"Who'd pay the rent?"

"A secret zoo. Admission fifty dollars. Worth it to see a hippo cooking breakfast and a full-grown moose grazing the shag rug in the bedroom."

"I want to be together later. When Celeste takes Kevin and Joseph to the movies."

"I thought he and Joey were fighting."

"No. Now Dashiell and Kim are fighting. The rest of the class has suspended hostilities, pending the outcome."

The wolf turned and stood directly before Bob, lowering its head as if it wished it could ram itself into his belly. It growled—not a little, throaty sound, but a big noise.

It was magnificent, it had the whole wild in it.

Down the row of cages the baboon sat, its mouth lolling open, its head resting against the bars, its eyes in Africa. The wolf paced and barked, and Bob knew that it was begging for freedom.

No, begging for forgiveness. "It's just their fate," Cindy said, trying to be kind to him, "they ended up here."

Bob thought. What if it isn't that way at all? The man-wolf knows. . . . "I'm no good today," he said aloud. "I didn't sleep. I don't want to go to Atlanta."

She was hugging her shoulders, watching the wolf. "It is us it's reacting to. There's no doubt about it."

"I'm scared. Maybe it's telling me not to fly. It's a portent."

She shook her head as if trying to dislodge a gnat from her ear. "No, it—" The wolf threw itself against the bars, growling and yapping, dragging its teeth on the iron with a clacking sound. Cindy stepped back. Bob's impulse was to throw his arms around the wolf, to kiss it, to caress it. He had kissed his dog Moe when he was a boy, had put his arms around Moe, and he remembered Moe's smell, that musty dogginess, the fetor of his breath. Moe had been ground to wreckage beneath the wheels of the school bus. The bus had let Bob off. As it pulled out, there had been a crunch, a thud, a canine scream, and the bus had rumbled away with Moe's tail fluttering out from under the fender. Bob had been left with his dog, its jaw torn back, gabbling against the street, making noises like wet paper being dropped from a height. Moe was a pulsating shambles, save for one rear leg, which was running furiously. There was nobody around, it was a block to home, and Moe was dying. Bob had screamed while Moe popped and spluttered.

Bob ran through the lush neighborhood, which had become a moonscape of empty houses and houses that would not answer the door. He had gotten home to find his own house also empty. He had called his father at the office. "Moe can't live, Bobby," his father had said. "You take my shotgun down and help him out of his misery."

Then there was a twelve-year-old boy, his eyes soaked with tears, rushing down the hot, empty street with a big old Remington held at port arms, who

aimed the gun at the flapping puddle on the street, and shot, sending up a great splash of blood from the body of his beloved. The boy then turned the shotgun on himself, only to find that his toe could not—by an act of the goodness of God—reach the trigger. He looked down the smoking barrel into his deepest, truest wish. At last, dragging the gun, he made his way home.

The agony of that experience reasserted itself. Was the wolf rabid, sick, would it be taken up to the pound and gassed, ending its life in the ultimate prison, a chamber so small it would have to be stuffed in, with the gas hissing from the jet in the back? "Cindy, I am leaving this zoo. If you and Kevin want to stay, you can."

She knew him too well to abandon him. "Let's go to a coffee shop and get some lunch," she said.

Their son was not unwilling to leave. Bob usually did not dare to look at his drawings, and yet these were the very opposite of violent. He had rendered a portrait not of the tapir but of the wolf, a full face, eerie with knowing. "It practically posed. It was staring at you, Dad. Do you think it knows you love wolves?"

"I don't know."

Kevin took his father's and mother's hands, and they went out into the streets of the strange old city. "I wish we were in the country," Kevin said.

"Not when your dad has to travel on Sunday night. It makes things too hectic for him."

He thought of their rented house up in Ulster County, of Mount Tucker jutting up behind it, and the loons calling on the lake and the doves, and the occasional scream when something captured something on the mountainside.

Once he had watched a fox eating a small rabbit. The fox had torn out its bowels and was lapping at them while the rabbit shrieked. Or, another time, he had seen a rat taken by a red hawk. The rat knew what it was to be torn to pieces while being lifted into the happy sky.

Sometimes, warm in bed in his apartment, his wife sleeping beside him, his son in the next room, he thought he was close to a secret of incredible importance, the secret of why life was so involved with suffering, the secret the north wind said when it roared through the snowy pines, the secret of the fire in the plains, burning because it had to burn, the dog dying because it had tried to bite a rolling wheel, or the secret the great timber wolf had dreamed as it succumbed to the zoo hunter's numbing dart. But then something would

happen, his own body would go urgent or something, and thoughts of secrets would come to an end.

"Would you like a hamburger, Kevin?"

"Fine, Mom."

Bob didn't want hamburgers. He wanted to take his family to the Plaza, and dine in the Palm Court on finger sandwiches, followed by enormous slices of cake and strong, black coffee. He wanted to do this while listening to a Vivaldi concerto played by the Palm Court String Quartet. And perhaps to start with, a champagne cocktail. Furthermore he wanted to spend the rest of the afternoon in a movie, any movie as long as it was gaudy and loud, and he also wanted to float out of himself across the sky of the city, to float above the towers, off farther and farther, until the last sound from below whimpered out, and he could see stars in the middle of the day.

He would let go the mystic chain, and fall then. But he would not end up back on Fifth Avenue, not at all. He would not fall back into the world but out of it. He would fall past the moon, past Neptune, past Arcturus and the Milky Way, fall past stars and galaxies with names like NC-2376, and past those without names, past them all, until he thudded softly against the purple velvet side of the universe.

Then what would he do? Dig through? Maybe that was not such a good idea. Perhaps there was another universe on the other side, maybe worse than this one, a universe where no truth is real, where the child's ball on the grass is a killing boulder, or all of fate is concealed in the toe of a shoe.

Maybe that's what the quasars that stand sentinel at the end of the universe are all about—they are the spots where people like Socrates and Christ dug through; they are windows into bright and terrible wisdom. They are warnings.

Sometimes Bob agreed with the quantum theorists, that the world was a knack of chosen possibilities, nothing more substantial than that. Man's true model was not Macbeth, not Othello, not even Gregor Samsa, but rather Puck the fairy, magical and insubstantial and so dangerous.

"Bob—watch out! Honest to God, I never saw anybody so willing to walk in front of buses. What do you think the bus drivers are—gods? One of these days one of them'll be blinking and he won't see you in time to put on his brakes."

"Let's not go to a coffee shop. Let's go to the Palm Court."

"I'm wearing sandals, Bob."

"Champagne cocktails. Dancing to the music of Vivaldi."

"We can't afford it. The American Express bill remains unpaid."

"Let's have some fun for once."

She never let him down about things like this, The Palm Court it was, and Kevin got a Roy Rogers, she got white wine, and Bob finally settled on a Vodka Sunrise. He assembled a banquet for himself, managing to find goose with fresh snow peas, but no broiled wolf, frog legs, though, but no dog.

The music was gentle, persistently civilized, and Bob managed to sustain the illusions you need to enjoy food. You cannot think of the way hogs knock against the walls of the slaughterhouses, or of the chickens scrabbling down chutes lined with knives. As he ate he thought he could feel the world turning, exposing each part of itself to the sun, so that the light could sustain it. The engine of life labors so hard, but why? Nothing survives, yet everything tries. Worms on the end of fishing lines struggle through hells beyond imagination, slowly drowning, impaled, while monsters loom at them. Fish in creels take hours and hours to die, and you make them live a little longer so that they'll be good and fresh at the end of the day, a cheerful sight frying in the skillet.

What eats us? We can't understand it any more than the chicken can understand Frank Perdue. There is something out there.

"Coffee, sir?"

"I'd like to see the dessert cart."

Cindy luxuriated. Kevin's eyes lit up when the glorious tray was brought over, its perfections of sugar and flour and cream enough to make any boy feel suddenly quite cheerful.

When they came out of the Palm Court, it was nearly three o'clock. The sky had changed. Long, dark clouds rushed down from the north.

Cindy called Celeste. They would not go home, they would go to a movie and take Kevin with them.

The Ambassadors, a Merchant-Ivory picture based on the James novel, was playing at the Plaza Theater. In the dark of that theater, Bob felt delicious, immense relief. He closed his eyes and listened to the music, and made the words part of the music, and imagined that he was Henry James, and had succeeded in his creative life.

That night Cindy asked him to come to bed naked, and she caressed him expertly, her fingers very slow. Even after all these years, the intimacy of her touch still made him shudder with embarrassed delight. He had not had many

lovers before her, just one, as a matter of fact, with whom he had slept four times when he lived in London. There was another who had shared a single bed with him for a year, but without making love. It was the Catholic boyhood that had ruined his fun. When he made love, he still sometimes smelled the smoke of Father O'Reilly's cigar drifting through the confessional screen.

When he slept, draped across her, his chest half on her lap, while she read propped up against the head of the bed, he dreamed of a wide, empty walk. There were pizza crusts and popcorn boxes blowing, and on both sides of the walk there were cages, most of them alive with movement. A gibbon brachiated endlessly back and forth across a thirty-foot span, leopards paced, deer snorted, a weasel moved sinuously about, chimpanzees stared into the dark. The wolf watched him.

If you listened when the wind blew through its hair, you could hear the rustling of the whole forest. It came soundlessly out of its cage, drifting between the bars like fog. Bob didn't have to wait for instructions, he was familiar enough with the logic of dreams to start running at once.

Inwardly he was calm. He knew that this was a dream. He was not running through Central Park being chased by a breeze that had become a wolf. He was in bed.

The trees swept past him, their great trunks dimly lit by the antique pathside lamps. As he ran he found that he was moving along just above the surface of the path, almost as if he was about to fly like the wolf of his childhood dream.

There was nothing behind him now, nothing but the long expanse of the Literary Walk, so elegant at night, as if waiting for the return of the civilization that had created it. It was a windy night and the trees sighed and tossed their heads. No voice sounded, no radio blared. The park was empty.

The fear had left the dream, to be replaced by a sense of wonder. He had never been in the park in the middle of the night. Being here now filled him with sweet unease. Anybody he met would be dangerous, and yet it was also dark and he could hide. He could be the wraith in the shadows, the one who stalked the midnight lovers, the predator. He could be the one they all feared, the one who kept the park empty at this hour.

He slowed down. The wolf was gone. The dream became a stroll between dark pillars of trees. One part of him was searching for symbols; he sought the sense of his dream. Its landscape seemed connected to some obscure inner

resurrection.

The wolf burst upon him, its paws outstretched, its teeth bared, its eyes dark beneath the hood of its brows. He fell back, hands out, kicking, pushing, and was swept along as if in water. He tumbled between the trunks of two trees. Then he gathered himself up, feeling the wolf right at his heels. Somewhere in his mind the voice of Walter Cronkite explained that wolves are shy and do not generally harm human beings. But the voice did not connect with the empirical reality. He tried to run but now he could not. He blew instead as a detached leaf blows, soaring past the crowns of the trees, high into the sky. Around the park the buildings glimmered, a wall of gleaming fortresses. Below and behind him the wolf rose amid flashes, as if its claws sparked against the air.

The higher he flew, the harder it got to continue. Finally he felt himself begin to fall. He did not fall fast—in fact he could control it enough to avoid trees. The wolf, though, had not lost control of itself at all. Its whole attention was fixed on Bob, who lusted to reach the ground where he could run again. But he fell as softly as a bit of thread on the whipping air. Growing increasingly desperate, he kicked like a swimmer. He felt the breath of the wolf on his back, heard its urgent little cries as it closed the distance between them.

Then his feet touched the ground. He was in the Sheep Meadow, running as fast as he could. A woman was running beside him, Cindy, calling to him in a shrill voice. He could not quite hear her, but he had the impression that if he could, her words would help.

The wolf snapped. A flash of white shot through Bob's brain and he tripped, falling head over heels in the rich grass. Then the wolf was upon him. Its claws melted his flesh with a puff of blue smoke and a hiss.

Then the jaws opened, and began to work the flesh off his bones. He became a mass of conscious agony. He could see the red, pulsating walls of the wolf's esophagus, could feel the sizzling acid of its stomach. He commenced a grim kneading suffocation. Then he began to dissolve. He became softer and softer until he seeped through the walls of the wolf's organs and began to race through its body, his blood screaming in its hot, quiet blood. He was the living victim of the night, sacrificed to the life of another.

Then he was seeing through the wolf's eyes, hearing the great rustling, banging, honking, shouting, roaring city all around, and smelling waves of

odors that were like bridges of leaves and memories, the smell of dark, sick gardens, and most of all the smell of people and metal bars.

He was moving through the night in the body of the wolf when Cindy came into the center of his dream, her face streaked with tears, her hands on his wolf head, her voice begging, and this time the words made sense.

"Oh, God, honey, please wake up!"

By degrees, he obeyed the words. His wolf body fell away, smells turned back into sights, then the whole park seemed to melt. The trees flowed down like great candles, the grass shriveled into a pale Canon sheet, the cliffs of buildings became a cliff of pillows. Cynthia sat with his head cradled in her lap. He could smell sweat, his and hers. The bedroom light shone softly in his eyes.

"Cindy?"

"Thank God! Honey, it's all right. It's me. You're all right."

He grunted; his throat was so sore he could barely talk. "I'm sorry," was all he managed to say. There was terror in her eyes. He reached up, caressed her face, feeling her warm, tear-wet cheek.

"I couldn't wake you up!"

"I'm sorry. Truly, Cindy. I wanted to wake up, believe me I did."

He got up and on wobbly legs went into the bathroom. When he drank he felt a thirst like fire and drank more. Again and again he drank. Finally, gasping, he leaned over the sink and splashed his face with more water. He coughed. Cindy came in and put her arm around him.

The thing was, he could still feel himself inside the wolf. Somewhere in the night they were running together. Maybe they would always be together, running like this, running for the end of the universe.

Cindy turned him around and enfolded him in her arms. He kissed her, and her response was hungry at first. Then she sighed. She caressed him, a sad, almost apologetic gesture. "It's three o'clock in the morning," she said. "Let's try and get some sleep."

Chapter Two

SOME YEARS BEFORE, ROBERT AND CINDY DUKE HAD tried to vacation on an island in the Carribean. It was a beautiful island, its interior lush with waterfalls and orchids, its beaches chalk white, its lagoons as clear as air and swarming with colorful fish.

The only difficulty with this island was and is that the best beach is located at the end of the airport's one runway. The Dukes had just gotten to the island that morning, and having no time to discover its smaller hidden beaches—the pockets of sand secreted along its rocky harbors and lagoons—they were at this beach.

Bob watched an airliner bank over the ocean, then aim for the airport. Fortunately the planes today were landing from the west, so all the beach had to endure was a roar and a blast of sweet, warm fumes when one came to the end of the runway and turned around. Otherwise they would be thundering overhead at an altitude of fifty feet.

Dropping, the airliner disappeared below the edge of the dunes. A few moments passed. Bob heard a much louder roar than he had on previous landings. Then there was a dull thud and a cracking sound. Then silence, but for the bouncing of an enormous wheel, which bounded down the dunes, across the beach and splashed into the sea. People sat or stood, all turning toward the dunes, all freezing when they saw the nose of the airplane sitting there like a sculpture, not two hundred feet away. Bob was locked in a kind of silence. Two men in blue uniforms clambered out of the top of the plane and jumped down, disappearing among the dunes.

Bob began to run. When he reached the top of the dunes, he found himself overlooking a scene of astonishing destruction. A huge jetliner lay in at least four pieces, festooned with wires and smoking tubes. Jet fuel poured out of half a dozen places, making foaming pools in the sand beneath the shattered plane. A man and a woman jumped off one of the sections of the plane and, arm in arm, began making their way back toward the airport. The pilots climbed up into another section, the main section, and started shouting into the jumble of detached seats and people.

There was a soft rush of sound as the jet fuel under one section ignited. Bob could see the people inside struggling frantically,, then they were obscured by thick, black smoke. The two pilots had begun dropping people

out of the main section. Bob ran over and began leading them away from the plane. There were terrible screams coming from the burning part of the plane. A burning woman leaped out of the smoke and began to dance, her arms flailing as she slapped at herself with her flaming purse.

Then the main section of the plane caught. The fire was for the moment confined to the rear. People kept jumping out of the front. The pilots and a stewardess could be heard inside, shrieking at them to hurry up.

Fire burst into the cabin from a thousand different directions, swirling in a vortex. One of the pilots rushed forward, leaped down, and ran away, his face black, his hair smoking. The other one could be seen in the fire, throwing seats, pushing people toward the gaping hole at the front.

Bob sat in his seat in the plane to Atlanta, reliving as he always did that afternoon on the Island of Escape. The Island of Dreams. Pina colada, limbo, snorkel. The Island of Coral Bedrooms.

"Will you be having dinner with us, sir?"

He nodded.

"Steak or chicken?"

Always the same two meals.

"I'll have the duck a l'orange and a half bottle of Chablis. Maybe the saffron souffle for dessert."

"That sounds like the chicken."

"It's the chicken."

The flight attendant made a note on her little list and went away. This year he had earned over a hundred thousand miles on Delta. Soon he'd be able to cash his mileage in for a free trip somewhere. Maybe the Caribbees, maybe hell.

For once he wasn't lugging along boxes and boxes of seminar materials. Instead it was simply a matter of coming, listening, and going home again. The Apple Computer people were the ones with the boxes of junk.

He tried to let his mind drift. Last night's nightmare was still close to the surface, though, and when he drifted, he at once smelled its fearful scents: wolf breath, wet grass, and his own blood. The dream wasn't really over, that was the trouble. Cindy shouldn't have waked him up, as terrifying as it must have been to see him toward the end howling and snapping. She should have let the dream resolve. Now it persisted in him, lingering at the edge of memory, jumping for a split second into his vision.

To quell it he forced his attention to the face of his watch. Nine P.M. She

would just be turning off *Masterpiece Theatre* and probably fixing herself a cup of herb tea. Kevin would be asleep, the cats at the foot of his bed. When Cindy lay down they would come to her, their habit being to share the society of sleep between the two beds in the household. He wished that she was sitting in the seat beside him, Kevin in the window seat.

If the plane was going to crash, though, better he be alone.

When Kevin had been a baby, Bob had taken great pains to preserve his own life. He did not want to leave such a vulnerable little creature. When there was someone in the world whose eyes literally shone when they regarded you, how could you bear to die? Kevin had needed a male image, had adored Bob in a way he had not known was possible, had so relished his every attention. But now Kevin was twelve, and he could grow up without a father, if necessary. Or Cindy could remarry. Bob could be replaced.

While these morbid thoughts passed through his mind, the stewardess dropped his meal on his tray. He nibbled at the chicken breast, ate the parsley, ate the half of a cherry tomato that was on the salad. He drank the club soda and ate a bite of the dense brownie. He had brought Max Brod's book about Kafka. If he was going to keep up with his son, he was going to have to gain some sort of insight into Kafka. What were the parables about? And the "Penal Colony"—or, for God's sake, the *Metamorphosis*? This morning, while Bob was looking through the Amusement Section of the *Times* for notices about ballroom dancing, Kevin had suddenly asked, "Where's Away From Here? Is it away from here, or away from where Kafka was when he wrote the parable?" He had seen the mirth in his son's eyes, and decided that he had to learn more about Kafka.

He just stared at the pages, though. Half of his mind was waiting for the plane to fall out of the sky, waiting for the dreadful roar that would announce the explosion of a terrorist bomb, or the thuttering oscillations that would precede the separation of a wing.

Why should I read about Kafka? I'm living in Kafka. I'm a Hunger Artist on trial in the Penal Colony. There isn't any escape. Even death is no escape, not if there is reincarnation. Oh, God, what if I come back in Bangladesh or as a Shiite fanatic, or a Chinese peasant? What's going on, how does it all work, why do I keep thinking I've lost my keys when I haven't?

I'm in the middle of the woods and I suddenly realize that I can't get out. The wolf is no help, the wolf is only chasing me deeper.

A cold hand covers mine. A face, rusty around the edges, skin as tight as

that of a mummy, hair too blond, voice older than the polished nails, the pearl-hard face-lift. "Jesus will comfort you," says the mask.

Bob realized that he had been crying, his tears raining down on the chicken and Max Brod.

"Jesus—"

"Pray with me. It'll help."

"I don't go to church." He thought: O'Reilly. Cigar. Communion. Then: Altar Society, mother picking up the lilies at Anne Warner's house. Benediction, Mass, the Last Sacraments.

"It doesn't matter whether you believe or not. Jesus doesn't mind."

Where was Father O'Reilly now? The Oblate Seminary, perhaps, teaching the dwindling few seminarians their truth and calling: "Don't drink after midnight or before five o'clock in the mom-ing. Beware of female converts, they are all after your tail. Remember that most questions cannot be answered. Remember that most sins cannot be understood. Nuns expect terrible penances. That is what their lives are about. The church is dying, this is the key truth of our time. Trust in God. Judging from the amount of notice He takes of us, He isn't too concerned. Follow His example, He has perfect knowledge."

All things grow old. The girls of spring get face-lifts. Bob wondered how much skin the lady beside him had lost over the years, how much experience she had hidden in her waxed looks. Where was the skin? Incinerated, or lying in a bottle of formaldehyde in some plastic surgeon's private museum? What would he have there— removed scars pinned to cards like butterflies, septums, big lips, bits of eye sockets and breasts? And, floating in formaldehyde, the discarded cheeks, jowls, and chins of his best customers?

"Pray with me. You might find it helpful."

Her intrusion made him feel mean. "Play?"

"No, pray!"

"You said play."

"Well, hardly that. Play—I mean, oh dear, *pray* with me."

"Freudian slip. I don't remember any prayers except the Hail Mary."

"I don't believe in Freud. He knew nothing of Jesus. What is the Hail Mary? I don't know that prayer."

"Moslem."

"Oh."

She began leafing through the Airline Gift Guide. If you fill out the card—

say, order a friend some golf shoes with retractable cleats—and the plane crashes and they find the card, do they mail it for you and take the charge out of your estate? Is there an airline policy covering this matter?

Until the island Bob had always assumed that people were just pulverized in jet crashes. But they had all been alive, broken arms and legs no doubt in the twisted jumble of seats, but alive. Twelve got out.

He imagined being twisted practically in two, the seat on top of him, his face against the floor, and the floor getting hotter and hotter and he cannot get free.

"Please fasten your seat belts, ladies and gentlemen. Captain Gamer has begun our final approach into Atlanta's Hartsfield International Airport."

The flight attendant hurried along collecting the last of the meal trays and plastic cups. The landing was completely normal. Bob moved past the smiling crew members and out into Hartsfield's silly vastness without any difficulties. Maybe he only imagined that his life was running out. Perhaps this was an illusion, there to mask the far more horrible reality that he was going to live a long, long, long time.

My problem is, I'm in a panic state. I'm panicked about death. Over death. Death and going broke. At the moment I have no accounts receivable. I've got to drum up some new business. Dying and going broke are similar, except death is less embarrassing. He hurried along a moving sidewalk. But what do I do? How do I drum up business if I'm not sure what it is I do?

Maybe the Apple people would have some i-deas. Maybe he ought to start advocating the Macintosh Office after all. A point of difference. "Spend your money with me. I advocate the Macintosh Office."

"Excuse me?"

"Nothing." The man beside him had responded to his thoughts, not because he could read minds but because he had obviously spoken out loud. All right, so you pass age forty and you start talking to yourself.

Nose, ears, and penis all continue to grow, even as your overall body mass starts to decline. Short-term memory is going. And now you mutter.

Silently, over the past year, Bob had begun to engage in the battle of the nose hair. You couldn't very well just leave it to grow longer and longer, curly and gray, like smoke flowing out your nostrils. You had to cut it. Bob used nail clippers, and the process made him sneeze. The more he cut it, the stiffer the hair became. Maybe he was one of those unlucky men whose beards grew inside their noses.

He would have drunk, but he had swallowed so many gallons of alcohol in his youth that he was almost unable to stimulate himself. He didn't smoke, drink, or chew gum.

He was nostalgic for the time in London he had been given some brownies laced with hash by a lush daughter of the nobility—possibly the only lush noble daughter—and had wound up writing a seventy-page epic poem about the death of Nebuchadnezzar.

This part of any trip was the worst, the cab ride from the airport to the hotel. You were alone and you were angry and you were bored. Stone bored watching the passing exit signs, the cars, a Camaro driven by a blonde so enormous she might be a depilated man. Maybe she was. What would *that* be like? A violation, thrilling ... or depressing, a sexless struggle with someone too strong to escape.

The dull, steamy thoughts of the traveler. Already 10:35. Get checked in, for God's sake, you can't call Cindy after eleven. That's the rule, that way you don't inconvenience anybody. Too bad he couldn't afford a portable phone.

The cab hurtled around a corner and he finally accepted the feeling that the world was ending, or rather, he was ending. "It felt like I died and the whole world died with me," a man had once said upon awakening from a particularly severe auto accident.

"May I take your bag, sir?"

God, I wish you would! "No, that's all right."

Check in: the people ahead have no reservations. Then they have a credit card on the Bank of Pakistan. They speak little English. Bob would carry them on his back to their room if it would hurry things up. The lobby smells faintly of cigarette smoke and food. Liquor. Steak. Later, he'll come down to the bar with all the other lonely men and sit staring around, looking for the Woman Who Is Not There.

He's being processed now. Credit card. Guest of Apple. Oh, that'll be the fourth floor. She says it like it's the bomb shelter. Go right up, you're already checked in, Mr. Drake.

Duke.

Okay.

Fourth floor: a woman of twenty in a tan suit with the Apple logo on her pocket comes forward. "May I take your bag, Mr. Drake?"

"Duke. No thanks."

"Let's see, you're in 403. Lucky you, you'll have a view down Peachtree

Street."

Oh, how wonderful! What luck!

The room is very nicely packaged. Little soaps and creams and things, and a shoeshine rag that doesn't quite work, the bed turned down with a mint on the pillow. A bowl of apples and a lot of literature. A Macintosh on the desk to play with. Very posh. Apple wants to win.

Brochure: *Apple and Your Corporate Clients*. Oh, God, I haven't got any corporate clients. I've got to make some calls, but I hate to make calls. "Hello, may I speak to the president of the company? Hello, my name is Robert Drake—I mean Duke—I'd like to send you some information about—hello, yes, this is Robert Hack, I'd like to send you—this is who—oh, no, I need to speak to your podiatrist—or president. Well, good-bye." That's called a line of gab.

Look at you, strutting around in the dreary room, proud and scared, an ego on a stick, signifying nothing. The girl left abruptly with a reminder that he was due for breakfast at 8:30 in the Dorset Room. Dorset Room. Breakfast. Okay, Mr. Drake will be there. Why not Mr. Mallard, it's similar but more interesting. Midlife crisis cliché. But I had my midlife crisis when I was thirty-eight. Working for Merrill Witch, flacking bonds, all of a sudden you get up from your desk and go stomping off like a golem. You reach the elevator. You leave the building. A day passes, your boss Luke Skywalker finally calls. "Hi, Bill," he says.

"It's Bob."

"Yeah, that's right. You okay, Bob?"

"Am I?"

"Well, I'll tell you, Bill, I thought you were sick or something, looking at your numbers. Real sick! You can't get the business. Sure, you rush around with goddamn cups of coffee in your hand, but that's it. For you, that's the whole job. I've been watching you, Bill—"

"Bob."

"Rob, Bob, Bill, goddamn Irving! Your severance check is in the toilet!"

A factual story: A very hot man was once hired by a small but very hot brokerage firm but did not do the volume expected of him. The trouble was, he had gone there on a five-year contract with a five-year salary in addition to commissions. This was a man who could not work unless he was desperate. Mr. Float, they called him at Wrexler, where he had originally been employed. Soon the boss of the very hot brokerage firm wanted to get rid of

Mr. Float. But how, with a five-year contract? One morning Mr. Float walked in to find that his entire office had been moved into the men's room.

He remained in that office, reading comic books, for the full five years.

Some say that is where the expression "taking a floater," got its start.

Hanging up his spare suit, Bob thought: Now, why in hell did I tell myself that story? Why don't I go down to the bar and tell some broad that hilarious story? This very night I may fondle strange breasts.

That thought led to a frantic check of the watch. Eleven-two. No. Grab the phone, *click*, dial, *click click*. Ring. *Clunk*. "Hello."

"Honey—sorry I'm late."

Laughter. "I was reading. I knew you'd be late. I was hoping you'd call."

Am I a self-absorbed by-product of a dying culture? "I'm glad you're still up. How was *Masterpiece*?"

"I slept through it. Kevin watched it, though. He says it's very well acted. Apparently some of the period detail is wrong, though. Something about the men's collar styles."

"I miss you."

"You know what I want to do to you."

"Oh, God, Cindy, I wish you could."

"Have a good night's sleep, darling."

"The dream—"

"What dream?"

"God, don't you remember? Last night I dreamed I got eaten by a wolf? It's still in my mind, I can't get rid of it. It's terrifying, Cindy. I wish to hell I'd canceled out on this."

"You might make some good contacts. Now, I want you to take a nice, warm shower and settle down with a good book. What did you take with you?"

"Max Brod on Kafka."

"Dear God. That's Kevin's influence. Let him deal with Kafka, you need to have some fun when you read. A good historical, Michener or John Jakes. Something that'll take your mind away from itself. Kafka's not for you, you're too old and overwrought to stand it."

"He stood it. He had to, he was in himself and couldn't get out."

"Didn't he cut off his ear?"

"That was Van Gogh, the painter."

"Yes, well, his skies are Kafka's words. They all ended badly, those men."

You can't get on that road. It'll kill you, there are secrets down there we shouldn't know. I'm telling you, Bob, you've got to stick to the real. Throw yourself heart and soul into the conference. Learn, make friends, really work at it. Bob, you might lose your way, honey, a lot of people like you do."

He yearned toward her voice, wished he could flow through the phone and into her body, could swarm into every cell of her, the wet, the jittering electric places, and possess her and be possessed by her, to be her ghost, her aura.

"I'll do like you say, I'll go down to the news-stand and get some light reading."

"An author you like. Don't pick up someone who annoys you. Someone somewhat literate."

That's me baby, someone somewhat literate. I'm a man who happened wrong. I should be a writer, for God's sake, but I hear it's an awful profession. They're always going broke. It's a brutal, exploitative field. Oh, God, I've missed my life.

"Good-bye, Cindy, I love you."

Click. We're off. He hangs up the phone thinking that she is an awesomely decent woman. She's a priest, a shaman, Dante. Some people are here to lead the others through life, to succor and to guide. Does she not, in her blond and voluptuous ease, even in her perfection, the calm creator of Kevin and beneficent sustainer of me, does she not deserve my loyalty?

Somewhere in this hotel, right now, there is a woman who will sleep with me. Oh, yes, not Cindy but one of her allies. I will have to go home and go to confession in our pink bedroom, and my penance will be more serious than "say the Our Father three times my son, and keep your hands out from under the covers."

He heard distant howling, as if of a wolf.

It was feeling, it was sensation, his body quaking, bending over, hands clutching the center of his gut, eyes screwed closed, and he was aware of another Atlanta, a ghost Atlanta, when it was all forest, and the things of the earth swept and swished, trotted and crawled here. On the hill where the Westin now stood—which had been completely removed for the hotel, a million-year-old hill—a wolf had howled, a bigger, heavier creature than today's wolves, and his howl had carried up and down the river, and high, high into the night, where it had echoed against the fat rising moon. The howl still lived, domiciled in the hotel's bones.

When Bob was a boy in Texas, he used to imagine that if he ran fast enough, was secret enough, clever enough, he could step off the edge of Texas and onto the full moon. On the moon lived the ghosts of ten million Indians, and he also belonged there. The Comanches and the Tejas, the Apaches and the Kiowa, the Blackfeet and the Iroquois, the Pueblo and the Mixtec, all would greet him and call him brother, and he would go down the river of heaven in a bark canoe.

Reality: The sun of his youth came up like a big hubcap and Texas kept right on happening. San Antonio grew, row upon row of houses marching out into land so ancient and untouched that fossils lay on the surface, land so delicate that any footfall was permanent. And the power lines marched and the drive-in banks, and the Great Atlantic and Pacific Tea Company, and the kids, and the cars, and the law offices.

Bob had gotten himself into a very bad mental state by the time he arrived in the bar. It didn't matter much, there wasn't a woman in the place except for the waitress, who was spreading the vodka tonics and white wines in full armor, visor down. What can you do? Ishtar opens her legs and all the corn of Babylon flowers. When she closes them, the man who was involved gets his head cut off.

"Stoly on the rocks."

"You thought you were getting somewhere but you're not. Am I right?" A guy had edged in beside him, a used-car shill in a bleak checked suit. "Whatever you want, you end up with something else. Is that right or is it right? A guy like you, like me, we get tied up, we can't get away. Well, you have to go for the gold. I always tell people who come to me for advice, buddy, I tell them, go for the gold. You think you have a home but you haven't got a home. You have a mortgage. This is not a home, excuse me, a home would be your own. The four walls belong to the bank, the paper is what belongs to you. We have to get these things straight. The trouble with you, with me, is we cannot get these things straight. We own nothing, have everything. It's all an illusion, complete and total. Am I right? I'm asking you, I'm serious, am I right? Here's a guy, asks you am I right, and you can't get a word in, this guy's not a genius, he's not a guru, he's not even a salesman, he's a compulsive talker in a goddamn bar. Look, you want a decent home for your wife and kids, that's why you're here in this bar. That's why we're all here. We're knights on the journey to the grail, every one of us, even the old fart over there with the stogie, that old pushbelly's Sir Goddamn Lancelot, am

I right? Look at this place. Not a skirt in sight. Even the gigged-out old rejects leave places like this alone. Where are the hookers? They are in the places of youth. Not even hookers want us, we are reject johns. Hookers won't bother with a bunch of weepy fifty-dollar tricks. Nowadays even the ugly whores and the sex changes make big bread, you know how they do it? How the hell do they do it, why can't we get them into the Salesman bars anymore? It's S&M ruined us. There was an old war-horse used to come in here to drink and turn a few. Now she's got a posh suite up in the Bonaventure and she's bought herself some whips and a pair of leather gloves. There are guys'll pay a fortune even to them plug uglies to go after them with a whip. Am I right? I miss that damn old rotten whore. They're all the goddamn Blessed Virgin Mary, that's our problem. Blaspheme, blaspheme, etcetera. Excuse me, ma'am—could you bring me another couple of double bourbons?"

The waitress huffed off. Bob, who wanted desperately to get away from this man, but who was also curious about him, had to get rid of a bothersome question. "Is this a pitch for some kind of self-improvement seminar?"

"You ask that?"

"I don't want any more pitches for Jesus. I get Jesus pitches every time I get on a plane."

"That isn't a real question. Who am I, what do I want, those are real questions. You think you have a life but you don't. You do not have ownership, you have debt."

"My car is paid for."

"Wha—well, good goddamn, aren't we wonderful! Oh, may I touch the hem of the garment— well, let me look at you! Your car is paid for! Good goddamn. Well, hell. Isn't that wonderful. I'm so proud of my friend! Here's a guy can fuck the best part of your whole goddamn carefully rehearsed speech! We better be careful, this guy here with the plastic nerdpack in his shirt pocket might be president someday. He drives a car that is *his own*. Now, looky here, Mr. Smartass. You think your car is paid for, but you're wrong. You don't have the fucking holy grail just yet, Sir Gawain, my brother. Your kids' educations, are they paid for? Is your house paid for? And what about your business, your goddamn swimming pool, your time-share, your TV, your VCR, your home computer? Your car is paid for—what a lie. Unless everything is paid for, nothing is paid for. Your debt is just arranged differently. Look, what I'm leading up to is, you need something that is your

own, and that nobody can take away from you. You need a stake in the earth. You need land. Land, man! I know a lot about land. Specifically, I know about the sweetest little piece of eastern Canada ever was. The very sweetest."

Bob thought, Oh, lord, a real-estate salesman.

The pitch drummed on. He was like a penitent before the altar of the hustle. Kneeling at a bulging vest, not reading the contract, the haze of fine print, take the pen, hit it right here, thank you, you have just bought another American dream.

—But it's not paid for either.

Slam, bam, thank you, ma'am. Phrase that became current in Dodge City during the cattle drives, to describe encounters between prostitutes and teenage cowboys who had not seen a woman in years. What is a man like who comes in after two years on the range eating sowbelly and beans, working seven days a week twenty hours a day? Put him in the middle of the biggest, richest city he has ever seen, with three hundred dollars in his pocket, and also give him a gun. That's the American dream, although few of those young men lived to tell about it:

No, they bought real estate with their three hundred dollars and then went out to see their land. Slam, bam, thank you, ma'am. Goin' to Canada to see mah swamp.

Bob signed the contract "Ronald Woodrow Wilson Reagan."

"My God, you have a long name—like a Negro."

"I am a Negro."

"But you look—ah, hell!"

"Sorry."

"I can't sell this stuff to you on time. You've got to pay cash."

"Don't have it."

The real-estate hustler got up and went to the far end of the bar. Bob, for his part, left ten dollars on the table and slunk out.

He wished, how he wished, that there would come a knock at his door and that tall, beautiful blonde from the Camaro would be standing there, but no knock came. The air-conditioning hissed. He threw off his clothes, ate the mint on his pillow, and then brushed his teeth. He climbed into the bed.

The claws of sleep grabbed him, and he was dragged screaming down the nightmare escalator that never quite gets to the grail.

Chapter Three

YOU LIE ON A BED IN A HOTEL ROOM. YOU ARE NAKED, you are rigid. Nobody cares, nobody will help you. Therefore you go to sleep.

The effect was as sudden and devastating as mainlining gasoline. His breath came in shattering barks, his hands fluttered, his legs kicked, his whole bones twisted in the elastic prison of his muscles. Air swooped in his lungs. Then his nose bloomed with odors, the plastic stench of the drapes, fungus from the air-conditioner filter, the body-ridden bed. This room seemed no longer slick and clean, but rather a dark, thick den swarming with the leftover flakes of a thousand lonely men.

His hands worked at the air. His fingers seemed dull and stubbed, and he felt streaming out behind him a hot dagger of nerves. He tried to touch his face—awful thick nails came up. He groaned, which was a coarse inarticulation. He was full of aches and newness. A leg trampled air, and when he attempted rising, he fluttered and fell in the bed, unable to make himself work right.

His legs skittered in the sheets. Oddly, his hands wanted to work with them. What was he trying to do, crawl?

In his extremity he cried aloud, a sound as high as the air brakes on a truck. Jesus, was this a stroke?

Get it together!

He scrabbled, he flopped—what the hell was happening!

He was out of control here. With every muscle, with every ounce of his strength he strove to quiet his heaving body.

This was grotesque!

He struggled at least for order, for power over the wild, twisting gyrations.

But his struggles didn't help. As if powered by another soul, his body leaped up, jumping farther than he had ever jumped before, soaring all the way from the bed to the window. He hit the ceiling and fell, grabbing at the curtains, which collapsed around him.

He crouched in their folds. Burning in his mind was an image he had seen as he leaped, a great beast in the mirror, its front paws outstretched, its tail soaring behind it. Experimentally, he tried to feel for the tail. No luck, his arms didn't go back that far anymore. All right. He tried a little hip action. Behind him he heard the thud, thud of something hitting the floor. He felt the

weight of it, and the air tickling its fur.

Do not move. This could only be one of two things: complete psychosis or a really bizarre stroke.

What if he was one of those stroke victims who just sit and stare, saying nothing, locked forever in deep universes of fantasy? Or he might be the kind of psychotic who is so unruly he must be abandoned to the violent ward. He is the one so out of it that his care packages from home will always be stolen by the orderlies.

It was damn sad. He started to cry again, but stifled himself when he heard the whines. How could he even talk to Cindy? How could he discuss Kafka with his son, or play chess and Stratego with him, given the apparent presence of paws? Could he even think anymore? This room smelled like cigars, cigarettes, pipe tobacco, perfume, and human sweat.

He raised his head. Something was slipping through the brush nearby.

His immediate reaction was immense relief. If there was brush nearby, this must be a dream after all, because there was no brush in hotel bedrooms.

All right, then let it roll. A man was coming through the brush. Bob cocked his ears, heard the man breathing, heard him muttering, smelled alcohol on his breath. He did not smell the steel of a gun, only leather and cloth and sodden skin. The man was singing to himself as he put up plastic markers in the sodden ground. Clouds of mosquitoes swarmed around him, and from time to time he groaned and made a swipe with his arm. He was the real-estate salesman from the bar, and this was the land he was selling. The plastic markers went flying as he made a lunge at the mosquitoes. He took out a can of insect repellent and sprayed the bugs. "All right, you bastards, live with yourselves!"

I am not in eastern Canada and I don't have the ability to smell the vodka and the tonic separately on a man's breath. No, I am alone in a hotel room. I am not in the woods with this repellent old salesman. I do not have long teeth, Granny, I do not have big eyes. This isn't stroke or psychosis, it is one mega-dream.

I am in the Westin Hotel in Atlanta, Georgia, Room 403. I have a view down Peachtree Street which I cannot see because no matter how my dream makes them look, the curtains are in fact closed.

He heard the air conditioner hissing, felt the air brushing his fur. A sound in the hall made him snort.

From the doorway there came a knock. Another. Then the door made a

clicking sound. A woman hurried into the room, elderly, in a gray uniform with a white apron. "Turndown service. Sir?" A grunt. The lights went full on. "Wha—the curtains!"

In the mirror that covered the wall behind the dresser Bob saw a large dog or wolf standing on the bed staring at the mirror. Startled, he cried aloud. The animal reared back, its barking filling the room, its hackles raised, its teeth bared.

"Oh, no! No pets allowed!" The maid threw all of her mints in the air and jumped back, falling over her cart full of sheets and towels and little bottles of body shampoo.

Bob's difficulty was that he could not find himself in the mirror. Did nightmares have reflections? This had to end soon. Dream or not, he could still see the mints on the floor.

Since he was not a wolf, what had she seen and run off to report? Had he exposed himself to her? Would the vice squad soon be here, ready to take him in, scare him good, and send him home to a furious wife? "Really, Bob, if you want to try it with strangers, why not just call an escort service?" Then the diminished relationship. Fifteen years of loyalty lost to a bad dream.

The maid had left her cart overturned in the hall. Bob, moving awkwardly, trying to keep all four limbs coordinated, went out and sniffed one of the slowly turning wheels. There was a click behind him. He didn't need to look. Of course the unseen hand of nightmare had closed the door.

He sniffed the handle, smelling a strong odor of the maid's hand, mixed of sour skin smell, cigarettes, mints, and body shampoo. He shrank back, thinking that he really couldn't handle sniffing a doorknob. It was part of the perfection of the illusion that he had just automatically done that instead of trying to open the door.

He thought: Probably I only *feel* like this. What I actually look like is a naked man sniffing a doorknob and I've got to stifle this peculiar behavior!

I'll be calm, straightforward. I was going for the shower and took a wrong turn. Honest mistake. No big deal. Just please God don't let me start barking again!

The worst thing about this experience was that it didn't have the logic of dream or hallucination at all, it had the logic of life. He wished to God for Cindy.

When he heard the elevator bell ring and the doors roll open, a powerful and unexpected instinct asserted itself. He cowered back down the hall,

seeking some darkness. Excited voices came toward him. "I swear it's the biggest dog I ever seen." What was this? Was the maid part of the dream, after all, or was he shifting the sense of her words into his own delusional system?

"How he git it into de hotel, dat what I got to know."

"Ask the guest. He must have smuggled it in."

They came around the corner and stopped dead. "Aw, God. It got out." Bob looked up at them. A wave of sensation made him shudder, almost as if there were tiny creatures running on his skin. He felt frightened and dismal. He certainly seemed to be naked on all fours in the hallway of a hotel.

"Its creepin' along, look out."

"We gotta get the police, I ain't gonna touch nothin' that big." Hearing this, Bob cracked. Terror whipped him. He screamed and ran for the fire stairs. "Holy shit, it done got some speed on it!" Bob raced down the corridor, his claws catching on the rug.

"We can't let that thing out in the hotel, they'll fire us both!"

"Come on, woman, help me! We can head it off."

The yellow lights glaring down, the beige elevator doors, the confusing twists and turns of the halls, Bob might be in a maze of some kind, the lights too bright, the ceilings too high, the smells all wrong.

He saw writing on a door: EXIT. He threw himself against the bar until the door gave way into the fire stairs.

"That thing's got a mind of its own, it just opened that door."

Down, up, which way to go? Bob heard himself whimpering. He made a solemn vow: When I get home, if I ever do, I will call Monica and make an appointment. I will do this no matter how good I feel at the time. Frantically, he sought reasons for his predicament. Was it the salesman in the bar? Some kind of drug in his drink to make him a more pliant buyer? When he was selling, he had often wished for drugs of some kind. Just a nice little powder in the damn fool's steak sauce, and he becomes silly enough to buy the damn bonds. "Go out among the people, young man, and rape them." Fatherly advice from Charlie Decker, his boss in the bond office. Charles Decker: killed himself with a fingernail file.

Quite arbitrarily he started up instead of down. It was not long, though, before he heard voices behind him. "How high is it?" "Go up to fifteen. You're gonna head it off." "Come on, where's that elevator when you need it?"

Bob was having trouble working his body. If he thought about it, his back legs and his front legs stopped working together and he went to scrabbling. Trying to make his mind a blank, he moved up the stairs. His mind went back to Sister Eustacia, the music teacher at Sacred Heart. Sister Eustacia: playing the piano is a matter of mind over matter. Let your mind float free in the music, and your fingers will find their own way.

Mind, let go. Body, run. Door after door, smell of concrete dust and hot electric connections. Running, reduced to raw reality, no more thought, just the urge to escape, to get away from the embarrassment. The road to Cairo, *The Road to Rio*. Bob Hope, 1956, Ozzie and Harriet, *The Dinah Shore Show*. *The Honeymooners*, *Leave It To Beaver*. Ernie Kovaks, a station wagon going *boom boom* down into the ditch, Ernie Kovaks. 1956, remembering the dark side of the war. Yes, we went and found out what was behind the curtain, didn't we? The word "Hiroshima" even sounds like a soft explosion.

The last time you ran like this was in 1956. You were twelve years old. You and Roxanne de LaPlane rolled naked down the hill behind her house, and found yourselves at her father's feet. You rose up and you certainly did run, a naked kid in the evening.

Ahead, a door! God save me, it's the roof. They are still behind me, they have come forty floors. That security guard is made of strong stuff. Bob had to hang out his tongue, otherwise his mouth felt like somebody had stuffed a hot pillow in it. When he panted it got cold, spreading relief through his body.

He stood at the door jerking, twisting, pounding his tail against the floor. He tried to change back, straining and grunting. He hopped and yapped, hating the absurd sound of his voice. Poof, bang, abracadabra, hocus-pocus. *Hoc et corpus*, Father O'Reilly, Jesus. Mary Catherine Baker and Salvatore Allessio each completed ten thousand Hail Marys during Lent in the year 1957. Lent, sacrifice, passion of Christ: oh, Mother of God, intercede for me.

His prayers were idiotic yaps.

They brought, however, a curious relief. Someone heard the noises and came to the other side of the door. With a loud click a waiter in a red jacket opened it. Bob, aware only that this was the end of the line, knowing that the security guard was no more than a couple of floors below, rushed through.

Sights, sounds, and an overpowering mass of odors assailed him. His eyes could not understand, his nose could not sort out the chaos before him. He

barked once loudly, and the face of every diner in the Starlight Restaurant turned toward him.

Damn that bark, without it he might have been able to slink past unnoticed. He was aware of his own nakedness, and sought to cover himself with his hands. The moment he did this, he toppled forward. When he recovered himself, he was confronting three waiters, one of them with a large silver tray in his hand which he used as a shield. A few of the diners had jumped from their seats. "It's a wolf," one of them shouted.

"How in hell—"

"Don't let it out onto the floor," a maitre d' hissed. "You'll cause a riot."

The waiters skittered around. Bob's eyes went to the long corridor. At the far end he could see a glass door. Behind it would be the sky lobby. His own room seemed a million light-years away.

Oh, Cindy.

Remembering Sister Eustacia's instructions, Bob tried to concentrate his mind on the glass door and let his body do its own work. He shot forward with the power of four legs instead of two, moving faster than he ever had before. There was a blinding red flash and a shock of pain to his head. With a great shattering the doors became a rubble of glass pebbles. Bob rolled over and over across the sky lobby. As he rolled he moved through a jumble of smells, the glass, the sweat of his pursuers, his own fur and flying slobber.

Then he was on his feet. "Oh, God," he said. He staggered, his arms working like arms instead of forelegs. He was high off the ground and his nose was suddenly numb. The riot of odors had disappeared. He jabbed the elevator button with a normal finger. When it opened, three women in beehive hairdos and tight dresses burst into shrieks of hysterical laughter.

The nightmare of being a wolf had left him stranded on the fortieth floor, naked.

He dashed past the women into the closing elevator, hammered "four," and pressed himself against the back wall as the doors made a thumping sound.

The waiters, the maitre d', the security guard, and about six male patrons were blasting down the corridor. Bob banged his fist against the "close door" button, but the elevator was at the top floor, and cycling on its own time. They reached the glass rubble and slowed down, picking their way to avoid getting their shoes cut open.

Not realizing that Bob was inside, the security guards ran right past the open elevator, heading for the fire stairs at the far end of this lobby. "It musta

gone to the roof."

"It can't open doors, surely."

"I saw it open a door. That thing is smart."

Hail Mary full of grace, the Lord is with thee. Blessed art thou among women, and blessed is the fruit of thy womb, Jesus Christ.

"Hey, wha—lookit him—wait!"

The doors slid closed just as a man in a maroon polyester sports jacket and a string tie lunged toward them.

"There's a guy in there stark staring naked!"

"Dis a good hotel!"

Vroom, down he went, down to the fourth floor. Blessed be, don't make a stop on the way. No such luck, a stop is made.

Bob turned his back on the young man and woman in tan Apple Computer sports jackets, who entered the elevator. "Uh-oh," the woman said.

"Please, I was taking a shower," Bob replied, his face to the wall. "I was looking for my hair conditioner and next thing I knew I was in the hall. I couldn't make anybody hear me, so I tried to go for the security guards."

The couple remained silent. The doors opened on the fourth floor and Bob backed out, careful to avoid showing them his face. After the doors closed he heard a burst of laughter, the woman tinkling merrily, the man going haw-haw.

He raced around the corner and down the hall. Either the door would open or it wouldn't. He saw the overturned cart at the end of the hall, moved forward. He was praying as he walked, a breathy "Jesus, help me" at each step.

Somebody must have intervened, because he found his door unlocked. Given hands, it was blissfully easy to open. He rushed inside, grabbed clothes frantically, a pair of pants, his house shoes, a knit shirt. Dressed, dressed again, oh blessing divine. His mind twisted and turned. Go down to the bar. Forget the whole thing.

No. Foolish man. Your room will be full of cops when you return. A better idea: He went outside, heaped all of the maid's things on her cart and rolled it to the opposite end of the hall. There he overturned the cart and spread everything out at another door. Then he dashed back to his own room and replaced the curtains. If only he could have gotten into 422 and pulled the curtains down as well.

A shout came from outside. Very good. "Aw, damn—" Footsteps going in

the opposite direction. Bob exited his room, stepping confidently toward the elevator bank as two security guards and a whole squadron of cops began hammering on the door to 422.

He remained in the nearly empty bar long enough to knock back two neat Stolys. Then, heavy with sleep, he returned to his room. Down the hall another computer consultant was talking frantically. He didn't have a dog, he had been asleep, he was from Houston, Texas, he was very quiet, yes, he had a driver's license, oh, Officer, there's no need to go down to the station.

Behind his own door, safe at last, Bob felt a giggly sort of relief. He took off his clothes and went into the bathroom. The mentally ill were often given Jacuzzis to calm them down, so Bob filled the tub and turned on the nozzles. Then he got two little bottles of Courvoisier from the room's fridge. He knocked one back almost immediately. When the tub was ready, he sank into it, floating the other bottle so it would get nice and warm. He watched it dance in the bubbles and he sang softly to himself, "You clever devil, you got away, got awaaay...." He sipped from the second bottle, sipped the good fire. Like a man after battle he was suddenly seized with a need for sex, for the blood and passion of the life he had almost lost. He wanted sex, but he also wanted food. Maybe he would find an escort service. He would get to that. But first he decided to call room service and order a BLT and a bottle of beer. Dixie, if they had it; if not, a nice, cold Molson. Above the hissing of the tub and the foam of these pleasant thoughts, there intruded the frantic bleating of the poor sucker who had been sucked up by the security guards. His explanations must not have sufficed; they were on their way to the police station. Booking, indecent exposure, breaking down a door, bringing in a giant dog. Sent back to his wife in disgrace, there to be thoroughly punished. God help him, God grant that he deserves it for other sins.

He ordered his midnight snack over the phone in the bathroom, and was in the hotel's terrycloth robe watching *Midnight Blue* when it arrived, the cart being pushed by a fetching woman of perhaps forty, neat in her red dress and white blouse, as cheerfully efficient as a stewardess. As she swept the silver dome off his sandwich she glanced at the TV. He saw color come into her cheeks.

Now, Bob, by God, this is a definite chance. This is what you've been wanting, a stranger. She's no kid, but then neither am I. I need a woman who's had a little experience. She lingered, waiting for him to sign the chit. "Want to share it with me?" he asked.

She looked down at the chit he had handed her. "How?"

"I mean the sandwich."

"I don't want a sandwich."

What an asinine attempt. He should be ashamed of himself. She was between him and the door, turning to leave. "Wait," he said. He was trying to think but his mind was blank. He leaped across the bed and threw himself to his knees at her feet. She jumped back, her face registering surprise and annoyance.

"Ma'am, you must know the extraordinary effect your beauty has had upon me. Seeing you this moment, I must confess that I was stunned by the intensity of my own reaction. You look angry, but consider rather that you should be flattered. I'm a decent enough man. My interest is in itself a compliment. I give you my body, my soul, for an hour's love or a lifetime."

"I—uh—ah—" She had no words, no reply. He fancied that she realized any reply would be fatal. Thus encouraged, he seized her hand and kissed it, the first flesh not of Cindy he had kissed in passion almost since he could remember.

She drew her hand away, but slowly, like she was removing a luscious glove. "I can't just disappear into a room, I'll lose my job." His heart started thundering. She was saying yes. This was yes.

"When do you get off?"

"At three. It's an hour from now."

He kissed her hand again, then her red sleeve. He rose and swept her up in his arms. "At three. I'll be waiting for you."

She slipped out, he ate every scrap of his sandwich and drank his beer.

The next thing he knew his phone was ringing. "Hi, this is Amanda from Apple. Just calling to make sure you'll be at the breakfast." What time was it now? Seven-thirty. He ached from a night spent half in dreams, half in hard, physical longing.

"I'll be there," he said. He put down the phone. The world was so disappointing. It took more than the real passion of a decent man to entice a woman. Just not very good-looking, that was Bob. His approach had been stupid. Sexual competents didn't go down on their knees and blubber. No macho. A wimp, to use an expression only wimps use nowadays.

He shaved, lathering his face with Trac II Shaving Cream and then using the Bic shaver the hotel had thoughtfully provided. He rubbed some Brylcreem into his hair, brushed his teeth, and dressed in a J. Press suit. None

of this polyester junk for him. He liked to look Manhattan.

As he was leaving the room he saw a note at his feet. It had been slipped in under the door. "Sorry, a big ruckus in the hotel. No way I can get back after my shift without being noticed, security everywhere. Love ya, crazy guy, Alison."

For an instant he was delighted with the note, then he threw it down with an in-sucked cry. "A big ruckus in the hotel": reality. The engines of the impossible, still churning. He looked at the note again, then at the door. He was going to have to go out there and pretend ignorance of whatever it was he had done.

He couldn't hide, that would create suspicion. The thing to do was to attend the breakfast, maybe hit a seminar or demo session, then plead a business emergency and depart on the next plane. Do it smoothly, correctly. Do it well.

Still, he hesitated. There was always the possibility that the disturbance she referred to had nothing to do with him.

But of course it did. Last night he had assumed the structure of another kind of creature, perhaps a dog or wolf, and had gotten himself tangled up in a flickering, dangerous adventure in the halls. It remained in his memory, a thick storm of odors and sounds, odd, gray visions, confusion, people shouting, and then a queasy, naked escape back to his room. He remembered his eerie *other* body as a storm of rich sensations: the tickling joy of paws upon carpet and concrete stair, the movement of air through fur, the sounds and above all the smells of the restaurant, almost as palpable as the food itself. He caught himself sucking breath through distended nostrils, and thought of breakfast eggs, of coffee, of buttered toast, of the shifting, magical steam rising from a plate of food.

He left the room and strode down the hall. "Hi, Mr. Drake," said a young woman in an Apple blazer. "I'm Jane Poole, I'm your coordinator for the conference. Breakfast's just starting in Ballroom C on the mezzanine."

"I'm as hungry as a wolf."

Going down, in the elevator he was joined by two other conferees, named, according to their tags, "Hi, my name is Winston Jeal, Jealco Systems," and "Hi, my name is Harry Thomas, CompuTex." Bob's own name was "Hi, I'm Bob Drake, Drake Business Consultants." What had happened to Bob Duke? he wondered. Been canceled, apparently, at least as far as Apple was concerned.

Winston Jeal looked haggard. The Kaywoodie in his mouth was the only thing holding his face together. Without it he would collapse into twitches and snickering anger. Bob knew just exactly who he was. This was the remains of the man from 422, who had spent his night in a police station fielding accusations that must have sounded rather bizarre. "You brought a wolf into the hotel! You ran naked through the halls!"

"Morning," Bob said.

"Hiya," Harry Thomas replied. "Hope you're hungry. I've been to these Apple dos before, and they really lay a table."

Jeal said nothing, only stared at the elevator doors, his pipe jutting from his mouth. There was a copy of Thomas Pynchon's *Gravity's Rainbow* in his jacket pocket. His glasses, in desperate need of cleaning, were held together by a couple of Band-Aids. The doors opened. There was also a conference of independent real-estate agents in the hotel, and they had gathered into boisterous, boasting knots in front of the elevator banks, preparing to go to their own breakfast in Ballroom A. "If those bastards try to sell you some damn land, sell them back with a damn computer," Jeal said. His voice was hollow and deep, resonant with bitter meaning.

Once in Ballroom C, he went down the row of steam tables loading his plate with eggs, bacon, and sausage, with the darkest toast in the pile, with slices of honeydew melon and tiny pastries, finally with a small croissant from a last pile at the end of the table. A sudden roar arose from the real-estate salesmen two ballrooms away. They were there to be set afire with greed by some blazing expert, to be whipped and massaged until they were virtual psychopaths of sales. The hunger upon them, they would rage out into the land, to sell its still-empty meadows, its forests, to people who might haul in trailers or put up A-frames, and drain their septic tanks into its arteries and veins.

Bob once saw stalking the night woods near his hunt club a ghost Indian whose face was so pocked with anger that it had festered. Black puss fell in globs from the rotted cheeks, and the eyes were bloodshot with rage. The Indian had walked right off into the sky, and Bob had heard a sound like a stone door closing.

He sat down now across from Jeal and tucked into a forkful of wobbly scrambled eggs. They filled his head, his lungs, his esophagus with fluffy flavor. Through his mind there flowed images of chickens, clouds of chickens, laying eggs to *Eine Kleine Nachtmusick*, *ta ta ta bloof, dum dum*

dee. Bloof. And the clerks at their computers, hen number 11893, laying rate 4, weight 2.2 kg, *cluck cluck* went the disk drive, and the sausage and the bacon, and the howling pigs in the slaughterhouse, the sows and the hogs, the shoats going down the chute, the screams of terror in processing, the automatic clubber smashing ten thousand skulls a day.

They evolved without hands, the pigs, but bearing meat that looks, tastes, and smells just like human. Poor pigs, condemned to be at once reviled and loved by man. Sometimes, eating bacon, you almost remember something. Then you don't, you can't.

"What?"

Bob looked up. It was Jeal; he had taken his pipe out of his mouth and spoken, raising his coffee to his lips.

"Excuse me?"

"You said something about a pig."

Bob smiled. "I was thinking about—I used to—I mean, my father once took me to a slaughterhouse." He barked out a laugh. "Sorry."

"You just blurt out gobbledygook about pigs because you're eating bacon? This industry needs more people like you." Bitter, enraged, his words sharp, his voice thick with anger.

"What's the matter?"

"I spent the night as a guest of the goddamn Atlanta police. And I never figured out why. Some crazy story about me letting a dog loose in the hotel. I don't have a dog. My sister has a Lhasa apso, and I had a bulldog named Jane when I was growing up. They say this dog that was allegedly in my room wrecked the goddamn restaurant. What is this, a police state?"

"They had the Wayne Williams thing here, remember. Child murderer. The Atlanta cops are pathological about anything strange."

"A guy sitting in a hotel room in his goddamn underpants watching Arsenio Hall is strange? Now I've heard it all." He attacked a poached egg, slicing through it so that the yolk ran and the white collapsed. He cut furiously for a time, until the egg was pale yellow pulp. Then he knocked back a glass of prune juice like it was a shot of Old Crow. "There isn't a goddamn thing you can do. All of a sudden the door flies open and here comes a maid and about six security guards and a dozen cops. 'He put the curtains back,' the maid screams. The damn cops grabbed me. I was so startled I almost swallowed my pipe. As it was I blew the fire through the bowl and set one of the cop's hair alight. He was using this inflammable

Georgia Peach goo they've got down here, and it took them a while to get it out. So off I went, booked for assault by a furious five-hundred-pound policeman with a wet towel wrapped around his head." Leaning close to his plate, he shoveled in the rest of the pulped egg.

"You were actually booked?"

Jeal regarded him with suspicious interest. "If I'm talking to a reporter right now, I want to say something real simple. You print a word about this, and I will kill you." He started on his toast, tearing at it with a jerk of his head. Bob realized that the man wasn't exaggerating. He wondered if Jeal had killed before. Vietnam, maybe. Bob had gone the professional student route to escape the war. Jeal did not seem the type to escape anything.

"Are you in any trouble?"

"Apple sorted it out. That coordinator honey was down at the precinct house the whole time. I don't think it amounts to much. It's just the goddamn abuse that gets me. I mean, a man is sitting in a hotel room minding his own business, and *bang*. Can you imagine what Apple thinks of me? How is this going to look once Miss Coordinator files her report? Beware of the kook from Houston. That's all they'll remember. I'm trying to feed a family just like every guy here. This is not going to help me. Hell, let's talk about something else. What we all want to talk about. You got pictures?"

Bob experienced the familiar delight, the ritual of showing his own fascinating pictures of Kevin, then politely observing his companion's boring ones of his own kids. You pretended interest in the other guy's pictures and he pretended interest in yours. That way you both got to say the names of your children and your wife.

As Jeal opened his wallet his photos slid into his coffee. His pipe jutting from his mouth, his teeth gritting with anger, he retrieved them, laid them on a napkin. "Damn! That one's the only one I have of my first wife, Ellen. She died in childbirth, it was just utterly fantastic. So sudden. Right in the middle of transition, her heart stopped. *Bam*. What remains of Ellen is this picture and Hillary. This is Hillary, damn, it's soaked worse than Ellen. She's twelve. This is Franklin, my son. I married his mother in '78. She gave me this boy."

Bob held out his pictures of Cindy and Kevin.

"He's our only one. My wife had toxemia and it's a risk for us to have more."

"Don't take any risks. It's damn foolish. You have a beautiful child, a beautiful wife. You are content."

God, if only this poor, beset man knew what it was to be *really* beset. Last night I roamed the halls. Last night I was another kind of being.

I, Robert Duke, roamed the halls.

Chapter Four

THE FAMILY SAT TO ITS DINNER, CYNTHIA AND BOB AND Kevin. They sat in the light of a Monday evening, with music chosen by Kevin. He had picked some Chopin Nocturnes he claimed that Kafka had loved. In his wallet he now kept a small photo of Kafka at the Prater Amusement Park in Vienna, sitting in a fake airplane with a straw hat on his head. Instead of throwing his arms around his father's waist when he returned from the journey to Atlanta, Kevin had showed him this picture.

Kevin was a large, slightly overweight boy, whose skin seemed unnaturally smooth because it was filled with fat. He was loving, dutiful, and unforgiving of falsity. He needed love, attention, money. His dream was to write, to paint perhaps, or to own his own airline. Sometimes Bob thought his son was going mad; others that he had been born mad. He loved his son.

They ate boiled cabbage, beef stew with pearl onions and green peppers, small new potatoes, and salad. They all drank an inexpensive Pinot Noir from Astor Wine and Liquors, a large store around the corner from their apartment building. Cindy had her usual single glass, exhaling through her mouth each time she took a swallow. Kevin had a quarter of a glass, which he drank off at once. Later he would creep out to the kitchen and knock back four or five shots of Stolichnaya neat, but not until long after his parents were asleep. Then he would watch *Midnight Blue* and count the number of times the escort-service ads were repeated. His interest was strictly clinical. Kevin's sex life hadn't yet started in earnest. There had been Ricky Riles, of course, and Ginny Starer, and Bobby and Sally Harper, and that group at Tim's slumber party—those, but no others. Such questions as hetero- and homosexuality never concerned him. He had grown up in a neighborhood that was at least a quarter homosexual. His parents had preached toleration, often expelling long, sententious speeches on the matter. Toleration of what? To Kevin homosexuality was no odder than air, and no more interesting.

What was interesting to him, and more than a little disturbing, was his father's condition. Kevin loved his dad with a great passion. In response Bob had poured himself into the relationship, had lavished his heart and soul on his son.

Kevin ate his cabbage, chewing without real interest, watching his father,

trying to draw him into conversation. "I got a neat book about Kafka, Dad. Want to hear about it?"

"Kafka?"

"It's a photo album. *Kafka, Pictures of a Life*. That's where I got the one in my wallet."

Bob stared at his son in a way that made Kevin extremely uncomfortable. He did not want the foundations of his life disturbed—it was a dim-cult enough life without this happening. But there was something in Dad's expression that Kevin did not like at all. The boy lapsed into silence and concentrated on his food. In his mind's eye he saw his father's burning gaze changing to a smile that got too bright, and stayed too bright. Then where would Dad go?

Cindy felt the luxury of herself, her amplifying flesh, the warmth of her legs in her dress, the possible pleasures of the coming night. Would Bob notice her, or had the marriage slipped beyond that? Love, no matter how rich and wet, has dry, crinkled borders—and beyond was the sky through which lovers fell forever.

It had taken fifteen years of a good marriage for Cindy to become confident of her own beauty. As a girl she had thought of herself as too large. Loving her was a big job, there being acres of pale flesh to kiss, and a mouth she imagined able to swallow the heads of most boys. She had wanted for lovers, too proud to call the boys, waiting in her room, her imagination soaring in the steamy nights, when the breeze seemed to penetrate every crack in her body with warm, touching fingers. The trees tossed and there were words of magic in the air.

A siren rose in the street, fading quickly into the blaring of a radio and hard laughter. A window opened, a woman shouted at a boy gluing the flier advertising a rock club to the wall of a building. Cynthia turned away from the table, drawn by whatever more was in the world. "The wine's made me flush."

Bob wondered if now was the moment to relate his experiences. "I think I'd like to see Monica," he said instead. "Have a chat."

Kevin was toying with his food, his wife leaning back in her chair, shaking her long brown hair. Beyond the window the night was growing into a density of a yellow sodium-vapor light. The Columbia Hotel sign came on, and began to cast its shaking reflection against the ceiling of the dining room. The music poured out of the stereo.

"I have a story to tell," Bob finally managed to say. He drank the dregs of his wine, poured himself another glass. Kevin went for the bottle. "No. You've had yours." The boy stopped. He ate a morsel of cabbage.

"Was there any trouble, honey? Is that why you came home early?"

"I came home early because I had a disturbing dream that perhaps was not a dream. Not entirely. There were certain indications afterward that the dream, at least in some way, was real."

They were naturally eager to hear more. But he found he could not bring himself to tell more. The trouble was his son; the family always shared everything but this was too much. He could not share this with his boy. To Kevin he was golden;

his ego would not allow him to compromise that image.

"Dad, come on. That's got to be one of the classic lead-ins. You can't just say that and then stop."

He traded looks with Cynthia. She understood perfectly. "I don't think Dad actually remembers the dream."

"I thought I did but now I don't. It's just, as I said, there was some sort of a disturbance in the hotel that happened to coincide with the dream. I do remember I left the room in my dream. And there had been a disturbance. Maybe I actually did leave the room. That's why I came home."

"Was anybody hurt?"

"No, son, not as far as I know." He remembered Jeal and the police. "People were inconvenienced, and a glass door was broken. That's about all."

"Wow, Dad." The boy smiled but it was obvious that he was scared. Bob was ashamed of himself.

"Eat," Cindy muttered, addressing them both. "I worked hard."

Bob loved cabbage; he ate eagerly. "It's a delicious dinner, hon." There came to him an impression which before the dream had been fuzzy, but which was now quite clear. His life seemed a series of paper cutouts, his own body merely a jointed thing, able to move only on command of some mystery that could neither be controlled nor ignored. When the music stopped, it was replaced by the sounds of eating, the clink of knives and forks, the working of jaws. Three ordinary people consumed an ordinary dinner deep in the flaring night of Manhattan, while the neon glared on the ceiling and the traffic crept past below, long lines of honking cars jamming Broadway.

The clock that had been in Cindy's family since before the Civil War chimed eight times. "Any more homework, son?"

"No, Mama. I want a tub bath tonight. I want to sit in the tub and read the *Metamorphosis*."

"As long as you're in bed by nine, this can be free time. What did you have for homework?"

"Do a book report on *The Penal Colony*. Do some algebra problems. Write a poem about a subject of my choosing. The usual sort of thing."

"You're lucky you're in St. Anselm's. You could be at public school where you have to carry a knife in order to survive."

"Obviously I wouldn't survive, Dad. As you well know." Bob did not say it, but he thought bitterly that nobody survives. Nobody. There is a story of some strange tiles from a floor in Spain in which the faces of the dead have emerged, terrible, glazed horrors, apparently hellbound. And in Lake Ontario there is an island that looks from the air like George Bernard Shaw, and most of the views in the Catskills look like the profiles of Dutchmen and Indians, and there is a plateau on Mars that looks like an Egyptian, and then there's the man in the moon, that most haunting of natural faces. Maybe we get trapped in matter, some of us, condemned to contemplate the starry world forever, staring at sky or cloud, motionless. We discover, then, the simple truth that meditation—real meditation—is a stupefying bore. If you must do it forever, even contemplating the cosmos must get frightfully dull. God's probably bored silly. Look at God's sense of fun—see the fish, the birds. How can something with the glee to create them stand playing such a passive role?

Then again, maybe God is not passive, but coy. Shy. A coquette, or cocotte. A wallflower. A hermit. A zombie. A ghoul.

Life is movement; finally it is nothing more than random movement, any movement, the twitch of a hand in the dark, the hiss of legs beneath a sheet.

Kevin pushed back his chair and bounded off to his bath, with his boat and his book. "He's so beautiful," Bob said as the boy ran down the long hallway to the bathroom. "Don't forget to come tell us good night," he called.

Perhaps there was no answer, or it might have been absorbed by the walls. Bob began helping Cindy clear the table. "Kevin hardly ate, Bob."

"I'm sorry. I shouldn't have brought it up." The boy's psyche was an eggshell. When Bob felt wrong, he involuntarily hunched his shoulders.

"Don't do that, I'm not attacking you. If you want to see Monica, see Monica. If you want to leave me, leave me."

The words settled as wet smoke in the air. Bob was wary now. He often worried that a day would come when Cindy became exhausted with him. His

self-absorption was that of an artist, but he had not the glory. There was no reward for the waitressing Bob Duke demanded. Only her kindness sustained her; for her any reward had to be internal to herself. Bob did not see what she got out of the relationship, which worried him.

"Cindy, please, I didn't mean to imply anything like that. I need you. It's just that I also need professional help. I'm under a lot of stress."

"We're running out of money."

"I know that, don't hit me with it."

"How dare you say that? I'm not hitting you. I'm just telling you so you'll know."

Despite all the terror he had felt last night, the sense that the universe had ripped and he had been the one who fell through, there was also a sense of wonder. Once Kevin had commented that seeing even the most dreadful of supernatural manifestations, a disfigured ghost or a vampire, would make him happy because of everything else it implied about the persistence of the soul. Bob had not used the word "supernatural" in reference to his experience before, but it now occurred to him to do so.

He wished that he could impress Cindy with the seriousness of the situation. To do that, maybe he should express the wonder. For, despite everything, there was wonder. Even if it was all a complex, subtle dream, woven of lies and illusions, it was remarkable, ranking as a psychological phenomenon. And if there was any truth to it at all, *any* truth—

Good God.

How would she take the blank suggestion that he believed he had, for a period of about fifteen minutes last night, actually been another creature? He knew very well how she would take it: she would react in anger. And her outrage would have entire justice, for he had no right to place such a burden upon her. Cindy was not good at earning money. She was too bright for the jobs she could get. She annoyed people. As a brilliant, untrained woman she was a sort of economic defective. She had been fired from a dozen secretarial jobs; she had been fired even from a position as a school librarian which paid only five thousand dollars a year and was practically unfillable. In work situations she tended to be huffy and rebellious. And yet, as business manager of their personal firm she was superb. Her decisions were always correct. She could handle money. The trouble was, he did not bring in any money. She spent her time playing credit cards off against one another and working the float.

"Cindy, please forgive me." He opened his arms and she came to him.

"I can't live with all this Sturm und Drang, Bob. You're such an overdramatizer. I don't even want to know what happened in Atlanta, as long as you didn't do anything that's going to cause the police to come after you. I just want to accept you, and I'm doing my best. If you are having a problem, I'll do what I know how to do. I'll hold you, I'll listen to what I can bear to hear, I'll comfort you if that is in my power."

She was afraid, and that made him pity her. It did not stop him, though. "I've had an experience that will remain with me until the end of my days." He caught himself in the posturing, the destructive silliness, of that statement. So did she—he heard her soft moan.

People call it midlife crisis, male menopause, whatever. They laugh, they simplify, then when it happens to you and you're in trouble and afraid, what do you do? Where are the resources? He had shamed himself before her. "I think it was just a very bad dream," he said carefully. "It's nothing I can't handle. But please be straight with me. Do you have a problem with my seeing Monica about it?"

She touched her cheeks, her long fingers graceful against the gentle weight of her jowls. What a strange journey it was, the lasting marriage.

She remained silent for some moments. He raised his eyebrows: she owed him an answer to his question. She took a deep breath. "We aren't children. Monica is my friend, and I think I might even have suggested you see her. Now, when I think of her hearing my intimate details with you, I wonder if the friendship can take it. I don't have many friends, Bob. If I lose Monica, I'll be lonely."

"I understand. I can get Monica to refer me to somebody."

Cindy nodded. "On the other hand, she knows us both. She will be more help to you than a stranger. And she's very skilled; I've heard that from a lot of people. No, Bob, I think she's best for you. I think you should go to her."

"Your friendship?"

"We're old, old friends. I met Monica in grade school. We've shared so much—you and Scotty, that crazy night." She laughed a little. "We'll share this too. Who knows, maybe it'll have the opposite effect. It could make us closer."

"She'll separate the personal from the professional."

Cindy put a period to the conversation by announcing that the news had started. They told about a terrible series of murders in Calaveras County,

California. Pictures of the concrete blockhouse where the crimes were committed were shown. Bob felt fascinated loathing at the sight of the thing. He wondered what had gone on inside.

Later he went into Kevin's room and talked to him about Kafka. Then he read the *Metamorphosis* and grew slightly sick. People assumed that the story of a man turning into an insect was metaphorical, but what if Kafka had taken it from life? What if it was a real experience?

Of course it wasn't real. How could he even think that, and so debase the literature of the piece?

Later he drank three Stolys and listened to Steve Reich's *Desert Music*. He ate some cold shrimp that were in the fridge and wished he was at Pascal Manoules in New Orleans. Barbecued shrimp and a Dixie beer. God love it, perhaps the best meal in America.

This night passed without dreams.

When he woke up, there was thin, gray light coming in the window. He went through the ceremonies of the morning, the shave, the brushing of the hair, the dressing in the gray suit, the kissing of the schoolbound boy, the march out into the sun-drenched traffic, the subway, the jammed crowds of Thirty-fourth Street, the elevator, the office of Duke Data Consultants on the sixth floor of the Empire State Building. At the moment he could not afford a secretary, and his outer office contained nothing but a desk, an archaic Mac, and a telephone.

He took in the mail, which consisted of the usual pound or so of computer magazines, trade journals, and bills. There were no letters of inquiry, and none of his outstanding accounts had sent checks. The bills he piled up to take to Cindy.

He had not yet sat down when the phone began ringing. "This is Joe Tragliano, I want—"

Bob put down the phone in horror. Tragliano? Somebody from the landlord's office—but which landlord, home or this place?

He didn't want to call Cindy about it. The mere fact that landlords were beginning to phone would terrify her. Why didn't things ever come out right? The world is not made to come out right, the world is made to burn. And yet flowers, spring, glistening lakes, snowflakes, laughing children.

And yet—the phone ringing again. Bob jerked back and forth. God, God, it could be a client. Or—he answered.

"Tragliano. Look, we got a hot check here. We can't deposit it again, you

gotta send us a new check. You understand that?"

"Yes."

"Okay, there's gonna be an eviction notice in your mailbox tomorrow. It's no big deal, don't get worried, just get the money to us, okay?"

"Okay." Oh, God. The apartment, sixteen hundred and fifty dollars a month. It hadn't seemed like much a year ago but now, God.

There was a pink envelope on the floor he hadn't seen before. Pushed under the outer door while he was on the phone. He opened it. A pink copy of his April office rent bill, a yellow copy of the May bill, a blue copy of the June bill, a white copy of the current bill.

They had been waiting for him to come in. Eyes had watched his entrance, feet had moved. Was somebody now hanging back in the hall, waiting to buttonhole him when he came out?

Please somebody—if there is a God—help me, help me get out of this mess.

