember?”

“About Atlantis? Nothing. It was before my time.” His contempt was growing.

“Please keep reading, young man, if you don’t mind.”

As the jet sped on, its old engines blaring, its airframe shuddering, he returned to the document.

“The beginning of reentry was first detected as an increase in cosmic background radiation by Dimitriev in 1997. Then, precisely on December 21, 2012, as the Mayan Long Count calendar suggested, an unusual spike took place. Since then, the density of the field has continued to grow, and all indications are that this will continue, possibly for thousands of years, with unknown consequences. In fact, the solar system is headed directly into the center of the cloud. In a very short time, we will begin to actually see the core of the exploded star, and it will be flooding Earth with radiation.”

This last paragraph had changed his opinion of the document. In fact, he was eager now to know more and flipped the page—and sat staring at the back of the folder.

Mrs. Denman took it from his hands.

“Let me ask you this, David. Do you recall Herbert Acton? Bartholomew Light?”

“I want to know more about this document. Because if this last part is confirmed—”

“It’s confirmed. Please answer my question.”

“Who confirmed it? How?”

“The way you give me the space I need to address that is to answer my question.”

“I know who Mr. Acton is, certainly.”

“But you recall nothing else? No childhood memories?”

“Of Herbert Acton? Mrs. Denman, I was born in 1984. He’d been dead for—what? thirty years or more.”

“Charles Light, Bartholomew’s son?”

David was mystified. “No, I don’t remember him. Should I?”

She reached over and touched his face, drawing her fingers along his cheek. It was an oddly suggestive sort of a thing to do, and David was embarrassed.

“As far as you’re concerned, you were never at the home of Herbert Acton?”

“No.”

She regarded him. “No memory at all?”

He shook his head.

A small, sad smile came into her eyes.

“There were thirty-three families, all associated with Herbert Acton in one way or another. Your family was one of them.”

“My family?”

“Your great-grandfather sold Herbert Acton the land the estate is built on. That connects you.”

“A very tenuous connection.”

“You remember nothing of your childhood?”

“I remember my childhood perfectly well. I was raised in Bethesda. My father was a GP. He was a good doctor and I’ve been trying to be the same.”

“But you don’t remember Charles Light? Or the class? Or Caroline Light?”

“Absolutely not.”

She smiled. “You will meet Caroline, and when you do, I’m sure it’ll all come back to you. In any case, you were hired because it’s time, and you’ve been carefully prepared.”

He absorbed this last and most mysterious statement. When she had originally interviewed him, she had a list of obviously professionally written questions about medical qualifications. Frankly, she could have gotten them from any hospital personnel department, or even a book. He had thought her interview technique a poor one and had doubted her qualifications to select a physician provider for any decent sort of mental health facility. Now he really doubted those qualifications.

He’d also had the sense that his answers didn’t matter to her, and even that she didn’t understand his discussions of patient evaluation methodologies, the uses of the *Diagnostic and Statistical Manual of Mental Disorders*, his thoughts about drugs to be used and dosing, or, frankly, any of it.

No matter this document, whatever it might actually mean, he had no intention of proceeding if anything other than his professional qualifications

had gone into his hiring. It was already a sticking point that she'd come to Manhattan Central and found him, even though he wasn't looking for work. First in his class at Johns Hopkins had been the stated reason.

"If you didn't hire me on my medical qualifications—"

"You have magnificent qualifications."

"Who is Caroline Light? What class?"

"Doctor, you will remember."

"No. I need to know right now or we need to turn around and go back to New York."

"You have nothing to go back to. You've resigned."

That was true enough. For everyone working just now, there were fifty ready to take his job, and his position at Manhattan Central had no doubt been filled within hours of his leaving.

"What class?"

"You were in a class as a child. On the Acton estate."

"That's impossible."

"That's what you say now, but you'll remember."

"Why would I forget?"

"Because if you had not been made to forget, you might have revealed something about an extremely sensitive matter. Any of you."

"Any of us? Of who?"

"The class!"

"I don't remember this class, Mrs. Denman, so I need you to explain it, please."

"David, the class is now assembled at the clinic. They will appear to be patients."

"*Appear to be?* Mrs. Denman, please. What am I getting into?"

"David, when you're at the clinic, you'll remember more on your own, and there will be somebody coming soon who'll help you remember everything."

If there was one thing he could not handle and had never been able to handle, it was helplessness. He needed to be in control of his life, and that was at the core of his willingness to take this job. He wouldn't be under control of a hospital administration, he would control one—or so he had thought.

"This is an outrage."

"Yes, it is, David. I admit it. You were always the only candidate for the

job.”

He could not turn back, that was clear. He did not relish ending up on the street just now. The world was starving and there was no recourse. Professionals were clawing for food alongside beggars.

“You’ve lied to me. In effect, kidnapped me.”

“And who’re you gonna call? The FBI?”

He waved the report. “I hope I’m not expected to deal with supply problems and survival issues, because this looks like a horrific disaster. Something way beyond the Acton Clinic.”

“You have been trained to navigate us through this. You are uniquely qualified.”

“I’ve had one class in disaster management. I treat psychiatric disease.”

“You will remember. Trust me on that.”

“Trust *you*?”

“You must understand—”

“I don’t understand a thing!”

“Shut up, boy!”

“I will not shut up! I don’t understand and I need to understand because you’re dropping me into an incredibly challenging situation and at the same time telling me that I’ve somehow forgotten all the damn rules. Come on!”

The jet shuddered.

“Oh, God,” she said. “I loathe air travel.”

“It’s starting to land, that’s all. What am I supposed to remember?”

“David, let’s please just get through the landing!”

“What in *hell* am I supposed to remember?”

She sighed. In her eyes he saw something beyond desperation, the expression of an animal that is dying and knows it has run out of options.

But then again, that was apparently the definition of the entire world, if this document of hers was to be believed. Everyone had been assuming that it would be like this another few weeks or months. Surely it would get better.

And surely it would. Earth wasn’t descending into hell . . . was it?

As they banked, David could see the trees over northern Maryland brushed with fragile early spring leaf, a dusting of green not quite thick enough to camouflage the reality on the ground, of burned-out houses and strip malls, and abandoned vehicles along the roads.

Off to the west, he saw a large estate, a complex of shale roofs in lovely,

manicured grounds. He could see figures on the grounds, a man riding a lawn tractor, two others walking along the curving driveway.

“Is that it?”

She jabbed the intercom. “How much longer, damn it?”

“Five minutes, Ma’am.”

She regarded David. “I don’t want to die. Isn’t it odd? An old woman like me. So selfish.”

He wasn’t interested in her anxieties. “It’s human nature,” he snapped, causing her to blink and set her jaw. Well, let her be offended. “I need to get to the bottom of this,” he continued. “Tell me about this class. And if I’m suffering from an amnesia, what was responsible or who? Was I underage? Did my parents consent?”

“Of course they did! Your father brought you to the class.”

“I’m taking this job as a clinician, not a survival expert or whatever it is you expect me to be. I’m a psychiatrist and that’s all I am.”

“Think of yourself as a shepherd.”

“All right. That’s valid. But not a disaster expert.”

“You’re our Quetzalcoatl.”

How tiresome. Since it had been realized that December 21, 2012, actually did have some significance, everyone was an expert on Aztec and Mayan civilization, and their dreary, complicated, and unforgiving gods.

“I am so tired of that stupid fad. Those damn gods didn’t mean a thing.”

“They had meaning.”

“Come *on!*”

“Not in the way people think, of course. They represent scientific principles that have been lost. Human personality types, hidden powers. But you understand all this. You just need to remember, David.”

“Remember *what?*”

They came in low over the estate, then banked again, this time quite sharply, resulting in an excellent view of the property.

Behind the shale roofs of what was obviously a very large mansion, stood an austere modern building. The whole establishment was surrounded by high brick walls.

“Is that razor wire on the walls?”

She peered out the window. “Looks like it. We have an excellent security organization. I’m sure it’s there for good reason.”

“I’m sure.”

When they landed, what looked to David like an unusually heavy black car appeared, some sort of Lincoln, he thought. Andy the waiter opened the jet, dropping down the door and lowering the steps. David checked his watch. They’d been in the air for thirty-eight minutes, a journey that would have taken six hours by car, assuming the roads were open. But with all the disabled vehicles around nowadays, it could have easily taken a week, or proved to be impossible.

As they went down the steps, the pilot appeared.

“We need to keep moving,” he shouted over the whine of the engines.

Andy was already putting David’s bags in the trunk. Mrs. Denman had no bags. She was returning tonight.

David gazed off across the airport. There were a couple of Cessnas in tie-downs. The wreckage of two personal jets—newer than this one—lay piled alongside the runway.

“Get in the car!” Andy barked. David realized that he’d taken on a new role. In the air, he was a servant. Here, a bodyguard.

David jumped in. A moment later, the trunk slammed, the pilot returned to the jet and it took off, making the car shake violently as its exhaust hit the vehicle.

“Jesus, they’re in a hurry!”

“There can be shooters,” Mrs. Denman muttered.

“How dangerous is this place?”

She looked at him as if he was some sort of a lunatic for even needing to ask. Andy, now driving, did his job in silence.

“I have two hours. The plane will fly a pattern, then meet me back here. Not a good idea to keep it on the ground.”

“No, I suppose not.”

The car swayed, then picked up speed as it approached the town of Raleigh itself. David had never been here before, but had been told that it was a prosperous and settled community of upscale commuters and local gentry.

By the time they reached the outskirts of the town, the car was doing at least sixty. They accelerated as they went along the main street, tires screaming as they rounded courthouse square.

Buildings raced past on each side as Andy leaned on the horn and they shot through one red light after another.

“What’s going on?”

“We call it ‘running the town.’”

“But—Jesus . . .”

“There’s a lot of inappropriate resentment.”

At that moment, the car turned and slowed as it began moving, once again, through the countryside. “Cigarette?” Mrs. Denman asked, holding out a pack.

“I don’t smoke.”

She put it away. “Neither do I.” She sighed.

Soon, David saw ahead of them a pair of enormously imposing gates. They were iron and easily twenty feet tall at their peaks. Across the top were four iron finials. On the finials, David recognized gryphons with their eagle’s wings and lion’s bodies, familiar, leering forms from the walls of Gothic cathedrals. Gryphons were guardians of the gates of heaven. Worked into the iron of the gates themselves were images of Mesoamerican deities—which was odd, given the age of this place. In the early twentieth century, they’d hardly been known.

“Are these gates new?”

“They’re original to the estate.”

As they opened and he saw the great house standing off across the rolling, exquisitely kept lawns, he was struck as if through the heart with the most poignant *déjà vu*.

“You’re as white as a sheet, Doctor.” She put the back of a long, spiderlike hand to his forehead. “No fever, at least, young man. Memory can bring fever.”

“Stop the car.”

“Ignore him, Andy.”

“Stop the car! I’m not taking this job. No matter what, I’m going back to New York.”

The car didn’t even slow down, and as they approached the great redbrick house with its wide colonnade and broad terraces, the sense of *déjà vu*, rather than fading, became more acute.

“You feel it, don’t you?”

“I feel very strange and I do not want to go ahead with this. I don’t know what’s going on here.”

She laid a hand on his wrist. “Just relax and let yourself feel it. Memory

will return.” She leaned back and gave him a smile as broad as a child’s. “You’ll thank me, young man, when you do remember.”

“Just tell me, for God’s sake!”

“You have to make the connections yourself or they’ll have no meaning. No emotional resonance. You need to find your commitment to your mission in your own heart. I cannot do it for you.”

“But you know.”

“I know that the class existed but not what you were taught in it. And I also know that you just this moment remembered being here. It’s written on your face.”

They pulled up before the portico. David opened the door of the car, which was so heavy that it felt like pushing open a safe.

Walking toward the great house, he found himself profoundly drawn to the sense of order and permanence that pertained everywhere. The docile clicking of the lawn sprinklers, the early green of the trees, the grand apple tree just by the south wall in full bloom—it all spoke of a world that elsewhere had already slipped into the past, replaced by the sense of the posthumous that was coming to define modern life.

But it was also part of *his* past. His own personal past belonged in some way to this place.

Aubrey Denman opened the front door using a fingerprint detector. He’d half expected the great door to be swept open by some sort of butler. Instead, an armed security man in a blazer and tie greeted them. Obviously, his orders were to wait until the fingerprint reader had released the lock.

“Where are the—” David’s voice died. He had been about to ask where the patients and staff were, but the splendor of the room he had just entered silenced him. He found himself looking across a wide hall with a magnificent inlaid floor depicting a hunt in full cry. It was marquetry, and yet not too fragile for a floor.

And, incredibly, he remembered: *You slid across this floor in your socks.*

The leaping horses and racing dogs in the floor led the eye to a grand staircase that swept upward as if to heaven itself, drawing the eye further, this time to a phenomenal trompe l’oeil ceiling that imparted an unforgettable illusion of a vast summer sky.

You lay on the landing and imagined yourself among the birds.

“Where are my patients?”

“The patients are in the patient wing. Study the records first, Doctor, please. Then meet them.”

“Will they know me? Are they also in amnesia?”

“They’re in a state of induced psychosis.”

He stopped. “What did you just say?”

“For security reasons, this place appears to be a clinic for the mentally ill. Most members of the class are here as patients, their real selves hidden beneath a combination of amnesia and artificial psychosis. Members of the class who are on staff have only the amnesia, and one or two of them, who will guide the others, retain clear memory.”

He turned to her, and on her. “This is totally unacceptable. Who did such a thing to these people? I can’t be a party to it.”

“You can be a party to waking them up, then, and ending the need.”

“This is all insane, the whole thing. Who would *ever* induce mental illness to conceal somebody’s—what, their knowledge, their identity? Why was it done?”

“The enemies of our mission are incredibly ruthless and they’re going to get more so. If they found the class, they’d kill every single one of them. And you, David, make no mistake. But beforehand they would tear your mind to pieces with drugs and torture beyond anything you can imagine. And in the end, they would obtain your knowledge, amnesia or not.”

Never in his life had he struck another human being, but he was tempted to now, as he found himself coping with a disturbing impulse to shake the truth out of this old lady.

“Who are these enemies?”

“Presidents, kings, the rich and the famous, not to mention the members of the Seven Families who control the wealth of this planet.”

“I have no idea what you’re talking about.”

“The more you remember, the more you’ll understand. Come with me. My time is short, and I need to show you your office.” She touched his hand. “David, you’ll regain control of your situation and I know how badly you need control; I wrote your personality profile.”

“Wrote it? Where is it? How could you write it?”

“I’m a psychiatrist, David, just like you. I managed the mental health of the class.”

“You did this to these people!”

Her eyes sought his, and in them, brown and hazed, he saw that hunted expression again.

“How did you do it? What method did you use?”

As if in shame, she turned away from him, and he knew that whatever she had done had been traumatic for all involved, including her.

Causing amnesia was a matter of hypnosis and drugs, but to make a person psychotic must be a ferocious process.

“How can they be released from this?”

“I’ll come back, and I’ll release them.”

“When?”

“We’re working on a very exact timeline. But I can assure you that it will be done.”

“Wait a minute. What timeline? I need to know!”

“If somebody who knew that was caught, it would be an incalculable disaster.”

“Caught? Could I be *caught*? By whom? Who are these enemies? Are they here?” He followed her up the staircase. “Damn it, I want answers!”

She mounted the stairs with the deliberation of a heart patient, her nostrils dilating as she sucked each careful breath.

“The house itself is lived in by staff and service. The patients are in the back, in the new wing.”

“Answer my questions!”

“Time will answer your questions.”

“Too damn late!”

“At exactly the right moment. Now, please focus on this. You’ll meet your staff later, then be introduced to the patients. I want to talk to you about your colleague Marian Hunt before you meet her.”

She stopped before an imposing mahogany door.

“Are you ready?” When she smiled, that expression came again.

The office was gigantic.

“I can’t work in this. It’s ridiculous.”

“Nonsense. You ought to be grateful to be surrounded by all this beauty.”

It was the size of a ballroom, but constructed out of mahogany inlaid with many other woods. A broad bank of windows looked south, another north, and the walls were lined with shelves and shelves of books, all old, all leather bound. An immense Persian rug filled this end of the room, under an equally

huge and ornate desk. At the other was a fireplace fronted by a leather couch and wing chairs. In the paneling above the door were two glyphs of Mesoamerican gods, exquisitely carved, their faces glaring and ferocious.

“Who are they?” he asked.

“What principles do they represent? I haven’t the faintest idea.”

“I thought you were an expert on Aztec crap.”

“Thank you. Each of us knows only what he needs to know.”

Unlike the downstairs, he had no sense of déjà vu about this room. He surveyed the library. Every shelf was filled.

“Is there room for my books?”

She pulled down a row of what turned out to be book backs, revealing some empty shelving.

“Your predecessor kept his here.”

“Ah. Is the whole library fake, then?”

“Hardly. There are some extraordinary texts here.”

She handed him a volume with a gold-embossed glyph on the spine. He opened it to magnificent color plates of glyphs, hundreds of them.

“It’s entirely in . . . what is this? Is it Mayan? Toltec?”

She looked at it. “You’ll have access to scholars.”

“Where?”

“Here. Among your class.”

His only choice, he saw, was to just roll with this. There was no question in his mind that, as a child, he’d been to this house. Certainly, he had seen the downstairs. But what this class was all about, and why the security, he could not imagine—or rather, he supposed, remember.

Or could he? There might be vague memories in the back of his mind of the names of the old gods. But it was also true that their names were everywhere these days. And yet, he recalled other children, and being happy here.

He remembered, also, that there had been an enormous security issue.

“We need to discuss Marian Hunt.”

“Yes. She’s been assistant director here for what, ten years?”

“Since it opened.”

“Then surely she was the ideal choice for director.”

“She wasn’t part of the class. But she doesn’t know that and cannot know it; so as far as she’s concerned, she’s been passed over for a mere boy.”

“If the board doesn’t have faith in her, perhaps she would’ve been better off leaving.”

“Where would she go?”

A question without an answer. Or no, it did have an answer: she would go nowhere.

“Let me show you the surveillance toys,” Mrs. Denman said. “Every patient is available to total monitoring.” She pressed her finger against a discreet fingerprint reader embedded in the bookcase beside his desk. Two more shelves of fake books slid away to reveal a very large screen populated by dozens of small video images revealing what he felt sure would turn out to be every inch of the public spaces in the facility, indoors and out.

She touched a button and new rows of images appeared.

“These are the patient social areas,” she said. She tapped one of the images, which expanded to fill the screen.

For a moment, David did not understand what he was seeing. Then he did, and he was so shocked that he must have gasped aloud, because Aubrey Denman’s bird head snapped toward him, and the expression of fear on her face was almost as appalling as the straitjacket confining the patient.

At Manhattan Central, he’d seen patients under restraint, of course, but not being kept in one of these things. If not illegal, it was certainly a spectacular medical failure.

“I can’t allow that,” he said.

There were three patients in a sunny, pleasant room. Each one had a nurse in attendance, not surprising in a facility that offered the extreme level of care found at the Acton Clinic. But one of them was in this primitive restraint.

“He’s unable to bear . . . anything. At any moment he’ll just lose himself.”

“Do you know him?”

Her eyes closed, she gave a slow nod, one that communicated a sense of the anguish that her work clearly caused her. “There has been a great deal of sacrifice here, David. Lives sacrificed—the happiness of youth, David—all for the mission.”

“Which is what?”

“David,” she said, “the future. The *future!*”

She took his hand—snatched it—grasping it as if it was a lifeline in a storm. And suddenly, there came a memory.

He was trying urgently to explain something to a tall man, and to

emphasize his point, he had grabbed this man's hand.

"I told him I couldn't do it. I told him!"

"But you can, David." She glanced at her watch. "I'm out of time."

He would have to keep his questions and his considerable doubts to himself. But he did not agree with her optimism, not at all. How could anybody save anything, given what was coming?

Well, perhaps he had a mentor in her. She was hardly the wealthy old fool she had initially seemed.

"You'll be back," he said. It was not a question, and not intended to be one.

"Of course. And I'm always available on my cell."

"I need to get to know my staff," he said, "and the class. Who are my classmates?"

"There will be somebody coming to help you. Until they arrive, don't breathe a word about the class, not a single word."

"I'm sitting on top of an institution full of people who've been spectacularly abused and I'm not supposed to even say anything about it? I don't think so." He gestured toward the screen. "What about them, are they members of the class?"

"Two of them. The other is genuinely disturbed."

"And you did this. It's appalling."

"David, we did what we had to. Without security this deep the class would have been found. That must not happen, David, it *must not*."

"What's so important about them? I'm sorry if I sound callous, but I really need to know why, in a world where billions are dying, a small group of people would need to be so carefully protected?"

She closed the control center. "Call a staff meeting, but I'd advise you to move carefully. After Marian, your next order of business will be to meet Katrina Starnes. Katie. She's your assistant."

"Isn't it rather odd that she's not here now?"

She gestured toward the book backs that concealed the electronic wonders. "She's not a member of the class. She isn't allowed access to this system or to know anything about the inner meaning of this place."

"Which is what? I still don't understand."

"No, of course not."

The moment he had experienced the *déjà vu* that had convinced him that

he had been in this house before, he had made the decision to let this play out. These vague, amnesia-stifled memories he was experiencing were really very strange, and, if they were true, then he was potentially looking at a whole hidden life, and he had no intention of not exploring it.

“I need to know more. A lot more. Are there any records of what we studied in the class? Video? Even just a syllabus. What did we study?”

“I need to leave.”

“Oh, wonderful! Leave me with an insoluble mystery and an institution to run during the worst social collapse since the fall of the Roman Empire.”

“Your memories will come back to you.”

“And if they don’t?”

“Oh, they must! Young man, you see the stakes. They *must!*”

A moment later, she was heading toward the door of the office. He was appalled.

“What about Dr. Ullman? Was the fire really an accident? Am I in danger?”

For a long moment, she was silent. Then she said, “David, we don’t know. Maybe it was a fire set by resentful townies. Could be. Or it could be something worse.”

“I need to know more!”

“You have your security force and Glen MacNamara is very, very good at what he does. Start there.”

As she spoke, she hurried away across the large room.

“Wait! The fingerprint reader? How do I get programmed into it?”

“You’re already in it.”

“Nobody took my fingerprints.”

“Of course they did—in class. Your fingerprints, your DNA, we have it all.”

She neither spoke again, nor wished him well, smiled—any of it. She simply went stalking off down the hall.

Her hidden timeline was strict, clearly.

“Mrs. Denman, wait! I need help! I need my questions answered!”

Her footsteps sounded on the stairs, quick, clattering away into the silence of the house.

As he heard the enormous car start up outside, he ran down the stairs, but by the time he reached the front of the building, she was already well down

the driveway.

He yanked his cell phone out of his pocket and jammed her number in—and got nothing. The damn phone was deader than dead. He glanced up at the spotted, angry sun and threw it down onto the elegant brick driveway.

A moment later, there was a flash, followed at once by a sound so loud that it was like a body blow from a wrecking ball, an enormous, thundering roar.

He had never been close to a large explosion, and so did not know the effects and did not immediately understand what was happening. Then he did.

Shocked, disbelieving, he watched the smoke rising. She had been right and more than right. This place had enemies, and so did he. And he felt sure that they had just taken from him his most important ally.

From behind him, a siren began to wail. No police came, though, no fire department, no EMS. The siren was the clinic's alert system, and it would be the only siren, because the Acton Clinic was alone. And he was alone, and they were all alone.

Not their enemies, though, hidden, aggressive, and lethally effective. Obviously, they were not alone.

2

THE ENEMY

In the disoriented silence that followed, a fireball erupted above the wall from the other side, then disappeared into the roiling pillar of black smoke. The car's gas tank had exploded, ending any thought that its armor might somehow have protected the occupants.

Two white Jeeps came bounding down the driveway, with discreet ACTON SECURITY signs on their doors. They raced through the gate.

Finally absorbing the reality of the situation, David began running behind them. At once, though, powerful arms stopped him. He struggled but he could not escape from hands like great stones.

"You can't help her now."

Then another man ran past them, a tall man in an improbably elegant green crushed-silk suit.

"Mack, stop," the man holding David shouted. "STOP THERE!" Then, more softly, "Shit!"

A small fire truck left the gate, and a moment later white steam began rising, and the sound of water hissing from its pump.

The man holding him released his grip. "I'm Glen MacNamara," he said as David turned around. David was startled by a sense of recognition. He'd seen Glen before. His voice, even, contained an echo of familiarity.

"I'm David Ford."

The patient called Mack came back with his minder, who was introduced by MacNamara as Sam Taylor.

"I'm sorry I manhandled you like that, Doctor," Glen said between breaths. He was pale, his eyes shocked. He looked to Taylor, who shook his head. No survivors.

"The car—you mean Mrs. Denman's car? That's what blew up?"

All three men, Sam, Glen MacNamara, and the patient, looked at him with careful eyes.

"It was a bomb," Mack said.

Aubrey Denman had certainly been right that there was a security problem, but this was far, far worse even than her warning had suggested.

“They’ve been killed,” he said faintly, trying to grasp the catastrophe, trying to understand. But he could not understand, could not even begin to. “Why? An old lady like that? *Why?*”

“Doctor,” Glen MacNamara said, “I’d feel a lot better if we could go inside.”

Two security guards went toward the gate carrying freshly opened body bags.

“Don’t bag them until I’ve inspected,” Glen said. “I’ll be back shortly.”

Glen insisted on accompanying him to the house.

“I need to get in touch with the rest of the board,” David said.

“You’d best ask Katie Starnes about that.”

The tone of Glen’s voice, his choice of words, brought more recognition. Normally, he would have simply asked him outright if he’d been in the class, but he wasn’t about to do that now.

“Glen, you look familiar. Have we met before?”

Glen stared back, his eyes steady.

“We have, haven’t we?”

He did not say no.

“And you remember, and thank God. What else do you remember?”

Glen grabbed his shoulder so hard he stopped talking immediately.

“Never speak about it,” he said.

“No, obviously not directly.”

“Not at all.”

As they walked, Glen took something from his pocket, then slipped it into David’s hand. David felt a small capsule.

“If you’re captured, bite down on it and breathe deeply. It takes ten seconds. No pain.”

“But—”

“Do it without fail.”

He jammed the thing down into his pocket, and then they were through the main door and immediately confronting a silent, frightened crowd.

Staffers, patients, workers—the whole front half of the house was filled with people. A couple of security men kept them back.

David realized that he was going to have to make an introduction of

himself here and now. No waiting on this.

He raised his voice. “Obviously a tragedy,” he said. He found himself clutching the cyanide capsule, as if it represented rescue, or needed protection. Then, afraid that it might open, he took his hand out of his pocket.

A sea of faces, eyes wide, silent, looked back at him. Here and there, somebody exhibited inappropriate behavior, grinning, bobbing their head, dancing to some inner music.

But these people weren’t really crazy, at least not all of them. Induced psychosis as a means of concealment. And now what was he to do?

“I’m Dr. Ford. David Ford. I’m your new chief psychiatrist. I—we—we —” But what did he say? “The security team will handle this,” he finally blurted out. “Mr. MacNamara—here—here he is.”

Now, there was a great speech. Very dynamic and take-charge. Idiotic.

“Thank you, Dr. Ford. We’ve informed the Raleigh County Sheriff’s Office,” he told them. “Right now, we’re assuming that criminal activity was involved.” He drew himself up. “There will be an investigation. The perpetrator will be found.”

“Was it one of us?” a voice called.

“There will be an investigation. That’s all. Thank you.”

David said, “Attendants, please accompany the patients back to routine. Back to routine, please.”

He went slowly up the grand staircase, into the fabulous painted sky, with its birds and its heavenly clouds.

I made believe I could hear those birds sing.

He had never felt this alone. He had not known that such a feeling—like falling and being buried alive at the same time—was possible.

He entered his office, filling now with evening shadows, as silent as death.

There was one *hell* of a security problem here, and Jesus, he had to be a prime target. That other guy—Ullman—had been burned to death. *Burned*.

His stomach was sharp with acid, his mind racing. He needed a gun, he needed a bodyguard, but how to tell who was reliable?

Then he realized that somebody was in the room. He turned. A lovely young woman had entered and was standing in the doorway, silently watching him.

“Hello.”

“I’m Katie Starnes.”

That was to be their only introduction.

“Miss Starnes, I want a list of all the other members of the board. And I want us to start trying to get in touch with them immediately.”

She stared at him.

“Please!”

“Dr. Ford, there are no other members of the board. Mrs. Denman—she’s the board.”

“That’s impossible!”

“I’m sorry.”

“Then get hold of her secretary, her accountant, whoever you can locate. I need to talk to anyone I can!”

“We only have the one number.”

“That can’t be true!”

“We only have the one number!”

“What about her bank? Call her bank, call her lawyer!”

She shook her head, her eyes full of fear. “We only have the one number, I’m sorry. Security here—”

“Is very damn tight but very damn poor!”

And what were his alternatives now?

That, at least, was one question with a perfectly clear answer: he had no alternatives. He was trapped.

DAVID FORD'S JOURNAL: ONE

I have never been so scared in my life, so confused in my life, so apprehensive in my life. I'd take mood regulators but they're out of supply, and anyway, I can't afford to lose whatever pitiful edge I may have.

The clinic is full of guns, and I have been issued a weapon. It's a compact thing, a Beretta. Can I use it? I don't know, I've never shot a gun in my life.

I tell myself that I don't know enough to matter, that I'd never need to use the gun or the cyanide, but then I look into the well of my own mind, and I know that there is amnesia there, and suspect that a skilled interrogator could break it. Psychosomatic amnesia is nothing more than a refusal to access certain memories, which remain intact beneath the surface.

How, without Mrs. Denman, do I repair my broken classmates, not to mention find them in the first place? There isn't any literature on the induction of psychosis—at least, in the public domain. Probably reams of it in the classified world.

I am keeping up as best I can with outside events, but communications are sporadic. For example, the Internet has been intermittent for days and so far cell phone coverage has not returned since this morning. Given that they're so entangled with the Internet, landlines are unreliable. In the past, they survived all but the most extreme catastrophes. No more.

In a world going out of control, an organization like this is highly vulnerable. We are suffering every kind of shortage, including drugs. For example, we have no atypical antipsychotics left. No clozapine, no risperidone, no nothing. Because of the youth of most of our patients, the lack of Risperdal is particularly distressing. We have Xanax, but that's hardly adequate.

Many of the patients I have met display very structured, relentlessly typical symptoms. They're like actors who have been captured by their roles. I

suppose that this is induced psychosis.

It's not that they all exhibit the same symptoms or should receive the same diagnosis—but there is a strange by-the-book quality about them, as if they'd stepped right out of the *Diagnostic and Statistical Manual*.

As conditions deteriorate, what do I do with patients who I know to be imprisoned by artificially induced mental illness? What if the death of Mrs. Denman means that we will never get the information we need to draw people out of their psychoses?

It's late, and auroras are appearing, even this far south. The sun must be literally blazing for this to happen. They are a bizarre emerald green and flickering like a broken lightbulb. Across the room, the shadows are deep, and I dread going through them to get to my bedroom.

And why should I? I don't sleep, how can I?

My head is on the block. I await the stroke of the axe.

3

MACK THE CAT

Michael Graham—who had called himself Mack the Cat ever since he came to be nicknamed “el Gato” by his colleagues at the Mexico City station—drew on the notepad that the doctors had agreed not to look at—but, of course, did . . . as he expected them to. If he was supposed to be crazy, he needed to exhibit symptoms, and doctors loved drawings.

He was encouraged by the ease and success of the Denman operation, which had trapped these bastards like a maze full of rats. She’d been a fool to be so controlling that their whole operation depended on her.

Buried in this place as he was, it was easy to forget that he had been assigned to the Acton Clinic, not committed to it. He was a specialist in stealth, and this was not only a place of interest for his superior, General Wylie, it was packed with exotic security. So he’d been given a false past that would allow him entry, and sent here to find what the general needed.

He tried to be professional and dispassionate, doing his work with clarity and efficiency. But he could not help hating these arrogant people. Filthy half-breeds all, chosen by that obscene fool Herbert Acton to represent the common man.

The common man was the goddamn problem. Blood is what counts, and this was the time to save the best human blood. Let the common man die; he’d shown himself to be a weak, ignorant fool.

The Acton Clinic had looked easy to deal with, but this was among the most difficult situations he had ever confronted, and despite the success of the Denman operation, he was still having trouble making progress understanding exactly what they were doing here—and therein, of course, lay the key. They had a means of survival, or believed that they did. But what was it?

Every night he got an increasingly urgent demand for that information from General Wylie.

He sat beneath the apple tree that grew near the enormous oak at the edge

of the grounds, his back against the sweating bricks of the wall, in the shade of the oak and the scent of apple blossom.

The sky was a shimmering electric yellow, and last night the auroras had been intense. So the sense of urgency around here was right. Time was running out.

He was supposed to be not only crazy but dangerous, so he had a minder, Sam Taylor. He sat under the tree drawing a glyph of a *tzitzimitl*, a skeleton demon of the stars that governed the sun at times like this. Death star. Everyone in the world by now was well aware of the fact that this present disaster had begun to unfold during the night of December 21, 2012, and people were obsessed with the Mayan and Aztec religions, and with their calendars and their prophecies. So he was just another stupid patient, chewing the fad.

A lot of people had suspected that Herbert Acton had possessed some sort of secret beyond his uncanny skills as a speculator. He had been approached by occultist J. P. Morgan and by John D. Rockefeller, by representatives of Presidents Harding, Coolidge, Hoover, and the Masonic master Franklin Delano Roosevelt, all without any results. Also by leaders of half a dozen of the truly important human organizations—the Thule Society, the Society of the Illuminated, the New Knights Templar, the Vatican—and representatives of the best and truest human bloodlines, especially the Seven Families to whom this world belongs.

He must have been offered astonishing rewards—but he would have none of it. He lived on his estate and did his business and ignored the world around him. When everyone was sending gold to Germany, seeking to save the bloodlines of the best people from the catastrophe, Acton had spent his time assembling his collection of mongrels and irrelevant, disposable people. After the war, when money had been desperately needed by the Germans to establish colonies in South America to provide shelter for those who had given their loyalty to Hitler, he had funded the ridiculous intelligence service of the Israelis, adding immeasurably to the expense of protecting what remained of the great bloodlines.

Now the children of the collection of mutts Acton had assembled were believed to possess his secrets, and therefore quite possibly the means to survive the coming catastrophe, while the people who mattered did not.

The intensification of the auroras last night, the increasing deterioration of

electronics, even the bizarre color of the sky right now—it all suggested to Mack that the climax was unfolding.

General Wylie, commanding from the Blue Ridge Redoubt seventy miles from here in West Virginia, obviously agreed with him, thus the increasing urgency on the radio.

Massive efforts had been made, whole cities built underground in Arizona, in the Blue Ridge Mountains, in the Black Forest and the North York Moors, in the Gran Chaco in Uruguay and the Maule Region of Chile. A hundred thousand people had been tagged for access to these refuges. All well and good, but something more had to be done to insure survival, something beyond present knowledge.

Suddenly, Sam was there. “Doing okay?”

“I’m plotting my escape.”

“Ah.” He looked at the drawing. “Who’s that this time?”

“God of destruction.”

“Pretty.”

He finished his drawing and then, staring straight up at Sam, ate the paper.

Mack was just getting up to follow Sam inside when he heard a very surprising and very interesting sound, the whine of the main gate sliding back on its hinges.

He noticed that Sam came a couple of steps closer to him. Could this be police, perhaps? If they still existed, that might be inconvenient.

A Mercedes came nosing slowly into the estate. A new victim being brought in? That seemed unlikely at this juncture. To get here through all the chaos in the world took significant resources. Even the rich were more likely to stash their crazies in the attic, he would think.

The car proceeded up the long drive with the grim majesty of a hearse. No, this would not be a garden-variety crazy. This might well be a crown jewel, a member of the hidden leadership, someone whose knowledge had not been obscured by artificial psychosis—that is to say, someone who was in possession of their information and therefore useful.

So there were perhaps now two, David Ford and this new one. And, of course, MacNamara, that bastard. He knew a lot, that one, Mack had always sensed it.

He glanced across at Sam Taylor, who had returned to his bench and his thermos of coffee. Yesterday, Sam had been the victim of a little sleight of

hand. He'd never seen Mack trigger the mine with his cell phone. The towers were out of commission, but the radio receiver on the mine was only a few hundred feet away. One of the general's men had buried it two days ago.

So far, there was no suspicion of the CIA officer who'd gone mad in Mexico and started sacrificing drug mules to the old gods.

He lay back and gazed up into the spray of pale pink flowers that crowded the apple boughs, putting on a show of nonchalance. Above and behind the tree, he could see the top of the wall. The gleam of the new razor wire winked down.

He heard the car's engine stop, and he knew that it was about to disgorge its occupant. And, indeed, one of the rear doors opened a little. The driver got out and came around.

A girl emerged, tall, unfolding herself and shaking her shoulders and her hair as if today's sunlight was her first.

She was auburn-haired, tanned, and—well, was the word “ineffable?” There was a sense of air in the way she moved, and yet something about her said that she was used to being in control of her life and her world.

She did not look insane, or even particularly troubled, which he found most interesting.

She paused for a moment before the great façade of the mansion, put her hands on her hips and gazed at it. Well, it was normal enough for a person to be impressed by the row of columns, the red brick of the façade, the imposing doors . . . for a normal person, in any case.

Then, determined and yet hesitant—a complicated human being, he saw that at once—she went inside.

He needed a surname, and right now, but the secrecy of their operation was so extreme this might be hard to obtain. In fact, the secrecy was so deep that these people, who had been together in a childhood class run by Charles Light, the son of Bartholomew, were in a state of amnesia more profound even than the CIA could induce.

They were not insane, but they believed that they were, and *that* was security at its extraordinary best.

He watched the newbie, who had reappeared quickly after her entry into the building. She went off toward the gate, a curving pour of very feminine milk.

She stopped before the enormous iron bars. Nurse Cross strode across the

deep green of the lawn and conducted her back to the building. The newbie's sobs tumbled through the air.

Was this just a patient?

As Beverly Cross tried to get her to enter the building, she shook her off and stepped out along the brick terrace that spread so elegantly beneath the front of the structure.

She took out a cigarette. She puffed, he watched. Puff, white smoke, hold the cigarette aside, puff, white smoke, hold the cigarette aside.

And then, quite suddenly, he was surrounded by the color red. All around him, a rose-red haze. Sunset? No, something else. He tried to wave it away, but found that he couldn't move his arms.

That scared him and he cried out, whereupon he felt warmth on his forehead and a voice, young, female, said, "You're fine, Mack, you've just been finishing."

The taste of rubber from the mouth guard caused him to realize that he'd been in shock therapy.

"How do you feel, Mack?" the nurse asked.

As he sucked in breath, the room appeared around him, all tile and dismal machines. Across the way, a hydro tub moaned and splashed. The head of Glenda Futterman bobbed back and forth, as frantic as an agitated waterbird of some sort.

"Mack?"

"I'm coming out of it!" He gazed around at the room. "I'm sorry. I thought I was . . . outside."

"Earlier you were."

"Did I dream about a girl? A beautiful girl?"

"She's a new intake. Very real. You saw her come in."

When he tried to get off the table, Dr. Ford said, "Not yet, guy."

It was so damnable to have to endure their ridiculous treatments, but what could he do? This was the deepest possible cover he could create for himself, and the danger that he might be discovered was too great. So he endured the stupid indignity of taking electroshock treatment that he did not need.

The treatment made him forget a lot of things, sometimes too many things. He kept careful notes hidden in his room, but they might eventually be found, he knew that. So speed was essential. He needed to complete his mission, which had two parts. First, find out whatever was hidden here so well, so that

it could be taken and used by the people who mattered. Then, the pleasant part: destroy this place.

4

THE LADY OF THE STARRY SKIRT

External conditions were deteriorating far more rapidly than David had imagined possible, and the problems this was causing forced him to put his effort to unravel the mysteries of this place aside for the moment. The blackened bodies of Aubrey Denman and her failed protector had been given a quick burial at the end of the estate's formal garden.

He went to his windows, gazing out across the green lawn to the two rough mounds of earth. Close to them, an apple tree bloomed. It reminded him of something, but not something pleasant.

"The apple blossom is the color of . . ." What? It was blank, so he left it. But it was disquieting.

A little farther along, an oak spread spring leaves, their pale new green at once reassuring and heartbreaking.

If you did not raise your eyes, all appeared normal and settled and safe. Look up to the top of the perimeter wall, though, and you saw that razor wire. By reading the clinic's activity logs, he'd discovered that Aubrey Denman had not been candid with him about much of anything, and certainly not the security situation, which was far worse than she had claimed—or, it would seem, known.

The razor wire was there because there had been an incursion from the town. People had tried to come over the wall. They'd been forced back and additional defensive measures had been taken, including the acquisition of some very powerful new guns, and thousands of rounds of ammunition.

Look past the wire, though, and a magnificent view of Raleigh County unfolded, the rolling hills brushed now with palest green. Only if you looked closely would you see a blackened house here or there.

The sky was now always that odd color, no longer the blue it had been. Really, not a color, more of an absence of color, a steely whiteness during the day, flickering auroras at night.

The lawn sprinklers came on, clicking smartly. It was a sound from

childhood, which the child in him found reassuring, he supposed. But where did they get the water? he wondered. Hopefully, from a well on the grounds.

Katie Starnes's voice came over the intercom. "The new intake's in prep."
"Bring in her chart, please."

When he saw the name on her chart, he was stunned to frozen stillness. He kept his voice as calm as he could.

"What's her state?"

"Agitated. But it's a self-commit, so we're expecting her to be cooperative."

"Expect nothing."

"Yes, Doctor."

Aubrey Denman had said that he would remember Caroline Light, and that she would bring some focus to this whole affair. But it was just a name on a sheet of paper. Seeing her, that must be what would do it.

"Schizoaffective disorder, previously controlled with lithium therapy," Katie said.

He was careful to reveal nothing to her of what the name meant to him, or of his excitement that this was the daughter of their teacher.

He read on. She'd lived a wealthy easy life, it seemed, up until symptoms began to appear last year.

This sounded a troubling note. Aubrey Denman had induced psychosis in the class during their late teens, not last year, or so he'd assumed. So was this a real case of mental illness, some sort of odd coincidence? Or was she simply playacting? Because this report gave no indication that any symptom had been present before 2019.

Sudden onset of mental illness was commonplace now. The whole human species was under extraordinary stress. That was why Manhattan Central had literally been overflowing into the streets. So it was perfectly possible that the daughter of their teacher had, quite simply, gone mad.

But it was just as possible that something else was happening, so his only choice was to play it as it appeared.

The report said that her disorder had begun to break through the lithium, in the form of auditory hallucinations ordering the patient to do various things—paint a picture, take a journey to some irrelevant spot, arm herself with a pistol.

At what must have been astronomical expense, she had made the pilots of

her family plane fly her to Guatemala, where she'd chartered a local plane to take her deep into the jungle. What she had done there was not clear, nor had she been willing to explain herself when she returned home.

Herbert Acton and Bartholomew Light had gone to Guatemala in the twenties, and brought back extensive journals, drawings, and maps that filled many shelves in this library.

"I want her housed initially on confinement, but give her full indoor privileges with observation. Outdoors accompanied only."

"Awfully tight supervision," Katie commented.

Caroline Light's vulnerabilities were complex. Whether she was acting or genuinely troubled, with that last name, she was probably of as much interest to the opposition as Aubrey Denman. More, conceivably.

"In my opinion, it's necessary. And keep her surname confidential, please."

"We never use patient surnames in population."

"Not even in her chart. Call her—I don't know—Caroline Smith."

"Of course, Doctor."

Her tone was too neutral. He thought it concealing, but of what he could not be sure.

The door flew open and Caroline Light came striding in, a breathtaking beauty, her legs outlined by her blue silk dress, which fluttered behind her as she walked forward.

He felt a sensation of literal, physical shock pass through him as she got closer. Her eyes were jewels flashing light, her skin tanned but soft, her lips at once held in a tight, angry line and yet ready, almost, to laugh. The eyes, made brighter by the darkness of her full lashes, glared, stared, and mocked all at once.

Behind that complex, challenging expression, though, was a face of heartbreaking beauty, the forehead broad, the eyes shaped for nighttime, the nose tapering but not severe, the cheeks full but not so full that they concealed the suggestive curve of the cheekbones.

However, the memory he had hoped she would spark did not come. There was no sense of *déjà vu*, no poignant quickening of the heart. She was, simply, a stranger.

As Katie discreetly withdrew, she sat down, crossed her knees, and regarded him with pale eyes. Was that anger in there? Amusement? Both?

“At last,” she said.

He thought it the most disconcerting comment she could possibly have made.

“Have we met?”

She flushed, then tossed her head like a young mare. He had the impression that she was both furious and hurt.

“Okay, let’s do our medical interview. See how good we are.” Long hands dipped into a purse made of what looked like some sort of cloud, white and soft. She drew out a cigarette.

“No smoking in the facility, I’m sorry.”

She lit it, took a long drag, then expelled two streams of smoke through her nose, an exquisite dragon. She glanced around.

“What is this dump, anyway?”

“The Acton Clinic. Do you often lose track of where you are?”

“I mean the room. Of course I know where I am.” She barked out a laugh. “David, are you still asleep?”

He wanted to open up to her, but he couldn’t, not without some inner signal, some echo of recognition, and there was none. He maintained his professional posture.

“What do you mean by sleep?”

“You can take your shrink questions, fold ’em up, and stuff ’em you know where.”

“Which would be?”

She flipped the cigarette at him. It hit his shoulder and bounced to the floor.

“That was useful.”

“David, you’re embarrassing yourself and—to be frank—hurting me.”

“In what sense?”

“Stop it!”

He was really having trouble here. He was strongly attracted to her, that was certain, but there just was no memory.

“Those images over the door, I’ll give odds you don’t know what they are,” she said.

“I do not.”

“Well, I do, because my grandfather was the man who discovered them. *In tetu inan, in tetu itah*. That’s Nahuatl for ‘father and mother of the gods.’

Ometeotl was two in one, mother and father.”

“Is this why you went to Guatemala? Are you a believer?”

“What do you think?” Her tone was knife-edged with sarcasm.

“That’s for you to say, Caroline.”

Her eyes became sad. “You need to remember something, David.”

This was a subtle mind, quick and supple, and it was testing him, but in what sense? Was the real Caroline Light trying to find out if he remembered her, or was an imposter trying to determine if he’d been in the class?

“What about myself do I need to remember?”

She lit another cigarette. “Shall we do sex talk?”

“Shall we?”

“Isn’t that what you do here?”

“This is a hospital you’re in, Caroline. It’s a place where people who are suffering come for relief. Which is why you checked yourself in, I would think. What do you think?”

“That I need an ashtray.”

“There isn’t one.”

She flicked ash on the carpet. “This is a Tabriz, probably a Hajijalili, and look at the abraded. Gorgeous.” She smiled a little, then, and her face became soft with promise. Really, she was meltingly beautiful. “I always wondered what it was like up here. Remember the time we tried to sneak up and old Mrs. Acton got mad and threatened to spank us? She lived to a hundred and three, did you know that?”

“Under the terms of the transfer, we can’t alter the décor in these rooms. That’s why the rug is still here.”

“How strangely colorless you’ve become, David. You’re not in total amnesia, though. I can see it in your eyes.”

She stood up and came around the desk. He stood, also, and suddenly they were quite close, and the attraction was powerful. He cleared a dry throat.

“Maybe I’ve always been a colorless bureaucratic type. By your definition, anyway.”

Fingers brushed his forearm, a seemingly innocuous gesture that was surprisingly intimate.

“We know each other, David, and we have made promises, and even if your mind is in denial, your body knows it.” She gestured toward the images over the door. “They mark this as a sacred space. Worthy abode of the

Plumed Serpent, for example. Quetzalcoatl. Does that ring a bell with you?”

Vaguely, he recalled talk of the Mexican gods in the class.

He cleared his throat. “The situation—the disturbed sun, the coincidence of the dates, all of that—has caused a significant minority of patients to integrate Mayan cosmology into their fantasy production. We psychiatrists used to get Hitlers and JFKs and Napoleons. Now, it’s Tlalocs and Quetzalcoatl. So yes, I am indeed familiar with the Plumed Serpent. If I may be so bold, which god are you?”

“I get what you’re doing. You’re not sure about me. You remember something, but not enough to let down your guard. I could be the enemy.”

“What does that mean to you?”

Her cheeks went rosy, her lips parted just enough to reveal the pearl edges of her teeth, the moist pink of her tongue.

Maybe it was the most seductive look he had ever seen.

“David, I want us to be us again, like we were when we were kids.”

There was no longer the slightest question in his mind that his decision to house her on confinement was correct. If she was a member of the class, she’d welcome the safety of it. If she was some kind of agent, she’d be contained. This woman had no psychiatric symptoms, and she wasn’t even bothering to pretend.

Katie appeared, meaning that he was out of time.

He said, “Caroline is ready to go.”

With a dancer’s grace, Caroline turned around. Then she whirled back, her cheeks red, her eyes so savage that they sent a shock through him. Caroline angry was a terror.

“That works exactly once,” she snapped.

She was very controlling. She did not like to be “handled.” And he was just not sure where he stood with her.

He tried a smile. “It’s just that it’s lunchtime, Caroline.”

“Anything raw and bloody. A heart, preferably.”

“Be careful, you might get just that.”

“Ah. Can I order it? Does this place work like a cruise ship?”

He ignored the question and instead turned away from her in his chair. After a pause, she huffed out, Katie hurrying along behind her.

Katie handed her over to Sam Taylor in the outer office and began to push David’s door closed.

“No, Katie, I want you,” he called.

She returned. For the safety of Caroline Light, he intended to make a convincing case to every staff member at the clinic that she was genuinely insane, perhaps even dangerous.

“I want this patient placed on priority observation at all times. Her luggage is to be searched by Glen personally for anything that shouldn’t be there, and it’s to be brought to me. She is to have locator buttons placed in her shoes and clothing, and I want security to put her on the alarm list for any deviation from routine.”

Katie’s face suggested carefully concealed surprise.

“This woman is in a good deal of trouble,” he explained. “She’s been poorly diagnosed and inappropriately treated, but that’s not the problem. What we have here is a time bomb that’s about to explode. In the safety of this environment, surrounded by professionals who can control her, she’s going to give herself permission to just plain cut loose.”

“I’ll get this set up right away.” She turned to leave.

“Don’t worry, she’s not going to blow just yet. But she will, Katie. At some point that anger is coming out, and it isn’t going to be pretty.”

“Doctor, you have the steering committee meeting.”

When Katie had gone, he took a deep breath and let it out. He was drawn to his assistant sexually—not as explosively as to Caroline Light, of course, but he’d welcome company in bed.

He went to the bookcase and pulled down one of the beautiful codices. He really wanted to spend some time with them, if nothing else admiring the artistry. He was drawn to them. He wanted to feel them in his hands.

He drew down another volume, then another and another. They were all different, all huge, and he thought that any one of them might contain more writing than all the known Aztec and Mayan codices in the world.

Then he saw a volume that was not a codex. *The Gods of Mesoamerica* by Bartholomew Light. He took it down. Obviously, it hadn’t been touched in a very long time, and the leather cover crackled when he moved it.

He had just opened it when Marian Hunt came in, followed by the executive chef, Ray Weller, Glen, Bill Osterman, the chief engineer, and the other members of the on-site steering committee.

Appropriately enough just before lunch, the subject was to be food resources. Supplying the clinic with the luxuries the patients expected was

getting more and more complicated. There had to be cutbacks, followed by the inevitable protests.

As the room filled, he began to experience an acute sense of claustrophobia. He was not used to feeling suspicious of coworkers, and having his office filled with them was surprisingly unpleasant. As large as it was, it felt just now like a coffin.

Katie said, “Doctor, are you okay? Because you don’t look okay.”

He put a hand on her shoulder and could feel her stiffening and recoiling from the contact.

“Do you think Dr. Ullman was murdered?”

“Excuse me?”

She was surprised by his question—as, for that matter, was he. But she recovered herself quickly.

“He died in a fire,” she said, her voice sharp.

He looked around at the assembled group, the concealing, careful faces.

“Very well,” he said, “let’s get started. We don’t have much time.”

And then he thought: in truth, we don’t have any time. No time at all. In fact, the Acton Clinic, all of us, the country, the world—we are all in the same situation: we no longer have time.

DAVID FORD'S JOURNAL: TWO

I was looking through Bartholomew Light's book and a document fell out, and this document has, quite simply, turned me inside out. Reality is not what I thought. Not at all.

The note is old. It is signed by Herbert Acton. The heading is "Divinatory Calendar" and dated "6.1.1." This is either June 1, 1901, or January 6, 1901, I have no way to tell which.

Now, this next part is important, and I want to record it exactly: I found this note at 11:50 in the morning of May 22, 2020, while paging through the book.

I know it isn't forgery—not because the paper looks old, but for another reason that will become clear after I have recorded the list itself.

The list. In my humble opinion, probably the most astonishing words ever written by the human hand.

On the surface, it is the work of someone with deep insight into modern history. On the surface.

It is a list of the dates on which certain small but crucial events took place in the twentieth century. Each date is accompanied by a stamped glyph, and I found the deities they refer to in *The Gods of Mesoamerica*.

In the absence of the Internet, I have used *Every Day in History*, also in this library, to research the dates I did not know, which was all but one or two of them.

I record them herewith together with the identity of the Aztec glyph associated with each one:

2 February 1910: Entry of Aleister Crowley into the Order of the Golden Dawn.

This was an occult organization. The glyph is the god of the underworld, Acolmiztli, as if this act somehow drew us all into a kind of hell, or marked

our passage into it.

28 June 1914: Assassination of Franz Ferdinand of Austria.

This assassination led to World War I. The associated glyph is Ixtab, goddess of suicide. Eater of blood.

13 October 1917: The Fátima “dance of the sun.”

This bizarre event was witnessed by thousands. Glyph of Citilalinique, “she who illuminates,” goddess of the starry skirt. (And I do recall the remarkable star-covered robe the apparition at Fátima was described as wearing.)

5 January 1919: Foundation of Deutsche Arbeiterpartei.

Adolf Hitler joined this party the following year and it became the Nazis. Tezcatlipoca, god of rulers, death, and the night.

16 September 1922: The last reparations meeting in Weimar.

At this meeting, it was decided to strip all the gold from Germany. As a result, the German mark hyperinflated and the stage was set for the rise of Hitler and his party. Five-Vulture, god of ruinous excess.

30 March 1934: Leo Szilard conceives the nuclear chain reaction.

Szilard was walking the streets of London when suddenly he saw how the atomic bomb would work. Quilaztli: goddess of the Milky Way, whose roar signaled war.

25 January 1938: Fátima prediction fulfilled.

On that night, massive auroras over Europe heralded the beginning of World War II, just as Our Lady of Fátima had warned would happen. The event was associated with Chalchiuhtotli, god of mystery.

This is the last date save one, which is the most shocking of them all.

This is a list of events that took place beneath the surface of history, but which were critical markers in mankind’s long journey through the underworld that we apparently entered in 1910.

I have a personal story about one of the events. Specifically, my father knew an elderly priest, Father Thomas Heim, who was among the thousands who actually witnessed the dance of the sun at Fátima. Father Heim had said that the object was not the sun, but something in the sky that was in front of the sun. He said that he could see a ladder on the object, with figures moving on it.

I have never known what that might have meant, but this last date has made it more clear.

It is June 22, 1947. This is the date of something called the Maury Island UFO encounter. It was the first UFO event of modern times, preceding the famous Roswell Incident by about three weeks. It involved the sighting of a number of unidentified flying objects over Maury Island, Washington, by some fishermen. Some strange material fell out of one of the objects and onto the boat of the fishermen.

It also involved the deaths, over subsequent weeks and months, of many of the people involved in the investigation.

One who survived was called Fred Crisman. He was later implicated by New Orleans District Attorney Jim Garrison in the Kennedy assassination. What that may mean, if anything, I do not know, but he was certainly involved with Lee Harvey Oswald.

The point of this list, I think, is to reveal crucial moments in history that illustrate the hidden battle among the higher powers that govern human affairs. We have not drifted into this desperate trap at all, but been led here. Just as the ancient Maya knew when we would reenter the debris field of the supernova, so did whoever is behind the way this world of ours works. And they have been *designing* history, not simply allowing it to happen.

But, of course, my own assumption that this document is old isn't enough to convince me of its authenticity, but the second page is. On this page are just two paragraphs, the first entitled "Citilalinique." There follows an intimate description of Caroline Light: *The Lady of the Starry Skirt, bringer of the light of understanding. She is to be born 25 October 1986 on schedule and sign. Will enter class 1 June 1994 with the others. Pubescence takes place 12 July 1997. Amnesia will then be induced.*

The second paragraph is called "Quetzalcoatl," and it is about one David Ford. *The Plumed Serpent, creator and builder, is to be born 25 October 1988 on schedule and sign. Pubescence takes place 12 July 1992. Enters class 1 June 1994 with the others. Partial induction, no artificial psychosis. Directed to medical career in anticipation of later role. To become clinic director 14 May 2020. Will find this document at eleven-fifty in the morning of 22 May 2020.*

Perhaps I could explain all this away as a clever forgery, except for that last sentence. As soon as I read it, I looked at the clock. It was 11:57 A.M., and it had taken a few minutes to read.

In other words, no matter the ink, no matter the age, the author had

anticipated the exact moment I would find it, and could *not* have known this in any conventional way, not even if the document was written an hour ago. So, as I turned over the page, I also overturned everything I understand about our world—as, I am sure, I was meant to do.

The list ends with two sentences: *What I could not do, you must. The judgment has begun.*

Many religions and societies have intuited—or known—of the existence of the great cycles we are moving through, and seen their periodic end as times of divine judgment. All well and good, except I don't think that we should view the higher force that creates and harvests souls on earth as something supernatural.

I don't believe in the gods identified in the document, or any gods, for that matter, and certainly not in myself as some prancing Aztec deity. But I now have no choice except to believe that an extraordinary science, hidden from most eyes, is able to predict the unfolding of time, and that it is in some incomprehensible way connected to the images of these deities—and to me and Caroline, and to this place, and probably to whatever future the world has, if any.

What I have here is a document based on the lost science I am beginning to remember being taught in our class. It operates entirely differently from modern disciplines, for this is a science of the soul, and as such makes use of more than the three dimensions we see around us.

Its engineering built the impossible structures we see from the past, such as the gigantic platform at Baalbek in Lebanon, made of stones so huge that we could not move them to this day, or the fortress high in the Andes at Sacsahuamán, constructed from more than thirty thousand perfectly matched boulders, each weighing at least a ton, and carried thousands of feet from gorges far below.

But it was its ability to see into time that was its most extraordinary achievement—to see into time and, just possibly, to actually move through time.

Of course, I'm going to look between the pages of every book in this room, because I understand very well what I am seeing here. I have beside me on this desk as I write these words a list that is a map of mankind's descent into an underworld where we are still trapped.

I have often reflected on the fact that a single bullet fired from a small

pistol by the political simpleton who assassinated Franz Ferdinand led to the collapse of Western Civilization and the destruction of a billion lives.

This list, by including that event, acknowledges its hidden importance, and by associating it with Ixtab, the symbol not of war but of suicide, reveals much insight into the actual psychology behind the events. The old world did not die, it committed suicide, quite literally. It was the mechanical nature of the interlocking treaties involved that amplified that single shot into the vast international immolation that followed, and, above all, the *machinery* of the situation. Once one country had put its soldiers on the trains that would take them to the front, the others were forced to do the same or risk being unable to prevent the army that was already mobilizing from simply walking across their borders.

At its deepest level this is a list of man's enslavement to mechanism.

It is also something else. It announces the coming of a higher power in the form of the UFO, a phenomenon that started with the Maury Island incident.

In 2012, NASA did say that some of them were apparently of intelligent origin, but who has investigated? Who's had time? Maybe somebody, but I never saw any news about their findings, and now it's too late for that sort of thing.

So this higher power has returned to oversee this enormous change.

I find myself in this marvelous, silent room with its tall bookshelves and exotic carved walls, with its mysteries all around me, going deep into myself and finding more and more questions. I am a man alone at the end of time, with a dependent flock to keep, a sort of shepherd.

Before God, I could not previously have imagined a sense of helplessness this profound.

5

QUETZALCOATL

Caroline Light followed Sam Taylor through the lovely front of the house. He'd been described to her as a "minder," and he looked considerably tougher than the nurse who had originally met her, a gentle lady called Nurse Cross.

Coming here had been the hardest thing she had ever done. Leaving her dad, and him so old and the situation so perilous—it had taken all the strength she possessed to turn her back on him. His old driver, Vincent, had gotten her here in just over fourteen hours, traveling back roads, bypassing cities, avoiding the interstates where a car like the Mercedes was a definite target.

And now here she was in the place where the legendary Aubrey Denman had just lost her life—and in certain danger herself.

Dad had wept quietly as she left. She had, too, but not quietly. The last she'd seen of him was that proud old figure, narrow but immensely dignified, standing before their beloved Mayfair, the house Dad's father had bought after being blessed with the friendship of Herbert Acton. Dad's last words to her had been a cavalier wave and a confident, "See you on the other side." The tears, though, had been silent testament to the truth: they were beyond the edge of the age now. Not even Herbert Acton had been able to see clearly into this period of chaos.

The future was on her shoulders now, hers and David's.

They reached the end of the long corridor that split the second story. Before them was a black door locked by a fingerprint reader. It looked like the entrance to a gas chamber or a prison, or the underworld. He touched the reader and the door clicked, then opened onto a white institutional corridor lit by fluorescents.

She needed to seem like just another patient, and saw a chance to do a little acting. She stopped.

"Excuse me, Sir. Mr. Taylor?"

"Ma'am?"

“What is this? Where are we going?”

“Your things are being moved into your room now, and I’m taking you on a tour of the facility.”

“Fair enough, as long as I don’t have to fraternize with the other nuts.” Lay it on, girl.

They entered a large room, and for the first time she saw some of her compatriots. She hadn’t seen her classmates since they were children, but she could recognize almost all of them. In any case, she knew their names, so she would be able to identify even the ones who were most spectacularly different.

Being close to them again was every bit as eerie as her father had warned her that it would be. Most of them had not the slightest idea who she was, and those who did weren’t going to show it.

David had been expected to remember her immediately. Her mention of Quetzalcoatl had been the trigger that was supposed to break his amnesia.

It hadn’t worked, so now what? Mrs. Denman was dead, and she dared not talk about such a subject with Dad on the phone, even if she was able to get through. Obviously the enemy was right here in this place. Could even be this Mr. Toughguy with a heart of gold, for all she knew.

“This is the activity area,” Sam said. “This is where we meet friends, make new friends, that kind of thing. There are games, there’s a poker game, there’s bridge, of course, we have two leagues and an annual championship, there’s backgammon, a lot of stuff like that. Also, we have an art room where you can paint or sculpt or do pottery. Actually, we have practically everything.”

She noticed a guy ogling her. He had not been in the class, so he was one of the real patients, and his nostrils were actually dilating. What a creep.

“Who’s he?”

“Graham Mining.”

“If we go by our company names, that makes me Daddy’s Little Girl. We have no company. We’re post-work.”

The patient followed her with his sick eyes. Then, annoyingly, he got up and came sliding over. Big, imposing man with a carefully tuned smile. “They call me Mack the Cat,” he said.

She understood why, too. He moved like a jaguar. You wanted to step back.

“May I know your name, Miss?”

“No.”

“ ‘No’ is a good name. Easy to spell.”

“And it gets the point across. Incidentally, you drool, but cats don’t. From now on, you’re Mack the Dog.”

The smile froze. She wondered if he was marked yet. If not, her guess was that his truth would soon emerge. This was a bad man. Written all over him. So, enemy or not? Bad was certain, the bastard had rape in his eyes. But the enemy—wouldn’t he be charming, fit right in? So no, this one was probably just damned unpleasant. Good window dressing for the clinic, though.

Mack the Cat met Sam Taylor’s eyes, and Caroline saw that they knew each other all too well. Sam’s hand came to her elbow.

“Ma’am, we need—”

“Oh, be quiet.” But she followed him. No excuse needed to get away from Mack and his drool.

They went down some steel stairs and suddenly they were in another lovely room, back in the old house. It was large, glassed in, and full of sunlight. There were three patients there, each with an attendant. Two of them were in straitjackets, struggling and growling. The third paced back and forth, back and forth.

She sucked hard breaths, forcing herself to appear calm, but she was seeing Monty Offut who had been so strong and Carl Winston who’d read Greek and Latin, and pacing in a state of paranoid frenzy, Jenny Offut, Monty’s sister. They had swung together on the old swing that had been under one of the oaks out back, and dreamed the dreams of little girls.

“This is the old solarium,” Sam said.

“I know what it is!”

“You do?”

“I—of course. It’s obviously a solarium, you stupid jerk.”

She felt him tighten—felt a hurt, a disappointment come from him—and thought that she did not like playing this role of the testy, overwrought neurotic.

But look at the tile floor, at the walls painted with those vines, even the old sunporch couch over there—she’d lain on that couch and gazed out at the marching clouds.

The nostalgia was tremendous, and seeing her friends like this—it was also

agonizing.

“I think we need to move on,” Sam said. Tough, gentle man.

“Yes . . .”

This had been the classroom, where Daddy had taught them the secrets of the old gods, and given them their ancient names. She was Citilalinique, the Lady of the Starry Skirt, and her work was to bring the light of understanding to an ignorant age. Light the bringer of light. Nominative determinism. Not funny, though. Funny was in the past.

Finally, she could bear it no longer and turned away. She went toward the living room, where you had been allowed to sit and read, but certainly not play or roughhouse, and not endanger the collection of Fabergé eggs that was no doubt locked away upstairs somewhere nowadays.

She had curled up in that chair right over there and read—what had she read? Yes, *The Philosopher’s Stone*. She had memorized her formulas and what alchemists called confections, the assembly of the different components that would go into the extratemporal matter she was here to make.

Her father had brought her out of her own amnesia ten days ago. Prior to that, he had been awakened by Mrs. Denman, who had come on a day and at a time that had been specified by Herbert Acton fifty years ago, and showed Daddy a glyph of Huehuetotl, the Aztec god of life and the polestar . . . also the symbol of guidance, but not to the current polestar, not to Polaris. No, when the time came, they would journey toward a new polestar.

“Miss, patients are requested not to use these rooms.”

She sat down in her old chair, regarding him with mild interest. Would he drag her out? He certainly could.

“Thank you for letting me know,” she said.

He inclined his head. The guardian servant, then. Fine, she could stay.

She let her mind seek back over the events of the past few tumbling, chaotic days.

When Mrs. Denman had shown Dad the image of Huehuetotl, his eyes had grown steady and hard, and he had set his jaw like the soldier that he was. Then he’d embraced the cadaverous old woman, who had left as silently and mysteriously as a nun under vows.

That evening, he had been very quiet, refusing to speak of what had happened. Eventually, he had gone to one of Granddad’s wonderful handmade books, the one called the *Book of Silence*. He had opened it to two

beautifully colored images and said to her, “Remember.”

As she had looked upon Quetzalcoatl and Citilalinique, a whole hidden life had come flooding back. She recalled swinging in the garden at Mr. Acton’s house, and Daddy being their teacher, tall and rangy then, full of smiles and remembrance of Mother, and Mrs. Acton, incredibly ancient, looking down on them from the upstairs windows with appraising eyes. She had been the master behind the class, Daddy’s teacher, but they only met her once or twice.

Caroline had been ten, and Mom’s sudden death had then still been at the center of her life. The night before it happened, it was as if her parents had known—which, on a deep level, not then conscious, they indeed had.

The two of them had sat together in their private study into the small hours, talking in a loving way, touching each other and kissing, and Caroline had watched, and seen a kind of wonder between them, as if they were privy to a miraculous secret that was at once deeply serious and deeply joyous, perhaps the secret of life itself.

Mom had died of an aortal aneurysm, so suddenly that she had not even had time to cry out.

Mom had ascended, Dad had said. She would not be returning to earth again. Dad had explained, back then, that almost everyone who had ever been born was alive in the world now, every human soul returned to the flesh to experience judgment. And, he had added, by 2020—not 2012—they would all be here, all who needed to be.

Mom didn’t need to stay, she was finished here, he had told her.

All well and good, but it didn’t change a daughter’s grief. When there is a death between people who love each other deeply—husband and wife, parent and child—the relationship continues on in the heart of the survivor, and Caroline had told her dad that she wanted to follow Mom, she wanted to go, too.

He’d explained in his gentle way, “You and I are working-class, girl, we stay put. Only the saints and the sinners get to take off early.”

Since Mom’s death, he’d spent many an evening in that study, reading poems he had explored together with his wife, and Caroline had, in recent years, made a habit of joining him, and they had shared their grief and their love, enjoying their memories.

She recalled once again the images of Quetzalcoatl and Citilalinique,

intricately painted, their seemingly bizarre faces going deep into mind and memory. The Mayan and Aztec gods were representations, among other things, of the human unconscious, the purest ever created by the mind of man . . . the unconscious in all its wonder and playfulness, and all its paradoxical savagery.

On softest wings, when she had first seen them, memory had come, bringing with it a love that had been hidden in her heart for years.

She had remembered David.

Now, she recalled watching him curse and, on the wide lawn, trying to fly a kite. She'd laughed until her sides ached. David was so clumsy and so sincere and so very dear to her, and she thought that they had known one another across many lifetimes.

"Daddy," she said to her own secret heart, "tell me how to make him remember me."

When he was awakened—if—he would become their leader, assuming the role and the power of protector and healer. The knowledge that the new world that was coming would rest on his shoulders made her proud of him, and proud to be his promised love.

Except, what if he did not remember? People change, even locked in the amber of amnesia. What if he had somebody else now? There were attractive nurses here and people under pressure form attachments fast. In war, whole lives are lived in days, and this was just like war. It was war.

"Miss, we have a lot still to see. I want to show you the dining facilities and the kitchen. It's quite a wonderful kitchen."

"Sure," she said. The poor guy was practically dancing, he was so eager to get her out of the so-called restricted area. As if she'd somehow damage carpets on which she'd played Monopoly on rainy afternoons.

She followed Sam through a pair of double doors with mirrored windows in them, entering a spotless, magnificently appointed, but very busy kitchen—all of which was new. This had been the music room in the old days. Now, the piano was in what had been the old smoking room, opposite the solarium.

The new kitchen revealed a fine spread of marble countertops and high end appliances. She counted four chefs in toques, surrounded by rushing crowds of assistants. It looked like the kitchen of the *Queen Mary II* back before she'd disappeared in that storm.

"Miss Caroline, this is Ray Weller, our executive chef. He's the one who'll

read your preferences list.”

“Hello, Ray.”

The way he smiled told her that he knew her. So this fellow classmate was not in total amnesia. Dad had said that some would be and others not, but that she was to show everyone their glyphs, because the sight of their particular image would end all amnesia. Those hidden in psychosis, though, were a different matter. They were the stars, the powerful ones, the essentials, the most important and therefore the most deeply concealed.

“We aim to please,” Ray said, “so do think carefully about your desires. We can do just about anything, as long as supplies aren’t short, of course.”

“Now we’re going to the art room,” Sam said.

She followed him through double doors that led back into the patient wing, but this room was brightened by big windows that overlooked the lovely grounds. There were men and women in paint-smearred jeans and T-shirts, some painting on canvases large and small, some drawing, others creating clay sculptures.

She was satisfied to see a group of potters working industriously, their kiln casting a glow that she found extremely realistic. They were actually firing pots in it, but it was not really a kiln—or rather, not only that. In fact, right now, it was the most important machine on planet earth, because of what she was going to do with it.

An old classmate, Susan Denman, sat reading *The Philosopher’s Stone*. She looked up at Caroline and smiled through what was obviously great personal sadness. Her father had told her that, if all else failed, a sufficiently intense shock could often cause spontaneous remission of artificially induced psychosis. The murder of Susan’s mother had obviously, in her case, been enough.

Caroline returned just the slightest glimmer of recognition. She and Susan Denman had studied subspace together, learning how to form holographic realities that would be at once in a single place and in all places at the same time—essential knowledge, given Caroline’s mission. And Susan would bring the colors and prepare the brushes.

She sighed as she walked, wishing that things were different, that they weren’t so hard and so dangerous. Class had been a joy—the joy of their childhoods, and she was so grateful to Mr. Acton and to her dad and granddad for all they had given.

She'd been glad to be recognized by Susan at least, because this business of concealing the group inside induced symptoms of mental disease, and turning Mr. Acton's beautiful home into a fake mental asylum, was even more horrible than she'd feared it would be.

Susan might be awake, but over there, Aaron Stein, painting that horrific thing—what was it, a woman colliding with a gigantic penis?—obviously still needed to wake up.

“What's that guy's problem?”

“Schizoaffective disorder,” Sam replied in a self-important tone. Proud of his jargon.

Beautiful, poetic Aaron, so quick to laugh and so full of gentle wisdom . . .

She would soon be painting as well, but it wouldn't be an outlet for mental illness, far from it.

It was essential that it be completed quickly, for there would come a time soon that the chaos would be too great, and it would be impossible to finish it. Even the color of the sky was going to change, and without good color, she could not make this artifact that was to be a perfect confluence of the knowledge of science and the energy of art.

If Mr. Acton's plan worked.

“Let's get out of here,” she muttered to Sam.

Another member of the class—a grinning Amy Makepeace—looked up from a painting of what appeared to be some sort of grim tower, and smiled the too-radiant smile of a madwoman.

“What's your death going to be?” she asked, her tone crisply genial, her eyes button-bright. “Me, I prefer to jump.”

At least there was plenty of painting going on, which was an important part of the plan. The device she had been trained in class to create would appear to be a painting, at least at first. Later, as it developed, it would reveal itself to be a doorway through time, and when it did, nobody would imagine for a moment that it was just a picture.

By balancing the artistic skill and scientific knowledge in her mind, all enhanced by the power of the alchemical gold she would make, she was actually generating their escape route. What she would create in this room would look like a painting for a while. But it was not a painting, not at all.

“Ma'am, we want to move on.”

“Sure. Gotta cover my cage, I'm too noisy.”

“The tower,” the woman said, “you walk and you fall.” She thrust her grinning face into Caroline’s. “And you *fall* . . .”

And Caroline saw an opportunity to reinforce her own feigned symptoms. She pretended to have a seizure, letting herself pitch backward shaking. She hit the floor so hard that she blacked out.

A moonlike face appeared, its demon eyes fearsome. She gasped, then screamed—and the face of Mack Graham smiled, and it was as if the demon had withdrawn—hidden, once again, in its lair in the man’s heart.

He helped her to her feet. “I’m so sorry, Miss—”

Do not tell him your name.

Brushing herself off, she scrambled away from him.

“Maybe your medications are affecting your balance,” Sam said.

“That’s just it! I’m not on any. I’ve run out so I came here—” She looked around the room. Every eye was on her, and she was looking at gargoyles, at smoldering sex maniacs, at wild-eyed schizophrenics, at paranoids in their sullen corners—it was awful, a gallery of the damned in the faces of people she loved dearly and respected enormously. That brilliant class of wonderful kids were the center of her heart and to see them like this was almost enough to induce actual insanity in her.

She smiled, forced a laugh. “I won’t miss that step again,” she sang out. “Let’s see my suite.”

“Of course, Ma’am.”

Sam laid an arm around her shoulder, or rather, his big arm came oozing around her with the muscular stealth of a python. She allowed herself to be guided out of the art room and down yet another long institutional corridor.

Ahead was another of the black doors, looming at her like a hungry trap. “Do we have to go back in there?”

“Your suite is there.”

“Where does Mack live?”

“Next door, actually.”

“No,” she said, “no. I need to live in the house, you see. It’s what I’m used to. This—oh, my God, it’s a prison.”

“The rooms are nice, Ma’am. So, please—”

She had to lay it on. She had to continue to seem insane, here. She must not raise the suspicions of that monster Mack, and he was suspicious already, there could be no doubt of that. She pulled away from her minder. “Look,

I've made a mistake. I can't do this. I'm going home."

"Caroline—"

"I'm going home!" But now she found herself confronting not just dear old Sam, but David and his assistant, Katrina Starnes. Katrina, the modern name of the Mexican goddess of death.

"Caroline, you need to go in now," she said.

"Please, Caroline," David added—and the lack of recognition stabbed her heart.

"We're still processing your intake," the death goddess said. "Someone will be along to help you with your program in a few minutes."

She had to continue her act.

"I'm free to leave," she snapped. As she tried to push between them, the enforcer laid his thick—and surprisingly gentle—hands on her shoulders.

Drawing herself away from him, she cried out, "How dare you touch me!"

His body blocked her way, but when she tried to get around him, he proved to be as adept as any dancer.

"What's she doing, Doctor?"

"I don't know."

She turned on David. "Get these people out of my face!"

As she tried to make her way back into the main house, Katrina dropped a leather strap around her arms and pinned them to her sides. Even fighting as hard as she did, she could not free herself.

She did a little method acting, imagining what it would be like if this were real, if she were actually mad and being trapped, and terror exploded through her with such intensity that she just burst out screaming, surprising even herself with the ferocity of it.

The sounds of the struggle echoed up and down the corridor, and the cries of other patients were soon added to her own screams. As patients came out of the art room and other public rooms, some of them laughed, their voices warbling high with hysteria, while others shouted for help, or came rushing forward to do battle on her behalf.

Susan Denman watched, amused and appalled at the baroque antics.

But before any of this chaos could resolve itself, she was dragged backward hard, there was a great crash and sudden silence, and she was on the floor looking up into David's dear, empty face.

"Okay," he said, "she's controlled. Now, Caroline, can you hear me?"

She continued her act. “Bastards! *Bastards!*”

“All right, all right. You’re angry and I would be, too. Now, I want you to get yourself together, Caroline. Can you do that?”

Despite all that she knew, she could not help being genuinely furious, if not at his ignorance, then certainly at his condescension. “I’m not one of your patients,” she wanted to say, “I’m part of your heart.”

She managed a choked, “Yes, Doctor.”

This was hideous, to see him like this.

“I’m going to have Katrina here release you. Is that all right? Are we able to calm down now?”

“I’m calm! So get me out of this damned thing!”

“Uh, Doctor, is this wise? She’s very agitated.”

“Do it. But step away. Step *behind* her.”

“I’m not going to do anything,” she said as Nurse Katrina freed her. “Just keep that other guy away from me. Sam. I mean, what is that, a giant dwarf? A troll?”

“The hell . . .”

“Leave it, Sam. Caroline, we’ll address all of these issues in our intake interview.”

“I thought we did that.”

“No. No, not entirely. We did not.” David pranced toward her, all officious professionalism. He took her elbow and in a moment they were in a small room, sparsely furnished with a cot and a recliner that took up far too much of the space.

“Now,” he said, “you can collect yourself. Get in the recliner, it’s great! I mean, you talk about relaxing, these things—all the patients just really love them.”

“It’s a chair, for God’s sake.” But she sat down. After a moment, she pulled the lever and leaned back. She noticed that the ceiling lights were protected by wire cages.

“What is this, one of the cells? Am I a prisoner, because I better not be. I did a voluntary commitment, remember that.”

“This is a safe room. We call it a safe room. Now, close your eyes.” He began rubbing her temples and she let herself drift, let the distant sounds of the institution die away, let the world drift and drift . . . on a quiet ocean . . . ocean of silence.

“I have a little something,” he said.

“I don’t want anything.”

“You’re very agitated.”

“Oh, it’s just this sun business! I can’t quit thinking about it.”

“Take deep breaths, let it go, let the trembling go.”

She was trembling? Yes, actually shaking like a leaf. She could feel the dark gods coming, smelling her weakness, coming with their jaws clicking, their obsidian eyes flickering with inner fire. Xipe Totec, the Flayed One, skinned by the sun, dead but alive, and coming out of the bloody mouth of Mack the Cat.

She was aware of movement in the room, the clink of glass. When she opened her eyes, a nurse was there with a small paper pill cup and a glass of water.

“What is it?” she asked David.

“A mild sedative.”

“No.”

His hands were gentle, insistent. She felt his subtle power and liked the feeling. She saw plumes of red and blue around him, feathers in the wind.

“And he will descend into hell and gather the bones of men, and he will spread them on the earth, and his wisdom will make them dance.”

“And that is?”

“The work of Quetzalcoatl. The bringer of peace, the builder of heaven.” She saw him in David’s eyes, just as she had when they were children, and she had thought him the most beautiful creature that God had ever made.

He touched her temples again. “Take it easy, Miss. Right now, you’re agitated. Let’s cross this bridge first.” He took the pill cup from the nurse and handed it to her.

She pretended to take what she recognized as a Xanax. She did not take it, though. She needed her wits.

“Good. That’ll help.”

“David?”

“Dr. Ford. I’m Dr. Ford.”

“Okay,” she said, fighting to keep the pain out of her voice. “Dr. Ford, I want you to humor me. Indulge a little innocent paranoia. Don’t tell anybody my last name. Can you do that?”

He blinked as if surprised, and she wondered immediately how much he

did remember. Clearly, he wasn't entirely clueless.

"Patient surnames are confidential. Nobody gets your surname except from you."

His hands caressed her temples so gently, so firmly, that this time when she closed her eyes she did indeed drift away.

Then, seemingly without more than a moment passing, she came to understand that he had not been rubbing her temples, not for some time. In fact, not for a long time.

With a shocked gasp, she opened her eyes. At first, she couldn't see anything at all—and then she could, a line of light floating ahead of her. A line of light . . . which she moved toward.

She understood that she was on a low bed. And naked, she was also naked, or rather, in one of those loose hospital gowns that tie in the back. She leaned down and touched the line of light, running her fingers along it. A faint coolness brushed them—air, she realized, from outside.

Once she understood that this was the door, her disorientation resolved itself and she stood up, feeling for the doorknob. She found it and turned it, but it was locked tight.

She called, "Hello, I'm awake! Hello!"

Not a sound came in reply.

She tried to look at her watch, but couldn't find it on her wrist. Taken. Not stolen, of course, she didn't think that.

They'd overdone this, and she saw a chance to put on a performance.

"Hey! HEY!" She shook the door, then hammered on it.

Nothing.

She felt the walls and found a quiltlike surface on them. She ran her palms along it. Soft. So was the floor, soft, quilted. There was no window. The ceiling no longer had caged lights on it, but rather flush glass fixtures that emitted a faint nocturnal glow.

He'd doped her with something more than Xanax, that clever David, good at every job he'd ever done. And she'd thought she hadn't swallowed the pill. She hadn't been meant to—or rather, it hadn't mattered. Whatever had done this to her had been in the water.

So, okay, here we go. He wanted crazy, he was going to get crazy.

She backed up, then took in a deep breath and screamed her lungs out.

And—wow, that was something! Her heart was hammering, her body

flushing with adrenaline. She did it again, then threw herself against the door.

The padding absorbed the blow without the slightest effect, which was genuinely disturbing and isolating, and made it quite easy to scream more, so she screamed and screamed and screamed, and roamed the cell, hurling herself against the walls, against the door, dropping to the floor and rolling and screaming, and screaming and screaming and screaming. But, then again, that's what a padded cell is for.

She stopped. This was all well and good. She was putting on what must be a convincing performance. But she was also here for serious reasons. She needed to get the arc furnace running. There was a lot of gold to make and only a little from Guatemala to start the process, far less than she had expected to find. And there was the matter of the painting. It would be a meticulous, difficult process, enormously intimidating, and all of it needing to be done on a very tight and very precise schedule.

The whole world had arrived at the border of an unknown country, a rare shadow land that few men ever enter and fewer recall. Already, they were advanced into it, for the death of Aubrey Denman, an incalculable disaster, had not been predicted in any of the writings of Herbert Acton.

This was because he had not foreseen it. Her father had told the class, "There is a period at the end of a cycle of time that we call its omega point, where life itself enters the unknown. An omega point is a dark labyrinth from which only the few will escape." He had smiled then, this gentle and compassionate man, a smile filled with hope and pain. "Be among the few," he had said.

She rattled the door again, and this time it was no game. "Let me out," she shouted. But there was only silence in reply.

This time, when she screamed, it was no act, and she screamed and screamed and screamed.

DAVID FORD'S JOURNAL: THREE

The staff is alerting me about poor Caroline again and again, but I sense that she's taking advantage of the situation to do a little playacting, and I keep thinking that I need to let her do that. Somebody needs to be convinced, I feel sure. But I don't want her to pretend so well that I have to put her in a jacket or shock her.

Caroline is brilliant. But how did she get here through all that mayhem on the outside? Was she helped, perhaps, by the resources of the Seven Families?

I wish that I could have proof that she is the real Caroline Light.

I have about convinced myself to take the risk of opening up to her. Despite the fact that I don't have any recollection of her, I am tremendously drawn to her, and perhaps that is a sort of memory. If we were children when we last met, she would look entirely different, would she not?

After she drank the sedative, I held her in my arms and she felt as light as air, her body slack with sleep, her sangfroid gone. Her vulnerability broke my heart even as it filled it.

Glen turned up nothing unusual in her belongings. Her driver's license seems genuine, for example, but what does that mean?

If she's the real person and she isn't in amnesia, I need her desperately.

Last night, there were monstrous, flaring, leaping auroras. Today, half the face of the sun is covered with gigantic sunspots.

The Internet, TV, and all telephone systems have more or less failed. Even the patient families we have relied on for food deliveries are not supplying us at this time, and we cannot reach them to find out what's happening.

What happens when we eat our last food and burn our last fuel? And when the solar flares get worse, then what? What I need to know is how we survive.

At least Katie Starnes is becoming more at ease around me. She isn't a problem like Caroline, and I would really welcome some development in our friendship. Just friends, though, sexual friends like we had in med school. No commitments, and I don't think she's looking in that direction, either. I hope not, at any rate, because this is no time to involve oneself in hopes for the future.

What's my next step? Where do I turn? I don't have a religion, not even some childhood thing to fall back on. My parents were scientists and atheists, just as I am. But right now, there are only three words that come to mind, that haunt me, that never leave my thoughts for long: God help us.

6

THE SOUND OF BLOOD

Again Mack heard them, pulsating out of the dark, long cries of human anguish. He could open neither his window nor his door, and he wasn't absolutely sure that they were coming from inside the facility. With all the mayhem these days, they could be from the distant streets.

As scream after scream pealed out—but so faint, why did they use all this soundproofing?—his whole body was set to vibrating.

He pressed his intercom button.

“Yes, Mack?”

“Somebody's upset.”

“It's the new intake. She's struggling again. We're calling one of the residents for her.”

He threw himself on his bed. Damn, what did this mean? He would have sworn she was an actress, no more crazy than he was. But this was one hell of an act, damn her eyes.

He did not want to sweat over some worthless loony, he wanted to sleep. But there would be no sleep, they doled out their goddamn pills nowadays like they were gold fucking bars. Worse. Everybody around here was crawling in gold bars, but they damn well were begging for Lunesta. Damn fucking cheap bureaucrats.

“What's her name?”

“You can ask her when she's in the population.”

“Sweet Caroline, I already got that much. Also, the fact that she's a bitch. That came through loud and clear.” After tonight's transmission, General Wylie had come back inside of a minute. “Get me the name.”

At this point in time, any new arrival was important.

“She might be a bitch, but she's suffering now, Mack.”

“Caroline . . . who?”

“Ask her!”

Well, the hell with it, the screaming had stopped, and thank you, God. He

turned out his light—and, damn, the flickering out there was incredible. He went to his wire-enforced window. The sky was a flaring, jumping curtain of multicolored light.

He was not making the kind of progress that was needed. They should have put a whole team in here. He hated to admit it, but that was the truth of it. Too late now.

In Mexico City, in the embassy's garden, he had watched the gods dancing in the night sky, watched Tezcatlipoca shift from man to jaguar to serpent, taunting and raging at his brother Quetzalcoatl. In Egypt, Quetzalcoatl was Osiris, the god of resurrection, and Tezcatlipoca was his brother Set, who cut him into small pieces. The Bible called them Cain and Abel. In Judea, the light and dark brothers had been Jesus and Judas.

He identified with Tezcatlipoca, El Gato, the night cat roaming and changing, the shadow cat. That's where his nickname came from. Doing his work, he moved like a cat.

But just as he had planned to begin exploring patient and personnel files, he had suddenly been deprived of his ability to leave his room at night.

They'd found out that he'd been off the premises the night Dr. Ullman was killed. Well, yes.

Now this new director and patient turn up just when it was expected that the Acton group would be putting their leadership in place—and here he was, locked up like a monkey in a GODDAMN ZOO!

He twisted on the bed, as uncomfortable as a man in a rack. And that thought took his mind back down a path it loved to go and hated to go, the torture path.

You look down at the guy in straps and you know that he belongs to you. You lay the cloth over his face, adjusting it a little, drawing out the suspense. He turns his head and Billie Fisk gets it between her sweet knees and holds it steady for you. Then you get the pitcher, you fill it in the sink, you hear the echoing drip of the water on the tiles as you carry it brimming over to the guy's gurney-bound body. It's not a torture chamber or something, it's a men's room with a DO NOT DISTURB sign from some hotel on the door. Embassy basement, where else were they gonna go? Their work was illegal on Mexican soil.

Then you ask your question and you do not wait for the bullshit answer, you start your pour. The body of Ramos curves on the board. Stomach sucks

in. Legs pulse. Dick comes up. Feet hammer. Pour and pour. Neck goes from red to purple.

You run out of water. As you are refilling, you ask your question again. This time, he kind of starts in, but you don't listen. You and Billie will work him for an hour, doing maybe twenty pours. When his dick comes up this time, you dig your heel into it. You slip and practically fall on your ass. Billie laughs.

Somebody somewhere reviews the video feed, looking for clues in the body language, piecing together bits of words, all of that, working up a report for whoever.

Drug interdiction, that was the mission.

Thing is, why? Why are drugs even illegal? They're good, they do a search-and-destroy operation on the weak.

Never mind, you did your work and now you are here playing crazy, and, you gotta admit, it's just a little too easy to act that way.

She started screaming again, and that was it, she reminded him of too damn much. "Fuck this, will you shut her up! Shut her UP!"

"Dr. Claire is with her."

Claire Michaels, that floppy little puppy of a shrink. "She's useless! Get Hunt, get Ford! But shut her up, please."

Was this woman actually one of their leaders, or had her appearance at this time been chance?

Hell, that screaming was loud—and maybe it was there to cover some other sound that he might hear, like the hiss of the arc furnace they had in the art room. It was disguised as a pottery kiln but there were elements in there that could generate truly extraordinary temperatures.

But for what purpose?

It had to be involved with time, and the CIA's Acton Working Group had determined that Herbert Acton, like certain ancient Egyptians and ancient Maya, had definitely been able to somehow see forward in time. This explained his flawless investments, which statistics could not. As one of the statisticians who had examined them put it, "there isn't enough chance in all the universe to account for this. He wasn't lucky, he was informed."

In other words, he'd been able to see forward in time. This also explained things like the accuracy of the Mayan calendar. It hadn't been constructed forward to December 21, 2012, it had been written *backward* from that date

because they had *seen* forward first, then built their exquisite calendar from the top down, as it were.

Seeing didn't make a difference now, though. The only thing that would matter to anybody right now was physical movement through time.

So that's what this place had to be about.

If this Caroline was indeed one of their leaders, she had some damned important secrets, there was no question about that.

His mission was quite clear, and he didn't need General Wylie screaming down the horn at him to tell him that he needed to confirm her identity and then obtain her secrets by whatever means presented itself. No legalities, that was over and done with.

He had his problem, though, which was his night confinement and his daytime minder.

For the thousandth time, he considered his window. The upper sash, he could get that down a bit, maybe even work his way out. Problem was, there was nowhere to go from the sill. No, the ductwork was his only option. But he needed a blueprint. You couldn't go wandering off through the air-conditioning system of a building this size. You'd be heard. You'd get trapped.

There was a faint beep from his desk. Damn, he was shut down for the night, and here was Wylie back again.

He went for his radio, but he never got to it, because the next moment something completely extraordinary happened. It wasn't as if he hadn't been expecting it. He had. Expecting any damn thing.

What this consisted of was, in quick succession, three flashes that must have been a million times brighter than the sun, flashes that filled not only the eyes but the entire head, as if they had entered every orifice and pore on his body, and penetrated right down to the marrow.

One second, he was going for the radio, and the next the flashes hit. They caused an immediate, powerful, and startling hallucination, a form in plumage, grimacing, its face draped in golden chain mail, skulls strung around its neck, its long, black nails slicing toward him, sparking in the air.

In his surprise, he cried out, he pressed himself against the wall beside the bed.

That had been a damned hallucination of his own adopted god, Tezcatlipoca. But as his eyes adjusted to the sudden change in light, he

realized that it was still here, it was real, he could even hear the clatter of its bejeweled robe and the swish of its plumed headdress as it darted its face toward him with the horrible precision of a snapping vulture.

In another instant, though, his revulsion passed. It was as if a fire came into his body, lighting up the cells, causing his spirit to dance within him, and it was a dark and bloody dance.

With understanding, the apparition faded. He had seen a reflection of his own soul in a very special light, and boy, had he felt it. The energy of the damn god of death had come into him. That had been powerful.

His radio beeped again. Goddamn them! He turned off his light and opened the drawer. His little Sony was a masterpiece of clandestine technology, its additional circuits smaller than grains of rice. On the surface, it was an ordinary multiband portable. But it also contained this other component, a high-energy single-sideband transceiver and very careful shielding so that it would not be fried by solar electromagnetic energy.

The small display quickly flashed the decoded message. “General warning. General warning to all stations. Atomic clocks have stopped worldwide. Repeat. Atomic clocks have stopped.”

Physicists had theorized that such a thing might happen, as the world came to the end of the cycle.

They had gone past the frontier of reality. And at that very moment, the people who ran this place had started something new, some device that emitted light that drove you to face the truth of your soul.

And here was Mack the Cat, trapped in his damn room.

The end of time had arrived and what did he have to do? He had to goddamn well *wait!*

DAVID FORD'S JOURNAL: FOUR

It's now three o'clock in the morning and I have been paging through every book in this library and I have been doing it for five hours, and I will now record the reason. My search was inspired by those last two sentences at the end of the list. The first one was, "What I could not do, you must."

I interpret this to mean that he could not accomplish time travel, but knew that it was possible, and also that it would be, in our era, the only route of survival. But movement through time—literal, physical movement into another time—how could that ever be done?

When I was in college, the great physicist Stephen Hawking announced that he had changed his view of time travel, saying that he had come to believe that it was indeed possible. Last year—God, how long ago that seems—there was an experiment at the CERN supercollider in Switzerland that projected subatomic particles into the future, which were detected a few millionths of a second later, as they "landed" in time and the rest of the world caught up with them. They had never left time, but rather had moved through it faster than the universe normally allows.

Still, though, can something as large as a human body ever be accelerated like that? Even if this were possible, we'd have to go incredibly far in order to find a world that had healed from the wounds of this catastrophe.

Herbert Acton didn't do it. From my days in the class, I remember visiting his grave, which is on this estate. Mrs. Acton took us there, and now lies beside him, I am sure. They had no children. Understandable, knowing the future as they did.

As impossible as acceleration through time sounds, it may be that it has happened before—not to a human being, but to an animal.

A story that might involve time movement appears in a book called, I believe, *Hunt for the Skinwalker*, by a biochemist called Colm Kelleher. Dr.

Kelleher was the manager of the Institute for Discovery Sciences, an organization which sought to bring scientific method to the study of unusual events.

One of these events was the sudden appearance of an enormous wolf on a property that had been bought for the institute. This property, in Utah, was known to be a hotbed of odd events and sightings of the otherworldly.

When I read the book, I recognized the animal to be a dire wolf. It came up to a paddock containing some goats, in full view of the ranchers, then loped away after they shot at it. It went into some tall grass and simply disappeared.

Now, the dire wolf was rendered extinct by the catastrophe that ended the last Ice Age. And yet, here it was on this ranch. The scientists were even able to determine its weight by measuring the depths of its footprints in the marsh where it disappeared.

I think that this animal had moved through time, and I think I know why this happened. First, there was something about the place. There must also be something similar here, and this, I think, is crucial to whether or not we will be able to do it. This house was undoubtedly placed here because this spot is, like the ranch in Utah, conducive to such movements. Why, I cannot even begin to imagine.

Second, I believe that, in its own time, this animal was experiencing incredible fear. Its world was collapsing around its ears. At the end of the Pleistocene, most of Utah was flooded along with the rest of the United States by rapid glacial melt. Like now, the solar system was passing through the energetic remains of the supernova, and this had brought about a planetary bombardment and the complete, sudden, and devastating ruin of the world.

So given pressure extreme enough and the right conditions, actual, physical movement through time must be possible.

How, I do not know. However, my thought is that the class, if it can be brought back to normal, *will* know. They will all turn out to have pieces of the greatest puzzle that has ever been: the secret of time, and how to walk it like a road.

But, for now, I must leave this part of the document behind. If only the class can come into focus before it's too late, maybe we can construct our bridge across time.

I think on this. Come up only with one thought—I have to trust Caroline.

So I go on to the second sentence: “The judgment begins.”

What is happening now is, we already know, a repeat of a disaster that happened 12,600 years ago. In that time, the human population of Earth declined by over 90 percent.

After that, there was a long period of silence on this planet. Nothing happened. But then, about seven thousand years ago, heroes appeared throughout the world. The story of the great Egyptian hero Osiris dates from that time, and the stories of India’s demigod Krishna and other brilliant heroes, and civilization starts. Throughout its early years, we see such leaders as Akhenaton and Moses, who was perhaps his son, who bring the idea of the single God into the world. In the Americas, the civilizing Viracocha appear and, of course, my avatar Quetzalcoatl. Then, to begin the recently ended Age of Pisces, Jesus, who learned his secrets in Egypt and who was born in a most mysterious way.

I believe that these people were not mythological figures but very real human beings, time travelers from the lost civilization, coming forward to bring its wisdom to a new, still brutal era. The ideas of compassionate life, of the one God, of the promise of resurrection and the means to attain it—these are what they brought.

Just as their pre-Egyptian civilization was being inundated worldwide, they used their knowledge of time travel to leap forward five thousand years and reinvent human decency and goodness. They left behind new civilizations in the Indus and Nile valleys, in the Fertile Crescent in Sumeria, on Crete and in Central and South America.

Even as recently as the early Christian era, somebody knew of the existence of the great cycles and the periodic harvest of souls, I think, and was consciously directing the construction of civilization from a high perspective, with the objective of making more souls that were energetic enough, and light enough, to enter higher realms.

The energy is the energy of love, and the lightness is a lack of attachment to the physical world.

My reasoning that these cycles were known comes from observation of the Western long count calendar, the Zodiac, which measures the slow movement of the North Pole around a great circle that lasts just over twenty-five thousand years. It is divided into twelve roughly two-thousand-year segments, the houses of the Zodiac.

Like the Mayan Long Count calendar, it marks ours as an age of enormous change, although without that extraordinary precision.

The Old Testament was written during the Age of Aries, the ram, and in the Old Testament, the ram is mentioned seventy-two times, more than any other animal. It is the testament of the ram, written by people who knew very well what they were doing. Similarly the New Testament, which appeared just as Aries gave way to Pisces, the fish, speaks of Jesus as the Fisher of Men. The apostles are fishermen. The earliest symbol of Christ is the fish.

They knew and they understood, and they left this hidden record for the future.

Now we have reached the Age of Aquarius, the water carrier, and he is pouring out his water—that is to say, Earth is becoming unlivable.

During the Age of Pisces, the little fish—mankind—was nurtured in the water—the womb of Earth. Now, however, we are too big for Earth to carry and we are experiencing the violence of birth. As Earth becomes unable to support the little fish, she is ejecting us onto dry land.

Many will die now. Souls heavy with greed and cruelty will be unable to rise and will sink down into the core of the planet—the lake of fire described in Revelation.

In the autobiography of Hitler's architect, Albert Speer, he describes his experience after the ringleaders of this spectacularly evil movement were hanged at Spandau Prison in Berlin. They had been executed in a gymnasium, and he and other remaining prisoners were ordered to clean it up after the process was complete.

Underneath the gallows, they found a scorch mark in the floor so deep that they could not remove it.

Charles Light explained to us that this mark was left by evil souls as they fell out of their bodies and sank into the core of the earth, where they will remain until their evil has been consumed. They will return as the merest sparks of essence, ready to begin the eons-long climb from tiny life to intelligence, or, in some cases, to remain forever a part of the lesser world, never again to be granted the chance at change that being an intelligent creature offers.

The evil descend, the good rise—and then there are the rest of us, the little band of perhaps a million who stay. And what happens to us?

I know that we are intended to build a new world, but I also know that

nothing is certain. It is clear to me that we are supposed to escape into the future—to go forward to a time when Earth has healed herself.

Somebody else also knows these things, and they want to escape into the future instead of us, and they are here and they are fighting hard.

I'm exhausted beyond words and I feel sick to see the way this whole affair seems to be going off the rails, but my body has betrayed me with exhaustion, and I've got to sleep.

I fall back on the bed. I reach over to the table and take my gun in my hand, and clutch it, holding it over my heart. I close my eyes.

7

DEVILS

A bright light—very bright—brought David’s eyes flying open. Before he could think, he had leaped out of bed, but it was gone now and he was blinded.

He stood poised at his bedside, his heart thundering, desperate for his vision to return. When it did, he saw a shadowy form between himself and the window. Instinctively, he stepped back. It didn’t move, but he could see in the untidy glow of the auroras that it was something fantastic, feathered, massive, radiating a presence he could actually feel, a kind of immediate, spontaneous joy that made him think of the joy of a child, but also another, more fundamental sense of the rightness and balance even of this terrible time, and he seemed to see a deep secret, that the world rides a wire of balance that man cannot break.

No matter how bad things seem, in some deep living heart, the heart of the universe itself, always, all is well.

It was Quetzalcoatl in all his richness and joy.

The emotions were confusing and powerful and the apparition was so real that he drew away from it—and felt, then, the brush of feathers as the thing came right up to him, its eyes infinite pools of kindness, its soft hands caressing him and, it seemed, dipping into his skin as if it was cream, sliding with a quivering, eerie tension, into him. He twisted, he pulled at it, but it drifted between his fingers like smoke, and kept on entering him until it was entirely inside him. Gradually, the whooshing of its feathers was absorbed in the trembling rumble of his heart.

Gagging, his pulse soaring, sweat and tears pouring off him, he retched, then fell against the edge of his bed, then staggered into the bathroom.

He was heaving over the toilet when a cool hand came under his forehead. Shocked, he jumped back and turned—and there stood Katie in white silk pajamas, her hair loose around her face. He tried to say something but had to return to his vomiting, and she held a damp cloth against his forehead as he

struggled.

“Let it come,” she said, “let it be.”

It was, frankly, immeasurably reassuring to feel her holding him and hear the calm in her voice.

Finally, the feeling subsided. He straightened up. “I’m sorry. I—my God, that light! What was that light?”

She gave him a quizzical look. Not for the first time he saw past her job to the woman, noticing the sensuality of her lips and the seductive directness of her eyes. They were not gentle eyes, but frank ones.

She guided him back into the bedroom. “I think you had a nightmare, David.” And also, that was the first time she’d addressed him by anything except “Doctor.” She drew him down to his bedside.

“That light—my God!”

“I didn’t see a light. I heard you yelling.”

“I hope I didn’t wake up the whole house.” The medical staff were all on this floor. He did not need to be embarrassed. He did not need to appear weak.

“Just me and Marian.” She gave him a tentative smile. “I told her I’d handle you.”

“I’ve made a fool of myself.”

“You’ve revealed yourself to be a man under pressure.”

“It was weak and unprofessional and I’m sorry you and Marian had to hear it.”

She ruffled his hair. “Is there anything else?”

There was, he realized. There could be. But then he had a change of heart. That sort of fraternization was just a bit less bad than diddling with patients, especially in an enclosed situation like the Acton Clinic was becoming. Or rather, had become.

“Thanks for helping me, Katie.”

She smiled, he thought, a little sadly. “Not a problem. You’re a lot easier than the patients.”

“I should hope so.”

“Incidentally, if you want to read the paper files, could you please ask me in the future, David? I’d really appreciate that.”

“Of course. I was just curious, Katie.”

“Oh, hey. You do know how to use given names. Everybody’s been

wondering.”

As if on impulse, she leaned forward, lifted onto her toes, and brushed his cheek with a kiss. He started to speak, but she held her finger to his lips, then waved it. Then she turned and was gone.

The little intimacy had shot right through him, warm and immediate and comforting. The need he had been feeling for a woman surfaced so intensely that he sprang up in his pajamas.

Sitting on the edge of his bed, he took deep breaths, waiting for the desire to subside. He could probably go across the hall right now and have her. That had been a clear invitation. But no, it was a mistake.

And then he thought, *That light was real*. But the hallucination that had followed—dear God, the pressure was really getting to him, driving itself deep. That had been Quetzalcoatl, the Aztec god he was identified with in Herbert Acton’s note. Now he was, himself, integrating the imagery into his fantasy life.

Well, here was some pretty obvious psychology: he wanted to identify himself with the compassionate and healing aspect of the dark religion that was obsessing the world, and had long since seduced this place.

He worried about the light. Finally, he called the guard station.

“Did you notice a flash?”

“Yes, Doctor. But we don’t know its origin.”

“The facility is quiet?”

“All secure.”

He padded across his bedroom and gazed out the window. Katie must not have seen it because it had originated on this side of the building.

Standing, watching the grounds pale in the auroral light, he felt a great surge of compassion for this little community whose welfare had been put in his hands.

But then he saw—could that be real? No, it was a trick of light, surely. But then he saw it again, a supple figure moving toward the copse of honey locust that stood between the parking area and the formal gardens behind the house. Was that somebody heading toward the gate?

He watched the trees, their leaves fluttering in the wind. No, he was sure he had seen a woman going toward the gate—a woman in what looked like a hospital gown.

Not a staffer, then. So, a patient. He went back to his phone. “Dr. Ford

again. You guys need to light us up, we've got somebody on the grounds. A woman. Heading for the main gate."

"Got it. I'll alert perimeter and send a team out."

As David hung up, the night security officer threw the switches that flood-illuminated the entire property.

A moment later, three uniformed guards, guns on their hips, came up from the gatehouse, and two more from the nearest of the new watchtowers that had been installed along the perimeter.

He grabbed the phone again. "I want a patient census. Every room, including the lockdowns."

"We're moving."

Glen he trusted, and his security team was the best money could buy . . . but, these days, how good was that? He did not want to end up having to call a family that was paying fifty grand a month to keep their patient safe, to tell them that he or she had left care, especially not naked in the middle of the night.

Should he go down and supervise? No, that would send the wrong message. He needed to show his people he had faith in their abilities—or, at the least, to conceal his suspicions. Only if a patient was apprehended would he go down. If it turned out to be a member of the staff, he'd leave the matter to others.

Still, he might be needed, so he pulled jeans and a sweatshirt over his pajamas, then thrust his feet into a pair of sandals.

His phone rang. He picked it up and Katie said, "Now I see light."

"A possible patient outside," he said. "I thought I saw somebody over by the parking lot."

"Oh, okay. Do you need me again?"

"No, I'm waiting on a census from security. If we've got somebody missing, I'll call you."

He hung up. A moment later, the phone rang again. "We're fully complimented," the security officer said without preamble. "The patients are all in their beds and the staff's all accounted for."

"Well, okay, then chalk it up to inexperience."

The security officer chuckled. "Doc Ullman lit us up twice a week at least. Comes with the territory."

"Boy, does it ever." He hung up. The flash of light, the bizarre

hallucination, the person outside—were they all somehow connected?

Thinking back, he thought maybe he recognized the woman. That flowing hair—maybe it had been Caroline Light. But she'd been so extremely distraught—or acting the part so well—that he had moved her into a padded room, which meant constant surveillance, so surely she hadn't managed to just stroll out.

He sank down onto his bed. He was absolutely exhausted and dawn was not far off. But before he went to sleep, he had to face some facts. First, there had been that flash. It couldn't have been an aurora, they weren't that bright. Maybe an exploding satellite, but then surely Katie would have noticed it, too. No, he thought that the flash must have come from below his windows, either from inside the building or from the grounds in front. From Katie's room on the back, it must not have been noticeable.

Then had come the hallucination of Quetzalcoatl. It had been very vivid, but his overwrought and overtaxed mind was the explanation for it.

He was less sure about the presence of Caroline Light outside. That had seemed real. He had been awake, standing at the window.

He decided to look in on her, and not rely on the surveillance system, but do it personally.

He went quietly into the corridor. All the doors were closed, including Katie's. Even so, a glance up at the surveillance camera at the far end of the ceiling made him wonder who might be watching him besides the guard station, or if anyone there might be part of the opposition.

He came to the door that led to the patient wing, swiped his right forefinger across the reader, and waited for it to unlock. But as he waited, he heard sounds coming from the part of the recreation complex that was in the old house, which included the art room with its tall windows, and the music room. Somebody was playing the wonderful old Steinway that was there.

Immediately, he changed direction and hurried down the service stairway that led from this back hall to the pantry below. At the foot of the stairs, he stopped and listened. No question now. That was Beethoven's *Appassionata*, and the pianist was superb. The only problem was that it was nearly five in the morning, and the public rooms were closed.

As he passed through the patients' dining area and the sound grew more distinct, the superb musicianship made him think that it might be a recording.

At the door to the music room, though, he saw a vague figure sitting at the

instrument.

It was a woman in a nightgown, her hair down her back.

Caroline?

No, the hair was straight, not shimmering and flowing like Caroline's. The woman was wrapped in an enormous robe. As she played, her body moved gracefully. She was easily good enough to go on stage. A member of the class, then?

He knew that he should not approach this person without support personnel equipped with restraints, and he hesitated—whereupon she stopped playing.

"I'm not dangerous, Doctor," she said without turning around.

He knew the voice. It was Linda Fairbrother. No wonder she had been identified with the god of music. He wished he had her glyph with him. He could test the process. If it worked, he'd awaken the whole class. The time for waiting was past, he sensed that clearly, and he was going to trust his instincts now.

"Linda," he said, "I think there's a time for this. Another time."

She resumed playing.

"Linda, we need to stop now." Slowly, carefully, he moved closer, until he was standing directly beside her. "Linda, we need to stop."

She played on.

There was another of the terrific flashes. In the second or so that it filled the darkness, Linda Fairbrother seemed to turn into something else, a complicated creature full of flaring colors—her god, or, as we call it now, her subconscious. And then the light was gone and all he could see were two red dots. But the music never stopped. She didn't miss a single note.

Unlike him, she had not startled. So she was expecting the flash, she must be.

"Linda, what was that?"

He put his hand on her hand, dropping the music into discord.

She stopped, and in the silence, he heard something unexpected—a hissing noise that had been covered by the sound of the music . . . which, he thought, was meant to have been covered by it.

It came from the art room.

"Linda," he said, "what is that?"

She sat staring into the dark, silent.

"Linda, I need you to step out of here because that sounds like a major gas

leak, and I've got to—”

Another flash, and again he was looking at the fluttering, dangerous, wonderful deity of music.

Whatever was happening in the art room had to be dealt with. He went to the wall phone and snatched it up, only to find that there was no dial tone. Wonderful.

He called back to Linda, “You can play, go ahead and play.” He didn’t need this one to be wandering right now. But the music did not start again and he had to prioritize. Clearly, the possible danger to the whole structure took precedence, and he pushed his way into the art room.

At once, his eye was drawn to the kiln, out of which there glared an unearthly blue light. Here, the hissing sound was a roar. There were figures clustered around the furnace—it was no kiln, that could not have been more obvious. They were wearing welder’s masks.

“Excuse me!”

As if in a nightmare, nobody seemed to hear him. He went right up to them, but here the light was so intense that he had to shield his eyes.

“This has to stop!”

He saw a big square tray from the kitchen’s baking department. On it was a measure of white powder, and two of the concealed figures were carefully pouring it into tiny jars, mixing it with a liquid. Others took trays of the jars toward the kitchen.

A yellow flash so bright that he was ready to believe he’d been blinded forever this time came out of the furnace. In it, though, he saw something completely unexpected, not glowering Aztec gods but a beautiful field, a green and smiling land, incredibly detailed. It was there for only a second, but it was as if he was actually in this field.

Then it was over—and there was a smattering of applause. Applause! And still they were acting as if he wasn’t there at all.

An instant later, he saw the face of Caroline Light three inches from his own, the eyes tight with anger, but also—what was it? Humor? The kindness, he thought, and the danger of the gods.

Then the room was filled with clouds, beautiful, soaring clouds just becoming visible in the light of the predawn. Clouds . . . he was looking up at clouds.

Dear heaven, he was in bed! He was in bed and those were the clouds of

his ceiling, one of the many trompe l'oeils in the mansion.

As if the mattress was on fire, he jumped out and onto the floor. But nothing was on fire. He was simply alone in bed at dawn, that was all.

But no, that couldn't be. It could not be. That had not been a dream, nobody dreamed that elaborately, it wasn't possible.

He was still in his jeans, anyway, so he went back downstairs.

There was nobody at the piano and the kiln was dark. But, God, how disorienting. What had happened to the time?

Exactly.

Whatever they had been doing with the kiln had affected not just the brain, inducing hallucinations, it had, he thought, done something to space-time itself. Warped it, twisted it, sent him racing across the hours from three o'clock until dawn in just seconds.

He went to it, opened it, and thrust his hand into the firing chamber. A faint warmth was all he felt, exactly as if it hadn't been fired since yesterday.

But he had seen Caroline Light in here, and Linda Fairbrother had been in the other room playing music to cover the sound of the superintense fire.

They'd made some sort of powder, he had seen it. And they had also been fools, because everybody in the place must have noticed the flashes, except for the staff in the four bedrooms on the far side of the building, and maybe them, too. Maybe Katie had lied.

What a hell of a situation. What was real? Who could be trusted?

Those people could. That had been the class, and Caroline had been there. They could be trusted. But who were they?

She must be waking them up. Of course she was, they'd been taught to use the glyphs and she was doing it.

Not all of them, though, and not the ones likely to be needed the most, they were still trapped in their various insanities.

It was while they were making that powder that space-time had gotten all twisted. So the opposition was going to try to take it. Therefore, bloodshed was coming.

He took the stairs leading to the second floor of the patient wing, running up, then through the door and down the hall to the central nurses' station.

"Nurse!"

Nurse Fleigler came up from behind her small, electronically dense station.

"Doctor?"

Behind her was a bank of screens. Cameras covered each room from two directions. A computer continuously analyzed sounds, and immediately warned her if there were any screams, breaking glass, thuds, any sound suggesting violence. It also warned her when a room became too quiet.

“You’re up early, Doctor.”

“What kind of a night?”

“We had a security check. Some lightning flashes. Aside from that, it’s been quiet.”

David noticed movement in Mack Graham’s room.

“What’s four doing?”

It was perfectly obvious that the man was engaged in sexual self-stimulation.

“This is the third time tonight. He claims that he’s entertaining me.”

“He’s been in there all night?”

“Absolutely.”

“Have any confinement patients been recorded outside of their rooms tonight?”

She shook her head. “What’s the matter, Doctor?”

Could those have all been staff members? But no, he’d seen Caroline—or had he?

“How’s Caroline?”

“I’ve got a good sleep signal. Normal breathing pattern. REM sleep.”

“But she was agitated earlier, after Claire left her?”

Fleigler nodded, her plain, broad face registering sadness and, perhaps, a degree of accusation.

“The poor woman—she did not like that locked door.”

“I want to see her tape, if you don’t mind. Just roll it back to, say, three, and play it for me.”

The screen flickered, then flashed, and he saw what at first appeared to be a static image, but the status readouts confirmed stage four sleep, heart rate fifty-seven, breathing regular.

There was a flicker on the screen. “What was that?”

“What?”

“Roll it back.”

She did so. The flicker repeated.

“Run it slow.”

He watched Caroline sleep. Were the flickers caused by the flashes from the art room, or were they edits that concealed Caroline's comings and goings?

"So everything's been quiet? Definitely?"

"Quiet, Doctor." She looked up at him, her brows raised in a suggestion of question.

On his way back to his suite, he came face-to-face with the fact that mystery was piling on mystery, and he was drowning.

Using the fingerprint reader on his door, he entered his suite. He returned to the window where he had seen Caroline disappearing under the trees. Ripped clouds sped past the low moon, and, to the north, lightning now flickered. The east was red with dawn.

He tried the Internet, but it was useless. Finally, he called security.

"How many of those flashes did you record?" he asked.

"Two sets of two each."

It was still over an hour to breakfast, and he was profoundly exhausted. He threw off his jeans and T-shirt and returned to bed. It was so very strange to draw these gorgeous silk sheets up around himself in the context of the world as it was. There was jeopardy all around him, but the bed was here, the sheets were soft, and the mattress even somewhat tolerable. He closed his eyes and began to drift . . . and found himself having to will his mind away from the image of the woman running in the night, and thoughts of Caroline Light.

He redirected his longing toward Katie Starnes. Her dark Gaelic eyes and cream-white skin were well worth a few moments of presleep contemplation. He shouldn't have been such a damn fool when she'd offered herself. He needed to fix that.

He wondered what Katie actually knew about this place. She hadn't been in the class.

It was as this thought was forming in his mind that he slipped through the invisible door into sleep. His breathing became more steady, his shoulders relaxed, his lips parted slightly. After a moment, his body turned onto its right side, entering its preferred sleep position.

The dreams were immediate and once again he was facing the kiln, watching it flare with that amazing light. Then the broad clearing once again spread out before him. There was thick grass. A distance away was a tall oak, its leaves spring-fresh. Beside it was a thickly blossomed apple tree. In fact,

the scene looked very much like the clinic's grounds, but in far, far better days. Caroline Light was there, standing near the trees. She gestured to him, smiled and gestured again.

He thought that this sight of this woman in this place was the most beautiful and compelling thing he had ever seen.

Then there was a crash, followed by a long, retreating rumble, and he was again in bed. More crashing thunder and, coming with it, more flashes, but ordinary lightning this time.

He opened his eyes. Seven ten by the clock. More than an hour had passed in a sleep that seemed to last only a few seconds. Outside, thunder roared and bellowed, and lightning flashed.

The first thing on his agenda this morning was yet another staff meeting, more bad news about supplies and infrastructure, he supposed.

He thought that he needed to understand more about that powder. He needed to gain the confidence of the makers.

He should damn well remember it from the class but he didn't . . . or did he?

Gold? Was it connected with gold?

Rain struck the tall window behind him, crashing torrents of it, and the great house groaned from the pressure of the wind, and the eaves mourned.

Exhausted, confused, and deeply, deeply afraid, David prepared to meet his day.

8

EXTRAORDINARY MINDS

Nurse Beverly Cross and Dr. Marian Hunt came in at the same time, taking seats in the huge office. As David greeted them, he came around from behind his desk. The office enforced the formality of another age.

Nurse Cross gave him a weak smile. She looked exhausted, her eyes hollow.

“You lit us up,” she said.

“Sorry about that. I thought I saw a patient in the grounds.”

“We have trouble after a light-up. The patients need support.”

Bill Osterman, the chief engineer, arrived.

“We have a supply problem,” he said as he came in. “Critical low oil and there’s nothing in our pipeline.”

“Okay, Bill, is there any other supplier we can try?”

“We need to start thinking in terms of a shutdown, to be frank.”

“How long do we have left?”

“On full use, four days.”

Nobody mentioned the flashes or the activity in the rec area, and he felt that the omission must be intentional.

“All right,” he said, “the first thing to do is reduce air-conditioning use. Drop it back to the sleeping areas at night only. The rest of the time, it’s off. How much more time does that give us?”

“Another forty-eight hours, maybe. So say a week.”

It seemed a great gulf of time, a week, but that, he knew, was just an illusion. What would he do when the generator shut down for good? How would they run the well? And how did you manage a building full of crazy people at night without the use of lights, let alone monitoring equipment?

“I want max possible power down, then. No air at all except in confined spaces where we can’t do without. No lights except emergency lighting and as needed for patient control.”

Bill nodded. David didn’t ask him how much longer this regime would

give them. He'd do that later, in private.

Ray Weller arrived announcing that he would be reducing portions and simplifying meals until he could get more reliable deliveries.

"Supply fell out of bed," he said, "everybody just stopped coming and communications are so bad, I can't even tell you why."

On food, they had five days.

With the nurses, handlers, counselors, and other personnel, there were now twenty-one people in the office.

"All right," David said, "obviously we're in serious trouble. Can we send any patients home?" He turned to Glen MacNamara. "I assume we shouldn't even try."

"From what we can tell, it's a probable death sentence. I asked that new intake. She said she was lucky to be alive. She's worried about her chauffeur, not to mention her father back in Virginia. Terribly worried."

He remembered Charles Light as young and vibrant, bursting with sheer joy because of the value of what he was teaching. What charisma, and what a man to have for a father. She must be beside herself.

David decided to try to deal with the unspoken issue in the most straightforward manner that he could.

"Let me be frank. I observed people in the art room last night doing something with the kiln that was producing extraordinary flashes of light. I couldn't tell who it was, they were wearing welder's masks. But I think more than one person in this room knows what I'm talking about, and I'd like an explanation."

Marian Hunt said, "What I find interesting was that you were down there at all."

"This place is my responsibility, Marian. And I think that the new intake, Caroline, was out of her quarters at some point last night."

"She was confined," Marian said, "on your orders."

"And your tone says that she shouldn't have been."

"She showed no signs of violence."

"She was distraught. She needed to be controlled. Supported." Also protected, but he certainly did not intend to add that.

He could see the color rising in Marian's face. She was looking at it entirely from a professional point of view, from which standpoint he'd obviously made a misjudgment.

“I was with her for a time. Claire and I spelled each other. Doctor, to be frank with you, it’s not appropriate to bring procedures you learned at a public facility into this environment.”

“Doctor, if you don’t mind, I’d like to continue this outside of staff.”

She nodded. He continued playing his role.

“Mr. Osterman, I need you to deal with that kiln. I want it moved out of the art room.” Actually, he was terribly excited by what had been done. Even if he was still only peripherally in the picture, progress was being made and that was the first hopeful thing he had known since he’d realized the true import of what was happening.

Claire, who had been shaking her head, now burst out, “That’s a therapeutic tool! I want an explanation!”

“It’s being used in an unauthorized manner by unknown parties in the dead of the night, which is a damn good explanation, in my opinion.”

She gave him what he interpreted as a condescending look. Katie Starnes crossed her legs and smoothed down her white skirt. The silence in the room deepened.

“Leave the kiln,” he finally said. He was no actor, and the whole process involved made him uncomfortable. But he had no choice, obviously, not until more was known.

It was time to shift subjects, and he turned his attention to Katie.

“Is there any word from Maryland Medical Supply?”

“They’re expecting to ship day after tomorrow. But even if the shipment gets through, we can expect massive shortfalls and no-ships on most drugs.”

“So, basically, we’re in a tailspin. We’re going to have to cut to the bone. As far as our therapeutic service is concerned, it looks like we’re headed back to about the mid-fifties, before there were even any tranquilizers.” He looked to Glen. “Given that we’re leaving the kiln as is, I want the recreation area patrolled regularly at night, but if you find anything unusual, don’t intervene. Call me.”

Glen’s eyes told him that he understood. The workers at the kiln would be carefully guarded.

“And nurses, if you have patients missing from any confined setting at any time, I am to be informed personally and at once. Is that clear?”

Nobody spoke. Finally, Claire said, “Well, I think we have our marching orders.”

As far as they were concerned, he'd gone too far. Never challenge a nurse's professionalism, not if you expect peace in your hospital. He tried a little diplomacy.

"Obviously, circumstances are presently working against us, so I want us all to stay as focused as we can on our mission, which is to keep this institution running, which means working together as best we can. But, if I am going to manage this place, I am asking you, please, to cooperate with me. We have a terribly hard time ahead, and we also have this security issue, given what happened to Mrs. Denman."

"Here," Katie asked, genuine surprise in her voice, "a security issue in the clinic?"

"With the town," he explained hastily.

"Well," Katie said, "I don't know about the rest of you, but I'm doing my best."

"We all are, and we're certainly willing to carry out your policies," Marian Hunt added.

"And the kiln is just a kiln," Osterman muttered.

The meeting concluded on what he could only see as a sour note. But why wouldn't they be sour? There was nothing positive here, it was all supply problems, security problems, and, because of the subterfuge he'd had to engage in, a lack of faith in their new boss. But any opponent in this room would have to see him as being nothing more than what he appeared to be—an inexperienced and overbearing supervisor.

Marian lingered at the door. Their eyes met and he nodded, and she returned.

She said, "David, we need to talk about some additional matters."

"Don't resign, Marian. Remember that I didn't pick me, Mrs. Denman did."

She sat down before the dark fireplace.

"If it's all the same to you, David, I won't dignify that with a response."

"I'm sorry, I—"

"Don't say you're sorry. You say that too much. It makes you look weak." She smiled a little. "Do you know that T-shirt? I think Mack wears it from time to time. " 'Graham Mining, Where the Weak are Killed and Eaten.' Do you know that?"

"I haven't seen it."

“He’s in the art room now,” Katie said. “He’s got it on.”

Marian waved her hand. “The point is, if you appear weak, Acton will devour you.”

“Is that what happened to Dr. Ullman?”

“As far as we know, the fire was set by townies.”

“And yet one day later you put Mack under confinement and gave him an armed guard.”

“I did that because he’s potentially violent.”

“Not because he killed Dr. Ullman and you know it perfectly well?”

“I do not know it. It could’ve been the police themselves, or even the firemen. We are hated here.”

“I’ve noticed.”

“Understand it. Live it. It is the central reality of all our lives. This is the palace, still splendid in the middle of a ruined and starving world.”

What was her point? And speaking of Mack, he was due here for a session in a few minutes.

She continued, “I want to agree with you to an extent, David. Oh, not about the conspiracy business. You saw lightning, or some sort of static effect. Who knows these days what nature might toss at us? And patients go downstairs at all hours.” She held up a hand. “I know it’s against the rules, but you don’t tell people like this to follow your rules. You ask them.”

“But they—”

“I’m sorry, but I’m not even interested in what they were doing. They do all sorts of odd things. Most of them are geniuses, which I’m sure you’ve noticed. Or have you?”

“Don’t patronize me, Marian.”

“Trust them, David! What they are doing here, even who they really are, most of them—well, we’re not sure, none of us. But we serve their needs. We feed them and protect them and give them shelter and psychiatric support. They’re far, far beyond most mortals, including you and me. Did you know that most of them can learn a new language in a couple of hours? And ask them to recite something for you sometime. Anything worth reciting. They’ll know it, almost certainly. Give them something to read, then ask them to repeat it a couple of days later. It’ll come back verbatim. Engage them on the most complex topics, you’ll be amazed.”

“Like what—Aztec culture?”

“Most of these people are as interested as anybody in ancient Mesoamerica. The difference is, they understand things like the Nahuatl language of the Aztecs, and their philosophy, and Mayan mathematics.”

His mind went to Acton’s list sitting right now locked in one of the drawers of his desk. He did not want to feel as if he was drowning, but that was exactly how he felt. He knew that Marian was not an insider, Aubrey Denman had told him. So he would not open up to her, no matter how familiar with the situation she seemed.

Mack Graham was on his way, and there wasn’t time to continue this. All he could do was to tell the truth of his feelings.

“Marian, I’m moved, I have to admit, by your loyalty to the patients.”

“David, in this place nothing is as it seems.”

“What does that mean?”

“It means that you may never fully understand them or what they’re doing. But trust it, David. We all do, we just trust it.” She came to her feet. “I have patients, too,” she said. “Linda Fairbrother had a very difficult night. A painful interruption, as I understand it. She has a compulsive need to play every note in precise sequence.” Her voice rose a little. “But some insensitive fool touched her hand—*touched it*—and disturbed the flow of her music and that has injured her.”

“I’m sorry,” David said.

“Yes,” she responded, “you are.” And she left.

David fought the pain that her sarcasm brought. He should not have interrupted the patient. It had been insensitive, even unprofessional. You empathized, you did not control . . . unless, of course, you were a kid who was just plain out of his depth.

To regain his composure, what he needed was information. If he just understood the basic realities of this place better, he could be more useful. Or, frankly, begin to be useful at all. He looked to Katie, who remained as still as a wary bird.

“Katie, you’ve been here for, um—”

“Four years.”

“As a psychiatric nurse who has been working with Dr. Hunt for that time, what do you make of this conversation?”

“Are you putting me on the spot, here?”

“I’m asking for your professional opinion.”

“As a nurse, my opinion of her is that she’s a conscientious and effective doctor.”

“And me? How am I doing?”

“David, to be completely frank, you’re taking longer figuring things out than I would have thought.”

“I can’t figure anything out!”

“You can figure out what you need to figure out, which is how to support these patients. Just concentrate on their needs, David! Who knows what they’re *doing*? We can’t understand, we don’t have the minds for it. What we can do is provide a hug or a pill when needed, and a sounding board. Let them go where they want to go, be there to catch them when they trip. That’s all we can do.”

His buzzer rang, and at the Acton Clinic, you did not keep patients waiting.

9

ORME

Mack appeared in a silk jacket and trousers, moving with that curious precision of his. As he slid into the patient's chair in the nook that David had reserved for these sessions, David thought that he looked not like a mental patient with a severely distorted grasp of reality, but like some sort of vaudeville performer.

"We could become cannibals," Mack said.

That certainly sounded like symptomatic production. He settled in for a real session with a real psychiatric patient . . . for once.

"What makes you say that?"

"No eggs at breakfast, therefore Acton is having supply problems. We could send raiding parties into the town."

"Do you think cannibalism is a good idea?"

"I'm crazy, so of course I do. I want to know about the new intake."

"You'll meet her in the common areas."

"Social Register?"

"I wouldn't know, Mack."

"Let me tell you about her. She's at least thirty. She's a self-commit who's been having very serious second thoughts. And last night, when she was screaming in that so very pleasant padded cell of yours, and you went to observe her, you got, shall we say, sidetracked."

What was this? Had this patient overheard something? Or had he been behind one of those welder's masks, perhaps—another confinement patient being let out at night?

"Expand on that."

"I think there are lots of surprises in the Acton Clinic. Right answer?"

"Therapeutic interaction isn't about right answers. It's about opening doors."

"You see the sun this morning?"

"Have you seen the sun?"

“My point is that it looks like it’s had a bite taken out of it. The sunspot is gigantic.”

“What does that mean to you?”

“To me? That I won’t be alive in six months. Like you. Like everybody.”

“Are you sure?”

“Of course I’m sure. Incidentally, the new intake—what’s her surname? Where’s she from?”

“We’re back to the new patient?”

“I just like to know who’s here. Who I might be dealing with. The world of the obscenely rich is not a large one. She and I might have played doctor as kids. If so, I’d like to renew the acquaintance.”

“Being in the CIA makes you rich?”

“Being the heir to Graham Mining makes you rich. I served my country for a dollar a year. And I was retired mental, okay? Is that what you want me to admit? That I was humiliated and ended up in this idiotic place, spilling my innermost secrets to a kid? Dr. Ford, I want just two things from you. First, I want to know the name of the new intake. I want to know who I’m living with. Second, I would like you to review my file and see if I really need to be on confinement.”

“You don’t think you should be?”

“Of course not! I don’t understand it at all.”

“Dr. Hunt did it because you have anger issues. Your daytime rights aren’t affected.”

“Except I have a goddamn armed guard when I go outside!”

“Armed with a tranquilizer gun. After Dr. Ullman passed away, you were very, very angry.” He did not bring up the fact that Mack had been AWOL at the time of the fire.

“Something was wrong that night, Doctor. And something was wrong last night, is wrong now, and has been wrong for weeks. And I don’t mean the sun or the economy or any of that crap. I mean that something is wrong *here*. Something is happening to this place, and yes, it scares me and when I am afraid, yes, I have an anger problem. Like those flashes last night? What was *that*? I had—” He stopped, shook his head.

“You had?”

“I don’t know. A dream. Not pretty.”

“You think the flashes were a dream?”

“Hell no, but they triggered something.”

“Can you describe it, Mack?”

“Um, sure. A demon. I saw a demon.”

David strove to maintain the therapeutic context, but at the same time was acutely aware of his own reaction to the flashes, but what he’d seen had hardly been a demon.

“You want to ask me something, Doctor. Go ahead.”

Mack was certainly perceptive. “What do you know about the flashes?”

“They’re making an ORME, and that’s pretty damn disturbing.”

“An ORME?”

“An orbitally rearranged monatomic element. Gold, would be my guess. The legendary philosopher’s stone.”

Those two words, “philosopher’s stone,” would ordinarily have evoked in him the quiet contempt of the scientist dealing with an ignorant member of the public who was silly enough to believe such twaddle.

That was not how he reacted now. “Go on.”

“It’s being made in their arc furnace. The ‘kiln.’ Look inside sometime.”

“I have. It looks like a kiln.”

“Not at night, Doc. That’s when they install their tungsten filament, and you’re looking at three thousand degrees sustained.”

“Isn’t that rather a high temperature?”

“Not for them. And this new lady, she’s their leader, I think. I think things are going into overdrive. She, um—God, you know, I’ve forgotten her name.”

“Caroline.”

“Haven’t we done this? Maybe the flashes erased my memory. I mean her last name. Is it Acton?”

David remained impassive.

“Is it Light, then? Is she a member of the Light family?”

Mack was fishing hard—too hard, David thought. He would not forget this. “Let’s get back to ORME,” he said. “It’s what?”

“An orbitally rearranged monatomic element is an element that’s not entirely confined to three-dimensional space. It’s torsioned into hyperspace. You eat it, and you extend into hyperspace, too.”

The philosopher’s stone . . . they’d been taught about it in class. “*It’s not just for philosophers and it’s not a stone, it’s a white powder.*”

“And extending into hyperspace gets you what?”

“You’re outside of space and time. So you can see the past and the future. You can . . . maybe escape. Move around time or through it faster. Except, of course, for the problem.”

“Which is?”

“It’s total bullshit. All ingesting a heavy metal is gonna do is screw with your kidneys.”

“That would be my best guess, too.”

If a man’s stare could express the hunger of a tiger, Mack the Cat’s poisoned eyes expressed it now. At that moment, the session bell chimed softly and he leaped to attention and saluted. “Hup!”

David recalled Katie’s comment that Mack alternated between incipient serial killer and charming boy.

After he left, David slid aside the wall of book backs that concealed his electronics from patients. He keyed in Mack’s code, F-0188, and the system began following his transponder. David watched him go down the wide hallway past Katie’s office, then down two flights of stairs, the system automatically shifting from one camera to the next as it followed him.

He went into the art room where a number of other patients were painting and one was sculpting.

David closed the monitors. This was the very picture of a compliant patient.

He had fifteen minutes before his next appointment, which was Linda Fairbrother.

He pressed his intercom and said to Katie, “I’m going down to the art room to observe Mack. I’ll be back in time for Fairbrother.”

As he was closing his monitoring system, he saw Caroline Light sitting at an easel in the art room. Again, he pressed the intercom. “I see that Caroline is in the population.”

“Dr. Hunt said to release her.”

He went into the outer office. “But she’s under constant supervision?”

She gestured toward her bank of screens. “Absolutely. Sam’s on the job, watching her and Mack and keeping them apart.”

“Oh?”

“Mack has expressed interest in her.”

He was tempted to issue Sam a real gun and live rounds. He would

immediately reinforce to Sam that he thought that Mack was potentially quite dangerous to her.

“Let Marian know that I’ll expect to discuss Caroline’s progress toward the end of the day. We’ll need to make a decision about where she sleeps tonight.”

Frankly, he hoped that she would fake more evidence of disturbance and justify another night under confinement—not that it helped, given her hidden power to apparently come and go as she pleased. He’d assumed that she’d had help from the staff—probably Fleigler—but now who knew, maybe she’d just walked through the walls.

This substance they were making—even the process of creating it affected the mind profoundly, and look what had happened to him when he drew close. He’d been somehow—was the right word “overcome”?—yes, overcome, and what had taken place next? He thought that they had probably carried him to his room.

But the state he had been in was not sleep, it was darker and deeper than sleep. Had he been outside of time, somehow? Was such a thing truly possible?

In any case, if just the manufacturing process was that disorienting, perhaps the substance was potent indeed. He could certainly understand why the group making it had been wearing welder’s masks.

White powder gold . . . it had been discussed in class—discussed a lot. He could see Mr. Light sitting on the edge of his desk speaking about it. Could see but not hear.

God, but the fog of amnesia was maddening. Maybe Katie knew more than she was saying. Maybe there would be some trigger to memory if he just talked about it all. “Katie, what’s your impression of what happened last night? Please be frank.”

“You were overwrought. It could happen to anybody.”

Not helpful. “Did I go out? Were you aware of that?”

She was silent. Then she reached out, her hand tentative. For a moment, he still hesitated, but when she began to withdraw it, he took it. They remained like that for a moment, and he felt that her hand was warm and small and very soft.

A moment later, it was over, and she turned away and busied herself with her files. He went down to watch Caroline and Mack, and try to feel his way

a little further down the dark passage that was life at the Acton Clinic.

10

MAYHEM

Mack sat near Caroline Light, watching her paint the most strikingly realistic painting he had ever seen. She was just beginning, but it was really very odd. It wasn't photographic, it was beyond that. The light shimmering in the meadow, the glow of the tiny flowers and the green of the grass—it was just uncanny, and what a very mysterious thing for her to be doing. What would a painting have to do with anything, no matter how it appeared?

He had calculated every word uttered in his session with young David, controlling not only his own answers, but also the doctor's questions, until finally the truth had been revealed. At the instant that the young doctor's untrained body language—crossing his legs, glancing away—had revealed the correctness of his guess that this was Caroline Light, a bolt of pure fire had shot through him, forcing him to will his face to impassivity and idly straighten his tie while he was actually brimming with triumph inside.

It was Caroline Light, and my, but she had fooled them all, hadn't she? Rich, neurotic playgirl. And all that screaming and crying last night—she was an excellent actress.

No matter how good she was, though, in the end he was going to squeeze out every morsel of information she possessed, including how to make white powder gold that worked, and exactly what to do with it that would lead to escape from this hell.

They might not be able to save all the people in all the redoubts, but they could certainly save the Blue Ridge, which would be enough to start mankind again on a far stronger footing. No more corrupt bloodlines, no more inferior people, not ever. A new world.

He was eager to get to his room and let General Wylie know she was here. He needed orders and support personnel. There must be no mistakes, and if there was resistance from the security guards when he took her—as he had to believe there would be—he had to be certain that they would not succeed in stopping him.

“Don’t,” she said.

Was she speaking to him? Surely not. He was thirty feet away, hardly looking at her.

She turned toward him and challenged him with a stare. “You. Don’t.”

“Excuse me?”

“Go away.”

“I’m sorry. It’s your painting. The life in it—”

“I don’t think looking at pictures makes men drool like dogs, Mr. Dog.”

Why did she care so much? Why was she so concerned about a *picture*?

He was so maddeningly in the dark.

“Hello? Are you deaf?”

“I’m terribly sorry.”

He got up from the chair and moved out into the larger recreation area. He strolled up to Sam.

“I guess that didn’t work,” he said, trying to sound affable.

“Not her type, Mack.”

“Yeah, I was halfway across the room.”

“You were staring pretty hard.”

“Look, I’m going to take a little siesta. Wash her outa my hair.”

Sam nodded.

“Um, would you do me a huge favor and not turn on my room.” He tugged at his crotch.

“I hear you. I’ll hang out in the hall. Monitor off.”

They went together up the stairs to the living area. “You used to only be with me when I was outside. I feel kind of oppressed.”

“Glen’s orders. Supertight security from now on. Thank whoever did Dr. Ullman.”

“Townies. Nothing to do with us nice, sweet patients.”

“But you were out that night. Unfortunately for you.”

He went into his room and closed the door. He couldn’t lock it, of course. That could only be done from the outside.

Immediately, he went to his drawer and got out the radio. Using the keypad on the modified TV remote that controlled it, he tapped out a few words: first, “Caroline Light has come. Need immediate action.”

He waited for the faint tone that would indicate that his message had been received. The set on the other end was monitored twenty-four hours a day.

For security reasons, they had no set transmission times. He looked at his watch. The sixty-second window came and went. Still no acknowledgment. Following protocol, he transmitted a second time, then once again waited.

This had to work, it was too important not to. But the sun was awful today, maybe even the single sideband system they used was gone.

Again he transmitted, and again there was no response.

Okay, he was panicking now, feeling that same sense of being trapped that regularly woke this claustrophobe up nights. Angrily, he shut down his equipment. He told himself that it was a lot harder for his simple system to detect their signals than vice versa. So maybe they'd gotten the message. Maddening. But he had to take risks now, and one of them was to find a way out of this room after lockdown. It was urgent that he gain the freedom of this place as soon as possible.

Sure, he could enter the ductwork, but he needed that blueprint, which meant another excursion into town and a search of the building department's records.

Once he could get out of this room, cover would also require confusion, and he thought he knew how to cause it. The townies lusted after this place. They stayed away because of the guards. He understood the system, though, and he could provide them with a plan. If they were desperate enough, they would come. There would be a battle, and he would use it as a cover to capture Light and wring the truth out of her. Maybe Ford, too. He'd been appointed supervisor of this place, so he had to be high up in the leadership, also.

He stepped out into the hall. Sam sat half asleep in a tipped-back chair in the nurse's station. Good, he would leave him behind right here and now.

"Hi, there," Sam said.

Shit! "Well, I think I'm looking at a walk."

"You want to go out in that? Have you seen the sky?"

"I'm crazy, remember."

Sam was not happy about it, but he stuck to his orders. Don't control the patient, follow the patient.

They reached the bottom of the stairs and crossed the art room.

"Jesus," Sam said.

Mack also looked toward Caroline Light at her easel, and this time was even more awed. It looked more like she was opening a window into a

beautiful forest glade, a real one—but not in the here and now, because her sky was normal.

Although he needed to discover what, if anything, this strange talent of hers might mean, he didn't pause long. He wanted no more trouble from her, and he had his plan, and he would find out everything.

At the end of the room, there were broad glass doors that led into the side garden. Glass, but thick as steel. Sam unlocked them with his fingerprint reader, and he and Mack stepped into the white glare of the sun.

"We don't want to be out here, Mack, I'm telling you."

"It's incredible."

"Don't look at the sun."

"I'm careful, Sam." Mack held up his hand, observing through two cracked fingers. The damn thing was devoured with sunspots, a great, jagged, flaring mess.

Sam was doing the same thing. "Come on, let's go back in, Mack."

"Just to the apple tree. Five minutes." He had to get Sam out of sight, just for a moment. He went down to the formal garden, where there were some tall laurel bushes, just trying to bloom. Their slick, dark green leaves were thick, and the path between them was concealing.

People sense things, and in particular, they sense danger. You need absolute control over your body language, your breathing, everything, if somebody who is guarding you at close range isn't going to become wary as you attack them.

"I just want to stretch my legs," he said. "I just do not get why you're on me at all, let alone inside."

"Personally, I like you. I think guarding you like this is bullshit. But hey, I got a paycheck to be concerned about."

They were in the formal garden, Sam just behind him. Ten steps later, they were at the most concealing point, surrounded on both sides by large tea rosebushes in fitful bloom. From here, Mack could see only the top edge of the guardhouse at the corner of the south and west walls.

He took a quick step aside, then one back.

"Mack?"

He wasn't called Mack the Cat for nothing, and before Sam could turn around, he'd enclosed his neck from behind, lifted him in his iron-strong hands, and made a quick spinal adjustment that would paralyze him for about

two hours. This was an “in and out” technique he’d learned in the Black Magic program, an offshoot of the MK-Ultra mind control experiments and Nazi medical discoveries. MK-Ultra had been plastered all over the media back in the 1970s and decisively shut down, but not Black Magic.

Sam dropped like a bag of ashes. Mack lifted him and arranged him on a bench. Maybe the mouth tried to open. The eyes stared into his, pleading. Mack said nothing. Sam couldn’t move, but he was still conscious.

“You’ll be fine, buddy,” he said. Except, not with your boss, not so fine there.

Now he would work his way to the low area in the wall near the service gate that led out onto Route 16. Sam had been a piece of cake, but this next maneuver was going to be seriously dangerous. The guards were a bunch of nervous kids, and nervous kids were hair-triggers.

The old gate he was headed for hadn’t been opened in a long time, and it was on the opposite side of the property from the town. So it had one, maybe two guys on it. He could do two, no problem.

He moved through the garden, strolling casually. Let them think that Sam was sitting on a bench sipping his usual cup of coffee.

When he came to the end of the garden, he stopped. Ahead and to the right was a hydroponic greenhouse. To the left, the disused road to the service gate crossed a clear field of grass, nothing to shelter him at all.

So, okay, speed would shelter him. He strode out of the concealing garden and onto the road, heading for the gate. A moment later, the guard came out of his little station. He wasn’t dressed like the ones near the house, in discreet blazers. This guy was in full battle dress, helmet and all. He carried an automatic rifle on his shoulder . . . and a paperback in his hand, a finger holding his place open.

Mack pushed away the thought that it would be easy. You take that approach, you are dead.

As he drew closer, he smiled. “Hi, there!”

“You need to stay away from the wall, Sir.”

“I’m just getting some exercise.”

“Stay away from the wall.”

Mack moved closer to him. “Sure. No problem.” He kept going closer.

“You need to return to the garden, Sir.”

“Sure.” He started to turn. Then froze. Looked more closely at the guard.

“Man, that can’t be an M14A SOPMOD.”

The kid shuffled. “Yeah, it is.”

“Jeez, can I just come close enough to get a look?”

“You’re Mack Graham. You have a minder.”

“Oh, come on, take it easy. He’s got a sore foot and he’s over there sitting down. Don’t make him get up, he won’t like me anymore.”

The guy smiled slightly, then ported the rifle. Mack took three quick steps toward him. The kid was trained, but not so well that he recognized Mack’s movements as an assault setup.

A quick rap to a point just between and above his eyes and he went down. As he doubled over, Mack grabbed the rifle out of his hands and set it down back in the guardhouse. Then he pulled the kid in. He’d be unconscious for only five minutes tops, but there was a difference: this maneuver blew out the short-term memory. The kid would not recall that Mack had even been here. He’d assume that he’d fallen asleep and try to cover that with his superiors. Mack would have done the same thing with Sam, but if he woke up in five minutes and found his charge gone, he’d raise hell. He needed the time he’d get out of Sam to put distance between himself and the clinic.

He reached up to the roofline of the guardhouse and pulled himself up. No question but that he could be seen from here, so he had to keep moving. Not a problem, though. The guardhouse was only two feet higher than the roof, so he was sliding through the razor wire in a couple of seconds.

For a moment, he teetered on the narrow edge that topped the wall, then dropped down onto the far side.

Still not out of danger, though. He had to move fast now, to get into the cover of the woods that spread across the wild portion of the Acton land. A hundred-foot perimeter had been created between the wall and the trees, and so recently that the stumps were still bleeding.

Only one thing to do, now: cross it and trust to luck that nobody would see him from the two other towers that watched over this particular spot. In fifteen seconds, he was in the shade of the trees. He waited. No alarm. So he headed deeper.

The storms of earlier had gone, and the air was clean, faintly tangled with smoke. One thing solar electrical energy this intense did was to cause spontaneous fires in wiring of every kind. There were houses and buildings burning all over Raleigh County, no doubt.

He moved off deeper into the forest, taking a long, curving path among the trees, one that he would use later to guide townspeople to this vulnerable spot. He would bring them back, a great number of them, and they would come to kill, and while they did, he would do things to Caroline that would definitely bring the information he needed. Black Magic had many tricks up its sleeve, many tricks, and some of them caused amazing discomfort and amazing confusion, and some of them could hypnotize your adversary into becoming your slave.

He wondered who would break first, Caroline or dear little David. His money was on David. That Caroline was beautiful on the outside, but the interior was tough. David was nervous, rule bound, and insecure. Start pulling his skin off, he'd tell you every damn thing he knew.

He found Route 16 and sped up his progress by jogging. It was no trouble for him. In his condition, he could jog for hours.

Not until he came to the outskirts of Raleigh did he slow down. In that time, he had not seen a single car or a single person. The town was quiet, too. Very damn quiet.

He moved on, dropping back to a walk as he passed Raleigh Mortuary Services and the Dairy Queen. There would be a mayor. Some leader. He would find him. They would talk. And mayhem would come to the Acton Clinic.

11

THE NIGHT WALKER

David and Katie sat together in the living room of his suite attempting to get some kind of idea what was happening in the outside world. The Internet was still down, and, in any case, when it had been up, the Spaceweather.com website had been too swamped to be accessed. Toward one in the afternoon, the television signal had failed, both on cable and satellite. Prior to that, though, the stations had not had much information except endless repeats of the FAA statement that all aircraft were grounded and Homeland Security's warning to remain indoors.

Katie turned on the radio, trying to find a station. Voices drifted in and out, sounding as if they might be emanating from a land of dreams. But most of them were probably from Baltimore, fifty miles away.

Security was working frantically on the surveillance system, which was blowing circuits left and right due to massive atmospheric electrical overloading.

Katie picked up the small radio, raised it above her head, then slumped. She put it down.

"Just when you need them, they're not there."

"People are looking to their own lives."

"David, how bad is it? You know, don't you? You understand these things."

"It's certainly the most intense solar storm since 1859. Sunspots, a huge solar flare, and an intensely energetic coronal mass ejection. So it's inevitable that the satellites would be gone, but many of them are programmed to shut down during incidents like this, so they could come back. On the other hand, even well-insulated power grids are going to be collapsing all over the world. Even here in the U.S., if it keeps up."

"But it's not what people are saying, surely? It's not the end of the world?"

Before he came here, he would have brushed off the claim as having no scientific basis. But even though he now knew the truth, how do you tell

another person a thing like that?

“We need to be prepared for anything,” he said finally.

She looked doubtful, turning away, then glancing back at him.

“I think it’s the last thing they would admit. The panic would be incredible. People would claw their way into every hole in the world. Anyway, how can they tell us?” She gestured toward the radio.

“Let’s keep focused on the clinic. That’s our responsibility.”

“Okay, fine. Nothing was delivered today, David. And I can’t reach Sysco, I can’t reach UPS, FedEx, Maryland Medical, anybody.”

Outside, the auroras were dancing.

“I do think we need to close all blinds and curtains.”

“That won’t keep out radiation, will it?”

“Actually, it’ll help. Gamma rays aren’t very penetrating and the walls are thick. The roof is made of tons of slate. The weak point is the windows. And I think we need to minimize guard patrolling. Keep the men in sheltered areas.”

“I think this place is going to collapse. In fact, I think the whole world is going to collapse.”

At first, she had seemed welcoming, but no longer. She was totally focused on the welfare of the institution and its people, and he thought at once two things: she’s right to be afraid; but then, can I rely on this woman? Her file was equivocal. It was hard to know exactly what her relationship with Dr. Ullman had been, and there were a number of years in her timeline that were not accounted for. If they were going to go through a crisis, he would like to know about those missing years. In fact, he’d like to know more about the entire staff, especially the security personnel. He needed to know who the class could rely on and who not.

The intercom clicked. “We have a code blue in Room 303.”

He hit the reply button. “Is the cardiac team in motion?”

“Yes, Doctor.”

“I’m on my way.” As he left, he called back to Katie, “Do you know which patient that is?”

She was right behind him. “I’m not certain.”

As he ran across the flyover to the patient area, he could hear voices ahead. The nurses had just wheeled the shock wagon into one of the rooms. David saw that they were working on Linda Fairbrother. Her skin was cyanotic.

David's initial impression was that the woman was dead.

The nurses performed efficiently, but not like code blue teams he'd seen in operation at Manhattan Central, where they did a cardiac arrest every few days. Then he saw that one of the defibrillation paddles was on the wrong side of the woman's chest.

"Hold it," he snapped. He could hear the whine of the defibrillator loading.

"It's gonna fire!"

He grabbed the paddle and placed it correctly. Just as he pulled his hand away, the system fired off and the patient convulsed. A moment later the computer said, "No response. Reload. Ten seconds."

He would let it go through two more cycles, then pull it off. He saw that he'd have to inform the Fairbrother family that their patient had expired. But how, given the state of communications?

The third round came, the body convulsed again . . . and the heart started. "Stable rhythm," the computer said. "Defibrillation complete."

The staff wasted no time moving her to the facility's small infirmary. David wondered what this was—a natural event or the result of some sort of attack?

"We need to get this woman into cardiac intensive care," he said.

"Raleigh County EMS isn't responding," one of the nurses said.

"Did you call the hospital's main number?"

"Doctor, I called all five hospitals in the area. No response."

Katie said, "I told you, David, it's all coming apart."

Anger put a bitter snap into his voice. "Maybe it is, but we're here now and we have a heart attack to deal with." He felt the full weight of this place and all these people on his shoulders just now. "I'm sorry," he said. She did not deserve his spitting words, it wasn't her fault.

He went down the corridor and through the door into the main patient area with its wider hallway and its expansive suites. People had heard the activity and were coming out. As Linda was moved past, they watched in a silence that was quite unlike what would have happened, say, at Manhattan Central. Frankly, these people were much more contained than he would have expected, and he wondered if perhaps Caroline was secretly waking up the class. He hoped so.

"All right," he said to the largely calm and silent group, "Linda had a minor cardiac event. Please return to your rooms now."

William Moore, one of the genuine patients, gave him the most menacing look, lips a set line, body language suggesting that he'd like to pounce. Then he grinned from ear to ear.

"You're a bureaucrat," he said.

"I'm your doctor."

"The bureaucracy of medicine is the machinery of death."

David stopped himself from automatically moving into a therapeutic stance with this patient and said simply, "We can talk tomorrow."

"With you? You're a waste of space."

"All right, then, with Dr. Hunt or one of the psychologists, as you prefer."

Leaving the patients to the nurses, he went into the infirmary.

Linda Fairbrother was lying quietly as Marian Hunt applied leads to her chest from the EKG machine.

"They're coming for me," Linda said.

"Who is?"

She snapped her jaw shut.

He would once have thought that this was yet another patient struggling with inappropriate thoughts, but as she was a member of the class, he wasn't sure what was meant. He wanted to ask her more. He remembered those two glyphs on her record. There was something special about her.

"Linda, tell me what's troubling you? Who's coming for you?"

"I got a message." Her fist closed on his shirtfront and she pulled him face-to-face. "I don't think Tom can go." Her voice dropped to a whisper. "Never tell anybody this, but he has this blackness on his back and side, and it's growing."

David's mind went to the notion of judgment. Could those who had done evil be actually, physically marked? It seemed impossible, but all the rules were changing now. Perhaps bodies were becoming mirrors of souls, our flesh no longer concealing our truth. But what had Tom Dryden ever done, that innocuous little man? All he could think was that people tend to keep their evil acts secret.

Marian came up to him with the EKG tape.

"This is normal," she said.

"Can we e-mail it to a cardiologist?"

"If the Net comes back. But we'll get a normal report, no question."

David looked at the tape. He had been assuming that this was an episode of

sudden arrhythmia death syndrome that had been interrupted by timely action.

“No Bruguda sign,” he muttered, “no fibrillation.”

“No arrhythmias at all, in fact.”

“I think we need a deeper study on this woman. Hearts don’t just stop. And we want her under close observation until we can get her into a cardiac unit.”

“David, I’ve been exploring unexplained cardiac arrests. *Bangungut* and familial long QT syndrome are possibilities.”

“And *Bangungut* is?”

“A type of nightmare so intense that it can cause death. Common in parts of Asia.”

This staff was out of its depth. No specialist would even bother to think about something so irrelevant.

“And familial long QT syndrome? Any symptoms?”

“There’s no heart abnormality or defect. A little crud in the arteries, nothing to get excited about.”

“And how do we know this? Do we have documentation?”

She paused for a moment, then said more quietly, “She’s presented this way before.”

“So was there follow-up?”

“Of course there was follow-up! We could get out of here then. She was worked up at Raleigh County. The heart muscle was healthy.”

“So she can stop her heart at will?” He looked down at her. “Can you do that, Linda?”

“I’m afraid you won’t let me go home. I have nightmares about it.” Her eyes bored into his. “I’m not like the rest of you. It’s time for me to go home.”

“Linda, normally you’d be free to leave. It’s just that current conditions make that difficult. Nobody’s holding you against your will.”

“Doctor, when the time comes, I will have only a couple of minutes. And all these doors in this place—oh, God, how I hate the Acton Clinic!”

A voice came from the doorway. “We’ll take care of you,” Caroline Light said. She addressed David. “When she wants to go outside, let her.”

“So now the patients are the doctors. Fine.”

“Will you wake up, David!”

“I’m awake.”

Linda said, "Caroline, let him be."

"He's an idiot! He won't wake up!" She strode in, got right in his face. "Wake up," she shouted.

He looked past her to Katie. "Nurse, get this patient under control."

Caroline slapped him so hard that he saw stars.

For an instant, there was rage and he grabbed for her wrist. But then he stopped. His mind had gone silent. Clarity came.

"What was that supposed to be," he muttered, "a Zen slap?"

"That's exactly what it was." She turned and stalked out of the room.

"Confine her again tonight," he said.

"Oh, shut up," Marian replied.

"What?"

"Will you people stop!" Linda said.

He was appalled at himself, realizing that he was doing this in the hearing of this patient. It was grotesquely unprofessional. Katie was right, the world was falling apart, and not just the outside world. He drew an unwilling Marian Hunt out of the room.

"Hold your tongue in front of the patients, Marian."

"Then show some competence."

He paused, struggling not to explode in her face. "Keep her under observation for the night."

"They're all under observation all the time," she muttered as she headed off the floor. "Want her *really* locked up now? Maybe cuffed to her bed?"

"She doesn't like you," Katie said after she left.

"Who does?"

Katie's expression said every silent thing that her lips did not, and suddenly the crisp, worried professional was replaced by a warm, compelling woman.

She turned to go back to their side of the building, and he followed more slowly as she strode on ahead.

He was hardly disappointed to find her in his sitting room. She had just dropped into one of the big wing chairs that stood before the fireplace, once again tuning the radio.

"Pick up anything?"

"News from WBAL. It's huge, what's going on. Satellites are not coming back, power systems are down all across the world, the Internet backbone is

fried. We won't see the Internet again for years."

As suddenly as suppressed fears will do, all the terror that he had been containing inside himself boiled to the surface and he uttered a single racking sob, then immediately stifled it, but not before she started in the chair, and looked up at him, her face registering surprise.

"Katie, I'm sorry. I'm on edge."

"Well, yeah." She rose out of the chair and stood before him, her eyes cast down.

They were in each other's arms so suddenly and so naturally that David hardly registered what was happening. It was just *right*. But when she lifted her neat heart of a face and he saw her lips open slightly, he did think about it. What he thought was that fraternization like this never led anywhere good, and then that he was tired of being the person who had thoughts like that. Caroline Light had accomplished a true Zen slap. He recognized the need for change.

She was looking up at him, waiting, and he did not do what he had been about to do, which was to turn away. Instead, he kissed her, and as he did he felt the hunger for her change from something he could control to something he could not control, and he had never felt such a flood of gratitude and desire, not in all the kisses of his life.

"Oh, God," she said, breaking away.

"I'm sorry."

She shook her head, then threw her arms around him. Her throbbing life pulsed close to him. When his body responded, she laughed a little, her eyes shimmering, and pressed closer. He found himself wondering again if she had been Dr. Ullman's lover—and threw the thought out like the rubbish that it was. What if she had, what did it matter?

Life was not about things like that. Life was about this moment, here, now.

This sensitive woman broke away. She returned to her place by the fire. "What's that called?" she said. "Absence of affect? We see it in patients."

"Katie, no."

"You're just sort of a cold fish by nature, then?"

"I was hardly feeling cold." He went to her, reached down and took her hands. He drew her up to him. She came, but leaned against him as a child might, expressing affection without yearning.

What had been broken here, and so suddenly? And by him, or by her? He

put his arm around her waist. Tentatively, he moved toward the bedroom. She came without the protest he expected, but when she sat on the edge of the bed, he saw in her face for just a moment a haggard expression. She was exhausted, but she was here.

“I’m sorry,” he said.

“You were suddenly just so distant. What do you think about when you do that?”

“Do I do it often?”

“People around here say you have no emotions. That you’re—well, that you’re heartless, David.” She took his hand in hers, and for a moment they sat side by side, two awkward kids.

He went to her top button.

“I’m scared, Katie.”

“Not of me.”

He unbuttoned it.

“Of taking on a job I can’t handle. And from a murdered man in a place where murders happen.”

She opened her blouse, then reached around and unsnapped her bra. Her breasts tumbled out in a pale perfection of curves. Then she put a hand on his belt and glanced up at him. He found the shyness flickering in her eyes profoundly erotic.

She drew down his zipper. Laughing a little in her throat, she said, “You’re going to tear these pants,” and she drew him out into the coolness of the air and the warmth of her hands.

Her nakedness was exquisite. Certainly, she was among the most beautiful women he had ever touched. She was as pure and smooth as cream, and when they lay back together, he sensed that he was forgiven, as if whatever had almost driven them apart had with kindness and grace been put aside. The only flaw she possessed was a brown shadow along the back of her neck, and as he slid his hand along its smooth coolness, then kissed it, it tasted faintly of ash, perhaps a faded suntan. And yet, it was odd, not really a color at all. He’d never seen anything quite like it, as a matter of fact, a color that wasn’t a color, that seemed more like a shadow being cast from within. Maybe it was something bizarre to do with exposure to the sun.

“Have you been outside?”

“When?”

“Recently? Say, the past three days?”

She sat up. “Why do you ask?”

“Just don’t go. There’s a lot of radiation in the atmosphere.”

She kissed his nose. “I’ve wanted to do that.”

“Kiss my nose?”

She hugged him, and they fell together and he tried to love her with skill and care, to be for her what he believed women wanted, drawing from his not very wide experience, which was of mostly equally unsure nurses. Many a hospital was full of exhausted, brilliant kids exploring not only the challenges of medicine, but also those of the heart.

When he reached up and turned off the bedside lamp, the room filled with greenish-purple flickering so intense that he had to close his eyes against it. This had been a long, hard day, and one that seemed to have become night very quickly. But the hour was eight by the clock.

She reached up and turned the lamp back on, pushing away the demented flashes. “Let’s not let it spoil it,” she whispered.

The lamp was another treasure, graceful girls sleeping, satyrs with erections leaping. Perhaps the only piece of pornographic glass ever produced by Louis Comfort Tiffany.

Coming together seemed so completely right and so completely innocent, and as his body filled with the pleasure that she had for him, the burdens that he bore slipped away like soldiers into a morning mist.

He knew that he would be too quick with her, and tried to slow his pace, but the energy of it burst through, and as his body was swept by the familiar tingling waves, he looked down into her face, into the happiness there, and could only think that, glowing in the soft light of the bedside lamp, it was the most beautiful of faces.

Then his body swept all thought away and his loins shuddered and his blood hummed, and the glorious, dying explosion came, and she smiled and was excited, too, at least that’s how she appeared, and he came to rest on her and in her.

They shared a silence that was marred only by the twisting of the wind as it worried the eaves of the old building.

“Have you noticed the scene on that lampshade?” she asked, her voice full of warmth . . . and, he thought, a certain triumph. He had thought himself the seducer, but this Katie was a clever woman.

“This is the room where he took his mistresses. He had dozens of them, you know.”

She came up onto her elbow, then kissed him on the cheek, a tentative sort of a peck. “David, you have got to be about the cutest guy who ever came here.”

“I thought you really did not like me.”

She kissed him again, this time on the edge of his mouth.

“Please just melt a little, okay, David?”

Then she kissed him full on the lips, pressing him down into the thick and giving pillows. He opened his mouth, letting the kiss penetrate, enjoying her sudden aggression.

They swam together across the gulf of the night. He let himself be intoxicated by her, and, drifting between sleep and wakefulness, he made love to her again. Toward dawn, he slept deeply.

It was then that the dreams came, his mind flowing so seamlessly into its own reality that he had essentially no idea that he was, in fact, dreaming.

The first one involved the opening of the bedroom door. Although, later, he understood that he must have been asleep, he seemed to hear a click, and to sit up and look toward the door. However, nobody came in. Instead, a shadow appeared a few feet in front of it, a human shadow. Or no, it wasn't a shadow, it was more solid than that. He watched it move forward, and thought that it was something that was coated in a darkness deeper than any normal darkness, and felt emanating from it what he could only describe as a wave of hate. His first impulse was to push away from it, and then next thing he knew, Katie was shaking him.

He looked up into her face, dark with night shadows, alive with light from the flickering sky.

“You were having a nightmare,” she said. “You were really going strong.”

“I saw somebody in here.”

“What? Paranoid about a place like this? What *could* be the matter with my beautiful man?”

They laughed together, but he felt little conviction. That had not been a nightmare, it had been a whole level more intense than that. It had been a classic *pavor nocturnus*, a parasomnia disorder. Classically, also, he had felt as if he was still awake, when actually he had been deep in slow wave sleep.

“God, what if I'm hypoglycemic? That's all I need.”

“You want a test? I can look for one in supply.”

“Nah, it’s not that. It’s just stress.”

“You’re the doctor.” She slid close to him, and they kissed, and he felt that she could not only inspire him sexually, she could be warm and comfortable in the night, and he began to drift off again.

He did not drift off, though. Instead, when he heard her breath change to a sleep rhythm, he found himself growing uneasy. He was lying with his back to the room, and he began to get the impression that this was a mistake, because the figure—or was the word “phantom”?—was still there.

Finally, he turned over and looked out into the room. The door was securely locked and chained, and there was no other way to get in here. Or was there? In an old place like this, especially a room where mistresses had been entertained, there might be hidden access.

Then, without seeing anything specific, he knew that the presence was approaching the bed. Despite the fact that his scientific mind could not for an instant believe such a thing—knew it to be impossible—it appeared that a vividly alive but invisible presence was now standing right beside the bed.

He knew that this was a return of the *pavor nocturnus*, an effect that was common with this type of sleep disturbance, but that did not change what he was feeling, and now he noticed a very strange sensation, a vibrating coldness that moved across the skin of his chest. He looked down at his nakedness, and saw a flurry of goose bumps rise where it was touching him.

There was somebody there, he knew it. But he couldn’t see them.

Why not?

This was some sort of schizophrenic hallucination, it had to be. But he didn’t possess any genes for schizophrenia, and none of the single nucleotide polymorphism associated with delusions.

So, was there somebody actually in here?

He raised himself up on his elbow. Beside him, Katie moaned softly.

He fumbled for the lamp, finally turning it on—and thought he saw the door slip closed, and jumped up and ran to it and threw it open.

The hallway was empty.

A vivid dream, then.

The next thing he knew, he was standing at the window, the one that looked out over the parking area and the trees. Overhead, an enormous object, brilliant with lights, moved majestically past. It was no plane, this

thing, and it was absolutely massive. Gigantic. And behind it was another, and above them two more, and then he raised his eyes and an awe of surpassing power captured him, for he saw hundreds and thousands of these gigantic things, stretching off into the sky until the sky itself was swallowed in auroral discharges.

Then he was inside one of these things, surrounded by columns of light that he somehow knew were living beings, ascended to great heights of the heart, and filled with love so intense that it seemed to thrust him back into early childhood, and he saw his mother and father on the beach at Cape May, Dad calling out, Mother lying with cucumber slices on her eyes, Jack the terrier barking, a tiny girl singing general praises of the day.

They were angels, a fact which he seemed instinctively to know, and he felt absolutely naked in their light. They were so deeply right and so deeply true that he cried out, or imagined that he did, for they also radiated a sense of joy and purity that was without the slightest question the most glorious, the most innocent, and the yet the most awesome emotion he had ever known.

He felt also, though, a certain sadness and he lunged at it in his soul and demanded that it leave him but it did not leave him, far from it, for the next thing he knew he was in darkness absolute, crushed by waves of sick terror. The most glorious of all dreams had turned in an instant into the black and formless mother of all nightmares.

He was moving past stone, down some sort of deep fissure. There came a sensation of heat. Soon, the rock around them was glowing and the heat had become a horrible pain, more like being sanded than burned, but it was hideous. Again and again he threw himself against the walls, back and forth, back and forth, but there was no escape.

Objectively, he knew how serious a seamless, absolute break with reality like this was. Stress induced, yes, so vivid it was the next thing to psychosis.

He went deeper, and as he did the heat rose and he writhed and fought, hammering his fists and kicking, reduced to the frenzy of a panicked child.

Cries came around him, and he could see forms embedded in the walls now, bright, blazing human shapes, and they were all crying out their innocence, but they were not innocent, he could hear it in their tone, a despairing cacophony that bore within it the discordant note of the lie.

A new pain joined the fire, a very definite pain in his right wrist.

And there was somebody yelling, and again and again he was hammering

his wrist against the edge of the bedside table, and the exquisite old lamp was bouncing.

Gasping, he wallowed in the sheets, then held his wrist. Jesus God in heaven, had he broken it? No, just the skin, but he had hammered the devil out of it.

“What happened . . .”

The room was normal, everything quiet. His clock said six forty-five. “Katie?”

His bed was empty. She was gone, and he had to ask himself if she had ever been there.

He knew this imagery, of course. The Christian heaven and hell. So he’d dreamed it, that’s all that had happened, and no matter how vivid, it had been, in the end, just a dream. A symptom of stress, perhaps, but not the psychotic break he had feared.

A sudden voice from the little sitting room beside his bedroom startled him. Male, but who was it? Nobody on staff sounded like that. He threw open the door.

“Excuse me—”

He recognized the voice of *The Today Show*’s Craig Harding. They were in the window at Rockefeller Center, and people were looking in on them. So the solar storm, also, must have passed and the satellites had switched on again, and the world had resumed. As he dressed, he listened hungrily to the news, which was basically about all the disruptions. But they were disruptions, not the end of the world.

He allowed himself to hope that Mrs. Denman’s white paper had been wrong.

In his luxurious marble shower, he imagined that the foaming body shampoo was washing off the madness of the night. For sure. If the solar storm was gone, life would return to normal very quickly now.

By the time he was striding down to the staff dining room for breakfast, he had put his dream aside.

As he descended the stairs, Glen MacNamara stood waiting for him.

“We have a patient missing.”

He absorbed this.

“Sam Taylor lost Mack.”

“When?”

He paused. "Yesterday afternoon."

"*What?* Why wasn't I informed, Glen?"

"Nobody was informed. Sam was knocked out."

"But Mack's on lockdown! Surely the staff noticed this when he didn't turn up at lights out."

"Sam asked for time while he looked for him."

"All night?"

"He let me know about ten."

"Glen, it's seven o'clock in the morning and the director of this institution is just finding this out?"

"Doctor, I didn't see the need to wake you up. What could you do? This is my issue."

David was about to really get into Glen MacNamara, but the truth was that he was right. He couldn't have done anything to help.

"Okay," he said finally. "Could Mack pose a danger to us?"

"It would be damn surprising if we ever saw or heard anything about him again. If you want me to guess, I'd say he won't last a week out there. It's hell, Doc. I'm telling you, from the smoke columns I see and all the infrastructure problems, folks are tearing each other apart." He gestured toward the dining room. "Toast, bacon, coffee, and Gatorade. In here, everybody's outraged. Out there, it would be a feast."

They went in together. As he crossed to the buffet, Katie came close to him, discreetly touching his hand.

"At least that scumbag is gone," she said quietly. "Nobody cared for him." She brightened. "And anyway, the cable's back and the sun looks better, and I've got a feeling we're getting past this thing."

Mrs. Denman's paper had warned that the solar system was headed much deeper into the supernova's debris field. Much deeper.

The truth insinuated itself into his mind. They had not come to the edge of the storm at all.

This was the eye.

12

GOLIATH

Caroline woke up on her first morning in the general patient population in a state of intense unease. She didn't actually wake up, because she hadn't slept. She'd lain there with her eyes closed, worrying, primarily about David. She had a letter for him written by Herbert Acton, but it was not to be handed to him until he remembered his past, and to her that meant remembering their time together, their shared innocent life.

Herbert Acton had warned about this period right at the omega point, that it was too unsure for him to see into it clearly, so his instructions about these final days were vague.

Beyond the borders of history, which is where mankind was now, nothing was certain, and as the evil came to understand their fate, their efforts to escape it were going to make them incredibly dangerous. Many of them would actually want all of mankind to be destroyed, if they were destroyed.

David had remembered a lot, she could sense that. But if he did not remember her, he was not on mission, and time had run out.

Intending to confront him late last night, she had gone to his bedroom. She had hoped to feed him some of the potent white powder gold they had created in the arc furnace, and see if that helped.

Oddly, the door had been unlocked. When she slipped inside, she had discovered why: Katrina Starnes had come in before her, and was sharing his bed. Carelessly—or perhaps out of an unconscious desire to broadcast her conquest—she had failed to pull the door closed.

She had never been warned about him falling in love with anybody else, and she was appalled and deeply saddened.

She had stood there, her face flaming with embarrassment, her heart wretched, her mind at a loss as to what to do now. They were too involved with each other to notice her, and she had quietly retreated.

When she'd returned to her room, all she could do was cry into her pillow.

The first thing she'd done waking up this morning was to arrange an

appointment with him. “We’ll need to squeeze you in,” Katie had said in concealing, velvet tones, “but I think I can get you fifteen minutes.”

Katie was no fool. She sensed a rival, and no way was Caroline getting any more of his time than that.

Well, Katie was going to be hurt and there was nothing Caroline could do about it. She’d been hurt herself last night, hurt terribly, watching them in their pleasure.

She had been assured by her father that David would remember everything the moment he laid eyes on her. If there were any gaps, she could show him his trigger, which was an image of Quetzalcoatl.

Neither thing had worked, and she was no longer able to contact her father for further advice, not unless the phones returned, which they had not. So she waited now, sitting with her hands folded, watching Katrina bring David his morning coffee.

As Katie crossed the room, her body spoke to Caroline of its conquest. And by the way she laid the cup near his hand, with a too-furtive glance toward his lower extremities, she knew that she was remembering him in his passion.

She fought back her anger and jealousy, but Katie sensed her feelings and her eyes darted at her, and there was between them a moment of daggers. Then Katie went flouncing out, her cheeks brushed with rose . . . and Caroline was horrified to glimpse, just above the edge of the young woman’s neckline, a telltale shadowy darkness from a mark concealed below.

Katie was judged! Caroline felt actually queasy—physically ill. This was the first person she’d seen with a mark, but there were going to be a lot of them, she knew that.

At the omega point, bodies ceased to conceal souls, and some became like light and others like darkness and others—workers like her and the rest of the class—shouldered the burden of life and kept on.

It was hard to be so evil that there could be no redemption, so what terrible things had Katie done? She looked like a sweet young nurse, the last person you’d expect to see in such a situation.

She didn’t seem in the least uneasy, so maybe she hadn’t yet noticed the discoloration or didn’t understand it. But she would notice it, and come to understand it, and when she did, the evil that she was concealing was going to explode to the surface, because this woman could not be what she seemed.

Hidden beneath that pretty surface, there lurked a monster.

Then she was face-to-face with David.

“Thank you for granting me my freedom,” she said to him, after Katie had gone. “How is Linda?”

“She had a mild heart attack. She’ll be fine.”

“Will she?”

“You think not?”

“I don’t think anything. I asked a question.”

“Which had implications.”

“I don’t do implications. I say what I mean.”

He sipped the coffee. His prop, in lieu, she supposed, of a pipe.

“David, do you have any idea who I am?”

“Caroline Light.”

“Why did I come here?”

“The same reason people usually come to the hospital. You were suffering and you wanted relief.”

“You know more than that. Do you know we were childhood sweethearts?”

“I know about the class. I know who you are and I know about . . . something. The gold. Sort of. But I’m lost. And I don’t know you. You’re like a stranger who’s sharing a compartment on a train or something.”

“I need you to wake up,” she said.

He gestured with the coffee cup. “I’m wide awake.”

“I’m going to say something,” she told him, “and you can take it however you’re going to take it.”

“Okay.”

“I dreamed you made love with Nurse Katie last night. I dreamed I watched you.”

So much blood drained out of his face that he seemed to turn to wax.

“You feel a need to tell me this?”

She decided to force the matter even further.

“I saw you tangled in blue sheets, in the light of a beautiful Tiffany lamp—so sexy, I didn’t know he did erotics—and, oh, God, I felt such incredible jealousy, because, David, you need to face the truth, and the truth is that even though we were children when we made our vows, they counted, and even though you don’t remember right now, last night you were cheating on me!”

The waxen face slowly filled with the color of a deep flush. He blinked rapidly. He picked up his pencil and put it down. Then his chin lowered, his fingers stopped toying with the pencil and grasped it tightly. There was an odd sense that they were moving down a tunnel, racing away from each other. She feared that she had made a major mistake.

He jumped to his feet, came out from behind the desk, and stood over her.

She felt the menace in it. She said, "I'm sorry I slapped you."

"I am, too. It hurt."

"I'm a punisher. It's a fault. But you're hurting me, David, you're hurting me terribly."

He loomed and she could feel him suppressing his own violence. Then he strode across the room and threw himself down in one of the sumptuous chairs that stood before the fireplace. He was muttering, and she could not hear the details.

"I'm sorry," she said, going toward him. "I've touched a nerve and I'm very sorry."

Slowly, his head turned toward her. His face was sunken and gray now, skeletal with fury.

"Will you please tell me which member of my staff allowed you access to my bedroom?"

"I—nobody. The door was unlocked."

"Damn you! *Damn* you!"

She tried another sort of shock. "You have a mission, David. Face it! You have to lead us out of this mess."

As if the chair was burning him, he leaped up and strode away again. She realized that he knew. Inside himself, he knew it all. It wasn't that he couldn't remember, but that he couldn't face it.

"Were you also out the first night you were here?"

What should she say? One of their fellow classmates had released her from her locked room, and she had gone to fetch the tiny amount of ancient white powder gold she had brought with her. She had hidden it near the gate until she was sure she wasn't walking into a trap. That gold was star stuff, what NASA had found when they went searching for stardust, and what was found in the crop circles of haunted England. Without a little of the ancient material, new material could not be made.

He returned, a stalking lion. "How stupid do you think I am?"

“David, the whole nature of reality is changing and there’s work to do. You have to accept this.”

“And I suppose the ridiculous, bloodthirsty, mad Aztec gods are coming back, too, and we’re all going to be sacrificing children soon!”

“The gods don’t exist.”

He gestured toward the glyphs above the door. “A couple of days ago you sounded like an evangelist.”

“The old gods are the mythologized principles of a lost science. As human knowledge declined after the last cataclysm, science became myth, and myth became religion. They ended up worshipping subtle principles as meaningless gods. That’s all religion is. Worship of the powers of a science that existed before Egypt.”

He glared at her in silence.

“David, you know this! We were taught it. We sat side by side.”

He looked long at her. “Yes,” he said softly, “I know.” But he seemed to sink into himself, his face growing ugly—eyes bloodshot, cheeks seething purple, lips twisted back—a face savage with amazing depths of rage.

“Now wait,” she said helplessly, “it’s all right.” How soft and full of grace that face had been when he was a boy of twelve. “Be as little children—”

“I’m an adult!” Seeming to overcome something deep within himself, he pulled away from her and stalked off again. This was a cage and he was an animal.

“David, all you have to do is embrace your role. Then you’ll see how important our love is.”

“We were kids. The loves of childhood don’t survive.”

“Our bond is essential to our mission, and it was meant to survive.”

“Well, I’ve remembered a lot of things, but not that.”

She came close, and he did not stop her. “Start again then.”

“Now? There’s no time. Not for feelings.”

“All this pacing you’re doing—you’re trying to run away, but you can’t, David. There’s no place to go.”

“There had better be, because we have very little food left and almost no fuel, and I don’t know how to save the situation.”

She did something she had last done in the basement of this very house, when they were still just kids. She kissed him . . . but not with the gingerly innocence of those days, not this time.

For a moment, they were frozen like that. And then, slowly, he pulled away from her. His face was popping sweat. She slipped close to him, and drew her arms around him. They became as still as statues, two people in the ancient, tentative posture of unfolding love.

She lifted her face, and found him looking down at her, and felt the same delectable weakness go through her that she had known when they were innocent.

“Let me show you something,” she said.

For an instant he closed his eyes, and his face was as narrowed and sculptural as an old painting of a saint enduring martyrdom. When he opened them again, they were on her, boring into her.

“What’s going on?” he asked vaguely, muttering as if in a dream.

They lay on the floor, going down by mutual consent, saying nothing.

Then, suddenly, his lust came and he tore at her clothes, his eyes wild, his body thrusting, she thought, uncontrollably. In another moment his pants were off and he was pushing, seeking, and she turned a little, opened her legs a little, and the shock of his entry into her was by a thousand light-years the most intense experience she had ever had in her life.

He arched his back and cried out, his teeth bared, and then drew himself out and she tore at him, grabbing his thighs, and he entered her again, and this time it was more than sex, it was beyond all physical experience, it was the moment of death amplified to a great, roaring, abandoned surrender of body, mind, and soul.

They lay, then, in soft grass, and from the billowing woods nearby there came birdsong.

“Oh, God,” he whispered. “Oh, God, where are we, what is this place?”

“This is the future,” she said, “if you want it. But it takes love. To come here takes fear, but to stay, there must be love.”

He thrust and thrust and thrust, and every time he did, a wave of heart-stopping pleasure shot from her curling toes to her shuddering scalp. Then he kissed her, his tongue like fire boring into her and setting everything inside on fire, and the birds made their music, and a soft breeze caressed them, and the sun crossed the sky and went low, and in the long shadows, they heard, like distant bells, the secret harmonies of the human soul.

It ended then, in a series of declining thrusts. Surely now he would remember their love, and they would gain from it the energy they needed to

pass through the time gate and not fall back.

There was no sound that marked their inevitable descent back into the familiar world, nothing but a gentle, subtle change from cool, pliant grass to the old rug they'd started their journey on.

"It was your painting, Caroline, the one you're doing in the art room. It was like we were in it."

"Yes. We went there."

"Then it's not a painting."

"No, it's a navigation tool and it worked just as it's supposed to. We couldn't control our movement, though. We fell back. You and I should be able to cross easily by now, to prepare the way for others."

"Why can't we?"

"There must be love, David."

His hand withdrew from hers. He sat up.

She saw that he'd enjoyed himself with her. Lust, though, was all that it had been for him, the lust of a soldier on his way to die.

She was down to the final card, she saw. No matter Mr. Acton's instructions, she must play it now because if she didn't, she would lose him here, now, forever.

Without love, the journey across time—the physical journey—would last no longer than it had just now, the flicker of a eye.

"I have something for you," she said.

She drew her purse open. This letter, in its fading envelope, had come to her from her father's hand, as he had wished her well on her quest. "My knight," he had said, "with no armor. My beautiful girl." Being held by her father, this man in profound transmutation, was the most sacred experience that she knew. She feared so for him, off there in the Virginia countryside with no guards and no guns.

"This is for you," she said. He looked down at the envelope. Then back up at her. "It's from Herbert Acton," she said. "It was written over a hundred years ago."

He took it, then turned on the magnificent desk lamp, in which Louis Comfort Tiffany, himself a master alchemist, had reproduced, as if they were a swirling rainbow, all the colors of alchemical transformation, from the black of the ground through red to creamy white to green and yellow, then to the radiant white of monatomic matter and the ruby red of super

consciousness, to the violet of night and wisdom, the color of the Great Elixir itself. In the lamp, fairies danced.

As he opened the letter, the dry old paper crackled. For a cold instant, she feared that it might turn to dust. Anything could happen now, in these enormous moments, beyond even the reach of visionaries like Herbert Acton.

He read in silence.

“What does it say?”

“You don’t know? I thought you’d know.”

“It’s never been opened before, not since the day Herbert Acton wrote your name on it and sealed it.”

In his eyes she saw flickers of the Great Elixir, shimmering and shuddering faintly, living violet in the blue that had long ago captured her heart. She allowed herself to hope.

He read aloud, “ ‘David Ford, this will come to you from the hand of the woman you love. Surrender and learn. But quickly, David, for nothing is decided. Goliath follows her close behind.’ ” He made a little sound in his throat. “That’s all.” He held the letter out. “And there’s today’s date.”

“ ‘From the woman you love,’ David. He knew what was supposed to be between us.”

“Caroline . . .” His voice faded. Then she realized that he wasn’t looking at her anymore, he was looking past her.

When she turned, she found herself confronting Katrina Starnes and waves of hate unlike any she had ever felt, and she knew that this was the pure hate of darkness and, even worse, the hate of a scorned woman.

“I was just leaving,” she said faintly.

“Oh, no,” Katie snarled. “Fuck him again. Fuck him on the floor, you rich, spoiled filthy *bitch*.”

“Now, wait.”

“I’ve been waiting all day. And hearing!” She turned on David. “You sob a lot, asshole. Sob with pleasure. You sound like a complete jerk when you’re fucking, did you know that? And you’re even worse than Marian says. You’re not only a self-centered piece of shit, you’re an incompetent doctor. If we could get out of here, or we could get the goddamn phone working, your license would be history. And it will be. Because when this is over, you’re going down, Doc.” Now the jewel-hard eyes returned to Caroline. “Like his dick? Tell him to wash it next time, between fuck toys.” Her voice dropped

low now. “Guys like him—human garbage—they end up in pieces. Be warned.” She strode out. “There’s a list on your desk, Doctor,” she said over her shoulder. “The patients you missed, the problems you ignored.”

Silence followed. Hardly above a whisper, he said, “It’s dark. We’ve been here all day.”

“An uncontrolled move through time.”

“I have a problem with her now, Caroline. Big problem.”

“I have to go work on my painting.”

“I know.”

Their eyes met, and their hearts danced, but it was a slow dance, full of sorrow and full of fear.

She wanted to stay with him but she could not stay with him, there wasn’t time. She left, moving quickly down the halls, intent on her task.

Neither of them was aware of the other eyes that watched them via the surveillance system, Katrina’s eyes, or the true intensity, the towering fury, of the hate that was there.

DAVID FORD'S JOURNAL: FIVE

I've always moved too fast with women, and now I've got two of them on my case. It's happened before and I've always been ashamed, and I feel that now.

Caroline Light wants my love but I just do not feel anything there. Katie wants it and, again, I just want the comfort of her body.

Both women are furious at me, of course, but I'm dealing now with a new issue, and they're going to have to wait their turn. To be frank, I believe that I know what Herbert Acton did to look into the future.

Educated as I am in modern science, I have always viewed alchemy as the first primitive fumbling of what became chemistry. However, what I now suspect paints a different picture. Alchemy, as we have known it through history, is the degenerated remnant of a chemistry far more advanced than what we have now.

The shibboleth has always been that the "philosopher's stone" is supposedly capable of turning something like lead or iron into gold. In the Middle Ages, mountebanks went about in Europe using sleight of hand to convince the wealthy that they could do this, with the intention of fleecing them.

There is a truth behind it, though, and it is the explanation, I am convinced, for Herbert Acton's abilities. And, in fact, as I write this, I feel a sort of déjà vu again, as if the words are a kind of echo. I would surmise that this is information from our class, being drawn through the amnesia.

What this ancient science concerned, I believe, were manipulations that are presently far beyond our ability. It was able to see into the future, and, I think, holds the promise of actually enabling physical movement through time—an orderly, organized version of what happened to that dire wolf in Utah.

I have made a most interesting discovery about this room. It contains a time machine—not one that can enable physical time travel, but one that can facilitate the sort of seeing that Herbert Acton was so expert at. I think of it as a time telescope, and it stands on this desk, the Tiffany masterwork that is far more than a desk lamp.

It was the alchemical colors that revealed the lamp's true purpose to me. The master who created them understood the uses of light frequencies, and when I close my eyes and let the colors wash across my forehead, I am able to see brilliant images of the future. In other words, the legend of the crystal ball or the magic lantern is about lamps like this.

Accelerating vision into the future—perhaps bodies, too—need have nothing to do with arcane contraptions like supercolliders. It has to do with changing the temporal frequency of the body, and that can be done with light.

You look into a color of the type produced by this lamp until, when you close your eyes, it fills your head—and then, after a few moments, you will see what for me are flickering, indistinct visions, but which for a master like Herbert Acton must have been exquisitely detailed images.

Even with my limited skills, though, I have seen the future, and, frankly, I am terrified. Not because of what is there, but rather what is not.

In my mind's eye, for example, I can see this room as it will be later tonight, empty, the darkness flickering from the auroras.

Then something else happens, involving strange light rising in the east—a piercing violet object in the sky. And that light—the color is like that of the Great Elixir, a light frequency of great power, both creative and destructive.

No sooner does this light wash in through the windows than all light disappears. It's not night, it's another kind of dark entirely. When I tried to see into it, it almost seemed to want to suck me in, as if it was in some way hungry. I think that I was seeing the absence of reality itself, the absolute emptiness that surrounds the universe, that is, what exists before light has come and after it has faded, beyond the limits of time.

In other words, we are almost at the end of time, probably just days away, or even hours.

And yet, it's not the entire and complete end, because something else is there, a glimmer in the black ocean.

I think this is the beginning of new life on earth, thousands of years from now.

And getting there is our goal, and it is why Caroline refers to her painting as a navigation tool. As she paints, she is looking in her mind's eye at a specific spot on the Earth of the future, the place she briefly took me to. Once the painting is finished, everybody who sees it, and is properly prepared—no doubt by consuming the substance they're manufacturing in the arc furnace—will supposedly be able to navigate to the point in time it depicts.

I have also seen our world as it is right now, and what I have seen has almost made me sweat blood, because hell is unfolding here, and it is far, far worse than I imagined. Even as desperate as we are here at the clinic, compared to what's going on outside, we are a splendid palace shining in the middle of a wasteland.

For example, the farm belt all over the world is a gigantic desert of brown, ruined crops. I sailed from Iowa to Texas on the lamp's magical wings, and saw nothing but stubble and burning cities and long lines of dead cars on the roads, and everywhere bloated, dead cattle, and people in their millions cutting and eating the carrion meat.

Also, I saw ever more of the huge objects that I glimpsed out my window the other night, drifting over the face of the land, lingering over cities, marching in enormous platoons across the suffering world. I saw them drawing people into themselves in vast numbers, but I could not see what was happening to them. I do remember, though, that it was beautiful. Were these the biblical elect, then, those who have finished with earthly life, being raised up? Or was it something else, the harvest of mankind, perhaps, as slaves or as a DNA pool?

I could see what was happening, but there was nobody to tell me why.

I have also seen people cutting themselves to the bone—literally butchering themselves—to get rid of the strange quasi-physical shadows like the ones on Katie's neck and probably on Tom Dryden. I fear that I know why, and I fear for them both. Katie seems a good person and Tom is innocuous, but we do hide our darkness, we humans.

Taken together—the vision of the lake of fire from Revelation, and these two encounters with those huge objects, I think that what I am seeing is the beginning of a legendary event, the actual, physical judgment of man.

At the thought, my guts congeal, my heart overspeeds. This whole planet is on death row, and I feel it not only as a member of human society and a man responsible for a lot of lives, I feel it personally. I am the one whose energy

will enable us to take our first step across time. That's why I am identified with Quetzalcoatl who was, among many other things, the god of new beginnings.

My impulse is to throw myself into my work, and I have a lot of work to do. My primary immediate responsibility is clear: be sure this place is not destroyed before we've completed what we've been put here to do.

I wish that I could say that I was confident, but I am not confident at all. We know literally not a thing about whoever killed Mrs. Denman, and until we do know that, everybody here is in danger, and so is our mission.

Undoubtedly, somebody has at least an inkling of what we are going to attempt, and wants to take our knowledge and use it in our stead.

I look to Mr. Acton's final letter to me. It warns David that Goliath is coming—in fact, that Goliath is here now. But who is Goliath, a person, a storm, some new fire about to be spit from the sun?

No doubt Goliath is many things, but one of them must be that violet light—the highest color of alchemical growth and also the color of ultimate death. The light is an incredible poison, and it's coming. But it isn't the only aspect of the giant. Goliath has servants.

As I am apparently David to this Goliath, it's worth asking just how I sling my stone into his forehead. The light must come from the supernova that was mentioned in the document Mrs. Denman gave me to read. Maybe we're getting close enough to it to see its core as a distinct stellar object.

A supernova's core emanates sterilizing sheets of gamma rays.

As I sit here, night is coming on, the worst time.

I go to one of my majestic windows, to the glowing, bizarre darkness. Frankly, when I looked into the future, I was surprised that I did not see that the sun had gone supernova. Such things happen all the time, with one stellar explosion blasting nearby stars with so much energy that they explode, too.

I cannot see around to the east very well, but it looks as if there is a violet-purple tint off beyond the limits of my vision.

This distant star—previously unknown to science—is, in reality, what controls life on earth. I know from modern paleoastronomy that light of this monster first washed the earth forty thousand years ago, leaving a huge swath of the planet, from Australia through southern and central Africa, empty of large, plains-dwelling animals. They died because they could not hide from the gamma rays. It came again during the end of the last Ice Age, and once

again, the plains-dwelling animals, the mammoths, the mastodons, and so many others, were decimated.

So violet is the highest, and therefore also the most dangerous light, and as I sit here looking into my lamp, I ask for direction, but get only silence in reply, and darkness in my mind's eye.

Purple is the light of evolution. But evolution also means death. Ask the dinosaurs—and ask, also, mankind. Are we destined to follow them into final species death?

We have reached the end of the game. The rules are cast aside, but still we play on, deep into the night.

And I am left with the question, What is my stone, what is my sling? How do I slay Goliath?

13

THE TRACK OF THE CAT

Mack had moved swiftly through the countryside, but thought better of entering Raleigh during the day. He needed to work fast, but he also had to stay alive, and that was going to take some care. For all of his skills, anyone with a good rifle and a good eye would be a danger to him. He wished that he could have brought the young guard's rifle with him, but if it had been gone when he woke up, even though he would have had no memory of what had happened, he'd have known that something was wrong and raised the alarm.

Hiding in a barn, Mack hadn't rested, he hadn't been able to. When so many people were waiting on you and things were deteriorating this fast, the tension was appalling.

After the sun had at last set, he climbed down from the hayloft and surveyed the farm. It was as quiet as it had been when he'd come here. He needed food and, above all, water, so he decided to take a chance on the house.

He'd had a great deal of field training, so he knew how unsafe it was to expose yourself to dark windows, but it couldn't be helped.

It was pointless to conceal himself, so he just strode forward.

When he returned to the Acton Clinic, all exhausted and apologetic, he would use the same technique. He would let them lock him in again. The window was hopeless, but there was an escape route through the air-conditioning ducts in his room, and one of his jobs in Raleigh was to go to the county building department and look at the plans of the patient wing. He had not killed yet, but when he got back there, he was going to do a good deal of that, and a good deal of information extraction.

By the time he reached the house, he knew that it was empty.

The fridge was warm, but there was a half-finished bottle of Coke inside, flat and hot. He drank it all. The water taps didn't even drip when he turned on the faucets, so he got a pitcher out of the cabinet and banged through the house to the nearest bathroom. There was water in the toilet tank, which he

pitchered out and drank. Down the hall, he saw a woman's legs in the doorway of a bedroom. The rest of her was sprawled out of sight.

He left the house and found a pickup in the garage but its electronics were fried so he headed off down the road on foot. With the setting of the sun, the sky had turned an odd pinkish-purple color, something that was new. Pinkish purple, with long, shimmering sheets of green auroras cutting through it. Beautiful, indeed, and so could death be beautiful.

By the time he reached the outskirts of town it was full night, and now it could be seen that the odd color of the sky was centered on a faint thickening brightness low on the northeastern horizon. What was it? He knew little about astronomy, but it had the look of something that the world would come to wish had not appeared.

Most of the houses he passed were dark, but some contained faint, flickering glows of candlelight, and one or two the brighter light of oil lamps. He had no real plan, except to see what he could do to stir these people up against the clinic. They hated it, of course, but they needed leadership to go up there and cause mayhem.

As he drew closer to the town center, he was stopped by something he had not seen in many years, not since his days in Mexico, when drug cartels sometimes did it to terrify locals into serving them.

On a street lamp about halfway into the town, a man had been hung . . . and, he noted, hung badly. The body was covered with blood from the neck, because they'd hauled him up without tying his hands, leaving him to struggle with the knot while he choked. Ugly way to do it, probably because they were clueless about the process. Under the body, dogs snarled at one another as they licked the blood in the street.

A number of storefronts were burned out, and he could smell death in the air. More dogs could be heard in the darkness, and as he passed the ones beneath the hanged man, some of them gave him a predatory appraisal. Once a dog has tasted blood, it is dangerous, always. Not wanting to have to fight off the whole pack, he gave them a wide berth, and did not meet their eyes.

You could give a dog a heart attack by shattering its muzzle with the right kind of blow, but six or seven dogs would keep you damn busy, and you would absorb damage.

Ahead, there was a restaurant showing a flicker of candles in the front window. Inside, he could see the shadows of many people. Good, this was

what he'd been looking for. Desperate people band together, at least when they still believe that they might have some way to save themselves. Only later, when they understand the hopelessness of their situation, do they turn on one another. In another couple of days that would happen here. In fact, he was probably lucky that it hadn't already happened.

He went to the door and paused, evaluating the crowd. There were men, women, and children present, so this was probably some kind of survivorship gathering. Safe enough.

He stepped in. Voices rumbled around him, angry and desperate ones, and the children were crying, many of them. A few were playing.

"We're real hungry, John," a male voice said. "You gotta find a way."

"We need to do some urban foraging," the man in front, probably the mayor, said.

"We've scoured the town, goddamn it," somebody shouted. Rage. Terror. They were just about to turn on one another.

Mack took a breath and raised his voice. "Excuse me."

They froze like frightened mice, then turned all at once. Suspicion in the faces. Women swept their children behind them. He was acutely aware of the fact that the room was full of guns.

He held up his hands. "Hey, I'm unarmed." He looked from face to face, smiling just enough but not too much. His next words were crucial, and he had thought about them carefully.

"I just escaped from the Acton Clinic."

An immediate murmur, more suspicion in the faces. All expected. He was playing them.

"I'm not a crazy, okay!"

They quieted down a little.

"Let him talk," the man at the front of the room said. He was pudgy, but his eyes were hollow. That was one famished fat man up there. He must be almost crazy with hunger, probably dropping ten pounds a day.

"I'm an assistant chef."

A guy with a deer rifle said, "What do you mean, you escaped? Why does an assistant chef need to escape?"

"That goddamn place is a palace! There's tons of food, *tons* of it. They've got enough to feed their damn psychos for a year. It's enough to get this whole town through this thing—I mean, if there's another side to it, God

willing.” Then he stopped. Time to let it sink in. Time to let them chew.

“How much food exactly?” a woman asked.

“Try a hundred dressed hogs, forty beeves, maybe a quarter ton of prepared meats, not to mention a whole huge basement storage area full of canned goods for long-term use. That’s a damn Versailles palace up there on that hill, and they have no right to keep all that food just for a bunch of loonies. No right, not when good, normal people who are the backbone of the country need it! That’s why I escaped. I want to help people who need help . . . folks who’re healthy and normal.” He laughed, made it bitter. “That palace up there is full of people who this world doesn’t even need. But it needs you.” He pointed to a little girl peeking out from behind her mother’s dress. “It needs her.”

“They got more guns than we have, man.”

General assent.

“Yeah, I know. You’ve gone up there and taken a few shots, I know that, too.”

“I did that,” the same voice said. He stepped out of the crowd. He was a young guy, about thirty. He had a preteen boy in tow who looked as tough as he did. “I’m two tours in ’Stan. I was on rotation stateside when this thing started. And if we try on the Acton Clinic, I can tell you as a soldier that a lot of us are gonna get wasted.”

Mack let silence follow that statement. They needed to taste their fear, then be pulled out of it. “How long has it been since you folks got anything to eat?”

People looked around at each other. “Three days,” the man in the front said.

“Okay, I had three squares before I came out. I think it was the steak that made me make my move, eating it, knowing that at least some decent, normal folk down here could be eating what the crazies were gobbling. And the patients get a lot better than we do. It’s like a damn cruise ship up there.”

Another voice rose, this a kid of about fifteen. “Mister, they signal. They use SSB code bursts. I pick them up on my scanner. So they could signal for help.”

That brought an uneasy murmur. Of course, the kid was worrying about Mack’s own code bursts, but no way could he say that.

“Those are probably just signals to their rich families, arranging for more

supplies. Now listen to me, I know the place from the inside out and I've got the kind of training you need for an op like this. Special Forces. Afghanistan. Pakistan."

"Unit?" the guy with the rifle asked.

He'd done this sort of thing many times before, and it actually felt good to do it again. "Night Stalkers," he replied easily. "160th SOAR." One of the many answers he had to the many questions a CIA field officer gets about his identity. You always lie, even to your friends.

The guy started to be impressed, but then he asked another question. "How'd you end up in the kitchen?"

"Oh, I was on security, all right. But we got shoot-to-kill orders last week and I told Glen MacNamara that I could not do that." He looked around the room. "You all know who Glen is?"

They knew. Like any town living beneath the walls of a castle, they were obsessed with what went on inside it. Except they did not know about this food, of course. Naturally not, because it didn't exist. But their imaginations and their eagerness to hate the palace made them believe it in without question. In truth, the clinic was just about stripped of food like everywhere else—except, of course, for the redoubts. If he had wanted to be straight with them, he should tell them how to get to the Blue Ridge underground facility, but he had no intention of doing that. There, they would find food enough to carry this town for five years. Yeah, and give the food of the pure of blood to this gaggle of human trash? Not gonna happen. The pure of blood were the future of the world, or it had no future.

"What I need to do is for you folks to get me the building and ground plans for the clinic from the buildings department, then I can lay out a professional plan of attack for you."

"Mister, they've got SOPMODs in there, I've seen them. And bigger stuff. Lots of it. Plus those cannons that make you feel like you're on fire. The best we can do are a couple of assault rifles and this kinda stuff." He ported his deer rifle.

"Except you're gonna have me in there, and you're gonna have a Ranger plan." He addressed them all. "I can't tell you that nobody's gonna go down, because that's not gonna happen. There will be casualties. But you will win. That I can tell you, because that's what's gonna happen."

And when they couldn't find the food, they would first slaughter the bosses, and when they still couldn't find it, they would fall victim to their own rage, and they would lay waste to the place.

They got the blueprints he needed, and together they laid out a good plan of attack, one that would actually work. "This gate," he said at last, pointing to the disused back gate on the grounds plan, "will be unlocked. After your feint draws them to the front of the grounds—and they'll all come running, they're not that well trained—then you just send your main force right through that gate. You get inside the grounds, they are toast, people."

They worked out a schedule, and at midnight, he began his journey back. Crazy ole Mack was just about done in, starving and filthy. Mack was sorry. Mack was coming home.

14

THE HAND OF DARKNESS

On the night side of the earth, most of the lights—the cities of New York and London and Paris—had gone dark, and the atmosphere glowed softly purple against the strangling void. The International Space Station swung through its orbit in darkness. Inside, the bodies of the crew floated, one or two hands fisted, most touching the air as if it was something miraculous, their fingers carefully extended. The bodies appeared old, the hair gray with frost from the suffocating carbon dioxide of their own breath, which is what had—mercifully and gently—killed them.

Along the face of the night far below moved the great, glowing objects, working faster now, sliding just a few hundred feet above the suffering land, seeking with probes beyond human knowing, signals from our souls.

They had an enormous task before them, because one of the most improbable truths about mankind is that the vast majority of people are good, and would not need to sink away into the long contemplation that draws the evil, ever so slowly, to face themselves.

Had we not been rendered soul blind by the catastrophe that destroyed our pre-Egyptian civilization, the coming of the great objects would not have been mysterious to us. But it was mysterious, it was very mysterious, and the immense, drifting shapes only added terror to terror, and people hid, and hid their children, and dared not look upon these machineries of rescue.

Aboard, this caused neither surprise nor concern. If you looked into the workings of these machines, you would find that they were old and worn, full of humble signs that they were somebody's home.

In this immense universe of ours, worlds die every day, so the objects and their crews were always busy, flashing from one catastrophe to the next, harvesting the spiritual produce of planets in cataclysm with the industry and care of the good farmers that they were.

David had been watching these objects in his mind's eye, when he heard screams.

They were not cries of madness but of pain—no, agony. Terrible human agony was involved.

“Katie,” he called as he went through the outer office, but she was already far along the hall. As he reached the top of the grand staircase, he saw her at the bottom, turning toward the back of the building and the patients’ activity area.

He slid along the broad mahogany planks of the priceless floor of the front hallway, his stomach churning and congealed. Was there fire down there, or somebody being torn apart by some escaped jacket case, or had one of the dociles suddenly gone berserk?

He went through the empty dining room with its splendid crystal and silver laid out already for tomorrow’s breakfast, and then to the steel door that led into the patient wing.

The uproar was coming, as he had anticipated, from the activity area, which was filled with a white, chalky light unlike any he had ever seen before. Was it radiation from the sun? But why only these windows? So, no.

Katie stood in the doorway, and David stopped beside her. For the first moment, a scene of true terror often makes no sense to the eyes, and that was the case here. What David saw were crowding black silhouettes, all pressed up against the barred armor-glass windows that, at better times, let sunlight flood this space. Then he realized that they were patients, all peering out the windows.

In among the figures was somebody moving quickly, racing back and forth and screaming, and then he saw her run like a mad thing through the parted crowd and leap at least six feet into the air, hurling herself against the outside doors with a horrible crunch.

“Let me through,” he shouted as he went toward her. Katie remained standing, transfixed.

As the crowd parted, David saw two injured people on the floor, Sam Taylor and Beverly Cross. Sam cradled his right arm. Beverly looked up from a swollen face as he passed.

“Careful, David,” she said, “she’s real bad.”

It was Linda Fairbrother.

Caroline was near her. “She’s breaking herself to pieces. David, help her!”

She leaped at the door again, then bounced back and hit the floor with a sickening slap and lay still, a lovely woman covered with bruises, her nose a

mass of purple flesh, one eye swollen closed, in the glaring white ocean of the light that shone through the windows and the glass of the door.

“Linda,” he said, kneeling beside her shattered body, “Linda, I am here to help you. I can help you.”

“Let her out,” Caroline cried.

From outside, there rose another sound, low at first, then gaining strength, finally becoming the enormous howl of what must be the largest siren in the history of the world.

As it grew louder, Linda’s body stiffened. Then her good eye swam to the front and stared up into the light.

“David, get back!” Caroline drew him away from Linda.

As if being drawn by some sort of invisible rope, she rose up, knocking him aside in the process. Then she ran toward the door, gathering speed fast. He leaped at her, felt his head and shoulders connect with her body, noted the rigor of extreme panic, then felt himself thrown aside like a rag.

While he tumbled helplessly against Caroline, Linda slammed against the door, hammering it with her hands and shrieking, then leaping against it again and again, so fast that the sound of her body hitting the thick glass was like a series of cannon blasts.

Dear heaven, he had never seen a symptom like this, never in his life.

“Hurry,” Caroline snapped.

If she was going to survive, he saw that he had to open the doors, but if he did, other patients would certainly go out into that light and God only knew what it was.

“All right,” he shouted, “everybody across the room. Staff, help me here—get them back—all of you, get back, give her space.”

Caroline made a gesture, and everybody moved back. David made note of this. Even the staff were watching her for instructions.

Linda leaped up and began slamming against the door again, jumping four or five feet into the air each time.

“Do it, David! Let her out!”

A haze of blood appeared around her, and as the air filled with the smell of it, he went close, shielding himself as best he could, and finally managed to swipe the fingerprint reader.

It didn’t work.

“Keys, my God, I need keys!”

Again Linda hit the door, again and again. Caroline and Linda's desperate, tear-streaked lover, Tom Dryden, tried to control her.

"Glen! Glen MacNamara, I need keys!" David looked desperately around the room. "Get Glen, somebody!"

The siren came again, rising, wailing, a soul-whipping sound that turned Linda into a human piston, driving her again and again and again into the thick, unyielding door.

"Doctor," Tom shouted, "sedate her! Get a damn shot in her!"

Then Glen was pushing through the crowd, his dirty white shirt soaked with sweat. "I was afraid we'd lose that damn locking system," he said as he thrust a key into the door and threw it open at last.

Linda went racing out, her body lurching from broken bones, her face now a purple blotch, unrecognizable. Tom followed her into the light, laughing and eager, and both seemed almost to be dancing, their anguish transformed in an instant to lilting joy.

David followed them, and when the light struck him he was suffused with an exquisite sensation, at once physical and emotional, a surging shiver of delight that was coupled to poignant nostalgia, and he thought, *This is how we're meant to feel, this is the aim of life.*

He saw in the light a ladder hanging down—and it was old, with bent rungs, but made of silver metal that gave off a gorgeous glow.

He remembered his grandfather's friend's description of the thing that Father Heim had seen at Fátima, and knew that, even then, they had been preparing.

Linda dragged herself, a white mass of bone protruding from her left leg, her fingers crazy from breaks, her breath coming in warbling sighs as she sucked air past swollen lips and broken teeth. Tom assisted her, an arm around her waist.

"You look to the injured in there, David," Caroline said. "We've got this under control."

As Linda was flooded by the light and her body became white with it, she began to reflect its whiteness. He saw her bones melt back into her skin and her face grow normal again—but then more, it was a shining face, full of the joy and energy of some higher world, and David had the sense that he was in the presence of a great and dignified being that was returning home.

Before his eyes, this ordinary, humble patient was transfigured into a being

of grandeur, naked in her physical perfection, ascending in the healing flood of light.

An obscure sort of sorrow flickered in his heart then. Caroline's hand slipped into his, and he knew that she had the same question, Why not me?

Other patients came out like pilgrims to a shrine, wandering as people do in fog, blinded by the light, calling out, their voices echoing dully. Some of them raised their arms as if asking for deliverance.

In the next moment Linda, the light, the great object that had produced it—all were gone, a majesty ascended into the turmoil of the sky.

An instant later, there was a devastated, earsplitting shriek and Tom Dryden collapsed in a heap in the grass.

More groans filled the silence, sounds of deep human misery and despair.

"Don't," Caroline called out to them. "It all balances out."

Tom got up and came shuffling closer. "We were going together," he muttered. "Together!" He jumped a couple of times, snatching at the air.

The others were milling now, peering into the violet sky, still calling to the emptiness.

"Please," David said, "we need to get inside, this is not safe."

As they went back in, he said to Glen, "If this recurs, let any patient out who wants to go. I don't want them beating themselves to death against the walls."

Glen nodded.

Most of the patients were clustering in small groups in the activity area, talking among themselves. Tom Dryden cradled his chest and swayed back and forth, his eyes closed.

David said to Claire Michaels, "Can you attend to him, please?"

"Of course, Doctor," the resident replied. "Tom, do you want some Xanax? You can have a dose, Tom, if you need it."

"The sins of the world belong to us," he said, "the sins of the world."

"Why do they belong to us?" Claire asked him as she gently led him away. If the world ever returned to what it had been—if that was possible—she was going to develop into an excellent clinician.

David approached Katie, who was wiping blood off Sam Taylor's forehead.

"I'm sorry, Sam," David said.

"I'm the one who should be sorry, Doc. I lost my patient."

He was referring to Mack, of course. Frankly, David was glad.

“That guy was no loss. Katie, how’s Bev Cross?”

“All right,” she said, as he moved deeper into the recreation area, then the art room.

Caroline was sitting under the light of a lamp she had pulled close to her easel, once again painting with quiet concentration.

Going toward her, he caught sight of Katie following him with her eyes.

“I’m fine,” he said to Katie.

“I know you’re fine.”

He heard anger and stopped. He went to her.

“I am. I’m fine.”

“We’ve now lost two patients, first Mack leaves and then this. That’s the sort of operation you run, Doctor.” She turned away from him, started toward the hallway.

He caught up with her.

“Katie, you need to pull yourself together.”

She froze, her head bowed.

“Me? I don’t think so. You’re screwing a patient. Another patient is AWOL and probably in danger if he’s not already dead. And now this third—I can’t even begin to imagine what’s happened to her. But I do know one thing. You’re not competent.”

“I can’t quit. Where would I go?”

“David, I think last night was wonderful and I think we can be important to each other, and maybe this is the only chance for either of us to taste real love. But not if you screw the patients.”

He looked over at Caroline, who was painting steadily. Katie saw this, and drew away from him.

“Go play with your toy, then.” She stalked out.

“Katie!”

“I’ll be in the infirmary with the injuries.”

When she was gone, Caroline said, “ ‘Also when they shall be afraid of that which is high, and fears shall be in the way, and a man goeth to his long home—’ Do you know it?”

“Of course I know it. It’s from Ecclesiastes.”

“Did you know that the Bible is a scientific document?”

“I don’t see that at all.”

“You’re soul blind, therefore blind to soul science. You’re afraid of yourself, David. The long home of Ecclesiastes is the shadow of the soul reaching back across time, looking at its life and its previous lives. You need to open to yourself, David.”

“I am, I’m remembering an enormous amount. I can even use Herbert Acton’s lamp.”

She put down her brush, leaned closer and whispered to him, “We need to try a very serious dose of the gold. Take an injection.”

“It’s a heavy metal. You can’t inject that.”

“What we make isn’t a metal anymore at all, or even really connected to the physical world like other elements.”

“Gold is gold.”

“No, this starts with some of the ancient substance, so it becomes a hyperelement. In its pure form, it’s so light that it levitates.”

“It’s hardly ancient. You just made it.”

“We made it correctly, starting with a little of the ancient material, to light the path for the new gold.”

Her hands came like a fluid, and framed his face, and the love in her eyes was so intense and so naked that he felt embarrassed for her and looked away.

“David, you have to face our love. You need its energy.”

Furious, he pulled away from her.

“Goddamn it, *shut up!* What fatuous nonsense.”

Lowering her eyes, she quietly returned to her easel.

He looked around the room at the milling patients. He had to control this situation first, but he had to get out of here, he could not bear another moment with this woman. He felt nothing and she felt a lot and it was just extremely disturbing.

“Patients are to go to their quarters now and remain in their rooms until the breakfast bell at seven,” he announced.

“Excuse me, Doctor, you’re needed.” Ray Weller had come up to him.

He stood there in a dirty apron, Glen and Doctor Hunt with him.

“We need an emergency meeting,” Ray said. Then, more softly, “We’re in trouble. Big trouble.”

That was obvious, but why say it in the hearing of patients, even in a whisper?

“In my office in five minutes,” he said. Then he went to Claire, who was talking softly with a group of patients. “Time to shut it down for the night,” he told her. “We’re going to have an administrative staff meeting. We’ll all be in my office.”

Claire raised her voice. “Okay, boys and girls, beddie bye.”

There were none of the usual groans and protests, David noted. People simply got up and began moving toward the door into the patient wing.

“This is a danger sign,” he said to Claire. “They’re in shock.”

“Yeah,” she replied.

“I want two people on the monitors tonight.”

“Doctor,” Glen said, “the system’s down, and it’s not coming back until we can get a new motherboard.”

Without its computer system, this place was in its death throes, especially when it came to security.

He waited until the last patient had gone, leaving just Caroline. The only sound in the room now was the faint rustle of movement when she dipped a brush.

“You need to go,” he said.

“I can’t stop and you know it.”

“You can’t work in the middle of the night, alone.”

“Especially in the middle of the night, alone.”

Glen stood in the doorway. He nodded sharply, urging David to come. Obviously, there was an immediate problem and he could not stay here longer.

“Someone will take you to your room,” he told Caroline. He would send one of the orderlies down immediately. She must not be left alone, not ever.

He followed Glen up what had once been the servants’ stairway at the back of the original house. They rose into the magnificence of the upstairs hallway, its elegance speaking of an orderly world that had entirely gone.

They arrived at his office to an uneasy murmur of voices. When he entered, silence fell.

Glen’s eyes went to the sitting area in front of the large fireplace. In one of David’s wing chairs sat a filthy, bedraggled man, his clothes torn, a badly skinned elbow protruding.

“How did he get in here?”

Katie’s response said it all: “How did he get out?”

Mack the Cat had come back.

DAVID FORD'S JOURNAL: SIX

Caroline says that I have to face our love, but what can love possibly mean in a situation like this? How many people die in, say, sixty seconds right now? Millions, no doubt, in a world that is disintegrating this fast.

Apparently, she wants me to remember her in a way that I do not remember her. I want her physically. Of course I do, who wouldn't? But this love of which she speaks seems to be some sort of a bridge, and I don't understand why that would be true.

It's quite clear how the gold is supposed to work, but I am not finding any change after ingesting it. Perhaps she's right and I'm not taking enough, but there is no way I'm going to eat a heavy metal. Supposedly their preparation no longer contains any elemental gold in metal form, but how can that be? It's an element, it's going to be there.

I've remembered a lot and understood a lot, but the situation that's unfolding now really eclipses more or less everything. It is true that Herbert Acton anticipated this, but his vision did not penetrate into the actual event or surely he would have left us more clear instructions. My best guess is that this is because things are now so chaotic that looking into this era would have been like looking into dirty water or dense fog.

So we're on our own, and I think that it is very clear what we're going to have to face. That document of Mrs. Denman's was right, I think. The solar system is going through a very dirty and dangerous area of space, and the sun and all her planets are taking a terrible pounding.

I think that it will be too much for mankind. Certainly, civilization is finished. If this lasts much longer the way it is, our population is going to plummet massively. If it should intensify, then I think we are going to go the way of the dinosaurs—unless, of course, Caroline's wonderful painting can somehow save a few of us. But it will be a very few, won't it, just a tiny

elite? In itself, that troubles me. Why should it be us and not, say, the great scientists of the world or the great saints, or simply the children?

So where does love come into this? Why does it matter anymore? I want to spend time with Katie and Caroline. I want to take every bit of pleasure from life that I can, while I can.

I have made a decision. If we cannot take the world with us, then I am not going myself. It isn't right for just the carefully chosen to live while the rest, equally deserving, do not.

And yet, I am talking about my own death, here, and, in the end, if I have a choice, I know that I will try to save myself. It isn't a moral choice, but an instinctive one. I am not a hero, and I don't fully understand this business of calling me a leader.

When I was a boy, Charles Light tried to drill my specialness into me, my brilliance, my natural ability to take control of situations—all qualities that he saw but that I did not.

And yet, and yet . . . it's true that I understand a great deal of this. I understand why the gold works, but not, perhaps, why it doesn't for me.

I think that the best thing for me to do is to keep striving to save my patients, and give Caroline the space she needs to accomplish her work.

So far, there has been no further sign of the presence of our enemies. Does that mean that they've been swept away in the chaos? Perhaps, but somehow I doubt it. It has crossed my mind that Mack, the former CIA agent, might be one of them. He takes an inordinate interest in Caroline and her work.

He's among the patients who display genuine symptoms. Paranoia, among other things. I can see the violence in the man, and I know that he has the skills necessary to enable him to enter and leave this place, and to infuriate Sam by neutralizing him the way he did, a professional handler like him.

In any case, he bears watching, I suppose, but the reality is this: events are going to overtake our enemies just as they are going to overtake us and, very shortly now, the whole world.

15

THE RED STAR

Mack selected from the tools he'd stolen over time and brought into his room a screwdriver and a small knife. They'd given him a meal of canned corned beef hash and potatoes washed down with tepid water, but it sure as hell beat gnawing on raw potatoes and drinking toilets in abandoned farmhouses.

What was important here were two things. First, he'd seen from the snow on the screens in the nurses' station that the surveillance system was down. Second, he'd had a close look at that painting of Caroline Light's, and nobody—no ordinary person—could create a work of art so detailed. As incredible it seemed, he could most safely conclude that she was somehow creating another reality in the medium of oil on canvas, and that had to mean something, and he intended to find out what in holy hell it was.

He got up on his desk and stood, using the screwdriver to open his air-conditioning vent. It would take a real mastery of the human body to get around some of the turns, but he intended to try.

Out the top of his window, he could see auroras spinning complex madness tinted blood red. This was a change even from last night, and it unsettled him and made him work faster.

Then he noticed something very odd indeed, that made him look out into the grounds.

It was light out there, even brighter than the auroras and a full moon would make it. But this was not the moon or the tinge of auroral light. This was the glow of something else, something that he could not quite see around the corner of the building.

There had been reports of strange ships in the sky, and he'd overheard mention that Linda Fairbrother had been taken up in one. Absently, he ran his finger along the shiny dark spot that he'd noticed just below his neck in the shower the other morning. Was it tingling? Perhaps. He feared that it might be a melanoma, but they were supposed to be irregular and this thing was perfectly round. Growing, though, no question there. It had an odd texture,

not like skin, but slicker and more featureless, almost as if it was covered by a film of some kind. Also, at the center, where it was darkest, it wasn't like color at all, but more an absence of color. It was really the strangest thing he'd ever seen on a human body and he needed to get it cut out, no question.

Faint voices drew him back to his window. Now there were people down there. Guards and staff were out on the lawn, their forms lit by an eerie violet glare coming from a source that was blocked to his vision by the corner of the building.

Normally, his ability to concentrate on his work was prodigious, but this unsettled him. He'd witnessed a woman burned at the stake by the Taliban in Afghanistan, and the wild, abandoned agony of her screams had left him, already claustrophobic, with a creeping horror of suffering death by fire.

He hammered on his door. Hammered again. Finally, he started kicking the hell out of it. His relationship with Nurse Fleigler was not pleasant, and it had not been improved by his recent excursion.

"What do you want?"

"What the hell's going on? What's that light out there?"

"Nothing."

"Come on, Fleigler, I'm a paying customer here."

"Nobody cares. We don't like you. You're a creep."

"Please, Fleigler, gimme a break. What's everybody looking at?"

"You haven't earned any breaks. Sam's still got a headache because of you."

"Fairbrother did it!"

"Sam says you used some kind of a hold on him. Paralytic."

"All right, I will kick this door"—he gave it three wall-shaking wallops—"until you tell me what in fuck's happening out there!" He started in again, and, frankly, he could probably pop it off with a few more body blows.

"All right already! If you must know, it's this really bright speck in the sky. Deep violet-red speck. It's weird and I'm reading my Bible, so good night."

Jesus God, what was it? The townspeople were supposed to be coming up, but who knew how they'd react to this? They were hungry, that was for sure, but this could frighten them into hiding.

It could be emitting energy, too. What if it totally killed his radio?

He had to face something here: this situation was deteriorating too fast, and

changes in tempo were dangerous to missions like his. Unless some luck came his way, he was not going to succeed.

He went back to the desk and started scraping the paint away from the screws that held on the vent above it.

“I know you by your name,” he muttered as he worked. “You are Wormwood, come to collect the blood of man.”

He dissected carefully, so that there would be no evidence of anything when he returned. He’d seen the look in Glen McNamara’s eyes, baleful, the look of somebody who was just about an inch away from damn well blowing Mack Graham away. Sam, too, for that matter.

Had Caroline Light secretly taken over? She had to be above the terrified Dr. Davey-boy in the pecking order. That guy was a wet-behind-the-ears fool.

One nurse—Katie, that one—might not be on the side with them. She had a black spot, too; he’d seen it under her turned-up collar. He did not want to think about the damn things, though. What were you going to do about cancer now? And yet . . . something deep within him told him that this was not cancer. It told him that he’d be better off with a melanoma the size of a pie plate.

Then a welcome interruption to his thoughts: the grill came loose. Working carefully, he took it off and laid it on the desktop.

He had his route traced with measured care, every turning calculated, including the ones so tight that pushing too hard might snap his bones.

No doubt to save fuel, they’d turned off the air-conditioning an hour or so back, so the ducts would be stifling and he would have to hurry or potentially face heat stroke.

He lifted himself and raised his arms, drawing his shoulders together until his bones sighed. To get his head into the space, he had to turn it to one side with his arms straight out before him. Then he worked the rest of him in, twisting his hips until they were at a diagonal, which gave him just enough room to wriggle forward.

He felt his claustrophobia acutely now. If he got stuck in here he did not know how he could bear it. Just inches in, he knew that he was already essentially trapped, in the sense that he could only squirm ahead, not back. Lying along the duct, he began working his way around the first bend he had seen in the blueprints.

If he was successful, as far as the clinic was concerned, Caroline Light and David Ford would just disappear. Before they died, though, they were going to learn some new things about themselves, and what the human body can endure. If he failed, he would either suffocate in the ductwork or get back here and reseal his vent and nobody would be the wiser.

At the first turning, impossibly sharp, he felt his body growing warm from the effort of the stretching, then growing hot. He pushed against the aluminum corner in the smothering dark, and knew that his skull was being compressed really severely, because a storm of crazy images—a girl with a mouth like a cave laughing, a man dancing slow and burning, a dog serenading a dead child—began gushing through his mind's eye as his brain was constricted, and bands of pain whipped his temples.

He lay along the duct gasping, his body an agony of muscle knots and popping cartilage.

A push with his toes brought some release to his head and his twisted hips. Another inserted his upper body into the larger feeder duct, giving him a pulsing rush of blood to his brain and a surge of relief.

He edged ahead now, pushing with his toes, thinking only of his objective. Another turn and he was above the nurses' station. He worried that his movements would make too much noise until he heard the faint scratching of Fleigler's iPod, which she was playing at its usual deafening level over her earphones. She must be trying to drown out reality. Good for her, good for him.

Finally, inching along, sweating, his eyes closed tight to minimize the feeling of being trapped, he reached the even wider sloping duct that led down to the air-conditioning system itself. Here, he could move easily and therefore go much faster. But when he pushed himself into the duct, he went into an unexpected slide, which resulted in a series of booming sounds. Worse, he went slamming headfirst into the fan, and would have been sliced to meat if it had been turning. As it was, he ended up with a painful gouge in his forehead.

The blueprints showed an access hatch here that was used to clean the fans, and he felt for it, his sense of confinement growing as his fingers sought edges that were not there.

Unless he found it, he would be trapped. There was no going back up that slope, which was far steeper than it had appeared in the blueprint. His heart

sped up and he began to need to take deep breaths, but the air was foul. Without the system running, he thought he was in danger of suffocation, and it was not just his fear of confinement working.

He fluttered his fingers along the smooth duct, seeking for edges, finally touching a seam. Yes, oh, yes, he felt along it, felt hinges, felt the simple flat latch, pushed it—and it was tight, too tight to move. Wriggling, twisting, too frantic now to care about the noise he might be making, he got a quarter out of his pocket and slid it along until it stopped against the tongue of the latch. Pushing, he finally felt a shift, heard the rasp of it, felt it moving more.

Cool air rushed in and he found himself almost weeping with relief. Carefully, making as little noise as possible, he slipped out of the ductwork and into the dim basement.

Listening, looking around him, he detected no other human presence. Very well. With a predator's quick and silent stride, he moved toward the stairs and ascended them.

Here was the supply room, its shelves mostly empty. Good, this would outrage the townies. Hopefully, they'd tear the place apart. He went to the door, then paused. He was watching the strip of light beneath it, because it was flickering.

So was somebody there, or was it the flickering of the sky tricking his eyes?

No choice but to find out, so he grasped the door handle and turned it slowly, making certain that the door did not creak as it opened.

Before him spread the kitchen, with its long row of gleaming stainless steel ranges, its ovens, its broad cutting tables. Stepping softly and quickly to the knife wall, he pulled down a cleaver, a nice one, beautifully weighted, sharp as sin. So he would be the classic madman with a cleaver. Except he knew how to use things like this.

What little of him that might have been decent, might have felt mercy or relented, now slipped into memory, became unreal to him, and finally went out like a dying candle.

He felt full of the dark, and was in a curious way comfortable in it, like a man who has entered a cave that appeared dreadful from the outside, but who, once inside, becomes used to its terrors.

He strode across the kitchen, pushing through the double swinging doors into the dining room. Here, all was elegance, the crystal stemware flaring

with the wild light from outside, the silver seeming to jump on the place settings from the glowing sky.

It was different tonight, the auroras pulsating rather than flashing, and there were long streaks of light in the tops of the tall windows that surrounded the room. Now, meteors.

At the door of the dining room, he paused. Beyond this point, anything could happen. He went out to the broad corridor that led into the beautiful front rooms of the house. It had been a long time since he had been here in the flesh. Except for visits to their shrinks, inmates rarely got past this door.

“Excuse me.”

Standing at the foot of the stairs was a security guy. He was six foot three and fully weaponed.

Mack smiled. “I’ve lost my way.”

“Identify yourself, please.”

He took a step closer, at which moment the guard’s eyes flickered and Mack knew two things. He’d been recognized and the cleaver was spotted.

In the split of an instant, Mack stepped up to him and swung it, and his head went wobbling off, hit the stairs with a wet thud and came rolling down, coming to rest at the feet of the crumpling corpse.

Human bodies contain an amazing amount of blood, and there was no way to stop the ocean of it that was pumping out of this man. Mack picked up the head and took it to the coat closet that was concealed under the wide staircase. He shoved it onto a shelf, then dragged the body in, leaving behind a long, streaked trail of blood.

When morning came, they would certainly find this, but in the night, with all that flickering, it was hard to see exactly what was going on with the floor. So, unless somebody slipped in the mess, he had a reasonable chance that it would not be discovered until morning.

The stairs were open to him, and he thought he might alter his plan and try Dr. Ford first.

He took them three at a time. Surprise was essential.

Hallways led to the left and the right, then a central one, arched, where Mr. and Mrs. Acton’s suites had been. On the left were the old nurseries, now offices.

Moving along the central corridor, he heard nothing. The doors were thick and all were closed. He stopped at the one with the DR. DAVID FORD sign.

Behind it lay his office, his reception room, and his private rooms.

He put his hand on the doorknob and twisted it very carefully, so as not to make the least sound. After an eighth of an inch, he met resistance. The damn thing was locked, which was a setback, although a predictable one. He was going to have to find some basic tools, a coat hanger or a long, thin screwdriver, if he was going to get through a thick, well-made door like this silently.

As he leaned against it, trying to see if he could hear the tumblers as he moved the handle, he heard voices inside, faint but intense. The door was so closely fitted that you couldn't even see a line of light under it. Leaning against it didn't help, the voices remained indistinct.

For all he could tell, whoever was in there might come out at any moment. His bridges were well and properly burned. If he was found here, something permanent would be done to him. These were kindly people and he could not imagine them killing him. But they were desperate, also, and desperation causes unexpected behavior.

Initiative was slipping away from him. He'd thought it was possible that he would not unlock the secret of this place in time. If so, then his duty was clear: he must prevent it from being used at all. If the purest and best could not continue, the whole species had to go extinct. No third alternative was acceptable, not to him and, he was certain, not to the people in the bunkers.

He went back downstairs and threw open the recreation area doors and went through it to the art room, and there it was in its magnificence, the painting. And the damn thing was gloriously, superbly finished. Caroline Light had painted a great masterwork in a day. He didn't know a great deal about art, but he knew that the technique was immeasurably accomplished.

Even in this bizarre light, he could see a lovely meadow just after sunset, behind it a woodland, and in the far distance the western sky still glowing orange. Just an amazing thing.

As he peered into it more closely, he noticed that he became physically uncomfortable. He found himself rubbing the dark place on his neck, which seemed to be getting hot.

Swallowing the pain, he continued his examination of the painting . . . and realized something. For all the realism of this thing, the sky was wrong. Or was it? Yeah, the constellations could be off. He wasn't aware of exactly how they should look, but it wasn't like this. Then, as he watched, he saw that the

painting appeared to be changing. And that was the damndest thing he had ever seen. The glow in the sky was fading. That was a sunset.

But then this wasn't a painting. It was—God, what was it, a window into another world? Because there were no auroras there, no purple sky.

He thought: I could go through. Just climb through. To hell with his goddamn duty, this was a chance to save himself. He extended his hand toward it—and his skin immediately got so hot that he snatched it back.

More carefully this time, he moved his hand closer, and the closer he came, the more the heat in his body increased. Gritting his teeth against the pain, he touched the surface of the thing.

It was like touching the edge of a column of air.

He pressed a little deeper, and could feel, on his palm, a subtle change in temperature.

It was a door, damn right. So he was going through and screw them all.

He extended his arm, and immediately felt such furious agony in the discolored area on his neck that he had to stop. He threw himself back away from the thing, rolling, writhing, forcing his screams back into his throat. The dark area hurt like hell. He could smell burned skin.

Clutching his shirt, he smothered what seemed to be a fire that had started spontaneously in his flesh.

These people were full of tricks and goddamn them.

He raised the cleaver. Then stopped. What would happen if he struck it, would it blow up in his face or what?

He looked more closely at it, being careful not to try to touch it again. You could see the places where the canvas was tacked to the stretcher. The back of it was just—well, he pushed the edge of the cleaver against it and found that there was give there.

No matter how it looked or what it did, this was basically paint on canvas, it had to be. Maybe it was also a damn wormhole or something, and if so, they were certainly about to use it.

That must not be allowed to happen. But he was in no position to steal it. He didn't know how it worked. He only knew that if he couldn't use it, they damn well weren't going to, either.

He went around behind it and positioned himself. He raised the cleaver, aiming for the center of the frame. With an easy motion, he cut the thing into two halves, which flew off in opposite directions. Where the painted area was

slashed, tiny sparks flickered.

Again he slashed it, to the left, to the right, again and again, ripping and tearing and cutting until there was nothing left of it but smeared paint and scraps of cloth, and a tiny, shimmering corner not big enough for a finger.

He stood over it and smashed his heel into it and ground it and ground it until there was nothing left at all.

“Excuse me, what are you doing?”

He turned. He looked across the dark, flickering maw of the large recreation area. A shadow stood there.

“Hello, Doctor,” he said, and advanced toward Marian Hunt.

When her eyes went to the cleaver, she took a step back, but he was on her then and before she could turn away he had grabbed her wrist and, with a swift upward swing of the knife, severed her arm.

Blood sprayed from her shoulder, shock and disbelief transformed her face into a gabbling mask, and he swung the severed arm at her and hit her in the side of the head with the ball head of the humerus bone, which struck her skull with a thick crunch.

She fell to her side, landing on the gushing shoulder with a sucking gasp of agony. He slammed her head with her arm again and again, hitting her skull until it was soup.

He didn't clean anything up, it was too late for that. He needed to get out of here because he didn't know why she'd suddenly appeared in the first place. He must have made too much noise, and that meant that others would be on their way. Plus, by now that guard had failed to report in and that was going to be investigated.