He would go down to the coffee shop in the basement and coffee himself and read the latest issue of *MacWorld*. Maybe there'd be some useful tidbit in the computer-industry gossip columns, something he could make a few cold calls about. "Hi, Willard, I just heard a rumor that Compaq's coming out with an AT clone that's—"

What? Who cares. His "clients" didn't need him, they subscribed to computer magazines, too. Soon he heard the coffee bell in the hall. Never mind the shop in the basement. He shouldn't risk leaving his office, anyway. What if they changed the locks on him? But they were nice people here. He was nearly half a year behind and they hadn't even given him an eviction notice. Just these bills, and the feeling that he was being watched.

He went out and bought a cup of hot tea. When he returned to his desk, he noticed that there were tears streaming down his face. He worried that he was in imminent danger of becoming the first person to commit suicide by jumping out of a lower floor of the Empire State Building. He called Monica. She took the call personally, bless her soul.

"Bob?"

He had planned a big speech, but the sound of her voice washed it all out of his mind. "I need a little help." He hated the shaking tone, the whine behind it. "Monica, give me an appointment as soon as you can."

"Where are you, Bob?"

His throat was constricting. The dreadful memories, the sheer terror of

what he had experienced in Atlanta now flooded in on him. "My office." His voice was a whisper. He jammed his teeth together to capture the sob that was about to follow the words.

"If you can get here by ten-thirty, I'll give you half an hour. We can meet again after five."

The even tone was like a handclasp right through the phone. As soon as he hung up, the phone rang again. This time it was American Express. "Mr. Duke, we must have a fifteen-hundred-dollar payment at one of our offices by the close of business today, or we'll be forced—"

He put the phone down, a fussy, frightened gesture. Fear made him feel so careful that he thought he must look prissy. Did pilots in crashing planes become fascinated by bug splashes on the windshield as the ground rushed up?

He tried to swallow his tea and leave, but the tea seared his throat and he gagged, spitting it all over the pile of bills and computer magazines. Oh, so what? His lips, his tongue burning, he stalked out into the silent hallway.

He no longer cared if the Empire State Building was watching him. Better to be outside than in here with all these miserable creditors and the spilled tea. Who knew, maybe something good would happen. He might find a dime on the sidewalk, for example, or be run over by a bus.

As he moved through the streets of the city he experienced a radical change of mood. His spirits lifted. Hard, white sunlight was flooding the world. He went up Fifth Avenue past the corpse of Altman's and still-moving Lord and Taylor's. The people who passed him were shining with what he told himself was the light of the soul. For a moment, reveling in the secret understanding that there was something beautiful here, he loved the faded plastic sushi in the window of a Japanese restaurant, the roaring buses, the sweating Con Ed workers at the corner of Fortieth and Fifth, the new Republic National Bank building, the library with its bright lions and its grand facade.

He was in essence a family man, he decided, and trudged on to the Olympic Tower, where Monica's office overlooked all of mid and lower Manhattan. The waiting room was full of teak and zebrawood furniture, rich dark paneling, and floor-to-ceiling windows. An elderly, beautifully dressed woman sat behind the reception desk and a man of perhaps thirty in one of the chairs. Far below, St. Patrick's Cathedral spread like a stone beast.

"You can go right in, Mr. Duke," the woman at the desk said. Monica was

so successful, so rich;

Look at all this. Somehow it enabled him to regain his composure. "Look at all this," he said as he went in. "It's a long way from a psychiatric residency at Bellevue." Bob remembered her as she had been then, a laughing girl so blond she might have been an angel.

He sat down gratefully in the heavy chair she indicated with a gesture. She came beside him and sat in a higher, stiffer chair.

"Go ahead," she said, touching his hand.

"I was in Atlanta at a conference. Business. I went to sleep—no, it begins before. It started on Saturday. We were at the zoo. The wolf stared at me. Later I had a strange dream, that the wolf had eaten me, and I sort of filled its body. I animated it, like. That must have been Saturday night. Sunday I went to the conference, and I had another dream. Far worse."

"During the conference?"

"Well, at night. I was in my room. It was like I didn't even fall asleep, when suddenly I was not a human being anymore. I was this animal again."

"The wolf from the zoo?"

"An animal. Whatever animal. Probably a wolf, maybe a dog. I dreamed I went out of the room and got chased by a guard and ended up, for God's sake, in the hotel restaurant. I crashed through a door and made it back to my room. I became myself again in the elevator and I had to stand there with my face to the wall because I was totally naked. I have never felt so naked." He dropped to silence. That had not been as hard as he had thought it would be. The next part, though, he wondered if he could utter.

"Yes?" She touched his hand again. She had done that ever since he had known her. Surely she understood how provocative it was. He wished for perhaps the hundred-thousandth time that he had made her that night in the Catskills.

"Monica, I think some part of this dream was real. The next morning I got up and everybody at the conference was talking about how this giant dog had gotten into the restaurant and broken down the glass doors, and escaped into an elevator."

She did not do what he had thought she would, which was to cry out in amazed disbelief. "So you integrated this into your previous night's dreaming."

"Integrated—Monica, you don't understand. It *was* my dream. My dream was true. I became something else, something wild. I remember how it was to

be that creature. Exactly how it was."

"Yes?"

Could he talk about it? It was almost as if the part of him which contained those memories had not the best grasp of the English language. Or was that true? Maybe he could do as she asked, maybe he had language enough. He had planned to talk about what he did, and how it was all real, not a dream, but some baroque effect of a deteriorating mind—the emergence of the wild. But how it *felt*—well, how had it felt?

"I was lying on my bed in the room. I was naked."

"Lying how, on your back?"

"On my back. I was aroused."

"Meaning?"

"I had desire. Intense desire and there was nobody there. I don't fool around on Cindy, but right then I wanted to. I was in a state of intense excitement, and I was alone."

"Did you do anything at all about it?"

"I rarely do that—you're referring to—"

"Bob, try to relax. If you can't talk comfortably with me, I can certainly recommend somebody else."

"No, Monica, I love you—" How in the world had he come to say that? This wasn't going to come out right. "You to help me."

"Bob, I'm a mother figure for you, as much as you may think you desire me sexually."

"I never had much of a relationship with my mother. When I got in her lap, she used to say I was too bony and put me out. Or she'd say she didn't like to be touched when it was hot, her skin was clammy. It was always hot, and her skin was always clammy. When I say that, I feel a hideous, upsetting sexual stirring. I remember when I used to get punished, my sister would watch. It was horrible."

"How were you punished?"

"The old-fashioned way. I was spanked. Viciously, at times. It happened constantly, but I only remember one or two specific occasions."

"Do you think that this is where your masochism started?"

"Masochism?"

"You tell me."

"I want to tell you about my experience. What brought me in here. I have to, it's terribly important. I think that I may be the victim of a rare

psychophysical effect. My mind and my body are working together in some mysterious manner— oh, God, Monica, I've got to get this through to you: I *was* that animal. I turned into something that everybody else in the hotel, the maid who first saw me, the security guards, the people in the restaurant, they all thought it was a big dog or a wolf. And Monica, I felt like a wolf. I did not feel like a human being."

"Did you want to eat them?"

"No no no, that's totally off the point. You're not understanding me. My whole frame of reference changed. Sense of smell, hearing. For God's sake, I could hear people breathing at the far end of a long hall. I could smell all the components of their sweat, their perfume as seven or eight different odors, even the difference between the smell of their hands and the smell of their faces. And I saw it all in vague, muted colors. The point is, what I did in the dream is what people in the hotel saw this big animal do. And I dreamed I was that animal."

"Bob, I want you to listen to me for a moment. Our half hour is up and I'm going to run late with all my patients until lunchtime. I'm going to write you a prescription for something that will calm you down. You'll feel much better. I want you to take it and have a good lunch and then do something you enjoy. Go to a movie. Afterward come back here. I'm finished at five-thirty and I can spend a couple of hours with you. Does that sound like a good plan?"

He nodded and she wrote something on a prescription form. He didn't read it and didn't intend to. He was so grateful that she had instructions for him to follow that he would have followed them into a fire, had that been demanded of him. On the way out of the office he had quite a surprise.

"Mr. Duke, that's a hundred and fifty dollars," the receptionist said with a smile.

"Excuse me?"

"Your bill. We prefer payment by visit. The fee is three hundred dollars an hour. The doctor said you should pay for this visit now, and be sure and bring another check tonight."

For a moment Bob felt anger, then disappointment. Then it occurred to him that she was doing the professionally correct thing. The relationship was being established for what it was, being separated by the check from the friendship. As he wrote he felt a little sick, thinking of the astounding dwindling of the money. Another hot check. How would she take it, when she discovered that he was a deadbeat?

It hit him that he could spend the next few hours productively by writing an ad for the Consultants Market of the Tuesday Science Section of the *Times*. That made sense. He could run it for a month and maybe something would happen that would spare him the hopelessness of letters and the indignity of calls. Or he could go over to the library and look through the Standard Rate and Data Catalog of Mailing Lists. A new SRDC was out; maybe this month's edition would show some relevant mailing lists he hadn't tried. Or better, he could get some lists of people in computer-intensive industries like accounting, and send them letters. Lists of known computer users weren't worth a damn. Consultants had a bad rep with those people. Too many fast-buck operators in the business who turned out to know less than their clients.

After all, it wasn't entirely hopeless. He did have a few miserable assets. Last week he had found some useful changes to the WordPerfect word processing program in an obscure freeware database. Those were worth money. They sped up the program and removed many of its minor annoyances. He could look like a hero to companies that used WordPerfect as their word processor. Surely he could find someone, somewhere willing and able to pay him a few thousand dollars for increasing the efficiency of their secretarial pool by twenty percent. Surely he could. For the love of God, Monica got three hundred dollars an hour. He was more poorly paid than a private detective in a Raymond Chandler novel. He was lucky if he was paid at all.

As he walked he read the prescription. Elavin. What would it do? He had no idea, but it was an immense relief to consider using it. He would place himself in Monica's capable hands. Let her make the decisions. Let her reorder his life. Give up every dignity to her: take the pills she prescribed, let her alter his brain.

He went down to the Duane Reade Drugstore on Madison and Forty-first and filled the prescription. Like a skulking thief he continued on the avenue, half expecting to find his office rekeyed when he came back.

And what about the apartment? Would they start eviction? How long did it take? Could they keep their furniture, and would there be anyplace to go?

Back in his office he took the dose, two pills, with a cup of water from the men's room. His water cooler had run out last month and they had not showed up to replenish it, not with their bill unpaid for six months. It was autumn. His last good month had been April.

The disturbing thought occurred to him that the Elavin might trigger the reaction. He looked down at his hands, took them to his face, and inhaled the familiar smell of his own skin. There hadn't been any sensation when the change took place in Atlanta. He had been assuming that it was instantaneous. Was that true? Maybe he had been lying there for some time, oozing and twisting. There really wasn't any way to tell.

Therefore he would have no warning if it was going to happen again. They said that a strange disquiet often preceded a stroke. And there was a moment of melancholy, he had heard, prior to a grand mal seizure. There was nothing now, just the silence of an office, the faint hissing of the air-conditioning, a man sitting at a desk waiting. It was possible to believe that he was alone in this office and in the world. He could look down six stories to the street and see the cars, the passing people, the rich human activity of Thirty-fourth Street and Fifth Avenue. He could enjoy the faint art deco quality of his office, and dream of sunny days long ago, the late forties perhaps, some magic time when New York was right.

Then again, he had the habit of walking up to the Strand Bookstore and looking through the collections of Weegee's searing photographs of tragedies of city life, most of them taken in the forties. Maybe New York was never right.

Something deep within, a sort of turning of his gut, made him sit up rigid. His heart started pounding. "I won't run, I'll just stay in here until it passes." Footsteps came and went beyond the door; female laughter went by. Something tickled his cheek, a tear. He brushed it away. Should he call Monica? Was that allowed? Maybe Cindy, but Cindy couldn't handle this, she had said as much. He sucked a breath through his teeth. The chum-ing in his guts grew more intense. He imagined some great hand within him, remixing his body.

"No." He took a deep, slow breath, shut his eyes. At once he realized that he wasn't really alone here. There was a presence staring at him much as the wolf at the zoo had stared, glaring into his heart. It was formless, you couldn't make out a face or even eyes, and it was full of furtive eagerness, like a thief. "Who are you?"

Outside, the bell tinkled for afternoon coffee. Doors opened and shut, voices filled the hall. What of them, the people in the other offices? They never seemed to have such moments as this;

they were not like him. But they were. In his heart he knew that he was a

more or less ordinary man, living the common desperation.

His breath left him with a whoosh, and when he gasped back his air, it was through a nose able to tell the difference between the smell of his own sharp and frightened sweat and the succulent damp of the secretaries in the hall.

He had to feel his face. He had to know. His hands were trembling so much that he could barely control them. It was a struggle to raise them. They were clutching human hands, not paws, the fingers a blur of jitters, like the legs of a scorpion running in a ring of fire.

They touched a human face. He heard a loud sound, identified it as a sob. His own sob. He sat there shaking, weeping. An almost overwhelming sense of tragedy possessed him. He wanted to feel his boy's arms around him, to hear Cindy's comforting, familiar voice.

He remembered his mother when he was very little, her powdered mask of a face looming down into his world of toy cars and tunnels in the sandpile, the way she smelled, the way she looked, the dark eyes in the pallor, the bright, unlikely smile and those fingers on his cheek, too freezing cold to be real.

Then he would be alone, as he was now alone. Monica's advice returned to mind: see a movie.

He went out into the bright, rushing afternoon, haggard, his eyes full of memories, his hands stuffed in the pockets of his suit. Nobody noticed him, nobody cared, for nobody in the world but he himself knew the truth, that a wolf was awakening in his belly.

Chapter Five

BOB HAD TROUBLE KEEPING HIS FEET ON THE SIDEWALK. He was slipping and sliding along, the victim of frustrating air currents. It was as if he was coming unmade in himself, his body not changing shape but losing all shape. His mind was fine, but his body was falling off some kind of edge. "Monica, it really is physical, that's what you just would not believe." The pills were making it worse. They provided the lubrication: if he didn't walk like a man of glass, his hands might drop off, his knees go rolling up under the shishkebab stand on the corner, his head topple into the goo of wet cigarette butts that floated in the gutter.

Easy does it, fella, this is serious. You are out in the middle of the street. But was he walking, flying, or being blown like a leaf? And where was he going? A bus leaped at him, its driver leering down, chewing gum furiously. Someone had him by the hand, was drawing him farther and farther —no, he was still in front of the bus, it was his arm that was getting longer and longer. He stared down the immense stretch of his sleeve into the real world. There was a man out there, holding hands with him. Dance?

"Can't you cross a goddamn street?"

Bob ran around in the garden, gathering flowers, and each flower was a word of a part of a word. "Oh," snapdragon. "I'm," daffodil. "Sorry," Easter lily. "I," Queen Anne's lace. "Slipped," Mountain laurel.

"Holy Christ, leggo my hand. Goddamn pansy." The man shook Bob off and hustled away. "Geek," he cried over his shoulder.

Bob was struck dumb with wonder to find himself at the corner of Fifth Avenue and Sixtieth Street. The zoo stood just across the street, a damnation of cages. He saw it not as a place but as a state of being. It was as ideological an institution as mankind has produced, a place of total and perfect injustice, where innocents were confined in hell for the amusement of the curious.

Oh, getting sentimental about the animals again, Bob? What about people, what about Auschwitz, Rudi Mengele standing on Sonja Teitelbaum's chest? Did that happen because Sonja went to too many movies, or smoked on the street? And why is the wolf here? He ate living flesh, and so is no more innocent than his captors:

Here we have it: To survive is to be guilty. To die is to be more guilty still. That's the point of Kafka's *Trial*, isn't it: guilt is the central quanta of life. The

trial is itself the sentence. The accusation proves the guilt of the accused, okay? And the wolf? Well, he was tried in the court of the tranquilizer dart, and in that court the sentence is always the same: life behind bars, thank you very much.

Once upon a time Bob had known a man who had suffered from a tic so extreme that it made him look as if his face was a wobbling gelatin sculpture. He was a bond salesman and his life depended on the impression he made on people. He had a pipe, which he would grasp in his teeth, surround with his lips, and struggle to hold. He never lit it. The pipe was his anchor. And the guy in Atlanta—Jeal—had used his the same way.

The pipe—Bob needed its equivalent on this terrible pilgrimage to the lair of the wolf. He needed something totally ordinary that would contain his urge to flutter, to run, to skitter along under the benches.

"Popcorn," he gasped, the prospector dying in the desert, calling to his last mirage.

"A dollar."

He took the bag of warm popcorn, gratitude humming in him. The world made nice things. He could remember the six-to-sixty matinee at the Broadway Theater in San Antonio—oh, to just once hear the faint cataract of fresh popcorn being expelled during the love scene, and you could go out to the lobby and for a dime actually buy a red-and-white-striped box of that wonderful smell.

There is no six-to-sixty matinee anymore, because there are no children. Childhood was invented by Lewis Carroll as the private amusement of a master of paradox. Carroll's brilliant artifice was destroyed by the twentieth century.

But there is still popcorn, and walking along the rows of cages to the cage of the God, Bob looked just like any other lost man ambling through the forest that never ends. "Hey, tapir, I know somebody who might like to free you. And you, kinkajou, let's set you up in my secret zoo." He elaborated on that theme. Manhattan is a place of secret clubs, even a secret coffee shop on Lexington Avenue, a place where they serve perfectly ordinary coffee and danish and make a decent egg cream, all ordinary and nice, except it is a secret, and because it is a secret, is fought over by the endless stream of the newly famous who make the city at once so sad and so hilarious.

The popcorn was good. Overhead the trees, swept by afternoon wind, hissed with a voice too subtle to be understood, too important to be ignored.

Bob looked up and almost wept with the grandeur he beheld, the leaves dancing, the clouds sailing past angels on their indifferent ways.

In his preoccupied state it took him some little time to understand that the zoo had gone into pandemonium, more or less coincident with his arrival. He realized it only when a condor began beating its wings against its bars and huffing as he passed. He noticed that keepers were running back and forth, one a young woman in tears, sobbing words of comfort to a cage full of bellowing, eye-bulging monkeys. The tiger dragged its' flab around, rippling as it waddled. Its eyes stared into Punjab.

The ring-tailed cats were screaming and hissing, slashing at the air, which was itself in turmoil, the wind whipping women's dresses, grabbing a baby carriage and sailing it off, its au pair frantic and far behind, shrieking in Swedish. A tiny hand waved from the carriage.

The mountain goats were leaping toward the top of their enclosure, the gorillas were roaring, the gibbon was laughing, its teeth bared.

Still the wind came on, sharp and cold, sudden black hands of cloud chasing the fluffy angels, stinging flecks of rain and squadrons of leaves sweeping down the paths, catching in Bob's popcorn, swarming, swirling, and the clanging of the little Indian elephant as she tortured her bars.

Just then three keepers rushed past carrying between them a huge slack snake with an oblong bulge in its middle. "For God's sake she swallowed a purse," one of them wailed. "Maggie swallowed a damn lizard purse!"

Behind them came a well-dressed woman of perhaps fifty, her black face tragic, her makeup running. "I never seen no snake that big strike," she said to Bob. "They think she's gonna die because of my purse!" The last word came out as a crackling moan. Then the woman hurried on, presumably to claim her belongings after the vet operated on Maggie.

Bob let his popcorn fall away. He was drawing close to the cage of the wolf. There was only one word to describe his feelings, and that was awe, for he had seen the eyes. The wolf alone was not screaming, it alone was not gnawing or beating or pushing its bars. Bob was overcome by emotion. He could not look into the face of the great forest beast, but rather looked down. He felt its gaze, as implacable as diamond, a radiant fire. Now the God reveals itself, he thought. It has hidden long enough in the folds of the animal.

He went to his knees, crouching, and felt himself raise his right hand, press it closer and closer to the jaws of the cage, spread it wide, and slip it through.

The wolf sniffed Bob's fingers.

It snarled. Then it took his hand roughly, shaking its head from side to side. Bob could almost see as if through the tips of his fingers the crusted old teeth, the cracked and yellowing tongue. The wolf shook him once and let him go, then raised his own paw. Bob looked up. The animal's ears were back, his eyes gleaming like taxidermist's glass. Bob sensed within himself a great animal awakening and flexing.

He knew with a clear and sickening certainty that he was going to change. Right here, right now, he was going to become body with body, this wolf. His insides bubbled. He was melting, being reformed by powerful, hidden hands. His mind struggled with the matter—he was out in public now, people were bound to see. His clothes would be lost, he would be naked. And what about his wallet? There came a great spasm and his back went as straight as a rail. Frantically, he put his hand over his wallet pocket.

Then there were strong hands. "Hey, buddy, you okay?" He was lifted and he saw a flash of brass and blue. A cop was bending over him, lifting his head in a big palm. "You okay?"

"I—I—"

"Have you taken anything? Do you need a stomach pump?"

Would that get it out—he thought not. He lay with his head on the cop's knee, gazing up the powerful lines of the cage bars behind him, and high above he could see the nose of the wolf poking through, and one fang. Ever so carefully, the wolf was gnawing at his cage.

The rest of the zoo was growing quieter. "I'll be all right," Bob said through a thickness of tongue he had never felt before. A shudder racked him.

A policewoman bent over him, her face pinched. "Don't let him swallow his tongue."

"Mary, what the hell's the matter with him? I can feel his bones, he's shaped funny."

"Sim, it's a fit. The guy is a cripple and an epileptic." Her face softened. She was a mere child, probably not much past twenty. "Grand mal seizure," she said. "We've got to keep him from swallowing his tongue."

He could not speak, especially not when she stuffed a pocket comb redolent of her styling mousse in his mouth.

"It's not drunk or drugs?"

"Nah. Don't haul him in on a substances charge. We'll look like jerks."

"Thanks, Mary. I don't want an arrest. I don't want to lose lunch break."

Their hands holding him, the sweat of their presence, the faint scent of deodorant and cologne and gunmetal had brought Bob back to the world of fingers and eyes that see in color. It hurt a little: some sort of magic was leaving him, and that was sad.

The comb was bothering him, held firmly in his mouth by Officer Mary. He began to work it with his tongue, which only made her hold it more firmly at first. "Wiiiff—pibb—" Finally she removed it. She smiled. "Welcome back. See, we're gonna be fine, aren't we?"

He tried to sit up, but the cops restrained him. "Just a minute. Catch your breath."

"I'm okay."

"You sure?"

He hoped that his expression wouldn't betray him. "Yeah," he said.

The male cop suddenly ran his hands along Bob's chest. He was frowning. "You're—you were—"

"I'm okay."

"You sure are!"

They didn't prevent Bob from getting up when he tried again. The male cop was staring hard at him as he stood.

"Thank you, Officers."

The cop stood with him, looked him up and down. "Jesus!"

Bob could only turn and hurry away. Behind him he could feel the raging presence in the cage, the very wild itself straining at the toils of rusted steel.

Behind him, he heard the cops talking. "He was all bent up, Mary." There was an edge of panic in the man's voice.

"It was the seizure."

"I felt twisted bones! I felt them straighten out!"

Bob kept moving. He hardly glanced to the left and right, ignoring the remains of the pandemonium, the gorilla curled into a giant ball of fur and clutching hands, the monkeys piled in the back of their cage, still and silent, the condor staring, its beak agape.

The cop's voice rose in the distance, high, full of scream. "That man was crippled, I felt his body. I felt his *bones*!"

An energy had definitely departed. Even the wind had ceased to blow. The light in the streets had lost all magic. Buses and taxis went screaming madly down Fifth Avenue, people dashed back and forth, lovers walked hand in hand, women in furs gazed at the windows of Bergdorf Goodman, limousines

lurked before the Plaza. A bag man leaned against the wall that separated Central Park from Fifty-ninth Street. He was totally inert.

Bob felt as he had when he was a teenager, after some immense act of sex, drained, emptied of all spark, of all friction, a dreg.

The policeman's attentions had interrupted the process. But the cop had *felt* his bones. He had been in the process of actually turning into something physically *else!*

By the time he entered Monica's office, he was wondering why he had ever bothered to call her. No psychiatrist could help a man who was melting.

She was cheerful, still dapper in her blue double-breasted suit, her eyes wide and bright, so innocent that they stopped the heart, so knowing that they made him humble. "Well," she said in a confident tone, "how are we this afternoon?"

He could only lie into her broadside of supportive signals. "I feel better."

"Elavin is a good drug. There's nothing like it when somebody's feeling a little panic."

Panic. Yes, that was a good word. But it was not bad panic. Grand panic. Exotic panic. Magical panic.

"At first I thought the pills had made it worse. I got into a really horrendous state."

"How so?"

He related his story, ending it with the kindness of the two cops.

"The zoo animals we can discount. If there really was a disturbance, it was coincidental. It might even have been what induced your attack."

"I was having trouble before I got to the zoo."

"No doubt you were. But we can't trust our own perceptual memory, can we?"

"Monica, I can only repeat that it was a physical thing. One of the cops that helped me out at the zoo thought I was crippled. He was practically screaming when I walked away, because he obviously didn't understand how a person that twisted could just get up and stroll off."

"Well, this is your perception."

"I had a seizure."

"I grant that—but only that. A seizure I can deal with, hallucinations I can deal with, panic I can help you with. But we have to have a basic understanding that these perceptions of yours are not real. Otherwise, Bob—well—"

"I'm psychotic."

"That would be one diagnosis." Her voice was soft and even, but the sharpness in her eyes betrayed her.

"You think I'm going around the bend."

"I think I can help you."

"Then it's Cindy. You're worrying about her."

"Of course. She is my dear friend. I've known her for more than twenty years. And I know how much she loves you. She treasures you."

"Why would anybody do that?"

"I am not in the profession of analyzing love. I'd be a fool to try."

"Implying that you cannot imagine why she loves me. Well, neither can I. I'm a lot of trouble and not much good."

"You've made her happy." There was an edge in Monica's voice.

"Am I leaving my marriage behind? Is that what this is all about?"

"What do you think?"

"I don't know! That's why I asked. You're the expensive psychiatrist. You tell me."

"I'm not a Miss Lonelyhearts. My profession is to guide you toward insight."

He remembered the wolf sucking at his hand. He could feel the tongue, the teeth, could see those glaring, empty eyes. They looked like glass because the soul behind them had been burned away. That wolf was already dead. It wasn't responsible for what was happening, it was just a mechanism.

There was an impression of somebody so huge that they contained the whole earth. He thought of the Catholic image of the Blessed Virgin Mary standing astride the world, and was for a moment deeply comforted. "Officer Mary."

"Excuse me?"

"Did I say something?"

"Something. I couldn't hear you. What were you thinking about?"

There was no way to say it, because the image was so strange and private. His mother must have held him newborn thus, a magical being cradling an infant who trailed in his soul the whole world.

"We underestimate ourselves, Monica. Human beings don't know what they are."

"I've often thought that." A smile almost captured her face, but it got away.

There was something startling here—this woman was not at all wise. She

wasn't even a good questioner. Her mind wandered about. She occasionally repeated something you said, agreed, tried to make you expand. But she was not concentrating. For all her well-groomed beauty, the perfect blue of her eyeshadow, the colorful humidity of her lips, her heartbreaking almond eyes, her radiant blond hair—for all of that—she was just not here.

Bob was here, totally. Maybe that was his problem. He had come awake to a life which is normally meant for a sort of sleep. A soul might be like this in heaven, but when it was born, it would forget everything it had learned in the airy libraries of the angels.

"What are you really, truly thinking about right now, Monica?"

"Why do you ask?"

"Monica, please. Forget the session. Forget the questions. *What are you thinking about?*"

"What should I be thinking about?"

He noticed that there was nothing near the patient that could be thrown, no ashtrays, no fat little statuettes of Buddha like in the rest of the office.

"I could get a computer that would ask me these parroting questions."

"Would that satisfy you?"

A tingling iron was thrust directly into his groin by an unseen hand. His penis sprang up. Sweat flowed from his every pore. Her skin was alight, pale and smooth, her fingers tapering, her breast a milky stillness. The fire in him almost cracked him open. He thought for a moment that he would split in two and his organs would fall out, a stoke of blazing coals.

She laughed a little, leaning forward, her chin on one of those long, soft hands he wished to God would touch him. "Bob?"

"I'm remembering the Catskills." It wasn't true, it was more than that. He wasn't remembering anything and it wasn't her in particular. His desire went flying right out the window, and in an instant included everybody in the world, good, big, little, bad, old, new, every sweat and softness, hair in the sun, sweet skin in the dark.

Singing came from the reception room. Monica turned her head sharply. "Katie, are you still there?"

"I'm leaving now, Monica. Is that okay?"

"Sure, Kate." She got up, a glory of whispering movement. In a low voice she spoke to her assistant. "You don't need to stay for this one. He's a little overwrought, but he's harmless. I've known him for years."

The kiss they traded, made to look casual, seemed to Bob like two molten

cymbals crashing, a thing of fury hidden behind a thousand curtains, and on each curtain was another deceiving word. It was not casual. It meant that their hidden souls were in deep and abiding love. They should share their bodies, their very blood. That they did not know this, or ignored it, made them sinners.

She closed the door firmly and came around her big desk. She stood before Bob, her arms folded. "That night haunts you, doesn't it?"

"I want you."

"We could put all that to rest, you know. I'm speaking as a friend. You don't want me, you want your image of me. If I satisfied your curiosity, maybe we could get on with the analysis."

Her words shuddered, and Bob saw that she was shaking. Behind the folded arms, her hands were clenched fists. He felt sorry for her, because he had discovered her secret. She had tried so hard to hide her failure. The reality was before him, though. She had no idea what she was doing: her profession was exactly what it seemed—a superficial fraud clinging to a deeper truth.

There came to him an insight. His path had diverted from common reality and entered uncommon reality. He might be off in this fog, lost here at least for a time, but it was a grand fog.

Within it there were fearsome discoveries to be made, but also he was closer to the old immortalities. Saints and the innocent of God had been here, the geniuses of the surreal like Francis of Assisi and friend Kafka.

He had to break the tension between himself and Monica. His passion would not be satisfied by some hurried roll on her rug, indeed not by any physical thing. It was too deeply of the body to be appeased by the decorative rituals that have grown up around the act of procreation. Maybe giving her a child would wet his fires a little, but he did not want his fires wetted. He had to see this through.

A new experience had claimed him.

She, though, still assumed him to be part of the old reality. Her eyes were wet, her lips parted. Her fingers took his cheeks and guided his mouth to her mouth. He turned away and her kiss came to his cheek.

"Bob?"

"Monica, this is not—"

"Hush. Don't say it." She dropped her eyes, her head, knelt, then crouched before him like an Egyptian at the feet of Pharaoh. He heard constricted sobs.

But the constriction began failing, the sobs growing louder. She had come to her own darkness, here in this lovely room, with the late sun bathing the cathedral below the windows. She was seeing full how close she was to the mysteries that her ancient sisters in magic had celebrated with potions and flying ointment and broomsticks. So close, and yet denied. Her science, in seeking to penetrate the heart, locked the heart.

He felt sure that she had just at this moment discovered her own fraud. As softly, as gently as he could, Bob rose. He stepped over Monica's crouching form. He left this soul to the privacy of its discovery.

There was no point in trying any longer to escape. Not Monica, not her pills, nothing could help him. If there was a guide, he would find it in the black letters of the past, the *Mabinogion*, the *Little Flowers of St. Francis*, the *Metamorphosis*.

Bob Duke had come to the center of the forest. There was no sound, not even wind. The path was not marked by moon or stars or prior passage. All around him the eyes, the fangs, the claws of another world—the wild and true world—gathered themselves.

As evening settled over New York St. Patrick's Cathedral raised its bells. He started off through their glassine clamor and at the same time through this silent forest in his soul. Now he was alone.

Chapter Six

THE ENCOUNTER LEFT BOB DESPERATE FOR TYLENOL, and he was glad when he was finally riding the old elevator up to his own apartment. Lupe drove it, one-eyed, silent Lupe who had been here since this building was called "The Montague House" and dressed its doormen and elevator operators in tan uniforms with gold braid. Now there was only Lupe, and he rarely wore his shaggy formals. They were reserved for Christmas, or if there was a wedding party in the building, or a wake.

Lupe never talked. He had stopped talking, the old-timers said, back when the Dodgers had left Brooklyn. Mrs. Trask in 14C remembered Lupe's last words: "Too sad."

Lupe's last words, Mrs. Trask . . . the life and history of the building. Mrs. Trask also remembered when your maid piled your dirty sheets on the dumbwaiter and sent them down to the laundry, which was staffed by six Chinese. "At Christmas we gave twenty-eight tip envelopes, a dollar each. Our rent was forty-one dollars a month. Let me tell you, young man, this place was class with a capital K."

Lupe pulled back the rattling brass cage. "Thanks, Lupe." Bob heard, and disliked, the superior drone in his own voice. "I need about twelve Tylenols," he said as he went through the door into his dark, silent apartment. "Hello?"

There was a scrabbling sound from the bedroom.

He went down the hall. "Cindy?"

She was sitting cross-legged on the bed in the dark, smoking. He was stunned. To his knowledge, she had never smoked. "What's the matter?"

"We have thirty days to go in this apartment. Jennie called from the bank, we're eight hundred dollars overdrawn. I spent all afternoon at the welfare office trying to get food stamps, and we can't get them because we've already made too much money this year. So I bought a pack of Salems and I've been sitting here ever since smoking them and get me some money or leave me alone!"

He stepped back as if a snake had lashed its head in his direction. Her breath hissed between her teeth.

She was hurting, and he loved her, but he could not comfort her. The source could not melt the pain. Still, there must be something to say.

"We—"

"No, Bob."

He held out his arms. She looked at him, and for a moment she seemed to be gazing at him through the bars of a cage. Gazing in. Her beauty flowed in the dark.

"Don't come any closer, Bob, unless you've got money."

"I went to Monica. She made me take pills—"

"We need money more than we need you sane! Why didn't you rob a bank and then go to Monica?"

"They rape you in prison."

"Forty-year-old men with Jell-O around the middle? I hardly think so."

"I've forgotten how to make money. Why don't you work?"

"Doing what? Taking in wash? Pumping gas? Scrubbing floors for our friends? I'm equipped for nothing. A drone. A victim of the culture." She laughed silently, mirthlessly, her cigarette bobbing like a little red lantern. "I've been paying for being a woman all my life, and now I'm really going to pay, I guess." The bobbing stopped. "That's what being a woman's all about. You're born, therefore you pay."

What did she mean? Was she referring to pregnancy? They had used the Lamaze Method for Kevin, working as a team, two shouting, screaming people in the University Hospital birthing ward, and afterward she said it hadn't been so bad.

She stubbed her cigarette out on the bottom of her sandal and aimed the butt at the trash can. "Bob, I've loved you so much. More than I ever thought I'd love anybody. You have a decency about you, honey, that's just so sweet. You're the only thoroughly good person I've ever met. You wouldn't hurt anything. I don't think you've ever even killed a fly." She sobbed. "Is that why you're such a failure? Why we're always broke?"

"Actually, I think I might have something with the Macintosh Office concept. I'm planning on hitting my old client list, making some cold calls—"

"Shh! Honey, don't belabor the absurd. Just leave it alone. We have no money. This is who we are. We are the We Have No Moneys. 'Hello, this is Mrs. We Have No Money. I'd like to get a credit line, please.'"

"We have MasterCard. Gold American Express—"

"Used up, used up."

"Maybe the bank—"

"They don't have time to assist the indigent."

"Something will turn up." He smiled at her, giving it his biggest, his

brightest. Maybe somebody would take the apartment, maybe they wouldn't even be able to get food, but this love they had was bigger than a roof over your head or a meal.

Or, actually, maybe that was taking it a little too far. The love was big. But food and shelter were also big.

"I was poor as a kid and poor when we first married. The rest of the time I've worked the float. Just for one month, for one week, I'd like to have enough money. Get it. Get it now!" She grappled with another cigarette, lit it, and smoked with amateur fury. White streams roared out her nose.

He took all he had out of his wallet and laid the three one-dollar bills on the bed before her,

"Wonderful. Kevin and I can go out and share a Coke and a burger at the Greek's."

The numbers on that didn't quite work, but Bob thought it better not to mention it. They could get a grilled cheese sandwich in lieu of the hamburger and still have enough change for dessert from the Muscular Dystrophy gum machine beside the cashier's counter.

Bob's body seemed to churn and boil, as if he was turning under his skin to the consistency of a milkshake.

He was changing right here in the bedroom! He had to get out of here. "Isn't that music?" he asked, desperate to conceal his inner turmoil.

She sighed. It must be obvious to her that his voice was not right, and she probably knew why. "Kevin's got a friend over."

"I think I'll go say hello." He took a long step back. He quivered, goo in a sack of skin.

"Bob?"

"Yes?"

"Is that a dance you're doing or what?"

"The music—"

"You don't do the frug to the 'Blue Danube.'" Backing away from Cindy was an evasion, of course. He should go to her, and let her spend her rage on him and then ask her for the blessings of the night, but he had not the courage. Over the years of their marriage she had remade herself in an image he preferred, but now that he couldn't pay her way anymore she was back to her old self, the real Cindy—a stranger he had from time to time glimpsed in moments of rage or passion. There were jets of rebellion flaring.

And yet—and this was the most awful part—the strangeness of her anger

was what was making her attractive. Her rage was a fierce aphrodisiac.

All the rules were changed; reality had come unstuck, danger and the unexpected now reigned.

His bones shifted, scuttling beneath his skin. Step-by-step he backed down the hall. Cindy snorted, a derisive, cutting noise. The light streaming from under Kevin's door was yellow and rich.

He had to hide, to get away, to save his family from this absurd horror—

His bones were oozing in his skin, his muscles bubbling as if they were carbonated glue.

He stumbled, fell against Kevin's door, lurched into the room.

The whole place was done up in blue construction paper. From Kevin's record player there blared the "Blue Danube." He was waltzing around and around with a girl in his arms.

"Dad!" They stopped waltzing.

The girl held out a soft, child-fat hand, smiled around a bucking reef of teeth. "Pleased to meetcha."

To take the hand Bob had to concentrate all of his attention on his own arm, force it forward, scream in his head for his fingers to open. Then he had to draw his hand back, which was like pulling against a cold river. The arm wanted to go straight out before him, the hand to crunch and twist itself into a new form.

This must not be allowed to happen, not here, not now. But he *wanted to*, his body *wanted to*, it had wanted to all day, to just burst its old skin and become the new, magic self that belonged to the wild.

Both children looked at him, the little girl's face flickering fear, Kevin's a mix of amusement and concern,

"Dad, have you got a sore throat?"

"Rrr—no!"

"Then why do you keep growling?"

"Your dad is really weird."

He finally managed to lurch out, caught himself leaning forward toward all fours, scuttled into the living room, and hit the phone. He fluttered through Cindy's directory, a pretty cream-colored book with roses pressed in the Lucite cover that Kevin had made last summer at camp. Here was Monica's home number. Thank God, what a convenience when your wife and your psychiatrist are such good friends, no need to gabble to some gum cracker at an answering service. *Ring*. Please. *Ring*. Oh, please. *Ring*. "Monica, thank

God you're home."

"Who is this?"

"Bob; I need help."

"Are you hurt?"

"No, Monica, I'm changing. I swear."

"You sound like you've got a mouthful of Brillo or something."

"I swear, my whole body—Monica, it isn't a psychological problem, it's real. I've got to have help."

"Can you come to my office?"

"Please, I don't think I can get out of the apartment."

"Is Cindy there?"

"They're both here. And a little friend of Kevin's."

"Give me ten minutes, Bob." She hung up. He slumped over the phone, breathing deeply, trying for control, clutching his chest, huddling in on himself. Evening light gathered to waltz time from Kevin's room. Bob crept into the darkest corner he could find, the coat closet.

His body gave itself to its rebirth. He wrenched and quivered, saw waves passing through his muscles, felt the grinding reorganization of his bones. His organs seemed to have become detached from their moorings. They swooped on cold comet tracks down new paths inside him, freezing and burning at the same time, while he gasped and gargled, trying not to scream.

"Tales from the Vienna Woods" gave way to the "Acceleration Waltz," and the *pop* of a bottle of fizzy apple juice. Bob stared at the faint light coming under the door of the coat closet. He darted his ears toward the rustling sound of movement—Cindy was coming down the hall. Now she was in the living room. "Bob?"

He pressed back against the wall. The smell of overcoats filled his nose: his own coat smelled of moldy money. Perhaps that ten dollars he had lost had worked its way down into the lining. There was a faint aroma of Paco Rabanne coming from Cindy's coat. Either she had taken to using it or had walked arm in arm with a man who did.

Didn't Monica's husband use it? That, or Aramis. Bob did not care for fragrances on his own body. His ears followed Cindy as she came to the center of the room. The light increased. She had turned on the lamp over by the TV. "Bob?"

The downstairs buzzer sounded, blasting the silence in the closet, making Bob chortle out an involuntary growl of surprise. Cindy came across the

room, lifted the receiver of the intercom. "Yes?"

"Cyn, it's me."

"Oh, Monica, come in."

A few moments later they embraced with swishes and a ripple of ginger kissing. "Why did you come?"

"He phoned. Where is he?"

"I think he went out."

Light burst into his eyes. There stood Cindy holding Monica's airy mink. She dropped the coat. "Bob, my God."

Monica appeared, a dark mask before the light. She squatted down, reached in and took his face in warm, firm hands. She drew him out into the blinking light. The waltz music had stopped. Briefly his eyes met his son's, the boy standing at the far end of the room. "Is this for real?" his playmate asked.

"Kafka," Kevin said, "the *Metamorphosis*."

"Look at his teeth." Cindy's voice was analytical, the tone of someone so fascinated that for a moment they have forgotten to be upset. Then she fully realized what she was seeing, signified by the fact that her skin went corpse gray.

He tried to raise his arm, to touch what he sensed as a numb disfigurement of his lower face. His right arm shot out before him. It was short, the sleeve of his shirt drooping around it. The fist at the end of it was so tight it felt like it had been strapped to itself with cord. His palm was hot, his finger joints oozing red pain.

"It's a hysterical reaction," Monica said crisply. "Get him down on the floor. Get his clothes off. We've got to massage those limbs before he loses his circulation."

"What do you mean, a hysterical reaction? Look at him, he's—oh, Bob, oh, my baby!"

"The body can do wonders. You wouldn't believe what some patients look like. Especially from the East. Indians. You'd swear they'd half turned into monkeys, the way they contort themselves. It's nothing that modern psychiatry can't handle, of that much I can assure you. A few months on a Thorazine drip, a course of electroshock, and he'll seem fine."

"Months! Monica, we have no money. He can't go into the hospital, he has to work."

"I'm sorry. This is a classic case of avoidance. He can't handle his

problems, can't face his responsibilities. It's a fortress mentality."

"Mother, his teeth are actually growing."

He heard all of this with absolute clarity as Monica and Cynthia undressed him. Through eyes that had gone to vague colors and shades of gray he watched his son and the little girl standing hand in hand at his feet. "Don't cry, Kevin, I'm gonna—"

Kevin clapped his hands over his ears. "He sounds like a dog!"

"Rub, Cindy." Their fingers raced along his arms and legs, raced and kneaded. Within his limbs there was a continuous churning, and it was getting worse. He delivered himself to their efforts but it was no good, not really. He was slipping, sliding through their fingers. His wife's hands were soft and cool and dry, Monica's damp and warm. Their manipulations were beautiful agony.

It faded like rain fades, and the rubbing of skin against skin was replaced by the whisper of fingers in fur.

"Oh, God, Monica, what's the matter with him!"

Monica lifted her hands as if she was being burned. A rictus twisted her face, her teeth gleaming behind tight lips, her eyes beaded to amber chips. Then a great force seemed to descend upon her and she controlled her face. Her lips were a line of wire. Young Kevin had moved away. His girlfriend was huddling in a ball beside the TV. Kevin's tape had recycled and the "Blue Danube" now filled the room.

A passing fire truck wailed. Bob, lying on his back, slowly windmilling arms and legs that no longer worked right, heard a voice from the street call out, "Artie, don't forget. . ." Then again, "They'll kill you if you do. . ." Somebody laughed. High in a window a pale star shone down.

Bob wished he could fly out into the wild emptiness between here and that star. His heart almost burst with longing and he cried aloud. A sound drowned the waltz, making Kevin cover his ears and stare with stricken eyes, making Cindy beat her fists against his chest, making Monica gather him in her arms and press her warm, soft cheek against the cold wall of teeth that half formed his new face.

The sound he made felt in his chest like flying, it was so high and rich and full. He would have thought such a voice would reach the stars, but when his breath ran out, the world was still exactly the same. Or, not quite. The little girl had gone to her knees facing the wall, and was loudly praying the Confetior.

"Bob," Monica whispered, "Bob, it's all right. I know you're still in there. I must tell you that I don't know exactly what's happening here but there must be some rational, perfectly sensible reason that explains this. I want you to know that you are not alone. I am with you. I will help you."

"Dad, can you talk?"

He wanted to talk. Very badly. He wanted to tell them to go, to leave him alone.

The world and the dark beckoned to him, the long paths and shadowy leaves, the barking of the pack, the high wind at night.

"Bob, please, if you can talk, say something."

Of course he could talk. "Lorr." No, not quite right. "Bwaorr." It was an awful moment. "Urraoo." The walls seemed to come closer. He heard his own frightened panting.

Kevin burst into open tears. Monica's drone started again, and Cindy's sobs were in waltz time, unconsciously keyed to the sway of the "Blue Danube." In the corner the Confetior had given way to the Apostles' Creed. This little girl was a full-scale Catholic.

Bob wanted to comfort his son, to take his wife in his arms. He was sad, now. His initial fear was evaporating. Beneath the sadness there was something new, an interest in the dark beyond the window. He knew that there was nothing out there but Washington Square Park, New York University's private drugstore, jammed with dealers and students. He could hear the trees, though, speaking in soft night voices, and the glittering rattle of crickets.

Clumsily, he got to his feet. There was a general outcry in the room. Even Monica shouted. "What's he wearing?" shrieked Kevin's poor playmate.

"Get her out of here," Cindy said. "Take her home, Kevin. Your dad is sick."

"He's metamorphosed. Kafka's story isn't fiction anymore. In 1990 it's a medical text."

"How can you be so supercilious! Look, Jodie, he's wearing a wolf rug we bought last year in Alaska. He's having a nervous breakdown, that's all, do you understand?"

"No."

"What do you mean no—oh, God, Monica, can't you see what this will do? This kid'll tell her parents. Before we know it, everybody at St. Anselm's will know. What will happen to our reputation?"

Bob tried once again to talk. "Mwee, mwee. Eooo." It was horrible. His mind was swarming with thoughts, with explanations, answers, above all with the reassuring notion that it had worn *off* that night in the hotel, and it would wear off again.

Then he heard the wind again. He wanted to go out and run the night.

His nose came to life. This was nothing like the hotel. He was so startled by the change that he reared back, growling involuntarily, causing a renewed outburst of woe from those around him. Smells in hundreds and thousands and millions burst alive. He was instantly overwhelmed. The floor, the remains of his clothes, Monica's sweat, Cindy's soap, Cindy's sweat, her intimate odors, Kevin's child-sourness and Jodie's child-sweetness, the hot electronics of Kevin's record player in the next room—a smell like a Formica counter-top with a hot pot on it—and the outdoor odors, the leaves, the bark of the trees, the squirrels sleeping among the branches, the brown odor of the crickets on the leaves, the chlorine-sourness of cocaine and the smoky, pungent aroma of the drug dealers, a complex of sweat and cigarettes, and the smells of marijuana and tobacco, of the concrete in the sidewalks and the rubber on the tires of passing cars, of gasoline and nitric acid from exhausts, the smell of garbage and hot food, garlic, beef, broccoli, and the faint, distinct odor of their bedroom, powder and the oils of human bodies, and a musky whiff of the spermicide Cindy used with her diaphragm.

He jerked his head back, gobbling out twisted cries, his brain overwhelmed by the sudden plunge from the universe of seeing to that of smelling. The warm room, the lights, the furniture, the people, were in an instant ripped from their moorings in sighted life and plunged into a madhouse of radiant odors.

The world, as he saw it, was mostly gray. Red he could see, and green, and shades of brown. Would the blue sky be gone forever, and what of the beautiful smooth whiteness of Cindy's breast? He experienced as deep a pang of yearning as he had ever known. He bowed his head and covered his eyes with his hands.

The moment he tried to do so he fell painfully on his chin. "He's trying to use his hands," Cindy cried. "Look at him, oh, *look at him!*"

"Cindy, we have to stitch ourselves together. Remember this. It's very, very important. *This is not a miracle!* No, not a miracle. No. Somewhere, there is some quite, quite rational, clear, and understandable scientific explanation—"

"Oh, shut up, Monica. You're repeating yourself because it *is* a miracle and you're scared. You're terrified."

"I admit I'm uneasy. This is a very unusual case and it's appropriate for me to feel uneasy."

"Oh, yeah, I'd agree with that. Uneasy."

Bob was catching and then losing the thread of words. He was so disoriented by his changed senses that he couldn't pay attention, no matter how hard he tried. It was as if his mind was going blind.

The room, he realized, stank. The odor was salty and like cold, wet hair. It was cloying, as if made of oils, and lingered in his nose. A shiver coursed through his body. He felt cool air against the skin on the back of his neck.

"Look at him now. His hair's standing on end."

"Is he mad? What's happening?"

"Bob—"

He could not speak to them, could not tell them that their own fear was infecting him, that he was helpless before the odor of emotions that they couldn't smell. Every nuance of feeling created a change in odor that shafted at once to the depths of his soul. He had no way to defend himself from this assault, and could only suffer it, the raw march of feeling among those he loved.

"May I go?" A tiny little voice coming from Jodie. She was knotting her hands.

Cindy knelt to her level. "Honey, of course you can go. Monica will take you home, there's no need to call your parents to come get you. Just as long as you understand that this is all..." Her voice whispered away, and was replaced by a keening as of stressed wire. Bob longed to embrace her: He knew the sound of Cindy in abject sorrow.

Monica took the girl by the hand and left, promising to come back as soon as she had delivered the child.

"All a game!" Cindy shrieked as they left.

Not fifteen minutes had passed before the phone rang. Cindy snatched it up. "Hello—oh, hello Mrs. O'Neill. Yes, I'm glad she had a good time. Bob? Oh, he's a little indisposed, you can't talk to him. You want to do what? Oh, sure. I guess—well, of course." She hung up. "How nice. How goddamn nice! The woman's going to bring us a covered-dish supper. She acts like we had a death in the family."

Bob wanted to say just four precious words: "It wore off before." But he

could not speak and despised the sound of his own efforts too much to try again. He sat on his haunches and stared helplessly at his wife.

Not long after, Monica returned. She and Cindy and Kevin sat together on the couch. None of them spoke. Bob sank deeper and deeper into despair. The emotion he was feeling now was loneliness. He was not a wolf, but rather a profoundly deformed man. He was the victim of some odd psychophysical disorder, that must be it.

And yet, in him there was something triumphant and free. He remembered the wolf in the Central Park Zoo. What of that wolf, what was it doing right now? Was it sleeping, dreaming only of the wild?

His own childhood dream of becoming a wolf had obviously been a true experience. He had swept through the backyards as a wolf. There *were* grass stains on his pajamas. There *were* those memories, so perfect, of a wolf's movements and ways.

Shape-shifting... it was said that witches could turn themselves into owls and rats and hares. And the Indians—didn't they have legends about it, too?

Was that poor old wolf still in its cage, or had it died and the two of them somehow come to inhabit this same flesh?

It had looked at him, looked into him—yes, actually entered him with its eyes.

That was the secret, the wolf had done it, had entered him with its eyes. And it had happened before, yes, it had, back at the San Antonio Zoo in the summer of 1957, he remembered it vividly now. There had been a wolf there, a sleepy, dejected old Texas red wolf and it had *looked* at him and then . . .

Then had come his dream.

"Could I watch *M*A*S*H*?" Kevin asked.

"No! No TV." His wife's voice was so lovely, full of melodies he had never heard before. He went to her and stood before her, looking into the creamy miracle of her face, the blue, wide eyes, the dramatic, perfectly proportioned nose, the lips that seemed always to conceal, as their deepest secret, laughter.

By degrees she raised her hands. "If I touch him, will it help?"

"I can't answer that."

Kevin, sobbing softly to himself, leaned against his mother's shoulder. Cindy seemed to Bob small and weak and vulnerable. For fifteen years he had been taking this woman in his arms.

Now all he could do was to nuzzle her with his big jaw, trying to avoid

letting the tongue—which felt like a mouthful of belting leather—get in the way. As he got closer her scent became stronger. It was nostalgic, familiar in ways he had never before understood.

Oh, Cindy, fifteen years. I knew you as a girl and I knew you as a woman. I'd been so looking forward to gentle old age together. Pressing his nose up against her neck, into the place under her ear he had kissed a thousand times, he inhaled.

The odor stunned him. To call it an odor, even, was to diminish it terribly. Voices, songs, high summer days, blue sky in the Catskills, the warm of winter fires, snatches of love talk, the hot and the wet of bed night, the first halting glances and the settled looks of the marriage, her body big with Kevin, so much more. He realized that every good thing that time takes from us lingers in our odors—and we have lost the sense of smell.

Her hand came up, shaking, and she pressed her palm against his cheek.

To truly find her love, he had become a prisoner from her. He lay against the touch of her hand, and heard the final establishment of the night outside, the course of the stars against the restless sky. A leaf tapped the window, dropping silently past the light.

Part Two

The Journey To The West

A man without anything, alone on the road
long after midnight,

is told by the choking street light
morning will not come.

He jams his hands in his pockets, walks on.

—Robert Duke, "In the Matter of the Night," (1983)

Chapter Seven

ROBERT DUKE HAD A NEW BODY TO LEARN. BREATHING through the long snout, and seeing around it, were difficult. He had lost the power of speech and what he now saw as the great privilege of hands. He was fallen from the human state, there was no other way to look at it.

His wife and son stared at him, stricken but also fascinated. Monica sat in the blue upholstered chair, watching him through quizzical eyes. "I need to do a little research," she said. "I'd better get up to the library at the hospital."

"At eight o'clock at night?" How Cindy's voice pierced! He was standing at her feet. When their eyes met, she reacted as if struck a blow, and looked away.

"The library's open till midnight. It's a teaching hospital."

Why did she need a library? Didn't she realize she could use his computer to access Medline? She could do whatever research she needed from the next room.

"I wish you didn't have to leave. I'm so scared."

"Don't be scared, Mama." The bright edge was gone from Kevin's voice. His own fear rose to a stench like acid wax when he looked at Bob. "He'll change back any minute now."

Bob's impulse was to comfort his boy. He turned his head, only to see him shrink away from eye contact. It hurt Bob, and he humiliated himself by quite involuntarily making a high keening noise.

Cindy clapped her hands over her ears. "Don't do that, please!" She looked at Monica. "He can only make animal sounds." Another wave of fear poured from her body, that strange tart-musty odor that made Bob's heart beat harder and the hair at the back of his neck thrill.

Monica came down to his level, pressing her face into his. "Can you understand?" she said in a loud voice.

He was having trouble dealing with the cascade of odors that were now pouring from their bodies. Their emotions seemed to run in waves, bursting forth for a few moments, then subsiding, then coming out again. And each time they came forth they were stronger. Their fear was rising, and soon it would break them. Inside himself Bob was in turmoil. He felt so odd that he could barely walk. It was a tremendous effort to coordinate four legs, to see through these shape-sharpened, color-dulled eyes, to sort out the smells and

sounds that shoved and swarmed at him from all sides.

What's more, the presence of the night was oppressing him. The walls of the room seemed almost alive, like malevolent flesh keeping him from the freedom of the woods.

He moaned again, he couldn't help it. Cindy clapped her hands over her ears. "Bob, are you in pain?"

"Bob—" Monica took his face in her hands. "We have to communicate with you. We have to have some means of knowing how you feel and what you want. Now, please, try to listen to me. Tap the floor if you hear me."

Tap the floor. Was that all that was left to him?

"He tapped! Dad, Dad, tap once if you're in pain, twice if you're okay."

What could he do? He was not in pain. Anguish is not pain. Desperation is not pain. He tapped twice.

"He's not in pain!"

A barrage of questions followed. Bob heard the fluttering of wings outside the window. When he cocked his ears, he could also hear the alien breathing of a large bird. He was astonished to know that there were owls in the city. He could imagine the bird skimming over the buildings, searching out the dark places for mice. From the rapidity of its breath, its busy fluttering of feathers, it was working hard, and full of excitement. Then it flew on, after a faint scuttling sound that came from the edge of the cornice.

There was a secret world out there.

"Don't even think about it," Cindy yelled. She put her arms around his neck. "It's a six-story drop, don't you remember?"

"Close the windows. There's not much he can do but jump."

He tapped once, sharply. "Once is no," Kevin said.

"Yes, yes, we will close the windows. Bob, this is all going to be over soon. You'll get back to normal. You'll be all right. Monica's going to do some research and find out what's wrong with you and she's going to fix it, isn't that right, Monica?"

"That's right."

Didn't they realize what had happened here? A great reordering in the world had caused this. The petty ministrations of a doctor weren't going to undo something so enormous.

But if he didn't change back, what would he do? He couldn't spend the rest of his life in this apartment. Not the least reason was that they were due to be evicted. What was Cindy going to do? She was desperate for money. Now

how would she get it?

The wind whispered, the wind called. It was seductive, it was insistent. And now the wind rattled the windowpanes a little bit, tapping for him to come. He saw himself running across the top of the wind, escaping from the maze of prisons that was this city.

He might have wished for wings, but thought perhaps he'd better not.

He watched Monica and Cindy frantically locking the windows. He climbed up and dragged his paws against the glass. "Down," Cindy commanded. "Down, Bob!"

How dare she talk to him like he was a dog. He wanted to tell her, to scream it out: I am a human being in here. I am a human being! All that escaped, though, was a very unpleasant snarl.

He had bared his teeth at her, he had raised his hackles. Terrified, she was backing away. "Now, now, Bob. Nice Bob." Oh, good Lord, how stupid.

Kevin came up to him. "Dad, I know you can understand everything. Look, they don't want you near the windows, okay? So let's compromise. Let's say you stay away from the windows and I'll get Mom to leave them open."

Bob tapped twice on the floor.

"Hear that, Mom? He *does* understand. Is it a deal?"

"You won't go near the windows, Bob." Again he tapped. He was a little bit in control at least.

Then Monica went to Cindy and whispered in her ear, a whisper that Bob could hear clearly. "Don't open the windows. He could be suicidal."

"How can we be sure? He's always been fascinated by wolves. Maybe he's having a good time. At least he doesn't have to get out and earn a living."

"Look, Monica, how would you feel if this— this—fantastic catastrophe happened to you?"

They both regarded Bob, Monica with a weak smile, Cindy sadly. "I want to turn on the air conditioners," she said. "It's too close in here."

Lacking voice, lacking hands, all Bob could do was watch as she defied him.

A moment later the downstairs buzzer sounded. Monica picked up the handset, spoke for a moment, then let somebody in. She turned a shocked face to the others. "It's Jodie O'Neill and her mother. They've got the covered-dish supper."

Cindy rushed to the door. "I don't believe it. We can't—" The doorbell rang. "Monica!"

"What can we do—tell them to leave it on the stoop?"

"Say anything, say he's got AIDS. No, don't say that. All hell will break loose at the school."

"Cindy, as far as this woman is concerned, Bob's been taken to the hospital. You have a big dog, that's all. It's simple enough." Monica opened the door.

The O'Neills were all there, the mother and father, the daughter, the teenage son. They came right in, bearing sweating Tupperware dishes. "Hi, Cyn," Betty O'Neill said.

"Is that him?" the son asked. So much for Monica's subterfuge. Jodie had obviously told her family everything. And why not, she had witnessed the whole transformation.

"Now, this is truly amazing," said Mr. O'Neill, a flat-faced man with a pencil moustache. "He looks every inch a wolf."

"That's no wolf," Cindy shouted. "That's our dog."

"Jodie said—"

"She was confused. The dog bit Bob. He went to St. Vincent's to get a shot and some stitches."

"I hate to be nosy, but if a dog's biting its own master, shouldn't it be destroyed?" Mrs. O'Neill's words were almost snide.

"Oh, God, no!" Cindy put her hands to her cheeks. "No."

"At least take it to a vet," Mrs. O'Neill put in.

Bob saw Monica blink. She said nothing, but he didn't care for the look that had come into her eyes.

"We brought baked beans and ham, pea soup, and broccoli with hollandaise."

"Oh, that's very kind," Cindy said. "You needn't have done it."

"No trouble. It's left over from a wake a couple of weeks ago. The only work we had to do was to turn on the microwave." She laughed. "We have a huge family, and a lot of them are old. I keep this sort of thing ready all the time."

Bob hardly heard her stupid nattering. His skin felt hot, he began to hear and smell with even greater clarity than was now his exquisite norm. His whole body tingled, his muscles became like compressed steel. His breath got long and low, and came through his throat in growls he could not control. He was furious. That nattering woman, the gaping children, the superior sneer in the father's face—he wanted to hit somebody. How dare they put ideas of

vets into Monica's head! He was damned if he was going to submit to an examination by some animal doctor.

He was a human being. In here, yes, but still a human being, with the rights and lordship of a human being. They would not treat him worse than any degenerate junkie, and put him in a cage for observation, and shoot him with a tranquilizer dart, and examine him on some dirty table covered with dog hair.

"I think it would be a good idea to take him to the vet," Monica said. "We could get a full X-ray series. Find out what's going on."

Mr. O'Neill was sampling some of his wife's baked beans. "A Bud'd sure go good with this."

A Bud! The bastard, that's my last Bud in that damn fridge!

"Sure." Cindy spoke casually. Who cared anyway, Bob wouldn't be drinking any more beer, right?

He snarled when he heard the *pschtt* of the can. "Damn! That dog's skittish."

"It's not a dog," Jodie said. "It's their dad."

"Jodie, I don't want you to say that. It's too embarrassing."

"Well, it is."

Mrs. O'Neill looked at Cindy helplessly while the father swilled Bob's beer.

The clock struck nine. "*Mystery's* on Channel Thirteen," Kevin sang out.

"We don't watch that highbrow dreck," O'Neill said.

Bob growled again, harder and not by accident. He wanted to watch *Mystery*, to sit on the couch between his wife and his son, with his damned Bud in his hand, and enjoy every minute of it.

"What do you do, Mr. O'Neill?" Cindy asked smoothly. "Are you in trucking or something?" Atta girl, atta girl, needle the moron!

"No, I teach philosophy, actually, at NYU."

Which philosophers did he teach? Bob wondered. Howard Cosell? Madonna?

Cindy gave up nothing. She simply shrugged. "Bob's an entrepreneur," she said smoothly. "He teaches big companies how to use small computers."

Wonderful woman! O'Neill squirmed. "I've always wanted to have my own business," he said, a whine entering his voice.

Bob decided to get rid of the O'Neills. He trotted over to the dining-room table, where O'Neill sat, beer in one hand, fork in the other, tasting the beans

right out of the pot.

But when he tried to unleash a barrage of barking, all he could manage were silent gasps.

Was barking something canines learned, like walking on their hind legs? Surely it was instinctive.

He thought with horror: I don't *have* any canine instincts. I'm not a canine. I have no idea how to bark.

"Do you brush your dog's teeth?" O'Neill asked cheerfully.

"Why, no."

"Why does his breath smell of Crest, then?"

"Uh—maybe—he likes it! Yes, he eats it every chance he gets. Kevin! You must have left the top off the toothpaste again."

"No, Dad brushed his teeth right before—"

Kevin silenced himself, thank God, but the O'Neills all looked sharply at Bob.

"Their dad turned into a wolf," Jodie said again. "That's him."

"Oh, be quiet. Sometimes I think my daughter's a little addled," Mrs. O'Neill said.

"Merely intelligent and imaginative," the father said. "Unlike Spider here. Right, Spider?"

"Right, Dad. I'm fit only for basketball and then the grave."

If Bob couldn't bark—what other routines could dogs pull? Oh, yes, he vividly remembered a damnable Irish setter back when he was a kid. He knew exactly what to do.

Sitting down on his haunches, he prepared to wait. He stared up at O'Neill. Soon the man would get up out of the chair, and then Bob would do his deed. O'Neill was wearing a white cotton sweater and a nice pair of worsted pants. So much the better. Bob waited. When O'Neill met his eyes, he wagged his tail.

"Dog's a paraplegic, or what?"

"What do you mean? He's perfectly healthy."

"I've never seen an animal that bad at wagging its tail. He shakes his rear and just sort of hopes the tail will wiggle."

Cindy put her hand on his head. "I think he does very well, and he has a magnificent tail." Bob heard the sadness in her voice, and his heart was made very full. She was a real fighter, was this Cynthia he had married.

There came a great shuffling and creaking from O'Neill. "Well, we'd better

get going. Don't want to miss the ten o'clock news. Channel Five's got the best sports." He laughed. "Also, I've got some papers to grade, if the cat didn't piss on them again." Another laugh, chair pushed back, man standing.

Bob leaped up on him, planting his forepaws on his chest and dragging them down, shredding the sweater and tearing the pants in about four places.

"Oh, Bob, no!" Cindy came, grabbed him around the neck just as he was rising for another pass. "Bob, what in the world are you doing?"

O'Neill lashed out, kicking Bob hard in the chest. The blow hurt and Bob involuntarily bit at the foot that tormented him.

With all her strength Cindy pulled back.

"That dog is crazy," O'Neill snarled. "Look at my clothes—and look at this shoe. Oh, shit, I'm bleeding. Broke the skin."

"It's their dad. You made him mad. He doesn't like you."

"Shut her up, Betty! Look at what it did to my foot!"

"I'll get a Band-Aid, Mr. O'Neill."

"Band-Aid, the hell. Now I'm going over to St. Vincent's. I've got to get a stitch." He tried to walk, hobbled, nearly fell. "Two or three stitches right in the ball of my foot. Betty, where's the car?"

"This side of the street, halfway up the block."

"At least it's not over on goddamn Mercer." He glared at Cindy. "I think you'd better look over your liability policy, girl."

Cindy went gray with rage. She detested sexual diminutives.

"Oh, now, John, you won't be doing anything like that. Come on, children, let's help Daddy get over to the emergency room."

Bob saw Cindy's hands on the baked beans. The O'Neills began to leave. Bob cringed. He knew exactly what was about to happen. The O'Neills went into the foyer, began waiting for the elevator. At that moment Cindy snapped. "You can take your damned baked beans and shove them you know where, *boy!*" With that she poured them over O'Neill. They were followed by the soup and the broccoli and then the door was slammed on the howling, food-covered O'Neills.

"You're harboring a rabid dog, you've assaulted me," O'Neill roared. "There will be revenge, girlie, there will be sweet revenge." Then, in a lower tone: "Stop eating that broccoli, you fool."

"Sorry, Dad."

The elevator took the O'Neills away. "Well, I guess I can write Jodie off as a friend," Kevin commented absently. He turned up *Mystery*, which he had

been watching with the volume off.

"Oh, hell, now I've got the whole damn foyer to clean up."

Monica put her arm around Cindy. "I've got some nice Melozine in my purse."

"Tranquilizers give me anxiety attacks. I keep waiting for the other shoe to drop."

The two women cleaned up the mess, assisted by Kevin. Bob could easily have helped them by eating the beans off the floor, but he was damned if he was going to act like an animal. He went over, lay down on the couch, and watched *Mystery* with his muzzle on his paws.

Monica came and sat beside him. "I want to talk to you alone for a moment, Bob. I'm assuming that you can understand what I'm saying. Your actions tonight make it clear that your mind is unchanged. You're as odd as ever. First, I have some sort of an idea of what you have done. It's called hypnagogic transformation. You, of course, have accomplished a miraculous hypnagogic transformation. Among American Indians it is called shape-shifting and at best involves a certain amount of straightforward contortion. What you have done staggers the scientific mind. I always knew that you were a repressed, undeveloped genius of some sort. That you would choose to express your genius in this particular direction is naturally a surprise. But I must say something to you. Now listen to me. You are causing your family great suffering by what you have done. You must shift back. You must leave this utterly fantastic contortion and return to the human form. You can do it, you're in complete control of the situation. You and I know this, even though you yourself may not be willing to admit it. Bob, I beg of you, for the sake of a marvelous woman and a lovely little boy, return to them. Accept reality. You are a failure in life. A complete failure. But you are also a wonderful, surprisingly charismatic man. Your wife loves you to distraction. And that little boy—he adores his father. Please, for them, come back to us."

Outside the wind blew, sending a rattle of leaves against the window. Autumn was here. Time for the running of the deer, time for the gathering of nuts and the making of nests. The wind was wild, the wind was rich, the wind went where it went. Bob could see the high stars changing in their courses, could hear a rat scuttling along the roof across the street, could hear pigeons fluttering in their sleep. The owl that had been here earlier was now gone, but bats squeaked in the sky, dashing about after the last flies of summer.

He could not tell Monica how mistaken she was. His present form was as

real and as immutable as his former one had been. Whatever had affected him had come and gone its merry way, leaving him as he now was.

"Am I reaching you, Bob?"

He tapped.

"Wait until you see what this absurd avoidance response is going to do to your family. You've sent a wonderful woman and a beautiful child to hell. So be it. I'm off to the hospital, where I intend to spend the rest of the night doing research. If I can find a way to force you out of this maneuver of yours, I'll do it. But I doubt that there's going to be a thing in the literature."

As she left, Bob disconsolately watched Lord Peter Wimsey dance through the intricacies of some mystery he couldn't identify.

"I'm going to bed, Mom."

"Good night, son. Maybe things will be better tomorrow."

"Tomorrow is another day, eh. That might not be entirely correct. Kafka —"

"Shut up about Kafka! I'm sick of hearing about Kafka."

"We're living the *Metamorphosis*."

"I don't care if we're living the *Niebelungenlied*, no more Kafka. At the moment I find it almost invincibly depressing. Now go to bed, I want to be alone with the remains of your father."

With a murmured "okay, Mom," he left the room. Soon the "Blue Danube" was drifting out his door.

"Turn it off! I never want to hear that again!" She sobbed, then rushed after him. "Oh, honey, I'm sorry. Please forgive your mother. It's been a pretty dismal day."

Bob could not cry. In fact, great emotion made him droop, loll his tongue, and stare. He watched as they prepared for bed.

"Can I stay with you, Mom?"

"Sure."

They climbed in bed together. They were beginning to respond to him just exactly as if he were a real dog. In a word, he was being ignored.

Cindy lay still, her mouth slightly open, Kevin in the crook of her arm.

Then the doorbell started. It was insistent, buzzing again and again.

Bob could do nothing but wait and watch. Cindy opened her eyes, gave a grunt of confusion, then turned over. The buzzer started up once more. She sat up in bed. "My God." With a hustle of covers she arose and went to the intercom. "Who? The *police*! Of course." She buzzed them in.

Bob paced, panting, which reduced his body heat—cold air across the tongue, a good, new sensation.

Then they were there, a whole foyer full of them, men smelling of cigarettes and oiled steel, of leather and sweat, tough men. "We got a dog complaint, ma'am."

"That bastard."

"He had twelve stitches. He lost a nerve in his foot. It'll be months before he walks. The dog's gotta go in for observation."

"No! That's completely impossible."

"Ma'am, the ASPCA truck is downstairs. It'll just be a week, he'll be treated well. You can visit him. It's no big deal."

"They're afraid of rabies?"

"Yes, ma'am."

"Doesn't the rabies test involve dissecting the head of the animal?"

Bob shrank back into the coat closet, staring wildly.

"Ma'am, it's a matter of observation first. It won't come to no tests."

"But if it does?"

"Well, the test terminates the life of the animal. But if he might have rabies —"

"He doesn't have it! The worst he has is a slight case of the sniffles!"

"Well, it's put him in a kind of a bad mood."

"You can't take him. I'll have my vet look at him."

"No, ma'am. There's been a complaint filed. We have to take the dog."

"Where's your warrant? You can't even come in here without a warrant!"

"I hate these pet schticks. We don't need a warrant, ma'am. I'm going to tell the ASPCA guys to come up." He spoke into a handheld radio. The other cops fanned out into the living room, their bulky bodies filling it, casting black shadows from the single light that was on, the lamp that hung over the dining table.

Bob was so horrified that he couldn't move. He stood watching Cindy lose her battle with the police. She literally wrung her hands as she talked, and then three more men came in, dressed in khaki overalls, carrying a large cage between them.

"Come on, boy," one of them said, opening his face at Bob in a most insincere approximation of a grin.

The smells, though, told him a great deal. When the man spoke to him, an odor of tooth decay and old bacon grease came across the air. Bob took a step

forward and it blossomed with acid, a stench like boiling wax and onions. The man was afraid of him—terrified. And full of hate.

Bob could not go with these people. They would kill him, he knew it certainly.

"What the fuck," the man burst out. "This ain't a dog!" His voice was high, his odor grainy with fear. "You got a fuckin' wolf here."

One of the other men in khaki spoke up. "Why didn't you say this was a wolf, lady?"

"I—I—"

"People think these things are pets. They're crazy. This is a dangerous animal, my men aren't going near it."

Two of the policemen had their hands on their pistols.

"Go back to the truck," the flushed man said to one of the others. "Get the dart gun."

Cindy gave a little cry. A flash of panic made Bob growl. It was short and sharp, almost a bark.

The head cop took off his cap. "Lady, why are you keeping a wolf? Don't you know this is illegal?"

"He's a—he's just a big husky."

"Back out," the chief ASPCA man said, "these things can cut you to ribbons in a second. Where the fuck's Louie with that dart gun?" He grabbed one of the radios. "Louie, for God's sake, its hackles are up!"

The police had their pistols out now, all of them. Behind the clutch of blue and khaki the elevator door opened. Bob bolted, racing down the hall toward the bedroom.

"I'm calling my lawyer," Cindy shouted. Who? Bob wondered. Stanford Shadbold, whom they hadn't paid in a year?

"Okay, guys, break out the net. Block the corridor. I'm going in." As Cindy started her frantic phone calling Bob raced back and forth from bathroom to closet. The smells of fear and rage coming from the men drove him to panic, that and the knowledge of what was coming. From the bed there came a groan, then young Kevin was sitting up. He stared, stupefied, as a man in khaki, wearing a fencing mask and heavy quilting on his chest, arms and legs, advanced. In his hands was a neat plastic gun. Bob tried to rush past him at the last moment, his heart full of hopelessness, his body still determined to escape.

There was an awful, burning pain in his breast. He heard himself

screaming, a doggy wail.

"Dad, Dad!"

"Shut up, kid. Okay, guys, he's going down."

The fire spread, an agony that turned him to wood. It hurt but he could neither move nor cry out. He lay on his side, stiff, while his wife yammered at answering services and the ASPCA team gathered him up in a stout nylon net.

They took Bob's burning, paralyzed body down the hall. His eyes had blurred but he could still smell the horrible odors of the men, the faint smells of other animals on the netting, the rancid butter of Cindy and Kevin's terror.

Shrieks followed him down the hall, their razor agony penetrating even the tranquilizer. He could not even struggle to help Cindy, he could do nothing but listen to her at the far edge of panic, making a sound beyond grief.

"What about the Bill of Rights?" Kevin screamed, running along behind his father, wearing nothing but a pair of underpants. "What about due process? You can't just wrap my dad up in a net! You can't do it, this is America."

One of the policemen enclosed Kevin in a hug. "Gonna be okay, son. You wait and see."

"Don't you do that! Don't you grab my boy like that!"

Then Bob was in the elevator. The door rattled closed. Cindy's bellowing and Kevin's rising, frantic voice receded.

The world receded. There remained only the burning pain at the center of his chest, where the needle had been embedded. There was that, there was the blur of lights as the net was carried through the lobby. Then the back of the truck, thick with the scent of animal despair, a urinous, rotted stench. One of the men played a harmonica, some Spanish tune. Bob drifted helplessly away, and the world went silent, and odorless, and black.

Chapter Eight

TOTAL OBLIVION ONLY LASTED A FEW MINUTES. HE WAS still in the back of the truck when he became aware that they were fitting a wire and leather muzzle over his head. Vaguely he could feel them doing it, could hear them grunt when the truck lurched. His body seethed as if it was filled with insects. Try as he might, he could not move.

He understood, though, that he was in a cage in the back of the truck, and another cage had been fitted over his head.

"Man, this sucker is big."

"Just once I'd like to get it on a leash and go down Hundred and Thirty-Fifth. Nobody bother me then."

"Big boys bother you, little man?"

"Fuck you. Man, look at those eyes, just starin'."

"Starin' at you."

"We gonna gas 'im?"

"Dunno. Cage 'im tonight, in the morning, Tony know what to do."

"Look out, man, he might be comin' 'round. Give 'im another dart."

"No, man, what can he do? He's in the muzzle. Let him wake up. I want to see that sucker on his feet."

"Tear your throat right out."

"Yeah, man. Beautiful."

"You sick, man."

By the time they got to the pound Bob could lift his head enough to see. He could also scent things with great acuity, but the smells were meaningless to him—a jumble of startling new sensations. He could identify some of the odors: the stale fetor of sick breath, of tooth decay and smoker's mouth, the odor of other animals in the truck, the smell of the steel and the plastic and the gasoline. But there were other scents, far more subtle, that seemed elusively beautiful. He was in contact with the world in a new way, but he had no time to appreciate it, for the truck stopped and he was carried down a corridor into hell.

The sound hit him in flashes. He imagined that he was at the exploding muzzle of a machine gun. Then he saw walls of cages all filled with roaring dogs. Their barks were wild and furious, their eyes terrible. Close up, on direct terms with it, he could scarcely imagine the intensity of this passion.

The dogs' voices were blasting with fear and savage hate.

They knew he was no wolf, they knew it at once. Quailing in their cages as he was carried past, screaming, their lips frothy, their eyes beyond the border of sanity, they leaped and clawed, trying to get away from the monster that was being deposited among them.

"Don' like the wolf," one of the men said.

"He a mean sucker. They knows it. He kill ten of 'em all at once."

"You wanna see 'im fight?"

"Shit, he'd never make it tonight. Tomorra night, though."

"You on tomorra night?"

"Yeah."

"I got fifty bucks says he'll go down against the three shepherds that're up for gassin' Friday."

"You got fifty bucks sayin' that wolf ain't gonna stand against three mangy, broke-down street mutts? I got fifty bucks sayin' you is wrong."