The painting represented science so advanced that he could not even begin to imagine how it might work, but two things were certain: first, it would not be doing its job now. Second, Light would tell him how it *did* work, and she would make one that worthy, decent people could use.

He tossed the arm into the air and slashed up as it came down, severing the forearm. Then he slit the flesh off the humerus and hefted it. A club could silence a man a whole lot faster than a knife.

As he headed for the patient suites, he heard a rise of voices all through the building—and realized that he wasn't the cause, because the windows were now as bright as dawn, but it was not dawn and the light was a bizarre, sickly violet.

He strode to the closest window and saw, rising on the northeastern horizon, the source of the earlier disturbance outside.

A new star was rising, and it brought a quote to his mind, “And a great star, blazing like a torch, fell from the sky on a third of the rivers and on the springs of water . . .”

The star Wormwood was here, and this was not only what the Book of Revelation foretold, but also the old calendars. It was what all the warnings from the past were about, and why they involved such exquisite calculations and precise dates.

The thing had only one meaning for him. Time was no longer running out, it *had* run out.

These bastards had known this, he suspected, right to the minute. That was why they had prepared their little escape hatch when they had. They would also realize that it was the most valuable thing in the world, or that had ever been in the world.

Well, they would do it all again, but not here. They would do it for him. He just very badly needed those people from the town to come up and create his diversion. Then he would take Light and Ford where he wanted to take them, and do with them what he needed to do.

16

MEMORY

As David watched the rising of the new star, the red star, he thought of the Book of Revelation. What was the past, that it was so wise that it could write such books? As he looked back from the world as it was now, history seemed to him to be a long process of going blind.

He thought, *I am at stage two of the process of dying, I'm beginning to accept the reality of what's happening, and that's changing my perspective.*

It meant accepting that he could not keep the Acton Clinic functioning and he could not save the patients. Perhaps there had been a mission. Of course there had. But he did not think that even Herbert Action had been able to imagine the sheer scale of the catastrophe.

He tried to shake off the simmering anguish of failure, but that was not going to be possible.

“David.”

A shock went through him and he whirled around—and found himself confronting a large group of people who had entered his office so quietly that he had not heard them.

“David,” Caroline said again. He did not like that tone. He did not like this crowd. On top of everything else, now he had a rebellion on his hands.

Glen was there, Bev Cross and Sam Taylor, and a dozen or more patients, among them Susan Denman and a mysteriously recovered Aaron Stein, who had been among the most profoundly psychotic. Katie was nowhere to be seen.

Caroline said, “We’re a delegation.”

“May I know your complaint? I presume it is a complaint.”

Bev brought out a disposable syringe. “David, we’re going to do this.”

It was the substance—the gold.

“David,” Glen said, “you need to let us.”

Caroline’s lips were a stern line, but her eyes were pale clouds, heavy with tears.

“We’ve all taken it, David,” Sam said. “We all remember.”

“I’ve taken it.”

“How much have you taken?” Aaron asked.

“How much have you taken, Aaron? Any of you? I know the answer and so do you. Very damn little, just like me. So what does that tell you? *It doesn’t work for me.*”

Glen asked, “Will you let Bev inject you?”

There was a stirring in the room.

“Look, I understand everything.” He gestured toward the lamp. “I even understand how Herbert Acton saw into time. But I don’t understand how this is going to help. Why would my brain require a megadose?”

“David,” Caroline said, “once you wake up, you’ll thank us.”

“For injecting me with a heavy metal? I don’t think so.”

Glen said, “It isn’t a heavy metal anymore.”

“It’s gold, for God’s sake. If you think that’s not a heavy metal, you missed high school science.” He was thinking about the Beretta he’d been issued. If he could get to his desk, he could regain control of this situation.

Bev attempted to get behind him, but he turned as she did. “You can’t put gold in somebody’s veins.”

“You can.”

“What you made in that furnace is amateur chemistry. You can’t inject somebody with amateur chemistry.”

“It isn’t amateur,” Caroline said, “and it isn’t chemistry.” She gestured toward the glyphs above the door. “It induces the union of those two principles and results in an extension of consciousness beyond space and time.”

“Look, I’m a doctor and I can only say that ingesting a heavy metal is bad, but taking one in an injection is going to be catastrophic.”

“You’re in amnesia—”

“I’ve remembered everything, Caroline! The class, all of it. So I don’t need this—this attack. I do not need it.” Again he looked toward the desk. The gun was in there.

“David, your amnesia is emotional. What the gold will do is open a door in you that’s locked tight right now. The door to the heart.”

“The heart has no place in this.”

“David, the heart is everything! Without love to sustain us, we cannot

make the journey.”

“Look, folks, you need to face something, all of you. We aren’t going to be making any journeys through time. Herbert Acton was incredibly accomplished, but he was also deluded. You can see into time. But actual, physical movement? Forget it.”

He saw Glen’s eyes flicker toward Sam, who came forward and was suddenly behind him with Beverly. Once again, David started to turn toward them, but this expert restrained him by immobilizing his arms just above the elbows.

Sam said, “Sorry, boss.”

Glen said, “Either this happens with a struggle or without a struggle, it’s your choice.”

Part of him considered the provable skills of Herbert Acton and part of him the arrogance of these people—but then Bev removed the sheath from the needle and all of him felt anger.

“How dare you,” he shouted, and he kicked at them.

“Hold him,” Caroline said. “We need the neck!”

“Jesus God, NO!” But they swarmed him and immobilized him with their bodies. “Don’t do this, this is insane!”

They forced him to the floor, they held his head so that he could not move it. He felt Bev swabbing the left side of his neck just above the carotid.

“Okay,” she said, “you’ll feel this one, hon.”

The needle was fire and he bellowed; he twisted and writhed and tried to move his head enough to dislodge it but he could not dislodge it, and he felt the substance running like lava through the vein.

Then it hit his brain in an explosion of darting sparks, each of which seemed filled with information, and in the next instant he saw beyond words, beyond thought, beyond language itself, into the pure, wordless mathematics of hyperspace.

Which he understood—and with it, also understood more of himself than ever before, that they were, in one sense, right about him, that he contained an enormous past stretching across eons among the living and eons among the dead. He saw, also, that a living man and a dead man are simply two aspects of one creature. The living form moves through life in an active state; a dead man is the same creature in its contemplative form, looking at what has been done, and in so doing seeing the truth of the self.

There came next a burst of pure physicality—bodily sensation in its purest form, the agony of pleasure and the agony of pain mixed together.

“Oh, God, God, I’m . . . I think I’m having a stroke. You’re giving me a stroke!”

“No,” Caroline said. Her hand on his forehead was cool and firm, and the tears in her eyes gleamed.

Then something happened that he had not expected and could not expect. The rich, vivid sensation of his body seemed to concentrate until it was a single, burning point—and then his head, for want of a better word to explain total annihilation, exploded.

He had no eyes to see with, no ears to hear with, no sensation of the world around him.

He thought, *They killed me. They’re all crazy and they killed me. This was a blood sacrifice.*

But the black that had enveloped him was not like the abyss he had glimpsed earlier. This darkness was vividly alive, and also changing, and it changed by degrees through all the colors that were on the Tiffany lamp, until it was a radiance, and suddenly he was no longer in a void, but back in his office.

He saw also within him another being who was not him but who occupied a place in hyperspace that was at once everywhere and was deeply, profoundly specific. He saw that this being, who had been called Osiris, who had been called Christ, who had been called Quetzalcoatl and Viracocha, who had been called so many different names, was right here, right now, and he understood why the preflood ritual that was now known as communion, the sharing of the flesh, had been preserved, because to accept Him into your body was to accept Him into your soul.

He was looking up into a face. He reached up, and Caroline smiled, and kissed the tips of his fingers.

Around him was his class, his deep friends, his companions in the Great Work.

“I remember,” he said, his voice faint. He tried again, attempting to speak more strongly. “I remember. I remember how I love you.”

At first, he’d been afraid and embarrassed.

Dad had driven him into a world of Lamborghinis and Bentleys in an ’88 Chevy Caprice. He had not understood then what he understood now, that he

had been chosen not because his grandfather had happened to own a certain piece of land, but because he was, himself, exactly right for the role he was to perform.

“Mr. Acton didn’t only see the future,” he said, his voice faint. “We weren’t chosen because of our lives, but because of our past lives. Nothing was an accident.”

He had been a general, an admiral, he had led men and nations, and was an ancient being full of wisdom, and he *could* perform the role being offered to him. In fact, he was the only one who could do it, the good leader.

“I saw you,” he said to Caroline, “you . . .” She’d been perhaps ten, he twelve, but she had shone like a child made of sunlight.

He remembered sitting side by side with her under the apple tree—for there was such a tree in the garden of every house of the Acton Group, including his own. The color of the apple blossom, he knew now, was a memory trigger. When that red blush came to the sky, it would be time.

The color of the new star was no longer frightening to him, for it was the color of the highest energy, and the auroras combined with it to make the sky the subtle pink of apple blossom.

He looked at Caroline again, and, softly, secretly, his heart opened—and he saw at once how necessary this had been. Without love, there was no reason to continue the species at all, and there was a great plan and there were rules, and without love they could not fly through time.

“I remember my promise to you, Caroline.”

She met his eyes with the warmest gaze he could ever remember, and at once for him everything changed. They had held innocent hands as kids, but there had been a deeper bond, the entwining love of souls that has carried humanity across so many perils and divides.

They came together and he enfolded her in his arms, and it felt good, it felt so very, very good.

An instant later, he broke away. In his new role, he had new responsibilities.

“The painting,” he said. “Who’s guarding it?”

Glen and Sam looked at each other.

“Nobody? Is it *nobody*?”

“David, we didn’t think that—”

He didn’t listen to the rest, he didn’t need to. He was already running.

Please, God, that he not be too late.

17

THE TOWNSPEOPLE

“For God’s sake, Glen, she’s been dismembered! My dear God!” David felt as if he was watching himself from a distance as he stared down at the body of Marian Hunt. He knew that he was experiencing stress-induced dissociation, a symptom of shock. Claire Michaels, who had found her, sat slumped in a chair, her face in her hands.

If they had not needed to take the time to inject him, perhaps this wouldn’t have happened.

Katrina said in a dull voice, “We need a blanket, David.”

“Yes, of course. We need, uh, a body bag—Glen?”

“I’ll get a couple of men to pull her out of here and clean up the blood. But we’ve got no communications, so this all has to be done with runners and my first priority is to locate and secure the person who did this, and I have to tell you that we’ve got perimeter issues. We had an incursion attempt earlier today, and there was one intruder injured.”

“Where is he? Is he being treated?”

“They carried him off. I’m hopeful that it taught them a lesson.” But then he stopped, listened.

David heard it, too, a chugging noise.

“What is it?”

Glen had gone pale.

“Automatic weapons fire,” he said. “South wall.”

“Ours?”

“That’s an older-model machine gun, probably a Browning. The townies are back and my guess is that somebody’s opened that back gate for them again.”

There followed a sharp, rushing whisper.

“That’s us. HK G40.”

Then three cracking booms, sounding like a small cannon.

“Forty-five automatic. Civilian again. I need to get down there.”

Cries echoed through the building. More chugging followed, and upstairs, glass breaking, followed by horrific screams.

“Somebody took a hit through the window,” Glen said. The initial fear in his voice had been suppressed. In its place now was professional calm.

“We need to get everybody to safety,” David said. “We need to bring the whole security team inside the building.”

“David, begging to differ, you are telling us to begin our defense by retreating to our place of last refuge.”

For a heartbreaking instant, David could see the boy in the man, the bright hope that had been there when they had been in class together. Glen was tired now, very tired. David’s heart went out to his friend.

Feet pounded on the stairs and a patient appeared, Tom Dryden. He was naked, his face tight, a grin that spoke agony. Without a word, he ran past them and into the recreation area. An instant later there was a wet thud, and he was slamming himself against the windows the same way Linda had slammed herself against the door. All across his back there was an area so black that it looked more like a great hole in him than any sort of sore.

Shouting that the great ships were gone, David ran to help him.

But he kept on, just as Linda had, smashing himself to pieces against the thick, relentlessly resistant glass.

“Stop! Take it easy!” David got to the door and threw it open. “Here, you can go!”

Still, Tom hurled himself against the window, which, David saw, was starting to develop long, ominous cracks. He really did not need a point of easy access, not with a firefight going on a few hundred yards away.

“You can go, Tom,” he shouted. But Tom didn’t want to leave by the door, or at all. He wanted to break himself against the window and the wall.

“Mr. Dryden,” a female voice called, sharp and high. It was Katie.

“Don’t get near him.”

“He’s like me.”

“What do you mean, Katie?”

Her eyes glittered like dark jewels, and he could see defiance in them. She held up her hair, and on her neck, spreading up from her back, was a gleaming spot of deepest blackness.

As a doctor, he might have thought melanoma, but not with borders that precise.

“On his back,” she said. “He’s dirty, they’re never going to come for him.” She laughed a little. “We’re rejects.”

Again Tom Dryden slammed himself against the window.

“We can’t let him just do that,” David said, attempting to pull him toward the door. As he did three more people appeared, all running to help, Amy Feiffer and Robert Noonan, both from the class, and Mack Graham. Robert was the youngest son of George Noonan of Web development fame.

The group of them manhandled Tom through the door and into the grounds. David hated to do it, but getting him out of here was better than having him slam himself to pieces.

As they returned, they shut and locked the door.

“How come you’re out, Mack?”

“Nurse Fleigler released me.”

“Yeah, well, okay, I can understand that.” Under these circumstances, nobody could be left in lockup. But with this man, it was tempting.

“What can we do to help?” Noonan asked.

Now there was a thunder of gunfire, and greenish-blue flashes stuttered in the violet of the new star.

Under this new light, all the colors were different. The grass was a washed out pinkish brown, the new leaves on the trees yellow instead of green, the trunks black. As it raced toward the fire, a white SUV, one of the security vehicles, appeared bright pink. The perimeter wall, visible in the distance, had gone from gray to rose, its razor wire gleaming an odd pinkish red.

Dryden stood where Linda had stood, his face raised, screaming rage at the sky.

David heard a cry from inside, and he recognized the voice instantly, and he forgot everything, and ran back in.

Caroline stood before her empty easel, her face in her hands. The easel itself was just a frame with tatters of canvas around the edges.

In the way that people sharing a tragedy will, Mack laid an arm on her shoulder. She shrugged him off, but he persisted, and finally she leaned against him and sobbed.

“There are more materials,” Susan Denman said.

“Where are they?” Mack asked. “I’ll help you.”

“Caroline,” Susan said, “why don’t we go to the supply room together, you

can pick out what you need.”

When Mack started to follow, David called him back.

“Mack, I want you to remain in sight of staff at all times.”

“Of course.”

He was suspicious of Mack. Of course, there was no proof of anything, but when you added this patient up, you got a sum that was wrong.

Looking out across the bizarrely colored landscape, David knew that this new light would affect the human brain profoundly. Serotonin, dopamine—all the neurotransmitters—were light dependent, and this radically different wavelength—violet—would have the effect of intensifying and changing not only colors, but also the mind and heart. Colors you could see, but what it might be doing to brain chemistry he could scarcely imagine.

Again there were shots, but this time they were so close that David instinctively ducked. Mack hurried back to the door, and David followed.

“Katie,” he called behind him, “get the patients upstairs, keep them away from the windows.”

As Mack opened the door, David saw movement around the side of the house, and a figure backed into view. He was concentrated on whatever scene was unfolding before him. In his hands there was some sort of a gun, David did not know what sort. But a big one, certainly, oily black and complicated. David’s own gun, the little Beretta he’d been issued by Glen, was in his pocket, but he dared not bring it out in the face of that monster.

The gun fired again, and this time the sound drew people out of the recreation area—and he saw that the patients—the real ones—had not gone upstairs at all, but were, in their panic, coming outside and straight into danger, with members of his class trying and failing to control them.

“No,” he shouted, “get back!”

On hearing the voice behind him, the figure turned around, and David saw that this was a boy of maybe fourteen or fifteen, a towhead with darting, frightened eyes made red by the new light.

As he aimed the weapon, David threw himself against the wall. An instant later the heat of bullets seared past his face, and he saw the child’s thin frame hopping from the recoil.

Silence followed, then a single, ripping shriek. Turning toward it, David saw that a crowd of patients that had come out the door had been torn to pieces by the bullets.

Many lay screaming, holding themselves, crying and gagging. One man capered wildly, blood as dark as a beet spraying out of his neck. Another bubbled foam from his chest, his hands fluttering around the wound, his eyes darting like the eyes of a trapped animal. Others were still, one of them kneeling and praying with his hands folded, gazing up toward the glow of the star.

The boy came a few hesitant steps closer. His face was a child's, but it contained the cruel shadows of fear and desperation.

Quickly, the boy raised his gun to his shoulder, a snapping, oddly military gesture. Pink fire burst from the barrel and the praying man came sailing backward, his arms thrusting out, hands spread.

Suddenly, there was movement beside David. The light was so bizarre that it was difficult to see some things, such as a fast-moving figure, but as she ran past him, he saw that it was Caroline and she was going to the boy.

"No!"

The boy kept the weapon raised, his face intent.

"Caroline, we need you!"

David ran, trying to put himself between her and the child, but she was well ahead of him.

Then she was standing before the child.

"Don't," she said to him.

"Mom got shot. You gonna help her, lady?"

"I can help her."

"She's dead." The voice was stark and cold. "What's wrong with the sun?"

"That's not the sun. It's a different star."

"It ain't the sun?"

"It's dangerous. You need to be inside."

David tried again. "Caroline, we can't afford to lose you."

The boy said, "I want a bowl of soup."

"You can have a bowl of soup."

"Caroline, get back. Let me do this."

"Get out of here, David. Son, come here."

"Fuck, no." The boy's hand moved and the rifle clicked.

Caroline took a step toward him.

David could smell the stark odor of cordite still coming from the rifle.

"Caroline, *please!*"

“Come here,” she said, opening her arms.

The boy pushed the rifle into her face. David was behind her. He could not save her now.

“Son, no. No, please,” he said, but his fear reduced it to a dry, barely audible murmur.

Caroline lifted her hand, palm out, as if trying to protect herself from the barrel of the weapon. The two of them remained like that, frozen. David could not see Caroline’s face, but the boy’s slowly changed, the hardness leaving his eyes and tears appearing at their edges.

“Ma’am, is this the end of the world?”

“It’s a big change. Son, tell me, is there a black spot on you anywhere? Under your arm, maybe? On your leg?”

He hesitated. David took a step to one side, trying to get a clear run at the kid. Behind him, Mack was also in motion.

The boy said, “I got nothing like that.”

Caroline said, “Give me the gun.”

“No’m.”

“Did the ships come over your house?”

“Yeah, they didn’t stop, we got left here.”

“Son, you have a chance to escape with us. Don’t lose it now.”

“I shot ’em all!” His voice broke. “I’m sorry.” This was followed by a cataract of sobs and the boy ran into Caroline’s arms. David had never seen anything quite like it.

Her arm around him, Caroline returned to the building. A security guard quickly scooped up his abandoned weapon.

Two staffers came out with sheets to cover the dead, of which there were four. The wounded, many more, had been taken to the infirmary.

Most of the remaining staff and patients were assembled in the recreation room. Caroline had gone back to her easel and set it up, Susan having supplied her with paint and a fresh canvas. Mack watched her, and Noonan watched him.

David got up on a chair. “Patients, you need to get upstairs with the others and stay away from windows. Our security team will get the situation under control, but we need to help them by staying out of harm’s way.”

As he watched, the others trooped upstairs, all except Mack and Noonan, and, of course, Caroline. He looked around for Sam, but didn’t see him. Katie

was still here, so he asked her to escort Mack to his room.

“Aren’t we past that?” Mack immediately asked.

“I told you, I want you in the sight of staff, and I can’t deal with you right now.”

“I’m not being locked in any goddamn room! No way!”

“Just go upstairs with the others.”

“What about her?” He gestured toward Caroline. “She can’t stay down here.”

“She needs to do her work.”

“Let’s take her somewhere safer.”

“Mack, you go with the others, or I will lock you down at gunpoint.”

“With what gun?”

He was about to produce it when Caroline whirled away from her painting.

“Stop it! Mack, stop being a fool. Go upstairs where it’s safe.”

“What is that thing, anyway? It’s no damn painting.” He advanced toward her, one aggressive step, then another. David took out the little pistol, which felt mysterious and awful in his hand.

“It’s a way out,” Caroline said. “It’s a *chance!*”

“How does it work?”

“If it works.”

“So you’re not sure?”

“I’m sure I’m creating a portal. If nobody destroys it this time, maybe we can go through.”

“To where?”

“Away from here.”

“There’s got to be more to it than that.”

She shook her head—and Mack came yet closer to her. “Tell me how the goddamn thing *works!*”

David fired. Across the room, a painting of Amanda Acton, Herbert’s wife, dropped to the floor with a resounding crash.

“The next one,” he said to Mack, “belongs to you.”

Mack still seemed ready to throttle Caroline, and David began tightening his finger on the trigger.

Mack’s eyes were steady and unafraid. He was calculating odds, David could see that.

“All right,” he said, “I’ll go upstairs. Just don’t goddamn well lock me

down.”

“Do it now.”

At last he left, moving with exaggerated casualness, as if unconcerned about a thing.

When they were alone, David kissed Caroline’s hair. There was such a strange combination of newness and old, assured love in the way he felt now about her, as if she was a settled lover who had mysteriously appeared in a fresh and sensual new body. It was all he could do not to embrace her, but she was working and he did not dare disturb a single line. He wanted to explore with her the wonder of adult love, in the innocence of childhood memory.

“How long will it take?” he asked.

“Too long.”

“Then what happens?”

“Don’t interrupt me!”

He stepped away from her. His stomach felt as if it would turn inside out. He laid an encouraging hand on his painter’s slim shoulder.

She worked on, the steady whisper of her brush the only sound in the great room.

DAVID FORD'S JOURNAL: SEVEN

The substance they injected changed me profoundly. They were right to force me and I'm glad they did. In a sense, I suppose, it was my scientific education that made me so resistant—but it is this same education that has also enabled me to understand what we are trying to do.

For me, our hope is lodged in that woman hunched over the easel, in her concentrated face and long hands, and the ocean of love that hides behind her harsh exterior.

She is creating a true hyperdimensional object—the first one, I think, that has been created in a long time. The icons of the Russians are a degenerated memory of such paintings, in the sense that it is believed that they contain the actual, living consciousness of the saints they depict.

This is more than an icon, though, far more powerful. It is a bridge between art and science, fashioned out of the artist's love and creativity, and the scientist's patient attention to the laws of nature.

It is true alchemy, the transformation of base metal into gold—that is to say, the transformation of paint and canvas into a hyperdimensional portal.

I am humble before the alchemists, and especially before that one with her paints and the hyperdimensional colors out of which they have been made. For those are not mere oil paints that she applies to that canvas.

I don't know who mixed them or how, but I know this about those paints: they are a machine of the very highest order. The light reflected from the surface of paint she is applying not only penetrates this reality, it is visible in all realities.

I think one of those great physicists—was it Stephen Hawking, or possibly Roger Penrose?—said that a time machine would be the most visible thing in the world because it would necessarily exist in every moment. Well, that's true, for this painting, as she paints it, at once takes on the appearance of an

old master, an ancient encaustic, a cave painting, and in every respect of line, it is perfect.

It is not meant to save just an elite few. It is meant to save all who need saving. The elect are rising, the judged sinking into the dark center of the earth. But the rest of us, we have to escape and we have to do it in our physical bodies. Of course, many of us won't make it. But many will, and I know this: when she is finished—when the moment is exactly right—this device will enter hyperspace and thus become visible to everybody with eyes to see it and the goodness of heart to use it.

It won't save just a few hundred here at the clinic. No, it is part of a much larger plan. When it is finished, it will indeed be the most visible thing on earth.

This thing being shuffled onto that fragile canvas is nothing less than light in a very dark time, our great chance and great hope.

And now I know that I am here not only to use it and guide others through it but to protect it.

We are few around her, and the enemy is very many—in fact, so many that he is legion and will certainly destroy us if he can.

I can sense the edges of a great plan that surrounds us with love and hope, but also another plan, equally powerful, that seeks the ruin of the world.

18

GENERAL WYLIE

In Hancock, Virginia, the convoy stopped to refuel, then reroute around the Hagerstown, Maryland, area. Recce ahead had identified an active uprising in Hagerstown, so they were going to need to bypass in order to reach Raleigh and the Acton Clinic fast, and speed was probably essential.

General Wylie had a small muster consisting of his command vehicle, a Stryker Mobile Gun System, three squad Humvees, and a fuel truck. He did not see the light defenses at the clinic as being able to stand up against twenty-one soldiers and the MGS, which could deliver a pretty fair punch, and he intended to take the place out and obtain whatever of value his agent was signaling him was located there.

He had received an urgent and promising communication from Mack Graham, which had convinced him that immediate action was essential. It had said, "Device located and understood."

That could not be more clear. There was a device and he knew where it was and he understood it.

So, fine. General Wylie was going to get it and take it back to Blue Ridge.

Over the past few days, one after another of the redoubts had reported over the fiberoptic network that the local situation was becoming critical. A number of them had since gone silent. Colonia Dignidad, with its reputation in Chile as having been founded by war-refugee Germans, had been an immediate target of the locals. Its last report was that the Chilean air force was overhead using deep-penetrating bunker buster bombs. The center in England had simply gone silent. Destroyed? Overrun? No way to know.

There were no longer any satellites operational so it wasn't possible to get lookdowns. Also, there was no chance of deploying any sort of air power. That was all down due to electronics failures. How the Chilean air force had gotten up was anybody's guess. Old planes, probably, without sensitive electronics. But that had been three days ago. Because of the tremendous electromagnetic loading of all wiring, not even the simplest aircraft were

going to be viable now. The only reason his own vehicles were operational was that they were diesel and they had been started inside the redoubt. They'd keep going as long as they weren't turned off and once again required their electronics.

General George Wylie sat in his command vehicle staring at an empty computer screen. He was back to Civil War-level intelligence. No eyes, no ears, except what a guy in a dusty diesel Jetta could bring back from his travels ahead.

"Device located and understood." After that, no further reports. Probably, Mack the Cat was dead. Mack took the extreme chance, always.

They'd put Mack in the Acton Clinic last year because it had become clear that the group who, as children, had been taught Acton's secrets by the son of his associate Bartholomew Light were assembling there.

A number of these children had been DNA profiled, and curious things were found, things that not even the most advanced genetics laboratories could decipher. Something—and it was extensive—had been added to their DNA. It was as if some sort of artificial evolution had been induced in them.

The redoubts around the world were full of members of important and very private societies, members of various fraternal orders and religious organizations, all of them devoted to the same thing: maintaining and increasing the wealth of those who had it and deserved it.

But not even the most secret of them was as well concealed as Acton's group. They'd had their memories wiped, then experienced some kind of temporary psychotic induction process that was far in advance of any brainwashing technique ever developed. It had been this that had caused them to be so hard to find. Who would think to look among a bunch of psychotics? To all appearances, Mrs. Acton had left the estate to a favorite charity when she died, and it had used the money to found the clinic.

All very straightforward, and all a big, fat lie.

One of Mack's messages from last week had said, "group leaders now present."

So they were ready and whatever they were going to do, it was going to be going down pronto.

He tapped his driver's shoulder. "Get under way."

"Still fueling."

They had to anticipate fuel needs carefully. If a vehicle were to stop

running, it might never be able to be started again.

“Snap it up!”

“Yeah, okay.”

That sleazy response made his blood boil, but he sucked it in. The U.S. military had disintegrated. Who had ever imagined that regular soldiers like these would protect the redoubts effectively?

“We’re rolling,” his driver finally said as he increased power. Good. The sun was well up and that damn weird *thing* had set. What in God’s name was that? Nothing good, no question there.

The convoy moved on, turning onto a side road. To the north, he could see tall columns of smoke rising from Hagerstown. Here and there along the road were burned-out cars, stripped cars, some kind of a cattle truck with half-butchered carcasses and flies around it, and bodies, always bodies, bloating, hacked, shot, burned, you name it.

The United States was gone. Long gone. All countries were gone. That whole thing was over.

He drove on through the slow morning and afternoon, stopping far too frequently to clear the road, or, where that wasn’t possible, to do a slow workaround through the countryside.

At about two some asshole came running toward them with some kind of rifle in his hands. Before he could fire it, the general ordered him blown away. Then they moved on. The order of the day was, if it shows a gun it is hostile, and if it is hostile, kill it.

Here and there, you saw families on the road. Looked like Iraq during the invasion, or newsreel footage of World War II. Some of them even waved. Jerks. One time, incredibly, a Greyhound bus had passed going in the opposite direction. Now, that was amazing, but it was an old unit, looked like something from the sixties. No electronics, so all they needed was gas and they were in motion. There was a lot of gasoline around, too, if you could get to it. But pumps are electric and gas stations don’t have generators. A bus company, though, probably would have some way of pulling up its fuel in the event of a power failure.

He liked to think about stuff like this. Keeping the world working. But the GODDAMN WORLD WAS NOT WORKING, WAS IT? Goddamn them, fine! FINE! What if this happened: this thing kept up until all the human garbage, the ragheads, the Chinks, the spics, the Mexes, the blacks, you name

it, all of that trash perished? A few good Americans and Englishmen and Germans, too, of course, couldn't be helped. But ALL of that garbage—and then suddenly they opened the redoubts and here was a whole new world ready to start over again.

Except it wasn't going to be like that, was it? It wasn't going to be like that AT ALL.

Oh, he'd taken the fucking white powder gold. And he was a good man. Churchgoing. You had to be a good little boy, they said, to make that shit work. He'd goddamn well drunk it like a milkshake for days, and all he'd gotten out of it was bloody piss. Plus now there was this frigging black spot on his stomach that he could not get rid of. He tried scraping it, he'd even tried packing it in bleach. Would not go away. Cut at it with a razor. Whatever it was, the sucker went deep.

“General, we have an escort.”

“What the fuck?”

“There's one'a them UFOs up there.”

What in hell was this? He'd seen video of these things. They were kidnapping people all over the world. Well, hell, he had damn few soldiers in this unit and probably half of them would take off the second the sun set, so he did not need this. He popped the overhead hatch and saw this big goddamn thing up there. Should he shoot it? No fuckin' way, God only knew what kind of ordinance it had. These things had been around for years and nobody knew what they were. NASA maybe, the president maybe, but not this soldier. “Increase speed. Let's see if we can get out from under this sucker.”

The radios didn't work, so they used hand signals, and it was about a minute before a signal came back from the fuel truck. If they increased speed, they would need to load more diesel fuel before they reached Raleigh. “Maintain speed!” And, goddamn it, what next?

One radio that was functional was the single sideband unit that was used for contacting Mack. It was kept powered down except when in use, and so far it was fine. In fact, he could hear his communications officer sending a burst right now. He did that every fifteen minutes.

But then, a screech of brakes, the screaming of tires.

“What the hell?”

One of the Humvees veered off the road and went over on its side in a cloud of dust and a crash of a kind he hadn't heard since Iraq—the sound of a

whole lot of metal taking a hell of a beating.

A second later, a column of light as white as powder came down from the thing overhead, and two young soldiers floated out of the Humvee, their arms raised to the sky, and went up in it and were damn well gone. And so was the thing—whoosh, just like that. Steel-white sky, end of story.

He threw open the access hatch and ran to the Humvee. Nobody else had moved except one soldier, who had taken off across country and was going like hell. He was tempted to order the man shot, but that might bring outright rebellion, so he ignored the desertion.

When he looked inside the Humvee, he had a hell of a shock. What was in there was the driver, and he had literally ripped his own clothes off. His body was as red as a tomato and there was heat coming off it, a lot of heat. The eyes were open and staring and they were not glazed like the eyes of dead men, they were sharp with horror, like he was suffering somewhere deep inside himself. They were not dead eyes, and that was weird.

Whatever was happening to the guy, it was horrible and it just plain hit George Wylie right between the eyes. He was U.S. Army to the core, though, and the U.S. Army saved the lives of its soldiers. You got a man down, you did what was necessary to get all that training and that skill back to medical support. You did that. But here? “Hey, soldier, you hear me?”

Nothing.

Then he noticed on the kid’s bare chest and around his side, one of those damn spots, black and gleaming. So what in shit’s name was this stuff then, cancer caused by the fucked-up sun?

He went back to the Stryker.

“One KIA,” he called out. “Driver. The other three are gone.” He pulled himself into the vehicle and commanded them to get moving.

As they went on down the road the general found himself feeling kind of sick. There was something about the two guys who had gone up in that thing that he didn’t like. Not the fact that he’d lost men, although that was a pain, for sure, but the way they had looked as they ascended, like saints or some damn thing. That was it, a couple of beautiful young saints. He was a Christian and all that. Damn right, and screw the opposition. You weren’t with Jesus, you needed your heart cut out.

But he didn’t like saints. You weren’t gonna win a war with damn saints in your army.

He hit his driver on the shoulder. “What’s our ETA?”

“We don’t have any holdups, three hours.”

That would be well after dark, such as it was with that violet thing, if it came back.

As the vehicle sped along, he found his mind going to his most recent wife, to Sally. Pretty, not beautiful, so why had he married her? Couldn’t tell her no, was the main reason.

She went on and on, wanted this, wanted that. Expert in one thing: being disappointed.

He just got so damn mad sometimes, and leave it to a woman to bring out the worst in you.

So what happens when you’re isolated in a survival redoubt and you command the security force and you off your wife? They put her in the freezer is what happens, and good-bye.

Too bad he hadn’t brought a bottle on this little frolic. He needed a bottle. He always needed a goddamn bottle. Essential carry, soldier, forget it again, just blow your own head off.

One thing, the Acton Clinic meant maybe getting something that would get him out of this mess, and maybe the whole Blue Ridge group. Too late for the rest, probably. But the Seven Families were at Blue Ridge, plus the cream of America, so they were first in line, anyway.

“Any response from Mack?”

“No, Sir.”

Never mind, they’d be there soon enough. If those bastards had offed Mack, though, there was going to be a slight change in plans. He would still kill them, of course, but slow. Damn slow.

19

STEALING PEOPLE

Mack had thought that he would kidnap Caroline Light and possibly David Ford, but he had not anticipated that Caroline would start re-creating the portal as immediately as she had, or move nearly so fast. And he had not understood, until he saw them together, that they were so tender toward one another. Now, he would definitely take Ford. Torture is a reliable form of interrogation in only one instance: when you torture the lover and question the subject.

Because of the attack, Mack was no longer locked down, and he had been able to slip out and watch her. He stood in the shadows on the stairway that led into the recreation area.

Without knowing it, she had made this a race. Either her painting got finished and they used it—however that was to be done—or the townspeople invaded and gave Mack the chance he needed.

Except for one thing. They would not use it because he was going to prevent it. He would destroy the painting again and this time he would kill her as well. Far better, though, if the deserving got the benefit of the thing.

In the darkness across the room, hidden in the red shadows, Katie was also watching, and she felt every endearing touch between the lovers like a knife skewering her heart.

As the new star had shone its baleful light through the high windows of the rec room, her jealousy had festered into hate, and then into the truth of her soul: the pathological, murderous rage that was her great hidden flaw.

Katrina had a secret. She had killed. She had killed more than once. First, when she was a child, she had killed a boy called Jerry Flournoy. It had happened during a celebration bonfire at Camp Oscalana.

They had just finished the musical, and parents and kids were sitting around in congratulatory mode. The show had been *Annie*, and Jerry Flournoy had directed and played Bert Healy, and he had been the one who had kept Katrina from being Annie.

She had slid a brand out of the fire, and let it fall against the leg of his costume. She had not realized that it was made of rayon, and he had burned to death. Nobody thought it was anything but an accident, and he should have rolled, he should never have tried to run down to the lake, he should have known that. But she had done it and she had never regretted it, because his agony and his death had filled a hole in her heart. His fire had cooled her jealousy. She had forgotten his cries, his racing, leaping death in a shower of sparks and flailing limbs. But the odor that had hung over the camp she would never forget, the honey stench of vengeance.

She had killed Jerry Flournoy and it had been a good thing to do, good for her soul, so when another cruel and hostile person—this one a man thief—had appeared in her life, she had killed her, too. She had backed over Patricia Dickerson while she was at the mailbox. What she remembered from that one was the crunch of the bones, and she enjoyed remembering it. Patty had taken her Tom. *Her* Tom. And this bitch Caroline, she had taken her David. *Her* David.

An accidental fire. A hit-and-run. Now, a slashing in a clinic full of psychotics—she would get away with this one, too. Both of them, the bitch and the ungrateful bastard.

For his part, Mack was quietly aware of her presence in the room, and watching her intently.

It was four thirty in the morning. The star would set before the sun rose, and there would be a period of darkness then. Things like night-vision equipment were all fried, so if the town was going to strike, that would most likely be when they came.

As he watched the drama unfolding below from the landing—the painting going on, the watcher preparing to strike—he began to hear sounds of movement from the patient area upstairs.

Worse, Katrina apparently heard it, too, because she started going closer to Caroline and David. Mack needed them alive—for a time.

Where in hell were those townies? God, if they didn't come, this was going to be a mess.

Katrina had gotten a knife from the kitchen, and if she could, she'd put it first in Caroline's spleen, which was full of blood. Puncture it and you had a dead body on your hands almost as fast as with the heart, and the spleen was more vulnerable. As a nurse, she knew that stabbing somebody in the heart

was more difficult than it appeared, because of the breastbone in front and the spine in back. The body protected its heart. Going for the spleen was easier and just as efficient.

As she moved closer, she brushed the back of a chair. It made only the tiniest sound, but this was more than enough to make David turn around.

As he did so, she dropped to the floor. He looked out across the room for some time. The light coming in the windows from the new star was a little brighter than moonlight, but not so much that you couldn't hide in its shadows.

David came toward her. There was something in his hand—a gun, she thought. But first he'd talk, he wasn't going to shoot anybody except as a last resort, she didn't think . . . which somehow made her hate him all the more.

She could see his legs now. He'd paused just the other side of one of the bridge tables. All right, if he came around that table, she was going for him and hopefully she'd be fast enough to neutralize the gun.

In the distance, there was a ripping sound. A machine gun on the perimeter, she thought.

David heard it, too, and hurried back to Caroline and spoke softly to her, then sat down. His gun remained in his hand.

Carefully—very carefully—Katrina worked her way out from under the table. Rising just enough to get them in view, she saw that the bastard had not been distracted by whatever was happening outside. He still stared out into the room.

There was more machine gun fire, louder this time.

Then Caroline's voice rang out, "David! David, it's done!"

When he turned, Katie moved closer to them fast. He'd get his first, then her. She would rather have done her first and forced him to watch the bitch's death agony, but he had that gun.

She came up behind them and raised the knife, staring down at his back, looking at the place she would put it in.

As she started the thrust, something totally unexpected happened—it felt as if an iron cuff had gone around her wrist while at the same time a steel hand covered her mouth.

For a moment, she was too stunned to react. Nobody else had been in here. *Nobody*. Her heart flopped and her blood howled in her head.

A voice said, "Okay, David, drop the weapon, please." She was astonished

to recognize Mack the Cat. He'd come up on her in absolute silence, and surprised the watchful David, too.

Mack saw that, once again, the painting looked like a window. In it, there were leaves moving on the trees, there was bright, normal moonlight, and the surface of a river could be seen shimmering in the distance. Except for one thing: the moon was different. More craters.

David said, "Mack, let her go."

"David, she's trouble."

All she could think about was bringing that knife down, and feeling the sliding resistance when it cut into him.

Mack could still feel the tension in Katie's body, so he wouldn't release her. She must not hurt either of these people, or that thing—the portal.

David took a step forward. "Mack, Katie is a good person, she's no danger to you."

Mack laughed. Then David followed his eyes and he saw the knife still poised in Katie's hand. When Mack increased the pressure on her wrist, Katie opened her fingers and it dropped to the floor with a clang.

"Katie?" David asked.

Mack uncovered her mouth and all of her rage and hate came spitting out in the form of one word, "*Bastard!*"

Surprise tightened David's face until the realization of why she was so enraged made his eyes go soft with regret.

"I'm sorry," he said to Katie.

Caroline said, "Let's get past this, because we have a miracle here." She looked from Mack to Katie to David. "A miracle—look at it!"

David said, "The others are waiting. We need to do this."

Unless he acted quickly and correctly right now, Mack understood that he was going to lose his chance forever. Before, he'd had no choice but to destroy the portal. He had not been ready, and they would have used it before he could get it away from them, and that must not be allowed to happen. If the right people didn't get the portal, nobody was going to get it.

But now they'd played into his hands by reconstructing it just as all hell broke loose around them. So now he could use the danger that was unfolding here to take the portal and the two of them off the clinic grounds and into some more private place. There, he would force them to teach him how to use it, and then he would slash their throats. Should he fail, he would kill them

both and take the portal and just hope that somebody at the redoubt could figure out how to use it.

Reaching forward, he disarmed David, corkscrewing the gun out of his hand.

“Jesus, Mack!”

“Doc, please forgive me, but you have no idea how to use that, so let me do this.” He said to Katie, “I’m gonna explain something to you. You need to do what I say. You need to help us and save your anger for later. When this is all over, beat the shit out of him, cut him, whatever you want. But *not now*.”

“He made a promise he didn’t keep!”

David tried to reach her.

“It was just a night between us, Katie. A night together and it was lovely, but it wasn’t love, and I think you know that.”

Mack thought she might just leap on David and rip his throat out with her teeth.

“Katie,” he said, “if you don’t comply, I will kill you. I’m sorry, but you have no choice.”

She nodded. In the distance, there was a faint *pop*, followed immediately by the sound of many high-velocity machine guns.

“Do you know how to shoot at all, Caroline?”

She shook her head. He didn’t need to ask David. The way he’d handled the pistol so far told him all he needed to know.

“I know how to shoot very well,” Katie said.

He gave her the pistol and produced his own.

David said, “Is that wise?”

“She’s what we have, Doc.”

“But she’ll—she’s liable to—”

Now came the chugging of a more primitive machine gun, but it was louder. There were screams, followed by a general outburst of firing.

“We need all the firepower we can get, David.” Then, to Katie, “Don’t even think about revenge right now.” He thrust his gun into the small of her back. “Don’t try me on.”

“I’ll be okay,” Katie said. “I’ll swallow it for now . . . what he did to me.”

Mack gestured with his own pistol. “Let’s get moving.”

David hesitated, started to talk—and Mack shoved him, but gently.

“Let me protect you,” he said. “I know what I’m doing.”

“Security!” David shouted.

“They’re busy, David. And we have to save this thing right now.”

“Let’s get it upstairs,” David said, which was not what Mack wanted to hear. He had to play this very, very carefully. They didn’t trust him, and that must not be forgotten for a moment.

“David, what if security fails?” he asked.

“They won’t fail! Glen will keep us safe.”

“IF, David!”

“He’s right, David,” Caroline said. “We can’t risk the portal.”

“We need to get it away from the clinic,” Mack said, allowing his very real sense of urgency to enter his voice.

“But—it has to be here. It has to be where the people are!”

“When it’s safe, we’ll bring it back.”

“But the class—you’re saying the class could be killed. That must not happen!”

“David, all we can protect is the portal. We just have to hope for the best.”

“Look, you know about firefights and such, I’m sure. Help me make my decision. Tell me what you think is happening out there?”

At last, a little trust. Mack moved to exploit it.

“Doc, I hate to tell you this, but it sounds to me like whoever’s out there is moving closer to the house, which means that your security men are being defeated. The whole town is probably out there, and they are going to rip this place to shreds, and if you want to live and you want that portal to stay intact, you need to come with me right now.”

“David, he’s right,” Caroline said.

“Cover us,” Mack told Katie, “then follow us out the back.” He had the portal. He had its designers. This operation was finally polishing up very nicely. The general was going to be pleased.

He gave David a reassuring pat on his shoulder. “Let’s roll, Doc.”

20

THE DESTRUCTION OF THE ACTON CLINIC

Just as Mack was ready to move them out, the gunfire rose to a chilling thunder. People began running downstairs, calling to David for leadership.

David went to the nearest one, Susan Denman.

“Get the class back upstairs.” He looked past her to Aaron Stein and the others. “We’re taking the portal to safety. We’ll be back as soon as possible.”

His words were swallowed by the cascading shatter of glass as rifle butts were used to smash the windows.

The sound caused the whole crowd to turn around and then to erupt into panic as men—strangers, not security personnel—began coming in through the debris. People ran everywhere, overturning tables and chairs, dashing for the doors, for the stairs.

“We need to move,” Mack urged.

Bill Osterman appeared, greasy and exhausted, from the machinery room. “I’m the plant supervisor,” he shouted to the armed men, women, and children. “I know what you want! I can show you everything.”

A man walked up to him, raised a pistol, and fired it into his face. He rocketed back across the room, a flailing shadow in the blue-pink flash.

“Drop to the floor,” Mack said to David and Caroline. “Katie, get that damn thing off the easel and bring it with us.”

Katie looked at it. “Is it . . . liftable?”

“Just do it!”

More shots filled the room and people slammed against walls, flying into pieces as they did so. Modern high-velocity expanding rounds don’t just injure people, they tear bodies apart.

Patients and staff scattered, running for the doors on both ends of the room. Mack noticed that the class—so very disciplined—had followed David’s instructions and returned in a group to the temporary safety of the upper floor.

“Go out the back,” he told Caroline and David. “It’s our only chance!”

He had them now, he sure as hell did.

But David hesitated, so Mack gave him a slap to the side of the head—not hard, but hard enough to startle him.

“Sorry, Doc, but get moving! Right now!”

They scrambled toward the back doors.

Once they were outside, Mack told them, “We need to find a vehicle that works, otherwise we die here, now.”

“We can’t leave. We can’t abandon the mission!”

“David, I’m on your side, so you listen to me. If you die, you abandon your mission. If you live, you still have a chance to come back here when it’s safe and complete it. *So do this!*”

That seemed to reach him, and he began to follow Mack, and Caroline followed him. In the rear, Katie did a sort of guard action, not that Mack thought for a moment that she would be particularly effective.

Out in the grounds, dawn was just breaking across a running firefight between the security guards in their camouflage and the townspeople. The locals had some decent weapons now, too, not just deer rifles and shotguns. He heard the rasping whisper of an Uzi and saw one of the security guys turn to red haze.

“There’s a lot of ordnance flying around,” Mack said, “heads down.”

Behind them, glass shattered upstairs and the body of Claire Michaels hit the ground, bounced once in a bed of blooming flowers, and was still.

“Claire!” David howled, rushing to her.

Mack grabbed him. “She’s past help, but you’re not. If I have to knock you cold and drag you, I’m saving you, Doc. You gotta understand that.”

Ahead, the parking lot was jammed with derelict security vehicles, their electronics long since killed.

“We can’t escape,” Caroline said. “It’s impossible.”

“We have to,” Mack replied, “because if we stay here, we are dead. No question. We get the hell out, lives are saved, and your thing that is so important to you—that is saved.”

There was a voice raised, echoing across the broad lawn they were crossing, and then another, this one excited. Shots rang out—pistol, .22-caliber.

“Stop,” the first man shouted. The other, right behind him, cried excitedly, “What is that? What’ve you got?”

Mack aimed, braced on his elbow, and squeezed off two rounds, dropping both men. Immediately, more townspeople came out of the house. They were cursing with rage, and letting loose a fusillade of bullets in their direction. No discipline but too many bullets to risk crossing the field of fire.

No choice now, they had to head for the garage.

“Move it! Fast!”

David and Caroline carried the portal.

Then Mack saw two more men coming from around the front of the house. They were not in a hurry. One of them raised a Benelli Riot Gun and blew away a security guard.

“Those two are trained,” Mack said. “They know how to kill and we need to be out of their line of fire right now.”

Moving among the disabled vehicles in the new parking lot, Mack led them toward the old garage. He knew this place as well as he knew every other corner of the Acton estate, and he knew that there were older vehicles in here, vehicles without sensitive electronics.

The garage was brick, built in the same grand style as the house, an incongruous place to store dusty trucks. The side door, as he knew, wasn't locked.

Taking no chances, he sent Katie in first. When nobody blew her head off, he followed with Caroline and David. Inside, the cars and trucks loomed, a silent row of angles and shadowy bulk. There were a couple of pickups, a Buick Roadmaster, a black Cadillac from half a century ago, a Chrysler convertible from even earlier, and a mid-seventies Pontiac.

Mack had previously identified the pickups with their simple mechanicals and magnetos as good bets. On his way back in from his visit to the town, he'd fueled one of them up and made sure its battery worked. He led them to it and opened the door.

“They went in there,” a voice said from outside. Then the other: “They showin' any iron?” Then silence.

Mack whispered, “We have one chance. We start this and we blast out through the garage door. That's our chance.”

David said, “We can't leave, the gate's closed.”

“The power failed. Therefore, it opened automatically. That's the way it works.” Mack replied.

“You certainly know a lot about this place,” Caroline said.

“I know everything about this place.” As he spoke, he watched David carefully. He had detected something there beyond the general level of mistrust of Mack Graham. Did David know anything more? Suspect it? Mack was watching.

“They came in this way,” a male voice said.

Mack saw a shape appear at the door, so he got David and Caroline into the truck. There was room behind the seat for the portal.

“What about me?” Katie asked.

“Ride in the bed,” Mack said.

“I will not.”

He took Katie by the collar of her blouse and lifted her off the ground.

“You will. And you will provide covering fire or they will shoot our tires out, because these two know what they’re doing. Do you understand me?”

The two shooters had opened the garage door and were moving carefully closer. Good soldiers don’t hurry unless that’s the only choice.

“Okay, folks,” one of the men said. “We saw you come in here and we got the door covered. We want to see what you’re carrying.”

With an enormous rattling cough, the old truck’s engine came to life. Mack jammed the gas to the floor and it shot forward, slamming into the garage door.

One of the men raised his rifle and fired across the line of vehicles, but the bullet hit a dust-covered Oldsmobile and went wild.

Mack backed up until the truck hit the back wall, then ground the gears into first.

“Is it fragile?” he shouted.

“Of course it’s fragile!” Caroline responded.

On Mack’s second try, the truck crashed through the door and out into the driveway.

Mack turned out into the grounds, avoiding the choke of vehicles in the drive and—he hoped—most of the marauders.

He drove down the driveway and through the gate into the outside world.

A view opened to the flaring dawn in the east, as to the north and west, the supernova set in purple haze. Mack headed toward Raleigh, from which he could see smoke rising. Was the convoy already there and raising a little hell? Fine, he’d deliver the portal, and with it Caroline and David. Let Wylie join him in tearing the information out of them, he was good at it. And Katie, too.

She was going to enjoy sweet revenge.

DAVID FORD'S JOURNAL: EIGHT

I am writing this in my notebook as we drive toward Raleigh. There is little time, and I believe that this will be my last entry. After this, anything can happen. Herbert Acton offers no instructions for this period of extreme chaos.

In my last entry, I spoke briefly of the plan that I see, and with the appearance of the new star, its outlines are extremely clear. Also, it is already in our hands, in detail. The plan was expressed to a man half-mad with God, in a cave on the island of Patmos. The Book of Revelation was written in the reign of the Roman Emperor Nero, about a year before the great fire that consumed Rome.

In all probability, the Romans were right to blame the Christians. On one level, John's book is a coded message about the destruction of what was then the great Babylon of the world, the center of sin and oppression, Rome.

On a deeper level, though, Revelation is a document of the lost science, which describes very precisely what will unfold as time ends.

We are most assuredly being judged. Those who will not go forward are tainted with the mark of the beast; the elect are ascending. And the dead have indeed risen, in the sense that, statistically, there is a living body here on earth—or was, before this happened—for every single person who has ever lived in history. Reincarnation is real, and, as this disaster began, all human souls were in the physical state.

And now we see the final sign: “And there appeared another wonder in heaven; and behold a great red dragon, having seven heads and ten horns, and seven crowns upon his heads.”

Seven is the number of completion. A dragon may be a comet or star. In this case, it's the lowering monster that is bringing the destruction of the world.

I have written of the elect and the condemned. Now, I turn to the matter of

us, those who are going in neither direction.

I will not write down what is to happen to us, for two reasons. First, nothing is certain. Second, in doing so I would, perhaps fatally, betray a great secret.

I do not believe that the man driving this vehicle has our best interests in mind. I believe he means to harm us.

I sit here, writing and waiting. It is my belief that Caroline and I and the portal—all three of us—have fallen into the hands of the enemy.

21

REBELS

The farther they got from the clinic, the more disturbed Caroline became about the fate of the rest of the class. They were the core of the future, each one of them trained to carry out a fundamental task of governance. If all went well, there would be millions coming, and they would be urgently needed, every one of them.

Mack had been right, though. They could not stay where they were, and hiding the portal on the property—attempting to—was just too dangerous.

She just hoped that some of those carefully chosen people would be left. As David closed his little book and clutched her hand, she sensed that his thoughts were exactly the same.

As the invaded clinic disappeared behind them, though, she had to ask herself another question: had Mack captured them or rescued them? He was a subtle, skilled man, and she feared that this might go in a bad direction. She did not know exactly what he understood about the portal. He had watched her creating it, though, and had seen it in its finished state. He could not fail to recognize what it was.

It had come out of her mind and her hands, and existed at the vanishing edge between thought and reality. As she had painted it and the gold had done its work on her mind and body, she had remembered the lessons she'd taken about it in the class. She remembered being taught to paint, remembered the special state of surrender that allowed the colors to flow, and a new reality to emerge out of the art in her hands and the science in her mind. But the most critical part of the creation of the portal, the mixing of the colors, had been done by Susan Denman. Should they need to do this again—if by some miracle there was time—Susan would be needed.

But they were all needed.

The science that enabled the creation of the portal was not like modern science. It taught that reality is not the hard, immutable, inevitable structure that appears all around us, but rather an idea that only seems impossible to

change. Brute force—the lumberman’s axe, the builder’s tractor—appears to be the only way, but it is not the only way. When science and art come into harmony, miracles become ordinary.

No miracles in the here and now, though. She sat jammed in beside David, with Mack driving and Katrina Starnes crouching in the truck bed.

She looked over at Mack, trying to see in his face some hint of his intentions. His eyes were as dark and dangerous as gun barrels.

“Where are we going?”

He didn’t answer.

As they passed through the outskirts of Raleigh, the emptiness told her that the citizens who weren’t attacking the clinic had probably left or been killed.

Here and there, untended wrecks lay abandoned in the road, and bodies in them and beside them. By the time they had reached the courthouse square at the center of the town, she had counted forty of them, most of them apparently the victims of gunshots.

They went around the courthouse square, turning, then turning again, until they were on the opposite side and once again facing out of town.

Finally, Mack stopped the truck with a scream of dry, old brakes. The three of them stared out the windshield, stunned silent by what they saw. From the bed behind them, Katie stifled a scream.

On the lampposts along the street, stretching at least a quarter of a mile to the entrance to the interstate, there were bodies hanging. Closest, a man dangled with his pants around his ankles. On the next lamppost, a state policeman in uniform hung slumped and still, his wide-brimmed trooper’s hat on the ground beneath him. On the next one was a woman wrapped in so much duct tape that she looked like a cocoon.

There were easily two dozen of them, stretching off into the distance.

But they were not the reason that Mack had stopped. She saw that he was indifferent to these bodies. Who knew why they had been hanged or who had done it? Perhaps they were a sacrifice to the old gods, or perhaps they’d violated some sort of jerkwater martial law that the locals had declared. Maybe they had refused to participate in the attack on the clinic.

In any case, it was all pointless. That final sign had sealed the matter, had it not?

Mack had stopped because of a great horde of people coming toward them, people filling the street and the sidewalk on both sides, inching toward them

on their knees, their faces twisted with agony. They were singing tattered hymns. She heard snatches of “Amazing Grace,” “How Great Thou Art,” “What a Friend We Have In Jesus.”

Running up and down among them were frantic children, their shrill voices adding an anarchic note of panic to the howled songs. The people closest were sliding slowly, their knees shredded to the exposed bone.

She thought, then, that the people who had been hanged were probably human sacrifices, and, since that had not worked, they were now torturing themselves to death in an effort to induce God—or maybe the old gods—to save them.

This was the fundamental error of history being acted out in these desperate streets. The gods to whom they offered sacrifice did not exist and never had existed, and cosmic disaster was not the fault of man and never would be. Earth’s history was not about gods at all, but rather a very large-scale scientific program that was aimed at creating a harvest of souls. Who the designers were, Caroline did not know, but she believed in their work with all her being, for vast numbers of the good were being freed every day, every hour, and taking the human experience up into a higher level of reality.

The end of the world wasn’t a disaster at all. It was a huge, resounding, amazing success.

Mack sat staring at the crowd. His profile was granite. He had taken on the stillness of determination, and Caroline knew that he was about to drive right through them.

She said, “Mack, don’t.”

There were hundreds of them, it seemed, maybe thousands, filling the street, the sidewalk, and the side streets feeding into this one.

“This is human behavior we do not understand,” David said. “This is beyond what is known about stress response.”

Mack gunned the motor, and Caroline writhed in her seat.

But David, who was closest to the door, jumped out.

“You can’t do this,” he said.

The leading edge of the penitents or whatever they were had now reached the truck’s front bumper.

David faced them. “Wake up, wake up, all of you!”

He went to one of them, a man with the bones of his knees visible as he dragged himself along. He leaned into the man’s face, calling on him to stop.

Robotically, he continued on.

Mack said to Caroline, “Stay here.” He also got out of the truck. “We have to keep moving, David, we can’t stay here!” Then Katrina came up to them. Her—or rather, David’s—gun was at the ready.

Caroline had had enough. Why would Mack, if he had good intentions, ever give a gun to somebody as obviously murderous as Katie? And why go so far from the clinic, and why even enter the town? No, this was all wrong, all of it.

The crowd had surrounded the truck, men, women, and children moving past them with the indifference of a flooding river. Mack was in front, struggling to push people aside.

Katie saw that he was having trouble and fired into the air.

He turned. “Help me,” he shouted.

She went toward him, firing a second time, this time into the face of a woman, who pitched back amid her screaming children.

Caroline saw their chance. “This isn’t right,” she said to David.

“I know it.”

They got out of the truck. David reached in for the portal.

“Stop!”

Mack was blasting through the crowd toward them.

“David, run!”

“The portal!”

“*Run!*”

She turned toward a nearby alley, and David followed her.

Mack had gotten in the truck and was gunning the motor, Katie hanging on the running board of the old vehicle. Honking the horn, they drove through the crowd, the engine snarling as the truck bounded and crunched over people.

David and Caroline ran hard down a side street, but the truck was faster and it was on them in moments, and suddenly it was beside them and Katie was pointing her gun straight at David’s head. He angled away, heading into the alley.

At that point, Mack hit the brakes, Katie jumped off the running board of the old vehicle, and Mack got out, caught up to David in a few strides, then dragged him farther back into the alley.

“Come on,” Katie said to Caroline, motioning with the gun.

“Katie, I understand your anger. I’d feel the same way. But you have to accept the fact that David and I go back—”

As David struggled with Mack, Katie slapped Caroline so hard that she reeled and fell to the sidewalk—which also brought David to a stop.

Mack kicked in one of the doors that opened onto the alley.

“Bring her,” he said to Katie as he dragged David inside what turned out to be a restaurant kitchen. “Lotta useful stuff in here,” he explained to Katie.

When he had his gun on both David and Caroline, he told Katie, “Go out and get the portal. I want it in my sight at all times.”

Caroline and David both understood immediately what was about to happen here, and exactly why Mack had chosen a place full of the tools you find in a kitchen.

“Mack,” David said, “we can’t help you. The time for that is over.”

“What in *hell* kind of bullshit is that?”

“If you have a black spot on your body, Mack, you’ve been judged and you can’t go through. The portal is part of a science we know only in legend. It’s not a science of inanimate matter, but of the soul—and so it’s alive, in a sense, and it won’t allow you through unless you are chosen.”

“I am damned well chosen! I am one of *the* chosen!”

At that moment, Katie returned with the portal.

“A Humvee with soldiers just pulled up out there,” she said. Then, as she leaned it against the wall, she added, “My God, Mack, look at this.”

As she held the portal up and moved it, the image within it also moved. Trees appeared, then, as she continued to move it, they slipped away into a riverbank dotted with flowers and thick grass.

“It’s a window,” she said in wonder.

“I know what it is,” Mack snapped. “I promised you your revenge and now’s the time. We need to find out how they made this and how in hell to get through it.”

She was completely entranced with the portal.

“It’s soft,” she said. Pressing a little, she pushed her fingers through.

“Jesus,” Mack said, “Jesus, can you go farther?”

She pressed until her whole hand was inside.

“I can feel it! Oh, it’s sort of cool but I can feel the sun on my hand.”

Mack was right beside her now.

“That grass,” he said, “can you reach down and—”

Katie crouched, taking the portal with her.

“Sure—oh, I can feel it. It’s grass. Oh—God—” Smoke, fast and thick, began coming out from under her T-shirt.

She snatched her hand back, and blood came gushing out of the neatly sliced stump of her wrist. Flailing, she screamed, then flames shot out around her midriff, melting the shirt and causing her to twist and turn in agony, then to run to the far end of the long kitchen and smash into the wall.

All the while, Mack watched with the coldest eyes Caroline had ever seen. He did not try to help Katie at all, but kept his gun trained on the two of them.

Katie struggled in her death agonies, her pealing screams dropping to choked gargles as the room filled with a sickening stench of charred flesh and the overwhelming stink of burned hair.

The portal lay flat. Pressed into the grass on the other side of its surface was Katie’s hand and most of her forearm.

“What in hell happened to her?” Mack snarled.

“She was marked,” David said quietly.

Mack thrust the gun into his stomach.

“What is this about these marks?”

“You get them from the life you’ve lived. A life beyond redemption, and you—”

Mack slammed him with the pistol and sent him sprawling and spitting.

“All right, shut up with that bullshit! You listen to me, both of you, and listen close, or you will die slower and harder than you can imagine. That Humvee out there is a recce unit. Behind it is a strike force. They know what you have and these are your choices. Either tell us how to work this thing right now, or we will torture the life out of you until you do, then go to the clinic and waste whoever there is left to waste. Choose, children. Now.”

“Mack, listen to me,” Caroline said, putting all the urgency she could into her voice. “We can all go together. We can be friends. Partners!”

With a speed so sudden that it was in itself terrifying, Mack lunged at her and slammed her against the wall so hard she slumped, momentarily stunned. He shook her back to consciousness.

“I tried it before and it hurt so much I couldn’t do it. Then this woman—Goddamn! But this fucker works and there’s a secret to it, and you *will* tell me that secret.”

She remained silent. What else could she do? If he couldn't get through, it was because he was judged.

"Okay, Doc David, then you tell me how it works."

He had something in his free hand that was not a gun, then she heard her clothes ripping and felt coldness and tightness against her skin. It was a point, she knew, and a little more pressure and it would penetrate.

"I swear to you, I will take every inch of skin off her, every *fucking inch*, unless you tell me the truth."

"There's nothing to tell," David said. "It's a sort of filter, it only lets certain people through."

"Then you're gonna change it."

"We can't."

The knife began sliding along her skin. She forced her pain to remain silent.

"You will hold her skin in your hands and she will still be alive, David. She will be in agony unlike any either of you have ever known. The only way you will be able to stop her pain will be to kill her with your own hands!"

"David—"

David turned on her. "Shut up!" Then, back to Mack. "Mack, we can change it. For you. You can go through."

"Where? Where is that place? It sure as hell isn't anywhere on this Earth."

"It is, Mack. It's on this Earth."

"Where?"

"Mack, it's right here. It's where we're standing right now. It's what the Earth will become after . . . after what's going to happen."

"And what would that be?"

"The end of this cycle."

"And the Earth is totally destroyed?"

"The cycle is over. Those of us who enter the new Earth start the new cycle there."

Caroline felt the pressure of the knife lessen.

"And who decides?"

"We decide," David said. "We can change the portal for you."

He lifted it from the floor. Caroline wasn't sure what he was doing, and remained silent. But one thing she did know. He could not change the portal in such a way that it would let someone with the mark through, because that

mark identified them as being below the human level, lacking higher morality, compassion, and judgment. This is why it was called the mark of the beast. It meant, simply, that your life had left you more animal than human.

From outside, there came the snarling of big vehicles, then the squealing of brakes, followed by voices.

“That’s the general,” Mack said. “He’s seen the truck.”

“He knows about your truck? How?”

“We have communications. Just enough.”

David looked doubtful. “May I ask—”

“Just fix the damn portal. Do it now!”

Caroline realized that Mack did not know how General Wylie had found them. A lucky guess, perhaps.

David picked up the portal. “Caroline, we have to do this.”

There wasn’t a thing she could do to change it. All she could think was that he was buying time, so she took it from him. Up close like this, it was indistinguishable from a window. It was marvelous, just the most extraordinary thing she’d ever seen. But what would she do to make Mack think she’d changed it?

“It has to be tuned to the people who’re going to use it,” David said. “It works like a fingerprint reader. Let us—Caroline, print Mack to it.”

Dear God, he was going to trick Mack into doing the same thing that Katie had done.

She had no choice but to go along. “Give me your hand, Mack,” she said. Touching his damp skin was horrible. There was a sense of the corpse about it, not like the skin of a living person.

The judged were still moving and breathing, but they were already outside of life, in a state where no further change could take place. They just didn’t know it yet.

She positioned her hand in his, so that her palm faced the portal and his hand enclosed hers. She had no idea what she was doing, she was just trying to make something up that he would believe.

“This is doing what?”

“Imprinting you,” she said. “Then you can go through.”

“What about my people?”

David said, “You imprint them. Do it the same way.”

“Do you feel anything yet, Mack?”

“Yeah, actually, the same thing I felt before. Warmth.”

“You tried this before?”

“It nearly burned me like it did her. Jesus!”

Caroline drew his hand away. “Okay, you’re imprinted.”

He addressed himself to David. “There’s a general out there. I am going to imprint some of his men and send them through your portal. If all goes well, we will take it and put it to good use. But if not, you are going to experience hell firsthand, both of you, until we are told the truth about how to make it work.”

“I don’t know what else to tell you,” David said. “You just imprint and step through. That’s all.”

“You are a poor liar, David.”

Outside, the snarling of the big vehicles was joined by a ferocious thunder of weapons.

“Those praying crazies,” Mack said pleasantly. “He’ll kill ’em all just to tidy the place up.”

He picked up the portal and went to the door. He opened it. “I need a guard in here right now.”

“Mack,” came a gruff voice. “How the hell are you?”

The door closed.

“Come on,” David said softly.

As David led her toward the front of the restaurant, the kitchen door was opening again.

They went through into the wrecked dining room, with sunlight glaring in through the shattered windows, tables smashed, chairs upended, and a great splash of blood across one wall.

Behind them, they heard a curse. The young soldier sent to guard them had discovered that the room was empty.

“Quick!”

She followed David into the street. The door by which they’d entered the restaurant opened onto the alley beside it, but this one faced directly into the street where the convoy was parked. Closest was an enormous machine with a slanted front. It was bigger than a truck, emblazoned with three stars, flying a general’s flag, and painted with a lurid image of skeletal Cimil, the Mayan god of the underworld. Atop the vehicle was a remote-controlled .50-caliber

machine gun—which immediately moved toward David and Caroline.

“Down!”

But then it whirled, its motors screaming, spinning upward toward a huge silver object that was just appearing overhead.

Caroline felt washed by the sacredness that these silver objects seemed to carry with them like a sort of force field. The urge, when they were near, was to drop to your knees.

The heavily armed soldiers looked extremely uneasy, clutching their weapons, looking up. Around the convoy, in piles, sprawled, twisted, and bloody, were hundreds of bodies, the remains of the people who had been on their knees. Piled among the dead adults were their dead children.

There was a huge sound, a hissing thud, and light shone down from the silver device, flooding the convoy in powder white. A moment later, one of the soldiers cried out, leaped from his vehicle, and throwing off his helmet, began rising.

“Stop that man,” General Wylie shouted. “Shoot him!”

The machine gun fired, bullets streaming toward the rising soldier . . . and then sparks appeared in the light around him, a pattern that grew as the gun continued to fire.

“The bullets are stopping,” Caroline said. She gripped David’s hand as they both watched, awed by the magnificent and flawless display of technological power they were seeing.

Then the convoy command vehicle’s hatch flew open and three young soldiers piled out, also throwing aside their helmets and leaping, then rising into the light. General Wylie emptied his pistol at them, but with the same lack of effect that the machine gunner had experienced.

“Launch grenades,” the general roared, and another soldier pulled a bulky-looking item out of one of the vehicles, loaded it with a large projectile, and fired it upward.

With a clap of thunder and a burst of flame, it shot into the light and exploded—or started to. The projectile cracked apart in slow motion, the burning gasses and shrapnel oozing into a mushroom shape and stopping, the explosion frozen like a flower dotted with bits of steel. As if it was as light as the air itself, the frozen explosion drifted away on the breeze.

As this was happening, there came from the bodies all around the convoy a stirring and a groaning, and, at the same time, from the great machine above

waves of what could only be described as directed emotion—waves of love, in fact, that made David and Caroline draw closer together, and made them both wish the same wish, that they, also, could join the mysteries unfolding above. Except . . . they didn't, actually. They were workers and needed elsewhere, and—if they could only reach it—an important task was waiting for them.

The heaps of dead began coming to their feet, their wounds disappearing, life returning to their bodies. For an instant, David found himself looking directly into the eyes of one of them, and in the instant that he was connected to this man, David relived his whole life, not in linear memory, but as a compressed, stunningly poignant, and fragile instant of pure emotion, and it was good, so good that it hurt and he sobbed aloud, unable to contain his emotion.

Beside him Caroline also sobbed, and the dead began to rise into what at first seemed to be a great, round opening in the bottom of the craft. But as his eyes followed them, he saw that this was not an opening in the ship, but in the universe itself, for its velvet, living darkness was spread with a spectacle of stars.

Around them, more and more of the slaughtered rose upward, disappearing into the star garden at the heart of the machine.

He saw, at the very top of this perfect sky, the constellation of the Pleiades, the Sailing Ones, so clear that the vivid colors of the stars was clearly visible, the magenta of Pleione and the faint red of its blazing hydrogen ring, the white of Alcyone, and the iridescent blue of Electra.

As he watched, the people ascended in increasing numbers, rising one after another, and he saw them go sailing upward, and transform as they did into bright points of light.

Then the last of them were swept up into the fountain of stars. As suddenly as it had opened, the gateway in the sky closed. He was left watching the leaping death of the auroras' return, and he bowed his head and fell to the ground crouching, and covered his face, so great was the pain of losing touch with that beauty.

“And so the dead rise,” he said, “and now to follow there will be great earthquakes.”

Caroline, weeping also, clutched at him, and their love—so essential to maintaining one's humanity in dark times—enabled them to help each other,

and give one another the strength they needed to go on.

But the convoy remained in chaos, with men screaming and leaping on the vehicles, trying to somehow jump into the sky, tearing at one another, bellowing and cursing and fighting to get to a door that was already closed.

Mack and General Wylie strode among them, their pistols in their hands. When a soldier clambered onto a vehicle, Mack or the general would shoot him and he would lurch off, hitting the ground with a thud.

Taking advantage of the confusion, David pulled Caroline into a shattered drugstore, and they were going through to the rear when they both saw it at the same time—a flash of green in the street outside.

Two soldiers had come into view. Between them they held the portal, which now contained an image of a sweep of meadow that ended on a riverbank. Beyond this stretched an enormous view that faded into blue hills.

Corralled at gunpoint by Mack and the general, soldiers shuffled toward the portal. They were eager at first, looking at it in wonder.

Mack held the first man's hand against it until he snatched it away, pulling at his tunic.

When the man hesitated, the general lifted his gun as casually as he might a spoonful of soup, and sent a bullet through his head.

"This fucker works, at least," he said as the young soldier dropped.

The next soldier stepped right into the portal.

Caroline gripped David's arm. On the neck of the man going through, they could see a telltale shadow.

Then this man also hesitated. His body jerked and he seemed to stop, his front half in the portal. Mack kicked him in the small of the back, shoving him forward.

For a moment, he seemed to go deeper.

"Jesus, it's working," Mack exclaimed. "We have got it, General!"

They were congratulating one another when the soldier, still only halfway through the portal, burst into flames. His writhing became frantic, his head jerking from side to side, his midriff lurching and squirming, and suddenly the man was out, falling back, hitting the ground as he was consumed, screaming in agony as the fire engulfed him.

In the air there was the same horrifying odor of cooked flesh and hair that had filled the kitchen when Katrina had burned.

General Wylie glared at Mack. David could see the veins standing out on

his neck.

“You stupid asshole! Fuck you! Fuck you!”

Mack stood at attention, taking it.

“Get those freaks,” Wylie muttered. “I want them front and center.”

“Get them,” Mack snapped.

Soldiers looked at each other.

Mack pointed directly at the store—at them, at the precise spot they had imagined that they were hiding.

“DO IT NOW!” he roared.

Caroline and David ran for their lives.

The portal remained where they had left it.

22

DEATH BEYOND THE END OF TIME

For a moment, their pursuers lost sight of them in the alley and David understood very clearly that these seconds were their last and only chance—whereupon they came up against a chain-link fence.

“David!”

He grabbed it and shook it with frustration—and then saw that it was loose along the bottom. “This way,” he said, lifting it, ignoring what the jagged metal was doing to his hands.

She went through and he followed, pulling it back into place behind him.

They found themselves in a yard with a greenhouse, with their pursuers close behind.

Almost certainly, it was going to be a trap, but their only hope of not being seen was to duck into the structure.

They found themselves in a steamy and exotic world of vivid yellow and blue and red orchids. They went deep among the vines and crouched there, hiding, barely breathing.

They did not hear Mack the Cat approaching, and David was almost ready to move to a broken window he had noticed when he suddenly realized that this master stalker was three feet away from them. From here, he could just see the side of Mack’s head, and his nostrils were dilating as he smelled the air, trying to catch a scent of his prey.

The humid air was heavy, though, and the way he moved his eyes, flicking them from place to place with the suddenness of the expert predator, David knew that he could not smell any faint perfume or sweat that would betray their presence.

He turned, and now he was so close that David could have reached out through the vines and touched the gun in his hand.

Absolute stillness. Absolute quiet. Except . . . what was that rustling? A glance at Caroline revealed that she was flushed with effort, both hands clapped over her face. Something in here had triggered an allergy and she

was fighting a sneeze.

Mack sighed, then looked toward the door. He started out and David's whole body shuddered with hope—but then he stopped. Slowly, the long, predatory face turned his way. He seemed to be looking directly into David's eyes. But no, then he turned away again. When he moved, it was like watching a dancer, swift and lethal . . . but, in this case, making an error.

A moment later, low voices came from the front of the greenhouse. There was a curse, sharp, urgent, then the clatter of the door.

Caroline started to rise, but David gripped her arm and she froze. And saw what he saw—Mack, still right there, listening, sniffing the air, his eyes darting. And so he remained for long minutes, so still that he was almost impossible to see through the vines. And then there would be another dance step to another part of the greenhouse, and another long silence while he tested the space for presence.

Eventually, though, he was gone. They never saw him slip away, but his absence was signaled in a way that felt surprisingly like love: a cricket began chirping, and soon the greenhouse was splendid with their song.

Warily, David slipped out of the deep tangle and lifted his head above the edge of a broken window. His view was across a short lawn to a bobbing flower bed full of impatiens and petunias, and beyond it a cottage, and that, he thought, was where Mack might yet lurk.

Overhead, a meteor appeared, falling gracefully through the pink plasma that dominated the sky. The new star had set, and to the east, down low where the sky should be glowing pink with the blush of predawn, there lay instead a line of deep bloodred. David estimated that they would have about an hour of semidarkness before the sun rose once again.

It was during this brief night that he intended to make his move. His plan was to return to the Acton Clinic, hoping that the class would still be there, or enough of the class to still carry out some part of their mission.

Soft voices came to his attention. He looked up and down the lawn. Then he saw them, three men. One was dressed in ill-fitting military fatigues, the other two in sweatsuits. None of them were Mack, and that worried him. Their young faces were tight and their eyes were hunter-quick as they came into the yard. One of them went up to the back door of the house and tried it. He drew it open and looked back at his friends.

An instant later, he exploded—not as if he'd been blown up with a bomb,

but as if he was literally ripping apart as he lurched backward. His head shot up and hit the doorjamb with a thick crunch, then came rolling through the air, hit in the petunias, and didn't bounce. The face, expressionless, stared. Even as this was happening, a flash of black and steel appeared under the right arm, which flew up as if in surprise, then tumbled out into the grass. Slowly, the fingers closed.

The body buckled, and as it did, he could see a shadowy form just inside the house, wielding an axe.

Not Mack, though, not that humped figure.

Whoever was in there was long past rescue, hiding in psychotic rage and despair, in the state of savagery that would be emerging now in all the judged.

The survivors poured gunfire into the house, creating a cataract of noise and a fury of flashes.

David grabbed Caroline's arm. "Come on," he said

Together, they leaped through the glass wall of the greenhouse. As they dashed down the driveway, passing the two survivors just ten feet away, one of them shouted and wheeled his gun toward them, and David saw a red laser telltale bouncing on Caroline's back, and the bullets passed so close they felt surges of air.

But then there was another cry, this one choked with horror, then dropping to wet gabble as one of the two remaining men looked down at the axe handle protruding from his stomach. Somehow, the defender of the house had survived their fusillade and once again used his ferocious weapon.

The last of the soldiers ran so frantically that he lost control of himself and fell in the driveway. Screaming again and again, he went off down the street, his cries echoing away into the distance.

"Let's move," David said. There had been too much shooting here not to attract more of the soldiers.

"Not so fast."

Whirling, David saw Mack standing in the middle of the street.

"Quick," he said, and leaped a low rock wall, Caroline close behind.

They ran into a thin woods behind the house. David had no idea where they were or where they might be going, just that they had to get out of here.

He could hear Mack moving fast to close the distance.

Then the woods ended. They came out on a two-lane highway, one that he

recognized immediately. It was Maryland 1440, the road that passed the small private airfield that the clinic had used.

It was suicide to stay exposed like this, so they went to the far shoulder—and saw here a field just sprouting young shoots of some sort, the life of the past still unfolding. Beyond it, perhaps half a mile away, was the roofline of a condo complex—shelter, certainly, but they could not survive an attempt to cross that field.

For a few moments, David ran down the middle of the road, looking for something that would afford them more shelter than the field. All he found was a concrete bus stop plastered with Celebrex and McDonald's ads. He drew Caroline to it and crouched beside her, shielding her with his body.

Not hurrying now—not needing to—Mack came toward them. As he walked, he moved first into the center of the highway, then angled to the far side. As David and Caroline tried to keep the bulk of the shelter in front of them, Mack tried to widen the angle.

“We can make a deal,” he said. “I bring the portal and you take me through. That's all I need now. Forget the rest of them.”

Behind Mack, David saw an unlikely sight—headlights. A vehicle was coming. Mack kept moving closer to the two of them. Either he didn't see it or he didn't care. David watched, trying to see what it was, waiting for it to overtake Mack.

What the hell was that thing? It was big, not a car or an SUV, or even a military vehicle, which had been David's initial fear. A big truck, perhaps. No, he saw more lights. A marquee. But—holy God, it was a Greyhound bus. A *bus*?

Mack stepped easily aside as it passed him, but David ran out into the middle of the road, waving his arms frantically. Caroline joined him.

On the marquee, David saw the word “Baltimore.” Inside, there was a driver, there were passengers, and it all looked astonishingly, impossibly normal.

Now the bus was a hundred feet from them. Fifty feet. They could see the face of the driver. Behind it, David was aware that Mack had started running.

The loud *phew* of its air brakes sounded. The driver leaned forward over his steering wheel. *Phew. PHEW.*

It stood there, engine rattling. With a quiet hiss and a click, the door opened. He went around it—and saw Mack not fifty feet away, coming up

beside the back of the bus. A huge knife brought from the kitchen left his hand like a lightning bolt.

As David and Caroline threw themselves onto the steps, it slammed into the door, embedding itself in the vinyl and insulation. They scrambled into the cabin, David shouting, "Close the door!"

The driver didn't need to be told.

Outside, Mack commenced hammering on it with a fury unbound, the sound of his assault filling the bus, the power of it making the big vehicle shake like a leaf.

"Jesus!" the driver said.

"Get moving!"

He threw the bus into gear and pulled out onto the road. As they drew away from Mack, he emitted an inhuman roar of anger.

But now, very suddenly, David and Caroline were in a different world. Other passengers filled the seats, people with bundles, people with kids. Some seats empty, most not.

"Hey," the driver called.

"Yes. Thank you."

"How far?"

"Excuse me?"

"This is a bus, buddy. You buy a ticket. That's the way we do it."

"Oh, Baltimore. Baltimore . . ." He gave the driver a twenty and got back a dollar and change. Stuffing the money in his pocket, looking down at his receipt, he almost wanted to cry.

How had they ever kept buses running? But of course, they were old vehicles, many of them forty and fifty years old. They didn't contain the kind of electronics that would be fried. So, even this deep in death, life went on.

"Behind the white line," the driver said, "thank you."

They went down the aisle, finding seats across from an older woman, prim, her eyes keen with a light he hoped was not madness.

"May we sit here?"

"I don't own it."

When they sat, David realized just how deeply, deeply tired he was. The star having set, it was full dark now, and the windows reflected the interior of the bus. Distantly, he could see blood in the east, getting brighter. The old woman saw it, too, and began to chew her gums.

“I will not taste of the bitter water,” she said.

He knew the reference, of course, to the water ruined by the star Wormwood in Revelation.

It would happen that way, too. There would be deuterium in the debris of the supernova, and the water of the world would be absorbing it, turning it into heavy water. It wasn't in itself radioactive, but when half the water content of a larger animal's body was replaced with heavy water, the animal died. Or the man.

She said, “I am saved, hallelujah.”

The bus would pass the Acton Clinic in a few minutes, and it was there that they must get off. David squeezed Caroline's hand, then returned to the front.

“Do you know the Acton Clinic?” he asked the driver.

“Yeah, it's a couple of miles on. I pass it four times a day.”

“We want to get off there.”

The driver glanced at him. “It's been burning for hours.”

His heart heaved in his chest. He forced his voice to a calm he did not feel.

“You can make a stop, though?”

“Sure. But there ain't no refund. No refund here.”

“Fair enough.”

“You got that man's name? 'Cause he damaged this bus. I gotta write that up and the company's gonna want to go to the cops. Vandalism. They don't like it.”

“Your company?”

“Maryland Trails Bus Lines,” the driver said, ignoring the passengers. “I been drivin' their rigs for thirty years. Never got a citation, not one, not never.”

“It's still operating?”

Again, he glanced at David. “What does it look like?”

A hand grabbed David's shoulder. He turned to face a woman whose face had been made pink by too much exposure to the supernova core.

“You a doctor? My baby got fluid. You a doctor?” She held up a baby as bloated as a stuffed toy and gray with death.

Ethically, he could not deny his profession. But he'd barely touched pediatrics in medical school. He was not qualified to help.

“We thought it was God's light, we slept him in it, my husband did. My

husband was a fool.”

David did not know how to tell her that this was a sunburn of a new and terrible kind.

“I’m sorry for you,” he said.

“They nothin’ you can do?”

“That is not God’s light,” another passenger shouted. “You have laid your baby in Lucifer’s light.”

This lovely, ignorant young woman raised a long hand to her cheek, and with a gesture of surpassing grace, wiped away her tears.

“I’ll put him in the ground,” she said. “Very well. Thank you.”

She went swaying back to her seat, the other passengers looking straight ahead.

“We all told her,” a man said. “She’s got a dead baby.”

The bus’s brakes hissed and it lurched to a stop.

“Acton Clinic,” the driver intoned. “Acton!”

David and Caroline got off, stepping out into the dew of morning.

Above the sun, in the purity of the eastern sky, hung a full moon, its face the red of blood.

As he watched, he saw a brief flash on the lunar surface, then another and another.

The driver closed the door of the bus and pulled out. What would happen to it, and to the people aboard? Nothing good, that was certain.

The great iron gates of the Acton estate still stood open. At the end of the curving driveway, the building loomed, still and silent. He could see jagged edges in the line of the roof where the fire had burned through. The windows were dark.

“It’s destroyed,” Caroline said.

David did not reply. He could only think that, even if they did find the class, what would they do without the portal? He had been counting on finding the supplies here for Caroline to re-create it a third time, but that did not look possible now.

“Come on,” he said. They proceeded into the grounds, moving quickly but carefully.

As they drew closer to the house, he watched the door and the rows of broken windows for any suggestion of activity inside. They would have done well to look behind them, but they did not do that. Instead, they responded to

the deep animal instincts that drive all men in times as terrible as these, and went toward the concealment that the house offered.

Thus they did not see who had dropped off the back of the bus as they had come through its door. Mack moved swiftly to the gate, then slipped into the grounds, then to the apple tree, now naked, where he had spent his afternoons.

He watched them enter the house through the sprung front door. He went closer, listening, and heard the scuffling of their clumsy movement through the ruins inside.

When he saw that they had gone through to the patient wing and all was quiet, he slipped into the house.

23

THE RISING OF THE SOULS

Mike and Tim Pelton and Delmar Twine were in terrible trouble because their general had gone crazy, and in just a minute, it was going to be Timmy's turn to get himself burned alive in that damn mirror or whatever it was.

The three of them had been friends all of their lives, growing up on the same street in Sandusky, going to the same schools, finally joining the army together, all three intent on getting the education they could not otherwise afford. Mike and Tim were identical twins, and they had joined up on the condition that they would stay together.

But instead of the training they'd hoped to get, they'd come out the other end of boot camp as infantrymen, and spent two years in 'Stan. Then, as the U.S. withdrew from that country, they had been reassigned to General Wylie's specialist brigade, guarding some sort of supersecret underground facility deep in the Blue Ridge Mountains.

The guard unit hadn't been allowed inside, but instead had been billeted in tents near the entrance. They'd seen the people coming, though, famous faces glimpsed as they got out of their vehicles and went through the thick steel doors into what appeared to be a luxurious interior. For weeks they'd come, the masters of the world—congressmen and senators, big-time preachers and Catholic hierarchy, TV personalities, movie stars, hundreds of them. Some of them had the black spot disease big-time, with the weird pigmentation almost covering their skin. Others, you couldn't see if they had it or not.

Mike and Tim and Del didn't have it, and they wouldn't bunk with people who did. You didn't want that, no way.

There were burned bodies all around the portal now, the remains of guys they'd worked with in the unit for the better part of a year. Behind them there was just Colonel Manders with his pistol, and at his feet the bodies of the seven men who had refused even to try.

Mike and Timmy and Del had talked about this thing. Whatever it was, it belonged to that man and woman who that CIA guy and the general had tried

to kill.

The point was, those two people were the ones who knew how to make the sucker work right and stop burning guys. Everybody in the unit knew they were from the Acton Clinic, which was another secret installation of some kind.

“Okay, look,” the general said. “You—” He pointed at Timmy. “You just make one smooth, easy movement. The problem is, guys keep trying to pull back—”

Timmy vomited.

“Shit!” The general thrust his gun into Timmy’s face. “Do it!”

Timmy gagged and raised his hands flat against the sublime view of an orchard, its trees dripping with tiny, blushing red apples.

“Do it!”

And then the next thing Mike knew, the gun was in *his* face.

“Do it,” the general shouted at Timmy, “or I blow your fuckin’ brother’s fuckin’ brains out right now!”

Timmy went to the portal. He stood before it.

“I love you,” he said without turning around. The tears in his voice broke his brother’s heart. He was gonna burn, Timmy was gonna burn, and Mike and Del, they would be next. What a shitty goddamn way to go, how stupid was this?

“Sir,” Del said frantically, “we need to take this thing up to the clinic. That’s a secret installation! They know how it works, they can tell us.”

“Move!”

There was a click. The cold of the gun barrel nestled against Mike’s neck.

Suddenly Timmy just very smoothly stepped forward and went right into the thing. He seemed to walk forward, but also to get smaller and smaller, until finally he just disappeared.

Silence. Nobody moved. “Jesus . . .” the general whispered.

Then he seemed to climb out of something, and there he stood as clear as day in the grass on the other side, facing away from them. He bent down on one knee and ran his hands through the grass. Then he stood up and raised his eyes to what looked like a summer sky, floated with soft white clouds. Mike could practically hear the birds singing.

“Timmy,” Mike shouted.

“Shut the fuck up!” The general removed the gun from Mike’s neck and

stepped closer to the portal. “Can you hear me?”

Timmy came close to the portal. Inclining his head to one side, he peered back at them. Could he see in this direction?

“Come back, Timmy,” Del shouted. “Come on back, man!”

“Stuff it, soldier!”

“Yessir. But, Sir—”

Timmy held out a hand. He flattened it against his side of the portal—and instantly pulled it away.

Then Timmy was looking past the portal, seemingly into the sky above his side of it, or maybe at the portal itself, it was hard to be certain.

His face changed, moving into a wide-eyed expression of disbelief, then amazement.

He turned and went the other way, disappearing in among the trees of the orchard.

“*TIMMY!*” Mike went toward the portal. “*TIMMY!*” But as he tried to follow his brother, the general shoved him aside.

“Get outta there,” he said.

“Where’s my brother?”

“Eating goddamn apples, looks like to me.”

“He was running. Something was wrong.”

“Yeah, what’s wrong is he’s a fucking dumbass not to come back.”

General Wylie stepped into the portal, using exactly the same decisive motion that Tim had used. Except . . . he stopped. For a moment, there was silence. This was followed by a stifled cry that quickly became a howl of agony as flames burst through the fabric of his uniform, accompanied by a sound as if of frying bacon.

“Help him,” Colonel Manders shouted, shielding his eyes as he tried to get near the general, who was flopping like a fish, his body enveloped in flames.

Then, just as the others had done, he fell backward off the portal and lay kicking and spinning on the ground in burned agony.

Aside from the colonel, Mike and Del were the only members of the unit near the portal—alive, at least. Most of the ones who hadn’t gone up into that machine or been killed like the general was being killed, had deserted by now. Maybe someone was still hanging in a Humvee here and there, but nobody who was willing to come anywhere near the portal.

Overhead, another meteor roared past, a thick streak of light accompanied

by an ominous rumble. Somewhere below the southern horizon, it exploded in a flash.

“Fuck this,” the colonel muttered. He swung into a Humvee, started it, and went back down the road, heading out toward the interstate and the Blue Ridge.

Mike and Del watched him go.

“Well, shit,” Del said into the silence that had enveloped the convoy. “Anybody home? HELLO?”

Mike went to the portal.

“Timmy,” he shouted into it. “Timmy!”

What was in there that had so upset him? Timothy Pelton did not scare easily, and Mike was in a position to know that. Even as kids, Tim had always been the bold one, the first one up the tree, the first one to ride the Top Thrill Dragster in Cedar Point, the first one to ask a girl out, the first one in to save Momma that time they had the fire.

Mike slumped. He felt Del’s arm come over his shoulder.

“Del, I feel like he’s on the other side of the moon. Farther.”

“What the hell is this thing?”

“Some kinda classified stuff, has to be.”

“They ain’t got no problems over there,” Del said, “ ’cept them crab apples don’t look real worth eating.”

“He’s not eating crab apples! He run scared, man.” A sudden burst of pure hate overcame Mike, and he kicked the blackened rubble of the general hard a few times. “Fuckin’ bastard! BASTARD!”

“Hey. HEY!” Del pulled him away. “That ain’t gonna do nothin’. That guy was headed for a court-martial, anyhow, the way he’s killing people. I mean, I saw about five murder ones go down here today.”

“Time of war.” He went close to the portal. “Timmy! TIMMY, damn your eyes, come back here!”

Then he saw, across a far hill, a small dot in motion. For some moments, he watched it as it moved steadily up the grassy hillside. Del also watched.

At some length, he said, “Could be him.”

“Or some caveman who ate him. We gotta find out how this thing works.”

Del went to a Humvee and opened the door. Inside was Ken Freitag, a gun in his mouth and the back of his head spread across the cab.

“Occupied,” Del muttered.

He went to the next one down the line and got in. There was a click, then the engine started. Hardened military electronics were not so quick to fry, fortunately, but there was going to be more than one vehicle in this convoy that wasn't gonna move. "Got forty miles left in this," Del said.

Without speaking—they didn't need to bother, the three of them always understood one another's thinking—Mike picked up the portal and slid it into the back of the Humvee, where it fit nicely . . . or had it gotten smaller when Mike tried to put it in?

Everybody knew the way the image in it changed as you moved it, and Mike didn't want to lose the spot where Timmy had gone in.

"We get this thing working right, we need to bring it back right here," he said.

"It's a countryside over there. If we get through safely, we're gonna find him sooner or later. Looks like southern Ohio, matter of fact."

"Southern Ohio is God's country."

"So is the rest of the world."

They were silent for a moment, each contemplating in his own way the enormity of what was happening.

"Why don't we just go in now?"

"You think we should?"

They both looked at it, then at each other. At last Mike said, "I think we need to find out more about it."

"I hear you," Del said. He pulled the Humvee out of the line and proceeded toward the town square. Plasmas so intense that they outshone the dismal sun now flashed across the sky without ceasing. Instead of the empty streets that had followed the passage of the penitents, they soon found that Raleigh was crowded with people who were pushing and pulling anything they could that was on wheels, trying to take supplies with them as they headed west toward the interstate. It looked like something out of a World War II movie.

People stared hard at the Humvee as it trundled east. They'd been shot at one too many times when trying to approach the convoy. They gave the soldiers their distance.

Up and down the street, buildings were burning. Molten insulation was dripping off overhead wires. "Spontaneous electrical fires," Del said. "Must be a whole lot of solar juice in the air to cause this."

Mike knew that the sun's energy would concentrate in wires if it became

intense enough. There were weapons that could do that, too.

Up and down Main Street, the same street lamps from which the victims of the penitents were hanging were now exploding, sending sparks down into panicky crowds of refugees. Sheets of fire flared along electric lines, and columns of smoke rushed up from the roofs of buildings.

“It’s everywhere,” Mike said. “The whole world is burning.”

When Del was forced to slow down, people began coming up to the Humvee. “This could get ugly,” he said, and jammed the gas to the floor.

“Easy on the clutch, man.”

“I know it, but I gotta not hit these folks.”

In the sky, a huge plasma danced, a long electrical body writhing, its appendages sweeping the horizons like great snakes.

Soon, they were through the town and onto the highway that led to what had been the convoy’s original destination. Like the town, the road was filling with refugees, a few on horseback, more on bikes, most on foot. Mike held a weapon in sight, making sure it was visible to the angry eyes and the mad eyes that watched them pass.

These poor damn people—somebody had to save them. If this darn portal would work, they could go through. Given enough time, maybe the whole darned country could go through.

What a damn miracle it was, but probably not for ordinary folks. Only people like the ones in the Blue Ridge would be allowed to use a thing like this, you could bet on it.

His heart just literally felt like it was tearing in two. He could feel his twin wanting to be with him. He could feel Tim being scared and being alone, and maybe knowing that the portal was in motion, that it was disappearing like a summer cloud or whatever it looked like on that side.

The farther they got from town, the fewer people there were on the road, and Del began to run the Humvee harder—until he saw someone ahead of them.

“Damn,” he said as they drew near the person standing in the middle of the road. It was a woman with a baby stroller filled with fishing equipment, rods, reels, poles, hooks and lines in packets. She wasn’t going anywhere, either. She held her ground right in the middle of the two-lane blacktop.

Del stopped, leaving the Humvee idling.

She came around to the window. “We’re moving our stock,” she said, “and

I'd be willing to pay you twenty dollars for an hour of the truck." She glanced around. "There's looting. The cops are gone."

"Lady, we'll all be dead in a few days."

"What in the world is the matter with you? How dare you say such a thing."

"This is the Last Judgment, lady," Del said. The Twines were Church of Christ, big-time. Not the Peltons. Their dad had steered clear of religion altogether. But Mike knew about the Last Judgment, of course, and from where he sat, Del could damn well be right. What if that black stuff on people was sin showing up right through their skin?

"I need to move my stock. We're in hard times and we're planning a sale next week. We need inventory."

Mike leaned over to Del. "She's blown," he said. "Totaled."

"Christians can't just leave people," Del snapped.

"So let me drive. I ain't one. Anyway, you left all those people back there."

"Yeah, they weren't askin' for help."

Mike had to get this portal working. He had to get over into wherever the hell it was and find Tim. Mom and Dad were gone now, but this is what they would've wanted him to do, and it was what his blood wanted him to do. You lose your twin, you lose half your soul. But how to convince Del?

"Lady," Mike said, "we need to get on. We got a mission."

"There's no mission, Mike!"

"My brother is my mission!"

"Fellas, if you need to go—"

"We need to go!"

Del did not move, and it shocked Mike to realize just how strongly he felt about this. He was going to push Del out of that seat and drive away without him if he didn't get this vehicle moving again.

But, in the end, Mike had to admit that he couldn't bust up with Del, let alone make him eat a fist or something. So the next thing he knew, he was loading fishing tackle into the Humvee.

They did six miles to a just plain pitiful little house, sad and tired and full of kids. An older boy and his dad came out and quickly unloaded the Humvee. Helping them and seeing the way they treasured this stuff that nobody would ever buy, Mike was almost moved to tears. It reminded him of

being in Afghanistan and having cold families come up to camp in the night, to huddle against the warm sides of tents and fill them with their ripe stink and the reek of 'Stan food.

Guys would kick the shit out of them through the canvas, but Mike and Tim didn't, and Del would go out and feed them, which would draw more, and he'd feed them until he ran out of damn loaves and fishes or whatever.

These were Americans, though, but it no longer felt much different.

They finished, then Del went out and got their well going by osmosis using garden hoses, which is the kind of thing he always knew how to do.

Mike let the boys look at his weapon, but not fire it. Who knew if those rounds would be needed. He kept the portal covered. No use in having to explain that damn thing, and he knew as well as any soldier that desperate people can turn nasty real fast, if they see something they think might save them.

When he had a chance, though, he looked into the portal. He was sort of hoping to see Tim, but he only saw the day over there getting slowly older, just like it was here.

Del reappeared. "Done and done," he said, satisfaction in his voice.

"Let's just get rolling, man. It's already sunset damn near, so it's sunset over there, too, and my bro is gonna be feeling mighty needful."

The first thing they saw of the Acton Clinic was a big wall topped with razor wire. There was a huge iron gate that was wide open, and as they went through it, there appeared what Mike knew at once was the most beautiful house he'd ever seen. But as they drew closer, he saw that it was partially burned out. Windows were broken. There was an ugly silence of a kind he knew all too well.

And now, as the sun set, the violet star that Colonel Manders had told them was a supernova appeared low in the northeastern sky, flooding the world in its creepy light.

When they arrived at the front of the house, Del stopped the Humvee and cut the engine. He turned to Mike. "What now?"

Mike had no idea what now. The windows of the old house were dark. It looked pretty ruined in there. But it didn't look real classified. No government warning signs, a wide-open gate, and no lights or guard units didn't exactly suggest this.

"What now is, we take a look around."

“Weapons?”

“You carry and cover, I’ll take the portal.”

“We can’t leave a weapon uncontrolled.”

“Then we pull the ammo outta mine and I’ll hold on to the bolt.”

“We might need that firepower.”

So Mike strapped on his rifle and carried the portal. The thing wasn’t heavy, and from the back it looked like a piece of canvas. But on the front, it was as slick as glass and you could go in it and run off in there, which Mike did not have the guts to do. He wanted his brother, though, and worse every minute.

The darker it got, the brighter the light from the portal appeared. Now it was looking over a glade full of grazing horses. The sun was a glow in the west, the sunset rich with gold at the horizon, then orange and yellow above it, and finally pale green fading into the blue of night. You could see plenty of stars, and Mike knew a fair amount about stars, thanks to their dad, who had a Celestron and had taught them the sky.

“How weird,” he said. He held the portal directly overhead and looked up into it, then brought it slowly down to the eastern horizon.

“The constellations are out of place.”

“Useful to know. Let’s go inside and see if we can find out why.”

Mike was transfixed. “Let me tell you . . . this sky is not right.”

“Okay! Now let’s move our asses. This can’t be safe out here, man.”

He kept moving the portal, trying to find north based on the glow on the western horizon. From the foliage he had seen when it was light there, he knew that the season was the same—early summer. So . . .

“What the hell is Draco doing *there*?”

“Dray-who doing where?”

“The constellation Draco . . . it’s way north. There’s Eltamin, and . . . Thuban. Thuban is the North Star!”

“Goddamn it, will you get your ass in gear?”

He lowered the portal. “Del,” he said, “this is just a damn amazing thing.”

“Well, *duh*!”

“No, you don’t understand what this is. Because this isn’t just some kind of window, like, into China or somewheres. Some kind of wormhole or whatever. Del, the polestar in that sky—” He tapped the edge of the portal, being careful not to touch its lethal surface. “The polestar is not Polaris, it’s

Thuban. *Thuban*, man!”

“Look, do you remember how interested I was in the telescope, which was not at all? So I am not going to know what the fuck that means, am I?”

“What it means is that this thing is a damn time machine!” He held it up. “Thuban won’t be the polestar for another twenty thousand years. When Timmy went into that thing, he crossed thousands of years into the future, Del. It’s the future in there!”

“Oh, yeah, what about the little matter of the fact that Earth is gonna be a burned-out cinder in the future?”

“The dinosaurs got torched, and we’re here. So it’s not gonna stay, like, a cinder forever.”

“Oh, man, somebody is gonna be very pissed off at us, because this thing is unbelievably classified, it has to be. The general was taking it back to the Blue Ridge for, you know, the Family, the politicians, all those rich people, the senators—”

“I know who’s down there, I seen ’em go in same as you.”

“Okay, then, we are criminals. Big-time. The whole fucking army is gonna be after us, plus the FBI, the CIA, and all’a that shit.”

“Except that doesn’t matter a shit anymore and I am not gonna stop until I get my brother back, and that is the line in the sand here, Del, so if you want to go back, that’s fine by me. Personally, I wouldn’t sell those scumbags shit on a platter, much less give ’em this thing. Find me some good folks—decent, you know—and let’s get ’em through. And get us through, and find my brother.”

Del ran a hand along the top edge of the thing, which now gleamed purple as the supernova spread its rising light.

“It’s gonna be a brave fucking guy goes through this thing first. I mean, it’s a damn miracle your brother didn’t do like the rest of ’em.”

“Drop the gun and step away from it, please.”

Del did exactly as the voice from inside the house instructed. To Mike he mouthed the words “told you.”

“Now face me. Come up onto the porch, please.”

Mike started to lift the portal, but the unmistakable snicker of a bolt being thrown on a very proficient-sounding weapon froze him. Turning slowly, he held up his hands. Side by side, he and Del walked onto the porch. After a moment, a flashlight shone in their faces. It lingered on their patches.

Whoever this was wanted to identify their unit, obviously.

“PFC Twine, please come forward.”

Del took another step closer to the door. Behind them, Mike heard movement. Somebody was taking the portal! He reacted immediately, turning to stop them.

“Freeze!”

Which Mike did. But he had seen a woman in the violet light, her long legs striding, her hair flowing back, carrying the portal like the damn thing was her own personal possession. But Tim was in there. He had to get his brother back!

“Hey, look, we come here to bring it to you,” he said. “But you gotta understand, my brother’s in it. He’s lost in there!”

There was no reaction. He could hear the woman’s footsteps fading away. He dared not try again to look. He focused his attention on the flashlight.

“We’re twins, see. So we are real close and I gotta get him outa there or go in—go over—with him. That’s what I gotta do.” He said nothing about the time machine part of it. That was probably the most secret thing about it. Guys were getting shot right and left these days. Forget the court-martial, the brig. Nowadays, you got your head blown off by a psycho general and nobody gave the slightest shit.

“Okay, Specialist Pelton, please come forward.”

Del was shaking like a terrified Chihuahua or something, which was not like Del Twine, who could chew the beard of a Taliban for lunch.

“Now what’s going to happen is I want you to come into the building. I am going to be standing aside. You will not see me. Then you will go where you’re directed.”

Del was shaking so much he looked drunk, and Mike was about to wet his pants. Maybe there was another Blue Ridge here, full of even more rich shitkickers, and they were gonna end up getting their asses tortured.

Then a match was struck ahead of them, and Mike saw that they were in a ruined hall that had once been really, really beautiful, with a sweeping staircase that led up to a mass of blackened beams where part of the roof had come in. Delicate fingers touched the match to a candle, and Mike saw a beautiful girl in the yellow light, with big eyes that looked him over dispassionately and frankly.

“Hello,” he said.

She turned and went through a dining room full of upended tables and toward a big black door. So this was it, the inner sanctum.

The windows were draped with blankets, and there were many candles. And, in their light, many faces.

Mike's first thought was, *These are civilians*. His second was that they were hurt, some of them. Then that there were a whole lot of them, maybe over a hundred, and they had to be the quietest people he had ever seen in his life.

Then, from the back, the woman who had taken the portal came in. Del sucked an awed breath, and even in flickering candlelight, Mike could see why. There was just very little question—this was about the most beautiful woman in the world. She carried the portal, which was glowing softly with starlight from the other side, and put it on an easel.

Mike said, "Lady, my brother is in there. I want you folks—" He looked around the room, tried to smile, but his smile collapsed and he was all of a sudden not a soldier. That all just went out of him, all the hardness, the long, cold nights ducking Taliban mortar shells and hating the bastards, all of that and all the misery he had endured as a virtual slave guarding the Blue Ridge, and the terror of this day—all of it just melted away.

What was left was his truth—he was a scared nineteen-year-old boy in an impossible situation, who had lost his twin brother and with him half of his own soul. He let out a long sob, then choked it back.

A man came to him, a guy in his thirties, the kind of guy who was born to command. When the guy's arm came around his shoulder, he wasn't embarrassed, not even in front of all these people. He was just tired and scared and alone.

"Come on, you two, I want to introduce you to our head of security. There's work for you here."

The two young soldiers went with David Ford, watched by many eyes, and in the candlelight, there gleamed many tears. Before them, the portal, back where it belonged, glowed with soft and beautiful light.

From his careful place of hiding, Mack also saw this. As he calculated his odds, he fingered the safety on his gun. He was sick and his burn hurt like nothing else he had ever known, but mostly he was filled with a rage that was beyond any emotion he had ever felt, a great, fiery darkness that boiled up from the center of his soul, and would drive him, he knew, both to feats even

beyond his own great skill, and to death if it was necessary to fulfill his aim, which had become very simple.

Alone, he could not get the portal to Blue Ridge, which meant that the people who deserved it were not going to get it.

So nobody else would, either.

24

THE MOON

As soon as he'd disarmed the two young soldiers and assured himself that they meant no harm, Glen had gone outside to run the perimeter. He'd lost six of his sixteen men, but that still left enough of a force to reestablish a presence on the walls. They were a lot better off with a deeper defense, even if it had some light spots.

It was as he was crossing the broad lawn that led to the front gate, which was stuck open and thus guarded now by three men, that he noticed the moon.

He stopped, then focused his full attention on it. Over millions upon millions of nights, the moon has risen in peaceful splendor. But there is a reason that her face is marked by craters so enormous that they define her very form. They are a reminder and a warning that what has happened in the past can happen again.

He decided that he needed David to see this, and returned to the rec area where the survivors were assembled.

David could see by Glen's expression that something was very wrong.

"You need to come outside."

"What's the problem?"

He nodded toward the door, and David followed.

"My God," David said as soon as he saw the moon.

"What do you think it means?"

The face of the moon was unrecognizable. That strange, shocked expression that had fascinated human beings from time immemorial was turned in a new direction.

"It's in motion," David said, "the moon is rotating."

Del and Mike had followed them out.

"Does this mean the end of the world?" Del asked.

Hardly hearing him, David watched in awe as this enormous cosmic event continued to unfold. Another object appeared in the sky, this one perhaps a

tenth the size of the moon itself. As it crossed the face, it became a black irregular shadow. Size was impossible to judge, of course, but it was easily visible, so it was huge.

Once it crossed the face, it was lost to view because it was too black to reflect sunlight.

David knew what it was. It was an immense mass of debris of some sort from the supernova. He said, "I think if it strikes the moon, we're going to see gigantic boulders thrown off. Some will fall back, but some won't and the ones that don't are headed here."

"Which means . . . what?"

"Mike, it means devastating earthquakes. Tidal waves. Maybe worse. Much worse."

As Del backed away from him, David saw a trapped animal come into his eyes.

"You think you know it all but you don't know a damn thing!"

David did not challenge him, what would be the point? His fear and his anger would mean nothing, not in the face of what was coming.

The object reappeared, dark again as it crossed the moon's face. With deceptive slowness, it arced downward. On the moon's surface, then, there was a flicker of light. A moment later dust rose in a cloud so huge that it could be seen clearly as a haze spreading across the whole face, making it go out of focus.

Then a rain of gleaming specks emerged from this haze, some of them big enough that they could be seen to be tumbling, others nothing more than additions to a star field made faint behind the endless auroras and sick, purple-pink light.

David knew that these were actually huge stones, and that they would reach Earth in the next few days. But even before then—long before then—others were going to strike, and that could start happening at any moment.

"We got a problem," Glen said. He wasn't looking at the moon, and David followed his eyes toward the distant front gate.

"This is just the beginning," David said.

"I can't stop them this time, David."

"We can dust 'em," Mike said. "Give us back our guns."

"No," David said. "You need to let this happen. Just be sure they're orderly, because there're going to be more."

The people began to hesitate, then to cluster in uneasy groups, when guards on the perimeter showed themselves.

“Go in and retrieve your weapons,” Glen told the two soldiers.

David saw men, women, and children, he saw dogs on leads, cats in carriers, people hauling suitcases and straining under heavy backpacks.

As people flooded into the compound, it became possible to observe great, long columns of them stretching off along the road as far as could be seen.

Glen called to his men, “Pull it in, stay in front of them!”

As the guards on the gate began backing up, the others came in off the walls.

Del fired his gun into the air.

“NO!” David said. “Not that.”

A woman tried to settle a barking dog, but other than that, there was silence from the whole enormous and swelling mass.

A man came forward, his hands in the air, a white handkerchief in one fist. “Please,” he said, “let our children come with you.”

“They know about the portal,” David said.

“How?” Mike asked.

“A lot more people are going to know about it. It’s going to be seen all over the world by the ones who need to see it.”

“Seen? How?”

“As time passes, it becomes more . . . I guess the best word is ‘focused.’ And the more focused it is, the more people see it.”

Mike shook his head.

“It’s hyperdimensional. It’s outside of space-time as we know it. What’s happening is that it’s growing in hyperspace, like a gigantic crystal made of time. Does that make sense to you?”

“No, Sir, it does not. But I assume it means that a whole lot of people are going to go through it.”

David drew on his now clear memories of what he’d learned in the class. “Around a million worldwide,” he said. He called to the crowd, “You’re welcome on the grounds. But the building is off limits, do not attempt to enter the building.”

To emphasize this, the security guards moved toward them in a line, arms linked. The crowd spread into the broad front garden, but there were still many more coming.

“Man, look at the moon,” Mike said. “Look at it!”

The orb was dark red from dust, and the familiar face was now gone.

What had been the dark side was now facing earth.

“Man, that sucker could be about to come out of its orbit,” Mike said. “If it hits us, we’re done.”

The last time the moon had rotated was four hundred and fifty million years ago, before even single-celled life-forms trembled in the waters. It had been struck, then, by an even larger asteroid—actually a small planet—and a huge piece of it had crashed to earth. The crater it had left remained the largest landform on earth. It is called the Pacific Ocean.

Now the whole crowd was watching, and people were coming out of the house, all looking up at the greatest cosmic spectacle that any man had ever witnessed.

From within the mass of them, there arose a female voice, clear in the cathedral silence of the moment.

“ ‘Yea, though I walk through the valley of the shadow of death, I will fear no evil.’ ” And although her tone was filled with fear and even the ragged edge of desperation, a chorus took up the lines, until by the time the final verse was uttered, it was a solemn chant, clear and determined, from many thousands of throats.

In the silence that followed, they watched as bright sparks flickered in waves across the new face of the moon.

“Jesus, it’s the fishing tackle lady,” Del said. He went into the crowd to the woman who had spoken out.

David saw that she and her husband and kids carried an extraordinary variety of angling equipment, and he thought that it might prove very useful if where they were going was as undeveloped as it appeared. So far, no matter what direction he had pointed the portal in, he hadn’t seen a sign of any sort of structure. He feared that a great many people were going to be thrown into a very primitive environment, and that was going to be a very hard situation for them to face, especially after the hellish conditions they were enduring here.

“It’s beautiful,” a voice said from behind them. David did not need to turn to know that Caroline was there. Suddenly and with great intensity, he remembered her body close to his, and her gentle, insistent ways.

“David,” she said, “I’m having a problem with the portal. It’s flickering. It

looks like it's failing somehow.”

Terror like lightning shot through him. He looked out at the crowd. “Don’t tell them,” he said, and followed her back into the building.

25

THE OMEGA POINT

Looking at it on its easel, David could see at once how it was changing. There was something dim and grainy about it now. He touched it. "It looks like a painting again," he said.

The class was clustered around it. As it turned out, they had survived the worst of the assault by hiding in the attic and ductwork of the patient wing. They had been clever about hiding, and only two lives had been lost.

"Before we moved, I thought we should wait for dawn over there," Caroline said. "I didn't expect this."

David did not say that he thought that Caroline had made a mistake. How could anybody be blamed for anything now?

He addressed the group. "We need to start getting people through. We need to do it right now."

Nobody moved.

George Noonan said, "All those people, one by one? Through this?" He shook his head.

"I don't see how we can help them," Aaron added. "Not with such a small opening."

"I think we have to," a voice replied. It was Peggy Turnbull, who had been a tomboy in the days of their class, interested only in hunting and horses. In recent years, she had become a poet. Her false psychosis had been depression. He regarded her narrow face, pale in the candlelight. How long would this delicate creature survive in the wilderness that they would soon be entering?

At that moment, there was light so bright that it glared in through the blankets that had been hung over the windows, and from outside there came a howling uproar of terror.

There followed a clap of thunder so enormous that it shattered the few remaining windows.

"Bolide," Mike said. "Big one. Hit just below the horizon, so better hold

on.”

The world began shaking.

He grabbed David. “If we can go through that thing, we need to *do it!*”

The shaking got rapidly worse. Caroline and others staggered, then she fell to her knees. As David went to her, there arose from outside a clamor of shouts, followed by the chatter of an automatic weapon.

“NO!” David shouted, but his cry was lost in the thunder of the earthquake, as the whole patient wing trembled and cracks raced up the walls. Still, though, the earthquake increased, and David threw his body over Caroline, and could practically feel the ceiling above them getting ready to give way.

“We have to get it outside,” she shouted above the din of crackling plaster and collapsing window frames.

Again light, so intense this time that heat came with it, searing, burning, their exposed skin.

The air was sucked out of David’s lungs, and he thought that he must die.

“It’s coming down,” a voice cried, and then Glen and Mike were there, and everyone was running for the doors. Glen helped them up, and Caroline took the portal.

As they went toward the door that led into the side garden, the wall collapsed before them.

“The front,” George Noonan shouted. “It’s our only chance.”

They picked their way through the rubble of the front of the house, moving in a fog of dust almost too thick to navigate at all, but then there were lights ahead, bobbing closer. There came a girl of perhaps twenty, her tired face full of sadness. David remembered her from the bus, and thought, *She has lost her future, that’s what a child is.*

An agony deeper than blood filled him, because he thought not only of her and the others outside, but all the millions who were suffering this without even the slight hope of survival represented by something like the portal.

“Help us,” the girl said, reaching out and taking David’s hand. “I buried my baby just a while ago. But I want to live. I want to live for him.”

In his heart, David felt that the baby had ascended, but he would explain it to the mother later. He found himself being led onto the front porch with its now teetering colonnade. Behind him, Caroline brought the portal and the class came with her, struggling, covered with dust, some of them nursing injuries. But nobody was screaming, and the house still stood, and the quake

was subsiding into a series of more and more distant shudders, and thuds as if a giant was walking off into the forest behind the house.

Caroline raised the portal up before the crowd. “If we stay calm,” she shouted, “if we get in line and take our time—”

Susan Denman said, “Isn’t it holographic? I remember your dad taught us that it would be.”

“I know what he said, but look at it! We need to deal with what we have.”

“But this is all wrong, then! We didn’t give our lives to save a couple of hundred people. This is supposed to be about millions!”

Had they been lied to? Were they, in fact, the most elite of the elite?

She returned to the crowd. “Let’s start now, and nobody rush forward. Just take it easy—”

Without warning, a shock passed through the earth with such force that it hurled people flat, causing the whole crowd to drop in a confusion of possessions, pets, and terrified, screaming children.

The power of it caused trees to leap out of the ground as if they were being fired from buried cannons, and the Acton mansion itself, as strongly built as it was, shuddered and kept shuddering.

People were unable to stay on their feet, and David was no exception. Struggling, falling, clawing the heaving earth, it was like being in a nightmare where you ran but went nowhere.

“Get away from it,” he cried—but then Caroline pointed, and he looked up to the great roof and saw a figure there, a man with a rifle. “Glen,” he shouted, “get that man to come down off there!”

“He’s not one of mine, David!”

But David didn’t need to be told. He had recognized Mack the Cat. Despite the gigantic shaking, Mack remained absolutely still and steady as he raised the rifle and fired down, at first, David thought, at him and Caroline. But he was not shooting at them, he was shooting at the portal, and David understood instantly that he cared only for one thing now: if he couldn’t use it, nobody would.

It took all of his effort and all of his strength, but he managed to get to his feet and to stagger along the heaving ground and throw himself onto it, pressing it against the earth beneath him. The front of it was to the ground, and the back still seemed like nothing more than canvas stretched on a frame. But then he saw a bullet hole in it, and something like starlight leaking out

onto the backing, as if the tear was oozing the blood of time.

Behind him there was a sound that was almost human, a great, grinding sigh, which for all the world sounded like the death rattle of a very old man. He turned in time to see the great mansion implode, the figure of Mack disappearing into the dust and chaos of its disintegration.

One after another, the great columns fell, and when the collapse had ended, David was struck by how very much the place resembled the rubble of an ancient Roman palace, and he felt the echo of ruins.

The dust grew as thick as the air in a cave. Around David there was now no more movement, nothing except material falling from the sky, stones, bricks, bits of furniture, and red-hot scraps of what he supposed must be a meteor that had struck close by. To the west, violet light swam in blackness. The supernova was setting. In the east, there was blood on the horizon. But the northern sky was different. The northern sky was glowing, then going dark again, then glowing more brightly.

“David, it’s damaged!”

Caroline’s eyes were fierce with panic, which surprised David. In these past few moments, he had stopped struggling. Too much was wrong, and his heart was telling him that they must fail.

“It’s clear,” Caroline cried. “Oh, my God, look at it!”

As the crowd drew closer, people coming tentatively up through the grounds, families, pets, children, the portal not only became clear again, the rip made by the bullet simply faded into the image itself.

But then something else happened, that made David’s mind go blank with amazement, as the portal also began to get larger, as if curtains were spreading or clouds parting.

Caroline no longer held it, but only stood beside it. The portal had taken on an existence of its own, spreading wider and wider until it was ten feet wide, then fifty feet, then filling the whole grounds.

Tears streamed down her face, which was transfixed with joy.

David grabbed her shoulders and looked into her blazing, triumphant eyes.

As the portal grew, it looked like a gate into heaven, leading away from the roaring, dust-choked catastrophe that surrounded them.

Like ghosts, people came out of the dust clouds, moving tentatively toward the crystal predawn that spread before them.

But they did not enter it. Instead they began throwing themselves to their

knees, pleading.

“They don’t understand,” Caroline said. “David, help them.”

He tried to raise his voice, but the dust that choked his throat made that impossible. Finally, he took a man by the shoulders and guided him toward the portal, but he shrank back.

“Don’t be afraid,” David said. He did not think any of them would be here if they bore the mark. By now most of those—the ones who were not hiding in bunkers—must surely have come to their ends. But what if he pushed this man and he burned, then what?

Before he could decide how to proceed, the light from the north came soaring above the horizon, an immense, flaming mass, the largest thing that any creature for the last half a billion years had seen in the sky of earth.

David called to the class, “Help them,” he shouted. “We have to help them!”

As a glare brighter by far than the sun flooded down from the object now speeding overhead, David tried to speak in the man’s ear, but he pulled away and ran. David knew that he must look mad, covered as he was by dust.

Still, there was no choice now, no time to waste, so he ran to a cowering family, the children so panicked that they were beyond control, the mother screaming, the father trying to shield them from the thing passing overhead. He picked up a girl of perhaps ten.

“Come on,” he said, “come with me.”

“What’s that thing?” the father shouted.

What did he mean, the thing in the sky or the portal? No time to find out. David grabbed him by the collar. “Come on, follow me!”

As he went toward the portal with the screaming girl trying to pull away from him, he felt once again heat from above, but also saw that the light was getting less bright. The gigantic meteor was not going to strike here, it was going farther south. But he couldn’t think about that now. He had reached the portal where Caroline stood with her arms outspread, calling to the crowd, telling them they could go through, in a voice that was lost in the roar of voices and the wind that had followed the meteor, and was now shaking the few trees left standing, and drawing dust up like a massive cloud of roiling smoke from the ruins of the mansion.

And now, as suddenly as it had come, the great light was gone, disappearing beneath the southern horizon, which glowed briefly with white

light, and then was once again dark.

Mike said, "It hit in the ocean."

"I know it." And they both also knew exactly what, therefore, would be coming. The elevation here was six hundred feet, which would not be nearly enough.

"What's in there?" the father asked him.

"A new world," David said, and did the only thing left for him to do, which was that he thrust the screaming, writhing little girl through the portal.

"Jesus God," the father cried, and the mother and younger brother both screamed in terror as they saw the girl inside the portal. She turned and put her hands to her head as if she was going to pull her hair out, and her face twisted into a scream that they could see but not hear. She came to the portal and threw herself against it, pressing herself and clawing at it, her face grotesque. From this side, she looked as if she was pressing herself against glass, and David understood for the first time that there was no return, and he remembered what had happened to Katrina's arm when she had tried to pull it out.

"Do not stop, do NOT try to come back," he shouted to the people crowding toward the glory of it, a sparkling dawn, enormous across the whole expanse of the lawn, concealing behind it the ruins of the house.

He took the father by the hand and said to him, "You need to help your daughter," and the father took his wife's arm and she held her son, and the three of them stepped through. A big old springer spaniel with gray dewlaps barked twice after they had gone, and jumped through behind them.

So far, none of these people showed the slightest sign of the mark, but God help any that did, should they try to go through.

Dawn was gold and clear in the east of the portal, and the family, now hand in hand, walked a short distance. The father bent down to feel the grass beneath their feet, then turned and spread his arms wide.

Along the southern horizon in this world, though, there had appeared a shimmering line, and David thought he knew what it was, and Mike certainly knew. "We just got a few minutes," he said.

Inside the portal, David saw other people appearing, coming from other directions, and realized for the first time that this place was indeed not the only one where the portal was present. Just as they had been promised that it would in the class, it had appeared all over the world.

“Your father was right,” he told Caroline. “It’s holographic.”

David thought, at this point, that he understood the mechanics of judgment. Over the many lifetimes that come and go during a great earthly cycle, we are born and born again, making choices as we go along, each time locked in physical bodies that remember little of the soul’s past and its aims, where we enact lives that either add to the weight of the soul or reduce it. Evil makes it heavy, good makes it light, and the vast number of people die, each life, a little lighter than before.

Then, as the cycle’s end approaches, the chance to be reborn anew ceases. The changes become permanent and most people are harvested to higher life. Some, who have ruined themselves, sink away, and a few remain to take the wisdom of the last cycle forward into the next.

“We got maybe ten minutes, man!” Mike said.

So David believed he understood these sacred mechanics, which was lovely, but this was no time to stand watching the spectacle and indulging his inner professor.

He raised his voice. “Get moving, everybody! Everybody! NOW! NOW!”

People stirred but were still unwilling.

“They’re scared,” Caroline said. “They still don’t understand.”

“There’s no time left!” He knew that this scene was being repeated all over the world, and many would fall by the wayside, and also that this was intended, that it fit the gigantic plan of life, and for just an instant he sensed the presence of the mind that had conceived the universe . . . and felt as if he was in the presence of a child.

Caroline stepped to the center of the portal. “We can go through,” she shouted. “Look, we can all do this!” But then she was absorbed in the milling, panicky crowd.

“Caroline!” He waded after her.

Ahead, he saw her hair, then he saw a tall, ghostly figure come to her, and she was lifted by her hair, her face distended with pain, her eyes bulging.

Against her throat, Mack held a jagged blade that had been broken off an electric hedge clipper.

26

THE LAST BREATH

Across the world, as the gigantic event reached its climax, all the treasures and wonders of history were being swept away. Some of the boulders that had broken off the moon were the size of islands, and they had begun striking Earth mercilessly. Those that hit the oceans generated waves unlike any that had been seen even during the climax of the Ice Age, black mountains of water that were now sweeping away whole nations.

London and Rio and Tokyo and Amsterdam were among the first to disappear in the maelstrom. A boulder the size of Bermuda slammed into the central Ukraine, releasing the equivalent energy of a billion hydrogen bombs and instantly vaporizing every living thing from St. Petersburg to the Black Sea.

The shock waves of the meteor impacts were so great that they completely disintegrated cities from Casablanca to Paris, and the gigantic explosions they generated made millions instantly deaf.

Whole species of animals died in an instant, herds upon the prairies, fish in the sea, and the bodies of great schools drifted to the ocean floor where they would become fossils. In millions of years, very different hands would raise them as human hands had raised the mats of fish skeletons that had died exactly the same way in the Permian extinction over two hundred million years before.

There is, indeed, nothing new under the sun.

Everyone who was not near a portal was afflicted with the stain, and they had come to understand their fate, and they cut themselves to pieces and burned themselves and ripped at themselves to remove the stain, but they could not remove the stain, and in their billions they lay writhing from their mutilations, or they ran in doomed streets, or tried to end their agony with suicide, only to discover that the death of the body was what sprung the trap. Their darkness also grew and grew, until they were reduced to a state that is darker than darkness itself, for this new skin reflected no light at all. They

were shadow people now, sweeping through the streets in despairing packs, their cries like the wind wailing on a winter night.

A series of more than fifty objects struck the Pacific, including one that sent a tsunami slamming into the coasts of Washington and Oregon, drowning Vancouver and Seattle and Portland, inundating San Francisco, and sweeping across the entire Los Angeles basin with such energy that it gushed through the mountain passes to the east, finally expending itself a hundred frothing, foaming miles into the high desert.

The people who had come to the Acton Clinic were streaming into the portal in a more orderly manner, as the members of the class moved among them, urging them forward.

Mack had dragged Caroline into the leafy shambles of some trees, and David had gone with them.

“We’re going through together,” Mack said. “The three of us.”

“Mack, it can’t work.” Mack’s body was almost entirely a shadow now, as if he was becoming a living darkness.

“Then I rip her throat out.”

Surely he could not be deceived another time. Surely he understood that the portal would not let him through.

David did the only thing he could, which was to lead Mack to the portal, which was now busy with people crossing, moving easily and quickly, ten and twenty at a time walking into what was becoming a great, wondering crowd on the other side.

There came a rumbling sound that quickly deepened, soon trembling the ground.

“Hurry,” Mack said.

David pushed a pregnant mother through. Until every one of them was safe, he would not himself go through.

On the distance, the horizon began shimmering.

“Hurry, goddamn you!”

“Go without me,” Caroline shouted against the rising thunder of the oncoming tsunami.

David pulled at people. “Everybody,” he shouted, “GO GO GO!”

As he cried out, yet another enormous light appeared in the north, this time striking the ground below the horizon. Immediately a great, bright swarm of objects rose from where it had fallen—and David thought that this was ice

dislodged from the polar cap just as it had been dislodged twelve thousand years ago by a strike on the Laurentian glacier. The icebergs would probably fall as far south now as they had then, when they had hit from the Carolinas to New Mexico, leaving, among other artifacts, the hundreds of thousands of craters of the Carolina Dells.

Finally, the last of the people were through, except for Mike and Del and Glen, who stood with him and with Caroline.

“So how do I do it?” Mack asked. Embracing Caroline tightly, he moved toward the portal. “If I burn, she burns,” he cried against the enormous, echoing thunder of the onrushing water.

David did the only thing he could think of, he exploded into Mack’s back, throwing himself against the larger man—and Del and Mike and Glen joined him, kicking him and shoving him—and then, suddenly, he was lighter and David saw, on the other side of the portal, that Caroline had come free and crossed.

Slowly Mack turned. He no longer had the blade. In fact, he no longer had the hand that had held it, but his open wrist did not pump blood. David could see in the eerie wells of his eyes the reason for this: Mack was dead. He was still moving and still thought himself alive, but this was not a living creature anymore, this dark, shifting form was a corpse.

The air began to scream and to suck them back, and even the edges of the portal trembled.

Glen turned and jumped through it, followed by Del and Mike, and Mack groaned to see them do it, and gargled deep rage in his throat, and if a corpse could utter a sound, this was what it would be like.

Mack’s remaining hand grabbed David’s throat—but David managed to twist away and half jump through the portal. Mack still held him, though, and began to pull him back, and he felt moving through the part of his body that was between the future and the past a churning coldness, as if the absolute waters of death were flooding into him.

Laughing now, Mack dragged at him, and the coldness turned to fire, and he knew that he was being sliced apart—but then felt hands grab the arm that was flailing on the far side of the portal, and felt himself being pulled.

Mack’s eyes, a moment ago empty with death, now sparkled with hatred. Despite his injuries and the shadow that had enveloped him, he remained strong. In fact, his grip was like iron, and David thought, *This is what a*

demon is. He struggled with all his might, but he could not overcome Mack's steel strength.

Behind Mack, though, he saw what appeared to be a great, dark cliff, and he knew that this was the wave, and it was here, now.

They were both swept up in it and smashed as if by the fist of a giant against the portal—and suddenly, there was silence.

David scrambled to his feet. The wave was hitting, and he braced himself. He did not understand why this had happened to him. Was there some sort of mistake? He had not judged himself evil, had not marked himself . . . for it is always a choice, to accept the mark of the beast. We are our own judges, but we always choose correctly.

David now found himself face-to-face with something that was no longer even a human form. Mack had disappeared entirely, into the deepest darkness he had ever seen or known possible, a darkness as deep as all the sins of the world, radiating evil like brutal heat. Embedded in it he could see the billions of faces of those who had lost their souls, the faces distended by what must have been truly terrible screams, but the screams were silent.

They seemed to be taken up, somehow, into the wave, but it wasn't affecting him, he was watching it as if through glass—and then he understood: he was looking *back in time*, through the portal.

Then he was racing through the portal, and the old Earth, the ruined Earth, was becoming smaller and smaller, dwindling faster and faster, disappearing so totally that it was as if it had never been.

What had hit the portal was not only a gigantic tidal wave, it was also a wave in hyperspace, capturing in its dark waters all who had made the commitment to evil. Him, it had simply pushed away—and through the portal.

And then he saw a face appear, much closer than the others, the eyes terrible in their desperation, the mouth distorted by great agony, the hands clawing through time, clawing and burning, and despite all his effort and the will of a demon, Mack the Cat became outlined with fire and then became fire, but still the face screamed, still the agony went on.

As David watched in sorrow and loathing, Mack transformed from the dark-cloaked figure he had been on the roof of the clinic into another person entirely, a man wearing the uniform of some sort of officer, black, the chest spread with medals. And then David saw the red armband with the black

swastika, and then the body changed again, this time wearing the splendid suit of a wealthy nineteenth-century businessman, and then it wore the flowing robes of a cardinal, and then the changes flickered past so fast that it was impossible to see anything except that David knew that he was actually watching Mack's whole time on Earth move past, lifetime after lifetime of evil.

Seeing this caused stirrings of memory from his own long-past time, but the memories were not evil, they were haunting and wonderful and full of nostalgia, loves, and hard work; they were lives he would be proud to live again.

Mack was washed away into the blackness then, a spark instantly absorbed into what was at once a tidal wave containing a whole ocean, and a wave of purest evil.

The darkness itself began to recede, until there was nothing left of the past in the portal, which itself shuddered, then faded, and slipped into memory.

David found himself looking out across a broad meadow that ended in trees, and beyond the trees, the vine-choked pink debris of a city, its ruined towers glowing in the dawn.

The ruins were very, very old, and they looked dark and haunted with the terrors of the last cycle. But they must be filled with useful materials, even with shelter.

But where was everybody else? In fact, where was he?

"David?"

Her! He'd come through the portal backward, that was all, and he whirled around and there she stood, her body framed by the golden light of dawn, as the sun, now placid again, rose behind her.

All across the meadow, sitting silently and watching the new sun rise, were the people they had rescued, and more; in fact, there were thousands upon thousands in this verdant new world.

There was a man with her, and they were hand in hand, and a knife cut to the frightened heart of David's love.

"David, don't you remember your old teacher?" the man asked.

Flushed with relief, then with the joy of meeting again after all these years, he took the shoulders of Charles Light, looked into his eyes, and the happiness of those days came flooding back, and with it all the memories that had remained lost, not the important things, which he had already

remembered, but the less important ones, the way the desks were arranged, how exciting it was to understand the marvels they were being taught. And, above all, he remembered Caroline.

They had not been lovers in any adult sense, but in an instant he recaptured all the innocent happiness he had known with her, and remembered the promises they had made.

She stood before him, her eyes cast down, the sunlight flaming in her hair, a picture of dizzying sensuality and innocence all mixed together, and in that moment he truly understood how perfectly the human spirit is paralleled by the personalities of the old gods, and he saw her as the Lady of the Starry Skirt, at once an earthy, sweaty, soft woman and a star keeper, her body belonging to youth and the promise of the womb, her soul to the heavens.

He could not speak. He was beyond speech.

She came into his arms, and when he embraced her, she felt as soft as a cloud. Her eyes regarded him, looking in amazement at his face, then fluttering closed in the cathedral of their kiss.

For a moment, the kiss was the center of the universe—and then there came a hand to his shoulder.

They slipped away from one another. Charles Light was smiling, but then his expression became more serious.

“We have to organize them,” he said. “We have to get this thing rolling.”

Arm in arm, he and Caroline headed back toward the great crowd, where children were now running and dogs cavorting, and people were relaying down to the nearby river to get water.

“There’s a lot of work to do,” David said.

“That’s why we’re here,” a voice replied. It was Del, and he and Mike were arm in arm with a third soldier. They had found Tim.

Tim was appalled by the magnitude of the situation. All these people without food, without shelter.

“I don’t know where to start!”

Caroline squeezed his hand. “Of course you do.”

Which, he realized, was true. All of them did. They knew in their blood why they were still here on Earth, because they had wanted to participate in the building of the next great cycle.

But they weren’t the sort of people who were likely to think on such things. If you put one of them in a room, they would clean the room. Give

them a file, and they would organize it, or an empty field on a summer morning and they would think ahead to winter, and start a house.

They were already stirring among themselves, seeking aim and direction, looking for work to do.

The immeasurably conscious presence that is the ascended wing of mankind was never wrong and could not be wrong. These were the ones who would put their shoulders to their task, and create the foundation of a new and better world, that would emerge out of the compassion that was common to all of their hearts, and it would be better than the old world, because in it there would be no more souls devoted to greed and all its cruelties. The last phase of history had been designed to cause them to reveal themselves, so that they could be removed forever. Mankind was not going to experience another cycle of evil and ruin, but this time would work on ecstasy, so that, somewhere along the vast halls of time, when this age ended, everyone would ascend and the species, finally, would leave the physical world entirely behind.

Eventually, other earthly species would gain intelligence, but that would not be for a billion and a half years, and by then even the least trace of human works would be gone, and mankind would have joined the journey into ecstasy which, like heat, has no upper limit.

In the deep redoubts that Mack had striven so to save, death had been slow, for they had been built to last, and to the people imprisoned within there came bitter hatred and violence, and finally madness, and they all sank away, all of those people, into the same darkness that had consumed Mack.

The god with whom David had been identified from his childhood, the great plumed serpent Quetzalcoatl, manifested in him not as a grand presence, but rather as a practical one, concerned less about the mysteries of time and the grandeur of its cycles, and more about making sure the water was fit to drink and shelter could be found, and food gathered during the plenitude of summer.

As some got water, others were already scouring the shrubs for berries, others heading in groups toward the ruined city, to find what might be of use there.

From across a far hill, another group appeared, people waving, and here and there joyous reunions took place, wife running to husband, child to mother. Over the whole of the restored Earth of all those thousands of years

in the future, this same scene was being repeated.

But it would not be all joy. There would be struggle and suffering here. This was going to be hard.

David would do his best at his job, and become famous among them for his tirelessness, but time would wear on him as it does on us all, and one day he would leave them, and his beloved Caroline, and the family that they would make in a small house that was yet to be built, in a village that was not yet, on this first day, even an idea.

The secret of Quetzalcoatl's power is that he is a humble god.

In many stories and religious traditions, and even in the science of the lost world, this time had been predicted. But there was one statement about it that turned out to be the clearest and the most profoundly true, which had been made over two thousand years before the old cycle had ended.

It had been uttered on a little hill in Palestine, by a tired man with a matted beard, the last public practitioner of the lost science. He was an itinerant Jewish carpenter and sometime preacher who had met an old Egyptian priest, who had given him white powder gold of the true form, confected at one of the great time temples, all of which were dedicated to Hathor. This one was in the Sinai, and it was here that he was taught the secret laws of reality, which enabled him to raise the dead and heal the sick, and see clearly along the dim halls of time.

He had gone far in his studies, and seen much. And so it was that there came a day when he saw a chance to speak a sermon that would contain the deepest human meaning that there is. So he set forth, in a few hoarsely shouted verses on a hot afternoon, the whole journey of the human soul, and the inner meaning of mankind.

In that sermon was contained the most important prophecy ever made—ten words shouted out while people ate and chatted, and listened with the same casual wonder they might give to a bird of surpassing voice, or a street-corner mountebank with a deck of cards.

After he had been speaking for a while, he saw that he was not gaining their undivided attention, and he therefore tried this: "Blessed are the poor in spirit: for theirs is the kingdom of heaven." He had shouted it at them, but still there was little attention paid. What did it mean, anyway? They did not understand that he spoke not of the spiritually impoverished, but of those who share in spirit the suffering of the poor, and give of themselves to lift others.

He tried again, crying out, “Blessed are they that mourn: for they shall be comforted.” This had immediately regained the attention of the crowd. In that hard era, when the Jews were chained to the Roman yoke, there was not one of them who did not have reason to mourn.

So he had what he needed, the crucial moment of attention into which he would utter words that would define a future that was still over twelve thousand years away.

He then cried out, “Blessed are the meek: for they shall inherit the earth.”

That had brought silence and questioning glances, then a confused murmur.

Soon after, he had gone down and taken a meal of bread and oil, and some thick wine. Nobody had recorded the words, but they had stayed in many hearts, and, in time, were given to the ages.

Today, though, those of whom they had been spoken had no time to think on them. And they weren’t thinkers, anyway, most of them. They were workers, and the sun was full up and the day was growing warm, and there was a very great deal to be done.

AUTHOR'S NOTE

THE WORLD OF *THE OMEGA POINT*

What if the world really did end? What would we do? How would the human species come to a close—in terror and chaos, or according to some sort of hidden plan?

If there is a plan, there will also be chaos, that's clear enough. No matter how sublime the plan, people are likely to be quite upset, so I am happy to report that I don't have any specific information that the world will end in 2012, 2020, or, for that matter, anytime soon. But I can assure you that, one day, for one reason or another, planet Earth will become unable to sustain human life, and there are people, or will be people, who will face this distressing inevitability.

So, what happens? Is it all simply random or is there some sort of meaning? Is there an afterlife, perhaps, or some other place we can go, or is our species condemned to join all the others who have emerged here, lived for a while, then died out and been forgotten?

Or, put another way, is the universe essentially random and chaotic, but so large that the emergence of conscious life here and there is more or less inevitable?

Modern science says that human beings are biological machines and that we emerged out of a long period of evolution that is mechanical and random. To make matters even more dolorous, the fossil record demonstrates with terrifying eloquence that gigantic, devastating extinctions are the norm on our innocent-seeming little planet. Add to that the fact that modern science says that death is the end of everything, and a pretty dreary picture emerges.

However, modern science's vision is quite a new approach to the meaning of life, and there are reasons—a few—that enable legitimate speculation that it may not be correct. My own life has unfolded so far outside of what

science tells us that we should expect, I really do wonder if we might not be having, as we live, quite a different experience from what appears to be the case, and one that is only partially explained by a mechanistic view.

Over the course of this little essay, I'll tell some of the stories from my own experience that suggest—at least to me—that life may be much more than it seems, and there may be good reason for our inability to perceive the whole truth of it. Of course, I would be the last person to assert that I'm right and the entire scientific establishment is wrong.

In fact, I'm more than a little embarrassed at ending up so far outside of the mainstream. In terms of getting things like book reviews, for example, it's been quite inconvenient. But I love quiet, and being an outsider certainly brings plenty of that. It also brings undeserved opprobrium and spittle-hazed rage. In my career, I have encountered many pumping carotids, and I confess to taking an evil pleasure in inducing bluster and outrage.

I'm annoying and, unfortunately, I enjoy this. But there's a larger reason. I don't think that I'm wrong about the marvels that have filled my life, and I do want others to enjoy them, as well, and to find the same delightfully light and deep meaning that they have brought me.

It is incredibly freeing to know—as, in my heart, I do—that human life is indeed part of a vast continuum of consciousness that persists after death, and that is woven into the extraordinary glory that is intelligent life in the universe.

So I'm full of joy, because I have had, and am having, a marvelous adventure that suggests that the secular and essentially mechanical vision of ourselves that has become a shorthand and core belief in scientific and intellectual circles, is not true, and that what is true about us is so far beyond even the most optimistic imaginings of the ancients that we actually live on a hidden frontier. Just beyond the lowering clouds that choke the present horizon lies a world of wonders, and the electrifying discovery of what we truly are.

I don't think that, at any time in recorded history, we have been right about our true nature. Certainly, the old Western theocracy that arose out of the dismal Council of Nicaea in A.D. 325 is wrong, and probably even more wrong than modern science.

I suppose that leaves me more or less out on a limb—or, more properly, a plank. Without science or religion, I certainly have no established allies.

Maybe secret societies could take up my cause, but so far, no cigar.

It's quite fun on my plank. Out here, if you jump you may just fly. Out here, we are a delicious mystery that goes far beyond the intricacies of physical life, but is also divorced from the guilty weight of conventional religion.

I do not think that we live in the highest civilization ever known, and I think that the modern intellectual enterprise has failed in two fundamental ways. It has been unable, or unwilling, to look at the past objectively, and it has been unable to devise any means to detect the existence of the soul as a part of the physical universe—a measurement that, I think, must be possible. If I am correct, it must also be the foundation of a much truer science than we now know.

I think that the modern failure to realize that energy can itself be conscious is as fundamental to our progress as was the failure of the ancient world to understand the potential of steam power.

Around A.D. 120, Heron of Alexandria invented a device called the aeolipile, a simple steam engine, which was used to open the doors of a temple, and also showed up in Roman playrooms as a toy. The potential of the technology was never understood by the Roman world. Without any ability to see the soul, and penetrate into its reality with technology, modern science is at least as far from understanding the truth about human life as the Romans were from understanding steam power.

If the experience gained from lives like mine is at all true, then we have two forms, one that is active and embedded in the physical body, and another that is contemplative and lives on when the body dies, in an energetic state. I believe that consciousness cycles back and forth between the two, but both are essentially part of physical reality. The soul is not in any way outside of nature, but human death is a transformation into another form, in the same way that a caterpillar becomes a butterfly.

To me, the physical world is far richer than would be suggested by a mechanistic model of reality. I do not believe that religious traditions such as that of resurrection, which emerges in earliest times in the form of the story of Osiris, and continues to the promise of Christ, involve the supernatural at all. They are about living in the physical world in a way that leads to the preservation of individuality when the body dies and consciousness enters the energetic state.

From Osiris to Christ, I wonder if the resurrection stories might not reflect an ancient science of the soul that was lost as our increasing focus on the material world caused us to become soul-blind and thus god-blind and therefore also blind to the most vividly alive aspect of our own being?

As a result of this change in focus, we no longer live to die, we live to live. On the surface, this seems nicer, of course. But that's only on the surface. In that it assumes that death has no meaning, it also assumes that life has no meaning.

I think that it has led to a situation where most of us are completely unprepared for death. So we enter the other world in confusion, clinging to the residue of our physical lives. It has also led us to our fantastic obsession with material existence, and our addictive habits of consumption.

It's interesting to contemplate just how awkward it must be for some people when they arrive on the other side. Christians who find no Saint Peter, or Muslims who are not greeted by dancing virgins—except, perhaps, for the women. Or people like Jean-Paul Sartre or, say, Nietzsche, whose embarrassment must have been quite fantastic. The truth, I suspect, is that on dying we enter another kind of life, but it is, also, ordinary life. Chiefly, it offers an immeasurably detailed reconstruction of our physical experience that can enable us to rise above the whole process altogether and, seeing ourselves with true objectivity, ascend into unimagined realms.

This is what is happening in *The Omega Point*, to the vast numbers of people who are ascending into the enigmatic higher reality. David Ford never quite understands what is happening to them, or why it doesn't happen to him, so he soldiers on in his elegantly unsure way, trying to find the sense of his own very different mission.

Certain parts of the Bible, and traditions such as the ancient Egyptian religion, suggest that there may once have been more objective understanding of this other reality, and that it may have been addressed with the lost science of the soul. Among the relevant documents in the Bible, the Gospels are a chronicle of how to live to die in a state of compassion and forgiveness that enables us to let go of the concerns of physical life and ascend, rather than cling to them and end up eventually returning to this state—a fate which cannot possibly be considered as other than a pretty mawkish outcome, once one has become aware of the greater potential that one might have realized.

This is why, in *The Omega Point*, Christ is seen as a scientist. I think that's

exactly what he was, and his miracles reflect not supernatural powers but scientific knowledge of the way the energetic world actually works, and an ability to apply its principles to physical reality, thus effecting cure and defying death.

Developing this assertion, it would therefore be probable that he learned his techniques during the time he spent in Egypt, and that he was specifically chosen because of his Davidic heritage, by practitioners who understood that their own world was coming to an end, and were seeking to bequeath their knowledge to the future. When the Romans tacked that sign on his cross, KING OF THE JEWS, they weren't just being sardonic but also stating a fact: he was the heir to the House of David and thus the mortal enemy of Rome's client-king Herod.

If this knowledge still existed in Jesus' time, it must have already been quite isolated from the central and public stream of Egyptian culture. For example, what we know of Egyptian religion suggests, in its elaborate use of magical implements and ritual, that it was enacting something that had lost its true meaning, somewhat like what happens when children who have observed an adult drive a car play at doing the same thing.

As a child I did this—unfortunately, though, with a real car. I was no more effective at driving down the street at the age of ten than the Egyptians were, I suspect, at engaging conscious energy with their rituals.

During World War II, natives in the mountains of New Guinea were exposed to Western technology for the first time when the U.S. Air Force began building bases in the area. When they saw planes landing and disgorging an unimaginable cornucopia of supplies, they responded by using sympathetic magic. They cleared jungle air strips. They built airplanes out of bamboo and leaves, and wove objects that looked to them like the refrigerators the airmen had. Then they devised ritual movements and sounds that to them mimicked the movements of the U.S. personnel back and forth between the airplanes and the refrigerators.

But when they opened the doors to their “refrigerators,” no beer came out, and I speculate that this could be what was happening when Egyptians concluded their rituals, which mimicked the operations of a much older lost science, but were no more functional than bamboo airplanes.

All was not lost, though, not entirely. Here and there, some traditions had retained at least some of that knowledge, and later in the discussion we will

speculate about who and where.

Nevertheless, for the most part, the science that once gave these rituals potency had been lost, I believe, in a phenomenal upheaval that swamped the world thousands of years before Egyptian civilization even appeared.

Around twelve thousand years ago, the last Ice Age ended. And, as is not uncommon on planet Earth, this was a violent event. As the Laurentide glacier melted, sea levels around the world rose precipitately, and other upheavals caused further chaos.

There is enigmatic evidence—necessarily ignored by modern science—that a much more potent human presence existed then, probably hugging coastlines which are now submerged to a depth of hundreds of feet, and in some cases actually swept into the abyssal deep.

At the same time that this civilization was flourishing in the lowlands of the late Pleistocene, in the highlands of that world, human life was primitive. But go into a mountainous region today. Almost everywhere, you will find there the poorest people in the world. And where are our greatest cities? Hugging the coasts. If the future had only the remains of life in the Himalayas and the Andes to tell us about this world, it would not realize that our civilization had even existed.

Many books have been published about the evidence of a lost civilization, but I would like to mention here just one telling piece of it that is rarely referred to, but which I find fascinating. It is that there are seventeen ancient ritual sites and cities around the world, all situated on the same great circle, with a southern axis point that falls about five hundred miles from the coast of Antarctica, and a northern axis in British Columbia roughly fifteen hundred miles from the present geographic North Pole.

In itself, it is remarkable that places as diverse as the first Sumerian city, Ur, the Giza Plateau, Easter Island, Nazca, and the ancient Indian city of Mohenjo Daro would all be on the same great circle, but they are.

Modern science has no real explanation for this, except that it must have been just random happenstance. But surely that isn't enough of an answer. It's satisfactory only if you want to cling to cherished theories and ignore evidence.

I no longer ignore evidence. The last time I did that, I ended up being dragged out of my house by aliens. The evidence that such things could happen was abundant, but I assumed that it was absurd. So what might have

been a fascinating meeting turned into a screaming confusion for me. It could have been more civilized, surely, but I will never forget the ghastly shock that coursed through me a few days later when my doctor said, “You’ve been raped.” It was so humiliating that it took me twenty years to actually utter those words. To this day, I suffer pain from the injury I sustained on that night, which I mentioned only in passing in *Communion* as the “rectal probe” that has made me such a laughingstock. Rape and laughter don’t actually go together all that well, though, at least not to the victim.

Had I been aware that such things could happen, I would certainly have been more calm, and perhaps the experience would have been less chaotic. Over the eleven years of contact that followed, I ended up in a sort of school, the lessons of which were glimpses into the greater reality in which we actually live. In short, what started out pretty badly became the most precious of treasures. Even the fear became entertaining and profoundly instructive, especially when I realized that the outré little beings I have called “the visitors” found me every bit as terrifying as I did them.

It’s too bad that science has not acknowledged their presence, because, even without direct contact with them, there is a wealth of physical evidence available for study. But they don’t fit our theories of the cosmos. According to modern theory, it is impossible for there to be physical travel across the universe because the distances are too great. But there is also no evidence of where they are from. Maybe they are far stranger even than aliens from another planet.

As our rational culture has matured, it has also become, as is inevitable, more decadent. In science, this decadence finds expression in the fact that we’ve slipped into the trap of putting theory before evidence, which is the core reason that we are missing so much of what is real all around us.

Given the evidence of all the sites along that great circle, for example, it is also likely that, in very ancient times, somebody knew that the Earth was round, had an awareness of its size, was in planetwide communication, and intentionally built these sites on a great circle measured from the physical North and South poles, which, during the cataclysm, moved when the earth’s crust shifted on its mantle.

If such a movement were to have taken place, as Charles Hapgood first postulated and Rand Flem-Ath developed in his book *When the Sky Fell*, the consequences would have been fantastic destruction, a catastrophe beyond

imagining.

But what's so unusual about that? This is planet Earth, where catastrophes beyond imagining happen pretty darned frequently.

An earth movement that great and that sudden would have changed the planet's coastlines—as, in fact, it did. But underwater archaeology is in its infancy. We have barely explored the ancient coastlines of the planet, but what we have explored, as Graham Hancock demonstrates in his book *Underworld*, seems to be populated with enigmatic ruins.

Great catastrophes are ordinary events on Earth, and even mass extinctions are relatively common. Much more common are the smaller disasters that are not classifiable as mass extinctions, and there have been at least two of these just in the past fifteen thousand years.

My story refers to the infamous upheaval that ended the Ice Age 12,600 years ago.

Whether or not a sequel to that disaster is building now is unknown, but certainly something is causing persistent changes in our solar system, and has been for about forty years, and possibly longer.

A Dr. Alexey Dimitriev allegedly published an article in 1997 suggesting that charged particles were entering the solar system from the outside, resulting in changes to all bodies within the solar system. I say “allegedly” because I have been unable to contact Dr. Dimitriev, and there is some evidence that the paper may be a fabrication.

But, in this case, that isn't important. *The Omega Point* is fiction and, frankly, I would be flabbergasted if the world in 2020 was anything like what appears in the book. At the same time, though, more than one ancient calendar points to the immediate future as being a time of great change.

Whether Dimitriev's paper is real or not, there is evidence of increased planetary heating not only on Earth, but also on Mars and Jupiter. Planetologists observed an approximate 1 degree Fahrenheit warming on Mars between 1970 and 1990, and in recent years the Martian polar cap has retreated. An increase in the number of red spots of Jupiter, and other signs on various planetary bodies and moons in our solar system, point to the widespread presence of this phenomenon.

As of this writing, the sun is also acting in an unusual manner, but rather than increasing solar activity, which would be expected if it was being bombarded from the outside, it has become unexpectedly quiet.

At the same time, the amount of observed cometary and asteroid activity in the solar system may have been increasing. Because the amount of observation and the sensitivity of instruments is also increasing, it's difficult to be certain. But when the Shoemaker-Levy comet struck Jupiter in 1994, it was thought to be a thousand-year event. Just fifteen years later, though, another large object struck Jupiter, surprising astronomers. It would never have been noticed, except that the scar it left was photographed by an amateur astronomer. A day before the object's scar was seen on Jupiter on July 20, 2009, a similar scar appeared on Venus. Whether this was the result of an impact is not known, but if it was, then the object that produced it was a large one. Had it struck Earth on July 20 instead of Venus, it would have resulted in a massive planetary catastrophe very much like the one that overtook us 12,600 years ago.

So, are we more than ordinarily exposed to an asteroid strike right now? Truthfully, nobody can be certain, but observation does suggest that there is more debris in the solar system just now.

In my story, by the time 2020 has come around, the amount of material entering it has increased exponentially from where it was in 2012, and as a result the sun has begun to be affected by it.

It is difficult to imagine the scale of what is happening, certainly for those living through it in the story, but as author and readers, we can visualize matters more clearly. A supernova emits two forms of material. The first is a radiation burst that moves at about 90 percent of the speed of light. This generally spreads through space as a gigantic expanding ball of energy. The second is a mass of debris, which moves much more slowly and unevenly, with the densest parts expanding most slowly.

As a result, this expanding cloud has an irregular front, and it is this fact that gives rise to the fundamental premise of the story, that our solar system passed through one node of it 12,600 years ago, and is now entering another.

While there is no certain evidence that this is actually happening, something must be causing the changes we are seeing in the solar system at the present time.

One thing has become clear in the past few years: 12,600 years ago, there was indeed a tremendous upheaval on planet Earth. It hit North America the hardest, and was responsible for the mass extinctions that took place then, including the destruction of the entire human population of North America

that existed at that time, the Clovis culture, and the extinction of no fewer than thirty-five animal genera, including most large animals in North America, such as the American horse, the mammoth, the mastodon, the American camel, and many others.

There are dozens of myths about a time of flooding and upheaval in the world, some of which may date to this very early period.

On May 23, 2007, in the General Assembly of the American Geophysical Union in Acapulco, Mexico, the work of a multiinstitutional twenty-six-member team proposed the theory that just such an impact caused the upheaval that ended the last Ice Age.

They presented substantial evidence of the event, and three of them also published a popular book on the subject, *The Cycle of Cosmic Catastrophes*, which lays out their evidence for the nonscientific reader.

But the event that took place 12,600 years ago was hardly unique in Earth's history. In fact, it is simply one of a continuum of such events.

Approximately 5,200 years ago something extraordinary caused the collapse of Mediterranean civilizations from archaic Greece to Egypt. Terrible drought struck the area. At the same time, in Peru, leafy plants were frozen so quickly that they did not wither—in other words, in a matter of seconds, like frozen food. Subsequently they were covered over by glaciers that remain intact even now.

The climate there went from temperate to extremely cold in a matter of minutes or even seconds, and has remained extremely cold ever since in the area where Professor Lonnie Thompson of the Byrd Polar Research Institute studies these glaciers, in the Andean highlands.

During the same period a man running through an alpine meadow in the Tyrol was overtaken by a blizzard and frozen. He—and the meadow—were then covered by a glacier that melted enough to expose his remains only in 1991, when the mummified form of Otzi the Ice Man was discovered lying in the frost of the retreating glacier.

What sort of event would cause changes this sudden and yet long lasting across the globe? The simple answer is that the universe is a very messy place and even though Earth happens to be packed with a mind-boggling mass of sensitive, intelligent creatures who urgently seek to survive, it is still subject to arbitrary and random catastrophes, and—in terms of geologic time—they are relatively frequent.

This book started with a thought: what if it happens? What if the world really does end for us?

Teresa McDonald of the University of Kansas Natural History Museum says that 99.9 percent of all species that have ever lived are extinct right now, so extinction is certainly the norm—and, in fact, unless we happen to establish ourselves somewhere else in the universe, our time on planet Earth will sooner or later run out. And not only that, there is, in fact, no way at all to determine when this might happen.

If an object that we happen to be able to see collides with the planet, we might have some warning, but there are many perils on Earth and in space—in fact, most—that will come as complete surprises.

But was that always true, and need it still be true?

Conventional modern wisdom asserts that time is immutable, reality is limited to what we can measure now, and that both evolution and civilization display rigid progressions occasionally punctuated by unanticipated changes, which are entirely unpredictable.

However, that may not be entirely true, and it could be very far from true. As an example, there are buried in our past suggestions that somebody understood the world very differently from the way we do today, and perhaps saw a structure in the development of human civilization to which we have become blind.

One of the oddest facts about our past is the number of very long-term calendars that exist, the most famous of which are the Zodiac and the Mayan Long Count calendar. The reason that this is odd is that our modern understanding of the ancient world leaves no room for the need for such calendars, let alone any ability to create them. For example, creating the Zodiac required understanding the precession of the equinoxes, which must necessarily involve thousands of years of observation as the Earth slowly gyrates and the stars its poles point at gradually change. Who could have made such long-term observations and recorded them? No civilization in recorded history has lasted long enough to create such a record.

But then again, our understanding of the past does not have any room in it for the building of cities and sacred sites along the same great circle around the planet, either.

One bit of evidence that cannot be disputed is that the authors of both the Old and New Testaments knew very well which signs of the Zodiac the

books were being written under, and wove this knowledge into their texts.

The Old Testament was written under the sign of Aries, the ram, and the ram is mentioned seventy-two times in it, more than any other animal. But, of course, that could be dismissed as a coincidence.

But not when one realizes that the New Testament was written at the beginning of the next 2,300-year astrological cycle, Pisces, and its primary symbol, even more than the cross, is that of the fish. Jesus is the Fisher of Men. He gathers his apostles from among fishermen. Among early Christians, the universal symbol of recognition was the fish.

The Old Testament that was written under Aries also reflects the demanding, stubborn characteristics of that sign, the exemplar of which is the dour personality of its governing deity, Yahweh. Similarly, Jesus with his message of compassion is characteristically Piscean. In addition, Pisces the fish swims in nurturing, supportive water, so if we are Pisces, then Earth is our water, providing us with everything we need to live.

But not always. At present, we are leaving Pisces and entering Aquarius, and the water that has sustained us so long is being poured out. And indeed, Earth is already being plagued by droughts. In 2008, the southeastern United States came close to a catastrophic drought. In 2009, droughts afflicted much of Asia, parts of Europe and Africa, Mexico and the American Southwest, and the potential for catastrophic drought was reaching an extreme in Australia.

In the February 28, 2009, issue of *The New Scientist*, it was suggested that a 4-degree Centigrade rise in planetary temperatures is likely by the end of the century, with the result that huge areas of Earth, including much of the United States, Africa, India, the Middle East, and most of the Amazon, are going to become much too dry to sustain the populations that now live in those areas. According to James Lovelock, the author of *The Gaia Hypothesis*, the situation is likely to lead to something approaching a 95 percent reduction in the human population of Earth, and, given present worldwide temperature changes, the predicted increase is probably already inevitable. In addition, as ocean currents slow, there could be serious and unpredictable shorter-term weather events, such as ferocious storms and, as the temperature of the planet becomes more even, the slowing and eventual stopping of essential air circulation.

Were air circulation to stop, dozens of cities across the planet would

become unlivable in a matter of weeks.

Obviously, this is a horrific prognosis for the future of man, but there is a different way of looking at it, and in *The Omega Point*, the journey of David Ford, Caroline Light, and the class expresses the importance of ways of thinking that are completely new, and bear no reference to the entire system of values and way of life that have led us to the peril in which we now find ourselves.

The first signs of human industrial activity on Earth become visible during the middle centuries of the Roman Empire, when residue from smelting activities in Britain and Spain was deposited on glaciers in Greenland.

This is also when there was a fundamental change in the way human beings conceived of their lives. For the first time, material well-being became more important to a large social class that also became divorced from spiritual awareness. Previously, material opulence had been part of the ritual presence of leaderships that were both temporal and spiritual. During the great Roman peace, however, there came into being a class of people who were more or less irreligious, and whose interests focused primarily on material wealth. This secular class was focused on material consumption and longevity, not on preparing for an afterlife in which they no longer had any belief. And the more devoted to the material world they became, the less real the soul seemed to them.

After Rome collapsed, the Western world returned to theocracy, but it was not a healthy theocracy. Christ taught the triumph of resurrection, but in A.D. 325, the Council of Nicaea changed the focus of the church from joy at Christ's triumph over death to guilt at our—probably entirely fictional—birth into sin. Prior to Nicaea, Christ had often been portrayed as carrying a magician's wand that promised new life. Now, he was portrayed as suffering on a cross that was our fault.

This change was made for political reasons, because guilty people can be controlled by those who claim the power of forgiveness. As a result Christianity sank into the long trance of guilt and retribution from which it is just beginning to emerge.

Growing wealth in the fifteenth century caused the reemergence of a secular community, followed by a revolt against the oppression of the church. This, in turn, led to a second and more formidable rise of materialism. And now we are at the climax of material civilization. Most of us are either soul

blind or passive to the idea that our lives may matter in some larger way. Most of us live to live, and struggle against death as if it was an absolute and final end, whether we have cherished beliefs about an afterlife or not. We have, in short, gone soul blind, which is another of the core themes of the book.

Largely because of extraordinary, unstoppable population growth, we find ourselves in a situation where only the most heroic efforts, probably already beyond both our capacity and our will, would enable the planet to continue to sustain us.

We are almost exactly in the place anyone watching the stately movement of the Zodiac would expect us to be, and whether anything unusual happens precisely on December 21, 2012, or not, the Mayan Long Count calendar has also been uncannily accurate in predicting vast change during this period.

It is strange enough that these calendars even exist, but far stranger is the fact that they are in any way at all accurate. Even stranger is the fact that there exists knowledge of a great plan of some sort concealed in the Bible.

If modern perceptions of the human past did not make it seem impossible, there would be no question but that people in earlier times possessed deeper understanding of the human situation than we do, and recorded their understanding in long count calendars that can have no purpose other than to mark great cycles of life that are hidden to the modern mind.

In fact, somebody in the past did understand. The Maya understood. The creators of the Zodiac understood. The authors of the Bible understood. But we no longer understand.

But what did they understand, and why did they understand it? Is it possible that they had skills that we no longer possess, such as the skill that is recovered by Herbert Acton and Bartholomew Light in the book, in the jungles of Guatemala?

This gets us to one of the central elements in the story: white powder gold. The existence of this substance was first brought to my attention by an old friend, Laurence Gardner, in his book *Lost Secrets of the Sacred Ark*, which basically asks the question, was the Ark of the Covenant an artifact of an ancient science now lost, and, if so, does it have any relevance now?

Gardner describes a substance the Egyptians called *mfkzt* and the Hebrews *shem*. It was believed to confer great powers of concentration and physical health, and to enable users to enter the world of the gods and confer with

these higher powers. It is depicted in reliefs as a conical white substance, and was apparently created under extremely high heat. A quantity of it was unearthed at a dig on Mount Horeb in the Sinai peninsula by Sir Flinders Petrie in 1904.

Sir Flinders found this substance while excavating the only Egyptian temple ever found outside Egypt. In the 270-foot-long temple he discovered a metallurgist's workshop, and hieroglyphs indicating that the site had been in active use for fifteen hundred years, up to the reign of Akhenaton in 1350 B.C. Most of what Petrie found of the white substance was abandoned at the site and blew away, and both the sample he returned to England and his notes have been lost.

The actual formula for this substance remains lost to history, but it may have been accidentally rediscovered by a farmer called David Hudson while he was attempting to restore some land to arability in Arizona. He was a wealthy and politically conservative man, and had no interest in or awareness of ancient alchemical formulations. The soil was full of salt, so he was using sulfuric acid on it when he noticed that black and red material was appearing in the soil that he could not identify. When it dried, it exploded with a silent flash and disappeared, taking the paper on which he had put it with it.

Naturally, he was intrigued. He soon discovered that the flash did not cause a change of air pressure. So it was a release of light, not an explosion. After crucible reduction, he was left with beads of gold and silver that shattered like glass. But there is no alloy of these elements that is that brittle. So what did he have?

By heating, he eventually created a substance that was a white powder, which was 56 percent lighter than the original material. This could be explained by the material partly volatilizing away, but when he heated it to the point that it fused into the glass container where it was being tested, all of its weight returned.

He had found a very unusual substance, one that Dr. Hal Puthoff, of the Austin Institute for Advanced Studies, said "bends" space and time.

Interestingly, there is some evidence that colloidal gold does help people with rheumatoid arthritis, and can even raise I.Q., but this is different from white powder gold.

Because the modern substance doesn't seem to be as dramatically efficacious as the ancient one, in *The Omega Point* some of the ancient

substance must be acquired first before the material that is used in the story can have its full effect.

This effect involves the ability to see events outside of time, before they have actually happened, as well as the ability to physically move into the past and the future.

Now, one would assume that such things are fiction. My problem with that is that I have actually done them. I've gone into the past and into the future both, and have often had physical experience of events before they happened.

From time to time I've read things in newspapers, only to look again a moment later and find them gone—and then to discover them weeks later in the latest edition of the same paper. Sadly, these little visions have not involved the stock market tables. An annoyance, to be sure.

The first of these involved the Claude Chabrol film, *A Girl Cut in Two*. I saw a listing of it in the *Los Angeles Times* in June of 2008, looked up and said to my wife, "There's a new Chabrol movie. We've got to go." I then turned back to the paper to find out where it was playing, and the listing had completely disappeared. There was no mention of it in the paper at all. So I went online and discovered that it had not yet been released.

Six weeks later, in August, I saw the same listing again. Naturally we went to the film.

But what had happened? Well, truthfully, I'm not at all sure. It was as if I read a listing from August in June. Since then, this has happened to me three or four times.

It is far from the most extraordinary thing that has ever happened to me involving time. The most amazing of these events took place in March of 1983, when we lived on LaGuardia Place in Manhattan. One rainy Saturday morning, I was crossing Houston Street on the way to the bank when I suddenly heard a terrific creaking and sloshing and clip-clopping in front of me. This symphony passed me and turned the corner, and I turned with it, to see an immense wagon come into view as if out of nowhere. It was stacked with barrels and there was a strong smell of pickles. High atop it sat a man wrapped in a black leather apron. It was being drawn by a huge horse, I assume a dray horse.

Of course, I thought that it was one of the Budweiser Clydesdales, but it was worn and dirty, and the smell was very clearly not beer.

As it passed up the street, I found that LaGuardia Place had changed

entirely. Gone was the street I knew, with modern co-op towers on the northeast side of LaGuardia and Houston. Instead, a man in a derby stood across the street, much closer and in front of a row of smaller buildings. He shouted something, and at the same moment, there was movement to my right, and I turned to see a small woman dressed entirely in black go skittering away from me. Then I saw, coming up what in 1983 was West Broadway, a group of five or six riders on gorgeous horses, looking like some sort of equestrian team.

I became aware of the fact that this was no longer the New York of 1983, but that, somehow, I was seeing the same street corner in the past. I noticed an odd, curved curb at my feet, then a bit of paper in it. I thought, if I get that paper, that'll prove what's happening. But as I bent down, something that felt like ice-cold water seemed to pour right through my body, and with it came a loneliness so intense that, had it persisted for more than a few moments, it might have driven me mad.

The thought came that, if I touched that paper, I would remain here forever, and I froze. Slowly, the sharp smell of coal and the denser stench of manure dissipated. Then the sound of cars returned. When I looked up, everything seemed normal.

Forgetting about the bank, I rushed home, frightened that something was terribly wrong and I might never see my family again. This was before my 1985 close encounter, so I was totally unprepared for anything in the least unusual.

It never happened quite like that again, but I never forgot it. I went to the library and read endless microfiche records of old newspapers, looking for classified ads that might have been placed by people trapped in time. I didn't find anything.

These experiences, though, have led me to think that we are not fixed in time, and that we don't really need any technology more exotic than the human body to move through it.

In *The Omega Point*, movement through time has been developed to an art and a science, and the time machine involved is a mixture of both. It is a scientific device, in that the colors mixed for it contain chemical properties that enable movement through time. But it is also created with love and artistry, and it is the combination of science and art that confers its amazing properties on it.

This is because it is constructed using not the arid principles of modern science, but those of the lost science of the soul, which combines, in my novel and perhaps in reality, a rigorous physical technology with a carefully controlled and immeasurably potent emotional state, the love that Caroline Light needs so badly to succeed, and gets, after a struggle, when her beloved David finally remembers what they shared as children.

Christian principles of love, compassion, and forgiveness are explored throughout the book, and it is love, in the end, that confers on mankind the ability to move on into time, and reestablish our presence in the physical world.

I am not a conventional Christian, but I am certainly a believer in the intelligence and compassionate insights of Jesus, and the meaning of his resurrection. I reject the idea that it was done to free us from some sort of sin. It was an example of what happens when a person lives an ethical life that feeds the soul, and dies without attachment to life's hungers.

One of the most ancient of all human ideas is that there is a judgment after death. The Egyptians saw the soul as being weighed, and in my story, greed, cruelty, and arrogance weigh souls down to the point that, when the body dies, the soul literally drops out of it and ends up imprisoned in the depths of the earth, remaining there, presumably, until the end of time. Other souls—the great majority—which are light enough to rise, ascend into a state that is never described in the book, because its mystery has never really been explored, and perhaps cannot be explored.

So far, the plan described in *The Omega Point* mirrors the one in the Book of Revelation. But then it takes a turn in another direction. In the Sermon on the Mount, which is probably the most profound statement ever made, there is mention that the meek will inherit the earth.

To me, this is promise of some surcease from the ages-long torment that the ordinary human being has experienced at the hands of the more aggressive and powerful. In my story, the great of the world are left hiding in their holes to die, I suppose, a lingering death. The innocent majority ascend, as well as those chosen for the special work of constructing a new home for mankind to move forward in time and continue our ages-long journey toward ecstasy, but this time without the cruel, the avaricious, and the arrogant, only with those who are fully human.

When I was a young man, I had the extraordinary privilege of being an

occasional student of P. L. Travers, who was deeply involved in esoteric work. She taught a powerful ethics of the meek, whom she used to call “the little cottagers,” and this ethic was present not only in her talks but also in the letters I received from her. It affected me profoundly, and I have never forgotten that it is, in the end, the humble man at the bottom of the world, the one who is entirely overlooked by the grand and the powerful, who is forced into war, starved, left to die, ignored, and broken on the wheel of the avarice of the great, who emerges into immortality while, as Jesus put it so succinctly, those who display their excellence receive their reward in life.

Is there really a plan for us, one that brings justice to this unjust world? When one thinks of all the ages of oppression and injustice that define our history, one can only hope that, somewhere in time, the promise of the Sermon on the Mount will indeed be fulfilled. If so, then the earth will wind up in the hands of those who will cherish her, riding her in joy and respect, into the reaches of time.

DEDICATION

I dedicate this book to the memory of Anne Strieber. We evolved our approach to the super natural together. She contributed three foundational insights. The first is that the close encounter experience is something unknown and must be kept in question. Second, that the question must be deepened and can only be resolved by scientific and academic inquiry. It must no longer be dismissed with assumptions, beliefs, and premature theorizing. Third, that, after reading in excess of two hundred thousand testaments from the public about close encounter experiences, she was able to say with authority that close encounters with apparent aliens often include perceptions of the dead as well.

It is on her rigorous questioning and tireless inquiry that my own insights depend.

—WHITLEY STRIEBER

I dedicate this book to Julie Kripal, whose magnetic hands, night visitations, and general spiritual mojo have opened my mind, and body, to new levels of energy, possibility, and being.

—JEFF KRIPAL

Instead of shunning the darkness, we can face straight into it with an open mind. When we do that, the unknown changes. Fearful things become understandable, and a truth is suggested: the enigmatic presence of the human mind winks back from the dark.

WHITLEY STRIEBER, *COMMUNION*

The eye with which I see God is the same eye with which God sees me.

MEISTER ECKHART (1260–1327)

ACKNOWLEDGMENTS

We would like to acknowledge the help and support of our editor, Mitch Horowitz, without whose enthusiasm and careful shepherding this book could never have reached a point of useful focus. Additionally, we had the help and support of Adam Crabtree, David Halperin, Toby Johnson, Brent Landau, Glenn Magee, Paul Marshall, Leigh J. McCloskey, Diana Walsh Pasulka, Alex Rotaru, David Gordon White, Haeyoung Seong, and two of Jeff's colleagues (who are given pseudonyms or superheroic "secret identities" here), whose patient reading of our manuscript, insights, and super natural experiences helped us immeasurably.

The Already World

JEFF

They took a little hair off my head and cut my nails. I asked questions in my mind, but before I could verbalize them, they answered back very softly but directly, “We are making a new you.” I asked him, “Are you like angels?” and he replied, “Not as you have been taught.”

AN ANONYMOUS LETTER WRITER IN *THE COMMUNION LETTERS*

I am afraid of this book. There is something about it, something explosive and new. It is not a neutral book. It is an apocalypse of thought waiting for you, the reader, to actualize.

The world will not really end as you turn these pages, of course. Not the real one anyway. Much might well be lost—we hope. You should know that. But more, much more—really everything—might well be gained. In a few words, this is a book about a new world, the next world that has already arrived, that has always been here, whether we have recognized its presence or not.

In the pages that follow, Whitley and I explore the proposal that we are all embedded in a much larger, fiercely alive and richly conscious reality that is only, at best, indirectly addressed by everything that the human species has ever thought or believed. The religions, for example, have been attempts to

look at and engage this conscious reality as if it were primarily concerned with us, but we don't really know that, and in fact we cannot know that. Not at least yet.

Our proposal? To venture outside the present houses of faith without forgetting those family homes or leaving the spirit behind. To embrace science in a new way, by promoting a more generous vision of the full human experience of reality that can embrace and ponder "more stuff," especially the wild, fantastic stuff that shouts, glows, and zaps in these pages. And, above all, to understand, to *really* understand that we are already and always have been living in a super natural world, that we ourselves are highly evolved prisms or mediums of this super nature coming into consciousness, and that many of the things that we are constantly told are impossible are in fact not only possible but also the whispered secrets of what we are, where we are, and why we are here. This is a book about that Already World.

To my knowledge, nothing like it has ever been attempted. Here, one of the most widely read figures in UFO and abduction literature and a seasoned (take that either way) professor of comparative religion sit down to encounter each other's thought—seriously and respectfully. As the author of the twentieth century's most influential and intimate description of an abduction event, *Communion* (1987), Whitley sets on our shared table his visions of alien spectral figures that seemed at once physical and not physical, at once a thing and a thought, at once sexual and spiritual, at once traumatic and ecstatic. I bring the practices of the professional study of religion to the table in order to explain what historians of religion have written about these paradoxical things (it turns out, *a lot*) and how we might make sense of them without surrendering our critical faculties and understandable skepticism. We work in tandem. We read each other. We rewrite our chapters in the light of what the other has written. In the process, we rewrite ourselves.

The text is at once intimate and professional, both in content and form. Whitley, far from being what he has been portrayed in the media—that is, an advocate for belief in alien abduction—reveals himself in his chapters as a questioning and self-critical nonreligious but spiritual man, telling his story as he has lived it, as a journey through unexplained but extremely powerful perceptions. I take the role of the trained comparativist, framing my responses to Whitley's narrative through the tools of my trade. I introduce technical terms. I use footnotes. I talk history. I play the professor. I

demonstrate how the modern experience of the alien coming down from the sky *can* be compared to the ancient experience of the god descending from the heavens, but not in the ways that are commonly accepted today: “Not as you have been taught,” as the letter writer (and now you, as the reader of that letter) is telepathically told in our opening epigraph.

Most of all, I engage Whitley’s thought as an intuitive set of comparative and interpretive practices. I demonstrate how Whitley has, all along, been offering us a most radical theory of religion and the human spirit. I make explicit the principles that are implicit in his writing and give these the names and nuances that have been developed in the study of religion over the last two hundred years. Whitley in turn challenges me and, by extension, my field with experienced realities that few intellectuals are prepared to admit exist, much less are willing to study and try to understand: things like the imagination’s ability to materialize its content in the physical environment, a home invasion and an implant, the human soul as a real form of energy that is not dependent on the body-brain for its existence, and an emergent mythology that is not entirely imaginary.

As my initial invocation of an apocalypse of thought makes clear, neither of us takes this conversation lightly. Both of us have known professional rejection, religious hate campaigns, censorship, and outright character slander for what we have sincerely thought out loud in the public square. We know perfectly well that what we think cannot be slotted into the present order of scientific knowledge and religious belief. We will not pretend otherwise.

Nevertheless, we want to speak clearly and respectfully to both the open-minded skeptic and the open-minded believer, as we think both have something important to bring to the table. And are we not all believers and skeptics at different moments? The final hope and intended result of this book is not yet another set of pat answers or clear conclusions about strange things. We have no such easy or settled answers. Our intentions for this book are more humble. We want to model a different sort of conversation about the importance of experienced anomalies, one that is more evenhanded, more careful, more intellectually generous, and so more useful.

We want to shift the conversation.

What to Say on a Plane

You have probably heard of Whitley Strieber and know something about what he does. You probably have no idea who I am or what I do. I am not at all sure what to tell you, either.

It is always a problem. I am on a plane. The person sitting next to me asks, “So what do you do?” I quietly groan inside, as I know this will not go well. “I am a professor.” That’s true enough, but it is also a dodge. I have no idea why I keep using it, since it *never* works. The next question is always the same: “So what do you teach?” I’ve tried everything: “religion” (not really true), “comparative religion” (a little better), “the history of religions” (a very accurate but uncommon expression) and, finally, “really weird shit” (very accurate, sometimes funny, and immediately understandable). But nothing works in the end. The last response simply elicits a request to be a bit more precise about the weirdness. I eventually have to utter the word “religion.” The moment I do, the person puts me, consciously or unconsciously, in a box of his or her choice: the box of the preacher, the believer, or the kook. There is nowhere to go now. The conversation has ended, and “religion” has killed it.

Still, there is an answer to the question of what I do. *I compare things*. To be more precise, as a historian of religions, I compare fantastic states of mind and energy and their symbolic expressions in human history, literature, religion, and art.

These fantastic expressions often appear to issue from, point to, or even try to conjure some other realm or dimension. As such, they commonly violate our assumptions about how the world works. First and foremost, they commonly challenge our most basic assumption that the human being is a subject “in here” looking at a world “out there.” Something might zap the body with bizarre energies that in turn affects technology in the immediate environment: the inside now literally resonates with the outside. Or the person might become endowed—temporarily or permanently—with astonishing psychical capacities, X-Men style, that provide accurate information about the empirical world, say, the precise details of a brother’s future funeral, the distant location of a husband killed in a car accident, or the

moment-by-moment development of a neighborhood fire miles away in another city.¹

The historical record is as vast as it is consistent with respect to these real-world superpowers. In every culture of which we have some adequate historical record, we encounter spiritually radiated individuals with miraculous healing capacities, telepathic gifts (what was once called the “reading of hearts”), precognitive abilities (traditionally known as divination or prophecy), clairvoyance (seeing objects or events at a distance in space or time), even, believe it or not, apparent literal floating or flight (levitation). Forget Hollywood. Forget the comic books. Superpowers have been with us for millennia, and they are *real* in the simple sense that people experience them all the time and have reported their effects throughout history.

Some of the remembered effects of these fantastic states of mind and energy have been taken up by extremely elaborate social, political, and artistic processes and have been fashioned by communities into mythical, ritual, and institutional complexes that have fundamentally changed human history. We call these “religions.”

Back to the plane and my imagined conversation partner. I suppose I do not really compare these later complexes, these “religions.” Rather, I collect and compare the earlier building blocks, the anomalous events or extraordinary experiences that may (or may not) eventually lead to a religious belief or institution.² These anomalous building blocks, these tiny personal religions before religion, are historical facts, as real and as important as any other recurring historical fact. *They happen*. What they actually *are* is quite another matter. But here is the thing. If you resist the temptation to believe these events (that is, provide them with some definite religious category, judgment, or interpretation) but instead collect them, arrange them into patterns, and put them all on a flat, fair table to analyze, they remain “super” enough. But they no longer appear to be so odd, and they are certainly no longer “anecdotal,” as the debunkers like to label them (as if that intellectual cop-out explains anything at all). Quite the opposite, these super states begin to look like universal, if always morphing, attributes of a shared human mindspace. They begin to look, well, *natural*.

And that is what I really do. I compare fantastic states of mind and energy in order to catch a glimpse of our own super nature, of our own super

natural world.

I wish I could say that on a plane.

Meeting Whitley

I first met Whitley in a Walmart in western Pennsylvania. Well, okay, it wasn't really Whitley. It was one of his books, which I saw near the checkout counter. It was probably around 1995 or so, so it was most likely one of his nonfiction books reflecting back on the *Communion* phenomenon. At this point I had no real interest in the book, in the subject of alien abductions, or in the broader UFO phenomenon. None of these things registered in my mind as potential objects of interest, much less of systematic study and professional analysis.

That all changed around 2009 or so, when I picked up *Communion* at the recommendation of a number of colleagues who learned that I was working on a book on the paranormal and popular culture. *Communion*, of course, is the book that recounts Whitley's experience of what he calls "the visitors" during the Christmas holidays of 1985.

What struck me about the book were the various ways that Whitley was engaging my own professional discipline in order to make sense of his traumatic openings and bizarre visions. Basically, he was reading his own abduction experiences by comparing them to similar accounts in the broader history of religions. Out of existential necessity and the transcendent traumas of his own immediate experience, he was implicitly, intuitively practicing the comparative study of religion.

I decided to look and listen. I reminded myself that, as a historian of religions interested in comparative mystical literature, especially of the erotic sort (this is what I wrote about for twenty years), I had some responsibility to do exactly this. After all, if *Communion* is not a piece of modern erotic mystical literature, then I do not know what it is. I'll explain why in due time.

But there was more. It also seemed obvious to me that, *whatever* the ultimate nature of Whitley's experiences, one thing was certain: these types of extreme events lie at the neurological, psychological, perhaps even electromagnetic origins of many basic religious beliefs that are distributed around the world and have become the building blocks of the religions

themselves for millennia. I am thinking here, for example, of the countless mystical encounters with “light,” “fire,” “radiance,” or “power,” of the magical or parapsychological capacities attributed to shamans and religious prodigies, or the widespread belief in a separable soul and its ability to leave the body. The latter is an especially common experience that has led in turn to countless belief systems around the immortality or reincarnation of the soul and its various subtle bodies or spiritual “vehicles.” If one is interested in how religions develop, then one should be keenly interested in exactly these sorts of extreme experiences, wherever one finds them.

I found them in Whitley. Gradually, over the last five years, I have come to consider him and *Communion* as litmus tests for my field. I have decided that if we, as scholars of religion, cannot take this text seriously, if we cannot interpret it in some satisfying fashion, if we cannot make some sense of this man’s honest descriptions of his traumatic, transcendent experiences, then we have no business trying to understand his spiritual ancestors in the historical record. We either put up here, or we shut up there.

I decided to put up.

The Wastebasket Problem

My engagement with Whitley is also part of a conscious research strategy. In his pioneering book *UFOs: Operation Trojan Horse* (1970), John Keel encouraged us almost a half-century ago to stop focusing on the light shows in the sky and start looking closely at the effects that these phenomena have on the witnesses and contactees. The real meaning and purpose of the UFO phenomenon, Keel felt, is not in some machine in the sky. It is in the people who encounter these strange lights and are transformed by them. *The secret of contact lies in the contactee.*

As a historian of religions, I am committed to the human context of any and all religious experience. Whatever the ultimate origin of such events might be, we know of *no* religious experience, scriptural text, or revelation that did not come through a human being or human community. The UFO phenomenon, of course, much like the human experience of the gods and revelation (indeed, *as* another human experience of the gods and revelation), might end up having something fundamental to do with the nonhuman, the

superhuman, or the future-human. That remains to be seen. But, as researchers, we must begin somewhere, and it is better to begin with what one does know and can study than with what one does not know and cannot study.

Which leads me to “the wastebasket problem.”³ Something like the UFO phenomenon is not a single thing. It is a broad set of things that are constantly being confused and mixed up. It is a “wastebasket” category, by which I mean that “UFO” is an umbrella term that encodes a particular cold war military history and encompasses very diverse historical facts, institutions, and experiential events.

Under this broad umbrella, for example, we find: millennia-old folklore currents, particularly around the abductions and otherworlds of faerie lore, as famously pointed out by Jacques Vallee; the physiological condition of sleep paralysis and what my colleague David Hufford calls the “supernatural assault”; elements of traditional Catholic and now Evangelical demonology and angelology; various ancient Gnostic and early modern esoteric teachings; more recent Theosophical and New Age beliefs and channeling practices (significantly, it appears that the early UFO contactee communities of the 1950s helped shape the earlier language of the “channel,” from medical clairvoyant Edgar Cayce, into its contemporary use⁴); real secret military projects in multiple countries; U.S. intelligence misinformation campaigns; faked crashes and orchestrated hoaxes; a few modern UFO religions and at least one suicide cult (Heaven’s Gate); culturally filtered encounters with balls of apparently conscious plasmalike light variously interpreted as ghost riders, souls, witches, and now UFOs; near-death experiences involving encounters with similar conscious light forms and subsequent “electrified” human bodies that affect electronics and electrical equipment in the environment; a whole range of parapsychological phenomena, including and especially telepathy; perceptual mistakes involving natural meteorological and astronomical phenomena and top-secret military technology; hard to dismiss physical sightings by individuals and large groups, including military professionals and government officials;⁵ the stranger details of modern apparitions of the Virgin Mary, some of which eerily reproduce the specific behavior of flying saucers; psychedelia of various sorts, especially around the “little people” and hyperdimensional “elves” of DMT (dimethyltryptamine)

and Amazonian ayahuasca shamanism; and literally—and this is no exaggeration—hundreds of thousands of individual contact and abduction experiences, often in bed and often heavily sexualized.

Are all of these things really the same thing? No. Are they somehow nevertheless related? Sometimes. So how do we determine which is which, what belongs where, what to compare with what in order to get where? What should be on our table, for whose interests, and toward what goal or purpose?

To take the most obvious example, it is often assumed that the “things seen in the sky” have some relationship to the occult erotic encounters in bed with various discarnate beings. But this, in fact, is not at all clear. These two sets of events *can* be related within a particular narrative or mythical framework, but this does not require any universal causal relationship between the two, as if the former were somehow always causing the latter. Maybe in some cases they are related. Maybe in others they are not. But certainly not all things seen in the sky are related to all things seen and experienced in the abduction literature.

The UFO phenomenon is confusing, then, first and foremost because we are using a single *very* loose comparative category to collect, classify, and interpret what are probably completely different things. That some of the things in the wastebasket (say, the military disinformation campaigns) appear to be actively mimicking and dissimulating some of the other things in the wastebasket (say, the genuine unexplained aerial phenomena) hardly helps the matter. It only shakes up the wastebasket and makes it messier and more confused.

There is a way forward, though, and we will take it here. That way forward consists of (a) acknowledging the obvious presence of various military-, intelligence-, and security-state measures at work in the cold war history of the UFO phenomenon (the acronym *does*, after all, come from the American military), but (b) setting these aside in order to move beyond and past them to the much older and deeper roots of the encounters in the global history of mystical and esoteric literature. This simple move solves many problems all at once. It takes us out of areas that this author has no authority over, no knowledge of, and no interest in. It also cleans up *a lot* on our table. Moreover, it allows us to focus on those subjects that we really do know something about and that we can actually study. Here all of those subjects crystallize in a single subject: Whitley Strieber.

How (Not) to Control What's on the Table

There are two basic problems anyone must confront when one attempts to make some sense of this fantastic material. And they come at the reader from opposite directions.

From the first direction, which is the more elite and formidable challenge, one confronts the ideological debunker (as opposed to the fair and open-minded skeptic), standard scientist, or conventional materialist who seeks to protect a flatland materialist worldview by simply *keeping off the table* all of the fantastic stuff that suggests that we are living in a super natural world that is anything but flat. There are many protective strategies employed here. Five of the most common are: (1) the automatic conflation or unconscious identification of science with materialist interpretations of science; (2) the invocation of the adjective “anecdotal” to dismiss these events as somehow meaningless and not part of the real empirical experienced world; (3) a naive understanding of mind that classifies all visionary phenomena as simple “imaginary” products of brain matter (without the slightest clue how this works); (4) the public shaming of sincere and serious people, from all walks of life, who see or say otherwise; and, related to the last, (5) a certain historical amnesia with respect to all of those scientists and intellectuals who have been fascinated by the unexplained and have seen these phenomena not as meaningless anecdotes to dismiss and demean but as important clues to a future superscience.

At the end of the day, though, most of these objections boil down to a simple (and simplistic) attempt *to control what is on the table* so that the only permissible evidence left there is that evidence that supports the materialist assumptions. It is very easy to explain all of reality if you get to define what that “all” is. It is very easy to explain everything on the table if you have just taken off the table everything that you cannot explain.

Nevertheless, Whitley and I consider the materialist objections to be serious objections. They are certainly the most successful objections. Accordingly, we take them seriously, and we will be addressing them at considerable length as we proceed with our conversation.

How (Not) to Compare What's on the Table

So that is the first basic problem. It will take the book to answer it adequately. There is another problem that can be dealt with more quickly. From the second direction, one confronts the true believer who naively literalizes or mechanizes the UFO visionary encounters and so further confuses what is on the table. Intellectually speaking, this second problem is not as formidable as the first, but it is nevertheless important to address and understand, since it, too, has worked to prevent any adequate public conversation.

This book is my public engagement with what I have elsewhere called the comparative practices of popular culture. By the latter expression, I mean those comparisons performed by individuals who are not professionally trained to compare across cultures and times.⁶ I have learned a great deal from these writers. I am grateful, particularly for how they often venture into ideas and areas that no professional historian would dare go, not at least in public. I love that about them.

Having said that, there are other aspects of the comparative practices of popular culture that make me wince, or groan, and that need to be challenged, or at least qualified and better nuanced. I am thinking in particular of two basic ways that individuals have been comparing the ufological material for the last half-century or so. Both are understandable strategies, but both are also flawed. We will need to talk about them in these pages, and we cannot talk about them if they do not have names. So let us call these two strategies *reductive comparison* and *religious comparison*.

Reductive comparison can be pictured as a straight arrow moving from right to left, that is, from a present worldview to a past one. Religious comparison can be thought of as an equally straight arrow moving from the left to the right, that is, from a past worldview to a present one. As the reversed arrow imagery suggests, these two comparative practices are really not so different from each other. Which is another way of saying that they make the same mistake, if in opposite directions.

Here is how.

Reductive comparison is best exemplified in figures like Erich von Däniken, author of *Chariots of the Gods?* (1968), and his followers. This

kind of comparison uncritically assumes the truth and completeness of the present Western worldview and so reads all religious phenomena of the past as misinterpretations of what can only be properly understood from the modern Western scientific worldview. The comparison is “reductive” in the sense that it reduces the surface or mistaken truths of the past worldview to the fuller and deeper truth of the present worldview.

The modern Western worldview has been dominated for the last century or so (a mere blink or wink in the bigger picture) by what has been called “instrumental reason,” so named because it wants to turn everything into an instrument or technology. This worldview is materialistic and mechanistic, that is, it insists that all of reality is nothing but matter (that’s the materialism part), and that this matter operates through machinelike mathematical laws (that’s the mechanism part). The same worldview also commonly asserts that the *only* reliable way to know something about reality is through the scientific method and, more specifically, through mathematics. If something cannot be turned into an object or “thing,” replicated and controlled in a laboratory, and measured (that is, assigned a number or mathematical form), it cannot be considered real and so does not deserve our attention or respect. That is a bit of an exaggeration, but not much of one.

The worldview of conventional science, technology, and instrumental reason, of course, is an extremely powerful and useful one. I am by no means against any of this. Quite the opposite. But what is useful is not at all the same thing as what is. Where things go wrong, then, is when individuals take this very modern and very practical way of knowing something about the world and assume that it represents the *whole* world.

Things go more badly still when individuals (who have no training in history or the study of religion) project these very recent (and no doubt very temporary) assumptions backward into the distant past and advance highly speculative mechanistic and materialistic scenarios. So the universally attested phenomena of magic—whereby a mental event “in here” is astonishingly correlated with a physical event “out there”—becomes nothing more than the misinterpreted effects of an advanced technology. Gods descending from the sky to bestow cultural or practical knowledge become ancient astronauts. Chinese dragons become misperceived spaceships. Mayan funerary art illustrates a rocket ship taking off. And so on. In each case, a religious expression is “reduced” to a distorted technological or material fact.

On the surface, these comparisons are provocative and even sometimes attractive, since the connection that they draw between ancient gods and the modern UFO phenomenon is in fact a plausible one. There *are* some genuinely uncanny comparisons to be drawn here. Still, the way that this approach handles ancient religious texts and artifacts, that is, as relatively unproblematic records of real historical events (records which few if any of the reductive comparativists can actually read in their original languages) is extremely naive.

Moreover, and more seriously still, the *direction* and *meaning* of the connections and comparisons drawn are far from clear or obvious. I mean, why read ancient religious texts through the prism of the UFO as ultra-modern machine? Why not read modern UFO encounters through the prism of ancient religious texts, that is, as discarnate souls, modern gods, or revelation events? In the end, there is no good reason to assume that we just happen to be living in the historical moment that has the privileged view of things. Indeed, there is every clear and good reason to assume that this is not the case.

Religious comparisons—best exemplified in the writing of various Evangelical and fundamentalist authors who interpret UFOs and aliens as portents of the end of the world and/or as demons—make the exact opposite comparative move. They uncritically assume the truth and completeness of a past worldview (in this case, a diverse collection of ancient Near Eastern cultures embedded in the biblical texts) and read all the UFO phenomena of the present from these past mythical and religious assumptions.

The ancient biblical worldview was dominated by the assumed presence of invading spirits and demons, which functioned as the standard explanation at that time for disease and mental illness. Hence possession was understood to be the cause of the illness and exorcism was the cure. More problematic still, such demons also entered the early Christian practices of “comparing religions.” In these early comparative practices of popular culture, the gods of other peoples and cultures were not genuine gods or sincere expressions of some greater God. They were demons. They were evil. These demonic readings, then, made good emotional sense of the destructive aspects of disease and mental illness, but they also functioned as a way of literally demonizing other religious communities. This same demonic reading of other

people's religious experiences would also lead to later historical horrors, like the early modern persecution of witches in Europe and colonial America.

Unfortunately, that is not an exaggeration at all.

Having said all of that, there are aspects of both the reductive and religious comparisons that are attractive and that actually work to our benefit in particular contexts.

To take a single example (we will get to others in the pages that follow), it *is* remarkable and surely significant that particular religious visions of the past look like visions of some kind of living machine or conscious technology.⁷ The famous vision of Ezekiel in the first few chapters of the biblical book of the same name is a very good example. The Jewish traditions have understood those chapters as revealed descriptions of a divine "chariot" and have made them central to their own versions of the mystical life, hence the "chariot mysticism" of ancient Judaism. But, clearly, whatever the prophet saw within his own "abduction" experience, it was no chariot. Not even close. Any honest reader can see that, immediately. Unsurprisingly, the biblical book itself never uses the word "chariot."

It is also worth keeping in mind here that the Jewish tradition has long recognized that the first chapters of Ezekiel are among the strangest and most dangerous chapters in the entire Hebrew Bible. Moreover, it has often sought to restrict access to them, particularly among the young and unprepared. There is even a well-known rabbinic text that tells about a child who accidentally read these chapters and was consumed by fire that burst from the holy pages. We need not be Jewish or Hebrew readers to detect an important lesson there.

But even with the conscious machines of the history of religions we have to be very careful. Something like the very traditional Jewish (mis)metaphor of the chariot, after all, should give us deep pause, as the rabbis, kabbalists, and ancient readers who invoked it were doing more or less what the modern reductive comparisons are doing today. They were taking the cutting-edge technology of their own place and time (in their case, the chariot) and reading it into an extraordinary visionary scene where it really does not work or belong. Clearly, when individuals invoke "spaceships," "ancient astronauts," and "extraterrestrials" today (all aspects of our present modernist culture and science-fiction literature) to describe

past visionary events, they are doing the same thing. Basically, they are invoking chariots. They are drawing the same straight arrow from their own relative present to some past event or text. They are misreading the past through the lens of the present. They are doing something similar, of course, when they read modern UFO encounters as ultramodern machines. Here they are misreading the present through the lens of the present.

And although the overwhelming consensus of scholarship on the Hebrew Bible is that the first few chapters of Ezekiel record an actual reported vision, do we need to be reminded that a text is not the same thing as a historical event, that stories in texts, even biblical texts, often never happened at all?

The religious comparisons can also be helpful, particularly to the extent that they work to challenge the simplistic technological readings of the reductive comparisons. The latter “nuts and bolts” readings of UFOs (whereby the UFO is a physical, objective machine), for example, inevitably cherry pick the ufological literature and concentrate on those encounters or sightings that look very much like technological encounters. Many of them indeed do.

But then what to do with the simple facts that these things in the sky do things that no machine can do, that they behave more like thoughts than things? And what to do with the little and big humanoids and, as John Keel continuously reminded us in order to *really* mess things up, the hairy and winged monsters often seen in association with the crafts? And this is before we get to the elaborate descriptions of the humanoids’ apparent abilities to walk through walls, float, read minds, paralyze people, disappear into thin air, and so on. Are not all of these abilities traditional magical powers? And are not all of these powers common features of the gods in cultures like ancient Greece and traditional Hindu India?⁸ In other words, these encounters *do* look like religious encounters. The religious comparisons, like the reductive comparisons, have a real point.

But the question remains: Which way do we shoot the arrow of comparison and interpretation?

The Future of the Past

The short answer is: “both ways.”

The longer answer is: “it’s complicated.”

The truth is that the comparative practices that Whitley and I will be performing in the pages that follow are neither purely reductive nor religious. We will privilege neither our modern world’s materialism and mechanisms nor the mythical and religious assumptions of some past worldview, since all of these are clearly relative to their place and time, *as is our own*. It is precisely this acute awareness of the relativity of any perspective, of *any* point in space-time, that makes things so complicated and rich.

We will draw comparative lines between the past and the present, then, but we will “shoot the arrow both ways.” By doing this, we will allow the religious comparisons to challenge the reductive ones, and we will allow the reductive comparisons to challenge the religious ones. But we will privilege neither. If we need a visual image here, we might replace our two straight arrows with a time loop circling back and forth as it moves up and forward in a kind of spiraling progression. Not a straight arrow but an upward spiral, then.

Elsewhere, I have written of “the future of the past” to capture this progressive spiraling model of historical thinking and interpretation.⁹ By this paradoxical expression, I mean that we need to come to terms with the simple fact that, yes, we can now read the past in ways that past peoples could not read their own presents. *Our future changes the meanings of their past*. But any adequate understanding of their past will also inevitably challenge our own present assumptions about the world *and so change the meanings of our present*. There is no straight arrow here. There is a kind of recurring time loop, a constant return to the past in order to reassess and recalibrate the present toward a different kind of future. Anyone who works seriously with historical materials is familiar with these interpretive paradoxes.

Think this is the stuff of academic eggheads and so irrelevant to the subject at hand? Think again. These sorts of interpretive paradoxes and historical loops are *integral features of the contact experiences themselves*. Indeed, the contact literature has only radicalized the possibilities of this future of the past. In many of these events, after all, the implication is that *we* are in the past being visited by future humans, who are contacting and abducting us toward, we can only assume (or hope), some kind of

recalibration or adjustment.¹⁰ Consider lines like this one, from Whitley's *The Secret School*: "The vague mythological beings of the past that have focused into the aliens of the present will soon become our selves as we become the very time travelers whose shadows haunt all our history, including the present."¹¹

That is the kind of mind-bending comparative practice that we are after here. To really name it, define it, and practice it, however, will take the work of both an experiencer and a theorist working together, in deep conversation and mutual criticism. This is the spirit of our undertaking. Our mutual wager is that, by "shooting the arrow both ways," by practicing the paradoxes of "the future of the past," by "sitting with the question" instead of landing on some stock rational or religious answer, a *third* kind of gnosis or new superknowledge will eventually emerge, one that can encounter a strange being in the bedroom without labeling that presence an angel *or* an alien, much less a demon, hallucination, or anecdote.¹² "Not as you have been taught."

Hence our title: *The Super Natural*. With this little provocation, effected by the tiniest and humblest of moves (a single thumb tap on the laptop's space bar), we move beyond both the flatland materialism of scientism (the natural) and the naive literalisms of certain types of religion (the supernatural). Within that tiny gap or space, we seek another different kind of answer or, at the very least, another way of asking the questions, one that is deeply material and deeply spiritual at the same time.

Hence the new world that has arrived with this book but that has also always been here. Hence the Already World, the natural world that is really and truly a super natural world.

Into the Woods

WHITLEY

The human mind spent many thousands of years explaining the mysteries and vagaries of nature as the outcomes of various enchantments, the actions of gods and demons in human affairs, to be managed by ritual and worship. The Renaissance brought reason, the enlightenment that followed the freeing disciplines of structured academic inquiry and scientific method. Gradually, superstitions about everything from seasonal changes to the appearance of diseases and natural disasters and much else gave way to logic and scientific understanding.

However, there is one area that remains outside of understanding, and which is by far the most culturally potent of them all. In the past it manifested in the form of mysterious beings, strange lights, and ghostly presences. St. Paul encountered it on the road to Damascus when he was startled by a flash of light and a voice, an event that changed the world. Earlier, Moses encountered it in the form of a burning bush, with equally dramatic effect on our culture. It is what we now call the supernatural. It has reemerged in the form of the alien and UFO stories that abound in our time, and threatens to degenerate into a new superstition if it does not receive the study necessary to determine what it actually is.

Previously, this aspect of nature—for that is what it is—had to be entirely rejected as there was no avenue of approach that would enable empirical study of it, and therefore any acknowledgment of it by science threatened the possibility that its manifestations would be taken to be what we believed them to be, simply because they were being studied.

That has changed. Moses, Paul, and all the others who encountered such manifestations in the past saw something, just as people who encounter UFOs, orbs of light, and aliens do today. I have seen them and interacted with them for years. Millions of others have. What we are seeing now is very much what our ancestors saw. The only things new are the names, and with them a visual grammar that fits our imagination, now directed toward creatures from other planets rather than heaven and hell. But one thing is clear: what we see now is just as convincing of its otherness to us as what our ancestors saw was to them.

As this point in our intellectual and scientific evolution, it seems possible to study this material without recourse to beliefs, old or new. We have both the intellectual and scientific tools needed to, in effect, bring reason to enchantment. Now, we can understand.

In February of 2015, presidential adviser John Podesta tweeted that his greatest regret of 2014 was that he had failed to get the government to release the information it possesses about UFOs. But how can such information be released into the current intellectual and scientific climate? We are not prepared to respond meaningfully, with the result that the information is likely to be taken by the public at face value as proof that aliens are here.

Not too surprising. Given the number of unusual sightings and encounters that have taken place over the past seventy years, most people assume that UFOs mean extraterrestrials. But do they? In fact, we don't yet know enough to be certain of anything in this area, except that unexplained objects do occasionally appear in the sky and many people, me included, have experiences that seem to involve interaction with nonhuman beings.

Having been the object of their visitations over a period of years, and the recipient of hundreds of thousands of narratives from others who had similar experiences, I wish to suggest from the outset that the phenomenon is much larger than any of the usual explanations, including alien visitation and such interpretations as brain seizure. It is far richer, more complex, and more ambiguous than we commonly suppose, and is, with or without governmental

revelations about UFOs, in the process of changing us and our world, as it has been doing not just since the first modern flying saucer sightings seventy years ago, but also for thousands of years, and maybe ever since we first noticed the stars in the night, and wondered at the flicker of moonlight on restless water, or the mysterious passage of the sun.

Assuming that UFOs and alien encounters are related, it is not simply a matter of beings from another planet coming here as explorers. They did not act, in my encounters with them, like explorers in any easily understood sense, nor, in my experience, are they aliens in the way that is commonly assumed. But that does not mean they emerge from our minds and nowhere else, nor does it mean that the one possible explanation that cannot be true is that they are beings who originated on other planets.

This universe is absolutely immense and incredibly ancient. I would never dismiss the idea that aliens from other planets are here, or may come here. It's just that this is not proven, at least not outside the community of secret-keepers to which Mr. Podesta referred in his tweet, and until there is proof, it is only one of a number of possibilities. More important, even if aliens are riding around in the unidentified flying objects that Mr. Podesta claims are the target of so much secrecy, an alien presence here is unlikely to be the whole of it.

“They” represent the largest, strangest, most dangerous, and potentially most fruitful experience humanity has ever faced—as, indeed, they always have. What “they” are, though, is an unanswered question. Whatever they are, my persistence in attempting to interact with them resulted in what I can interpret as a structured process during which they at once led me to deeper understanding and more provocative questions. This has led me to explore in ways that seem new but evolved out of age-old methods of truth-seeking, the nature of the world, the reality of experience, and, above all, the mystery of what we are. Most of my nonfiction from *Communion* on reflects my attempts to make sense of this. I would hope that my focus, in this text, will signal that a greater clarity has emerged out of these years of research and reflection.

It is one thing for the government to reveal that UFOs are intelligently guided objects of unknown origin and another to assume that this means that “they” are here. Should we ever come into more general contact with what I encountered—assuming that is even possible—they will not be offering us

plans for a starship, or a trade in exotic electronics. What will be on offer, I would suggest, is a journey into a whole new understanding of reality and the part we play in it. The “alien” is as much a herald from the dark of the universe as it is a signal from the depths of our own minds. The discovery of the reality behind UFO and alien apparitions and the discovery of our own truth will prove to be profoundly intertwined. When this discovery is finally made, we will at that moment become immeasurably larger. Free at last from the constricted vision that now so limits us, we will begin the journey toward which we have been struggling from time immemorial, into a new relationship with the universe and a new understanding of mind and the natural world.

No matter what sort of disclosures may be made, there will prove to be no government documents that define for us the new world that is on offer. As we collectively enter the school that will be opening its doors to us, we will find that we have been limiting our own vision of reality, and that the limits we have set simply do not apply.

I don’t believe in the supernatural or the paranormal, but I do feel strongly that these terms are used in our materially focused culture to explain away phenomena that are in some way real, but which have so far eluded understanding.

I have lived a life filled with such phenomena and often encounter ghosts, aliens, and all manner of apparently supernatural beings. To make this more difficult, at least for me, there has been a wealth of personal witness to my experiences. Had it not been for the friends who had experiences, for example, at my cabin in upstate New York, I would have dismissed many of them. But the experiences are simply too common for me to reject. The phenomena causing them exist. Or is it a single phenomenon that appears in many different ways?

But just because a thing is witnessed by more than one observer does not mean that it is understood. It can be understood, as Jeff points out, in the context of whatever “present” one happens to live in, but that doesn’t mean that flying saucers and aliens are the final truth any more than were past interpretations. At different times, I have convinced myself of many different things regarding what I was perceiving and experiencing. But all of those explanations—aliens, interdimensional beings, other earthly intelligent species, ghosts, deities, time travelers, seizure effects (it’s a long list)—have

proved to be unsatisfactory or incomplete in one way or another. Aliens both are and are not aliens, for example. Ghosts are both real and illusory, something like reflections. But it is possible to look beyond the theories and assumptions. It is possible to bring elements of the wider reality—albeit fragmentary ones—into perception, and to learn to live in this broader context. Not only that, “it” can and will respond by penetrating into the physical world, by coming into contact, by offering itself on many different levels, ranging from the transcendently transformative to the desperately dangerous, and all manner of shadings in between. As long as one does not try to force it into some reductionist structure or other, there is much to be learned—and, frankly, much fun to be had, especially if one has a taste for danger.

When I responded to the initial physical overtures of what I call “the visitors,” as violent as they were, the reaction was to offer me what has become years of coherently structured instruction in an entirely new way of life that penetrates the barrier of assumptions that so limit our vision and restrict our access to reality . . . unless, of course, I am looking into a mirror more deeply than is wise.

I hope that my unwillingness to address it through the filter of beliefs, assumptions, and, above all, appearances has enabled me to focus on this reality in a clearer way. I don’t think that I am perceiving the supernatural, but rather, as Jeff has so adroitly expressed it, the super natural, that which is part of nature but works by rules that are different from those we are familiar with. So I don’t see it through the lens of religion or myth or superstition, but rather through eyes that look at the immensity of reality and see aspects of being that are living by a physics that we apparently do not fully understand, but which, in the end, is knowable. I do not see it as being overseen by a final being, or god. We the living, in all our ancient vastness, are all that is here. But by living, I don’t mean only physically alive. There is more to life, my experiences tell me, much more.

In late December of 1985 I was awakened by strange noises in my little rural cabin. I found myself surrounded by odd and menacing figures. I’d felt that I was being carried, then manhandled, and then I was in what I initially thought was a tent. It was full of distinctly nonhuman creatures, some of them capering stick insects, others squat, frog-faced trolls who were a deep iridescent blue. As a sometime horror novelist, I was initially delighted by

this useful dream. But when I tried to wake up, the horror became real. I kept trying to make my bed appear around me, but it would not. I wasn't in my bed and I could not conjure it by simply willing it to be there. I heard a softly robotic female voice repeating over and over, "What can we do to help you stop screaming?"

A series of spectacularly bizarre and terrifying events then took place, unfolding at once as a horror movie, a grim fairy tale, a nightmare, and a viscerally real, physically painful experience.

The next morning I awoke feeling beaten up, but confused about why that would be. Over the next few days, I would begin to recall somebody pushing a needle into my head, and feeling what my doctor would later say looked like a spider bite. More disturbingly, the rectal agony that would later be universally lampooned began to torment me.

During the day, I became convinced that an owl had come to our bedroom window, even that it had gotten in the house—and, with that, began to receive my first communication in a very new language, that of the visitors. I did not know it at the time, but subsequently I have come to understand that by identifying themselves with owl imagery, as they have done in my and innumerable other lives, the visitors have said something. They have suggested that it might be useful in understanding them to look to the owl both as an animal and a mythological creature. By doing so, it is possible, I suspect, to hear them explaining themselves. Wise and dangerous birds, night flyers, all seeing and immeasurably capable, but also vulnerable.

In the days after my 1985 experience, my memories began to focus more, and they were extremely strange. I saw big, glaring insect eyes. I recalled short, dark blue figures racing around me at breakneck speed. I recalled that I had been treated very roughly.

At first, I thought that I'd been the victim of a crime. I had recently co-authored a controversial book called *Warday* that had annoyed some government officials because it gave the lie to their dangerous and absurd push to destabilize cold war détente. Had vindictive officials had me drugged and beaten up to terrorize me, or even to drive me mad, or, if I dared speak about it, to guarantee that I would be discredited? (If that was the motive, it certainly worked. My efforts to describe my experiences publicly and accurately have profoundly compromised my credibility.)

I recalled seeing a familiar face during the initial stages of the

experience—a school friend who had joined the Central Intelligence Agency. But when I tried to look him up, I was appalled and confused to discover that he had died months before the night in question.

So then I decided that I must have had a psychotic episode, and never mind my injuries, which had been quite apparent in the following days. These injuries included an aching malaise, as if I'd been roughly treated, a needle mark in the side of my head, and the rectal injury.

I did not want to face these injuries. I did not want to deal with the possibility that the experience had been physical. A visit to my doctor was extremely unsettling, largely because he not only saw the injuries as physical, but when I described my memories said, “It sounds like you’re saying you were taken aboard a flying saucer by little men.”

We agreed that psychological tests should be the next step. However, they revealed only a high stress level. Then I thought perhaps it was a seizure that had manifested itself as a vivid hallucination, but a test for temporal lobe epilepsy indicated that I had a brain that was not only normal but also exceptionally resistant to seizures. An MRI scan revealed no sign of any illness that might account for my perceptions.

Thus began what has become the odyssey of my life. Although I have been identified as the primary advocate for belief in alien abduction—and have at times publicly entertained this notion—for the most part, I have tried to adhere to the question. The alien explanation—while fascinating and touched by deliciously uneasy romance—has, from the beginning, made me wary. There are elements of the experience that are so fantastic and so improbable, but so consistent, that some much more complex event than alien scientists visiting Earth must be taking place.

But the debate, such as it is, remains as it has been since the first flying saucer reports appeared back in the 1940s: either this must involve space travelers from some other planet, or it's all a load of rubbish. For the most part, scientists and intellectuals come down on the “load of rubbish” side of the equation and decline to inquire further. UFO researchers seek to confirm the alien hypothesis. The people who have actually had unexplainable experiences of the phenomena in question are generally confused, bemused, and unconvinced by the arguments being put forth on both sides. It's not nothing. Something happens and it is not confined to the mind. It isn't

hallucinatory. Neither, however, is it real in the same way that we are real, not exactly.

Most paranormal phenomena are addressed by this same debate. Either they are “real” and therefore exactly what they seem to be, or it’s all nonsense. The ghost is either there or it isn’t. The elf is either a real flesh and blood creature or it doesn’t exist. There cannot be consciousness or coherent being outside of the physical—which is, in fact, what I want to believe. Unfortunately for me, though, it simply is not my perception. Despite the fact that I can’t explain them, I frequently see and interact with nonphysical and quasi-physical beings. They seem to be part of nature just like we are, but, as Jeff advocates, in some “super” way for which we have neither an adequate religious model nor present science.

They also have, at least in my life, what has come to seem a rather clear aim. They want to challenge me with questions too provocative to be left unanswered, but which I cannot, in all frankness, answer in anything approaching an objective manner. I’m not like the old prophets who saw them as angels and deities, or modern advocates of alien contact, who see them as extraterrestrials. They are in my life, but I don’t know what they are.

In fact, they are involved with me right now, as I am writing. After I had finished this introduction and was beginning my first experiential chapter, which is primarily focused on a type of alien that is also a troll called in folklore a kobold, another sort of little person appeared in my life. On the very morning that I started writing about little blue men, Linda Moulton Howe, who is a long time observer and professional reporter in the field of the paranormal, sent me a group of three trail camera photographs of what appeared to be a classic garden gnome, complete with red vest and tall, pointed hat. At first, of course, I assumed that this was exactly what it was—a garden gnome suspended from a string.

Work with a photography expert soon told a different story. First, the figure was blurred and thus moving fast. It wasn’t swinging in an arc but walking on two spindly legs. It was forty-four inches tall, a typical height for all of these small beings. It had stopped moving forward the moment the camera took its first picture, then beat a retreat at a high rate of speed. The camera, activated by movement and heat, takes a photo every second until the movement stops. There was no evidence that the photo was hoaxed, or that the image on it was anything known.

Now, if we apply the old methods, we must conclude either that garden gnomes are real creatures, or that this is some sort of a hoax, or perhaps a shot of a common animal whose appearance has been distorted by a trick of light. I could add paragraphs here, calling on the testimony of photographic experts to show why it can be neither a hoax nor a distortion, but why bother? I'd prefer to let that sort of debate wander off down its meaningless pathway on its own, frankly.

It is possible to apply new methods to the enigma, which would involve attempting to find what I would describe as more energetic questions, in the sense that they would have more potential to meaningfully dimensionalize the mystery.

Discovering such questions is not going to be easy, given that we have never searched the supernatural for an inner logic, but only argued about it, at least in the public forum, in the most simplistic way. In the academy and the professional study of religion, of course, a much more sophisticated debate has been going on for a hundred and fifty years, but that debate has hardly penetrated public perception, which remains bound to the either/or proposition.

So there I was, dealing with a photo of what appeared to be a real gnome. The picture had been taken in July, but time and chance had dropped it into my inbox at precisely the most provocative moment.

But why? Or is there a why? Is some hidden level of mind asking me to become an advocate for the reality of garden gnomes? Or are we seeing a droll challenge from this other level, one that is suggesting that we really do need to think about the whole subject in a new way? And perhaps, also, a little less ponderously. The images in all their ambiguity, with all their implications and their deep hilarity, are there to be faced with an open mind, and I think some laughter would be appropriate, too.

After I realized that my 1985 experience was a true mystery, I began compulsively going out into the woods around the cabin where it happened—quite a large woodland, in fact—and attempting to somehow face it again. At the same time, I wrote and published my book about it called *Communion*, the reaction to which was easily as unexpected as the experience itself.

Had you asked me prior to the release of the book how many people might claim similar experiences, I would have estimated the number in the hundreds. I'd met twelve or fifteen, and knew of perhaps thirty others.

Then the letters started coming in, at first by the hundreds, then the thousands, then a great cataract of letters, easily ten thousand a month, from all over the world. The publisher told me that the book was selling far beyond even their most optimistic expectations.

Previously, the close encounter experience had been assumed to be a rare and eccentric anomaly. Accounts were dismissed as isolated anecdotes, not worth pursuing scientifically because of a lack of consistent data.

I was deeply moved, not to say shocked, to see that I had uncovered a human experience of vast size that was completely hidden. Far from parroting versions of my own experience, my correspondents revealed that they were perceiving an extremely complex phenomenon that involved hundreds of different types of events. They were linked by certain commonalities, most often the seeing of a face, long and thin with great, dark eyes, like the one I'd had painted for the cover of the book.

The letters were, many of them, articulate and detailed. At the time, the skeptics community was advocating that the alien abduction accounts were being induced in susceptible people by the use of hypnosis. This was concerning to me, because there were indeed amateur hypnotists who were convinced that the phenomenon was caused by interactions with aliens, who were actively hypnotizing people and possibly distorting their memories. I had myself been hypnotized, but by Dr. Donald Klein, a leading practitioner of forensic hypnosis who had solved numerous criminal cases with his techniques. Neither of us, at the time he began hypnotizing me, believed in the "alien abduction" scenario.

My correspondents, however, had for the most part never had hypnosis or any kind of professional support. They had never heard of UFO investigators or organizations like the Mutual UFO Network. They told, time and again, stories that were strange beyond strange. Between 1987 and 2000, we must have received well in excess of half a million letters, at least a hundred thousand of them detailed accounts. I understand that this seems like a fantastic number, but it is probably accurate. We stopped counting at two hundred thousand, and that was in 1992, and they were still arriving in surprising numbers as late as 1998. We have kept around thirty thousand on file.

Anne, who read them all, compiled a book called *The Communion Letters* that includes a little over a hundred of them, chosen because they

contained examples of typical experiences, and were quite well written.

Obviously, I was not dealing with isolated anecdotes. There was a wealth of material here for study by neurologists, psychiatrists, and sociologists. To expedite this, I created the Communion Foundation. However, I found that I could get no support. There was not just no scientific interest, but the reaction was often hostile. And why not? A scientist seeking to study such people, as doctors John Mack and Roger Leir discovered, could expect to have their professional credentials challenged if they dared propose such study, or worse, engage in it.

I very well remember the day that Dr. Mack called me and told me that both his license to practice psychiatry and his tenure at Harvard were under review. Later, the very man who led this attack became an ally of Dr. Mack's, but it was initially a very dangerous situation for him. Dr. Leir told me that he was also the subject of such attacks.

Sadly, over the years, I was unable to successfully communicate the reality of this fantastic outpouring of witness. Most members of the academic, scientific, and intellectual communities, let alone our serious media, have to this day no idea how extensive the experience actually is.

So we're still at the beginning of the journey when it comes even to finding useful questions, let alone viable answers.

Surely that can change, but not unless the most interesting aspect of the phenomenon, which is its ambiguity, is to replace the either/or debate. For example, there is a rich trove of physical evidence that something strange is afoot, but also a rich trove of evidence that clearly emerges out of folklore, with a strong strain of myth in the mix.

Whatever happened to me on the night of December 26, 1985, there was enough physical trauma to send me to the doctor a few days later, who observed that I had been raped. Unfortunately for me, I was so humiliated by this that I described it in *Communion*—delicately, I thought—as a “rectal probe.” The result was that, instead of being treated with the sensitivity one might think would be due a rape victim, I was made a figure of fun. Still, I could not bear to admit it, not even knowing that doing so would have rescued me from the trauma of being ridiculed for my suffering. It took me a quarter of a century to even describe the experience as a rape to my wife. It was during this period that I became identified as an advocate of the alien abduction scenario. I could not refute it, because it might be at least partially

true. So I won't say that, at times, I haven't been seduced by it, because it does have its appeal. But that core of distrust has never left me. My reason for this is not the one usually advanced, that "they couldn't possibly get here." Given the age of the universe and its immensity, I wouldn't be in the least surprised if somebody has figured out interstellar travel, even if, for us, it is impossible.

In any case, I, who stated in large type on the inside front cover of *Communion* that "the enigmatic presence of the human mind winks back from the dark," have ended up closely identified with one side of a debate between two propositions, one of which I find insupportable and the other open to question.

Why, though, would somebody who suffered such unpleasant physical consequences, and later had to face such a cloud of witness, attribute his experience in any way to the human mind?

I don't mean that it's entirely in the mind, but rather that the mind might not be entirely in us. In other words, mind might not be entirely confined to the brain. Since the moment that I began to apprehend the actual dimensions of the experience in all its wonderful improbability and confusing physicality, I have been dogged by that improbability. I can't get away from it though. My intellect says that it cannot be true. My life bears witness to its truth.

If mind does exist independent of biology, then, given the conservation of energy, it is likely to be rather old, and given its lack of confinement in the body, limited, if at all, in unknown ways. Considering that this universe is at least thirteen billion years old, and that there is increasing evidence that it might not be the only one out there, it is liable, also, to have a good deal of experience.

What would it be like, then? What would our part in it be? How would we communicate with the aspects of it, which must be vast, that have nothing to do with us? And yet, when we do manage to communicate with it as something that seems separate from us, to what degree would we actually be talking to ourselves? Given what would have to be a very ancient presence, is physical life an outcome of some plan it has? If so, what might that be? What need has it to have drawn us into being, or rather, to have injected itself into physical bodies? What does time mean to such a thing, and is it creator or created, or both?

I cannot answer these questions, and they might not even be the right

ones. I am not a believer in any hypothesis. On the contrary, I am a wanderer, lost in the forest of hypotheses.

I cannot tell you how to escape, but I can tell you that it's a terribly interesting place. It's full of aliens; ghosts; sexy succubae and incubi; fairy-folk; demanding and inconsiderate gods, angels, demons, and growling subterranean kobolds—and, it would seem, garden gnomes. In fact, there are too many other forms to list, as well as some that cannot be defined beyond saying that one sometimes senses presences beyond description.

My direct questions are these: Why do we see all of these things; and why and how do they sometimes interact with us in enough of a physical way to leave injuries, have sex, and, in some cases such as my own, leave demonstrably bizarre physical objects in the body, not to mention perplexed witnesses? In my chapter on implants, I will describe them in more detail.

Once one opens one's mind to the notion that these mysteries are worth consideration, one takes the first baby step into the forest. At once, the paths proliferate. Not only that, the forest is very much alive, growing and changing all the time. And the paths—they change, too. The shadowy presences in the sacred groves of antiquity, Dante's lost path, more humble journeys such as my own, ridden with fear and driven by compulsion—these are the journeys in the forest of mind.

It has keepers, you know. Foresters, if you will. They're a pretty rough bunch, and pretty strange, and I suspect that they are the arbiters of souls, much like the growling, groaning creatures that appeared from the depths in the delightful movie *Ghost*.

Over the course of this volume, as my contribution, I am going to reconstruct my and others' experiences in a new way, in exchange with Jeff, attempting to reveal the large-scale structures that are present beneath the chaotic narrative surface. For such structures most certainly exist. As I have said, I can look at my whole experience as an education, with a definite point of matriculation, various classes, and eventual graduation into my life as it is now, trying one path after another in this dangerous, delightful, and deliciously mysterious woodland.

Maybe, on the night of December 26, 1985, I was in an alien spaceship and maybe I wasn't, but I was certainly in a very agitated state, and getting more panicked with every moment that the impossible scene around me came into greater focus.

After the robotic female voice began trying to comfort me, an event happened that would prove to be of fundamental importance to my ideas of what this might all mean. This was the approach of a unique form of creature, who, like the more familiar willowy gray ones with the large eyes, has a distinct and deeply embedded place in folklore.

A squat blue man came up to me. He carried a silver device in his hand, the “rectal probe.” Subsequently, I found that models are marketed both for erotic stimulation and for use in animal husbandry. They work by stimulating the vagus nerve.

As one of these beings proceeded with the electrostimulation, another busied himself inserting a long needle into my temple. I cried out, “You’ll ruin a beautiful mind,” as I both felt the needle piercing me and endured the embarrassing penetration of my anus.

At the same time that the electrostimulation was taking place, there was a sample taken of my fecal matter. I was confused to see that I was experiencing an erection, and disturbed when there was an ejaculation—then appalled to see the semen being collected into a tube by one of the capering insectoid monstrosities with the bulging eyes. The ejaculation didn’t come with any emotional affect and very little sensation. The whole sexual event was so dissociated that it might as well have been happening to another person.

It is an easy thing to jump to the conclusion that I am claiming here that I was abducted by aliens and had semen stolen by them, but I am not claiming that. I am reporting a perception, not making a claim, and there is a world of difference between those two approaches. While I came away with clear physical injuries, as we shall soon see, there were elements of the experience—that are also integral to the whole “alien abduction” phenomenon—that challenge to its core the very meaning of what we perceive as “physical.”

One reason that I doubt that aliens have flown here from someplace like Zeta Reticuli to study us is that the contact experience includes two seemingly disparate aspects: encounters with the dead and encounters with nonhuman beings.

Until the discovery, originally made by Anne Strieber as she read all those thousands of letters, that the dead and aliens seemed often to show up together in the lives of witnesses, the two phenomena were assumed to be

entirely separate. The folklore of alien contact and the folklore of spirit manifestation were unrelated. What possible connection could there be between alien scientists from another planet and ectoplasmic manifestations of dear aunt Ethel?

Now, before I continue, I want to define my position very carefully. I am, in my heart, a secular individual, but I do consider it possible, based on personal experience, that there may be conscious being outside of the body. I am willing to entertain the notion, in fact, that the physical world may be embedded in a much larger, older, and more intelligent energetic consciousness. If so, then the true journey of cultural and religious history is about our long struggle to come to terms with it, and find a way to objectively include it in our understanding of reality.

We started the journey on our knees, cowering before the ruthless and intemperate gods of antiquity. We followed our many religions deeper into the forest, until finally that path played out, disappearing into the current dark mutter of ritual, sloganizing, and murder. Now we are at a crucial turning point. Either we journey on, this time along the secular path, or we take another fork, embarking on an even darker, more dangerous, and twisted journey.

Paradoxically, I am rather sure that this secular path through the impossible—the most ill-marked and twisted of them all—opens eventually into the sunlight of a clear and objective understanding of what we are, where we are, and why we are here.

Making the Cut

JEFF

It is an easy thing to jump to the conclusion that I am claiming here that I was abducted by aliens and had semen stolen by them, but I am not claiming that. I am reporting a perception, not making a claim, and there is a world of difference between those two approaches.

Whitley Strieber is a phenomenon, a kind of religious prodigy without a religion who cannot help engaging classic religious questions and themes, since that is what his experiences clearly invoke. The last lines of the preceding chapter voice these perennial religious questions perfectly: he seeks an objective answer to the hymning questions of “what we are, where we are, and why we are here.” Obviously, the emphasis is on that “we,” that is, on our own human nature.

Or super nature.

The human-centered focus of the inquiry speaks volumes. What Whitley really seems to want is not a new religion but a new science, one that can take extreme religious experiences (out-of-body and near-death experiences, precognitions, moments of clairvoyance, and visions of the dead) as privileged data about the deepest nature of mind or consciousness, which is to

say about “what we are, where we are, and why we are here.” I think he is right about that. I have said as much many times in very public places.¹³

We are not anti-science. Quite the contrary. We simply want a science that is honest and brave enough to take in *all* that human beings experience without immediately explaining away that “all and everything” by some easy pat answer that is really no answer at all. The Harvard psychologist and philosopher William James had a wonderful expression for such a future science. He dreamed of a “radical empiricism,” that is, one that took *every* human experience, however strange or apparently impossible, under its careful gaze without prejudice or assumption. This book is an attempt to practice just such a radical empiricism.

Experience as Experiment

But how?

Whitley’s intellectual orientation, “lost in a forest of hypotheses,” is a very good example of what one of my colleagues, Alex van der Haven, calls the “hypothetical supernatural.” Alex means something very specific by this curious phrase. He means to refer to all of those modern individuals who have known their own personal revelations but do not want to believe or accept them prematurely. Rather, they want to question them, test them. Put most simply, they want to turn their own mystical “experiences” into scientific “experiments.”

In Alex’s terms, they want to take their own apparently religious experiences not as absolute-truth claims but as testable hypotheses. This is why these modern mystics care so little for religious institutions and care so much for professional science. They literally want to be tested (hence Whitley’s various submissions to MRIs, psychiatric examinations, and temporal lobe tests). They want the truth to be known. This is also why they are so hurt when professional scientists do not return their confidence and, instead, heap insults on them and their experiences. The modern visionaries embrace science, but the conventional scientists too often respond with a sneer.

In his own way of putting it, Whitley writes of wanting “to sit with the question,” of leaving the question open and learning to live with the ambiguity. He wants to do this not as a compromise, but as a mirroring response to what these experiences/experiments clearly intend: *they themselves are ambiguous and paradoxical*. Hence his identification of this same ambiguity as “the most interesting aspect of the phenomenon” and his call that we embrace this and that we abandon the terms of the “false either/or debate” that has taken place so far, with its two unworkable and untenable positions: there are space aliens among us, or it’s all rubbish.

From the Paranormal to the Super Natural

Whitley and I disagree about some things. Being writers, we also care very much about words. The word “paranormal” is one of the things we disagree about. Whitley’s rejection of the paranormal in his opening lines as more or less the same thing as the supernatural is certainly accurate enough within today’s very loose use of the paranormal in the tabloids and in horror movies. But this rejection is unwarranted and unnecessary if we are using the term in its original, intended meanings.

As I have explained elsewhere in detail, the adjective appears to have been coined by British and French intellectuals and scientists shortly before and around the turn of the twentieth century, first as the British English *supernormal*, then as the French *paranormal*, in order to describe things like telepathic and poltergeist phenomena. As they were carefully crafted and originally intended, the supernormal and the paranormal meant something like “of the natural world but not yet explainable by our present science.” They meant “normal,” but normal on the extreme end of the spectrum, an end which we do not yet have the tools to model and map but someday will. These adjectives did *not* mean “supernatural,” that is, they did not signal the presence of a ghost, deity, or anything necessarily outside the natural world and its workings. Quite the contrary, both the supernormal and the paranormal signaled exactly the approach that Whitley has long advocated.

But I understand how these historical origins are now largely lost. Perhaps, then, it is time to retire a word like “paranormal.” Or at least use it

much more carefully. Whatever we decide, it is certainly time to clean up our language and make it more precise again. It is time for the super natural.

On Belief and Denial

There is another level to Whitley Strieber as phenomenon, and it has to do with this notion of taking one's experiences as experiments, this extraordinary modern ability to *not* believe one's own most intimate experiences, however convincing they may appear.

It bears constant underlining. Belief is an understandable but often unhelpful response in this realm. It is also a potentially dangerous response. Certain types of belief—particularly literalist ones that do not understand the symbolic or coded nature of religious expressions—can quickly make a fool out of one, since religious experiences interpreted literally are often patently absurd. To the extent, moreover, that literalist beliefs lead people to identify themselves with their culturally relative religious ideas, local ethnicities, and historical cultures, they can also lead to real social conflict, even horrific violence, as we see again and again in our modern world. Fundamentalism, of whatever stripe, is the curse and cancer of religious belief.

And the exact same warning holds here as well, in the realm of the super natural. As John Keel put it with respect to his own paranormal researches: “Belief is the enemy.” To the famous motto of the 1990s hit television series *The X-Files*, “I want to believe,” Keel would have shot back immediately: “Don't.”

I would not go that far, since I think religious expressions, including religious beliefs, are often pointing toward something very real, perhaps even ultimately real, if always in coded ways. But there is more. I also think that there is something potentially occult or magical about belief. Belief can function as a naive literalism or serious obstacle to serious thought, to be sure. But belief can also conjure. Belief can make real. Belief might even act as a kind of psychic portal through which other beings can enter our world, as Whitley has speculated in some of his most visionary moments. It all comes down to *how* one believes, not whether one believes. It all comes down to whether one possesses an adequate understanding of the religious imagination and the symbol. More, much more, on all of this later.

It is also worth observing in this context that the ideological debunker is also a fundamentalist, if of a very different stripe. Unlike the literal believer, who affirms but then misreads what has happened, the debunker denies what happened, what was honestly seen, what was sincerely experienced. The debunker makes a liar out of a truth teller and so shuts down the experience-as-experiment before it can begin. Here our empiricism, our experience, and our experiment come to an end.