There were slapped hands, then the two men walked out, oblivious to the noise of the crazed dogs. Bob lay on the filthy floor of a large cage, surrounded by other large cages. To his left and right large dogs shrank away from him. Across the aisle a terrier yammered, glaring at him out of scared, dripping pop eyes.

Despite all the noise, the barking and the whining, Bob was overtaken by sleep. It came quite suddenly, a black sheath. Abruptly he was dreaming. It was May 1961: Junior Cotillion Night at the Country Club. He was taking Melissa Costers, driving Dad's enormous new Thunderbird. There was a scent of oleander blossom in the air. He gave Melissa a corsage of gardenias, and the two smells mingled. On the way to the cotillion they listened to Fats Domino on the radio, singing "Blueberry Hill." Bob fell in love with the softly smiling Melissa. He even liked the way she looked in her braces. At a light he asked very solemnly if he could give her a kiss. Their lips touched dryly, then a waiting hunger captured them both and the kiss grew more intimate and humid. Their braces clattered together but neither of them cared. The light changed to green, a car honked and finally came alongside. The driver asked if they needed help.

It was then that Bob discovered that their braces had become locked together. Receiving no answer to his question, the other driver huffed and went away.

Bob woke up, sweating out the hideous waiting for rescuer, the frantic

bending and twisting of the braces, the amused stares of the police, the flashbulbs of the *Express* photographer.

He awoke snapping at his muzzle, and knew to his despair why he had been dreaming about braces. The iron bound him, the leather straps tasted of the saline gnaw of a thousand other canines. He got to his feet, glanced around for a water fountain. Then he realized that he had a hangover from the tranquilizer dart. He was sick in a corner of the cage.

Thirsty, and he smelled water. All he could see, though, was an encrusted dish attached to a feeder tube that automatically refilled when the dish was empty. There was something floating in the water, possibly the previous occupant's spittle. The dish was slick with the licking of thousands of tongues. Bob was revolted, and crept to the far side of the cage.

Presently a small man came hurrying along, pushing a cart stacked with bowls. He thrust one into each cage through a spring-loaded door. The dogs commenced eating at once, gobbling down the appalling mess with gusto.

They were a dull group of creatures, these dogs. They were tired and broken, most of them, standing in these cages awaiting their turn in the gas chamber, which was a little black hutch at the far end of the room. Bob tried to remember how long animals were kept here before being destroyed. Five days, wasn't it?

Surely Cindy would manage something.

But time passed, and he remained in his cage. The light coming in the high, barred windows changed, grew thin. Bob yearned toward that light. His initial despair had given over to fury. Most of all he was furious at science for giving him no hint at all that this could happen. He had grown up in the illusion that there is something fundamentally stable about the universe. But that was a lie. It was only stable for those who believed it to be stable. If you did not so believe, you risked personal catastrophe. How many others had ended up like him, stuck in the bodies of creatures that had interested, inspired, or obsessed them?

He walked over and stared at the drying glop in the bowl. It was so damn stupid. He had to get out of this mess. The thing was, he hadn't felt any control over his transformation. So how could he hope to change himself back?

He searched his mind, trying to understand how this had happened to him. All of his life he had been fascinated by wolves. He had tried to observe them in the wild in Minnesota, but had gotten only a few glimpses. They were the

devil to track. Hunters flushed them into clearings and shot them from helicopters. Bob had used years of tracking skills, gained from the Boy Scouts, from books, from professional guides. Still, the wolves had eluded him.

All but one. This was a she-wolf, young, weighing no more than eighty pounds. He had been crawling down a brush-choked ridge to a little stream when he had encountered a thatch of gray-brown fur. He had felt ahead and discovered the animal. She had been so frightened by his approach that she had become like a thing of rubber. There had been a brief moment between them. Her eyes had met his. He had thought himself the possessor of a great secret, to stare into the enigmatic, panic-clouded eyes of this alien creature, to see her as she was in her own world, a place intended to be hidden from human eyes.

Had that done it—had something of her somehow stuck to him all these years, some strange seed . . .?

But this was a matter of the flesh, of the real, immutable body, of blood and bone and skin. There had been some kind of dance of atoms, for they had reordered themselves. Wouldn't there have been a discharge of energy as the molecules of his old body broke their borders and sought new ones? And why had he first melted, then re-formed?

It was all completely impossible. And yet here he was in this cage with a bowl of dog food to eat. Not a very high quality brand, either, judging from the fatty bits and the chunks of what looked like organ meat suspended in the dissolved cereals. He sniffed at it. Most unappetizing. He wanted eggs, bacon, orange juice, and coffee. He wanted toast, dammit, butter, a bit of strawberry jelly. He wanted the *Times* and maybe another cup of coffee. He wanted all of these things at the Elephant and Castle restaurant on Prince Street, with Cindy sitting across from him with her croissant and cappuccino.

He wanted them now!

When the echo died away, he realized that he had somehow learned to bark. He had rattled away like the worst of them, yammering at the top of his lungs.

What a foul degeneration. He was now a coarse beast, he couldn't say a word, he couldn't turn a key, he had no clothes and had only garbage to eat. There was a gas chamber right out in the middle of the room and they were soon going to put him in it, and this terrible mystery was going to die. A human being who had gone through the mirror was going to come to a

choking end, pitiful, terrified, claustrophobic.

All around him dogs licked bowls, paced, slept, barked, whined, defecated, urinated. The air was a fog of canine odors. When the door to the front of the building opened, expectant noses twitched, eyes followed the coming of the men with the big plastic garbage bags. They opened a cage and took a scabbling animal down to the gas chamber. In a moment it was locked inside. The others paced and panted, then a buzzer rang and the inert form was pulled out and stuffed into a bag. Another dog, this one screaming and running, was processed. Then another, and another and another. The cages were disinfected.

Didn't these people realize that the dogs knew what was being done here? They all knew it was a charnel house. But they could not make the leap of consciousness to see that they themselves would be victims in a few days. They could not see this. When the men went away with their bags of cadavers, the other dogs settled down to an afternoon of licking themselves, pacing, barking, and sleeping.

Bob was alone. He could not befriend one of these creatures, for they had not his intelligence. He could not tap out signals or share noble thoughts in this filth.

During the day new dogs were brought to fill the cages of the old, most of them scruffy, terrible creatures, things of the streets. One was so emaciated that all it did was lie on its side. When a keeper offered it food, it gently licked the man's hand and closed its eyes.

Whenever a new beast was brought in, the other dogs barked. For Bob there could not be any real rest or even contemplation—much less sleep—with the cacophony. He kept wanting to believe that it was mindless, but the more he listened, the more he heard something new in it.

He heard a song, built on a very definite, very unhuman esthetic, but certainly a song. When dogs barked they expressed excitement or fear or rage, but they also expressed a beauty, something in its way as subtle as the luster of an aria. An aria, or was it a prayer? There was joy in it, even from these trapped beasts, and when one of them went to the gas chamber and the others barked, it seemed to Bob that the unseen world shifted and fluttered in sympathy.

"It isn't eating. It hasn't touched a thing through three feedings."

"Shit, I got fifty bucks on it. I hope it ain't sick."

"The pool's seventeen hundred dollars, you aren't the only one who doesn't

want it to be sick. I've got some money on it myself. It's an exceptional wolf. Must weigh in at a hundred and sixty pounds, maybe a little better."

"It jus' look at you. You think it wants to eat us?"

"Don't take the muzzle off before the fight. If that's what's keeping it from its food, it can wait a little longer."

"That lady been by. We say we ship it up to Queens."

"I've got a buyer already. Movie guy."

"That lady done los' her a wolf!"

The man in khaki and the one in the soiled white coat left. Bob followed them with his eyes, hungering for their freedom, their voices, their beautiful hands.

The implications of their conversation were so unfortunate that it was a few minutes before Bob fully realized what had been said. Then it hit him a solar blow: he ran back and forth in the squeeze; he panted and snapped at his muzzle; he butted his head against the cage, finally stared in fury and frustration at the rusty padlock. Given the muzzle, he couldn't even chew it—not that he'd have a prayer of chewing it through.

They were stealing him, if they didn't kill him first. Made to fight to the death, then sold to some movie producer for God knew how much money — it was outrageous, criminal.

He raised his head and found that he could howl, and it felt good to howl out the misery of his situation. God, though, was as silent as ever He had been when Bob used to pray the Our Father and the Hail Mary. He hadn't been really Catholic since he was twelve, but now the nobility of the old prayers returned to his mind. He saw his religion as a grand and rather pitiful human attempt to somehow speak back to the mute wonder of creation. He had prayed just now, with his howl.

The dogs had fallen silent. Many of them were staring at him, and in their faces he could see reproach. He knew why: he had interrupted the song of the barks with a noise that did not fit. One little Shih Tzu in a tiny cage yapped. Then a terrier, then a mutt, and another mutt, and a burned mutt and a starved mutt, and two shepherds, and some other nameless breeds, and then like a night full of crickets they were going at it again, deep in their esthetic.

It came to him with great force that he was the only creature here who was not already in heaven. Nothing could happen to these dogs that really mattered to them. They were all lovers, they had all seen God many times in the human form, and theirs was the celebration of the heavenbound.

He yapped, but it was wrong, a sullen little note in these symphonics. He brought the habit of concept, of memory and forethought with him from the human world. That was why he was so much less than the dogs, why his voice lacked timbre and resonance. He had the past to savor, the future to fear, the present to endure. The dogs had only their barking. They strove to make it fine and exciting and fun. It was prayer, yes, but also entertainment: they were singing a song of dog-affirming.

This was not an unhappy place. Dogs suffered terribly here, yes, but the suffering only reached so deep. The gay tails, the flags on the jumping bodies of the condemned, attested to the persistence of life and the triumph of dogdom in a way that nothing in human experience could, save perhaps the singing that came from the gas chambers of World War II, when briefly man had experimented with treating himself as he did the animals. He longed to ask these dogs: "How does it feel to love a master, to live with and see and smell a God?" And how does it feel to be deprived of this love? Each dog was a detailed, complex tragedy. Lost, given away, abandoned, forgotten. They knew what it was to be discarded by someone they adored. Why then were they not lovelorn, and what was this strange humor in the barking? Did they see themselves as absurd? Were they capable of sensing the ridiculousness of being a dog?

When once a woman came looking for a dog to take home, the whole place filled with a smell as if of hope, and dog after dog shambled to the edge of its bars, dancing and panting its friendliness.

"That one you can't have," the vet said to the woman, a girl of perhaps twenty, with clear, hard eyes and the heart-stopping skin of the just-formed.

"Is he a husky?"

"He's a wolf."

"You're kidding!"

"No, ma'am, that's a full-blooded male timber wolf in the prime of life."

"What's he doing here?"

"Bit a guy's foot off. Cops confiscated him as an illegal pet."

"I don't want any problems like that!"

"No, ma'am. Now, let me show you this little husky over here. Name's Rindy. Got him in two days ago."

"Hello, Rindy. Rindy?"

A wave of ambrosial odor poured from the dog at the sound of its name. It wagged its tail, it shot gladness and welcome from its eyes.

The whole pound awaited the decision of the human goddess, who turned with a murmured instruction to call her when a female husky came in. When he saw she was leaving, Rindy circled his tail, climbed his cage, panted, yapped, licked at the withdrawing hand. This was blood-love, this feeling the dogs had for humankind. They were not capable of hating people, only of fearing them.

The pound was silent for a time after the young woman left. Then the barking started again, a rhythmic mystery.

Chapter Nine

CINDY FELT LIKE SHE WAS TUMBLING DOWN A SCREAMING well when she saw poor, netted Bob disappear into the elevator in the hands of a bunch of near thugs. Blotches of fur stuck through gaps in the net.

It was more than she could bear. A curious silence enveloped her. Little Kevin hopped around like a frenzied dwarf, trying to break through to her. She watched him, heard him calling her name. Or was that all a dream?

Eventually he gave up, lay down on the couch, and slept a miserable sleep. Cindy stared at a corner of the rug.

A long time later the door buzzer rang. It was now nearly three o'clock in the morning. The buzzer rang and rang. Cindy heard it as a voice calling from the top of the well. It didn't seem very important. Then she heard Kevin, saw his stricken face. "Monica is here," he said.

Monica, Monica, the ocean whispered. Monica, the ocean said. Monica, Monica.

Monica soon appeared beside Kevin. Something tickled Cindy's face. Monica's hands were holding Cindy's cheeks. It felt nice.

A blow followed, sharp and colored red. It exploded the numbness. "Kevin," Monica said, "that sort of thing is unwise!"

"It worked."

Her son had struck her.

"Can you feel your body?"

It was as if she was enclosed in a cotton wool.

"Sort of."

"Hysteria. Under the circumstances, an appropriate reaction."

Kevin's voice cracked. "She was like a wax statue, just sitting there. I couldn't get through to her! Monica, I was scared."

Cindy realized she had frightened her dear man-boy. She had to pull herself together, she was a mother. He lay against her chest, and she stroked his trembling body. "It's going to be all right, Kevin. You'll see."

He drew back from her. "Please don't act like I'm eight, Mother. I'm twelve, remember. I know what's going on." He looked at Monica. "They took him away. He bit Jodie's dad. The police saw he was a wolf—" Kevin stopped, became the little boy again. His body shook and he stifled his cracked sobs into his mother's breast. It was all she could do not to cry with

him.

"The police?" Monica's eyes implored for more. Cindy told how they had taken him. Still listening, Monica bustled across to the kitchen and ground some coffee. In the middle of it she stopped. "Get a lawyer." Cindy did not like to hear tremor in that voice. Monica had to be strength.

"I thought of that. What do I do? Call Stanford and tell him he's got to get Bob out of the pound?" Saying it, she was suddenly convulsed with a fit of laughter. Monica watched her, appraisal in her eyes. When it ended, she went back to preparing the coffee.

Kevin became furious. "Don't you dare laugh! This is the worst thing that's ever happened to anybody just about. It's horrible." His hands had become fists, his face pasty gray.

"I'm sorry. Monica's right, I'm in a state of hysteria."

The pot whistled and Monica poured the coffee.

Sipping from her mug, feeling a little stronger, Cindy began to wonder what Monica had found at the library. She was unsure about asking, though. She did not want to hear a hopeless prognosis.

"It is a disease, isn't it?" Kevin did not share Cindy's hesitancy.

"Kevin, I don't know for sure."

Cindy felt cold within. "Is there anything, any information?"

"Cindy, I'm afraid it's a genuine medical miracle."

"A miracle? Gee, thanks, God, thank you so much! How about more miracles? Turn me into a frog, Kevin into a sheep! Miracles are supposed to be good!"

"The whole event defies physics, biology, all understanding."

"No, ma'am," Kevin said. "Not quantum physics, not if you assume subjective reality. Or if the Many Worlds theory is an accurate reflection of the actual situation, then you could even argue that this was inevitable, in one or another universe. Given many worlds, everything that might happen will happen, and each possibility will create its own universe."

Cindy looked at her son, hurting with pride and love. "What actual material did you find, Monica? Anything?"

Monica might have understood Kevin better, because she ignored Cindy's question and flared up at him. "What the devil are you getting at? You're saying that princes *do* turn into frogs?"

"I'm saying that they could. It might be that we've only recently—say, in the past ten thousand years or so—gained enough imaginative stability to

prevent our dreams from coming true. One of the greatest achievements of civilization might well be that it has contained the mind and shorn it of its ability to project into physical reality."

Monica rocked back on her heels, her eyes wide at Kevin's unexpected brilliance. "All I found was folklore, Grimms' fairy tales, Apuleius's account of the wolfman, and medieval superstition. Nothing modern. A couple of movie scripts."

He began noisily sucking the dregs of a box of Hawaiian Punch through the little straw that came with it.

"No scraping bottom," Cindy said automatically.

"If what you say is true, why don't we have more recent incidents?"

He looked at Monica over his box. "Who's to say we don't? The thing is, once people change, they're gone. Maybe there are a lot of them, changed into what they loathed or loved— whatever fascinated them enough. The people that do it might be genetic throwbacks or something."

"They never come back?" Monica winced at her slip even as she asked the cruel question. Kevin and Cindy clung to one another.

"There are no stories," Kevin said quietly.

Monica had to remind herself that this was not speculative. She had seen Robert Duke change. She had seen the slow alteration of the body, had massaged him with her own hands as his skin became soft and dry and fur emerged in clumps and sprays. She had to ask herself the fantastic question, were there others out there like Bob?

It was a fearful thing even to be in the room -where it had happened. The event challenged her most fundamental assumptions about the nature of thought and the boundaries of the mind. What is a concept, or a fantasy? Are there universes filled with the tatters of our fantasies and nightmares, places where we *become* the shape in the dark?

"You came back to tell us you hadn't found a thing!"

"A lot of people wouldn't have come back at all, not after what I saw. I *know* what happened here. But I am back."

"Without any idea of how to help."

The bitterness in Cindy's voice gave Monica a brief rattle of anger. She made sure it had subsided, though, before she spoke again. "I cannot offer a cure—not a magic bullet. What I can offer, and I am willing to try this, is therapeutic support—"

"Monica, you can't expect him to sit down and have a session with you?"

Surely, you must see the joke."

"I'm willing to try. Maybe we can get him back to the real world."

"He's in the real world. An uncommon version of it. Isn't that the gist of what you're saying, Kevin?"

"Yes, Mother."

"Well, then maybe I can help him get back into a common version of it."

Tomorrow morning Cindy intended to march up to that pound and extract him by sheer force of argument. Kevin's analysis had helped her immensely, in the sense that it sounded sensible enough to enable her to rest. In what he said there was a thread, however thin, to the understandable.

It was a matter of fighting idea with idea. If she could conceive of a successful outcome, she could move toward it.

"Why don't we call Stanford in the morning," Kevin said, "and tell him that it's a pet they've taken and we want it back? Don't tell him the whole truth."

Monica stroked Cindy's cheek. "Your color's coming back. I like to see that. Do you think you'd like a little something to help you sleep?"

"No. Absolutely not."

"But you will sleep. It's three-thirty, and there's nothing more to be done until morning."

A weariness was there, waiting to receive her. Cindy went back into her own dark bedroom. Was this how widows confronted the first night, looking across the sea of perfect sheets? No, not perfect. There were wrinkles in the middle where she had sat waiting for him earlier, sat like a spider.

She had lashed out at him, struck him. But they had no money. She had to do it, to inject him into the real world, to *make* him earn something.

How stupid, how arrogant. Now what would she do? Abandon his office and everything in it, for starters. She dropped onto the bed fully clothed. What about money? What about breakfast? And would Stanford work without payment? Didn't they owe him, too?

So many questions.

"Mom, can I stay with you?"

"Sure. There's room—" She had been about to add "on Dad's side," but the words did not come.

She lay in the dark, the huddled form of their child beside her, the talisman. Monica came in and silently held her hand for a time.

She plunged into black, empty sleep.

The ringing of the telephone woke her. At first she thought it was the alarm

clock, time to get Kevin off to school. The rhythm of it was what made her come to full attention. Then Kevin was standing with the receiver in his hand, holding it out to her.

"Hello?"

It was a moment, listening to the snide young voice on the other end of the line, before she understood that she was talking to a newspaper reporter. "We understood that you are the owner of a wolf that attacked a Mr. John O'Neill. Would you care to make a comment?"

Her mind cast wildly for something to say. From somewhere she recalled the ritual formula. "No comment."

"I'll be writing that you harbored this wild animal, is that correct?"

"No." Now that she fully understood the implications of this call she was grim with fear. What would happen to Bob now?

"Look, Mrs. Duke, you can save that stuff for the movies."

"Please leave me alone. Don't hurt us."

"I'm just trying to get a story."

"Don't hurt us!"

"Your wolf hurt a man pretty badly. Don't you think that entitles the public to know, at least how long you've had the wolf? And what's its name?"

"We found it on the street," she said miserably. "A week ago."

"Is that all? What street?"

"Fifth Avenue."

"You're kidding, a wolf just walking down Fifth? How did you capture it?"

"We fed it a ham-and-cheese croissant. It was starving." A lump of coldest ice had settled in her gut. This was only going to lead to more trouble. "We didn't know it was a wolf until the police came. We had no idea."

Without so much as a good-bye, the reporter hung up. Why not, he had what he wanted. To him other human beings must be no more important than dumb animals.

It was too early to call Stanford, so she contented herself with making a breakfast of oatmeal, orange juice, and tea. Kevin came in and ate. Monica, who had stayed on the couch, stretched and rose, and drank some coffee. In a dull voice Cindy told her about the reporter.

"That's all we need."

"God, what'll it lead to? Poor Bob's going to become a cause celebre."

"We've got to get him out before the story breaks. Have you called your lawyer?"

Cindy glanced at the kitchen clock. She tried his number, although she didn't have much hope at 8:40 in the morning. He surprised her, though, by both being there and answering his own phone.

"Cynthia. How long has it been? A year at least."

"At least that, Stanford. Stanford, we have a problem."

He remained silent.

"We've had our pet wolf confiscated by the city."

The sound that came over the line was like that a man might make on discovering a spider has gotten into his trousers at a funeral: a politely constricted whinny.

"It's in the pound. We want it back."

"A wolf-dog? A breed of dog?"

"No, an actual wolf."

"It's an illegal pet? No permit?"

"We didn't know we needed one. We found it on a street comer."

"You found it, or Bob?"

"Bob."

"Ah, now this begins to make some sense. Bob brought home a wolf and it has been taken away. You want me to have the animal released to your recognizance. But not, I presume, to Bob's."

"Bob is my husband. To both of us."

"Cynthia, do yourself a favor and keep Bob well in the background. Don't let him talk to the police or go to the pound. If anybody asks why, tell them he's indisposed."

Bob had been Stanford's client for many years. He had been in the middle of some unusual capers, such as the matter of the automatic theater seats that folded up around their victims, and that of the blue bread made from seaweed. He had also helped Bob with the FBI when he had tried to set up a series of computer conferences in Bulgaria. It had not occurred to him that the computers he had shipped out ahead of his own departure were proscribed, and that the Bulgarians had agreed to his project simply in order to get them. He wound up losing thirty-one thousand dollar's worth of equipment and narrowly escaping criminal charges. "Don't tell them he's eccentric," Stanford said. "Tell them to call me. I'll explain Bob."

"Bob won't be involved."

"Good. I'll have to look up the ordinance on dangerous pets to see if it's changed, but back a few years ago I had a client who had some trouble about

importing a jaguar. As I recall, it was a pretty straightforward matter. The city wouldn't allow it in. New York takes a dim view of dangerous pets. Too crowded."

That sounded bad. She strove to keep the wild rising panic out of her voice. "Could they ship the wolf to another city and let us take possession of it there?"

"Well, we'll see. I'll give the law a look and telephone you back."

"When?"

"Oh, soon. Why?" Suspicion was creeping into his voice. He knew perfectly well that there was more to the story.

"We're afraid they'll hurt him. He's a wonderful creature. We all love him terribly."

"People and their pets. I have my cats. If they were impounded, I'd be beside myself. I'll get to it right away."

Monica had made some instant oatmeal. They ate in silence, drank orange juice and more coffee.

It was agreed that Kevin would not go to school during the family emergency. Cindy ate because she knew she needed strength. She was not hungry.

The telephone rang again. "Is this the home of the wolf lady?"

"No." She hung up. "Another reporter."

It rang yet again. "My name is Rebecca Fontinworth. I represent the Animal Rights League, and I'd like to ask you if you realize just how evil—"

Cindy hung up again. "Stanford, please hurry up!"

His was the next call, and it broke her heart. "As long as the wolf hasn't hurt anybody, I don't see a problem."

"And if it has hurt somebody?"

"Big problem. They'll want to test it for rabies. They'll keep it in quarantine, probably donate it to a zoo. And you'll get a fine, not to mention the inevitable lawsuit. Cynthia?" She could not speak. "Hello? Tell me this isn't the situation. Cynthia?"

"He bit a man."

"Badly?"

"In the foot. Plus the papers are calling."

A sigh. "All right, then we have a problem. I am going to do what I can. You cannot expect me to get the wolf returned to you. The best we can hope for is a nice berth in the zoo. I will try to prevent the animal's being

destroyed."

It was hideous. She threw the phone as if the instrument had gotten hot. The man was talking about Bob, about Bob's *life*! She could hardly breathe, couldn't do more than make an awful sound—"eh, eh, eh"—as her blood thundered and her breath came in raw stutters.

Monica took up the phone. "I'm their psychiatrist."

"You live with them?"

"When I must. And right now I must. I'm camped out in the living room."

"The one I'm most worried about is Bob. Don't let him get involved in this. God knows what will happen."

"Maybe God knows and maybe God doesn't. Try to get the wolf out. As their psychiatric adviser, I'm telling you that this is the best course."

"I can't possibly get it out."

"Try. Do anything. It is important to their sanity, to their very survival." She put down the phone.

"Thank you, Monica. But it's hopeless. I know it's hopeless. He's going to die this insane, stupid, impossible death. Oh, how stupid, how stupid!"

"Mama, we're going to get him out. If we have to spring him, we're going to do it. We can't let Dad just die!"

She thought of last Saturday at the zoo. Was that when it had all started, when that strange wolf had been staring at Bob? He had wanted to leave there, as if he already sensed that something was wrong. And what of the wolf, what had it known? Maybe that wolf—maybe it was somebody, too, and it knew the signs, had seen them in Bob. "The world isn't what we thought," she blurted. "It's completely different!"

"Well, I have to agree now." But Monica looked personally insulted. "Science is a limited view of things."

"Every view is limited. The occult is limited."

Kevin spoke up. "The occult isn't a limited view. It doesn't reject phenomena like science. The trouble with the occult is that it misinterprets everything. Demons, ghosts—"

Monica slammed her hand against the table. "How do we know! At least one thing is true for the three of us. We have had the veils lifted from our eyes, and that is not bad. We *know* for certain that things are not as they seem. We *know* that this world is full of dangerous and mysterious powers. That gives us an advantage. And I'll tell you another advantage we have. We know that Bob is inside that creature. He understands English and he has the

mind of a human being. If we can get to him, we might be able to spring him."

"We're no SWAT team. How do we get into the place? What do we do?"

"We're both pretty."

Cindy was thunderstruck. "We use—"

"Sex, of course. We seduce."

"You saw those goons?"

"They'll seduce, believe me."

Kevin, who was as prudish as his father, had gone still. He was clutching his spoon, his knuckles streaked red. Cindy reached toward him. For all his brilliance, her son was the most vulnerable human being she had ever known—next to Bob. At least Kevin had inherited his mother's temper, and could use it. Bob had no temper, little anger, no guile.

Sometimes, though, he could see beyond the mountains.

Chapter Ten

THE DOG SLOP BECAME INTERESTING TO BOB AT ABOUT noon. He could well imagine what must be in it—possibly even the remains of animals that had been gassed. His impression of the Animal Control Foundation was not a bad one. Obviously there were employee abuses here, but the basic situation wasn't intolerable. Too bad young Kevin had never wanted a dog. Had there been dog food in the house, Bob might have been able to identify this by brand—if, indeed, it was a brand and not something made here. Nutrition concerned him. He would have known the cereal, ash and waste content, and the food value.

He sniffed it, and was surprised to discover that his nose could tell him a great deal about what was before him. There was a thick, oozing odor that seemed to congeal in his muzzle: perhaps that was fat. Another odor, slightly gray, almost like wet cement—that was ash. There was some cereal, not much. Then a faint but piercing scent that made his stomach tighten with need. This was the meat, the real food. Then there was bone, and the dense smell of organs. What had they done, dropped dead animals into a hopper and ground them up, then thickened the whole mess with ashes? Was that all there was to making cheap dog food?

He returned to the question of the source of the meat. Certainly it wasn't steak. Dog was probably a good guess. Or maybe bulls, roosters. What if unscrupulous zoos sold their cadavers to dog-food manufacturers? This could be anything. Gorilla. Python.

The smell of the meat went deep into his brain, into lusty new centers. This new, inner self must be the instinct of the wolf he had become. He turned to it, and found confidence mixed with churning fury, a questing, probing mind that was designed to compare and make sense of millions of odors. If he quieted his chattering human thoughts, he was at once connected to this spirit. His nose made sense for him then, and the few odors he could verbally identify expanded by a thousandfold into a nonverbal catalog of great richness.

That wasn't good enough, though. He was a man, and verbal. To use the powers of this new body, he had to break the boundary that existed between its instincts and his familiar mind. He could not abandon his human self to the wolf. And yet there were things in the smells—living, twisting things—

that were not connected to human words at all. Call them memories, call them longings, they shot through his body like the very words of creation.

His wolf sense knew there was food value in the slop. But the man Robert Duke was not about to taste it.

At one o'clock his gut knotted. In the distance he heard Paul Simon singing "Graceland," and they hauled four more dogs down the hall. The slop, drying and lined with flies, said, "I am life."

Two o'clock. The keepers muttered. A man came, smelling of coffee dregs, sauerkraut and hot dogs, and took pictures of him through the bars. When the keepers retreated, the man pulled a monopod out of his camera case and tried to prod Bob. "C'mon, you sucker, get mad." He laughed, a cruel, nervous man with a nose like a knife, a man with eyes glazed by what Bob saw was a habit of sadness. "Heyah! C'mon, sucker, give me a snarl!" He lit a Bic and thrust it at Bob, flame full on.

With a blubbery flap of tongue and lips, Bob blew it out.

"Holy moly."

The man then met his eyes. A terrified, screaming mutt was slammed into a cage. Barking erupted, the flip-flop rhythm of doghood.

The man looked away. "What the fuck are you?" he said in a hoarse voice. He started to raise his camera, then dropped it and grabbed the monopod. "You bastard!" He jabbed it at Bob, who pressed himself against the far bars. He jabbed again, and Bob felt the monopod against his skin. Again, and it seared a rib. The man was sweating, grimacing. "Fight, baby! C'mon, you aren't gonna fucking eat me! Fight, you bastard!"

Then the camera, *click click click*. Bob tried to create an expression of utter peace, deep, soft, calm. With a curse the man ran off. Soon he was back, one of the keepers in tow. "Look, get behind the cage. Get the damn thing's tail and give it a pull. I gotta have it growling. I'll get page one if this sucker looks dangerous enough."

"I ain't doin' that. It ain't right."

"Ten bucks says different."

"Ten bucks, man, I can't buy shit with ten bucks."

"A double saw, then."

"Double, you got yourself a man." The keeper headed around to the back of the cages. Bob stood in the middle of his space, his tail curled way up under his legs. "C'mon, c'mon— Jeez, how you know I se after your tail?"

"It's weird. You shoulda seen it a minute ago, it blew out my lighter. Sorta

slobbered it out. I dunno."

Fingers came in and closed around Bob's tail. He felt stabs of agony right up his spine and he cried out.

Almost at once the pain stopped. "Christ!" The keeper was out from behind the cage. "You hear that? You hear what it sounded like?"

"What of it?"

"I been around dogs for fifteen years. Wolves, I seen a dozen wolves. We get 'em in here once in a while. They jus' big, quiet dogs. They don' make no sound like that." He was staring at Bob. "We oughta gas that thing right now. I don' know what that is."

"I still didn't get my picture."

"You can keep your fuckin' picture! I don't want your money. Thas' a voodoo in there."

"Oh, Christ, do you believe in that stuff?"

"I'm from Brooklyn, turkey. But there ain't no wolf that screams like a man. Ain't no wolf."

The keeper retreated, his footsteps echoing on the damp concrete floor. The newspaperman took a final picture. "Thanks a lot, Voodoo Wolf," he said. With a last jab from his monopod he also left.

Silence brought boredom, the curse of all the creatures here. Boredom intensified hunger. Bob imagined a nice array of sushi: *tekka maki*, *taro*, *ikura*, sparked by a pyramid of green Japanese horseradish, freshened by delightful slivers of fresh ginger, the whole deliciousness washed down by a rich Sapporo beer. Then he would have *yokan*, sweet red bean paste, as dessert. Not this flyblown bowl of garbage that so tempted the wolf.

Left alone, he had plenty of time to consider the significance of a newspaper photographer. Maybe there would be a public outcry against his imprisonment. But no, on reflection he suspected it would go the other way. Man fears the wolf, that is in the nature of things. Newspaper people would have one objective: excite that fear in order to sell papers.

Water dripped, a dog whined, four more animals were gassed together, their frantic, muffled barking sending thrills of fear through the little colony. More strangers were brought in, to fill the cages of the dead. Doors clanged, slop was poured, a vet forced something down the throat of a dog with diarrhea. Another dog vomited worms and was gassed at once, and his cage swabbed down by a tired-looking keeper.

Pigeons, sitting on the sills of the high windows, gobbled and cooed. Bob

looked up, as millions of men and others have looked up from cages and jails, and longed after the wings, and saw a thread of sky. He could have wept but he had no tears. Then he leaned swiftly down and ate his slop.

His cage was thrown open, and before he could so much as growl, a net came and he was being carried down the hall. The black gas box stood before him, open, its wooden interior scored by a legion of digging dogs. He could see where they had chewed frantically on blocks and joints, and he could see the grille at the back where the gas came through.

He screamed, it was his only hope, apparently all he had left from humanity. Their faces went wide with surprise, but they kept at their work. He wallowed in the net as they stuffed him down into the box. Then the door closed. It was tight. His legs were twisted under him, his muzzle jammed against the wood. The oldest and worst of all terrors burst up within him. Monster though he had become, he wanted to live. A windy night, a bucking deer, blood beneath the moon; starlight in Manhattan, dancing at 3:00 A.M. Slow love, the jumping of cubs in the spring, watching Kevin sleep the sleep of an angel.

A valve creaked, the gas hissed. He smelled its choking must, a powerful, ugly note of ether in it that marched him off to sleep.

An angel stood before him in a seersucker suit, his white wings glancing sunlight. He was laughing, and waving a red lantern. When their eyes met, the library of the universe was opened to Bob, and he received rich, sustaining knowledge: he, too, was known, Robert Duke, and his fate was understood, and he was loved.

Then he was strapped to a table and there was another strap so tight around his jaw that his muzzle whistled when he breathed. His side was partly shaved, he could feel the cool air. And his head was thundering. They had only half killed him, had stunned him.

"Weight's a hundred and sixty-one pounds. That makes him one of the largest wolves ever found. He has a most unusual voice, and he has green eyes, another unusual feature. His coat is richly colored, displaying seven distinct shades, browns, grays, tans, white, and black. The overall effect is to give him an extraordinary glow. His teeth are healthy, and his skeleton is massive. Until we have done detailed X rays or dissected him, we cannot determine the laryngeal features that give him his voice. Our present theory is that he is a highly unusual breed of wolf, perhaps Russian or Chinese in origin, possibly imported to serve a ritual purpose within the voodoo

community. When he wakes up fully, we will display him in the rear courtyard, at which time you may take pictures."

Bob watched a stuffy man with the bald head fold his papers and clear his throat. Then the net floated down and he was carried away again. As two of the keepers were putting him in his cage he heard a number whispered in awe: "fifteen grand."

"You kiddin.' In the pool?"

"Sure enough. This a voodoo wolf. They gonna be a doc to bleed 'im. They gonna be a mama-san. He gonna eat them shepherds up. I glad I ain't got my money on 'em."

"It a bad scene, man, you gonna get some demon outta that thing. I dun hear it screamin' in the gas, it's some kinda banshee or somethin.' Gonna let Roy hold my marker for the pool."

"What make you think Roy so brave, if you not? Who gonna run the fight, the mama-san?"

"They gonna ring the whole courtyard with the Fierce Water of Johnny Blood."

"Then it safe."

"I ain't so sure. Them voodoos always get all mix up. You never know what's gonna go down, they start playin' with the demons."

"Where your faith my man, Papajesu gonna protect you."

"Papajesu, shit. I ain't goin'."

Later Bob was brought to the courtyard. For a time the air was brilliant with flashbulbs. In the green, glowing haze they left in his eyes, he saw a single pale face and his whole body ached with longing. He stared straight at her, he devoured her with his eyes, he tried to coordinate his tail enough to wag it. Cindy shone in his glance. She stood familiarly beside the vet who had examined him, seemed to speak to him easily, and even touched his arm from time to time with the tips of her fingers.

That gave Bob hope. If he understood what she was attempting, it was a good idea. She might be able to accomplish it. When he was returned to his cage, he found there a bowl of chopped steak. He gobbled it; this body did not easily bear hunger. Cindy had somehow been responsible for this food, he was sure of it.

As night slipped in the high windows, he became less sure. Finally there was a stirring among the dogs. His heart raced. He expected to see her with keys.

Instead there came a strange procession. He had always heard that there was voodoo in New York City, but this man was more elaborately dressed than the cardinal on Easter Sunday morning. He wore long white robes embroidered with a collar of dancing skeletons. There was a red cross on his back and a black pentacle on his breast. He wore a top hat and carried a cane. Over the robe was the tattered tailcoat of an ancient morning suit. His fingers were all ringed with skulls and such, and his feet were shod in doeskin shoes. He smelled of oil of cloves and dried blood, molasses, and thick, decayed breath. A drum beat in his shadowy entourage, and many of the dogs barked with fear. Straining on leads, their collars worked with daisies and spray-painted purple carnations, came four powerful young German shepherds. They were snarling and eager. Bob had seen them before, waiting in the front cages where the keepers took prospective owners and claimants. You could get a mutt here free, but one of these animals would cost. They were fine and brushed, and the keepers exercised them daily.

As they passed Bob they set off a poundwide round of nervous barking.

He listened to the rhythm of drums and the bleating of a trumpet, and saw flames flicker up from time to time in the dark outside. There were chants. The old priest pranced past the door, his top hat shining in the torchlight, a cigar clenched between his teeth.

Bob kept watching the corridor, hoping that Cindy would come through it, having somehow struck whatever deal she was making with the vet. But she didn't come, and the ritual that had formed around the betting pool grew louder.

Incense, cigar smoke, the sharp scent of hashish all wafted in, borne on a heavier layer of oils: rose, clove, pepper. The worshipers danced past, their faces alight in the torches, saying words he could not understand in the pidgin of the islands. When they put their hands on him, he let forth the scream that had terrified them before. If it frightened them now, they gave no sign. He was carried out into the courtyard and left there with the four shepherds, who had been worried during the ritual to a pitch of rage.

He could smell their anger and their hurt. These dogs had loved man. Human enmity made them feel bad about themselves.

Their thick, angry odor gave over to the hot pitch of breath when they barked at him. To be with him in unbarred surroundings terrified them. He was more afraid, though, and he clawed desperately at the door, trying to somehow get away. At all of the high windows there were faces peering

down, and over the back wall they also peered.

Bob didn't know what to do. He couldn't talk to these dogs, he had no arm to parry with when they attacked. All he could hope to do would be to bite back. But he'd never bitten. He didn't know how to bite.

The dogs hammered out their barks, their ears back. In Bob the wolf stirred.

They rushed him, all four of them at once, their bodies slamming into him one after another. The first came in under his throat, the second right beside it. They knocked him off his feet. The other two buried themselves in his soft belly. He felt an awful pain, kicked, squirmed, and was surprised to notice within himself a confident undulation. He rose and his jaw went off like a spring mechanism; one of the dogs was on three legs, screaming dog screams, and the crowd went wild. Then the fury of the shepherds was renewed. Their barking was like the clatter of applause. This time when they rushed him, Bob trotted away. Now they changed their tactics and began to chase. In a moment they were running around the courtyard. Bob was astonished at himself. He could run like the wind. In fact he ran so fast he was soon behind the slowest dog, the one with the hurt leg. Then he leaped on that dog and felt his muzzle probing for its throat. He thought about it, thought about aiming his teeth, finding the right place in the fur—and in an instant was at the bottom of a heap of snarling, snapping killers.

Again he got to his feet, but this time he could feel his own blood leaking from a hole in his neck. He needed a doctor; what if the wound was close to his jugular? Still just the one dog was wounded. He noticed, though, that their chests were heaving. He was barely tired.

A voice said from the dark wall: "He can run, man, but he slow in the clinch."

"He strong."

The dogs were wary now, keeping their distance, very intelligently using their superior maneuverability to worry him. Every few moments there would be another excruciating pinch and another wound. If this kept up, they would slowly tear him to pieces. When they came close, he would try to bite them, but he inevitably missed.

It was not long before their circle had tightened. They were crouching low, their heads against the ground, their hindquarters in the air, tails flying. He had a dozen wounds. Between them they shared perhaps four, only one of them serious enough to reduce the victim's efficiency.

He shook his head to get the blur of blood out of his right eye. His muzzle reeked with his own blood when he inhaled, and he seemed almost to be floating. The battle went far away.

Instantly they leaped at him, biting wildly. They were going to eat him alive, to tear him apart. He screamed in agony as teeth dug into him.

Wolf: the gleam of the careful tooth, the mind calm in the mayhem, calculating a death blow and then the snick of the jaw, a shocking flash as the tooth passes through flesh and a dog howls its last, its bowels splashing from the hole Bob had made.

Wolf: leaping on the back of a squirming dog, gobbling at his bones, gnashing down on the gristle, feeling tooth slide against backbone, tasting the soft sweetness of the spinal bundle. Another one dead.

Then the wolf stopped, scented the air, tossed his head to clean his ears of the wild screaming, the thundering drum, to clear his eyes of the flicker of the torches. Two dogs remained, one dragging a leg and constantly shaking its head, the other shrinking against the far wall.

He had a vision, and he knew that he could make the vision true. Quickly he trotted to the near side of the courtyard. Between here and the back wall there was a twenty-yard run. He tossed his head and catapulted forward, a bullet of glowing fur. His legs carried him, took him upward, soaring, flying in the screams of the crowd and one scream in particular: "Bob, Bob, Bob!"

Cindy was in the courtyard. The vet was behind her, his face flushed. Beyond her was Monica, angular in the light cast from the building. He glimpsed Kevin, too, his beloved son!

Bob's claws reached the top edge of the wall. He pushed, the timing perfect, and cast himself up onto the scree of glass shards embedded in the concrete. Below him there was an alley, and in that alley a panic-stricken crowd was falling wildly over itself in its urgency to get away. A shot exploded, a blue, blinding flash, a rush of hot air, a stink of powder and hot oil.

Bob learned forever the smell of a gun.

Then they were gone, all of them, the doctor, the mama-san, the worshipers at the altar of the game.

"Bob, Bob, come down. You can come home now, honey. We'll take good care of you."

It was hopeless. There would be no peace at home, not with the press blitz that was probably breaking on the eleven o'clock news just about now.

Atavisms would be brought up in the marginal people; there would be men with high-powered rifles, poisoners, trappers, and of course O'Neill and his lawyers.

But there would be Cindy and Kevin, and the chance to be a little bit human in the privacy of their home.

"Bob, please."

He hesitated, drawn by the night and the freedom, and by the soft, familiar scent of his wife. The moon paced the clouds, the wolf paced the high wall.

"I'll get the dart gun," the vet said softly. Hearing that, the wolf won.

Bob leaped off into the wild, free night.

Chapter Eleven

WHEN HE DISAPPEARED OVER THE WALL, CINDY BRACED for another shot. Instead there came the high-pitched screams of the voodoo worshipers still in the alley, who cared not at all to have their wolf-god join them.

Rage broke in Cindy like a bloody foam of waves. She ran her fingers in her hair and shrieked. "Shut up," Monica bellowed. "Pull yourself together."

"He's going to get killed!"

"Ma'am, we'll get him back."

"You were using him, you were treating my husband worse than I'd treat an animal. You're vicious, inhuman *monsters*! I swear, if he dies I will come back and I will kill you one by one!"

The vet's mouth had dropped open. The word "husband" formed and died silently on his lips. Then a glance askance at Monica.

Cindy roared on. "I know what you're thinking, you bastard. You're thinking I'm crazy. You're hoping I am. But I am not crazy and I have a superb lawyer, and you and the city and the ASPCA are going to suffer for this! Your career is over, buddy, dead and in the dirt. And as for this bunch of cigar-chomping weirdos—look at them, you ought to be ashamed, for Chrissake—you talk about cruelty to animals, my God, you oughta be closed down!"

Cindy's words flashed into a silence. Even the dogs quieted down. The voodoo practitioners who had been in the windows were creeping away. As for the vet, he had gone to attention. "Yes, ma'am," he said in a voice he had probably learned during military days, "there have been irregularities. They'll be corrected at once, ma'am!"

Cindy laughed, harsh and derisive. "I don't care about your irregularities." Now her voice rose to a cutting quaver. "I want my Bob back, and I want him back alive!"

"Bob? Is that the wolf's name, ma'am?"

"Yes, of course it's his name. Bob Duke."

"He responds to the name Bob Duke?" The vet's face was now impassive, very carefully so. He definitely scented craziness, perhaps even amusing craziness, but this lady was so mad he couldn't risk the smallest sign of mirth. She was going to be complaining loud and clear, and the voodoo ritual was going to be very difficult to explain to the board of directors.

For the first time Cindy saw the reporters, who had flowed out into the courtyard and were now trying to scale the wall. Realizing it was hopeless, one astute camera team came thundering back through the pound itself, camcorders swinging. "Fan out," shrieked a tiny man in a Hawaiian shirt, his face purple, the veins in his temples pulsing like fire hoses.

"Who are these people?" Cindy asked.

The vet brightened. He was looking forward to being on TV. WCBS and Channel 5 had already interviewed him. "The media—"

"You're kidding!"

"No, this is big news. I'm sure I can get them interested in talking to you, too. They don't just want expert opinion. Human interest has a place, too."

Monica grabbed Cindy's arm. "Let's get out."

As they left the building police cars started roaring up, their sirens wailing, their lights jumping red against the dun girders supporting the elevated part of FDR Drive. Radios spattered codes, uniformed men jumped from the cars and sprinted off down the street. A van disgorged a SWAT team decked in full body armor and carrying 12-gauge riot guns. "They'll kill him," Cindy moaned.

"Come on, Cyn, let's find a cab. We've got to get out of here. We need the media like a hole in the head."

Outside of the vicinity of the pound, the streets were gray and lonely. "What will he eat?"

"He'll find what he can. Bob's a resourceful man."

"Oh, he is not! He's about as resourceful as— as—" She stopped, considered. "A three-year-old would be more resourceful!" Her poor husband, he couldn't camp out, couldn't even hike without getting hopelessly lost. Even around the house he was a disaster. "Last week he glued himself to the dishwasher with Krazy Glue trying to fix a knob. When I found him, he'd been there for two hours. The phone was within easy reach the whole time. He knew where I was, but it never occurred to him to call me. Do you think the man who did that can survive alone on the streets with no money, with no clothes, with no hands, with no way even to talk to people?"

"He'll hunt, he has the capacities of a wolf."

"Bob Duke will hunt. I've been hunting with him, so have you. He'll starve and he'll get wet and cold and confused and make mistakes. Meanwhile every man, woman, and child with so much as an air rifle is going to be hunting *him!*" She stared up and down the street. "Bob," she called, "Bob!" A camera

crew began running toward them.

"Uh-oh, we're recognized," Monica said. "Let's get a move on."

Just then the vet burst out of the pound, his white coat flying. "*Live at Five, Live at Five*, they want us all on *Live at Five*!"

A cab rolled around the corner. Monica waved at it even though it was occupied. "I am doctor," she hollered, "matter of life or death." The driver gunned the motor, a New Yorker's seasoned instinct to get away, but he lost the light and a line of cars coming off the FDR Drive prevented him from running it. As Monica and Cindy crowded in with the surprised passenger the driver hit his steering wheel with the heel of his hand.

"Sorry," Monica said to the passenger, "gotta take a little detour. This woman is having a heart attack." The driver turned around. "Listen, bitch, I gotta fare."

"This woman is dying. Now step on it."

"I don't give a damn who's dying." He produced a baseball bat. "You get out of here."

"The hell we will. You don't do exactly as I say, I'll haul you up on charges."

"Taxi commission, taxi commission, I've heard that shit a thousand times. Lady, you get out of this cab or I'll beat your goddamn brains from here to Scarsdale, now move!"

It was obvious to Cindy that Monica couldn't handle this. She took over. "We're not talking commission, gorp-face, we're talking five years in jail for uncooperative manslaughter. Five years, and you *will* serve that time! We will not stop, Mr. Czlywczi, until you are in jail and the key is thrown the hell away. You see those cops over there? If you don't help us, I am going to scream, and when I scream, those cops are coming over here, and they will see your baseball bat—"

He threw it out the window. It clanged on the street and rolled into the gutter. "Step on it," Cindy said.

"I get out," blurted the passenger, a stunned Japanese businessman. He leaped from the cab just as the light changed.

"Kill the meter," Cindy commanded. "We'll make it worth your while. Monica, give the man ten bucks. Take us to Mercer and West Fourth."

The driver became happy now that he had the ten. "God knows what'll happen to that Jap." He laughed. "From here he'll have to swim down to the UN Plaza if he doesn't want to walk."

For a time they rode in silence. The driver was studying Cindy through the rearview mirror, his eyes twinkling. "Look, no offense, but I want to know something. Do you ladies always pull this routine? I mean, every time you want a cab? Or what?"

"Every time we want a cab," Cindy growled.

"Jesus, I been hackin' twenty years and I never seen shit like that. I mean, you gotta admire shit like that!"

"Step on it."

As the cab pulled up to her building Cindy saw a crowd lurking around the entrance, their silhouettes dark against the glow from within.

As they exited the cab a klieg burst on, and Cindy found herself confronting a bright impenetrable wall. A familiar TV face came into view. A microphone was thrust at her. "Dr. Wilcox at the ASPCA says Bob is one of the largest wolves on record, and the largest ever held in captivity. Can you tell us where you got this wolf?"

Cindy heard him, but she was totally unprepared to answer. Her mouth was so dry it tasted like a cedar closet. She learned, in that moment, the true meaning of the term "tongue-tied." What could she say? The camera eye gleamed, moths fluttered in the hissing lights. Sweat beaded up through the reporter's makeup.

"Cut a minute, Jake. Look, Mrs. Duke, we're going to find out one way or another. We're going to find out everything."

"My God, help me," a male voice screamed off in the dark. Instinctively, Cindy whirled. Flashbulbs popped, somebody scuttled off.

"Don't worry about that," the reporter said, "it's just the *Post* going for a reaction shot. You and Bob are their front page tomorrow."

Cindy rocked back on her heels. Front page! All it meant to her was Bob's body, full of bullet holes, being held up by a proud SWAT team. "How long have you had the wolf?"

"A day," she finally managed to answer. "We found him on the street. He was hungry and alone and he needed help. He's such a gentle creature—"

"You found him on the street? Where?" What had she said before? Was it Fifth Avenue? She couldn't remember. She'd be vague. "Uptown. On a comer. He's so gentle and sweet, so tame. I'm just terrified that—" Her chest ached, her throat all but closed. She looked at the camera, and for an instant she was looking into a million faces. They were not hard faces, they were faces of ordinary people, watching her blankly. Right now they were

impassive, but at a word from the reporter they were all going to turn into cavemen. "Please don't hurt him. Don't hurt my Bob." She could not go on. Before that savage crowd she felt so weak, so helpless, all of her bravado collapsed and she buried her face in her hands and gave way to tears.

"This is Cynthia Duke, ladies and gentlemen, the distraught owner of the giant savage wolf that is now roaming the streets of New York. Again, police have urged that people stay indoors, that any and all suspicious-looking stray dogs be reported at once. Remember, this animal is fast moving, intelligent, and savage. It has already seriously injured one of the Dukes' neighbors. You could be next. John Lye, Newswatch Five."

Monica dragged Cindy through the hectoring crowd. Cameras were flashing, microphones were being jammed into their faces, questions were being shouted. The sheer energy of it all dulled Cindy, so when Lupe silently handed her an envelope in the elevator, she took it without even much curiosity.

She was still holding it when she put her key in the front door. No sooner had she done that than the door flew open and Kevin leaped into her arms. "It was on the newsbreak, Mama. They're saying we had a dangerous wolf and it's on the loose."

She groaned, hugging him to her. There might have been things she could say to her son that would comfort him, but she could not think of them. It helped her to hold him, and she trusted that it helped him to be held.

They went arm in arm into the living room, Monica following behind. The television glared at Cindy, a sheer gray eye. "Turn it on," she said.

"Don't you think perhaps you'd better not?"

"Turn it on, Monica, it's nearly eleven. We don't want to miss the news."

"Cyn, I'll tape it and you can look at it in the morning."

Cindy went over and turned it on. She sat down and crossed her legs, staring blindly at the last few minutes of *Thirtysomething*. The envelope lay on her lap. She looked down. The return address was Weisel and Dobson. The landlords. She opened it. Legal papers. She read with quickening interest. "We regret to inform you that under paragraphs 14 and 23 of your lease we are compelled to initiate summary eviction proceedings against you. We were willing to negotiate with you about the matter of nonpayment of rent, but this harboring of a dangerous animal in total disregard of the safety of your neighbors has led us to respond to the dozens of complaints we have received, and ask you to leave."

"God, they're prompt. Monica, I'm being thrown out."

"Give me that." She snatched it away from Kevin, who had grabbed it from his mother. He was white, his eyes following the paper as if it was a cobra ready to spit. Kevin had never known a home other than this. The room where he had grown up was filled with his things, his books, his art, his stamp collection, his coin collection, his computer, his very secret collection of girlie magazines. "I wish Dad would come home."

"This is outrageous. They can't do this. Why haven't you paid your rent?"

"We're dead broke, Monica."

"You're kidding. I thought Bob was doing so well."

"He hasn't made a dime in months. I thought you knew that. I assumed you did."

"He never mentioned financial problems."

"Well, he sure as hell had them."

Monica regarded Cindy and Kevin with tenderness. "I don't have any big answers, Cyn, but at least I can help you with money."

"I don't like to ask."

"No, that isn't your way. Bob married you because he was attracted to your strength."

"I'm too damn strong! I drive people away. I scare men to death." She did not add what she thought, that she only scared the strong ones. The weak came to stay.

"Don't worry about that now. I'm going to write you a check, Cindy. How much money do you actually have?"

"What's in my wallet. Eight dollars, plus three Bob gave me yesterday. That's somewhere in the bedroom."

"I have twelve dollars in my box," Kevin said.

"But what assets? What can you draw on?"

"Nothing, unless you consider the furniture."

"You're kidding."

Don't get defensive, Cindy cautioned herself. She's your good friend. "We don't have a thing."

"I can lend you five thousand dollars, Cyn. I wish it could be more."

"I haven't seen that much money in months." Just then the news started. Cindy turned up the sound, and they all watched the story of the wolf unfold. It was the lead item, preceding the president's operation and the crash of a commuter plane on Long Island. There were terrible, lurid pictures of Bob

glaring into the camera, his face lighted to look menacing. To see him made Cindy groan aloud. What was it like to *be* that? What was the poor man thinking, what hell was he going through?

They talked about the "enormous, very dangerous animal." An "expert" named Dr. Bert Choate from the Fish and Game Commission appeared and warned the public that while wolves were normally not particularly dangerous to man, in an unusual situation like this, "anything can happen." He leaned into the camera. "This animal is frightened and alone. It feels cornered. The first chance it gets, it will lash out. And believe me, I've seen what a wild animal can do. Its teeth are a razor-sharp weapon. And it's so skilled at using them, it can catch a floating hair out of the air and split it."

Then came Cindy. The camera made her coarse and heavy of face, her skin glue white, her eyes dark, sunken holes. She looked like an inmate in a fluorescent nightmare. "How did they do that? John Lye looks great."

"It's the lighting. They're trying to portray you as evil and callous."

She was seen in her initial anger. When she said Bob was gentle, Lye smiled ironically. Rather than show her weeping, they cut to a shot of Bob standing on the examining table, glaring at the camera with what Cindy knew was almost total confusion.

"The wolf lady says she found the animal on a street comer right here in Manhattan. Who knows where she actually got it? Given its tremendous size, experts at the Zoological Society theorize that it may be a wild wolf from the Soviet Union."

Then they went on to other stories. Cindy was amazed. She had come across looking like an ogre, vicious, hateful, uncaring. She wanted to throw something through the TV. If she'd been able to get her hands on Rivera, she would have turned him inside out.

Monica handed her the check. "Thanks," she said. She knew it would be gone tomorrow noon. Four thousand rent, five hundred to her loudest creditors, five hundred for food to keep her and Kevin for the next few weeks. Rent or no rent, she'd probably get evicted anyway.

After the news Monica went home, pleading exhaustion. Soon Kevin nodded off on the couch. She tried to smooth his fists, to somehow make the terror leave his exhausted body. She kissed him. Now came the time she had really been dreading. The apartment was empty and there was no one to help her.

Her mind went to thoughts of Bob, out there alone, disfigured, confused,

chased. "God make him come home." Her voice filled the room with brief, helpless sound. Seeing herself in the mirror, a slumped shadow, she felt very small. She had been yelling at people, making demands, cursing, for hours and hours—in fact, ever since Bob had his problem. What good had it done?

She went into her bedroom and threw herself down on their bed. Her mind kept running images of him hurrying along streets, him hit by a car, him shot. She saw that big, furry head, those eyes, and she thought she was going to be sick to her stomach. "Where is he? Bob, where are you!"

She turned over on her back, stared at the ceiling. Obviously she had been too hard on him, making demands that he couldn't possibly meet. Bob was a poet. His business ability was nil; he couldn't even remember to put bus fare in his pocket when he went out. Anybody could sell him anything. When he was a broker he was always getting stuck with the customers the other brokers didn't want to bother with, the idiots, the dead-beats, the complainers. He would be ceaselessly patient with them, and was always ready to overlook their faults. Naturally he didn't make a penny brokering. But he spent anyway. Bob didn't understand the concept of credit. He looked upon loans as presents from banks grateful for his custom. Checks were simply a means to an end, usually a means to getting rid of creditors for a few more days—until the checks bounced and it was time to write new ones.

She turned on the light. There was a copy of *Travel and Leisure* at her bedside, and a library book she had been enjoying enormously, Doris Grumbach's *The Ladies*.

She stretched. "Oh, Bob." She did not miss him physically, although they were often intimate.

Love was more central to their relationship than sex. She seduced Bob whenever the mood struck her. It was always easy. She wanted to do it now.

What a good talker he was. His wit was dry, sardonic, and he had brought a wonderful deadpan humor from Texas. His lies could be completely convincing, and if you believed them, you were in peril of the surreal. Once he had made a brilliant case for eggs separating back out of brownies if they were cooked too fast, and had gone so far as to slip an egg into a pan of brownies she was baking. She had found it, perfectly poached, in the middle of the pan and had told the story in all seriousness for years. People were polite. They generally didn't comment, thinking that she was perhaps a little odd.

She laughed aloud, remembering how many times she'd told that story.

Monica had finally stopped her and made her think. "It's scientifically impossible, Cyn. The physics just aren't there. It can't happen."

"But it did happen. I saw the egg—oh, my God, Bob, you creep!"

Her heart raced when she heard gentle tapping at the bedroom window. "Bob!" But no, it was not him, miraculously having climbed the six stories of sheer wall. A thin rain had started, and she watched it blowing in clouds around the streetlight. It was very late, and no cars passed. A man hurried along, the collar of his raincoat pulled up, a hat down over his eyes. The night sky glowed pink, flaring from the city lights. When she opened the window she felt a cold clamminess in the air. Autumn was definitely here, with its long, gray rains.

If he had any sense at all, he would come home.

Suddenly she thought again of being evicted. Even if she paid, they might get her on the animal angle. Then where would Bob go? He would have no way of finding her and Kevin. They might never see each other again. "Bob," she whispered, her word making a faint haze on the window glass.

Then she saw him. He was trotting right up the sidewalk, his tail between his legs. He stopped, stared at the building, then hurried on. The fool! Didn't he recognize the place? She threw open the window. "Bob! Bob!" There was no time to waste. With what seemed the slowness of nightmare she dragged on a pair of jeans, tore her nightshirt from her body, and pulled on a sweater. Still in her slippers, she ran across the apartment and out the door. There was no time to wait for the elevator. Lupe was off duty and she couldn't run it well. She'd spend five minutes just getting it to stop close enough to the lobby floor to enable the doors to open.

She rushed into the green, echoing fire stairs with their perpetual faint tang of incinerator smoke and took the steps three at a time. The lobby was unattended at this hour, the front door inaccessible from outside without a key. As she raced through it she hit her pocket, confirming the presence of the keychain. Good girl, you did that right.

The street was as quiet and empty as a closet in an abandoned house. She looked up, down, past the row of trees, beyond the swirling mist. The dank cold sank through her sweater. "Bob," she shouted. Her voice echoed against the blank face of the high rise across the street, which responded with a faltering echo of her cry.

Then she saw movement among the parked cars at the far end of the block. She took off, running for all she was worth, her arms flailing, her feet

slapping the wet pavement. There was a thickening of shadow under a BMW parked at the curb. She leaned down. When she did she jostled the car, and its antitheft siren promptly began to warble. "Damn!"

The shadow under the car darted out into the street. It slid across the pavement and halted. The creature stood on the far sidewalk looking over its shoulder. Cindy held out her hands. "Honey, it's me." She could see him twitch his nose, and had the awful thought that even his mind might have been dissolved into the animal form. Maybe he was just and only a wolf now, here in obedience to an urge he no longer understood.

She went between the two cars, ignoring the outraged shouts coming from windows on both sides of the street. If people didn't like car sirens, they could damn well get earplugs. Manhattan is the world car-siren capital. Moving slowly, her hands open before her, she progressed toward the wary animal, which backed off as she came closer. "Bob, Bob ..."

It was a matted creature, wet and bedraggled, just like Bob would be. "Bob?"

She was almost close enough to touch him now. He put his ears back. His eyes were teared pools, swimming with fear.

For an instant her hand came into contact with his head. He crouched, drawing back, baring his teeth. Then, with a flash of his tail, he turned and dashed off.

She started to run after him, but the rain was getting harder and she was freezing cold, and she knew she could not catch him.

For a time she stood watching the dark. Then the siren wound down and the street returned to its quiet. Had it been Bob, or just another stray? Unable even to hazard a guess, she turned and went home. She slept the worried sleep of the lost.

Chapter Twelve

BOB HAD LEAPED ACROSS THE SCATTERING CROWD INTO the alley. There came an animal shriek when his fall broke against the back of one of the spectators, the one with the gun. The man never got the second shot he'd been trying for. Instead he threw his gun aside, bellowing in agony. Dark red trenches appeared in his back where Bob had accidentally dragged his claws. The man crumpled.

Bob ran the other way, soon coming to a fence at the end of the alley, cinder blocks topped by three feet of Cyclone. He raised himself up. Beyond were gardens, a pretty decorative landscape surrounding the lobby of an expensive apartment building. He climbed to the top of the fence, carefully putting one paw above the other, forcing himself to remember to control his body. Along the ground it could go like a glider, but it was not structured for acrobatics.

Behind him there was a loud cry of alarm. He saw two uniformed men sprinting toward him, heard their quick breathing, heard the clink and rustle as they withdrew their guns from their holsters.

Then they stopped. They were bracing to fire.

One paw up, then another, then the first again. He reached the top of the fence.

A click resounded in the silence. Bob knew that it was the hammer of a pistol being cocked. Then another click, and another. Bob scabbled at the far side of the fence, seeking purchase. A shot thundered, then more shots. Hot wind passed him. One of them brought searing heat to his thigh. With all of his strength he launched himself into the darkness. He fell hard into a flower bed. The cops behind him reached the wall and started scaling it. "We got 'im now," one of them said. "That garden's not open to the street."

Hearing that, Bob almost despaired. His impulse was to lie down, to curl his tail in against his body and close his eyes. Then he saw a glass door that led into the lobby. Bob ran to it—the damned thing pushed out, not in. A thud followed by the whoosh of breath and a curse indicated that one of the cops was already over the wall. Bob worked at the door with the claws of his right paw—claws, he noticed, that had a lot of blood on them. He had hurt that poor man in the alley terribly.

"Holy shit, that thing is *smart!*"

Bob got the door open enough to slip through. He dashed across the slick marble floor, his claws ringing, then silent when he reached a huge Kerman rug. "Good heavens," a doorman in dark blue livery cried. "Oh Lord." He grabbed a telephone as Bob rushed out into the street. He trotted down the curved driveway, then broke into a run again, dashing toward First Avenue. He knew that Carl Shurz Park wasn't far away, but it was too small to hide him. His objective was Central Park. He could crawl down into the brushy part of the Ramble and hide, and nurse this throbbing thigh. He hoped that it wasn't just adrenaline driving him, and that there was only a graze wound.

Ahead of him another police car sped into view. It screeched to a halt at the corner of First. The doors flew open and five cops leaped out for all the world like clowns coming from a circus car. Deadly clowns, though. He could see the somber gleam of the streetlights on their pistols.

He was not a man of action. It took him time to figure out how to deal with situations like this. He kept trying to talk. Explanations clogged his mind. "Excuse me, I've had a slight accident. . . Pardon me, but I'm not nearly as dangerous as I look. . . Ah, the police at last! Could you return me to my home?" To a listener, though, his most civilized, reasonable words sounded like chilling snarls. A repertoire of barks, growls, whines, and howls was totally inadequate to the delicate clarifications his predicament demanded. And that last human vestige, the scream, didn't help a bit. It drove the ignorant to blind panic, and made even decent people vicious.

The wolf, the traditional monster, was on the loose. To live through this. Bob was going to have to concentrate completely on the situation at hand. He could not wonder at the evil miracle that had afflicted him. Right now he had to put a line of cars between himself and those police pistols. The cops would blow his heart out if they could, and mount his head on the wall of their precinct house.

Behind him an entire SWAT team appeared in the street, all running like maniacs, waving shotguns, tear-gas grenades and pistols. Regular cops were closing off the intersection ahead. He'd have to rush somebody, and he chose the street cops. On them he smelled at least a little fear. The members of the SWAT team had an unpromisingly solid odor: sour beer, gunpowder, steel. They weren't even nervous.

For all his soul was worth, he ran. The air roared around him, his ears swept back, his dewlaps parted, and wind rushed coldly past his tongue. It was exhilarating, it was like flying— right into the barrels of five pistols.

Just then, though, there was an intervention: a stocky man burst out of a building ahead. He was carrying an aged 30-30 rifle and wearing a blue bathrobe. His slippers plopped as he ran, his glasses danced on his face. "He's mine," he screamed, "he's goddamn mine!"

Bob passed right between the churning legs and the man went up into the air, his gun describing the arc of a windmill. The man hit with a soft, painful crunch. Then the rifle struck the ground and went off, its report cracking the air, the bullet ricocheting off a wall. "Goddammit, move your fat ass," one of the cops yelled.

It was like flying, or being a ghost, and Bob knew where all the flying dreams come from, those escapes of the night when we leap the houses and the fields: they come from the past, when we could truly run.

"Move! Move! Move!"

The cops were in trouble, their guns glaring straight into Bob's face, unable to shoot because of the civilian still floundering around behind him. He rushed the cops and this time his bark worked. It worked fine: it was a thunderous, primitive bark. As a wolf he was neither clumsy nor timid.

Their faces folded and twisted, they turned away as if from something loathsome, they began to scramble back into their car. Whining, one of them worked a back window, slammed the door, pounded the lock with the heel of his hand.

Bob jumped upon the sloping shoulders of another of them and launched himself straight up like a rocket. Below him the man slammed into the ground. Bob soared up and up, glimpsing into second-story windows before he came crashing down onto the top of the car, denting it deeply.

Another jump took him to the street behind the police car. He ran full speed down the middle of First Avenue. Traffic was heavy and slow, and he found he could keep up easily. This body could run, could lope, could leap. He could not dislike it anymore, not after the past few minutes. He'd never been much of a physical specimen, not before now. This was quite wonderful! He had gotten past those cops beautifully. He was excited, elated—and then coughing, shocked by how strong the fumes of the cars smelled.

At Ninetieth Street he made a turn and trotted up the dark sidewalk. He was breathing harder, but despite his wound there was still plenty of run in him. He lolled his tongue and breathed across it fast, moving the air and spreading delightful little tendrils of coolness through his entire body. This is panting, he thought. This is how it feels to pant.

Had he been able to laugh, he would have laughed with the wonder of this new body and the exhilaration of his escape. All he did was toss his head and pull back his rather immobile lips. He did not make a sound.

A car slowed. Pale faces peered from behind rising windows. Excitement sparkled in their eyes, but when he met them they glazed with fear. The car sped off, its occupants silent, haunted. No doubt they would stop at the nearest phone to call in their sighting.

His excitement was fading. The thought of the whole mechanism of the city hunting him down was depressing in the extreme. He moved on, now slinking through fine mist. Stray dogs always seemed to huddle close to the buildings, and as he walked he felt the same vulnerability that they must. A moving shadow startled him and he dove down under the stoop of a grand old brownstone. Beyond the kitchen window he saw a woman in a silk dress and a Kenneth hairstyle talking to a maid who carried a tray of canapes. From farther up in the house there came a spill of laughing talk. How Bob would have liked to be in there among them, drinking and snacking, ready to sit down to a beautiful dinner. Smells assaulted him. They were as powerful as actual blows, these explosions of roasting duck and braising celery, of smooth, thick goose liver and saline, marine caviar. Also, he smelled wine, and the comfortable odors of bourbon and gin and whiskey, of vodka.

He leaned against the iron basement door, moaning to himself, dreaming of a nice little glass of Stoly, frosty cold from the freezer, freezing the throat and warming the heart. Then he would take a caviar canape like Communion, and when it was time for the duck, he would get a breast piquant with sauce, covered with dark, crackling skin, and he would wash it down with glass after glass of Chateau Latour '69.

There was a garbage can *off* in a dark corner of the understairs. It had a sticky, old-food odor. He went over, sniffed more carefully. There was bread in there among the rancidities, the old butter, the greasy gravy, the wet cigarette butts. He nosed the top of the can. Stuck tight. He pushed again. Angry frustration made him whine. This was just hell, this whole thing, and being without hands was a special hell! He stared at the can. Just like a hungry dog, he was drooling.

He made a loud sound and was astonished at himself. The whine had built into a yap. If he expected to survive much longer, he was going to have to get into control of his own noises.

His stomach tormented him with muscular heaves. Was it eating itself? He

trembled. Was this how dogs felt when they were hungry? If so, food was an awful lot more important to them than it was to humans. Dogs weren't slaves to men at all; they were slaves to regular meals. There was really only one choice: he was going to have to knock the garbage can over and hope the lid flew off.

He shouldered it, which had an effect far greater than he had intended. The can seemed to leap from the floor. It smashed against the door with a ringing crash and a fountain of garbage flowed out. Another thing Bob needed to do was get used to his own strength. He had to find the measure of himself, but not now, not when he was standing amid coffee grounds, butts, rotten fruit, bread soaked in vinegar, soy sauce, and sour milk, and a bag of Almost Home peanut-butter-chip cookies that had somehow gotten covered with what smelled like liquid Wisk. Was this to be dinner?

Then he noticed the cold cuts. There were slices of Hungarian salami with little spots of white mold on them: these he gobbled up, chewing slowly, letting the rich saltiness fill his muzzle, closing his eyes with delight. The presence of the food in his mouth banished all reserve. Now he gobbled wet bread, tore into the cookies and damn the Wisk, ate some mushy grapes and a piece of fiercely hard Parmesan slopped in peach yogurt.

It was while he was breaking up the Parmesan with his powerful jaws that he noticed that the lights had come on and the door was open. The elegant woman stood there. "Oh, Mary, a goddamn dog has broken into the garbage." She stamped her foot. "Tell Jake to get down here and get it cleaned up. Honestly, I'm going to have to get a lock for that can."

Bob was backing away when he heard quick footsteps in the street behind him. He had lingered too long on this block. He should have run like a maniac the moment that carload of people recognized him. But the food ... he was so hungry he wasn't thinking straight.

The woman waved her hands at him, shouted "shoo, shoo!" A man in blue workclothes came hurrying out of the house. "Jake, I want this cleaned up, and I want poison put out from now on."

"Yes, ma'am."

"This neighborhood is overrun. I don't know— what in the world?"

Two cops were running up the street. The homeowner shrank back into her kitchen. The cops stopped when they saw Bob, who was still at tempting a retreat to the sidewalk. He was trapped between the police and the woman. He did not like the feeling of being trapped, did not like it at all. A surge of

raw terror coursed through him.

He turned away from the cops—into the sight of the iron understair door being pulled closed. Without even thinking about it, he dashed through that door into the hallway. The elegant woman cursed, Jake blurted an automatic "Sorry, ma'am!" and the two cops came rushing in.

"It's the wolf," one of them yelled. "Take cover!"

You would have thought he was a neutron bomb with four legs and a tail. A glance back revealed the woman, her eyes popping out of her head, Jake cowering behind her, and the two cops, their own faces carnival masks of horror.

If only he could talk! "This is all so silly," he would say. "I'm about the least offensive person you could meet. Ten-year-old muggers practice on me."

At the top of the stairs was a butler's pantry. He went through, hoping that he would find a hallway, but instead he walked into the middle of the party. "I didn't know you had a dog," a woman shrieked.

"I don't," the hostess bleated.

The guns began to follow Bob as he leaped around the room, upended the coffee table, turned over a couch, caused an explosion of ashes out of the fireplace.

Then he saw the street beyond the front window, silent and free. There was no time even to consider. He ran for that window, his feet scrabbling maddeningly on the highly polished floor. Then he leaped, his tail whirling, his paws grabbing air, and sailed out through a cascade of leaded glass. Behind him alarms started clanging. Shapes darted back and forth behind the broken window.

Bob left it all behind, running as fast as he possibly could. For once the police made a slight error; the backup teams came roaring around the corner from Madison. Had they been smart, they would have gone down Fifth, knowing that they would head him off on his way to the park.

He might be able to run like the wind, but his thigh hurt when he did it. Without the anesthesia of desperation, the wound was getting painful.

When he at last reached the park, it took almost all of his remaining strength to leap over the rock wall. He fell down the other side, landing with a soft thud in a mat of moist leaves, and another world.

Suddenly there was silence, there were smells that seemed to penetrate instantly to the core of his soul, smells that he remembered from some

childhood, perhaps his own, perhaps that of the wolf, or all childhood. His body urged him to burrow down into the redolent leaves, but his mind demanded more of him, that he get deeper into the park. He was about at Ninety-second Street: travel due west would soon bring him into the thickest part of the Ramble. He pulled himself to his feet, yelping a little at the spikes of pain that came from his thigh.

Movement in the park was much different from movement on the streets. It was a lot better, a whole lot better. There seemed to be a sort of electricity between his paws and the ground, and the air was tightly packed with odors that he could almost understand.

There came to him the weighted thought that we must have known the world from this perspective before Eden, before we climbed down from the trees. He tossed his head. When he saw them, his heart leaped toward the towers that shone on all four sides of the park. He looked toward the rich far windows of Central Park West and yearned as he had at Kissinger's party for the hiss of luxury.

He was passing the baseball diamonds now and turning in to the Ramble. As he moved he noticed one odor that stood out above all the others and gave him greater alarm than had the police or even the pound employees. It was a musk, deep and tart. What did it mean? Here it rose from a bush, there it covered a patch of browning leaves. He found the bones of a bird and gnawed them, but they were too dry to be of any use. Deep in the Ramble, down in the dark where roots tangled like ropes of distressed muscle, he moved swiftly and silently along. He passed a derelict sleeping under a bench. Then he smelled that odd smell again, so strongly that it stopped his easy slithering through the undergrowth.

He crouched, very still. A cold understanding crept into his mind: this smell was a warning. Other canines were not wanted here. Something had claimed the Ramble as its own.

He knew then that he was being observed, and from very close by. He had blundered into the middle of a pack of some kind, and it did not want him here.

As if in response to his thought, they flooded him with their smell, a straw-blood odor shot with urine and feces. It revolted him, and their dark little eyes revolted him more. Two of them came prancing stiff-legged out of a blackberry thicket.

They bared razor teeth. The eyes with which they regarded him were

astonishingly intelligent. One animal stared him down while the other glanced constantly about, keeping watch. Their ears moved with method back and forth. These wary beings never ceased to test their environment, not for one instant.

They were the size of scrawny sheepdogs and a lot thinner. Their heads were wide and their ears big and pointed, like giant cat ears.

This was no motley pack of stray dogs. As more of them slipped into view Bob found himself stopped by awe and understanding. These were wild animals who made their living off New York City. They were the legendary coydogs of New England, a strong cross between the coyote and the dog, among the smartest animals nature has ever produced.

They were notorious dog murderers. And they obviously did not like big, wheezy wolves too much either. They were wiry little monsters, their faces sharp with hate and hunger. It was clear to Bob that they would kill him if they could. He could locate six of them in the shadows around him. He noticed the bones of a dog scattered about. It had not been a small dog.

He could sense movement all through the dark shrubbery, ahead, to the sides, behind. The only thing that prevented them from attacking him was the locked stare he was giving the leader. If he broke the look first, he was going to be torn to pieces.

Every whisper of fur against leaf, of paw in loam registered in Bob's ears. The breathing of the coydogs sounded like tiny pumps hissing. When he cocked his ears toward the leader, he could hear his heart beating faster and faster. And his scent was changing, rising to greater sharpness. He was a creature cocked, ready to dart like an arrow for the throat of the big, slow animal before him.

There was a frisk of movement just at the corner of Bob's eye, and a high-pitched squeal as one of the coydogs snatched a bat from the air and gobbled it down, the wings fluttering against its chin.

For the edge of an instant, the leader glanced at his companion. It was enough: feeling as clumsy and lethal as a tank, Bob ran at him. The little creature did not expect this. Bob shouldered him aside and took off running as fast as he could toward the lights of the Transverse Parkway.

As he ran one of them dropped down from a tree, its claws spread, growling rage. Bob took it on his back and felt the hot touch of its claws before he managed to scrape it off against an overhanging limb.

Then he was at the reservoir and the coydogs were still with him, slipping

dangerously along nearby. If only he understood this situation, but he did not even begin to: if he had any wolfish instincts at all, they were a vague mental stubble. Bob was no more a part of this secret wild than he was a part of humankind.

Thirst made his tongue feel like a wooden paddle. His nose was tight and he longed to dip his muzzle in clear, fresh water. His hunger made his insides seem like a hollow shell. The feelings were astonishingly intense, much more than they had been before he changed. Even the various diets Cindy had tried out on him had not created burning, passionate hunger like this.

The coydogs attacked as swiftly and silently as Indians attacking a prairie schooner. One moment he was loping along, aware of their odor around him but more or less minding his own business, the next moment he was in the middle of a dusty, snarling, snapping crowd of the vicious little killers.

One of them nipped his belly, and it hurt like a blast from a blowtorch. He screamed his miserable, human scream and rolled, covered with coydogs. A small one wailed as his weight compressed it, but the creature was like rubber, and it was digging its teeth into his neck before he even got to his feet. Dragging five or six of them, he struggled on. If only he could get to the Transverse Parkway, surely the cars would scare them off. A terrific flash of fire exploded in his breast. One of them was lodged just below his chin, his dewlap in its mouth. It shook its head, furiously tearing the meat of his neck.

He went to his foreknees, biting air, flailing and kicking. Now the one on his belly bit down. The heat of it made him scream again. He gnawed the ground, he knew that death had come to him: they were tearing him apart. He was big but he had no idea how to fight them. Involuntarily, he tried to use fists that weren't there anymore.

A few minutes ago he had been congratulating himself on his newfound wolf prowess. Now where was he—being eaten alive by a pack of really skilled killers. They gnawed, they tore, he snapped and thrashed. Soon one of them was going to open an artery or disembowel him. Then this odd traverse would end, here in the night and dirt.

They melted away, disappearing like dreams in morning light.

He stopped growling, stopped his futile snapping, stopped his kicking. Then he heard the rhythmic thudding of human feet. Shakily, he stood up. He was near the reservoir/Through the bushes was the jogging track. A man and a woman came pounding past, Walkmen on their heads, their bodies pouring off odors of sweat and various perfumes. Bob had never been so glad to see

anybody in his life. Gleefully, he followed along behind them. The coydog odor dwindled and soon was gone.

South of the reservoir Bob adopted a long lope. Obviously he couldn't hide in the park. As soon as the joggers disappeared around the far curve of the track, the coydogs would be back.

Bob had decided to go home. If the media wasn't too crazy, maybe he would have some chance. There was no place for him in this world, not as a wolf without instincts, or as a man without the form of a man. Home, though, was different. Cindy and Kevin would care for him and love him, and give him what comforts they could. Of course, if the press was whipping up real hysteria, the apartment could turn out to be a death trap.

He reached the Park Drive and hurried south, his various wounds all demanding attention even as his tough new body kept at its job. The creature he had become was a real survivor, it appeared able to stand a great deal of punishment. But it had an end, he knew that. The beast would fail.

He was down an awfully lonely crack in the world. If he had to die, let it happen at home, in Cindy's arms.

Before he reached the zoo, he moved out onto Fifth Avenue. Zoos were dangerous.

He huddled along the streets, keeping to the shadows cast by parked cars. Seen from his new angle the city was a very different place, menacing, darkly looming, fast and full of surprises. Dogs on these roaring comers must be grateful for their leashes.

Because it is a street devoted to business and not well tenanted at night, he chose to go south along Madison Avenue. As swiftly as he could manage he went through midtown, scrabbling under cars twice as patrols passed. The second police car had four men in it, and a rack of hunting rifles. He had never seen rifles in a police car. The only logical conclusion was that they were a special detail assigned to him.

It was a strange thing indeed not to feel that the law was backing your right to live. He had no rights.

He kept on, reaching the end of Madison and proceeding south on Park. He finally got into his own neighborhood.

Just as he was turning onto Fourth Street, he was spotted. A pretty girl of about eighteen with a shaggy green punk hairdo put her fists to her cheeks and screamed like a thing gone mad when she saw him slide across the sidewalk. "The wolf, the wolf," she cried, and the cry spread.

He rushed along, his tail down, his head low. Maybe he ought to just let them catch them.

The prospect of home kept him going. His mind fixed on that one, single, true place. His place, the place of Robert Duke. He wasn't much of a provider, not much of a success, but there was love there for him.

He rounded a familiar corner. Even the graffiti was familiar, that and the black plastic bags neatly stacked for tomorrow's garbage pickup, the line of five ginkgo trees, the ironwork in front of his own building with the newspaper machines chained to it.

He looked up. His windows were lighted. Lupe would be off by now. Maybe he could break down the glass door and get into the lobby, somehow punch the buzzer, somehow call the elevator. Or, Cindy might come out. Once, twice he paced the block. He'd hide under a car until—

He saw her. His soul, his blood, yearned toward that silhouette in the sixth-floor window. She stiffened, leaned forward. He cocked his ears. Just barely, he could hear her saying something. But the window was closed and he could not make out the words.

Then the silhouette disappeared. Bob moved away from the building and crouched under a car.

It was from that vantage point that he saw the headlines on the *Post*. It was a red-banner extra, and it said:

**KILLER WOLF STALKS CITY
POLICE WARN: IT'S A FREAK**

What he could read of the story described him as a giant, marauding wolf so dangerous that he was to be shot on sight.

It sickened his heart. This was just the sort of thing he had feared. He wasn't going to be safe anywhere in this city, not even at home. Perhaps especially not there.

Then Cindy appeared, hobbling along in a single slipper, her hair a mess, her robe flapping in the wind. "Bob," she called. Her voice was music.

Sadly, he remained hidden. When he could, he slipped away from her, moving quickly under parked cars.

She called and called, her voice echoing in the street. Her tone agonized him. She was suffering so terribly. He wished he could take her in his arms and kiss her, and bring her some measure of comfort.

He hadn't really thought of where he would go. His only destination was away from here. Cindy's cries grew long with despair. They followed him

down the streets, catching him, driving him deep into sorrow. He'd been a fool to try this, to subject them both to this anguish. He made his way west through the intricate and hidden streets of the Village.

It was a long time before he lost her in the silent streets. Then he was as far west as you can go, standing on a ruined pier. Before him was the black, muttering Hudson, wide and swift and cold.

Chapter Thirteen

SHE'D BEEN LOOKING OUT THE FRONT WINDOW, WATCHING the grim, blowing mist when she saw his shadow dart out from under a car. For an instant their eyes met and her heart thrilled. "Bob," she said, "Bob!"

She ran down to the sidewalk in her robe and slippers, but when she arrived he wasn't there. She also saw the *Post* in its machine, was drawn to its cruel, lurid headline.

Her hands shaking so badly she could barely manage to put the coins in the slot, Cindy bought a copy.

She stood there, stunned, staring at the picture of Bob. Blown up to cover half of the front page, even his wolf face communicated the gentleness of his soul. This was despite the fact that an airbrush had been used to make his teeth look larger and sharper and to heighten the gleam in his eyes.

She knew him well enough to see how lost and sad he was. Slowly, reading the story, she sat down on the curb. When she turned to page two, she stifled a scream. Her skin prickled. There was a photograph of her stepping out of a cab, her face pinched, her eyes glaring. WOLF LADY TERRIFIES CITY said the headline above the picture. Below it was a garbled version of her lie about finding Bob on a street corner. She was portrayed as unwilling to meet the police and the press halfway. She was pilloried.

The silent buildings seemed to frown down on her. People do not like to be frightened. They distrust the wild, and she had unleashed it in their midst. "God help us," she whispered.

Then she thought she saw a flash of Bob in the distance. Her paper under her arm, she set off after the shadow. But by the time she reached the corner he was gone again. "Bob! Bob!" There was no answer, no movement in the silent street.

A nobility of love possessed her. "I'm going to find you!"

She looked up at the blowing, cold sky, at the low, pregnant clouds. "*What did you do to him!* Answer me! God, you answer me! I know you're there, you can't hide anymore, not after what you've done. Answer me, damn you! Don't you dare keep silent, you haven't got the right!" She broke down completely, right out in the middle of the empty sidewalk, weeping bitterly, her paper fluttering down, a crowd of white bat pages around her feet. "God, don't turn out to be a creep. I will sacrifice my life if you will change him

back."

She hurried off after him, calling his name again and again, seeking him through the streets. Once or twice she glimpsed a shadow. That was all.

She did not notice that a car had stopped near the sidewalk, nor that a big, expressionless man had gotten out. He put his hand on her shoulder. She looked up, startled, into a face that was very disturbing. There was a red scar running up his tan, hollow cheek. His lips were cruel, his eyes tiny and black and thick with sin. Slowly, sensuously, his hand came up her cheek, tickling her, and something sparked in the black eyes. "May I help you?" he asked.

She turned away from him, wishing she was closer to home. She could imagine his mayhem, the ripping, the snarls: this was a violent man.

"You're the wolf lady," he continued, his voice soft. "I know you from the TV. I've been looking for you. I can give you some help."

His words seemed to penetrate as if from a great distance, words of fate and solace coming from this huge, horrible creature. She had expected rape in the small hours. Instead a weighty, careful finger slipped along the line of her tears, and she saw that the eyes were not cruel at all, or at least not all the time. For a moment they became merry, and he was a great benevolent elf. Then what she now recognized as an expression of fundamental anger returned. "I am Joe Running Fox," he said. "I know a little bit about the old ways." He glanced again at her, as if willing her to accept him. When he continued, his voice had acquired a tone of pornography. "There was once something called shape-shifting, that medicine people could do. A long time ago. They lost their power when we were thrown out of our land."

"Are you going to hurt me?" How little she sounded, a whining girl.

Tired air rattled through old lungs. He closed his eyes. "I'm an ugly cuss but I never hurt nobody. I have some medicine in me, the old-time kind. You get where I'm coming from?" She did not. He had conjured images of Lydia Pinkham's and Castoria. "Indian medicine," he added.

She looked him up and down. "You're an Indian?"

"A medicine Indian. Power. It's what you need, power to lead your heart to understanding."

In an instant her fears, her suspicions evaporated. A shock brought her snapping to her feet. "You know."

He nodded. "I have a pretty good idea, hawk woman. Is he your husband?"

She wrung her hands in frantic eagerness. "You know, you know all about it!"

"So I'm right. Your husband is the one who shifted out." He stood up. "We need to talk."

She glanced around. "My place—"

"No, a place where I am comfortable. A bar. Do you mind an Indian bar? Drunken savages?"

"My son is asleep in our apartment. I've got to get back."

"Is he wolf clan?"

"What?"

"Is he like his father, especially attracted to wolves?"

"No, I don't think so. He likes Kafka."

"Oh, Kafka. Everything in Kafka happened to the Indians before Kafka was born." He looked up at the sky. "I ought to meet your son. I will find out what kind of child he is."

He took her home, his bar proposal apparently amended by the presence of Kevin. Cindy let him into the building, thinking to herself, You fool. His back was extraordinarily wide, covered by a threadbare and not particularly clean charcoal knit sports jacket, the sort of thing one might get at the Salvation Army. He was wearing ancient, cracked army boots and baggy khaki pants.

She recognized that she was absolutely crazy to be letting this man in her house.

And yet there was something stolid and earth-bound about him. He seemed too old, too wide, and too decrepit to be of any danger to anybody. Then you looked at his eyes and there was a sense of spreading wings, of sunlight in the midnight hour. Those eyes were wonderful with love, reflecting back the light that entered them, at once menacing and gentle. She could still feel the delicate touch of his huge sausage finger on her cheek.

His presence was overbearing in the elevator, his odor a mix of beer and beans and thoroughly ripened sweat. There was also, though, something sweet—quite fresh and pleasant—that brought to mind new flowers. Standing beside her, silent, staring at the elevator door, he gave no sign of what might be happening in his mind.

They got off together and Cindy opened the door of the apartment. How did it feel to be forced? Would he make it hurt? Would it last a long time? Fear had strengthened her senses. She felt with great acuity the coolness of the key in her hand, listened fascinated at the rasp of the lock, inhaled the familiar home scents that blew out through the opening door.

He stood shyly in the foyer, his hands folded over his broad waist, his eyes down. "Come on in. Sit down."

"No. I have to get something from the place. Let me walk around." He stared at her. Seeing that she did not dissent, he began a slow, rocking progress, his brow wrinkled, his lips pursed. He crossed and recrossed the living room, circled the dining table, moved through the kitchen. Then he proceeded down the hall to the bedrooms. Occasionally he made a guttural sound. He passed thrice around her bed, then lay down on it, dropping so hard it all but went through into the Steins' apartment below. After a moment he sat up. "Lots of love here," he said. When he smiled, she saw that his teeth were rotted to stumps.

Then, with a grunted sigh, he got up and went to Kevin's room. Cindy followed him avidly. She was now convinced that she had been insane to do this. He might hurt her little boy. He was someone off the New York City streets; she didn't even know his name. "Owl boy," he said absently.

He returned to the living room. "Hawk woman, owl boy, wolf man. And wolf man has been stolen." He ground out a laugh, dropping down to the couch. "You think I don't know what I'm doing—it happened over there." He pointed straight to the spot where Bob had changed. "That's where he entered the wolf clan."

She was astonished, excited. He was either very clever or schooled in disciplines hidden to her own eyes. "What do you mean, 'entered'?"

"The wolf clan is dying. They are calling all the ones whose spirits will help them. The people who have a special affinity for them. The Wolf People. Do you understand?"

"No."

"Everybody implies a certain kind of animal. Each human soul contains a little dust from some other species."

"We're descended from apes."

"It's much more complicated than that. Remember the philosopher Whitehead? He stressed that there is no 'nature.' Only details. Millions upon millions of details. Concentrate on any one, or any group, and your whole reality changes to support your new focus of attention."

"I thought you were an Indian. What in the world does Whitehead have to do with it? What about Black Elk or somebody like that? Chief Dan George?"

"We get what we can where we can. Injun Joe's been a beggar for a while now. I'm from a culture that went under."

This was leading nowhere. "What do you want?"

"I want to help you understand what happened to your husband. From my own understanding, from the cultural tradition I represent, I might have a few answers."

He was beginning to annoy her. "So, I'm waiting."

"You're very impatient."

"I don't think you know what you're doing. You made a lucky guess but now you're ad-libbing. You probably aren't even an Indian."

"I'm a full-blooded Mohican."

That answer chilled her. She had been taunting him for more information; she had not believed that he was an imposter.

"The last of the Mohicans?"

He gave her a long look. "The last one around here. I was a Mohawk, but what the hell, there's a family tradition that we were Mohicans until the Mohawks stole my great-grandfather eight times removed. So why not? Let old James Fenimore Cooper turn over in his grave if he wants to, I don't give too much of a damn."

Once again he had surprised her. You thought you had captured the measure of this man, only to discover a moment later that your conclusions were still wrong, but in a new way.

"I could use a beer, if you've got any."

Her mind went to Bob, Bud in hand, reading a novel in Sunday-afternoon sunlight. "Help me get him back."

"Why don't you join him?"

"Don't be ridiculous!" The way the Indian looked at her made her furious. "I have a child to raise!"

The Indian laughed. "Him too."

"I want help, not this superstitious nonsense! People don't just turn into animals. That's ridiculous, it doesn't. . . happen."

His eyes were twinkling. "Have it your way, white eyes. But I'd like to keep talking about reality for a second, if you don't mind."

She closed her eyes. He went on: "I was trying to tell you about the fact that the animal kingdom is dying, and because it is dying, it is beginning to take heroic measures to save itself. That's why the spirit of the wolves beguiled your husband. The animal kingdom is after the mind of man."

"I want my husband back!"

He leaned forward, clasped his hands between his knees. "So, follow him."

You're his squaw."

"Crap!"

"Well, I don't mean it in a demeaning way. It would take great courage to follow him. He is a hero. You would be a heroine if you did it."

It was time for a family conference. She went in and woke Kevin up. He was flushed with sleep, his hair tangled, his smooth skin warm and sweet. "I don't know what he is," she told him, "but he's saying things that make a kind of bass-ackwards sense. He thinks we should try to find Dad."

Kevin regarded him down the shadows of the hall. "He looks like an old drunk, Mom."

"Well, he's most definitely that. But he also knew the truth about Dad, from the very first. He has the idea that the wolves are in such desperate trouble that they sort of seduced Dad into becoming one of them in order to gain the power of the human mind."

Her son's hand came into her own. "I wonder what the truth is about Prometheus," Kevin said. "What did he steal, to make the gods so mad? Was it only fire?"

"Wasn't that enough?"

"My guess is that he stole their inner fire. Their godliness. That's the point of the myth. And the wolves want to steal our inner fire, our humanity."

"Is that bad?"

"Mother, the animals are beautiful." Squaring his shoulders, he went into the living room.

The Indian got to his feet. "You are a young brave. I salute you!"

"Hey, Mom—"

"Let it go. Just listen to what he has to say." Catching a glimpse of herself in the dark window, she saw the sharpness of her face, that angular, questing shadow that seemed to fight her beauty, but was in fact its center. Her psyche had claws:

she remembered last night, waiting in the middle of the bed for Bob, waiting like a wolf in the secret dark, to devour him with her demands. Wolf woman.

"You know the old idea of types? In the West, it used to be thought that there were seven types of personality. There are more than seven types! A type for every beast in the animal kingdom. We are reflections of the whole of reality. Among us there are shrew types, porcupine types, owl types, frog types, lion and zebra types, eagle types. On and on. Often people change

types when they get dogs. That's why old people and their old dogs look alike. A bulldog owner becomes a bulldog type. You have to understand the universe as it really is. A hall of mirrors, and we are the mirrors. I hate to sound like a broken record, but I would be able to do this better if I had a beer in my hand."

He was and wasn't a fraud. She got him a Bud. They'd been out. When had she bought more? She didn't remember doing it. But there were also three new Lean Cuisines in the freezer, some apples and grapefruit in the fridge, and another half gallon of Tropicana Premium OJ. She'd done the shopping automatically, sometime in the black struggling hours.

"Can you dance, boy?"

"I can waltz."

"That isn't dancing. What's dancing is what attracts spirits. Ghost dancing." He began to shake, leaning from foot to foot. "You have to jiggle your insides so your soul jiggles. The spirits hear that and they get curious. They're like fish that way, coming up when you jiggle the bait. Only be careful, because your soul is the bait."

Kevin started the same movement. The man began to chant, "eaah, eaah, eaah eaah." He repeated the simple rhythm, his eyes closed. Then he had a little packet in his hands, made up of fur and bones and bits of skin. "Wolf medicine," he said. "Very powerful. Medicine of the Thunder Wolf."

For fifteen minutes they danced. Occasionally the man went around in a little circle, hopping and chanting. Once he whooped. He took a small rattle from his pocket and shook it. He handed the wolf medicine to Kevin, took it back, handed it over again.

Finally he stopped and took a long pull on his beer. "They aren't coming," he said. "My magic's not powerful enough. I could hear them laughing, though."

"Who?"

"The wolf clan. They're very happy. I don't want to upset you, but it looks to me like they've got him for good."

A rocket blasted into the center of her gut and exploded with phosphorus fire. "Nobody got him for good! He's mine, do you hear that! He is mine and I am going to have him back. My God, Bob was one of the gentlest, most humane people I've ever known. He was this boy's father. He's ours. I'll curse the whole species of wolf unless they give him back to me."

"Stealing's never a good idea, I guess."

"Get out of here, you old idiot! You're like some quack with a fake cancer cure. And if you tell the papers that the wolf is really Bob, I will come after you and personally kill you, and believe me, I will do it slowly."

He smiled, the whole bottom half of his face cracking open in a paroxysm of black pits, gnarled stumps, and yellow teeth. "What will you use, the claw or the tooth?"

Shaking like a disturbed longleg spider, she guided him to the door. "Get out."

"Thanks for the swallow of beer."

She slammed the door behind him. Kevin came and put his arm around her waist. That felt awfully good. Now if only Bob was standing on her other side . . .

"I'm going to find your father and bring him home and turn him back into a man."

"Yes, Mom."

"You'll help me?"

"Mom, of course I will."

She told him how close she had been to him earlier. "He's been hurt, he's all scruffy. The last I saw of him, he was heading for the far West Village."

They made bacon and eggs and coffee together, and opened the fresh orange juice. Sitting at the kitchen table, in the thin light of dawn, they laid plans, gardens and castles and clouds of plans, to go down the labyrinth that had claimed husband and father, and lead him back to his humanity.

Chapter Fourteen

THE STREETS OF NEW YORK ARE ALLEGEDLY NEVER quiet, but they were certainly quiet tonight. An occasional siren wailed, mist billowed, shadows moved behind windows. After seeing the *Post* extra Bob understood why: this city of seven million lethal human creatures was stifled with fear. The beast of apocalypse prowled its streets. Ancient terrors were invoked. All was quiet.

To Bob, slinking along hurt and cold and famished, it seemed absurd. In his present mood he would gladly have let a child kill him. Smelling Cindy so close had been too keen a sorrow. He could bear no more of this. As he paced the banks of the Hudson, he contemplated jumping from one of the ruined piers and bringing this whole bizarre experience to an end.

The city around him could not have seemed more oppressive or unfriendly. He had no way of explaining himself, not even in his own mind. His only thought was that ours is an age at the far limit of time, and it is at limits and extremes that the impossible can happen. Or maybe the mysterious fifth force that physicists speculate about had something to do with it. Maybe it was a disease, psychological or otherwise.

He stood looking down at the waters. They were black and smelled of creosote. Lapping and sighing beneath the pier, the river surged in its course. Far out, a magnificent yacht moved in stately passage, its portholes all alight, the sound of its engines coming faintly on the wind.

Bob inhaled, almost believing that he could still smell Cindy's special odor. People's smells were as distinctive as their faces or fingerprints. Were there two smells exactly alike? He suspected not. They hung in layers in the streets of the city, millions of them. He had just noticed this, and was beginning to be able to tell them apart.

He looked down at the water again. How would it feel to die in that murk? Would he struggle, or just go to sleep? It might be a painful death, indeed, like the death of smothering. Once when he was ten, another boy had smothered him in a plastic shower cap, a large, vicious boy. To this day he remembered the gnawing agony.

And the water was cold. He did not know how this miserable body might react to that. Normally he shunned even slightly cool swimming pools. Cold showers, cold days, snow sports were all abhorrent to him.

He could see things floating in the water, big, amorphous things, like great masses of sewage. Doubtless that's what they were. So he would not only drown in the river, he would drown in sewage.

His ears back, his tail down, in his anguish he snapped at the air.

He smelled Cindy again, this time much stronger, as if she was somewhere nearby. It was the perfume of her spirit, this, or the trembling scent of memory. Until he had been blocked by this new body from his relationship with her, he had not understood just how much a part of him she had become.

Then he heard a noise, a tapping on the pier. Figures approached, moving silently side by side, by their smells a man and a heavily scented person, probably a woman. She was so powdered and perfumed that her real smell was almost obscured. There was a faint underlying odor of pus and scabs. He was fresher, the scent of healthy sweat, the remains of deodorant put on many hours ago, a touch of Afta still clinging to his face. The blue odor of oiled metal was chief among those he noticed coming from the woman's purse. He knew she had a pistol hidden there.

There was a quick round of bargaining between them, obviously further to an earlier conversation.

"This ain't exactly a hotel."

"You're gettin' off easy, ten bucks."

"It's cold. I wanna do five."

Her voice, exhausted. "Seven."

They came closer, the prostitute and the john. Bob stayed absolutely still, embarrassed and ashamed to be witness to their humble and private business. Closing his eyes did nothing to shut them out: he smelled them, he heard them. The woman was kneeling before the man, the man leaning against a piling, his fingers working in her hair.

In a merciful few minutes it was over. There was a stink of hot bodies. The woman made a rustling movement. "Take off your clothes," she said in a low voice. The gun was in her hand.

She tossed everything into the Hudson—the underpants, the socks, the shoes, the cheap suit.

"Please, lady."

She opened the wallet. "Eighty fuckin' bucks," she said in a new, harder voice. No wonder all the powder: she was a man. "I oughta blow you away."

The transvestite turned and marched off the pier, leaving his john cowering naked. "What am I gonna do?" he moaned. After a short time, he also hurried

back toward the darkness of West Street, a pale flash in the night.

To Bob that poor man seemed the luckiest of creatures, normally formed, his body the key to the whole list of human freedoms and powers.

The wild was not freedom at all; the wild was a terrible bondage. Man was free.

He remembered the wolf in the zoo. That had been the message in his eyes.

Was that wolf like me, a lost man? Was he warning me with his eyes, or cajoling me?

His eyes had been so beautiful. Too bad being a wolf was such hell.

He could escape, of course. All he had to do was let himself fall, then take a single, deep breath after the water enclosed him.

Before he jumped, there was one thing he had to do, if only to satisfy himself that his situation was indeed hopeless. Many years before he had been interested in meditation. TM had been popular when he was in college, and he had tried it. He had met a girl who was involved in the Ecstatic movement within the Catholic Church, and he had gotten high on repetitive prayer.

They had joined together, Bob and Lorelei, on the Way of Flesh and Prayer—their own name for their Catholicized sexual freedom—and had learned secrets of meditation known, if at all, to a few adepts of the *Kama Sutra*.

Bob wondered if he could still sense his body in the old way. Could he perhaps re-create his human body by creating a vivid enough image of it in his mind?

With all the will he could bring to it, he concentrated on turning his left rear paw back into a foot. He visualized a foot—his own foot—just as he remembered it, complete with the scar from his bunion operation and the ingrown second toenail he had been meaning to show to Al West, his podiatrist.

Nothing happened, nothing at all. He kept on trying, raising the paw off the ground in the intensity of his effort. Nothing seemed to happen, but when he put the paw down, he was amazed and shocked to feel ordinary human toes and heel. He looked back, and there in the shadows was a pale, naked man's foot attached to his wolf leg.

Pure excitement made his blood rush so hard he started to faint. The foot felt a little like rubber, a lot like gelatin, and it seemed as if a lessening of attention might make it dissolve once again into a paw. The moment he shifted his attention to his upper leg, the foot indeed began to disintegrate.

There was no sensation, but his contact with the ground began to change. Then he returned his concentration to the foot. At once it was human again.

But it wouldn't stay like that, not without a Zen master's ability to concentrate on it and keep it human. A very real force was urging his cells into the wolf shape. When he fought it, he could feel it resisting, striving to recapture the shifted part.

Then he learned another thing: By keeping some attention on his foot and extending it up his leg, he could transform the leg as well, and include it in the new fortress of his human being. He labored, striving to fix the quicksilver of concentration, until he was a human torso with a wolf's chest, shoulder, and head. There was war inside him. His organs battled the confusion of juices. He vomited and the wolf body regained the torso for a moment. Then he recaptured his attention from his pain and dragged it up his midriff. It slipped, concentrating suddenly on what he wanted most, which was hands. They popped out of his paws, new and slightly wet, knuckles closed against the ground. Then the wolf tail slipped out again. He fought it down, felt the fur of it tickling against his buttocks as it was absorbed.

Now, holding in awareness all of his human parts, he made a great effort to draw his attention up both forelegs and then across his chest and neck. With a rush as of swirling snow his whole sense of smell disappeared. He was shocked to realize how dependent on it he had become. For a moment, shaking his head, he thought he was blind.

Then he saw a flush of color, the crystal world that human eyes see. He was lying, wet and new on the dirty slabs of the pier. He raised himself up.

Shaking, he stood slowly to full height, and felt the sharp airs of night on naked skin. He clapped his hands, he swooped and swirled.

He had to be careful, though. The wolf itched just beneath the surface of him, waiting to pop out the moment he stopped concentrating on his shape.

He remembered a paraphrase of the physicist Richard Feynman, that reality is plastic, that it is essentially dependent upon the observer.

Speaking of whom, he found himself lit by headlights, which proceeded slowly down the rattling pier toward him. He began to back up, momentarily terrified. But why? He was human again. He was safe. Smiling with relief, he ran forward toward the car. "Hey, I need help."

A light bar flashed: it was a police car. "You couple of fuckers," a voice said, drawling easily. "Come aaannn." Two young policemen emerged from the car. Sitting in the back was the dim figure of the man the prostitute had

mugged. "What is this, a new thrill?" one of them asked.

"I don't think I—" He stopped. The moment his attention had gone into the effort of speaking, the wolf had leaped up inside, ready to surge out.

"You guys stay at home. We don't want any funny business out on these piers."

"I—I—"

"Get in the goddamn car. We're runnin' youse in. Two creatures start a naked trip out here, pretty soon all the creatures are doing it, am I right?" The officer made a move toward Bob. A strong hand connected with his arm. Bob jumped away: where the cop had touched grew a tuft of fur. "Oh, come on," the cop said in a bored tone. "We'll beat you up if you make this a pain in the ass." He grabbed again.

Bob still felt loose and unreal, like a jelly. He skittered away, dragging a paw on his left arm, then with a dry hiss a whole left foreleg. When he tried to bring back his arm, it would not come.

"Halt, you're under arrest," one of the cops shouted. The other came at Bob, his arms outstretched. Bob backed up, warding off those awful hands with his one human fist.

He saw the misty sky and heard a rush of air around him. Then he hit the water with a whooshing splash. Cold, stinking river water poured down his throat, making him choke. Choking, he sank deeper and deeper, until there was no sound but the pulsing of distant marine engines. Something big and clingy wrapped around his midriff. He struggled to release himself from it, arching his back, clawing, trying to paddle.

His attention was shattered, and he knew that the wolf would win if he didn't regain it. The wolf leaped, struggled, twisted. There was nausea and the seething of skin. He fought: foot not paw, flesh not fur, and then he felt the eerie swinging of the tail. The pressure of the water was slaughtering his ears. He concentrated his whole attention into a single dot of consciousness. And he knew he had won: down in the depths of the river, he was human again. There came the pounding of blood, shock after shock, the hammer of suffocation. He had to breathe. The agony was amazing, total, all-involving, far worse than what he had imagined.

He felt his flesh popping like sausage skin, felt the emergence of the reborn thing as it climbed out of him and became him. Each quake of his heart brought a flash to his eyes. In a moment he was going to take in a heave of water, cough, and commence the unmanaged panic of his dying.

Cold water rushed past his face. He drew back his lips, felt his mouth opening, felt his every muscle straining, his legs churning, his lungs expanding to whistling, airless balloons, then a gust of water blasted down his throat. He gagged, his body contorting to a knot, then he coughed it out, expelling it through his nose, helplessly breathing again—but this time it was cold, dank air.

His head had broken water. Again he breathed, choked, coughed, gagged, breathed, fought the waves, raised his nose high, and swam along, sweeping the water aside with his four powerful legs.

He was an amazing distance away from the pier, and his nose took in the myriad scents of the watery world, the fish, the creosote from all the rotting timbers, the sewage and trash, the skim of oil on the water's surface.

He cocked his ears toward the pier. The two cops were standing there calling, playing their flashlight on the near waters. They were looking for a blubbering human swimmer, though, not the sleek creature who watched them.

He was a wolf again, thoroughly and completely. His concentration had been shattered at just the wrong moment. He screamed out his rage, but this time even that vestige of his humanity was gone. It seemed that his return to the wolf form had worked more perfectly than the first transformation. He was now smoothly wolf: an animal howl echoed across the Hudson waters.

Dog-paddling steadily, he turned himself around and around, seeking the closest shore. But there was no close shore. He was being taken by the tidal current, and taken fast. Manhattan was already farther away than Jersey. He could see the lights of cars emerging from the Holland Tunnel. Far upriver the George Washington Bridge glimmered. A tug sounded its mournful drone. The mist sometimes obscured the riverbanks, making it even harder for him to orient himself.

He had lost sight of the police on the shore. Manhattan was now an anonymous grandeur of lights, coldly self-centered, indifferent to the mere animal that was going to drown before its glow. Dog-paddling was an exhausting way to swim, but if he stopped he sank. He kept his muzzle just above the water, held his ears back to keep the cold out, and dug at the water with his tiring legs. The cold made him ache, the pain distracted him, the spinning lights on the shores made him fear that he was swimming in circles.

It would have been easy to just stop paddling, but there could be no question of that now. His experience of drowning had cured him of any

desire to do so; the closeness of death had ignited in him a hunger for more life. He worked furiously in body and mind, trying to find some way to survive.

He had entered that state beyond exhaustion, where the flesh is supported only by will. It is a condition of rapture that seems while it lasts that it might go on forever. It doesn't. The end is always complete and total collapse. Bob swam on. There were lights ahead, but he could not tell if they were a ship at anchor or the Jersey shore.

Then he heard a bell ring loudly and he understood that one of the lights must be a buoy, and perhaps quite near. He cocked his ears—water ran down inside, roaring and causing these fine wolf ears excruciating pain.

There was a flash of white noise in his head. His chest constricted, he gagged. Dimly he realized that he was now completely submerged, still paddling but no longer powerfully enough to keep himself afloat. He remembered a morning long ago, fishing for perch at the John O. Fishing Camp with his father, looking down into the green water, wondering that there were creatures who needed it as we need air. He remembered the flopping struggle of the caught fish, the astonishment in their golden flat eyes.

Then he surfaced, heard the bell, and knew he was soon going to stop swimming. No matter how hard he tried, his legs were slowing down. For relief he let his back legs stop and churned with his forelegs, just keeping his nose in the air.

The bell rang again, a clear, sharp peal. Before and above him he saw a flashing green light, and he heard the river sloshing against the buoy. He flailed with his paws, touched the bouncing thing. Its sides were smooth, but there was a superstructure that housed the bell. Conceivably he could lodge his front paws up in there and hang on.

He tried to grasp the side of the buoy but his claws scratched helplessly. For hands this would be simple. He tried to concentrate, to picture a hand where his paw now scrabbled, a hand with its flexible fingers, its reach, its power.

No change occurred. It was as if his earlier efforts had drained a battery. Change now seemed completely impossible. He was as much a wolf as he had been a man. He snorted, yapped, tried to hug the buoy with both paws. The buoy was rusty above the waterline, and he dragged slowly down until he reached the algae that clung to the base, whereupon he slipped and

splashed off into the water.

Excited, snapping, frantic, he came to the surface and tried again. This time his forepaws held. He scrambled with his rear paws, trying for at least a little purchase in the goop that adhered to the buoy's underwater surfaces. Again he kicked, and again failed, and came slowly down the side. Then one claw caught what was probably the rough edge of a weld. For an instant he was poised, unmoving. He could feel his forepaws beginning to slip. Another inch and he would topple backward into the water. Slowly, carefully, he began to straighten the rear leg that was holding. First a bare quarter of an inch, then another quarter, he slid up the buoy. It was working, definitely. Higher and higher he slid, stretching at last to his full length. He felt the edge of the cage that enclosed the bell. Then he was falling, twisting, splashing, turning beneath the waves. He came up fast, slamming his head against the bottom of the buoy so hard he saw a pink flare behind his eyes and was for a moment stunned.

•Then he made his way out from under and surfaced again. His swimming was slow. He might as well have been wearing saddlebags filled with lead. If only he could shed this soggy fur, if only he could rest just for five minutes. He could actually hear cars on the shore, horns honking at the tunnel entrance, the sigh of the roads, even a radio playing on the bank, entertainment for some lonely fisherman.

He wanted life, his blood hungered for it, his breath sped through his lungs for it, he yearned toward the shore. He did not think he could make it. There were now just two choices, either he could try the buoy a last time, or he could attempt another fifteen minutes in the water. If he failed at either, he was dead.

The buoy rang again, its sound deafening and yet also peaceful, reminding him of a church at dawn, of the flat seascapes of the world. He smelled coffee and hot dogs. The fisherman had opened a snack.

Desperate now, Bob struck for the shore. The buoy was useless to him. Every few moments he would find himself underwater. It would take a burst of energy to get him to the surface, and every time he did that he was a bit less able. Soon he was spending more time below the surface than above it. His ears were roaring, his muscles were frantic, he wasn't getting enough air.

Then the water was suddenly very cold and the lights were whirling again. He was in a powerful current. He relaxed, realizing that this was the end. The lights, which had been no more than a few hundred feet away, began to get

smaller. He sloshed with listless paws, waiting for his body to give up its struggle. The water caressed him. He closed his eyes.

As soon as he sank he found himself rolling against rocks. Rocks! They couldn't be more than five feet below the surface. He paddled again, reached the surface, flopped and splashed, looking for a place shallow enough to stand. But he was rushing along so fast he couldn't even begin to get purchase. The rocks tantalized him, sweeping by just below the tips of his paws.

Then he came to something quite solid. The current literally shoved him against it. He found himself clambering over cutting stones, clambering and swaying. He stood, astonished, his head hanging, too weak even to look up. Then he toppled to his side, his legs still weakly paddling, but they paddled air, for he had come up on a rocky promontory of the shore.

"Oh Lord, who—" Bob heard the voice of the fisherman, smelled his food, his coffee. His impulse was to run, but he was beyond anything so draining. All he could do was lie on his side just where he was, and stare with one open eye up into the dank gray-red sky of fog and mist.

"You is a dog. Lord, you done swum out of the Hudson, ain't you? Lord, Lord."

He took off his own coat, the fisherman, and rough-dried Bob's freezing, soaking fur. Then he stroked his head. "All I got is the end of a wiener," he said. "Ain't much food for a big dog like you, but it ain't air either."

Then there was meat at his lips, meat and bread and tangy hot mustard. Even a little kraut. Bob gulped down the food. His eyes closed. The fisherman threw an old, dank tarp over him.

Soon there was a slight warming of his body, which was an infinite comfort. At once he slept, and he dreamed that he had come to the reefs of heaven, and found there an old black man with a hot-dog end and a rotting square of canvas, who was an angel of God.

Part Three

Country Life

The country has been amputated, its soul
is bigger than its place.

The country has perfect mist, morning light
that reconstructs what is true.
The country is where you go to find what you lost,
and find what lost you.

—Robert Duke, "Country Life" (1989)

Chapter Fifteen

THE MORNING SUN HEATED THE CANVAS TARP. WHEN Bob awoke, it was from a nightmare of the gas chamber at the pound. His fur was steaming, his body sanded with pain. It was as if every muscle had been wound with barbed wire. His stomach was tight and sour. He was ravenous. In his mouth there lingered a maddening temptation of hot dog.

He got up, shaking the canvas off his back. All around him were dank, twisted rocks. Beyond rose a cliff of the lower palisades, tall and complicated. He moved forward, sniffing the crisp air. Everywhere there was the sour sweetness he was coming to recognize as the ground odor of human bodies. Above it was the stink of the river, the nostalgic rot of autumn leaves, warm asphalt, faint car exhausts, and a musty odor of animals, no doubt the rats that lived along the riverbanks. His stomach knocked and a film of drool covered his tongue.

He was damned if he was going to eat a raw rat. And yet he found himself imagining a lovely steak tartare, the way they would serve it at the Palm, one of his favorite restaurants. It had been a long time since he could afford lunch at the Palm.

Would he get rabies from eating a rat? Well, that was nothing to worry about. He would never eat anything alive. He was going to be the first noncarnivorous wolf.

His real desires were for a cup of coffee ground at home from Jamaica Blue Mountain beans, some flaky croissants from Patisserie Lanciani, and a nice stupefying Sunday morning with the *Times* and WBAI's *Music of a Sunday Morning* in the background. Add to that some fresh-squeezed orange juice from the Korean market on Bleecker, and perhaps—just to be bad—a couple of slices of bacon.

Even so, the rats smelled kind of good. He couldn't see them, of course, but he knew they were there, and he sensed that every rat eye was on the monster that had intruded on their domain.

Maybe there were delis with salad bars here in Jersey. He could burst in and start gobbling down the *kappa maki*, the endive, and the *olivata*. He'd be shoed away, of course, but what the hell. Hit three or four delis and he'd be full.

There was movement before him, back near where the old road passed

under the cliff's face. He cocked his ears and was rewarded with a richly detailed scuttle of noises: the chugging of rat breath, the silver rustle of rat paws on stone, the swallowed whines of rat fear.

They knew what he could not yet admit, that in the end he would hunt them, that among them there was one who soon would die. He drew deep, exploratory breaths, hoping that the fisherman had left some bits behind. Even one of the greasy, tumor-ridden Hudson fish would be preferable to a rat. For God's sake, rats were nothing more than reprocessed garbage.

His body's motives were not those of his mind. His body simply wanted to eat. It was also efficient. And it was working on the problem. While he worried, it had targeted a hole that was full of rats. His ears said that they were seething there, uneasy, noses pointing toward him. When he moved forward, there was a tensing. He stopped;

Soon the tension died down. He found that his tail had lifted, and he felt some sparkle in himself, a glee as sharp as glass. He pranced forth on the hunt—and saw not just one hole but a dozen explode with fast gray shapes. They skittered about, their tails swirling behind them, their little voices shrilling. It was a dance of dread, and he suddenly knew the source of all dance.

His body twisted, skidded, turned, and leaped. Then there appeared in his sight a long rat crusted with offal, its teeth yellow, one eye filmed gray. His nose smelled the saline freshness of its blood, sensed the heat of its body, and he tasted in his muzzle the minute hurricane of its breath, which reeked of wet cigarette ends, pigeon droppings, and bugs.

His muzzle was a quick weapon. Once he had the rat in his vision he was able to follow it with the dexterity of a radar guidance system. A flush of wet filled his mouth. His belly churned, becoming blazing hot. This was a stomach far more powerful than its human counterpart. As he matched the rat's staccato march he noted fierce acid fumes rising from his own throat. Probably his stomach could digest damn near anything.

There came a moment when the rat's neck would be just where he needed it. He reached down, snapped, and drew the scrabbling, screaming creature into the air. It had heft, it was no small rat. When it tried to turn around and bite him, he cracked the whip with its body. As if turned off by the will of God, it went limp. He had killed it as easily as that. It fell from his jaws with a wet thud. Now all the other rats, who had become indifferent as soon as they realized they had not been singled out, took a new interest. There would

soon be carrion to scavenge.

Bob sniffed at the thing. Up close he could smell so many different varieties of unpleasantness that he was unable to count them all. The worst, perhaps, was a distinct odor of benzine. The rat also had a scaly growth on the side of its head, that looked almost like the plates of a lizard's brow. A bizarre cancer.

His humanity told him not to touch this diseased thing. His wolfhood wanted to gobble it up and have done with it. He pushed it with his nose. The surviving rats gathered eagerly around, waiting for him to finish.

He wanted to get out of here. But the dead rat kept him lingering. Without hands, how would he skin it? How could he bear the crunch of the bones? His stomach was molten iron. Without any conscious decision at all, he gave the rat's soft underfur a smart nip.

His jaw seemed to go off like a cocked pistol. Entirely without his conscious participation, he had ripped the rat down the middle. Its blood flowed out, steamy and quick, causing eager scurrying to break out among the others. They followed their brother's blood down the cracks and commenced drinking at once, their little lapping filling the still, expectant air.

He recoiled at the sight of the slick, purple guts spilling over the stones. How could he be doing this? A thrill of fascination went through him— this curiously automatic and quite skilled behavior must come from instinct. Becoming a good wolf was like learning a musical instrument.

In this case, though, success would mean actually eating the ghastly mess on the rocks in front of him, something he did not at all want to do. The smell of it, so intense and bloody and alive, made him step back. Then, quite suddenly, one of the rats dashed in and grabbed some offal. That made him growl and lunge forward, and before he could stop himself, the warm meat was going down his throat. He felt it on his tongue, fur and skin and muscle, little rat bones, he tasted it and the taste was absolute meat. Then it was gone, the whole damn rat, even the tail.

He stood there, his head lolling, his mouth open. The revulsion that crawled through his body made him turn up his lips and snarl. When he exhaled, he smelled essence of rat, the freshness of the meat as well as the hollow rot of the filthy fur and whatever horrors had been in the stomach.

He gagged. But he did not bring up what he had eaten. On the contrary, it was perfectly acceptable to his stomach, which was comfortably digesting it.

Good God. He had done something truly unspeakable and yet lived. He

was so sensitive, such a careful eater. As a child he had been amenable only to hamburgers and carrots. Over the years his repertoire of foods had expanded, but slowly. Not until he moved to New York had he acquired a taste for real exotica. Now he relished everything from snails to raw abalone.

A great, low booming distracted him from his thoughts. He looked out at the river, and there was the *QE2* flanked by tugs, her white superstructure shining in the morning sun. His heart almost stopped to see her and behind her the jeweled towers, Manhattan in a splendor of glass and spires. He could see people on the decks of the *Queen*, a man in a blue blazer with white trousers, a woman beside him wearing a hat, her mink shining darkly. She raised one hand and held her hat against the wind.

For him it was a bitter sight. The corner of life he had entered was a place of adventure in the deepest sense of the word, where every step was a step into the unknown, where all of his human intelligence and his animal instinct would be required to see him along the way.

His muzzle raised itself to the blue sky and he made a long, high tone he found quite fine. He did it again, this time adding a tremble at the end by relaxing his throat. Again he did it, throwing all of his feelings into the note, his loneliness, his despair, his disgust. These were the feelings that he put into it, but something very different came out. He heard in his howl the voice of a deeper freedom than he had ever imagined, and the sky seemed more blue, and the smells of autumn more poignant, and the booming of the liner more grand. He stopped, excited, his tail waving. The wild was in him, the very wild, the unchained, the innocent, the terrible wild. He knew it from the farthest reach of his human heart, it was the old, old truth come forth in him, resurrection, Eucharist, a new world being born.

He realized with the force of cold water on morning skin that he was feeling a primitive emotion that was essentially and totally human. The ancient human wildness had reemerged in him, cohabitant with the wildness of the wolf.

To have been human at the beginning of the species must have been like this. His first impulse was to run and tell people, to tell anybody he could find, that the wild is waiting for us.

Obedying both sense and instinct, he trotted off up the road, seeking a way to the top of the palisade. Somewhere out there across the human land lay the forest, constricted perhaps, but still the forest. He wanted to race this body against the closure of the suburbs, to seek the quick eye and the savage tooth.

As it mingled with his own blood the blood of the rat taught him the morality of the carnivore. Every act is a poem, sniffing the scent-touched leaf, disemboweling the faun.

He was filled with so much energy that it seemed almost like magic. The rat had been just the good food his body had wanted. His instincts had been right. His tail high, his head thrust smartly forward, he moved up and up, making his way among the stones. It was easy to keep to the path: all he had to do was follow the scent of men and fish. This was where they came down, this collection of crevices and rough-hewn stones. Here was a Welch's grape drink bottle, there a Trident gum wrapper. And over it all was the smell of fish and the smell of men, many men, some young and sharp and fresh, others old and covered in sodden wool.

When he reached the top of the palisade, he found himself in a park he hadn't even known existed, a dramatic park overlooking the Statue of Liberty and the harbor. People stood at the edge of the balustrade just above him, some of them leaning into ten-cent binoculars and looking at the *Queen*, which had reached the center of the harbor and was just dispensing with its tugs. Farther east a Staten Island Ferry left its slip. It was rush hour, and a traffic helicopter sped up the Hudson, a green and white bug spewing noise. He looked over this great vista and picked out his old neighborhood. He couldn't see their building, but he could just see the top of the structure that hid it.

He blinked his eyes. His vision was not as good as he would have liked. The colors were muted, the details obscure. But when he cocked his ears, he heard a wonder of sounds. The world's noise was no longer an aural fog. Rather he now heard all the detail of it, the pulsing deep in the *Queen's* engines, the excited voices of the people on her decks, someone hammering in the scaffolding on the Statue of Liberty, somebody else scraping, the engines of the ferry and the splashing of her thick bow, the suspiration of wind around the towers of the World Trade Center, the click of a sea gull's wings, and the hiss of fish rushing in the harbor.

He was a generous man, and at that moment his heart burst with one wish, that all human beings everywhere could just for one instant experience the old world in this new way. He had not known it was like this, had never dreamed what a difference really powerful senses could make. Human eyes were strong, but not so strong as wolf ears, nor nearly so discriminating as a wolf's nose.

A smell startled him, the familiar odor of human fear. When he realized where it was coming from, his heart almost stopped. One of the ten-cent binoculars was pointing directly at him. Two froglike eyes swam in the dark lenses. For an instant he captured them with his own eyes.

He saw deep into them, into the empty soul behind them. He could push, he could twist, he could *alter!*

He could make her into a wolf with his eyes!

But the pupils dilated and then drew back. He saw a pale mask of a face peer past the shiny aluminum housing of the binoculars. The face was rapt, closed, the lips tight, the eyebrows knitted. Bob was in too awkward a position to cringe, to cower to this young mask of a woman in her vaguely red sweater and wind-rushing skirt. If only he could make people see him as the inoffensive being he was.

Behind him was the tumbling palisade. He dared not go down, because he knew there was no escape down there. Unless he was willing to try another swim, that was nothing but a trap. Too bad he couldn't fly.

The young woman had darted away from her binoculars without uttering a word. He struggled up the final thirty yards and scrambled over the balustrade. Here was a cobbled esplanade backed by a road, and beyond it a stand of trees. There were perhaps a dozen people on the esplanade, some of them sitting on benches, others strolling, others at the binoculars. Simultaneous with his appearance, there came a cry across the quiet scene. The young woman shouted in a clear, stem tone, her smooth hands cupped around her soft lips: "It's the wolf! The *wolf!*"

The whole scene froze. People stopped walking. Those on the benches turned their heads. A man rose up from behind a pair of binoculars and began to hurry across the esplanade, his shoes clicking in the silence.

There was nothing to do but race across the pavement. He ran as fast as he could. This particular movement aggravated last night's thigh injury, sending hooks of pain deep into his leg. But he was still fast. He shot along close to the pavement, his nose down, the cobblestones speeding past. It was only a moment before he was in the trees and racing between their thick-grown branches toward the far end of the park.

Then he was through the park and finding shelter in some reeds. A police car screamed past.

Ahead was the invincible barrier of the New Jersey Turnpike, eight lanes of certain death. He trotted along, trying to see a way across. But there was

no way across. The turnpike stretched for miles. From his vantage point low to the ground he could not see a single break in its featureless expanse. He had to cross, and at once. He'd never seen so much traffic, never realized just how fast cars could go, never understood the barrier of the road. Not far away lay the stinking body of an opossum, skinless, torn, its jaw gone. The school bus, his dog screaming, the shotgun in the gentle afternoon.

There was hardly even a median here. He would have to find a lull on this side and cross, then jump the divider and huddle on the other side until another lull. Only then could he manage the four southbound lanes. He'd come dozens of times along this route, dozens and dozens of times, never thinking how totally devoted it was to human needs, how indifferent to the needs of other creatures. Had they bothered to build a few low tunnels under it, the opossum need not be dead, nor the wolf trapped.

He stepped onto the shoulder of the road. Cars roared past. Then he encountered a terrible and unexpected phenomenon. One of them swerved onto the shoulder, aiming directly at him. He could see the driver hunched over his wheel, a young man with a green smile. Beside him another man had just raised his head and was beginning to laugh.

Bob leaped back, catching a blast of hot exhaust fumes and the angry wail of a horn.

They hated his freedom, or perhaps it was their own helplessness that made them do it. Crushed, oppressed, miserable men—killing something granted them power. That they could take life pushed back the fear that they themselves had lost their value.

A hole appeared in the traffic. He darted out into the road, one lane, two. Then he felt the pavement trembling like a hot pan. Bearing down on him was a huge thirty-two-wheeler, its grille a wall of steel. Its driver sat impassive over his wheel. Bob was transfixed by the face, the slow, steady chewing, the plug of tobacco bulging in the jaw, the aerodynamic sunglasses. Beside him a woman smoothed her hair with her hands, looking down, a smile on her face of almost ineffable purity, her lips slightly parted, the sunlight shining on her fresh skin. Then the truck was upon him. There was no escape. He crouched, pressing his body against the pavement as it screamed over him, blasting off down the road, its slipstream almost lifting him into the air. Behind it a Buick was coming up fast. Seeing him, the driver swerved away.

Bob wasn't hit, but he had lost the lane he had gained. Another space

between cars, perhaps three seconds to a VW Sirocco. He dashed forward, his tail slapping against the car as it passed him. The impact sent a shock wave through his body that made him yelp. Then he was at the median, crouching flat along it as the traffic billowed by in both directions. He raised himself, leaning against the steel fence that separated the lanes, found purchase, and drew himself to the foot-wide space between the beams.

He was tempted to trust luck and just dash out into the traffic on the far side of the median. He felt trapped here, and the rushing of the cars confused his eyes. It was easy for him to observe details up close, or to follow a single, moving object against a still background, but this was just a blur.

Under these circumstances his nose and ears were useless. To function in the world of man requires a sharpness of eye most other land animals do not possess. This place was as dangerous as poison to a creature such as himself. Even his instincts fought him. Being trapped here was like being cornered. He wanted to lash out at the cars, to run wildly.

He fought himself, begging the wolf to listen to the man this time. Standing where he was, he could see another opening in the traffic, this one also in front of a big truck. They tended to be slower than cars. Ahead of them the road was often clear. Behind them, though, there would be a glut of traffic.

The wolf did not listen to him. He was just tensing himself to jump when he popped off the median like a spring. It was too early. He landed in front of a van, which tried to miss him. Desperate, he rolled. The van passed as hot wind. Now he felt nothing. He was on his back against the concrete base of the median. There was no more than an inch between him and the tires of the cars. He couldn't even turn over without risking his paws being smashed.

He was a creature at war with himself. The instinctual part was not in touch with the intellectual. It seemed unaware even of the existence of reason. Out here in the middle of the turnpike, though, either reason was going to win or instinct was going to get him killed.

Thanks to instinct he was lying on his back, his tail curled over his stomach, his paws clenched against his body. He could no longer see the cars. Now he had to go by the vibrations of the road and the sound of the traffic. The trouble was that there was so much noise that his ears didn't work right. What would in a human ear have been an ebb and flow of sound as each vehicle passed was to his wolf ear a continuous roar.

Because there was no other way to deal with the situation, he finally did

the only thing he could and rolled over. Cars were whipping by so close he could feel heat pulsing up from the road. He managed to get to his feet. Leaning against the barrier, he waited. The cars continued. Twice people swerved toward him, but they missed because they were afraid of scraping the barrier.

Then an ancient van came rattling along, much slower than the rest of the traffic. Its lights were on, it hung askew on its frame, and it was being driven by an old woman who looked as if she was dressed in handkerchiefs. She slammed on her brakes. He would have gone to her but he simply could not trust human beings. Probably she stopped out of kindness, but it might be out of fear, because she realized that he was the terrible wolf. Maybe there was a bounty on his head and she was fumbling for a tire iron. Unlikely, but he could not know. He ran in front of the stopped van and, using it as a barrier, managed to cross to another lane. Now he could see clearly, and his progress to the far side of the turnpike was smooth.

Before him was a sea of reeds interrupted far to the north by the tall bulk of the People's Gas and Electric power station, and to the south by the rusty hump of the Pulaski Skyway. He stepped into the marsh. At once he sank to his knees, but fortunately no further. He took a step, then another. Like an envelope closing, the world of the marsh embraced him. It might be in the middle of a brutal traffic pattern, it might be viciously polluted, but it was alive, and as long as it lived it spread its magic over all who entered it.

The roar of the highway was replaced by the click of insects and the busy fluttering of birds. Driving along, he'd always thought of this as an empty world, reeds, muck, that was it. He now found rich life pouring into his ears and nose.

The smell of the man's world dwindled fast. For the first time since he had entered this new life he did not smell a single human presence.

He sloshed along, thinking that he might soon scare up a rabbit or another rat. Given how the last rat had gone down, he no longer found this a particularly unpleasant notion, although he did hope to find a cleaner victim.

Soon he was moving through shallower water. Then he came to a bald place. The sun was high, the day warm for autumn, and it occurred to him that he was free to lie down. He curled up in the reeds, drawing his tail almost to his nose.

It was peaceful here, but he knew that these marshes did not extend very far. Beyond them were suburbs full of peril, then the Poconos and beyond

them the Catskills. He would have to go far to the north before he found the forest that his wolf soul and wolf blood sought.

Lying still, he could hear the traffic's faint wail, a hungry ghost half a mile away. When he slept he dreamed that a helicopter was nosing about in the reeds, looking for him. Then his dream changed, and in it he was matching the turns of a rabbit, delighting in the prospect of a meal.

He awoke sometime past sunset. The western sky was deep orange, and the evening star hung on the edge of the horizon.

For a long moment he considered the young woman on the palisades. Had he *really* been able to turn her into a wolf? No, surely not.

But it had happened to him.

When as a young man he would lie on the ground in the deep country and look at the stars, he would think that their light must have been purified by its journey. So also souls are purified by journeys, and it was time for him to move on.

He set out to cross the marsh, moving toward the jeopardy of the lights, and the dark promise of the hills beyond.

Chapter Sixteen

IT MIGHT BE TWO O'CLOCK IN THE MORNING BUT HE WAS a fool to be standing on a street corner in Morristown, New Jersey, peering at a newspaper through the wire of a rack. He was aware of a car cruising slowly up the street, but he was so fascinated and horrified by his picture in the paper that he didn't retreat. It was remarkable to see himself like this. He really was a wolf, a perfect wolf. His mind had conjured a more muscular, vaguely human shape for him—a sort of man on all fours with the head of a wolf. He wasn't like that. There was nothing at all human about him.

Below the picture he could see the first few words of the accompanying news story. "After critically injuring one man, the animal escaped across the Hudson . . ."

The words froze his blood. He stared, stupefied, as his shadow defined itself beside him. Even the gentle rumbling of the car's engine did not break his attention. He had injured somebody, hurt them bad. But who? Maybe the man he fell on in the alley. It had all happened so fast, he wasn't sure.

The poor man.

When Bob looked up, it was into a flaring explosion of brilliance. These eyes were wonderful in the dark, but he discovered that they did not work at all well under an assault like this. He was staring into a glaring, impenetrable curtain, behind which he could hear an engine idling, doors opening, and the shuttle of weapons from holsters to hands.

He shrank back, one ear cocked toward the clicking of the pistol.

A shot seemed to explode in his face. He reeled, twisted, scrambled wildly to the middle of the street. Then there was another shot and the slap of wind against his head.

He ran for all he was worth. Up the street he raced, past an Italian restaurant with a full garbage bin waiting for dawn, past a hobby shop, a drugstore.

Then he stopped, panting. Behind him there were pattering footsteps. He crouched behind some trash cans. What was in them? They smelled like heaven. Then another police car swept past, its lights flashing. There was no siren, not in this suburb of high executives and broad, quiet lawns. Nixon had once lived around here.

Bob went on, trotting close to the storefronts, slinking across streets, taking

advantage of every bit of foliage he could find. He left Morristown on a long, straight road. Every so often he would see a police cruiser and crouch down. The car would glide past, and he could hear the men inside. "Man, I haven't had this much fun since deer season."

"Who gets the head, the guy that does the shooting or the mayor? That's my question."

Horrible!

As he neared Morris Plains Bob turned west and began to make his way through a more densely populated neighborhood.

Something happened that he hadn't taken into consideration, something very bad.

The houses around here were closer to the street, and the dogs inside were going mad. One, which had been asleep on a porch, came running up and went into a paroxysm of barking, leaping, and snapping. Its lips wrinkled back over its teeth as it crouched down, ready to attack. He watched its hackles, its muscles, waiting to absorb its charge. The creature went off like a shotgun, blasting into him with the full force of its body.

He let himself relax into the blow, dropped his chin to protect his throat from the fury of the jaws, then followed the dog down as it fell in a scabbling heap at his feet. Once he would have merely wounded it, and sent it screaming away into the night, but he knew he could not afford the attention the screaming would attract. Sadly, he tore the dog's throat open. Its barking at once ceased, replaced by the sound of air whistling and bubbling in the wound. The creature bit wildly, running in the air as it did so. Bob jumped away from it, his heart beating hard, and then he heard a boy's voice call "Frito." The dog shook and gibbered. The voice repeated, "Frito?" Bob slipped into the shadows, miserable but safe.

Scared now, the voice repeated, "Frito!" Bob could see a profile in a front door, a boy of about eleven dressed in pajamas and floppy sandals. "C'mon, Frito, come home." Sadness now, the voice cracking.

An engine muttered beyond the trees at the end of the block, and a squad car wheeled around the corner, its lights searching through the thin fog of the night. Concealed in a bush, Bob stood very still.

The boy waved and the car stopped. "There was a dogfight," the child said. "My dog is hurt!"

The two policemen got out of the car, their guns drawn. The pistols smelled cold. This was not the same pair that had shot at him in Morristown.

A flashlight worked the ground, coming to rest on the body of the dog.

"Frito!" The padding of small feet across grass, the sobs. There is no love like this, Bob thought bitterly, no love so noble or so true as that between a dog and a child. He hated himself. His only excuse was that life was sweet also to the wolf.

The flashlights began to poke about in the bushes. One of them swept the bush he was in, paused, came back. "Go inside, son."

"My dog—"

"It's the wolf. Go inside." The boy needed no more prompting. Bob heard the slippers pattering frantically on the dew-wet grass.

Inside the house the child's voice was raised:

"Mom, Dad, it's the wolf! It's here, it killed Frito!" Lights came on, joining other lights from houses where dogs were still barking. Bob had already understood that his end might come anywhere, down any innocent street, anytime. It could come down this street, now. He wanted to be reconciled to this but he could not accept it.

There was in him an almost overwhelmingly urgent need, one he had never felt in such a raw, terrible form. Bob the man might be tired and sad and ready to give up. But the wolf didn't feel that way at all. The wolf wanted to live, and he wanted it desperately. Bob was still his gentle old self. But the wolf had tasted blood; the wolf would kill to live.

The two cops had already radioed for help and lights were now coming on in virtually every house in the neighborhood. These wealthy families would probably be well armed. The police, with their notoriously inaccurate .38 Specials, might miss a quick target in the dark, but the hunting rifles and target pistols that were about to be brought into play would not miss.

"Work around to the other side of the hedge," one of the cops said softly. "It's just standing in there. Maybe it doesn't realize we mean it harm."

As soon as the second cop came around the bush Bob was going to be trapped. Without another thought he jumped up and took off down the street, causing a massive upsurge in barking. Doors slammed, people shouted. A shotgun roared, its pellets whining over Bob's head.

"I hit it," a man shouted, "I got the wolf!"

The tip of Bob's tail stung, but the old wound in his thigh was far more painful. His tail might have been grazed by a pellet, but as injuries went it was minor.

He dodged down a driveway and jumped a Cyclone fence into a yard

inhabited by two cats, which began shooting around like fur-covered hockey pucks, their tails fat with terror, their eyes blazing. Then he was through the yard and into the alley, trotting fast, but not running. This could be a long chase and he had to preserve his strength.

As he moved along he realized that he was not nearly as scared as he had been before. The wolf and the man had come together again. He had begun to be very interested in the process of combining his reason with his instinct, which was the key to preserving this unique life.

He smelled not only woods around here but flowing water. There was a stream where he could drink, maybe even enough woods to harbor a meal.

He trotted to the end of the street, throwing himself under a car as the police and a crowd of enraged citizens came puffing around the corner. Powerful lights plunged about, seeking the tawny spot of fur among the fallen leaves and the naked bushes. A little earlier in the season and it would have been a lot easier for him to hide. They passed him and he started off again, heading for the smell of the water.

Soon he came to the stream. There was nothing behind him to suggest danger—no smell of dogs, no off-the-road vehicles. He lowered his muzzle and began to lap the sweet, iron-tasting water.

A shot split a limb a few feet to his right. Far off in the street he saw a man with a rifle and some bulky equipment: a starlight scope.

Bob hastened up the middle of the brook, trying to run in the water as much as possible. He was worried about dogs being put to his scent. As a boy he had seen the Lone Ranger ride down streams to throw them off, a trick taught to him by Tonto.

He left the stream bed for a jumble of rocks. Another shot echoed in the woods, but farther away. Starlight scopes or not, people couldn't follow Bob into this tangle. Beyond the rocks the land sloped steeply upward. He was soon on a ridge, looking down over the wood he had just crossed. His ears and nose told him that he was alone. Without trained dogs, they were helpless.

Bob loped now, following an abandoned deer path. There wasn't a fresh scent along its whole length, not even droppings. The deer had died out on this ridge. As he moved he glimpsed a dark hulk off to the right. Then, through the trees, he saw that it was a house. This one was huge, a great, Gothic monster with a dozen chimneys and hundreds of blank leaded-glass windows.

He altered his course toward thicker woods. He wasn't precisely sure where he was anymore, just that he was moving in a northwesterly direction, and his nose told him that the human population around him was growing less dense.

He trotted steadily, easily, putting as much distance as he could between himself and the human world.

As the western sky began to grow light he lengthened his stride, trying for a final burst of speed before he stopped and hid until dark. He was also hungry.

Sniffing as he moved, he sought the rotted-grass odor of a rabbit or the garbage smell of rats. The woods seemed empty, though. He would have considered bugs, but it was past their season.

Was this to be his new life, scuttling through the woods searching for food or seeking escape? He wanted to lie back on a grassy hillside and think. He wanted to have a discussion with his son, or go out with his wife and talk and sip espresso.

He was the running wolf, the wolf of desolation, lonely wolf. To man he was now the gray cloud in the morning, the shadow worrying the bones. Overhead he heard a helicopter popping. He ignored it. They weren't going to spot him from that thing, but its presence meant they were really hungry to catch him.

The helicopter circled back, louder this time. As a precaution he stopped in a dense copse of hemlock. As far as he knew there was no way for them to detect him. Unless—what about infrared, or a starlight scope?

A bullet whizzed down through the trees, splitting a fat branch not three inches from his face.

There was no time to hesitate: he started running.

He tried to remember the terrain he had crossed. Were there any gullies that went down to the stream? No, he thought not. As a matter of fact, he didn't remember any place he might hide from starlight scopes or infrared, unless it was behind the waterfall he had seen on the creek. The waterfall was miles back, though. Slow as they were, even his human pursuers would have reached there by now.

He did the only thing that he could do, the thing any ordinary animal would do: he ran blindly, hoping for the best. Maybe he would reach deeper woodland, maybe he would be shot. All he could do was hope that his nasal and aural technology would somehow outwit man's sight technology.

The helicopter kept with him, fluttering like a massive insect in the glowing sky. From time to time a bullet smacked through the trees.

When he mounted a rise, he knew exactly why he was alone here. The wind was blowing from behind him or he would have known much sooner. Before him there was a pit full of rusty steel drums, some of them leaking stinking orange goop, others intact, still others surrounded by scums of green jelly. This close he could smell them despite the direction of the wind, and the odors were awful: powerful acidic scents as if of Clorox mixed with gasoline, airplane glue, and roach spray. A rivulet trickled sadly along, scummed with silver oil, making its way through tired, brown grass. There was a smell of death: two buzzard corpses lay twisted beside the fulminating ruins of a 'coon that had apparently dropped dead while drinking the water. Then the buzzards had died while eating the 'coon. Nature is designed to work in cycles. It dies in cycles, too.

The dump seemed to have no borders. Bob had no time to get around it. He would have to cross it, out in the open, the helicopter on his back. There was no reason to wait; caution would gain him nothing. He moved into the clear space. The land was just being touched by the gray light that precedes the dawn. The eastern sky was now a faint green, Venus low on the horizon. Grackles and jays were beginning to scream in the woods; the feathers of a dove lay in a puddle that Bob carefully avoided.

Inside the dump the smell was shocking. The ground was spongy and his paw prints quickly filled with scum. The odor reached deep into his muzzle and clung there. He was sure that it was in itself poisonous, it was so strong.

Then the helicopter came in low, raising a mist from the standing pools. Bob ran hard. He was more afraid of getting exposed to that mist than he was of the bullets that now came steadily from the copter. In his mind's eye there was an image, maybe from a *National Geographic* special or a Sierra Club program, of a wolf seen from above clambering through a snowbank, being chased down by a helicopter. And then the wolf's head explodes and it tumbles back down the bank, its tail gyrating like a broken propeller.

Behind him there was a terrific thud. For a mad hopeful instant he thought the helicopter had crashed, then he felt heat on his back. One of the bullets had caused a drum of chemicals to explode. So much for their infrared scope now. That blaze would white it out. Unfortunately, dawn was on their side. Shimmering lines of light were spreading from behind low eastern clouds. Bob could hear birds rising from the trees on the distant horizon, and could

smell even above the stink of this dismal place a sterling, rich burst of autumn breeze, the beautiful dry odor of the hanging leaves, the sweetness being exhaled from the ground.

Another drum of chemical exploded. Intense heat made Bob skitter forward, then gallop. The whole place started thudding and popping. The fire was furious and spreading wildly. The helicopter rose into a billowing mushroom of orange-black smoke and disappeared off toward Morris-town. Bob wondered if the citizens of that worthy community even knew that this mess was here, leaching slowly into their water supply. Well, they were certainly going to find out.

He managed to stay ahead of the flames by running himself hard, finally reaching a high Cyclone fence. He ran along beside it, thinking for an awful moment that it was going to trap him. But it hadn't been maintained; he managed to go through a hole as big as a Lincoln.

He rushed back into the scrubby woods. The area had been logged within the past ten years, and the hemlocks and white pine were still saplings, and stunted by the near presence of the toxic dump. He kept moving, always choosing the uplift of the land, seeking less populated regions.

He was tired and hungry and wanted badly to hunt. As if on command, his nose and ears promptly became hypersensitive. All he could smell, though, was birds. They seemed to be more able than ground dwellers to survive near the chemicals, probably because they spent relatively little time exposed to the poison. He'd seen one of the coydogs in Central Park catch a bat, but he didn't think his own paws were adapted to such extraordinary skills. Nature had created coydogs in the past fifty years or so, breeding the new species from the best of the dogs and the coyotes. The coydogs belonged to the future. They were smart enough and supple enough and adaptable enough to live right in the middle of the human world. People had them in their backyards and never knew it. In the small hours the Central Park packs probably hunted midtown from the Hudson to the East River, and nobody saw them, not ever.

Bob stopped long enough to lift one of his paws and examine it. It wasn't going to grasp anything. The toes were long, but not as long as those of the coydog. And he could not move them independently. He would eat no birds.

There was a flutter and a sudden pang along his spine. Snapping, he twisted around just in time to see a jay flying off with a tuft of his fur in its beak. As a child he'd disliked them because they got to his feeders and scared

away the songbirds.

To rid himself of the jay Bob moved into a thicker copse. Screaming, the bird flew off.

Then Bob became aware of a pungent and absolutely magnificent aroma. As it filled his muzzle he trembled with delight. He was hungry, very hungry, and he smelled bacon.

The odor was warm, too, meaning that the bacon was being fried nearby. He followed the scent up a low rise and through a thick copse of saplings. It wasn't long before he saw a ruined cabin with smoke coming from the chimney. The roof was half-off, the walls were peeling tarpaper, there was no glass in the windows. Bob approached warily. He could hear the bacon sizzling, smell the two people clearly. Bob was a reticent man, but he could not ignore the fact that he smelled the odors of human sex. There was also an odd smell of fresh earth. He stole forward on his belly, trying to ignore what he was smelling, all except the bacon.

Then he heard a female voice, softly pleading. "Please, please ..." He pricked his ears. Something told him that this was not right. Close by the cabin wall, he could hear deep male breathing, very soft female breathing. It was almost the gasping of a child. Bob raised himself up on the window ledge and looked in. There was a man of perhaps forty frying bacon and eggs in a skillet on the hearth. Behind him there were some dirty, crumpled sheets on the dirt floor of the cabin, sheets that stank of sweat and the uses of night. Bob was horrified to see, hunched into a corner, a terrified and naked girl of perhaps thirteen. Her arms clutched her beginning breasts, her legs were twisted around one another.

Around the front of the cabin Bob saw a hole, a shovel lying beside it. On the man's hip was a .45 automatic. But for his pistol belt, he was as naked as the child.

Bob had never seen such a depraved situation. The poor girl was in awful trouble. This vicious monster had obviously raped her repeatedly. Bob was no longer one to waste time about these - things. He leaped at once through the window and knocked the man on his side.

"Aw! Holy shit!"

He grabbed at his gun but Bob bit his wrist hard. The man yelped, twisting and turning until Bob felt his own teeth scraping bone. Then there was a crunch and the man shrieked. The girl sat absolutely still, staring. With a snarl the man came at Bob, swinging his closed left fist. The blow connected

with Bob's nose, causing him a fierce blast of pain. He screamed, thrusting his head up, snapping, trying to reach the man's throat. Instead he connected with his chest, took a gouge out of his skin and fell back. The man also fell, but in the opposite direction, landing with a high scream on his dangling right arm. He kicked at Bob, who was trying to straddle him.

The girl, who had seemed almost catatonic, now rose from her corner and moved to the hearth. The man grabbed Bob's muzzle with his good hand while he forced his bad one to fumble for his pistol. It was no good; Bob was heavy and took full advantage of his weight. Again and again he hurled himself against the struggling man.

At the hearth, the girl took the skillet in her hands. Bob felt a blow from the man to the side of his head. Another one, much harder, landed on his skull. The man was built like a tank. Despite the pain of a broken wrist, he was becoming a wheezing, furious juggernaut. He crashed into Bob's side, throwing him to the ground. A spike of pure fury made Bob roar. He dug his teeth into the man's floppy belly, feeling the little pops as his incisors broke through the flesh to the fat within.

There came a clang. The man sank down. He and Bob were both covered with sizzling bacon and eggs. The girl stood over the inert form of her captor, the skillet held in both hands. Then she dropped it and, grabbing a dirty sheet, took off into the woods, looking like a ghost as she swept off among the trees.

Bob ate the bacon, which was only a little burned, and lapped up the eggs.

Chapter Seventeen

WITH A DETERMINED JAB CINDY STUCK ANOTHER RED pin in the map, at the location of the smoldering dump site northwest of Morristown. "I'm convinced," she said to the others. "It was him."

Monica still disagreed. "The police say it started during a high-speed chase. They don't mention Bob."

"Of course not, he got away. But look at the media. 'Killer Wolf Invades Silk Stocking Suburb.' We know Bob's in the area. Who else would they have been chasing out in the woods? The poor guy is heading directly away from civilization. He's trying to escape, he must be so scared!"

Joe Running Fox stared at the map. "My guess is he'll go back into the Poconos, up through the Shawangunks to the Catskills, then on into the Appalachians and Canada." Monica stared at Cindy, a slight smile flickering across her face. "I'll bet he's going to the hunt club!"

"To meet me," Cindy said. She even thought it might be true. Even Bob had the occasional flash of practical insight.

Joe Running Fox put his hand on Kevin's shoulder. "What about you, Kevin?" Her son was comfortable with this man. Joe Running Fox had told Kevin about the Way of Silence and won his heart. The two of them had spent hours together sitting face-to-face, totally silent, their eyes locked. Last night Kevin had told Cindy that it was the most intimate experience he had ever had. "We can all see each other's souls any time we want. We just have to look at each other. Not for a minute or two, but the way the Fox does it, for a couple of hours. Then you see the soul."

She had managed to share her eyes with Kevin for about three minutes. Her love for her vulnerable, inquisitive little boy had burned high, but there had come a point when what she saw, and what of her she felt was being seen, was simply too much to bear. You see the whole of a person's time in their eyes, from the first shattering infant moment to the darkening swells of age.

Over the past few days Kevin had undergone almost a complete change. Although children shine very bright, it doesn't take much to dull their fragile spark. More even than the loss of his father, Cindy thought, her son was suffering from a loss of his own faith in reality. His Kafka shelf was now abandoned. Instead he read the Bible. She found him absorbed in Ecclesiastes

and Job, and the Book of Revelation. He had also bought a book about multiple personalities, and another about the Spanish Inquisition. He sat sometimes for hours staring at this last book, looking at a facsimile of a poster announcing an auto-da-fe in which thirty people were to be burned at the stake.

His identification with the persecuted had always been deep, arising, she liked to feel, from the powerful ideals that animated her own and Bob's thinking. Yesterday she had discovered him staring into the eyes of a picture of a wolf. "Can you share anything with a photograph?" she had asked.

"No, but I think I know how the wolves captured Dad. They did it at the zoo. Remember that old wolf staring at him? That was when they captured him."

"It's that dangerous to look into another's eyes?"

"A child goes forth each morning, and whatever that child first sees, that thing he becomes."

How many times Bob had read Whitman's poem to Kevin. "Whitman was referring to a change of spirit, not a physical change."

"How do we know that? Maybe he was talking about a real change. I think Kafka was talking about a real change in the *Metamorphosis*."

"Whitman was writing about a child. Dad isn't a child."

"You never accepted that a child is exactly what he was. In some ways I'm more mature than Dad."

Fox came over. He folded his arms, looked down at Kevin, who had tossed aside the wolf photo and was examining a woodcut of a man having his feet burned off in an Inquisitional dungeon. "Few people are more mature than your father," Fox said. "Maybe now, nobody."

"You never knew him," Kevin replied in an intensely charged voice. "He could get excited about the same flower every time he saw it, day after day, until it died. Then he forgot it so completely it might as well never have existed. Dad had no mature emotions."

Cindy could not agree. "He loved us."

"We frightened him, I think. Life was too much for him. And we drove him. We created the conditions that enabled this to happen."

It was grief that was behind these hard words. His brilliance was working against him now. Cindy sensed that what he really wanted was to cuddle up in her lap and cry.

Fox might have known it, too. He touched the boy's cheek. One thing the

man knew was when not to talk.

In the silence Monica drew a line on the map, connecting the red pins. Beyond the last pin she continued the line to the hunt club deep in the Catskills. "Maybe we ought to just go up there and wait for him."

"Unwise," Fox said. "We're better off tracking him. If he doesn't go to the club, we won't miss him that way."

"You can do this?"

Fox nodded. "I can track a wolf, if I can find the trail."

"And you're sure you can? I'd hate to be traipsing around Ulster County while Bob sits at the hunt club. He might not wait long. It's bird season and we got a huge stocking assessment, so the place is full of grouse and therefore hunters."

Cindy interrupted. "We'll split up. You go to the club, Monica. The three of us will do the tracking."

"I want to do it alone. With the boy."

Cindy wouldn't have that, not for a moment. She wasn't going to agonize the days away at the club. The miseries of camping and hiking would keep her preoccupied. Anything was better than the ordeal of waiting. "I'm going."

"Women have other power. Not this."

"Oh, nonsense. I won't hear that. He's my husband."

"I won't track with a woman." She almost couldn't believe what she heard. The man was worse than a chauvinist, he was an unreformed Neanderthal. "You have no conscience," she said. She'd always found personal discrimination surprising and confusing. His eyes were brown and flint hard. She pleaded on her own behalf. "He'll respond to me. If he knows I'm there, he'll be much more likely to stop running."

"His son will be there. A man will do anything for his son."

That was it. He'd have to learn here and now who was in control of things. "If you imagine for one moment that my boy is going without me, you're very much mistaken, Mr. Fox. You're not lord and master of this house, no man is, not even my poor husband, God help him. I intend to go out there into that wilderness and find him."