Making the Cut

So how to move forward? How to find a new path between and beyond the literalizing belief of the believer and the flatland denial of the debunker? A particularly rich vein of resources for such a way forward can be found in a stream of thought and practice called *phenomenology*.

The basic concepts of phenomenology are not too difficult to understand and are, in fact, already at work in Whitley's writing. A "phenomenon," from which the practice gets its name, is simply the Greek word for "appearance." Here it refers to an awareness of something that appears as an object of experience, *whatever* that object of experience might be. Phenomenology is the study of such appearances. German philosopher Edmund Husserl (1859–1938) is normally credited as its founder, even if the method has deeper roots, as we will see in a moment.¹⁴

The fundamental idea here is to begin any inquiry by taking a set of experiences on their own terms and setting aside, for the time being, the question of their possible external source, cause, or truth value. The method encourages us to "make a cut" between the appearances themselves and what may, or may not, lie behind them. Whitley practices such a phenomenological cut naturally and effortlessly when he writes in the last chapter that "I am reporting a perception, not making a claim, and there is a world of difference between those two approaches." Indeed! That's the phenomenological cut.

Very much related to phenomenology but lying deeper back in the German stream was the foundational thinking of Immanuel Kant (1724–1804). Kant made a famous distinction between phenomena (again,

“appearances” in the mind) and noumena (things in themselves allegedly “out there,” apart from how they appear to us). Kant taught us that we do not know the world as it really is. We only know the world as it is filtered through and shaped by our senses and the structuring categories of the human mind (very basic unquestioned categories, like space, time, and causality). None of these mental filters or innate categories of understanding are necessarily reflective of what is really “out there,” although Kant thought that the appearances were reflections of something real.

In today’s language, we would say that the innate categories of space, time, and causality and our perceptions of the physical world are functions of our neurological wiring and senses. Such categories and sensory filters are certainly “close enough,” since they have allowed us to adapt and survive in this world for hundreds of thousands of years (and gross misperceptions of the natural world would, obviously, be fatal for any young species or new organism). But we cannot assume from any of this that our perceptions are absolutely true, only that they are relatively and practically true. All we can assume is that our perceptions of the world are *true enough*.

True enough for what?

Survival.

Unfortunately, as science progresses, this “true enough” gets smaller and smaller. We are now being told that 95 percent of the physical world is completely invisible and unknown to our young science. We know nothing about this “dark energy” and “dark matter.” We only know that the vast dark is there. And the 5 percent we know something about? Well, we cannot sense the vast majority of it, either. Indeed, our senses are pathetic when it comes to the full range of the electromagnetic spectrum. We are almost totally deaf, dumb, and blind in this Already World of energy and light. Nearly *everything* about the cosmos is occult to our evolved (or unevolved) perceptual system.

This cut, then, between “what appears” and “what is” is not just a function of some difficult ideas from some dead German professors. It is a very reasonable and appropriate response to *our actual situation in the cosmos*.

The Numinous

The same distinction between experience-as-appearance and the possible object or source of such an experience has been central to the study of religion, where scholars routinely “make the cut,” or suspend judgment about the truth value of a religious phenomenon, as a means to study religious experiences they have not had, mythical worlds they do not share, and belief systems that they do not hold. The reason is simple enough. Once one makes such a cut, one can, in principle, take *any* religious experience or mythical world seriously and sympathetically without adopting any particular interpretation of it, much as one suspends disbelief to enjoy a good novel or watch a science-fiction movie.

Particularly influential here has been the work of yet another German professor, Rudolf Otto (1869–1937). In the pages of this book, as in his other books, Whitley often invokes the language of the “numinous” to capture the feel and sensibilities of his experiences. The word was invented by Otto in one of the genuine classics of the study of religion, *The Idea of the Holy* (1917). By “the holy” Otto did not mean “the good” or “the ethical.” He meant “the numinous.” He meant an awesome power, electric energy, or godlike presence that a human being encounters in the environment and experiences as special, set apart—as Wholly Other. Today we might say: as Alien. What I think Otto was really writing about is the deeper nature of consciousness itself beyond the ego—a form of extended or cosmic mind that when manifested to the human ego, appears as Other or Alien. But we’ll get to that later.

Otto went to great lengths, mostly with biblical materials, to show that this numinous energy or alien presence might be experienced as positive or negative, or both at the same time. The numinous might in fact invoke a whole range of physiological, emotional, and spiritual responses: dread and foreboding, awe and mystery, eeriness, terror, reverence and worship, even ecstasy and mystical union. The angel is an expression of the numinous, but so too is the demon.

Otto was very much a follower of Kant. He did not think that human beings generally have any direct access to the numinous presence as it really and truly is. He thought rather that this mystical presence is always filtered through and shaped by the categories of the human mind and the cultures that largely determine its functioning. Otto, in short, had “made the cut,” and at about the same time as Husserl.

This may seem like an unnecessary conversation to you. It also may seem like an easy and obvious thing to do. But it is in fact very necessary, and many, if not most, people are not able to make this cut, *especially* when it comes to religious phenomena. Many people firmly believe that what they believe is what is real; that is, they fail to make a cut between what has appeared to them within a particular experience or community and what may, or may not, actually be the case. Moreover, they can only take the religious experiences of their own culture and community sympathetically. And they insist on treating the numinous apparition of, say, an angel in completely different ways than they would treat the numinous apparition of, say, an alien or a demon. *They can't make the cut.*

Just as seriously—and just as seriously wrong—many people immediately dismiss and demean any extraordinary experience that cannot be fit into their own experience of the world. They declare them unreal, hallucinatory, or just plain crazy. In so doing, they also fail to make the cut. Making the cut means taking *all* experiences seriously, however strange or impossible they may seem to a particular psyche, and without immediately jumping to a moral or intellectual conclusion about what they mean or point toward.

Extreme experiences like those of Whitley and the modern contactee are particularly interesting here. We know that they happen. We do not know what they are. But we do not need to know what they are in order to begin to study their patterns, histories, narrative structures, sexual dimensions, and philosophical implications. Perhaps such appearances are more or less what they seem to be. Perhaps they are expressions of something else that is *not* appearing, something that, by its very nature, cannot appear as it really is to an embodied ego with this particular evolved nervous system. To employ a common movie metaphor, perhaps the pictures on the screen of the abduction experience are being projected from somewhere else, somewhere outside the dark room of the theater, somewhere “behind” or, if you prefer, “above” the display itself.

We will, in fact, explore this very suggestion below. We will also see how the visionary appearances of Whitley displayed very real physical and sonic effects in the external environment, effects that Anne and others could see and hear. Whitley will also challenge us to confront the contact experience as something that cannot be safely walled off in a subjective

psyche, as just a set of private experiences. Which is all to say that we will venture into the questions of what may lie beyond the phenomenological cut and well outside the phenomena of the contact experience.

But not yet. Here, at the beginning, it is enough to make the phenomenological cut and focus on the experiences as experiences, that is, purely as a subject (which may turn out to be something *far* bigger than we suppose). This simple move will immediately provide our conversation with a new intellectual and moral generosity. Making such a cut will allow us, after all, to take the most fantastic, unbelievable, even graphically sexual appearances and treat them seriously and sympathetically *without* having to treat them literally and naively. The practice will enable us to be faithful to what actually appeared and is being reported without immediately believing or dismissing it. Making the cut will free us to talk about the impossible without it sounding impossible. It will enable us to entertain the most astonishing possibilities without sounding like fools.

The Human as Two

“Making the cut” asks us to consider a particular duality or twoness in the human being, at least in the functioning of the human psyche and how it knows the world. Here, after all, we are asked to make a clear distinction between what appears to us as sense-based egos (“what we know”), and what actually is out there (“what is”). Kant and his successors have argued that human beings can never know the latter. Like the prisoners of Plato’s Cave, we are all locked down tight to the cave floor of our senses and brains. We are locked into the cave of the skull, as it were, and condemned to witness only flat, sense-based shadow shows in the dark—mini-movies inside our head.

But here is the thing. The history of mystical literature strongly suggests something else or more. Indeed, the whole point of Plato’s parable is that we *can* crawl out of the cave and see the multidimensional world outside, that we *do* have access to the Light, even if many of our peers will never see it and so continue to deny that it exists at all. In rare but real cases, it very much looks as if individual human beings can know, even become, something of reality as it really is, as opposed to what their cultural, religious, and sensory scripts

tell them. In essence, these individuals “wake up” out of the social and sensory movie that they are caught in as characters. They peel themselves as perceptions off the screen, turn around, and come to know something of the projecting light streaming in from behind or above them.

Meister Eckhart (1260–1328), the great medieval mystic, recognized this already over seven hundred years ago in a little sermon that sounds like a chapter out of Edwin Abbot’s *Flatland* (1884). Eckhart is preaching of an inner light that makes humans divine and of a power beyond space and time that he called the eternal Now. “This light,” he wrote, “is so potent that it is not merely in itself free of time and space, but . . . this light takes away time and space.”¹⁵ In our own modern terms, we might say that this light grants a type of consciousness that is outside space-time. To employ the traditional religious terms, it is infinite (beyond space) and immortal (beyond time). “Anyone powerfully seized by this light,” the man preached, “would be as far superior to another man as a living man is compared to one painted on a wall.”¹⁶ The painted human lives in only two dimensions, we would say today. He is “flat.” The illuminated human now lives in three or four or more. He or she is hyperdimensional, we would say.

This, I take it, is what Whitley is getting at through his own movielike visions, which admittedly astonish him and have even tempted him to accept them as literally true, but which he can never quite bring himself to fully believe. From the beginning, he has suspected that something else is going on, that these are complex psychical projections from some hyperdimension and not simple objective truths, hence the very first lines of *Communion*, about how “the enigmatic presence of the human mind winks back from the dark.” Whitley has expressed real frustration in the preceding chapter about how so few took to heart that opening line and how so many, to this day, continue to read him as some kind of literal believer in what he witnessed on his own private movie screen.

When one reads him carefully, what one finds is a very modern version of what one finds when one reads classical mystical literature—what I have called the Human as Two. Here is Whitley on the nature of his appearances or experiences: “I don’t mean that it’s entirely in the mind, but rather that the mind might not be entirely in us.” In short, mind “might persist even outside of the cradle of the brain.” In other words, there is ego, there is the human

subject, there is “you” and “me.” And then there is mind, which may not be restricted in any way to a brain, a skull, an individual ego, a culture, or a religion.

This, it turns out, is a very old idea that can be found in any number of forms, including the medieval European notion of the *anima mundi* or “soul of the world.” Here is Whitley’s version of the same: “If mind does exist independent of biology, then, given the conservation of energy, it is likely to be rather old, and given its lack of confinement in the body, limited, if at all, in unknown ways. Considering that this universe is at least thirteen billion years old, and that there is increasing evidence that it might not be the only one out there, it is liable, also, to have a good deal of experience.” There is an understatement.

Whitley then goes on to ask a series of very astute questions, including the openly paradoxical one: “How would we communicate with it, and in so doing, to what degree would we be talking to ourselves?” Such a soul-of-the-world or cosmic mind, after all, would be us and not us *at the same time*. And it would behave much like the lights dancing on the movie screen: it would take on *any* cultural narrative (or myth), *any* subjective form (or ego), including some really cruel and really stupid ones, but it would remain, despite all of this, pure white light—without a form, without a story, and without a religion. The Human as Two.

Producer or Reducer?

Such a mind beyond brain would also carry real implications for what is clearly *the* central religious question throughout human history: What happens to us when we die?

It all depends, I suppose, on what we mean by “us.” Which part of the Human as Two are we talking about here?

It’s really quite simple. If mind is a product of brain, then mind goes away when the brain dies. Period. If, however, the human brain is more like a highly evolved receiver, transmission station, or local neural network that limits, reduces, and shapes mind into a cultural and subjective container that we know as the self or ego (which is itself not the producer of mind either), then when brain dies, the self may or may not go away (or it may stick

around for a while, and then go away), but mind almost certainly does not go away. Mind as mind, after all, would be completely unaffected by the death of an individual brain, much as the Internet is not the least bit affected when you turn off your laptop or “drown” it in the swimming pool.

It all comes down to this, then: Is the brain the producer or reducer of consciousness?

Materialist-oriented neuroscientists like to point out that when the brain is damaged, the personality often changes dramatically, and that when the brain stops, consciousness disappears. This, of course, is entirely correct. Where they presume too much is when they conclude from these obvious facts that mind *equals* brain, or that brain *produces* mind. This may be the case, of course, but this possibility does not necessarily follow from the facts. It only follows from a particular interpretation of the facts. All that we really know is that when the biological medium of mind, that is, the human brain, has been damaged or destroyed, these events profoundly effect how mind can be experienced by that particular subject. All that we know is that a laptop at the bottom of the swimming pool won't work anymore.

It might be the case that brain equals mind. Or it might be the case that the laptop computer called a brain has been damaged or destroyed and will no longer project a particular personalized desktop and social media system, but that the Internet of Mind is just fine, thank you very much. The facts are the same facts in either interpretation. The materialist scientists presume the materialist interpretation because they presume materialism, not because the facts require that particular interpretation. In essence, they are confusing an interpretation of the results of science with science itself.

But there are thousands (no doubt millions) of other “rogue” facts, conveniently ignored, wished away, or crudely pathologized as “crazy” or “delusional” by the same materialist interpreters of science, that support the Internet metaphor of mind beyond brain.¹⁷ Among them we might wish to place Whitley's eerie experience of seeing an old school buddy who had joined the CIA among his alien abductors, a friend who he later learned had passed away a few months earlier.

Whitley uses the experience to humorously call into serious question the typical extraterrestrial hypothesis: “What possible connection could there be between alien scientists from another planet and ectoplasmic manifestations

of dear aunt Ethel?” But the same kind of experience can just as easily be used to call into question the typical materialist hypothesis. It is easy enough to dismiss a vision of a dead friend who one knows is dead as a subjective hallucination. It is not so easy to dismiss a vision of a dead friend one does not know is dead. The latter suggests, though hardly proves, some kind of survival and postmortem communication.

Still, perhaps it was all just a coincidence. Whitley, after all, did not know the friend was dead in the vision, and he may have simply put the two things together afterward, like this: vision of friend, news of his death, interpretation that the earlier vision of the friend was a vision of the dead. This kind of coincidental reading, though, loses much of its power when we put it in a larger context. Hence the discovery of Anne, who noticed a spate of similar reports among the letters they received in response to *Communion*.

Whitley also recognizes that the broader shapes and themes of his visions are shared by a veritable crowd of corresponding witnesses. By publishing *Communion* and being honest about what he saw and experienced, he had, in effect, accidentally “uncovered a human experience of vast size that was completely hidden.” Whitley is a fine comparativist here, particularly when he notes both the similarities of these different reports, but also their real and genuine differences, which number into literally hundreds of types or patterns. In his own words, he wants “to expose the large-scale structures that are present beneath the immediate narrative surface. For such structures most certainly exist.” That is *exactly* how comparativists and phenomenologists talk.

But the letter writers are not alone either in their visions of the dead. This kind of apparition, of someone familiar who the visionary did not know had died, has been known and commented on for almost a century and a half now. They even have a technical name in the parapsychological literature. They are called “Peak in Darien” experiences after a book of the same title published by Frances Power Cobbe (1822–1904) in 1882. Cobbe adapted the expression from a poem by John Keats in which the poet describes the Spaniards climbing a peak in Darien (now Panama), expecting to see a landmass, but instead seeing another ocean, in this case, the Pacific Ocean. The expression thus carries the sense of surprise at seeing something unexpected, vast, and disconcerting. Over four decades later, the knighted English physicist Sir William Barrett (1844–1925) called systematic attention

to these cases again in his classic study, *Deathbed Visions: How the Dead Talk to the Dying* (1926), in his opening chapter, “Visions Seen by the Dying of Persons Unknown by Them to Be Dead.”¹⁸

So much for the “anecdotal” nature of these visions of the dead. In actual historical fact, there is nothing anecdotal about these visions at all. They are part of a stable and consistent pattern in the history of visionary experiences around death that has been reported for a century and a half in the modern English-speaking world. And that, of course, is only what we know in the modern West. The real landscape seen from a higher cross-cultural peak is no doubt much more vast and impressive, if only we would take the time and spend the resources to look.

The Secular Soul

The language of “spirit” and the “spiritual” appears quite a bit in Whitley’s writing, and usually in very positive ways. The language of “religion” and the “religious” also appears, but usually in much more critical ways. This, of course, places Whitley quite squarely within a rising new demographic of secular people who nevertheless report spiritual experiences or spiritual orientations to the world. They are sometimes called the “spiritual but not religious,” a phrase that emerged from, of all things, a set of questionnaires that sociologists were using. People would check the two boxes marked “spiritual” and “not religious.” Hence the expression.

I study and write about new religious movements. Not surprisingly, I am often asked what sets apart the modern orientation of “being spiritual” from the traditional orientation of “being religious.” At the risk of simplification, I would say that there are three clear markers.

One is the location of religious authority. The traditionally religious place that authority outside the self in a scriptural text or institution. The spiritual but not religious place that authority inside the self. Two other clear markers are the temporal relationship to revelation and the nature of those past revelations. The traditionally religious locate full revelation in the past and understand the religious life to be a faithful remembering and reliving of some singular revelation. The spiritual but not religious might appreciate

multiple past revelations, but they do not consider any of them to be absolute. Further revelations are available in the present and fuller revelations will appear in the future.

Crystallized down to their most basic forms, these three basic markers of the religious and the spiritual become:

on religious authority: outside/inside

on the nature of revelation: singular-perfect/multiple-partial

on the temporal locus of full revelation: past/future

Whitley displays all three markers. He does not think of any of this, of course, as “being spiritual.” He thinks of it as “being secular,” but in a very special, soul-filled way. Obviously, secularism does not preclude spirituality. If anything, it makes such an orientation possible.

Whitley describes the history of religions as “our long struggle to come to terms with it,” “it” being this hypothetical mind outside brain. His final lines pertain directly to these secular-spiritual commitments to looking in, to multiple incomplete revelations and, above all, to a more hopeful future:

We started the journey on our knees, cowering before the ruthless and intemperate gods of antiquity. We followed our many religions deeper into the forest, until finally that path played out, disappearing into the current dark mutter of ritual, sloganizing, and murder. Now we are at a crucial turning point. Either we journey on, this time along the secular path, or we take another fork, embarking on an even darker, more dangerous, and twisted journey.

We do not have an adequate vocabulary, much less a worldview or a set of institutions, to come to terms with such a human future. Maybe we never will. Maybe the super natural is just too much for us. I doubt this is the case, though. I doubt that the super natural is too much for us for one simple reason. I think we are an expression of it. I think we *are* it.

The Blue Man Group—the Other One

WHITLEY

Like so many of the aliens believed to have recently arrived, little blue men have been with us for a long time. As is the case with most of the other forms, they were originally identified in folklore—most frequently, in this case, in northern European folklore. Just as the camera in the Pennsylvania woods recorded the presence of a gnome, people in the past were witness to such things. They saw something. These manifestations probably weren't—and aren't—real in the same sense that you and I are real, but they most certainly do occupy some sort of space in reality.

Not only gnomes, but also and even more commonly small dark blue men have been seen. In the past, they were most often found in mines. Now they're known as "blue aliens." They were observed by German, Welsh, Cornish, and English miners. The folklore was most developed in Germany, where they were given the name kobolds. Because of its dark blue color, the metal cobalt, discovered in a German mine in 1735, was named after them. But the word "kobold" ultimately derives from the Greek for "rogue." Most appropriate, judging from my own experience with them.

They were said to carry, at the level of the heart, a small orb, glowing red, and, in point of fact, I've seen that myself: Sometime in the mid-

seventies, I saw such a being come rushing out of my brother's room in the middle of the night in our house in San Antonio. It was about three feet tall, stocky, wearing a dark blue uniform covered with pockets and flaps, and it held a glowing red light at waist level. It brushed past me, went darting downstairs, and was gone.

I looked in on my brother. He was sleeping peacefully, so I attributed it to a waking dream on my part and forgot about it.

There was another dream during that visit, though, which, looking back, seems of great importance. In it, I saw small men in dark blue uniforms lighting lamps in an ominous looking tower, which, a few years later, I came to see as the Tower of Destruction in the Marseilles Tarot, a card of profound and dynamic change, the destruction of past beliefs.

In about 1976, I had one of those concentrated moments of insight that come to one on occasion, in this case concerning the intricate symbolism contained in the tarot. I saw in it a beautifully worked-out structure that could be used to add definition to the journey of life. It had nothing to do with fortune-telling, but I could certainly see that people who had no direct knowledge of it might have come to believe that fortunes could be told by the cards that contained it. It amounted to an elegant pathway through the symbols of the Major Arcana, which reveals the way the cards interact and what each one means in terms of the growth of consciousness. It came to me very suddenly one day, as I was walking out of my office. I had the peculiar impression that somebody had been in the office with me, a man in a blue suit. But nobody was there.

Shortly after the turn of the century, I recorded my discovery in a book called *The Path*. But back in 1976, I found myself reconsidering that earlier dream, which had been powerful enough to remain in my mind, and coming to see that the lighting of the tower heralded something, some change. But what?

It was, I think, the beginning of the destruction of the system of beliefs by which I had always lived, that the dead are dead and gone, that aliens, if they exist, are certainly not here, and that religion is an anachronism founded in the magical thinking of the past and has no basis in any actual, observational evidence. All of the visions and apparitions of the past, in other words, could be summed up quite simply: they either didn't happen or were the result of misapprehensions or mental problems.

Ah, those innocent days! I was in my “conventional interlude,” the years between when I stopped having numinous experiences as a child and started having—or noticing them—once again at the age of forty.

It was not long after seeing the apparition in San Antonio that, back in our little apartment on Fifty-fifth Street in New York, I had a more arresting experience with the kobolds.

It came in the form of another powerful dream. It probably happened in 1973 or 1974, but I still recall it vividly.

I was on a plateau in the middle of an enormous desert. The horizons were much too far away, as if the planet was two or three times its normal size—or, I suppose, as if it was not this planet at all. Before me on the plateau was a narrow road, snaking elegantly through an expanse of close-cropped grass. There were tall trees, like cedars of Lebanon, in a grove off to my right. Ahead, the road passed beneath a tall triumphal arch. To my left was a squat oval building perhaps three stories tall, set in the side of a cliff. Beyond it was the immense desert view that I was seeing. The building was dark blue, and its windows had louvered awnings. The sun was bright and powerful, flooding everything with chalk-white light.

Having no idea what I should do, I decided to walk toward the building. As I went under the arch, I was joined by two small men wearing clothes that were busy with flaps, the overalls of workers. The clothes and the men themselves were a dark, iridescent blue, the same color as the building.

They drew me along to a little ravine. In it were some lean-tos made of sticks. They indicated that this was where they lived. I said, “These aren’t even huts.” One of them replied in a low, breathy voice, “They’re all we need.”

At that moment, I got the impression of vast stretches of time, and how hard it was to maintain environmental balance, how you must waste nothing if you expect to survive long enough to matter. From that brief instant would later arise my own deep concern with the environment, which would lead to the writing of *Nature’s End* and *Superstorm*, and all the environmental reporting on my website, and the work I have done in this field. From that one moment of dream came a whole lifetime of effort.

I asked them about the building. One of them replied that it was a university. Now that we were close to it, I could see that it was a wreck. I said, “It looks like it’s in ruins.” The reply, through bubbling humor, was,

“It’s a million years old and the scholars aren’t very good at maintenance.” Then they asked me if I would like to attend it.

I can remember the shocked delight and eagerness that flashed through me. I could see an arched doorway in the base. I hurried toward it. But as I drew closer, I found myself struggling through a field of sharp boulders. At that point, two very strange beings appeared, as tall as I was, very thin, with great, slanted black eyes that disturbed me very much as they bored into me.

One of them said, “He’s not ready.” This seemed to disappoint the blue fellows. It certainly disappointed me, and I tried to get around them, but they blocked my way. I sensed that the whole history and meaning of humanity must be known in that place, and that if I could matriculate there, I could learn the truth of us and the secrets of our lives, and find some real definition to the three great questions of what we are, where we are, and why we are here.

I wanted to go in, and badly, but I understood that I had to obey them. The little blue men reacted with regret. They still thought I was ready. Finally, I turned away. The next moment, I woke up. I was covered with sweat, cold, my limbs aching as if I’d been running half the night. Anne lay beside me sleeping peacefully. It was about three.

I sweated out the most intense curiosity and regret that I had ever known. The regret was an agony, and the curiosity maddened me. Little did I know that, in that moment of living dream, I had entered the school. They rejected me, perhaps, in order to find the real depths of my desire. If so, then my regret told them that I was ready.

I was nowhere near that place, though, not anymore. I was back in our tiny apartment, with the night murmur of Manhattan slipping in through the windows.

I went into the living room and got a drink of water in our railroad kitchen. Then I sat at the dining table and cried in silence.

The next encounter with the blue men took place across Eighth Avenue from our apartment, at a strange little storefront that Anne and I had come to call “the whore store.” The reason we called it this was because a young girl would sit in the window in the evenings looking ashamed. She’d be in a hard-backed chair with a dark red curtain behind it. Sometimes, the chair would be empty, and we would make jokes about what might be going on behind the curtain.

On this night, we were returning from Doubleday's bookshop on Fifth Avenue when we noticed something odd taking place in the whore store. The chair was knocked over and the curtain was flapping furiously. As we watched, astonished, little blue dwarfs kept running out, then darting behind the curtain again. Every so often, the leg or arm or shoulder of a man in a suit would appear, only to be pulled back by the blue men.

We stood there watching this odd display for a moment, then began to feel uneasy. We walked on across Eighth Avenue and went home. From then until we moved, we both avoided passing the whore store.

We discussed the event many times, but never came to any resolution about what we had seen. It was many years before I related it to my dreams, or the apparition I had glimpsed in my parents' house in San Antonio—in fact, not until long after I had begun encountering the kobolds again, in that epochal autumn of 1985.

The first encounter took place in September of that year, probably one of the later weekends in the month. From about my thirteenth year, I had been troubled with neck pain. I'd been to a number of doctors for it. The last one I tried did an X-ray and observed that two of the vertebra were surgically fused. I told him that I'd never had surgery. He said that the fusion was definitely surgical. I repeated that there had been no surgery. So he refused to treat me, and that was the end of that. (Other doctors have since said that it could also be due to a fall on my head as a baby.) The pain dogged me so much that I had taken to pulling at my neck and making the bones crack, gaining a few minutes of relief that way.

On this night, I woke up and saw standing in a far corner of the room, barely visible, what I took to be a squat blue figure about three feet tall. I stared at it, trying to tell if it was a trick of light or if there was indeed something there.

I was distracted by the pain, though, which was intense. Forgetting about the figure, I grabbed at my head and twisted it. The result was like some sort of genius chiropractic adjustment. The vertebrae on the left side popped one after the other all the way down to the center of my back. At one point, there was a deep scraping sound and I felt as if my consciousness had become momentarily detached from my body.

Then it was over. I lay there, confused and a little afraid. Had I broken my neck? What had just happened to me? Then I realized that I was no longer

in pain. I sat up. I forgot all about the blue figure. The lack of pain was extraordinary, the sudden freedom of being without it after all these years. From then on, the pain has remained far less than it was before.

It was after that night, with the vision of the kobold still perhaps somewhere in the back of my mind, that I became increasingly apprehensive, and began the gradual journey of fear that would explode into consciousness on the morning of December 27, 1985.

Over the years, my recollections of that night have become complicated by the fact that they returned only gradually, and I am not really sure that I can accurately differentiate between precisely what I recalled in the days immediately afterward, and what came into focus later on. In part, it's because it was structurally so unlike normal experience, and so much of the imagery was so novel.

What I am going to do here is to draw from it my specific recollections of the kobolds. I cannot say with accuracy exactly at what point these memories entered my mind, but they have the same quality as my other memories of these experiences, too self-organizing and vivid to be ordinary dreams, but less defined than what we normally regard as memories of the real.

The specific recollection I am referring to is of being carried—or rather, manhandled—toward a window by a group of kobolds. The experience had enough of the affect of a dream that I wasn't startled into consciousness by it, but rather tried to shrug it off and go back to sleep.

Was I being physically carried out of the house? Later, I had physical injuries. And yet, nothing else about any part of the experience—or most of my experiences—was as firmly invested in physical reality as, say, the act of pushing my pen across this page. (Yes, I still write the old-fashioned way, though I have retired my quills.)

At this point, once the *Communion* experience is behind me, things change. There is a change of scope. It happens subtly, slowly, but nevertheless everything changes.

While I was writing *Communion*, I began questioning people in the immediate area regarding odd things they may have seen. As yet, I was not aware of all the strange sightings across the Hudson in Dutchess County, which would become famous as the Hudson Valley UFO sightings. There

were many stories, but one told by a carpenter in the process of finishing a house on our private road is particularly relevant to this part of my narrative.

This was the first of two incidents that, to me, added up to a sort of communication. I have learned, over the years, to see the actions of our visitors as a sort of illustrative language, communication built out of images and events. For example, a consistent image that witnesses connect with them is that of the owl. It has played an enormous role in my own experience of them, in fact. If you study the habits and capabilities of the owl carefully, you find yourself studying the capabilities of the visitors. They are creatures of the night, they are stealthy, silent, and use surprise. Like owls, which can use their extraordinary ears to hear prey scrambling under snow, they have extraordinary means of detection. Like owls, they are predators. Left unanswered, though, is the question of what they are hunting. If we are generally returned home more or less intact, what do they want?

Actually, one level of this book is an exploration of that question.

The incident involving the carpenter occurred during the fall of 1986. He had been hurrying to complete construction before winter arrived, and had ended up in a situation where he had no way to take his tools out at nightfall. He didn't want to leave them in the unlocked house, so he decided to sleep there, on the floor.

Later, he found himself awake and looking straight at a short man who was standing a few feet away. It was too dark to determine any color, but he was short and squat. The carpenter experienced a wave of intense fear, whereupon the man changed before his eyes into a bird of paradise and then disappeared.

Thus ended the first incident, or the first sentence in the paragraph that I saw the visitors as composing.

The second incident was more complex. A couple of years later we had a large group at our cabin who'd had a multi-witness encounter with one of the gray figures with large eyes. I will describe this in a later chapter. A filmmaker was there trying to make a documentary, and he had an encounter with what I think was one of the kobolds. There was a low-light video camera running—one of many attempts we made to document some of the strange events taking place in that cabin. It failed, but not because nothing happened on that night. It failed because what happened could not be detected by a camera. Could it be that alien technology prevented this? Of course that's

possible, but it is also possible that what was happening couldn't be filmed because it was unfolding in a space that cameras cannot record, an inner space that relates to the physical but is not part of it. In other words, a supernatural space.

The filmmaker and his wife were sleeping on a convertible couch in the living room when he turned over and saw a small man standing beside the couch staring down at him. He experienced a surge of fear. Instantly, the face of the man changed. It became the menacing head of a hawk, the very image of the Egyptian god Horus, sun-god and protector.

The next thing he knew, the apparition was gone.

He was, naturally, upset, and woke his wife up to discuss what had happened. They could come to no resolution and were still awake at dawn when my son and I came up from the woods where we'd been sleeping, given that every bed in the house was taken.

As we approached the cabin, we observed a short, hooded figure of a translucent gray color come out the front door, race down the deck before our eyes, then dart off into the woods at breakneck speed, dashing with incredible dexterity around the trees.

So, even if what was happening was unfolding in some not quite physical way, it was, in the end, physical enough to be visible, and to need to avoid the trees.

Later, I walked into the woods along that same line. In a few minutes, I found myself at an old Native American burial site where there are two graves. When I bought the land the site is on, I put a codicil in the deed that the burial sites must not be disturbed. I did this in part because two men claiming to be Delaware Indians came to the cabin and said the graves were sacred to them, but also because I had sensed on the day we saw the translucent figure that it was somehow connected to the dead, and maybe to those specific dead.

My son and I went in to find the filmmaker and his wife on their feet, because, just as we had seen the figure leaving, they had experienced a blast of heat so intense they thought the couch had caught fire.

If you want to be invisible, you need to bend light, which takes a lot of energy. Could it be that the figure was using technology to do this, and that, as he left, he reduced the power of some sort of device, which caused both the release of heat and him to become somewhat visible?

With his departure, this part of a very complex incident ended. Earlier that night, two of the other people in the cabin had had face-to-face contact with what, according to their descriptions, was one of the small gray beings. I will discuss this in a later chapter.

It is possible to see these two incidents, and much more, as a form of communication—visual communication as it were, living hieroglyphs. The first one might be seen as inner beauty, represented by the bird of paradise, replacing the outer ugliness of the froglike creature, and adding an implication of flight. The second, the image of Horus, might be seen as a response to the filmmaker's fear. This is because one aspect of this very ancient Egyptian deity is protective. But, like the bird of paradise, the falcon also flies, indicating that it can reach a higher level. So the kobolds, perhaps, were communicating that it is possible to mine for wisdom by ascending.

The Emerald Tablet of Hermes by Hermes Trismegistus, which first appears in an Arabic text in about the eighth century and was considered by master alchemist Sir Isaac Newton to be the foundation of the alchemical movement, is about finding the point of balance between lower and higher worlds, and this, it would seem, might also have been the message being communicated, in pictures and actions, by the kobolds who were involved at our cabin—that is to say, by the unknown aspect of mind that may be their origin.

Another incident that might be related took place at about this time. We were on a co-operative road, and one of the other residents came over to discuss some repairs. During this period, we were hearing high-pitched sounds from under the cabin—drilling, it sounded like, in the seam of iron that runs there. (We were not far from the original Iron Mountain facility in Rosendale, New York.)

Was this drilling an extension of the Iron Mountain storage area? Not likely, given that, as the sound continued, a stream of blood came shooting out of the center of our guest's forehead. Anne immediately staunched it with some tissue. He went home, never to return.

As the Newton translation of the Emerald Tablet says,

*The father of all perfection in the whole world is here.
Its force or power is entire if it be converted into earth.*

An alchemical transformation that was apparently not so good for the circulatory system of an elderly lawyer caught in its shrilly whine.

After the multiple witness incident and before the incident with the neighbor, at an earlier attempt to assemble a group who would co-operatively have an experience of our “visitors,” the first of the truly complex events took place.

Anne and I were upstairs in our bedroom. In the living room below there were four people on cots and the convertible couch, including a magazine editor who had promised to publish his experience if anything happened. In the basement was another couple, sleeping privately.

Sometime after midnight the people in the living room discovered that they couldn't move. But they could still talk, and began to converse as they tried to get off their beds.

A moment later, a group of short, dark blue figures entered the room through the front door, and began leaping around like acrobats, jumping and tumbling and making a ruckus. This went on for a few minutes until they disappeared and the group found that they could once again move.

They spent the rest of the night talking about what had happened. Meanwhile, an odd event took place in the basement, one that would turn out to be astonishingly and unexpectedly common. Among other things, it would profoundly weaken the argument that any alien presence that may be here is on a scientific expedition.

What happened was that the couple sleeping in the basement woke up to see an old friend of theirs standing at the foot of the bed. She spoke to them, telling them that she was all right. They were astounded, because she had died in the Mexico City earthquake of 1983, and yet here she was, big as life and seemingly entirely solid, standing before them telling them that she, who had been dead now for four years, was perfectly fine.

Upstairs, little blue aliens were cavorting in the living room. Downstairs, a ghost, seemingly solid and very much alive, was telling two of her old friends that she was fine.

So, what was this all about? What happened?

What happened was that beings popularly believed (by those who do believe) to be aliens, came into the living room and put themselves on display by leaping around before a temporarily paralyzed audience. Meanwhile in the basement, a very solid-seeming ghost showed up. As would almost

universally be the case in the other such instances that followed at our cabin, and the many others that have been reported to us, she assured them that she was fine, and then disappeared.

That's what appeared to happen, anyway. But what *really* happened? What can it mean?

As Anne and I worked together on this, as we did on everything, she asked the question: How do we know that any of this—the visits from Horus and the bird of paradise, and, for that matter, the meanings we are deriving not only from things like that but also from the whole “school” of close encounter—is communication? Perhaps it's simply a matter of our using our own knowledge to construct meanings that were in no way intended—at least, not by the entities we saw.

Maybe they don't know any more than we do. Given their chimerical nature, maybe even less. There can be little question but that there is a structure, large in scale and intellectually dynamic, that gives form to the whole phenomenon, including UFO sightings, alien encounters, encounters with the dead—all of it. Does it come from them, from us, or from some larger manifestation of consciousness that is dancing us marionettes to a cosmic tune?

Whatever its origin, judging from the history of religion, it is probably a good deal more dangerous than it looks. Religions have a habit of launching themselves among rejected minorities, then emerging unexpectedly from the cultural shadows, believers with their swords aflame. We human beings have a great defect, which is that we are all too often willing to both spread and enforce our ideas with violence.

If aliens show up, all sorts of people will rush forward with supposedly authoritative explanations of what is going on. Few of these are likely to include the presence of the dead in the equation, and none will include any explanation for the group of stories I will now tell.

But first, as these are way, way out there in terms of strangeness, a disclaimer: I would never have believed them, not for a moment, had there not been witnesses. As has so often been true in my experiential life, these experiences, outré as they were, were shared with others.

I might refer here to Jeff's concept of the Human as Two, and mention that these may be glimpses, as it were, through the fence that surrounds Charles Fort's famous comment in *Book of the Damned*, “I think we're

property.” We are little, curious animals, as it were, peering through the slats of the fence that surrounds our barnyard, and seeing beyond the edge not another world, but a more real vision of ourselves reflected as noumena and wondering, “What is *that*?”

It is what we are, would be one possible answer.

The first of these experiences took place in our apartment in Manhattan. I was lying in bed one afternoon, not asleep, when suddenly I felt a strange pulsation cross my chest. I opened my eyes to see an image before me, the head and shoulders of a being. It had round, coal-black eyes, very gentle, in a familiar “gray alien” face. The image was cut off along a line that precisely paralleled the pulsation in my chest. The gentleness of the being was striking. Equally striking was the feeling I had that I was looking at another form of myself or at somebody who inhabits me.

At about this same time, I woke up one morning with the sensation that my head was open at the top and there was somebody inside me. As I came into consciousness, a youthful voice, shrill with fear, cried out, “I’m being trapped inside a body.”

That brought me to full and immediate consciousness, you can be sure. But it never went further. Not another stirring. I was left to wonder what had given rise to this dream or hallucination or whatever it was. I am still wondering.

The famed psychic Ingo Swann came to the house at about that time. During our conversation, he suddenly kicked his feet uneasily and said that he was being invaded by somebody. Within a couple of minutes, he got up and rushed out, never to return.

The next incident took place about a year later, when we were living in Brooklyn Heights. I was curled up on a loveseat reading. Anne was sitting in a chair beside me doing the same. Waves of vibration began flowing through me, surging up and down my body. I thought to myself that Anne was finally going to get a chance to see an alien, because I was about to change form. Just then, though, one of our cats jumped up on my chest. He yowled as electric sparks shot between his paws and my body, and immediately jumped down. Nothing further happened, so I assumed that the balance had been thrown off. I spent the rest of the afternoon wondering what aliens really are . . . and what we are.

Later that night, I woke up. I was in the other form. I got out of bed and

found that I could fly a few inches above the floor. I was entirely conscious. I felt normal, but far lighter than usual. Unfortunately, I did not look back at the bed. I wish I had, because then I would have seen if my normal body was still there.

Instead, I went upstairs to my son's room. He had a friend sleeping over, and the boy woke up. At this point, I was against the ceiling, hovering above them. The boy seemed delighted. He was smiling from ear to ear.

I then went back down to the master bedroom, but on the way met another "alien," who begged me never to leave her again, never to return to the other form. She screamed, threw herself onto my back, and pleaded with me. I can remember her arms around me, as strong as steel.

The next thing I knew, though, I was lying back in bed. I was awake. Beside me Anne lay with her eyes open, seemingly both asleep and awake at the same time. Nothing further happened, but I spent the rest of that night awake, turning over in my mind all the possibilities that the experience suggested. After a few minutes, Anne's sleep returned to normal. I finally decided that I'd had some sort of hallucinatory dream that has not yet been identified and fell asleep myself.

When I went down to breakfast, the boys were having a sullen conversation. They would not speak to me. Later our son said that his friend had seen one of those *things* in the bedroom and was furious about it. If he was going to have any sort of social life, let alone more sleepovers, no more aliens, *please!* And here I was again, face-to-face with another witness to the impossible. On one level of the boy's mind, smiles of delighted recognition. On another, terrible fear and anger.

Which one is more true? Or better put perhaps, who are we, that we so conceal ourselves from ourselves?

I am far from alone in having experiences like this, that suggest the presence of an entirely unexpected duality of human being, not to say an entirely different core to reality itself—indeed, Jeff's "human as two."

I knew a massage therapist who specialized in working with very frail people. One time while massaging a patient (an elderly woman with an extremely weak heart), he felt an odd vibration, looked up from the patient, and saw in a mirror across the room that he had apparently turned into an alien. Naturally, he was terrified that she'd see this, too, and that the shock would kill her. He continued quietly massaging her while in this state for

some little time, until he finally resumed his normal appearance with her fortunately none the wiser.

Judging from the aforementioned Podesta tweet, it seems likely that the government could be holding back some pretty surprising information; perhaps even more so than Podesta himself imagined. He also wrote the introduction to UFO investigator Leslie Kean's book *UFOs: Generals, Pilots and Government Officials Go on the Record*. The book makes a convincing case that officials are aware of something unknown in our skies. But I am not so sure that the conclusions that the objects are spacecraft and that they are piloted by aliens—which are universally believed in the UFO community and, for all I know, in government circles as well—are correct. In fact, even if alleged aliens actually come forward in some way and claim that this is true, I think we should still hesitate to abandon the questions that surround the enigma before the whole of the truth is understood.

It is interesting to contemplate that this level of mind that we are discussing must be held responsible not just for the ancient, organic polytheisms but also for many of the more modern religions.

One must ask, if it is there, are its ambitions malignant or confused, or is it our response that is defective? Something is most certainly very wrong, or we wouldn't have spent the last three thousand years and more killing each other over religion. We convert the ambiguities of meaning that it presents us into beliefs, which we simply cannot handle. Inevitably, in defense of belief, we become willing to die and willing to kill.

If beliefs—even scientific beliefs—could really be brought into clear focus, then the basic philosophical question, “Why is there something rather than nothing?” would have a clear and unambiguous answer.

As established religions in the West implode and Islam suffers its agonies, a vast and hidden experience spreads among the people, its power concealed behind the same sort of wall of denial that Rome once erected against Christianity, which was also derided, ignored, and persecuted, as most religions are during their early emergent periods.

By the end of the first century CE, Christianity probably had only a few thousand devotees. Presently, millions of people have been touched by UFO lore.

Within a few months of the publication of *Communion*, Anne was reading our mountains of letters as fast as she could, and making notes of

similarities as she went along. It was during this period that we understood the actual complexity of what we were dealing with, and just how deeply it was penetrating human consciousness. I can recall going into her office and seeing on the wall a yellow sheet with a list of typical observations in one column and numbers in another. I noticed that she had written at the top of the sheet, "This has something to do with what we call death."

I recalled that this had happened to me. As I mentioned earlier, on the night of December 26, I had seen a friend with the aliens. He had recently retired from the CIA. During the period that I thought I had been the victim of a conventional crime, I had attempted to find him, only to discover that he had died the previous March. So I was among those who had seen a dead man with the aliens. There was nothing ghostly about him at all. Like the apparition our friends saw at the foot of their bed, he had seemed entirely solid and real.

During this period, also, a few months after *Communion* was published, I received a call from my literary agency. A reader was desperate to get in touch with me. At the time, there were thousands of people doing this, but only this one had located my agency and called them. In those days, before the Internet, this took some significant effort, so I called him.

He told the following heartrending story: He and his wife had been sitting in their living room. Their old dog had become unexpectedly agitated and had needed to go out a second time. As the wife was opening the front door, she saw what appeared to be a fireball roar overhead and disappear below the treetops. She told her husband that she'd just seen a plane on fire and crashing. The next moment, their seven-year-old son came rushing down from his bedroom shouting, "Little blue men came into my room and they had Frankie [his older brother] with them and he said to tell you he was OK."

The older boy had been killed in an auto accident the week before, and the father desperately wanted to know if there was any reason to believe his child's story.

I was able to tell him that this was actually a commonplace part of the experience, judging from what we were discovering.

Not every experience of the kobolds involves death and the dead.

By late 1987, we were literally inundated with letters. Anne was determined to read them all and catalog as many as possible. She was looking for a secretary to help her when she found herself reading a remarkable

narrative from a woman who lived across the street from us in Greenwich Village.

Her name is Lorie Barnes, and she became our secretary and now has been a friend for over thirty years. She is also among the people who have had encounters at our cabin, and has gone on record with them.

When she was a young woman and pregnant back in the 1950s, she was lying in bed one night reading and waiting for her husband to return from work, when movement at the foot of the bed startled her.

She was shocked to see a group of squat blue or black figures with hideous froglike faces. As she recoiled, the one in the lead said, "Do not be afraid. We are not here for you. We are interested in the girl child you are carrying."

Of course, this took her to a new level of panic, but before she could completely lose her mind, they ended the confrontation with a brief and deeply startling statement that we will address in a moment. They withdrew, and disappeared from the room. When born, Lorie's child was indeed a girl. Back in those days, there was no way to determine the sex of a fetus. At least, we didn't have one.

In another instance, this one involving death, I saw, in my mind's eye, an event that haunts me still. A friend was having open heart surgery. He was alone in the world, an ill-liked man and something of a criminal. Anne and I did not want him to wake up in an empty room after his ordeal, so we were at the hospital keeping vigil. Our plan was that he would see friendly faces when he was taken out of recovery.

Perhaps two hours into the procedure, I was surprised to see him standing in the doorway of the waiting room. He stared at me with a mixture of longing and resignation, his eyes at once famished and deeply sad. To a degree, he had led a dissolute and dishonest life, but he had also been a loyal family man. He had been my friend since boyhood.

In the next instant, he was gone.

I said to Anne, "I saw Tommy. Tommy just died."

In another instant, my mind's eye was filled with a vision of a totally unexpected kind. In it, a group of kobolds were carrying him through a tumbledown cardboard slum in India. Then he was gone and in his place there was a tiny baby girl being held by her father.

The baby's eyes widened with what seemed to me to be adult

recognition, and the infant began screaming terribly, waving its arms and kicking, its eyes practically popping out of its head. The frantic parents tried to comfort it, and then the vision was gone.

The doctor came in and told us that our friend was dead.

I've had long thoughts about that vision. What might it mean—that these odd beings are indeed the managers of our souls? Did they put the soul of a bad man into a fresh young body, to give this not entirely lost being some sort of a second chance? Is that in some way part of life? What is life? What does it actually mean to be human?

Who are we, why are we here, where are we?

The activities of the kobolds are not confined to the regions of birth and death. I know an individual who, as a child, said that he would sometimes wake up at night and find them shining lights on his body. They said that they were doctors, and they were examining his soul.

Another incident took place on the Grand Central Parkway in Queens; it was so spectacular and mysterious that all I can really do is relate it, then let the questions it raises sing their haunting song.

As a gentleman I knew in those days was driving on the parkway in heavy late-afternoon traffic, he was horrified to see a jet coming straight toward his car, apparently about to crash into the dense traffic. Instead, though, it went right overhead, and he was perplexed to observe that the engines appeared to be wood cutouts. The whole plane was fake. Huge, but nothing more than a stage prop, in some bizarre way set to flight.

It may have been there to deflect attention away from what was happening nearby, because as he lowered his gaze to reengage with the traffic, he saw what appeared to be an enormous animated billboard on the roadside. It was lighted like the news feeds in Times Square, and strange symbols were flashing across it. I asked him what they looked like, but he wasn't able to remember them, except that they were moving fast and didn't look at all familiar.

He noticed cars along the roadside and people getting out and walking into the dark beneath the shoulder. It was all so odd, he decided to stop himself, take a look, and ask some of the others what they thought.

When he got out of his car, he could see a short distance away a number of people standing in a circle. As he walked toward them, he was approached

by fearsome looking little men in dark blue uniforms, one of whom snarled at him, “Get out of here.”

He did. But what had he witnessed? The fake plane seems to have been there to draw the attention of passersby away from what was happening. But what in the world *was* happening? I cannot say if it had anything to do with aliens, but it certainly did have to do with human beings, because there were people there in that circle.

What of the little men, though? Who were they?

Actually, there is something of an answer. As Lorie Barnes lay in her bed, young and pregnant and terrified beyond words, the leading figure asked, “Why are you so afraid?” She replied, “Because you’re *so ugly!*”

He laid a thickly gloved hand on her wrist and said in a kind and understanding voice, “My dear, one day you will look just like us.”

But what might this mean? Are we to turn into aliens, then? Or, if we take this comment at face value, might it not mean that there is more than one human form?

There appeared among our letters in 1988 a remarkably vivid account from a woman in Australia, who had been doing housework in the middle of the day when some very strange creatures had abruptly appeared in her sitting room. She observed a willowy being with dark, slanted eyes and a group of short, stocky ones in “brown shrouds,” who seemed to her to be workers, while the tall one was more of a supervisor.

It proceeded to overpower her with its mind while the workers moved about in the background, doing what she could not imagine. After a ferocious mental struggle, during which she literally tried to crawl out of the house as she could no longer walk, all went dark. When she woke up, it was hours later. She never found out what had happened to her during that missing time.

Presumably, though, the creatures who put her through this ordeal know—and perhaps, also, that is something close to the secret of the ages.

In any case, one wonders, looking at Lorie Barnes’s story and the story of the Australian woman, if we are not seeing the outline of a very remarkable and unsuspected structure: we are the kobolds. They are us working, somehow, in the fields of the soul. And one day, many of the living will join them down this very strange path, as we enter this other level of humanity, where what is hidden to us in this state, is the grammar of their ordinary truth.

A Context in the Sky

JEFF

We have only faith to guide us, say the theologians.

Which faith?

It is my acceptance that what we call evidence, and whatever we think we mean by intuition and faith are the phenomena of eras, and that the best of minds, or minds best in rapport with the dominant motif of an era, have intuition and faith and belief that depend upon what is called evidence, relatively to pagan gods, then to the god of the christians, and then to godlessness—and then to whatever is coming next.

. . . . If now, affairs upon this earth be fluttering upon the edge of a new era, and I give expression to coming thoughts of that era, thousands of other minds are changing, and all of us will take on new thoughts concordantly, and see, as important evidence, piffle of the past.

CHARLES FORT, *Lo!*

History is not what we think it is. Certainly its meanings change as we engage it differently. Piffle of the past—odd things in the historical record that make no sense to us because of our convictions about how the world works. Until, of course, those convictions pass and the piffle of the past appear as the unrecognized codes of some future knowledge.

Back to the piffle. I think most readers are probably like me when they encounter the story about the blue trolls bouncing around the Striebers' cabin living room as their paralyzed guests watch the show. I have never seen any

squat blue aliens. I think most readers are like me again when they hear about the couple who witnessed an old (dead) friend show up in perfectly good form—a “solid ghost . . . entirely solid and real.” I have never seen a ghost, much less a resurrected woman. For that matter, I think most readers are like me again when they hear almost *any* UFO story. I have never seen a UFO of any kind.¹⁹ When it comes to these sorts of things, I am a veritable genius of nonexperience. I am an amazing spiritual dud.

So why do I believe Whitley? Why listen to this professional storyteller tell us more stories? I have numerous professional reasons and one deeply personal reason to listen. I will get to the personal reason in chapter 9 (turns out that this dingbat is not a total dud). For now, let me focus on the professional ones. These are not simply professional reasons. They are also methods or practices, that is, they are highly developed “tools” with which to make some sense of otherwise impossible things. If you know where to find these tools (in the professional study of religion) and take the trouble to learn how to use them well, you can build the most astonishing things. Like a new world.

So far, I have introduced two such practices. It seems helpful to begin a list, as there will be quite a few others. Indeed, before we are done here, you will have an entire “practice kit” or “toolbox” at your disposal, which I will summarize at the end of the book in an appendix.²⁰

We encountered the first practice in chapter 1. This is the first and most important of all the practices in the study of religion. We call it simply *comparison*. This is a deceptive word, mostly because it is so familiar and seems so common. Consequently, we always underestimate the power of what this mental technology can do. We also underestimate the sheer havoc and embarrassing mistakes this tool can create, if it is not handled expertly and used well. As we shall repeatedly see, *everything* depends on what you “put on the table,” that is, everything depends on your comparative practice: what you compare with what to conclude what.

In our opening pages, I explained that if we collect enough seemingly “anecdotal” or “anomalous” experiences from different times and places and place them together on a flat and fair comparative table, we can quickly see that these reports are neither anecdotal nor anomalous. We can see that they are actually common occurrences in the species. They are part of our world.

They are “natural,” as we say, even if each of them is also rare with respect to any particular individual, and all of them are “super,” that is, beyond how we presently understand how this natural world works. But—and, again, here is the big point—we can only begin to perceive and understand these super natural things through a careful comparative practice. Otherwise, they are more or less invisible. Otherwise, they seem coincidental, accidental, meaningless. Or they seem to mean what they, as a whole now, almost certainly do not mean: that there are spacemen out for sex, or UFOs are demons.

We encountered the second tool or practice in chapter 3: *phenomenology*. We learned to “make the cut” between “what appears” on our comparative table and “what actually is.” We also learned that our sensory systems are simply not set up to know the latter. This cut allows us to take seriously even the most fantastic appearances of human experience without naively equating them or their interpretations with the truth of things (and the truth of things may well be weirder still). We can put the damnedest things on our comparative table.

There is a third tool or practice. I want to take it up now. It is a very simple and effective way to make the impossible possible. As with comparison and phenomenology, historians and humanists have given this third practice a technical name. They call it *historical contextualization*, or, more simply, *history*. This is what I want to do in the present chapter. I want to historically contextualize Whitley’s abduction experience. I want to place it in a larger history.

These three practices, I should immediately observe, are often performed together. Whitley performs comparison and contextualization at different points in his narrative, for example: when he locates his troll experiences in the larger European history of blue troll folklore; or when he tells us of the child who saw the little blue men and whose dead brother, Frankie, was with them; or when their neighbor-secretary Lorie Barnes tells Whitley about the squat black figures who took such an interest in her unborn daughter; or when he talks to his neighbors and looks for other stories of things seen in the sky in that area at that time.

Anne took up the comparative method again when she read through the *Communion* letters, created a chart and classification scheme on the wall, recognized patterns in the data, and came to the working hypothesis: “This

has something to do with what we call death.” Actually, Anne had moved beyond collection, classification, and comparison, beyond the phenomenological cut, and beyond historical contextualization with such a sentence. She had moved into the act of theorizing her comparative data.

For now, let us take up this third tool or practice of historical contextualization. I want to bring it out into the open and make it more explicit and conscious. I also want to show how contextualization can have a most ironic and unintended result, ironic and unintended anyway for the conventional historian.²¹ As we will now see, robust historical contextualization, like robust comparison across historical contexts, does not always end up explaining everything. Sometimes it ends up making our world much weirder than we thought.

Hudson Valley, 1909–1986

Historians, and humanists in general (by which I simply mean professionals who work in the humanities), are expert in insisting on the “historical context” of every human experience, idea, value, or expression. What they mean by this is that every human experience takes place in a very particular historical context and so is profoundly shaped by that place and time. Think about who you are. You are who you are largely because of where and when you were born, who your parents were and how they raised you, what language or languages you speak, and so on. Change any of these variables and you would be a different self, a different person.

But many humanists often want to push this obvious truth further. They want to replace my carefully chosen “shaped by that place and time” with another expression: “constructed by that place and time,” by which they really mean: “completely determined by that place and time.” For them, everything about human experience and expression is not just shaped or mediated by a historical context. It is constructed out of that historical situation and, or so it is implied, is *nothing but* that historical situation. Everything human can finally be reduced to and explained by “history,” which is to say: by its historical context.

This move, of course, makes every human experience relative to a particular place in time. Taken to its logical end, it turns us all into psychological silos, silos that have no real way of communicating across space and time (hence, logically speaking, “history” should not be possible). It also sucks any bigger meaning out of the world. No single experience now can be taken as a sign or expression of some larger cross-cultural reality or shared human nature, much less as a revelation of some cosmic truth. It’s all history. It’s all context. It’s all constructed. Put in the terms of our earlier analogy, it’s all appearance. There is no projector behind or above us. There is no real behind the show.

The ideological debunkers of anomalous phenomena have a very similar strategy in mind when they label the extraordinary data of this realm anecdotal. Basically, what they are arguing is the same point, but now in reverse. They are arguing that these experiences have no larger context or bigger point to make (this is what “anecdotal” means). They are arguing that these pure anomalies can be fully explained (away) as local constructions of a single human psyche and so should not concern us as either meaningful or real in the sense that other things are real, that is, in the sense that they can be experienced by multiple individuals in more or less the same way in other times and climes. In their opinion, such anomalous experiences can tell us nothing about the real world or our real nature because they sit entirely alone among our other more public and so more reliable perceptions and experiences. “No broader context” equals “unreal.” These anomalies are best left ignored, then, as meaningless blips, as statistical flukes, or as neurological hiccups.

There is a real insight here. The meaning of something, after all, *does* depend on its context, be that a text, a grammar, or a social event. To take a simple, mundane example, I know that a long flowing piece of cloth attached around a person’s shoulders and neck is interpreted differently in a superhero comic book than it is at an elite social event. The meaning of the “cape” is determined by its literary, artistic, and social contexts. This is why *completely* anomalous experiences would in fact be “meaningless” in the simple sense that we would have nothing else to compare them to, no context in which to place them, and so no way of understanding what they are or how they are functioning.

But here is the funny thing. Such historical and contextual insights are

helpful enough, but, if applied fairly and systematically, they can easily backfire on the conventional historian and the dogmatic debunker. Sometimes, after all, what initially looks anomalous or “without a context” turns out, on closer historical inspection (that is, with better history), to be neither. A truly robust historical perspective here does not relativize or dismiss. Sometimes it ends up confirming the anomalous experience as part of a much larger pattern or context. In this way, good history, like good comparison and good phenomenology, makes the impossible possible.

Consider, for example, the historical contexts of the events recounted in *Communion* and in Whitley’s later nonfiction books on this same series of events. These events may seem to the uninformed reader to be completely anomalous, just plain weird, but they are in historical fact anything but. If we look carefully at either the big picture or the little picture, a very different image on our comparative screen emerges, as if tens of thousands of little tiny pixels were flashing in and out on our flat-screen TV to take a definite, and quite eerie, shape and story.

First, step back a bit from the television. Way back. The visitors, of course, are not anomalous at all. They possess *countless* precedents in the general history of religions. And that is an understatement. I do not think it is too much of a simplification to suggest that the entire history of religions can be summed up this way: strange superbeings from the sky come down to interact with human beings, provide them with cultural, technological, legal, and ethical knowledge, guide them, scare the crap out of them, demand their submission and obedience, have sex with them (often forcefully), and generally terrorize, awe, baffle, inspire, and use them. This history of religions is the broadest context and grammar of *Communion*. Nothing anomalous or meaningless there, even if it is all, of course, impossible in *our* modern materialist register and assumptions, themselves all very recent, and no doubt very temporary.

Now step forward, say, halfway to the TV screen: not so close that you just see individual pixels, but not too far away either, so you can still see the images and stories on the screen. Similarly, this “little picture” or more immediate temporal and spatial context of Whitley’s initial experiences work powerfully against any anecdotal reading.

Whitley briefly invokes these larger historical contexts in the previous chapter when he writes: “As yet, I was not aware of all the strange sightings

across the Hudson in Dutchess County, which would become famous as the Hudson Valley UFO sightings.” Indeed. The geographical locale of Strieber’s abduction experience is a well-known and well-documented hot spot for UFO activity throughout the twentieth century. Consider the following.

The first major “UFO flap” in the United States was the airship mystery of 1896–97, during which hundreds of sightings of craft flying over major U.S. cities, often with spotlights or “lanterns” no less, were reported in the newspapers from California to New York. According to Whitley, an airship floated over San Antonio in May of 1897 and must have flown over Strieber’s great-grandmother’s house.²² This was six years before the Wright Brothers managed to get their first dangerous contraption a few feet off the ground in Kittyhawk, North Carolina. The nature of these sightings remains controversial and ambiguous, and many of them were no doubt hoaxes or misreported, but one thing is clear: they *were* widely reported, and these reports are part of the historical record and so a part of the larger historical context of the later sightings.

Another major wave of sightings occurred about a decade later, in 1909–10, this time centered in the Hudson Valley region. On July 26, 1909, the *Newburgh Daily Journal* ran this headline: “AIR SHIP” IS SEEN AGAIN FROM WASHINGTON HEIGHTS: SHE WAS SWOOPING: TOO DARK, IT IS SAID, TO DISCERN OUTLINES OF THE “SHIP.” And here is what *The Sun* of New York City reported a few days later, on August 1: “A mysterious airship which flies only at night is causing considerable excitement and keeping the people of Orange county residing between Goshen and Newburgh up nights in their efforts to get a look at it.” And here is my favorite piece, under the headline “HUMAN VOLCANO ERUPTS,” from the *Goshen Democrat* four days later, on August 5:

Otto Pushman, Newburgh’s champion cusser, had been sent to jail for thirty days for using sulfurous language. During the nocturnal hours of Tuesday he was discovered on Grand Street looking for that ding-blasted airship that the Newburgh papers tell about and cursing fervently at the blankty-blanked moon.

As this precious piece reveals and as author Linda Zimmerman emphasizes through an analysis of other newspaper pieces from the same

year (one of which featured mocking cartoons and an invocation of Santa Claus), one can see “all the elements of denials, ridiculous excuses, hoaxers, and belittled witnesses already in place, more than 100 years ago!”²³

Zimmerman has written two books tracing the UFO phenomenon in the Hudson Valley region from 1909 to the present. What she finds is a dizzying array of phenomena not unlike those we find later in the century: “airships” and later “spaceships” in the sky ranging from baseball size glowing balls to huge floating Vs (including her own sighting); an immense circular metallic craft with colored lights and symbols that hovered just above the heads of a mother and her twelve-year-old son close enough to hit with a rock; two early abduction reports (from 1929 and 1937) involving things like time standing still, floating humanoids in “diving suits,” and a sense of being in two worlds at once; encounters that result in the witnesses developing various psychological capacities, particularly telepathy and precognition (an extremely common pattern in such encounters to this day); a bizarre vision of two immense “wheels” on their side (vaguely reminiscent of Ezekiel’s “wheels” and also reported as a spinning “ferris wheel” in the 1980s); an eyeball-to-eyeball encounter with a long-necked green humanoid flying in a circular craft right beside a traveling car; a large pile of sand blown to smithereens with circular landing marks burned into the cement (with attending photographs); UFOs surrounded by helicopters or helicopters apparently searching for UFOs; and numerous stories of scared dogs, cats, and birds.²⁴

Zimmerman also deals with some cases outside the Hudson Valley, including my personal favorite: a sighting in a backyard outside of Chicago in 1992 of a seven-foot humanoid with an apparent tail teleporting from tree to tree whose description sounds, to me anyway, *exactly* like Nightcrawler of the X-Men. The thing even displayed Nightcrawler’s signature cobalt blue flash when it instantaneously “jumped” from place to place.²⁵ This is well before the movies, but not before Nightcrawler himself, who was introduced in a comic book in 1975. What to do?

The spooked dogs, cats, and birds are also especially interesting, as they strongly suggest that these events had some kind of biological or physical existence outside the subjective psyches of the witnesses, that is, outside the phenomenological cut. I think an entire book could easily be written on UFOs and our canine and feline companions. Whitley himself has written about the

physiological effects different visitor phenomena had on their pet cats, including above again.²⁶

Moreover, and worse still for the anecdotal thesis, it was the 1980s that saw the strongest spike in reports of sightings and up-close encounters in the Hudson Valley. The Northwestern University astronomer and air force scientific consultant J. Allen Hynek, the researcher Philip J. Imbrogno, and the journalist Bob Pratt dedicated an entire volume to this subject, with a later edition (after Hynek's death) claiming some 7,046 reported cases in the Hudson Valley from 1982 to 1995.

Particularly important here, since it temporally wraps around the Strieber case, is the three-year flap—beginning on New Year's Eve, 1982, and petering out throughout 1986—that featured something that came to be known as the “Westchester Boomerang,” basically an immense triangular-shaped craft repeatedly floating over the region. The thing was described variously as “a flying city,” “as large as an aircraft carrier,” “as big as a football field,” and like “something out of the movie *Close Encounters of the Third Kind*.”²⁷ As is so often the case, the sci-fi references were irresistible.

Not that the immense thing behaved like a thing. It could appear and disappear instantly, vanishing, as one witness put it, “like the Cheshire Cat's smile.” It was often described as completely silent. Or in uncanny religious terms: “It just hung there motionless in the sky. It was like seeing a ghost.” Squadrons of helicopters were seen in the night skies during some of these sightings, as well as unidentified planes flying in formation, which the witnesses believed were sent up by the military to confuse the matter and provide a bogus explanation to the public.²⁸ The public was not tricked, or amused.

After two books on the Hudson Valley material, Zimmerman's conclusion seems reasonable enough: the Hudson Valley region is a UFO hotspot. And it was *here* that Whitley Strieber had his own abduction experiences over the Christmas holidays of 1985, right smack in the middle of the most active decade of the twentieth century, during a spike in that same decade, and after at least seventy-seven years of similar encounters in the same area that included not one or two reported sightings, but *thousands*.

Such cultural and geographical contexts do not explain these experiences or offer us any definitive answer. I am certain that the reports are

not all of the same quality or reliability, and, as we have seen, some of them were simply mocking. Accordingly, I do not wish to take a particular position on these records, much less on this or that individual sighting. We simply have not done the hard historical, textual, ethnographic, and scientific work that would warrant or authorize any such definitive position. As a culture, we have barely begun such a project. But, taken as a whole, such historical materials certainly dispel any notion that Strieber must be a kook, or that his honest descriptions and dramatic sufferings can somehow be brushed aside as lacking any meaningful context, as anecdotal or anomalous. They were in historical and contextual fact nothing of the sort.

That is one big reason I continue to listen to Whitley Strieber.

The Earth-Farm

There is one other thing to say about the Hudson Valley, and it is a biggie in my opinion. It is obvious enough, but no one, to my knowledge, has noted it. It is this: Albany, New York, was the birthplace and childhood home of the man who did more than *anyone* to shape the American paranormal: Charles Fort. Jim Steinmeyer has given us a wonderful biography of Fort.²⁹ I have done my best to summarize Fort's sophisticated comparative practice.³⁰ Here I can only sketch the barest of outlines.

In four weird and wonderful books written between 1919 and 1932 (*The Book of the Damned*, *New Lands*, *Lo!*, and *Wild Talents*), Fort laid down the paradoxical, both-and, real-unreal, mental-material nature of paranormal phenomena, which he humorously called "the damned" for the ways that religion and science so anxiously denied, condemned, and ignored these constantly reported events/experiences. It was Fort again who began to speculate about the meaning and purpose of what he called "super-constructions" in the sky. There were no "UFOs" or "flying saucers" yet, although many of Fort's descriptions are astonishingly close, like the man's in 1871 who saw a thing fall from the sky, "oscillating from side to side like a disc falling through water," that is, exactly like flying saucers would be seen descending in the next century.³¹ Then there were his many speculations about abductions, which he framed in his typical humorous, not quite

grammatical way, like this: “Whether spacarians have ever dredged down here or not, or ‘sniped’ down here, pouncing, assailing, either wantonly, or in the interests of their sciences, and I have strong objections against lugging in the fourth dimension, because then I am no better off, wondering what the fifth and sixth are like.”³²

Or more bluntly: “I think that we’re fished for.”³³

But all of this, at least as we think we know it now, would come later, partly because of Charles Fort. It was this man’s speculations that were picked up by the pulp-fiction subculture of the 1930s and ’40s (the pulps even serialized sections from his books), which in turn morphed into modern science-fiction literature in the 1950s and ’60s. Fort is one of the fathers of all of this.

Fort, however, did not make the mistakes of the reductive and religious comparativists of today. He was a very special kind of skeptic. Indeed, he was extremely critical of two common ways of demonizing or dismissing anomalous events: what he called the Dominant of Religion (related to what I have called religious comparison) and the Dominant of Science (related to what I have called reductive comparison). He made fun of both by simply demonstrating how they really didn’t work to explain the full scope of the data and how they both took certain things off the table so that they could pretend that they were explaining everything.

It is worth repeating. It is very easy to claim a theory of everything if you get to decide what that everything is. It is very easy to explain everything on the table if you have put everything you cannot explain underneath it in the wastebasket.

Fort sought to move beyond these two dominant ways of knowing into a third Dominant, what he called (not so eloquently) “Intermediatism” or (a little better) the “philosophy of the hyphen,” by which he basically meant to refer to events that were physical and mental or real and unreal at the same time. It is a similar still future, frankly paradoxical, deeply spiritual, deeply materialist way of knowing and understanding our world that Whitley and I are re-visioning as the super natural.

Fort, who spent his adult life reading and writing at the southern end of the Hudson Valley, that is, in New York City, considered some very entertaining, and occasionally very dark, possibilities with respect to all of

these superstructures in the sky. For example, he often invoked the experience of the Native Americans around 1492, when they first witnessed those immense, anomalous ships floating in the bays. It would not go well for them, Fort noted.

Then he got darker (and weirder). Earth might not be a “new land” or a galactic colony. It might be a farm. This would certainly explain why the visitors do not establish any open contact or attempt communication with us. Why should they?

Would we, if we could, educate and sophisticate pigs, geese, cattle?

Would it be wise to establish diplomatic relation with the hen that now functions, satisfied with mere sense of achievement by way of compensation?

*I think we're property.*³⁴

Or again: “I should say that we’re now under cultivation; that we’re conscious of it, but have the impertinence to attribute it all to our own nobler and higher instincts,” which is to say: to our religious instincts and beliefs.³⁵

This dark thought of a kind of galactic seeding, alien husbandry, or earth-farm secretly working below (or above) our mythologies and religions would have a long and rich history in the later science fiction, of course, up to and including Ridley Scott’s recent film *Prometheus* (2012). But it is not just a sci-fi notion. None other than the Harvard psychologist and philosopher William James had advanced a more domestic, less sci-fi version in a related context, that of the spirit world suggested by his own extensive psychical research with mediums. More specifically, James wondered if our relationship to the otherworld of the spirits and the dead was not like that our pets have in relationship to our world. He wrote the following stunning lines in *A Pluralistic Universe*:

In spite of rationalism’s disdain for the particular, the personal, and the unwholesome [the modern debunker’s anecdotal], the drift of all the evidence we have seems to me to

*sweep us very strongly towards the belief in some form of superhuman life with which we may, unknown to ourselves, be co-conscious. We may be in the universe as dogs and cats are in our libraries, seeing the books and hearing the conversation, but having no inkling of the meaning of it all.*³⁶

In any case, James's "superhuman life" is precisely what Fort was writing about. Hence his affection for the prefix super-, which he attached to pretty much everything: super-constructions, super-vehicles, super-mind, super-sight, super-imagination, super-religion, even super-sociology. Hence also his extensive focus on the "wild talents" or superpowers of paranormal people.

Although this is pure speculation on my part, I cannot help but wonder if behind (or above) all of this super-writing floated some personal sighting in those haunted Hudson Valley skies, or even some private "abduction" experience. Charles Fort certainly would not have been the first to see things in that sky or experience such an encounter in that haunted valley. Nor would he, of course, be the last.

Biological Gods

These speculations of James on the pet in the library and Fort on the earth-farm are highly relevant to our present subject, and this for at least two reasons. First, because, as Whitley describes in the previous chapter and as Anne discovered reading through the hundreds of thousands of letters that *Communion* invoked, the dead are often seen within abduction events. Second, many of Whitley's speculations about the meaning of his own experiences are clearly "Fortean" in their paradoxical thing-thought structure. This is especially evident in the last chapter of *Communion*, entitled "A Structure in the Air: Science, History, and Secret Knowledge."

By far, the most difficult aspect of Whitley's "structure in the air," for a traditional academic anyway, is his suggestion that these experiences might represent an encounter with other actual species, invisible life-forms existing in some other dimension of the natural world that overlaps with ours and

whose occasional rupture into our dimension is always mediated by our cultural imagination. This, of course, is not simply a theory about the visitors. It is a radical, and deeply critical, theory of religion as well, since it implies that these invisible life-forms have been interacting with us for millennia under various mythical forms that we have traditionally (mis)framed in supernatural terms. In Strieber's elegant phrase, it appears that the visitors "were somehow trying to hide themselves in our folklore."³⁷

Others had suggested something similar with respect to the flying saucers and the folklore, and in very sophisticated forms, before Whitley, including John Keel, Jacques Vallee, and Eddie Bullard. But there is something more "physical," "realist," or "biological" about Strieber's suggestions. Here is how he put the matter in the 2008 preface to *Communion*: "But the visitors are not only real and here. In fact, I don't think they are visitors at all. I think that the truth is that we are embedded in their world in the same way that animal species are embedded in ours. It was hard to accept, but as I got to know some of them, I began to see that their relationship to us was quite similar to ours with, say, chimpanzees. . . ."³⁸ Later in this same text, and again in this one, Whitley compares himself and his terrified reactions to the presence of the female visitor to a wild, frightened bucking ranch horse. He was being "broken."

Shades of Fort's pigs on the farm and James's cat in the library.

What sets Whitley's model apart is how interactive it is, how it relies on us to manifest the other species. This interactive model is advanced through multiple frames, including that of the triad or triangle in the history of mythology and the bizarre implications of quantum physics, which, as has been amply noted by physicists and enthusiasts alike, has reintroduced consciousness and intention back into the scientific picture in dramatic and baffling ways. In this interpretation of quantum physics, the result of an experiment is partially determined by what the physicist decides, that is, how he or she chooses to set up the experiment. The result then is not simply "objective." It is "subjective" and "objective" at the same time. The entire system is interactive.

Whitley takes this interactive model very far, suggesting, in effect, that the visitors may rely on our beliefs to appear: "Thus the corridor into our world could in a very true sense be through our own minds."³⁹ He is not after

simple belief here. He is not a fan of the contactee “eager to see the phenomenon as a dimensionless cartoon of space friends.” He is after something much more complex and interesting. Here is how he ends the book:

*The visitor experience may be our first true quantum discovery in the large-scale world. The very act of observing it may be creating it as a concrete actuality, with sense, definition, and a consciousness of its own. And perhaps, in their world, the visitors are working as hard to create us. Truly, such an act of mutual insight and courage would be communion. . . . Who knows, maybe really skilled observation and genuine insight will cause the visitors to come bursting to the surface shaking like coelacanths in a net.*⁴⁰

Note that there is no stable subject or object here. There is a weird, mind-bending, mirrorlike moment in which the viewer and the viewed bring each other into existence through their mutual intentions and gazes. *This* is what Whitley means by “communion.” I will take up this communion again in my next chapter, there through the conjuring practices of reading and writing and that mystery of consciousness we so banally call “interpretation.”

Keep observing. Keep turning the pages. Keep letting go. Keep the apocalypse going. The Already World is shining through.

Lying in the Lap of the Goddess

WHITLEY

This ancient human experience not only rends the veil between the living and the dead, it penetrates deeply into sexuality. If we take the position that modern close encounter experiences are essentially the same phenomenon of contact that we have been perceiving through all of our history, then this aspect of them, also, fits long experiential tradition.

It is with this in mind, then, that I seek now to explore the ways in which my experiences have engaged me sexually. It's a subject that I am extremely reticent to talk about. I am a very private person when it comes to sexuality. Prior to meeting my wife, I was sexually intimate with a woman only once, and since then my entire experience has been with Anne—that is to say, my conventional experience.

My unconventional sexual life has been wildly promiscuous, fearsomely intense, at times even somewhat perverse—or at least, what this very conventional man would regard as perverse. Of course, I've hardly ever written or spoken about it. As I have said, it took me twenty-five years even to admit to my wife that I had been raped. But that was only one small incident. There is much more.

I have never wanted to write about it, to some degree because of the prurient stupidity that I fear it will elicit in people addicted to sensation and looking for the next lurid tale of “alien sex.” There is a deeper reason, though. This is because it was so very beautiful. I am haunted by the paradoxical sweetness of many of these ferocious experiences. One way to put it would be to say that I had a love affair with a goddess. Another would be that it was an affair with an alien. But the third way to describe it—which is, I suspect, closer to the truth—is that I didn’t know who or what my wife really was, or myself, or any of us. I don’t know what human beings are, and, based on my own life experience, I have every reason to suspect that the form we live in every day of our lives is not our only state. Unless, of course, it is what one of our letter writers was told when she asked her visitor who he was. He responded, “It is me within thee.” So, not only an interstellar astronaut piloting a spaceship.

Sometimes when Anne was sleeping or distracted or her face blossomed with pleasure, I would see in it a flickering shadow of the great-eyed being I’d painted for the cover of *Communion*. Now, I am not making a claim here that my wife was an alien or anything nearly so concrete as that. What I am saying is that the shadow of my wife—her life, her ways, my awareness of her body—ghosts through the experiences that I am about to describe like a sylph.

Over the years, I told her a few of these stories. As they seemed like a great betrayal of our marriage, I was very hesitant to do this, but also ashamed not to. I had experienced such powerful emotions during the experiences that I felt that they were a profound invasion of my vow to her. As they had not apparently been initiated by me, and I didn’t have the impression that I could have stopped them, I wasn’t sure that I had violated it, but the pleasure that they had brought me made me very uneasy about my moral position.

My self-valuation is deeply connected to what are now regarded as outdated ideals, most especially honor. To have honor, I feel that one must lead a life in truthfulness and honesty. One must keep one’s vows. I would never presume to extend my own values to others, nor to judge them if their values are different from mine. But I would basically never, ever break a vow, and I feel that the marriage vow is the most sacred of them all for any common man like me. A great leader—a president, for example—may take a

more important vow, I suppose, to defend the country, but for someone in the ordinary way of life, my marriage vow was central to my honor and thus inviolate.

But I violated it. Not technically, as I have said, but in my heart, helplessly and certainly. For I fell in love with this being and am still in love with her and always will be. I also love my wife deeply and passionately, but if this woman were to come back to me, I would be unable to resist opening my arms to her, and that's the truth of it.

I'd assumed that Anne would be furious when she heard me tell of my various assignations with this being, but she took it all in stride, so much so that I came to wonder what her level of involvement really is. Could Anne be one with the woman depicted on the cover of *Communion*? Are they the same person in two different forms, or do I perceive her that way—and by extension, do we all sometimes perceive others around us as being in different forms? If so, then sexually staid Whitley and Anne and sexually wild Whitley and Anne share a kind of mandala-like existence, a conventional relationship and an unconventional one rotating around each other, enclosed in a circle that, as it is a form without final measure, contains an infinity of possibilities.

In considering the idea that humanity may have more than one form, I would like to refer to an event that took place when I was out touring for *Communion* in 1988. I got back to my hotel to discover that I had a phone message from my editor, Jim Landis, then at William Morrow and Company. When I telephoned him, he said, "I have good news and bad news." Of course, I demanded the bad news first. He answered that the visitors thought that *Communion* was full of mistakes. Then he added, "The good news is that we all believe you now." I was perplexed, because I'd had the impression that Jim and the rest of the staff at Morrow took my story with a substantial grain of salt. In fact, I didn't think that they believed me at all.

It turned out that another editor, Bruce Lee, had been checking stock in the old Madison Avenue Bookshop when he had noticed two people looking through a copy of the book. They were turning pages very rapidly and laughing together. When he went closer, he could hear that they were saying that I'd gotten this wrong or that wrong, then paging along and snickering.

But how could they know? How could they be so sure? When he walked up to them to ask, they stopped and looked at him. He was shocked to see

huge, glistening eyes just like the ones the being on the cover of the book had. He found the eyes absolutely terrifying, and decided to leave the shop. When he walked out, they followed him, chatting together in what he thought of as Jewish accents. He watched them walk off into the afternoon crowd on Madison Avenue. Nobody seemed in the least concerned that two aliens were strolling down the street in overcoats and hats on a warm afternoon. He told me that people would look right at them and not react at all.

I found this all very hard to believe. At that time, I was debating in my own mind whether or not the experience was real or imaginal—that is to say, a tangible presence somehow generated by the imagination. At my insistence, Bruce took and passed a lie detector test and stuck to his story, so I finally accepted that he was at least reporting his perceptions as he had seen them.

In a similar case in 2004, Adrian Hicks, a member of the Winchester town council in Great Britain, saw what appeared to him to be a humanoid alien walking in ballet shoes down a crowded shopping street. He said, “I was near the Works bookshop when I saw this strange woman, a humanoid walking with a penguinlike gait. She had very large prominent eyes and was twirling her hands in a circular motion. She seemed friendly and totally at ease with us. She wasn’t scared, she was smiling, and seemed to be enjoying herself among us. She walked very slowly up the High Street. I remember she was very interested in the clock over Lloyds Bank. She was human enough to get away with it. Everybody’s heads were turning.”

He also recalled a woman taking pictures of her, and other witnesses, but to my knowledge nobody has ever come forward. Given his position in political life, one would think him very foolish to invent such a story, and I doubt that he did. I wonder, though, what he actually did see, what Bruce Lee saw, and what my dear “alien” lover, of precious memory, really is.

I have been sifting through the grains of my life looking for where this may have begun. When I was a child, as I mentioned in *The Secret School*, a white owl used to stand at the edge of our backyard and stare up at my windows. While I still cannot say that much of what I remember, or have imagined, of those days exists outside of my mind, family members do recall the white owl, and my parents were disturbed enough about what appeared to be nocturnal excursions on my part to have had the screens on the windows of my room nailed shut.

I remember a nun on whom I had a terrific crush—who, when I was ten

and eleven was my heroine and my most precious friend. I can recall meeting her behind the old sisters' home that is still on the grounds of the University of the Incarnate Word in San Antonio. She is, however, confused in my mind with another glorious older woman, Aileen Carter, who had an observatory on the roof of her mansion and used to hold astronomy classes there. The nun taught about the drama of evolution, dinosaurs, and the shimmering movement of God's hand across time, drawing life toward the knowledge of him. I would say, now, that something was certainly drawing life somewhere, but for me it has turned out to be in the direction of question rather than belief. Mrs. Carter taught of the vastness of the universe and the sacredness of creation. Both women were deeply religious, but both women, as I look back, taught good science, as it was understood in the 1950s.

In *The Secret School*, I portray myself as riding my bicycle down to the Carter place at night. But this would have been a daunting task for a child, and I really cannot believe that I did it, especially not at night, any more than I went to the spot behind the old sisters' home in the wee hours, as I also recall doing.

I did go to classes at Mrs. Carter's house, and I might well have gone to the old sisters' home some afternoons with my mother, and could well have been befriended by one of the old teachers, eager to enjoy a last student. The night journeys, I assume, are imaginary.

When I was writing *The Secret School*, I experienced a vibrant thrill, though, and remembered how, when I reached puberty, the wonderful excursions ended. And no matter the degree to which they were imaginary, they suffused my life then with a grand romance, and left me with a reverence for the world around us that is as strong today as it was when I was a boy.

There was, in these experiences, an unformed longing toward the drama of women. I did not relate to either woman sexually, of course, but deep within my body there was something stirring that would emerge more overtly when I came face-to-face with the woman on the cover of *Communion*, and found in her both the authority and gentleness of my teachers and the brilliance and sensuality of my wife.

In my life, I have had four very powerful sexual experiences. The first one occurred when I was just coming into puberty. I was camping out on the front lawn with some neighborhood children. In a late hour when all was

quiet, somebody suggested that we take a walk through the neighborhood naked. Of course I was keen for the adventure. When we stripped off our clothes, I saw that one of the boys, older than me, had an erection. This caused the girls to giggle. At that point, I had not had anything explained to me about sex. I suppose that I'd had erections myself, but this was the first one I had ever noticed.

I thought he was deformed, and made elaborate efforts not to seem too appalled. I thought his penis had turned into a horn. No wonder the girls found it funny, poor guy.

In any case, off we went on our adventure. There were five or six of us, as I recall.

It was really amazing to feel the night air on my skin and to actually cross the street naked. We had gone down through the yards on the other side, and were just coming out onto the next street when car lights suddenly blazed through the darkness, a siren wailed, and a red light began flashing atop a police car.

The other kids, who were all behind me, headed back toward our front yard. I was too far out in the street. I had no choice but to run to the far side. I ended up skulking through the neighborhood while the cop drove up and down the streets with his lights off trying to trap me.

Finally, I found myself on the estate of some friends. They had a lot of trees, a sort of artificial forest, and I climbed one of them—still naked, of course. Although I got scratched, the sensuality of it, the caress of the night wind, the air redolent with night-blooming flowers, quite overcame me. The intensity of the experience caused me to also get an erection. In amazement, I touched it—and nearly fell right out of the tree, such pleasure did my fingers bring me.

Down below, the cop was shining his flashlight into one bush after another and saying, “All right, I’ve got you, come on out.” He sounded very authoritative, but obviously, I was not there. While he was trying to find what, it turned out later, had been reported as naked dwarfs, I was in the tree touching myself, shuddering with wonder and shaking with guilt.

The waves of pleasure were delicious. Up in the tree, I could not only smell the flowers of the night, but also the rich odor of the sea, even though the Gulf of Mexico was over a hundred miles away. But that was a long time ago, when the sea was still rich with life.

Finally, I took my hand off myself. I was beginning to wonder if it was permitted to feel pleasure like that. It was so nice, surely it was a sin. At school, the nuns had cautioned us to not even look down at our nakedness while we were bathing. So perhaps I had annoyed Jesus.

I sat watching the cop as he continued poking around. He must have been very eager to get to the bottom of the strange complaint. He would have wanted badly to find out what the naked dwarfs were up to.

Eventually, though, he gave up. I watched the lights of the squad car flicker away down the street. Still, I waited a bit, just to be sure that it wasn't some sort of trick. Eventually, I went down and returned to the house, slipping along the edges of yards and through back alleys.

The other kids were still there, huddled in their sleeping bags. They had been praying for me.

The next morning, my mother told me that there could be no more campouts that summer, as naked dwarfs had been seen creeping through the neighborhood. I listened solemnly, and did not argue.

After that, girls, whom I had previously hardly noticed, took on a delicious glow in my eyes. I was in a Catholic boy's school, though, and had access only to the neighborhood girls I had grown up with. It didn't matter, though. It was as if they had become entirely different human beings. I longed to be with them, to just talk to them, to maybe kiss them if they would let me. My ardor confused them. What had changed? Why not just play like we always had? Had I gone crazy?

Of course I had. I'd been sexualized.

Thus began a familiar phase of life, the desperate and ludicrous courtship rituals of the inept young male. Years later, when I was about sixteen, I was briefly touched by a girl, and touched her in return. Although I was as eager about sex as any boy, the manners of the time and place meant that I never went so far as to make love. Until I met Anne, that is.

She was not from an old southern family. She was not constrained by archaic scruples. She enjoyed sex in a very normal and open way, and she found me attractive. So we were soon rolling around in bed together in the same joyous, unrestrained, delightful way that we did for the forty-five years of our married life. So my second great sexual experience was not one event, but rather a lifetime of joyous union. On that first night, she was not ready to go to bed with me. I had never before acted this way toward a girl, but I

simply insisted. I could not stop myself. She had inspired me, driven me to desperation. We embraced, we fell into one another, we went deep, and we were still there when she died, nearly half a century later, still amazed, full of adventure, surprised.

And now I turn to this other woman, if she is a woman, or, for that matter, a person at all. She has provided me with the other two great sexual experiences of my life, and I don't even know if she exists!

And yet when I write of her in this way—exploring the notion that she might exist only as some sort of figment or wraith—I feel a deep sense of disloyalty. Speaking of sin, it feels sinful and duplicitous, as if such a suggestion is a cruel lie, and one which will be hurtful to the most sensitive person I have ever known.

I think of her as an aristocrat, a princess, someone grandly born and of great attainments. I believe her to be deep in my life, and that *The Secret School* is a chronicle of the period in which I entered her orbit, in a childhood filled with magic.

With the coming of puberty, though, she and her kind withdrew from my life. I can remember thinking that they had been coming to me out of the walls, and trying to get to them by going into the crawlspace behind the clothes hamper in the children's bathroom. I remember begging them to come back.

They would, but not at once. Prior to coming into communion with this great being, I would go on a long journey of preparation. My enormous experiences with her—really, beyond sexual, they were so intense and felt so deeply holy—would come to me only after half a lifetime of spiritual search and fifteen years of intensive inner work in the Gurdjieff Foundation, exploring the process of looking out at the world and back at oneself at the same time, and learning from this work that there are realms of consciousness all around—cathedrals of consciousness—of which we are generally unaware.

Only when I left the foundation, which caused me grave anguish, but which I knew was necessary, did she appear once again in my life, that dangerous, wonderful night bird who has been my secret teacher, mistress, and lover over all of my days.

My spiritual search began in a confessional at Mount Sacred Heart School in San Antonio, when I informed the priest that I didn't believe the

Old Testament. I did not believe that god had created the world in seven days, that Adam and Eve had been formally tossed out of a garden called Eden, that Jonah had been swallowed by a whale, or that a god worth worshiping would have amused himself by causing Job all that misery.

The silence that followed my remarks was, as I recall, long. Finally, he said that perhaps I should just forget the Old Testament and try the New. I did, but as I was intensely interested in Roman history, I soon discovered while struggling through a translation of Origen's *Contra Celsus* I'd found at the public library that the Mass was derived from secret Mithriac rites that had started in Tarsus, which was, coincidentally, also where Paul had grown up. Then I noticed, while reading Roman history that the "good news" proclaimed in the gospels was strikingly similar to the good news proclamation spread across the empire by Augustus after he established the *Pax Romana*. In fact, it looked as if Paul had plagiarized it. In Jeff's language, I was *comparing*, and the results were severe ones.

By my middle teens, I had become disengaged from religion, but not from the spiritual journey. I had a strong sense of the presence of soul within me. In fact, I began to see that body and soul are really a continuity, not two separate entities, and I began, at the age of seventeen or eighteen, to attempt to meditate. I could feel that I extended in some way beyond the physical. I sensed that a new sort of integration was possible, that the body did not actually end with the flesh, but was somehow extended into regions of being of which I knew almost nothing.

I briefly embraced Buddhism. I read *Siddhartha* and contemplated going to Asia after high school and becoming a dharma bum. But ultimately I found the same defect in Buddhism that I had in Christianity. Both of them—and all religions—promote structural visions of the unseen world, and are based on the assumption that their particular vision is accurate. But how could that be so, given that their founders had, at best, a very unclear and limited idea of how the universe is constructed? It wasn't until the early twentieth century that it even began to be realized that there were galaxies beyond our own. Until the work of Heber Curtis (1872–1942) in 1917, we had no inkling of the true size of the universe. Religionists might consider this unimportant, but I don't see how we can really think about a deity with any clarity unless we also think about scale, and I have a problem with that. It was a big problem for me when I was eighteen. It is insurmountable now. Over those years, our

understanding of the size of the universe has changed to the point that the vastness of it is now quite literally beyond imagining. More incredibly, the condition of the background microwave radiation suggests that it has collided with other universes from time to time. In other words, beyond this tremendous flow of galaxies that we call “the” universe, there may be other such structures just as large. And, of course, there is the enigma of parallel universes possibly being physically real also.

All of this has led me to consider the possibility that the firmament might be endless, or at least so much more enormous than we can conceive that it is not possible to confine it paradigmatically, let alone in any religious context. How could a reality so huge have a single creator or, for that matter, any creator at all? It simply is, and in that thought I find rich meaning and spiritual sustenance.

Later, I also explored atheism, which was closer to my heart than the other religions, but I found, during a conversation with an editor from the *New York Times Book Review* at a literary event, that it was just as much doctrine as the other religions. He was a brilliant and articulate man, and the only avowed atheist I had met who had the ability to actually explain his reasons for the choice that he had made. But I found that he preached atheism in the same way that I had heard Catholicism and Buddhism preached, as truth. In other words, a faith.

This was because his atheism went a step further than it should if it is to remain attached to the question. It did not contemplate the possible absence of a deity, but excluded god and all nonphysical beings, and, in fact, this is almost universal in atheism today. It now offers two main assertions. The first is that there is no god. The second is that all consciousness, if there is such a thing, is an outcome of brain activity. There is no god and we are only flesh. But I think a more adequate response, based on the vast and ancient evidence of the numinous, is that there is unlikely to be a god and we don't know what we are.

It is possible to be an atheist and still recognize the evidence that there are aspects of being that we don't understand—that is, if one can resist the temptation to turn it into a religion.

What is useful to me, contemplatively, is to regard our isolation in the spectacle of immensity that is reality, and to consider how very many possibilities it must contain. We are lost in the stars, which I find both a

source of wonder and foundational to freedom of thought. This is because it offers all but endless possibilities, and because my life is rich with evidence of the reality of the numinous, I am released to search as my fancy takes me, rather than riding the rails of belief, and no matter the religion, even if it's atheism.

It is possible to experience mind outside of body without religion. It is even possible to conjure expressions from it. I have done this many times, and seen it done by others. I have sat on a quiet hillside with UFO enthusiasts shining flashlights at the sky and seen bright orbs come and dance about overhead. Rather than settle on the assumption that we have called alien spaceships with our flashlights, I have let myself come to rest in the question, and found there what to me is truly holy ground, a mystery that can neither be ignored nor solved.

To me, the question is what G. I. Gurdjieff called “holy the firm.” That is to say, the only firm ground in human life is the seemingly uneasy ground of question, especially question that can neither be answered nor left unanswered.

He described “holy the firm” as “nothing.” But nothing is not, well, *nothing*, is it? For those of us who enjoy the conundrum intrinsic to that fundamental question of philosophy, “why is there something rather than nothing,” nothing both must and cannot be. This is shadowed in physics, which offers evidence that the vacuum is, in fact, not empty. For example, the Casimir effect suggests that nothing contains energy—that it is, indeed, not *nothing*. It could be that events happening on the Planck scale—the really, really tiny—have durations that are too short to be measurable. In other words, they reflect the conundrum in a slightly different way: “nothing is unmeasurable.”

I was introduced to the work of G. I. Gurdjieff in 1970 by a man I met while a Director's Guild trainee. At his suggestion, Anne and I read P. D. Ouspensky's book *In Search of the Miraculous* and began attending meetings at the Gurdjieff Foundation in Manhattan. There were three reasons that the Work drew me. The first was that, behind the eccentric word-salad of Gurdjieff's prose, I saw a spiritual journey without a religious component. There was material of real value to be found by patiently decoding his peculiar vision of the universe, largely because it was so open-ended and internally contradictory that, unlike religions, it forced one into a state of

question, which was its intention. Additionally, the basic ideas, as expressed by the more conventionally articulate Ouspensky, were powerful. Reality was formed of triads with active, passive, and balancing sides. Events unfolded in octaves, like music. One could find the action of triads and octaves everywhere in life, and find them also in deep thought and to some extent in the esotericism of the past. In one of my novels, *The Grays*, the aliens are divided into triads, with one always advocating action, the second warning of danger, and the third reconciling the ideas of the other two and moving the triad forward. This is because close encounters so often begin with a triangle of stars crossing the sky.

Grouping by threes is an important part of the way the visitors present themselves to us, and I noticed from the beginning that my relationship with them was structured around ideas that I had learned in the Gurdjieff Work, most particularly, a method of meditation that facilitated communication with them.

But that was for the future. Under the instruction of foundation leaders Joseph Stein and William C. Segal, I began meditation practice, which involved placing the attention on the body and letting the mind go along on its own. Later, when I would do this in the presence of the visitors, they would be able to access my mind, and there would be communication. Without this skill, I cannot see that my interactions with them would ever have become as rich as they did.

In 1983, I left formal engagement with the Gurdjieff Foundation, on the theory that I would either continue my inner work on my own, without the support of weekly group meetings, or I would slip back into the less acute consciousness that is associated with ordinary life.

As I have said, that was when she reappeared—when a real master showed up in my life. It began with me being roughed up—finally raped—until I noticed her presence, and with it a profound truth that we seem almost hardwired to filter out and ignore.

What is this truth?

Well, another teacher I had in the Gurdjieff Work, P. L. Travers, expressed it most eloquently. While she was famous as the author of *Mary Poppins*, she was also deeply involved in the Work, an aspect of her life that she kept very private. She used to come to visit the New York Gurdjieff Foundation annually. We met during one of her journeys, and started up a

friendship and correspondence. She was a flawed, brilliant, damaged, and wise human being, who was able to bare herself in our conversations, thus drawing me to my own flaws and strengths, and enabling me to learn how it is that holy ground, foundational and fundamental to all real search, is as shifting and elusive as quantum indeterminacy.

She used to ask those of us who would gather around her, “Do you know what it means to lie in the lap of the goddess? It means to be unsure.”

And then there came the great wave of the two experiences that shattered me at every level of my being, experiences that crackled with sensuality, that ripped away my ego as a hurricane rips away a city, leaving me in ruins.

What Evolution Looks Like

JEFF

*He who fights with monsters should look to it that he himself does not become a monster.
And when you gaze long into an abyss the abyss also gazes into you.*

FRIEDRICH NIETZSCHE, *BEYOND GOOD AND EVIL*⁴¹

Instead of shunning the darkness, we can face straight into it with an open mind. When we do that, the unknown changes. Fearful things become understandable and a truth is suggested: the enigmatic presence of the human mind winks back from the dark.

WHITLEY STRIEBER, *COMMUNION*

We have now explored together three ways of approaching the UFO phenomenon in a way that does not pretend any easy answers but avoids the pitfalls of both the doctrinaire believer and the dogmatic debunker. We have carved out a middle ground—a version of Whitley’s “spiritual practice without religious belief.” First, we have brought our comparative practice into sharper focus through a discussion of religious and reductive comparisons, neither of which quite work with the striking similarities and real differences that we see across cultures and times. Second, we have taken up phenomenology in order to “make a cut” between that which appears and that which is in Whitley’s strange experiences. And third, we have practiced

historical contextualization in order to better locate, understand, and acknowledge the commonality of these experiences.

In each case, we have seen how these methods or techniques can bring precision to a public conversation that was previously imprecise or simply confused. We have also seen, in each case, how the practice in question can make reasonable that which was previously unreasonable, how it can make the impossible possible. We take up a fourth practice now. I will warn you: it is way trippier than the first three.

The Secrets of Hermes

Let us call this fourth practice *hermeneutics*. You can translate the word simply as “interpretation,” but it is way weirder than that. Fundamentally, hermeneutics is the art and practice of deciphering meaning or message. The word itself is derived from the Greek god Hermes, a trickster deity who oversaw the mysterious middle realms of divine speech and revelation, doorways, crossroads, language itself, and the afterlife. Hermes was also a liar and a cattle thief, and he was worshiped in a simple form that commonly sported two features: a beard and an erection. Take note. The same god also gave us the words “Hermetic” and “Hermeticism,” both referring to an ancient Egyptian-Greek stream of secret teachings about the deepest nature of the human mind and its identity with the cosmos.

The history and practice of hermeneutics encompass a vast range of figures, debates, and ideas.⁴² Just two of these, both related to the figure of Hermes, will concern us here.

One is the key concept of secrecy or hiddenness. Hermeneutics is the art of interpretation that deciphers the hidden meanings of some enigmatic symbol, text, dream, vision, or striking coincidence. Freud was practicing just such a hermeneutics when he argued that the human mind censors itself and then indirectly expresses that which it has censored in the puns and symbols of dream and the slips of the tongue in everyday conversation (hence the famous “Freudian slip”); or when he argued that repressed and sublimated sexual desires drive a whole range of cultural, artistic, and religious expressions (and now, I would add, much of American humor). Whitley’s

intuition that the figure of the female visitor had something profound to do with his conjugal relationship with Anne and his engagement with the symbolic message of the “nine knocks” phenomenon are both perfect examples of this kind of hermeneutics as speaker of secrets. Whether it’s a Freud or a Strieber, the human Hermes encounters a code and reads it out with the “clicks” of a particular key. Unsurprisingly, but importantly, one of Whitley’s most beautiful books is called *The Key*.

The other major idea of the hermeneutical tradition that will focus us here involves the strange loopiness of particularly profound acts of interpretation. Some interpretations are straightforward enough, of course. I see an octagonal red sign with the English letters “S,” “T,” “O,” and “P” while I’m driving and know to press my foot down on the brake pedal. No enigmas here. But other kinds of interpretation do not work like this. Sometimes the hermeneut finds herself in a paradoxical “circle” or “loop” in which the reading transforms both the read and the reader. It is very much like the mind-bending understanding of quantum physics that Whitley keeps invoking: the one in which the act of observation really and truly changes the behavior and expression of the observed, which of course then changes the reality of the observer. Again, there is no stable “subject” looking at or interpreting a stable “object” in such moments. In hermeneutics, as in quantum physics, there is a single process that co-creates both the subject and the object *at the same time*.

No doubt the secrets of Hermes will confuse and frustrate you, as they do me. We are, after all, used to thinking of ourselves as independent subjects somehow contained in a body, not as secret codes to decipher or as living quantum experiments. So it is not your fault that you do not fully understand these hermeneutical paradoxes. Nor is it mine. Our confusions are a function of the fundamentally paradoxical ways that our very subjectivities are constituted: as cultural scripts, as texts written before us as us. It is confusing being a novel, a piece of fiction that considers itself a simple fact.

But let me make a simple observation that might give us all a bit of courage here: *nothing* I express under the rubric of hermeneutics is foreign to what Whitley Strieber has already written, and written in thousands of pages. I am simply making explicit what has been implicit all along in his body of work. Consider lines like these: “There are theories of physics that suggest that perception may affect reality, and that we live inside a kind of envelope

of meaning that confers structure on an indeterminate universe. It is as if everything is a sort of field before we perceive it, and that perception itself resolves it into the world we see and understand.”⁴³ *That* is hermeneutics, here expanded from the interpretation/activation of a text in an act of reading to the interpretation/activation of physical reality itself in an act of observation. This, by the way, is what I had in mind in the opening lines of this book, when I warned you that it is an apocalypse of thought waiting for you to activate it. Take note.

There is another way to explain this. Through movies. Filmmakers have engaged the same ideas, and often with much success. I am thinking of films like *The Never-Ending Story* (1984), *Stranger than Fiction* (2006), and *The Adjustment Bureau* (2011). Have you seen any of these films? Then you understand hermeneutics. In each case, the story revolves around a protagonist engaging his own life as a fictional story being written either in this world or in another, seemingly by someone else. As he reads and interprets the text of his life, however, he discovers that its story or plot changes. He discovers the circle or loop of hermeneutics. *He discovers that as he engages his cultural script as text creatively and critically he is rereading and rewriting himself.* He is changing the story.

The messages of such films are clear and profound ones. They tell us that we are writing our own stories, even as we are also being read by them (since we are born into stories that we did not write). They also tell us—and here is the real point—that it is time to take more responsibility for this world-writing, to claim our own imaginative powers. In the words of one of the members of the adjustment team that we hear at the very end of *The Adjustment Bureau*, spoken to us, the viewers, “Maybe one day we won’t write the plan; you will.”

The same hermeneutical insights are often voiced by Whitley in his books and in person. I once heard him at a private symposium speculate on how his visitor experiences were likely shaped by the “bad sci-fi movies” he had seen in such abundance as a kid in the 1950s. In other words, what he saw in the cabin on that terrible night may not have been what was actually there, but what his imagination had been trained to see. Nevertheless, something *was* really there. And then the Hermes-like flip. “What we need to

do now,” he mused, “is make better sci-fi movies so that we can have better contact experiences.” *That* is hermeneutics.

The Two-Way Mirror

The subject *and* object of the practice of Hermes is the human imagination, which works like a magic mirror. This is Nietzsche’s “when you gaze long into an abyss the abyss also gazes into you,” that Whitley Strieber moment when “the enigmatic presence of the human mind winks back from the dark.” It is also, of course, this magic mirror–like structure of hermeneutics that makes it so trippy, so loopy, so hard to wrap our simple heads around.

In the terms of my previous chapter, we might think of the imagination as that mode of human knowing that intuits the unknowable “what is” and turns it into the knowable “what appears” so that a primate can make some sense out of that which its sensory system was not previously evolved to know or see, not at least on any regular, practical basis. That making sense of the unknowable through the appearances of the knowable—that is, through the imagination and its symbolic expressions—is what we call “interpretation.” When the individual goes further and comes to recognize that these interpretations are both reflections of something real *and* human creations, that one is being interpreted as one interprets, being seen as one sees, then we call this paradoxical practice “hermeneutics.”

I warned you.

Although never named as such, this is all at the very center of the abduction phenomenon. In 1988, not long after *Communion* appeared in January of 1987, Whitley wrote a most remarkable foreword for Jacques Vallee’s *Dimensions: A Casebook of Alien Contact*. There he struggled on the page with the nature of his recent and still ongoing encounter experiences. What bothered him the most is the at once physical and not physical nature of the beings whom he was encountering. “And yet I myself have faced physical beings,” he wrote. “The context of my own experience, with extensive witness by others, makes it clear that the phenomenon can emerge as an entirely real, physical presence that is quite capable of manipulating its environment.” And yet, and yet: “The next moment, though, it can evaporate into thin air, leaving not a trace of what was a moment before an immense

and overwhelmingly real presence.” He then dropped one of those amazing one-liners about the visitor experience. “I have even thought that it may simply be what the force of evolution looks like when it acts upon conscious creatures.”⁴⁴

I have never been able to shake off that line, as if it somehow wanted to be written about. So I will. I want to employ the line as a kind of prism to engage Whitley’s invocation of “the imaginal” in the previous chapter. Recall that he was reflecting on the famous story of editor Bruce Lee running into two aliens paging through *Communion* in a New York bookstore in 1988 as they criticized this or that passage. The story is confirming, bizarre, unbelievable, and, significantly, I think, funny. Whitley adds another twist here, though. The upshot of *this* particular retelling is that the two aliens were two human beings seen in another guise, dimension, or mode. That is, this retelling is an exercise in considering “the possibility that humanity may have more than one form.” It is in this context that Whitley then writes: “At that time, I was debating in my own mind whether or not the experience was ‘real’ or ‘imaginal’—that is to say, a tangible presence somehow generated by the imagination.”

By “real” I take it that he means “part of the physical, objective world that is socially confirmable,” like, say, a chair that anyone can see (and sit on). But what does “a tangible presence somehow generated by the imagination” mean? I take it that he is implying that the two aliens would not have been seen *as such* by someone other than Bruce Lee, that is, that others in the same bookstore either (a) would not have seen them at all, or (b) would have perceived the pair as simply two human beings, since that is also what they were. But how can any of this happen? And does Whitley’s invocation of that odd word “imaginal” help?

Whitley is not making up this word. It is thrown around quite a bit in the UFO literature, seldom, if ever, with an understanding of where it comes from or what it was first intended to express. Whitley’s use of it here is quite faithful to the term’s historical origins and original meanings, but both these origins and meanings need to be more fully explained so that the public conversation around the encounter experience can move forward and not keep stumbling over the same obstacles again and again.⁴⁵

Debates about the imagination and its role in human knowledge go back in the West to ancient Greece around the secrets and enigmas of the revealed “symbol” and its relationship to the more plodding ways of reason and rational knowledge. The most recent chapter of that larger conversation goes back to the eighteenth century and what we now call the Romantic movement. The poets and philosophers of the latter asked: What is the imagination? Is it simply a spinner of fantasies? Or can it also become a “window” of revealed truths from some other deeper part of the soul or world? Or, better yet, like some secret two-way mirror in a modern-day police station, is the imagination *both*, depending on whether one is looking *at* or *through* its reflecting surface, that is, depending on which side of it one is standing? Can one stand on both sides?

When we give answers to such questions about the imagination, we are in effect proposing particular comparative practices. With the metaphor of the mirror, we are also proposing sight or the visual as the most adequate metaphor for spiritual knowledge (later, we will see that this is likely a mistake). For example, why do we encounter near-death experiences in numerous cultures but notice that these are normally painted in the mythical colors and populated by the personalities of the local folklore? A Buddhist child in Sri Lanka does not see Jesus on a white horse, but a boy from the American Midwest has. What is the same from culture to culture? And what is different? Or for that matter, why do some UFO encounters look like some near-death experiences in American culture? Any adequate answer to such comparative questions will involve some implicit or explicit theory about the imagination as a kind of two-way mirror that is reflecting back some things and seeing through others. The more explicit we can be here, the better.

I want to be explicit. I want to propose the idea that *a rare but real form of the imagination may be what the conscious force of evolution looks like*. And by “looks like,” I mean two things: *how the evolutionary force appears* to a human mind in a particular culture; and, with a bit of a trippy twist now, *how the evolutionary force itself “sees.”* I mean both sides of the two-way mirror. I mean both the *reflecting back* and the *seeing through*.

The first meaning of “how the evolutionary force appears” is, I take it, what Whitley had in mind when he wrote that line: “I have even thought that it may simply be what the force of evolution looks like when it acts upon conscious creatures.” The second meaning of “how the evolutionary force

itself sees” shifts the conversation into new territory. That new territory involves the possibility that, in very special moments, the human imagination somehow becomes temporarily empowered or “zapped” and functions not as a simple spinner of fantasies (the imaginary) but as a very special organ of cognition *and* translation (the symbolic), as a kind of supersense that is perceiving some entirely different, probably nonhuman or superhuman order of reality but shaping that encounter into a virtual reality display in tune with the local culture: in short, a reflecting back and a seeing through *at the same time*.⁴⁶

I cannot stress enough how important this question is to everything we are addressing here. I also cannot stress enough how damaging the inadequate models of the imagination have been to the public discussion. Take my two-way mirror analogy again. If you are working—consciously or unconsciously—with a model of the imagination as a mere projector of fantasy (if for you it is all reflecting back), then you will, then you *must* interpret the visions of the encounter experience as simple reflections of the visionary’s own psyche and culture. You think that we are all standing before a simple mirror, and that there is no other side to the mirror, much less beings on the other side looking in at us. If, on the other hand, you are working with a model of the imagination as a perfect camera or recorder of what is (if for you there is no reflecting back), then you will, then you *must* interpret the visions of the encounter experience literally. You think that the contactee is standing on the see-through side of the two-way mirror, and that what he or she sees on the other side is what is really there.

I am suggesting that both sides of the mirror contain a piece of the truth but that each is incorrect if taken as the *only* perspective. I am also suggesting—and here is the really trippy part—that in extreme experiences like the contact or encounter experience both sides are in play at once. This double model allows us to appreciate “what appears” without naively taking it literally as “what is,” but it also enables us to entertain the possibility that there is another side to the mirror, and that we can, as it were, see, and maybe even step, through it.

Whitley, I would argue, has been working with just such a model of the imagination all along. His whole paradoxical notion of “communion” is about this same trippy idea of imagining a presence that is imagining us. Hence his

erie image of the visitor as an ancient prehistoric coelacanth suddenly appearing in our nets the moment we ourselves are willing and ready to *observe* it. This is no ordinary fish, of course. We, he suggests, may be working hard to create the visitors, even as they may be working hard to create us: “Truly, such an act of mutual insight and courage would be communion.”

That is the mind-bend of hermeneutics. *That* is the two-way mirror of the imagination. If we are ever going to understand something like the contact experience, we will have to come to terms with both.

The Imaginal

There is a history of reflecting on this communion in the two-way mirror of the imagination. Much of it is bound up in the “imaginal.” Some think this expression goes back to the French scholar of Islamic mysticism, Henry Corbin, which is partly true. Some think it goes back to C. G. Jung, which is partly true as well. Corbin borrowed it from Jung, who in turn borrowed it from a Swiss psychiatrist by the name of Theodore Flournoy, who used it in his classic study of the Swiss medium and visionary Catherine Elise Müller, *From India to the Planet Mars* (1900). This particular book (written over a century ago) actually bears directly on the later alien-abduction literature for its careful engagement with supernormal or paranormal phenomena, for its invocation of Mars, and for Flournoy’s use of a particular psychological tool to catalyze and access Müller’s “romances” or stories: hypnosis.⁴⁷ But Flournoy himself did not coin the term either.

The word “imaginal” was first brought into broad use in the early 1880s by the Cambridge University teacher of Latin and Greek, education reformer, and Victorian psychical researcher Frederic Myers (1843–1901). There were no movies yet. But there were lots of telegraph wires (and there would soon be telephones). Behind the imaginal, then, lay another new word inspired by this newfangled technology: “telepathy,” which Myers coined in 1882. He intended to express through this new word the fact that most dramatic psychical communications occur between loved ones within extreme

emotional states, often in dangerous or deadly contexts. Hence his new Greek derived word, *tele-pathos*—“pathos at a distance.”

Myers and his colleagues struggled at first to come to terms with the extraordinary stories that they heard in such numbers (they systematically collected and analyzed thousands of them). At first, they used the patently paradoxical expression “veridical hallucination” (if you haven’t noticed, paradox is everywhere when one ventures into these realms). The expression was meant to capture the simple fact that in the cases they were collecting the individuals know perfectly well that they are imagining, dreaming, or seeing a “hallucination,” but they also know that the dream or vision is “veridical,” that is, that it corresponds closely to something actually happening in historical and physical reality. In my own terms, they were perfectly aware of both the “reflecting back” and the “seeing through” of the two-way mirror.

But “veridical hallucination” was an awkward phrase, and Myers was a poet. He had to come up with something better. He noticed that telepathic communications were often accompanied by altered states of energy, or what he called (probably after the great Swedish clairvoyant Emanuel Swedenborg) an “influx” of spiritual energy. He began to speculate that these altered states of energy somehow fundamentally change how the imagination works. In our own terms, he began to speculate that such energies could “flip” the two-way mirror around so that the reflections in the mirror could suddenly become visionary displays of something that really existed on the other side. This, he believed, was how the imagination would someday normally function in the far future: as both.

He described these future human capacities as “supernormal.” We have already encountered this word above in our discussion of how the paranormal came to be. The supernormal appeared just before the paranormal. Now I can tell you more. Supernormal meant “further along on the evolutionary spectrum.” It meant natural but highly evolved. Myers thought that in telepathic communications and precognitive dreams we are witnessing the early signs or buds of a still-evolving future super nature—ours. He meant the super natural.

It was this superevolved form of the imagination that Myers dubbed “imaginal,” and he defined it this way: “A word used of characteristics belonging to the perfect insect or *imago*;—and thus opposed to *larval*;—metaphorically applied to transcendental faculties shown in rudiment in

ordinary life.”⁴⁸ The definition is an awkward one, but it is directly and eerily relevant to Whitley’s visions. So let me explain it.

Myers was thinking of entomology, the study of insects, when he defined the term. In entomology, an imago is the final adult form of an insect’s metamorphosis. This final stage is also sometimes called the imaginal stage, whereas the insect’s immature feeding form is called the larval stage. The larval stage of an insect, of course, generally looks nothing like its adult form or imaginal stage, although the latter develops from the former. Myers was also working in an era that commonly held, after the German comparative anatomist, defender of Darwin, and evolutionary mystic Ernst Haeckel (1834–1919), that the development of an organism “recapitulates” or repeats its deep evolutionary history: Haeckel’s famous “ontogeny recapitulates phylogeny.” It was probably this same understanding of an organism’s individual developmental history as a reliving (here extended into a preliving) of the species’ deeper evolutionary history that Myers was invoking with his new coinage of the imaginal.

He even told a humorous parable about some “humble larvae” dissecting each other as they argue about their destinies and real natures. Everything about their wormy forms looks like it was made for the cabbage leaf. And yet they also appear to possess budding or potential features that look like they might be adapted to the air. One brave caterpillar points this out, but the rest don’t believe him. How silly. How ridiculous. Then, suddenly, a butterfly lands on the cabbage leaf. The brave caterpillar points out all of the features on the beautiful winged being that look like advanced developments of their own squishy bodies. The butterfly then flies away.

“This,” Myers explains, “is exactly what I hold to have happened in the history of human evolution.”⁴⁹ The imagination is now evolving into the imaginal. We are about to fly. The wormy munching stage of the larval will someday evolve into the perfect insect of the imaginal.

Wild Talents and Wild Visions

There are at least two different modes of the imaginal, which correspond to the two sides of the two-way mirror analogy (and it is only a rough analogy).

There is what we might call the *empirical imaginal*, and there is what we might call the *symbolic imaginal*. Following and expanding upon Charles Fort, let us call the first a “wild talent” and the second a “wild vision.” Whitley has known both.

The empirical imaginal, or wild talent, names those moments when the dream or waking vision corresponds closely (but not always exactly) to an event in the objective world. Myers’s early “veridical hallucination” falls into this category: the visionary knows, instantly and firmly, that a loved one is in danger or has just died. Often, even the mode of death is known and described in the vision or dream. Here the human imagination is, in a word, “clairvoyant.” It seems to work like a camera *and* a video projector: it somehow “sees” and then projects what is happening at some distance along the space-time continuum within a mini-movie in the mind of the visionary. Little or no interpretation is needed in this type of imaginal event. The visionary often knows instantly what the vision is about. The vision is about what it says it is about. Finally, note that there need be only one world or order of being in play here. There is no invocation of an “otherworld” or another side of the mirror. The action all takes place in this one.