"A northeastern second-growth forest is hardly wilderness, ma'am. I want my medicine to work, and with a woman around it might not. It's no reflection on you. It's just the damned Indian culture. Woman has her role and man has his, and the two are different. Equal but different. I know it's another stupid Indian idea, but I can't help respecting it, dummy that I am."

"The hell it's an Indian idea. I don't hold with all this idealization of the old Indian culture. You say you've got Mohawk blood? The Mohawks considered their women slaves."

"They loved them. It was all stupidity, though—"

"Shut up, and can that false self-deprecation. It makes you seem like a bigger ass than you probably are. Now, let's quit bickering and lay our plans. The more we talk, the farther away Bob gets."

Fox didn't say much more after that. It took only a few minutes to plan their journey. Largely it was a matter of making sure that the available hiking boots passed Fox's meticulous inspection. "I thought Indians used moccasins," Kevin said. "I don't mean to be condescending, but it is what I thought."

"Boots. Indians used moccasins because they couldn't afford anything better, not to mention the fact that the dopes never invented the shoe on their own. Indian high-tech consisted of beaded wampum. Life was diseased, dirty, violent, and short."

Cindy wondered if the man was trying to be insufferable, or if he was so involved in his posturing that he really couldn't see himself at all. She needed him to track Bob, and she wasn't going to let anything stand in the way of that.

"We have no camping equipment," she said, "beyond the boots and Kevin's sleeping bag."

"I need a blanket. What do you need?"

It was a dare, she supposed. At best she found it boring. "I need everything I can get. A tent, preferably air-conditioned and equipped with a full kitchen and all necessary supplies. Why?"

"Just asking. So I'll bring two blankets."

"Waterproof."

He nodded. "Let's go."

"You're kidding. Right now, at eight o'clock at night?"

"We can stay in a motel tonight. In the morning we start. Early, four A.M."

She found herself eating a fatty breakfast in an all-nighter on Route 202 at 3:30 in the morning. Her head was pounding. Poor Kevin looked like a corpse, he was pale and very slow. Cindy made sure he drank a couple of cups of tea. Fox advised a big breakfast, and she obliged with scrambled eggs, toast, sausage, 40% Bran Flakes, coffee, and a slice of melon that tasted like dishwasher detergent. "You can eat," Fox said. "That's good. Once we're

tracking, there won't be much time for food, and game's scarce these days."

"We'll hunt?"

"I make traps. You'll see. They work good."

The detailed area map showed a road ringing the dump site. It was a lozenge-shaped two hundred acres of smoldering, noxious ruins when they arrived, their headlights dispelling the faint glow that persisted from the fire. The car moved slowly along, Fox peering out into the dark as he drove.

"Somewhere on this side, I figure." He drove for a time in silence. "I hope your husband had a good sense of direction. He's not a fool, is he? He wouldn't go south?"

Bob was not a fool in the sense that Fox meant. She did not think he would go south. He knew the direction of the wilderness in New York. His love of it had taken him deep into the Catskills and the Adirondacks. If only he could get away from civilization, he might well have a chance to survive. "He knows the country."

"Can Dad kill things with his mouth, like rabbits? And I wonder if he can eat a raw rabbit?"

They were upsetting questions. "I have no idea how your father is coping. I can't even begin to imagine it."

"They acquire the secrets of the beast," Fox said. "That's why men try shifting in the first place. They want to learn the secrets of the animals. Such secrets used to be very valuable."

"The cave paintings at Lascaux," Kevin said. "They don't show any people because the people are the animals."

"It's an ancient way. In all my life, in all the legends I've known, I've heard of only one other case where it really happened. Where somebody really, *really* changed into an animal. And that was many generations ago." He stopped the car. His hands went toward Cindy, took hers. "I want to thank you. You've given me a chance to meet this man in person, the man who was seduced by the wolves."

The three of them got out of the car. Cindy could see absolutely no trace of him in the dark blotchs of undergrowth that hugged the ground this side of the woods.

"There." Fox gestured toward a place that seemed no different from the others. "He went in right there. He was moving fast, you can see that by the number of leaves that are broken." Bending low, he hurried over to the spot. "He's favoring his right rear leg, toes digging in left to right. That says he's

got a thigh wound. The way the left foot is hitting, I'd say the bone's not broken. It's a flesh wound, probably infected. Hurting him, but not too dangerous. He's moving very strongly for an animal that's lost weight."

"Now, how can you possibly tell that?"

"The paper said he was weighed in at one-sixty. These tracks in this dirt—he weighs more like one-fifty." He stood staring at the ground, thinking.

"Where is he?" Kevin asked.

"Your father is well away from here. He passed this spot at least twenty-four hours ago."

"The dump fire started at five-fifteen yesterday morning. That's when he was here."

"Well, nearly twenty-four hours then. With his thigh and general weakness, he's covering about twenty miles a day. That's if he hunts on the run. If he can."

"What do you mean, if he can?"

"If he has the skill. You're hunting like he's got to hunt, running the animal down, it doesn't go in a straight line. It goes in circles, backtracks, anything to get away from you. Once he's killed and eaten something, then he has to reorient himself and cover lost ground. So we can assume he's getting maybe fifteen miles a day out of it. Moving sunup to sundown, maybe a couple of hours at night. My guess is he's about thirty-five miles from here."

She didn't want to ask the next question; she felt Bob slipping through her fingers. But she did ask, she had to ask. "What are our chances of catching up with him?"

"We can cover maybe fifteen miles a day. Twenty, if we work like mad. We don't have the four legs, that's our trouble. And we're tall. The undergrowth will slow us down."

Maybe they should all go to the hunting camp and just hope for the best. Bob would know the camp was crowded, though. There was a good chance that he would bypass it. He was hurt, she knew he was scared. If it was her, she'd be desperately unhappy and in a state of extreme panic. She would not make rational or courageous decisions. Her tendency would be to get to the most isolated place she could find, and hide there until she died.

It had occurred to her that he might commit suicide. She could only hope that the thought wouldn't cross his mind. Sometimes, though, he had fallen into deep, deep troughs. His despair was pitiful, at once bitter and full of sardonic humor. When he got an especially good poem back from one of the

magazines, or endured some epic business humiliation, he could drop into one of those states.

She kicked a stone.

"There might always be another sighting," Fox said. "You never know."

Wave after wave of sorrow broke in Cindy's soul. She hunched her shoulders, fighting back the tears until her throat felt like it was being wrapped in leather thongs. Then she burst out with huge, gasping sobs. Kevin clapped his hands over his ears. Fox stood impassive. When she stopped, he merely headed into the woods. They moved along easily at first, passing between tall trees and through stands of mountain laurel.

Soon Cindy became uneasy. They seemed to be going in an almost perfectly straight line. This was fine, but it didn't strike her as the sort of thing Bob would do. He'd get confused, double back, fall down gullies, end up at the edge of cliffs. But she had to trust Fox; he was the expert.

Even so—Bob in the woods? He'd practically gotten himself killed trying to track wolves in Minnesota back in the early seventies. And then there was that camping trip where he'd forgotten the matches and failed to pack the tent in the tent pack and brought the wrong hiker's map and missed the bus, and then laid their campsite at the edge of a pretty waterfall which had become a raging torrent during the ten-hour downpour that had taken place that night.

And the poor guy was out here with no hands, trying to keep himself alive with half the population of the northeast cheerfully hunting him down.

Lost in her thoughts, she wasn't aware that she had fallen behind until Fox was standing in front of her. "Look, Mrs. Duke, we can't keep breaking stride for you. Either you keep up or you don't keep up. The car's half an hour behind us. You can go back if you want to."

"No. I'll keep up."

He started again, twisting and turning through the trees like some sort of ghost, followed by Kevin, who was almost as swift. "I've been thinking," Kevin said as he moved, "we need to hit a town and buy a Walkman. One of us has to be listening to the news at all times in case there's another sighting reported."

Fox grunted. Twigs were scraping Cindy's head, she had leaf dust in her right eye, she'd practically shattered her knee slipping on a toadstool the size of a pancake, and now she was tumbling head over heels down a ravine she hadn't even noticed.

She did a complete somersault. When she saw the top of the forest rush

past, leaves against a pale pink streak of dawn, she forced herself to relax totally. Then she hit with a thud. There was a jagged rock right under the center of her back, but she had managed to loosen up enough so that she flopped over it rather than breaking in two. "I'm good, no problem," she shouted. Then she was on her feet and up the ravine and running to catch them.

As he talked Kevin hopped from stone to mossy stone in a little brook.

"Listen," Fox said. "I think the water has a message for us. He passed this way. The brook remembers him."

Cindy could not keep her mind on the water. She was more interested in her own ragged breathing and the excruciating pain at the back of her left heel, where her boot seemed to be grinding down to bone. She flopped back in a bed of leaves and mushrooms, and stared up through amazingly tall trees. It was now full dawn, and the orange and red leaves were clearly etched against a blue sky.

When she listened, the brook did indeed speak to her. She sort of understood what Fox meant, that the water had a message. It wasn't a direction, a piece of information, it was another kind of message, vibrant with obscurely useful meaning.

"I tell you one thing," Fox said, "the way this water smells, there's a town upstream."

"I don't smell anything. The water's fresh."

"You don't know the meaning of fresh water, then," Fox replied. "I've drunk perfectly fresh water. Bathed in it. The more filth you can smell, the farther along you are on the road home. That's the message of this water."

"What he's saying, Mama, is that we need to get to the town."

Nonlogical thinking was what they called it. Or was it nonsequential thinking? Cindy sighed and got up. "I hope there really is a town."

"Hell, just through those trees is a gigantic condo development. We're in New Jersey, ma'am, one of the most densely populated states in the nation. The only reason we don't see it is that Bob avoided it. This forest is a thin strip of green between armies of housing developments, believe me."

Half an hour later they were walking along a road. A mini-mart stood next to an Exxon. Rite-Aid Drugs and Wendy's had occupied the center of town, hard on to the lawn and garden center and the drive-in bank. Kevin picked out an inexpensive Walkman at Rite-Aid and Cindy was elected to listen with one earphone.

When they started back to the woods to reconnect with Bob's trail, she found herself walking to the drone of WINS, all news all the time. The Brooklyn-Queens Expressway was jammed from Grand Central Parkway to the Gowanus Canal, due to a disabled tractor-trailer. It was now 9:14. In sports, the Oakland A's had beaten the Orioles.

Torture, torture, torture. Slog through the woods while listening to this drivel. She was bored. She wanted a cup of tea and a good book. She wanted to lie down. She wanted to cuddle Bob up tight and make love to him.

"In other news, the escaped wolf has been sighted along the New York-New Jersey border. Waldemar town Supervisor Richland Frye and his daughter were camping at Braemar Park Site 12 when the wolf leaped in the window of their shelter, menaced Mr. Frye, and knocked him unconscious. Young Miss Frye wrapped herself in a sheet and ran the four miles to Waldemar to give the warning. Mr. Frye was treated and released at North Orange Hospital in Waldemar."

Cindy was sitting on the ground by the time the story was over, her hands pressed against her ears in order to drown out her son's frantic questions.

"It's him, there's been another sighting!" She repeated the story.

"Waldemar. My God, your husband's doing damn good. He must be covering more like twenty-five, thirty miles in a day."

To make a long story miserably short, it now became necessary to hike all the way back to the car in order to drive to Waldemar.

Lying in the backseat, inert with exhaustion, Cindy vowed that she was going to take control of this expedition. Fox wanted to do what he was best at, which was track. But good strategy and good detective work were more important. If only she could anticipate Bob's own thinking, she felt sure she could put herself in his way instead of trying to chase him, which was obviously hopeless.

Waldemar. He was now traveling due north. The question was, what did he know about the region he was entering? He would be bound to use that knowledge to his own advantage.

Her mind returned to the early seventies, to those ridiculous camping trips.

She knew. Just like that, she knew where to intercept him. Sitting up, she told Fox. When Bob got there—and he would get there—she would be waiting;

Chapter Eighteen

A HUGE WILLOW TREE GAVE BOB HIS NIGHT. NEVER, not even as a child, had he felt as small and vulnerable as he did now, sheltering in the tree's silent, protective fronds.

He dreamed of deep woods, the trees stalwart and concealing friends, and in his vague, shadowy dreams he ran after slow, fat rabbits. Then he dreamed of an enormous old cruise ship, and he was his old self. He and Cindy were taking a cruise through cold, islandless seas in the dead of winter aboard this ramshackle vessel. Like the other passengers she was dressed to the elegant beckoning of the past; she wore white flowing silk, the whispering evening clothes of the turn of the century. She smelled like wysteria, and indeed her jewels were their color, cunning glass earrings and necklace believed by the awed, hissing passengers to be priceless.

Bob was restless on the ship, frightened of its rough progress and the deep clanking of its engines. In his exploration of the dun ballroom, the weathered dining room with its frayed chairs and chipped Spode, the algal swimming pool, the cold, musty cabins with their sagging beds and their hair-choked bathtub drains, he became less and less sure of the vessel.

Then the others went parading in to a dinner of grapefruit halves with withered maraschino cherries and some sort of very dubious curry, chicken or rabbit, cat or rat. Bob found the fourth level, the deck where the crew lived. It was a brown, awful, rotted mess crawling with rats, spread with feces and bits of unidentifiable rot, and from its portholes he could see that the bows of the ship were plunging so deep that water was pouring down the smokestacks.

The crew were worse than zombies, listless, their vigor escaped with the last heat of their bodies. Some of them lying in their bunks had become almost flat, and when you touched them, their skin turned to dust.

They had to leave the ship. To get to the dining room Bob had to crawl through a squishy, musky tunnel. It disgusted him, all the intimate wriggling that was necessary, and the sins of the woman, her exhaustion, her poor diet, her fear, were contained in the stink of the canal.

Emerging, his tuxedo flowing with a slick substance, he confronted Cindy, telling her the truth about the ship, and saying that they had to get off at the next island.

"But there aren't any islands, and this ship won't sink." She surrounded him with her smooth arms and buried his face in softness and wysteria.

Then he heard water gulping in the bowels of the ship and ragged, exhausted cries.

He awoke to a rushing morning. In the night a northern storm had come, bringing with it long gray arms of clouds and icy flecks in the air. The fronds of the willow whipped his broad head with armies of yellow leaves. As he staggered to his feet, unaware yet of hunger and thirst and pain, this was one of those moments when he thought he understood some elusive secret, when perhaps a poem could come from him that would be nearly good, the very lines of the ship rendered into words. But then he became aware of the stunning, overwhelming beauty of autumn's smells, how very subtle and rich were the aromas of the ground, the leaves, the fust of mushrooms, the dirt, the sour little smells of insects, and through it all a wild freshness, the north wind coming down the Catskills.

He knew exactly where he was. This morning he would take the path up past Veerkeeder Kill Falls on the south face of the Shawangunks and proceed into the fastness of the chain of preserves and parks that protect the mountains and all that live upon them. As long as fifteen years ago he had come up this very trail with Cindy, taking her camping, trying to teach her his own techniques for living off the land. She never learned, though; to her, camping consisted of hauling the whole twentieth century into some corner of the woods and re-creating it there, with a wood fire for effect only. One cooked on a portable alcohol stove. One ate dried food reconstituted in boiling water. One drank not from the fresh-flowing streams but of flat city water brought in canteens and bags.

Bob sniffed the air. There wasn't a human smell in it. It seemed almost as if his body was becoming wider and bigger, encompassing more space. As he left mankind, the world opened out to him. Wolves are creatures of small society. They are not like ants and men, living in vast hives, entirely surrounded by their own kind and odors. On the wind Bob smelled ice, leaves, the bloom of the witch-hazel plant, cold stone, water. There was hardly a single detectable tang of smoke, no undertone of chemicals, little odor of human bodies, no smell of cold steel and oil, the sign of the gun.

He felt exultant—and he wanted to tell Cindy. He wanted so badly to say to her that he'd—but he couldn't say anything. He couldn't talk to her, couldn't share his life with her, never again.

Cindy. It was the most beautiful of all the words he could no longer say. Dear, sweet Cindy.

He moved off in the predawn, traveling slowly at first, then, as his thigh loosened up, going faster, slipping under the low-reaching boughs of saplings, through stands of hemlock, upward and upward. After an hour of steady trotting he came to Veerkeeder Kill, which was merry and fast, speeding down from its mountainside. The water was full of iron and seemed almost to catch in his teeth, leaving them vibrating. It was fiercely cold, so cold that it seemed to clarify his breathing even more than had the air. His sense of smell grew ever more powerful.

Raising his head, sniffing deep to find a rabbit or some other small creature, he smelled something that made his heart twist on itself and his tail droop.

It was her. Unmistakable. She was somewhere up on the mountain. He threw back his head, his thoughts dark with recognition and longing. She had been thinking and planning very carefully, to anticipate his route.

He wanted to get to her, to feel her arms around him, to take her and give himself to her.

His mind whispered, God help us, and the wolf threw back its head and howled through the rushing autumn morning.

Her scent lay close to the ground, wrapped in other smells, Kevin's humid freshness, and the old, smoky odor of another body. Had she hired a guide? It was certainly possible. After her experiences camping with him, her distrust of the woods had become profound.

As he climbed the path beside the spraying falls he became more and more uneasy. What would happen when they met? Could there be a real relationship? He imagined himself sitting in the living room, Kevin reading to him in that fluttery boy's voice of his. Or his dinner, pretty on one of the yellow checked place mats and a china plate, on which might be beef stew with a side of endive salad and a bowl of red wine, all neatly laid in a corner of the kitchen floor. There would be signals, nod to turn a page when he was reading by himself, a couple of taps to open a door, and it was all a pipe dream because in fact there would be no money and all the problems with the police and the ASPCA and heaven only knew who else.

But Cindy was a terrific person, she could solve problems. The only thing she'd never been able to do was hold down a job. She was too stubborn and proud to get along with bosses.

He climbed so easily, a free wolf in the air of morning, that he reached the top of the falls far more quickly than he had as a man, and with no gasping, no scrabbling, no skinned hands or dubious pains in his knees. This body was wonderful to feel and be.

Now their odor became strong. His nose directed him to their sleeping forms. Going softly closer, he inhaled the most amazingly intimate odors from them. He could smell everything, their sweat, the grease of the hamburgers they had eaten for supper, the light acidic content of his son's stomach, the fouler odor of the man's belly with its must of digested beer, and Cindy's contents, sour dairy: she'd had ice cream for dessert. He loved her harder; when she was sad she ate ice cream.

He did not want her to be sad.

With the total clarity that these things sometimes bring, he knew exactly what he had to do. There just couldn't be any question about it. This woman, this poor little boy, were his family. That meant more to him than life itself, than anything that had transpired. His skin crawled when he remembered his desire to commit suicide. How great a sin that would have been against these beloved sleepers. Look at them: Cindy with that amazingly pure skin of hers. How madly he had loved that skin. He could smell it now in heady detail. The lives of scented beasts were so intimate.

Odors that might once have seemed foul to him no longer seemed at all bad, not even the sour, unwashed stink of the man who was with them. Odors were not characterizable as good and bad. They were too complex and interesting. Just the smell of that man—he couldn't even count the number of separate odors involved. There were thousands. A whole art must exist in potential around the selection and orchestration of scents.

Still, though, as much as he enjoyed his wolf, it was time to make a final and heroic effort on behalf of real life. As soon as he had smelled Cindy there came to him the definite sense that the wolf was on some level less real than the human had been. It was a wonderful body, true, but it was also primitive, totally unsuited to a man of poetry and thought. He, who sometimes spoke well, had been reduced to a rude state indeed, given this minor voice, capable of no formed words, and the crude paws for hands, paws that could never write a line.

And yet he was in here, full of thoughts that ought to be written, love and hope to speak, defenses and challenges, all made of words. He wanted to love his wife, to love his son, to somehow apologize to them.

When the man with them moved, Bob knew he was awake. How long had he been lying there watching him snuffle his family? A great moon face came oozing out of the blankets, rimmed by black hair. The eyes were tiny and as dark as obsidian. What was this man, Hispanic? No, Bob knew an Indian when he saw one.

An Indian. How interesting that Cindy had gotten an Indian. Where in the world had she found him, this man who moved so slowly that it was hard for wolf eyes to follow him?

Then he was on his feet. A swift, watery motion. Scary. Up close, human beings were tall and alien, their heads so far away, their faces terrifying with knowledge.

The Indian stood absolutely still. His face, though, was dark with staring. He was absolutely concentrated on Bob. His stillness made him hard to keep in the eye; this man knew something of wolves.

One reason that men were so scary was obviously that they were dangerous. There was another reason, though, one it was hard to put into words. It had to do with the very animation of their faces. They looked too aware. And he knew they were: the human mind has gotten lost; it has strayed too far from its wild origins. Animals were distinguished by their concentration on what was in front of them. The human mind went back and forth, in and out, complicating. It could not find anymore the shadow upon the grass.

The wind soughed across the mountain, the falls sounded like glass. In Bob's nostrils were the smells of water and stone, and of his beloved family. The light had taken on a rosy grayness, and a sparrow twittered nearby. Why in this sweet morning was the man moving like that?

He wanted to kiss Cindy, to hold her, to feel her snuggling against his breast.

The Indian came closer, oozing like heat-softened plastic, his arms and legs seeming almost jointless. "Shape-shifter," he whispered. "Shape-shifter, please tell me your secret."

To calm the man, Bob sat firmly down on his haunches. He let his jaw drop and his tongue hang out. His face was not very mobile but he thought he must be smiling. He yapped once, trying to awaken his family.

"Shh! Tell me before they open their eyes. Think what it would mean to my people, shape-shifter. Think what it would mean!" He squatted before Bob, his hands open and pleading. His face tightened, his lips drew back. Bob

could see his skull, and his death, and the long quiet years in the ground. He had a clear notion: The body belongs to the ground, and the ground knows it. "Please, shape-shifter, give me a sign." He screwed his eyes closed, his hands were begging claws. "Think what it would mean to us. We Indians could change into wolves and foxes and deer, and we could go back to the forest!"

Bob was startled enough to growl sharply. The man's eyes bulged wide open. "You—you understood?" The wind swept down, ruffling Bob's fur, making the man squint. "Snow's coming!"

Kevin leaped out of his sleeping bag and threw his arms around his father's neck, kissing him wildly, his tears filled with the smell of the ocean and his skin with the fragile scent of youth. Then Cindy was there, too, and she kissed the side of his muzzle, his lips with careful, determined sensuality. "You never run from me again," she said, her voice going low. "Never!"

He looked at her. Before the knowledge that he now faced, he felt ashamed.

He could not live in the human world, not as a wolf, not as a dog. As much as he missed Cindy and Kevin, he didn't even want to become human again.

You, wolf, will be back to making cold calls from that stuffy office, the man at the bottom of the Empire State Building.

He snarled at the Indian, who had produced a little straw packet, which he was opening.

"We've tried shifting a million times. I used to do it when I was a kid. I wanted to be anything except an Indian. If I'd been able, I think I'd willingly have turned myself into a lawn mower. As it was, I tried for hawk, for eagle, for wolf, for deer, for panther. All I got was burned hands when my ritual fire blew up."

He spoke as if Bob could not understand him. Bob had gone up on all fours, and made sure he was between the people and the mountain. His instinct wouldn't let him be comfortable with the falls behind and three human beings blocking escape.

He was ashamed of himself when the notion of simply trotting off flashed through his mind. The Indian could probably track him, but he could never catch him, not without an off-the-road vehicle or an airplane.

He heard Cindy muttering to herself, her words inarticulate. It would hurt so much less if she wouldn't pray. Her religion, like his, was indifference. They were lapsed Catholics, both of them, full of quiet pride that they had solved the algorithm of guilt so well that they could enjoy the croissant

Sundays that kept them home from church.

Until now Bob had not understood quite what it was that distanced him, from the church. A few days in the bright shock of a new form had made it all clear, though: on a planet that so obviously needed the love and protection of its most clever species, a heaven-directed church seemed anachronistic, its indifference to the welfare of the earth fundamentally invalidating.

When the Indian began shaking a carved stick over a fire, a fine pin of unease entered Bob's mind. Religion may or may not be invalid, but rituals aren't hollow. In the hands of the believer, the ritual is a powerful force indeed.

On its deepest level Bob's change had been a matter of the wall against this kind of belief breaking down in him. His first transformation, in the hotel in Atlanta, may indeed have been imaginary. Because it was so realistic, though, he had believed in it. After that, everything else had become inevitable.

He stared transfixed at the Indian's preparations. Western culture had destroyed the Indians because it had destroyed their ability to believe in their own magic.

All the Indian had to do was to transform Bob back into a man and all of his magic would work for him again, because his success would strengthen his belief. The tribes, broken in spirit, would spring back to life.

At the end of the stick that danced in the Indian's hand was a tiny dancing man. He stared at the naked thing. Was it wax or real? It had no face, or perhaps the face was simply too small for wolf eyes to see.

He thought of the ritual deaths of kings. To give the Indian back his birthright, the wolf would have to die. The man at the end of the stick danced, a slow and regular dance, as graceful as the drifting of a finger in the sea. He was a weed of a little man, down at the murky bottom.

His arms rose and fell, his legs flashed in the spreading light. Kevin cried aloud, clutching down into the folds of his mother. A crow landed nearby. Bob smelled rabbits on the wind, and wondered how far away they might be.

He didn't wonder long though. The Indian kept chanting, shaking his stick, and Bob knew that there was another smell in the air, a human smell, small and intense. There was a suffering, real man at the end of the stick. He wept as he danced, the same awful, universal mourning that made Lewis Carroll's Mock Turtle such a figure of childhood dread. The weeping without reason and therefore without consolation, reflected in the tears of the Indian.

Bob felt the movement within and knew that the man was striving to

escape as the wolf had escaped. He sensed the crow alight from its food gathering, sensed the rabbits across the mountain grow still, sensed the failure of the wind and the stopping of the leaves. He had known a body that saw by eyes and one that saw by nose. It was difficult to imagine how the planet saw and felt and knew: the whole of life was its mind, its nerves, its vision. The earth was a great cyclopean eye rolling through space, looking out into the void. What awful consciousness had urged the spawning of man, or more, had ordered him to become what he had become?

He felt anger rushing through the stillness. No wonder the tiny man cried, no wonder the Indian cried, no wonder his son hid in his mother and the crow became silent. Within him the man rose and clambered, stuffed himself into the shape of the wolf, and he felt his muscles longing to stretch, his skin longing to shed its stuffy fur and spread to the caressing air. His stomach did a grotesque turn. Green-flecked vomit burst out of his mouth and he stood tottering, a tall, naked man who could not help but dance to the command of an Indian with a stick.

The Indian threw the stick down and screamed. Cindy cried out, Kevin shrieked, and Bob saw a chance of madness in the poor child's eyes.

His scream, his father's anguish, spread through the silence as quickly as an atomic expansion. Then, as quickly as a trap taking a rat, the wolf snapped back around Bob and he fell down, his jaw working, growls scumbling in the thick mucus that was the waste matter of these furious changes.

"Bob, Bob!" Letting her boy fall aside, Cindy rose up. Her face was distorted to a Hydra grimace, her hands were working in his fur like snakes, her body bursting with thick panicky stench.

"Bob, please come back to us." Her voice was not steady. She was thinking fast. "I never expected you wouldn't want to. You don't though, you *don't!* Oh, Bob, you got a rejection from the *Poetry Review*, but it was a personal letter. Bob, they asked if you were aware of the Imagists. I sent a reply, I said yes, but you didn't care for Amy Clampitt. Was I right, Bob? Oh, come back to your life. Come back to us." Then her voice broke and she sank down, miserable on the stones.

The world seemed not to have noticed. The falls still spattered, the crow still worried a berry bush. But Bob knew the lie in that, he had sensed the tension in its watching.

"Dad—"

It was agony to hear their pleading. Even to glance into his son's eyes was

torment.

"Dad, please. Please. I need you, Dad, I miss you. I can't even read anymore, not without you at home. I can't draw. All I draw is black."

The Indian was lying on his back, staring at the sky. His breathing was so even, Bob thought he might be in a coma.

He must not prolong this torment. With a bitter heart, hating himself for what he did, he turned away from them. There was no sound behind him. Over his shoulder he saw Cindy slumped on the ground. Kevin was watching him with a sorrow in his face that no child should know. Bob could not say why, but his deepest instincts, wolf and human, were all telling him to do this, to leave them, to run into the wild.

He did run, farther and farther, until the last edge of their scent was gone.

All day he ran, stopping only to steal a chicken from a yard in High Falls, New York. Toward afternoon it began to snow. He ran as much toward the wilderness as away from his family and his former life. Somewhere in him a brute voice shouted that it was free, shouted down the driving snow.

He heard the flakes hiss on the hemlock boughs, felt them snap cold on his nose. As he ran the world changed from the last of autumn to the first of winter, and all memories, all desires, were covered with a kindness of snow.

Chapter Nineteen

DAYS STRETCHED ON DAYS AS BOB MOVED STEADILY north. He became a cunning hunter, quick and mean, and clever at avoiding men. Winter came, wet at first and then rich with snow. Sometimes he heard Cindy's name in the wind, or saw the sorrow in Kevin's eye, but he ran on, obedient to the wolf that he was, and the wild.

He was in the deep north now, and the snow hissed in the hemlocks and pines, it roared past the naked limbs of oak and maple, it swirled in the glades and blew hard against his flanks.

His coat had grown thick and full. Only his nose was cold, and it was tormented. When he could bear the twirling knife of the wind no longer, he would curl up with his back to the blizzard and bury his muzzle in his paws. He could remain like that for hours, until he was entirely covered by a blue, icy translucence. Then it was quiet, and he experienced a deep feeling of safety.

Every morning, when thin light would penetrate the sky, the urge to move would possess him once more. He would break out of the snow and shake himself, feeling the cold air penetrate all the way to his skin. Thus refreshed, he would sniff the air, seeking the musk of an opossum or the rabbit odor.

The colder it got, the less often he smelled anything beyond the smooth aroma of the snow.

There was something in his soul that was urging him north. He did not know what it was, but it drew him, dragged him, forced him when he was tired. His nose ceaselessly tested the air for something he could not name. Cindy and Kevin had become glowing statues in his memory. The brutal labor of his journey, the snow, the clarity of his struggle had sliced away all sentiment. His blood was no longer attached to his family; it belonged to whatever goal lay at the end of this journey.

But then he would hear the wind, and her name. . . .

He loved something out here, something he could not name. Maybe it was the wild itself, the whole complex, restless personality of life, or maybe it was his new wolf nature—so urgent, so fundamentally decent—or maybe it was wolves in general, even the beautiful act of hunting.

Finding and killing game was the highest experience he had ever known, higher even than riding Cindy in the soft summer nights. There was

something at once so terrible and so beautiful about biting the life out of a little creature that he quaked inside just to think of it. In his life before he had never seen sorrow like the sorrow that entered the eyes of an animal he was killing, nor had he ever felt the fire that eating a kill gave him.

It is the life of the killed thing that is eaten, as much as the blood and meat and bone.

By the time he reached the high Adirondacks the weather was so cold that the fur framing his face froze at its tips. The pads of his paws had fissures in them that revealed deep red wounds, and he left pink flecks of blood in his tracks. Game was scarce indeed, and he was becoming famished.

Despite his doubts and the conditions, his progress had taken on a kind of hypnotic quality. From the gray hours before dawn to the gray hours after sunset he would lope steadily along, stopping to hunt when he scented the opportunity. He would eat anything—rat, opossum, rabbit, raccoon. He avoided skunks and porcupines. Deer were too fast for him, and the idea of trying to attack something with sharp little hooves was unsettling.

In the past few weeks he reckoned that he had come at least five hundred miles. As he moved along he altered his course to the northwest. Sooner or later he knew that he must cross the St. Lawrence Seaway. He would not attempt to swim. He was hoping that he would reach it after the seasonal ice had closed it. If not, then he would have to wait on the American side until it did.

He had been without food for six days when he detected a powerful, greasy odor coming out of a tumble of rocks. He'd never smelled anything like it before. Strong smells delighted him, and this one was so strong that it made him shudder all over. His impulse was to rub himself with it, to wear it like a sort of talisman. It was extremely rich with meat and blood.

He looked toward the rocks. How odd that the odor came from there. Such a powerful smell, rolling over him in waves, had to emanate from a large animal. But what could it be? He would see a deer or a moose. Stiff-legged, he stole closer. Still there was nothing, and yet the odor was literally pouring out of the rocks. It was strange enough to be frightening. Had he not been so hungry, Bob would have left this place.

The rocks were contorted razors. They cut painfully into Bob's paws, and he slipped on the ice, skinning his spindly lower legs. But that scent: he visualized a whole mass of animals, rich game, incredibly rich. His drool froze on his chin.

It was not long before he located a den in the roots of an enormous hickory. The den opening was large enough for him to walk through.

A large black bear came swarming out at him, its eyes beads of fury and hate, its voice booming against the snow-muffled land. There was no warning, no waiting. Before Bob could do more than utter a bark of surprise, the bear had taken a hissing swipe with the claws of his right paw. Bob narrowly escaped the speeding, black nails. He skittered back, fell, tumbled backward. The bear literally leaped through the air in its mad urgency to attack. For a moment the whole huge beast hung above him, its front paws spread wide, its lips revealing yellow, vicious teeth.

The smell that cascaded down from the bear was lovely, an art of meat and wonderful, rich grease and blood. As Bob tried to tumble away the bear landed on him with a thunderous crash. Now Bob was under the creature, his breath knocked out, half-stunned by the power of the blow, feeling his bones bending to break beneath the horrendous weight of the animal.

Beneath his compressed body he could feel a tangle of frozen brush. It was a crack in the rocks. As the bear struggled to get its huge forelegs around him, he tried to dig down, grappling at the twigs with clumsy paws. Frantically, he scrambled out from under the bear. A swipe of one of its paws connected with his injured thigh, reopening the wound with a flash of pain so great that he almost lost consciousness. He spun round and round, tumbling down the rocks, stopping only when he landed upside down against a spindly rowan. The bear stood in front of him, swaying from

side to side. He could hear its claws clicking, and the moaning of the wind across the top of the ridge behind it. Looking into the bear's blank, glittering eyes, he felt very alone and very lost. In all the wild he was, after all, the only truly aberrant creature. This bear was savage, its eyes said. And its eyes also said that it had no mind. If he died here, it was going to be a lonely, hard death. But were not all deaths in the forest such? And he would die having had one of the highest of experiences: to be a raw animal, in the body of the animal, with all his human consciousness intact.

Cindy ... the wind said. He shook his head and snorted. At a moment like this, the human world must not be allowed to intrude. If he was to survive, he had to fight as a wolf.

The bear sucked him up in its deadly hug, and began dancing ponderously through the snow-choked clearing that bordered the stony hill. He smelled its breath and heard the dark thudding of its feet in the soft snow. Then sun came

out, and shone golden on its coat. In the rich new light Bob struggled and snapped, trying to connect with some vital part of the monster, while it crushed out his life.

His chest was closed off and his nose began to pulse with trapped blood. He could no longer breathe, and it felt as if his head was going to explode. A torment of air hunger made him writhe. He felt his bowels give way.

His teeth kept meeting air, but the bear's claws did not meet air. Instead they twisted and dug under the skin of his shoulder, piercing toward essential gristle. In great agony, he screamed. The bear replied with a mournful, inexpressibly savage moan. It tightened his grip on him, and he saw Cindy coming up the clearing with a gun in her hand.

His heart battered against the walls of his chest, he felt his legs scrabbling through the bear's fur. Cindy raised her rifle—and then disappeared into the crystal air. At that moment he came close to complete despair. The bear was killing him, and she had been a death dream, nothing more. Had he been able to shout, he would have called her name, but in the event, all that escaped from him were high, sucking cries.

His body turned and his legs kicked frantically. The bear danced round and round, moaning as it brought its muzzle closer to his neck. He could feel its bear breath on his face, could smell an intimacy of berries and old fish. His body was -wiped in the animal's grease. The odor of bear that had drawn this ignorant wolf too close now became a loathsome smell.

He probed dismally into the wall of coarse fur, snapped with half his strength. To his surprise the bear tossed its head back, then bit at him angrily. For a moment the two of them were cheek to cheek. He could see his own reflection in the bear's savage eye.

Twisting his head, he drove a canine deep into that eye. There was a loose pop as of a finger jabbing through many layers of tight, wet paper and this time the bear screamed horribly, throwing its head back, the remains of its eye dangling along its cheek. A claw drew across Bob's back, the nails going deep. It would have been less painful to have his skin trenched by hot irons.

The pain was so great that he forgot himself. His head shook from side to side, his jaws snapped and snapped. All control was gone.

Then he was lying on the ground and the bear was glaring down at him, shrieking and gasping. Half of its face was torn away. Bob could see teeth and muscles, and the tongue working in the mouth. In his own mouth he tasted filthy hair and rich, rich meat.

Almost without being aware of it he leaped right at the creature, driving his furious muzzle deep into the flesh of the belly, into reefs of sticky fat, then deeper into the wall of tight muscle beneath it and the steaming organs at the final depth. With a roar the bear grabbed him in both paws and heaved him away. Bob slammed against a boulder, was covered in a cascade of snow, and came forth wild with a fury he could neither control nor understand.

Shaking, his ears back, the skin of his neck stiff and full of shivers, his tail close down, he ran at the tottering bear and grabbed a purple loop of intestine protruding from the hole in its belly. The gasping creature savaged him again, kicking him away. This time, though, he drew the bear's vitals with him, his jaws clamped hard around them.

By pushing him away, the animal had gutted itself. It stood to its full four feet of height and waved its forelegs in the air, looking very much like a man wearing a bearskin. Then it began to claw at its own belly. A torrent of dark blood poured out of its mouth. Surprised, it snapped its jaws shut. Its eyes were sad now. Slowly, it sat on its haunches, swaying from side to side, staring at the wolf that had killed it.

With a final moan of rage, it threw itself toward him. By the time its great, bloody body had covered him, it was dead. Bob lay beneath it, in the heat of its blood and offal. He struggled a time to free himself, but a tiredness so profound that it seemed itself a kind of death overcame him and he closed his eyes.

He dreamed of the kindness of a balmy goddess, who touched him mercifully where he hurt. She touched him with long, golden fingers, probing so gently into his wounds that he felt naught, filling them with the sparkling medicine of heaven.

When he awoke, it was from coldness bothering his nose. It was snowing again, and the bear was no longer covering his body.

He opened his eyes to piercing gray light. The blizzard had blown itself out, leaving a residue of flurries drifting down from high clouds. When Bob raised his head, he was astonished to see the remains of the bear scattered all around him. He snorted, stood up.

At once he yelped; every part of him ached, especially his chest and back. His old thigh wound was better, perhaps because the bear's clawing had lanced it and drained away some of the infection.

He took personal inventory: he had at least two cracked ribs, possibly a broken one. His shoulder was hard with swelling and scab. When he

shuddered his skin, his back felt as solid as a board. Looking as far as he could over his shoulder, he saw a mass of scab there. He was literally encased in dried blood.

The bear was in pieces around him. The huge creature had been pulled apart by experts, and eaten. The organs were all gone, most of the meat and fat had been consumed, even the bones of the legs had been cracked and the marrow eaten.

Bob saw in the snow tracks very much like his own, dozens of them. His heart started racing: wolves! Then he smelled the finest, the sweetest, the most exciting odor he had ever known. He barked five or six times, he did a crutchy dance of excitement. Wolves, he was in wolf country! Sheer happiness burst up in his heart, making his injuries seem light, his trouble seem small. Wolves, you could feel them, all around. His heart was weighted with love and longing.

This was the nameless thing that had come to dominate his life, had separated him from his family and drawn him all of these brutal miles. They smelled wonderful. It was much more than an odor or a perfume, it was a scent connected directly to his soul. There was no way to describe it, except to say that it was to normal odor as the sight of heaven must be to hell-weary eyes. Again and again he inhaled. Wonderful. Love. His heart burst with joy.

Then he found himself throwing back his head and howling. The sound that came out was not restricted as it had been before, controlled by the uneasy human consciousness that was so quickly becoming a supercargo. Now the sound rose fine and tight as a needle piercing the sky. It shaped itself to a long sonic spire, then spread out like a flower in the light air, flowing softly across the frozen land.

It evaporated into silence. Bob was disappointed. Where were the wolves? Why wouldn't they answer?

Then they did.

Echoing across the far hills, sweeping past the naked limbs of the trees, as cool, as sharp, as delicate . . . the answer came, and his tail twirled wildly.

He had been spoken to across the miles by a real, living wolf! He had spoken wolf-to-wolf! As a wolf he was here in this place, and he was one with the whole kingdom of the wolves.

The howl died away, ending on a low note that carried in its tone a text of warning. Bob howled back at once, all of his excitement and joy flowing into the soft, curving sound.

The reply came as quick, from the north and from many wolf throats, a high scream of a note, speaking volumes of subtle language, building pictures in his mind of limpid eyes and fast teeth. Was this alien speech rejection or welcome? He listened and their voices touched him to the bottom of his life. He wanted to be among them, to be one with them, to love them and live among them. Cindy, they're wonderful, they're like gods! Cindy, I—

I still miss you.

But he started out at once, tracking them with a competent nose.

Even though he was still in New York State, he'd encountered a wolf pack! A big one too, judging from the number of different voices in their howl. He found himself looking around for a pay phone to call Cindy and tell her to get in touch with the Department of Environmental Conservation. Wolves in New York: what good, what happy news.

Then he thought: maybe DEC already knows. What if they *did* tell the public? Would not people come forth with their guns, eager for trophies, eager to kill the evil thing of the forest? No, the presence of these wolves must remain a secret. In their world they were powerful, they were kings, but in man's world he had to remember that they were vulnerable little creatures without a future.

He smelled them again, this time when the wind blew from behind him. This scent was stronger and he detected in it something new, something so exciting that he almost collapsed. A female odor, definite, musky, deep as wood, so intense that for a moment he could actually see her, the face of perfect beauty, its sleek snout, its fine, black ball of a nose, and the heartbreaking line of the eyes, so expressive and subtle. He was embarrassed, confused. This was not a woman's face, but it was the most feminine face he had ever seen.

All of his knowledge of wolves arrayed itself before him. The books sped past in memory: *Of Wolves and Men*. Erik Zimens's *The Wolf: A Species in Danger*, the work of Dan Mech. He remembered his time in northern Minnesota, the wolf he had seen, and his dreams of wolves, his lifelong wandering in the shadows of his own desires. Now he ran, a wolf at last, seeking what his soul had wanted, maybe from the very beginning of its existence, which was to fulfill this odd destiny.

The wolf pack is a tightly knit organization, made up of animals who have known one another from birth. It is not generally open to strangers. Wolves are fierce territorialists, protecting their hunting grounds from outsiders. They

are expert fighters. They have a strict and elaborate hierarchy.

He followed the trench of tracks in the snow, never losing it for more than a few seconds, his nose drawing him after them with great accuracy. As he moved along, he thought he could smell other wolves much more clearly than he could anything else, almost as if his nose was more perfectly adapted to this odor than to any other.

He did not move fast. If he ran, his back, shoulder and thigh hurt, and when he breathed deeply, his ribs wrapped him in a band of pain. Trotting along, he again scented the female. Something turned in his loins, and he moved faster despite the pain. He was astonished at himself. He was having a strong sexual stirring. This was the mating season for wolves, or the beginning of it. He did not feel the steamy sense of desire that Cindy evoked in him. This was more pure than the inventive love of humans: this was lust in a form so simple that it was perfectly clean; it was sex devoid of all but purpose.

His desire made him imagine the gentle aroma of cubs, feel their soft fur. He had to father cubs, *had to!* He gasped as he ran, he panted even in the cold. His desire came cracking through the layers of self: cubs, cubs, cubs. She was in heat, she was a goddess, and he had to have her. He stopped, raised his muzzle, and howled. In that howl he knew that there was more than quest and loneliness, there was also a challenge he was helpless to suppress.

The replying howl washed over him, a tumult of passion, and it was not kindly passion. It was fierce and immediate and full of snarl. Behind it was fear, and he knew that he was approaching them too directly. A pack of wolves is an ancient and very subtle social structure, governed by rituals and laws that must go back in an unbroken tradition to the very origin of the species.

There were things in that howl that made Bob stop and listen most carefully. Terrible things, anger, bitterness, suspicion. There was also a pride so great that it awed him. The howl was rich and full and decisive, beginning and ending with a single, great tone. It was the voice of the leader.

Bob ignored the warning in the howl, the implication of murder. He had to; he could not bear to think that the wolves would do him any injury. After all, had not that wonderful female in her kindness licked him? Hadn't she? What healing she had in her—were it not for her, he would have awakened in great anguish. As it was, her tongue had accomplished significant healing. He could move and he was certainly not going to die.

For hours and hours he followed the trail of the pack. They were going north, farther and farther, never stopping, never even reducing their pace. He had prided himself on his speed and range, but these wolves were much faster than he. He believed that they had gone as far as forty miles last night. Evidently the odor of the bear had been strong enough and unusual enough to bring them out of their normal territory, to which they were nervously returning.

It was just getting to be evening when he found himself at the edge of the forest. Before him was the St. Lawrence.

He looked out across the tumult of ice.

The seaway must be at least a mile wide here. It was a white, tumbled emptiness, cracking and thundering as the current underneath shifted the ice floating on top.

On the far edge of the ice, where it softened into a smooth, snowy strand, he saw something that stood his hair on end. There were at least a dozen black dots there.

On a nearby bush there were a group of strong scent marks, pungent, redolent with the particular urine odor of this pack. It was not a bad scent. It was sour and warm and penetrating. Interesting. He sniffed carefully.

Then his body did something that he did not expect: it raised its leg and urinated, obliterating the territorial marker.

The wolves on the far bank had become very still, and were now hard to see, a fuzzy clutch of black blurs in the winter emptiness.

He smelled them, raised his head, and howled again. They howled back, angry, afraid, full of warning.

His answer was the only one he could give: he trotted out onto the frozen water. Whatever happened, he had to try and join these wolves.

They were the center and purpose of his life, he now understood that clearly.

They howled again. The sound was frank with menace. Bob lowered his head against the vicious wind. The time had come to face them.

Chapter Twenty

THE STACK OF FILTHY DISHES TEETERED ON THE EDGE OF the counter. Cindy turned, snatching at them. Her uniform snagged against a loose corner and she went down amid a cascade of plates, cups, silverware, hamburger crusts, and wet cigarette butts.

She sat there in the rubble contemplating a half-eaten pancake that had adhered to her apron. From the other end of the counter Louie Parma, the owner of Parma Lunch, clapped, a series of dismal pops. Misery swept Cindy. She got up, murmuring a "sorry, Louie," and started picking up the shards. A piece of glass jabbed her finger. A convulsive jerk caused her morning's tips—a dozen or so quarters and dimes—to fall out of her pocket and roll away among the chipped and broken dishes. "Sorry, Louie, sorry."

She shook the tears from her eyes. As she started organizing the rubble into a pile she saw Louie's neatly polished shoes appear. "How much?" he asked, pointing a toe toward some of her coins.

"Six dollars."

"I'll take that and dock you another twelve, we'll be even."

"Okay, Louie." Her salary was five dollars an hour and she'd been here since 6:00 A.M. It was now eleven, which meant that less these deductions, she'd cleared only seven dollars on the morning. That was important, vitally so: Kevin would have to eat the last of the spaghetti tonight; she would skip the meal.

No matter what, she was not going to call Monica. The woman was slowly coming undone, tortured by her inability to understand what had happened to Bob, and unable to enlist the aid of any of her fellow scientists and doctors in her research. Monica was now a haunted woman, her practice in ruins, her wealth disappearing into the well of what the rest of her profession saw as an insane quest.

Monica was no longer a source of money, support, or anything else. Cindy felt so sorry for her, but there was nothing she could do. Her concern was finding Bob again and really communicating with him. Only then, with him and understanding him, could she and Kevin hope to have any peace.

Joe Running Fox, also, was obsessed with him. He had guided them to Olana and then disappeared—when was it, in February? Yes, and here it was the end of March.

Joe knew that Bob was somewhere near here. If Joe found him, Cindy knew that he would be back. As it was, he lived out in the snow, a frostbitten ruin of a man, almost an animal himself. He prayed to the old Indian gods. He searched.

As she dumped the remains of the plates into a gray busman's tray, she remembered that she would still be able to keep her lunch tips, which might be as much as eight dollars if those darned highway engineers didn't take up table one the whole time and not leave anything again.

She took her mess out back herself, not caring to confront Willie Clair, the dishwasher and busman, with the results of her mistake. He'd scream at her, then subside, walking back and forth slapping his hands against his thighs and cursing.

When she opened the back door, a blast of wind made her stagger. She glanced up, into the clear, frozen air. Immediately beyond Ontario Street the forest began. She looked into the blue, shadowed fastness of it. Week after week she had walked this forest, through what seemed an endless winter. She had come to see it as intractable, hostile, and joyless. It was devoid of poetry, of hope: in all the weeks of her searching she had heard wolves howling exactly once.

She and Kevin were fugitives from ordinary life. He was no longer in school. He had become fierce and domineering. Night after night he awoke screaming, so often that they could not keep a room for long. They'd about used up Olana, as a matter of fact, moving from the Gracey Hotel to Mrs. Winslow's to the Indian Inn, where the puffy, woebegone Sim Jones was beginning to shake his head whenever he saw the boy.

"Cindy, you got customers," shouted Louie.

"On my way, Lou!" Table one was occupied by two people, a thin, sallow woman with a cigarette between her fingers and a big man who looked like a wax effigy of himself. That table was the big one. "Hi, folks," Cindy said, "sure you don't want a booth?" Seeing two people at his big table would put Louie into a funk for the rest of the afternoon.

"This's fine," the woman said. "Gimme coffee and one of them nut rolls."

"Coffee and you got cherry pie?"

"Yes, sir, we sure do."

"I want apple. Cherry's too damn sweet."

The woman laughed. "What do you do that for, Bud? You always do that. 'Got coffee?' 'Yeah.' 'Gimme tea.' I couldn't believe that when you first did it."

She looked up at Cindy, smoke rising from her wide, tight smile. "Can you believe this man?"

Cindy smiled. She did not laugh. It would take an extra tip to get that out of her. She turned and posted the order on Louie's turnstile. His face, already dark over the loss of the big table, darkened further when the highway engineers came blundering in, knotted in the doorway, and stared at the table. There were mutters. One of them nodded his head and the group left, tramping back into the snow, headed no doubt for Clasby's down at the other end of Ontario, or for the McDonald's that stood near the high school.

Louie shook his head. "You got no sense," he said bitterly. "There goes twenty-five bucks if it's a dollar. What the hell am I gonna do with all the extra hamburger I got in for those guys?"

"Eat it."

"Gimme a kiss, cutie."

She thought how nice it would be to take a whip to Louie's great lardbag of a rump. She could imagine his flesh rippling and his voice cracking while she did to him in the body what he was doing to her in the soul. He's paying me and I hate him, she thought. Isn't that typical, ungrateful bitch that I am?

"C'mon." He made yet another halfhearted snatch at her. Then his eyes met hers, his big animal eyes. The Indian had called her hawk, Bob wolf, Kevin owl. This was hyena, this sweat-sheened short-order cook with a fleck of tobacco from his long-chewed morning cigar still adhering to one of his front teeth.

She shook her head, backing away from Louie. There was no use yearning for Bob. Even if she managed to find him again, he would no doubt run away once more.

At first she had been furious with him, but time had made it more clear that he'd seen no alternative. How could she house him, feed him? And what about their love?

There was a man in that wolf body, and she loved the man. But the animal—it was mysterious and, frankly, horrible.

There was no time to think about these things now: she had another table to work: Big Charlie Tolner had just come in with his brother Little Charlie from their garage over on LaSalle.

That made Louie happy again: the Charlies tended to favor Clasby with their business. "You guys walk? I ain't seen a car."

"My truck's busted," Big Charlie said. "So's his. We's out last weekend

after us a moose, ha-ha. Almost got us a wolf. They're comin' down farther every year. Not enough deer and moose up in Ontario, I expect."

Cindy might as well have been dealt a blow to the side of the head. She took a large, unlikely step, slopping coffee out of both mugs, ruining the piece of cherry pie she had just cut.

"Wolves," she managed to croak. "Charlie, did you say you saw a wolf?"

"Big black fella, thin as hell, standin' up beside the St. Lawrence. Just stood there, lookin' at us. We got two good shots at him."

Her skin felt like a sheath of snow. "Did you hit him?"

"Nah. He's a smart sonembitch. Most wolves, they start runnin' like hell, you shoot at 'em. This old guy, he see's he's got the St. Lawrence behind him. He runs out on that ice and we can just take our time. We got a wolf pelt. This fella takes cover, like. See, he goes up behind a big chunk of crack ice." The Charlies both stared at her, their left eyebrows raised in identical expressions of astonishment at the memory. "We run after him, but he got away," Big Charlie said.

"Slunk through the ice mounds near the bank," his brother added.

It was Bob. It had to be him. She could picture him: thin, scraggly, smart.

Out on the St. Lawrence. "Where?"

"Oh, well..."

"Please tell me, you guys."

"The DEC—"

Her mind was twisting and turning on itself. She had to know, had to get it out of them. "I don't care if you were poaching or whatever it's called." Both Charlies looked away. She went for the dumb one. "C'mon, Big Charlie," she said, "tell me where you saw a wolf. I think it's so exciting." She hated the fake sex in her voice. Big Charlie didn't hate it, though. His ears turned red.

"Oh, well, we were out about twenty miles up from the bridge. We were on that piece of land owned by those city people."

"The Jews," Little Charlie said, as if this would excuse their trespass.

Cindy didn't know a thing about who did and didn't own land around here, and she didn't give a damn. All she could think of was Bob. She squared her shoulders and raised her chin, thinking of the nobility of her love. It was always the men who embarked on quests in the old stories, Piers Plowman, Sir Gawain. Women stayed at home and raised the children. Well, she wasn't that kind of a woman. Her quest was clear, as fine and perfect as Sir Gawain's: she had a grail, too, the sacred body of her love.

"Cindy," Big Charlie suddenly blurted, "you care to take a drive over the border Saturday? Maybe go up to Voix and have a little supper at Antoine's?"

Louie stared, openmouthed. Little Charlie began giggling silently.

Without a word she turned away from the table of the two gargoyles. "Sweet," Big Charlie said as his brother collapsed into open laughter.

"Willie won't bring in the damn potatoes," Louie snarled as she came back to the counter. "You go get 'em."

He was referring to the two-hundred-pound sacks of frozen french fries that were due to be delivered today. "Lou, I can't possibly! I can't drag those bags."

"You do it, or you've got your walking papers. And I want them in the back of the freezer, not all jammed up around the door like he does it."

Feeling hopeless, Cindy put her beautiful blue cardigan from Bloomie's and better days on over her thin nylon uniform and went struggling out into the glaring, icy light of noon.

She tugged miserably and quite hopelessly at one of the big gray sacks. Louie was a cruel man. They were all cruel. The women around here were huddled misanthropes, slaves and sloven whores. What a misbegotten place.

It came to seem even more misbegotten a moment later, when both of the Charlies appeared, one at each end of the restaurant. She stepped back, only to see Louie's shadow in the doorway. He had locked the door.

So that was what this was about. When had they had time to plan? There hadn't been a word spoken between them. Without another thought she started running, wobbling across the snowy parking lot in her cheap flats, the wind eating at her body, making the cardigan seem almost imaginary.

They came along behind her, moving heavily but with surprising speed, the two Charlies. "Come on, Cindy," Big Charlie cried, "won'tcha? Why won'tcha? A little blowjob ain't nothin' to a woman."

"Oh, God."

They appeared beside her. She did not like the sweat sheening Big Charlie's face or the clicking wheeze that Little Charlie developed when he ran.

Big Charlie's hand brushed her shoulder. "Them shoes are no good in this hardpack," he said absently, as his arm closed around her neck. "You had no chance."

She could see Louie's shadow in the back door of the diner. He waved at her, a hesitant gesture, as if he was seeing her off on some undesirable

voyage. Her impulse was to kick and bite and claw, but she controlled it. She was not a weak woman, but these two men were certainly her physical superiors. Quietly, carefully, she reviewed her options. She was being walked along, Big Charlie tugging her by the neck, Little Charlie with his homy fist around her wrist.

Taking a deep breath, she screamed. The sound was high and thin, more like the squeak of chalk on a blackboard than a human noise. Little Charlie looked up at her out of the corner of his eye. "That wasn't too good," he said happily.

When she was a kid, she had been able to scream marvelously well. She closed her eyes, tried to calm herself enough to organize some more effective noise. They were passing her rooming house. If only their room wasn't at the back, Kevin might hear. He'd be there—because she did not want to put him in one of the local backwater schools where he'd be taught nothing more challenging than Gum-Chewing 101 and probably beaten to a pulp as well, they had decided he would go into hiding for the duration of the search.

He spent his time reading. He was on *Remembrance of Things Past* now, and he wanted to get the walls lined with cork like Proust had.

Big Charlie's hand pushed against her left breast. The sensation was disgusting, a nauseating thrill that churned to pain when he squeezed. This time she screamed with fierce energy. In response the two men began moving faster down the freezing, silent street. "Somebody help me!" Was the whole town dead? No, more likely everybody around here except Kevin was off at work or at school, Kevin and that inert old man who inhabited the little house at the end of the block. He wouldn't come out. If the world ended, he would meet it staring out that window of his. "God help me! God help me!"

Big Charlie moaned. "Come on, Cindy, we won't hurt you. Please, I just want you to treat me like a man. Honey, I could give you a good life."

"Let me go, you filthy creep. You smell like a wet cigar butt."

"I'll stop with the cigars if that's what it takes. You don't like 'em—done! Howya like that? Cindy, I got nobody, I'm getting older. You're young. I'll leave you everything in my will. I got money, Cindy! Marry me."

"Help! Help!"

The door of the old man's house flew open. Astonishingly, Kevin came rushing out. Behind him was the old man himself, carrying a tall, rusty halberd. In his hands Kevin brandished a volume of the *Encyclopedia Britannica*.

"Oh, Lordy, now look what you done, Cindy! Hold on, fellas, she don't need help. Lord, what is that, an ax?"

"Unhand her," Kevin shrieked. "Mr. Forbes has been trained on his weapon!"

The old man, who was tall and emaciated, wearing a tattered herringbone sports jacket and plaid pants, took a spread-legged stance and lowered the halberd. "Let her go, Charlie," he said. "I can cut off balls with this thing just as clean as heads."

"That's gotta be an illegal weapon or something." The two Charlies complied, though, and Cindy felt a great relief. Kevin stepped forward and slammed the encyclopedia down on Little Charlie's head, whereupon he sank into the snow without so much as a sigh. "Aw," Big Charlie cried, "why'd you do that?"

"That's my *mother*, scumbag!"

"Oh Lord. All I wanted was to talk to her. I want her to consider me a suitor, that's all. I need a wife. Eileen died, damn her, and I need a wife, oh, God I do. I've got love in me. Yes, I've got love in me."

The old man jabbed with the halberd, and Big Charlie became silent. "I'm tired of men like you, you brutal fool," the old man said. "I ought to hurt you." The halberd whistled and Big Charlie had to jump.

Little Charlie raised himself up, squinting and rubbing his head. "Somebody oughta whip that kid, he's a damn sonembitch."

Louie came running down the street, shouting and waving a large knife. "You let them alone, Gilford Forbes! It's just their way."

"The hell, Louie, nobody drags women off like that, not in my sight. This is the civilized world, and if you don't like that, you can damn well move to South Africa or someplace."

"Come on, Mother, it's time to go."

The tension between Louie and Gilford Forbes seemed ready to erupt into a battle. Cindy was not sure what would happen if the spindly old man actually began to use the halberd, which was obviously as sharp as a razor. She wasted no time following Kevin, who was already on his way back to Forbes's house.

Forbes backed up, marching like a spider, rather than turn away from the other men.

The house was an old one, really no more than a cottage, with a wooden porch populated by an ancient swing and choked in the tendrils of what in

spring and summer must be a laurel. Beyond the front door was a living room full of bulky furniture, overstuffed chairs, a large and complicated Wurlitzer organ, and on the walls prints of familiar Impressionists: Van Gogh's *Starry Night*, Renoir's *Bathers*, and four or five others. They added an altogether incongruous note of intense cheer to an otherwise drably comfortable scene.

"Please make yourself at home, Kevin's mother," Forbes said. He bowed. "The altogether estimable mother of a most remarkable young boy." He smiled, his cadaverous face cracking into a grin so wide that it seemed about to cause his lower jaw to disengage itself and flop down along his neck. "I am Gilford Forbes, former don at Christ Church College, Oxford, former tutor at Harvard—alas, all very former. Presently Kevin and I are engaged in setting ponderous poetry to light music and light poetry to ponderous music. An interesting exercise, Pound's *Cantos* chanted to the tune of 'A Rock and Roll Waltz' and the works of Rod McKuen intoned to Beethoven's *Missa Solemnis*. Your screams did not fit, and I must apologize to you—"

Kevin rushed forward and hugged her.

Gilford Forbes smiled a little nervously. Kevin glanced just sharply enough at Cindy to communicate the message that he had kept his father a secret from this man. The boy must already have told the old man some story—some lie—that explained their presence here in Olana.

"A broken life," Kevin murmured sadly. His face was grave. Cindy saw again the stoniness that more and more often appeared in his eyes.

She nodded. "That ends at Parma Lunch."

"You'll get back on your feet. You're young!" There was an extended silence after the old man's remark. "It's cold," he added. "Would anyone care for tea?"

Wordlessly, Kevin went with him into his tiny kitchen. "Where did you get this Darjeeling?" she heard her son ask.

"In Toronto. I've also some scones. Your mother might like one."

"She hardly eats anything."

The man did not answer. Cindy sat in an old Morris chair. This was an extraordinarily comfortable room. The wood stove crinkled softly, beads of snow tapped against the window. Beyond it, in the darkening afternoon, the sinister little town seemed about to settle into the woods that surrounded it. Nothing moved in the street, no car, no pedestrian, not even a wandering dog. Idly, Cindy picked up a magazine, a literary journal called *Prometheus*. Bob had bought it from time to time, and the look of it brought back memories.

She glanced through it, impressed mainly by the beautiful printing and layout. Then she saw a poem by Gilford Forbes.

*The snow trumpets silently down,
Hurrying the shadows in
The terrible land,
Enforcing the migration of bones,
This snow, laboring with the force
Of dangerous old laws.*

The fire shuffled again, and the snow pinged on the window. Cindy realized that in this moment she had come face-to-face with the mystery. It stood revealed before her, as if a door had at last opened—but only into endless night. Tears collected in her eyes. She could not look again at the magazine. Instead she pushed it to the floor with her knuckles and wiped her hands on her dress. A tiredness akin almost to death stole over her, dropping around her shoulders like a cloak of cold chain. She bowed her head, aware only as her glance passed over it of a tiny cross hanging on the wall, a priest's black cross.

"So you see," Gilford Forbes said, "I'm broken, too." He put her cup of tea into her hands. On the saucer there was a scone cut in two and buttered, and it looked awfully tempting. "Before you, woman of the broken life, stands a ruined priest. I will tell you my story if you will tell me yours."

How could she? His story would move, it would touch, it would enlighten in a fine and decent manner. Her story would sound lurid and absurd.

Even so, Bob was out there in the snow, or he was dead, a pecked hulk on a roadside, or a pelt in some trapper's winter storehouse. "I was caught in flagrantibus delictis. I pluralize because I was with two of my students, a young woman and a young man. We were in the dressing room, in the bottom of a cupboard. The shaking of the cupboard attracted the attention of the choir, which was just coming down after singing High Mass. One of them opened the thing and there we were, wallowing naked in a pile of vestments."

Another silence developed. Kevin looked steadily at his mother, his eyes intractable. She was not to tell.

"You were thrown out?" she asked.

"Difficult to do to a priest." He held up his hands. "They will still bear the Paraclete. I was hustled out of Cambridge and posted to an obscure boonie

parish. No more Newman Club for me, no more students. The trouble was, that incident—which was my only transgression of celibacy—assumed such enormous proportions in my mind that I could no longer bear to abide by my vows. Night after night I thought of the wonders of that time in the cupboard, how good they had tasted, smelled, how warm and lovely it all was. Dear God, I still do. It was the central experience of my life. I've never tried sex again, for fear of disappointment."

"They must have been marvelous people," Kevin said.

"Marvelous looking. They were a team. I got their number out of a singles paper. They were undergrads doing a little whoring to make their lives more comfortable. God, they were wonderful." He sipped his tea. "Your story, please."

"No," Kevin said. "You have to be careful of him, Mother. He never had that experience. He wasn't even a priest. He's trying to trick you."

Gilford Forbes smiled, this time a little thinly. "Your point, Kevin. I suppose that you must remain a mystery to me, too."

Cindy would have told him everything. Why not, what did it matter? Look at the Indian—he understood more about what had happened to Bob than she had imagined possible, but he had not the strength for the journey. And Monica: "Call me if you need me. I love you." In other words, good-bye.

Only she and Kevin remained, in this difficult time. She bit into the scone, which was still cold in the middle. As she chewed she heard shouts outside, more than one shout in the muffling snow.

Forbes frowned, looking toward the dark gray window. Kevin put his teacup down and stepped over to the door. He opened it, stepped onto the porch.

Another shout, this time accompanied by the shape of a man running down the street.

Kevin returned. His face was horribly twisted, his eyes were darting with fear. "Wolves," he whispered, "they've seen wolves at the north end of town."

"Really! I had no idea there were wolves in New York State. In a way that's lovely, if they don't just shoot them."

Without another word, forgetting how lightly dressed she was, forgetting her fearful experience with the Charlies, Cindy jumped up and dashed out into the snow.

Up the dark streets she raced. She could hear Kevin beside her. Whether Forbes had come or not, she did not know.

As she ran she heard it. She stopped and looked up. Kevin looked up. Ahead of them a man carrying a high-power rifle stopped also, and he looked up. A cat, which had been sitting in a window, darted away.

The howl rose and rose, a plasma of dark peeling echoes, powerful and loud.

Kevin's hand came into her own. That was Bob, she knew it in her freezing bones. Bob was here, and the town was turning out to meet him. Bob must stand against a town full of sharpshooting roughnecks.

She ran, Kevin ran. Far behind them Forbes— who had been running—dropped to a walk with a gesture of annoyance.

Bob was here. At last, at last she had found him. With a frantic little scream in her throat, she made her way through the snow, determined this time to find a way to share life with him as best she could, on whatever terms he would grant.

Part Four

Homecoming

We left when we were too young
to know.

Now we are far away and going farther.
Home, we say, home. . . .
We watch the empty dark.

—Robert Duke, "Home" (1985)

Chapter Twenty-One

BOB HAD GONE DASHING ACROSS THE FROZEN ST. LAWRENCE Seaway, his claws crackling on the ice. He had leaped over floes and cracks, slipped, got up, and slid forward, barking joyfully.

The eyes of the other wolves had followed him. None barked back, no tail wagged. For his part, Bob had been so excited that he couldn't stop barking. Smelling the wolves this close made thrills sweep up and down his body. Their odor was sensuous, incredibly attractive. It was far richer to his nose than any human odor had ever been, more so even than Cindy's beloved scent. As he ran, his mind cast about for meaning in this odor, but there were no words that described the experience of smelling it.

These wolves lived in this heaven of smell; they were used to it. Beyond their individual smells—the sharp, shocking aromas coming from the pack leaders, and the sweet smells of the lesser wolves, there was another odor, which was the combination of them all, the majestic smell of the pack as a whole, a fine old spirit of an aroma.

When Bob was about ten yards from the pack, the wolf at the lead had barked once, a sound as sharp as a shot. It went deep into Bob, exploding in his heart. It was a warning and a command: it said stop.

Bob had stood, his tail wagging, his tongue slopping out of his mouth. He gathered himself together: he was a man inside, after all, and he had his dignity.

The dignity of a man, though, is nothing before the dignity of a king of the wolves. Human governments rise and fall across a few generations. This king was the inheritor of ten thousand generations. His pack was an ancient kingdom, and he ruled it by traditions that extended back into the mists. He had come forward, his legs stiff, his ears cocked, on his face a look at once curious and fierce. Bob could see his nose working.

Bob's whole attention had gone to this wolf. By degrees he was realizing that he would not be welcome here. It hurt him. He had come an awfully long way to get a reception like this. He might be a man, and feel he was a man, but he was also a *wolf*, every inch of him. If he had any rights at all, it was among these creatures.

In his rising anger he had made a mistake: he barked loudly. It was a challenge, it couldn't be interpreted any other way. The king of the wolves

snarled horribly, lifting his lips to reveal startlingly effective-looking fangs. His pack seethed behind him. A strong musk came from them, as if they were spitting odor at the interloper, trying to cover his unwanted scent. Bob could feel his own glands working, could smell his own anger and excitement. His neck tickled: his hackles were rising.

The king strutted, ears back, eyes fairly cracking with rage. Bob had to think, but he was getting too scared to think. He was acutely aware of the fact that he was out here alone in this wilderness, and the only creatures he could trust, the only companions that were even close to his own kind, were rejecting him out of hand.

What to do? He couldn't explain himself, he didn't know the language of the wolves. And they had a language, he could see, hear, and smell that. It was a thousand, a million times more rich than anything he had ever read about. Tails flickered, expressions rushed through faces, complicated waves of odor and sound flashed through the pack like little storms. They were so incredibly integrated, they were like one person.

How could anybody have ever thought that these were simple beasts? Bob was faced with the shocking realization that the wolves had evolved an intelligence and a sense so great that it was literally incomparable, and yet so different from man's intelligence that it was all but invisible to the human mind.

There was no rational shape to it, no sense structure. It had words, though, sentences that were songs, and through it all there was creeping what he could only describe to himself as angry, rejecting prejudice.

His heart ached. He knew that he was going to have to fight again. It was so damn sad. He lowered his eyes and tail.

When he did, the whole pack erupted at him, barking with savage fury. Then their leader, their arrogant, strutting king, was at his throat, bellowing, his jaws flashing in the white, snowy light. There was more fury, more wildness in this assault than Bob had ever known before. It was literally fantastic in its energy, like a hurricane, like the explosion of a mountain, like some holocaust come down from heaven. The wolf snarled and snapped and slammed directly into Bob's chest. Bob was bowled completely over, his own growl sticking in his throat.

In all of his previous battles, with the shepherds at the pound, the coydogs in Central Park, with the bear, this had been the moment when his wolf instincts took over and carried him to victory. But this wolf was so powerful

that it shattered all instinct. As he rolled and tumbled beneath its attack he was swept by aromas that stunned the very center of his being. He was awed, humbled, titillated by the smell of this wolf. He could not fight back, he just could not.

The wolf bit him hard in the throat and he found himself turning over on his back. He felt an awful, delicious stirring of what could only be described as ecstatic humility. He spread his legs and turned his head, baring throat and genitals to the powerful creature that dominated him. The wolf was not large, nor was he old, but he was so lordly, so proud, so certain of himself that Bob simply could not stand up to him.

For a moment he held Bob's throat, then he released it. Still full of strut and anger, the wolf suddenly did a most intimate and embarrassing thing. He bent down and nuzzled Bob's penis with his cold, damp nose. The contact injected a fiery vibration of purest pleasure into Bob's body, a pleasure so great that for a moment he was incapable of thought, of motion. As the wolf continued its exploration wave after wave of sheer, delicious enjoyment rocked Bob's being.

Then the pack leader tossed his head, snorted as if contemptuous of the gift he had given, and walked away from Bob. For a moment Bob lay there swooning, helpless. Then there came to him another aroma, this a scent he could identify from his old life: it was the smell of a woman.

She moved forth over him, circling him. He had never seen such beauty as the king's mate. She was young and strong, her fur shining white and light gray in the sun. Bob's own chemical essence poured desire through him. He almost wept to see such female magnificence. Hers was a new esthetic, of rich odors, deeply satisfying, the kind of smell Bob could imagine living within forever, intimate and sweet, conjuring images of furious passion. He recognized her odor: this was the wolf who had licked him after the fight with the bear.

When she stood over him, Bob again felt the same helpless wave of submission the king had given him. Then she also touched her nose to him, most intimately and without a trace of what he had once called shame. At once his body reacted, bursting with pleasure so great he thought it might actually kill him. For a long moment she continued, extending the examination, learning him.

When at length she was done with him, he was more in love than he had ever been or dreamed possible. The complex, equivocal coupling of his

human life seemed a mutant shadow compared to this. She was so beautiful, so grand, so calm and magnificent—he could hardly believe her an earthly creature.

He knew the secret behind the feeling of the dog for its master. Canine love is not like human love, not at all: it is all rapture.

She stepped off him and, growling in her throat, strutted about with her tail high, as if enjoying her conquest. Her mate looked on warily. The tension coming from the other wolves was high. They whined and strutted, some of the lesser ones snapping at each other. One or two barked. Bob realized that the pack was in heat. Coming upon them, he had gone into heat, too. What a small word for the largest emotion and the greatest pleasure he had ever known. He found himself lying there on his back in the snow and thanking whatever God there was that he had been freed of the bondage of being human. Something in the air had changed. The wolves were no longer holding him captive, no longer humiliating him. He was free to rise, and he got up, to stand hangdog before the king and his queen, too much in love ever to leave them, too alien ever to be accepted.

The queen regarded him. Her face—all soft fur and glittering, passionate eyes—seemed not unwilling. He circled her, his nose drawn to the center of her magic, the spot beneath her tail from which there flowed her nectar.

Up close the smell was so good and so fascinating that he simply could not quit inhaling it.

With a little growl she moved away. She had sniffed him, too, but in a perfunctory manner, an act perhaps of protocol or at best mild curiosity. He was being rejected. How was that possible? How dare she drive him to such a pitch and then turn away from him?

With a quite involuntary snarl he leaped on her back. He felt his penis strike at her like an arrow.

Instantly she was out from under him. So quickly that he could not tell how she had done it, she upended him in the snow, and he found himself once again with his legs in the air. His throat hurt; she had grabbed him by the neck and turned him over.

Again she dominated him, this time licking his exposed penis and causing an explosion by doing it that actually did make him faint. For a few moments he was on another ground. The she-wolf seemed serenely regal. Far off Cindy stood, and in a thin voice called his name.

This time when she had finished with him, he found that he could not arise,

not until every one of the other wolves had had his or her way with him. They strutted about in a kind of ecstasy of domination, one after another threatening him, standing over him, then examining him.

At the end of it there was not one of them to whom he would not roll. He would do anything to be with them, he adored them. To him they had acquired in full amount the magic he had always suspected was possessed by the nonhuman beings of the earth. They were living close to the central truth of things, their passions unencumbered by the cluttered mental hodgepodge that afflicted humankind.

When he got to his feet and went strutting toward them, the smallest and least of them, a scruffy little female wolf with a kink in her tail—the last one to have sniffed Bob—ran at him and snapped fiercely. Even though Bob was twice the animal's size, he turned away. The wolf wanted him to roll, and she barked furiously, then went for Bob's throat. Bob rolled, but another wolf had snapped at his attacker, who disappeared back into the milling, nervous pack.

Bob realized what had happened to him with these animals. Stunned by the unexpected intensity of the pleasure they were giving him, he had let himself be dominated by all of them. Instead of fighting for a place, he had wound up outside the pack's order altogether. He cursed himself for submitting to them. But how could he have avoided it? He would do the same thing again.

The little wolf, who was a female not in heat, bland smelling, returned to worry him. He wondered what would happen if he fought her. Or should he fight the lowest male, or go back to the king? He really had no idea. All he did know was that they had at once seduced and rejected him.

It was a more profound event than he at first realized. Night came on and he wound up sleeping some distance from the other wolves, outside of the inner border of their scent, the line beyond which they had to use scent marks to define their territory.

He would have thought they would huddle together in the snow, but each wolf slept alone, tightly curled in on himself, nose beneath tail.

Bob was not like them; he had neither their peace nor their confidence. Again and again in the night he remembered the extraordinary ecstasy they had granted him. If they could all evoke such powerful sensations in one another, how did they survive, how did they bear one another's presence? He was mad with lust and love, a trembling little creature beneath the cold stars, ignored by those whose touch he craved.

He raised his head in the middle of the night, alert with an idea that made

him weak all over again. Perhaps, if he challenged the alpha female, she would once more carry out the ritual with him.

He had no trouble finding her: her heated scent made her a constant beacon to any wolf. None of the other females were like her. Bob got up and walked across the creaking snow. He bent over her motionless form and sniffed, smelling the sweet beneath the unwashed dogginess. Her muzzle was soft, her fur glowing in the starlight.

Then, with a snort, she leaped to her feet. Not an instant was wasted: she attacked Bob with snarling, barking fury. The whole pack awoke and jumped up, but he was already lying on his back. He was rewarded once again by the whole strutting, delightful ritual, and was again passed down the pack and out to the rear, being finally dominated by the scruffy little female.

He crawled away, besotted, crazed with a hunger for more. Some of them had been a little perfunctory this time, though. He suspected that he would bore them if he challenged too often. A wolf pack was a psychosexual Gethsemane for the rejects, a bed of love and torment. For its members, though, it was Eden.

God curse the serpent and the tree of knowledge of good and evil. Compared with the animals, man is numb, and it is knowledge that has made him that way. Bob looked up at the sky, and learned in that instant more about the whole wheeling of the universe than all science knew. Without words, he understood the subtle indeterminacies of the laws and saw the endless frame upon which time is woven. He knew the true purpose of thought: It is not to process information, but to seek the law. Modern science is the burned stubble of ancient magic. Once we flew: now we struggle sadly along.

Curled up tight, he slept fitfully in the snow. When he woke up, it was with a lingering impression that some sort of kindness had soothed him in the night. Then he saw the wolves moving. They were cast in golden light. They were deities. Highest among them was the heated goddess, who undulated, wagged her tail, and gobbled snow.

The wolves were excited, yapping and running about, dashing off into the snow with their noses to the ground, then coming back, tails high, eyes agleam.

When Bob smelled a clear, clean odor of deer, he knew the reason for the excitement: a hunt was on. The pack was like a perfect machine. Led by the alphas, it moved off into the woods. Fifteen wolves disappeared as if they had

been shadows. But Bob was not lost. His nose and ears worked, too. He could follow them, which he did at once. They ran along beneath the snow-heavy hemlocks, ducking under low-hanging boughs of pine. He wished that he was part of the pack, but that was not to be. By light of morning he cringed to remember the liberties he had allowed them. Every one of them knew him intimately, while he knew none of them. Such knowledge was an important part of their ritual life. Unless he could make them roll before him, they would never consider him one of them. Even then, he wondered if he would ever acquire that almost indefinable odor of belonging that they had, the special undersmell they all shared.

As they moved along, Bob began to smell the deer more and more clearly. He could identify the odor of the breath: the deer had been gnawing a sassafras plant.

The wolves proceeded quickly and efficiently. As far as they were concerned, Bob simply didn't exist. He was there, though, running along behind as fast as he could, his mind swarming with thoughts and speculations, his heart brimming over with love.

They came upon the deer suddenly. The wolves were quick and efficient. They burst out of the woods into the tight clearing where the deer were tearing bark. There was a whistle of alarm, then the flash of a tail. Deer screams, as soft as the blowing of clouds, filled the air. There were three animals: a buck and two does.

The buck bounded off into the forest, followed a moment later by one of the does, who had a red streak on her left leg. Wolves were barking, leaping, snapping. The one remaining deer broke wildly for the woods. Her body twisting in the air, the alpha female leaped for the throat. She missed, falling back into the snow with a thud and a spray of white.

Bob found himself face-to-face with the doe. He didn't hesitate a moment—he leaped right at the throat of the beautiful little animal. He was a big wolf. The doe struggled, dashing him with her front hooves, but it was no use. He had the flap of skin on the underside of her neck. When he worried it she shrieked, a gentle and lovely sound. This was like killing Bambi. But something drove him on. He would not stop for Bambi, not even when her heart rending whistles changed to bubbling sighs, and then stopped altogether.

She stood, her head hanging down. The nearest of the pack wolves, which was the one farthest to the rear, had reached her. It was the shabby little

female with the broken tail. She clambered up the doe's side, trying to get on her back and bring her down.

This seemed to break the doe's trance. She proved to have more fight in her than Bob had imagined possible. Despite her torn throat and the little wolf clinging to her she began to run. Soon the wolf fell off. The doe plunged through the woods in plumes of snow. She was swift. Bob could also run, though. He was big and his thigh was healed; he could run like the wind.

The deer plunged on through the drifts, Bob just behind. He was hungry now, and the smell of the blood sent mad thrills of excitement through him. The deer reached a long meadow and picked up speed. Bob ran as hard as he could, stretching his whole body, nipping at the flying hooves.

Then someone was beside him—the alpha female. He was fast but she was much faster, a wolf of lightning, her muzzle stretched tight, spittle flying from her mouth, the whites of her eyes showing as she sped forward.

She shouldered Bob aside, ducked her head under the side of the leaping deer, and with a toss of her muzzle opened a huge hole in the creature's abdomen. Guts spewed out as the deer tumbled over and over. By the time it stopped falling it was dead. The alpha female strutted, her lovely face drenched in blood, and then she plunged her mouth into the still-heaving entrails and began gobbling huge gulps of the steaming organs.

Bob took a bite. A raw flash blinded him. Both she and her mate were on him, biting savagely. He screamed, scrambled away, felt her jaws tear his flanks as he ran.

He was forced to watch, drooling, in an anguish of hunger, while all of the other wolves ate their fill. They did it in strict rank order. To the little female was left the brain and some skin. To Bob was left gnawed bone.

While the others trotted off into the woods, full and happy, Bob bit at the bones, trying without success to crack them for the marrow. It was useless—all he succeeded in doing was cutting his tongue on a bone splinter.

Finally he went hunting alone. He was surprised to find such a lack of game. Then he understood why these wolves had come so far south. They, also, were suffering from the shortage of game. This was an exceptionally snowy winter. They had moved south with the deer.

As he sniffed about for sign of raccoon or opossum, he reflected on his passion and their seeming injustice. He shuddered, remembering the pleasure they had accorded him. Nobody but Cindy knew him that way, Cindy and now these wolves, who were so beautiful that he could not help but let them

do their bidding with him. He knew the truth—that they had humiliated and rejected him. But they had done it so sweetly. Did they make their pack important by creating in others a desire to join it? Or would what they had done to him have felt different to a real wolf? He suspected that a real wolf would have found their nosing about an intolerable humiliation and put a stop to it as soon as a beast weaker than himself tried.

He mounted a ridge. From here there was a view for miles. The St. Lawrence glimmered on the northern distance, a jagged tumble of ice. Far to the south rose the Adirondacks. For a moment Bob thought he heard music—a harpsichord, perhaps Scarlatti or Bach. The sound made him cock his ears, but then he lost it, gone in the immensity of the view.

He was hungry. In fact he was damned hungry. Sooner or later, he had to find a kill of his own. He sniffed the air in the careful, searching way he had learned from experiment. It was possible to sort out the different smells not only by odor but by an elusive texture. The ubiquitous smell of snow was crisp except where there was melt, which had a much smoother feel.

Besides the snow, he detected ice, frozen plants, a wisp of smoke, cold stone. No smell of game, not a trace. He was disconcerted. In all of his travels he had never encountered a day when he smelled no animals at all. The image of the winter wolf, its ribs like bars, came to him, and the image of the starved wolf, curled in death agony.

He paced the ridge, taking deep breaths, analyzing the air for any trace of food, any carrion even, any garbage. He wasn't revolted by these things anymore, at least not so much that he wouldn't eat them if necessary. He let his body decide what to eat and what to pass up.

Then he stopped, cocking his ears. This time it wasn't music he heard, but the grinding of gears. The sound came from behind the line of ridges to the south. His estimate was ten miles. He turned, cocking his ears, and listened carefully. When he did so, a welter of tiny sounds came into focus: cars moving on snow, voices, various snatches of music, doors slamming, children shouting. So there was a town over there.

A town meant garbage and it meant the chance of stealing some animal, a chicken or a goat, perhaps, from a farm. The other wolves would I shun the town, but they did not possess the human lore that Bob did. He felt that he could sneak in and out quickly, and get himself fed. A guerrilla attack.

Without further ado he set off down the ridge, going straight toward the source of the human clatter. As he dropped lower the sounds faded, but he

knew they would be there when he mounted the next rise.

He was halfway up it when he heard a sharp bark behind him. He turned and saw the alpha female standing in a clearing. Her tail was high, her face was stern. She was commanding him to turn back. She trotted up, whining. He was surprised, he thought the pack had rejected him. Apparently not, because she was treating him just like one of her other wolves. Whining, she rubbed her cheek against his. She began wagging her tail. At that, his interest in the town evaporated. She was far more important to him than food. Hunger could wait, journeys could wait. To have her come near him, to notice him, even touch him, drove him to a joyous pitch of excitement. He practically danced around her.

She played. She barked and tussled with him, growling in mock challenge. To say that he was delighted was to understate the feelings that washed over him, the rich, mysterious, enormous feelings. It was as if the basic creative energy of the earth was flowing right through him. When they tussled, he smelled and tasted her. Beneath the odor of her fur there was a sweetness so pure that it was shocking, and then the powerful female musk.

When it grew suddenly much stronger, he felt his loins contract. There was a sensation as if of a tickling, delightful fire between his legs. He found himself mounting her, felt himself thrusting at her, saw her eye shimmering with amusement when she glanced over her shoulder, felt her expertly pull herself away. He tried again, whining for her to stay still, pushing, trying in his clumsy way to make this new practice of sexual union work. Never before in his life had he mounted like an animal.

He was hurled off her into the snow by a snarling, biting streak of enraged alpha male.

Where the devil had *he* come from? And with him the rest of the pack, all barking, all threatening, their anger wild.

The next moment, though, he thought the alpha male was going to forget him, so intense were the odors coming from his mate. But he didn't. The alpha male attacked, leaping onto Bob with savage fury.

Even as they fought, both of them made involuntary sexual thrusts. One of the younger wolves mounted the female. The alpha male stopped beating Bob up long enough to turn and bark him away. This alpha was not enormous, but he was a devil of a fighter. His pack mate knew it, and the barking was quite enough to make him rush away.

Bob realized something in that instant of respite. He had to beat this wolf if

he was going to have a place in the pack. Now was the time. The alpha female's heat had precipitated the confrontation.

If he won the battle, he was going to be able to make love to her. The male grabbed for his throat and sank his teeth into the much-scarred skin. Bob yanked away, managing to bite the other wolf's ear hard enough to draw blood and a high scream of pain.

His eyes gleaming, the alpha took Bob by the scruff of the neck and shook him. Bob skittered away, feet digging the hard, old snow. So far he had always lost fights with the wolves, but he did not want to lose this fight. He had to find a way to succeed. The wolf was so fast, such an expert at this, so relentless and wild and passionate. Bob had never encountered such powerful will before: it mattered to this wolf, it mattered terribly.

They separated and Bob ran at him, forcing himself to be more aggressive than he felt. To his surprise the weight of his body completely unbalanced the smaller animal, who went flying into a snowbank with a scream and a great windmilling of paws. Bob was on him instantly, biting, growling, clawing. For a time there was nothing but a jumble of flashing fur and fangs, then Bob found himself on top, and his opponent was screaming.

He backed away. His heart hurt—he did not want to do injury to this magnificent creature.

The alpha wolf clambered to his feet. When he would not meet Bob's eyes, a rush of triumph filled him. He could not help himself strutting. His tail went high, he yapped in excitement. The female leaned against him, and her odor was strong.

He mounted her, causing a tremendous explosion of excitement among the other wolves. They yapped, whined, ran about, paced. Some of the males snapped at each other. Then Bob found her secret, and thrust, and was rewarded with the most exquisite sensation. It was a perfection of feeling: soft love mixed with electrifying pleasure. Lying on the back of that wolf, he found the edge of heaven.

It was not a quick thing. He burst open like a flower within her. His body collapsed from the sheer intensity of the sensations that were roaring through it like storms come down the mountains of love. Her back was strong. She stood like a stone, receiving him in her milky center. The other wolves kept coming up and licking at him, sniffing under his tail, adding to the pleasure he was already experiencing.

His heart beat so hard he thought it would explode. But it didn't explode.

Instead his loins exploded, and he saw flashes of stars, and smelled coming from her an odor so sweet that he could not but be humble before it. Then he was finished. He dismounted. For a long time, with quiet waves flowing back and forth between them, they stood linked.

He thought when it was finally over that he knew this wolf better than he had ever known any creature. In her dark and gleaming eyes, he saw that she, too, shared the knowledge. The total intimacy still shocked him a little. Privacy, secrecy were not known here. All the wolves had participated. Now some of the younger males were mounting each other. There was much intimate licking and much barking.

The alpha male went a little distance away, curled up, and slept. Bob also slept, and the alpha female midway between them.

Bob thought, on awakening, that he would become pack leader. She soon disabused him of this notion. By the operation of laws he did not begin to understand, all that had happened was that she had somehow changed places with the alpha male. She was now leader. The scraggly little female at the end of the line reasserted her dominance over Bob, making him roll to her. He did it because he sensed that ignoring her demand would lead again to total rejection.

That he could not bear. To be near them, to be included in their love, was the only thing Bob really cared about. That and food.

He cared about food. And there was so little food. No more deer, no possums, no coons.

There was that town, though, and on mornings when the wind was right, Bob was sure he heard the calling of a rooster and the bleating of goats. This was lumber country, so there weren't any significant farms, but that didn't mean that people in the town wouldn't be keeping chickens and goats, maybe even a few cows.

Of course they were keeping chickens. On the first morning of the south wind, Bob heard them clearly. He smelled melt, too. For three weeks he had eaten exactly two rats. Some of the wolves had eaten nothing at all.

He cocked his ears, he got up, shook himself. Despite the obvious danger, even the foolhardiness, of going into a human place, Bob trotted off south. He had to eat, they all did. It was especially important for the alpha female. Shortly after her encounter with Bob she had gone out of heat. The sexual intensity of the pack had immediately disappeared and they had become a band of companions, flawless in its balance and organization. Day by day

Bob watched the nipples grow on her thin body, and when the days were longer and the sun returning from the south, he saw a round-ness to her belly.

He was going to hunt down the town's chickens and goats, and damn the consequences. The pack could always escape across the St. Lawrence if they had to. Canada was far more empty. These wolves had come from there, after all. Only the presence of the town kept them from moving even farther south in search of game.

Well, with him in the pack they could confront the town. He understood towns. Maybe that was why all this had happened, why he was here. Suddenly there was a wolf pack that could survive in close proximity to human beings—indeed, could control its whole relationship to mankind. He glimpsed the edges of a magnificent design here, perhaps even another step in the process of evolution.

Wary but eager—no, desperate, for the pack was starving—he set out toward the town and all its dangers, and its chickens.

The first trip in was a great success. Bob ate two perfectly delicious Rhode Island Reds and took one back to the alpha female. She gobbled it down, leaving only feathers for the other wolves to lick.

When Bob returned to the town a week later, two of the other wolves came with him.

Again they were successful, although only Bob would return with food in his mouth. That was not a wolf tradition, and they could not be made to do it.

Through the last months of winter, the pack gradually moved to within striking distance of the town. They took goats, dogs, more chickens. Sometimes they got rats, once an opossum.

Through the lengthening days the alpha female grew heavy with her burden of cubs. Bob's cubs. He remembered Cindy when she was big with child. They were happy then.

Oh, Cindy, I am so lost.

One night, when the snow was grown soft and the breeze was again in the south, the alpha female gave birth to four magnificent cubs, and one small one. The birthing was abrupt and simple. She expelled the little bundles of fur one by one. Then the afterbirth folded out. She ate it, along with the cub that was too small.

There was happiness among the wolves. Everybody was awake, yapping and sniffing the babies. Bob and the two alphas licked them clean. Bob thought they were the most beautiful things he had ever seen, so soft and tiny,

mewing and shaking their heads. They nursed their mother, who lay on her side in a kind of rapture.

It was a good time, with spring coming and plenty of chicken. The cubs grew quickly. Soon it would be time for the thaw. That night all the wolves howled together, and the strongest of the new cubs yapped.

Bob wondered about his cubs. What would they be like as they matured? They had wide heads and quick eyes, and they gazed at him sometimes with the love eyes of children. He began to want to be across the St. Lawrence and away with them.

They loved their mother, nuzzling her, playing in the warm enclosure made by her reclining body. He had thought at first that the cement of a wolf pack was sex, but that had been true only during the time of heat. Now things were more settled and more simple. These creatures were together because they were friends and blood relations, and because they loved one another. The pack was a band of lovers, adoring, gentle, accepting, full of fun and play.

Bob was totally involved now, a bottom wolf still, but he accepted that. He had gained the highest of rights, to impregnate the heated female, and his cubs were his cubs. They crawled all over him when he was still. One little female liked to chew ears, and the sensation was so tickling that Bob could barely stand it.

He would lie very still, until she had crawled up on his muzzle. Then he would snort and jerk his head and she would go tumbling off with a great deal of mewing and snapping. They would lie face-to-face. When they were sleepy, he would lick his cubs, tasting their sweet taste.

One day he found a roach for them to play with, and it was a fine morning. What joy they took in the chase, what merry pleasure!

The presence of the roach should have warned him.

The danger it represented never crossed his mind, though. On a moonless evening, he made his way again to the town. There was a good coop of chickens as yet undisturbed, and he planned on raiding the garbage behind the diner.

No other wolves were with him. Raiding the town was not like hunting. They tended to do it alone or in small groups. Since Bob brought food back, the alpha female never went at all, but relied on him to feed her and the cubs.

Bob was standing just at the edge of town when he realized that everything had changed. He'd always assumed that people would notice the missing livestock, but he felt sure that they would attribute the losses to feral dogs, an

annoying problem in any isolated community, but the sort of thing they would put off doing anything about until spring made it easy.

The evening air was soft and almost warm when Bob reached the outskirts of town.

What he smelled stopped him right in the middle of the street. He stood there, paralyzed by deep emotions. The aroma brought crowds of memories: voices, dreams, sunny days. A woman's smell, rich and strong and familiar. That and the scent of a little boy. He knew them, and when the scents reached his heart, he was filled with longing.

Cindy and Kevin were here.

Bob's second mistake was to stand there, staring down the dark street, trying to see into the past. He lingered a moment too long.

Chapter Twenty-Two

THE TOTALLY UNEXPECTED PRESENCE OF HIS HUMAN family froze him.

—Sunday mornings with the *Times*.

—Watching *Mystery* with Kevin and Cindy.

—Reading Kafka, the *Metamorphosis*.

—A good cup of coffee. A good play. Laughing, singing, listening to music. Music, talk: pastries in the afternoon, discussing poetry with Cindy.

—Cindy in the night, Kevin's face when he slept. The life of the family, intimate, infinitely private, gentle.

—Rooms, heat, beds, food on demand.

—Privacy. Being alone. Being naked. Bathing. Being touched by Cindy, touching her. Sharing secret knowledge. The richness of human life.

It all came back, assailing him, sweeping him away on a tide of longing. He had become, truly, a lover: he loved the wolves, the cubs, but he also loved Cindy and Kevin.

The old wolf seduced you with his eyes.

Bob was torn, his heart ached, and when a wolf's heart aches, he is as inspired as when he is joyful or lonely, and he howls, forming with his throat and tongue and lips the music of the wild.

The howl swept down across the town, chilling the March twilight. Men, shining with eagerness, loaded rifles and fueled up snowmobiles. This was an event: wolves in Olana for the first time in living memory. What horror, what fun!

All winter there had been livestock thefts. At first they had attributed it to dogs left behind by summer people. But then they had realized it was wolves. Right there at the end of Ontario Street where the Tucker property began, stood a big, black timber wolf. No doubt about it, they'd come down from Canada because the winter'd been so hard.

Bob stood in confusion as Cindy started to run toward him. His skin quivered—he was repelled by the odd human odors, but also attracted to her, loving her again, that creature from the bright improbable past.

"Run, Bob, run!"

What was she saying? It had been a long time since he had heard words. She was speaking too quickly.

"Bob, run, run for your life!"

Her fear communicated what the words could not. They were simply too fast. In fact the whole town was fast, engines roaring, a siren blaring, people darting about.

He skittered away a little. Had he been seen? He'd come here so many times, he'd gotten used to not being seen.

He had gotten careless.

He knew it for certain when a phalanx of snowmobiles came screaming around the corner, jammed with men and guns.

Oh, God.

He turned and ran, leaving his wife and son and a large part of his heart behind. They had reawakened the man in him, a man who had gone peacefully off to sleep. He loped, choosing a wide, easy stride, the kind that was best for long runs. He could do forty miles like this if he had to. Initially, he wasn't afraid.

His plan was to head straight up the ridge behind the town, then cut through the dense forest just beyond. The snowmobiles wouldn't be able to follow him there. He would get back to the pack and draw them north toward the St. Lawrence. The ice might be getting loose. It was time and past time for them to return to Canada. They could not afford to be caught on this side of the seaway. There just wasn't room in New York for wolves, not even in these relatively empty regions.

The climb up the ridge was hard. He was moving a lot faster than usual, and he felt his wind coming quicker and quicker as he struggled through the sticky snow. If only it hadn't suddenly turned warm!

Behind him the snowmobiles never slowed down. They growled and screamed on the ridge, but they did not slow down.

It was horrible, being chased by such relentless machines. Once a shot rang out, but he wasn't worried about that—nobody was going to hit a moving wolf from a moving snowmobile.

The next shot, though, smacked into the snow not a tail's length from his head. He redoubled his efforts, bounding along, increasingly desperate.

Voices now mixed with the scream of the engines. Men were calling back and forth, their voices gone high with eagerness. "Two hundred pounds," somebody shouted.

"Two-ten," came the cheerful reply.

At the top of the ridge Bob began to be able to go faster, but the snowmobiles also broke out. They raced along behind him. The woods were

not a hundred yards away, but he knew they were going to close the gap before he was safe.

He was frantic, running with all the force he could muster, the wind sweeping past, his fur flying, his paws grabbing the ground with practiced efficiency.

The snowmobiles were on him in a matter of a few minutes.

A rifle butt slammed down across his back. He yelped and snapped at it, but he did not stop moving. There were snowmobiles on both sides of him now, and rifles were weaving in the air.

A shot rang out.

Bob, by a miracle, had been missed. Then he saw why: the shot had not come from the snowmobiles, it had come from a man standing off to the left.

"Leave that wolf alone," the man thundered, "in the name of the Mohawk Nation!"

An Indian, by God, and where had he come from? Another gun butt hit Bob, making him roll once in the snow.

Then the Indian fired again, and one of the snowmobiles peeled off, rattling horribly, its occupants diving off into the drifts. It turned over and burst into flames just as Bob reached the edge of the woods.

"You goddamn fool," a voice screamed behind him, "what the hell's the matter with you, that's a damn *wolf!*"

"I am not a fool. My name is Joe Running Fox and I'm the last of the goddamn Mohicans. That wolf is sacred to my people."

As Bob twisted and turned among the hemlocks and the pines the voices dwindled behind him. He could have listened but he wasn't interested. The Indian might stop those men for a few hours or even a few days, but they would be back. The pack was in immediate danger of being killed.

The cubs would die.

He raced on, his breath coming in hurting gasps, his blood thundering in his temples.

An hour later he reached the pack in a state of happy relaxation. The cubs were playing with the big alpha male and the little female with the bent tail, still Bob's immediate superior. Better, the middle wolves had taken a raccoon, which lay where it had been hunted down, a deliciously bloody ruin.

Bob's fear caused a little restlessness. The alpha female wagged her tail inquiringly. Others watched him, looking for some signal that would explain his distress.

Their language did not allow for explanations, though. They would have to hear the snowmobiles and smell the men before they would run. Bob dashed north a distance, barking frantically. Some of the younger wolves yapped, infected by his state. The alpha male, who had obviously eaten his fill of raccoon, stretched out on a bare patch of ground and went to sleep.

Night fell. The wolves were happy, and they howled together. Bob felt sure that the hunters were close enough to hear them, and he yapped helpless protest. The howl was so good though, so charming with its racing highs and soaring, laughing combinations of voices that he joined it, too, and when it was over, he almost wanted to leap for the rising moon, he was so full of the gladness that is being a wolf among wolves.

His beloved daughter cub curled up with him this night. He lay with her softness under his chin, listening and sniffing. Although he smelled smoke and may once have heard a faint murmur of voices, the men did not appear.

Next morning Bob arose before dawn, to the protests of the little cub. He nuzzled her and she licked his face, making complicated little noises of love in her throat.

Especially when he was with his cubs, Bob thought he could sense the loving force that was behind the change in him. He sensed it now, and he sensed that it was both uneasy and excited.

His mind went to Cindy and Kevin and he thought, *if only*.

But surely it was impossible. No, he was alone in this. People don't change into animals.

He stood, then ran a distance into the deeper woods. He did not like the fact that the thickest forest was to the south. Northward there was a daylong run to the seaway, through mostly scrub woods, over ridge after ridge. The climbing would quickly exhaust the wolves.

From the middle of the woods Bob heard them. The Indian had not been able to turn them back. Now they roared, now they snarled, at least a dozen of them, each carrying one or two armed men.

The wolves had no chance.

He barked furiously, and there was such fear in his voice that every adult wolf in the pack leaped to his feet also barking. In the quiet that followed, Bob heard the snowmobiles again, this time muttering in the far side of the woods. They were tracking him, moving slowly because of the trees.

He took his daughter cub in his mouth and started trotting north. Behind him a few wolves yapped, but the alphas soon heard the snowmobiles also

and took flight, each carrying a cub. The scraggly female carried the fourth, a scrappy little male who had once made a neat line of twigs, nosing them through the snow.

The wolves trotted steadily along, the alphas in the lead, then the middle wolves, then the female, and at the end Bob with his daughter, who had obediently fallen asleep.

The snowmobiles came screaming out of the woods not a mile behind them, and fanned out across the wider field they had just left, sending up silver plumes of snow in the dawn light. Bob could not make out the words, but he could hear the delight in the voices. The men must be almost beside themselves, seeing the whole pack. Probably these were the first wolves any of them had seen in the wild.

Shots sounded, snowmobiles shrieked and bounded across the land, eating up the distance. The wolves moved steadily along, going from a trot to a lope, the alphas conserving their strength.

It was a hopeless flight. Before another hour had passed the snowmobiles were flanking the wolves. A shot rang out and the little female ahead of Bob, whom he had faithfully obeyed since they met, whom he loved, to whom he often rolled, exploded in a splash of blood and bone. The cub flew out of her mouth. She lunged, grabbed it, and started trying to pull herself along with her front paws. Then her head was blown apart. The cub was hurled screaming into the air. No sooner had it landed than one of the middle wolves grabbed it.

There was no longer any question of conserving strength. The alphas were running hard now, desperate for anything that could be called shelter.

It was slaughter. They were still miles from the seaway and there was nobody to help them. Again the shots rang out, and this time a middle wolf collapsed, dead of a bullet through his heart. Bob closed the line, slinking low, his daughter cub in his mouth, running as hard as he could. He was thinking little, just following the alphas, hoping he wouldn't get shot.

Another middle wolf was hit. She screamed, blood spurting from her side. The cub she was carrying was picked up by another. She lay down in the snow, panting. Like the others Bob went around her. Her eyes were on the wolves, and he knew why. In her dying there was nothing else she cared to see but the long gray line with its waving tails.

"Don't shoot the fuckin' heads!"

She screamed. Then again, louder. She was dying in agony.

"Don't shoot again! You'll mess up the pelt. It'll die in a minute."

Her agony, though, lasted longer than a minute. In her tortured end she gave the others a little time. But they were terribly tired, so it was time not for more flight but time for rest. They trotted until they heard the snowmobiles grinding gears and starting off again. Then they began to run.

Bob was right behind the alpha female now. The middle wolves remaining were behind him. Pack order was in confusion. Even if the killing stopped now, it would take days for them to sort themselves out again.

Bob could smell her beautiful musk. God, he loved her. He loved her more than he ever had Cindy—or at least differently. His love for her was without equivocation. It was adoring, plentiful, unashamed. But it was not exclusive: it included the whole pack, male and female alike. Only in time of heat did sexual differences really become important.

The snowmobiles were back. The wolves had fanned out, though, in a hunting spread, and so they could not so easily be flanked. A few shots were fired, all misses.

Then there was some luck: one of the snowmobiles hit a tree and its driver fell off and started screaming. He was holding his head when Bob looked, dark blood coming out between his fingers. The wolves kept running.

As he ran Bob cursed himself. Despite his place at the rear of the pack, he had been subtly leading it just as certainly as if he had been at the front. The wolves did not have his intelligence. Pinned into a wolf suit, he was as deadly to them as if he had been a normal human being. It was he who had roamed too far south, who had discovered the town, who had started the chicken raids. Now the wolves were paying the full penalty for his lack of caution.

The cub in Bob's mouth was beginning to squirm and mew. It must be painful, bouncing along as she was. Then Bob heard the mad buzzing of the snowmobiles again. The other wolves put on a burst of speed but it wasn't long before the hunters were back, firing at the remaining wolves.

Another male went down, crying as he fell, his body pierced in the anus. With a whoop one of the hunters leaped from his snowmobile and began to follow the struggling, dying wolf on foot. Bob knew it had been a good shot; no doubt the only damage to the pelt would be a wound under the tail. The wolf dragged himself along. Bob remembered him playing with the cubs through long, happy hours, letting them climb up his back and then shaking them off amid squeals of cub delight. The dying wolf had not had a cub with him now, which was fortunate because there would be no saving it.

He gurgled and gasped. Looking back, Bob saw his lips twisted back, his legs digging at the snow. Then he went down. Once he barked, and then he was too far behind to watch without slowing down.

A bullet whistled past Bob's skull. He dodged and ran on, slinking to get between some close trees. Another shot cracked and there was a heart-breaking shriek. It was her, she was hurt! Carefully, his mind washed with great clarity, Bob put down his cub and ran for all he was worth to help her. She had a grave wound in her belly. A terrible realization came over Bob when he saw her blue guts dragging in the snow. She fell to her side, gabbling pain. The cub she had been carrying dropped from her mouth.

A laughing, happy man leaped off his snowmobile and scooped the cub up. Bob thought fast. He might be a wolf, but he knew a few things that were going to surprise this man.

"I got me a—"

Bob jumped up on the snowmobile.

"What in hell?"

He surveyed the controls. Handlebar throttle, wouldn't you know. If it had been a pedal he might have managed to drive the thing. He broke off the key and jumped out amid a fusillade of shots. A bullet grazed his back like a hot poker, tumbling him over in the snow. But he jumped to his feet and rushed the man, who was not ten yards away and reloading.

While his beautiful friend died in agony, biting her own guts to speed her end, all of her grace and dignity spattered as blood on the snow, Bob savaged another human being mercilessly. He bit the man's face, he raked his cheeks until he could see bones and teeth, he bit the scarf-protected neck so hard the screams became popping whispers.

Then he grabbed the cub the man had dropped and took it to where he had left the other. The rest of the wolves were already far away, followed still by four snowmobiles.

Bob left her dying, her murderer sitting in shock in the snow, his face a pulp. He would live, scarred. She would die.

She whined and Bob stopped. He could not bear to leave her, nor could he bear to leave one of his cubs. He yapped miserably, hopelessly.

He went to her and gently licked her gaping wound. At first she resisted, then her great head flopped down and she made no further sound.

Her eyes told him that she was dead.

He howled over her, raising his soul's dirge. The man he had injured

moaned, his hands fluttering in the ruins of his face. Bob could have killed him, but he would not. Already he had done too much.

Carefully, he picked up one cub and set it beside the other, then he took the two of them in his mouth as best he could. They did not like this at all, they squirmed and yowled. But when he moved, their instincts saved them—or perhaps their understanding—and they became quiet, bearing their discomfort.

About a mile to the north there were more shots, followed by whoops of pleasure. Something snapped in Bob, to hear the easy delight. For the hunters this was nothing more than fun.

But it was so much more. It was so terribly immoral, so fundamentally wrong that Bob almost could not bear that it was happening on the earth. Evil is not entropic, it is not a winding down: evil disguises itself as decay. In truth it is an active force in human life, active and clever and tireless. Evil laughed with the laughing men, and the wolves died.

When Bob reached the top of a low hill, he saw them, a scraggly line of six animals with snowmobiles racing round and round them. There was no hope, but still they ran on. Bob could see cubs dangling in the mouths of the alpha male and one of the middle wolves. They were trying so hard to save themselves and their infants. For the wolves this was an occasion of the greatest possible suffering and the highest seriousness. How could it be debased to fun by the whooping hunters, now riding their snowmobiles like cowboys on dancing mares.

Stunned by the horror of the scene before him, Bob had stopped almost without realizing it. The alpha was a clever wolf, and he suddenly turned away from his northerly direction and into a dense thicket that fell quickly away to a rushing kill, the torrent foaming with spring runoff. The snowmobiles could not follow. Within the thicket, Bob saw them put down the two cubs. No doubt they hoped to fly as fast as possible, then come back later for the cubs. Or maybe they were simply too tired to carry them farther, and were hiding them as best they were able, with no plan for the future.

The snowmobiles stopped in a line at the edge of the thicket. A couple of shots were fired but it isn't easy to hit a target running as fast as the wolves were running now that nobody had a cub in his mouth.

Bob saw a chance—not much of a chance, but a very definite chance. He could distract the hunters, draw them away from the other wolves and the two cubs left in the thicket. Without a moment's hesitation he put down his own

two cubs and began barking furiously.

Faces turned with alacrity. There were excited shouts. Sure enough, the easier game was more interesting to the hunters. After all, they had already gotten themselves eight wolf pelts and seven fine heads. A ninth—and such a big one— would surely be enough for one day.

Taking up the miserable cubs, Bob started moving north and west, still in the direction of the seaway, but away from the other wolves, who were going east and, Bob felt sure, would soon turn north again.

He ran as fast as his spent, trembling body would allow. The snow was in full melt beneath the noontime sun, and it made movement hell. The snowmobiles had been designed to handle it. They roared easily forth.

If only the men would find their companion with the ravaged face, they might call off the whole hunt. His was far more than the minor head injury the other one had encountered. But he was too far back. They wouldn't discover him until they turned for home.

The engines got louder and louder, the whoops and laughter higher and more excited. Soon early shots were ringing out and Bob saw the snow fountains of bullets all around him. Ahead of Bob was a long, drifted ridge— just the sort of situation that would punish him the most. His cubs were crying. At least the other two were with the main pack. They would live if the pack got across the seaway.

Bob realized that he was going to die. Maybe, somehow, his two cubs would make it.

Not two days ago one of his offspring had made a line of sticks. Made a line! They *had* to live!

He turned to face the snowmobiles, his head down, barking furiously.

There came out of the south an amazingly unlikely caravan. First was an ancient car, slipping and sliding through the snow, driven by the Indian who had called himself Joe Running Fox. Beside him in the car sat a woman. Bob smelled Cindy. The car had chains on its tires and was a total mess, covered with snow, both lights put out by collisions along the way, the windshield cracked. Behind it was an even more outrageous sight, a spindly old man on a brand-new Kawasaki snowmobile. Sitting behind him was Kevin, who carried a shotgun.

The procession drove right between him and the oncoming hunters, and there it stopped.

Bob could hardly believe what he saw. "You're all under arrest," Cindy

shouted. "What you're doing is a felony. You're wantonly killing an endangered species without so much as a permit."

"These damn things have been taking chickens and goats all winter. They're being exterminated." With that one of the hunters took aim on Bob. Kevin's voice came over the noon thrall: "If you shoot, I do, too!"

"Oh, come on." The rifle clicked ominously.

Kevin fired the shotgun high. Thank God Bob had taught him something about shotguns. Otherwise he might have misgauged the spread and given one of the men a face full of buckshot.

"The next one will be for you, Mike Lispenard," the old man said in a thin, slightly English voice.

"You old queer!"

"Maybe so, but you're a murderer."

"Hell, this is a hunt. The worst we're gonna get is a fine, if that. And one of these pelts is worth a lot more than what we'll have to pay."

Kevin fired again. This time one of the snowmobiles leaped back and its occupant climbed down, ripping off his jacket. "A pellet! I got a pellet in my goddamn chest!"

"That's a lot more serious crime than killing a few chicken-thieving wolves, lady."

"The worst he'll get is a fine," Cindy snarled, "and it's worth it to see you creeps suffer."

Bob did not wait for the end of this confrontation. He took his two cubs and set off toward the seaway.

All afternoon he loped, his heart still far to the south where the other cubs lay hidden in the snow. He wished mightily that he could go back for them, but he knew that the alpha had been right. Grown wolves could be risked for cubs only up to a point. Bob knew that there would be other seasons and other mates, and many litters.

At least he still had the two. In many ways that was a triumph.

Early in the evening he reached the seaway. For an hour he heard it booming and cracking. He had been sick with fear, but confused, because the ice seemed to be breaking up awfully early.

Then he saw why: there were icebreakers on the water, long, gray ships plunging and rearing along, leaving dark blue tracks of open water behind them. Bob remembered the roach—the fact that it was out should have warned him that spring was proceeding. The sailors knew it: like the insects,

they gave not a moment more to winter than necessary.

Bob ran as hard as he could, but it was not hard enough. By the time he reached the seaway the water was blue down a trench in the middle at least fifty yards wide. And the ice for a hundred yards on either side of it was shattered and thin, floating precariously on the current. -

Bob sat down on the bank. A wave of blackest despair washed him. Putting down the two cubs, who immediately began to tussle and play at his feet, he raised his muzzle in a disconsolate, lonely howl.

From the far bank he was answered. He counted six wolves. Since he was the seventh, it meant that they had ultimately killed nine. A terrible toll, more than half of them. But the survivors were over there, not here, and for that Bob could be glad.

He decided to hide these cubs in a snow den and go back for the others at once, so that they wouldn't have to spend the night in the cold. As long as he lived, they had a chance, all four of them.

As he dug his den, he heard the howling from the far bank of the St. Lawrence, and thought that it was the saddest sound he had ever known, far more sad than the deepest human sorrow, because it had to do with the final tragedy of their species, and they sensed this.

Miserably, Bob dug the snow den. These were such early cubs, maybe they were never fated to live, any of them. Bob had been so randy that he had interrupted the dance of heat with an impregnation weeks before it would normally have occurred. Again, his human nature had unbalanced the delicate life of the pack.

He nosed the little cubs into the den and turned south, counting on the rising dark to conceal him. He had not gone a quarter mile before, quite abruptly, he collapsed in a heap. For a moment he was confused. Why wouldn't he go? He tried, but he got nowhere. It was fully fifteen minutes before he could get himself to move again. And then he could barely manage to walk back to the snow den.

He lay down beside it, curling his nose under his tail. Soon he had two very happy and relieved cubs cuddling into the warmth of his fur, tugging and snuffling for the best position. He knew they must be hungry. He'd deal with hunting in the morning. God willing, the thaw would bring out some squirrels.

He dropped to sleep thinking of the other cubs out there in the night alone, the poor children of his body. And her, he thought of her, how beautiful she

had been, the most beautiful female creature he had ever known.

But when he slept, he dreamed of Cindy's arms around him.

The light that woke him was not the sun. It came stealthily through the woods, and brought him to his feet.

"It's us, Bob."

They came forth out of the scrub forest. Bob smelled a hot car nearby, and he also smelled something else, an odor that made his hackles rise even as his heart was charged with hope.

"We have the cubs. We saw you carrying the other two. We know how important they are to you."

Cindy and Kevin loomed up out of the dark, each carrying a cub cuddled in their arms. Both infant wolves were curled up, motionless with fear.

When they smelled Bob, their heads began to wobble. Then they started mewling, and his every instinct was aroused. They were so precious: they bore the spark of intellect. Such cubs as these were destined to save the wild!

The cubs were put at his feet, and soon all four of them were scrambling about together, their fears forgotten in the protective shadow of their father.

"Bob, do you still understand?" Cindy was a perceptive woman. He'd heard enough language this day for it all to have come back to him. One tap was yes, two was no. He tapped.

"Oh, Dad, you're still in there, you're really still in there!"

Kevin's voice, so full of loyalty and love, practically broke Bob's heart. Before he realized what he was doing, he raised his nose and howled out his combination of joy and sorrow. From the far bank there almost immediately came a response. He felt the longing in their voices: they had lost lovers and cubs. Also, though, they had heard his joy and there was an undercurrent of hope in their sound.

He looked at his son. For an instant, their eyes met. Then Kevin looked away.

Bob thought, I can do it.

"The seaway trapped you, didn't it," the elderly man said.

Bob tapped once.

The old man looked at Cindy and Kevin. "Amazing. Can it *really* be true? Every word you've told me?"

Bob scratched again, hard, and wagged his tail.

The old man made a sound like a sob. "I see this as a very hopeful sign," he said.

"If you'll get in the car," Joe Running Fox said, "we'll take you across the seaway at the Lightforth Bridge. We'll leave you within striking distance of the other wolves. Do you want that?"

Bob scratched yes and yapped excitedly. How desperately he wanted that!

"Bob," Cindy asked, "you must answer me a question. Please, Bob, do you want to stay with us? We'll give the cubs to the other wolves. But Bob, come home. There is love for you there. And maybe someday—"

He spoke with his heart: *Look at me, Cindy! Look into my eyes!* She did not hear. Within himself he was still her husband, still Kevin's father. But he was also the father of these cubs.

He was anguished.

He loved his old family and the life of man, but he belonged to these cubs, and to the future they represented. He knew why he was here, to save the ancient race of wolves by giving them a spark of man's devastating intelligence.

But Cindy, dear heart, how can I ever leave you! For God sake, look at me! Kevin, look into Dad's eyes!

The cubs, grown hungry, mewed in perfect unison at his feet. Normal wolf cubs do not mew together like that, not ever.

In the car the cubs became quiet after eating some beef jerky offered them by Joe Running Fox. Bob slept with his head in Cindy's lap, waking occasionally to take a long, lovely sniff of her.

It was a long drive down to the bridge and back up the other side. Through it Cindy stroked Bob's head. He smelled tears, but she made no sound. He waited to lock glances with her or Kevin, but it never happened.

Then the car stopped. "It's time," Joe said. Bob got to his feet. Kevin and the old man were sleeping on one another's shoulders. Gently, Bob nosed his son awake.

"Good-bye," Cindy said. Kevin bent down and kissed him.

No, it must not be! For God's sake, look at me!

He imagined them changing, fought to see them as wolves, Cindy's face soft and full of courage, her scent unimaginably perfect.

She moaned, and then, quite suddenly, she was looking back into his eyes.

There came a shaft of golden light from the sun. The old man screamed, the Indian sighed, Kevin's voice swept high with terror. "Mom, Mom!"

Oh, there—perfect, just perfect! He leaped into her, rushing and roaring, filling her with the essence of the wolf, the magic of the wild. She rolled,

growling and muttering, still trying to talk.

She was one god-awful beautiful wolf! "Mom, no!"

Kevin, come on, look at me, look at Dad! "Mama, I'm scared! Please, Mama, *please!*" She leaped up, resting her paws on the boy's shoulders. "They do it to you," the Indian shouted. "Kev, they do it with their eyes!" He was young and full of life, and that life recoiled in fear.

When his mother looked into his eyes, he whimpered, then cried. His whole body shook, shimmered as if behind a wall of heat, then his arms, his legs began to twist, his hands to curl in on themselves.

It wasn't easy for him like it had been for his mother and father. Perhaps this was because he was young and full of human hope for his human future. Or perhaps it was simply because youth loves life, and this felt too much like death.

But once the process started in him it would not be stopped. The change continued relentlessly on. His head burst with a great crackling sound into the head of a fine young wolf.

Out of the writhing blur of his body there came the naked stalk of a tail, the skeletal sticks that would be his legs, then beneath the ripping, tearing clothes, a blur of fine, gray hair.

He was a lovely young wolf, his soft eyes crackling with intelligence.

He stood beside his mother, his tail circling, his very stance speaking promise. When Bob went to him to sniff under his tail, he leaped forward, yapping.

Had it been possible, Bob would have laughed. But he taught them both the wonders of their new sense. In a few minutes of sniffing each other the little family knew each other better than human beings have since we left the forest.

When he lifted his head from his wife and his son and his cubs, Bob could smell the other wolves not a hundred yards away, hiding in a stand of pine.

"I'll never forget you," the Indian said. He would not look at Bob, though, when Bob sought his eyes. "It's too late for me," he added, "I'd be a waste." Then he dropped his eyes. His fists were clenched, such was the pain in his heart. "You go on, find others, many others! Find the young and the strong. God bless you and bless the race of wolves!" He and the Englishman withdrew so that the other wolves could come out of hiding.

When they appeared, the pack reunited with much sniffing and joyful yapping. Because of the losses, the two new wolves were more easily

accepted.

The pack remained there through the night, sometimes fighting, sometimes not, and in the morning there was a new order established.

The alpha wolf was still alpha. Behind him came Cindy of the high tail, who had turned out to be a fierce fighter. She had taken second place against all of the other female wolves. Then came a thoroughly beaten Bob. He had tried hard to be alpha. He was Cindy's husband, for God's sake, married in the Catholic Church no less! But the leader was clever in the ways of wolves, and he was strong. Behind him were the young wolves, included among them his own beloved son.

Not long after dawn the Indian and the old man returned to the pine grove. He watched them in silence. There were tears on the Indian's face, but he would not meet Bob's eager eyes. "Under God's heaven," he said, "make something new in the world."

Bob knew what was finally happening, knew the grandeur and the wonder of it. The spirit of man had finished its ages-long journey through history, and was finally returning to the wild from which it had come. But it was returning triumphant, bringing the gift of intellect with it.

The two old men stood watching as the pack left. When they mounted a rise, Bob looked back. He saw their car creeping away like a beetle, moving toward the Lightforth Bridge and mankind's old, dark world.

At last Bob turned north. He bounded forward, taking his hard-earned place as third wolf. He followed his alphas, deep into the freedom and safety of the wild.

For Anne

Since all is well, keep it so:
Wake not the sleeping wolf.
—Shakespeare
Henry IV, Part 2

Chapter 1

In Brooklyn they take abandoned cars to the Fountain Avenue Automobile Pound adjacent to the Fountain Avenue Dump. The pound and the dump occupy land shown on maps as "Spring Creek Park (Proposed)." There is no spring, no creek, and no park.

Normally the pound is silent, its peace disturbed only by an occasional fight among the packs of wild dogs that roam there, or perhaps the cries of the sea gulls that hover over the stinking, smoldering dump nearby.

The members of the Police Auto Squad who visit the pound to mark derelicts for the crusher do not consider the place dangerous. Once in a while the foot-long rats will get aggressive and become the victims of target practice. The scruffy little wild dogs will also attack every so often, but they can usually be dealt with by a shot into the ground. Auto-pound duty consists of marking big white X's on the worst of the derelicts and taking Polaroids of them to prove that they were beyond salvage in case any owners turn up.

It isn't the kind of job that the men associate with danger, much less getting killed, so Hugo DiFalco and Dennis Houlihan would have laughed in your face if you told them they had only three minutes to live when they heard the first sound behind them.

"What was that?" Houlihan asked. He was bored and wouldn't have minded getting a couple of shots off at a rat.

"A noise."

"Brilliant. That's what I thought it was too."

They both laughed. Then there was another sound, a staccato growl that ended on a murmuring high note. The two men looked at one another. "That sounds like my brother singing in the shower," DiFalco said.

From ahead of them came further sounds—rustlings and more of the unusual growls. DiFalco and Houlihan stopped. They weren't joking anymore, but they also weren't afraid, only curious. The wet, ruined cars just didn't seem to hold any danger on this dripping autumn afternoon. But there was something out there.

They were now in the center of a circle of half-heard rustling movement. As both men realized that something had surrounded them, they had their first twinge of concern. They now had less than one minute of life remaining. Both of them lived with the central truth of police work—it could happen anytime. But what the hell was happening now?

Then something stepped gingerly from between two derelicts and stood facing the victims.

The men were not frightened, but they sensed danger. As it had before in moments of peril, Hugo DiFalco's mind turned to a brief thought of his wife, of how she liked to say "We're an us." Dennis Houlihan felt a shiver of prickles come over him as if the hair all over his body was standing up.

"Don't move, man," DiFalco said.

It snarled at the voice. "There's more of 'em behind us, buddy." Their voices were low and controlled, the tone of professionals in trouble. They moved closer together; their shoulders touched. Both men knew that one of them had to turn around, the other keep facing this way. But they didn't need to talk about it; they had worked together too long to have to plan their moves.

DiFalco started to make the turn and draw his pistol. That was the mistake.

Ten seconds later their throats were being torn out. Twenty seconds later the last life was pulsing out of their bodies. Thirty seconds later they were being systematically consumed.

Neither man had made a sound. Houlihan had seen the one in front of them twitch its eyes, but before he could follow the movement there was a searing pain in his throat and he was suddenly, desperately struggling for air through the bubbling torrent of his own blood.

DiFalco's hand had just gripped the familiar checkered wooden butt of his service revolver when it was yanked violently aside. The impression of impossibly fast-moving shapes entered his astonished mind, then something slammed into his chest and he too was bleeding, in his imagination protecting his throat as in reality his body slumped to the ground and his mind sank into darkness.

The attackers moved almost too quickly, their speed born of nervousness at the youth of their victims. The shirts were torn open, the white chests exposed, the entrails tugged out and taken away, the precious organs swallowed. The rest was left behind.

In less than five more minutes it was over. The hollow, ravaged corpses lay there in the mud, two ended lives now food for the wild scavengers of the area.

For a long time nothing more moved at the Fountain Avenue Automobile Pound. The cries of gulls echoed among the rustling hulks of the cars. Around the corpses the blood coagulated and blackened. As the afternoon drew on, the autumn mist became rain, covering the dead policemen with droplets of water and making the blood run again.

Night fell.

Rats worried the corpses until dawn.

The two men had been listed AWOL for fourteen hours. Most unusual for these guys. They were both family types, steady and reliable. AWOL wasn't their style. But still, what could happen to two experienced policemen on marking duty at the auto pound? That was a question nobody would even try to answer until a search was made for the men.

Police work might be dangerous, but nobody seriously believed that DiFalco and Houlihan were in any real trouble. Maybe there had been a family emergency and the two had failed to check in. Maybe a lot of things. And maybe there *was* some trouble. Nobody realized that the world had just become a much more dangerous place, and they wouldn't understand that for quite some time. Right now they were just looking for a couple of missing policemen. Right now the mystery began and ended with four cops poking through the auto pound for signs of their buddies.

"They better not be sleeping in some damn car." Secretly all four men hoped that the two AWOL officers were off on a bender or something. You'd rather see that than the other possibility.

A cop screamed. The sound stunned the other three to silence because it was one they rarely heard.

"Over here," the rookie called in a choking voice.

"Hold on, man." The other three converged on the spot as the rookie's cries sounded again and again. When the older men got there he slumped against a car.

The three older cops cursed.

"Call the hell in. Get Homicide out here. Seal the area. Jesus Christ!"

They covered the remains with their rainslickers. They put their hats where the faces had been.

The police communications network responded fast; fellow officers were dead, nobody wasted time. Ten minutes after the initial alarms, had gone out the phone was ringing in the half-empty ready-room of the Brooklyn Homicide Division. Detective Becky Neff picked it up. "Neff," the gruff voice of the Inspector said, "you and Wilson're assigned to a case in the Seventy-fifth Precinct."

"The what?"

"It's the Fountain Avenue Dump. Got a double cop killing, mutilation, probable sex assault, cannibalism. Get the hell out there fast." The line clicked.

"Wake up, George, we've got a case," Neff growled. "We've got a bad one." She had hardly absorbed what the Inspector had said—mutilation and cannibalism? What in the name of God had happened out there? "Somebody killed two cops and cannibalized them."

Wilson, who had been resting in a tilted-back chair after a grueling four-hour paperwork session, leaned forward and got to his feet.

“Let’s go. Where’s the scene?”

“Fountain Avenue Dump. Seventy-fifth Precinct.”

“Goddamn out-of-the-way place.” He shook his head. “Guys must have gotten themselves jumped.”

They went down to Becky Neff’s old blue Pontiac and set the flasher up on the dashboard. She pulled the car out of its parking place and edged into the dense traffic of downtown Brooklyn. Wilson flipped on the radio and reported to the dispatcher. “Siren’s working,” Wilson commented as he flipped the toggle switch. The siren responded with an electronic warble, and he grunted with satisfaction; it had been on the blink for over a month, and there had been no response from the repair unit. Budget cuts had reduced this once-efficient team to exactly twelve men for the entire fleet of police vehicles. Unmarked cars were low on the list of precedence for flasher and siren repairs.

“I fixed it,” Becky Neff said, “and I’m damn glad now.” The ride to the car pound would be made much easier by the siren, and time could not be wasted.

Wilson raised his eyebrows. “*You* fixed it?”

“I borrowed the manual and fixed it. Nothing to it.” Actually she had gotten a neighborhood electronics freak to do the job, a guy with a computer in his living room. But there was no reason to let Wilson know that.

“*You* fixed it,” Wilson said again.

“You’re repeating yourself.”

He shook his head.

As the car swung onto the Brooklyn-Queens Expressway he used the siren, flipping the toggle to generate a series of startling whoops that cleared something of a path for them. But traffic was even worse as they approached the Battery Tunnel interchange, and the siren did little good in the confusion of trucks and buses. “Step on it, Becky.”

“I’m stepping. You’re working the siren.”

“I don’t care what you do, but move!”

His outburst made her want to snap back at him, but she understood how he felt. She shared his emotions and knew his anger was directed at the road. Cop killings made you hate the world, and the damn city in particular.

Wilson leaned out of his window and shouted at the driver of a truck stuck in the middle of the lane. “Police! Get that damn thing moving or you’re under arrest!”

The driver shot the finger but moved the vehicle. Becky Neff jammed her accelerator to the floor, skidding around more slowly moving traffic, at times breaking into the clear, at times stuck again.

As the dashboard clock moved through the better part of an hour they approached their destination. They got off the B-Q-E and went straight out Flatbush Avenue, into the sometimes seedy, sometimes neat residential areas beyond. The precincts rolled by, the 78th, the 77th, the 73rd. Finally they entered the 75th and turned onto Flatlands Avenue, a street of nondescript shops in a racially mixed lower- and middle-income neighborhood. The 75th was as average a precinct as there was in New York. About a hundred thousand people lived there, not many poor and not many rich, and about evenly divided between black, white, and Hispanic.

The 75th was the kind of precinct you never read about in the papers, the kind of place where policemen lived out good solid careers without ever shooting a man—not the kind

of place where they got killed, much less mutilated and cannibalized.

Finally they turned onto Fountain Avenue. In the distance a little clutch of flashers could be seen in the dismal autumn light—that must mark the official vehicles pulled up to the entrance of the Automobile Pound. The scene of the crime. And judging from the news cars careening down the street, the 75th Precinct wasn't going to be an obscure place much longer.

“Who's Precinct Captain?” Neff asked her superior officer. Wilson was senior man on the team, a fact which he was careful to make sure she never forgot. He also had a terrific memory for details.

“Gerardi, I think, something Gerardi. Good enough cop. The place is tight s'far as I know. Nothin' much going on. It's not Midtown South, if you know what I mean.”

“Yeah.” What Wilson meant was that this precinct was clean—no bad cops, no mob connections, no serious graft. Unlike Midtown South there wasn't even the opportunity.

“Sounds like it's a psycho case to me,” Neff said. She was always careful to pick her words when she theorized around Wilson. He was scathing when he heard poorly thought out ideas and had no tolerance for people with less skill than he himself possessed. Which was to say, he was intolerant of almost the entire police force. He was probably the best detective in Homicide, maybe the best on the force. He was also lazy, venal, inclined toward a Victorian view of women, and a profound slob. Except for their abilities in the craft of police detection, Becky liked to think they had nothing in common. Where Wilson was a slob, Becky tended to be orderly. She was always the one who kept at the paperwork when Wilson gave up, and who kept the dreary minutiae of their professional lives organized.

She and Wilson didn't exactly dislike one another—it was more than that, it was pure hate laced with grudging respect. Neff thought that Wilson was a Stone Age chauvinist and was revolted by the clerical role he often forced her to play—and he considered her a female upstart in a profession where women were at best a mistake.

But they were both exceptional detectives, and that kept them together. Neff couldn't help but admire her partner's work, and he had been forced to admit that she was one of the few officers he had encountered who could keep up with him.

The fact that Becky Neff was also not a bad-looking thirty-four had helped as well. Wilson was a bachelor, over fifty and not much more appealing physically than a busted refrigerator (which he resembled in shape and height). Becky saw from the first that she was attractive to him, and she played it up a little, believing that her progress in her career was more important than whether or not she let Wilson flirt with her. But it went no further than that. Becky's husband Dick was also on the force, a captain in Narcotics, and Wilson wouldn't mess around with another cop's wife.

The idea of Wilson messing around with anybody was ridiculous anyway; he had remained a bachelor partly out of choice and partly because few women would tolerate his arrogance and his sloppy indifference to even the most fundamental social graces, like taking the meat out of a hamburger and eating it separately, which was one of his nicer table manners.

“Let's just go blank on this one, sweetheart,” Wilson rumbled. “We don't know what the hell happened out there.”

“Cannibalism would indicate—”

“We don't know. Guys are excited, maybe it was something else. Let's just find what we find.”

Becky pulled the car in among the official vehicles and snapped her folding umbrella out of her purse. She opened it against the rain and was annoyed to see Wilson go trudging off into the mud, pointedly ignoring his own comfort. “Let the bastard catch pneumonia,” she thought as she huddled forward beneath the umbrella. Wilson was a great one for appearances—he gets to the scene wet, indifferent to his own comfort, concerned only with the problem at hand, while his dainty little partner follows along behind with her umbrella, carefully mincing over the puddles. Ignoring him as best she could, she set off toward the klieg lights that now lit the scene of the murders some fifty yards into the area.

As soon as she saw the mess she knew that this was no normal case. Something that made you break out in a sweat even in this weather had happened to these men. She glanced at Wilson, surprised to see that even old super-pro’s eyes were opened wide with surprise. “Jesus,” he said, “I mean... what?”

The Precinct Captain came forward. “We don’t know, sir,” he said to Wilson, acknowledging the other man’s seniority and fame on the force. And he also eyed Becky Neff, well-known enough in her own right as one of the most visible female officers in New York. Her picture had appeared in the *Daily News* more than once in connection with some of her and Wilson’s more spectacular cases. Wilson shunned the photographers himself—or they shunned him, it was hard to say which. But Becky welcomed them, highly conscious of her role as living and visible proof that female officers could work the front lines as well as their male counterparts.

Taking a deep breath she knelt down beside the corpses while Wilson was still registering his shock. Every fiber of her body wanted to run, to get away from the unspeakable horror before her—but instead she looked closely, peering at the broken, gristle-covered bones and the dark lumps of flesh that seemed almost to glow beneath the lights that had been set up by the Forensics officers.

“Where the hell’s the Medical Examiner?” Wilson said behind her. A voice answered. Wilson did not come any closer; she knew that he wasn’t going to because he couldn’t stomach this sort of thing. Clenching her teeth against her own disgust, she stared at the bodies, noting the most unusual thing about them—the long scrape marks on the exposed bones and the general evidence of gnawing. She stood up and looked around the desolate spot. About a quarter of a mile away the dump could be seen with huge flocks of sea gulls hovering over the mounds of garbage. Even over the hubbub of voices you could hear the gulls screaming. From here to the dump was an ocean of old cars and trucks of every imaginable description, most of them worthless, stripped hulks. A few nearby had white X’s on the windshields or hoods, evidence of the work DiFalco and Houlihan had been doing when the attack occurred.

“They were gnawed by rats,” Becky said in as level a tone as she could manage, “but those larger marks indicate something else—dogs?”

“The wild dogs around here are just scrawny little mutts,” the Precinct Captain said.

“How long were these men missing before you instituted a search, Captain?” Wilson asked.

The Captain glanced sharply at him. Neff was amazed; nobody below the rank of Inspector had the right to ask a captain a question like that, and even then not outside of a Board of Inquiry. It was a question that belonged in a dereliction of duty hearing, not at the scene of a crime.

“We need to know,” Wilson added a little too loudly.

“Then ask the M. E. how long they’ve been dead. We found them two hours ago. Figure the rest out for yourself.” The Captain turned away, and Becky Neff followed his

gaze out over the distant Atlantic, where a helicopter could be seen growing rapidly larger. It was a police chopper and it was soon above them, its rotor clattering as it swung around looking for a likely spot to land.

“That’s the Commissioner and the Chief,” Wilson said. “They must have smelled newsmen.” In January a new mayor would take office, and senior city officials were all scrambling to keep their jobs. So these normally anonymous men now jumped at the possibility of getting their faces on the eleven o’clock news. But this time they would be disappointed—because of the unusually hideous nature of the crime, the press was being kept as far away as possible. No pictures allowed until the scene was cleared of the bodies.

At the same time that the Chief of Detectives and the Commissioner were getting out of their helicopter, the Medical Examiner was hurrying across the muddy ground with a newspaper folded up and held over his head against the rain. “It’s Evans himself,” Wilson said. “I haven’t seen that man outdoors in twenty years.”

“I’m glad he’s here.”

Evans was the city’s Chief Medical Examiner, a man renowned for his ingenious feats of forensic detection. He rolled along, shabby, tiny, looking very old behind his thick glasses.

He had worked with Wilson and Neff often and greeted them both with a nod. “What’s your idea?” he said even before examining the bodies. Most policemen he treated politely enough; these two he respected.

“We’re going to have a problem finding the cause of death,” Wilson said, “because of the shape they’re in.”

Evans nodded. “Is Forensics finished with the bodies?” The Forensics team was finished, which meant that the corpses could be touched. Dr. Evans rolled on his black rubber gloves and bent down. So absorbed did he become that he didn’t even acknowledge the approach of the brass.

The group watched Evans as he probed gingerly at the bodies. Later he would do a much more thorough autopsy in his lab, but these first impressions were important and would be his only on-site inspection of the victims.

When he backed away from the bodies, his face was registering confusion. “I don’t understand this at all,” he said slowly. “These men have been killed by... something with claws, teeth. Animals of some kind. But what doesn’t make sense is—why didn’t they defend themselves?”

“Their guns aren’t even drawn,” Becky said through dry lips. It was the first thing she had noticed.

“Maybe that wasn’t the mode of death, Doctor,” Wilson said. “I mean, maybe they were killed first and then eaten by the animals around here. There’s rats, gulls, also some wild dogs, the precinct boys say.”

The doctor pursed his lips. He nodded. “We’ll find out when we do the autopsy. Maybe you’re right, but on the surface I’d say we’re looking at the fatal wounds.”

The Forensics team was photographing and marking the site, picking up scattered remains and vacuuming the area as well as possible considering the mud. They also took impressions of the multitude of pawprints that surrounded the bodies.

The Precinct Captain finally broke the silence. “You’re saying that these guys were killed by wild dogs, and they didn’t even draw their guns? That can’t be right. Those dogs are just little things—they’re not even a nuisance.” He looked around. “Anybody ever hear of a death from wild dogs in the city? Anybody?”

The Chief and the Commissioner were now standing nearby swathed in heavy coats, shrouded by their umbrellas. Nobody spoke or shook hands. "We'll give you whatever you need to solve this case," the Commissioner said to nobody in particular. Up close his face was almost lifeless, the skin hanging loosely on the bones. He had a reputation for long hours and honest work; unlike many of his predecessors he had attained the respect of the department by his interest in police affairs and his disinterest in politics. For that reason his job was now on the line. He was under criticism for allegedly allowing corruption, for taking cops off the street, for ignoring black and Hispanic neighborhoods, for all the things that usually get police commissioners in trouble. By contrast Chief of Detectives Underwood was pink, fat and rather merry. He was a born politician and was ready to redecorate the Commissioner's office to his own taste. His eyes were watery and he had a nervous cough. He stamped his feet and glanced quickly around, barely even seeing the bodies; it was obvious that he wanted to get back to the comfort of headquarters as soon as he could. "Any leads?" he said, looking at Wilson.

"Nothing."

"Right now it looks like their throats were torn out," the Medical Examiner said, "but we'll reserve judgment until the autopsy."

"A dog theory won't make it," Wilson muttered.

"I never said that," the M. E. flared. "All I said was the probable cause of death is massive insult to the throat caused by teeth and claws. I don't know about dogs and I don't care to speculate about dogs."

"Thank you, Doctor Evans," Wilson said in a staccato voice. Evans was not numbered among Wilson's few friends despite the professional respect.

The Commissioner stared a long time at the corpses. "Cover 'em up," he said at last, "get 'em out of here. Come on, Herb, let's let these men do their jobs."

The two officials trudged back to their helicopter.

"Morale," the Precinct Captain said as the chopper began to start "A visit from those two sure charges you up."

The Medical Examiner was still fuming over his run-in with Wilson. "If it was dogs," he said carefully, "they'd have to be seventy, eighty pounds or more. And fast, they'd have to be fast."

"Why so fast?" Becky asked.

"Look at DiFalco's right wrist. Torn. He was going for his pistol when something with teeth hit his arm hard. That means whatever it was, it was damn fast."

Becky Neff thought immediately of the dogs her husband Dick often worked with on the Narcotics Squad. "Attack dogs," she said, "you're describing the work of attack dogs."

The Medical Examiner shrugged. "I'm describing the condition of the bodies. How they got that way is your business, Becky—yours and His Excellency's."

"Screw you too, Evans."

Becky tried to ignore Wilson—she was used to his sour disposition. As long as people like Evans kept working with him it didn't really matter. Sometimes, though, it was nice to see that others disliked him as much as she did.

"If we can establish that attack dogs did this," she said, "then we can narrow our search considerably. Most attack dogs don't kill."

"If the good doctor says they were able to do... that, then you might have a point. Let's

talk to Tom Rilker, get ourselves a little education on the subject.” Rilker trained dogs for the department.

Becky nodded. As usual when they got going, she and Wilson started thinking together. They headed back toward their car. The first step was now clear— they had to find out if attack dogs were involved. If they were, then this was a first—policemen had never been murdered with dogs before. In fact, dogs were an uncommon weapon because it took the work of a skilled professional to train them to kill human beings. And skilled professionals didn’t train up dogs for just anybody. If you had gotten a dog trained into a killer, the man who did it would remember you for sure. Most so-called “attack dogs” are nothing more than a loud bark and maybe a bite. The ones that actually go for the throat are not very common. A dog like that is never completely controllable, always a liability unless it is absolutely and essentially needed.

Back in the car, Wilson began to recite what he remembered about cases involving killer dogs. “October, 1966, a pedestrian killed by a dog in Queens. Dog was untrained, believed to have been an accident. I worked that case, I always thought it was fishy but I never got a decent lead. July, 1970, an attack dog escaped from the Willerton Drug Company warehouse in Long Island City and killed a seventeen-year-old boy. Another accident. April, 1973—our only proved murder by dog. A hood named Big Roy Gurner was torn apart by three dogs, later traced to the Thomas Shoe Company, which was a front for the Carlo Midi family. I got close to netting Midi in that one, but the brass removed me from the case. Corrupt bastards. That’s my inventory on dogs. You got anything?”

“Well, I don’t remember any dog cases since I’ve been a detective. I’ve heard about the Gurner thing of course. But the scuttlebutt was you got paid off the case.” She watched him pull his chin into his neck at that—it was his characteristic gesture of anger.

And she realized that she shouldn’t have goaded him; Wilson was one honest cop, that much was certain. He hated corruption in others and certainly would never bend himself. It was a nasty crack, and she was sorry for it. She tried to apologize, but he wouldn’t acknowledge. She had made her mistake; there was no point in continuing to talk about it. “My husband works with dogs all the time,” she said to change the subject. “Some attack dogs, but mostly just sniffers. They’re his best weapon, so he says.”

“I hear about his dogs. All of them are supposedly trained to kill despite that ‘sniffer’ bullshit. I’ve heard the stories about those dogs.”

She frowned. “What stories?”

“Oh, nothing much really. Just that those dogs sometimes get so excited when they sniff out a little dope that they just happen to kill the jerk they find it on... sometimes. But I guess you husband’s told you all about that.”

“Let’s drop it, Wilson. We don’t need to go at each other like this. My husband hasn’t told me anything about dogs that kill suspects. It sounds pretty outlandish if you ask me.”

Wilson snorted, said nothing more. But Becky had heard the rumors he was referring to, that Dick’s team sometimes used dogs on difficult suspects. “At least he’s not on the take,” Becky thought. “I hope to God he’s not.” Then she thought of a certain problem they used to have paying for his father’s nursing home, a problem that seemed to have disappeared—but she refused to think about it

Corruption was the one thing about police work she hated. Many officers considered the money part of the job, rationalizing it with the idea that their victims were criminals anyway and the payoffs were nothing more than a richly deserved fine. But as far as Becky Neff was concerned, that was crap. You did your job and got your pay, that ought to be enough. She forced herself not to rise to Wilson’s bait about her husband, it would

probably start a shouting argument.

“Stories aside, I’ve heard a lot about Tom Rilker. Dick thinks damn highly of him. Says he could train a dog to walk a tightrope if he wanted to.” Thomas D. Rilker was a civilian who worked closely with the NYPD, the FBI, and U. S. Customs training the dogs they used in their work. He also did private contract work. He was good, probably the best in the city, maybe the best in the world. His specialty was training dogs to sniff. He had dope dogs, fire dogs, tobacco dogs, booze dogs, you name it. They worked mostly for the Narcotics Squad and the customs agents. They had revolutionized the technique of investigation in these areas and greatly reduced the amount of drugs moving through the port of New York. Becky knew that Dick thought the world of Tom Rilker.

“Keep this damn car moving, sweetheart. You ain’t in a parade!”

“You drive, Wilson.”

“Me? I’m the damn boss. Oughta sit in back.”

She pulled over to the curb. “You don’t like my driving, you do it yourself.”

“I can’t, dearest—my license lapsed last year.”

“When you teamed up with me, dip.”

“Thank you, I’ll make a note of that.”

Becky swung the car out into traffic and jammed the accelerator to the floor. She wasn’t going to let him get to her. Part of the reason he was like this was because she had forced herself on him. Between her husband Dick and her uncle Bob she had exerted plenty of pull to get herself into Homicide and to land a partner once she got there. It took the pull of her husband’s captaincy and her uncle’s inspectorship to move her out of the secretary syndrome and onto the street. She had done well as a patrolman and gotten herself promoted to Detective Sergeant when she deserved it. Most of the women she knew on the force got their promotions at least two or three years late, and then had to fight to avoid ending up on some rotten squad like Missing Persons, where the only action you ever saw was an occasional flat tire on an unmaintained squad car.

So here came Becky Neff just when George Wilson’s most recent partner had punched him in the face and transferred to Safes and Locks. Wilson had to take what he could get, and in this situation it was a rookie detective and, worse, a woman.

He had looked at her as if she had contagious leprosy. For the first six weeks together he had said no more than a word a week to her—six words in six weeks, all of them four-letter. He had schemed to get her out of the division, even started dark rumors about a Board of Inquiry when she missed an important lead in what should have been an easy case.

But gradually she had become better at the work, until even he had been forced to acknowledge it. Soon they were making collars pretty often. In fact they were getting a reputation.

“Women are mostly awful cops,” were his final words on the subject, “but you’re unique. Instead of being awful, you’re just bad.”

Coming from Wilson that was a compliment, perhaps the highest he had ever paid a fellow officer. After that his grumbling became inarticulate and he let the partnership roll along under its own considerable steam.

They worked like two parts of the same person, constantly completing each other’s thoughts. People like the Chief Medical Examiner started requesting their help on troublesome cases. But when their work started to reach the papers, it was invariably the

attractive, unusual lady cop Becky Neff who ended up in the *Daily News* centerfold. Wilson was only another skilled policeman; Becky was interesting news. Wilson, of course, claimed to hate publicity. But she knew he hated even more the fact that he didn't get any.

"You're making a wrong turn, Becky. We're supposed to be stopping at the Seventy-fifth to get pictures. of the bodies and pawprints for Rilker. Give him something to work with."

She wheeled the car around and turned up Flatlands Avenue toward the station house. "Also we ought to call ahead," she said, "let him know we're coming."

"You're sure we trust him? I mean, what if he's doing a little work on the side, like for somebody bad. Calling ahead'll give him time to think."

"Rilker's not working for the Mafia. I don't think that's even worthy of consideration."

"Then I won't consider it." He slumped down in the seat, pushing his knees up against the glove compartment and letting his head lean forward against his chest. It looked like agony, but he closed his eyes. Becky lit a cigarette and drove on in silence, mentally reviewing the case. Despite the fact that it looked like they were on a good lead she could not dismiss the feeling that something was wrong with it. Some element didn't fit. Again and again she reviewed the facts but she couldn't come up with the answer. The one thing that worried her was the lack of resistance. It had happened so fast that they hadn't appeared dangerous until the very last moment.

Did attack dogs lay ambushes? Could they move fast enough to kill two healthy policemen before they even had time to unholster their pistols?

She double-parked the car in front of the 75th Precinct.

Leaving Wilson snoring lightly she hurried up the worn concrete steps of the dingy red-brick building and introduced herself to the desk sergeant. He called Lieutenant Ruiz, who was responsible for the material she needed. He was a six-footer with a trim black mustache and a subdued smile. "Pleased to make your acquaintance, Detective Neff," he said with great formality.

"We need pictures and copies of the prints you took."

"No problem, we've got everything you could want. It's a rotten mess."

A leading statement, but Becky didn't pick up on it. That part of the investigation would come later. Before they identified a motive for the murders they had to have a mode of death.

Sergeant Ruiz produced eleven glossies of the scene, plus a box of plasticasts of the pawprints that had been found surrounding the bodies. "There isn't a single clear print in that box," he said, "just a jumble. If you ask me those prints haven't got a thing to do with it. Just the wild dogs doing a little scavenging. They sure as hell couldn't be responsible for killing those guys, they just came and got their share after the real work was done."

"Why do you say that?" She was examining the photographs as she talked. Why had he handed her one of the less grisly shots?

"The dogs—I've seen them. They're little, like cockers or something, and they're shy as hell. And by the way, I wonder if you could autograph that picture for my daughter." He paused, then added shyly, "She thinks the world of you."

Becky was so pleased by his admiration that she didn't notice Wilson standing behind her.

"I thought we weren't going to give out any more autographs," he said curtly.

“When did we decide not to? I don’t remember that.”

“Right now. I just decided. This isn’t some kind of a game.” His hand moved toward the picture but Ruiz’s was quicker.

“Thanks, Miss Neff,” he said, still smiling. “My daughter’ll be thrilled.”

Becky gathered the rest of the photographs and picked up the box of prints to lug to the car. She knew without asking that Wilson wouldn’t touch it, and she wasn’t sure she wanted him to.

“By the way, it’s Sergeant Neff,” she said over her shoulder to Ruiz, who was still standing there staring.

“Let me help you,” he said.

Becky was already out the door and putting the box into the back seat of the car. Wilson followed, got in, and slammed his door. Becky settled herself into the driver’s seat and turned on the ignition.

“I just don’t want this to be a circus,” he said as they headed toward Manhattan. “This case is going to be the most sensational thing we’ve ever worked on. Reporters are gonna be crawling out of your nightgown in the morning.”

“I don’t wear a nightgown.”

“Whatever, we’re gonna have ’em all over us. The point is, it’s a serious case and we want to treat it serious.”

Wilson could be sententious, but this was ridiculous. She forced herself not to say she knew how serious the case was. If she did he would then launch into a tirade about lady cops, probably ending with a question about her competence or some new criticism of her work. She decided to ignore him and make him shut up as well. To do this she drove like a madwoman, careening down the streets, making hairpin turns, weaving in and out of the traffic at fifty miles an hour. Wilson at first sat with his shoulders hunched and his hands twisted together in his lap, then started using the siren.

“Rilker give you some kind of deadline?”

“No.” She had forgotten to call Rilker, dammit. If he wasn’t there she’d have to suffer more flak from Wilson.

She lit another cigarette. Smoking was one pleasure that she had really begun to enjoy since the doctor had made Wilson stop.

His response was prompt. “You’re polluting.”

“Draw an oxygen mask if you don’t like it I’ve told you that before.”

“Thanks for the reminder.”

She wished that she smoked cigars.

Chapter 2

Tom Rilker stared at the pictures the two detectives showed him. His face registered

disbelief and what looked to Becky Neff like fear. She had never met him before and was surprised to discover that he was old, maybe seventy-five. From her husband's description she had assumed he was a young man. Rilker's hair was white and springy like frayed wool; his right hand shook a little and made the pictures rustle together; his brows knit, the salt-and-pepper eyebrows coming close together, heightening the expression now on his face. "This is impossible," he finally said. The moment he spoke Becky knew why Dick always portrayed him as young—he sounded like a much younger man. "It's completely incredible."

"Why is that?" Wilson asked.

"Well, a dog wouldn't do this. You'd have to train it. These men have been *guttled*, for God's sake. You can train a dog to kill, but if you wanted it to do this to its victims, you'd have to train it very, very well."

"But it could be done."

"Maybe, with the right breed and the right dog. But it wouldn't be easy. You'd need... human models for the dog to work on if you wanted it to be reliable."

"What if you just starved the dog?"

"A dog would eat muscle tissue—ma'am, if this bothers you—"

"No," Becky snapped. "You were saying, a dog would eat muscle tissue?"

"Yes, but it wouldn't actually—gut somebody. That isn't the way they feed, not even in the wild state." He picked up the pawprints and shook his head. "These all the prints?"

"How big a dog would it have taken?" Wilson asked. Becky noticed that his questions were becoming gentle but insistent; he must sense that the sight of the pictures had put Rilker under a considerable strain. The man's face was indeed getting flushed, and a band of sweat was appearing on his forehead. He kept giving his head a little toss as if to knock a wisp of hair back. The hand was shaking harder.

"A monster. Something big and fast and mean enough to accept this kind of training. Not all breeds would."

"What breeds?"

"Close to the wild, huskies, German shepherds. Not many. And I've got to tell you, in all my years I've never seen anything like this done by dogs. I think its—"

He grabbed a cast of some of the pawprints and peered at it, then fumbled with the lamp on his desk and looked closely in the light. "These are not dog prints."

"What are they then?"

"I don't know. Something very strange."

"Why so?"

Tom Rilker paused, then spoke with exaggerated calm. "These prints have circles, like human hands and feet. But they are clearly pawprints."

"Some kind of animal, other than a dog?"

"I'm sorry to tell you that no animal has prints like this. In fact nothing does. Nothing that I have ever heard of, that is, in fifty years of working with animals."

Becky had to say it: "Werewolves?" She resigned herself to the inevitable scoffing that would come from Wilson later.

Surprisingly, Rilker took some time to dismiss the question. "I don't think such things are possible," he said carefully.

“Well—are they or aren’t they?”

Rilker smiled sheepishly. Becky realized that he was being kind. She could see the glee in Wilson’s eyes. It was all her partner could do not to whoop with laughter, damn him.

“I don’t believe in werewolves either, Mr. Rilker,” Becky said. “Frankly, I wanted to know if you did.”

“Why?”

“Because if you had, we wouldn’t have to trust the rest of what you’re saying. As it is, you look like a creditable expert who’s just given us a very nasty problem.”

“A nasty problem in what way?”

Now Wilson did scoff—but at Rilker. “Well, for one thing, we must proceed under the assumption that these two fully armed police officers were killed by animals. OK, that’s not so good. But we’ve also got to assume that the animals are of an unknown species. That’s pretty bad. And now, to cap it all off, we’ve got to believe that this unknown species of man-killing animals is running free in Brooklyn and nobody knows about it. That I cannot accept.”

Becky’s mind was racing—this new theory plugged holes but it also had some great big ones of its own. “If it’s true, we’ve got to move fast. Brooklyn’s a crowded place.”

“Come on, Becky, stop it. Let’s get out of here. We’ve got real work to do.”

“Wait a minute, Detective, I’m not sure I like your tone.” Rilker stood up and thrust one of the casts in Wilson’s face. “Those pawprints were not made by anything that I have ever heard of. By nothing whatsoever. Not even by a species of monkey—I already thought of that.” He fumbled for his phone. “I’ll call a friend up at the Museum of Natural History. He’ll tell you these prints weren’t made by any known animal. You’re dealing with something highly unusual, that’s for damn sure.”