Obviously, such clairvoyant capacities, if cultivated and realized, would bring very real and very practical survival benefits. This is why Fort called them “wild talents.” They were *talents* because of their potential pragmatic usefulness; they were *wild* because they generally manifest only spontaneously, and we have not yet cultivated and integrated them into our lives and cultures. As he himself put it: “By a wild talent I mean something that comes and goes, and is under no control, but that may be caught and trained.”⁵⁰

And what talents these would be! The simplest of thought experiments can show how even a little precognition or clairvoyance could make a warrior nearly invincible or a hunting party astonishingly successful. And, indeed, we find various divinatory practices around military and hunting activities throughout the historical and anthropological records. For a modern western case that demonstrates especially well the survival utility of clairvoyant abilities, consider this case as told by G. N. M. Tyrrell in his classic little study, *Apparitions* (1953):

The percipient in this case, a child of ten, was walking along a country lane near her home, reading a book on geometry. Quite suddenly her surroundings faded away and she saw her mother lying on the floor of a disused room in her home, known as the White Room, apparently dead; and beside her lay a lace-bordered handkerchief. So real was the vision that instead of going home she went straight to the house of the doctor and took him home with her. There they found the child's mother, lying on the floor of the White Room (an unlikely place for her to be), suffering from a bad heart attack, and the handkerchief seen in the vision lay beside her. The doctor was just in time to save her life.⁵¹

The symbolic imaginal, or wild vision, works very differently. Here the dream or waking vision is experienced as mediating some other world or metaphysical truth. Whitley's visions mostly fall into this camp. Here the content of the dream or vision can be quite baroque and bizarre. The sense is that these images and narratives are functioning as ciphers of some other form of mind, some other dimension of the real, or—in Whitley's previous chapter—some other form of our shared humanity. Here the human imagination is not so much clairvoyant as it is an organ of revelation: it is *not* clearly seeing and projecting in any one-to-one fashion. Rather, the imagination is intuiting or sensing something Other or Alien and then translating, mediating, or picturing what it has known to a human psyche, but always in code. Hence interpretation is necessary. Note that there are at least two worlds or dimensions at play here.

I must add that we cannot treat these two forms of the imaginal as mutually exclusive. Wild talents and wild visions clearly overlap and are probably functions of some deeper human capacity still, perhaps consciousness itself (whatever *that* is). As is often noted in cases of robust precognition, for example, the visionary often misses this or that detail of the event. It is as if the projective imagination is filling in details that the transmission or telepathic cognition does not supply, much, I should add, as we see in ordinary sensory processing. As has been noted in the neuroscientific literature, the “movies” we see in dreams and in everyday sensory awareness are not entirely different, and everyday sensory

consciousness can be thought of as a kind of dream that is constantly controlled and guided by sensory input from the external environment.

The same exact mixture of wild talent and wild vision can be seen in Whitley's accounts. For example, in his early encounter experiences, he meets what appear to be blue trolls and slender bald aliens, but he also sees an old friend, who, he later learns, has recently died. So Whitley's experience mixed or fused the symbolic (the trolls in overalls and the almond-eyed visitors) and the empirical (the recently deceased friend). The wild talent was the wild vision was the wild talent.

I am not simply being "academic" here. Complexities aside, these new categories and careful distinctions give us a great deal. They shift our conversation. Consider the following.

First, with these new ways of speaking and thinking we can now be *more precise*, because we can distinguish between two very different types of imaginal functions: those that are seeing empirically and those that are seeing symbolically.

Second, we can also be *more generous* because we can now recognize the necessity and importance of the most baroque or fantastic imagery, that is, of the wild vision, without falling into naive belief or a too quick dismissal.

Third, we can also be *more open* to what the visions are trying to say. For example, we need not now shy away from visionary phenomena that are bizarre or strange simply because they appear absurd or outrageous to our rational egos and ordinary sensory experiences. Indeed, we might well expect with our new notion of the symbolic imaginal that this absurdity is a necessary function of the translation across the border or threshold between two radically different forms of mind and being. How else is the farmer going to talk to the pig, or the library owner to the cat?

Fourth, we can be *more suspicious*. Maybe the farmer doesn't want to communicate too much to the pig. Maybe the being on the other side of the two-way mirror doesn't want to say too much to the being on this side. Isn't that what a two-way mirror is for in our own social world, *to hide* the viewer from the viewed, *to prevent* a direct and unencumbered two-way viewing?

Still, having said all of that, I do not want to make too much of this basic distinction. I want to emphasize the two-way nature of the mirror. Here is a single comparative example of why. As I was finishing my chapters for this

book, I was attending a conference at the Esalen Institute and sharing a room with my colleague and friend Adam Crabtree, a gifted psychotherapist and historian of mesmerism, multiple personalities, and trance.

One morning, Adam awoke and began to chat, quite out of the blue, about a recent troubling encounter he had experienced during a kind of sleep paralysis episode, a fairly common state for him during which he is aware of (and can see) his room and can feel his body but cannot move it, except for his eyes. Adam proceeded to describe hearing knocks on the ceiling or slanted roof (which happens to be just above his bed) and becoming aware of two malevolent “hypnagogic visitors,” working in tandem. One, whom he could not see, pressed up tight against his back with its arm around his neck. The other, whom he could see, was a short athletic “repulsive” creature who appeared “like a man with slouchy work clothes and a rumpled overcoat on, all a kind of dusty light brown color.” This one jumped with catlike movements, silently landing on his hands and feet on the floor before he vaulted up onto Adam and straddled him, pushing his fingers down on his body and touching his penis lightly through the blanket. It was at this point that Adam gathered the “sheer determination” to move his body, and the scene instantly disappeared.

This caught my ear, of course, since it sounded like he was describing Whitley’s experience. Actually, it sounded exactly like Whitley’s experience. I asked him how many knocks there were. “Three,” he answered immediately.

Well, shit.

So were Whitley and Adam separately “imagining” the same things? Is there some module or code in our brains for “ugly short troll in overalls” and “three knocks on the roof”? That seems unlikely. Or are there actual invisible trolls in overalls who mess with us while we sleep and like to knock three times on our shingles? That seems unlikely. Are we in the realm of the symbolic vision or the clairvoyant vision here? Wild vision or wild talent?

I am always reminded here of the alien that appeared to Nebraska law officer Herbert Schirmer many decades ago. The alien is said to have left the good law officer with this piece of paradoxical, and funny, advice: “We want you to believe in us, but not too much.”⁵² That, it seems to me, is wise counsel for those of us who venture into the wild talents and wild visions of

the imaginal realm. Believe them, if you must, but not too much. And keep a smile and a chuckle about you.

The Telepathic Insect of the Future Human

There is something else about Myers and the imaginal, something fundamentally uncanny, something at once strange and familiar. This strange familiarity ties directly into Whitley's writings. It involves the evolutionary force again and "how it looks."

The alien in the visions of Whitley and countless other abductee accounts is often described as insectoid in form. These haunting figures are frequently compared with an immense praying mantis or a human-sized insect. They communicate with humans telepathically. The immense almond-shaped eyes are compared with those of bugs. And the visionaries repeat again and again their intuited sense that what they saw was *us* coming back from the future.

The modern abduction visions thus replicate, in precise and eerie detail, the thought of Frederic Myers: the same perfect insectoid form (Myers's imaginal stage), the same telepathic powers (Myers coined the term), the same implicit call to become active participants in our own evolutionary advance (Myers's sense of the supernormal as the superevolved and the imaginal as our future form). Whitley's books are also filled with this call to join the universe, to expand our vision's scale to its cosmic scale, and to "commune" with the evolutionary impulse of all there is.⁵³ What was a metaphor and a parable in Myers's system over a century ago has become a literal visionary form in the contemporary scene. The larval stage of the human being has morphed into the adult stage of the imaginal, which appears to the present human mind as a super-insect calling us to the further reaches of human evolution with the exact super natural power that Myers himself first named: telepathy.

How do we explain such precise resonances between this Victorian psychological researcher and our contemporary abduction literature? Did Myers himself, like my imagined Charles Fort, have some sort of proto-abduction experience or insectoid vision? We will never know. What we do know is

that imaginal visions are still with us. Like Myers's beautiful butterfly, these perfect insects have taken flight off the cabbage leaf before our wormy eyes, this time in a glowing machine that we call, with much too narrow a vision, a UFO.

Pain

WHITLEY

On that night in December 1985, the most essentially and powerfully feminine presence I have ever known came to me and had me dragged out of the house and essentially beaten until I realized that she was real and I was not dreaming. During those horrific moments, I awoke both physically and spiritually.

I know now that she had been trying for some time to awaken me. I have understood that we exist, in our normal state, in a sort of sleep that filters out certain aspects of reality. For whatever reason, we simply do not want to see this. Throughout the previous autumn, she had been using her droll and sinister coterie of trolls to approach me. My reaction was to buy alarm systems and guns, and stalk the halls of our little country cabin, sick with a nameless fear.

One of the first things that became clear in the days following was the feeling of being carried. There was a sense of surrender involved that was one of the most deeply relieving and yet terrifying perceptions I've ever had.

We are wild animals. We have tamed others to us, but nobody has ever tamed us. On that night, I began a process of education that started at the most basic level. I was being broken as I used to break horses when I was a

boy, on the rollicking ranches of South Texas. In fact, every summer when we returned to our country place in the Texas hill country, our horses, which had been left to roam all winter, required a bit of breaking.

You ride them until they're too tired to buck, basically. You do it again and again, until the instinct to throw off anything on their back finally subsides. Then the horse, terrified at first, full of viciousness and hatred, will gradually become gentled, will take food from your hand, and in the quiet way of horses, take pleasure in your companionship. Your horse will be glad to see you, whom he once hated, and will fill his nose with your scent, which he at first rejected with an angry snort.

On the night in question, my immediate conscious response was one of confusion mixed with fear, but on a deeper level something quite different was happening. Feelings emerged in me that I had not been aware of before, that could best be described as a sense of surrender to a greater power that carried with it both terrific fear and what I would describe as a sort of pleasure found in spiritual release, the giving of oneself to something higher. This was accompanied by a pleasure that was unlike anything I had ever known. It was physical. It was spiritual. It drew me to drop barriers I had not known were there, and from that to experience a new kind of nakedness, that made me feel at once vulnerable and delighted. My soul was naked.

This was not the third great sexual experience, but its prelude. Preparation for contact.

The combination of pleasure and helplessness was devastating. Delicious agony. The result of this was a short story, which I began writing at that time. It is called "Pain." In it, the narrator comes into contact with a young woman who turns out to be a sort of angel, very sweet but also very determined to free him from the dark things he has done in his life by balancing their karma with pain. The narrator is put into a box in which he experiences great agony, which is described as fire, but which is actually the anguish of facing one's own truth. When he is released, he is deeply free, not so much of any real evil he has done, but of the guilt that was weighing on his soul. His fear was not of what was there, but of what he was afraid was there, and this, I think, is why most of us resist looking into ourselves.

As I was writing the story, the memories of that night came back to me, and a sequence appeared in it connecting it to alien lore, the first time in my work that this had been directly addressed. There were, on that first night,

many different levels of experience, all unfolding at once. Confusion, amazement, and terror were on the immediate surface, of course. But beneath them there was something quite different. I've struggled with it, attempting to bring words to a subtle feeling that had an enormous emotional consequence.

Not since my life was wrapped in the amnesia of childhood had I been carried. On this night, though, I was, and while this was happening, I was completely helpless. The combination of dread and sensuality was almost impossible to bear. They could not mix, but they did. They had to. As I lay in that dreamlike but intense state of struggle, I came to feel a sense of being under control of a sort that I had never before known. Worse, it felt like a sort of relief, being under such a spell. This horrified me, but worse, thrilled me. I suppose that the horse, at the moment of breaking, feels something similar. It is when fear surrenders, and the acceptance that will eventually turn to love emerges—when the animal perceives that no harm is intended, and that compliance brings rewards.

At first, it was like being trapped, perhaps, by a bear. It seemed as if brute force, empty of meaning, had gained control over my body. Meaningless suffering would be followed by meaningless death. But then the groaning dark blue trolls were joined by what at first appeared to be gigantic hornets. They had the affect, though, of young women. I sensed in them the purity of maidens, and in the days after, they emerged as the character “Janet” in my story. I chose the name carefully. It's feminine, but with a distinct edge. This is how I described her: “She wore a fresh-looking blue frock. Her hair was golden brown and conventionally waved. Her face was soft, the face of a girl, with inviting, delicate lips, a straight nose and eyes softly rimmed by big lashes, framed by arching brows. It was a completely winning face, as pure a face as I have ever seen.”

And again: “Her eyes were light green and were the only thing in her face that suggested anything more than sock hops and torrid backseats. It was not that they were dazed or shadowed or cruel—not at all. They were the eyes of a surpassingly intelligent person—bright and quick and full of life. More than that they were kind eyes. Looking into them, one sensed a true place of rest.” I had changed the eyes from brown to green because otherwise it would have been eerily familiar as a description of Anne.

While the creatures I remember had big black insect eyes and a menacingly alien demeanor, when they appeared in my imagination rather

than my memory, I saw them as my emotions had seen them, behind the curtain of fear.

Great and terrible Oz turned out to be a young woman, possessed of the kindness that is present in good people who are loved for their beauty.

One night about six weeks after the event, I experienced, in an anguish of conflict and disgust, a very surprising feeling of desire. I was still working on “Pain.” In the night, images of Janet became entangled with images of the visitors, their innocence and their great power, and I began to feel waves of desire as I remembered their hands upon my naked body. “Their” became “her.” I squirmed with need. I begged her to return.

I wanted to be once again naked in those sweet arms, genuinely helpless and being penetrated in my soul if not my body. The supposed rape, which had so challenged both my sense of propriety and my sense of self, now returned on the wings of desire.

This plunged me into turmoil. I came to feel that the experience had been so powerful that it had given rise in me to what I then regarded as perverted desires. Even though the urgency was compelling, I could never fulfill a need to be dominated. How? Go to some sex club? The whole idea was creepy. In any case, I had no intention of engaging in sexual activities outside of my marriage. Years before, I had decided that Anne was right for me and enough for me, and I took a vow to be faithful to her, and that was an end to it.

Or was it? This period was when I began walking deep into the woods behind our cabin at night, carrying only a flashlight. Admittedly, it had twelve batteries and probably could have started a campfire if I’d needed it to, but it was still just a flashlight. I went really deep, a mile or two back into the forest. This wasn’t only to confront my fears, it was also a richly sensual experience. On those walks, my body came alive in ways that I had not known to be possible, as fear and desire melted into one another. Every breath, every movement, the smell of the air, the feel of it, caressed me in a newly vivid way. Familiar, too, from that long-ago childhood night.

I assume that, in some way, my nocturnal excursions did indeed attract the attention of the visitors, because they started to show up again in my life, beginning the journey that I remain on to this day.

When I say “show up again,” I want to be very specific. I am dealing here with more than one kind of perceptual memory, and I want to do a

careful job of differentiation. It has taken me many years of work to be able to do this. For example, when I wrote books like *Communion*, *Transformation*, and the others, I was not able to, as it were, taste the difference between a memory that refers to a concrete event and one that refers to an intense event that might not have been so concrete.

This is because the intensity of the more ambiguous memories was often so overwhelming that I simply could not focus my mind clearly enough to tell that they had this important textual difference.

Having worked with them now for years, I can do this, I think, fairly reliably. With this in mind, I am now going to describe four events, all of which, at least in part, seem to me to be memories of physical experiences. This does *not* mean that the perceptions I am going to describe are precisely what happened, but they are what I was able to perceive, or chose to perceive. In Jeff's language, please "make the cut" when reading what follows.

I reported the first of these in some detail in my book *Transformation*, and this one I recall in exactly the same way that I recall a physical experience. It was about midnight, and I was sitting in a chair in our cabin when there suddenly came on the side of the house or the roof, nine knocks in three groups of three, followed by what seemed like a sort of resigned double tap, which I perceived as a reaction to the fact that I had remained frozen in the chair and not, say, stepped outside.

These were not normal sounds. They were absolutely, startlingly perfect, as if the time between them was precise to a measure we do not normally perceive. They were also high up on the house, a good sixty feet from the ground, so it wasn't somebody in the backyard.

Both of our cats were in the room with me, and they reacted by turning into great puffed-up balls of fur and moving along on their stomachs yowling. So they were hearing something, too.

As this was happening, I had the impression that the dark blue trolls—the kobolds—were involved.

The nine knocks had great significance to me. One meditative practice that Joe Stein had used involved contemplating nine thoughts in three groups of three, and I had been using it for years. Also, when entering the thirty-third degree, a Mason must knock on the door of the lodge nine times in three groups of three. This is because three triads traditionally form a triad themselves, a completion. Reaching the thirty-third degree represents the

completion of one phase of one's life as a Mason, and so also on that night, I was being told that I had completed one level of study and was ready to enter another.

I was much too scared to go outside at that moment, and the two double taps seemed to express disappointment that I hadn't done so. But, like my initial entry into the school, this moment was about going to a new level of conflict. I was failing and succeeding at the same time. The mandala was turning. It was, in other words, a living experience that has left me with a living question: What if I had gone out? Would "they" have focused in a new way? Would I have met aliens, or had some deeper secret revealed? One very deep truth is that this was now the second time I had refused the call. The second crow of the cock, as it were. The first came when I struggled and fought on the first night. Instead of opening my mind to what was happening, and addressing it like a human being, with questions, I reacted with the wild animal's fear.

Maybe I made the right choice and maybe I didn't. By refusing the call, I sent a message that I wasn't ready to graduate from the school, not yet.

Now, looking back, this and the next refusal of the call that I will discuss shortly remind me of the way in which my early acceptance into the school of this experience was at one and the same time a rejection. I'm reminded of Anne Sexton's "awful rowing toward God." That's what this is, an awful rowing, but toward God or not, I do not know. An awful rowing toward the living darkness.

After I published *Transformation*, I got a letter from a reader in Glenrock, Wyoming, who said that the entire town had experienced the nine knocks on a very strange night in which there had been odd lights and small figures dashing in the streets. Anne and I went to the town, and I have no reason to think that any of the people we discussed this with were lying.

The next experience I will describe is one that I have, in the past, only alluded to. It was the most intense experience in a lifetime of intense experiences, a sexual experience so beyond anything I had ever known that I am left to this day to wonder at the powers hidden in the body. I will try to recount this transcendent, agonizing, and glorious experience as exactly and dispassionately as possible.

It starts abruptly, and seems to be factual memory, but so strange and unexpected that it also has the flavor of dream.

I woke up abruptly. To my surprise, I found myself in our guest room, not upstairs with Anne. A second later, I realized that I was aflame with desire. I wanted Anne, but she wasn't there. Instead, I was lying naked on my back and sexually excited. Sitting on top of me was the woman from the cover of the book. She was slim and soft and angular. Even though her face was blacked out as if by some sort of curtain, this is who I believed it was.

A fire went through me like no fire I have ever known before or since. When she shifted slightly, I arched my back, I screamed out my guts, abandoned to the pleasure of it, scalded by it, consumed by it.

When she was finally still, I lay gasping, still in her, still burning.

But then I noticed that standing at the foot of the bed was a group of people. One was a man in a military uniform, whom I recognized. (And therein lies one of the most fantastic stories in this whole narrative, which I will relate momentarily.) Beside him was a short blond individual who I would meet again some years later in the woods, and who would, in 1994, follow us to Texas when we left the cabin and moved there. Beside him was another man in civilian clothes. I think there were two other people as well. They all looked upset and embarrassed.

So here I was, this very private, very conservative man, in the most fantastically revealing situation I could imagine, and in addition, being watched by people who were disturbed, even disgusted, by what they were seeing. For a moment, I was embarrassed, but then she moved again and again the pleasure set me on fire. I can remember grabbing my temples and screaming, then weeping, and seeing these people turning away.

Then it started, the rhythmic flow of it, fire in me, burning up and down my spine, cleansing me, finally annihilating me. I was only pleasure, the body and the fire of the body.

It was a transformative nakedness. Lying there like that, I experienced total surrender and profound sexual satisfaction. I did not know that such absolute surrender could exist, let alone that it would open every secret door to pleasure in my body. And yet, as disturbing as it was, it was also gratifying. It seemed *needed*. I found myself glad to have been chosen for something that, although violent and exploitative, had about it a fiery holiness that I will never forget.

The event ended in ejaculation, a delicious, joyous agony, wrenchingly pure. I lay spent, vibrant with release. All was still for a moment, then she

lifted off me and at once I became aware that they were leaving. They moved quickly. I heard their voices out in the living room, a nervous discussion.

Exactly what happened after that I do not know. The next thing I knew, I was in my wife's arms, lying there in brilliant ecstasy.

Thus ended the third experience. The fourth would not equal it in intensity, but would be an act of such surpassing intimacy that to recall it even now makes me uneasy. I am not given to such acts, and it left me feeling even more unfaithful and ashamed. But that was for later. Just now, I found myself waking up in bed.

The sun was hard and bright pouring in through the windows, and all seemed normal and well. I was, however, so ashamed that I couldn't look at my wife. I felt that I had doubly cheated her. I had broken my marriage vow, Worse, I had just loved it.

Or had I? What really happened on that night? I feel as if I made love to somebody, but who? An alien? A succubus? Some part of myself that normally lives so deep that I am not in touch with it? Perhaps something that, put simply, cannot be known, not given the level of information we now possess about what we really are.

But recently, there was a shocking codicil that made the event seem more concrete. It had happened in 1987 or 1988, and for all of those years I have wondered if the man I thought I recognized there had any idea of it.

In late December of 2014, Anne and I were having dinner with some new friends. He is a filmmaker who was raised in Romania during the communist years. When he was twelve, he had a close encounter that he has never been able to remember, with the exception that he was given a book, a detective story. It was innocuous, except for one thing: one sentence was underlined twice in heavy lines. The sentence read "Colonel 'X' promised that he would never reveal what he saw on that night."

The name is that of the military man whom I recognized, who witnessed the event in the cabin. He is involved in secret intelligence, and has also been a friend for many, many years. Now I wonder what he really knows, what he has seen, and what memories he plans to take to his grave. If I had made a promise like that, I would never, ever break it, Never, and I would never challenge him in the matter. Still, I think that my suspicions have been confirmed. I suspect that something extraordinary did happen that night, and that he was witness to it. As dreamlike—even imaginary—as it now seems, I

suspect that there was a sexual encounter on that night, and I am haunted as to why. Always, the whisper of suspicion is there: do I have a child, or children, in some other reality?

Coming as it has nearly thirty years after the events, and when I was actually in the process of writing this chapter, I am left in silence while contemplating the possibilities.

Back then, it took me some time, but I finally told Anne what had happened. I expected her to be hurt, even furious. Even though I hadn't intended it, I had broken my vow to her. To me, this was deeply shameful. Anne, however, took it in stride. As I have said, I was—and am—left wondering if she did not somehow share the experience.

A couple of years later, one of the people who had been in that room turned up living in the woods behind our house. Or was it the same person? It could be that my mind inserted him into the memory of the earlier experience after I saw him. It is so very important not to forget things like this. While memory is more a plastic than a fluid, it is not an absolute record of the past, but a complex, ambiguous way that the brain and mind have of adding the dimension of the past to life experience. So, despite this apparently concretizing discovery, this memory, like all memory, must remain in question. I will say this, though: the man who began living in our woods in 1992 was incredibly strange, and quite real.

But that's for later in the narrative. Now, it was the summer of 1988. This was the period when other people were beginning to encounter the visitors at our cabin. I had grown concerned for our little boy, and had sent him off to summer camp, hoping that he wouldn't become involved any more than he already was. I'd also told the parents of his friends that people in the area were reporting these odd apparitions, and that they were coming into our house, but nobody seemed in the least concerned. I was concerned, though. Very concerned.

Then it came: the fourth great experience.

One night I woke up sensing a presence in the room. It was not visible, but it was really awesome. It was also feminine, and I recognized it—her—at once.

It is hard to remember surrounding details, but I think that after a moment I did see her. She was sitting in a chair at the foot of our bed, her form visible in the leaf-dappled moonlight that was coming in the window. I

only remember a shadowy presence, and an odd sense of freshness and youth contrasting with another impression I had gained at some point, that this person was very old.

The next thing I remember is that I was kneeling in front of the chair. Her hands came onto my head like tendrils of smoke, the hands of a ghost, but they were paradoxically strong and pressed me toward her lap. She opened her legs and I saw a darkness within. Not entire darkness, though. There was a glow there, too. She drew my head gently down.

My sexual life with my wife had been very satisfying, but not very adventurous. We'd been happy with it, anyway. And now, since December of 1985, this new sort of experience had entered our lives—primarily mine. I had endured anal penetration while helpless, which, while it angered me, also triggered a primal sense of acceptance that was, as it turned out, taming. Then I'd had a sexual experience that was more intense than anything I had even known was possible, and done that in a room full of people, one of whom I had recognized, another of whom would return to my life in a few years in a half-mad state.

I felt the hands drawing me forward, saw her legs spread, saw the glow seeping out from between the legs. But what glow? What was this? Human beings do not glow in their private parts.

Then I was doing something that I had never done before. My head was being held from behind and my face pressed against her. Now, close, there was a scent, pungent like forest muck, sweet and sour like a woman, richly alive, awful and wonderful.

I found myself drawn into the loveliest, sweetest kiss I had until that time known, touching my lips to the lips of that vagina. The liquid there was both delicious and disturbing. I reacted to it as if I was receiving a gift. It opened my heart, returning me to my first kiss, with a long forgotten girl a long time ago. The sensation was one of being absolutely cherished and absolutely favored. I wonder if even Hephaistos would have had so intense an experience of the *mouni* of Aphrodite.

I wanted it to go on, but those soft hands soon pushed me away. For a moment, they held my face, and then I found myself alone. I sat on the floor staring at the empty chair. Then I stood up and returned it to its normal place at the little desk that was in our bedroom.

I went into the bathroom and washed myself. I now felt disgust and

violation uneasily mixed with regret and loss. Looking into the mirror, I saw a haggard face. A wave of loneliness overtook me. I wanted to cry. Then I turned toward our bed, and saw there another shadow, my wife sleeping in beloved innocence. I lay down with her, and gloried in the sigh of sleepy pleasure I heard when I drew close to her.

The next day, I wondered what on earth had happened. Had I actually had another exotic encounter? What was this sense that she was so very, very holy, truly a sacred being?

I couldn't tell Anne, not something this strange. I simply didn't know how. I couldn't tell anybody, and haven't until writing these words. Even after all these years, putting this down on paper is extremely difficult for me. Without going further, I will say that these experiences revolutionized our sex life. We rediscovered ourselves in a new way. What a deep holiness it was—she was—to teach me as she did, and bring to my marriage the wonders I had found.

It was not all joyous, though. As always, the dark side of the sacred was there, too. During this same period, something quite terrible happened. It wasn't unfamiliar to us, though. We'd read about it in thousands of letters. It was, in fact, a commonplace occurrence of the close encounter experience.

In the backs of both my and Anne's minds had been the wish for another child. I would dearly have loved to have a daughter. Anne just wanted another baby. We weren't really trying for another pregnancy, but if one had come along, we would have been thrilled.

Then came an awful night. It began with a dream. In it, I saw a lovely young woman walking away along a path in a charming wood. Sunlight dappled the ground. Flowers overflowed along the borders of the path. As the young woman waved good-bye to me, I woke up. I was astonished to find myself in tears. But why? How could a dream overpower me like that?

Sooner or later, I went back to sleep, only to wake up again, or half wake up, because I thought that one of the cats had jumped onto our bed. We were at the cabin, but the cats were back in Manhattan in our apartment. As I realized this, my eyes flew open. I saw, standing on the foot of the bed, three of the dark blue kobolds. Their faces were horrific almost beyond description. Lorie Barnes's cry of "you're so ugly" hardly even begins to describe what I was seeing. Their eyes were sharklike and preternaturally sharp, as if they were looking not at me but *into* me. Their lips were red and lascivious,

grotesquely sexualized. One of them actually licked its lips, as if it was about to enjoy a meal. These were predators, there was no question in my mind about it, and they were after us.

I jumped out of bed and they were instantly gone. Also, I was now fully awake. Had “they” actually been there? How could anything that looked like that even exist? Surely terrors like that don’t walk the world, except the world of nightmare.

Later still, Anne woke up. She was in agony. She was bleeding. She rushed into the bathroom and proceeded to have a miscarriage. Blood poured out of her, but no debris. I got ready to take her up to the emergency room, which was about thirty miles away, but the bleeding stopped and she decided that she wanted to rest at home instead. She told me that she had been pregnant, but had been saving the news as a surprise for me.

We cried and cried that night, lying in each other’s arms, in the great dark. I kept the horror that I had witnessed to myself, and held Anne and cherished her and prayed that she be protected and loved, and her sorrow pass from her.

Perhaps a year later, once again at the cabin, we were going off to a restaurant for dinner. As we descended into the garage, I noticed what appeared to be an opening in its concrete floor, a round darkness. Anne didn’t see it, so I said nothing. By that time, I was well aware that I would often see things that others did not.

The next thing I knew, I was holding a lovely little baby who regarded me with dark, frighteningly conscious eyes. Then, seemingly with nothing in between, we were driving to the restaurant. All the way there, we talked of nothing but babies, but our youth had slipped away, and there would not be another infant in our lives.

That did not mean, however, that infancy was entirely behind me. The next winter, I would revisit that state in a most surprising way.

I was still trying to engage with my “visitors” in some manner that would enable me to finally strip away all of the artifacts of imagination and dream and see them as they actually were, in the flesh and in common light. I was still naive enough to imagine that such a thing could happen, and still wanted to believe—hoped to believe—that I was dealing in some straightforward way with aliens. But this next experience would in a most elegant manner enlarge the question of what they were and are, by offering

me an experience of the very highest strangeness and deepest ambiguity, mixing as it did clearly physical elements with others that we would consider completely impossible.

It would be the third and final refusal of the call. I did not understand at the time, but after this, my relationship with them would never be the same. I would still be a student, but left to my own devices, no longer able to rely on them for instruction. What I needed now, I would have to find within myself, and take my questions to them.

The first refusal had been the active side of the triad: I had fought and screamed like a wild animal. The second had been passive. I sat in my chair until they gave up. The third would be reconciling: from it, I would gain basic insight about what I was, where I was, and why I was here.

It was February. I had been going down into the woods nightly and meditating in the cold and winter silence, in the hard-frozen, glowing snow. I was returning to the spot from which I had been taken in the first place. I was asking for a meeting, dropping deep into meditation and making the request with my mind, heart, and body. On one of those nights when the clouds were rushing and the wind was sighing in the pines, I had seen a dark circular shadow above me, hanging just inside the cloud cover and as still as a stone. I watched the clouds tumble past it. I marveled at how absolutely motionless it was. And I visualized sitting on a little stone bench I'd built nearby, sitting with her, and talking together about the secrets of space and time.

Early one morning, just at the edge of dawn, there came from those woods the sound of a trumpet or shofar, three haunting, mournful wails.

I interpreted this as a signal. I was to go down in the woods. I was to sit on the bench. I leaped out of bed, grabbed my winter robe, put on my thick, fur-lined slippers, and headed for the door. I went out across our deck, then down the familiar path that led to the stone circle where I meditated. The bench was just beyond it. But as I walked, I saw in the clearing beyond the winter-naked woods, a dark, ovoid shadow that should not have been there. Shadowy figures, short and stocky, seemed to be standing near it.

I paused. I saw that this was an extraordinary opportunity, certainly the opportunity of a lifetime.

No sooner had those rather self-involved thoughts passed through my mind than I heard a voice say, "Come on, come on." It was hard and mean,

and had about it the flavor of somebody growing impatient, who was hoping to spring a trap.

I thought of my wife and son asleep back in the cabin, of what it would be like for them if I disappeared. I remembered the monstrosities on the bed and the other events of that tragic night.

I could not take this risk. I had a family, and their welfare came first. I couldn't just disappear on them. I was in that moment incredibly torn. I wanted to continue on. I dared not. I had to. I must not. Finally, my heart filled with fear and swamped with regret, I turned around and went back to the house.

The moment I put my hand on the doorknob, I heard the richest, strangest, and most beautiful sound I had ever known, or, I believe, will ever know. It was neither a human nor an animal sound, but it had elements of both. Astonishingly, there was also a strong sense of the mechanical.

It came in the form of three cries, so perfectly spaced and precisely uttered that, by comparison afterward, even the most superbly executed music had to my ear a muddy, slapdash quality for many months. This exquisite precision was a repeat of the nine knocks experience.

It was also, by a tremendous long shot, the most emotionally rich and complex sound I have ever known. Everything about it was tremendous: the gentleness, the ferocity, the love, the longing, the disappointment.

I was confused and badly frightened. I ran back upstairs, wanting to protect Anne from what I feared might be some sort of very overt incursion, even an attack. After all, the first thing I had heard was that awful voice snarling impatiently.

Somebody came with me, and I knew who it was. She was invisible, but nevertheless absolutely and undeniably there. I was once again in the presence of the goddess of my heart, my beloved and terrible friend.

I could not see her, but I could certainly feel her. Beloved, dangerous presence, an invisible tiger and an invisible saint. There was a sense of the empty menace of the cruising shark and a love richer than any I had ever known or would ever know again.

I remembered the penetration of my body on December 26, 1985, the fiery consummation that had taken place in the guest room, and the other intimacies.

That all flashed through my mind in an instant. My heart exploded then

with the most poignant sense of love and the greatest sense of danger that I have ever known. I saw our daughter walking away, I saw Anne weeping her anguish on that bloody night, I felt the strange baby in my arms.

Then I was somewhere else. I saw tall, spindly wooden spires around me and for a moment couldn't understand at all. Where was I? What had just happened? And why was I gliding like this? To my amazement, I recognized a nearby piece of furniture. It was my mother's desk that had stood in her bedroom back in the late forties when I was a baby.

The spires were chair legs and the legs of the desk. I was a baby again, and the wonderful gliding sensation was me walking.

I had been taken back to the beginning, to an incredibly vivid visual memory of my earliest, first steps. Once again, there was great complexity in what had just happened. I was being told that I had taken a first step. I was also being told that I was still a baby.

In the years that have followed, I have agonized many times over that final refusal of the call. Something very sacred had approached me and I had drawn back, too afraid to surrender myself to its dangerous embrace.

I must say that in all the beauty and all the darkness, the sweetness and ferocity—all of its contradictory, profoundly honest manifestation—the being that I had been having this love affair with—for that's what it was—was a holy person. Be it man or woman, part of me or Anne or some deeper, richer intimacy within the beloved labyrinth of my marriage, be it alien, human, or a nameless thing that wanders the world in search of love, I was briefly privileged to gain its notice and fall into its embrace.

It has given me so much—she has—but did she also take my daughter? If so, then to what end? I sense that my child is out there somewhere, perhaps living a superconscious life, or did she die in abnegation, fodder for some cosmic predator? Or is it that we are all both things?

Because I was led to reconciliation of the wisdom and the horror, I am grateful beyond saying to this my dear teacher, at whose knee I learned greater truths, and glimpsed the world as a far more complex, intense, and richly alive place than we are in our general life graced to know.

I recall that the author of one of the letters that Anne had brought to my attention wrote that, when she found herself face-to-face with one of these great-eyed beings, to all appearances the strangest thing she had ever seen, she found herself blurting out, "Teacher! How good to see you again."

Teachers, but bringing lessons harder than any ordinary teacher could ever bring. G. I. Gurdjieff taught the importance of friction, and manufactured it in the lives of his students. What I got from the visitors was friction a thousand times more potent, friction that had the power to break the soul, to plunge me into a frozen paroxysm of hatred and fear. But it didn't happen that way. I am still here, still learning, and will be until death takes me and, I am sure, beyond.

To be taught truly is to be guided inward, into the secrets of one's own heart, and at once to be lifted into a greater vision. "Greater" does not mean more beautiful, though. It means truer, which is, as far as I am concerned, more exquisite in its ambiguity.

Looking back over my life, I can see many different ways of embracing the experiences I have described. I could focus on the agonizing loss of our baby and say that it was stolen by aliens. I could say that we were later shown this baby and claim further that this means that it was kidnapped and raised by them.

I could say as easily that I fell in love with some sort of monster and had grand sex with it, and never mind those unfortunate looks. I could also say that this whole group of memories causes me to look at myself and the world around me in ways that otherwise would not have been possible, that open my mind and heart to the richness of questions that I can neither bear to leave unanswered nor truthfully answer. The corrosive power of these questions demands that I close them, but I will not close them, not until I can sit across a table from my dangerous and sacred mistress and converse clearly and openly with her about them. Even then, I doubt very much that she (he, it, or unclassifiable) would betray me by closing them in my face.

In the end, the questions that I bear and carry regarding these possible events are the most energetic intellectual and emotional resources that I possess. They draw me along one twisting forest path after another, into reflective caves and floral meadows, then again down ways so dark that I dare not pass. But I do pass. I always go down the forbidding path, into the trackless cave, across the desert that has no end, on the waters of the storm.

I don't do these things because I am especially curious or especially foolhardy. I do them because I can. These questions that burn within me, that wake me sweating in the night, are the treasures of my soul, the keys to the kingdom.

But what kingdom? Am I a seeker on the heaven road, or lost, doomed
to wander the darkness forever?

I have no idea.

Super Sexualities

JEFF

On the night of December 26, 1985, the most essentially and powerfully feminine presence I have ever known came to me and had me dragged out of the house and essentially beaten until I realized that she was real and I was not dreaming. During those horrific moments, I awoke both physically and spiritually.

What was Whitley Strieber's crime? What did he do that was so wrong, that merited so much shaming and condemnation on the part of the literary elite and the religious powers that be? And, yet, why did his story resonate so powerfully with millions of readers and come to indelibly mark, perhaps even shape, a new, emergent mythology well outside the reach of the cultural and religious gatekeepers? I think the answers to these two questions are related.

Put most simply, he was too honest. Put more complexly, he followed the cardinal rule of psychoanalysis, which is to speak exactly what appears in one's experience without self-censorship or concern about what others might think. He has also traced much of his visionary life back to his dream-life, his childhood, and his sexuality—all classic psychoanalytic themes. In psychoanalysis, of course, this is all done in the professional confidence of the analysis: the secrets are shared by just two people with the presumption

that speaking secrets is ultimately healing. Shockingly, Whitley did the same in broad daylight in the glare of the public page: the secrets were now shared, potentially at least, with anyone. And he was not writing fiction. He was writing about his own all too real encounters, about his realization “that she was real and I was not dreaming.” As in psychoanalysis, I think he did this to help us heal our public culture, mired in a materialism so deep that it can only be haunted by the numinous.

But there was something else, something fundamentally religious about these publicly spoken secrets. Not only did he speak his secrets in public, but he also spoke reverently and fearfully of a divine presence that was *feminine*, that broke and rode him like a horse, an erotic presence into which he disappeared in waves of terror and pleasure so overwhelming that they literally washed away his personality. Nor did he leave this divine feminine being in the abstract in some distant heaven or speculative past. He related the presence again and again to flesh-and-blood women with whom he had very real relationships: first and foremost his wife, here his mother, and even his unborn daughter. By so doing, he spoke of a presence at the very heart of the unconscious of the religious West, a presence that has been repressed and denied for three millennia. He spoke of Her.

Erotics

Comparison. Phenomenology. History. Hermeneutics. Scholars of religion have another practice for thinking about religious phenomena across great stretches of space and time. That practice is sex. Well, okay, it’s not actually sex. It’s thinking and talking about human sexuality, gender, and sexual orientation in more and more precise ways. Let us give this entire complex of modern thought and practice a new name. Let us call it *erotics*, as in the expressions “physics” and “optics.”

Erotics, as we shall see, is a very big word. It encompasses everything from the microchemistry, biology, and neurology of sexual arousal, through the immeasurable stretches of time (and countless sexual acts) of evolutionary history, to the socially shaped natures of sexual desire and gender identity, to the sublimation, or “making sublime,” of erotic energies into thought, art, and civilization, even, if we are to believe the reports, into

the highest flights of mystical ecstasy and metaphysical vision. Erotics, finally, is also deeply related to another topic to which we will arrive soon enough: the *energetics* of the soul.

If you consider it for a moment, this focus on human sexuality makes good sense on the humblest and simplest of levels, since every human being who has ever lived on the planet has had a body like ours, really almost *exactly* like ours. We can thus use our bodies to understand one another across cultures and times. We may not speak the same languages, and we certainly hold different beliefs and values and even, no doubt, differently nuanced sexual desires and genders. But we were all conceived in a sexual act (at least until very recently with the new fertility technology). We were all “born of a woman.” And we all have experienced sexual desire, if, yes, in incredibly different ways.

But the scope of erotics hardly stops there, with our shared bodies and physiologies. Its invisible lightning cracks and arcs from the lowest reaches of human cruelty, violence, and aggression into the highest reaches of the human spirit. It is a bit like nuclear energy: it can be used to power a city, or melt one.

I am hardly the first to suggest this. Two and a half millennia ago the Greek philosopher Plato argued much the same through his writings on what the Greeks called “eros.” Eros for Plato was not some simple reproductive instinct. It was the secret driving force of reproduction, for sure, but it was also the secret driving force of (male-to-male) education, of culture, and of the arts. And, most important of all, it was also the secret driving force of the search for wisdom and divine vision. Indeed, if eros could be redirected from the “vulgar” objects of heterosexual reproduction and the “heavenly” objects of homoerotic desire, it could become “winged” for ecstatic flight and take the eroticized philosopher into the highest realms of the cosmos. Freud, in the last century, would pick up on Plato and pursue the nitty-gritty specifics of how human sexual energy, which he called “libido,” morphs through the human life cycle and body (from the entire body, to the mouth, to the anus, to, eventually, the adult genitals) in specific family constellations. He also showed us, again, how this energy can be sublimated into various cultural works of art, literature, and religion.

Scholars of religion are seldom this Platonic or this Freudian, but the fact remains: we employ the categories of sexuality, gender, and sexual

orientation to think about religious phenomena and religious institutions all the time. We do this for one simple reason: it works. Whenever, for example, one is looking at extreme religious experiences, the sexual elements are probably not far behind. Sometimes they have been repressed or censored, or sublimated almost beyond recognition, but they are usually there, burning in the background, like a halo glowing on a saint or a flame dancing on the tip of a demon's tail.

All of this, though, begs a single question: What is sex?

No, I mean really, what *is* it? This, I think, is the deeper question that Whitley is getting at through the imaginal prism of the Alien Who May Have Been Anne. I think Anne was central to all of this: as Whitley's lifelong intellectual partner, as his co-writer, as his co-researcher, but also as his wife and lover. I do not think we can underestimate her importance or her presence in what Whitley has hymned over the years as his central dream and vision of "communion."

And this brings us back to the question: What *is* human sexuality? We tend, of course, to think of sexuality as *not* us, as some kind of dark and dumb "instinct" that forces us to reproduce, to "have sex," as we say. What a silly phrase. What is it, exactly, that one "has" when one engages in sexual activity or momentarily disappears in orgasm?

We also generally assume that sex as such has nothing essential to do with the astonishing zipping and unzipping architecture of the spiraling DNA molecule or the mind-boggling complexities of the cell, trillions of which make up, in near perfect concert, each of our gigantic human forms (from the perspective of each and every one of those trillions of living cells, each of us is *immense*). We never imagine sex "writing" these genetic codes in any conscious or creative way. Quite the contrary, we are asked by conventional science to think of all of this as ultimately meaningless, without any goal or purpose, and certainly without any conscious intention or internal intelligence or agency.

But what if this picture is incomplete? What if what we so naively call "sex" is not some dumb instinct but a conscious cosmic energy in its own right that is super-intelligent, that "wrote" us through our DNA and now "co-writes" us through our cultural and spiritual practices, including these reading and writing practices that we are engaged in together *right now*? What if *this*, too, is "sex"? And what if we are being asked to form some conscious

relationship with this conscious cosmic energy so that we can, in effect, co-evolve ourselves through these same sexual acts and sublimated cultural and spiritual practices?

This is a modern translation of what Plato was getting at when he called eros a god and identified it as the secret energy of our lusts, of our cultural productions, of our divine visions, of philosophy itself. In any case, this is what I have in mind when I refer to the study of sexuality and religious experience as a developing *erotics*. All of this in turn bears on the questions of Whitley Strieber, of *Communion*, and of all that followed that dark and beautiful book. *This* is “communion.”

Forbidden Fruit, Forbidden Knowledge

Most human cultures before our own have understood sexuality as sacred, that is to say, they experienced a terrifying and terrific divinity in it. Many traditional cultures went even further and saw it as a means to deify the human being. Believe it or not, this is the case for the founding biblical myth of Western monotheism, the story of Adam and Eve in the garden.

Go back and read it. The story clearly links the two forbidden trees—the Tree of the Knowledge of Good and Evil, and the Tree of Life—within a single narrative. Eating from the Tree of the Knowledge of Good and Evil produces immediate sexual shame, and so the young couple covers their genitals after tasting it. The same “eating” or “knowing” (a biblical euphemism for “having sex”) also invokes a set of punishments that fit the crime, in true biblical style. So Eve will suffer in childbirth, which is the direct result of the original “crime,” and Adam will have to toil in the fields, “plowing,” “seed,” and “soil” being what they were in ancient agriculture—heavily sexualized metaphors in the male imagination.

The fruit of the Tree of Life is not sex. It is deification. If the couple eats of this fruit, they will become gods. The couple, of course, is banished from the garden for their sexual disobedience before they can eat of the second tree, but the story stands: sexuality and divinization are the two (forbidden) trees of our original mythical home.

As the story suggests, we have not dealt very well with either fruit. We imagine a petty, mean god that stands against our most natural biological

urges and highest spiritual aspirations. We are morally tortured by our sexual desires and broken gender relations (all that Adam lording it over Eve), and we have hardly begun to struggle with our potential deification.

Yet.

The garden myth is just a piece of the historical puzzle, of course. If we broaden our historical visions (that is, our historical context), we can easily see that human beings have been experiencing themselves as the sexual objects of gods, goddesses, and other discarnate beings for a *very* long time. Witness the “sons of God” taking human wives to produce hybrid heroes just a few chapters later in Genesis 6. Witness the sexual nature of the djinn of Islamic folklore. Witness the nineteenth-century American Spiritualists engaging spirits erotically and, in the process, imagining entirely new gender and sexual relations. Witness the British lore around intense sexual emotions temporarily “lifting the veil” between this world and the other. We could go on here for literally hundreds of pages, and we would not come to the end of examples.⁵⁴ The history of religions is a history of strange sex.

The Divine Feminine

There is a basic problem here, though. It is so simple and so obvious that it is not always recognized as such, not at least in its full scope. Until, that is, someone like Whitley pulls it up from the cultural unconscious and has it painted in bold colors on a best-selling book cover.

The problem is this: in the monotheistic West, the divine can only be imagined as male. Exceptions aside, at the end of the day God is a He, a Father, a Lord, a King, a male Creator without a divine partner or a wife. There is God, but no Goddess. There is some good evidence that the biblical God once had a spouse, a Goddess, as it were, but She was long ago banished from memory and proper belief.

There are many devastating moral and spiritual consequences to this history and this basic gender grammar. The most obvious, and rightly most commented on, is that women are effectively erased from religious history and denied positions of authority and power in the religious institutions of the monotheistic West, since—or so the logic goes—their genders prevent them

from representing and speaking for (the male) God. My colleague April DeConick calls this ancient pattern “holy misogyny.”⁵⁵ By this phrase, she means to point out that this basic disregard for women is not something tangential to the biblical traditions. It is something fundamental to them. It goes very, very deep. This problem, of course, has been noticed and has become a central feature of the feminist study of religion, which is one of the richest and most developed voices of the field. These voices have even been heard by many a religious community that has taken the results of the scholarship here to heart.

Another consequence of the all-male gender grammar that is seldom commented on is that it results in a spiritual world in which human males have no “Her” with whom to commune, much less with whom to unite erotically and lovingly. There is *only* a “He.” This is why Jesus asked his closest male disciples not be married and to “castrate” themselves for the kingdom of heaven (Matthew 19:12): apparently, he wanted them to reject (hetero)sexuality and take on a feminized relationship to the divine. This is why Paul wanted all of his disciples, male and female alike, to become “virgins” for Christ and marry the god-man (2 Corinthians 11:2). This is why the two iconic female figures of Roman Catholicism have been the Virgin Mary and Mary Magdalene, that is, a lifelong virgin and the patroness of celibacy (read: no heterosexuality) and a repentant prostitute (read: no heterosexuality anymore). This is why some of the greatest saints of the Catholic tradition were called “bridal mystics.” They had—man and woman, alike—wed the god-man, become his spouses. Put in contemporary terms, a kind of spiritual or sublimated “gay marriage” was *the norm* among male Christian mystics for centuries.⁵⁶ This is why male heterosexuality—bodily and spiritually oriented, of course, around the desire for and love of real women—has long been either compromised as a second-choice thing of “this world” or entirely secularized as something purely physical.

There were historical exceptions, of course. I am thinking of traditions like the medieval Movement of the Free Spirit, who were known (or said to be known) for any number of spiritual and sexual excesses, including ritual nudity, the practice of free love, and the attempted sublimation of orgasm into mystical ecstasy, and who spoke, at least according to the heresy records, of sexual intercourse as “the joy of Paradise.”⁵⁷ I am also thinking of more

modern figures, like William Blake, the Romantic poet-painter who drew angels caressing immense phalli and a holy chapel in and as a woman's vagina. Or the French paleontologist and priest Teilhard de Chardin, who saw the evolution of the cosmos as a divine incarnation spread out over billions of years and dreamed of a day that Christian couples could encounter a God of love within their heterosexual intercourse.

But these astonishing ideas were all effectively marginalized or repressed. Hence my humorous memory of the kind monk who once told me how they sold Teilhard's books in the Catholic seminary bookstore in the 1960s and early '70s. Since these books were all incredibly popular but also frowned upon by Rome (they could not be published during the priest's life), the monks hid them under the counter and handed them over to eager readers in brown paper bags—exactly like (heterosexual) pornography was sold at the time in drugstores. That's what a spiritualized heterosexuality or sexually active evolutionary mysticism is in a monotheistic world: pornography, heresy, impossible.

I have written three books about what is going on here, but the basic point is this. In the context of a religion like Christianity in which God is male, any erotic relationship with this God for men will be, by definition, homoerotic in structure. I am not suggesting anything genital or even conscious here, nor am I passing any moral judgment. Actually, I think "being holy" and "being gay" are fundamentally related phenomena within the tradition: gay people have spiritual gifts that straight people do not. If anything, then, I am simply jealous.

But most of all I am trying to point out why any male heterosexual encounter with a feminine presence in a Christian culture will be framed as heretical and will be at best ignored and at worst demonized and persecuted. It will be *alien*. This is Whitley's real crime and the deeper reason that *Communion* was so vehemently rejected by fundamentalist Christians. He was offering what is essentially a feminine divine and a male heterosexual spirituality, neither of which can fit into the gender grammar of the monotheistic West.

One can "castrate" oneself for the kingdom of heaven, as Jesus wanted us to do. Or one can become a "virgin for Christ," as Paul wanted us to be. One can even "date Jesus," as young Evangelical women do. But a man can

never ever erotically commune with Her.⁵⁸ He can *never* lie in the lap of a goddess.

The Flip

Go ahead and track the uses of “communion” in *Communion*. You will see that, in almost every case, this communion signals some profound emotional connection to another human being, and that human being is usually Anne. For whatever else or more it may be, Whitley’s “communion” is fundamentally about human emotion and a married, procreative heterosexuality. It is about a profound cosmic love between a man and a woman.

This is even more obvious when Whitley begins to wonder if he was really cheating on Anne when he had sex with the alien goddess figure. The following passage is key to my argument, and so it is worth repeating here:

One way to put it would be to say that I had a love affair with a goddess. Another would be that it was an affair with an alien. But the third way to describe it—which is, I suspect, closer to the truth—is that I don’t know who or what my wife really was, or myself, or any of us. I don’t know what human beings are, and, based on my own life experience, I have every reason to suspect that the form we live in every day is not our only state.

As I read him, Whitley is not saying in this passage that the goddess and the alien are “nothing but” human sexual instincts. He is not reducing the spiritual to the sexual, as, say, Freud might. Rather, he is saying that there is something fundamentally “divine” or “alien” about human sexuality itself. He is not reducing the gods and goddesses to sex. He is raising sex to the gods and goddesses. He is “flipping” the whole thing around.

This strikes me as exactly right. It is certainly what I have been trying to say for twenty years now. I call these expressions of human sexuality “super sexualities.” By such a phrase I do not mean to suggest that Whitley and Anne’s sexualities are or were somehow better than ours, somehow “super”

in relationship to our “not so super.” I mean to suggest that *there is something super about sexuality itself*. I mean to suggest that, in rare but real moments, human sexuality can “flip over,” “reverse itself,” or “turn inside out” and thus be revealed as something uncanny, something that earlier cultures identified as “supernatural” but we might just as well recognize, with a single careful pause, as “super natural.” *That’s the flip.*

Sexuality, of course, is not just connected to our most intimate loves. It is also connected to our most violent cruelties, our most severe repressions, and our worst fears. Little wonder, then, that the monster and the demon often show up in our sexual lives.

Consider, as a single eccentric case, the Mothman of Point Pleasant, West Virginia. Here was a red-eyed, seven-foot winged monster who displayed a disturbing preference for terrifying menstruating women and whose multiple spectral manifestations in 1967 were accompanied by numerous UFO encounters. The latter UFO phenomenon, John Keel notes in his famous book on the Mothman, “displays an almost pornographic preoccupation with our mating practices.”⁵⁹ Indeed, one of his chapters begins with two lovers, stripped to the buff in a parked car enjoying each other, until a humming blue ball of fire parked outside their squeaking, bouncing car. The blazing blue ball seemed conscious, as it backed away a bit when the woman saw it and screamed. And then it disappeared. The young couple threw on their clothes and immediately drove back into town only to discover that they had lost two full hours.

“I knew that UFOs often zero in on lovers in parked cars,” Keel explains. He also knew that many men and women who have encountered these things often find their marriages on the rocks, “after they begin their liaisons with the space people.” So Whitley’s pained concerns about the possible conjugal effects of his erotic occult encounters were hardly unreasonable ones. They fit into a much larger pattern.

I would put all of this in the form of a rhetorical question: Is there something cosmic about human sexuality, something at once erotic and daimonic, something that can only reveal itself to us in spectral forms, like humming blue balls of conscious fire, UFOs, winged monsters, and almond-eyed sci-fi goddesses?

It’s not really a question. I think so.

Sex, Death, and the Sacred

Whether we are dealing with canonized Catholic saints or an American monster folklore, one thing is obvious enough in these accounts: sex is not just sex. Sex is “divine.” Sex is a “demon.” Sex is dangerous. Sex is a glowing blue ball of light. Or a giant man-bat. Or a feminine presence that drags a professional writer out of his comfortable life and beats him into a spiritual awakening.

The dark side is important. We should not look away. Why? Because it is one of the faces of the same presence or power. This is as true on a religious or mythical level as it is on a biological one. Sex, after all, is the biological flipside of death. “This ancient human experience,” Whitley writes in the last chapter, “not only rends the veil between the living and the dead, it penetrates deeply into sexuality.” There is a reason for this. There is sex only because there is death. If there were no death, there would be no need for sexuality. Sex and death are two sides of the same biological coin, and we are that flipping coin.

Such truths are difficult for many to understand, partly because of our religious heritages, which are not always very helpful here. Some of these traditions, and particularly the Catholic tradition into which both Whitley and I were born, have too often implied or openly claimed that the sexual and the spiritual are opposing forces, that sex must be left behind, renounced, or denied for the life of the spirit. Part of this, again, is a function of the male same-sex structure of Catholicism: what is really being rejected here is (hetero)sexuality, that is, sexual desire *for a woman*. Hence Jesus’s call to castrate ourselves for the kingdom. Another part of the reasoning here, though, is built on an ancient “hydraulics” metaphor that saw the human body as an upright channel of sexual-spiritual fluids and forces. Allow those fluid forces to flow out “down there” and they would not go “up.” Seems simple enough.

But it’s not. Such an either-or logic is built upon and indeed relies on a deeper identity between the spiritual and the sexual. One suppresses the sexual to get to the spiritual not because these two movements are completely different, *but because deeper down they are the same*. Sex and spirit are two

ends of the same human spectrum (and the same spine). They are not really opposed. They are part of the same living system—us.

There is something else to say in this context. It involves Rudolf Otto's notion of the numinous again. Otto, you might recall, was thinking of "the holy" or "the sacred," by which he did not mean "the good" or "the ethical." He meant to refer to an experienced force or power in the environment that might be positive or negative, or both at the same time. The sacred captures the very ancient sensibility that that which is holy or sacred manifests in two different ways: in a positive, "right-handed," beneficent way, and in a negative, "left-handed," sinister way.

To see or touch God in the Hebrew Bible does not lead to warm fuzzy feelings or ethical social behavior. It *kills* you. God in this ancient sense is not a nice person, much less someone to date. God is a fierce and powerful presence that is alluring and beautiful but also terrifying and deadly. God is awe-full. When Whitley muses about how he is still "haunted by the paradoxical sweetness of many of these ferocious experiences," he is giving voice to exactly this ancient sensibility around the sacred. So, too, was a writer like the great Irish poet W. B. Yeats (1865–1939), who took this name when he was initiated into a magical society: *Demon Est Deus Inversus*. The Demon Is God Reversed. As in a mirror?

This is all incredibly important for any remotely adequate understanding of encounter experiences, since it allows us to embrace both the positive and the negative experiences, and—and this is the real point—to see these seeming opposites as two ends of the same spectral phenomena, or as reversed mirror images of each other. We no longer need to deny one for the other. We can ponder both the aching beauty of Whitley's raptures and the violent and invasive nature of his rape. It is time to come to terms with *all* of it. It is time to stare into the mirror and step through. It is time to shift the conversation around sexuality, too.

Correspondences

I was once lecturing on the topic of super sexualities at a liberal arts college in the Northeast. The lecture included six sex scenes, four of which are relevant here. One involved a nirvana-experience of a young Protestant

woman (Jenny Wade) disappearing in an ocean of pure Light during a sexual encounter; one involved a sexually aggressive female dolphin that beamed, from her forehead, a kind of DVD-download of billions of years of evolution into a stunned secret agent in a swimming tank; one involved a Houston businessman getting his brain “rewired” by a conscious ball of energy that floated just above his head and experiencing an erection that lasted for ten days; and one involved Whitley’s initial visitor experience. A student asked me afterward how I determined which of these stories are true. Behind his polite question I detected another edgier one: Why believe any of these outrageous tales at all?

That is a fair question, but it has a simple answer. That answer involves the fact that I have been in such a super sexual state myself. Because of this, I often recognize, immediately, the details and nuances of that remembered state in the reports of others. I accept the reports I accept because I recognize my own experience in them. I know that my own state really happened, so why doubt the reports of others when they were structured like my own, often down to tiny weird details? Put differently, I look for correspondences and energetic resonances. I *compare*.

Such a method is not perfect, of course. I may be wrong in this or that case. I am certain I am, actually, although I do not have any way of knowing when and where. Still, this comparison through personal resonance or correspondence seems reliable enough in the long run. Moreover, is not this the same method of those who reject such states? Do individuals not reject the authenticity of this or that fantastic state because they can find nothing in their own experiences with which to compare it? *Everyone* compares. *Everyone* finds, or does not find, resonances and correspondences.

In the opening lines of chapter 4, I explained that I had numerous professional reasons and one deeply personal reason for taking Whitley Strieber seriously. We have up to this point looked at the professional reasons: *comparison, phenomenology, history, hermeneutics, and erotics*. Now we arrive at the deeply personal one.

The correspondences started with a painting and a book cover. Like so many of the hundreds of thousands of readers Whitley and Anne heard from after *Communion* hit the bookstores, I recognized the face on the cover. It was those eyes. I had seen them before. Actually, I had seen them many times, *countless* times.

Those large almond-shaped eyes are iconic in the esoteric religious tradition to which I gave my first academic love and attentions: Bengali Shakta Tantra. Remarkably similar eyes can be seen on thousands of Hindu goddesses throughout India, but they are especially prominent, and particularly obvious, on the goddess Kali within the Tantric subcultures of West Bengal in northeastern India, where I lived and worked during the school year of 1989–90 as I researched my dissertation and first book on the “empowered” (*shakta*) Hindu saint Ramakrishna (1836–1886). Shakta Tantra is an esoteric tradition that emphasizes the erotic conscious energies (*shakti*) of the goddess Kali and the ways that these energies can be awakened in the human body through the right yogic or sexual techniques, or through the touch of an awakened and empowered Tantric teacher.

It was not just those eyes, though. I immediately recognized in Whitley’s accounts of his erotic encounter experiences in books like *Communion and Transformation* what I had known and felt during “that Night,” as I came to call those few minutes in Calcutta, in the fall of 1989 during the annual Kali Puja festival, when my own mind and body were similarly electrified and, presumably, changed by Her *shakti*. Toward a demonstration of these energetic resonances, allow me to set, side by side, the details of that Night with a single scene in Whitley’s book *Transformation*.

Here Whitley describes how after his initial visitor encounters he sought to deepen the contact and “communion.” Toward this end, he had taken up a particular practice recommended by the out-of-body researcher and technician Robert Monroe: “mind awake/body asleep.” This simple description, at least, is very familiar to the folklorist and the reader of mystical literature as a consciously cultivated form of sleep paralysis, a physiological condition in which the body is indeed asleep or paralyzed but the mind is on-line and, often, engaged in elaborate visionary displays of (or encounters with) discarnate beings.

Whitley put himself in such a state in order to leave his body. Almost immediately, he witnessed a vision of the “long, gray hand of a visitor pointing at a box.” Such an abstract vision had a most unusual and surprising effect on him. It caused “an explosive sexual reaction” in his body: “My whole body was jolted by what I can only describe as a blast of pure sexual feeling.” This erotic blast in turn “seemed to loosen connections inside me. I rolled out of my body. It felt as if I had come unstuck from myself.” He now

found himself floating above his bed and body. A number of visions followed, including one of what he thinks was an electromagnetic field around some electric wires outside. Such experiences and visions in turn lead him to speculate over the next few pages about an “electric body,” “more energetic levels of being,” and of the independent existence of the soul as “an energetic form that is in no direct way sustained by the brain/body system.”⁶⁰

So what do we have here? We have a mind-awake/body-asleep state that results in an incredible blast of supersexual energies, which in turn catalyze an out-of-body experience and some subsequent ideas about the electromagnetic nature of the human soul outside the body/brain.

Now here is what happened to me twenty-six years ago. It was early November. I had been participating in Kali Puja, a multiday cycle of festivities and rituals celebrating the goddess in her fiercest and, in some more esoteric traditions, most erotic forms. Somewhere in the middle of the celebration, I “woke up asleep” one morning, that is, I found myself to be conscious and awake but also physically paralyzed. I could not move. Looking back, I would say that I was in some sort of trance state, very similar to what the nineteenth-century French mesmerists described as *lucidité* (lucidity) or *sommeil magnetique* (magnetic sleep).

“Magnetic sleep” seems exactly right, particularly if we add “electro-” to “magnetic.” As I puzzled over my odd condition, I felt some eerie presence enter the room, or emerge from some other occult dimension, or come out of my own body (I have no idea which it was). It began to arouse me sexually. This is a fantastic understatement. My first thought was that I was being electrocuted. Was there some kind of weird electrical malfunction in the wall near my bed? My second thought was that I was having a heart attack.⁶¹ But I didn’t die. It continued to work on me. I am tempted to invoke a subtle physics here, or the mythical languages of radiation and mutation. Whatever they were, these energies were *alive*. They knew what they were doing, and I was the object of their power and intention.

Or their prey.

As this presence did whatever it did to me (the unprintable f-word would be entirely appropriate), the aroused state I was in became more and more intense. It felt as if the energies were reaching down into every single cell of my body, or—if this is even possible—into every subatomic particle, each of

which seemed to be humming at an unbelievable frequency. “Frequency,” “energy,” “vibration,” “resonance,” “magnetic”—these are not mesmerist, Spiritualist, contactee, or New Age metaphors to be mocked by some arrogant intellectual who has never known such altered states of mind and energy and so has no idea what he or she is talking about.⁶² These are near perfect descriptions of what I was really and truly experiencing, *what I had become*.

There were other more fleshly effects, too. I had a serious erection. I was also watching phalli appear and disappear in a kind of surreal dreamscape. I wanted to come. But, on some deep, unspoken level, I assumed—no doubt from my years of reading both psychoanalytic theory on sublimation and South Asian Tantric literature on the redirection of sexual energies from the genitals into the cranial cavity—that, if I came, the fantastic states that I was experiencing would go away. I thought that it was a matter of either “going out” or “going in.” I intuitively held my breath (breath and energy are linked in Tantric yoga) and “went in.”

The conscious electricity responded with what I can only describe as an ecstatic implosion. It felt like I was being sucked into some kind of invisible portal or black hole that paradoxically went “in” to go “out.” It was as if a cosmic orgasm suddenly turned inside-out or outside-in (such three-dimensional metaphors are useless here). I was now being helplessly pulled out of my body by some powerful, invisible “magnet.” I felt and saw myself floating to the ceiling of the room. Now I was really scared.

I am not claiming any kind of literal levitation, although that may have been the case. I really have no idea what an external observer would have seen (or not seen) in that room on that Night. I am simply describing what I experienced. I am describing, as best I can, *the phenomena*—what I sensed, knew, and “saw” with my temporarily electrified imagination.

I do not have any idea what happened next. I vaguely remember a gap at this point, although I do not know if that is correct or a function of my later reading of the pattern of “lost time” in the UFO literature. All I really remember is struggling back into my bed or biological body in a most ridiculous fashion. As my feet still seemed to float above me, I grabbed the bedstead and pulled myself back down onto the bed and/or into my body. It was silly, but it worked. I woke up with what felt like a buzzing body, as if

some kind of weird electromagnetic gnosis had been transmitted into me. I wrote my first three books directly out of that whatever-it-was and have spent most of the last decade or so trying to convince my professional colleagues that mind has something to do with a superconscious energy that is not produced by the brain but is more likely filtered through, reduced by, and transmitted through its neurological circuitry and cultural software.

The correspondences between these two stories are precise and obvious: awake/sleep state, supersexual implosion, out-of-body experience, and a subsequent conviction in an independent electromagnetic soul or cosmic mind.

Whitley's description in this book of "being with an invisible tiger or an invisible saint" (the double sacred) perfectly describes what I knew on that Night, tigers and saints being what they are: oh so common in West Bengal. Actually, I may have actually *been* with an invisible saint, the one I was studying at the time with such devotion and intensity. Ramakrishna was famous for "zapping" his disciples with a hand or a foot while he was alive, exactly like this. My own experience even has a well-established name in Tantric culture: *shakti-pat*, literally, a "descent of Power." The notion of *shakti* carries the sense of an energy, at once palpably physical and spiritual, that is transmitted, like an electric current, from a spiritual master to a disciple. There is also a rich tradition of receiving such a transmission in dream or sleep states.

No argument here.

Transmission or no, I am not spiritually gifted. I have had only one such experience. I suppose it was enough, though. I have written about this experience many times, as it lies at the origin point of my writing career and all of my books, each of which is a halting, stumbling, imperfect stuttering of whatever (or whoever) was downloaded into me that Night.

The thing that I am trying to stutter *here* out of that Night is the way that the total experience linked the sexual and the spiritual—how it was super natural. When I chose to go "in" instead of "out," the same energies that I thought were electrocuting me and were certainly sexually arousing me now pulled me "up" and "out" of my body. The erotic morphed into the mystical. Sex flipped over and revealed itself as spirit. Not that it lasted. Not that I remember it in all its details. Not that I know what it all means. But the energetic equation had been drawn by the event, and I would never forget it:

sex and spirit are two expressions of the same conscious energy. Our sexualities, with the slightest flip, can reveal themselves to be super sexualities.

And that is why I take Whitley Strieber so seriously. It is not that I “believe” him. I don’t believe in beliefs. It is rather the case that I have known a similar state and recognize his descriptions as corresponding to my own. These correspondences and energetic resonances are the real foundation of our friendship, of this book, and of what we have named here the super natural.

Comparing Communion

What happens to our comparative practices when we take such correspondences seriously, even integrate them into our sexual and spiritual orientations? What happens when we take our own altered states of energy and mind as potential insights into the altered states of energy and mind of other human beings in other cultures and times? Certainly, we have to be very careful here. We cannot make naive equations. We cannot take our experiences as boilerplates into which to force fit the rest of humanity. But just as certainly, we *can* identify similarities, sometimes even uncanny similarities. We are not Martians to one another. We are human beings, all.

Let me play just such a comparison out for you here. The correspondences between Indian Tantric traditions and American abduction literature are quite striking—striking enough to raise the eyebrows of the comparativist who happens to know something about both traditions. Central to both, for example, are a broad range of paranormal powers or *siddhis* initiated by the Tantric practice or yoga and the spontaneous abduction experience. Telepathic communications, channeled revelations, and levitation or spiritual flight are some of the most commonly reported. Also central to both are the production of trance and a broad range of possession states, both positive and negative—bliss and terror abound.

Sex with discarnate beings is also a central concern of both literatures. These erotic encounters might be completely spontaneous or unsought and lead toward a kind of human-alien hybridity, as we see in much of the abduction literature. Or they might be ritually and contemplatively cultivated

toward a communion or union with a particular deity figure, even an explicit human deification *as* a deity, as we see in the Hindu and Buddhist Tantric traditions. Both the Tantric and abduction literatures are also filled with various kinds of strange photic phenomena, spiritual bodies of light, unearthly radiances, and exotic forms of energy awakening at the base of the spine, shooting up (or down) the spinal column, and floating just above the head, often as a conscious ball or blossom of light. Whereas the powers and energies appear to be uncannily similar, their cultural and mythical expressions remain dramatically different.

A few historians of Tantra have commented on these resonances. My colleague David Gordon White, in my own mind the most eloquent and learned interpreter of the Indian Tantric traditions writing today, has explicitly invoked what he very carefully calls “UFO-like” language to make sense of ancient South Asian Tantric culture in his *Kiss of the Yogini*.⁶³ Much of this book is actually a robust critique of New Age forms of Western Tantra as inaccurate romantic-weekend representations of the older, much more sophisticated, and much more complicated Indian traditions of Tantric yoga (which had little to do with today’s postural yoga practices). In one particularly provocative section, though, David turns to one New Age phenomenon that comes very close to the “Tantric sex” reported, described, and sought out in the medieval Indian Tantric traditions: the UFO phenomenon.

In sections with titles like “Early South Asian Aviators” and “Men Flying Spacecraft,” David writes of flying temples (*vimana*), royal airships, and the “landing fields” and “launching pads” of open-air, circular temples, where contact with the fierce female beings from the sky (the yoginis) were believed to take place. More or less exactly like the female visitor of Whitley’s account, these yoginis were described as descending from the sky to abduct, terrify, sexualize, and spiritually awaken the aspirant.

White also writes of the ritual consumption of sexual fluids and the sublimation of sexual pleasure as the yogic means that were used to fuel all of this flying. The *yoni* or sacred vagina of the Goddess—the second “mouth” to be kissed, as it were—has been widely worshipped in India, along with the *lingam* or divine phallus, for millennia for many reasons, but one of them particularly evident in the more secret practices of the Tantric traditions is

especially relevant here: sexual fluids were considered to be spiritually potent power substances. Whitley's otherwise bizarre story of finding himself forced into kissing and, I assume, consuming the fluids of the glowing vagina of a feminine alien presence makes remarkably good sense in this context. The scene reads like something straight out of a medieval Tantric ritual. Kiss of the yogini, indeed!

White's careful comparisons between the two bodies of literature are playful and poetic. He is not drawing any literal identification, much less is he offering some ancient astronaut idea. But his comparative play, I would suggest, works so well because the cross-cultural resonances are really there. And—I would add—they are *really* there if one knows the ufological literature as well as an author like David Gordon White knows the South Asian Tantric literature.

To take just one pattern, it is again striking to observe that bodily substances like semen, blood, and even feces are sometimes said to be collected in both the mythologized Tantric rituals and the reported abduction events. Again, Whitley's strikingly honest description of the visitors collecting fecal samples and semen from him in his first abduction experience fit eerily well into a Tantric context. Obviously, something at once biological, sexual, and spiritual is being articulated in both cultural contexts. In the ancient South Asian context, this something is coded toward a human-divine union, deification, and experienced flight. In the modern American context, it is coded toward an evolutionary transformation, a spiritual mutation, and various out-of-body experiences, that is, another kind of flight.

To take this comparative practice one step further, yoginis in South Asia were sometimes depicted as avicephalic, that is, bird-headed. David reproduces a photograph of a statue of such a bird-headed yogini. The face of the yogini strongly resembles the famous long-faced, pointed-chin, tiny-mouthed female being of Whitley's *Communion* cover. Go look at the photograph of the bird-headed yogini.⁶⁴ She looks like an owl. Or an alien.

David and I are not the only ones to note, playfully or seriously, this obvious comparison between Indian Tantra and the various visual, erotic, and psychical patterns of the American mythology of the alien and the UFO. Whitley himself recognized the same iconic resonance in the pages of *Communion* and even names Kali and the Indian Tantric traditions there,

along with the ancient Sumerian goddess Ishtar, as especially close to what he saw and knew as Her. He sees the resonances, although he does not draw any kind of simplistic equation.⁶⁵

Nor am I. I am *not* arguing that: “The modern contactee experience is about Indian Tantra.” Nor am I saying: “Indian Tantra was inspired by aliens.” These simplistic claims are species of the religious and reductive comparisons that I rejected in chapter 1. Neither can work in the end. What can work is an honest and systematic observation of the very clear comparative resonances between the two cultural traditions.

The project of “comparing communions” might also eventually lead to the development of a new mystical practice, a western “contact yoga” in deep conversation with our religious pasts (all of them), our evolutionary biology, our quantum physics, our cosmology, and our new understandings of human sexuality. Certainly such a future practice will require a much richer and more generous imagining of the divine presence. He must also become She. Just such a vision is clearly suggested by Whitley’s repeated call for a conscious practice of “communion” that would comanifest or coconjure both self and Other.

Were we to pursue such a comparative practice and such a contact yoga, we might someday be able to spiral up and isolate some shared super-realities behind the different and yet similar cultural phenomena of the Tantric yoga traditions and the American abduction literature. I do not know what those deeper processes might be. I am only suggesting them, pointing toward them. But, clearly, *something* is flying around in our folklore. And it’s something super sexual.

Physical Traces and the Feral Boy

WHITLEY

One night in February of 1986, I found myself conscious but unable to wake up fully. There was something moving in my left nostril, as if some sort of object was being inserted. The next thing I knew, there was a terrific *crack* in my forehead between my eyes.

This started me on a long and improbable journey in a completely unexpected direction. There can be no question that there is a physical dimension to this experience. I say no question because of the fact that the evidence is sufficiently documented outside of my own experience. Within it, there is both a confirmed “implant,” which has been examined by a doctor, and which I well remember being placed in my body. Additionally, I have had contact with an extremely strange man, which I shall describe in detail.

But these two points of evidence are inside my experience. There is more. Much more.

In April of 1989, I was contacted by a Manhattan radiologist who had read my account of my apparent implantation in *Transformation* and proposed to do an MRI to see if anything was there. He also asked if I could get some additional witnesses to participate.

As Anne was carefully noting such things as reports of possible implantation in the letters we were receiving, we were able to provide a group of people who claimed to have had similar experiences.

We gathered a group of witnesses, some of whom flew to New York to participate. For the most part, their brain scans were normal, but one of them was suggestive. The report reads, “In the right anterior ethmoid cell, just at the margin with the nasal cavity, is a small polypoid structure approximately 5mm. x 3mm. This displays equal intensity on both the proton density and the T2 images obtained.”

Initially, I was excited, but the report went on to say, “Slight prolongation of T2 relaxation times within the nasal turbinates is noted, which may be related to a recent allergy or respiratory infection.” And the witness did report such an infection. This meant that the object might have been an ordinary nasal polyp, and not one that was a candidate for surgical intervention. So it was never excised.

The next month, in May of 1989, I had an experience that completely changed my understanding of what was happening to me. Previously, I had been clinging to the notion that, even though I had physical symptoms as a result of my December 1985 experience, it was not, in its essence, something that had happened physically. In this, I was like most people of a scientific and skeptical mind about the paranormal: willing to explore it as long as it remained safely under control—that is, outside of the physical world. Once it enters the physical, it threatens our entire vision of reality. More than threatens it—it devastates it.

Just a month after the failure of the MRI study to find any clearly identifiable implants in me or any of the other test subjects, my reality was devastated. As long as my experiences were ambiguous, I could face them, even explore them. I could go out into the woods at night and confront the visitors, never sure about whether or not I was confronting myself or something in the world around me.

The event that took place on that night in May changed all this. At this moment, I reach up, I touch my left ear, and I feel, over a quarter of a century later, the same agonizing nakedness and vulnerability I felt when I first realized that it was there.

Late May of that year was warm, and we slept with the windows open. At about eleven thirty, Anne was asleep. As was often the case when we were

at our cabin, I lay awake in the dark, trying not to listen for sounds in the night. By that time, I was walking in the woods at night only occasionally. On this night, we'd watched an old movie and then retired.

I had an elaborate alarm system, and a system of lights around the house that could be turned on by a bank of switches at the bedside. The window alarms were set up in such a way that the windows could be opened, which they were. I also had a Benelli riot gun and an AMD backup pistol. The Benelli was under the bed, the AMD in a drawer in the table beside it. Both were loaded, and I was well practiced in using them.

I was more afraid, at that point, of the public than I was of the supposed aliens. Locally, I was as feared and despised as I was nationally. I'd been spat on in airports, which was bad enough, but I'd also had my grocery basket spat in at the local store, and that was frightening, because it meant that the people around me hated me as much as did the general public.

This was because the debunking and the media hostility allowed people to think that I was a fraudster and deserved to be punished. Such an opportunity brings out the bully in even the mildest of us, as I was becoming painfully aware.

So when I heard the unmistakable crunch of gravel in the driveway, I was absolutely terrified. There could be no question: there was a vehicle right outside. It had gotten around our stoutly locked gate. We were under attack. At once, I turned in the bed, reaching for the bank of switches that would flood the area around the house with light.

A moment after I heard the gravel crunching, a quiet male voice said from the backyard, "Condition red."

Instead of going after the light switches, I bent to get the Benelli. This was my worst-case scenario: not a person but people, a whole group of them. By this time, I was used to the visitors. The guns weren't for them. They were there to protect us from a much more dangerous species: our neighbors.

As I reached down for the shotgun, I saw standing in the doorway across the room from the foot of the bed, two people, a man and a woman. The woman was in front, the man behind. She was perhaps five foot five or six. He was six feet or more and had a beard. I have stated at times that there was an "alien" with them, but, looking back, the two of them are all I can clearly remember.

The terror that went through me is completely indescribable. I remember

it as a disorienting shock, like being slapped hard and unexpectedly across the face. I also remember it as sickening and enraging. I wanted to retch. I wanted to blow them apart.

Before I could so much as grasp the gun, they were upon me. I found myself lying on my right side, with pressure being applied to the left side of my head in waves. I tried with every muscle in my body to move, but I could not. I could hear the woman's voice murmuring words I could not understand, and feel her hands resting against the side of my head. I then felt pressure against my head, coming in waves, as if they were pushing it hard, to the point that I felt compressed against the mattress. I could not see and I could not move.

Abruptly, they stopped. As I turned over, preparing to leap out of the bed, there was a flash of light from outside and a great crashing in the woods. I had the impression that, whoever they were, they were not only running away from me but from something else that was there. I've never known why I felt this.

I saw that the alarm system was still armed. Then I threw on all the floodlights around the house. I took my pistol out of my drawer and went racing through the house from the basement to the attic. I found not a door unlocked, not a window ajar, and no sign of any intruders.

Returning to the bedroom, I convinced myself that it must have been a vivid dream. How could I draw any other conclusion, given the state of the property? It didn't seem right, though. I had seen those people, heard them. At times after the incident, I remembered a shadowy, mean-looking figure with them, not human. Looking back now, though, all I recall is the young woman and her bearded companion.

Leaving the outside lights on, I went back to bed, sleeping fitfully until morning. Our usual routine on arising was to shower, then for Anne to start breakfast while I went out to a small local grocery and bought the morning papers.

On opening the door between the den and the garage, I was startled to see that even though I had not yet disarmed the alarm system, the big garage door was wide open. As the alarm system was still armed, this was impossible—unless, of course, the system had been tampered with.

At this point, I disarmed the system, got into the car, turned it on, and began to back out. But why did I do this instead of reacting in some way to

the situation that confronted me? Why not call the alarm man? He was a friend and lived only a few miles away.

The reason is the same one that confronts most intellectuals when they face an intrusion like this. This wasn't imaginal, as Jeff has defined it elsewhere in this book. It certainly wasn't imaginary. The door was open. The alarm system was still armed. And I did not want to face what was now plainly before me. There had been an intrusion into the house, and it was physical, and my memory suggested that it was extremely strange.

As I backed the car out, electric sparks shot between my hands and the steering wheel, then began snapping against my cheek as I turned around and my face drew closer to the side window.

This I could not ignore. I was afraid that the car might explode, so I jumped out and ran back into the house. I went to Anne and asked her if she remembered anything unusual during the night. She did not.

Normally, that would have been the end of it. Never mind the strange electrostatic phenomena. I could ignore that. But I could not ignore that garage door. It had been wide open and the alarm system had still been armed.

I now called the alarm man, who came over in a few minutes. In checking the switches, he discovered that there was a powerful magnetic field that had kept the system from reacting when the door was opened.

The magnetic field seemed to have no source. They don't propagate like radio waves, but rather remain around whatever is generating them. The problem was there was absolutely nothing generating this magnetic field. So how could it exist? And yet it did.

We then downloaded the system's log, only to find that the clock had been altered and there was no way to tell what time the various entries and exits it had recorded had actually happened.

The alarm man replaced the switches on the garage door and left, leaving me with some very uneasy questions.

Later that afternoon, my left ear began to hurt. Of course, I'd gone over the events of the night in my mind again and again. I'd discussed them with Anne, but there had been no way to resolve the mystery.

I will never forget standing in the bathroom feeling the pinna of my left ear, where the pain was coming from, and feeling within it a new lump. I got

Anne to feel it. She said it was faintly red, but there was no sign of broken skin. So, what was it?

I thought I knew, of course. I thought it was an implant. I spent the night pacing and sweating. Sometime around three, when I was cold and terrified and unable to sleep, I seriously considered cutting my ear off.

Morning brought two things—first, Anne didn't react to it the way I had. She thought it was fascinating and that it might prove to be a very interesting thing to possess. Why did I assume that it was something bad? Why would it be? We don't implant animals with things that are going to harm them. On the contrary, our implants are in various ways supportive, never harmful. What would be the point? If you want to do them harm, it's not hard. Just shoot them.

A couple of days later, I went to the doctor. He took a look at it and said it was a small cyst. How long had I had it? A week, I said. He said if it became infected to come back and he'd remove it. But it did not.

Instead, after another week or so, it turned on. I heard a screeching sound in my ear, which became hot and, Anne reported, bright red. This effect came and went without incident.

That night I was meditating as usual when there suddenly appeared in my mind's eye a startling vision of what was clearly another world. I say startling because it was as clear as television imagery. It lasted only a few seconds, but it was so complex, so vividly detailed that it was hard to see it as a product of my imagination. It was an image of a dirt street overspread with flags that contained bold writing on them in an unknown language. On both sides of the street there were low buildings. Then the image was gone.

This was one of many such images. But there had been a lot of others prior to the implant, and I'd be the last person to advocate that they were anything but imaginary. And yet, they haunted me, some of them, because they were so detailed and so strange.

Four years after the object was placed in my ear, we moved to San Antonio from upstate New York. I soon found myself invited to speak at the Mind Science Foundation, which had been created by a visionary named Tom Slick, who had been a friend of my parents. An enormously successful oilman, he had also founded the Southwest Research Institute, which remains one of the world's leading scientific research facilities.

After giving my talk to the Mind Science group, I was introduced to

William Mallow, head of materials science at Southwest Research. We met again soon after, and I told him of the implant. As it happened, it turned on in his office. He saw my ear turn bright red, and rushed me into a signals lab. We were not able to detect any emissions.

Naturally, Bill was interested in seeing the thing. As it happened, I had met an internist, Dr. John Lerma, who was willing to try to remove it. I went to his office where he prepared to perform the minor surgery that would enable him to remove the object. I had not told him the object's origin, only that it would grow irritated when I slept on it, and I wanted it removed. He knew that I'd written *Communion*, so he had his own ideas about what he might be dealing with, but he kept them to himself.

He located the object just below the apex of the pinna, and drew a circle around it with a marker. It was fixed in place. It had never moved. He anesthetized the ear, then made an incision. A moment later he said, "It's a white disk." He then touched it with a scalpel, whereupon it slipped away, leaving him with just a fragment of it on the instrument.

He determined that it had moved, on its own, from the top of my ear down into the earlobe. He said that he'd have to cut my ear to pieces if he was going to extract it. Instead, he pulled out and closed the wound.

He sent the fragment for a routine pathology exam and was surprised, a few days later, to receive a phone call from the pathologist instead of the usual written report. The pathologist first asked him if the fragment was some sort of practical joke. When Dr. Lerma explained that it had come out of the pinna of a patient's ear, he responded that it was a fragment of metal with cilia anchored in it, and that the cilia were motile—that is to say, they were moving. He thought that they must be alive.

A few days after the surgery, I felt a burning sensation in my ear, and the object returned to its original position, where it remains to this day.

At this point, I was in a quandary. For years now, I'd had an invader in my body, positioned just millimeters from my brain. Always, in the back of my mind, was the notion that I could get rid of it if I wanted to. And yet, I'd been tantalized by those vivid images of other worlds, and so hadn't previously tried to have it removed.

Now I discovered that I could not get rid of it. The fear involved was quite terrible—actually, very much like claustrophobia. I'd long since gotten used to feeling watched. My deepest privacy was no longer private, but that

hadn't bothered me. I have nothing to hide. What is visible on the outside is the same as what is within me.

Again and again, the images of the man and woman who came into my room to do this to me reappeared in my memory. I relived the incident, looking in my mind for some clue that might reveal more. But there was nothing. I was at an impasse.

Then I was contacted by a podiatrist from California, Dr. Roger Leir, saying that he had an interest in implants. He claimed that he had removed small metallic objects encased in epidermal tissue from three people who claimed alien contact, and I soon verified this claim.

When I entered into a correspondence with him, it developed that he was going to conduct another series of surgeries, and I asked to attend as a witness.

In 1995, Dr. Leir had attended a UFO convention at which he had met a man who claimed to have one of these implants in his body. Leir had reacted by suggesting to him that he get an X-ray. When it came back showing an object embedded in the man's arm Dr. Leir was, to say the least, surprised.

Leir himself was licensed to conduct surgeries only below the ankle, so he enlisted the help of a general surgeon to extract objects from other areas of the body. It was decided that they would only do relatively easy excisions. Nothing from the brain, or close to vital organs, for example.

I attended a surgery in 1996, and was deeply moved to hear the stories told by the witnesses, all of whom had memories, some clear and others more vague, of being approached by what they assumed to be aliens. Later, they found little scoop-mark scars on their bodies and, in some cases, also raised areas where something appeared to have been placed under the skin.

Leir soon had a collection of these objects, and I introduced him to Bill Mallow at Southwest Research. Bill began testing the objects, but not without objections from management. He was told by the director that their CIA client, who provided almost half of the institute's annual budget, took a "dim view," of what he described as "UFO research."

I didn't see it as that at all. These were not unidentified objects, and they certainly weren't flying. They were identified bits of metal extracted from people's bodies. To me, the question of who had introduced them, if anybody, was still very much an open one.

Under the scanning electron microscope, they were found to be

composed of iron with traces of nickel and other metals present. They were typical of meteoric iron. But what were meteor fragments doing embedding themselves under people's skin? There is no known phenomenon that would cause this. Moreover, they were found encased in skin, and yet were embedded in deep tissue. The body does not have the genetic encoding to generate skin inside muscle tissue. The conclusion that the presence of these objects, like the one in my body, was not an accident of nature was hard to avoid.

In 1998, Dr. Leir told me that he had located one in a man's neck that was emitting a low-power FM signal. Bill and I were extremely interested, because we had found absolutely no sign of any technology in any of the others Roger had given us. But if there was a signal, there must also be a circuit of some kind, or a crystal.

The study we did on this object was recorded in the 1998 NBC special "Confirmation." Bill first ran it through the electron microscope, and received the same readings as with the previous objects: it was iron, with traces of nickel, the composition typical of a meteor. We then took it to the nearby University of Texas at San Antonio and put it in an X-Ray diffraction machine. Our hope was that we might see some structure beneath the object's surface.

On the first pass, the machine recorded the presence of the object, but after that it became X-ray invisible. We took it back to the SEM, which showed no change. Over many more passes and despite the fact that it was nearly pure iron, the diffraction machine never again detected its presence.

The skeptical community either dismissed the objects as naturally occurring, or ignored them altogether. However, they cannot be naturally occurring, and as difficult as it is, the truth must be faced: there is at present no explanation for what they are, but there is substantial witness testimony—including my own—that they are placed in the body by unknown presences.

Does this mean that aliens are involved? I wish I knew, but I don't. I saw people do it to me. Others have seen strange looking creatures. Most have found the objects after the fact, and have no clear memory of how they got into their bodies.

It's too early to conclude anything about them other than that they are there and cannot presently be explained. Everything else is speculation, but

it's a provocative problem, and it deserves more scientific and medical notice than it has so far received.

Of all the things that have happened to me, there are only a few others that involve physical traces, and these all concern the presence of beings. I have elsewhere described the various multiple-witness events that took place at my cabin in upstate New York. There is one incident, however, that I haven't described, which involves a small, very emotionally intense man and some surprising things that he did.

I first came across him in the woods behind our cabin, sitting under a tree smoking a cigarette. My initial impression was that he was a boy of about twelve, and I was concerned about his smoking when the woods were summer-dry. But when I walked over to ask him to stop, I found myself confronted by somebody who struck me as very strange and, in fact, sinister.

He had the face of an immature boy, but his skin was weathered, as if he was much older, but had never reached puberty. My impression was, frankly, of somebody rather freakish.

When I asked him to stop smoking, he made a growling sound. I had the feeling that if I was to get any closer to him, he would lash out.

What in the world was I confronting? Many an author attracts lunatics, I'm not the only one. But this—what was he, a child or an adult? And that growl—my God, it sounded dreadful.

I was quite deep in the forest, and so turned away from him and headed back to the house. I wanted no part of somebody like that, and was glad to get back home without being followed—at least, so it seemed.

I mentioned him to Anne, and we deliberated about whether or not he might be a neighbor's child. But we knew our neighbors and nobody had a child like that. So, was he somebody with mental problems and a bizarre deformity? If so, perhaps we should call the state police.

In the end, we decided that he probably was just some kid out there smoking in secret. Better that than crystal meth, which was endemic among the rural poor of the area.

But then I began to notice a change in our very quiet and private corner of the world. In the night when the air was still, I would notice the odor of cigarette smoke drifting into the house. There were no other houses nearby, so where was it coming from?

Could it be that we were being watched? I kept the alarm on at all times

and the doors and windows locked, and after dark I kept my pistol in my pocket. At night, we closed all the blinds and curtains.

I finally telephoned the state police, and eventually a detective from the criminal investigation division showed up. I described the person I'd seen in the woods. Unfortunately, he knew who I was and when I mentioned that he was "little," he said scornfully, "A little man?" It didn't take long for him to leave, and I was left alone with my problem. I suppose that his main job was raiding meth labs and crack houses, and when he saw that this case wasn't leading in that direction, he was no longer concerned. And then there was what Anne and I had come to call the "Strieber Factor," where the mere mention of our name causes snickering and generalized disbelief. Once the Strieber Factor manifests itself, that's the end of any serious interest.

So we were left to deal with the problem on our own, and for some weeks, all was quiet.

As summer waned, Anne and I decided to take some last swims in our pool before we shut it down for the winter. As it was entirely private, our habit was to swim naked. This time, though, when we went out, we were appalled to hear somebody running up and down in the woods just behind a thick growth of underbrush. They were gasping and breaking sticks, as if trying to warn us off.

We returned to the house and stopped using the backyard altogether.

Once again, though, weeks passed without any further manifestations of our intruder.

When the leaves changed, we decided to take a walk. We were still uneasy enough for me to take the pistol, but the lure of the forest with its riot of color was strong. We were far back in the woods when we found, to our horror, a sort of nest. The ground was beaten down, tree limbs had been broken and pushed aside to make a small space, and it was thick with cigarette butts.

That was the last of the woods for us. We returned to the house and never went back out.

Over the course of the season, my financial condition deteriorated further. Soon, it became clear that we could no longer afford the cabin, so we packed up our car and moved to a tiny condo we owned in San Antonio.

We had not been there for a month when I began to smell cigarette smoke in the bedroom at night. I soon discovered that somebody was

standing in a corner of the little garden where the end of the screened-in porch created a cul-de-sac. In that corner, they were not more than two feet from the head of the bed, albeit on the other side of a wall.

During this time, also, neighbors began noticing what appeared to be a strange child doing things like climbing the walls of the building, getting onto decks, and damaging possessions found there. Texas state social services were called. At the same time, I identified two very strange men living in the condo immediately behind ours. I first saw one of them stealing tobacco products at the local drugstore. He went out with easily two hundred dollars' worth of pipe tobacco, cigarettes, cigars, and whatnot. As he passed me, we locked eyes, and I saw there a frightful malevolence.

The clerks let him pass without a challenge, and yet the theft was blatant. It was as if they didn't even see him. He was real, though, and it soon became clear that the strange boy—if that's what he was—was living with the two men in the apartment behind ours.

I telephoned the managing agent and got the number of the owner of the condo, who lived in Houston. My intent was to complain about his tenants. When I called him, however, he said that he didn't have any tenants. As far as he knew, the apartment was empty. I told him that it was occupied by three individuals, two men and a boy. He was outraged, and said that he'd call the sheriff at once and have them evicted.

I bought a motion-sensitive floodlight and installed it in the cul-de-sac. That night, it went off time and time again, and there was the sound of somebody shuffling back and forth, sighing loudly, and making low growling sounds.

I spent the night wide awake, terrified.

The next morning, I was weeding our little garden when the "boy" burst around the corner of the building and went strutting off down the middle of the street, never to be seen again.

Soon, an eviction notice appeared on the door of the apartment, and—incredibly—the two men started going from door to door trying to sell the condo owner's furniture! Nobody would buy it, of course. It wasn't a large complex, and everyone in it knew what was happening.

Soon after, the two men also left, and as far as I know, that's the end of the story. I have never seen the two men or the strange boy again, and I never

want to. But they were entirely real. Were they somehow connected with aliens? For that matter, were the implants installed by aliens?

I have no idea. But my implant is there, and it and the others await serious scientific study. Instead, following the lead of the intellectual community, scientists ignore what to me is an obvious point of entry into an unknown reality. The implants exist. They are found encased in skin and embedded in deep tissue. Therefore, they are not accidental inclusions, but something put there intentionally.

But why, and by whom? And who were the people who placed an exotic, technologically advanced object in my ear without even making an incision?

Who was the “boy?” Where is he now? And why was he so disturbed, and the men with him so sinister? If they are aliens, what’s the matter with them? And if not, then who are they and, once again, what’s the matter with them?

I leave these questions for future science to address usefully. So far, that has not been done.

The Magical Object

JEFF

It's the old controversy—the action of mind upon matter. But, in the philosophy of the hyphen, an uncrossable gap is disposed of, and the problem is rendered into thinkable terms, by asking whether mind-matter can act upon matter-mind.

CHARLES FORT, *WILD TALENTS*

It is my personal opinion that in the science of the future reality will neither be “psychic” nor “physical” but somehow both and somehow neither.

QUANTUM PHYSICIST WOLFGANG PAULI

Whatever it is, the thing in Whitley’s ear is important, but probably not for any of the reasons that are ordinarily offered. For example, it is probably not important because it was put there by aliens. What is the evidence of that?

I am also skeptical that there were living human beings in the room doing this to him, although I know Whitley disagrees with me here. I am skeptical for two basic reasons: first, because of what Whitley describes as “a flash of light from outside and a great crashing in the woods” from which the intruders appeared to be running away; this suggests something more spectral or UFO-like than military professionals. Second, I am skeptical, because we

have numerous other cases in the literatures in which figures that looked and acted completely physical and “real” were not really there, not at least in physical bodies like you and I inhabit at the moment. I am thinking of physical apparitions of dead loved ones in which the body appears very much as a three-dimensional, solid, perfectly normal object in space. I take the human figures of Whitley’s narrative, then, to be projected apparitions in some sense, which leaves the door open to their true nature and whether their projectors were in fact human, nonhuman, or future-human.

I could be very wrong. Other aspects of the event look very much like a military-style abduction. Or were these individuals—I don’t know any other way to say this—real human beings from the future? The crashing light in the woods suggests a strange presence of some kind. Clearly, there was also an electromagnetic signature, suggestive of some advanced technology. I am willing to be wrong, spectacularly wrong.

It also seems highly unlikely that the implant is important because it works as some kind of tracking device. Given the recent advances of nanotechnology (which are no doubt mere baby steps into some major leaps on the horizon that will involve creating minuscule intelligence technologies that are completely invisible to the naked eye), why sophisticated aliens, or even technologically savvy human beings for that matter, would need to resort to crude skin scoops and chunks of metal painfully embedded in an ear or leg in order to spy on a human being is simply beyond my powers of sympathy. It makes no sense.

There is something very interesting about technology going on here, though. And it is this. Whatever was interacting with Whitley was also interacting with the technologies of his cabin (in particular the security system and the garage door). But, again, for anyone who knows the parapsychological literature, this is hardly surprising, since spirit-interaction with technology is “old hat.” In an earlier era, candles would go out when a person died. Then mechanical clocks stopped. More recently, the spirits (and UFOs) have moved on to interact with telephones, television sets, radios, tractors, cars, trucks, computer systems, billion-dollar fighter jets, and, allegedly, even nuclear missile sites. Then there is, of course, Whitley’s own electric body. Clearly, there is something electromagnetic about the phenomena in question.

If none of these “explanations” really works, then what might be going

on here? I think there are multiple entry points into this baffling subject (really object). In the following few pages, let me orbit around Whitley's ear and see what it looks like from four different angles: (1) the history and folklore of shamanism; (2) a famous New Testament text compared well; (3) another story about another magical object; and (4) another intellectual-spiritual practice to put in our developing toolbox for how to think about the unexplained. At first blush, these strategies may seem disconnected, but I think they throw some light on the object in Whitley's ear.

I want to be very clear and humble about that "some light," however. I really cannot explain Whitley's apparent implant, much less the feral boy. Both may be explainable through entirely different strategies than I offer in the present chapter. In any case, my strategies here are not dependent on Whitley's object, which may turn out to be something entirely different, or nothing at all. In any case, the four strategies set out below would remain as viable ways forward elsewhere, whatever the particular status of Whitley's own "implant" turns out to be.

In the end, I think my highly speculative "explanation" (that Whitley's mind, or, better, that Mind in which Whitley's mind is embedded, teleported the implant into his ear and messed with the technology of his cabin home) is more fantastic than the alien implant hypothesis. But this often happens when one tries to explain the unexplainable. The "explanations" just get more and more outlandish.

That is also a clue, though, and maybe *the* clue. Maybe there is no explanation. Maybe the unexplained remains unexplained because explanation is the wrong way to think about such events. Maybe an entirely different way of knowing is being called for here. Maybe these events cannot be explained because they are not caused through any ordinary physical channels. Maybe they are *expressions* of something. Maybe we should be *reading them*. And maybe, if we tried this, what we would finally read is not some positive truth to measure and prove (a technological object with the ability to receive radio signals) or some new piece of folklore to believe (extraterrestrial implants to track us), but a playful reminder that our present cognitive hardware and cultural software are simply not up to the task of understanding who we are and what (or who) the world is.

What if the secret message of these inexplicable things is to call us out of our present worldview? What if they are here to frustrate and say away *all*

of our present explanations and beliefs so that we can, as it were, start anew?

By now, you know me. You know that this is not really a question. You know that this is precisely what I think.

The Calling

As with so much else about Whitley's experiences, the history of religions offers us multiple clues to what may be happening in his ear. Many of these clues lie in the fertile but confusing loam of the folklore around shamanism.

"Shamanism" is a comparative construct, a word anthropologists made up to talk and think about a great deal of ethnographic material from around the world that is very different but also, they thought, related somehow, much like we use the word "ritual" to describe a Catholic Mass, a Hindu *puja*, or "worship," of a deity, and a Muslim pilgrimage to Mecca. Obviously, these are very different practices in terms of their content and intentions, and yet they are also similar in terms of their function or what they accomplish: all such rituals "act out" and "dramatize" the belief system of the religion in question, whatever that belief system happens to be. So too with the comparative category of the shaman: there are numerous different cultural contents and contexts invoked here, but there are also many similar functions or powers.

The word "shaman" comes from the Tungus language and culture of Siberia. It means "sorcerer" and has come to name a religious specialist or magical prodigy in different indigenous cultures. These prodigies might fill any number of roles, including healer or "medicine man," medium, out-of-body traveler, psychic military scout, community storyteller, and spiritual leader. It is also important to remember that shamans can be very ambiguous figures. Their magic, after all, can often be used for positive or negative ends, for healing or cursing and killing. Much like "the sacred," as a category the shaman possesses both a bright and dark side. Hence the original Tungus "sorcerer."

In truth, the category of shamanism is probably way too broad and general. It has come to name so many disparate cultural practices that it itself has become virtually meaningless. Still, the category does give us a way of noticing particular resonances or similarities between the traditional cultures

and our own contemporary materials. As long as we do not “essentialize” the category, that is, confuse it with a single, unchanging religious meaning, we can use it as a helpful, comparative lens with which to focus our gaze. Here is how.

The calling of the shaman is often signaled by what Mircea Eliade, in his classic study *Shamanism: Archaic Techniques of Ecstasy* (1964), called an “initiatory illness,” a severe psychological trial or physical illness that effects a transformation of the future shaman’s being, that spiritually mutates him, if you will. Other common tropes include the presence of “power animals” or totems; the ability to leave one’s body and travel in the interworld; a proclivity for trance states and robust visionary experience; erotic contact or marriage between the shaman and a particular deity, spirit, or discarnate being; and the use of psychoactive sacred plants to catalyze and supercharge these various magical powers.

And there is more. Sometimes, particularly in Australia, the calling of the shaman is announced by a god or spirit inserting (we would say “implanting”) a magical stone or crystal into the individual’s body. Eliade, for example, cites the ethnographic literature on Australian indigenous religions, where we find stories of a supernatural being named Nagatya consecrating the medicine man by opening up his belly and inserting rock crystals that will bestow magical powers on him. Another Australian tribal culture is reported to take the neophyte to a cemetery, bind him up, and leave him there for several days. It is said that animals come and lick his wounds, after which a man appears, inflicts a wound in the initiate’s head, and inserts a magical stone the size of a lemon into the wound. Afterward, the spirits arrive in order to teach him the healing songs.⁶⁶ Note that we find here exactly what we find in Whitley’s narrative: an ordinary “man” appearing in the middle of an otherwise completely fantastic narrative.

Rock crystals are particularly important to the Australian shamans, since they are believed to have been “thrown from the sky by Supreme Beings or to have fallen from these divinities’ celestial thrones.”⁶⁷ Whether purely symbolic or actually material, or both at the same time, the message is clear enough: the inserted magical stone or rock crystal symbolizes, indeed *materializes* the newfound vocation of the shaman. There is literally

something “special,” “different,” or “other” in him now. He has been set apart, called to a special place in the community. He has been *chosen*.

The reason that all of these obscure references and unknown cultural practices are relevant in the present context is that many of the exact same features or functions appear in Whitley’s experiences and books. The entire drama of *Communion*, for example, can be seen as a kind of initiatory trial or illness. His famous owls and wolves can be seen to function as power animals or guiding totemic spirits. His proclivity for trance, out-of-body travel, and visionary experience are patently obvious to anyone who cares to look at his books with an open mind. And the sexual encounter, even “sacred marriage” elements are both graphic and central ones. Hence his deep moral concerns about “cheating” on his wife (a theme also found in the literature on shamanism). Even more to the point here, his “implant” can well be seen as a “magical stone” that signals a shamanic calling. As support for such a reading, consider the simple fact that much of his initial abduction experience as recounted in *Communion* revolved around a single word uttered by the almond-eyed female visitor: She told him that he had been “chosen.”⁶⁸

Whitley resists this ominous word, and for very good moral reasons. But the calling does not go away by virtue of that oh so reasonable rejection. And that rejection, of course, is *also* a classic response to a religious calling, including the prophetic calling in the Western monotheistic cultures, which are no doubt culturally closer than the shamanic examples (although, as many have pointed out, the biblical prophets display any number of shamanic-like elements). Indeed, it is what every other prophet does: deny or run away from the calling.

The fact that Whitley has in turn been rejected by the official cultures of the public media, the scientific establishment, and conservative religion for his prophetic voice does nothing to challenge such a vocational reading of the “magical stone” in his ear. Indeed, it only strengthens it, since this is what often happens to the prophet in Western culture: he or she is rejected by the cultural elites.

Whitley, of course, cannot say any of this. But I can say it. And I just did.

I will also say something else: none of these comparative observations between the shamanic and alien materials are exactly original. The Harvard

psychiatrist John E. Mack realized quite quickly that his abductee patients (another kind of “initiatory illness” again) had close analogues in the comparative literature on shamanism. Indeed, in his *Abduction: Human Encounters with Aliens* (1994), Mack invokes Eliade’s comparative study of shamanism as one means of trying to understand the abduction phenomenon. Mack compares the abductees to a kind of unconscious shaman whose out-of-body experiences and visions he then contextualizes within humanity’s long history of encounters with beings from the sky.

What the modern abductee or patient lacks, of course, is any adequate cultural framework or mythology for making sense of his or her experiences. This “disconnect” or “cultural ignorance,” it seems to me, is the most important point to emphasize. We lack a paradigm to make sense of our own spiritual experiences, and so these events can only appear bizarre, anomalous, or even just crazy. They are usually no such thing, as we have already seen. We can see this quite clearly if we simply place them in a broader context, that is, compare and historically contextualize them with other similar patterns in the history of religions, as we have done again right here.

There is another payoff. Once we perform these kinds of comparisons, we might well find our comparisons “attracting” other confirming data. Consider this e-mail written in response to my thoughts articulated above:

Whitley Strieber
January 1, 2015, 10:19 a.m.
To: Jeff Kripal
Re: ch. 9

I think it’s important that we take this discussion beyond where it is now, which is that either aliens put these things in or they are simply trivial. I would be extremely surprised if aliens have anything to do with any of this. The magical stones of shamanism are quite interesting. Your mention of them caused me to recall that I was “given” such a stone, which I still have. I dreamed about it in the night, then walked outside and there it lay in the middle of our driveway.

Also you will recall in the kobold section, the being that rushed out of my brother’s room was carrying a stone, glowing red.

Paul's Implant

Before we leave the precedents of Whitley's implant in the history of religions, let me clarify something that goes to the heart of this book and its conversation. Let me emphasize what I am *not* saying.

I am not saying: "Whitley Strieber is a shaman." Nor am I saying: "Whitley Strieber is a prophet." Nor am I saying: "Shamanism and prophecy around the globe are functions of alien abductions." These are exactly what I am not doing. They are, after all, good examples of the simplistic religious and reductive comparative practices that I described and criticized in my opening chapter. We need to stop doing that. We need to get better at comparison.

What would a better comparison look like? Well, the first thing it would do is *step back* and stop identifying with *any* religious or cultural context, be it traditional or modern. We first "make the cut." Neither the traditional shaman nor the modern abductee can be privileged here.

Once we step back like this, we will not, of course, make any kind of simplistic equation between the phenomena of traditional shamanism and the modern abduction literature *in either direction*. Rather, we might "spiral up" and suggest that similar psychological, physiological, erotic and physical processes are behind both the traditional shamanic practices and the modern abduction phenomena, magical stone-implants and all. We might also point out that we cannot get to these deeper processes at this stage of our knowledge, but that we can see their related expressions, ciphers or codes in the history of religions.

Let me give you a single excellent example of comparison done well. Consider the work of David Halperin. David is a professional scholar of religion, an expert on, among other things, the book and psychopathology of Ezekiel (chariot and all), Jewish mysticism, and the modern UFO phenomenon. In one of the many astonishing posts on his blog, *Journal of a UFO Investigator*, David tackles the difficult topic of implants. He suggests that the West's first "abductee" was none other than St. Paul, who was famously "caught up" to the third heaven, whether in the body or not he did not know, and complained of a "thorn in the flesh" given to him by a messenger of Satan to harass him (2 Corinthians 12:1-9). Was this an ancient

negative “implant” experience? Halperin even includes a photo of an alleged modern alien implant that looks pretty much, well, exactly like a thorn.

Think that Halperin is claiming that Paul was abducted by aliens? Think again. Listen:

I need to be absolutely clear. I am not, not, NOT suggesting that Paul was kidnapped by space creatures. If you’ve been following this blog, you know I don’t believe that’s what the UFOs are. But suppose UFO abductions are a contemporary manifestation of some transcendent human experience, and that experience was known to the ancients as well as to us. (Which would make sense, if it’s part of what we are as human beings.) Why shouldn’t we consider the possibility that the feeling of something alien being intruded into the body may have been a recurring feature?⁶⁹

Note the move here. Note how Halperin does not fetishize *either* the ancient Jewish materials (Paul was a Jewish rabbi) *or* the modern UFO phenomena but suggests that both are expressions or manifestations of “some transcendent human experience” known both to the ancients and to us in different codes (there is the spiral up). Note also that he is advancing no causal or mechanistic explanation. Rather, he is concerned to identify similarities across the centuries and the cultures toward some deeper and more adequate theory of the human being, which we do not have yet. This, of course, is precisely the kind of comparisons I have been proposing in these pages.

The Honey Jar

None of this, of course, quite reaches the weirdness of Whitley’s implant. I mean, it’s one thing to speculate about an ancient “thorn in the flesh,” which may well have been a metaphor for something else, like sexual temptation (other expert readers, for example, have speculated that it is a coded reference to Paul’s illicit homoerotic desires, which were eventually sublimated into his

wish to become a “virgin of Christ” and “married” to the god-man). It’s quite another to make sense of a living crawly thing in an ear. But this next story gets us closer. Way closer. In fact, when I read Whitley’s chapter on the implant it immediately reminded me of something else. It reminded me of a honey jar.

It was my colleague’s honey jar. Let us call him Dan. Dan is an extremely accomplished academic teaching at a prestigious institution. He is a historian adept at reading in multiple ancient and modern languages. He has written numerous books and is a recognized authority in his field. So this is not “just another story.” It comes from a source of unimpeachable integrity, honesty, and historical precision.

It goes like this. One morning in August of 1980, at the age of twenty-four, Dan was making a large batch of blueberry muffins in his kitchen. He had just finished mixing the wet ingredients with a cup of honey. Honey being honey, he got some on the lip of the jar and so washed the jar off in the sink and sat it down to drip dry. He then turned to the business of the dry ingredients. Walking over to the pantry, he reached for one of those old-fashioned metal flour tins. As he pulled the tin off the shelf, it suddenly got heavier. His unprepared hands could not hold on to the new weight, and the tin dropped to the floor. Here is what happened next, in Dan’s own words, which he was kind enough to share with me at my request:

Upon meeting the carpeted ground, the tin lost its lid and much of its powdery contents. Rather upset at myself, I kneeled to clean up the mess. Then came the electric discovery whose current still flows through me. Enough of the flour had run out to reveal that something was buried at the bottom of the tin. Naturally curious, I dug through the flour with my fingers and then pulled out, of all things, a glass honey jar exactly like the one I had held in my hands and washed a moment ago, a jar completely caked with flour—as if it had been placed in the tin still wet. Puzzled, I turned my head to assure myself that the bottle I had just rinsed was standing where I had left it. It was not.

Dan stared for two minutes, examining the situation and its impossibility: “The fact was obvious. The wet honey jar had been moved from the sink and deposited on the bottom of the flour tin. The explanation, however, was not at all obvious.”

He went through all of the usual skeptical rebuttals: that this feat was a trick or show designed for an audience (where was the audience?); that he had somehow hypnotized himself and put a wet jar at the bottom of the flour tin himself (the latter is a nearly impossible feat he later learned—he tried); that his unconscious mind had played a trick on him and somehow traded places with his conscious mind for the duration of the experience (then how to explain the fully conscious and fully remembered sensation of the tin suddenly becoming heavier?). None of these “explanations” really resolved anything, of course. They were more unbelievable than the event itself, which was already outrageous enough.

Not that Dan had an explanation. He did not, and he still does not. When Dan told this same story to a group of us at a private academic gathering, he added his own immediate conclusion at the time of the original event. “I knew at that instant,” he explained to us, “that materialism is false.”

Saying Away

I like Dan’s conclusion because it does not go too far. It does not overreach. Indeed, it is not a positive claim at all. Dan did not conclude, for example, that, “If this can happen, then the literal resurrection of Jesus Christ is true” (although a minister friend of his made that exact claim when Dan told him the same story). Nor did Dan conclude that, “If the honey jar can teleport, then God exists.” He simply concluded that, “Materialism is false.” That is a negative conclusion, not a positive one. It is about something that is not the case.

This is another one of those subtle but important points, as I think it suggests what these inexplicable events may be fundamentally about, what they “intend.” What they intend, I want to suggest, is provocation, confusion, and offense. More specifically, they intend a provocation to our settled certainties of who and what we are, a confusion of our cognitive categories,

and an offense to our otherwise perfectly material world. What they intend to do is *mess with us*.⁷⁰

What they do not intend, I think, is some kind of singular interpretation. They seem intentionally open-ended and inherently plastic, as if they want to be picked up and shaped by different people and communities into different worldviews. Hence the long history of religions; our dramatically different worldviews and cultures; and our present popular folklores around flying saucers, alien implants, and UFOs.

If the latter folklores would have us “sailing away,” what I am suggesting is that we instead should be *saying away*. I am suggesting that we recognize that these events and objects are designed to take things apart, really to take *us* apart, so that we can put things back together again in more creative and flourishing ways. That’s really two steps or stages: *saying away* and *saying again*, if you will. I want to focus on the first of those steps here and the second in my last chapter on mythmaking. Here, then, is another tool to add to our growing collection: *comparison, phenomenology, history, hermeneutics, erotics*, and now, *saying away*.

There are many forms of saying away in contemporary thought, but the deeper roots lie in the history of comparative mystical literature. Any reader of this literature will recognize this idea of saying away immediately as a very old and powerful technique for transcending one’s ego and its various cognitive and cultural constructs. Hence the famous “apophatic” theology of the Christian mystics: *apo-phasis* is a Greek technical term for “saying away,” that is, taking apart anything and everything that can be said about “God” in order to arrive at a kind of dazzling, divine darkness beyond all names and forms.

Think this is a long way from Whitley Strieber’s ear? Perhaps. Perhaps not. I have continuously been struck by just how often Whitley invokes classic and contemporary mystical literature in his books on the alien and the UFO. This is significant. Gurdjieff and Ouspensky are central, for example, to his convictions around the paradoxes of “the third,” the triangle, and the three or nine knock phenomenon. Another writer whom Whitley references throughout his books is Meister Eckhart. Eckhart, it turns out, was the consummate “Sayer Awayer” of medieval Christianity. He also sounds *a lot*

like Whitley Strieber, or at least what Whitley would sound like were he living in medieval Germany in a Dominican monastery.

The ground of all this professor's teachings was a basic distinction that he drew between "God" and the "Godhead beyond God." "God" is the personal deity that comes into being when human beings pray, worship, and believe in Him (more or less precisely like Whitley's "communion" coelacanth). This "God," however, can always be said away, deconstructed as a historical and social construct and a psychological projection, because that is what "He" in fact is.

The Godhead, however, is no such thing. Indeed, the Godhead is no thing at all. Hence one of Eckhart's most common descriptions of this Godhead beyond God was *nicht*, or "nothing" (recall Whitley's description in chapter 5 about how Gurdjieff used very similar language in the twentieth century). By such a provocation, Eckhart did not mean "nothing" in the nihilistic sense. He meant that the Godhead was beyond space and time and so could not be identified with any single thing or act located in space and time. The Godhead is literally no-thing. He also famously referred to this nothing as the "eternal Now."

There is no ego in such an eternal Now. There is, as the professor put it, "neither Henry nor Conrad there," that is, there are no egos or personalities there. As egos, of course, as Henrys and Conrads, we can hardly understand such things. But we can well recognize the saying away that is going on here. We should not be surprised, then, when we read Eckhart begging his listeners to "take leave of God for God," that is, to abandon their simplistic and naive notions of God as an objective person "out there," so that they might experience true divinity in and as the Ground of their own souls.⁷¹ Today we might say that we need to stop projecting the supernatural and realize it as the super natural, that is, *as us* on some deeper level than the constructed ego—as consciousness itself.