Becky felt her heart sink. Wilson had angered Rilker. Rilker’s voice rose as his fingers fumbled at the telephone. “Maybe my word isn’t good enough for you sharpie cops—but this guy up at the museum’s a real expert. He’ll tell you bastards I’m right!”

Wilson jerked his head in the direction of the door. “We don’t need any help from a museum,” he muttered. Becky followed him out, carrying the pictures but leaving the pawprints behind because Rilker seemed to have taken possession of the box. The door to his office slammed behind them with an ear-shattering jolt. His voice rose to a frustrated screech and abruptly ended.

“I hope we didn’t give him a coronary,” Becky said as they returned to the street.

“You did good, kid,” Wilson said. “If you hadn’t asked him about the werewolves he would have pulled it off.”

“I can hardly believe that was the Tom Rilker I’ve heard Dick talk about. But I guess he must be a little senile.”

“I guess so. Where are the casts?”

“Still in his office. You want them?” Becky dropped her purse in through the window of the car.

“Yeah. We might need them.”

“Fine, you go up and get them.”

Wilson snorted. “We’ll get more from the Seventy-fifth Precinct. You know something?”

“What?”

“You’re losing your mascara. You’re sweating.”

She laughed as she started the car. “I’ve got to hand it to you, George, you really know how to set a girl up. That’s the nicest thing you’ve said to me in a year.”

“Well... you’re... you know, when your stuff gets messed up I notice.”

“Good for you. That’s the first sign you’re becoming human.” She pulled out into traffic, heading automatically for what she knew would be their next stop, the office of the Chief Medical Examiner. The autopsies were due to start in half an hour and it was now all the more important to be there. Unless a cause of death came out in autopsy they were going to be forced to conclude the impossible—that the killings had been done by dogs. And that is a very unlikely way for a policeman to die.

Becky could not dispel the growing feeling of sick fear that this case was giving her. She kept imagining the two cops out there in the drizzle, facing whatever in the name of God they had faced . . . and dying with the secret. At times like this she wished she and Dick worked more closely together. He would understand the source of her feeling in a way Wilson never could. She took her cases very personally, it was one of her worst failings (and also the reason she was often so successful, she felt), and each case affected her differently. This one, with its overtones of horror, was going to be unusually hard on her. What had happened to those two cops was the stuff of nightmares...

“You’re muttering.”

“I am not.”

“You’re muttering, you’re getting crazy.”

“I am not! You better keep your mouth shut.”

“All right, but I’m telling you that this case is going to eat away at you.” He suddenly turned to face her. The movement made her swerve the car— she had the absurd notion that he was going to kiss her. But his face was twisted into a look almost of pain. “It’s eating at *me* is the reason I say that. I mean, I don’t know what happened out there but it’s really getting to me.”

“You mean you’re pissed off about it, scared of it—what?”

He considered for a moment, then said very quietly, “It scares me.” Never before had Wilson said such a thing. Becky kept her eyes on the traffic, her face without expression.

“Me too,” she said, “if you want to know. It’s a weird case.” Extreme caution was called for in this conversation—Wilson could be telling the truth or he could be egging her on, trying to get her to reveal her inner emotions, to force her to admit that she was overinvolved in her work in an unprofessional way. Although she felt secure enough in their partnership she could never be certain that Wilson hadn’t concocted some plot to get rid of her. Not that it mattered —nowadays they were waiting in line to work with her, but somehow she wanted to keep the partnership going. Wilson was hard to take but the two of them were so good together it was worth preserving. “It’s hard but it’s good,” he said suddenly. “What’re you talking about?”

“Us. You’re thinking about us, aren’t you?” The way he sounded they might as well have been lovers. “Yes, I am.”

“See, that’s why it’s good. If it wasn’t so good, I never would have known.”

She took a deep breath. “We’re here. Maybe we’ll find out they were poisoned and this’ll turn into a normal case again.”

“We won’t.”

“Why not? I don’t think we can assume—oh, of course, the dogs ate the organs and there are no dead dogs, therefore there was no poison in the organs, therefore et cetera.”

“You got it, sweetheart. Let’s go up and watch old prickface pretend to be a master sleuth.”

“Oh, Wilson, why don’t you let the poor man alone. He’s just as good at what he does as we are at what we do. Your whole thing with him is personalities.”

“Can’t be. He hasn’t got one.” The Chief Medical Examiner’s office was housed in a gleaming modern building across the street from Bellevue Hospital. This “office” was really a factory of forensic pathology, equipped with every conceivable piece of equipment and chemical that could be of use in an autopsy. Literally everything there was to know about a corpse could be discovered in this building. And the Medical Examiner had been responsible for solving many a murder with his equipment and his most considerable skill. Bits of hair, flecks of saliva, fingernail-polish fragments—all had figured prominently in murder trials. A conviction had once been obtained on the basis of shoe polish left on the lethal bruises of a woman who had been kicked to death.

The Chief M. E. excelled at making such findings. And if there was anything to be found in this case, he would surely uncover it. He and his men would go over the bodies inch by inch, leaving nothing to chance. Still, there was that fear...

“They’d better come up with something or this case is going to drive me crazy,” Becky said on the way up in the elevator. It was new and rose silently with no sense of motion.

“I hate this elevator. Every time I ride in it it scares the hell out of me.”

“Imagine how it would be to be trapped in this elevator, Wilson, no way out—”

“Shut up! That’s unkind.” Wilson was mildly claustrophobic, to add to his list of petty neuroses.

“Sorry, just trying to amuse you.”

“You tell me I’m such an s.o.b., but you’re really the nasty side of this partnership. That was a rotten thing to do to me.”

The doors opened and they stepped into the odor of disinfectant that pervaded the M. E.’s office. The receptionist knew them, and waved them past her desk. Doctor Evans’s incredibly cluttered office was open but he wasn’t inside. House rules were that you didn’t go any farther into the complex without an escort, but as usual there wasn’t a soul to be seen or heard. They started toward the operating room when the receptionist yelled Wilson’s name. “Yeah?”

“You got a message,” she hollered. “Call Underwood.”

“OK!” He stared at Becky. “Underwood wants me? Why the hell does Underwood want me? I don’t remember trying to get you fired recently.”

“Maybe you did and forgot.”

“Better call, better call.” He picked up the phone in Evans’s office and dialed the Chief of Detectives. The conversation lasted about a minute and consisted on Wilson’s part of a series of yessirs and thankyou’s. “Just wanted to tell us we’re a special detail now, reporting directly to him, and we have the facilities of the department at our disposal. We move to an office at Police Headquarters in Manhattan.”

“That’s very nice. We get *carte blanche* as long as some of the credit rubs off on him, and the Commissioner gets left in his ivory tower.”

Wilson snorted. “Listen, as long as it looks like this case is solvable every parasite from here to the Bulgarian Secret Service is going to try to horn in on the credit. But you just wait. If we don’t get it together, we’ll be all alone.”

“Let’s go to the autopsy. I can hardly wait.” Her voice was bitter; what Wilson had said could not have been more true.

“Come on, ghoul.”

On the way to the operating room Becky wished to hell that Wilson would pull out a bottle of something alcoholic. Unfortunately he rarely drank, and certainly never while he was working—unless events called for it, which they often did about six **p.m.** But now it was after six.

“I thought you people didn’t come back here unless you were invited,” Evans growled. He was on his way into the surgery. He stank of chemical soap; his rubber gloves were dripping. “Or don’t those rules count where you two are concerned?”

“This is the man who *invites* us on his cases. How sweet.”

“I only give you cases that are too easy for me to bother with. Now come on in if you want to, but it won’t do a bit of good. And I warn you, they’re fragrant.”

Becky thought immediately of the families. When she was a child she had been at a funeral where you could smell the corpse—but nowadays they had things for that, didn’t they? And anyway, the coffins wouldn’t be opened. But still... oh, God.

The two bodies lay on surgical tables under merciless lights. There was none of the haphazardness and confusion of the scene out at the auto pound; here everything was neat and orderly except the bodies themselves, which carried their violence and horror with them.

Becky was struck by the sheer damage—this attack had been so unbelievably savage. And somehow she found that reassuring; nothing from nature would do this. It had to be the work of human beings, it was too terrible to be anything else.

“The Forensics lab hasn’t found a single thing except dog hairs, rat hairs and feathers,” Doctor Evans said mildly. He was referring to the results of the examination of the area where the deaths had occurred at the auto pound. “No human detritus that didn’t belong to the victims.”

“OK,” Wilson said, but he took the information like a blow. It was not good news.

Evans turned to Becky. “Look, we’re about to start. What do you think it’ll take to get Wilson out of here?”

“You can’t. There might be something,” she replied.

“Something I’d miss?”

“Something we’d see.”

“But not him. He won’t be able to take it.”

“I’ll be fine. Just do your job, Doctor.”

“There will be no repeat of the Custin mess, Detective Wilson.” During the Maude Custin autopsy Wilson had lost his lunch. The reference to his embarrassment hurt his feelings, but he was too proud to acknowledge it before Evans.

“I’ll leave if it gets to me,” he said, “but not unless it does. We’ve gotta be here and you know it.”

“Just trying to help you, trying to be accommodating.”

“Thank you. Why don’t you get going?”

“That’s what I am doing.”

Evans picked up a scalpel and commenced taking a series of tissue samples. An assistant prepared slides of them at a side table, and sent the slides to the lab. The autopsy proceeded swiftly—there was pitifully little to examine. “The main thing we’re hunting for is signs of poison, suffocation, anything that would give us a more plausible cause of death,” Evans said as he worked. “That good for you two?”

“That’s good for us.”

“Well, we’ll find out all about it from the lab. Look at this.” He held up a sharp white tooth. “Embedded in that busted wrist. You know what it means—really what it confirms?”

“The man was alive when his wrist was bitten. Otherwise the tooth wouldn’t have been wrenched loose.”

“That’s right, which confirms that this one was definitely alive when the dogs attacked him.”

There was a long silence in the room. Wilson seemed to sink into himself, becoming smaller and more square than he already was. Becky felt a dull powerlessness. As the vague outlines of what they were confronting began to take shape Becky could see all lands of nasty problems, not the least of which would be simple crowd control. What do people do when they discover a thing like this in their midst? Their placid, workaday lives are suddenly disrupted by a new terror of the most dangerous type—the unknown. And if it can kill two healthy, alert, armed policemen, the run-of-the-mill citizen isn’t going to have a prayer.

“I think we’d better get downtown as soon as the lab results are in,” Becky said. “Why bother to wait?”

“Confirming, just so we won’t have any loose ends.” Convincing Underwood of this wasn’t going to be especially easy. She didn’t want there to be any stray questions unanswered that might allow him to put off the inevitable decision—admit what killed the cops, seal the area, and kill everything in it that looked faintly like a dog—wild or trained.

The two detectives returned to the M. E.’s office before the autopsies were completed; they didn’t spend any more time observing than they had to. Wilson was visibly grateful to leave; Becky was glad to follow.

Wilson seemed unusually quiet, almost chastened. “What do you think Underwood will do?” she asked just to break the silence.

Wilson shrugged. “Two cops got killed by some kind of dogs. It’s a pretty flimsy story, you ask me. No matter what’s been confirmed, I think we’ve got to keep digging. Somehow or other we’ll uncover a real motive and a real crime.”

Becky felt a twinge of concern—didn’t Wilson believe the evidence? “But if it was dogs and we don’t act pretty fast there could be more deaths. I think we’ve got to make that assumption. That’s certainly where the facts are leading us.”

Wilson nodded. If she wasn’t sure that it couldn’t be true, she almost would have suspected Wilson of knowing something about the case that she didn’t. But they had not been apart since it had happened, not for a minute. Whatever information he had, she also had.

“You know,” he said in a low, angry tone, “you damn well never get over smoking. If you weren’t armed I’d mug you for your cigarettes right now.”

She didn't reply; she was staring past him, toward the door of the office. Evans walked in carrying a clipboard. "Lab says we might have carbon monoxide poisoning as a secondary factor," he said, "but the basic cause of death was the injuries. Primarily the throats in both cases."

"Carbon monoxide? Could those men have been impaired by it?"

"Normally I wouldn't say so. The levels are very low, just residual. You've both probably got higher levels right now just from your drive over here. But it's absolutely the only abnormal thing we found about these men."

"Could it have been higher when they were killed and then dissipated?"

"Not likely. These guys were functioning normally when they were hit. It's just the only other thing."

Wilson seemed greatly relieved; at the moment Becky couldn't understand exactly why this was so.

The Chief Medical Examiner put down his clipboard. "It's as strange as they come," he said, "the strangest case I have worked on in my entire career."

"Why so?" Wilson tried and failed to sound unconcerned.

"Well, they were supposedly killed by dogs, right?"

The detectives nodded like twins; Becky was secretly amused by the similarity of the gesture. She wondered what it was that brought the two of them so close to one another. God knows you couldn't call it love.

"The dogs had to be very unusual. Their mode of attack was extremely clever. It wasn't until DiFalco went for his gun that they attacked."

"So what?"

"So when did you ever hear about a dog smart enough to grab a man's wrist to prevent him from unholstering his gun? Never, is the answer. Dogs don't think like that. They don't know what the hell guns are."

"Maybe and maybe not."

"Oh, come on, they don't know. Point a pistol at a dog's head and not a damn thing will happen. He certainly won't try to defend himself. Whoever heard of dogs working like that?"

"It was a lucky coincidence. The dog went for the movement of the hand, not to prevent it from reaching the gun. I think we can assume that." Wilson picked up the phone. "I'm calling Underwood to tell him we're on the way. His nibs is awaiting us."

"Now don't go running him down, Wilson. Word is he's got the inside track to the big job. Your next Commissioner."

Wilson dialed. "A lot of difference it makes to me. I've been on the promotion list for at least ten years."

Becky was surprised to hear her partner admit this. His own complete inability to handle department politics had assured that he would never move beyond Detective Lieutenant. No matter the level of his achievement; while good work counted in the scramble for top jobs, pull and ass-kissing counted more. And with Wilson not only did he not try to ass-kiss, people were afraid even to *let* him try. You don't let a guy like that get into the delicate politics of the Police Department. Next thing, he'd unwittingly uncover some scandal and embarrass everybody.

That made him a less than ideal senior partner. The brass would hesitate to promote

Becky around Wilson. It just wasn't done unless the senior was completely incompetent—which was far from the case here. So she'd have to sit around as a Detective Sergeant until either she or Wilson rotted, or she was transferred away from him and that was one thing the department would never do. Only Wilson himself in his wisdom would ever consider such a thing. She hated the thought of it right now, too; it could easily mean being moved away from the action, back into the obscurity of a more typical policewoman job.

Wilson muttered into the phone, using no more than a few monosyllables. He had informed the Chief of Detectives that they were coming with just about as much grace as he would inform his building superintendent of a stopped-up toilet.

A wet, shuddering north wind hit them as they left the building; the drizzling cold of the past few days had finally given way to the first real touch of winter. It was seven-thirty and already dark. Thirtieth Street was quiet, with the wind clattering in the skeletons of scrawny trees up and down the block. A few pedestrians hurried past, and out on Fifth Avenue many more figures could be seen amid the flashing lights and the shapes of cars moving slowly downtown. Becky watched the people they passed on their way to her car, looking at the gray, blank faces, thinking about the lives hidden behind those faces, and of how what she and Wilson would soon be telling the Chief of Detectives would affect those lives.

In police work you gradually acquire a distance from nonpolicemen. People on the outside have such a limited concept of what you really do that they might as well know nothing at all. They see only the headlines, the endless propagandizing of the newspapers. Crimes are reported, their solution is not. As a result the people you meet outside of the force see you as incompetent. "You're a cop? Why don't you get the muggers off the street? I never see a cop on the street. I thought that's what we paid you for." Then you might see that same person dead somewhere, the victim of the very crime he said you wouldn't protect him from. It does something to you to realize that you aren't going to protect everybody, you aren't going to make the world a hell of a lot safer by your work. You are there to hold life together, not to bring on the millennium. When you see the incredible suffering and degradation, you begin to realize the truth of that. Sooner or later crooks and victims all merge together into one miserable, bloody mass of whining, twisted bodies and fear-glazed eyes. Murder after murder comes before you, each with its sordid tale of failed lives...

And then you get a thing like this. It doesn't make sense, it scares you. There's a chilly feeling that something *wrong* has happened but you don't quite know what it is. You want like hell to solve the crime because the victims were your people. The twisted bodies were from the inside, from the real world of the department, not from that chaos that swirls around outside.

Usually there is no mystery to a cop's death. He knocks on a door and a junkie blows him away. He hollers freeze at some kid running out of a liquor store and gets a bullet in the face. That's the way cops get killed, suddenly and without mystery. Death in the line of duty—rare, but it happens.

"Here's the car," Wilson said. Becky had walked right past it; she had been too deeply engrossed in her thoughts. But she got in, drove mechanically through the increasingly heavy rain, listening to it drum on the roof, listening to the wind souging past the closed windows, feeling the pervasive dirty damp of the afternoon.

Headquarters was dark and gray, standing like some black monument in the storm. They pulled into the garage beneath the building, into the sudden flood of fluorescent lights, the squeal of brakes and tires as they maneuvered through the garage and found a parking space in the area marked off for the Homicide Division.

Underwood was not alone in his office. With him was a young man in a polyester suit and round rimless glasses. For an instant Becky was reminded of John Dean, then the face looked up and the impression of boyishness disappeared: the man's eyes were cold, his face thinner than it should be, his lips set in a terse line.

"Good afternoon," Underwood said stiffly, half rising from behind his desk, "this is Assistant District Attorney Kupferman." He then introduced Neff and Wilson. The two detectives pulled up chairs; this was going to be a work session and there was no time to stand on formality.

Becky relaxed into the comfortable leather wing chair Wilson had gotten for her. The Chief's office was all leather and paneling; it looked like an expensive private library without books. Hunting scenes were hung on the wall a pewter chandelier from the ceiling. The whole impression was one of subdued bad taste—a sort of subtle and completely unintentional self-mockery.

"Let's go," Underwood said. "I told the papers we'd have a statement tonight. Was I right?"

"Yeah," Wilson said. He looked at the assistant DA. "You're chewing. Got any gum?" The man held out a pack of sugar-free gum. "Thanks. I'm not supposed to smoke."

"I want to know if you've found out anything about those guys that might justify us getting into the act," the assistant DA said.

So that was what he was here for. He was the District Attorney's little watchdog, sent here to sniff out any departmental wrongdoing. Maybe the two dead cops were bent, the thinking would go, maybe that's why they were dead.

"There's nothing like that," Wilson said. "These guys were Auto Squad, not Narcotics. They weren't into anything."

Becky's mind flashed to her husband Dick, to the Narcotics Squad. Just as quickly she pulled her thoughts away, returning them to this conversation. What was it that made her worry so about Dick, especially lately? She couldn't allow herself to think about it now. As firmly as she could, she returned her thoughts to the question at hand.

"You're sure?"

"We haven't investigated that aspect," Becky put in. "We've just now established a cause of death."

This was obviously the part Underwood wanted to hear about. He leaned forward and made a little pulling motion with his hands. "It was the dogs," Wilson said tonelessly.

"Oh, no, you can't tell me that! I can't have that!"

"It's the truth as far as we know. They were killed by dogs."

"Hell no. That's completely unacceptable. I'm not putting that in any press releases. Let the damn Commissioner do it, it's his responsibility."

The way he began to back off would have been funny if it wasn't so sad. He had called them down here hoping to get some glory thrown his way when they solved the crime; but now that it looked like this he wasn't so eager to be associated with it. Let the Commissioner tell the world that two fully armed policemen got themselves killed by a bunch of dogs; Underwood sure as hell wasn't going to do it.

"We didn't believe it ourselves," Becky said, "but Evans is sure. The only thing out of the ordinary was some residual carbon monoxide—"

"Carbon monoxide! That's incapacitating! Then it makes some sense, the guys were

out cold. Now that's better, why didn't you start off telling me that?" He glared an instant at Wilson. "That's the crucial piece of change, as far as I'm concerned. Did the M. E. say where they got it?"

"Background atmosphere," Wilson cut in. "It's not important. There are probably higher levels in your blood right now."

"Did anybody check their car, find out if the exhaust system was defective?"

Wilson laughed, a sneering little noise in the back of his throat. Becky wished to God he had never made that sound. "The CO count wasn't high enough."

"It's an angle, man! If I can use that, I don't have to put this case down to The Unexplained. Think about what we're confronting here! Cops were killed by dogs. It's stupid. It's bad for the department, it makes the men look like a bunch of jerkoffs, getting themselves killed by a pack of mutts. You don't tell the papers, yeah, here are a couple of dopes who got themselves done in by a bunch of dogs, didn't even have the sense to defend themselves. I can't make a statement like that."

"Which is why you'll try to get the Commissioner to make the statement. You don't want to be associated with it."

"It's his responsibility, Detective. And I don't think I like your attitude!"

"Thank you."

The Chief's eyes bored into Wilson's impassive face. "What's that supposed to mean?"

"Thank you. Nothing more or less. I've told you all I know about this case. Give me a few more days and a little luck and I'll know more. As far as the cause of death is concerned, it appears to have been the dogs. I don't like it any more than you do, I've got to tell you. But those are the facts. If you want a statement for the press, that's got to be it."

"The hell. The carbon monoxide did it. Had to. And that's damn well what I'm going to say."

"Have you considered the consequences, sir?" Becky said. She had, and a statement like the one Underwood planned to make was a serious mistake, even a dangerous one.

"Like?"

"Well, if the men were conscious—and we all know they probably were—it means that we've got something very dangerous out there. Something the public ought to be made aware of, and the police ought to take steps to eliminate."

"Yeah, but that's no problem because I intend to order that damn dump cleared of wild dogs. I'll send in the Tactical Patrol Force and clean it out. There won't be another problem no matter how those dogs got to DiFalco and Houlihan. Even if the men *were* conscious it doesn't make any difference because by this time tomorrow the dogs are going to be dead. I'm going to say that the officers were suffering from carbon monoxide poisoning and were attacked by the dogs while they were unconscious or semiconscious." He cleared his throat. "All right with you?"

"It's your statement, Chief," Wilson said.

"OK, don't you do or say anything to contradict it, you understand. Just keep your problems to yourself. And as of right now you're off the case."

Becky was astonished. This had never happened to them before; people always put up with Wilson, endured him. Being pulled off this case was a blow to his prestige and to hers. She could have kicked him for his Goddamn bullheadedness.

“It won’t last, Underwood,” Wilson said quietly. “You can kick us around and you can make any damn statement you want, but in the end you’re going to be embarrassed. This thing isn’t going to go away.”

“The hell it isn’t. You wait and see.”

“Something damn strange happened out there.”

“Nothing the TPF can’t deal with.” His face was getting blotchy; this was almost too much for his temper. “Nothing we can’t deal with! Unlike you! You two can’t seem to put this case together! Dogs indeed —that’s ludicrous. It isn’t even a good excuse, much less a solution. Here I’ve got this whole town screaming at me for a solution and you give me bullshit!” Suddenly he glared at Becky. “And another thing, sweetheart. I’ve heard the rumors about your sweet husband. This DA ought to be doing a little investigating into the Neff family instead of trying to dig up some kind of organized crime links to supply motive for the killers of DiFalco and Houlihan. We’ve got a bent cop’s wife right here—or is it a family affair, dear?”

The Assistant DA remained tight-lipped, staring like a statue at the Oriental rug. At the Chief’s words the whole room seemed to sway; Becky felt her head tightening, the blood rushing, her heart thundering. What in the name of God was he implying! Was Dick in trouble? She knew that she herself was an honest cop. And Dick had to be too. Had to be. Like Wilson. He had to be as honest as Wilson.

“You think we’re incompetent,” Wilson said mildly, “why not convene a Board of Inquiry? Present your facts.”

“Shut up and get out. Your superior officers will handle this from now on.”

“Which means there’s going to be a Board?”

“Shut up and get out!”

They left, even Wilson perceiving that the meeting was terminated. “I’m going home,” Becky said to her boss as the elevator dropped toward the garage. “Want a lift?”

“Nah. I’m gonna go over to Chinatown, get some supper. I’ll see you in the morning.”

“See you.”

That was that for today. Another charming day in the life of a lady cop.

Traffic was heavy and she had missed the evening news by the time she got home. No matter, the Chief’s statement wouldn’t make it on the air until eleven o’clock.

When she arrived at their small upper East Side apartment, Becky was disappointed that Dick wasn’t there. Mechanically she ran the Phone-Mate. Dick’s voice said he’d be in about three **a.m.** Great. A lonely night just when you need it the most.

At eleven the Chief appeared with his terse statement—carbon monoxide, wild dogs, TPF roundup of dogs, case closed in one day.

The hell it is, she thought, the hell it is.

Chapter 3

Mike O'Donnell hated this part of his daily journey. The streets around here were sullen, dangerous and empty. Openings in the ruined buildings exhaled the stench of damp rot and urine. O'Donnell liked the bustling crowds a few blocks away, but on the money a blind man made you couldn't take cabs through these areas, you had to walk. Over the years the deadly stillness had grown like a cancer, replacing the noisy, kindly clamor that Mike remembered from his childhood. Now it was almost all like this except the block where Mike lived with his daughter and the block near the subway station a twenty-minute walk away.

Those twenty minutes were always bad, always getting worse. Along this route he had encountered addicts, muggers, perverts—every kind of human garbage. And he had survived. He let them shake him down. What could he lose, a few dollars? Only once had he been struck, that by some teenagers, children really. He had appealed to their manhood, shamed them out of their plan to torture him in one of the empty buildings.

Mike was tough and resilient. Sixty sightless years in the Bronx left him no other choice. He and his beloved daughter were on welfare, home relief. She was a good girl with bad taste in husbands. God knows, the kind of men... smelling of cologne and hair grease, moving around like cats through the apartment, voices that sneered every word... actors, she said. And she was an actress, she said... he groped his way along with his cane trying to put trouble out of his mind, not wanting to bring his feelings home, start an argument.

Then he heard a little sound that made the hairs rise along the back of his neck. It didn't quite seem human, yet what else could it be? Not an animal— too much like a voice, too little like a growl.

“Is somebody there?”

The sound came again, right in front of him and down low. He sensed a presence. Somebody *was* there, apparently crouching close to the ground. “Can I help you? Are you hurt?”

Something slid along the pavement. At once the strange sound was taken up from other points—behind him, in the abandoned buildings beside him, in the street. There was a sense of slow, circling movement.

Mike O'Donnell raised his cane, started to swing it back and forth in front of him. The reaction was immediate; Mike O'Donnell's death came so suddenly that all he registered was astonishment.

They worked with practiced efficiency, pulling the body back into the abandoned building while blood was still pumping out of the throat. It was a heavy, old body, but they were determined and there were six of them. They worked against time, against the ever-present danger of being discovered at a vulnerable moment.

Mike O'Donnell hadn't understood how completely this neighborhood had been abandoned in recent years, left by all except junkies and other derelicts, and the ones who were attracted to them for their weakness. And now Mike O'Donnell had joined the unnumbered corpses rotting in the abandoned basements and rubble of the empty neighborhood.

But in his case there was one small difference. He had a home and was missed. Mike's daughter was frantic. She dialed the Lighthouse for the Blind again. No, they hadn't seen Mike, he had never appeared for his assigned duties. Now it was six hours and she wasn't going to waste any more time. Her next call was to the police.

Because missing persons usually turn up on their own or don't turn up at all, and because there are so many of them, the Police Department doesn't react instantly to another such report. At least, not unless it concerns a child or a young woman who had no

reason to leave home, or, as in the case of Mike O'Donnell, somebody who wouldn't voluntarily abandon the little security and comfort he had in the world. So Mike O'Donnell's case was special and it got some attention. Not an overwhelming amount, but enough to cause a detective to be assigned to the case. A description of Mike O'Donnell was circulated, given a little more than routine attention. Somebody even questioned the daughter long enough to draw a map of Mike's probable route from his apartment to the subway station. But the case went no farther than that; no body turned up, the police told the daughter to wait, not to give up hope. A week later they told her to give up hope, he wasn't going to be found. Somewhere in the city his body probably lay moldering, effectively and completely hidden by whoever had killed him. Mike O'Donnell's daughter learned in time to accept the idea of his death, to try to replace the awful uncertain void with the comfort of certainty. She did the best she could, but all she really came to understand was that her father had somehow been swallowed by the city.

During these weeks Neff and Wilson worked on other assignments. They heard nothing about the O'Donnell case; they were investigating another murder, locked in the endless, sordid routine of Homicide. Most crimes are no less commonplace than the people who commit them, and Wilson and Neff weren't being assigned to the interesting or dramatic cases these days. It wasn't that they were being muscled aside, but word was out that the Chief of Detectives wasn't exactly in love with them. He knew that they didn't like his handling of the DiFalco/Houlihan murders and he didn't want to be reminded of it, primarily because he didn't like it any more than they did. He was a more literal man than they were and much more concerned with his own potential appointment to the job of Police Commissioner than with following up bizarre theories about what genuinely looked to him like an even more bizarre accident. So the two detectives were kept away from big cases, effectively buried in the sheer size of the New York City Police Department.

The first words Becky Neff heard about Mike O'Donnell came from the Medical Examiner. "I thought you two had retired," he said over the phone. "You got a heavy case?"

"The usual. Not a lot of action." Beside her Wilson raised his eyebrows. The phone on her desk hadn't been ringing too often; an extended conversation like this was of interest.

"I've got a problem up here I'd like you two to take a look at."

"The Chief—"

"So take a coffee break. Just come up here. I think this might be what you've been waiting for."

"What's he got?" Wilson asked as soon as she put down the phone.

"He's got a problem. He thinks it might interest us."

"The Chief—"

"So he said take a coffee break and come up to see him. I think it's a good idea."

They pulled on their coats; outside it was a bright, blustery December afternoon and the cold wind coming around the buildings carried a fierce chill. The cold had been so intense for the past three days, in fact, that there weren't even many cars on the street. The usual afternoon jams were gone, replaced by a smattering of taxis and buses with great plumes of condensing exhaust behind them. The M. E. had been circumspect on the phone, no doubt savoring what little bit of drama might be in this for him.

They didn't speak as the car raced up Third Avenue. In the past few weeks Wilson had become more than usually taciturn; that was fine with Becky, she had problems enough of her own without listening to him complain about his. The last month with Dick had been

stormy, full of pain and unexpected realizations. She knew now that Dick was taking money under the table. Strangely enough the money wasn't from narcotics but from gambling. He had tracked a heroin network into an illicit gambling casino about a year ago. Dick's father was in a nursing home, he was sick of the bills, he was sick of the treadmill; he collared the junkies but left the gambling establishment alone—for a few thousand dollars. "It's gambling," he had argued; "what the hell, it shouldn't even be a crime." But since it was, he might as well let it pay the six hundred a month his father was costing. God knows, they might even be able to put enough aside for a decent apartment one of these days.

It hurt her to see this happening to Dick. The truth was, she had sniped at him for it but she hadn't tried to stop him and she hadn't turned him in. Nor would she. But Dick was a corrupt cop, the one thing she had sworn she would never be, the one thing she had sworn she would never allow him to be. Well, he hadn't asked permission.

She had always assumed that she would never give in to the temptations that were so common on the police force—and he had sworn it too. But he had and by not stopping him she had too. Now they bickered, each unwilling to confront the real reason for their anger. They should have had the courage to stop; instead they had let things happen. They had disappointed one another and were bitter about it.

Bitter enough to spend more and more time apart. Often it was days between shared evenings or monosyllabic breakfasts. They used to work their schedules to fit; now they worked them to be apart. Or at least as far as Becky was concerned she just stopped making an effort with her schedule. She drew what she drew, and overtime was just fine. Eventually there would be a confrontation, but not now, not today —today she was heading up to the M. E.'s office to be let in on a new case, maybe something really interesting for the first time in too damn long.

Evans was waiting for them in the reception area. "Don't take off your coats," he said, "we're going to the freezer." That meant the remains were in an advanced state of deterioration. The Medical Examiner's office had a claustrophobic freezer compartment with room enough for three surgical tables and a few people squeezed in tight. Wilson's eyes roved as they went down the disinfectant-scented hall toward the freezer; his claustrophobia had a field day in the thing. More than once he had commented to Becky that the freezer had figured in his nightmares.

"It's rough stuff again," the M. E. said conversationally. "I only call you folks in when I've got some real gore. Hope you don't mind." It could be that Evans lacked taste or it could just possibly be an attempt at banter. Becky didn't bother to laugh; instead she asked a question.

"What are we going to see?"

"Three DOA's, very decomposed." He ushered them into the starkly lit freezer and pulled the door shut behind them. He didn't need to say more; the bodies had clearly been attacked the same way DiFalco and Houlihan were attacked. There was something chilling about seeing the same type of scrape marks on the bones, the same evidence of gnawing. Becky was frightened, too deeply frightened to really understand her feelings. But she knew the moment she saw these corpses that the Chief of Detectives had made exactly the mistake they had feared he was making—this was not an ordinary murder case and it was not a fluke.

"Goddamn," Wilson said.

The Medical Examiner smiled, but this time it was without mirth. "I don't know how to explain these bodies. The condition makes no sense."

"It makes sense," Becky said, "as soon as you assume that they weren't killed by

human beings.”

“What then?”

“That’s what’s to be found out. But you’re wasting your time with us, Underwood took us off the case.”

“Well, he’ll put you back on.”

“There are a lot of detectives in this department,” Wilson put in. “I’m sure he’ll find others. And it’s likely he’ll want more. This is going to be a big embarrassment for him.” Wilson shook his head. “A hell of an embarrassment. Let’s get out of this icebox. We’ve seen all we need to see.”

Evans opened the door. “You’ll get back on,” he said, “I’ll make sure of that. So start to work. You need a solution.”

They didn’t bother to ask the M. E. how the bodies had come in; instead they called headquarters and got referred to the right precinct. As soon as he was off the phone to headquarters Wilson called the 41st Precinct in the South Bronx and asked to speak to the Captain. Sure they could come up, but there were already detectives on the case. “Might be a tie-in to another case, one of ours.” He put down the phone. “Let’s move.”

They battled their way across town to the FDR Drive. Despite the fact that the weather had reduced the amount of traffic in the city, getting across town was still difficult. “I read somewhere that it takes longer to cross town in a car today than it used to in a carriage.”

“And longer than that when I’m driving, right?”

“Yeah, if you say so.”

“Goddamn brass,” Becky growled.

“Hey, getting our dander up, my dear.”

“Damn right I am. Here we’ve got two cops buried and forgotten and we knew damn well something wasn’t right—damn these politicking bastards. It’s a black day when the NYPD won’t even mount a proper investigation when officers are killed. Seedman never would have done this.”

Wilson sighed, expressing in that single sound all the feelings he could or would not express about the Police Department he so loved to hate. The department had hurt him as well as helped him; in the past few years he had seen its emphasis shift away from solving crimes toward preventing them. Citizens demanded protection in the streets; the once-proud Detectives diminished and foot patrol became the thing. The old-timers were fewer and fewer; Wilson was one, sharp-eyed and careful. And the fact that his young partner was a woman was just another sign of the deterioration of the department. He stared out the window. Becky couldn’t see his face but she knew what the expression contained. She knew also that there was no sense in talking to him now; he was beyond communication.

They made their way through the devastated streets of the 41st Precinct, past the vacant brick-strewn lots, the empty buildings, the burned, abandoned ruins, the stripped cars, the dismal, blowing garbage in the streets. And Becky thought, “Somewhere, something is here. It is here.” She knew it. And by the way Wilson changed, the stiffening of his posture, the darkening of his face, the little turning-down of the edges of his mouth, she saw that he also had the same feeling.

“Every time I’m up here this place looks worse.”

“What street was it again, George?”

“East One Hundred and Forty-fourth Street. Old One Forty-four. Sure is a mess now.” Wilson was in the neighborhood of his childhood, looking at the ruins of where he had been a boy. “It was a pretty good place then, not the greatest, but it sure wasn’t like this. Jesus.”

“Yeah.” Becky tried to leave him alone with his thoughts. Considering that the little upstate town where she had grown up was still exactly as it had been, still and seemingly forever, she couldn’t imagine what seeing this place must do to Wilson.

“God, I can’t believe I’m fifty-four,” he said. “I’d swear I was sitting on that stoop last night.” He sighed. “We’re there,” he said, “the old Forty-first.” The precinct house was a dismal fortress, an unlikely bastion of reasonable decay in the surrounding ruins. A neighborhood of unabandoned houses clustered around it. The danger and destruction were beyond. In fact, with the strange fecundity of the Bronx, this immediate two blocks showed signs of mild prosperity. There was traffic in the streets, neatly swept sidewalks, curtains in windows, and a well-kept Catholic church on the corner. People were few because of the cold, but Becky could imagine what the area was like when the weather was good—filled with kids on the sidewalks and their parents on the stoops, full of liveliness and noise and the sheer exuberance that can infect city neighborhoods.

The Captain of the 41st Precinct looked up from his desk when Neff and Wilson were shown in. It was clear at once that he still didn’t know exactly why they were there. Normally detectives from another borough would have nothing to do with this case— and as far as the Captain was concerned it probably wasn’t much of a case. Just another couple of rotting junkie corpses and a poor old man. About the score for the South Bronx these days. Becky knew instinctively to let Wilson handle the Captain. He was the infighter, the resident expert on departmental politics. Look where his political skill had gotten him. The best detective in New York City at dead end. First Grade, true, but never a division, never a district of his own.

“We got a suggestion from Evans,” Wilson said by way of explaining their presence to the Captain.

“Evans pulled rank on the Bronx Medical Examiner and got those cadavers down to Manhattan. We don’t know why he did that.” There was acid in the man’s voice. He didn’t like a case being taken from him without a good reason. And it was obvious that so far nobody had given him one.

“He did that because the marks on them were similar to the marks on the DiFalco-Houlihan remains.”

The Precinct Captain stared. “That case still open?”

“It is now. We’ve got a new lead.”

“Jesus. No wonder you guys are all over us.” He stood up from his desk. “We got the scene in good shape,” he said. “You want to go over there?”

Wilson nodded. As they followed the Captain out of his office, Becky was exultant. The man had never thought to call downtown to check on Neff and Wilson. If he had he would have found out that they weren’t even on the case anymore. But why should he? It would never even occur to him.

The area where the bodies had been found was roped off and plastered with Crime Scene stickers. It was guarded by two patrolmen. “The bodies were found by a gypsy cab driver who stopped to fix a flat and smelled something. He came to us, we were lucky. Usually those guys don’t even bother.”

The bodies had been found in the basement of an abandoned apartment house. Becky took her flashlight out of her bag and went in under the decaying stoop. Lights had been

set up in the dirty room, but the rest of the building was in boarded-up darkness. The flashlight played along the floor, in the unlit corners, up the stairs that led to the first floor. "Door locked?" Wilson asked as Becky shone her light on its blackened surface.

"Haven't been up there," the Captain said. "Remember, we thought this was routine until this morning when the Bronx M. E. told us that Evans had snatched his bodies."

"Ha ha, that was funny," Wilson said tonelessly. The Captain glowered. "Let's go up, partner. We might as well make the search."

They all heard it; a footstep on the stair. They looked to their leader. His hair rose and theirs did too. They functioned with one emotion, one will, one heart. What did the footsteps mean? Obviously, the ones in the basement had decided to come upstairs. And they were familiar. The sound of their tread, their rising smell, their voices were remembered from the dump. As the elders had feared, the killings of young humans had caused an investigation. And these two had been at that investigation. Now they were here, obviously following the pack.

Their scent became more powerful as they drew nearer: an old man and a young woman. No danger, they would be an easy kill.

The leader made a sound that sent the pack into motion.

They were hungry, the children were cold and hungry. Food was needed. Today a new hunt would have begun. Maybe it would be unnecessary, this kill would both remove danger and provide meat. But the strong young woman would have to be separated from the weak old man. How to do that? Their scents revealed the fact that they were partners, and the way their voices sounded as they talked to one another said that they had worked together a long time. How do you separate such people even for a moment, especially when both recognize danger? The scents became sharp with the smell of fear as the two humans groped through the darkness. It made digestive juices flow and hearts beat faster with lust for the hunt. The leader warned, hold back, hold back. In this situation he sensed hidden dangers. Suddenly he hated the place. He loathed it, despised it. It was thick with humanity. There were strong, young ones outside and these two inside and another old one in the basement. Before there had been many more in the basement. "Our young must not kill their young," he thought fiercely. He found himself moving slowly toward the door of the room they inhabited, moving against his judgment, attracted by the need to kill the two who knew enough of the pack to follow it here. Now the others moved behind him, stealthy, efficient, padding quickly down the darkened hall, down the black stairway toward the wonderful scents, moving too close to humanity and yet only close enough to get what they needed. "Must find a way to split them up," the leader thought. Then he stopped. His whole body seethed with desire to go on, to finish the attack, to feel the death of the prey in his mouth. But he thought carefully, his mind turning over the problem and coming to the solution.

Certain sounds attracted humans. This fact was often used in hunting. A little cry, like one of their children, would bring even the most fearful within range of attack. And the child's cry was most easily heard by the women.

"Sh!"

"What?"

"Listen." It came again, the unmistakable groan of a child. "You hear that?"

"No."

Becky went to the stairwell. She heard it more clearly, coming from above. "Wilson,

there's a kid up there." She shone her light into the dimness. "I'm telling you I hear a child."

"So go investigate. I'm not going up there."

The sound came again, full of imperative need.

She found herself standing on the first step, moving upward almost against her own will. Above her the decoy put his heart into the sounds, making them as plaintive and compelling as he could. He imagined himself a helpless little human child lying on the cold floor weeping, and the sound that came out of him was like such a child.

The others moved swiftly to the opposite stairwell and started down. They sensed the positions of the prey. The strong young woman starting up the stairs, the weak old man standing in the dark hallway behind her. "Come up, come up," the decoy pleaded to her in his mind, and made the little sound. It had to be right, to be perfect, just enough to attract her, not enough to let her decide what she wanted to decide—that it was the wind, a creaking board, or something dangerous.

As she reached one landing the hunters reached its twin at the opposite end of the hall. As she rose toward the decoy they descended toward Wilson. As they got closer they became more careful. Hidden strength under the smells of fear and decay. They would have to hit this man with devastating force to get him, hit as hard as they had hit the two young ones at the dump. But their prize would be great; he was heavy and well-fed, unlike the ones they had found among these empty buildings. There was no starvation in him and no sickness to make him dangerous to consume. They loved him, lusted after him, moved closer to him. And they saw his dim shadow, his heavy slow body standing in the dark.

Then standing in a flickering blaze of light.

"What are you doing, George?"

"Lighting a Goddamn cigarette."

Becky came down toward him flashing her light in his face. "You *are* lighting a cigarette. I'll be damned. Where did you get a cigarette?"

"I've been saving it for a special occasion."

"And now is a special occasion?"

He nodded, his face like stone. "I'll be frank with you, Becky, I've got the creeps. I'm scared to death. I won't get out of here without you but I think we ought to leave—now."

"But there's a child—"

"Now! Come on." He grabbed her wrist, pulled her toward the basement door.

"There's something upstairs," he said to the Precinct Captain, who was standing in the middle of the basement as if he had been undecided about whether or not to follow the two detectives upstairs.

"I'm not surprised. The building is probably full of junkies."

"It sounded like a child," Becky said. "I'm sure that's what it was."

"That's possible too," the Captain said mildly. "I'll order up a search party if you think I should. But don't do it with just two people. It'll take ten men with carbines, I think that ought to do it"

Becky acknowledged the wisdom of this plan. No doubt there had been a pack of junkies at the top of the stairs waiting to jump her. Or perhaps there was actually a child. If that was so the ten minutes it would take to assemble the search party would make

little difference.

They went outside and got into the Captain's car. As soon as they left, the two patrolmen who had been guarding the scene moved swiftly to their own car and got in to shield themselves from the cold. They turned on their radio so that they would again have advance warning of visits from the precinct and settled back in the warmth.

For this reason they did not hear the howl of rage and frustration that rose from the upper reaches of the tenement. Nor did they see the exodus that took place, a line of gray shadows jumping one by one across the six feet of space that separated this building from the next one.

It didn't take long to assemble the search party. It was now four o'clock and the night men were coming on duty. Three patrol cars returned to the building. With the two men on duty there plus Wilson and Neff there would be exactly ten officers for the search. Of course as soon as the cars drew up to the front of the building you could assume that any junkies in it slipped out the back. But murder had been done here and the precinct so far hadn't mounted a proper search. Pictures had been taken of the victims and a cursory dusting of the area for fingerprints, but that was all. In this part of the city a committed crime was just another statistic. Nobody bothered to find out the circumstances that led to the deaths of a few derelicts. And nobody doubted that the blind man had gotten mugged and then dragged off the street to die. And nobody was right about what happened.

During the search Wilson and Neff were silent. The rooms of the old tenement still bore the marks of the last residents—graffiti on the walls, shreds of curtains in the windows, yellowing wallpaper here and there. Even, in one room, the remains of a carpet. But there was no child, and there were no traces of recent human habitation.

Wilson and Neff made the reluctant patrolmen scoop up some of the fecal matter that was found. They put it in a plastic bag.

"Empty upstairs," a voice called as a group of five came from searching up to the roof. "Nothing suspicious."

What the hell did that mean? These men wouldn't know evidence from cauliflower. "Take us through," Wilson growled. "We've gotta see for ourselves."

The patrolmen went with them, the whole crowd going floor to floor. Becky saw the empty rooms in better light, but her mind could not blot out those plaintive cries. *Something* was up here just a few minutes ago, something that had left without a trace.

They looked carefully in all the rooms but found nothing.

When they got back to the basement Wilson was shaking his head. "I don't get it," he said, "I know you heard something."

"You do?"

"I heard it too, you think I'm deaf?"

Becky was surprised, she hadn't realized that he also had heard the sound. "Why didn't you go up with me then?"

"It wasn't a child."

She looked at him, at the cold fear in his face. "OK," she said, swallowing her intended challenge, "it wasn't a child. What was it?"

He shook his head and pulled out his cigarettes. "Let's get the shit to the lab for

analysis. That's all we can do now."

They left the house with the clomping horde of patrolmen. With their meager evidence tightly enclosed in plastic bags they headed back to Manhattan.

"You think this will reopen the DiFalco case?" Becky asked.

"Probably."

"Good, then we won't be moonlighting on it anymore."

"As I recall we got taken off that case. Or do you recall something else?"

"Well, yeah, but in view of—"

"In view of nothing. We're going to be the scapegoats now. Neff and Wilson get case. Carbon monoxide and wild dogs. Neff and Wilson close case. New evidence comes in. Case reopened. Neff and Wilson scapegoats for closing it in the first place." His throat rumbled in a suppressed cough. "Goddamn Luckies," he said. "Goddamn, you know I could be resigning soon."

"You won't resign."

"No, not voluntarily. But it depends on how hard Underwood wants to stick me with blame for misunderstanding the case."

"But it's only one damn case."

"It's police officers killed in the line of duty. If it gets out that Underwood himself closed the case he'll lose his shot at Commissioner. Therefore you and yours truly are going to be blamed. Might as well relax and enjoy the fun." His shoulders shook with mirthless laughter.

"Maybe there's something more conclusive. If there is it'll help a little." She paused. The silence grew. "Who do you think is doing it?" she asked.

"Not who—what. It's not human."

Now he had said the words, words they had previously been unwilling to face. Not human. Could not be human. "What makes you so sure?" Becky asked, half-knowing the answer.

Wilson looked at her in surprise. "Why, the noise, of course. It wasn't human."

"What's that supposed to mean? It sounded perfectly human to me." Or had it? Becky remembered it now like something that had taken place in a dream, a child's voice or... something else. Every few seconds it was as if she woke up and heard it again—horrible, inhuman parody full of snarling menace... then child again, soft, wounded, dying.

"Look out!"

She slammed on the brakes. She had been about to glide broadside into the traffic of Third Avenue. "Sorry. Sorry, George, I—"

"Pull over. You're not in good shape."

She obeyed him. Despite the fact that she felt fine, there was no denying what she had almost done. Like the little cries were still taking place, but in a dream. "I feel OK, I don't know what came over me."

"You acted hypnotized," he said.

She heard the noises again, feral, snarling, monstrous. Sweat popped out all over her. She felt cold, her flesh crawling. Her mind turned back to the stair, to the terrible danger that had been waiting for her, the same as the torn, bloodied corpses, the jagged bones

and skulls.

With her hands over her mouth she fought not to scream, to give up completely to the terror.

Wilson came across the seat as if he had been waiting for this. He took her in his arms; her body rattled against his thick shoulders; she pressed her face into the warm, scruffy smell of his ancient white shirt, distantly she felt him kissing her hair, her ear, her neck, and felt waves of comfort and surprise overcoming and pushing back the panic. She wanted to pull away from him but she also wanted to do what she did, which was lift her face. He kissed her hard and she accepted it, passively at first, then giving in to the relief of it, and kissed him back.

Then they separated, propelled apart by the fact that they were in a car recognizable to any policeman. Becky put her hands on the steering wheel. She felt sick and sad, as if something had just been lost.

“I’ve been wanting to get that out of my system,” Wilson said gruffly. “I’ve been—” Then his voice died away. He clutched the dashboard and laid his head on his arm. “Oh, hell, I love you, dammit.” She started to talk. “No, don’t say it. I know what you’ll say. But just let it be known and leave it like that. We go on like we were. Unrequited love won’t kill me.”

She looked at him, amazed that he could bring up something so... extraneous. She had always wondered if he loved her. She loved him in a way. But that wasn’t important, it had been accepted a long time ago. And their relationship was established. Certainly it shouldn’t intrude now. When he turned his face toward her he registered shock. She knew her mascara must be running with the tears, she knew her face must be twisted in fear. “What happened to me?” she asked. Her voice was not her own, so distorted was it by the rush of emotions. “What was going on back there?”

“Becky, I don’t know. But I think we’d better find out.”

She laughed. “Oh, that’s for sure! I just don’t know if I can handle it. We’ve really got some problems here.”

“Yeah. One of them is you. I don’t mean that harshly, but I’m going to have to break my cardinal rule at this time. Let’s change sides, I’m going to drive.”

She hid her amazement. In all the years they had worked together, this was an absolute first. “I must be falling apart,” she said as she sank into Wilson’s usual seat. “This is really a big deal.”

“It’s no big deal. You’re rattled. But you know you shouldn’t be. I mean, you weren’t the one in danger. It was me.”

“You! I was being lured upstairs.”

“To get you away from me.”

“Why do you even say that? You’re a man, a lot heavier than me, not an obvious target.”

“I heard noises on the stairs at the other end of the hall. Breathing noises, like something hungry slavering over its food.” The tone of his voice frightened her. She laughed nervously in self defense, the sound peeling out so suddenly that it startled Wilson visibly. He looked at her out of the corner of his eye but kept the car moving.

“I’m sorry. It’s just that you’re the *last* person I’d think of as one of their victims.”

“Why?”

“Well, they eat them, don’t they? Isn’t that what it’s all about? Everybody they’ve hit has been eaten.”

“Old men, junkies, two cops in a hell of a lonely place. The weak and the isolated. I fitted two key criteria in that house—older man, isolated from all except you. And they damn near lured you away upstairs. You ever go hunting?”

“I don’t like it. I’ve never been.”

“When I was a kid I hunted with my father. We went after moose up north. We used to track for days sometimes. One summer we tracked for a week. And finally we got on to our moose, a big old bull that moved with a slanty track. A wounded bull. Weak, ready for the slaughter. I’ll never forget it. There we were just getting ready to take a shot when wolves stole out of the shadows all around us. They went right past us into the clearing where the moose was grazing. My dad cursed under his breath—those wolves were going to scare our trophy away. But they didn’t. That big bull moose looked down at those scrawny wolves and just snorted. They moved in closer and he stopped grazing and stared at them. You’d never believe it. The damn wolves wagged their tails! And the moose let out a great roar and they jumped him. They tore at him, bled him to death. We were fascinated, we were rooted to the spot. But it was like they agreed together that the killing be done. The wolves and the moose agreed. He couldn’t make it anymore, they needed meat. So he let them take him. And those timber wolves are scrawny. They’re like German shepherds. They look like they’d never be able to bring down a full-grown bull moose. And they wouldn’t, unless he agreed to let them try.” He was watching her again, barely keeping an eye on traffic. He was no better a driver today than she was.

“What’s that supposed to mean?”

“I’m the bull moose in this version of the story. I wasn’t scared, but I knew they were coming down those stairs. If they had gotten any closer to me, I think I would have been a goner.”

“But you didn’t want them to kill you! We’re not like animals, we want to survive.”

“I don’t know what was going on in my mind,” he said. By the choked gruffness of his voice she knew that if he hadn’t been Wilson he would be sobbing. “All I know is, if they had come any closer I’m not so sure I could have even tried to stop them.”

Chapter 4

Becky Neff awoke suddenly out of a restless sleep. She felt that there had been a noise, yet now there was no sound except the wind, and a little snow whispering on the windowpane. The glow from the streetlights far below shone on the ceiling. In the distance a truck clattered its way down Second Avenue. The hands of the clock showed three forty-five. She had been asleep four hours. She remembered a hint of dream—a flash of blood, a sickly feeling of menace. Perhaps that had awakened her. Dick’s steady breathing in the bed beside her was a reassurance. If there had been an unusual noise he would be awake too. Gently she touched him, thinking as she did of how things had been between them such a short time ago, and of how change seeps into even the strongest love. She became sad and afraid. The apartment was cold, the morning heat not yet up.

“Dick,” she said softly.

There was no response. She hadn’t really said it loud enough to wake him; she didn’t say it again. Then she leaned over to get her cigarettes from the night table and froze. There was a shadow on the ceiling. She watched it move slowly along, a low lump like something crawling on its belly across the bedroom terrace. Her mind raced to the sliding doors— locked? She had no idea.

Then the shadow was gone and she found she was still lying on her back, not reaching across the bed at all. In the manner of bad nightmares this one had continued even after she seemed to be awake. With the thought her heart stopped pounding. Of course it had been a dream. Nothing could climb sixteen stories to an apartment terrace. And nothing could have followed her. Yet she couldn’t quite overcome the feeling that something *was* out there. Something, after all, must have sparked the dream. Something must have waked her up.

The mutilated faces of DiFalco and Houlihan flickered in her mind’s eye. She thought of them staring up from the muddy ground. And she thought of Mike O’Donnell, the old blind man dying in his own darkness.

How did the killers look? She had assumed that they would look like wolves, but maybe not. Wolves, she knew, have never been implicated in a human killing. They are generally no more dangerous to man than are dogs. Wolves were interested in moose and deer. Man probably frightened them more than they did him.

A little sound from the terrace made her mind go blank, a shivering coldness pass through her body. It was a growl, very low and indistinct. They *were* here! Somehow they had done the impossible, had followed her here. They must have scented her at the house in the Bronx and followed the trail. They were hunting her, down! She felt frozen, as if she could neither speak nor move. This was fear, she knew, so intense that it left her mind floating in a strange, precise world of its own, looking from a distance at her body. Her hand moved across the bed and began shaking her husband’s shoulder. She heard her voice saying his name again and again with urgent, whispered intensity.

“What—”

“Don’t make a sound. Something’s outside.”

He slipped his service revolver out of his night-table drawer. Only then did it occur to her to do the same. Her own gun felt good in her hand. “On the terrace,” she said.

Very quietly he got up and went to the door. He moved fast then, pulling back the curtains and stepping outside. The terrace was empty. He turned toward her, his shadow shrugging. “Nothing’s here.”

“There was something.” The conviction grew in her when she said it. A few moments ago she had seen the shadow, heard the growl—and they were certainly real.

“What?”

“I don’t know. Some kind of an animal.”

“A cat?”

“I don’t think so.”

He came back to bed, crawling in beside her. “You’re really wound up in this case, aren’t you, honey?” The gentleness in his voice cut into her, making her feel more lonely than ever. Despite the urge she felt to embrace him, she stayed on her side of the bed.

“It’s a strange case, Dick.”

“Don’t get overinvolved, honey. It’s just another case.”

That statement caused anger to replace fear. “Don’t criticize me, Dick. If you were working on murders like these you’d feel exactly the same way— if you were honest with yourself.”

“I wouldn’t get worked up.”

“I’m not worked up!”

He laughed, a condescending chuckle. The great stone policeman with his tender bride. “You take it easy kid,” he said, pulling the quilt up over his head. “Take a Valium if you’re upset.”

The man was infuriating.

“I’m telling you, George, I know what the hell I saw!”

He stared across the room toward the bleary window. They had been given an office belonging to the Manhattan South Detective Division despite the fact that they were still not officially assigned to it. “It’s pretty hard to believe,” Wilson said. “Sixteen stories is a long way up.” His eyes were pleading when he looked at her—she *had* to be wrong or else they would be dealing with a force of completely unmanageable proportions.

“All I can say is, it happened. And even if you don’t believe me it wouldn’t hurt to take precautions.”

“Maybe and maybe not. We’ll know better what we’re up against when we talk to the guy we’re supposed to see.”

“What guy?”

“A guy that Tom Rilker gave some of those pawprint casts to. You remember Tom Rilker?”

“Sure, the kook with the dogs.”

“Well, he gave the prints we left behind in his office to another kook who wants us to go interview him. So maybe he’ll tell us what you saw.”

“Goddamn it, you have the sneakiest way of slipping things in. When do we see this genius?”

“Ten-thirty, up at the Museum of Natural History. He’s an animal stuffer or something.”

They drove up in silence. The fact that they were even trying this angle testified to their increasing desperation. But at least it meant doing something on the case instead of letting more time slip by. And time seemed to be terribly important.

“At least they aren’t throwing other assignments at us these days,” Becky said to break the silence. Since this case has been “closed” she and Wilson hadn’t exactly been getting more big jobs. Sooner or later they would be transferred somewhere definite instead of remaining in the limbo of reporting directly to the Chief of Detectives. Probably go back to Brooklyn for all the difference it made. At least out there they wouldn’t be victimized by high-level departmental politics.

“Underwood knows what we’re doing.”

“You think so?”

“Of course. Why do you think we’re not getting other cases? Underwood’s playing it by ear. If we turn up something he can use, OK. If we foul things up, we can always be

reprimanded for insubordination.” He laughed. “He knows exactly what we’re doing.”

“Evans told him, I suppose.”

Wilson smiled. “Sure. He probably called up and told Underwood he’d better leave us alone if he knew what was good for him. Underwood might not like it since he closed the DiFalco case himself but he’s afraid of Evans, so the result is we end up in a vacuum. Damned if we do and et cetera.”

“Here’s the Goddamn museum.”

They went up the wide stone steps past the statue of Teddy Roosevelt and into the immense dim hall that formed the lobby.

“We’re here to see a Doctor Ferguson,” Wilson said to the woman sitting behind the information counter. She picked up a telephone and spoke into it for a moment, then smiled up at them.

The workrooms of the museum were a shock. There were stacks of bones, boxes of feathers, beaks, skulls, animals and birds in various states of reconstruction on tables and in cases. The chaos was total, a welter of glue and paint and equipment and bones. A tall young man in a dirty gray smock appeared from behind a box of stuffed owls. “I’m Carl Ferguson,” he said in a powerful, cheery voice. “We’re preparing the Birds of North America, but that’s obviously not why I called you.” For an instant Becky saw something chill cross his face, then it was replaced again by the smile. “Let’s go into my office, such as it is. I’ve got something to show you.”

It sat on the desk in the office on a piece of plastic. “Ever seen anything like it?”

“What the hell is it?”

“A composite I constructed from the pawprint casts Tom Rilker gave me. Whatever made those prints has paws very much like this one.”

“My God. It looks so—”

“Lethal. And that’s exactly what it is. An efficient weapon. One of the best I’ve ever seen in nature, as a matter of fact.” He picked it up. “These long, jointed toes can grasp, I think, quite well. And the claw retracts. Very beautifully and very strange.” He shook his head. “Only one thing wrong with it.”

“Which is?”

“It can’t exist. Too perfect a mutation. No defects at all. Plus it’s at least three steps ahead of its canine ancestors. Maybe if it was a single mutation it would be acceptable, but there are the prints of five or six different animals in here. There must be a pack of these things.” He turned the plaster model in his hand. “The odds against this are billions—trillions— to one.”

“But not impossible?”

He held the model out to Wilson, who stared but didn’t touch. “We have the evidence right here. And I want to know more about the creatures that made these prints. Rilker couldn’t give me a damn bit of information. That’s why I called you. I didn’t want to get involved, but frankly I’m curious.”

Wilson put on a sickly smile. “You’re curious,” he said. “That’s very nice. We’re all curious. But we can’t help you. You’ve just told us a lot more than we knew. You’re the one who can answer questions.”

The scientist looked puzzled and a little sad. He took his glasses off, then dropped into his chair and put the plaster model back on the desk. “I’m sorry to hear that. I had hoped

you'd have more information for me. But I don't think you realize how little I know. Where did the prints come from—can you tell me that?"

"The scene of a crime."

"Oh come on, George, don't be so close-mouthed. They came from the scene of the DiFalco-Houlihan murders out in Brooklyn."

"The two policemen?"

"Right. They were found all around the bodies."

"What's being done about this?"

"Exactly nothing," Wilson snapped. "At the moment the case is officially closed."

"But what about these prints? I mean, here's clear evidence that something out of the ordinary is at work. This is no dog or wolf paw, you realize that? Surely somebody must be doing something about it."

Wilson shot Becky a glance and kept staring as if surprised. The feeling that she experienced confused and pleased her—not because of what the look communicated but because of the way his eyes lingered. "Nobody's doing anything about it, Doctor," she said. "That's why we're here. We are the only two police officers in New York on this case and we're about to be reassigned."

"You understand that this claw belongs to a fearsome killer." He said it like it was a revelation.

"We know," Becky replied patiently. In her mind's eye she once again saw the faces of the dead.

Doctor Ferguson seemed to withdraw into himself. His hands hung down at his sides, his head bowed. Becky had seen this kind of reaction to stress before, usually in those who have been unexpectedly close to murderers. "How many have died?" he asked.

"Five so far that we know about," Wilson replied.

"There've probably been more," Ferguson said faintly, "maybe many more, if what I suspect is right."

"Which is?"

He frowned. "I can't say right now. I'm not sure about it. If I'm wrong it could harm my career. We could be dealing with some kind of murderers hoax. I don't want to get taken in by a hoax."

Wilson sighed. "You got any cigarettes?" he asked. Ferguson produced a pack. Wilson took one, tore off the filter and lit up. He did this all very quickly so that Becky wouldn't have a chance to stop him. "You know, you shouldn't clam up on us. If you don't tell us what you think we aren't going to be able to help you."

The scientist stared at them. "Look, if I get tripped up by a hoax—if I go out on a limb about this thing and it turns out to be a fake—I would lose my reputation. I don't know what would become of me. Or I guess I do. Teaching at some backwoods college and never quite reaching tenure." He shook his head. "It's not much of a career."

"You're not presenting a paper here. You're talking confidentially to two New York City policemen. There's a difference."

"True enough. Maybe I'm exaggerating."

"So tell us your theory. For God's sake *help us!*" The words came out of Wilson like a bark, causing a sudden pause in the bustle of the workroom beyond the little office. "I'm

sorry,” he said more softly, “I guess I’m a little upset. Me and my partner here, we’re the only ones who even suspect what we’re up against. And we’ve had some bad experiences.”

Becky broke in. “These things don’t just kill. They hunt. They nearly got us in a house up in the Bronx a few days ago. They hid on an upper floor. One of them tried to lure me with the cries of a baby while the others—”

“Stalked me. They tried to separate us.”

“And I think they might have been outside my apartment last night.”

The words had come in a rush out of both of them, driven by their rising sense of isolation. Now Ferguson was looking at them with unabashed horror, almost as if they themselves bore some loathsome mark.

“You must be mistaken. They can’t be as intelligent as all that.”

Becky blinked with surprise—she had never realized that. Not only were they deadly, they were smart! They had to be damn smart to lure her and Wilson into that stairway, and to seek out her apartment. They had to understand who the enemy was, and know the importance of destroying him before he revealed their presence to the world.

Wilson moved like a man in a dream, his hand gliding up to touch his cheek, the fingers running down the rough line of the throat, down to the seedy brown necktie and back to his lap. As the realization grew also in him his eyes hooded in a deep frown, his mouth opened almost sensually, as if he had fallen asleep and was dreaming of love. “I was beginning to suspect that they were intelligent, too. No matter what you say, Doctor Ferguson, what happened is what happened. You know something—I’ll bet they didn’t pop out of the ground yesterday either. If they’re that smart, they know how to stay well hidden—and they know how important that is, too. That’s my thought.”

“Well, that’s pretty much the theory I didn’t want to tell you, too. You’ve got to get me a cranium or a head, though. Then I can give you an idea of the intelligence. But don’t worry about it, I’m sure we’re much smarter.”

“Doctor, what would a chimp be like if it had the senses of a dog?”

“Lethal—oh God, I see what you mean. If their senses are highly developed enough they don’t need our intelligence to best us. I suppose that’s right. It’s very disturbing, the idea of canine senses and a primate brain.”

“And it’s more than that.”

“What do you mean?”

“Jesus Christ, I thought she just told you she was *hunted!*” His vehemence surprised her. The layers of calm professionalism were stripped away, revealing a Wilson underneath that she had never seen before. Here was a man of intensity and great feeling, protective, angry, full of violence. The cynical surface was gone. What ran beneath was burning with pain.

“Please keep your voice down. I can’t have a disturbance in here. So I’ll agree that she was hunted. You do something about the problem, you’re the police.”

“Crap. We don’t know what the hell we’re confronting.”

“And I can’t help you unless I’ve got more information. I’m not going to go spouting out suppositions that could get quoted in the papers. Anyway it’s your problem to protect the community, so protect it. My interest is strictly scientific. So bring me a head. If I’m going to give you your answers, I’ve got to have a head.”

Wilson's chin was pulled in, his shoulders were hunched. "Hell, you can count on us! Bring you a head—we can't possibly bring you a head and you know it. Nobody's ever caught one of these things. Even if they've evolved at absolute top speed, how long have they been around?"

"At the very least—and this seems next to impossible—give them ten thousand years."

"Longer than recorded history and you want us to bring you a head! Let's get out of here, Detective Neff, we've got work to do." He got up and left.

"Just one more thing," Becky said as she was leaving, "just one thing I'd like you to think about. If they are following us, they probably know we came to see you." She went out behind Wilson, leaving the scientist staring at the door.

Wilson didn't speak again until they had passed back through the nearly empty museum and were in the car. "That was bullshit you fed that schmuck," he said. "He won't believe us no matter how close to home you try to take it."

"Maybe not. It sure would help us though, to get a Ph.D. behind us. Think of what would happen if that guy went to Underwood and said these two cops might have a point."

"Don't, Becky. It isn't going to happen that way." They rode on in silence for a few minutes. "Maybe we're spooked," Wilson said. "Maybe it was just our imagination last night."

"Our?"

"I saw something too." He said it as if he didn't want to. "Something watched me from a fire escape when I was on my way to my rooming house. It was a damn strange-looking dog. I only got a glimpse and then it was gone. I've never seen a face like that on a dog—so intense. In fact I've never seen a face like that before except once, when I collared a maniac. He looked at me like that. It was because the bastard was about to pull a hidden shiv on me."

"Why didn't you say something about this earlier?"

"I was wishing it was my imagination. I guess we're in trouble, Becky." This last he said softly, almost in awe of the words. They both knew exactly what the stakes were. Becky felt sick. Wilson, sitting beside her as solid as a statue, had never seemed so frail. She found herself wanting to protect him. She could imagine the thing on the fire escape—she could picture the eager, intent eyes, sense the frustration at the crowds on the sidewalk, imagine the silent anger it felt as Wilson went unmolested on his way, protected by all the unsuspecting witnesses.

"George, I just can't believe it. It's so hard to make it seem real. And if it isn't totally real, I'm not sure that I'll be able to deal with it."

"It's happened before, Becky. There are even legends about it." She waited eagerly for more but he seemed to see no need to continue. Typical of him to lapse into silence after making a leading statement like that.

"So go on. What are you driving at?"

"I was just thinking—you remember what you said to Rilker about werewolves? You might not have been too far wrong."

"That's ridiculous."

"Not really. Say they've existed throughout recorded history. If they really are as smart as we think, people in the past would have believed that they were men turned into wolves."

“Then what happened? Why did the legends die out?”

He braced his knee against the glove compartment and slumped in the seat. “Maybe the reason is that the population of the world grew. Back in the past their hunts were noticed because there were so few people. But as the population got bigger they started concentrating on the dregs, the isolated, the forgotten—people who wouldn’t be missed. Typical predators in that respect—they only take the weak.”

She glanced at him as she drove. “I think that’s a hell of an idea,” she said. “I don’t think it’s very good news for you and me, though.”

He laughed. “We’re not weak. That probably means they’ll be very careful. There also isn’t any knowledge about them at all, which must mean that they’re very thorough about covering their tracks.”

He means that they hunt down people like us, Becky thought as she guided the car through the traffic. It was like being in a bad dream, this feeling of being hunted. Her mind kept going back to the shadow on the ceiling, the shadow on the ceiling... the patient shadow waiting for that single, perfect instant when it could destroy the woman who knew its secret. The world was whirling around her, around her and Wilson, a world of lights and voices and warmth—except for the darting shape, the shadow leaping in pursuit.

“It’s a shame nobody believes us,” Wilson said. “I mean, it’s a shame the... things are wasting their time hunting us down, seeing as how we couldn’t reveal them even if we wanted to.” He rubbed his face. “Except maybe to Rilker and Evans. Even Ferguson if he’ll quit worrying about what they’ll say in *Science News*. But we just might be able to convince Rilker and Evans—hell, I don’t care *what* they decide is after us, I just want them to know we’re in danger and give us a hand!” He turned his head, looking at her with a haggard face. “You know, that Ferguson was a prize jerk. I think he was attracted to you.”

He’s jealous, she thought, and he doesn’t even know it. “I could tell he was a jerk from the first moment I saw him,” she said; “he looked like one.” There, Wilson will like that. True to her expectations he put his arm out along the seat.

“I like it when you wear that smell.”

“I’m not wearing any perfume.”

“Must be your deodorant then. It’s very nice.”

“Thank you.” The poor man, his best efforts were so terrible. She felt a twinge of sorrow for him; his loneliness was becoming more and more obvious to her. “You’re very sweet to say that,” she heard herself say, but the words sounded false.

Apparently they did to him, too, because he didn’t say anything more. When they reached Police Headquarters Becky pulled the car to a stop on a crowded nearby street rather than risk the big, empty garage beneath the building.

“We’ve got to try and get Underwood to assign a special detail,” she said when they were back in their office. Wilson nodded. He sat down at their desk and shuffled through the papers heaped on top of it: a day-old *Times* covered with coffeecup rings, a copy of the *New York* magazine crossword, half a dozen departmental memos.

“Nobody ever calls us,” he said.

“So let’s call Underwood ourselves. We’ve got to do something, we can’t just let ourselves rot.”

“Don’t say that! It does bad things to my gut. Why don’t *you* call Underwood? Hello,

this is the Detective with a capital D. You know the one? Well, please assign me a special protective detail. You see, I'm being chased by these werewolves. That'll get action."

"An invitation from Psychiatric Services and a little confidential note in the old personnel file. I know. But we don't want protection, we want to eliminate the menace!"

"You think we can, Becky?"

"We've got to try."

"So we'll call Evans and Rilker and try to get them on our side. And maybe even the scientist will put his two cents in if Rilker pushes him. Stranger things have happened. Maybe we'll at least get a scratch squad together, enough men to uncover some positive evidence."

Becky didn't feel particularly confident but she got on the phone. Wilson didn't even offer to lend a hand; they both knew that his services were, at best, counterproductive in the area of convincing people to give him help.

Evans listened to the story.

Rilker said he had suspected something like that.

Ferguson was willing to attend the meeting as long as absolutely everything was off the record. Becky considered offering him the loan of a false beard and dark glasses but let it go.

"Three hits," Wilson said, "they can't resist you."

"Now, now, don't get jealous. All that's left is for you to get an appointment with Underwood."

Despite his lack of skill with people, there was no way that Wilson could avoid being the one to call Underwood. He was senior man on the team, and their mere connection with the Chief of Detectives was a major disruption of the chain of command. Officially Neff and Wilson weren't assigned at the moment to any particular division. The Chief was keeping them in cold storage until he was sure the DiFalco case held no further surprises. Obviously he wasn't completely convinced that his quick closing of the case had been wise. With Neff and Wilson apparently still assigned to it he could keep them from uncovering embarrassing new evidence and also cover himself if that happened some other way, because he could always say that the department had kept a special team active on the case the whole time. He didn't want the case reopened, but if it was he was prepared.

For him it was a very economical solution to a problem. For Neff and Wilson it was agony—they didn't know where they stood and neither did anybody else. This meant that they could get nothing done. The resources of Manhattan South were not theirs to use—except for a dingy office. And the Brooklyn Division considered them off its roster. So they had only each other, and whatever help they could get outside the department.

It wasn't going to be enough, that had become very clear.

Underwood was polite, when Wilson finally got through. He set a meeting for three o'clock and didn't even ask what it was about. And why should he—he knew that there could be only two topics of conversation. Either they wanted to reopen the DiFalco case or they wanted to be reassigned. And he had one simple answer for both questions. It was no.

"We've got a couple of hours, we might as well go up to Chinatown for lunch."

Wilson glanced out the window. "Looks like plenty of people in the streets. I guess we can go."

They took a cab. Despite the crowds it seemed the safest thing to do. Pell Street, the center of Chinatown, was cheerfully crowded. They left the cab, Becky feeling a little more at ease, Wilson nervously studying the fire escapes and alleyways. Becky chose a restaurant that was neither familiar from her courting days with Dick nor one of the dingy chop suey parlors Wilson would have selected. He liked to eat lunch for under two dollars. And when he was treating he would go even cheaper unless his victim was very alert.

Becky was very alert. During lunch they spoke little because he was pouting at the cost. Or at least that was what she assumed until he finally did speak. "I wonder what it'll feel like."

"What in the world makes you say something like that!"

"Nothing. Just thinking is all." She saw that he was ashen. In his left hand he held his napkin pressed against the middle of his chest as if he was stopping a wound. "I can't get that damn claw out of my mind." Now his lips drew back across his teeth, sweat popped out on his cheeks and forehead. "I just keep thinking of it snagging my shirt, grabbing at me. God knows you couldn't do a thing once something like that was in you."

"Now wait a minute. Just listen to me. You're getting scared. I don't blame you, George, but you can't afford it. You cannot afford to get scared! We can't let that happen to us. They'll move right in if it does. I've got a feeling the only thing that's kept them from doing it before is the fact that we haven't been scared."

He smiled his familiar sickly smile.

"Don't do that, I expect you to take me seriously. Listen to me—without you I haven't got any hope at all." Her own words surprised her. How deeply did she mean that? As deep as her very life came the instant answer. "We'll get through this."

"How?"

It was an innocent enough question, but under the circumstances it exposed a weakness she wished wasn't there.

"However the hell we can. Now shut up and let me finish my lunch in peace."

They ate mechanically. To Becky the food tasted like metal. She wanted desperately to turn around, to see whether the doorway behind her led to the kitchen or to the basement. For Wilson's sake, though, she did not. There was no sense compounding his fear with her own.

"Maybe that claw is what we need. When the Chief sees it maybe he'll figure things more our way."

"I didn't even remember to ask Ferguson to bring the damn thing."

"But he will. He's very proud of that claw."

"I don't blame him. He can carry it instead of a shiv."

Wilson chuckled and sipped the last of his tea, his fears seemingly forgotten. But the napkin was still clasped convulsively against his chest.

As soon as they got back to headquarters they went to Underwood's office. It was actually a suite of offices, and in the outer office was the kind of policewoman Becky most disliked, the typist in uniform. "You're Becky Neff," the woman said as soon as the two of them came in; "the Chief of Detectives said you'd be coming up. I'm so pleased to meet you."

"Pleased to meet you too, Lieutenant," Becky muttered. "This is my partner, Detective Wilson." Wilson stood uncertainly staring past them. There was nothing on the wall he

was staring at except a hunting scene. “Wilson—you’re being introduced.”

“Oh! Yeah, hiya. You got any cigarettes?”

“I don’t smoke, the Chief doesn’t like it.”

“Yeah. What’s he doing? We’re supposed to see him at three.”

“It’s only two forty-five. He’s still in his other meeting.”

“Still at lunch, you mean. Why don’t you let me sleep on that couch he’s got in his office. I gotta sleep off about three pounds of chicken chow mein.”

The lieutenant glanced at Becky, but continued without a pause: “No, he’s really in there. He’s got some people from the Museum of Natural History and Doctor Evans—”

They went in.

“Sorry we’re late,” Wilson growled. “We got slowed down by your house genius.”

“Well, you’re not late. Still fifteen minutes to go. But since these men were all here, I thought we’d get started. Everybody knows everybody?”

“We know them,” Wilson said. “Anybody in here smoke?”

“I don’t have any ashtrays,” Underwood said firmly. Wilson pulled up a chair, crossed his legs, and sighed.

There was a silence. The silence got longer. Becky looked from face to face. Rigid, expressionless, Evans a little embarrassed. She felt herself slump into the chair. This silence could only mean that they didn’t believe. These men thought of the two detectives as being a little off their rockers. Two famous detectives driven a little crazy. Worse things have happened, more unlikely things.

“Apparently you gentlemen don’t know what it is to be hunted,” Wilson said. Becky was amazed—when he was up against the wall he revealed hidden resources. “And since you don’t know, you can’t imagine the state me and Neff are in. We are being hunted, you know. Sure. By things that have claws like this.” With a swift motion he picked it up. “Can you imagine how it would feel to get one of these in the chest? Rip your heart right out. Hell, you might look at the sunset out there and think it’s beautiful. And it was for us too, until last night. Now we don’t look at a sunset that way anymore. We look at it the way deer and moose do—with fear. How do you think that feels, eh? Any of you know?”

“Detective Wilson, you’re overwrought—”

“Shut up, Underwood. I’m maybe making my last speech and I want to be heard.” He waved the claw as he spoke, and measured his words with uncharacteristic care. “We are being hunted down by whatever has these claws. They *exist*, don’t forget that! They have for thousands of years. We have seen them, gentlemen, and they are very ugly. They are also very fast, and very smart. People used to call them werewolves. Now they don’t call them anything because they’ve gotten so damn good at covering their tracks that there are no legends left. But they’re here. They damn well are here.”