The One World

Obviously, this new practice takes away a great deal. But what does it get us? If we were to practice such a saying away, we might begin by asking which

assumptions the objects-out-of-place of the present chapter—the object in Whitley’s ear, the magical star stones in the shamans, and the honey jar—are saying away. I think the answer to that question is clear enough. They are saying away what Dan thought his honey jar was saying away: materialism.

It is not that materialism is wrong. It is that it is half right.

If we were *really* serious about all of this, we would not speak about a “mental world” influencing or affecting a “material world,” as if these were two different, stable things. We would not speak like this because there is almost certainly only *one world*, of which our mental and material experiences are two dimensions or modes. This deeper “one world” is why material events can behave like mental events and why mental events look like material events. *Because they are*. Both have “split off” from a deeper super-reality that is both mental and material, or neither mental nor material, at the same time.⁷²

This is another mind-bender (but you are probably getting used to that bending by now). How can we possibly understand it? Through a story. We grossly underestimate the power of narrative in the modern world, mistaking it mostly as pure fiction, when in actual fact narrative carries all sorts of forms of knowledge, including and especially esoteric or secret forms. Significantly, the English “to narrate” is based on a Greek root (*gno-*) that means “to know” and from which we get the word “gnosis.”⁷³ We will return to the power of narrative or “myth” in our last chapters.

For now, consider the material of the present chapter. These sayings away are all *stories acted out in the physical world*. They are all stories that rely on objects in the physical world to tell their tales and transmit their “punch-line.” Hence the crunching driveway, the people in Whitley’s bedroom, the screwed-up security system, the open garage door, and the thing in his ear.

Apparently, that is what the human mind-brain does when it is participating in a dimension of reality that is quite beyond our primitive “mental” and “material” categories of thinking (and our primitive science, which assumes the same division to work at all). It tells itself a story that involves otherwise impossible things *and then acts out that story with physical objects*. If those objects are available in the immediate environment, it uses them as props, like Dan’s honey jar. If they are not, it creates them

“out of nowhere.” Hence the implant in Whitley’s ear. These are all magical objects that say away our own sensory and cognitive habits of separating “mind” and “matter” in a super natural world where no such distinctions exist.

Cracking the Cosmic Egg

WHITLEY

Childhood is the kingdom where nobody dies.

EDNA ST. VINCENT MILLAY

As we grow older, childhood fades into a lovely, anguished distance until it remains only as glimmers of memory that probe into a world that is too unfocused for our adult minds. This is because, as familiarity with one's surroundings grows, the mind adds structure based on expectation, until at last the eyes that winked back from the raindrops of those early years and the ships that sailed the clouds are lost. When I was tiny, I used to sit in the living room in the dawn and converse with the sunlight. I had many friends in the swirling rain, and would watch Admiral Pirate fire his lightning broadsides when it stormed.

There was more, but it has been lost to me, as has the wonder of the rain and the saga of Admiral Pirate, and the sun no longer speaks to me in the language of light.

In every life, there remain sparks of wonder and visions—fleeting, perhaps—that are too eccentric to explain. We discount them, then deny them, and finally do not see them at all. But in some lives, the process of

filtration is interrupted. Things happen that are so terrible or so memorable that they do not get lost in the amnesia of childhood, but rather are tucked away in special corners of the mind, where they continue on as memories that are neglected but not forgotten.

A child who has done this may continue as an adult, and if adult perceptions are sufficiently strange, they may also enter neglected—or rejected—memory.

Hypnosis can be used to extract such memories, but it is a demanding process. Unfortunately, it is routinely carried out on “abductees” by nonprofessionals. As the objective of the subject is to please the hypnotist, even the fact that the hypnotist’s beliefs are known to the subject will confuse the results. People can end up with false memories that they can never untangle. Nevertheless, in the hands of a skilled professional, hypnosis can draw neglected memories into recollection, as happened with me when I was hypnotized by Dr. Donald Klein in 1986.

Neither I nor Dr. Klein put much stock in the notion that I might have been abducted by aliens. I still don’t think that the sessions I did with him necessarily suggest that. They do suggest, however, that whatever happens to me is an ongoing process and that it started in childhood. This is because, during the second session, I spontaneously regressed to the age of twelve and described seeing a room full of sleeping soldiers who were being overseen by a willowy form familiar to me from my close encounter the previous December. The childhood event happened on a train, during a trip to Wisconsin to see relatives. As author Ed Conroy described in his book about me, *Report on Communion*, a friend of mine from those days remembered me returning from the trip talking about nothing but the soldiers I had seen. During the experience, I started out by acting as a sort of guide for my father, telling him that everything was all right. I was familiar with the willowy figure. I’d been with her before. But then he said, “No Whitty, it’s not all right,” and a wave of terror passed through me. I saw the strangeness, then. I saw the improbability. And the memory—along with others that I was probably aware of then—got passed into the region of neglect, not to resurface again for more than thirty years.

To me, the figure minding the soldiers was not dangerous. My father’s fear is what changed that, and conceivably led to the amnesia that set in afterward.

To this day, I really cannot be sure what my childhood memories are, this one included. It is difficult to believe that what I remember of them now, as I described in *The Secret School*, happened in an absolute, literal sense. But something unusual happened, otherwise I don't think that they would be in my mind at all.

It may not have had anything to do with strange creatures, though. What if something else happened on that train, something perhaps that is part of a pattern so shocking that I cannot face it directly even now and have transferred it into this strange memory in order to protect myself from what my unconscious mind regards as an unbearable truth?

In his 1990 study of close encounter witnesses and near-death experiencers that led to his book *The Omega Project*, Dr. Kenneth Ring found among the close encounter witnesses one consistent result: the majority of them reported childhood trauma of some sort.

If this finding is correct, it could be that there is some sort of process of sublimation involved in transferring unacceptable and incomprehensible memories to more bearable fantasies. A brutal rape by a beloved parent might become a brutal alien abduction, as the mind seizes on the most believable and acceptable alternative in order to avoid facing what it cannot bear to see. This might explain, at least in part, the proliferation of close encounter memories, including some of my own. I doubt that it explains them all, but that possibility shouldn't be discounted, either. If such a process exists now, it is likely that it has always existed and might well be one of the primary generators of folklore. A rape by a father becomes a visit from a god. Leda didn't get ravished by daddy—too unbearable to contemplate. No, it was a swan, and that swan was a god.

This might explain many of these experiences, but it should not be used to explain them away. The shattering of expectation that accompanies trauma doesn't just cause transference, it opens a door. When a child finds that he cannot trust a parent, the child becomes hyper-vigilant, and the sense of mistrust radiates out from that foundational wound until the child's connection with reality becomes unsettled. It is then that the eyes reappear, staring—now with malevolence—out of the raindrops, and, in some cases, the developing close-encounter folklore replaces Leda's swan with a sullen reptilian alien or an owl-eyed gray.

The world whispers a devastating message to the sufferer: "I am not

what I seem . . . and neither are you.”

I have heard that whisper, and believe me, soft as it is, it is capable of searing the soul forever.

To this day my relationship to reality is edged by a region of ambiguity. Over the years, I have become able to address it in various ways. It is here that the faces in the raindrops command my attention. However, my life experience suggests to me that they may turn out not to inhabit only the raindrops of imagination, but conceivably to be reflections of another reality altogether.

Or so I think—and, I believe, have good reason to do so. As I have said, my perception is that our physical reality is embedded in something larger—an island, as it were, alone in a vast ocean, the nature of which we have thus far only guessed at. Instead of taking an objective look at phenomena that cannot be explained, we have thus far across our history contented ourselves with either accepting them or rejecting them. Personally, I find a more inclusive and questioning approach more interesting and intellectually useful, and also capable of offering the culture some advancement in the clarity of its vision of reality, rather than a continuation of the confusion that has dogged us since well before Leda was raped by Zeus.

If that larger world doesn't exist, then what is an inexplicable object doing implanted in my ear, and why are so many other people similarly implanted? I agree with Jeff that these are probably not tracking devices. I also stand by the idea that somebody was there. They had to be. I saw two of them. Outside, I heard others. They were people, but possessed of technologies far beyond anything known and using tools that seem almost incomprehensible, such as magnetic fields that persist even in the absence of a source.

They came out of the shadow-line that edges my life. When they returned to it, they left behind, in addition to the implant, the electromagnetic disturbances that I have described. On the other side of the line, they may or may not have been physical, but when they entered my bedroom, they were, and they brought with them a physical object that once yielded some very mysterious information. If I could be assured of an objective analysis of the object and of my own safety in having it removed, I might try that again. But it's a hard thing to face. It has now been there for years without hurting me. Would taking it out do the opposite?

Perhaps one day when I feel ready to take the risk, I'll try it. But that won't be easy.

The disturbance to expectation that has followed me across my life began, quite literally, with birth. I have never had a chance to experience an assured sense of reality, and perhaps this is why I am so open to intrusions from beyond the edge of expectation.

When I was born, I am told that my mother could not make milk. Unfortunately, I was not able to tolerate the primitive formulas of the 1940s, and lived in agony for my first six months. After enduring a twenty-hour labor, my mother had to take home a baby who did not and could not stop screaming, not for days, weeks, finally months. I was either in exhausted sleep or in agony. She herself became so exhausted that she ended up in a nursing home for the second six months of my life. At some point, I was apparently dropped on my head, with the result that there is a spinal compression in my neck that is the source of the pain I have experienced ever since.

Once I began to eat solid food, things settled down somewhat. Until, that is, I reached the age of six or seven. As I recorded in *Solving the Communion Enigma*, I ended up in some sort of program that I believe to have been carried out at Randolph Air Force Base near San Antonio. My primary recollection is of being jammed with other children into a dark space—a box—where horrific, deafening sounds were played. I remember it as shrill screaming that made us scream, also, as we twisted and struggled.

Now, these memories did not really focus until a few years ago, after Anne and I moved back to San Antonio. To my surprise one afternoon while driving home on I35 north of the city, I wound up at Randolph's south gate. I had no idea how or why I had driven there. After that, I found myself visiting certain memories that had always been with me, but which I had been neglecting in the same way that a stroke victim's brain might neglect a paralyzed limb. The surprise detour to Randolph restored my interest in them, and I have been thinking about them and researching them ever since.

I know that there was a program for bright children at Randolph because one of my oldest friends, now a distinguished academician, was present when a couple from the air force attempted to recruit him for it when he was a child. When a Skinner box was mentioned, his parents declined. Skinner boxes are used to study animal behavior, and the idea of using them with

children did not sit well with these very aware parents. They knew that, whatever this program was about, something was seriously wrong with it. I surely do remember that box, though. In fact, it's my most vivid memory of the whole wretched business, and it was extremely dreadful.

So I think that the program existed. I also know that it stressed me severely, because my immune system collapsed when I was in it, at age seven. My report card from the period shows weeks of absences, which was the time that I was kept in isolation.

Looking back at the program now, it seems to me that the stress involved had the effect of cracking the cosmic egg, just like, say, sexual abuse. Perhaps even more completely.

I think that the program was run by German scientists who had been brought to the United States as part of Operation Paperclip. They had worked in human behavior in the concentration camps. Could it be that they discovered that by stressing children to extremes, the children would not always go mad or die, but would sometimes become conduits to some other way of addressing reality? To me, the tightly packed bodies and the screaming amount to an excellent simulation of the interior of a gas chamber, pitch dark, packed solid with humanity, and thick with terror.

Did some children sometimes survive the gassings—buried, perhaps, under heaps of bodies—and emerge from the ordeal with strange knowledge and strange powers? Were the Nazi scientists trying to re-create these conditions in their lab in Texas?

If so, perhaps it sometimes works. My life would certainly suggest so. When I was twelve, we began noticing that white owl standing at the far edge of our backyard. It seemed to be watching my windows. This disturbed my parents so much that they had my screens nailed shut. It was also my first exposure to a creature that would come to emblemize my whole relationship to that aspect of being that I call the visitors.

Later, in 1968, I had a profoundly unsettling experience involving an owl. That year, I was living in London and attending the London School of Film Technique, now called the London Film School. During the summer break, I decided to travel on the Continent. On an overnight train to Florence, I fell in with a girl. We began traveling together. For a couple of weeks in Florence, we had a lovely time, living together in chaste intimacy. But then we went on to Rome, and when we toured St. Peter's, she became crazy,

stalking through the church in raging silence. She scared me. I was living with her in a small *pensione* near the railroad station. I decided, “No more,” and headed off to the *pensione* to collect my suitcase and get out of there.

I went into our tiny room, threw my toothbrush into my suitcase, and started to leave. Then I stopped. Her suitcase was lying on the foot of the bed. I have always been a bit too curious, and I opened it. What I saw shocked me to my core. In it was a nun’s habit and, lying beside it, a dry, flattened owl carcass.

I didn’t get off the train again until I was in Strasbourg.

The owls were gathering.

My first memories of my December 1985 experience involved an owl. I thought I’d seen one peering in the bedroom window, then flying around in the house. But it was winter, all the windows were closed and we had no chimney, so it wasn’t possible that an owl could have gotten in.

Our dark god, it would seem, isn’t a swan but an owl, and therein lies, I suspect, a fundamental revelation about how exactly what is touching us wishes us to understand our relationship with it, or, conversely, how we wish to interact with it.

As I write this, both Jeff Kripal and our editor at Tarcher/Penguin, Mitch Horowitz, are having owl imagery enter their lives. Mitch has been having unexpected encounters with them for about a year. And, of course, the owl is the mascot at Jeff’s university. In Celtic myth, the owl is a symbol of the otherworld, and in the UFO literature, a sign of the gray visitors.

Like owls, our visitors are creatures of the night. They are predators, silent, appearing suddenly and stealing people away for unknown reasons. The owl captures the unwary, the rat who dares to cross a wire in the moonlight, the chipmunk scuttling in the last sun, the famished rabbit daring the gray of dawn.

At our old cabin, as night gathered, the owls would often come, standing in the trees around the house, sometimes capturing prey right before our eyes. After Anne began analyzing our reader mail, it became clear that we were not the only close encounter witnesses who had owls in their lives.

I was fascinated by this phenomenon, and sensed at the time that it could be seen not simply as a sort of eerie mystery, but much more richly, as language.

To do this, it is first necessary to withdraw from the issue of who is

speaking, and rather concentrate on what is being said. Otherwise, we'll be stopped before we start, because there is no way to be certain why this happens—that is to say, who is speaking. This is the approach we've been taking since the beginning of the human experience. Over this time we have made thousands of decisions about which animal, which tree, which stone belongs to what god, and what the relationship means. Most recently, we would say that the appearance of owls in the context of close encounters is meaningless, because close encounter is itself a trivial folklore.

Looking at history, though, it is perhaps unwise to dismiss folklore. It does have a habit of transforming into belief systems, and we humans have trouble handling our beliefs. We kill for them.

Among close encounter witnesses, owls are believed to be “screen memories,” that is to say, memories of something ordinary that cloaks what was actually there, which was much stranger. This is not quite the same as Freud's use, wherein real memories are used to screen deeper, unwanted ones. In this case, the screen memories are not real, but fabrications perhaps introduced into the mind of the witness by hypnosis.

When witnesses find owls watching their houses, as we did, they will often think that the visitors are using the owls like cameras. More interestingly to me, people will identify the owl as the totem animal of the visitors.

In all of this, I hear language. Back when we lived in the woods, I understood that the visitors were potentially dangerous. The owl image spoke to me in two ways: it warned of a stealthy predator, and it promised wisdom.

The question was how to take the wisdom without being eaten? I decided to use the same language I was seeing to reply with my own visual statement. Knowing that I was looking at a predator, I nevertheless went out into the woods, went deep, seeking to be helpless in the dark. By this time, I had seen into their eyes and seen the danger there. I knew that I'd been raped, that semen had been taken from my body, and with it the essence of my life and the potential for a new child destined to rise up among them, a thought which haunts me to this day.

If this all rests somehow in physical reality, was that child made? What has been his or her experience? Have I given my seed to the stars, or given a lamb to the slaughter?

To lie in the lap of the goddess is to be unsure, and in that unsureness

there is extraordinary suffering.

The worst part of it was that they would only rarely and briefly come to me on my terms. As hard as those night journeys were—intentionally exposing myself in the moonlight, something no smart rat would ever do—the hardest part was the way the visitors usually withheld themselves. I went, I waited in agonized vulnerability, I returned home, knocked back a stiff drink, and turned in.

Was I not succulent enough? Too dry? Tasted too much like chicken? Or was it that I was doing what I hoped I was doing, which was surrendering myself to them—asking, I hoped, for a relationship?

That is what I got, and it has remained so for the rest of my life, and if we continue to be in some way intact after death, it will, I feel certain, develop even more richly then.

Richly, yes, but also dangerously, and that is a great part of the point, the second most important word in the sentence: it has ever been essential to finding one's truth that one tempt death. This is a central feature of initiation. Even in modern times, in Masonry, there is a symbolic death to the past self. In ancient Greece, the Eleusinian Mysteries involved a reenactment of the abduction of Persephone and her descent into the underworld.

To enter death. To gaze into the mirror of mortality. To find the truth that is beyond articulation, and yet is the final word in this very old and very new language. Old, because it dates so far back in human ritual, new because its power to transform has to this day never been methodically explored.

Perhaps that will change soon, because if this owl should ever take flight in our general night, we will find ourselves face-to-face with a truly remarkable predator, who will educate us if we face her, but steal us away if we run. But, of course, there was a secret revealed in the Eleusinian Mysteries, as there is in all shamanic initiation. It is that death is not what it seems; it is a change of direction, not the end of existence.

But release does not come easily. Suffering is the engine of transcendence. Osiris cut to pieces. Job in his abnegation, even so grateful to his god. Jesus forsaken on his cross. Humanity on a dying planet, lifting desperate eyes to the cold stars. Make no mistake, the entire species is probably headed toward suffering just as great as that of the avatars of the past, but on a truly fantastic scale.

In that night, the owl, bringer of death and wisdom, will potentially

reign as silent mistress of our souls. Like the old song, but perhaps with a somewhat different tone, she will have the whole world in her hands.

I cannot tell how dangerous it really was, but I can share the peace my life as her student has brought me. I have threaded the maze of my own suffering, Ariadne's follower, to a place in the heart that I had never known existed, where compassion floods for my fellow man, for Earth and her creatures, even for my own slouching struggle in the darkness.

In my foreword to Jacques Vallee's book *Dimensions: A Casebook of Alien Contact*, I offered the opinion that the pressure of the close encounter experience is what the force of evolution looks like when it is applied to a conscious mind. So the owl, flying through the mystery of the experience, brings with the danger of her talons and her tearing beak also the revelatory reflection in her fearsome eyes.

When I said in *Communion* that "the human mind winks back from the dark," I was addressing both the evolutionary power and ambiguity that emerges into our lives when we see past the expectations and assumptions with which we surround ourselves. We see into a darkness that, in my experience, is at once "us" as we truly are and the "other" in all its mystery. The crack in the cosmic egg is not just a crack in the mirror of self, but a shattering of that mirror. And beyond self, joy.

Trauma, Trance, and Transcendence

JEFF

No creatures can reach God in their capacity of created things, and what is created must be broken for the good to come out. The shell must be broken for the kernel to come out.

MEISTER ECKHART, SERMON TWENTY-FOUR

Any adequate modeling of super natural experiences like those of Whitley must not only throw light on these experiences. It must also explain why the rest of us do *not* have these experiences. The model must explain both the experiencer and the nonexperiencer, both the believer and the doubter. Put a bit differently, any model of the super natural must not just explain the rare experiences of the super. It must also explain the vastly more common experience of the simply natural.

This is where what I call *the traumatic secret* comes in. The phrase “the traumatic secret” is a poetic expression for another tool or technique for our toolbox. In truth, this tool, like the notion of an *erotics*, is really not a single tool. It is more like one of those Swiss army knives. It is (at least) three tools in one. The phrase encodes three separate but related notions: trauma, trance, and transcendence, each of which we will treat below. So now we have seven basic tools or techniques to make sense of the unexplainable: *comparison*,

phenomenology, history, hermeneutics, erotics, saying away, and the traumatic secret.

At its most basic, the traumatic secret is a function of the reduction model of the mind-brain relation that we looked at in chapter 3 under “Producer or Reducer?” This model, recall, suggests that the human body-brain does not produce consciousness but *reduces* it. The body-brain crafts consciousness into a human form through a vast network of highly evolved biology, neurology, culture, language, family, and social interactions until a more or less stable ego or “I” emerges, rather like the way the software and hardware of your laptop can pick up a Wi-Fi signal and translate the Internet into the specificities of your screen and social media. The analogy is a rough and imperfect one, but it gets the basic point across.

Sometimes, however, the reducer is compromised or temporarily suppressed. The filtering or reduction of consciousness does not quite work, and other forms of mind or dimensions of consciousness, perhaps even other species or forms of life, that are normally shut out now “pop in.” In extreme cases, it may seem that the cosmos itself has suddenly come alive and is *all* there. Perhaps it is.

In any case, such a model would certainly explain quite easily why experiences of the super natural world so often occur in or around trauma, illness, suffering, and death (all situations in which the brain-filter is compromised or suppressed). It would also explain why telepathy ends with “pathos”—deep suffering is precisely what it often takes to spark a telepathic communication between two emotionally entangled loved ones. It would also explain why the rest of us commonly experience only a natural world: our evolved systems have not yet been compromised or breached. That is not a bad thing, of course. It is simply what bodies, cultures, and egos do, and must do. They filter most of mind out so that we can be our little social selves, so that we can be us.

Trance-Formations

There are other safer and gentler ways to let a little more of mind in, however. One of the oldest and most common ways can be captured in a single word: trance. Trance induction is probably humanity’s oldest

technique for “hearing the gods,” that is, for accessing altered states of consciousness and activating special powers—what Charles Fort called wild talents and today we call human potentials.⁷⁴ Trance induction has also long been the privileged method for the production and establishment of new cultural narratives, otherwise known as revelations, myths, and religions.

Historically speaking, the shamans, bards, sages, prophets, seers, and poets were the trance experts who “knew” the secret truths, “heard” the revelation, or “saw” the gods of the culture. It was the same religious prodigies who could pass all of this on in poetic speech, which was then, generally much later, set down in writing. These trance-seers and trance-speakers were the original “novelists” or Writers of the New. Little wonder, then, that today trance states and new cultural narratives arise anew among professional writers, poets, and channelers. Little wonder, too, that we can detect profound comparative resonances between a figure like Whitley Strieber and the folklore of shamanism and the history of religions.

It takes more than trance states and writers to make a religion, of course. Political powers, religious elites, artists, and architects must all take up elements of these states and stories and create stable social institutions and the elaborate theater of ritual, art, and architecture around them. Entire communities must then reenact these “revealed” stories over and over again until their narratives and images seem eminently obvious and real to a majority of the people.

This is where it gets “loopy.” These same repeated rituals and reenacted stories are in turn designed to induce mild trance states in their participants in order to “return” them to the events of the myth—to establish them as characters in the sacred story of the culture. Every believer who becomes absorbed in the reading of a scriptural text, meditates on a religious image, chants a sacred name over and over again, or deeply engages in a repetitive ritual is, in effect, self-hypnotizing and attempting, through that same trance induction, to “remember” an original revelation, founding narrative, or beloved deity. By doing so, she or he is psychically entering and *becoming that story*. The story once born in trance and then shaped by society is now being told again within another trance induction.

Put most simply, *the religious self is a story*. And trance induction, as the original ecstasy of a religious prodigy or the repeated ritual of the devout

community, is all about hearing and seeing this story, becoming this story, remembering it, and transmitting it to others as the way things really and truly are. They never quite are, of course.

More to my present point, *the reading self is also a trance-induced story*. If you are absorbed in this book at this moment, you are in a mild trance state answering to the trance states that Whitley Strieber and Jeff Kripal entered in order to write these pages. You are a slightly different person reading this book, just as we were slightly different people writing it. Or maybe we are all really different people because of this trance state, itself designed to snap us all out of our story-trances so that we can tell better ones. We did promise to end the world in our first lines. We promised an apocalypse of thought.

End of the world or no, there is no doubt about it: writing and reading are trance inductions. As my colleague in the study of Indian religions Lee Siegel has so eloquently put it in his recent book on mesmerism in colonial India: “the relationship between a reader and listener is analogous to that between a hypnotist and subject.” And hypnosis is, “by its very nature, about the power of stories.”⁷⁵

In order to capture something of this, Lee invents an entire minivocabulary of new trance words: “in[tr]oduction,” “trance-formations,” “trance-mutations,” “trance-actions,” and “trance-migrations” (the latter for the hypnotically induced remembrance of previous lives that is so central to the doctrine of reincarnation in India). His point? That nearly everything we think, feel, desire, and do, that nearly everything we *are*—from our romantic relationships to our ethnic, national, and religious identities—is a result of some kind of trance induction; that culture entrances us, makes us believe all sorts of things about the self, society, and the world that are useful enough but are not necessarily true.

Think this is all irrelevant here?

“Look into my eyes,” says the hypnotist. One of the most obvious features of *Communion* is its astonishing cover, carefully designed by Whitley himself with the artist Ted Jacobs. The central features of that original painted cover, of course, are the alien being’s immense black eyes, at once subtly mirroring the viewer and pulling him or her in, like a two-way mirror. No iconic feature of the book played a more important role in its

reception history and in the hundreds of thousands of letters that the Striebers received. Readers were hypnotized. Entranced.

Moreover, the book itself dwells long and carefully on four trance narratives, each transcribed from a hypnosis session with a professional psychiatrist: two of Whitley's with Dr. Donald Klein, and two of Anne's with Dr. Robert Naiman. Whitley refers to these trance sessions in the previous chapter, but it is worth underlining here: *Communion* is a trance-text, a "remembrance" of a literally hypnotic story that helped "reveal" and then establish one of the most powerful cultural narratives working in American culture today.

The fact that this cultural narrative has been operating largely "in secret," that is, in the bedrooms, bodies, and private psyches of countless human beings well outside the approval of the gatekeepers of the culture does nothing to lessen the story's power and influence. Indeed, it may well increase both. As Jacques Vallee has taught us in his own books, if a form of mind wanted to really influence, shape, or direct a culture, it would not bother with the culture's public arguments or politics. It would choose to work on the culture's deepest operating system. It would go to the place of dreams and vision. It would choose to work on the cultural imagination.

Trance-scendence

What I am asking you to consider here may initially seem like an especially tough message. On one level, I suppose it is. I am asking you to consider the possibilities that both society and the self are stories, trance-formations generated through the hypnotic inductions of language and social scripts, and that every culture and religion is fundamentally an illusion. I am asking you *to wake up*.

But here is the thing. Here is where it gets really interesting. Once we wake up out of our respective psychological and social trances and recognize, as if emerging out of a long dream, that all of our cherished cultural and religious convictions are illusory trance-formations, just *who* has realized this? Who has woken up out of these trance inductions?

Consider the story of Haeyoung Seong. Seong lives and teaches in Seoul, South Korea. He was my first Ph.D. student. One day in 1984, Seong

was staring out a window in a high school classroom, watching the sun dance off of a white building. The movement of the light did something to him. Hypnotized him? What does that mean? In his case, it meant that he felt his body fill up with thousands of intensely pleasurable, hot “energy worms” before “It” happened.

“It” was some vast supermind, infinite and eternal, beyond space and time, and utterly indifferent to the insignificant human ego. The event shattered him, which is to say: ended all of his trances. The trances returned, of course. Fourteen years would pass before he found any adequate resonances to what he had known that day, first in William James’s classic study of mystical experiences, *The Varieties of Religious Experience*, then in the *nous* or “cosmic intellect” of the third-century Greek philosopher Plotinus, who, Seong concluded, had known a near identical state of mind seventeen centuries before him.

Something eerily similar happened to a German Lutheran shoe cobbler by the name of Jacob Boehme in the year 1600. Jacob was staring at a beam of sunlight bouncing off a pewter dish. He developed a mind-bogglingly elaborate symbolism and philosophy to explain what had been revealed to him in the light, much of which was deemed heretical and dangerous by the local religious authorities. Regardless, what happened to Jacob initiated an entire lineage of Western esoteric thought that influenced artists and philosophers like Emanuel Swedenborg, William Blake, Samuel Coleridge, and G. F. W. Hegel, a “thinker of the third” if ever there was one. Hegel famously called Jacob the “first German philosopher.”

Then there was the American science-fiction writer Philip K. Dick. The cultural and psychological contexts—that is, the filter, medium, or prism—could not have been any more different, but there was the reflected light again. On February 20, 1974, the author was staring at a young woman’s golden Christian fish-sign necklace. She had come to the door to deliver some pain medication for an oral surgery. The golden necklace glittering in the sun was his pewter dish. “It” rushed in again.

What happened to Dick in the next few hours, days, and weeks changed his life and resulted in his last three novels, all of which orbited around what he came to conclude was a cosmic mind that had reprogrammed him in and through that same mysterious light. It also did very practical things, like enable him to clairvoyantly diagnose an invisible hernia in his young son, a

diagnosis which led to an emergency surgery. Dick called this cosmic mind “Valis,” for Vast Active Living Intelligence System. His experience of it was so physical, so palpably electromagnetic, so real that Phil seriously thought that Valis was the beam of some alien technology or satellite in the sky before he concluded that it was more likely something else: a superintelligent plasma that underlies and underwrites everything, which the ancients had called the Logos, that is, the Mind or Word of God.

My point? That trance states, even and especially those induced casually and unconsciously by white buildings, pewter dishes, and gold necklaces, do not always lead to more illusion and more projection. Sometimes, for reasons that we do not understand, they appear to do the exact opposite. They appear to outshine, to *end* the consensual trances of society and self. They catalyze remarkable states of mind and being that look very similar across the ages, states that may well tell us something important about who and what we really are. Sometimes, it turns out, the black reflective surface of the alien’s eyes just disappears and one finds oneself *inside*.

I do not think that whatever Seong was hypnotized into was illusory. No doubt some of the visionary features of his experience, like those of Jacob and Phil, were functions of his cultural imagination. The light is *always* refracted, *always* reflected through culture and psychology. It can be no other way, since as social egos we ourselves *are* those mediums, filters, or prisms. We *are* that two-way mirror.

But I doubt very much that the basic message of Seong’s experience was illusory or false. Nor do I think that that cosmic *nous* he knew had anything to do with the illusions of culture, religion, or even history. This is why Seong could find a description of a near identical state in a third-century Greek philosopher. We might add another trance word to Lee Siegel’s new language, then, and begin to speak of “trance-scendence.” Sometimes, rarely but really, the trick of trance states leads out of the consensual trance of culture and religion into something other or more, something so other that it feels and seems *alien*.

That’s because it is. It is not us, not us as rational social egos anyway. And yet it *is* us, as soul, as spirit, as Valis. Again, allow me to repeat myself. The problem here is a very simple one: As knowing subjects, we are not one but two. Until we recognize the Human as Two, we will not be able to see and accept the illusory nature of our little selves, our little cultures, and our

little religions. Nor will we be able to recognize the cosmic vastness of who we really are. Consciousness is *not* ego. Consciousness is *not* culture. And yet no ego or culture can exist without “It.”

I confess. This central notion of the Human as Two makes sense of pretty much everything for me. It explains why the skeptics are so honestly and understandably skeptical (their egos or consensual trances have not yet been invaded or broken). It explains the utter convictions of the mystics, poets, and modern-day abductees (their egos or consensual trances have been invaded and broken). It also explains the necessity of the imagination as a translator or medium between these two forms of mind. It explains the various paradoxes we see again and again in the descriptions of these astonishing states of mind: how such a Mind is, and is not, us. Finally, it helps us to come to moral terms with what we see in the history of religions when we look closely enough and without blinking. What we see is death and transformation. What we see is trauma and transcendence.

Trauma and Transcendence

There are many ways to realize the Human as Two. There are many ways to “die” and be “resurrected,” to realize, as it were, *both* our own humanity *and* our own divinity. The problem is that none of these ways are quite reliable, and some of them are extremely dangerous and destructive, if not actually and literally deadly.

Whitley again recognizes all of this in his previous chapter. He understands perfectly well that trauma is often a catalyst for later visionary events. He also does not flinch from the common sexual dimensions of these traumas, even their horrific nature in childhood sexual abuse. Hence brave lines like these: “If such a process exists now, it is likely that it has always existed and might well be one of the primary generators of folklore. A rape by a father becomes a visit from a god. Leda didn’t get ravished by daddy—too unbearable to contemplate. No, it was a swan.”

Whitley also recognizes the classic *religious* dimensions of trauma and trance-formation. Hence lines like this one: “it has ever been essential to finding one’s truth that one tempt death. This is a central feature of

initiation.” We are on some *very* traditional ground here, even if it has all been recast in contemporary and more accessible terms.

Most important of all, though, Whitley recognizes very clearly that trance and trauma do not just lead to illusion and suffering. In rare cases, they can also lead to transcendence, hence the “new birth” after the “death” of an initiation ritual.

This linkage between trauma and transcendence is actually a long-standing conversation between the two of us. Hence his response to what I have elsewhere called the traumatic secret in lines like these: “This might explain many of these experiences, but it should not be used to explain them away. The shattering of expectation that accompanies trauma doesn’t just cause transference, it opens a door.”⁷⁶

The most striking example of this door of trauma opening out onto some form of transcendence is Whitley’s suggestion in the last chapter that the physical and psychological traumas that he apparently endured on the air force base outside of San Antonio as a young boy may have been engineered by German scientists, who in turn may have stumbled on this possibility through their gruesome observations of accidental survivors of their sinister gas chambers and death camps back in Nazi Germany. This is an especially poignant and difficult suggestion.

But it is hardly beyond the realm of possibility. Astonishingly, a very similar scene to the one Whitley has imagined here—that is, one involving a pile of slain bodies with a single individual with special powers emerging from its traumatic debris—occurs in the West’s oldest account of a “near-death” experience: the story of Er as told by Plato in the fourth century BCE in his famous treatise on political philosophy, *The Republic*.

Er was a warrior apparently killed on the battlefield. His body was dumped onto a pile of rotting corpses ten days after the battle. Two days later, the bodies are about to be burned on a pyre when Er revives and tells a remarkable story involving a journey to the other world, the nature of death, the moral mechanisms of reincarnation, and the purpose of life itself, including why we do not remember our previous lives and how and why we take on the bodies we do (basically, a kind of ancient Greek karma theory). Plato is very clear about what he thinks Er’s story means and why it is so

important: because it teaches us that the soul is immortal, and that we should take care to live well and rightly, so that our future lives will be better ones.

Er's story is usually described as the "myth of Er," as if Plato made it all up for some abstract philosophical lesson. Maybe. Maybe not.

I mention all of this not to distract the discussion at hand but to focus it, and to help us come to terms with the otherwise confusing ways that extraordinary human experiences often occur in the most destructive and dangerous of contexts. None of this is meant to romanticize the evils of Nazism, of war, or of the horrible sufferings of trauma and sexual trauma in their countless destructive and debilitating forms. It is simply to observe that human beings sometimes have profound spiritual experiences amid or after suffering and death, and that trauma sometimes opens up into transcendence. Is this really so difficult to understand?

The Original Superman Saves a Life

I have long argued that paranormal experiences are often connected to reading events, and that paranormal phenomena somehow shape themselves into a kind of symbolic language that wants to be read and interpreted. Whitley had this just right in chapter 4 when he proposed "to see the actions of our visitors as a sort of illustrative language, communication built out of images and events." Or again, when he wrote this: "There can be little question but that there is a structure, large in scale and intellectually dynamic, that gives form to the whole phenomenon, including UFO sightings, alien encounters, encounters with the dead—all of it." I have suggested, in effect, that we are at once the writers and readers of these illustrative languages, these living graphic novels, these eerie texts and secret structures; that, somehow, some very big part of us is speaking to a little part of us at these moments—maddeningly, in code. This, of course, is why we cannot escape hermeneutics, that trippy art of interpreting ourselves into being.

Whitley captures this idea perfectly (and much more clearly) when he writes about his uncanny owl encounters: "I was fascinated by this phenomenon, and sensed at the time that it could be seen not simply as a sort of eerie mystery, but much more richly, as language."

There is another way of saying this. The paranormal *is* a kind of reading. Which, of course, means that reading might catalyze or become a paranormal event. Here is another kind of “flip.” I really believe this. I am not exaggerating in the least. Forget Professor Xavier’s cool Cerebro room. Forget Superman’s icy Fortress of Solitude. Reading and writing are the most powerful paranormal technologies that we possess, if only we knew what and how to read.

I also write a good deal about the paranormal experiences of professional writers and readers. Not surprisingly, people come to study with me who have known similar things and are trying to make some sense out of them. Most of my graduate students are such “mutants.” Consider James. James’s story illustrates in living color all of the themes of the present chapter: trauma, trance, transcendence, and, yes, the paranormal powers of reading.

James was a troubled west Texas teenager. He had been removed from “Satan’s public school system” and educated on things like creationist biology. Torn by excruciating sexual guilt (“I couldn’t look at women without sinning anymore”), he had held a butcher knife to his wrist more than once. But he never quite had the courage.

But today was different. Today his parents were gone, and they had left the key to the gun safe unattended. James was out driving in some kind of weird trance. In his own words, he “Ouija drove” to Barnes & Noble, a “worldly” bookstore that was definitely off-limits, forbidden. He walked in, still in a trance state above it all, in some kind of odd transcendence, split in two, as it were: “Everything was a thousand miles away. I was a thousand miles away from myself. I watched myself walk a direct path through a library’s worth of books I had never seen before without hesitation. Not a glance side to side, no checking of signs.”

Then it happened. *Plop*, and 312 pages of a cheap paperback book fell at his feet. He was “back into meat-space.” He came to. The spell was broken. The book on the floor was Friedrich Nietzsche’s *Thus Spoke Zarathustra*. It had fallen from a shelf marked “Philosophy,” a word he had never heard of until that moment. He looked around to see who might have knocked it off the shelf. No one. Then suddenly, a “hauntingly beautiful blonde in her late teens dressed in a dangerously short black dress” appeared at a distance,

giggled, looked him right in the eyes, and began snapping pictures of him holding the book before she literally dashed out of the bookstore.

Thus Spoke Zarathustra. This is the book in which the German philosopher announces the coming of the “Superman” (way before the guy in blue and red tights), the *Übermensch* who he believed represented the future of humanity. Drawing loosely on Darwin, Nietzsche imagined our present humanity as a taut rope stretched between the ape and the future Superman. We can no more understand our own future nature than the ape can understand ours (another earth-farm or cat-in-the-library analogy). Nevertheless, we are in process. We are on the rope. We are evolving. And we will eventually be something else.

James took the magical book home and read its first section with his father’s Colt pistol in his lap. “It was the antidote to a lifetime of poison I hadn’t known I was drinking.” He put the pistol away and walked outside in a Texas downpour. “I stared up at the stars between the clouds and laughed. A divine laughter, an ecstatic laughter while the rain poured down. It was the greatest moment I had ever experienced. When my sides ached and the rain abated, I walked back inside, dried off and read the rest of the book.”

Nietzsche and his Superman saved James, they and the gorgeous girl dressed in black. This is what the trance state, the Ouija driving, the guided walking through the bookstore was all about. There was trauma (the suffering and contemplated suicide). There was trance (the Ouija driving and trance walking). There was a humble form of transcendence (“Everything was a thousand miles away”). And there was, of course, reading (the bookstore and subsequent reading with the pistol).

James is still reading. He would go on and major in philosophy in college. He wrote his senior thesis on Nietzsche. He is now working toward a dissertation on occult supermen in early twentieth-century esoteric movements. He first told me this story in a research paper that he wrote for a graduate class I taught on the paranormal and popular culture. I asked him what he thought really happened. He thought what I thought: that “he” somehow did all of this. Well, both of him. That his mind, at once tortured and supercharged by his teenage crisis, literally pulled the book off the shelf and threw it at his feet.

Or did he reach up with his hand, still in a trance, and knock exactly the right book off the right shelf onto the floor, without remembering any of this?

James doesn't think so. It is remotely possible, he admits, but highly unlikely and certainly not part of his experience. But, really, is such a scenario any less unbelievable? Okay, maybe a little.

Whatever happened, it happened off-line in an "unconscious," or superconscious, way. James as ego did nothing. But some greater presence within him, or acting through him, exploded into action. A supermind intervened through a trauma and a trance.

That and the Girl in Black. Who was she?

On Fear and Ecstasy One Last Time

There is one more thing to say here. It goes back to a conversation I had a few years ago not with Whitley, but with Anne. We were preparing for a radio show and discussing the confusing double nature of abduction experiences, that is, how they can be extremely positive or extremely negative, or both at the same time. After explaining the dual nature of the sacred in the history of religions, I shared with Anne my best guess about why some individuals experience a contact with the sacred as ecstatic and transformative, whereas others experience a contact with the sacred as terrifying and destructive.

It is only a thought. I do not know. I want to be very humble here and stress the complexities, not wish them away with a set of simplicities.⁷⁷ Still, here is the thought. What I expressed to Anne is that this strange both-and may be largely a function of the human ego and whether a particular ego is ready to let go of itself. If the ego is ready to let go, then it will be more likely to experience an encounter with the sacred Alien or Other as extremely positive, as redemptive, as ecstatic. If, on the other hand, the ego is not ready to let go of itself, then it will be more likely to experience an encounter with the sacred as extremely negative, as terrifying, as destructive. In this model at least, the demon is a projection of our fears, the angel of our nature beyond those fears. The same ego, of course, can move through different stages, with an initial terror morphing into a loving communion. This is how I read *Communion* and, indeed, the entire trajectory of Whitley's mystical life.

After I explained all of this to Anne, she expressed to me over the phone a genuine aha! moment. It made sense to her, and for the first time, I gathered. I never forgot that simple but profound conversation, not only because of Anne's warm response, but also because it helped me come to terms with my own thinking. Sometimes one does not know what one thinks until one explains it to another. Whitley expresses the same exact double insight, in more poetic or symbolic terms now, when he writes in an earlier chapter of the female owl of Athena, "who will educate us if we face her, but steal us away if we run."

Again, that seems exactly right to me. It is up to us whether we face her or run, whether we will be her students or her prey.

Haunted

WHITLEY

In 2006, the British Ministry of Defense released a previously classified 408-page document sardonically named “the Condign Report,” the title a play on that of Project Blue Book’s Condon Report. The Condon Report had concluded that the U.S. Air Force had no reason to pursue investigations of unidentified flying objects, there being no apparent military reason to do so. The Condign Report concurred, as it also states that there is no evidence of any military threat. But the executive summary of the Condon report essentially says that the phenomenon offers nothing to study. Not so the Condign Report. In its executive summary, there appears the statement that what it calls unidentified aerial phenomena “are comprised of rarely encountered natural events.”

Natural events can be studied, and clearly given the cultural impact of these, they should be. And yet, there is resistance from the scientific culture, the government, and the granting community to even begin to do this. Much official information, if John Podesta is to be believed, is classified. But if they are natural events and have no military significance, why is it that this classification even exists? Why was the Condign Report, for example, ever classified at all?

The report, which is now available in its entirety on the United Kingdom National Archives Web Archive, explores the belief that unidentified aerial phenomena are plasmas of a type unknown to science, and not only that, that they are capable of generating novel perceptions in people who come close enough to them. In the report, UAPs are frankly acknowledged to be of unknown origin, and it is noted that the “temporal cortex can be rendered electrically unstable” by them. “Neurological rather than biological effects may be the clue to some human behavior after exposure to the near field of UAP radiation. Particularly sensitive are the temporal lobe areas of the brain.” There is never any reason given for the conclusion that they are entirely natural formations, but it is acknowledged that they have been part of human life for a very long time.

This report was more or less ignored by the media and society at large, in part, I suppose because nobody has any idea what to do with its revelations. But, in fact, it is a stunning and damning admission. Governmental authorities have kept secret for years the fact that unknown plasmas can and do affect the minds of people who come close to them, and have done nothing to prevent the spread of the now enormous UFO lore and all of its attendant beliefs.

So what are the plasmas? Who have they affected? Are their effects on the mind temporary or permanent? Are they dangerous? The report discusses the various frequencies that are involved, and it is obvious that much more is known than is being released. Are the plasmas alive in some way, for example? Some parts of the report seem to hint at this. Given that they emit frequencies that affect the brain, it would seem important to try to identify what they are and answer any and all questions about them.

As I pointed out in the beginning pages of this book, balls of light, orbs, flashes and radiant beings have been part of our history for a very long time. As St. Paul and others seem to have experienced and the Condign Report affirms, they generate hallucinations. In fact, their effect on the mind is among the most powerful in human experience. Given this, it seems a trifle disingenuous of the authors of the Condign Report to discuss the phenomenon without referring to its enormous cultural influence. And to assume that it is entirely unconscious and by implication random seems premature.

We have never even asked the most obvious question about these

plasmas: very simply, what are they? The Catholic Church used to believe that the orbs of light so often reported were souls that were on fire, thus suffering. They were free to roam, which suggested that they weren't trapped in hell. So the conclusion was that they were souls in purgatory, as pointed out, for example, in Diana Pasulka's purgatory study, *Heaven Can Wait*.

I don't think it can be assumed without question that they are without any intelligent direction. Whatever affected me over all those years after my December 1985 experience seemed to me to be highly intelligent. I wouldn't so readily assume that they are entirely plasmid in nature, either. My impression is that some aspect of life that we don't understand is involved.

If we can learn to engage with it in an objective manner, we can potentially find some answers. Frequencies can be detected and analyzed. In fact, if the Condign Report isn't some sort of sinister effort to confuse the issue, there is every reason to think that an attempt to understand these plasmas would bear fruit.

After my 1985 encounter, high on the list of possibilities in my mind was temporal lobe dysfunction, either a tumor or temporal lobe epilepsy. As I have documented previously, tests for both proved negative. In fact, a very aggressive test for temporal lobe epilepsy revealed that I have an unusually stable brain. Not, however, one would assume, when in the presence of "UAP radiation."

The Condign Report provides official acknowledgment that unidentified aerial phenomena exist, and that they have effects on human beings. Given its release, it is no longer possible for governments to deny this. As these phenomena affect the mind, study is clearly essential.

The practice of official secrecy and lying has been with us for far too long, and the fact that it has come to surround the UFO and close encounter material is tragic. It has put on hold an important advance in our understanding of ourselves and our world. If a random, natural phenomenon is giving rise to the visions and hallucinations that generate our belief systems, that is of literally epochal importance. If it is in some way conscious, then the importance is beyond measure.

As we have pointed out elsewhere, this secrecy has also the effect of encouraging rampant speculation, which, in this case had led to the emergence of an elaborate folklore—strengthened, as is usually the case, by being based on a kernel of truth. So the secrecy hasn't simply stifled

progress, it has caused a malign descent into the old labyrinth of folk belief, superstition, and confusion.

It has also created an unpleasant social problem. If any official source were now to openly admit that such plasmas exist, it is inevitable that the public would conclude that they were evidence of an alien presence on Earth. Advocates of the belief that UFOs are alien spacecraft, now more or less ignored, would suddenly come buzzing into the cultural foreground. As an example, a UFO group leader in 2015 uploaded a video to YouTube of a “meditation” during which UFOs apparently lit up the horizon. However, photo experts to whom I showed the video felt that the lights were flares, and there was a military base nearby. So it seems unlikely that the meditators were directing their attention toward communing aliens. Right now, such events are largely ignored. But if there is any official admission that UFOs may be real, the gurus and believers will leap onto our TV screens and our internet devices with what amounts to a religious message: welcome our visitors from on high. In the end, we will come to the same drearily familiar results that we have been enduring for thousands of years: a belief system will form which will once again by its very nature push away whatever is actually there.

Paul assumed that he encountered the risen body of Jesus on the Road to Damascus. Mohammed thought that the radiant being he encountered in the cave was the angel Gabriel. Moses thought that the burning bush was the presence of Yaweh.

Let’s not go that far this time. Yes, the plasmas exist. No, we don’t know that they are aliens. Yes, we can come to an objective understanding of what they are.

The rush to the alien hypothesis would need to be countered by an authoritative and convincing reaction from atmospheric scientists, physicists, astronomers, and cosmologists. As a person who has experienced the phenomenon for years, I would assert as strongly as I could that it must remain in question until research brings more clarity.

There is a grave danger that disclosure would cause the media to so amplify the assumption that our visitors are aliens that the question would be buried, eventually to be completely eradicated by the power of the new belief system. It has happened before. One example is *Contra Celsum*. Only by reading the Christian Father Origen’s refutation of Celsus’s book disputing

the divinity of Jesus can one detect anything about the case he was trying to make. Celsus's text was long ago destroyed and every copy lost. In a world beset by the chaos of war and out-of-control climate change, desperate eyes will be lifted to the sky, and there will be the UFOs passing swiftly and silently across the mysterious night. There will be prayer, you can be sure, unless prior to that rational study has brought real understanding.

Plasmas certainly appear from time to time in the close encounter experience, but what about metallic-appearing UFOs and frankly physical entities? Are they illusions generated by the plasmas? When such creatures appeared to groups of witnesses at my cabin, and, for that matter, to me, I did not notice any plasmas in the vicinity.

As well, I can't believe that the people who put the implant in my ear were less than physical. They put a physical object in me. And yet . . . I cannot assert that the experience was as physical as, say, getting mugged might be. As always, something was "off," something was not quite right. As I read the Condign Report, I realized what it was. The morning after the implantation, the house was alive with electromagnetic anomalies. My car was so filled with static electricity that I leaped out of it in terror as I tried to back out of the garage. And what of the inexplicable magnetic field that was disabling the alarm system?

If there is a plasmid life form, can it sometimes penetrate into the physical, leaving behind traces like this . . . not to mention implants?

Despite my experiences, I find the idea of nonphysical life exceedingly hard to accept. If it exists, then the Western understanding of reality, as it has been evolving, is going to require some serious rejiggering. And yet, there are some interesting recent arguments that suggest that consciousness may of necessity and inevitably be eternal, and thus must persist outside of the brain. Physicist Dr. Roger Penrose and psychologist and anesthesiologist Dr. Stuart Hameroff have published an essay suggesting that consciousness is a deep-level effect of brain function, not, as is commonly assumed now in the sciences, a side-effect of the vast number of computations taking place in the brain. In this theory, called orchestrated objective reduction, consciousness arises when noncomputational processing is formed by qubits on cells' microtubules. Unlike a classical bit, which has only a single state, a qubit has two states, positional and superpositional, which open it, because of the nature of nonlocality, potentially to vast presence. The theory also means, if

it's correct, that consciousness would be indestructible and eternal, and therefore that the brain would not be its origin at all, but rather an instrument that would enable it to penetrate into the physical world.

Orchestrated objective reduction, or Orch-OR, as it is commonly called, is an interesting speculation, certainly. But it's a speculation only, and one that is open to criticism from both science and philosophy. Dr. Hameroff offers more information about the idea on his website, [Quantum Consciousness.org](http://QuantumConsciousness.org).

Maybe there is something to Orch-OR or some of the other exotic theories of consciousness, but my sense of it is that science is still some distance away from finding a useful way to address the problem. And yet, despite all my intellectual resistance, I find myself living a life that is far better explained by the notion that there is a nonphysical component to consciousness than by the assumption that it is confined to the brain.

By way of illustration of why I feel that there is an extraphysical side to consciousness, and in acceptance of what my life has given me, let me tell some stories. But let me do this with a gentle admonishment not to take them as we have always in the past taken such stories, including my own, to either be accepted or rejected. Let such stories remain as descriptions of perceptions and part of the large question of the nature of mind and its relationship to its environment. Regard the next few paragraphs as a sort of ballad, a song sung as a story, about my way of experiencing my humanity and the world around me.

Beginning in 1986, my mind changed profoundly. I began to think in a quite different way. When I went out in the woods at night attempting to reengage with the entities I had encountered on the night of December 26, 1985, mostly nothing happened. But when it did, communication would come in the form of vivid mental imagery. In a typical incident, I was sitting on a stone and meditating when I became aware of a certain amount of movement around me, so stealthy that it felt menacing, as if something was creeping up on me. By this time, I had disciplined myself not to indulge my fear. I had a question ready, and I asked it aloud: "What does the universe mean to you?" The answer I received was a vivid picture in my mind of a coffin.

This was an early example of what has become a process of communication by visions.

Visual thinking had always been there, but not communication by

vision.

One lifelong vision actually comes from before I was born. At some point in my early teenage years, I discovered, to my embarrassment, that it's not normal to remember coming into the womb. But I do remember this. That memory has come with me, I assume, from the day it happened. I cannot be sure, though, because after I mentioned it to some friends and was laughed at, I put it aside.

After 1985, it resurfaced. In it, I come down from a place of bright paths, feeling myself a speck of light—a plasma, I suppose. I am filled with peace. I am profoundly happy. Joyous.

I come down through the summer clouds, across the green umbrella of trees, moving in cuddled secrecy among their branches, disturbing only a cicada, whose ratcheting greets me as I enter the world, a sound which to this day draws me back to that lovely moment.

I then passed through the top of a window into a warm, summer-shaded bedroom. Below me on the bed a woman lay sleeping. She was great with child, and I knew that the body inside her was to be mine. I was born in June of 1945. As it was already warm in South Texas, this must have been in April or May of that year.

I have thought long about the depth of peace I knew during those moments that, as I now think, my consciousness was returning to time. It was the peace of eternity, our true core feeling, not the terror of the situation we are in during our excursions into mortality. In the difficult times of my life, which have been many, I have always had that memory to return to.

I went closer, slipping along the thread of communion with my mother until I was just above her. I was drawn by waves of love that acted like magnetism would on a fragment of iron. I went closer and closer, until I was in the folds of her summer blouse. Coming from within her was a quiet surging sound, the waves of her heart. I went closer yet, and now there was a vibrant embrace, as if her soul was coming around me, drawing me to her. Then, in an act that is beyond anything I have known since, I penetrated into her. I went through her skin and into the churning ocean of her, and then into the body within. Perhaps coitus, in its desperate urgency and in the sense of annihilation that accompanies it, is a striving to return to this extremely secret moment that is hidden within all of us.

There are levels of ecstasy, I think, that the physical body filters out, but

in that moment the soul—that little, peace-kissed fragment—knows both eternal the pleasure of being and the time-bound pleasure of penetration, and it is powerful. It must be one of the reasons we are drawn back to the wheel of life, to feel that again.

Then I was floating in her, and at once starting a conversation with her, spoken in whispers and songs, child to mother and mother to child, a sharing of plans and dreams and our entangled destinies.

Ah, Oedipus, sweet child of longing, and dear Dr. Freud, peering with his crystal light into these dark, uneasy halls. Even if it unfolded only in my imagination, that penetration of the womb exposes, I think, a deeply human and probably universal longing.

Our dialogue continued across our long companionship, until she died and her soul slipped away into what in the most haunting verse of Ecclesiastes is referred to as the “long home.” Maurice Nicoll, in his book *Living Time*, suggests that the long home is the great shadow of the soul, stretching across vast time, and containing within it every moment of one’s being, as acutely nostalgic, poignant, and ominous a record as can be imagined:

. . . because man goeth to his long home, and the mourners go about the streets: Or ever the silver cord be loosed, or the golden bowl be broken, or the pitcher be broken at the fountain, or the wheel broken at the cistern. Then shall the dust return to the earth as it was: and the spirit shall return unto God who gave it.

I wonder if the journey we take through time when we are born is really the center of life? Perhaps our more real existence is a steady state that exists outside of time—being fed by the experiences we collect during these temporal lives. We are fishermen along the riverbank of time. The part of us that is cast into the physical state no longer knows the future and the past, and so acts out of our deepest innocence, our truth. We, the anglers on the riverbank, cast this poignant bait that is ourselves into the flow of life in order to use experience to discover by the way we react to life’s novelties and temptations who we truly are.

But what if this exploration of self brings bad news? What if we turn out to be evil—say, one casts oneself into life and sits there watching oneself don the black uniform of a Nazi or become a cruel parent or a criminal of some sort? What if one turns out to be, quite simply, awful?

Attached to that question is an enormity of moral ambiguity. If life does not end with the body, then it would seem wise to attend most carefully to the consequences of our actions. If our memories travel with us, then living a life that one might enjoy remembering would be of extraordinary importance.

I am also haunted by out of context memory, isolated recollections that I have no instinct about at all. Imagination? Something that happened? No context, no witnesses, no idea. Normally, I don't write about these memories, but one of them is relevant here. In it, I ask, "Do we have souls?" The answer I remember coming from that dangerously lovely *Communion* face is "Not all."

Perhaps it means that the journey through time is one not only of opportunity but also danger, just as our religions have been saying for millennia. We are here working toward a place in what I strongly sense is a marvelous otherness, a great being that is unfolded in eternity, carrying in its tender arms all that is.

Into this drama, then, comes the outsider which is also the same presence that has always been there, transformed by the modern mind into something that makes enough present sense to enable us to explore a relationship with it. We call it the alien . . . for the moment.

The truth? Contact will be at once with ourselves, our souls, and these mysterious others in all their provocative ambiguity.

Religion is not wrong in the various ways it recognizes this process of life struggle, but the religious vision of it is subjective, not the objective vision that comes from turning the supernatural into the super natural. Because it is now possible to do this, it is also now time to step away from the whole of the mythological context—all of the stories—that have, as they have offered us knowledge of this other world, also served as the veil that conceals it.

We need to discard all the gods and ghosts, the demons and aliens, and all the stories that go with them, the heroes and their journeys and their resurrections, and reenvision our relationship with this other world objectively. Then we may well see that there is a cycling back and forth

taking place, the movement of souls into and out of bodies, living in time and outside of time. If those of us who are descended into time can acquire an objective understanding of why we have come into this state, we can make it vastly more useful to us than it is now. This would mean that we would remember who we are and why we came here, thus discovering for the first time in our history an objective answer to those ancient questions.

What if where we are now is the dark side, Hades, Sheol, the land of the dead—which, ironically, we think of as the land of the living? But if it is the dark side of the mandala, it is also the womb. Our lives here are preparation for a rebirth into timelessness, or so my experience suggests to me. We are here because the dark is where knowledge is hidden, and it is this knowledge we need to free ourselves, whatever that may mean to each of us.

The living, who we call the dead, come close to us now, calling to us to open our minds to a new vision of ourselves.

I have been a plasma, and it was delightful. I cannot recommend the experience more enthusiastically. The memory of those moments is among the most precious of my inner possessions. But I am hardly alone in this. Far from it. So now let me tell you about some plasmas I have known.

My mother did not leave me when she died. One night about fifteen years ago, I was at dinner at a friend's house in San Antonio. I'd stepped out into the back garden when I suddenly felt her presence. At that point, she had been dead for about five years. Her presence was palpable. I stood there, my eyes tightly closed, communing with her. I felt as if I could reach out and touch her. Just wonderful. Lovely, sweet sorrow.

Someone saw the expression on my face and, without knowing what was happening, snapped a photo of me. When the film was developed (it wasn't digital) there could be seen a small flare of light in the darkness of the sky, right in the direction I was facing. It's not precisely round, but more like a little flame—in fact, very like the old Catholic description of a soul in purgatory.

As impossible as this sounds, and as much difficulty as I have with such a concept, I have to say that I think that it could be her soul, penetrated deep into this dense world of ours, striving to reconnect with the love and companionship that had flowed between us. (Such living flames are hardly uncommon in the literature of the past, when people were too unschooled in science to understand that they ought to be impossible.)

My mother was my advocate. She understood that my mind needed food, and introduced me to authors like Saki and Kafka and Salinger. In my eleventh year, she bought me the Encyclopedia Britannica's *Great Books of the Western World*, which almost sent me to heaven. I devoured Plato, Suetonius, Descartes, Kant—it was glorious. My father felt that I should stay with children's books, but she defied him. I was so grateful to her, and I still am. A precocious, excessively bright little boy in Texas in the 1950s was at a distinct disadvantage. So we were very close, and I just cannot tear myself away from the belief that it was her on that night, doing her part to help me awaken to a very real world that continues to seem to me to be entirely impossible.

Whatever is knocking on our door, it could not have chosen a more resistant individual than me with whom to communicate. I can't believe in conscious plasmas, but I have no choice except to live with them. I suppose it's possible that I ended up dancing on this particular plank because I am at once exceedingly skeptical of things like the soul but unable to deny my own experiences. I can neither believe nor disbelieve, but also I am not agnostic. I don't think that the question is unanswerable. On the contrary, it seems to me that whatever this is, is making quite an effort to draw us toward a new vision of reality, and with it a new understanding of ourselves, of what we are, where we are, and why we are here.

Now I will tell the story of another plasma—or rather, seven of them. I've recounted this before, in *Solving the Communion Enigma*, but not in this new way.

When we had our cabin in upstate New York, there was a room upstairs under the eaves where I used to meditate at night. Because of my notoriety, it had become too dangerous for me to walk outside after dark—not because of the visitors, but because of local people who had primitive ideas about me, among them, inevitably, that I was in league with demons. What a bore, and particularly boring to be shot through the head by some nincompoop who would have preferred to burn me at the stake. So I quit going out into the woods at night, to my great regret. I feared that I would lose the thread of connection to my visitors. But that did not happen.

One night when I was meditating in that room, I became aware of a

presence. It was powerful. Immediate. Right in front of me. For a few minutes, I sat before it. But I couldn't concentrate. Finally, I said aloud that I couldn't meditate with somebody I couldn't see, and they'd have to either show their face or I was leaving. Nobody appeared.

Of course I had no definite idea if anybody was there. I just felt them. Felt, if you will, a curious presence. I'd had a certain amount of experience with invisible beings, but not at this level of intensity. It was as if there was somebody standing a foot or so in front of me whom I could not see. Mostly, when there had been invisible presences in our house, our cats had reacted even though we saw nothing. I only half-believed things were there, and didn't want to believe at all. I spent some little time trying to understand how invisibility might be possible in the real world, and none of the solutions I found even came close to approaching the level of it I was seeing—or rather, wasn't. And yet, it had happened to me and to others at my cabin too many times for me to deny it. The filmmaker I mentioned in chapter 4 had observed the being beside his bed disappear. As my son and I came up to the cabin, the filmmaker and his wife experienced a burst of heat so intense that they thought the bed was on fire. We then saw the translucent figure racing away from the cabin. If technology was involved, then the translucence suggests that the device had been turned down but not off. (I want one!)

All very logical, and all personally witnessed by me. So I sat there in the meditation room forcing myself to accept that somebody might really be there, but was not willing to show themselves.

It was completely unbearable. I even thought that I could hear them breathing softly in and out with robotic precision. Finally, I gave up and left. I went down the hall and went to bed. I tossed and turned, of course, but eventually fell asleep. By this time, I was beginning to understand my role as that of a student in a school. I'd passed through a dark initiatory phase that had plunged me into the deepest underworld I am able to imagine, a place of bizarre sexual challenge and profound heartbreak. I was devastated by these experiences. Anne less so. "Don't you see how fascinating all of this is?" she once asked.

The dark is indeed fascinating and informative, but it is indeed also dangerous. It is on journeys into it, though, that we find ourselves. Every initiate comes to the same shocking place, for all the paths of the underworld through which we are traveling lead to it. There is a mirror there, old and full

of shadows, and it is in the hints it returns of our faces—our dark, dark faces—that we find ourselves. To lose the true way is to become fully human. To get lost in the dark is to become truly conscious. But it takes a little light, or as the alchemists say, a little gold. That tiny bit of self-knowledge brings definition to the image and makes it real.

Later that night, as I have described in *Solving the Communion Enigma*, I was awakened by a punch on my shoulder, a familiar process that to me meant that the visitors had come.

But not, this time, short blue trolls or willowy insects with great, hypnotic eyes. Instead, sitting on the foot of the bed was a small man. He wore a tunic cinched at the waist with a simple belt, perhaps rope. He was absolutely still. I think that this was because, had he moved, he would have flown off into another state and I would no longer have been able to see him. To remain visible to me, he had to be as still as stone.

I took his hand and smelled his skin, as I had done before with the visitors. Only he was not mildly or oddly scented. He smelled human, strongly so. If he was a spirit that had somehow conjured up a body, he had included the body's odor.

I looked into his face from a foot or so away. The eyes were deep, black pools. I call those "knowledge eyes." They see more than we do, and that is very hard to bear.

I recognized him. I have never said this before because I could not even begin to explain it, but now perhaps I have some ideas that make a sort of sense.

Among my recollections are some from other lives. Whether or not these are lives I have lived I don't know, but they have a spontaneous quality that sets them apart from ordinary dreams, fantasies, and imaginings. In some ways they are like the images of other worlds that flash through my mind when I am meditating and have found a receptive inner state. Still, I don't know what any of this is, and would not presume to be an advocate for reincarnation, let alone visionary travel to other worlds. Both things, in their different ways, imply that our understanding of the world and the mind are deeply flawed. If we are reincarnating in life after life, then the modern secular notion that we evaporate with the death of the brain is flawed in yet another way from that discussed previously. It implies that we are part of some other mechanism, of which we understand almost nothing. And yet

books like *Soul Survivor*, with its story of a small child who could remember extraordinary details of a life lived during World War II, and Robert Snow's *Looking for Carroll Beckwith*, make it hard to believe that there isn't something there. Snow was chief of detectives for the Indianapolis Police Department when a past life regression at a party led him on one of the most fantastic journeys of discovery ever recorded, during which he found that the detailed memories he had during the regression and had written down with his detective's attention to detail actually described the life of an obscure nineteenth-century artist called Carroll Beckwith in ways that are beyond coincidence.

Three of my own recollections took place in ancient Rome. Two of them involve violent deaths, and one of these is relevant here. In it, I am rising out of the Circus Maximus. I have just been killed in a chariot race, and the enormous crowd is cheering wildly—cheering my courage, perhaps, but it seems more likely that it's because they've bet in favor of my opponent. As I rise up toward what at that moment is something familiar to me—a huge circle of light—I look down on them. These people, who while I was alive would have had a great variety of facial features, now look almost the same. Perhaps I wasn't seeing their individual characters but their essential selves. Then again, maybe it was simply a dream and there was a lack of detail.

The people have a certain cast to their faces—a way of holding them—that is the same as that of the man who sat on the foot of my bed.

Now, I'm not going to theorize about this. What I want to do is put it on the table. In part, obviously, I am telling you about a complex state of mind. I might be describing memories that originate outside of time—in fact, therefore not memories but states of vision of a sort that we really cannot describe in our present languages, which do not offer any way of expressing timeless experience.

Perhaps to really talk about and communicate with this timeless level of being, a more sophisticated tongue is needed, one that recognizes not only verbs of present, past, and future tense, but also verbs of permanence. Such verbs would draw their "action" not from duration, but from direction of view and intensity of seeing. They would thus simulate attention in timelessness just as conventional verbs simulate it in time. Such words will come, but they must be organic, entering the language out of need, not as a coinage. I wonder, if such a language had been available to me when I was interacting

with the extraordinary man who sat at the foot of my bed, would I have been able not only to engage with him on my terms, but also on his?

Now, let me return to the moment as the two of us were experiencing it. I was holding his hand, which was very light and small, like a child's. It was not absolutely physical. It did not have heft, it had a slight weight. Instinct caused me to hold it carefully. It felt as if it would be easy to crush, as if it was made out of some lighter flesh than my own.

But the smell of it was really powerful. There were two levels, the smell of salty skin and the smell of the oils of an unwashed body. Early on in my experience, I had started trying to use my sense of smell to add another dimension to what I was seeing and feeling. Skeptics have pointed out that strong odors are associated with certain types of seizure. Beyond saying that my experiences can't be dismissed as temporal lobe epilepsy, I wouldn't disagree with the theory that some sort of seizure activity might be involved. The brain must be doing something different from what it usually does, or people would not be engaged with this other world only at times. As Jeff put it the last chapter, trauma and transcendence are not exclusive; the former often opens a door to the latter.

My involvement with the man was in that moment extremely intimate. I raised my head and looked again at his face. The eyes were very deep, shadowed with knowledge. "Knowledge eyes." I did not know why, then. I do now. We look at passing time from inside its flow. He was looking at it from outside. Thus he knew truth from beyond the veil of death. There was also companionship, though, in the extreme strangeness of the moment, and startling familiarity.

As I dropped his hand, he disappeared. I thought to myself, "Now, if he comes back, I'll meditate with him." I went down the hall. I was happy, overjoyed. I thought that it was the triumph of a lifetime, frankly.

I sat down, feeling very proud of my years of facing my fears out in those woods, and my hours of meditation. Talk about conjuring. This was the real thing.

I sat alone. Nobody showed up, not even an invisible nobody. Disappointed, I eventually went back to bed. This was one time that I did not entertain the possibility that I'd had an ordinary dream or a hallucination. I'd been wide awake. I had held his hand in mine. I'd been a foot away from him. No, as bizarre, as impossible as it seemed, to me he had been real, and

that fact meant to me that this world is not what it seems, and we do not know what it is, only that we are in it. The pig and the chicken, the chimp and the dog, do not know what their worlds are, but they also cannot know their own ignorance like we can. That knowledge—the awareness of the gap—means that the gap can be filled.

The next night I returned to the meditation room. All was quiet—until, quite suddenly, the most fantastic thing happened. In quick succession, there were seven thuds on the roof. Remembering the man’s small size, I thought to myself, “My god, I’ve conjured the seven dwarfs.” I closed my eyes and did the meditation that I have been doing regularly since 1970, when as I have said, Joe Stein taught it to me. If ever there was a person in my life whom I hold in blessed memory, it is him. On that night, then, began one of the premiere experiences of my life, one for which I remain grateful beyond words. I was actually meditating with people from another world, or so I thought at first. But it turned out that it was something even more extraordinary.

Each night, I went to the meditation room and each night, a few minutes later, the seven thuds occurred. During daylight hours, I went up on the roof to see if there was any possibility that it might be raccoons or possums dropping down from the trees, or even pinecones, but it always happened just after I entered the room, and always exactly seven thuds.

For the first few weeks, not a lot happened: meditation, waiting, attempting to reach out in some way, enjoying the quiet and the wonderful sense of the body that one gets after many years of working with it in this manner. Over time, sensation expands, until one finally comes to the discovery that the nervous system doesn’t end at the skin or even the few millimeters beyond it that the electric body extends. It never ends, not in space, not in time. Never.

Once or twice, I think that there were small hands laid on my shoulders from behind, and I think I might have heard breathing, very steady, with that same strange sense of mechanical perfection that I had found in the more alien-appearing visitors. As if they were perfect machines, brilliant, filled with insight and understanding, and far more emotionally complete and complex than we could ever hope to be—machines of the gods.

From time to time, we’d spend a week in New York, and once when we returned, Anne said, “There’s somebody living in the house.”

When I asked her why she thought that, she said that the bed in the meditation room was being slept in (it did double duty as an occasional guest room). It was true. The bed was being slept in.

To me, this meant that this ethereal being needed rest. He needed shelter. So, what was he? Thinking back to the plasmas that plant illusions in the temporal lobe, I wonder now what I was actually dealing with? Could there be people—beings—with the same ability? People who could seem to be living on a different plane, but who, in the end, needed a roof over their heads and a bed at night?

I tried hard to catch him. I tried to photograph him. I set up a video camera in the corridor. I popped into the room at night and took random pictures with a still camera.

We would hear him around the house, stealthy movement, sighs, an errant rustle.

Still, the meditations went on, night after night, the seven thuds followed by a meditation session. Never face-to-face, and usually little of notice took place.

During this period, our son decided to bring some of his friends from school to spend a weekend at the house. He gave me strict instructions: no UFO books visible, no discussion of aliens, flying saucers, anything like that. When he was fourteen, he had said to me, “You really are the most embarrassing father in the world.” I had to agree. I assured him that there would be no saucer chatter. But then he said that they were going to sleep out in the woods. I warned him that the visitors were certainly around. A group of nice kids came—and at once began questioning me about *Communion*. After a very pleasant evening together, they went out into the woods with sleeping bags.

Later, I meditated, and sure enough, the seven thuds.

The next morning, as the kids began to drift in, I noticed some rather wide eyes. Some of them, it turned out, had seen seven glowing orbs floating through the woods. Another had experienced a cloud of mayflies form into the hauntingly beautiful face of a woman. Throughout the morning, these kids were quiet and introspective.

They left that afternoon, off into their lives again, having camped out, I would think, on a very real frontier.

My relationship with my meditation partners continued to develop.

There were seven thuds, always, but I seemed to be interacting with a single individual. At least, this was my perception.

I asked him where he was from. The reply was fascinating. It came in the form of three little half-sucked candies being laid before a book in my library: *Life Between Life* by Joel Whitten and Joe Fisher.

So I asked the question: What do I need to do to avoid the wheel of life. I want to ascend.

The answer was the most powerful moral lesson I have ever received. It began one night with a startling review of my life—the sort of thing that is supposed to happen at the moment of death, I suppose. Image after image from my life appeared before my eyes. I saw a good, honest life, flawed but pretty blameless. But then something appeared that was of interest. I was in a hotel room in Beverly Hills with a beautiful young woman. I wanted to make love to her, but I was hesitating, forcing myself not to, respecting my vow of marriage and my love for Anne.

Still, every detail of the meetings I'd had with this woman came rushing past.

I was left on that night devastated and, quite frankly, confused. I hadn't violated my vow. I'd been tempted, yes, but no violation.

When I got up to go to bed, I discovered that it was already three. I'd been meditating for four hours. Exhausted, I collapsed into the bed and threw my arms around my beloved wife. Silently, I cried tears of gratitude that I had not broken my vow.

Later, I woke up. The ceiling was gone, the roof was gone. Overhead was a blackness that I knew at once was the appalling face of infinity. Endless dark. Arrayed around the borders of this opening were seven faces peering down at me. Gentle faces. Angry faces.

Then it ended. I was fully awake. I lay there thinking about it for a time, wondering where it lay on the spectrum of reality. A dream? I thought not. But what, then?

I went close to Anne and kissed her cheek. She cuddled against me, delighted.

I had almost betrayed her, but I had not done so. I had wanted to, though, so very badly. And it wasn't like the incident with the gray being. That I could not control. This, I could.

Some time later I woke up and there, hanging over our bed, were the

two most terrible creatures I had ever seen. They were spiders, each at least three feet from stem to stern. They had gleaming black abdomens that were crossed by yellow stripes like tigers. Worse, they were not stable on the ceiling, especially the one over Anne.

My impulse was to roll off that bed and run for my life. Then I thought, “Wake up, you fool, this is the mother and the father of the nightmares.”

Fully awake now, I leaped out of the bed. Surely they would evaporate, will-o'-the-wisps of dream.

But no. I stood there at the foot of the bed staring at them. I was awake and they were as real as ever. I could even hear the slick clatter of their busy, complicated jaws.

Anne lay perhaps three feet beneath one of them, sound asleep. Some of its legs had come off the wooden planks of the ceiling and were scrabbling for purchase. The sound filled the room.

It looked as if it would fall on Anne, right now.

My dear God, how I wanted to run. But if I did that, then what would happen? She had said early on, “You won’t let anything happen to me, will you?” I told her that I would protect her. But how did I know that? Now, it seemed as if I was lying.

Another leg came loose and began jittering wildly. The abdomen was now tilted. I could see a stinger in it the size of a small knife. My body screamed at me to run, but I could not run, my love would not let me. On legs of lead, transfixed by terror, I approached the bed. The pulsating demon was inches from my face. I could not dare touch it, try to push it away. God only knew what would happen if it and its brother started running around the room. What was their venom like? Where were they from? Certainly not this world.

I did the only thing I could to protect my wife, which was to lie down on top of her so that my body was between her and the spider.

She opened sleepy arms, welcoming her husband to her in the night, opening herself body and heart to the man she loved.

I lay there, waiting for the spider to drop down on me. She lay there waiting for the act of love to commence.

In that instant, there was a feeling like weight lifted. My body felt free, my soul like the soul of a child. Like that, the spiders had gone. The night—the beautiful, earthly night, filled with sensual promise—had returned.

I wept and her comforting arms came around me. Joy filled me. We rode the small hours together in the boat of our love, crossing to morning.

Listening to all these stories, Anne decided that she wanted to give meditating with the seven visitors a try. She'd also spent years in the Gurdjieff Foundation. While she wasn't a meditator, she was a sensitive, exquisitely conscious human being, and on a powerful spiritual journey of her own.

A few nights later, she joined me in the meditation room. Soon enough, the thuds came. She'd heard them many times, as they reverberated through the whole house. But she had never been here, right under them. She said, "I'm not ready for this," and quickly left the room.

Anne had, in that moment, done something that is essential to spiritual search: she had refused the call. The anguish of regret that causes a deep inlooking is an essential part of the spiritual journey.

This led her, over the years, to a point where she was well prepared for her next great spiritual encounter, which was a near-death experience that took place in 2005, when she lay in a hospital bed, hovering between life and death after a near-fatal brain bleed. She found herself at first in a sort of limbo. Where was she? Then our Siamese cat Coe—long dead—appeared to her. "These humans," he snorted, "can't even find the world of the dead on their own." He led her to a sort of transfer point, like the waiting room of a train station. All around her were people holding great bags of belongings, far too heavy to take anywhere. A voice said to her, "You can go on if you wish."

But this time, she did not refuse the call—it wasn't toward ecstasy, it never is. The call is toward deeper search, and she decided to come back to life, bringing with her this simple but powerful take of nonidentification: we must leave the baggage of life behind if we are to ascend wholly into timelessness. One day, our species will no longer be using the physical world at all, but before that, we must let those burdens go.

Including, incidentally, the burden of sin, which was the real message of the spiders: embrace love and your sins will forget you.

At this point, I might put in a word about animals and plants, and, in particular, cats. When I once managed to leave my body while in full consciousness—becoming, I suppose, a plasma—I was able to not only see myself and Anne lying in our bed, but also to move out through the wall of

the cabin and into the yard. I could see that everything—the trees, the bits of grass in the early snow (it was October, I believe, of 1987), were covered with shimmering blue light, very soft. I think this light was alive. I think that it will remain alive after those trees and plants die. I see it is part of the vastness of nonphysical life.

Our cats weren't there on that night, but had they been, I have little doubt that they would both have been looking right at me—the plasma, not the body in the bed. They are somehow sensitive to the life of the soul, the cats. Perhaps it's why the Egyptians revered them so, leaving vastly more of them mummified than any other creature. They believed that the dead could use the body as a sort of focal point after life—a tradition that has come down to us in the West in the form of the belief that the body will “rise incorruptible” at the end of time. The Egyptians mummified, we embalm. But not cats. As we have become blind to the true richness of the living world, we've left ideas such as the spiritual life of animals behind. Coe, I think, would disagree. He was not wrong to think that we humans have lost our way. Not all of us, though. Many elder peoples still see all living things as being invested with spirit. They perceive the world as being invested at every level with gods—that is to say, with what we call consciousness.

We aren't ready to really see this in all its objective truth, not the elder peoples, not the Westerners, not the secularists or the religionists, none of us. But we can begin. That means just this: to give up the veil between what we call the living and what we call the dead, and live as a whole species, the part of us penetrated into time and the part of us living outside of it, with the aim of finally becoming a new being, altogether outside of time, perfect.

That takes wisdom, though, and that's why we journey into time. We the bodies are the dark side of the mandala, where wisdom is sought and found. The souls are the light side of it, where the truth is known. Our dance is bounded by a circle, which is a form without end and thus endless with possibilities.

If there are aliens here, then they are already like this, the “living” and the “dead” together as one, seeking toward the mysterious ecstasy that is like a fata morgana, a special sort of mirage that appears to be a ghost palace shimmering on the horizon, beguiling, elusive, but so rich with promise that it must ever be pursued, ever to be sought.

I've described elsewhere the anguish of losing that cabin and with it the

world I had noticed there—and, in this level of the human journey, noticing is conjuring. The act of magic is the act of seeing. I won't return to that time and I certainly will never return to the cabin. In any case, disaster followed disaster. Finally, I lost everything, including that place where I had woven a link between the worlds that had no recourse to myth. A great loss.

On the last night, I meditated. The thuds came. I said that this was my final moment there. There would be no more. Yet again, I asked them—begged them—to help me. There came from above uncomfortable stirrings. I waited, but nothing more. As I had many times before, I made a last request: please let me see you as you really are. Then I went off to bed. Early the next morning, we would leave that place forever.

About half an hour later, I noticed a glow coming in the bedroom windows. Quite a bright glow, in fact. For a moment, I thought that the house might be on fire. But when I rushed to the window, the most extraordinary thing I have ever seen appeared. It was a small star, blazing with beams of light. The light was so beautiful that it was agonizing. It was well aware of the difficulty I was having, and slid out of my view, so that I could only see part of it. The beams were narrow lasers that pricked through my skin and deeply penetrated me. They brought with them a sense of the essence of this man with whom I had been meditating for these past months. They were an embrace, an affirmation, a treasury of information. In short, a tremendous gift.

Then he was gone. My life at the cabin was gone. The next morning we left, leaving behind the objective enchantment that had been achieved there. Subsequent inhabitants of that cabin have noticed nothing unusual. I have departed, and my devils with me.

What a beautiful experience, the years at the cabin. How very grateful I am. I cannot even begin to put it into words. And that last event, the star in the front yard—I saw the truth then, what a human being might become, if he has the compassion and the will.

It was also a taste of what our world might one day be, if the caterpillar ever has the wisdom to see the butterfly and the courage to face its mighty beauty and protect its breathless fragility. I suspect that there are other worlds in which the veil between the living and the dead has long ago fallen, and the whole species is evolving as one, partly injected into time and partly in timelessness, and both elements working together toward the discovery of a

greater whole. I suspect that our visitors—at least, the aliens among them—are already like this. In fact, I would assume that they are more deeply involved with our souls than with our bodies.

Will we ever manage to face the reality of the soul? I certainly trust so, because if we don't, I don't think we can evolve. Right now our intellectuals and scientists are running from their souls, while many other people remain trapped behind the deceptive latticework of religious belief.

I had a brilliant, extraordinary experience with these plasmas, once again glimpsing the second part of Jeff's "Human as Two." But what did I actually see? It would seem, a human being who had become light. I saw him, tasted his essence, and came into a state of communion with him that will remain with me in life and into death, and, I suspect, forever. For that is what this is about, in the end, all of it: facing ourselves as part of greater consciousness, and coming to terms with the fact that our species, like others—perhaps all others—has two forms, one physical and embedded in time, and the other energetic and living outside of time. Once we have objective knowledge of this, we can also build an objective relationship between them. From my experience, this is going to be an incredible challenge, touched both by wonder and danger, but with truly extraordinary rewards. The confusion we experience now will gradually slip behind us, and there will be a useful basis for joining colloquy with others like us, who are on the same journey that all life is on, toward ecstasy.

The Soul Is a UFO

JEFF

[A]lthough it is the approximate size of a big vehicle, it is clearly one single luminous mass, not projecting light beams like reflectors or suchlike. Its aspect is like that of a big flat star, illuminating without blinding, with a strange incongruence between its respectable size and the low light intensity. . . . The light appears to have some body; it is denser than a thick cloud although I cannot find a substance to which it can be compared. Plasma, perhaps?

ANTHROPOLOGIST DIEGO ESCOLAR DESCRIBING HIS ENCOUNTER WITH AN ANOMALOUS, LUMINOUS ENTITY IN ARGENTINA

I have studied religion for three decades now. I don't run into many new ideas. But this notion is shockingly new: the soul as a plasmalike energy that can superpower our imaginal capacities and so generate the movies of visionary experience. Here the soul is an exotic form of energy interacting with a primate nervous system, and the symbol and the mythical narrative are the means of focusing, working with, projecting, even materializing that energy.⁷⁸ Here the soul is a conscious star gently blazing inside a skull. Here the soul is a UFO that has landed for a time in a body-brain, in what Whitley suggests is "a sort of biological technology" for the soul. Hence all those "conscious machines" of the UFO literature—that, after all, is what we may well be.

In some ways, this is old news, very old news. Solar light, spherical star souls, and mysterious forms of radiance—in short, *conscious light*—are among the oldest and most universal expressions of divinity on the planet.⁷⁹ Even the apostle Paul famously described the resurrection body as a “spiritual body” (*soma pneumatikon*) destined for the realm of the sun, moon, and stars, which is what his culture generally meant when it spoke of “heaven” (1 Cor 15:45–49). “Spiritual” here meant “of the *pneuma*,” which the ancients thought of as a very subtle *material* substance, like air, breath, or fire, that extended throughout the physical universe—in short, as a kind of invisible, living cosmic energy. By a “spiritual body,” then, Paul did *not* mean an “immaterial” one. He meant a real immortal body that shines like the stars in the night sky, indeed, that, in some readings, *is* a kind of human star.⁸⁰

The early Christian Gnostic texts are filled with similar convictions about our true home among the stars, about the secret spark of divinity that sleeps in us all, about the stellar nature of the soul, and about the savior who descended from the stars in order to teach us how to get back home. Such weirdly familiar details have led artist and author Christopher Knowles to write in his *Secret Sun* blog of early Christian Gnosticism as “history’s first flying saucer cult.”⁸¹ I think Chris is right.

And Chris is in good company. My colleague April DeConick, an expert on early Christianities, has just finished a marvelous book on “the Ancient New Age” in which she demonstrates convincingly how modern science-fiction films are deeply resonant with what she calls the Gnostic spirituality of the ancient world.⁸² This revolutionary spirituality rejected belief, ritual, sacrifice, and martyrdom (all still inflicting endless violence on us) and proclaimed a direct mystical knowing (*gnosis*) of the inner divinity of the spirit, or *pneuma*, itself, which the Gnostics knew as a real spark of God temporarily encased in a material form but destined, ultimately, for the stars.⁸³

Here was a new spiritual orientation that called into question, really denied, all the local ethnic or inherited religions and their petty, violent gods, including and especially the bloody god of the orthodox Christians. Here was a wildly syncretistic practice that pulled in *everything*—from Homer to Greek and Latin magic to wild speculations about multiple universes—in order to say what it had to say. Here was an ancient search for charismatic gurus, in

this case Egyptian ones. Here was a loose but effective network of grassroots movements poised against organized religion and its oppressive alignment with the imperial state. Here was a Mediterranean counterculture that flourished for centuries before it was stamped out by the “right-thinking” orthodox churches. Here was the Ancient New Age.

Physics and Mystics

In its shocking juxtaposition of “ancient” and “New Age,” April’s phrase captures beautifully the kinds of comparative practices I have been proposing here through “the future of the past.” What, of course, is fundamentally different today, in the future of that past, is the invocation of modern science. The ancient Gnostics did not know what we know. They did not have evolutionary biology, modern cosmology, and quantum physics.

These new forms of knowledge are game-changers that, with or without the scientists, are dramatically reshaping the religious imagination as they inspire new forms of secular spirituality and guide experiencers into new imaginal territory. Modern peoples, after all, rarely see hellscapes or visions of the Trinity anymore, but they are increasingly reporting popping into hyperdimensional mindspaces, becoming one with the evolutionary impulse of the universe, and knowing or “seeing” a superconnected quantum realm. With respect to our science, modern forms of mysticism are becoming more and more *realist*. Whitley’s call in the last chapter for us to form an “objective” relationship with both the biological medium of our time-bound mortality and the energetic consciousness of our “eternal being”—a version of what I have called the Human as Two—is a perfect example of this kind of realist understanding of the embodied soul-star.

However sophisticated these modern experiences and expressions might be, conventional scientists like to call all such reports “New Agey.” Like the word “anecdotal,” this is little more than an intellectual dodge, a moral meanness, a rhetorical sleight of hand designed to stop or sidestep the conversation, I presume, so that it doesn’t get too far.

Too far into what?

Into the actual history of science. The truth is that numerous founders of quantum physics—Werner Heisenberg, Erwin Schrödinger, Niels Bohr, and

Wolfgang Pauli, to name the most obvious—were deeply committed to worldviews that combined mysticism and rationalism. Many of them also saw comparative resonances between the mind-bending implications of quantum physics and different forms of mysticism. And they said as much, very explicitly and very clearly. They went to places like the *Brahman*, or cosmic unity, and *Atman*, or Self, of the Hindu Upanishads (Schrödinger), the yin and yang symbolism of Chinese Taoism (Bohr), and the paranormal synchronicities of Jungian psychology (Pauli) to help better understand what they thought quantum physics was mapping formally and mathematically. Generally speaking, they were drawing parallels, compatibilities, and complementarities, not simple equations, between physics and the mystics. Still, some of them were pointing toward a worldview in which the math and the mysticism were two different expressions of the same fundamental reality. In effect, they suggested: “If you want to understand what the implications of quantum physics might ‘look’ like up here, in the world of human experience, go read the unities and paradoxes of the mystics.” They were after a realist mysticism.

And this is before we get to what the historian of science David Kaiser has affectionately called “the hippies who saved physics.” These countercultural physicists became fascinated with the apparent “telepathic” effects that entangled particles exhibit in Bell’s theorem, or what Einstein had famously called “spooky action at a distance.”⁸⁴ Such intellectuals kept the notion of entanglement alive for decades while the rest of the physics community was being told to “shut up and calculate,” that is, to quit talking about the philosophical implications of the physics and just do the math.⁸⁵ Many of these countercultural physicists were convinced that quantum effects *do* scale up into human experience, and that these effects can be seen in parapsychological phenomena and mystical experiences of mind. One of them, my friend and colleague Nick Herbert, has written eloquently about these effects under the banners of “elemental mind” and “Quantum Tantra.” The latter is his dream of a scientific-spiritual practice that would lead to an erotic union with the physical universe.

And then, of course, there are the anomalous experiences of the scientists themselves. As a single example, consider Jane English. Jane has a Ph.D. in experimental high energy physics. She is also the

illustrator/photographer of the best-selling English translation of the *Tao Te Ching*, with Gia-Fu Feng. In short, she is an heir to Niels Bohr, who put the Tao on his coat of arms to capture the two-in-one paradoxes of quantum physics in which light can be measured either as a particle or a wave. The same paradox caught Jane's attention. For her it functioned as a Zen koan, that is, as a riddle that awakened her into the true nature of reality.

She was reading Fritjof Capra's classic reflection on the same, *The Tao of Physics*, and in particular a passage about this particle/wave or yin/yang paradox.⁸⁶ She got to Capra's discussion about how the "new awareness" of Zen could also be an "awareness of atomic reality." Then it happened:

*The experience began with a sense of sudden dissolution, especially of visual forms. After a moment, I was aware of patterns of energy, millions of pinpoints of light, and a confused rush of visual sensation. . . . everything was somehow different; there was no in-here/out-there split in my seeing!. . . . In this state there was no space or sense of separation between objects and my eyes. Thus I felt no need for light to exist to connect objects to eyes. Objects, eyes, and light no longer had the objective existence they had seemed to have just before. . . . I realized that the wave/particle paradox had been my first koan, and that I had just solved it.*⁸⁷

Essentially, Jane English had *become* light, had *become* the energy of the world, which is consciousness.

The results, of course, were utterly transformative. She was changed. Jane had once "accepted the orthodox physics thinking that says that quantum physics has no meaning for personal reality, that it is just a computational device, and that questions about things you can't measure are meaningless." In short, she had bought the line that quantum effects do not scale up to our world. She now knew that none of this is true. She understood that it was perfectly possible to directly experience the world of quantum physics, and that quantum physics does have meaning for us "up here" in the big world, profound and beautiful meaning. She understood that the paradoxes of quantum physics are nothing more than functions of us trying to understand reality with our objectifying senses, instead of directly via consciousness

itself. She understood that consciousness could not be reduced to the mechanistic laws of Newtonian physics. She also realized that “many psychic and healing phenomena that appear extraordinary on our usual Newtonian, sensory reality are actually quite ordinary in these other realities.”⁸⁸ Jane English had been shown the super natural world.

The Energies of God

Jane, of course, was not the first, or the last, to suggest that consciousness, energy, and light are expressions of the same underlying super-reality. Consider Whitley’s invocation of the language of “plasma” again. What is important here is Whitley’s perfectly accurate observation that these plasmalike soul-spheres show every appearance of being conscious and intelligent. Such an observation—commonly reported, as we will see in a moment—carries the stunning implication that life and intelligence may not need carbon-based life-forms or a nervous system to express and know itself.

I have long thought something like this, if in an inchoate and confused way. I remember, for example, reading in college about the bizarre qualities that take over at the speed of light, things like extreme time dilation to the point where time stands still. I remember wondering whether “eternity” might be a loose term for this stopping of time at the speed of light, and whether the classic “speeding tunnel” effect and sense of eternity “in the Light” of near-death experiences might be how the imagination translates a ride on (or as) a beam of light. Is there a mystical “inside” to light itself that is related to but not captured by the “outside” of light modeled by physics?

I still think those thoughts and ask those questions.

These were not entirely original ideas, it turns out. In graduate school, I learned that the Greek Orthodox tradition developed an extremely sophisticated mystical theology in the thirteenth century through which the light seen around saints and experienced within mystical encounters was understood to be not a metaphor or a symbol, or an effect of any cause, but really and truly God.⁸⁹ Here God is not *like* light. God *is* light.

The architect of this mystical theology was the monk and hermit Gregory Palamas (1296–1359). Gregory argued that the knowledge derived

from such mystical experiences of light is the knowledge of the “energies” of God, but never of the “essence” of God, which remains unknowable to us as creatures. One does not have to read too far into Greek Orthodox spirituality and its goal of *theosis*, or “deification,” to realize that Gregory and his colleagues were not being metaphorical about these luminous energies or their deifying effects on the human body and person that is fortunate enough to get illuminated by their rays. Gregory even argued that those who have been deified by such energies become *homotheoi*, that is, “co-divinities” or “co-gods.”

So there is a very deep historical precedent to the conscious plasmas and mystical illuminations of which Whitley writes in the previous chapter. Contactees and abductees get belted with beams of light all the time. And, just as we see in the Christian mystical literature, these lights change them, give them special powers, usher them into eternity (or telepathy), and call them to lives of prophetic witness.

We no longer speak of deification or “becoming divine,” of course, but this is because our culture has changed, probably not because the lights themselves have. Indeed, I strongly suspect that contemporary abductees *do* experience “becoming a god” within these illuminations, but that they are too ashamed, or too scared, to tell us. I also suspect that they often lack an adequate framework through which to express this, *even to themselves*. They do not recognize or understand what is happening to them because our culture has grown cold and stupid when it comes to spiritual matters. Or spiritual matter.

I would go so far as to suggest that we *need* the older mystical ideas of the subtly material “spiritual body,” the “energies of God,” and the deifying light to really understand the contemporary UFO encounters. Which does not mean, of course, that we must adopt the older understandings and belief systems. We do not. Here again we must learn to practice the “future of the past.” We must learn to recalibrate our present through a careful and critical return to our past.

I think I first encountered the idea of the soul as a subtle material energy in Whitley’s books. I did not at first understand or even recognize it, despite my earlier electric experience in Calcutta. The idea was just too new, too radical, too much. I needed another author to help me come to terms with what Whitley was saying. I needed Philip K. Dick.

A few years ago, one of my Ph.D. students, Erik Davis, asked me to join a team of scholars who were transcribing and editing Dick's massive *Exegesis*, his unpublished journals written roughly between 1974 and 1982, after his experience of Valis as cosmic mind. My role as an annotator of the selected passages was a humble and minor one. The effect of the journals on me was neither.

We have already encountered Dick's Valis experience. Dick believed that the entity that had zapped him in the winter of 1974 was a bio-linguistic plasma, that is, a living form of language-energy. I know that's confusing. It was confusing to Dick as well, who strained every word and every grammatical convention, who turned to every form of mystical literature he could find, who bent and broke time itself, in a brave effort to try to understand Valis. He failed. And that, he learned, was the final paradoxical function or purpose of the alien entity: to *say away* everything he thought.

The word "plasma" is all over *The Exegesis*. Dick, for example, describes a human being with whom the cosmic plasma has bonded (that is, himself) as a "homoplasmate." A homoplasmate is a kind of alien-human hybrid or, if you prefer, a deified human being. Like the apostle Paul and the monk Gregory, the sci-fi author was not being metaphorical. He meant something very real, something exotically physical. He was talking about *pneuma*, the subtly material "spirit" of the Gnostics. He considered himself to be such a secret Christian. He had been zapped, reprogrammed. He was a mutant. He was babbling about the plasmas and paradoxes of the energies of God.

Big Sur Real

I had one more encounter with the plasmas that prepared me for coming to terms with Whitley's ideas. This time it was gentler, more personal. I call the story "Big Sur Real."⁹⁰

Stuart was a marvelous undergraduate student of mine, drawn to the history of American metaphysical religions, cognitive science, and, ultimately, a psychotherapeutic profession. By his own description, he is a rationalist. He considers popular treatments of the paranormal "lame." He

thought of the brain as a kind of biological computer and consciousness as a form of “extended mind,” that is, as an emergent property reliant on brain activity that also extends into the local environment.

That was before the glowing orbs.

The summer before his senior year, Stuart decided to become a work-scholar at the Esalen Institute in Big Sur, California. A work-scholar commits to one month of work at the institute—in the gardens, in the cabins, in the kitchen—during which he or she also studies with a visiting work-scholar teacher in the evenings. This was the cliff community that Stuart entered in July of 2010.

About halfway into the month there, something very strange happened. Around midnight outside their room, just above the back porch of the Lodge, Stuart was waiting for his roommate to take a pee. The two friends were planning to go down to the famous sulfur baths or hot springs of Esalen that sit below the cliff on the property’s far southern tip. As he waited, he was doing pretty much nothing, kicking a few pebbles around and gazing down the anonymous alley between two rows of guest cabins.

Then it happened. What follows is how Stuart described the event at my request. Such an account is important for our conversation here, since it gives us an up-close and detailed description of these encounters, and from a psychologically and philosophically trained observer no less. Here is Stuart:

As I stood there looking straight into the alley I began to notice a rapid and significant change in my consciousness. I lost focus, and the air around me darkened into a thick black haze, unnoticeable except by sight. This misty haze made its way into my field of vision from the periphery towards the center of my visual field almost like tunnel vision, constricting my usual field to a small circle of clarity but in a less defined way—the darkness was slightly opaque, like an internal fog.

As I became aware of this lingering visual sensation, something began emerging from the ground a few feet in front of me. There’s really no reasonable-sounding way to say it, but three softball-sized, golden orbs made of light rose up and out of the ground. I didn’t move, but my attention was immediately redirected

towards them, and my mind began to ease into a placid calm. Colored lighter than gold and dully luminescent, these spheres of light radiated a consistent glow. Roughly, they formed a triangle shape, the plane between them parallel to the ground. They were arranged with one about seven feet away, slightly to the right, one, say eight feet away, slightly to the left, and the final one nine feet away, right in the middle. They slowly rose to a height of about three feet and I looked down on them, captivated. They were beautiful. They were intentional. In other words: I knew that they knew. Though at first part of my mind was aware of and thinking about the wildness and novelty of the experience, all of my cognitive resources soon shifted to an intense focus on the orbs. After a few seconds, I was totally immersed in them. While I had a vivid visual experience, I wasn't really seeing them so much as feeling them. It is difficult to describe, but I don't think I could have reached out and grabbed them; I just knew they were there, in front of me. I didn't move at all, and I didn't feel threatened. They induced in me an overwhelming calm and a peculiar serenity that I hadn't experienced before then, and haven't experienced since. I remember hoping that I could continue to be entranced by these magic golden orbs for a long time.

My attention was broken by the slightest hint of a rattle on the door handle to room 9. [My roommate] was done and had placed his hand on the doorknob to come out. Immediately and without warning the orbs blinked away. No more fog, no more orbs, no more calm—nothing! They didn't even recede back into the ground. They simply blipped out of existence. The whole experience probably lasted about two minutes. "Hey man." My roommate greeted me. "Hey," I responded, somehow casually. We started the short downhill walk to the baths and I didn't mention a thing.

In this same written report, Stuart continues to reflect on the experience. He notes that language is incapable of describing the event. It is the subject/object structure of language and normal perception that is the problem here. These, after all, were not simple "objects" that could have been seen by

another witness, like an animal emerging from a cave at a zoo, he explains. Rather, as he puts it: “They weren’t really seen, heard, or smelled. They appeared *to* me, but also somehow *in* me.” Whatever they were, these balls of light shifted and brightened his experience of the cosmos. He notes that the stars that night down at the baths were different, somehow brighter than he had *ever* seen them.⁹¹

One of the most striking details of the event for Stuart was something that was not part of the event itself but which he discovered after the fact: such glowing orbs, it turns out, are fairly well known in the larger Big Sur community.⁹² It was this “match” between his experience and the experiences of others that impressed him so. He had never heard of such glowing orbs, ever, and yet he had just had an experience that matched the other Big Sur reports in significant details. Stuart concluded that his own subjective experience of the glowing orbs was not simply subjective. In some sense, these orbs were a shared experience. They existed outside his own subjectivity. They were real.

There is one more historical context that seems important here: the grounds upon which Esalen sits and out of which the beautiful balls of light emerged is a Native American burial site.

Energetics

All of these extraordinary encounters with light forms, conscious plasmas, and energy beings bring us back to our earlier reflections on the trippy nature of the imagination. In what sense are these things “imagined,” that is, projected by our own subjectivities? And in what sense are they “real,” that is, in what sense do they exist independently of our seeing them? Or are these the wrong questions?

Notice that all of those earlier reflections about the imagination were just that: reflections. They assumed a *visual* framework. They assumed light bouncing off or emanating from objects or, as we had it in my preferred metaphor, as images reflected in or through a two-way mirror.

The imagination, of course, is all about images. And images, like mirrors, always imply *distance*, that is, they always imply that what one is

observing is separate from the act of observing it. If one *is* something, one cannot see it. One is it.

Similarly, the knowledge born of an image in a mirror is everywhere and always an indirect or distant knowledge. Like Kant's reasonable thing-in-itself, one can never get to the thing itself through sight or the image. One can only see it from afar. This visual distance, of course, is also the basis of modern reason and modern science, both of which need to create a "distance" between the subject and the object being reasoned about or measured. Hence the modern metaphor of "objectivity."⁹³ It's all about creating objects, which is to say: distance, separation, not us.

I recognize that this is a subtle point. But it is also a crucial point that changes pretty much everything. Consider the energetic states discussed in our previous chapters and here again in this one. Some of these involve images, for sure, but even here the seeing has changed. These altered states of energy take us out of the realm of distant objects or mirrored images into the much more immediate world of energy, vibration, electromagnetism, and light itself. Hence Whitley's descriptions of becoming an "electric body" and entering new "energetic levels of being," and of his cat yowling in pain as literal sparks shot between its paws and Whitley's palpably vibrating body. Hence "that Night" in Calcutta when I was radiated and inspired by unknown invisible energies. Hence Seong's "energy worms" that initiated him into a cosmic mind that took him almost two decades to find again, this time in some ancient Greek texts. Hence Jane's descriptions of the dissolution of visual forms, the collapse of the distinction between her eyes and the objects they were seeing, and the paradoxical event of becoming the light and energy of the world. Hence Phil getting reprogrammed or mutated by the beaming light of Valis. Hence, finally, Stuart's balls of light that were not "objects" at all, that did not appear "to" him but "in" him.

None of these descriptions are reasonable or objective ones. And although many of them were accompanied by elaborate visionary phenomena, none of them are primarily about seeing anything at all. Rather, they are fundamentally about *becoming* something, or at least communing with something. My point? That in moments like these, the framework of reason and the object falls away as it is replaced, somehow, with a new network of resonance and energy. This "resonance" is also a kind of

knowing, a most profound kind, but not of the sort that we are used to talking about with our words and grammar. To resonate with an energetic pattern or presence is not to see it from afar as an image or object. It is a kind of mutual “tuning” or “entrainment.” It is a becoming. It is to become present with a presence.

Here, then, is our toolbox as it stands: the spiral of sophisticated *comparison*, the cut of *phenomenology*, the contextualizations of *history*, the quantumlike, communion-like interpretations of *hermeneutics*, an *erotics* pointing toward our own super sexualities, *the traumatic secret* of trauma, trance, and transcendence, and now a particular *energetics*, that is, a focus on the felt energies, powers, and entrainments of resonance. Is it any wonder that so many spiritual practices turn to the sonic drivers of dance, drum, chant, mantra, and song in order to remember, or hum again, the power and presence of this communion?

Comparative Practice with the Light

Since I began taking the plasmatic soul seriously, since I made this conceptual move from reason to resonance, I have had hundreds of encounters with the glowing orbs in the more humble form of my reading and comparative practices. One, after all, generally notices and looks for only what one is ready to see. Once I recognized the pattern, I began to look for it and saw it pretty much everywhere. These last two sections represent a few examples of this comparative practice with the light and its resonances across space and time.

Mark Fox has published a wonderful comparative study of spiritual encounters with light forms. He tracks some four hundred unpublished accounts from a large database begun by the British zoologist Sir Alister Hardy (1896–1985), who believed, by the way, that such mystical experiences were somehow involved in human evolution. These cases include, among many other bizarre stories, a Marian apparition in Yugoslavia, a UFO encounter on an American military base in England, and a silver band of light that zapped out of a television set as it appeared to a dying woman *and* her border collie.⁹⁴

Fox's case studies are all modern. But light forms are known throughout the history of religions. Paul Marshall is a contemporary scholar of religion who has had his own modern mystical encounter, this time with a zig-zagging pattern of circular "little beings" that were somehow simultaneously both in him (recall Stuart's vision) and yet also exactly the same as he was, all-knowing and all-inclusive, the recognition of which triggered universal love. Paul calls this event the "vision of the rings."

Writing out of both the depths of this particular encounter and his own professional historical research, he is presently writing a marvelous comparative study and philosophical analysis of "globular beings," "fireball stories," and "soul spheres" in the history of Western philosophical and religious thought. Here he discusses circular halos, all-knowing eyes, luminous soul-vehicles moving in circular motions, shining bubbles, and spherical encasements or energy vehicles of the human form—so many "soul spheres." Hence the visions of figures like Ezekiel (whose chariot vision included "wheels-within-wheels" that were full of eyes); the Neoplatonists, who imagined the perfection of the soul as spherical; the medieval visionary abbess Hildegard of Bingen (1098–1179), who reported incredibly detailed visions, including one of how circular souls enter the developed fetus; Dante's famous *Divine Comedy*, which describes a heavenly vision of souls as "a hundred little spheres" (*cento sperule*); and modern near-death experiences, like that recently reported by the neurosurgeon Dr. Eben Alexander. Paul also gestures to other religious tradition, citing, for example, the modern Hindu spiritual teacher Swami Muktananda (1908–1982), who famously taught, out of his own meditative experiences, that the divine Self is a "Blue Pearl."⁹⁵

We can continue and extend these cross-cultural explorations. Glowing orbs have also been encountered in Africa and Latin America by professional anthropologists, where they are given numerous and conflicting interpretations by the local people, from the flight of witches or the battles of wizards and shamans, through ghost riders and spirits of buried treasure, to the omnipresent modern UFO. To take just two examples, the anthropologist Yves Marton reported a bright light about the size of a tennis ball that woke him from his sleep and filled him with states of plenitude and joy. More recently, the anthropologist Diego Escolar has given us a detailed report of

some “anomalous luminous entities,” or *luces*, that tracked and followed his research team through the mountains of Argentina for four hours. They all saw these objects, which appeared in different glowing sizes, from that of a soccer ball to about three meters in diameter. They were “tracking” the party and appeared to be clearly intelligent. The experience also included a dramatic temporal distortion, which altered the time that it should have taken to travel through a valley and reduced these four hours to an experienced one or one and a half.⁹⁶ Temporal distortions, of course, are extremely common in reports of UFO encounters.

The Revelation of the Magi, Then and Now

But if this is the case in the modern period, why not take them equally seriously in the historical record? Doesn’t this “future of the past” once again change how we see and understand the past?

Orbs of light are quite common in the pre-modern world, and all around the world. For example, they are very common in the ancient Mediterranean world, particularly in Neoplatonism, where the soul’s body of light, or “shining vehicle” (*augoeides ochema*), is reported as spheroid in shape. The historian of religions Ioan Couliano went so far as to describe this spherical soul-vehicle as a kind of ancient “space shuttle” traveling back and forth between the earthly body and outer space, where the gods were believed to inhabit, or *be*, the stars.

Living light forms are also described in many medieval and early modern records about the “materiality” of purgatory in Catholicism, here as mysterious flames or beings of light that allegedly left physical effects and were interpreted, at least by the officials of the tradition, as suffering souls in purgatory in need of prayer and the Church’s mediation.⁹⁷ How different, and how much more inspiring, was Whitley’s loving response to the “little flame” of his mother’s soul that appeared in the photograph.

Then there is this. Consider the third-century apocryphal scripture *The Revelation of the Magi*. This remarkable text features a luminous entity appearing to the magi in a cave “in the land of Shir” (probably China), changing into the form of a glowing “small and humble” humanoid, and

leading them, as the famous star, to travel to Bethlehem. There, in another cave, the light form is “born” as Mary and Joseph’s infant son, still glowing radiantly.

The text abounds with those weird little details that raise the eyebrows of the comparativist. For example, thanks to the power of the star, the trip from Shir to Bethlehem is said to be “short and swift,” as if time has deteriorated in the presence of a UFO. God is described as light “hidden by the great brightness of himself.” And much like Stuart’s encounter with the glowing orbs that were somehow “inside him,” the bright star is said to be visible only to the magi.

Then there is the comparative practice of the star-child itself. The little star or glowing orb never actually identifies himself as Christ to the traveling magicians and makes startling statements like this: “I am everywhere, because I am a ray of light whose light has shone . . . in the entire world and in every land by unspeakable mysteries.”⁹⁸ The star-child from the East, in other words, was proclaiming a kind of New Age wisdom about the deeper identity of the world’s religions, *seventeen centuries ago*. The Ancient New Age again.

Now consider an e-mail I received from Whitley early in 2014. We were corresponding about a project that I was working on that involved my imaginal readings of his accounts. He wanted to push back against some of these readings. He wanted to emphasize the blunt physical nature of what he had experienced. He invoked the story he told earlier about his vision of a little bright star just outside his upstate New York cabin, which he had just sold after his reputation had been ruined by the media assaults on his integrity and sanity and his book sales had plummeted.

Here is Whitley reflecting back on those encounters and that star-vision in the e-mail:

And yet, you will remember that fellow I meditated with at our cabin, who would come crashing down onto the roof over the meditation room with six others, then sometimes materialize in the form of a small man in a tunic. I touched him. I held his hand. I smelled his skin. (He did not bathe, I found.) He indicated to me that he was from a level of being “between lives,” but also that he was not dead—that I, in fact, was the one who was dead! His thought was that being plunged into the time-stream was death. That ours is the world of the dead and his, outside of the stream of time and able to observe it, is the world of the living.

Who was he, then? Small. Six companions. The Seven Dwarfs!

Some of my son's friends once came to the cabin and slept out in the woods. (They were teenagers, which explains this foolhardy act, I suppose.) They saw seven glowing balls of light moving through the woods. A couple of years later, on our last night at the cabin, when I asked to see him as he really was, he appeared as a little star hanging over the front yard. It was radiant, and the rays were like living light. They penetrated my skin, bringing with them the most intimate sense of human touch I have ever known. It was a moment of transcendent beauty and joy.

The next morning, we left forever. I was impecunious, defeated by the wiles of the world and barely able to put food on our plates.⁹⁹

I must add here that Philip K. Dick often came to the same conclusion from his Valis encounters, namely, that *we are dead*, and that the “dead” we see are actually the living. Whitley makes the same suggestion above. Charles Fort proposed the same “flip” almost a hundred years ago.

Whitley then goes on to reflect on the literary processes of memory and reframing that shaped his own accounts and continually reshape his understanding of them. He ends with a reference to his implant:

Now, I know that I have recorded these things both in books and in letters to you before, but we are after those flickers are we not? Each time, it's a little different, a little new, I hope. (Both more right and, of course and as always, more wrong!)

Before these experiences started in my life, I used to think of us as being inside Plato's cave. However, I have come to understand that we aren't inside the cave at all, but rather, we ARE the cave. And all of those shadows and all of that damned light cannot put Humpty-Dumpty together again.

But, alas, every time I gain the measure of the flickering and imagine that I have mastered it, I reach up and touch the implant in my ear and I think, oh dear!

Here, of course, we have another “Revelation of the Magi.” We have another sphere of light and transcendent bliss, another shining vehicle of the soul, another glowing orb, another little star that can morph into a small dwarflike humanoid.

I do not, of course, know what all of this means, but I do not see how we can avoid the obvious similarities here. Surely, those echoing resonances across the millennia mean something, something that we have not even begun to recognize, much less try to understand.

Once we begin this comparative project, once we really practice this future of the past, I suspect that we will begin to see the world and ourselves in another light, literally. Perhaps we will see that the soul is a UFO, a little

radiant star twinkling inside our heads and hearts that will lift off into who-knows-where when these carbon-based brains and bodies finally fail and fall away. I hope so.

Mythmaking

WHITLEY

Man know thyself; then thou shalt know the Universe and God.

PYTHAGORAS

The human mind is a mythmaker. We do this because we need mirrors, and our myths are those mirrors. We use them to understand ourselves and to find meaning in the way we relate to the world around us. In ancient times, myths and stories were used to explore psychological states, desires, fears, and needs. Many myths are warnings about psychological territory that is dangerous to enter. The story of Oedipus explores unresolved desire for the mother, which is also a significant factor in my own personal life, obviously—normally hidden, but visible, for some reason, in me. The story of Thyestes reflects the desire to dominate one’s children, even to kill them. Stories such as that of Persephone’s descent into the underworld are an attempt to grapple with death, and to reconcile our own mortality with the fact that so much of life, dying in the fall and being resurrected in the spring, seems immortal. It is why Jesus supplanted the pagan Green Man, a resurrection deity, in much of Europe. “April is the cruelest month, breeding lilacs out of the dead land.” So beautiful is spring, but so heartrending.

But surely, with our modern understanding of human psychology and the brain and the comparative study of mythology and religion, we're past all that. No more mythmaking. We understand ourselves too well.

But, in fact, we do not. The more deeply we plumb the psyche, the deeper the well appears to go. Somewhere down in there, it would appear that there is a place where the line between the physical and nonphysical blurs, where imagination and reality somehow converge, and events unfold that are not yet understood at all. It is the realm of Jeff's "imaginal," where the electrons of thoughts somehow converge into the molecules of things. But how? The mind knows, but not, perhaps, in ways that it can articulate, or perhaps that it cares to articulate. If we could control this uncanny transference, after all, we would be living in an entirely different world, ruled by laws far more salubrious than the ones we must follow now. Perhaps in Eden such blessings flowed. Here, in the real world, we have only echoes in the form of impossible events that sometimes happen.

I had a friend, an acerbic radio host named Morton Downey Jr., who had dreadful teeth. He looked like a Pacu, the fish with human teeth. One night, he was driving on an isolated road when he was forced by a sudden fog to stop. Shadowy figures came around the car, and he was taken out into a region of light. He blacked out, only to discover when the fog lifted and he woke up in the car, that his teeth were now perfect.

How I loved that story. Alien dentists, though, or the promise of the imaginal? Nevertheless, miracles do happen, but so infrequently and arbitrarily. Why can we not turn the magic on at will? Just as we are now mystified by why cancer sometimes disappears on its own, we don't now know how the imaginal works, or, for that matter, if it is even responsible for things like Mort's good luck. But surely it is accessible to study—unless, of course, it was indeed dentists from another world, or even the future, who knows? I will say that, knowing his story, it was hard to do a face-to-face interview with him. I was so fascinated by his teeth that I'd keep losing the thread of the conversation.

Until the nineteenth century, western mythological figures were generally either monsters of one sort or another, or human in form. Their powers were generally somewhat greater than those of the people who had conceived them, but, just like ordinary men, they were subject to the laws of nature and the punishments of the gods. In fact, there was an eloquent

warning about violating them expressed in many myths. Icarus flew too near the sun, and his falling cry haunts us still. Prometheus gave us fire, which is the foundation of humankind's power over nature. His punishment was dolorous indeed. Atlas Telamon, having been on the losing side of a fracas with the Olympians, was condemned to hold up the world.

The world was dangerous, but not overwhelming. Nature was usually comprehensible and predictable, if also generally harsh.

When the industrial revolution came along, for the first time, many millions of people began to lose touch with seasonal, predictable life. They found themselves overpowered by a strange new world, seasonless, unnatural, and terrifyingly powerful. Cities expanded, sucking up the old countryside into a maze of dirty streets, becoming the gigantic mechanical clockworks that we see to this day. The soul seemed to have disappeared into the machine.

It was out of this milieu that the idea of the superman emerged. The wise, fierce, and complex Athena burst from the head of Zeus, but it was the superman, as ominous a figure as ever conceived, that burst from the mind of Friedrich Nietzsche three millennia later. The superman was bold, furious, and terrible. He was bigger and more powerful even than the grinding mechanism of roaring factories and human anger that now surrounded us, even more powerful when amplified as the whistling bomb and the stuttering machine gun. He was not like Achilles with his disappointing heel, but invulnerable to nature. He had to be, because if he was vulnerable to nature, then he must also be vulnerable to the greater forces of the poisonous factory, the bullet, and the bomb. He was a cleansing agent who would sweep away all that was unjust and inhuman.

He was no hero, but he was the inspiration for one—in fact, for a whole genre of superheroes who have turned out to be almost literally addictive, so starved are we for the illusion of empowerment.

During *X-Men Origins: Wolverine*, I walked down to the front of the crowded theater and looked back at the faces of the audience. As the screen flickered with mayhem and gushed with blood, I found myself looking into a sea of smiles. This is not always true, but people do feel a weight lifting when the X-Men defeat what, in the real world, cannot be defeated. They do it with powers of mind that, in some sense, many of us hope might be real—and which do touch at the edges of our lives, offering hints of super nature.

I found myself so attracted to these figures that I bought a copy of *X-Men #1* twenty years ago. Possessing it pleased me. Now, of course, it has turned out to have been an excellent investment.

By the early part of the twentieth century, we were beginning to be able to observe myths forming within ourselves. Sigmund Freud's work enabled us to see that we had an unconscious, and to shine the light of insight into those dark places. In *The Red Book*, Carl Jung explored his own underworld in a completely new way, penetrating into it with words rather than leaving it as the unseen basis of his consciousness.

What we did not know is that the unconscious is apparently a house of many rooms, and some of them, it would seem, are occupied by presences that did not care to be exposed to the light of science. They sought for a new way to make myth.

Across the 1930s, as the economy foundered, the world was overwhelmed by waves of helplessness. Late in the decade, the creative community began a process that continues to this day. Beginning with Superman in 1938 and Batman a year later, it injected one hero after another into the entertainment culture.

Why did this happen? The reason was simple: comic book artists were coming up with new ideas all the time, and exposing them in comics on the nation's newsstands. Superman sold well, which led to Batman, then to the explosion of superheroes that followed in the 1940s.

But these were not like the heroes of the past, vulnerable and conflicted. Superheroes are moral perfectionists who are universally dedicated to the welfare of the helpless. Superheroes don't pout like Achilles. They aren't neurotic gods like Zeus. Their enemies reflect the evils we all face, with emphasis on corruption and organized crime—the two areas of criminal activity that make the public feel most helpless.

The 1940s involved the most terrible war ever known, which ended with the emergence of a weapon so fearsome that it was not difficult to believe that it might destroy souls, and with them the entire world. And then there was the Holocaust, orchestrated by cultists in black uniforms decorated with the death's head, who had proclaimed themselves supermen, and did indeed reflect the ruthlessness of Nietzsche's prototype, if not his morality.

After the war, the superheroes slowly faded. Every American was a hero. We were victorious. Supermen, all. But then came the cold war, followed in the 1960s and 1970s by an increasing sense of personal helplessness, that has risen to the quiet epidemic of frustration that we see today. And with it, the superheroes have returned, bringing with them ever more engaging superpowers—the imaginal at war with the cruel, grinding mystery of the real world in deeply satisfying ways.

Into this building cultural storm there came something completely unexpected. On June 24, 1947, a man called Kenneth Arnold, among other things an amateur pilot, informed the air force and the media that he had observed a formation of silver craft flying past Mount Rainier at the remarkable speed of twelve hundred miles per hour.

In a world desperate for some sort of salvation, there was now a new story, and not only that, one that looked as if it might promise some sort of deliverance. The story was being told in headlines, but also in the very ancient language that we use to address the unknown. Such stories develop along lines familiar across history: strange experiences are reported, tales are told, myths are spun, beliefs emerge. If the beliefs are eventually ritualized into religious practice, then they gain persistence, usually for a few hundred or up to a few thousand years.

During that period, also, the horrendous “Randolph” experience entered my life, a true descent into darkness that would forever rip off the door of myth within me, leaving me vulnerable before sinister and little understood presences, inner and, it would seem, outer. Later, I would add my own terror to the public mythmaking process, with results far beyond anything I or anybody else might have expected. The myth of the alien, which came boiling up to the surface in me, turned out to also be hidden deep inside millions of people, where it had been secretly deposited by an unknown process.

Instead of the mysterious power of the gods to inspire belief, we now have the mysterious power of aliens. In the 1950s, they were “space brothers,” possessed of the wisdom of the gods. But from the moment the Betty and Barney Hill case was described in John Fuller’s *Interrupted Journey* in 1966, the narrative moved in a radically new direction. The Hills reported a terrifying encounter on a lonely New England road. They had no direct memory of it, but Betty called Pease Air Force Base to report the UFO

they recalled seeing. They weren't experts. They had no believability. Their report was dismissed as a sighting of the planet Jupiter.

Maybe aliens were there and maybe not. But something unknown was provably present: our inner mythmaker had discovered a new way to sound from the dark within, its ancient dirge of mortality, that most poignant and true of all human cries.

The Hills were interviewed by an investigator from the National Investigations Committee on Aerial Phenomena. They also began suffering from nightmares sufficiently disturbing to cause them to seek medical help. They were placed under hypnosis by Dr. Benjamin Simon, whereupon a bizarre and frightening narrative emerged. They recalled being taken aboard a strange machine that had approached their car out of the night sky. Aboard were a number of humanoid creatures, the same sort of gray creatures with appalling eyes that I would also confront in the night a few hundred miles away and twenty years later. Betty remembered seeing a star map that an amateur astronomer eventually decided indicated that the creatures and their craft had come from the Zeta Reticuli star system.

They became known as the Zetas, then later, the Grays. They weren't godlike, either, but ambiguous figures who slipped through the night stealing people and, as rumor had it, not always returning them. But they also gained a reputation for wisdom, and thus present an equivocal picture.

Because it is equivocal, it can serve the same purpose as older myths. It can be used by the mind as a tool for inner exploration, at once drawing hidden fears to the surface, rekindling the sense of wonder that the modern world has stolen from us, and giving individuals a much needed feeling of value: they may be the tiniest specks in an ocean of humanity, but, by God, the aliens are interested in them.

This modern retelling of the old story acquired another novel layer. The gods now not only flew around in spaceships, they weren't gods at all, but scientists from another planet interested in us as experimental subjects. Unremarked was the fact that the Grays were, in appearance, strikingly similar to the fairy folk of Northern Europe. Also like them, they were frightening, came out of the night, and abducted people. I might note in passing that the majority of our correspondents had last names suggesting Scotch or Irish descent. What this might mean I don't know, but, as is true of most of this material, there must be an as yet unknown significance. It was

not a matter of 10 or 15 percent of the correspondents having recognizably Scots-Irish names. In the random sample we took of five hundred names, it was 55 percent. This kind of ethnic specificity, coupled with the abundant fairy lore common among the Celtic peoples means something, it must. But what? Hopefully, we'll eventually decide that knowledge of the fairy and UFO lore should not be rejected, and try to make sense of it.

We have a habit of assuming that myths and folktales are confabulations. That is not my experience of the UFO lore. As I have repeated a number of times in this text, there is a consistency of innocent witness that makes that conclusion impossible, at least for me. Additionally, many, many of the letters we received involved complex multiple witness encounters. Plainly, whatever is happening, it is not "all in the mind." Or, if it is, then, as I have said, the mind is not all in us.

This new nascent folktale was at its core very like the older ones. Strange things were seen by Mr. Arnold. His report evolved into the myth of the flying saucer. More strange things were seen—dozens, thousands, waves of them. But there was a modern difference. This time, it was not so easy to dismiss the reports, or to keep them confined to mythical realms—or rather, to keep the mythical confined to mental realms. When these angels flew, we sometimes had cameras and, in a few cases, observers of exceptional quality such as NASA expert Paul Hill joined the witnesses, contributing his own exquisitely detailed sighting narratives. In his book about his observations, *Unconventional Flying Objects*, he offers expert descriptions of some multiple-witness UFO sightings in which he participated. His sightings remain among those listed by the U.S. Air Force in Project Blue Book as unknown. And it should be remembered that the press misinterpreted the air force's conclusions in Blue Book. They did not say that UFOs didn't exist. They said that they weren't a matter for the United States Air Force to be concerned about.

Although the U.S. Air Force was quick to dismiss the Betty and Barney Hill case (and some observers made the claim that Barney Hill's report was a nightmare caused by the tensions he felt from his interracial marriage), another modern aspect of it soon amplified its power far beyond what might have happened in the past. This was the John Fuller book, and, above all, its excerpt in *Look* magazine, which was read by millions, including me.

I remember how chilling it was at the time. I was just entering young

adulthood, and it caused me to feel a curious but intense nostalgia and deep uneasiness. I was not aware of any memories, but fears haunted my nights and I suffered from a strange sort of vigilance that would immediately startle me awake when an uneasy breeze rattled the leaves or a car whispered past the house too slowly, or a rabbit screamed in the night.

With the publication of the *Look* magazine excerpt, the alien abduction narrative collided with the UFO narrative, and the two combined into the modern story.

As only the surface of the modern world is different from the surface of the past, while the interior, human impulses remain the same, so also the new myth is different from its predecessors, but only on the surface. It is different not so much in the way that it is revealing itself, but in the way it is being seen. It is not different in how it functions in the culture.

Just as the modern world, with its great cataracts of traffic, its glaring lights, its airplanes and skyscrapers, looks different from the past, the UFO narrative sounds different from earlier folk narratives. In both cases, the difference is a reflection of our expanding technology and science. Flying saucers appear to be machines. They come from the sky. They contain peculiar creatures. Ergo, they must be spaceships from another planet, and their inhabitants, obviously, are aliens.

They are not perceived as gods. There are only a few UFO cults, and they are small. You don't find many people praying to the Grays, although there are those, like me, who have found wisdom from a relationship with them. Whatever they are, they are hard and uncompromising, and there is that unavoidable—and very real—sense of danger. Like owls, they are ominously beautiful, but also predatory creatures of the night.

Prior to my 1985 encounter, I would have scoffed at the believability of the UFO/alien narrative, but not at its logic. Given the age and immensity of the universe and the apparent profusion of planets of all sorts, life elsewhere is statistically inevitable, and intelligent life probably occurs from time to time. But, while I am quite sure that parts of the close encounter experience unfold outside of the mind, the way that the myth of the other is integrated into culture over such a long period of history, in different forms, each appropriate to its period, tells me that it is something other than alien scientists studying us.

Could it really involve intelligent beings from elsewhere in the

universe?

Based on the way the human experience is unfolding, I would guess that intelligent life is usually a short-lived biological phenomenon, so it's probably pretty rare, but if anybody has ever immortalized themselves by establishing an extensive presence outside of their home planet, who knows what they might have been able to achieve over time?

Although I have been identified as an advocate for belief in an alien presence on Earth—and have, at times, entertained such an advocacy—I have never been comfortable with it. This is because it is so far unsupported by unimpeachable evidence. The evidence, though, does support the notion that something other than the shadows within us are generating this story. It is, in other words, a story with an external component, but clearly not one that we understand. Given this, I find it very strange that we seem unwilling to even try to take an objective look at it.

It might involve aliens, who knows? It's not entirely inside the mind, that seems clear enough if the physical evidence is faced for what it is.

The first report of an apparent alien spacecraft in the Western canon was made by the prophet Ezekiel. What he actually observed is impossible to know, but his description is very like many modern UFO reports. In fact, the whole “ancient alien” canon has added yet another dimension to the evolving myth. But the question “If they have been here for thousands of years, why?” is never asked.

The sighting aspect of the story not only has an ancient provenance, it continues to appear from time to time across history, the ship from the sky, but then, in the modern world, it suddenly goes from a smattering of observations to an avalanche. Is this because the activity increased, or because communications are now better, or both? Not only that, it is accompanied by the Grays with their abductions, sexual intrusions, and implantations, and there is nothing that spreads a story faster than fear. Additionally, there are now the high-level narratives such as that of Paul Hill, the photography, the vast amount of witness testimony, and the implants.

Or, to put it another way, our story has been made as convincing to us on our terms as those of the past were to our predecessors. We have always assumed that myth only came out of the mind, but, looking at this modern manifestation closely and objectively, it is clear that this is not true now, and perhaps has never been true.

It is crucial to understand this. The story still belongs to us, just as it always has, but now we can see that it isn't entirely imaginary. As much as we might like to believe otherwise, an objective view must accept that there are UFO sightings that have passed every test for believability, that the implants cannot be explained, and that the vast number of people claiming close encounters are having an experience that we cannot yet identify.

Our difficulty with this comes when we take a step too far and begin making claims about the phenomenon that are unsupported, either that it is without substance or that it must be alien contact. It is simply not yet time for this debate.

We respond to this new narrative as story, either believing or disbelieving. But, just as the story has acquired a convincing underpinning of expert witness and physical evidence, we have also acquired both scientific and intellectual tools that enable us to study it in a completely new way. By "intellectual," I mean the comparative study of mythology in anthropology, history, and the study of religion—in other words, exactly what Jeff is doing here.

If we step back from the debate and start approaching the story as a cultural artifact, and analyzing its physical manifestations objectively and without preconception, we can make significant progress in finally understanding not only the alien contact story, but conceivably all of the supernatural, or more accurately, super natural. But it is going to require larger-scale thinking than we habitually apply to the subject.

Prior to the publication of *Communion*, I had not the faintest idea that the close encounter experience was present in the culture to the extent that it was. Nobody did. The explosive response to the book caused it to rush onto the bestseller list, and then the avalanche of letters started, and I have to say that I was shocked to my very depths to see the power of what I had unleashed.

Communion's advocacy on behalf of the ambiguity of the experience was swept away in a cacophony of claims and counterclaims. I ended up in the middle of the strident debate between believers and disbelievers. As I was neither, my position was tenuous.

In part, people were simply too excited to see my book for what it was. My close friend, the experimental psychologist Dr. John Gliedman, the husband of NPR reporter and author Margot Adler, warned me that this might

happen. He was one of the most dynamic intellectuals I ever met. He accompanied me every step of the way through the *Communion* experience. He and Margot were among the first people to whom I told my story.

After reading the manuscript, he said, “People are going to take this as a claim of alien contact.” I disagreed, pointing out the theme of the book. He said, “Your writing’s too vivid. Nobody’s going to see the theme. They’re going to see the aliens.” That was why I added, in large type, in the front of the book, the sentence about the human mind winking back from the dark.

It didn’t help, obviously, with the result that, in 1989, Janet Maslin would begin her review of the film adaptation of *Communion* with the phrase, “Whitley Strieber’s *Communion*, an account of Mr. Strieber’s firsthand experiences with extraterrestrials . . .” She goes on to rage a good bit about me and that little movie, but the point here is that she begins with exactly the assumption that Dr. Gliedman warned me about, and she is a distinguished and discriminating reviewer. When I saw that review, I understood that my failure was total. It was one thing to fall victim to TV personalities looking for sensation, but this meant that the broader intellectual community I had hoped to reach had also been blinded to my theme by my prose.

I had also failed to detect the level of revulsion that the intellectual community had for the subject of alien contact. I didn’t understand that the emotions involved are powerful enough to overwhelm logic. The idea of a far more advanced “other” that observes us without contacting us is extremely intimidating to anybody involved in the process of expanding our intellectual content and scientific knowledge.

Above all, I did not understand what was roiling under the surface—unknown to the cultural leadership, in fact, much as Christianity was ignored by the Roman elite in the first and second centuries, or the movement of Islam in its hinterlands remained unknown to the Byzantine leadership in Constantinople a few hundred years later.

But cultural change is like that. It comes from below. Perhaps Ms. Maslin was touching a nerve of her own when she offered the opinion that I had a “gift for framing his visions in terms that readily appeal to the popular imagination, at a level only slightly higher than the one reached by supermarket tabloids.” Perhaps a bit unfair, but an eloquent *cri de coeur*, to be sure, and for a good reason. It would take very little, just now, to

transform the UFO cult into a powerful new faith. A flying saucer hanging over Washington for a few hours would do it.

That happened over Lima, Peru, in February of 2015, but went unremarked not because it wasn't a genuine mystery, but because it was possible to ignore it. A very strange UFO appeared over Camarillo, California, at around Thanksgiving time for six years running, and was expertly videotaped through a Celestron telescope by filmmaker Steve Neill, but that was also ignored. In fact, indisputable UFO events happen fairly frequently, but they are always ignored, not because they should be, but by tacit mutual consent, as the more comfortable way to deal with them.

As hundreds of thousands of close encounter narratives came pouring in, Anne and I found ourselves witness to what is certainly one of the most intense reactions to a book that has ever taken place. We were horrified. If this was contact, then what were we to make of it? What could it mean that it would unfold like this, a bizarre experience in the night, terrifying and enigmatic, devastating the lives of so many of these people?

While I was writing *Communion*, I had done research into the UFO and alien phenomena. I had seen that there was a debate, but I had not seen how strident it was, let alone that there appeared to be, of all things, government involvement in it. And none of the debaters had the faintest idea of what was happening in the cultural background, that this vast number of people was involved.

The presence of a level of official concern was disturbing to me. Had not the air force said that it had no interest? I thought to myself that aliens might actually be here, and the air force might be lying. The most telling—and disturbing—fact that I uncovered was that NASA had prevented Paul Hill from publishing his book during his lifetime. Reading it, I could see that he had intended to make the manuscript public after retirement. Instead, his daughter had found it among his effects when he died.

Thus there were powerful forces that did not want a man of his authority to enter the debate on the side of the UFO believers.

Later, I think I discerned the reason, which is an extremely odd one, almost funny, certainly pitiful. After the publication of *Communion*, my uncle, Colonel Edward Strieber, introduced me to his friend General Arthur Exon, who proceeded to tell me, in regard to the Roswell incident, that “everyone from Truman on down knew that what we had found was not of

this world within twenty-four hours of our finding it.” When I asked him about the secrecy, his answer was quite revealing. He said that he had heard that a memo had been written in the early fifties speculating in a quite unsettling way about why there had been no invasion after the surge of UFO sightings that began in 1947. The memo, he said, theorized that obscure laws of physics might prevent them from entering our reality without first convincing us that they were real, and that official admission might be the tripwire that would enable them to come through.

Obviously not aliens in the conventional sense, then. If we can land on the moon and Mars, if they managed to get here, they could surely land in a conventional way. What did the author of this memo, possibly Dr. John von Neumann, think they were, then? That question the general could not answer.

Von Neumann was certainly interested in aliens. In thinking about how travel around the galaxy might be accomplished, he posited what has come to be called the von Neumann Machine. This would be a self-replicating device that would seed the species that developed it whenever it found a suitable planet.

However, it was his work on the quantum perception problem that might have been germane to the memo. If parallel universes exist, and that’s where our visitors come from, then it’s conceivable that they might need us to believe in them before they can become invested in our reality. If so, then the whole vast UFO and close encounter experience could be a sort of military operation designed to open the door in our minds from their side.

All very interesting and a possible explanation for the government’s continued blanket denial. Even without knowing whether or not the speculation had substance, no government official could ever risk opening that door.

Could actual, physical parallel universes exist? If so, it doesn’t seem beyond the realm of possibility that the mind might in some way mediate communication among them. Certainly, something that we do not understand is happening. But one still has to ask, what on earth might it have to do with the military?

After going on a long journey of research into this question, much of which was narrated in my book *Confirmation*, I have come to the conclusion that, while the military and intelligence agencies are indeed hiding something in regard to this subject, they don’t know what it is, or have misunderstood it.

But their secrecy is a major input that is energizing belief in aliens. The more they obfuscate and deny, the more the public becomes convinced that what they're denying is true.

The first element energizing the myth, of course, is the strangeness and excitement of the narrative: A UFO sighting or a close encounter is a riveting event in any life. This hidden current of witness, which is enormous, remains to this day almost entirely unexamined in any objective manner at all.

The second is the public conversation, which is largely ghettoized in the UFO community. Most of the people involved are entirely sincere, but the community is a social isolate, dealing as it does in rejected knowledge.

The huge volume of mail that we received was a shock, but there was something else there, which has come, over the years, to seem truer and truer: there is, concealed in the structure of the reports, something that looks very much like a plan. But, as always, it's not possible to make a definite determination.

I pointed out in *Solving the Communion Enigma* that we might act in very much the same way that our visitors are acting, were we to reach a planet inhabited by a less advanced intelligent species. Our anthropologists would demand that we conceal ourselves, so as to not disturb their culture and ruin our chance to study it. This would be especially true if the scientific gap was great, and essential if they were fundamentally less intelligent. For example, there is no way that we can ever communicate the meaning of our world to a lower primate. Nothing we can say or do can explain the reality of our lives to a creature that cannot even understand what clothing is. To study, often to protect such creatures, we anesthetize them, abduct them, fit them with tracking devices, sometimes treat them medically, then return them to their habitats. Some of us hunt them. A fringe of the disturbed torment them.

As we approach wild creatures, they struggle, they react with terror, they have to be subdued . . . exactly as I did, initially. But over my years of contact, I was tamed. Now I am only afraid, not helplessly panicked and flailing dangerously. To get to this point took mutual effort. They tamed me, and I tamed myself.

Once, after I had been dealing with the phenomenon for about five years, a blurry, indistinct figure appeared in our bedroom door in our cabin in upstate New York, then rushed toward me. Anne and I were both awake reading. I erupted, threw my book up in the air, grabbed the little table beside

the bed and hurled it at the thing, smashing the table to bits. I cried out, “You’ll never get me! You’ll never get me!” Anne threw her book up in the air and screamed, too. She saw nothing.

One would assume that this was a waking dream. But the next day I received a call from my brother. He had been playing his guitar in bed in San Antonio when a figure had appeared at the foot of the bed. He reacted by throwing the costly and much loved guitar at it. The thing seemed to leap out of the top of his bedroom window.

He told me his story and added that he’d found a circle of glass cut out of the top of the window. There were three places where shards of the glass seemed to be missing, but otherwise it was intact. He said that he’d gotten a message, or had a feeling, that I needed to be careful or somebody might get hurt. When I told him what had happened to me, like Jeff’s friend Dan who had discovered that his honey jar had mysteriously migrated into his tin of flour, we were helplessly perplexed.

Next, I got a call from a friend who had just come home from a trip. He was well read in the *Communion* book, and had had some odd experiences himself. He had been surprised to find three shards of glass on the floor inside his locked apartment. He called me to tell me about it because he’d had the feeling that it had something to do with me.

So, did an alien approach me, then when I reacted badly zip down to San Antonio to deliver his oblique message through my brother, then somehow convey three shards of glass to the apartment of my friend, or was it something else entirely?

Eventually, perhaps, we’ll look at events like that in a large enough context to actually study them. Just now, though, all that can be done is to describe them, not explain them.

The past feared its gods, we fear our visitors. I wonder, have they emerged out of the old story, or are they a new arrival of some sort who have very cleverly fitted themselves into it, or perhaps been fitted into it by us? Could it be that any approach like this, whether imaginary, imaginal, or real is going to cause us to respond by mythologizing it?

I have certainly played my part on this particular stage. To a degree, this has been because of my writing. In part, also, it’s because of my desire to explore different possibilities, which has sometimes caused me to range too far from the question. This has helped open the door to the assumption that

I'm claiming contact with extraterrestrials, not reporting perceptions, that I have, as it were, failed to "make the cut" that Jeff encourages in chapter 2.

One thing that we noticed at once about our letter mail was that the great majority of the reports came from the 1970s. There were a few from as early as the 1930s, but the spike during the '70s was notable. There were many fewer stories from the 1960s, and from the early '80s on, they have continued to decline steadily. Now, on my website, I get perhaps two or three reports a week, and, once again, most of them are memories of things that happened in the '70s.

Were we somehow approached then, by something that has moved on? Perhaps they were indeed alien scientists, who concluded their studies here, or were drawn elsewhere by a more interesting species. Or is it that the initial interest the book generated has worn off, and people aren't bothering to make reports anymore?

Unfortunately, we cannot know, not without more facts, and unless the climate changes dramatically, we will never know. But myth is like that: it resists study. Our fears live in the dark, and from time immemorial, that's where we have processed them. I am hoping that by collaboration between, for example, psychologists and mythologists, we will finally succeed in pointing the way to a vision of the phenomenon that is broad enough and objective enough to be worth contemplating.

Ideally, both the National Science Foundation and the National Humanities Foundation would see fit to encourage granting in the area. Since it's not clear that science can do more at this point than confirm the existence of the enigma, it seems that the humanities are of enormous importance if we are ever to gain the perspective we need to advance our knowledge of it.

Jeff sees the engagement of the humanities as of primary importance, but I think that science has a role to play, too. It can do things like observe activity in the sky in a methodical way, study the brain function of close encounter witnesses, study the implants, and so forth. While this cannot answer the question of what, at its core, is happening, it can confirm that something is taking place that, if not real in an absolute sense, is present outside of the imagination, if not entirely independent of it. But if we are ever to evolve ways of talking about it that lead to understanding, comparative mythologists and experts in religion are going to need to engage exactly as Jeff is engaging. It is through their work that a useful way of talking about it

will evolve. In our discussions, Jeff has offered the opinion that scientists dismiss myth as being inaccessible to their methods of study. I would agree that the scientific establishment has no way of addressing them except through the narrow slit of psychology, but I think that there is potential for a sea-change in this area.

This is because of what has been known, since David Chalmers coined the phrase in 2009, as the Hard Problem, specifically, the Hard Problem of Consciousness. Consciousness is inlooking, and we look into ourselves through the dark glass of myth. I am confident that science will find ways of walking those inner pathways with tools that perhaps have not even been invented yet. When they do, they will find trail markers. These markers will have been left by comparative mythologists.

There is, of course, a huge danger here and a pitfall. It is that, if science is engaged in this way and, say, does determine that any part of the phenomenon is physically real, the public is liable to jump to the same conclusion that they jumped to because of the way I described the *Communion* experience. They are going to come to believe that scientists are saying that aliens are real.

But if we are ever going to know ourselves, we need to know our myths—truly know them and how they come about, not simply argue about them. This is especially true of this new myth, which is by historical standards extremely powerful, is capable of exploding into the cultural foreground at any time, and has the potential to change our world completely. Before that happens on its own, we need to make an effort to understand, so that we can use the forces it is unleashing for the betterment of our lives and our world. We need, finally, to recognize that we have been willfully ignoring this chance to know more of ourselves by pretending that the most provocative evidence doesn't exist. It is time to open the door to the chamber of the mythmaker, and at last see who lives within.

The Mythical Object

JEFF

Anybody may theorize upon other worlds and conditions upon them that are similar to our own conditions: if his notions be presented undisguisedly as fiction, or only as an “interesting hypothesis,” he’ll stir up no prude rages.

CHARLES FORT, *THE BOOK OF THE DAMNED*

Whitley articulates a number of important positions in the previous chapter. Among these is the conclusion that the U.S. military and government do not understand the UFO phenomenon, and that their secrecy, whatever its motivations, is feeding the mythology. He observes that a small collection of communities have formed around the stories and secrets, but that these are generally isolated and marginalized by the broader culture since they are embracing a form of rejected knowledge. And he notes that we now possess both scientific and intellectual tools to study the formation of such mythologies and communities that no previous culture possessed. All of these conclusions, it seems to me, are very good ways to move the conversation forward.

But there is one consistent thread through our conversations here that reveals a basic disagreement or difference between the two of us. Whitley, or so it seems to me, often appears to think that science is the way forward, that

science has what it takes, that more science will somehow be able to crack this mystery.

I am very skeptical of this. I think the science is crucial, of course, but I do not think it is enough, or ever will be. It is my own position that the tools of the humanities—and particularly those of the study of religion and anthropology—are much more promising and, frankly, much more powerful in this particular arena.

It is patently obvious to me, for example, why the U.S. military and government do not understand something like the UFO phenomenon—because it is not a military or technological object, because it is a *mythical object*. And I intend that phrase in the most paradoxical sense possible, that is, in the sense of something seen or physically encountered that is actually a materialized story or meaning. I mean a thing that is also a thought. I mean a friggin' story that shows up on radar.

Put differently, these spectral encounters participate in both the material and the mental. They are objective *and* subjective at the same time. They are expressions of the one world we encountered at the end of chapter 15. Like the bizarre objects of that previous chapter (the implant, the magical stone, and the honey jar), they are props in a drama. They pull us into their stories, even as we tell them ours. Whitley gets this just right when he writes: “We have always assumed that myth only came out of the mind, but, looking at this modern manifestation closely and objectively, it is clear that this is not true now, and perhaps has never been true. It is crucial to understand this. The story still belongs to us, just as it always has, but now we can see that it isn't entirely imaginary.”

If you want to understand mythical objects, you go to the people who know something about these things. You go to people who have given their lives to studying and understanding the global history and functions of mythology and mysticism. You go to anthropologists, literary critics, and scholars of comparative religion. John Keel saw this almost fifty years ago now in his pioneering book *UFOs: Operation Trojan Horse* (1970). He pointed out there that it was foolish to turn to engineers in order to understand something in the sky whose true meaning lay in the souls of the contactees and the rich history of Western esotericism.

Here is the catch, though. People who study mythology and comparative mystical literature, people like me, are almost universally allergic to

accepting the possibility that these subjects might be real objects, that they might have some physical, or parapsychical, existence outside the subjective imaginations of the individuals and cultures that construct, ritualize, and turn them into social and political institutions.¹⁰⁰ This is probably a premature conclusion on our part, but that is where we are at the moment.

In other words, Whitley's faith in science and my faith in the humanities are probably both misplaced. Neither can really deliver the goods here.

So what to do?

Well, we can begin by simply admitting our ignorance. We can also recognize the likelihood that this ignorance is not a moral one, that it is not somehow "our fault." It is much more likely a perfectly natural or cognitive condition, that is, a function of how we are put together, how we are "wired," as people like to say today, entranced as they are with computers and smart phones.

As a partial response to Whitley's implant, I discussed the spiritual practice of saying away our deepest convictions and beliefs as relative historical products and as constructs of human language and grammar and, deeper still, as biological consequences of our neurological hardware and sensory system. As a result of our cultural software (read: our languages, grammars, social customs, and beliefs) and our neurological hardware (read: our nervous system, senses, and brain), we are *constantly* equating what we believe or perceive for what is. These constant, unconscious acts need to be named for what they are: mistakes.

Our religious symbols, for example, may or may not *point to* some aspect of ultimate reality, but they are not literally true and should never be taken as absolutely accurate. This is the fundamental lesson of the comparative study of religion. It is also the fundamental mistake that the religions have repeatedly made throughout recorded history: their believers have too often (not always) confused coded cultural memories of real encounters with *something* as literal and perfectly accurate descriptions of *everything*. Much too often, they have forgotten, or simply have not known, that every religious truth is a mediated one, and so also a relative one. They have confused the filter with the filtered, the medium with the mediated, the prism with the light (not unlike the conventional neuroscientists who today confuse the brain with mind). As a result, they have ended up idolizing their

own local languages, their scriptural texts, their mythologies, and their local social practices and moral values, none of which are or ever can be universal. They remain entranced.

Such moves, of course, are not simply abstract philosophical mistakes or innocent psychological errors. When these sorts of confluences between appearance and reality, between something and everything, are linked to authoritarian institutions and exclusivist ideologies, they also carry profoundly dangerous political potentials, as we can see today all around us.

It is hard to avoid the conclusion that many of our world's present problems are a result of our lack of an adequate theory of the religious imagination as *both* a projector of cultural fantasy *and* a medium of conscious light. Without such an understanding, we can only fail, miserably, to compare one another's projections and prisms deeply, fairly, and calmly. Without such an understanding, we will also not be able to understand something like the UFO phenomenon and recognize, as Whitley puts it just right, *that it isn't entirely imaginary*.

Say Again

Whitley observes quite correctly that the human species is a mythmaking species. As anthropologists have long noted, just as birds instinctively build nests and bees build hives, we “make worlds,” that is, we create mythical universes to live in. We have no choice. Human beings need meaning, which is to say *story*, in order to live, much as they need food and air. No human community can live without meaning. As Jesus put it, man cannot live by bread alone. He was right about that.

But here is the thing. Every story is incomplete. No story works for everyone. If there is anything I know with certainty as a historian of religions, it is this: If you are worshipping a god, *any* god (including “God”), you are basically “worshipping Zeus.” That is to say, your religion, your story, like that of the ancient Greeks and their pantheon, will pass, will be no more, will become a thing of memory, a “mythology” for the curious of some future civilization to study and ponder. It is only a matter of time.

Believe it or not, this is good news, at least in the big picture. Every story must end, after all, because no story can capture the fullness of the

human experience and its various historical, environmental, and conceptual challenges. We are always and everywhere more than our stories, more than our cultures and families, more than our races and ethnicities, more than our religions and societies. We shut one book not to end the human venture, but to begin another anew. We abandon our stories not to abandon a story, but to tell yet another, and hopefully another *better* one.

A great part of this book, of course, is about just that: exploring the idea that it is time to tell a better story about the whole pantheon of the unknown, from gods, miracles, angels, and demons to fairy folk, aliens, and the mysterious objects in the sky. We would go further still and suggest that it is possible to consider that “they,” and by extension “we,” are engaging in the modern eruption of these manifestations and appearances precisely so that a new story *will* be told. We are suggesting that all the bizzarerie is “aimed” at one real object—a mythical object. Which is to say: a new and better story.

So the question is this. After we have said away all of our beliefs and unbeliefs about “what we are, who we are, and where we are,” we are still left with a fundamental mystery or question mark: What on earth (or off the Earth) has been in contact with us for all these millennia, producing, in the confusing process, tens of thousands of religions and billions of contact encounters?

Or, if you prefer, *who* wakes up out of all of these trances?

As Whitley describes the scene above, American culture has been building a particular mythology since the late 1940s and early '50s. Since then, popular culture, largely under the radar (and sometimes *on* the radar), has been telling itself a story about contact and communication that began with a fundamental saying away, with an *unidentified* flying object. This early humility, however, quickly trance-formed into an all too certain and all too mechanistic nightmare that was mostly a projection of our own cold war fears and Christian fundamentalist fantasies about the end of the world, which, horror of all horrors, we now had the technology to bring about, and still do.

It was the U.S. Air Force, after all, that coined the expression “UFO” in the early 1950s, largely for defense reasons. In its historical origins, the acronym is a military cold war expression. It names something that we need *to defend ourselves against*.

We are still defending ourselves against it. Whitley and I want to

suggest with this book, which is really a kind of intervention, that we stop doing this; that we just stop defending ourselves against the unknown, the unidentified, the impossible; that we stop denying the phenomena; that we stop ridiculing and shaming people who report these kinds of encounters; but also, of course, that we stop believing the forms in which the encounters appear or are shaped into appearing by the entertainment industry, by the military complex, and by our religions. Isn't this what *Communion* was really all about? To seek a deeper communion and a new form of communication after contact? To jointly materialize, in community, a new and better world?

Flipping Arthur C. Clarke

Both the technological *and* fictional readings of something like the UFO phenomenon are part of the same world-story that Western culture has been telling itself for a century and a half or so. As I have pointed out above, that story can be captured in one word: materialism.

On one level, materialism is just more monotheism in disguise. It is another jealous god. Instead of "My God is the only God," now it is "There is only matter." The story goes like this. Matter is made up of tiny dead things that are bouncing or waving around in predictable mathematical patterns. It's all math. There is no meaning. There is no mind. Evolution is without a goal. It intends nothing. It is going nowhere. The universe is pointless.

This is a bad story in the simple sense that it is deeply depressing. Why anyone wants to live inside such a trance state is simply beyond me. I recognize, of course, that those who embrace it do so because they think it is true. I respect that, but I also know that this conclusion is a belief and not a fact, an interpretation of the world and not the world itself. I also know that there are real phenomena in the world that this interpretation must ignore in order to preserve its own fragile status.

I am always reminded here of the strange and depressing fate of an otherwise wonderful saying by the British science-fiction writer Arthur C. Clarke. It goes like this:

Any sufficiently advanced technology is indistinguishable from magic.

The saying is the third law of Clarke's famous three laws of prediction. Taken out of context, this third law has been employed endlessly to diminish or demean traditional forms of magical practice and religious experience as deluded, mistaken, and ignorant. Those poor primitives just would not understand our modern science and technology. We moderns are so clever. They were so foolish. This, of course, is precisely the assumption of the reductive comparisons that I criticized at the very beginning of this book. It is also the attitude of colonialists, imperialists, and racists.

I would not deny that there is some truth in this interpretation of Clarke's saying. I am sure that many a nonliterate culture would perceive, say, a smart phone as a magical instrument. But there are numerous problems with this reading of Clarke, beginning with the simple fact that Clarke himself was fascinated with paranormal phenomena from maledictions, stigmata, and apparitions (all which he considered "highly probable") to poltergeists, telepathy, and dowsing (which he considered "possible" and "worth investigating") to survival of bodily death and reincarnation (which he considered "almost certainly untrue").¹⁰¹ The science-fiction legend even worked with two television professionals to create a series for British television on unexplained phenomena.

Hence his first two laws of prediction, which almost no one ever quotes because they do not serve the typical strategies of denial:

When a distinguished but elderly scientist states that something is possible, he is almost certainly right. When he states that something is impossible, he is very probably wrong.

*The only way of discovering the limits of the possible is to venture a little way past them into the impossible.*¹⁰²

Clarke was particularly fond of "flipping" our most basic assumptions. In his epilogue to *Arthur C. Clarke's World of Strange Powers*, for example,

he seriously suggested that the human eye, under rare but real conditions, might actually reverse its normal functions. Instead of passively *receiving* impressions from the environment, it might actively *project*, like a slide projector, mental apparitions into the physical environment that others can see.¹⁰³ Here was his version of the imaginal. He was very serious about this. He was quite convinced that apparitions are real phenomena. Apparitions rated very high on his scale of the probable.

In this same generous and flipping spirit of Clarke, allow me to flip in turn his most famous saying.¹⁰⁴ It would now read something like this:

Any sufficiently profound magical event is indistinguishable from technology.

This is exactly what I see happening today with the various misreadings of the UFO phenomenon. It is, of course, quite common these days to assert, supposedly with Arthur C. Clarke, that the gods can only be ancient astronauts misperceived by scientifically naive ancients. What looks like magic in the historical record is really technology.

But this, I would suggest, is the exact *opposite* of the truth. Contemporary extraterrestrials show every appearance of being gods misperceived by spiritually naive moderns. What looks like technology today is really magic. The gods were not ancient aliens. The aliens are modern gods.

This modern magic and these modern gods, of course, are likely not what they appear to be either. There is the flip of the flip. There is the spiral up.

What Ken Arnold Really Saw

As a concrete way of understanding how such a “flip” of the typical science-fiction scenario might work, let us return one last time to the story of Kenneth Arnold, the businessman from Boise, Idaho, who, as Whitley also mentioned, in many ways initiated “the coming of the saucers,” which was the title of a book he co-wrote with the pulp-fiction editor Ray Palmer in 1952.

In the standard accounts, Mr. Arnold began the era of the flying saucer with his sighting of nine silver boomerang shaped objects whizzing over the Cascade Mountains near Yakima, Washington, on June 24, 1947. The journalist Bill Bequette coined the phrase “flying saucer” listening to Mr. Arnold describe what he witnessed later that same day, the phrase went over the wires, Roswell reported a “crashed flying disc” a few weeks later, and the rest is history, as we say.

Well, sort of. As is almost always the case, the real history is more interesting, and stranger, than the remembered history. Once again, the tool of historical contextualization is invaluable here.

It is certainly true that Mr. Arnold seriously entertained, and even probably accepted, some fairly standard technological interpretations of the flying saucer at different points in his life. It is difficult to read what he wrote early in his career and not come away with that impression. But there was always something else behind the mechanistic readings, something that haunted Arnold for his entire life. In a recent interview with his daughter Kim Arnold, Ms. Arnold explained that one of the “hidden secrets” of her father’s literary remains and personal files is that he witnessed the flying objects “pulsating with a blue-white light,” like a heartbeat, and that he eventually concluded that the saucers were “not mechanical in any sense at all,” that is, that they were alive. Mr. Arnold was also convinced that they could change their density, and that they came from another dimensional world, which is the same one we enter when we die. Already in 1949, Arnold had offered a more biological version of the same understanding, when he suggested that these flying objects were in fact “groups and masses of living organisms that are as much a part of our atmosphere and space as the life we find in the oceans.”¹⁰⁵ This is pure Charles Fort, by the way. Was he reading Fort?

Kim Arnold also speaks about the telepathic gifts and reincarnation beliefs of her mother and what looks very much like a general Theosophical or occult framework in which her father and mother understood these historical sightings and their cultural aftermath. She speaks at length about how the events stressed and strained the family, mostly because of the way her father’s experiences were (like Whitley’s) mangled by the media, by Hollywood, and by the debunkers, but also because of the endless phone calls and some ten thousand letters that her father received (remember Whitley and

Anne's letters?). Finally, she also describes how her father was threatened by a government agent not to speak about what he saw and recounts in some detail how both of her parents spent the rest of their lives in fear of being killed by the U.S. government, whose intelligence community appears to have manipulated and harassed Arnold for its own purposes.¹⁰⁶

We can now well see that the Ken Arnold story is a perfect example of "Arthur C. Clarke flipped." Modern technology was not being misperceived by scientifically naive ancients. Ancient souls were being misperceived by spiritually naive moderns.

And the confusions only multiplied, fast. This occult vision of soul creatures living in the atmosphere or energy beings emerging from some other dimension almost immediately got implicated in a whole series of cold war fears, secret military projects, Christian teachings about "demons" (such interpretive strategies have been used for two millennia to deny and demonize other people's experiences of the sacred, which, like the Christian God, often do possess both positive and negative dimensions, at least relative to the ego), sci-fi stories, and Hollywood movies, not to mention more than a few government intelligence responses no doubt designed to protect and hide real military technology. Hence what we have called "the wastebasket problem." Where to start? Where to begin anew?

Emergent Mythologies

As I explained in chapter 1 and demonstrated again here with my flip of Arthur C. Clarke's famous saying, I think we have to begin anew by actively resisting any exclusive reliance on the machine readings and moving away from the materialist imagination to really understand what is happening to us, and has long been happening to us. The older religious stories may be better in some ways in that they recognize the spiritual side of all of this, hence the flip. But they are far worse in others. Again, neither the scientism nor the dogmatic religion are going to get us there. We need to keep shooting the arrow both ways. We need to keep flipping the coin, back and forth, back and forth. We need to spiral up. We need a new third way forward. Which is

another way of saying: We don't just need another story; we also need another *kind* of story, that is, another way of telling stories.

What will these new stories and this new way of telling them look like? I do not know, but I have two basic guesses.

The first guess is that these new stories will take modern cosmology, quantum physics, and evolutionary biology as their main sources of inspiration or general framework and put an extremely robust and expansive sense of “cosmic conscious evolution” at the center of their narratives—cosmological, material, and biological, yes, but also cultural and spiritual. Here we are not just “star dust,” as Carl Sagan had it. We are highly evolved expressions of *starlight* become conscious and aware within a vast web of planetary life. These new stories will not just be evolutionary, then. They will also be “green,” that is, deeply ecological in hope and direction. In *Mutants and Mystics*, I called this deep, science-inspired, nature-based structure of the emergent mythologies the “Super Story.” That still seems exactly right to me.

No wonder, then, Whitley found himself buying a copy of *X-Men #1* twenty years ago. That particular cultural mythology reflects and refracts his own mythology, which is no myth. It is worth noting, though, that the X-Men are very late to the emerging mutant mysticism. Such practices, experiences, and belief systems are not 50 years old. They are 150 years old. They go all the way back to the origins of evolutionary biology itself in the co-founding figure of Alfred Russel Wallace (1823–1913) and his deep personal engagement with nineteenth-century Spiritualism, occultism, and psychical research, all of which was forming around the Darwinian revolution.¹⁰⁷

The second guess is that the new super story-tellers will be different *kinds* of storytellers to the extent that, as authors and artists with real empirical experience, they will always keep in mind the indubitable fact that they are telling stories, even as—and here is the tricky part—they will also know that their fictions encode the remembered experiences of contact. In Whitley's language, they will be mythmakers who know that their myths are not just imaginary.

I consider Whitley Strieber to be just such a super story-teller. I do not, of course, think that Whitley has everything right. How could he? How could anyone? That's not the point. But I take his deepest instincts and intuitions as pointing us in the right direction: toward a conscious cosmic evolution, a

subtly material or electromagnetic soul and a future environmentally sustainable civilization—all embedded in an already super natural world.

I also take his conviction that the imagination can materialize its contents in the physical environment (something he shares with the late Arthur C. Clarke) and his fascinating extension of von Neumann's Quantum Perception problem—that we might actually “open a door” into an invisible world or dimension through the psychic power of belief—to be profound and dramatic instances of the imaginal and hermeneutical practices I described in chapter 9. The latter practices I would summarize again as the bizarre fact that we are always everywhere imagining, interpreting, and believing ourselves into existence through the process of contact, communication, communion, and community. We would do well to recognize that and to make it more conscious.

What we have here in the end is, as Whitley put it elsewhere, “the bone-structure of another new religion.” But must we go there? Must we do this yet again? “Hasn't the past taught us anything at all?”¹⁰⁸ Could it not be finally the time not just for a different story, but also for a different kind of story, a story that knows itself *as story*?

The fundamental question remains: just who is telling *all* of these stories? Who is left after another story is told, the book is shut, and the spell is broken?

And so we come to our final tool or technique. After *comparison*, *phenomenology*, *history*, *hermeneutics*, *erotics*, *saying away*, *the traumatic secret*, and *energetics*, we finally come to this: *say again*. With these two words, I mean two things. I mean: “Say again,” as in “Tell us another story.” But I also mean: “Say again?” as in “Do you really believe all of that?” I mean a particular way of inhabiting our communities, cultures, and religions, a way that is humbler, more paradoxical, more frankly honest about the fragile and fictional nature of *all* of our cultural productions, including and especially us. I mean what Whitley has long called “sitting with the question” and not settling for a particular pat answer. I mean what the two of us have modeled, however imperfectly, for you in this very book.

Mythology and Ideology

Before I close, I want to return to “the wastebasket” with which I began and struggle with an aspect of myth making that is neither bright nor hopeful. Recall that I began expressing my own voice in chapter 1 with a turning away from the military components of the UFO for a focusing in on the personal visionary and spiritual dimensions. I trust that perspective is clear enough by now, and that you can see well what it gives us, and what it does not give us.

What it does not give us is an adequate struggle with the political and ideological dimensions of the problem at hand. Nor does it adequately treat the very real military involvement in these histories, which also needs to be studied carefully and calmly. Mark Pilkington, Robbie Graham, and Diana Walsh Pasulka are all doing wonderful work here, for example, with the disinformation campaigns that the intelligence community has engaged in over the decades, or the U.S. Department of Defense’s involvement in the script writing for UFO films in Hollywood.¹⁰⁹

I want to address some of these difficult issues, ever so briefly, here at the end. I want to metaphorically wrestle for a moment with the people in Whitley’s room who broke into his cabin and put something strange in his ear. I want to acknowledge the decades-long anxieties of Mr. and Mrs. Arnold after those cruel threats in the desert. I want to recognize the role of shadowy intelligence officers, literal abductions, and misinformation campaigns that damage people’s careers, even ruin their lives. I want to call out the morally reprehensible ways that individuals and traditions literally demonize the religious experiences of other people that cannot fit into their own narrow and close-minded belief systems (calling something “demonic,” after all, is also a conspiracy theory). I want to acknowledge the moral and intellectual integrity of my colleagues in the study of myth and religion who have consistently pointed out to us that every myth is a power play, that every religion is political, and that countless human beings have suffered, and suffered horribly, from these mythical and ritualized ideologies.¹¹⁰ I want to point out that Whitley’s writings are filled with ideas and plots that express the same fears, the same concerns, and the same sufferings.

I am often asked about the wilder conspiracy theories (underground alien bases, the U.S. government forming alliances with extraterrestrials, alien crop circles, that sort of thing). I always respond: “I don’t do conspiracy.” What I mean by this is that I don’t trust the wild conspiracies

that are constantly spun out of this material, which is not to say that I do not recognize that there are likely real truths embedded in some of them. As literal scenarios, however, I always find them stretched and finally unbelievable. Having said that, I want to back up a bit here and qualify this stance in the light of some remarkable work on conspiracy in the sociology of religion.¹¹¹

I still do not “do conspiracy,” that is, I don’t generally buy the *content* of the extreme conspiracies, but I do understand their social *function*. What I mean by this is that I understand how conspiracy theories make an otherwise chaotic world meaningful to a small group of people whose psychology is dominated by the attractive belief that they possess a fantastic truth hidden from the rest of us. I also recognize a general if distorted truth behind the contents of the different conspiracies, namely, that mythologies are also always ideologies, and that “telling a story” is never enough, particularly when there are institutions and political and economic interests involved that want to “control the story” or “take back the story.” And, of course, there always are.

On a deeper level still, it must be said that all conspiracy theories—both reasonable and unreasonable—express a most basic fact about the human condition that is well known in the humanities, indeed, that grounds all of them: namely, that all of us at every moment *are* being duped, *are* being tricked by our languages, our cultures, our religions, and, alas, by our very brains. Every culture is a trance state. Every ego is a cultural production. Every text is a historical construction. Every perception is akin to a dream. Is not this proposed truth the ultimate conspiracy theory? Am I a conspiracy theorist?

In the end, the most reliable truth of conspiracy is not a positive one but a negative one. What you see is not what you get. Seeing is not believing. Don’t believe what you believe. Don’t think what you think. *Say away*. I have put this most basic of all truths in the humanities in my own work in terms of the observation that all of us are “being written” by language and culture. One could just as easily put the same insight, though, in the terms of Philip K. Dick, who once wrote that “we are not the artists but the drawings.” Here we are also “being drawn.”

Both are true enough. We are characters written and drawn in a two-dimensional graphic novel, real superheroes struggling to step off the page and into the conviction of our own independent existence, which, alas, is not as yet at all clear.

Shifting the Conversation

WHITLEY

Our thesis throughout this book has been that it is not necessary to believe in such things as flying saucers, aliens, ghosts, and other unexplained phenomena in order to study them. Such study, as Jeff has pointed out, has been developing in the universities for nearly two centuries. But the same has not happened in science. The difficulty that has kept science from advancing understanding of them in the same way that it has advanced understanding of, say, meteors, radio waves, or quantum entanglement is that such study, in the community's present social culture, raises an implication that one also believes in them not only as things perceived, but as things that are.

As Jeff urges, make the cut.

Given the bizarre nature of the evidence, it would seem important that there be enough analysis of it to at least establish some basic parameters of understanding before events compel scientific attention. If disclosure or some other event created a compelling suggestion, say, that aliens are here, it would be a grave mistake and a great tragedy to attempt to understand them in the context of the popular vision of them. It is not adequate, and there is every implication that, behind the supposed alien presence, there lies a

completely new vision of reality that is at once larger and more accurate than the current rigorously materialistic scientific vision.

We are suggesting that it is possible to acknowledge the super part of the natural world and study it in terms of the perceptions it creates, without assuming that by doing so we think that the phenomena generating those perceptions are the same as the noumena that lie behind them. Even if the reality of aliens is announced to the world by credible authorities, a new way of addressing the matter is still essential to any successful understanding. Right now, “contact” would be taken as the beginning of interaction with another society something like our own. From all the evidence, this approach would be a failure. It wouldn’t even come close to the achievement of true communion, which is a matter of at once seeing the true picture in all its complexity, and ourselves in our own ambiguity. To make real contact work we must not forget what is actually the central reality of the whole matter: not only that we don’t know who and what they are, but that we also don’t know who and what we are.

Find them, find ourselves.

From my own life experience and the vast mountain of similar testimony that Anne brought to light, it seems clear that they are *something*, but just what remains unclear. Aliens, sure, it’s not impossible. It also cannot be the whole story, not if all this testimony is even partly accurate.

Right now—and this is after thirty years of active involvement and research—I would not be willing to advocate for any particular explanation. If pressed, I would say that the most likely “correct” answer will only come when we have a more precise understanding of reality than we do now. Most importantly, a more precise understanding of what part of reality mind actually occupies.

Inevitably, as research brings better understanding of the overall phenomenon, fundamentally new knowledge is bound to come, possibly about the nature of reality, and certainly about the human mind, its actual relationship to the physical, and how and why it generates its folklores and injects them into its cultures. And about just in what way this other presence is real.

As I pointed out in my mythmaking chapter, I have played a major role in the development of alien folklore. But why is it that descriptions of perceptions such as those I reported in *Communion* would be almost

universally taken to be claims of actual experience, even when the author prefaced them as I did?

The reason is that something is actually being seen and interacted with. It isn't all in the mind, and the evidence is strong that the mind isn't all in us, either. If it was, the Physical Traces chapter could never have been written. There are physical traces, so there are physical events. But are they physical in the same sense that an encounter with, say, a doctor's needle is physical? This we do not yet know.

Folklore arises when super nature, in all its majesty and mystery, acts on minds that cannot hope to see the noumenon, and do not have enough information to understand that the phenomenon may not be the actuality.

Winston Churchill asked back in 1952, in a memo sent to Sir Henry Tizard and his Working Party on UFOs that had been formed in response to the large number of flying saucer sightings then taking place, "what can it mean?" Given that, more than sixty years later, we are still no closer to an answer than we were in 1952, it was a good question. If we don't finally address it effectively, the phenomenon will continue taking on a life of its own, penetrating more and more deeply into the culture, with consequences that cannot even be guessed at.

Whatever its origin, the phenomenon is a bridge into the unknown, and like any bridge, can be crossed. Do so, and the unknown begins to become known.

A good place for science to start serious study is to turn to the people who report interacting with aliens. There are certainly enough of us to provide a rich ground for effective sampling. Is a history of abuse consistent across a broader sample than has so far been studied? Are our brains functioning normally, and if not, then how does their functionality differ from the norm? Having lived with "the visitors" essentially all of my life, I would very, very much like to know this. We see—or perhaps a better word is "notice"—things that "normal" people do not see, but when we dare to report our experiences, we face prejudice, and it can be extreme. And, in fact, this sort of rejection goes way, way back in history. Prophets and visionaries are almost universally despised. But why? What is the cultural need for this? It would be useful to find out.

Neither does an autistic person see the world in a normal way, nor somebody with Down syndrome or an individual with Asperger's. In recent

years, the work of people like Timothy Shriver has brought more general social acknowledgment that these different sorts of minds have value in and of themselves, and that people whose brains function in these nonmainstream ways are worth integrating into the culture, and that their intellectual and creative output should be valued for itself, and not seen as an artifact of disease.

I want that same level of acceptance for myself and the whole community of close encounter witnesses. I've created a body of work that could be useful, in that it chronicles a struggle to understand that will be mirrored many times over if the experience of interaction with the visitors ever extends into public life. Unfortunately, it is largely ignored or misperceived by the cultural mainstream. It is ignored because it entertains rejected knowledge. But why has that knowledge been rejected, and along with it the people who possess it?

I don't think that there is any single answer, but there are some specific ones that can be usefully addressed.

An example of what is wrong occurred in January of 2015, when the CIA announced that its most popular recent tweet had been one which pointed to a suggestion that all of the flying saucer reports of the 1950s were attributable to misperceptions of U-2 flights.

This story had been floated by the agency previously, but cannot even come close to explaining the enormous worldwide phenomenon that was unfolding then, not even the part of it that was taking place in the United States. This is for a simple reason: during the day a U-2 flying at fifty thousand feet is invisible from the ground, and many of the sightings took place in daylight. For that matter, seeing one at night would be highly unlikely. The story is, to be blunt, blatantly false.

Nevertheless, National Public Radio repeated it uncritically a few days later:

“Good morning. I'm Steve Inskeep with an explanation for UFO sightings in the 1950s. The CIA released a document this year which it calls its most-read document of 2014. It reports on flights by U-2 spy planes. The document says those secret planes flying higher than anyone thought possible were mistaken for alien spaceships. Normally, a conspiracy theory would say the CIA is behind some mysterious activity. In this case, the CIA really was. It's Morning Edition.”

The media's uncritical acceptance of childish palaver like this is part of such a long tradition of similar failures that it bears only passing mention as a tragic inevitability. I will just touch on the concern that there is some sort of coordination between the media and the intelligence community. Perhaps, in the future, such things will become clear.

There are two larger questions here: first, why have the CIA, NASA, the U.S. Air Force, and other governmental organizations spent so much time and effort "debunking" UFO claims that clearly cannot be explained? Are we missing something here, or are they, perhaps, dismissing something they don't understand because it seems somehow provocative and they cannot control it? Or maybe it's as dangerous as it seems to many people, in which case they might consider warning the population, at least . . . unless they have been intimidated into silence.

Given all the research I have done and all of the experience I have had, I would suggest that they probably don't understand what's happening or whether or not it's dangerous, and that is one reason for the secrecy. The "plasmas" of the Condign Report appear in our skies and seem provocative. Strangely, even though they are judged to be natural and of no defense importance, information about them remains classified. The existence of this secrecy is certainly one of the major reasons, if not the primary one, that the alien and UFO folklores have become as developed as they have, and also a major reason why misinformation abounds, and along with it the inept "debunking" that we see in the scientific, intellectual, and media cultures. It is into the context of all this confusion that any official disclosure must be made, and perhaps that's why John Podesta has had trouble getting it to happen. Formal disclosure and the disintegration of the official story are two different things, though, and either one would have the same effect: a hopelessly uninformed media and a confused public would be left to sort it out however they may.

If there is disclosure, at least then the social opprobrium that close encounter witnesses endure would end. But even if there isn't, something needs to be done here. People are suffering, and the humanitarian issue must be addressed. Additionally, the media needs to accept that the matter is a serious one and stop blocking any serious consideration of it with indifference, fallacious reportage, and, above all, the devastating weapon of

laughter which, more than anything, suppresses rational approach to the subject.

As recently as January of 2015, the comedian John Hodgman delivered a Whitley Strieber rectal probe joke on the *Ted Radio Hour*. He framed it in the context of having seen the film adaptation of *Communion*. But prior to discoursing on the movie, such as it was, he was careful to deliver the identifying Whitley Strieber catchphrase, “rectal probes.” He concluded his description of having seen the movie in a venue where it never actually played with the line, “Whitley Strieber was played by Christopher Walken. The aliens were played by rubber puppets.”

The close encounter witnesses are among the last minority groups that can be humiliated without penalty. I curse my own ineptitude in having come up with that phrase “rectal probe.” It has been one of the primary reasons that the whole phenomenon continues to be taken in a simplistic way as a claim of alien encounter, and a laughable one.

Even given all that, I have been one of the lucky ones. I know of close encounter witnesses who have been divorced, fired, ostracized, institutionalized, and, in a few cases, driven to suicide because they made their experiences known. While, as I have recorded in some other venues, I have at times very seriously considered suicide, I have never been abandoned by my family, and have retained many of my friends, for the most part the oldest ones, who understand that I would never engage in fraud, and that the suffering I experienced was not particularly funny. Most of them understand that I am reporting perceptions, and what that means. They also know that I am almost pathologically honest. They are aware of the irony that it was this honesty that led me to write *Communion*, the book which has caused me to be labeled at best a misanthrope of some sort and at worst a liar.

I am not a liar, and I do not deserve to be punished for perpetrating a literary hoax, any more than I or any other close encounter witnesses deserve to be marginalized or discriminated against for reporting what we have seen and experienced. Just like other groups with unusual perceptual experiences and ways of responding to reality, we deserve to be treated with some modicum of respect.

However, changing all this might prove more difficult than it should be,

because there is a social institution involved that actively seeks to distort the culture's view of the phenomenon.

I refer again to the official intrusion into the matter. It goes beyond denial. There is a proactive element as well. Just before I published my book *Confirmation*, in which there is some criticism of U. S. Air Force, a fake story was planted about me in *Parade* magazine stating that I had "admitted" that I had temporal lobe epilepsy and made a contribution to the Epilepsy Foundation. This story was the exact opposite of the truth, which I had reported in an earlier book, *Transformation*. On the first page, I explained that tests had shown that my brain was not seizure-prone, and that I did not have TLE. I understood from a *Parade* editor that the story had come from friends of mine in the air force. I had no friends there, obviously.

The UFO/alien aspect of the larger phenomenon appears to have been singled out for special treatment by governmental entities, for reasons that remain concealed behind the barrier of classification.

In general, UFO researchers advocate that governments around the world are universally devoted to concealing an alien presence on Earth. Personally, I am not so ready to believe this. Certain governments are concealing *something*, but it is difficult to believe that all governments that might have been exposed to a phenomenon that has been lavishly present worldwide for at least sixty years would continue to keep such a secret.

I would assume that the United States and the United Kingdom are keeping secret not only that they know that there is something appearing in our atmosphere that they cannot explain, but also that they know that it sometimes has an effect on some of their citizens, and they don't want to admit that they can't control it. No matter its origin, alien or earthly, natural or generated by some sort of intelligence, it affects vast numbers of people and, for that reason alone, should be addressed rationally in the public forum. Because this does not happen, an enormous amount of human experience and human suffering that probably has nothing to do with national security has been left unstudied, and the victims made figures of fun instead of given the support that our normally compassionate society ought to be offering them.

It is, quite simply, no longer possible for official circles to deny that somebody or something unknown is manifesting itself in our world. John Podesta is right: the time for denial has passed. The revelation of yet another massive, ongoing lie will not surprise the public any more than revelation of

the truth of this strange presence will. Further denial, though, will continue to put a damper on granting for any research that might touch on the subject, and thus cause the present confusion to continue to expand into ever more elaborate folklores.

Another reason for classification is probably that governments cannot determine whether or not the phenomenon is a military threat.

Given, however, that these things have been engaging in their theatrics since at least the late forties, and probably for much, much longer than that, it is ludicrous to think that any threat from them would be military in nature. If threat exists, and my own experience and that of many other people certainly suggests that it might, it is deeply personal and individual.

Governments need to acknowledge that whatever they know and have encountered is part of a very large-scale and ancient phenomenon and detach it completely from national security classification. The National Academy of Sciences needs to encourage granting in the field, with a specific concentration on the close encounter witnesses, who are not only in the front line of whatever is happening, but also the core source of the myth that is building up around it.

Science and the wider culture, at the very least, need to approach it objectively on two levels: the first is for science to accept what governments has already confirmed, which is that the “plasmas” exist and to acknowledge that they have effects on people; the second is to acknowledge the contribution offered by the academic community: this is an ancient part of human life, and it is being studied, as Jeff has shown, within the academy. There is no reason that science should not follow suit.

Early on, based on my memories of what had happened to me and the testimony of others, I found the alien hypothesis very convincing. It was not until Anne began to report that my strange experience of seeing a dead friend in the company of the aliens was actually a commonplace of the letters we were receiving did I begin to think that this might not be an entirely satisfactory solution to the puzzle.

Now I think that there is an entirely new way to look at the phenomenon. First, it should be seen in context as a cultural artifact that is being forged as Jeff points out, in very deep levels of our psyche, places that have the power to transform how we view ourselves and the world around us in fundamental ways.

Second, it should be seen as having a physical component. It's been admitted that plasmas that are not understood by science are involved, so it's not that they don't exist or that they aren't worth studying. Hardly: the Condign Report also admits that these plasmas affect the temporal lobe of the human brain, the very seat of our humanity and intelligence. What's more, there are unexplained objects appearing in people's bodies, often, as in my case, near the brain. Clearly, study is essential.

Study of the witnesses certainly is possible, but how to go about studying such a transient phenomenon as a plasma, or UFO, that flits across the sky leaving behind, at best, fuzzy traces on amateur video? Actually, that wouldn't be difficult, either. We study transient phenomena like lightning, superwaves, and stellar explosions. All that is required is preparation. It would be possible to use camera arrays that scan wide areas of the sky across the spectrum of light, and gather data about all anomalies that are recorded. That they would be recorded is beyond question. UFO skywatchers using infrared lenses record them all the time.

Do they appear cyclically? How fast do they travel? Do they pop up in the atmosphere like sprites, or do they enter it from above? Do they land? If so, where and for how long, and what do people in their proximity report experiencing?

Assuming that the cultural barriers are dropped and scientists and intellectuals without negative preconceptions can be found to do the work, progress can be made.

Right now, as we have demonstrated, the culture, insofar as it cares about this issue at all, is divided into the two camps, one that believes in the alien hypothesis and the other that thinks that it's good only for a laugh. But, as we have also argued and the evidence suggests, there may be much more to it than that.

It seems likely that we are not yet finished understanding the way reality works and how the universe is actually structured. At present, for example, there are a number of experiments going on and theories being proposed that, if they prove out, will fundamentally revise our understanding not only of the universe, but of reality, yet again. As this is being written, for example, an attempt is being made at the Large Hadron Collider in Switzerland to detect mini black holes. If they are found to exist, then a key tenet of string theory, that parallel universes exist, will receive fundamental support.

Another experiment being prepared at the Fermi National Accelerator Laboratory, Fermilab, could change our vision of reality in yet another crucially important way. This experiment involves an instrument called the holometer, which, when completed, will be the world's most sensitive laser interferometer. Using it, scientists may be able to answer a fundamental question about reality, which is whether it is a three-dimensional object or a two-dimensional surface projecting a hologram—that is to say, whether it is obedient to classical physics or resolved into the forms we see and experience by some as yet unknown process.

Unknown, that is, to us. If it is indeterminate, then there may be ways of manipulating how it resolves into classical form. If so, advanced alien species might have powers that are literally beyond magic, powers, for example, to raise the dead by altering the flow of time or even editing reality itself as easily as we edit film.

They could be so advanced and so large scale in their capabilities that we are part of their reality in the same sense that chimpanzees are of ours. A chimp can apprehend a thing like a car but nothing can ever enable it to understand even the slightest thing about what it really is or why it moves. Nor can we ever explain to the chimp in his cage or his little corner of African jungle where he is. We can't tell him, no matter how hard we try. He literally cannot know.

We don't know, but I'm not so sure that we can't. Whoever our visitors are, the fact that, as I have found, there appears to be a process of education suggests that we might have a capacity for understanding. Otherwise, why bother?

So, if we can learn, then we need to do our part. Instead of hiding from the truth behind a screen of official secrecy and ignoring it intellectually and scientifically, we need to face it full on. I am not the only person who could engage with the visitors in the way that I have. If I can, then in one way or another, and each by his own lights and to his own abilities, we all can.

What will we find, though, if the evidence points away from an incursion by beings from another planet?

A remarkable paper was published in *Physical Review X* (<http://journals.aps.org/prx/abstract/10.1103/PhysRevX.4.041013>) by Michael J.W. Hall, Dirk-André Deckert, and Howard M. Wiseman on October 23, 2014. In it, they propose that quantum weirdness may not actually exist at all, and that

its effects can be explained classically if there are a large number of other universes occupying space coexistent with our own. “Here, a ‘world’ means an entire universe with well-defined properties, determined by the classical configuration of its particles and fields,” they say in their abstract.

What makes this paper so provocative is that it does away with the “spookiness” of things like quantum indeterminacy and entanglement, replacing them with very slight interactions with corresponding particles in the other universes. Dr. Wiseman told the *New Scientist* that “one way to think about it is that they coexist in the same space as our universe, like ghost universes.”

They would not interact with our universe except in very small ways, but this interaction, Dr. Wiseman and his colleagues believe, would be enough to explain why things like the “double-slit experiment” work. In that experiment, of course, photons fired at a light-sensitive screen through a double slit create a characteristic pattern on it that suggests that they are acting as both particle and wave.

If, however, we are not seeing some sort of weirdness at all, but the effect of subtle interaction with other universes, themselves operating according to the classical model, then quantum weirdness may be an illusion. It may also be that intelligent creatures arising in these universes have developed exquisite technologies that enable them to interact with universes other than their own. Thus when I sat across from a dead man in my woods, he was interacting with me from a context in which he wasn’t dead at all. This would explain, as well, why the dead who accompany the aliens generally report that they’re perfectly well. Because they are—but in another universe.

It could be, then, that there is an understandable “classical” explanation for all the weirdness that we are observing around us. It is due to the fact that, either naturally or by the application of some sort of technology, or both, there is interaction between our universe and others, and the “aliens” indeed do not come from some vastly distant planet, but from right here. How ironic it would be, if this is true, that we have spent so much time trying to imagine how it might be possible to travel interstellar distances in order to somehow explain this presence, when its actual distance from us might not be unimaginably far away at all, but unimaginably close.

In any case, experiments can be devised to determine whether or not this

theory is true. From my own experience of life, I would think that it may indeed be so, and that the brain, in some cases, might be capable of obtaining information from these other universes, and the body of interacting with them. Perhaps it takes something unusual in a person's life or in their genetic makeup or both for them to be sensitive in this way. As I pointed out in "Cracking the Cosmic Egg," and Jeff discussed in "Trauma, Trance, and Transcendence," early childhood trauma may shatter our expectations of reality, leaving us to see, amid the fragments that are left to us, shadows from ghost universes.

There may be even more to it than that, though. We might not understand our relationship to the physical universe any more than we do the true nature of the reality in which we find ourselves living. I say this because so many of our early cultures have included either a human origin among the stars or a means of returning to them in their mythologies, or both.

For example, the "solar boats" of Khufu, discovered in granite pits near the Great Pyramid may have been intended to convey the pharaoh's soul heavenward—that is to say, into the sky, presumably when the Milky Way aligned with the Nile. Similarly, in south Texas the "White Shaman," discovered by my old friend Jim Zintgraff on his ranch near the Pecos River fifty years ago, suggests a similar belief. The White Shaman is one of the finest examples of rock art in the Americas, and depicts a shaman directing souls skyward, apparently toward the Milky Way. So this idea that the soul might ascend to the sky would seem to be both very widespread and very old, as both the solar boats and the White Shaman are around four thousand years old.

Carolyn Boyd, in her book *Rock Art of the Lower Pecos*, describes and interprets not only the White Shaman, but places it in context with all of the rock art of the region.

I have gone down along the Pecos River at night, just a short distance from the White Shaman, and seen the Milky Way reflected in its clear, cliff-bound waters, and imagined, as Anthony Powell so beautifully expresses in *Temporary Kings*, book eleven in his *A Dance to the Music of Time* series, "the liberated soul ascends, looking at the sunset towards the west wind, and hearing secret harmonies."

As I looked up into the stars in that ancient place, I wondered about those harmonies. I recalled an evening with astronaut Edgar Mitchell at the

home of some mutual friends, when he described to me and Anne what it was like to look at Earth from the moon. It was a story he must have told even more often than I have told the story of the *Communion* moment, but hearing the wonder in his voice was transcending, humbling, and transformative. Singing behind his words, most certainly were those secret harmonies. We all hear them, when our minds are quiet and the night sky overspreads. It is fundamental to the human condition, this wonder. Do we have a history of some sort in the stars, or a fate among them? Are we travelers in the sky above, as well as among the ghost universes of which our own, to the others, must be equally a shadow?

Will we one day discover that our mind is a bridge to a living mosaic of universes, both ghostly and physical, and that ghosts, aliens, demons, angels, and all the super and yet natural creatures that we are able to peripherally observe and interact with, appear among us from various sources, some of them in the physical world, and others in a mysterious vastness that resides right here, right now, an infinity of mirrors reflecting reality as an endless strangeness?

As travelers among the forked paths of the forest of reality, we come once again to the place of question: who are we, what are we, where are we?

I have on the wall of my office a framed copy of the famous photograph of Earth known as the *Pale Blue Dot*. The photograph was taken in 1990 by the Voyager 1 spacecraft from a distance of 3.7 billion miles in space. In it, the dot where we have appeared and raised our eyes to the stars floats in a cathedral vastness, tiny, alone and profoundly isolated.

So it is easy enough to see where we are. We are riding a speck of dust in a great nowhere, a universe that may certainly contain other pale blue dots, but is, for the most part, a trackless desert of wandering stars and riotously uninhabitable planets.

But who, then, and what? We are a species of ape, reflecting in our brutality toward one another the same sort of brutality that we observe in the chimpanzee tribe, that and so very much more. We are very cruel and also very inventive, with the result that, across history, we have brought many an evil imagining to malignant life. But we also cradle our babies and touch one another with gentle love in the night, and weep at passings and rejoice at births, and live our lives out along a river that, deep within each of us, reflects the stars.

We hunger to believe. We need to believe. Unfortunately, we are all too often also willing to harm those who do not believe as we do, even to kill them. I remember once when I was walking late at night in the woods behind my old cabin, I perceived something nearby that I could not name nor even see, but which frightened me so deeply that I became unable to move forward or back. I was a good mile from the nearest inhabited place, and this presence was dropping down around me like the folds of a malign, living darkness.

I finally fell to my knees and crouched down into myself and began to pray to a god whose existence I doubt but whose help I needed, and begged for protection. Whereupon somebody out in the dark said across the silence, “Look at him, calling on his gods.” In another context, once again when I was praying, I heard, “There’s nobody here but us.”

Us. I did not feel a “them” in that word at all. I felt in it a sense of deep comradeship, as if “us” was almost unimaginably inclusive, a vast word that was being used to describe a vast being of which we are all a part. “Us” was them, was me, was you, was all the unseen lives on all the pale blue dots that dust the wasteland, and was consciousness in the void.

So we are here in the great unknown, “us,” the consciousness that rides the desert of space and time, a ghost light, extremely rare but nevertheless real and signaling our presence as best we are able and however we are able, signaling in the dark.

But what, then, are we? We know that we are flesh, and seek to believe that we are more, that our consciousness, which seems so ephemeral, might in some way continue on, affirming not only our individual selves, but also the billions of years that it has taken the pale blue dot to evolve creatures with questions in their minds and wonder in their eyes.

We so want this precious “us” to be more than sparks in flesh doomed to die with the inevitable implosion of the body. I have had a lifetime of experience that suggests that we may be more—indeed, that we have hardly even begun to touch on the complexity and enormity of what it is to be human. But I cannot give you that lifetime. I cannot give the richness of my experiences to others, only describe them as best I can. I can never transmit them as I have lived them, not in their visceral reality. I can never share with you the scent of a man who materialized before my eyes, from, he said, a place that is between physical lives. I cannot share what it feels like to have an implant, or to remember the strange loves I have known.

The fact that we are so isolated within ourselves is our tragedy and also our blessing. For that which drives so many of us to desperate belief also energizes the question, which is our most valuable asset and our best hope.

What are we? A fleeting, intricate presence riding a tiny speck of water and rock, out here in the dark, sailing the ship of wonder ever more deeply into the void from which we came, that is our true home and mysterious destination.

We are alone. We are not.

APPENDIX

“An Approximation to Realness or Final Awakening” Or How to Make the Supernatural Super Natural in Nine Steps

JEFF

The odd title of this appendix comes from Charles Fort's *The Book of the Damned* (1919). With respect to the unexplained, Fort understood that it all comes down to one's comparative practice. Collection, classification, and pattern recognition are the keys to seeing what is already there before our eyes, if only we could collect enough pieces and put them together in the right way. In his boldest moments, Fort even claimed that a sufficiently robust comparative practice could result in “an approximation to realness or final awakening.” Such a comparative practice would, in effect, end the world we assume and reveal another one, our true condition. He called this apocalyptic possibility on the horizon of thought “the gossip of angels.”

Whitley and I have done our best in these pages to imagine this angelic gossip. We have seen things. We have said things. We have failed, of course, to arrive at any “realness or final awakening.” But we never promised as much. But we did our best. It is now up to you.

Toward that same gossip of angels, here is a summary of what we have seen and said, a kind of instruction sheet for anyone who seeks to make the supernatural super natural in his or her own life and community.

COMPARE. Data is just data. It means nothing until it is classified and compared toward some end. *Everything* depends on what you “put on the table,” that is, on your comparative practice: what you compare with what to conclude. Begin, then, by recognizing your choices and your own role in this selective process. Compare the appearances you are trying to understand with other similar but different appearances in the historical record, all the while being careful to “shoot the arrow both ways,” that is, be careful not to privilege too quickly any past *or* present interpretation of these similarities.

MAKE A CUT. Make a distinction between what has appeared and what is and recognize that, as an embodied ego, you have no reliable access to the latter, and for one simple reason: you yourself are a biological medium or neurological filter. Do not believe what you believe.

HISTORICALLY CONTEXTUALIZE. Place the events that you are trying to understand both in the general history of religions and in their own more immediate historical, social, and political contexts. Employ these contexts to not only recognize the uniqueness of the events but also to see how they fit into much larger global patterns.

INTERPRET AND DOUBLY IMAGINE. Consider the possibility that some of these encounters may be mediated expressions of another form of mind (maybe ours) making contact with the human ego and transmitting some symbolic signal. Recognize that, generally speaking, extraordinary visions and experiences are not what they seem on the surface, that they must be interpreted. Recognize the roles of fantasy and projection in the production of these potential signals, but do not assume that everything imagined is imaginary. Imagine double. Hone your Hermes practice, your hermeneutics.

PRACTICE AN EROTICS. Consider the ways that these extraordinary experiences are shaped by particular gender assumptions and sexual orientations. Also look for moments in which they might actively engage or “flip” the human sexual system and so lead to various forms of union or communion. Do not automatically reduce

these experiences to the simply sexual, but recognize how sexual energies can sometimes morph into transcendent spiritual states.

SAY AWAY. Learn to live with paradox, to sit with the question. Come to terms with the bluntly physical ways that these events sometimes materialize in the environment. Recognize the manner in which they commonly fuse or transcend the subjective and objective dimensions of the human experience through various paradoxical “paranormal” phenomena and so point to some deeper, super natural world before the “splitting off” of the mental and material dimensions of ordinary experience. Recognize that this splitting into a subject “in here” perceiving objects “out there” is a function of the human organism and its cognitive and sensory hardware and probably not of the psychophysical world itself.

LISTEN FOR THE TRAUMATIC SECRET. Keep in mind the possible role of trance in the generation of the stories you are trying to understand. Consider whether the trance state might be related to a history of trauma that has “cracked open” the ego for contact and communication, but do not assume an identity between the traumatic opening and the transcendence that might be rushing in through this cracked-open door.

THINK IN TERMS OF AN ENERGETICS. Look for energetic, electromagnetic, or plasmalike phenomena within and around the extreme experience. See if these altered states of energy appear to be alive or intelligent in some way. Recognize that you may well not be able to reason with them, but that you may be able to resonate with them. And finally . . .

SAY AGAIN. Decide for yourself whether the story that your cultural trance-forms have put you in is a story you really want to be in. If it is not, then wake up out of that story, step off the page, and begin to think about telling another, but try to tell this new story in a new way—as a true fiction. You will need help. Seek out like-minded individuals. Create community. Look to unexplained events— weird “coincidences,” striking dreams, drop-your-jar super moments—in your life as possible clues to how to tell this new

story-self with others, or how to *not* tell it (there might, after all, be negative or dark synchronicities). Finally, consider just who is telling *all* of these stories. Here are the steps, then: contact, communication, communion, community, and, finally . . . consciousness.

No one, of course, really “makes the supernatural super natural.” It already is, and it has always been so. All that changes is the filter, the medium, or the prism of the light. All that changes is us.

ENTIRELY NATURAL NOTES

1. These are all allusions to actual cases, including a precognitive dream of Mark Twain's (the future funeral) and a clairvoyant vision of Emmanuel Swedenborg (the distant-neighborhood fire). For fuller discussions of each, see my "Visions of the Impossible: How 'Fantastic' Stories Unlock the Nature of Consciousness," *The Chronicle Review, The Chronicle of Higher Education*, April 4, 2014.
2. I am indebted to my colleague Ann Taves for this language and basic idea.
3. I am indebted to my colleague Wouter Hanegraaff for this language and basic idea.
4. J. Gordon Melton, *Encyclopedia of Occultism & Parapsychology* (Detroit: Gale Group, 2001), 269. Edgar Cayce had already used the word "channel" in the 1920s and '30s to describe what he was doing (my thanks to Kevin Todeschi via Mitch Horowitz for this historical fact). And, of course, whoever we want to credit with the term's invention, modern channeling possesses countless psychospiritual precedents in the various diviners, bards, shamans, mediums, prophets, revelations, and possessions of human history—the Human as Two.
5. Leslie Kean, *UFOs: Generals, Pilots, and Government Officials Go on the Record* (New York: Harmony Books, 2010). This book begins with a foreword by John Podesta, the fourth chief of staff under President Clinton (1998–2001). For another provocative treatment by a former Green Beret combat veteran, project manager at Los Alamos National Laboratory, and consultant to the National Intelligence Council and the CIA, see John B. Alexander, *UFOs: Myths, Conspiracies, and Realities* (New York: St. Martin's Press, 2011). Both authors insist on the base reality of the phenomenon behind and before all the misinformation and hoaxing.
6. I first identified these in *Comparing Religions: Coming to Terms*, with Ata Anzali, Andrea R. Jain, and Erin Prophet (Oxford: Wiley-Blackwell, 2014). See especially chapter 8.
7. Whitley puzzles over the same "conscious machine" phenomenon in *Transformation: The Breakthrough* (New York: Beech Tree Books, 1988), 37.
8. James Gallant has beautifully made the point with respect to ancient Greek polytheism in "The Humiliating UFOs," *Raritan* Vol. 30, No.4 (2011).

9. I believe I first introduced my own understanding of this notion in the conclusion of *Esalen: America and the Religion of No Religion* (Chicago: University of Chicago Press, 2007). For a similar, and more profound, version, see my friend and colleague Elliot Wolfson's notion of the "time-swerve," in *Language, Eros, Being: Kabbalistic Hermeneutics and the Poetic Imagination* (New York: Fordham University Press, 2004).
10. For more on this, see chapter 3 of *Authors of the Impossible: The Paranormal and the Sacred* (Chicago: University of Chicago Press, 2011), "The Future Technology of Folklore: Jacques Vallee and the UFO Phenomenon."
11. Whitley Strieber, *The Secret School: Preparation for Contact* (New York: HarperCollins, 1997), 227.
12. The comparative practice we are honing and developing here is not entirely new. Early and important strains of it can be found in the British psychical research tradition of the late nineteenth century, where this attempt to unite and yet move beyond mechanistic science and dogmatic religion was called the *tertium quid*, that is, the Third Thing.
13. See, for example, my, "Visions of the Impossible."
14. Although the point is debatable, some have argued that Husserl can be seen as a "transcendental idealist" in the tradition of Immanuel Kant. On this reading, Husserl held that objects are in fact partially constituted by subjectivity: by our awareness and perception of them. This is an especially trippy idea that we do not need to fully understand in order to see how it might relate to Whitley's visionary experiences, which he has routinely described as both a "thing" and a "thought," that is, as a set of real objects that somehow also participated in the nature of mind. Whitley's constant invocation of quantum physics to illustrate how the act of observation somehow calls forth a particular physical reality makes a great deal of sense within the transcendental idealist tradition. If I may be so bold, Whitley's experiences look *a lot* like a visionary demonstration of transcendental idealism, were Kant and Husserl American sci-fi writers and visionaries instead of German philosophers! I am indebted to my colleague Glenn Magee for this philosophical material.
15. Maurice O'C. Walshe, trans. and ed., *The Complete Mystical Works of Meister Eckhart* (New York: Crossroad Publishing Company, 2009), 145.
16. *Ibid.*, Sermon 24.
17. The fullest treatments of these empirical rogue phenomena toward a revisioning of the mind-brain relationship are the two volumes that came out of the Esalen "Sursem" symposia series over the last decade and a half: Edward F. Kelly and Emily Williams Kelly, eds., *Irreducible Mind: Toward a Psychology for the 21st Century* (Rowman & Littlefield, 2007); and Edward F. Kelly, Adam Crabtree, and Paul Marshall, eds., *Beyond Physicalism: Toward Reconciliation of Science and Spirituality* (Rowman & Littlefield, 2015).
18. Sir William Barrett, *Deathbed Visions: How the Dead Talk to the Dying*, reprinted with a new Introduction by Michael Tymn (Guildford, UK: White Crow Books, 2011). For a more recent

discussion, this time by psychiatrist Bruce Greyson of the University of Virginia, see “Seeing Dead People Not Known to Have Died: ‘Peak in Darien’ Experiences,” *Anthropology and Humanism*, Vol. 35, Issue 2 (2010): 159–171.

- [19](#). Not at least one that I can remember. Apparently my family encountered an immense rectangular UFO in the night sky of northern Nebraska on our way to Yankton, South Dakota, to see some relatives in the late 1960s. But I have no memory of this.
- [20](#). For much more on this, see *Comparing Religions* (Oxford: Wiley-Blackwell, 2014), Kripal, with Anzali, Jain, and Prophet, where I trace this metaphor of the toolbox in the history of the study of religion and develop it more fully.
- [21](#). Much of what follows is a rewriting of my “Better Horrors: From Terror to Communion in Whitley Strieber’s *Communion* (1987),” for a special issue on “Horrors” in the journal *Social Research* 81/4 (winter 2015): 897–921.

- [40.](#) Ibid., 301.
- [41.](#) My thanks to my colleague Diana Walsh Pasulka for pointing this passage out to me, and at exactly the right moment.
- [42.](#) Hermeneutics as a discipline is usually traced back to German romanticism and figures like Friedrich Schleiermacher (1768–1834) and Wilhelm Dilthey (1833–1911). Its basic methods, though, can easily be found in the history of Jewish and Christian biblical interpretation, particularly within the mystical traditions that moved far beyond the surface historical or literal meanings to the deeper, secret, or “mystical” messages of the texts.
- [43.](#) Whitley Strieber, *Breakthrough: The Next Step* (New York: HarperCollins, 1995), 20.
- [44.](#) Foreword by Whitley Strieber, in Jacques Vallee, *Dimensions: A Casebook of Alien Contact* (New York: Ballantine Books, 1988), vii. Whitley describes this as probably his “most accurate speculation” in *Breakthrough*, 5; and again in *Confirmation*, 93–94, where he links it explicitly to the phenomenological cut we introduced in ch. 2: “I would suggest that this is probably the best of my many notions about the visitors, especially because it refers only to their effect in our world, a question we can usefully address no matter whether ‘they’ are aliens or not.”
- [45.](#) There *have* been some very sophisticated discussions of the imaginal component of the UFO phenomenon, but these, as far as I can tell, have taken place in technical or professional contexts (often of a Jungian nature) and have been mostly ignored by the broader public. Consider, for a start, Dennis Stillings, ed., *Cyberbiological Studies of the Imaginal Component in the UFO Contact Experience* (Archaeus Project, 1989).
- [46.](#) I am indebted here to Jess Byron Hollenback’s notion of the “empowered religious imagination” in his marvelous *Mysticism: Experience, Response, and Empowerment* (University Park, PA: The Pennsylvania State University Press, 1996).

- [47.](#) For more on these figures and this history, see my *Mutants and Mystics: Science Fiction, Superhero Comics, and the Paranormal* (Chicago: University of Chicago Press, 2011), chapter 1.

- [56.](#) I am well aware that there is no good historical evidence that Mary Magdalene was a prostitute. I am describing the tradition here, not the textual and historical evidence. There is no good historical evidence that Mary was a lifelong virgin either, of course. But that is another story.
- [57.](#) Wilhelm Fränger, *The Millennium of Hieronymus Bosch* (Chicago: University of Chicago Press, 1951), 104.
- [58.](#) This is a difficult idea that I do not want to avoid but which I also do not want to pursue here, as it would take us far afield. My fullest statement remains *Roads of Excess, Palaces of Wisdom: Eroticism and Reflexivity in the Study of Mysticism* (Chicago: University of Chicago Press, 2001).
- [59.](#) John A. Keel, *The Mothman Prophecies* (New York: Tor, 1991), 82.
- [60.](#) Whitley Strieber, *Transformation: The Breakthrough* (New York: Beech Tree Books, 1988), 191–200.

61. A cardiologist once heard me describe this experience in a classroom and noted that it sounded like a “complex partial seizure.” Maybe it was. I would not deny that. This would explain why it felt like an electrocution and why the energies, in at least some of my memories, focused on the heart as they imploded “in,” perhaps into the neurological node in the heart that creates the heartbeat. Who is to say? What I would deny is that the cardiologist’s reading and my own reading here need to be mutually exclusive, as if such a neurological event cannot become the very “opening” to something more, that is, to an inrush of Spirit or Self projected as an imaginal out-of-body experience. Within various esoteric anatomies, the bodily locus of the Spirit or Self, after all, is often located precisely “in” the physiological heart. In my own mind, this is simply another illustration of the super natural. It is also an illustration of what I call “the traumatic secret” below, that is, the way that trauma can “crack us open” for an experience of transcendence.
62. And, yes, it *does* matter whether a thinker has been in such a state or not. Major scientists and intellectuals who have known such encounters have insisted on the reality of these phenomena against their nay-saying colleagues. Consider geneticist and Nobel laureate Kary Mullis’s account of what looks exactly like an alien abduction (which he positively compares to Whitley’s *Communion*) in *Dancing Naked in the Mind Field* (New York: Pantheon Books, 1998); or cell biologist and feminist social critic Barbara Ehrenreich’s epiphany of what she suggests is an invisible species living in the environment, akin to the gods and extraterrestrials of folklore, in *Living with a Wild God: A Nonbeliever’s Search for the Truth about Everything* (New York: Twelve, 2014). Ehrenreich uses her own experience to openly challenge, and reject, the materialist interpretations of science.
63. See David Gordon White, *Kiss of the Yogini: “Tantric Sex” in its South Asian Contexts* (Chicago: University of Chicago Press, 2003). This is the second volume in a trilogy that constitutes the most creative and learned interpretive vision we have of medieval Indian Tantra. I cannot recommend them highly enough. The other two are *The Alchemical Body: Siddha Traditions in Medieval India* (Chicago: University of Chicago Press, 1996) and *Sinister Yogis* (Chicago: University of Chicago Press, 2009).
64. White, *Kiss of the Yogini*, 206.
65. Another author who has intuited, if not quite developed, a similar comparison is Kenneth Ring, in his *The Omega Project: Near-Death Experiences, UFO Encounters, and Mind at Large* (New York: William Morrow & Co., 1992). See his brief discussion of “The Kundalini Syndrome,” 164–166. Ring’s bold book illustrates a number of my own convictions expressed here.
66. Mircea Eliade, *Shamanism: Archaic Techniques of Ecstasy* (Princeton: Princeton University Press, 1964), 45–46, 49.
67. Eliade, *Shamanism*, 50, n45. For other references to rock crystals, see Eliade’s rich index.
68. Whitley Strieber, *Communion: A True Story* (New York: HarperCollins, 1998), 83–84.
69. See David Halperin, “Saint Paul: UFO Abductee?” (Part 2) at <http://www.davidhalperin.net/saint-paul-ufo-abductee-part-2/>

- [70.](#) I am hardly the first to suggest this. The world's trickster myths work in very similar ways, as numerous folklorists and anthropologists have noted. In a similar vein, C. G. Jung read the flying saucer phenomenon in the late 1950s as the collective mind's symbolic attempt to rebalance itself after a long night of rationalism and mechanism. Finally, George Hansen has argued much the same in his *The Trickster and the Paranormal* (Xlibris, 2001)—required reading, in my opinion, for anyone truly serious about the topic.
- [71.](#) Maurice O'C. Walshe, trans. and ed., *The Complete Mystical Works of Meister Eckhart* (New York: Crossroads Publishing, 2010), 296.
- [72.](#) I am deeply indebted for this line of thinking to my colleague Harald Atmanspacher. Harald is a Swiss quantum theorist and an expert on the quarter-century friendship between the quantum physicist Wolfgang Pauli and the depth psychologist C. G. Jung. For Harald's latest work on the same, see Harald Atmanspacher and Christopher A. Fuchs, eds., *The Pauli-Jung Conjecture: And Its Impact Today* (Exeter, UK: Imprint Academic, 2014). Jung sometimes described this "one world" below what we know as the mental and the material as "psychoid."
- [73.](#) I am indebted to my colleague Sarah Johnston for this insight.
- [74.](#) For an eloquent and deeply personal explanation of trance as a technique for accessing human potential, see Adam Crabtree, *Memoir of a Trance Therapist: Hypnosis and the Evocation of Human Potentials* (Victoria, BC: FriesenPress, 2014).
- [75.](#) Lee Siegel, *Trance-Migrations: Stories of India, Tales of Hypnosis* (Chicago: University of Chicago Press, 2014), 2. I am indebted to Lee for my language of "trance-formations" and many of the insights of this particular section.
- [76.](#) Jeffrey J. Kripal, "The Traumatic Secret: Bataille and the Comparative Erotics of Mystical Literature," in Jeremy Biles and Kent Brintnall, eds., *Negative Ecstasies: Georges Bataille and the Study of Religion* (New York: Fordham University Press, 2015).
- [77.](#) I cannot pursue the possibility here, but I also want to leave open the possibility that there may be real "demons," that is, negative spirits or aggressive, invisible species in the environment. There certainly are in people's experiences throughout human history, and the phenomenological cut demands that we take those experiences seriously and sympathetically. Sometimes the most adequate response to an experience of evil is not a professor's theory but an exorcism. Having said that, there are moral and intellectual complexities galore here, from the possible presence of mental illness to the historical demonization of other people's religious experiences.
- [78.](#) I am indebted for this idea to Jess Hollenback, who articulated it at a symposium on the imaginal that I hosted for the Center for Theory and Research, Esalen Institute, October 19–24, 2014.
- [79.](#) See especially Matthew T. Kapstein, ed., *The Presence of Light: Divine Radiance and Religious Experience* (Chicago: University of Chicago Press, 2004). I cannot pursue this idea here, but the history of light in the religions is connected to the mystical experience of human sexuality. See

Mircea Eliade, "Spirit, Light and Seed," in *Occultism, Witchcraft and Cultural Fashions: Essays in Comparative Religions* (Chicago: University of Chicago Press, 1978).

[80.](#) See M. David Litwa, *Becoming Divine: An Introduction to Deification in Western Culture* (Eugene, Oregon: Cascade Books, 2013), ch. 4.

[81.](#) <http://secretsun.blogspot.com/2009/11/astrognostic-trapped-here-on-this-alien.html>.

[82.](#) April D. DeConick, *The Ancient New Age: How Gnostic Spirituality Revolutionized Religion* (New York: Columbia University Press, forthcoming).

[83.](#) The gnostics generally distinguished this immortal spirit (*pneuma*) from the soul (*psyche*), which they believed survives bodily death and can be reincarnated but that is not truly immortal or eternal. Since we live in a flatland culture that denies both aspects of the Human as Two, I often use "soul" and "spirit" interchangeably, not because I think they are the same (I do not), but because they are interchangeable in contemporary American English.

[84.](#) The finest application of entanglement to various forms of anomalous experience is Dean Radin's *Entangled Minds: Extrasensory Experiences in a Quantum World* (New York: Paraview, 2006). Radin's book is a wonderful example of employing the philosophical implications of quantum physics to "make the impossible possible."

[85.](#) David Kaiser, *How the Hippies Saved Physics: Science, Counterculture, and the Quantum Revival* (New York: W. W. Norton, 2011). I am indebted to my colleagues Nick Herbert and Jane English for reading over this section and providing me expert feedback.

[86.](#) I discuss the history of this "physics of consciousness" movement, including and especially the elegant comparisons of Fritjof Capra, in *Esalen*, ch. 13. Capra's book was based partly on a mystical experience he had of the subatomic world, not unlike that of Jane English described immediately below.

[87.](#) Jane English, *Fingers Pointing to the Moon: Words and Images of Paradox-Common Sense-Whimsey-Transcendence* (Mount Shasta: Earth Heart, 1999), 101-102.

[88.](#) *Ibid.*, 104.

[89.](#) See Litwa, *Becoming Divine*, 157.

[90.](#) I borrowed the title "Big Sur Real" from one of my work-scholar students at Esalen, in the summer of 2012. I deeply regret that I cannot remember his name. If you read this, please let me know who you are.

[91.](#) No, he was not stoned. All Stuart had on that midnight was a peanut butter and jelly sandwich, which he had just put together from the all-night bread bar in the Lodge.

- [92](#). One of the easiest places to find glowing orbs in Big Sur is in a book about the place, Henry Miller's lovely memoir, *Big Sur and the Oranges of Hieronymus Bosch* (New York: New Directions, 1957), 75–76.
- [93](#). I am indebted for this line of thought to Erik Davis, who has written eloquently about this distinction between “reason” and “resonance” in his dissertation on Philip K. Dick, Terence and Dennis McKenna, and Robert Anton Wilson, “High Weirdness: Visionary Experience in the Seventies Counterculture,” PhD diss., Rice University, 2015.” Erik is drawing on a number of thinkers here, especially Veit Erlmann, *Reason and Resonance: A History of Modern Aurality* (New York: Zone Books, 2010).
- [94](#). Mark Fox, *Spiritual Encounters with Unusual Light Phenomena: Lightforms* (Cardiff: University of Wales Press, 2008), 59–60, 158. Another book, based on the same archives, is Annekatrin Puhle, *Light Changes: Experiences in the Presence of Transforming Light* (Guilford, UK: White Crow Books, 2014).
- [95](#). Paul Marshall, *The Shape of the Soul* (unpublished manuscript), chapter 5, “Soul Spheres.”
- [96](#). Diego Escolar, “Boundaries of Anthropology: Empirics and Ontological Relativism in a Field Experience with Anomalous Luminous Entities in Argentina,” *Anthropology and Humanism* 37/1 (2012): 27–44. The Marton case is also discussed in this essay.
- [97](#). For an eloquent study of the elaborate historical processes through which such encounters were “disciplined” by Church authorities and theological writers until they “meant the right things,” see Diana Walsh Pasulka, *Heaven Can Wait: Purgatory in Catholic Devotional and Popular Culture* (New York: Oxford University Press, 2015).
- [98](#). Brent Landau, *Revelation of the Magi: The Lost Tale of the Wise Men's Journey to Bethlehem* (New York: HarperCollins, 2010), 90–91. My thanks to Brent for help here with some of the weird comparative details.
- [99](#). E-mail communication of February 2, 2014, 10:21 a.m.
- [100](#). A few very brave intellectuals have struggled with this. I am thinking in particular of the writers Aimé Michel, Jacques Vallee, and Bertrand Méheust. For a discussion of these three men, all of whom know or knew one another, see my *Authors of the Impossible*, chapters 3 and 4.
- [101](#). For his ranking, see the epilogue to John Fairley and Simon Welfare, *Arthur C. Clarke's World of Strange Powers* (New York: HarperCollins, 1984), 243. This was the second volume of three such volumes.
- [102](#). The best source of the three laws is probably Arthur C. Clarke, “Hazards of Prophecy: The Failure of Imagination,” chapter 2 of the 1973 edition of *Profiles of the Future: An Enquiry Into the Limits of the Possible*. The idea expressed in the famous third law is hardly original with Clarke, however. As others have noted, very similar lines can be found in Charles Fort's *Wild Talents* (1932) and Rider Haggard's occult novel *She* (1886), among other texts. See:

https://en.wikipedia.org/wiki/Clarke%27s_three_laws. I would only add that much of nineteenth-century psychical research (which employed techno-etymologies to describe psychical phenomena), many other works of occult fiction—Edward Bulwer-Lytton’s *The Coming Race* (1871) comes to mind—and the enigmatic Nikola Tesla, who entertained both extraterrestrial and mystical notions, all can be placed here as well. This entire techno-magical or electro-mystical complex has been studied by Erik Davis in his marvelous *TechGnosis: Myth, Magic, and Mysticism in the Age of Information* (Berkeley: North Atlantic Books, 2015).

- [103](#). Arthur C. Clarke, epilogue to Fairley and Welfare, *Arthur C. Clarke’s World of Strange Powers*, 240.
- [104](#). Although I came up with this idea “on my own,” it turns out that it is not entirely original. Hence this line from the Girl Genius: “Any sufficiently analyzed magic is indistinguishable from technology” at <http://www.girlgeniusonline.com/comic.php?date=20081205#.VLZwnEvm0s>. As is so often the case, it is popular culture, in this case a fictional female superhero in a comic book, that gets it right. Go Girl Genius!
- [105](#). Gregory L. Little, introduction to Andrew Collins, *Lightquest: Your Guide to Seeing and Interacting with UFOs, Mystery Lights and Plasma Intelligences* (Memphis: Eagle Wing Books, 2012), 15.
- [106](#). See the Kim Arnold interview in Paola Leopizzi Harris, *UFOs: How Does One Speak to a Ball of Light?* (San Antonio: Anomalist Books, 2011), 1–32.
- [107](#). For much more on this and the full argument, see my *Mutants and Mystics*, chapter 6, “Mutation: X-Men Before Their Time.”
- [108](#). Whitley Strieber and Anne Strieber, *The Communion Letters* (New York: Harper Prism, 1997), 287.
- [109](#). Mark Pilkington, *Mirage Men: An Adventure into Paranoia, Espionage, Psychological Warfare, and UFOs* (New York: Skyhorse, 2010); Robbie Graham, *Silver Screen Saucers: Sorting Fact from Fantasy in Hollywood’s UFO Movies* (forthcoming); Diana Walsh Pasulka, private communications.
- [110](#). I am thinking in particular of Bruce Lincoln, Hugh Urban, and Diana Walsh Pasulka.
- [111](#). Anyone serious about the subject must read Michael Barkun, *A Culture of Conspiracy: Apocalyptic Visions in Contemporary America* (Berkeley: University of California Press, 2013).

ABOUT THE AUTHORS

WHITLEY STRIEBER is a novelist and the author of a number of nonfiction works, among them the Communion series, which includes *Communion*, *Transformation*, *Breakthrough*, and *Solving the Communion Enigma*. His fiction includes, among many others, *The Wolfen* and *The Hunger*, both made into movies; *Superstorm*, which was filmed as *The Day After Tomorrow*; and the Alien Hunter series, which is being made into the SyFy channel series *Hunters* by Gale Anne Hurd.

JEFFREY J. KRIPAL is a historian of religions and the J. Newton Rayzor Professor of Religion at Rice University. His books include *Mutants and Mystics: Science Fiction, Superhero Comics and the Paranormal*, *Authors of the Impossible: The Paranormal and the Sacred*, and *Esalen: America and the Religion of No Religion*. The last two books are being made into feature documentaries by Scott Jones of Jones Cinema Arts. For his full body of work, see kripal.rice.edu

BESTSELLING AUTHOR OF *THE WOLFEN*

WHITLEY STRIEBER

THE WILD

No one can resist the call

www.whitleystriber.com

Praise for Whitley Strieber

Majestic

"Combining meticulous research, vivid characters, an engrossing mystery and convincing documentation, Strieber has come up with an intriguing, intelligent, exciting novel."

— *Washington Post*

"Engaging as science fiction, unnerving as possible fact . . ."

— *New York Times Book Review*

"A thrilling, frightening, and worthwhile work."

— *Chicago Tribune*

Communion

"If Whitley Strieber isn't fibbing in his new book *Communion* . . . then it must be accounted the most important book of the year, of the decade, of the century ..."

— *The Nation*

"Strieber comes through as both sensible and sincere ... His book deserves to be taken seriously."

— *Boston Herald*

Part One

City Life

Life along the vertebrae of the earth,
brown and slow, concentrates in the cracks,
boiling down to harder forms,
skin to stone, finger to claw.

—Robert Duke,
"Silent Transformation" (1987)

Chapter One

CINDY AND ROBERT DUKE WERE IN THE FIFTEENTH YEAR of a good marriage when something unusual happened.

They had a twelve-year-old boy named Kevin Thomas for his paternal grandfather; they had an apartment in New York City; Bob had sold stock, brokered insurance, sold bonds, was now a computer consultant. He had never been much good at making money, but until now he had managed.

Argument was past, anger was past, the sweated skin of Cindy's girlhood was past, and they were really learning one another, growing close in ways so deep that they spent a lot of time infected with secret laughter.

Cindy was heavier than she had been when they used to traverse Manhattan on roller skates, two cheerful Village types, a young poet and his wife. The need for money had ended those days; Bob was a poet now at night only.

Recently Cindy had made a private decision that she would allow herself to widen out a little, to find in the long curves of a bigger body a comfort she had suspected but never dared try.

Bob liked scallops and steak, he liked game and on occasion hunted grouse in the Catskills, where they were members of a hunt club. Cindy cooked the game intricately, her recipes running to Italy and garlic, and much invented, all good, the birds properly brown, the skin crisp and salty, the flesh tender and sweet, and her quail were delicious in steaming piles. They both liked to dig into homemade ice cream with the ice-cream paddle in the middle of the night. Young Kevin had read all of Jack London and Mark Twain. Recently he had turned—or been driven—to Kafka.

Kevin smelled often of oil paint and his art teacher fluttered when speaking about him. Cindy disliked the man, but the school administration loved him. She was tortured with thoughts of kidnapping or more subtle predation, the caress, the boy gladdened by the attention and then the hands against his naked skin, and the parted cracks, the cries, the awful memories for her little son.

She was a heavy sleeper, and did not know how difficult it was for her husband at night. He would read, he would lie looking at her, he would make a deer's soft whistle when the shadows from the street trembled on the bedroom ceiling. Drawing down the sheets, he would see her golden body,

and touch the down on her thigh, and listen to her weighty breathing. He loved her, he understood that, to distraction and to the exclusion of all others. Once he knew her, other women had come to seem ciphers.

Now he sat beside her on a bench at the Central Park Zoo while Kevin sketched a tapir. Bob detested zoos; Cindy and Kevin loved them. When he was much younger, Bob had spent time in the wilderness. He had camped and hiked and canoed. The wilderness haunted him. Wolves haunted him. Freedom haunted him.

It was an October Saturday, the third of the month. Cindy held a copy of the *Times* in her hands, twisting it until the ink was smeared. Bob ate the last of Kevin's Cracker Jacks.

"Look at that," she said.

"What?"

"That wolf is watching us."

She was right: it was staring past the children, the men and women, the candy-apple stand, the popcorn vendor, the whole free crowd. From its prison, it was staring not at them, but at him. The wolf was staring straight into the eyes of Bob Duke.

All of his life Bob had been fascinated by wolves. He enjoyed being near them so much that he had tried to track them. Often, he dreamed about them. In his childhood he had fantasized that he was a magic wolf, and could run through the night sky.

He was unsettled by the feeling this poor, imprisoned wolf communicated to him. As he stared back he tore into the Cracker Jacks box. "Why doesn't it look at somebody else?"

"You're the only poet."

He shot an angry glance at her. He could not help his infirmity. All of his life he had been a poet, unpublished, ignored, but nevertheless on the perfectly valid path of a poet. He hated his own love of poetry. Give him instead a good spreadsheet and some numbers to crunch. He was a bitter man.

There was only one way to describe the look in the eyes of the wolf: horrible.

In this regard it was brother to all the creatures here. Bob could feel the unfocused moaning of the place, the yearning toward a thousand different instinctual freedoms: to run, to hunt, to hide or fly. Love of trees, of animals, of the whole intricate, savage reality of the wild had always sustained Bob.

As a boy in Texas he had watched the night sky, the racing moon, and

dreamed his dreams of the wild.

There was one dream he would never forget. Even though it had happened when he was eleven, it was still vivid in his memory.

In this dream he had been a wolf. He had been awakened in the thick night by an amazing, intoxicating odor. His eyes had snapped open and his whole body had been quivering. The moon had shone down like the eye of some wild god. Waves of fierce pleasure had surged through him, deranging his senses, overwhelming his childish fear of the dark.

He had leaped out of bed, unlatched the screen window with fumbling, desperate fingers, and rushed off into the night. He remembered scuttling across the porch roof beneath his window, then leaping into the moon-silver air. He'd landed as gracefully as an animal on all fours.

Then there were dew-damp leaves slapping his face, and the pulsing, rushing of a beautifully muscled body, his heart breaking with obscure passions of overwhelming power, odors of the night filling his brain, intoxicating him—and then, for the first and only time, he was alive.

It was like leaping and crawling at the same time. The world was transformed by a great magic, the moon spreading its glow everywhere, and he was happy, all the cares of a dull childhood gone, and he was suddenly free in the night and he threw back his head and shook his body and he howled out the piercing joy that filled him blood and bone and soul.

Then he was awake. True, his pajamas were covered with grass stains and there was a dried leaf in his hair. True also, it was seven o'clock in the morning and he had a math quiz to look forward to.

He had gone off to school, smell of paste, math exercise book, the classroom shades drawn against the glory of the morning sun. But forever after, he had wondered if perhaps, for a little while in the dead of the night, he had been a wolf.

It was truly an intoxicating thought, a delicious thought. Man into wolf. Running. Howling. Leaping on the quaking innocent.

But he had never really escaped that classroom he entered on the morning after his magic, and now the caged wolf's eyes mocked him for it. And he thought, You, are you a man who became a wolf, locked in there now?

It was hideous to think that he might be looking at someone who had a name and a past, who had tasted the freedom of the wild only to be locked up like this, a sort of double prisoner.

"Let's get Kevin and go. It's lunchtime."

"We've only been here ten minutes."

The wolf's eyes bored into him. He imagined long, thin claws extending out from the center of those eyes and into the center of his brain, and forming there a molten spot. "The animal's angry," he said.

"I don't blame him. He's in a zoo."

"I hate this place."

"It's only a perfectly ordinary zoo. Anyway, Kevin's in the middle of something exciting. Look at him."

Bob envied and loved his son's ability to draw and paint. But for a child of twelve, why such furies? He made Francis Bacon look cheerful. His son would climb into his lap and they would read together, and Bob would wonder what tormented the boy, who read Kafka's "Hunger Artist" in a solemn, priestly voice, perhaps even in the voice Kafka had heard while he was writing it. Another jumbo jet would roar over the house, and to the west the sky would mutter, another restless night.

Bob was trapped between the staring wolf and his son's obvious excitement. When he moved, he was captured by his wife's cool hand, which squeezed his own. "Relax. It's a sunny day."

"The cages get to me."

"It's *only* a zoo!"

"Oh, come on, Cindy, can't you feel the anger? What about that wolf? You can feel his anger."

"Maybe I'm not sensitive enough for it to matter. After all, I'm not a poet."

How he hated that word. He suspected that it had been invented for the specific purpose of being applied to those whom it would trap. Cindy read his poetry, and now also Kevin. "It's good, Dad. It's real."

Cindy might add: "Couldn't it be a bit less sad? What about the beauties of the world?"

"At Auschwitz Dr. Mengele used to issue what he called 'standing orders.' He and his henchmen would stand on the chests of prisoners until they died."

"That isn't the answer I expected, at least I'll say that for it. What if they lay there looking at the sky, looking past the men destroying them? The sky is made for joy."

"Romantic nonsense."

"It's what I would have done."

"Fatuuous. The agony was too great."

"Damn you, Bob, your ego's always in the way. That's the reason your

poems don't get published, you're too proud of them, and it shows."

He threw his head back and stared into the sky. He imagined the feet on his chest, the boots slowly collapsing his ribs, the click of the man's lighter mesmerizing him, the glow of his cigarette against the pearl-blue evening of Auschwitz.

He stared up into the belly of a passing airliner, whose roar mingled with voices and the smack of eating mouths, and the cries of the animals.

Inevitably, he looked back at the wolf.

It had never stopped watching him. He decided that there is no such thing as a human being who is not terrified of the wild. His wife's body touched him. Her hand still lay in his. Their love was so profound that there was nothing to be said about it. Anything could transpire between them, any anger, any hate, any outrage, and it would not matter to this love, which was like blood, like breath, more a part of the body than of the mind. Sometimes he knelt before her at night, and she drew him down into her cavern. Once she had said, "You cannot survive without me. I have become myth for you."

The ecstasy of love is what transmits human feelings. Without it children cannot be truly human. If Adam and Eve had not fallen in love after their first child, humanity would have ended with them, for Abel like his brother would have been a beast.

"Don't keep tilting your head back like that. You look like you're having a seizure of some kind."

"I want to look at the sky."

"The pigeons are aiming for your mouth."

"You hope. But the statistics are on my side."

"Come on, sit like an adult. I don't want people to think I'm married to an overgrown child."

"You are."

"You're going to hurt your neck."

"Pain is good for me. Pain means something."

Cindy muttered a reply. What was it? Fatuous? He hadn't heard, but he didn't care, either, because he saw clouds. Another jet passed, and beneath the clouds it was so small. He imagined the people and the books up there, the copies of *Time* and *Newsweek* in the laps of the travelers, and their unimaginable dreams. He visualized the stewardesses stowing the empty food trays, the pilots reading off vectors, pulling and pushing levers, wheels, buttons, and the fire in the engines, the white fire of JP-6 waiting there to

fulfill its dream, the dream of all jet fuel, which is to bum its creators.

He would have to go down to Atlanta bright and early Monday morning, a guest of Apple Computer, to attend a two-day session about the Macintosh Office. Wonderful, crazy, impossible computer, the Mac. All the people from Apple would be smiling, everything calm and rich in the Westin Hotel, and at night, in their dark rooms, they would all be lying awake worrying about their jobs.

He did not want to fly to Atlanta. He did not want to attend the conference with the despairing computer salesmen. He did not want to lie in an oversize bed in the Westin, wishing he was home in Cindy's arms, listening to *A Sea Symphony* while the stars passed and the pacing in the apartment upstairs went on and on.

I'm a selfish man, he said in his mind. A brat.

He sat up straight, surprised.

What was happening to him?

If only there was some way to tell her how he was suffering, surely she would have compassion—she would fill with compassion—and let them go out into the streets, go to a movie, to a restaurant, home, anywhere but this damned zoo.

The wolf was still staring at him. Its ears were pricked forward, adding to the impression of almost supernatural concentration.

Wolf, or man-wolf?

It blinked its eyes as the sun emerged. The animal within Bob reacted: he felt a slow, intimate movement beneath his flesh. He recalled his wolf dream with the kind of insight that brings sudden and intense clarity. Raising a boy, loving a wife, writing poetry, selling, advising, flying, eating, waiting, he had driven himself insane. A wolf in the belly was not the fantasy of a sane man. Should he go into analysis? Expensive, and also the only psychiatrist he knew was Monica Goldman, who was Cindy's dearest friend and the only woman he had ever desired to distraction, but for Cindy herself.

At the Esopus Hunt Club one night Monica and Steve had come in, she flushed with pride at the pheasants she had taken, her gun on her arm, her birds at her waist, dangling and beautiful, her color high, her eyes sparkling. He had kissed her cheek, there had been wine and Steve's bobbing bald head in the light of the kerosene lantern, the group of them with the enormous old club build-ing to themselves but for the Brickmans from California, the deaf, smiling, ancient Brickmans, and he had thought of Monica in the night. Over

the course of the evening he had contrived a plan that would enable him to accomplish his object without shame, or so he imagined. He had rehearsed the words, the gestures, the casual laughter if his suggestion failed. "It's cold. Why don't we bunk up together, all four of us?"

A short silence. Steve's pate reddened. Monica crossed her legs, put her chin in her hand. He could practically hear the phrases of her profession wallowing about in her mind: penile insecurity, death wish, sublimation.

They all burst out laughing, so loudly that the Brickmans, who were sitting in armchairs reading *Reader's Digest* Condensed Books, nodded and smiled, and Mr. Brickman went "ha-ha, a good hunt!"

It was a night of false groping. For the longest time only Steve was potent. He and Cindy had coupled together with Monica sitting in a chair and Bob curled up under the covers at the bottom of the bed, praying to God it would end, but it was endless, on and on, booming through the night as if an artillery battery had opened up on his position.

At three o'clock in the morning Bob had waked up, his body quaking with lust, and made furious love to Monica.

Only at the end did he discover that the shadowy, grappling woman beneath him was Cindy. Monica and Steve had gone back to their own room hours before.

Should he now sit across a desk from Monica and say, "I had a hallucination that there was a wolf in my stomach?" Well, she wouldn't charge him too much. "A professional visit," she would say, "of course."

The wind blew, and Cindy's heavy thigh rested against him, and his son went on drawing the tapir. The crowd passed, a baby bobbing in a stroller, a couple with linked hands, a pale man who watched Cindy, his face in an agony of longing. Cindy's eyes followed him. She carried a terrible electric stunner in her purse. She would not hesitate to use it.

Something made Bob get up, made him stand full height. "Get me a Pepsi," Cindy said.

His mouth might as well have been sewed closed, for he could not even begin to answer. He found himself moving toward the wolf, threading through the crowd, or so he thought until he collided with a girl in shorts and a tie-dyed T-shirt, and smashed her orange drink against her naked midriff.

Her voice chopped at him, a wave smashing on rocks. Seeing that she could not make him hear her, she stamped her foot and stalked off. The wolf had watched Bob until he reached the cage. Then it began to pace back and

forth, its dewlaps wet, its eyes glancing from side to side, its tongue lolling. He watched the tongue, the black lips, the yellow, weak teeth, the eyes. The animal's tail was down, and when it passed close to him, it growled.

Was that entirely an animal sound?

He realized that it was literally frantic to escape, that its problem, very simply, was boredom. It was made for the woods, this creature, it belonged in secret and limitless spaces. But where were they? The woods that weren't being logged out were dying of acid rain. It belonged nowhere, this North American timber wolf. The animal was part of the past. Its last place was a cage in the middle of a zoo in the middle of a city totally beyond its understanding.

What *did* it understand? It understood how to snatch trout from streams, how to eat voles and gophers, how to bring down deer and moose. Did it also understand how to turn a key?

There was something about this creature, though, that Bob knew with crystal certainty could not be destroyed.

"It's beautiful," Cindy said. She had come beside him. He felt what Monica would call "inadequate."

"I wish I was some kind of an activist. I'd like to come in here and free all of these animals."

"Kill them, you mean?"

"Free them."

"To release them into the city is the same thing as killing them. Even in the wild, most of these animals would die."

The wolf remembers, though, the long shadows of evening and the darting movements of the muskrat. "You're so controlled. I think you're overcontrolled. What if they made it, all of them, even the sloth and the anteater."

"The anteater's cage is empty. I guess it's dead."

"What about giraffes? What if I found them all an apartment? They could live in comfort then, no crowds, no cages."