The two who had to be killed were hard to find. They had been scented clearly as they walked through the house where the pack had been feeding. Their car had been seen as it left, and seen again a few days later, this time far down Manhattan toward the sea. Patience had been needed. The man was watched as he went through the streets, and his house was finally discovered. The woman also was followed, and her scent traced into a building with many stories. It was watched until they knew that the bedroom behind one of the balconies must certainly hold her.

They were not rightful prey, but they had to be taken. If their knowledge of this pack spread, all the race would suffer. First, the many packs in this city would be hurt, then others nearby, and finally all everywhere. Better that man not know of the packs. If the numberless hordes of men knew of the many packs that thrived on them, they would surely resist. Essential that man not know.

Whenever man came close this was done. It had always been thus, and that was the first law of caution. For many years they had roamed free in the world and they had prospered. There was so much humanity that packs were growing through the world, in every one of the human cities. When they were occasionally glimpsed by man the pack passed as a group of stray dogs. Normally they hunted at night. By day they slept in lairs so carefully concealed—in basements, abandoned buildings, wherever they could find a spot—that man never realized they were there. Dogs also posed no problem. To them the scent of the packs was a familiar part of city life and they ignored it

Now these two humans had to die else they go among all the human cities and warn them of the presence of death in their midst.

So they had followed the scent of the two humans, they had followed this scent through the streets, tracked it until it entered a great gray building in lower Manhattan. When it came out again and separated they split up, following both parts.

The man's lair was easy to find. It was close to the ground, in a house with weak outer doors and an easily accessible basement. But the man's own room was locked and barred, with gates on the windows. The whole place stank of fear. This man lived in a fortress. Even the chimney leading to his fireplace had been blocked up long ago. It was pitiful to see one so sick and full of fear, sitting his nights away in a chair with all the lights in his room on. Such a one needed death, and the pack longed to take him not only because he was potentially dangerous but because he was in the condition of prey. He needed death, this one, and they all hoped to give it to him.

And they had found a way to move against him.

The woman lived far up in her building. Not all of the pack were adept climbers, but some were and one of them climbed. He moved from balcony to balcony, grasping with his forepaws, hauling himself up, doing it again and again. Below him the rest of the pack stood in the black alley longing with their hearts to howl their joy at his heroism, at his true love for all of his kind. But they kept their voices still. It was unnecessary anyway—even as he climbed he would scent the respect and gladness of those far below him.

And he climbed toward the smell of the human woman. She was here, closer and closer. He climbed, he longed to reach her, to feel her blood pouring down his throat, to taste the meat of her, to feel as her body died and the threat to the race ended. The pack was glad he could climb, and he was glad to climb for them!

When he got to her balcony he moved as softly as he could. But not softly enough. One of his toenails clicked against the glass door as he tested the lock. To him the sound was bell-clear. Had the humans inside heard it? Had she heard it?

Her scent changed from the thickness of sleep to the sharpness of fear. The accursed creature *had* heard him! Slowly he inched across the balcony. She knew he was out here. Now the sound of her breath changed. She was growing so terribly afraid that he longed to help her into death even though she was not weak enough to be prey. But this was so dangerous. If they opened that curtain, he would be seen. You cannot be seen by those who will live! To avoid that he was prepared to throw himself off the balcony. Or was he? Die, for that? His own heart began to pound. She made a little cry—she had seen his shadow on the ceiling. His instincts screamed at him —growl, lunge, kill—but all that came

out was a tiny noise.

A noise which she heard.

Now it was too late! They were getting up. He glanced at the light fixture in the ceiling of the balcony. The turning of a switch inside would reveal him! Desperately he climbed up to the next floor, and not a moment too soon. He heard the sliding door scrape, a footfall on her balcony. Her male companion looked about, moving through the dense body-heat and smell of himself and, in the marvelous blindness of humans, not even noticing. These poor creatures were blind in all except the visual sense. Nose-blind, ear-blind, touch-blind. They were the best prey in the world.

When the man went back inside and all once again fell into darkness he returned to the alley. His heart was full of sorrow. When he faced the pack—he had failed, she still lived.

But they found a way to move against her also, and now they were ready.

Chapter 5

Carl Ferguson had gone back to his office. His lamp provided the last glimmer of light in the empty workrooms of the museum basement. Beyond his open door the evening shadows spread slowly across the workbenches, turning the half-finished specimens into indistinct, angular shapes.

Under his light Ferguson held the model he had constructed of the paw.

The paw. He turned it in his hands, looking at its supple efficiency for the hundredth time. He placed it on the desk, then picked it up again and ran its claws along his cheek. It would do its job well, this paw. The long toes with their extra joints. The broad, sensitive pads. The needle-sharp claws. Almost... what a human being might have if people had claws. It had the same functional beauty as a hand, a lethal one.

Suddenly he frowned. Wasn't that a noise? He jumped up and started toward his door—then saw that some moving air was ruffling a box of feathers.

"I'm getting crazy," he said aloud. His voice had a flat echo in the empty space beyond his office.

Ferguson glanced at his watch. Seven **p.m.** It was dark, the winter sun had set. He was tired, exhausted from the harrowing meeting downtown and from his own hectic schedule. The new exhibit was going to be a great achievement, one that would be sure to get him tenure at the museum. A beautiful concept— the birds of North America. Not just static cases but a whole room of meticulous reconstructions, soaring, wonderful creatures... he looked at some of them, their great wings spread in the darkness, barely visible, in the process of being feathered quill by careful quill.

But where did this—thing—belong among the creatures of North America? What the hell was it, dammit!

The detectives had babbled about werewolves... superstitious fools. But they certainly had uncovered a problem. Surely the city police could capture one of the things, bring it in, let him evaluate it more thoroughly. Judging from this paw it was on the large side,

maybe bigger than a wolf. Possibly a hundred and eighty pounds. Even alone such a creature could be extremely dangerous, highly so in a pack. Unlikely it was a mutant wolf, they were too radically adapted to their traditional prey. Coyotes—too much of a size variance. Whatever had a paw like this had split off from the canine mainstream a long time ago, and had reached a very, very high level of evolution.

Which brought up the question of why there were no bones, no specimens, nothing.

It was uncanny and chilling to think that a whole subspecies of canine carnivore existed without even a hint of it in science.

He jumped again—this time he heard a scraping sound. Now he took it seriously. “Luis,” he said, hoping it was the night man coming down to check on the light, “it’s me, Carl Ferguson.” The scraping continued, insistent, patient... something trying to worry one of the basement windows open.

He looked at the paw. Yes, it could do that.

He turned out his lamp, closed his eyes to hasten their getting used to the dark. He stood up from his desk swaying, his skin crawling.

The scraping stopped, was followed by a slight creak. A puff of icy air made the box of feathers in the hallway rustle again. There was a sliding sound and a thump as something came in the window, then another.

Then there was silence. Carl Ferguson stood with his plaster paw in his hand, his throat and mouth agonizingly dry.

“Somebody’s over there.”

A light flashed in the scientist’s eyes.

“Hello, Doctor,” said a gruff voice. “Sorry we startled you.”

“What the hell—”

“Wait a minute, wait a minute, don’t go off half-cocked. We’re cops, this is an investigation.”

“What in hell do you mean coming in here like this? You—you scared me! I thought—”

“It was them?” Wilson flipped a bank of switches flooding the basement with a stark neon glow. “I don’t blame you for being afraid, Doctor. This place is spooky.”

Becky Neff pulled the window closed. “The truth is, Doctor, we were looking for you. We figured we’d find you here, that’s why we came.”

“Why didn’t you come in the damn front door? My heart’s still pounding, for God’s sake! I don’t think I’ve ever been that scared.”

“Think how we feel, Doctor. We feel that way all the time. At least I do. I don’t know about Detective Wilson.”

Wilson pulled his chin into his chest and said nothing.

“Well, you could have come in the right way. I don’t think that’s asking too much.” He was angry and aggrieved. They had no right to do this to him! Typical cops, completely indifferent to the law. They didn’t even have a right to be here! “I think you should leave.”

“No, Doctor. We came here to talk to you.” She said it sweetly, but the way she and Wilson advanced toward him made him take an involuntary step back. When he did Wilson sighed, long, ragged and sad— and Ferguson saw for an instant how tired the man was, how tired and afraid.

“Come into my office, then. But I fail to see what you’re expecting to get out of me.”

They pulled up chairs in the tiny office. Ferguson noticed that Wilson lingered at the door, Neff sat so that she was looking out. Together they had most of the workroom in view. “Those are easy windows,” Wilson murmured, “very easy windows.”

“The museum has guards.”

“Yeah, we figured that out.”

“All right, what is it you want—but don’t think I’m going to let this matter drop. I want you to know I’m calling the Police Complaint Department in the morning.”

“The Police Department doesn’t have a complaint department.”

“Well, I’m calling somebody. Cops don’t run around breaking and entering without citizen complaint. You people get away with enough as it is.”

Wilson remained silent. Becky took over. “We wouldn’t be here if we weren’t desperate,” she said softly. “And we realize that you’ve told us all the facts you know, that’s not what we want. We want your theories, Doctor, your speculations.”

“Anything might help us stay alive, Doctor,” Wilson added. “We are going to have a hard time doing that as things stand now.”

“Why?”

Becky closed her eyes, ignored the question. “Imagine, Doctor,” she said, “what these creatures might want, what they might need—if they are as we say they are.”

“You mean intelligent, predatory, all that.”

“That’s right.”

“It’s barely a hypothesis.”

“Try it.”

“Detective Neff, I cannot try it. It’s worse than a hypothesis, it’s rank speculation.”

“Please, Doctor.”

“But what if I’m wrong—what if I confuse you more than you’ve already confused yourselves? Can’t you see the risk that’s involved? I can’t work on unfounded imagination, I’m a scientist! The truth is I *want* to help you. I really do! But I can’t. I know that this damn paw is something special but I don’t know how to apply that knowledge! Can’t you understand?”

Becky watched him, her eyes filled with the desperation that she felt. Wilson covered their backs, listening to every word but watching the long row of black windows at the far end of the workroom. From the sound of Ferguson’s voice, she knew that he was telling the truth. No longer was he holding back to protect his reputation. Now, in the dead of night when the three of them were alone and the customary bustle of his little kingdom around him was missing, he had forgotten worries of reputation and was forced to face the real truth—that the two cops needed help that he could not give.

Or could he? Often the trouble with scientists is that they do not realize how little others really know. “Anything you can say might be of help to us, Doctor,” Becky said with what she hoped was gentle calmness. “Why not tell us about something you do understand.”

“Like what?”

“Well, like the sense of smell. How effective is it and what can we do to cover our trails?”

“It varies greatly. A bloodhound might be seven or eight times more effective than a terrier—”

“Assume the bloodhound,” Wilson said from the doorway. “Assume the best, the most sensitive.”

“It’s a very extraordinary organ, a bloodhound’s nose. What it is, basically, is a concentration of nerve endings that fill the whole muzzle, not just the tip, although the tip is the most sensitive. For a bloodhound, you’ve got about a hundred million separate cells in the olfactory mucosa. For a terrier, twenty-five million.” He looked to Becky as if to ask if this sort of thing was any help.

“If we understood their capabilities we might be able to throw them off our tracks,” Becky said. She wished that the man would explain how the hell the sense of smell worked—if she understood it she would think of something, or Wilson would.

Wilson. His instinct had told them that they would find Ferguson sitting in here worrying about his plaster paw. Wilson had very good instincts. Now added to them was the overriding feeling of desperation, the certain knowledge that something was following them *now*. From the way he was beginning to twist the edge of the blotter on his desk Ferguson was having the same thought. If so, he didn’t acknowledge it directly. “You want me to tell you how to throw the... animals off your tracks?”

Becky nodded. “Give me a cigarette,” Wilson growled. “I don’t think I’m gonna like what the doctor’s gonna say.”

“Well, I’m afraid you won’t. A lot of people have tried to figure out how to shake a tracking hound. Not much will do it except rain and a lot of wind.”

“How about snow? It’s snowing now.”

“A bloodhound in Switzerland once followed a track that had been under snow for forty-seven days. Heavy snow. A massive blizzard, in fact. Snow isn’t going to stop a bloodhound.”

“Doctor,” Becky said, “maybe we ought to approach this from another angle. Why can’t anything stop a hound from tracking?”

“Aside from rain and wind? Well, it’s because of their sensitivity and the long-lasting nature of odors.”

“How sensitive are they?”

“Let me see if I can quantify it for you. The nose of a bloodhound is perhaps one hundred million times more sensitive than that of a man.”

“That means nothing to me.”

“I’m not surprised, Lieutenant Wilson. It’s a very difficult number to grasp. Look at it this way.” He went outside and returned with a tiny pinch of oily-looking powder between his fingers. “This is about one milligram of brown paint pigment. Now visualize a hundred million cubic centimeters of air—about as much air as covers Manhattan. A good bloodhound could detect this amount of pigment in that amount of air.”

Becky felt as if she had been hit. They were that sensitive! She had never realized just what an animal’s sense of smell meant before now. She fought to stay calm, her eyes darting toward the windows that revealed only the reflection of the workroom itself. Wilson got his cigarette lit and drew on it, exhaling with a long sigh. “What if you neutralized the odor, if you covered it with ammonia, say?”

“Makes absolutely no difference. The dog won’t like it but it will still be able to distinguish the odor. People have tried everything to break track, but very little works.

One thing—floating down a river, completely submerged, with the wind going in the same direction as the water. If you can make it half a mile without putting your head out of water you might break track. I say might because a single breath coming up through the water could be enough for a dog if the wind wasn't too strong."

"Breath?"

"We don't know the exact mechanism of a dog's scent, but we believe that they track by body oils and exhaled breath. They may also go by the odor of clothing."

"There's nothing you can do to yourself to nullify your odor?"

"Sure. Take a bath. You'll be safe for a while as long as you don't put on your clothes."

Wilson raised his eyebrows. "How long?"

"A good three or four minutes. Until your skin oils start replacing themselves."

"Wonderful! That's very helpful." There was a ragged edge in Wilson's voice that Becky didn't like.

"There must be something, something you haven't mentioned that would help us. If we can't get rid of our odor, what about neutralizing their sense of smell?"

"Good question. You can cause osmoanaesthesia with something like cocaine, although I've never heard of a dog that would inhale it willingly. Also, you could use a phenamine. You'd get a temporary paralysis of the olfactory sense with that, too, and administration would be a little easier. That stuff you could disguise in meat. It doesn't have to be inhaled, just eaten."

"Here doggie, have a little snacker!"

"Shut up, George. We might learn something if you'd just keep your trap shut!"

"Oh, Little Miss Muffet becomes Dragon Lady. So solly, missy!" He bowed, his hands folded across his belly, his eyes in a mocking squint. Then he froze. His hand dropped to the Colt he was carrying under his jacket

"What?" Becky was on her feet, her own pistol in her hand.

"Good heavens, put those things—"

"Shut up, Sonny! I saw something at that window, Becky." The mocking tone was gone, the voice was grave and a little sad. "Something pressing against it, gray fur. Like something had banged against the glass and gone off into the night."

"We would have heard it."

"Maybe. How thick is the glass in those windows?"

"I have no idea. It's just glass."

Becky remembered back to their entry. "It's thick," she said, "about a quarter inch."

Wilson suddenly holstered his gun. "Saw it again. It's a bush blowing against the glass. Sorry for the false alarm."

"Keep your shirt on, Detective," Becky said "I can't handle many more of those."

"Sorry. Lucky I was wrong."

Left unsaid was the fact that they had now been here a long time, longer than must be safe. The plan was to keep to the car, keep moving. That way at least they'd be harder to follow. In fact now that she thought of it, Becky didn't know how they could be tracked at all if they were in a car. She asked the question.

“The tires. Each set of tires has a distinctive odor. Tracking dogs can follow bicycles, cars, even carriages with iron wheels. In fact it’s easier in some cases than following people on foot. There’s more odor laid down.”

“But in the city—hundreds of thousands of cars I—It seems almost impossible.”

Ferguson shook his head. “It’s difficult but not out of the question. And if you two are right about being followed all the way from the Bronx our specimens are quite capable of doing it.”

“So let’s sum up. We can’t get rid of our odors. We can’t neutralize their noses without getting a hell of a lot closer than we want to be. Is there any other bad news?”

“Is he always this acerbic, Miss Neff?”

“It’s Mrs. And the answer is ‘yes.’ ”

Ferguson held his eyes on her a moment, as if to ask something more. She stared right back at him. In an instant he looked away, faintly confused by the challenge. Becky did not like men to strip her with their eyes, and when they did she stripped right back. Some it turned on, some it frightened, some it angered. She really didn’t care how they reacted, although from the way Ferguson both crossed his legs and brushed his hand along his cheek it looked as if he had been turned on and frightened at the same time. He was scared of a lot of things, this scientist. His face was powerful, only the eyes giving away the inner man. Yet there was also something else about him—a sort of buried competence that Becky felt was a positive factor in his makeup. He must be very professional and very smart. Too bad, it probably meant he was giving them the best information they were going to get

“I wonder what it’s like,” Wilson said, “to have a sense of smell like that.”

Ferguson brightened. “I’ve been extremely interested in that, Lieutenant. I think I can give you something of an idea. Canine intelligence is of intense interest to me. We’ve studied dogs here at the museum.”

“And cats.”

Becky winced. The Museum of Natural History had been embroiled in a violent controversy about some experiments using live cats, which Wilson naturally brought up.

“That’s irrelevant,” Ferguson said quickly, “another department. I’m in exhibits. My work on dogs ended in 1974 when the Federal money ran out. But up to then we were making great strides. I worked very closely with Tom Rilker.” He raised his eyebrows. “Rilker’s a hell of a dog man. We were trying to breed increased sensitivity to certain odors. Drugs, weapons—bred right in, no training needed.”

“Did you succeed?”

He smiled. “A secret. Classified information, compliments of Uncle Sam. Sadly enough, I cannot even publish a paper on it.”

“You were telling us about canine intelligence.”

“Right. Well, I think dogs know a lot more about the human world than we do about theirs. The reason is that their sensory input is so different. Smell, sound—those are their primary senses. Sight is a distant third. For example, if you put on a friend’s clothes your dog won’t recognize you until you speak. Then he’ll be confused. The same way if you take a bath and walk out naked without talking your dog won’t know who, or necessarily what, you are. He’ll see a shape moving, smell the water. He might attack. Then when he hears your voice he’ll be very relieved. Dogs can’t stand the unknown, the unfamiliar. They have a tremendous amount of information pouring in through their noses and ears.

Under certain circumstances it's more than they can handle. For example, a bloodhound will get completely exhausted on a track long before he would if he was just running free. It's psychic exhaustion. Generally the more intelligent the dog, the more all this data coming through the nose means. To a wolf, for example, it all means much more than to a dog."

"A wolf?"

"Sure. They're much more intelligent and more sensitive than dogs. A good bloodhound might have a nose a hundred million times more sensitive than a human nose. A wolf would be two hundred million times more sensitive. And wolves are correspondingly more intelligent, to handle the data. But even so there's a tremendous richness of data, more than their minds can possibly assimilate."

Wilson moved from his spot by the door and picked up the plaster paw model. "Is this closer to a wolf or a dog?"

"A wolf, I'd say. Actually it does look more like the paw of a giant wolf—except for those extended toes. The toes are really wonderful. A marvelous evolution. They are beyond canine, as I understand the genus. That's why I keep asking you for a head. I just can't do more with this thing unless I get more of the body. It's too new, too extraordinary. Right now whatever made those pawprints is outside of science. That's why I'm asking for more."

"We can't give you more, Doctor," Becky said, it seemed for the hundredth time. "You know the trouble we're in. We'd be lucky even to get a picture."

"We wouldn't, and live," Wilson put in. "These things are too vicious for that."

He signaled Becky with his eyes. He wanted to get moving. Since night had fallen Wilson had kept on the move. Officially they were on an eight-to-four, but neither of them was recognizing duty hours right now. They had been cut loose from their division, their squad, their block and put on this thing alone. Nobody was marking their names on a blotter. Nobody was counting their presence or giving them calls.

They were on the case because the Chief felt there was a remote chance that something unusual was indeed happening. Not enough to really do anything about, just enough to keep the wheels turning very, very slowly. Which meant a single team, alone, digging as best they could. And being available as scapegoats—if needed.

"We ought to go," Becky said to Ferguson. "We figure our best bet is to keep on the move."

"You're probably right."

Wilson stared at him. "Sorry about the way we came in. No other way to reach you, the museum was closed."

Ferguson smiled. "What if I hadn't been here?"

"No chance. You're really running after this. It's got under your skin. I knew you'd be here."

Ferguson walked with them through the dim corridors, to a side door where a single guard nodded under a small light. "I'm leaving with you," he said. "I haven't had a bite to eat since lunch and I don't think I can accomplish anything just sitting and staring at that paw."

Their feet crunched in the snow as they crossed the quiet grounds of the museum. Becky could see their car on Seventy-seventh Street where they had left it, now covered with a dusting of snow. They had perhaps twenty yards to walk up a disused driveway

before they reached the safety of the car. Nothing seemed to be moving among the shadows of the trees that surrounded the museum, and there were no tracks visible in the new snow. The wind was blowing softly, adding the crackle of bare limbs to the hiss of the falling snow. The clouds hung low, reflecting the light of the city and covering everything with a green glow stronger than moonlight. Even so, the trip to the car seemed long. By the position of his hand Becky knew Wilson felt the same way: he was touching the butt of the pistol he kept holstered under his jacket.

As they reached the car Ferguson turned, saying he was going to take the Number 10 bus up Central Park West to his apartment. They let him go.

“I wonder if we should have done that,” Becky said as she started the car.

“What?”

“Let him go off on his own. We have no way of knowing how much danger he’s in. If they were watching us, they saw us with him. What would that mean to them? Kill him too, maybe? I think he’s in more danger than he knows.”

“Get moving. Put on the damn radio. Let’s listen to the traffic.”

“You handle the radio, man, you’re not doing anything else.”

He flipped it on and settled with his knee against the dash. “It’s too cold for junkies on the streets, it’ll be a quiet night.”

They listened to a rookie call and immediately cancel a signal 13 at Seventy-second and Amsterdam. But you can’t cancel an assist officer call just like that. Guys would move in on him anyway and then rib him about it later. “What made him jump, you suppose?” Wilson asked. He didn’t really expect an answer and Becky didn’t talk. Who the hell cared about some rookie and his erroneous 13. Becky headed the car east across Central Park on the Seventy-ninth Street transverse. She was heading toward a Chinese restaurant in her home neighborhood the other side of the park. She wasn’t particularly hungry, but they had to eat. And what they would do after that, how they would pass the night she had no idea. And what about the days and nights to come, what about the future?

“What the hell are they going to do about us?”

“Do, Becky? Not a damn thing. They’re just gonna leave us hanging on this here string. Hey, where’re you going—you live over here, don’t you?”

“Don’t get your hopes up, I’m not taking you to my place. We’re going to stop for a little supper. We need to eat, remember.”

“Yeah. Anyway, the brass isn’t going to do a damn thing about us. They’re too busy pushing paper and worrying—who has this division, who has that precinct, who’s moving up, who’s getting flopped. That’s their whole career, that and figuring who has the biggest hook, who is the biggest hook for that matter. You know that’s what they do. That’s about it in Commissioner country.”

“Bitter boy. I think maybe Underwood actually thinks we belong on the case. He respects us.”

“Who belongs on a closed case? Oh Jesus, Becky, this is a Szechwan restaurant—I can’t eat here.”

She double-parked the car and pulled out the key. “You can eat here. Just ask them to hold the hot sauce on your chow mein.”

“I can’t even get Goddamn chow mein in a place like this,” he sulked.

She got out of the car and he followed reluctantly. They entered the dimly lit

restaurant knocking snow off their clothes. "Getting heavier?" the coat-check girl asked.

"Heavier," Wilson said. "Becky, this place is going to cost a fortune. It's got a hatcheck girl. I never eat in places with hatcheck girls." He followed her into the restaurant still complaining, but he subsided into subvocal grumbling when he received the menu. She could see the gears turning over as he calculated whether he could eat for less than two dollars.

"I'll order for both of us since I've been here before," she said, taking his menu. "I'll get you out for five bucks."

"Five!"

"Maybe six. I hope you're not too hungry though, because it'll only be one dish."

"What?"

The waiter came. She ordered prawns in garlic sauce for Wilson and Chicken Tang for herself. At least she would enjoy what could easily be her last meal. But she stopped that line of thought—you think that way, it happens. She also ordered a drink, and Wilson got beer. "A buck for a Bud," he muttered. "Goddamn Chinks."

"Come on, relax. You'll enjoy the food. Let's talk about it."

"What Ferguson said?"

"What he said. What ideas did it give you?"

"We could set up living quarters in Evans's meat locker."

"It gave me a better idea than that. It's something I think we've got to do if we're going to survive. Obviously it's only a matter of time before our friends see their chance and move in. Sooner or later the two of us are going to join DiFalco and Houlihan. *Then* the department will wade into this thing all the way. But it won't make a damn bit of difference to us."

"Insufficient evidence, that's what's got the wheels gummed up. We have provided theories, hearsay, suppositions and a funny-looking piece of plaster of Paris made by Doctor Whozis."

"So why not provide photographs. Pictures. It's not a cadaver but it sure would improve our case."

"How do you photograph what you never see? If there's light enough for a picture there's too much light. These things won't get close to us in light. Although we *could* use infrared equipment. Special Services could probably give us the loan of a scope. But it's bulky stuff—hard to handle."

"I've got a better idea. Narcotics has been experimenting with computerized image intensification equipment, stuff developed during the Vietnam war. We can get a really super picture even in total darkness with it. Dick's unit's been using it experimentally."

"What's involved, a support truck or something?"

"Not at all. The whole thing looks like an oversize pair of binoculars. Camera's built in. You just look through the thing and what you can see you can photograph."

"What you can see? There's the hole in the idea. We have to be close enough to see them."

"Not so close. You've got a five-hundred-millimeter lens."

"My God, that's the damndest thing I ever heard of. We could be a quarter of a mile away."

“Like staked out on the roof of my building watching the alley, watching for them to come back.”

“Yeah, we could do that. We could get our pictures and pull out before they even started climbing the terraces.”

“There’s only one small hitch. Dick’s got to be convinced to help us. He’s got to give us the equipment, and it’s classified.”

Wilson frowned. It meant a departmental infraction, something he didn’t need. He had too many enemies to be able to afford getting things like that in his file. “Goddamn, the PD’d classify mechanical pencils if they had time. I don’t like to get into that kind of stuff, it’s not going to help me.”

“Dick owes you a favor, George.”

“Why?”

“You know perfectly well why.” She said it lightly but felt the anger nevertheless. Her staying in Detectives had depended on finding a place in a block of four men, and to do that you had to get one of those men as a partner. Wilson had taken her on and she had not been shunted off into administration like many lady cops. And Wilson had taken her on because Dick Neff had asked him to.

“He may think it was a favor, but it wasn’t.”

“Jesus. You’re going to seed, Wilson. You actually complimented my police work just then.”

He laughed, his face breaking for a few moments into a mass of merry wrinkles, then as abruptly returning to its usual glower. “You got some good points,” he said, “but I guess you’re right. Taking you on was a favor to Dick when I did it. Maybe he’ll let me collect.”

Becky excused herself and called ahead to the apartment. She wanted to be sure Dick was there; she didn’t want to end up alone with Wilson in the apartment. It wouldn’t look good, especially if Dick came home.

He was there, his voice sounding thick. She wanted to ask him what was wrong but she held back. When she told him she was bringing Wilson over his only comment was a noncommittal grunt.

They ate their food in silence, Wilson digging into his with glazed indifference. If you fed him silage, he’d probably eat it exactly the same way.

Becky was excited about the idea of getting photographs of the animals; excited and worried. The whole situation contained menace, every part of it. There was something about the way these creatures; killed—the extreme violence of it—that made it impossible to put the problem out of your mind even for a short time. You just kept turning it over and over... and Becky had a recurring picture of what they must look like with their long toes that ended in delicate pads and were tipped by claws, with their razor-sharp teeth, and their heavy bodies. But what were their faces like? Human beings had such complex faces, not at all like the more-or-less frozen expressions of animals; would these creatures also have such faces, full of emotion and understanding? And if so, what would those faces tell their victims?

“Look we just come right out and ask Dick— right? Just ask him without fooling around?”

“You mean no diplomatic subtleties?”

“Not my strong point.”

“So we just ask. Everybody’s heard rumors about the optical gear Special Services is using. Just logical that a Narcotics wire man could get his hands on it, isn’t it? We don’t have to tell him we know the stuff is classified. Maybe he’ll never even bring the matter up, just give us the damn thing and not think any more about it. That’s what I’m hoping anyway.”

But that wasn’t what happened. As soon as she opened the door to their apartment, Becky felt something was wrong. She left Wilson in the hall while she went to Dick in the living room. “Why’d you pick tonight to bring that old fart up here?” were his first words.

“I had to, honey. It can’t wait.”

“I got burned.”

There it was, as simple as that. To undercover cops like Dick getting burned meant being recognized as police officers by their suspects. “Bad?”

“Real bad. Some sonofabitch really put it on me. I might as well graduate to the Goddamn movies.”

“Dick, that’s terrible! How—”

“Never mind how, honey. Just say it was two years of work blown to hell. And I think I’ve got a shoofly on my ass, too.”

She leaned down and kissed his hair. He was slumped into the couch, staring at the TV. “You’re clean, aren’t you?” But her heart was sinking, she knew something was wrong. And the inspectors from the Internal Affairs Division knew it too or they wouldn’t have put a man on him—shoofly was what cops called other cops who investigated them.

“You know damn well I’m not clean.” He said it with such infinite tiredness that she was surprised. And he looked older, more hollow, than she had ever seen him before. “Look, let’s get drunk or something later, celebrate my early retirement, but bring Wilson in now, let him do his thing.”

“It’s not much, won’t take a second.” She called Wilson, who moved forward from the foyer where he had been standing.

They shook hands. Dick offered him a beer. They settled into the living room, the TV cut down but not off. Becky closed the curtains.

“What’s up?” Dick said.

“We need your help,” Wilson replied. “I gotta get some pictures, I need your night-vision camera.”

“What night-vision camera?”

“The one you can get from Special. The five-hundred-mil lens, the image-intensification circuit. You know what camera.”

“Why not order it up yourself?” He looked at Becky, a question in his eyes.

“We haven’t got authorization, honey,” she said. “We need it for the creatures.”

“Oh, Christ almighty, that bullshit again! Can’t you get off that? What are you two, nuts or something? I can’t get that Goddamn camera, not while I’ve got shooflies hanging from my Goddamn ears. Come on, lay off it. Why don’t you two earn your damn salaries instead of monkeyin’ around with that shit.”

“We need your help, Neff.” Wilson sat hunched in his chair, his eyes glistening like dots beneath the heavy folds of his brows. “I helped you.”

“Oh, Christ.” He smiled, turned his head away. “Oh, Christ, the favor. The great big

favor. Let me tell you, Wilson, I don't give a rat's ass about your big favor. That's not a factor."

"That camera could solve this case for us, honey, get the damn thing out of our hair. We only need it for a night or so."

"You need more than the camera, you need me to work the damn thing. It's balky as hell, you gotta know how to use it."

"You can teach us."

He shook his head. "Took me weeks to learn. You don't get it just right you don't get any picture."

She stared at him. "Dick, please. Just one night is all we ask."

He frowned at her, as if asking "Is this for real?" She nodded gravely. "A night, then," he said, "maybe it'll be a few laughs."

So he agreed, just like that. She wished she felt more than grateful, but she didn't. His anger and tiredness made her wish to hell that she would not have to spend the rest of this night with him.

She showed Wilson to the door. "See you at headquarters," she said as he pulled on his coat. "Eight o'clock?"

"Eight's fine."

"Where are you going now, George?"

"Not home. You're crazy to stay here, as a matter of fact."

"I don't know where else I'd go."

"That's your business." He stepped out into the hallway and was gone. She started to wonder if she would ever see him alive again, then stopped herself. Not allowed. She turned, took a deep breath, and prepared to face the rest of the night with her husband.

Chapter 6

They were hungry, they wanted food. Normally they preferred the darker, desolate sections of the city, but their need to follow their enemies had brought them into its very eye. Here the smell of man lay over everything like a dense fog, and there was not much cover.

But even the brightest places have shadows. They moved in single file behind the wall that separates Central Park from the street. They did not need to look over the wall to know that few of the benches that lined the other side were occupied—they could smell that fact perfectly well. But they also smelled something else, the rich scent of a human being perhaps a quarter of a mile farther on. On one of the benches a man was sleeping, a man whose pores were exuding the smell of alcohol. To them the reek meant food, easily gotten.

As they moved closer they could hear his breathing. It was long and troubled, full of age. They stopped behind him. There was no need to discuss what they would do; each

one knew his role.

Three jumped up on the wall, standing there perfectly still, balanced on the sharply angled stone. He was on the bench below them. The one nearest the victim's head inclined her ears back. She would get the throat. The other two would move in only if there was a struggle.

She held her breath a moment to clear her head. Then she examined her victim with her eyes. The flesh was not visible—it was under thick folds of cloth. She would have to jump, plunge her muzzle into the cloth and rip out the throat all at once. If there were more than a few convulsions on the part of the food she would disappoint the pack. She opened her nose, letting the rich smells of the world back in. She listened up and down the street. Only automobile traffic, nobody on foot for at least fifty yards. She cocked her ears toward a man leaning in a chair inside the brightly lit foyer of a building across the street. He was listening to a radio. She watched his head turn. He was glancing into the lobby.

Now. She was down, she was pushing her nose past cloth, slick hot flesh, feeling the vibration of sub-vocal response in the man, feeling his muscles stiffening as his body reacted to her standing on it, then opening her mouth against the flesh, feeling her teeth scrape back and down, pressing her tongue against the deliciously salty skin and *ripping* with all the strength in her jaws and neck and chest, and jumping back to the wall with the bloody throat in her mouth. The body on the bench barely rustled as its dying blood poured out.

And the man in the doorway returned his glance to the street. Nothing had moved, as far as he was concerned. Ever watchful, she scented him and listened to him. His breathing was steady, his smell bland. Good, he had noticed nothing.

Now her job was over, she dropped back behind the wall and ate her trophy. It was rich and sweet with blood. Around her the pack was very happy as it worked. Three of them lifted the body over the wall and let it drop with a thud. The two others, skilled in just this art, stripped the clothing away. They would carry the material to the other side of the park, shred it and hide it in shrubs before they returned to their meal.

As soon as the corpse was stripped it was pulled open. The organs were sniffed carefully. One lung, the stomach, the colon were put aside because of rot.

Then the pack ate in rank order.

The mother took the brain. The father took a thigh and buttock. The first-mated pair ate the clean organs. When they returned from their duty the second-mated pair took the rest. And then they pulled apart the remains and took them piece by piece and dropped them in the nearby lake. The bones would sink and would not be found at least until spring, if then. The clothing they had shredded and scattered half a mile away. And now they kicked as much new snow as they could over the blood of their feast. When this was done they went to a place they had seen earlier, a great meadow full of the beautiful new snow that had been falling.

They ran and danced in the snow, feeling the pleasure of their bodies, the joy of racing headlong across the wide expanse, and because they knew that no human was in earshot they had a joyous howl full of the pulsing rhythm they liked best after a hunt. The sound rose through the park, echoing off the buildings that surrounded it. Inside those buildings a few wakeful people stirred, made restive by the cold and ancient terror that the sound communicated to man.

Then they went to a tunnel they had slept in these past four nights and settled down. By long-learned habit they slept in the small hours of the morning when men mostly did not stir. During daylight, man's strongest time, they remained awake and alert and rarely broke cover unless they had to. In the evening they hunted.

This traditional order of life went back forever.

Before sleeping the second-mated pair made love, both to entertain the others and to prepare for spring. And afterward the father and mother licked them, and then the pack slept.

But they did not sleep long, not until the hour before dawn as was their custom. This night they still had something to accomplish, and instead of sleeping through the wee hours they left their hiding place and moved out into the silent streets.

Becky listened to the phone on the other end of the line ring once, twice, three times. Finally Wilson picked up. He had gone home after all. "Yeah?"

"You OK?" she asked.

"Yes, Mama."

"Now now, don't get sarcastic. Just bedchecking."

He hung up. The thought of slamming down the phone crossed her mind but what good would it do? She returned the receiver to its cradle and went back into the living room. Dick had not heard her and she paused behind him. Sitting slumped in his chair he seemed smaller than life—diminished. She would have to do everything she could to help him defeat the investigation. She had to; by simply being his wife she was implicated. "You knew he was getting extra money," they would say. "Where did you think it was coming from?" And there could only be one answer to that question.

It wasn't that she minded helping him, either. He had been a good husband for a long time and she supposed that what was happening between them was very sad. The trouble was she didn't care. The intimacy that had once united them had died through inattention. Where once she had been full of love there was now just stone boredom. There wasn't even a sense of loss. Or maybe—just maybe—there was a sense of loss, for a love that had never been real.

She had to ask herself, if a love can die like this, was it ever real? She remembered the long happiness of the past, the happiness that had seemed so eternal. When they had gone sleigh riding up in the Catskills five Christmases ago, the love they shared had *been* real. And in the hard times before she was a cop, that love had been very real indeed. It wasn't just that Dick was a good lover, it was that he was a partner and friend of a deep and special kind. "You're beautiful," he would say, "you're wonderful." And it had meant more than the physical. Maybe the waning of his enthusiasm was inevitable as she reached middle age. But his enthusiasm wasn't the problem, it was hers. Try as she might she could not love Dick Neff anymore.

Wilson waited five minutes to be certain she wouldn't call back. The phone didn't ring again. His rudeness had evidently made her mad enough to ignore him for the rest of the night

Fine. He went into his bedroom and unlocked a chest he kept in his closet. Inside were a number of highly illegal weapons—a sawed-off shotgun, a WWII vintage BAR in working order, and an Ingram M-11 Automatic Pistol. He pulled the automatic pistol from its case and got a box of shells. Carefully he worked the pistol's action, then hefted it in his hand. Its balance was a pleasure to feel. It was unquestionably the finest automatic handgun ever designed, lightweight, sound-suppressed, with a 20-round-a-second punch. It was not designed to frighten, slow down, or confuse, but purely and simply to kill. One bullet would blow a man's head apart. The best automatic weapon ever made. The fastest. The

most murderous. He opened the ammo box and snapped a clip of the special .380 subsonic velocity bullets into the gun. Now it was heavier but the balance hadn't changed. Only three and a half pounds of weapon, it could be hefted nicely. And aimed. The sights were precise. For a handgun, its range was almost incredible. You could shoot a man at a hundred and fifty yards with this weapon. A burst of three or four bullets would get him even if he was on the run.

He laid the pistol on his bed and put on an overcoat he rarely wore. When it was on he dropped the M-11 into a pocket which had been especially tailored to fit the nine-inch pistol. Wilson had had the coat modified when he had acquired the pistol. The pocket carried the M-11 almost invisibly. Despite the size and weight of the pistol only a careful observer would note that he was carrying a piece at all. His hand felt the weapon in his pocket, his thumb triggering the lever that moved the mechanism from safe to fire. A single press of the trigger could now deliver from one bullet to a full clip in a matter of seconds. Good enough. Now he got out his winter hat, old, wrinkled, perfect for both protecting the head and hiding the face. Next the shoes—black sneakers, surprisingly warm with two pair of socks, surprisingly agile even in the snow. They had been winterized with a polyurethane coating, and the soles scored to provide traction. The sneakers gave him the advantages of quiet and quick movement, most useful on an icy winter night. The last item was a pair of gloves. These were made of the finest Moroccan leather, softer and thinner than kid. Through them he could feel the M-11 perfectly, almost as if the gloves weren't there at all.

As a final precaution he took out the pistol and removed fingerprints. Not even a gold shield policeman goes around printing up a weapon like the Ingram. There isn't anything in the rule book about policemen carrying machine pistols, but that's only because there doesn't need to be. You need a special permit to own one, and permission to move it from one premises to another. As far as carrying one around in the street fully loaded, that is illegal for policeman and civilian alike.

He replaced the M-11 in its pocket and stood for a short time in the middle of the room. Mentally he checked himself out. He was ready to move. Too bad his plan to de-scent himself had been wishful thinking. Now the M-11 was really his only advantage. That and the fact that hunters aren't used to being hunted. Or at least he hoped they weren't. His logic seemed strong—how suspecting would a human hunter be if the deer suddenly turned on him, or a lion if it was attacked by a gazelle?

While he saw the danger of what he was doing he nevertheless felt that he had to act to give Becky some kind of a chance of survival. She deserved to live, she was young and strong; as for him he could take a few chances. And it was a hell of a long chance he was taking. The thought of being killed—by things —made clammy sweat break out.

But he knew that he and Becky had to have help if either of them was going to live much longer. And to get the kind of support they needed, they had to have a specimen. Irrefutable, undeniable evidence that would force Underwood to act, to assign this problem the kind of manpower it demanded.

Wilson was going to get that evidence if he could. And if he got killed trying—oh, God, he wanted to live! No matter how old, how beat-up, he still wanted to live! But he was going after a carcass anyway. Had to.

He left his apartment after making sure all the lights were on. He triple-locked his door and moved quickly to the rear of the dim hallway, where a fire escape was barred by an accordion gate. He unhooked it and pulled it back, then raised the window and stepped into the winter night. He took some putty out of his pocket—carried for just this purpose—and pressed it into the locking mechanism so that when he closed the gate again the latch fell into place but could be raised if you jiggled it just right. If you yanked at it or

shook it hard the putty would give way and the lock would secure itself. Then he closed the window and moved his bulky body down the ice-covered fire escape to the street.

The snow was becoming heavier. Not good, impeded his vision but not their sense of smell. Perhaps the muffling effect would reduce the acuity of their hearing a little.

He put his hand in his pocket, closing his finger around the trigger of the M-11. It was a mean weapon, designed for anti-guerrilla work, the kind of police work where you killed it if it moved. Right now it felt good. It was the right pistol for this hunt—the bullets would knock a man ten feet. A hundred-pound animal should go considerably farther.

He set out to find his quarry. He reasoned that the creatures would be more likely to hit Becky first because she was younger and presumably stronger, therefore more dangerous to them. Wilson, slow, old, sick, would be second in line. His theory was borne out by the fact that they had gone to such great lengths to get to Becky and had left him pretty much alone. Of course they had come in the basement window, Wilson was well aware of that. He had left it ajar as an invitation. His dusting of the basement of the rooming house last night had revealed two sets of pawprints as distinctively different as human fingerprints. They had gone up the basement stairs to the door. There were marks on the lock where they had tried to spring it with their claws.

But they had reserved their best effort for Becky, of that he felt reasonably sure. If he was wrong, if they were around him now... with luck he would take a few with him.

He walked through the deserted late-night streets with his hand in his pocket clutching the M-11. Despite the gun, he kept close to the curb, away from any trashcans and shadowy entranceways, out from under overhanging fire escapes. And every few steps he stopped and looked behind him. Only once did he see another human form, a man bundled against the snow and hurrying in the opposite direction.

When he reached the lights of Eighth Avenue he felt much better. He was safer out here under the bright sodium-arc lamps, with the passing cars and the more frequent pedestrians. Somehow he felt more anonymous taking the bus, so he waited at the bus stop instead of hailing a cab. Ten minutes passed before a bus came. He got on and rode it far uptown, to Eighty-sixth and Central Park West. Now all he had to do was cross the park and he would be in Becky's neighborhood. Upper East Side cardboard box neighborhood... well, if that's what she liked...

He thought better of crossing the park on foot—in fact he never really considered it at all. To the danger of the creatures he would add the dangers of the park, very foolhardy indeed.

After what seemed an hour a crosstown bus appeared, moving slowly in the deepening snow. Wilson got on, glad for the heated interior. He let himself relax in the bus, but he never took his hand out of his pocket.

When he got off he spotted Becky's building at once. He counted the balconies. Good, she had left her lights on, an intelligent precaution. She would probably be furious at him for coming out alone like this, but it had to be done. If you're going to take crazy risks, you take them alone.

He moved toward the alley where the creatures must have congregated. The snow had, of course, covered up all trace of them. They would be coming back here sooner or later, of that much he felt sure. But if their sense of smell was as good as Ferguson had implied they would know he was here long before they were even in sight. So what, let them move in on him. He hefted the M-11 a little in his pocket, then settled down behind a garbage bin to wait.

One o'clock. The wind moaned out of the north. Two o'clock. The snow blew in great

waves past the streetlights. Three o'clock. Wilson flexed his toes, rubbed his nose hard, listened to his heartbeat. He began to fight sleep about three-fifteen. Taking his cheek between thumb and forefinger he pinched hard. The pain startled him into wakefulness.

Then it was quiet. The snow had stopped. Involuntarily he gasped—he *had* fallen asleep. What time—four-twenty. Damn, over an hour out. And across the street, through the alley, standing in the light, were six of the ugliest, most horrifying things he had ever seen. He didn't move a muscle, just his eyes.

These things were big, big as timber wolves. Their coats were dusky brown, their heads perched on necks much longer than that of a wolf. They had large pointed ears, all cocked directly at this alley. He could practically *feel* them listening to him. Somewhere his mind began to scream, Fire the Goddamn pistol, fire the pistol! But he couldn't move, he couldn't take his eyes off those faces. The eyes were light gray, under jutting brows. And they were looking where the ears were pointing. The faces were... almost serene in their deadliness. And they had lips, strange sensitive lips. The faces were not even a little human but they were clearly intelligent. They were worse than the faces of tigers, more totally ruthless, more intractable.

Fire the pistol!

Slowly the pistol started coming out of his pocket. It seemed to take an hour for it to be raised, but at last the long barrel swung up and... without a sound they were gone.

Not a trace, not even the rustle of a foot in the snow. They had *moved!* Goddamn, he hadn't counted on speed like that. Then he was running too—as fast as he could out of the alley and into the middle of the snowy street, running frantically, feeling like an old, old man as he wheezed along, running toward a lighted window, an all-night deli, and then through the door.

“Jesus, don't scare me like that, man!”

“Sorry-sorry. I—I'm cold. You got coffee?”

“Yeah, comin' up. You runnin' your ass off out there. You in trouble, man?”

“Just trying to keep warm is all. Trying to keep warm.”

The counterman held out the coffee—and held on to it. “You got fifty cents, daddy? That's fifty cents in advance.”

“Oh, yeah, sure.” Wilson paid him, took the hot coffee cup in his hands, moved it to his face, and sipped.

Great God *I'm alive!* I got that Goddamn gun out f-a-s-t! One second later and they would have had me, the s.o.b.'s! It was exhilarating—it might have felt slow but he had drawn that gun Goddamn fast. Fast enough to save himself from them and they were fast beyond imagining.

He sipped again, noticing how his hand trembled. That had to stop. Long ago he had learned how to overcome the special fear that came with the close proximity of death. Now he went through the routine, a system that had been taught to him by his first partner, back in the forties when he was a rookie cop. There was a man—shot dead by his oldest son in '52. Now wait a minute, Wilson thought, you're digressing. You're shocked. Come on now, policeman, snap out of it! Relax shoulders, let them fall. Let your gut hang out. Slack your lips. Breathe deeply... one... two... and think about nothing, just let it roll over you.

Now when he sipped the coffee he tasted it, and for the first time noticed that it was black and unsweetened.

“Hey, I said light, this coffee’s black.”

“You need it black, man. You don’t need no light coffee. You drink that, then I’ll give you a light.”

“Thank you, Doctor, but I’m not drunk.” The counterman laughed softly, then looked straight at Wilson. “I wouldn’t say you were. You scared. You the scariest motherfucker I’ve seen in a good long while. Maybe that coffee’ll help you get it back together, man.”

“Well, it is back together, man. And I want a light coffee. I can’t drink this stuff.”

“Sure, you got money I’ll fix you a carbonated coffee if you want it. I don’t give a damn. But don’t say you can’t drink what you got.”

“Why the hell not! What are you, some kind of a nut? I said I wanted light. I can’t drink this junk.”

“Look in the cup, man.”

It was empty. He hadn’t even been aware of swallowing it! He shut up, returned to his thoughts, to how incredibly fast they had been. It was almost as if they had vanished; but he had glimpsed flashes of running bodies. Then it occurred to him that if they were that fast they would have gotten past his defenses before he had even realized they were there.

Why hadn’t they? For some unknown reason this particular gold shield had been allowed to live. The M-11 still felt good in his pocket but it had been no protection at all. None at all. It certainly hadn’t been the speed of his draw that had scared them away. Something, then... almost but not quite like a memory. He almost knew why they had run, then—he didn’t. “Shit.”

“You ready to go, mister?”

“No.”

“Well, you notice we ain’t got no chairs in here. This is a deli, not no coffee shop. You got to buy and go in a place like this, that’s the rules.”

“So what if I don’t go?”

“Nothin’. Just I feel like you got trouble all around you. You gonna bring it in here with you.”

Wilson debated whether to go back outside or to flash his shield. What the hell, outside probably wasn’t the healthiest place for him to be right now. Whatever had stopped them before might not again. So he flashed. “Police,” he said tonelessly, “I’m stayin’ put.”

“Sure enough.”

“There a back room, some place I can bunk out? I’m tired, I’ve just been in a bad spot.”

“I’d have to agree, judging from the way you look. We got a storeroom. It’s good, there’s plenty of place to lie, and it’s pretty warm. I get a little back there now and then myself.” He showed Wilson into a low-ceilinged room, obviously a shed attached to the rear of the old brownstone building that housed the deli. There was one window, barred, and a triple-locked door. Very good, very cozy, very safe until the morning brought crowds back to the street and he could safely go out. As he settled back he reviewed his strange, terrifying failure. Obviously they were way, way ahead of him—fast, smart, in complete control of the situation. There was only one reason that he wasn’t dead right now—they wanted him alive a little longer.

When he closed his eyes he saw them, their steady, eager eyes, the cruel beauty of

their faces... and he remembered the moose and the wolves. What did the spent old moose feel for the ravaging timber wolf—was it love, or fear so great that it mimicked love?

When they realized who was concealed in the alley they were full of glee. He had come to protect the female, just as the father had said he would. The father knew man very well and could detect nuances of scent that the younger ones could scarcely imagine. And Father had detected the fact that the man who had seen them loved his female coworker. Father had said, we can move against them both at the same time because the male will try to protect the female. And Father had selected the place and time: where the female was most defenseless, when she was most vulnerable.

And they went and there he was. Asleep! The second-mated pair prepared for the attack, moving into position across the street. They were just about to move when the man raised his head and looked at them. The pack froze and smelled it all at the same time: sweat from the hand that held the gun.

It was a hard decision, instantly made by Mother —we leave; we do not risk moving so far against the gun, we get him another time.

Now the pack ran, rushing through the streets to the ruined building where they would spend the day. Each heart beat with the same agonizing knowledge: they live, they live, they live. And they know about us. Even as the sun rises they must be telling others, spreading the fear that the old legends speak about, the fear that would make life among men hard and dangerous for future generations.

The second-mated pair was especially anguished: in the spring they would litter, and they did not want to bring forth children if man knew of the hunter.

Not that they feared anything from single individuals, or even groups. But endless numbers of men could overwhelm them or at least force them into furtive, tormented lives unworthy of free beings. As they moved warily through the deserted streets one thought consumed them all: kill the dangerous ones, kill them fast. And it was this that they talked about when they reached their sanctuary, a long, intense conversation that left them all shuddering with a furious urge for blood, all except Father, who said, we have won. Soon he will give himself to us as men did of old, for the death wish is coming upon him.

Wilson opened his eyes. The light coming in the window was yellow-gray. A steady tapping against the windowpane indicated that it was snowing again.

“Who the hell are you?”

A man was standing over him, a fat man in gray slacks and a white shirt. He was bald, his face pinched with the long habit of unsatisfied greed.

“I’m a cop. Wilson’s the name.”

“Oh Christ almighty—why’d you let this damn bum in here, Eddie? Throw the fucker out, he’ll get weevils in the Goddamn bread.”

“He got a gold shield, man. I’m not gonna say no to a gold shield.”

“You can buy a Goddamn gold shield on Forty-second Street. Get the jerk out.”

“Don’t worry, sweetheart, I was just leaving. Thanks, Eddie, from the NYPD.”

Wilson left to a snort of scornful laughter from the white guy, a disgusted stare from

the black. Sleeping over in storerooms was pretty unorthodox behavior for a cop. What the hell, he didn't give a damn.

It was still pretty damn lonely on the street. Lonely and snowy too. This was practically a blizzard, must be five or six inches by now. He started to walk back by Becky's building, then stopped himself. It hit him like a haymaker—they had come when they did because they knew he would be there. They were *hunters*, for Chrissake, they knew damn well where he'd be. Oh, they were beautiful! They had him figured from way back. It was probably exactly what one of them would have done—protect the one he loved.

What the hell, the bitch was beautiful. Fair cop too—but so beautiful. Becky had creamy skin, Irish coloring. Wilson was partial to that kind of coloring. And she had those soft, yet piercing eyes. He thought of looking into those eyes. “Becky, I love you,” he would say, and she would open her mouth slightly, inviting the first long kiss...

But not now. Now it was cold and he was hungry. He trudged toward the Lexington Avenue subway to ride down to headquarters. His watch said six-thirty. The Merit Bar was open by now, and they served up a fair breakfast. Then he felt the M-11. You didn't go into Police Headquarters with a loaded M-11, you just did not do that. He'd have to stop by his rooming house first and exchange it for his regulation piece.

The subway wasn't much warmer than the street, but at least it was well-lighted and there were a few people around. Not many at this hour, but enough to keep the things away from him. They were after him and Becky because they had been seen—certainly they wouldn't attack except when their targets were alone. But you can be alone enough for just a few seconds. That he had to remember.

He got off and returned to his rooming house, entering this time by the front door. At the top of the stairs he carefully removed the putty he had left in the fire escape lock and returned to his room. He dropped off the overcoat containing the M-11 and put on the one containing the .38. That was all. The way he kept his place locked, he wasn't worried that a burglar would rip off the pistol, or anything else in his apartment for that matter.

He double-locked his door, tested it, and left the building as quickly and quietly as he had come. And as he did it he laughed at himself. There was no need to be so quiet, it was just that it was second nature to him now. Unless he was acting the part of an unconcerned civilian he was always wary, always stealthy. He walked the short distance from his place to headquarters the same way, like a thief or someone tracking a thief.

He went through the quiet, brightly lit corridors of Police Headquarters until he got to the little office occupied by him and Neff. When he opened the door, his eyes widened with surprise.

There sat Evans.

“Hiya, Doc. Do I owe you money?”

Evans wasn't interested in bantering with Wilson. “We got another one,” he said simply.

“What's the story?”

Evans looked at him. “Call Neff. Tell her to meet us at the scene.”

“Anything new?” Wilson asked as he dialed the phone.

“Plenty.”

“Why didn't you call Neff yourself?”

“You're the senior man on the case. I tried you first. When you didn't answer I came

over. I figured you were on your way in.”

“Emergency, Doctor. You could have called Neff when you didn’t find me.”

“I have no emergencies. My line of business only concerns emergencies after they’re over.”

Somewhere out there the phone was ringing. Dick was subvocalizing a few choice curses each time the bell burst the silence. Ring and curse, ring and curse. “It could be for you,” Becky said.

“Nah. I’m burned, remember. It ain’t for me.”

“Then it’s for me.”

“So answer the fucker. One of us has gotta do it.”

She picked up the receiver. Wilson didn’t waste hellos. “Oh, Christ. OK, see you there.” She hung up. “Gotta go. Homicide in the park.”

“Since when are you assigned uptown?”

“Evans called us in. He says it looks like our friends got hungry again.”

“The big bad wolves.” He raised himself up on his elbow. “What about our picture-taking expedition, will it be on?”

“I hope. I’ll call you.”

“OK, honey.”

She was dressing as quickly as possible, but the gentleness in his voice made her stop. They looked at one another. The delirious, unexpected intensity of the night before was written in Dick’s face. She saw clearly: he was grateful. It touched her, made her think that maybe there was still something left after all.

“I—” The words seemed to die in her throat. They were so unfamiliar, so long unsaid.

Dick had come to her wordlessly, in the dark, just as she was falling asleep. He had embraced her, his body hot and trembling, and had awakened in her a painful rush of feeling. Maybe she *did* care—so much that she just couldn’t face it. Maybe that was the true source of the wall that was being built between them. And realizing that she had responded to his intensity with passion of her own and had enjoyed the violent insistence of his body, finally crying out with the pleasure.

“What, Becky?”

“I don’t know. Just wanted to say good-bye.” But not I love you, not that again, not yet. And she felt like a heel for holding back, a selfish heel.

“Don’t make it sound so final.” He chuckled. “The worst I’ll get is early retirement. If the shooflies are real good they might give you a five-day. Don’t let it bug you, darling. And by the way, there’s something else I want to say to you before you go.” He rolled over on his back, throwing off the covers, exposing his naked body and erect penis with delightful lack of modesty. “You still remain one of the great American lays, darling.”

And she was beside him, bending over him, kissing his smiling face. “Dick, you silly fool, look at you. You never get enough.”

“I’m a morning man.”

“And a night man and an afternoon man. I wish I didn’t have to go! I’ll call you when I get the chance.” She drew herself away from him, full of a confusion of emotions. Why

couldn't she make up her mind about this: did she still love Dick Neff or didn't she? And what about Wilson, what did her feelings for him mean?

She rode the elevator down to the garage level and got in her car. As soon as she started driving her mind closed around the case. The night with Dick receded, as did the welter of emotions she had been feeling. Like a murky, ugly fog the case rose and recaptured her. Wilson hadn't said much over the phone, not much. But he had sounded uncharacteristically upset. Evans had been with him at Police Headquarters. She glanced at her watch: seven a.m. An early hour for Doctor Evans. She stepped on the accelerator, racing across Seventy-ninth Street in the snow, heading for the point of rendezvous, Central Park West and Seventy-second.

The streets were empty as she maneuvered the car around the corner at Seventy-ninth and CPW. She was now in the 20th Precinct. Ahead she could see the flashing lights, the dismal little crowd of emergency vehicles that always marked a crime scene. She pulled up behind a parked radio car. "I'm Neff," she said to the lieutenant on the scene.

"We got a funny one," he intoned. "Anticrime boys found this bench covered with frozen blood about an hour ago. We took it to pathology and sure enough it's human. O-negative, to be exact. But we got no corpse, nothin'."

"How do you know it was a murder?"

"There's evidence enough. First off, too much blood, whoever lost it had to die. Second, we can see where the body was pulled across the wall." Her eyes went to the indentations in the snow that lay along the wall. More snow had fallen since the murder, but not enough to completely obliterate the signs. "By the way, Detective Neff, if I may be so blunt, why are you here?"

"Well, I'm on special assignment with my partner, Detective Wilson. We're investigating a certain M.O. When the M. E. finds a case that seems to fit he gives us a call."

"You take your orders from the M. E.?"

"We were instructed by the Commissioner." She hadn't wanted to pull rank, but she sensed that he was needling her. He smiled a little sheepishly and strolled away. "Lieutenant," Neff called, "is this blood all you have? No body, no clothing, nothing?"

"Hold on, Becky," a voice said behind her. It was Evans, followed closely by Wilson. The two men came up and the three of them huddled together under the curious eyes of the men of the 20th and Central Park precincts. "There's more," Evans said, "there's some hair."

"He's examined some hairs that were stuck in the blood."

"Right. This is my interpreter, Detective Wilson. I found hairs—"

"That match the hairs found at the DiFalco scene."

Evans frowned. "Come on, Wilson, lay off. The hairs match the ones we've found at every scene."

"They're pretty voracious if they only left blood," Becky said.

"They didn't. Don't you see what happened? They hid the remains. They've learned that we're on their tail and they're trying to slow us down. They're very bright."

"That's for certain," Wilson said. Becky noticed how haggard he looked, his face waxen, his jaw unshaven. Had he slept at all? It didn't look like it. He cleared his throat. "Are they searching for the corpse?" he asked the Lieutenant, who was standing nearby.

“Yeah. There’s some sign of something being dragged, but the snow covered most of the evidence up. We’re just not sure what happened.”

Becky motioned to Wilson and Evans. They followed her into her car. “It’s warmer here,” she said, “and the Loo won’t overhear us.”

Evans was the first to speak. “Obviously they were hiding behind the wall when somebody sat on the bench. Judging from the blood it happened five or six hours ago. They must have jumped over the wall, killed fast and dragged the corpse away.”

“Not in one piece,” Wilson said. “There’d be more marks. I think they tore it up and carried it.”

“Jesus. But what about the clothes?”

“That’s what we ought to be able to find. The bones, too, for that matter, there aren’t too many places they could have hidden them.”

“How about the pond?”

“You mean because it’s frozen over? I doubt if they’d think of busting the ice in the pond, that’s *too* smart.”

“We need to find clothes, some kind of identification.”

“Yeah. Where the hell to look, though? This friggin’ snow...”

“I have the hairs. I don’t need anything more to convince me. They came here last night and they killed this person. I’m certain of that. It was them. Their hairs are unique, as unique as a fingerprint.”

“So they kill a lot. That’s to be expected for a carnivorous animal.”

Becky corrected her partner. “Carnivorous humanoid.”

Wilson laughed. “From what I’ve seen they could hardly be described as humanoid.”

“And what have you seen?”

“Them.”

Becky and the M. E. stared at him. “You’ve seen them?” Evans finally managed to ask.

“That’s right. Last night.”

“What the hell are you saying?” Becky asked.

“I saw six of them outside of your apartment last night. I was hunting them, trying to get Ferguson his specimen.” He sighed. “They’re fast, though. I missed ’em by a mile. Lucky I’m still alive.”

Becky was stunned. She looked at her partner’s tired face, at his watery, aging eyes. He had been out there guarding her! The crazy, sweet old romantic jerk. At this moment she felt like she was seeing a hidden, secret Wilson, seeing him for the very first time. She could have kissed him.

Chapter 7

Carl Ferguson was horrified and excited at the same time by what he was reading. He seemed to drift away, to a quiet and safe place. But he came back. Around him the prosaic realities of the Main Reading Room of the New York Public Library reasserted themselves. Across from him a painfully pretty schoolgirl cracked her gum. Beside him an old man breathed long and slow, paging through an equally old book. All around him there was a subdued clatter, the scuttle of pen on paper, the coughs, the whispers, the drone of clerks calling numbers from the front of the room.

Because you could not enter the stacks and because you could neither enter nor leave this room with a book, its collection had not been stolen and was still among the best in the world. And it was because of the book that he had finally obtained from this superb collection that Carl Ferguson felt such an extremity of fear. What he read, what he saw before him was almost too fantastic and too horrible to believe. And yet the words were there.

“In Normandy,” Ferguson read for the third time, “tradition tells of certain fantastic beings known as lupins or lubins. They pass the night chattering together and twattling in an unknown tongue. They take their stand by the walls of country cemeteries and howl dismally at the moon. Timorous and fearful of man they will flee away scared at a footstep or distant voice. In some districts, however, they are fierce and of the werewolf race, since they are said to scratch up graves with their hands and gnaw poor dead bones.”

An ancient story, repeated by Montague Summers in his classic *The Werewolf*. Summers assumed that the werewolf tales were folklore, hearsay conjured up to frighten the gullible. But Summers was totally, incredibly wrong. The old legends and tales were true. Only one small element was incorrect—in the past it was assumed that their intelligence and cunning meant that werewolves were men who had assumed the shape of animals. But they weren't. They were not that at all, but rather a completely separate species of intelligent creature. And they had been sharing planet Earth with us all these long eons and we never understood it. What marvelous beings they must be—a virtual alien intelligence right here at home. It was a frightening discovery, but to Ferguson also one of awesome wonder.

Here were legends, stories, tales going back thousands of years, repeating again and again the mythology of the werewolf. And then suddenly, in the latter part of the nineteenth century, silence.

The legends died.

The stories were no longer told.

But why? To Ferguson's mind the answer was simple: the werewolves, tormented for generations by humanity's vigilance and fear, had found a way to hide from man. Their cover was now perfect. They lived among us, fed off our living flesh, but were unknown to all except those who didn't live to tell the tale. They were a race of living ghosts, unseen but very much a part of the world. They understood human society well enough to take only the abandoned, the weak, the isolated. And toward the end of the nineteenth century the human population all over the world had started to explode, poverty and filth had spread. Huge masses of people were ignored and abandoned by the societies in which they lived. And they were fodder for these werewolves, who range through the shadows devouring the beggars, the wanderers, those without name or home.

And no doubt the population of werewolves had exploded right along with the human population. Ferguson pictured hundreds, thousands of them scavenging the great cities of the earth for their human prey, rarely being glimpsed, using their sensitive ears and noses to keep well distant of all but the weak and helpless, taking advantage of man's increasing multitudes and increasing poverty. Their faculties combined with their

intelligence must make them fearsome indeed—but what an opportunity they also represented to science—to him—as another intelligence capable of study, even perhaps communication.

But there was something else about Summers' book, something even more disquieting, and that was the continual references to men and werewolves in communication with one another. "Two gentlemen who were crossing a forest glade after dark suddenly came upon an open space where an old woodsman was standing, a man well-known to them, who was making passes in the air, weaving strange signs and signals. The two friends concealed themselves behind a tree, whence they saw thirteen wolves come trotting along. The leader was a huge grey wolf who went up to the old man fawning upon him and being caressed. Presently the forester uttered a sing-song chant and plunged into the woods followed by the wolves."

Just a story, but tremendously interesting in the context of the information that the two detectives had brought him. Obviously the references to signs and a "sing-song" chant referred to human attempts to mimic the language of the werewolves, to communicate. Why did men once run with the werewolves?

Summers said that vampires were often connected to werewolves. Vampires—the eaters of blood. In other words, cannibals. To a less knowledgeable person such an idea might have seemed fantastic, but Ferguson knew enough about old Europe to understand the probable truth behind the legend. Men did indeed run with werewolves, and those men were called vampires because they fed off human flesh like the wolves themselves. Cannibalism must have been common in the Europe of the Dark Ages, when grinding poverty was the fate of all except a tiny minority. When men were the weakest and most numerous creatures around it must have tempted the hungry... to go out and find the werewolves, somehow build up a rapport, and then hunt with them, living like a scavenger off the pickings.

So much for the image of the vampire as a count with a castle and a silk dinner jacket. The truth was more like Summers' description—a filthy old forester scrabbling along with a pack of werewolves to glean the leavings of their monstrous feasts.

Man the scavenger, in the same role among werewolves that dogs play among men! And the human prey, unsuspecting now, but in those days it knew. People approached the night with terror crackling in their hearts. And when darkness fell only the desperate and the mad remained out of doors.

What, then, was the role of the human scavenger, the vampire, that ran with the werewolves? Why did they tolerate him? Simple enough, to coax people out of their houses, to lure them into the shadows where they would be ripped apart. It was ugly but it also meant that there had been communication of a sort between man and werewolf in the past, and could be again. And how immeasurably richer communication between this extraordinary species and modern science might be. There could be no comparison between the promise of the future and the sordid mistakes of the distant past.

It had gotten much easier for the werewolves in recent centuries. No longer were the human vampires needed. Nowadays the werewolves could do it on their own. Just take up residence in any big city, live in abandoned buildings among the city's million byways, and prey on the human strays.

Man and wolf. It had been an age-old animosity. The image of the wolf baying at the moon on a winter's night still calls primitive terrors to the heart of man.

And with good reason, except that the innocent timber wolf with his loud howling and once conspicuous presence was not the enemy. Lurking back there in the shadows, perhaps along the path to the well, was the real enemy, unnoticed, patient, lethal beyond

imagining. The wolf-being with its long finger-like paws, the werewolf, the other intelligent species that shared this planet.

We killed off the innocent timber wolf and never even discovered the real danger. While the timber wolf bayed to the oblivious moon the real enemy crept up the basement steps and used one of those clever paws to throw the bolt on the door.

Ferguson ran his fingers through his hair, his mind trying to accept the fearful truth he had uncovered. That damn detective—Wilson was his name —had an absolutely uncanny intuition about this whole matter. It was Detective Wilson who had first said the word werewolf, the word that had gotten Ferguson really thinking about that strange paw. And Wilson had claimed that the werewolves were hunting him and the woman down. With good reason! Once their secret was out the life of the werewolf would be made immeasurably harder, like it was in the old days in Europe when humanity bolted its doors and locked its windows, or in the Americas where the Indian used his knowledge of the forest to play a deadly game of hide and seek, a game commemorated to this day in the traditional dances of many tribes. The werewolf undoubtedly followed man to this continent across the Bering land bridge eons ago. But always and everywhere he kept himself as well hidden as he could. And it made good sense. You wouldn't find beggars sleeping on sidewalks if the werewolf was common knowledge. A wave of terror would sweep the city and the world unlike anything known since the Middle Ages. Unspeakable things would be done in the name of human safety. Man would declare all-out war on his adversary.

And at last he would have a fair fight on his hands. With all our technology, we have never faced an alien intelligence before, have never faced a species with its own built-in technology far superior to our own. Ferguson could not imagine what the mind behind the nose and ears of the werewolf must be like. The sheer quantity of information pouring in must literally be millions of times greater than that reaching a man through his eyes. The mind that gave meaning to all that information must be a miracle indeed. Maybe even greater than the mind of man. And man must, this time, react responsibly. If there was intelligence there it could be reasoned with, and eventually the two enemy species could learn to live together in peace. If Carl Ferguson had any part in this at all it was as the missionary of reason and understanding. Man could either declare war on this species or try to come to an understanding. Carl Ferguson raised his head, closed his eyes and hoped with every fiber of his being that reason would for once prevail.

He was surprised to notice somebody was standing beside him.

“You've got to take this call slip to the rare books department. We don't have this book in the reading room. All of our stuff is post-1825 and this book was written in 1597.” The call clerk dropped the card on the table in front of Ferguson and went away. Ferguson got up and headed for the rare books collection, card clutched in his hand.

He moved through the empty, echoing halls of the great library, finally arriving at the rare books collection. A middle-aged woman sat at a desk working on a catalogue under a green-shaded lamp. The only sound in the room was the faint clatter of the steam pipes and the snow-muted mutter of the city beyond the windows.

“I'm Carl Ferguson of the Museum of Natural History. I'd like to take a look at this book.” He handed her the card. “Do we have this?”

“It's catalogued.” She got up and disappeared behind a wire-covered doorway. Ferguson waited standing expectantly for a few moments, then found a chair. There was no sound from the direction the woman had gone. He was alone in the room. The place smelled of books. And he was impatient for her to return. It was urgent that she produce the book he needed. It was by Beauvoys de Chauvincourt, a man considered an authority

on werewolves in his day, and more interestingly, a familiar of them. The manner of his death was what had excited Ferguson—it indicated that the man may indeed have known the creatures firsthand. Beauvoys de Chauvincourt had gone out one night in search of his friends the werewolves and had simply disappeared. The dark suspicions of the time notwithstanding, Ferguson felt that he almost certainly had met his end observing the ancestors of the very creatures whose work the two cops had uncovered. “Do you know books, Mr. Ferguson?”

“It’s Doctor. Y-yes, I do. I can handle antique books.”

“That’s exactly what shouldn’t be done with them.” She eyed him. “I’ll turn for you,” she said firmly. “Let’s go over there.” She placed the book before him at a table and turned on one of the green-shaded lights.

“*Discours de la Lycanthropie, ou de la transformation des hommes en loups,*” read the title page.

“Turn.”

She opened the book, turning the stiff pages to the frontispiece. And Ferguson felt sweat trickling down his temples. What he was seeing was so extraordinary that it was almost too much to bear without crying out. For there on the frontispiece of the ancient book was engraved a most amazing picture. In this ancient engraving a sparse plain was shown lit by a full moon. And walking through the plain was a man surrounded by things that looked somewhat like wolves but were not wolves. The man appeared at ease, strolling along playing a bagpipe that was slung over his shoulder. And the werewolves walked with him. The artist had rendered his subjects faithfully, Ferguson guessed. The heads with their high, wide brain cases and large eyes, the delicate and sinister paws, the voracious, knowing faces—it all fit the image Ferguson had created in his own mind of what the creatures must look like. And the man with them—incredible. In those days there must certainly have been communication between humans—some humans—and werewolves. De Chauvincourt himself must have... known them. And in the end they destroyed him.

“Turn.”

Ferguson cursed his French. Here were lists of names—no, they were invocations of demons. Nothing to be learned here. “Turn.”

More invocations.

“Keep turning.”

The pages rolled past until something caught Ferguson’s eye. “The Language They Assume.”

Here followed a description of a complex language composed of tail movements, ear movements, growls, changes in facial expression, movements of the tongue and even clicks of the nails. It was as if human language had consisted not only of words but also of myriad gestures to augment those words.

And Ferguson knew something he hadn’t known before. The creatures had vocal cords inadequate to the needs of true verbal language. How fast their brain must have evolved! Perhaps it took only fifty or a hundred thousand years and there they were, strange intelligent beings roaming the world in pursuit of man, engaged in the age-long hunt that occupied them to this day.

“Turn.”

Here the book had another engraving—hand movements. “Can I get a Xerox of this page?”

“We can’t copy this book.”

He had brought paper and pencil and made rough sketches of the positions shown noting the meaning of each: stop, run, kill, attack, flee.

Stop—the tips of the fingers drawn down to the edge of the palm.

Run—the hands held straight out before the face.

Kill—the fists clenched, held against the throat.

Attack—the hands clutching the stomach like claws.

Flee—the palms against the forehead.

But these were human signals. Obviously the werewolves did not use such gestures among themselves because they were four-legged. There must have been a mutual language composed of signals like these between the werewolves and—

“*Les vampires.*” The book said it. And there was the source of another legend, the vampires again. This must be the language they used to communicate with the werewolves. The vampires, those who followed the wolves and scavenged the remains. And the wolves needed them to induce people to come out of their locked houses.

What a different world it had been then! Werewolves and vampires stalking the night, the vampires luring people from their homes to be devoured. No wonder the Middle Ages were such a dark and cruel time. The terrors of the night were not imaginary at all, but stark realities faced from birth by everybody. Only as the sheer numbers of mankind had increased had the threat seemed to disappear. Man grew so numerous that the work of the werewolves was no longer noticed. In the days of de Chauvincourt the human helpers must already have been unnecessary in most places... and so as soon as the vampire weakened with age the werewolves turned on him. The librarian turned the page.

Ferguson jumped up. He tried to stop himself, but took an involuntary step backward and knocked over the chair.

“Sir!”

“I-I’m sorry!” He grabbed the chair, righted it. Now he felt like a fool. But the engraving that covered both of the pages facing was so terrible that he almost could not look at it.

He was seeing the werewolf close up, face to face. This would be a reliable rendition of the features. Even in this three-hundred-and-eighty-year-old engraving he could see the savagery, the sheer voraciousness of the creature. The eyes stared out at him like something from a nightmare.

And they *were* from a nightmare. His mind was racing now as he remembered, an incident that had occurred when he was no more than six or seven. They were in the Catskills, spending the summer near New Paltz in upstate New York. He was asleep in his ground-floor bedroom. Something awakened him. Moonlight was streaming in the open window. And a monstrous animal was leaning in, poking its muzzle toward him, the face clear in the moonlight.

He had screamed and the thing had disappeared in a flash. Nightmare, they said. And here it was staring at him again, the face of the werewolf.

The librarian closed the book. “That will be enough,” she said. “I think you’re upset.”

“Those engravings—”

“They are horrible but I don’t think it quite calls for—hysterics.”

This amazed Ferguson. How dare she accuse him like that. “What would you say,

madam, if those were engravings of real animals?”

“These are werewolves, Mr. Ferguson.”

“*Doctor*. And I assure you that those animals are very real. You can imagine my shock when I saw them engraved in a book of that age, when the discovery was supposed to have taken place only a few weeks ago.”

He left her to sort that one out. Too bad, too, she was a nice-looking woman, he wouldn't have minded getting to know her. But not now. He went down to the basement cloakroom and picked up his coat. Outside it had stopped snowing and the pedestrian traffic had transformed the sidewalk into gray slush. He turned the collar of his coat up against the surging wind and walked toward Sixth Avenue. He was going to see Tom Rilker, to get his help in determining a logical forage in the city for these creatures. There must be some area where lots of homeless people congregated. Not the Bowery, it was surrounded by heavily populated areas. Rilker would have some ideas.

Then he stopped. “My God,” he thought, “those two cops have a point, what if the damn things are hunting me too?” Had they seen him with the cops last night? No way to tell. But if they *had* made the connection then he could be in mortal danger right now, even here in the middle of Forty-second Street.

He jammed his hands into his pockets and walked more quickly on. And he remembered the face of the nightmare in the moonlit window.

Dick Neff padded naked into the kitchen to fix himself another drink. He glanced at the kitchen clock—nearly noon. A shaft of sunlight shone in the kitchen window, as sharp and silver as a blade. First the snow had stopped and then the clouds had blown away. Now the wind moaned around the corner of the building and a bright dust of snow glittered through the sunlight. The glare hurt Dick's eyes, and he fumbled as he fixed his third Bloody Mary.

His mind was working, turning in a haze of anguish that would not go away. Becky, shooflies, burns, sorrow. He took a long pull on the drink and went into the living room. Goddamn, he couldn't believe what had *almost* happened to him, how close he had come to death. Burned and didn't even know it. He had been moving with Andy Jakes for six months, really working in with him. Hell, the guy was the biggest dealer in the Northeast. The Goddamn biggest fuckin' dealer. And Andy Jakes had been playing with Mr. Narcotics Cop. Jesus Christ! If he had collared Andy Jakes the shooflies would have laid off out of respect. Let it ride. But now he was just another victim of that brilliant crook's mind.

He had been about to enter Jakes's apartment, just heading toward the elevator when his teammates had gotten to him. Hold it, Dick, we got trouble. Bobby says the bug's pickin' up a lot of movement in there. Jakes's supposed to be alone?

—Yeah, he's alone. He's got the stuff in there. Ten kilos, let me go.

—Not alone. Don't go in. There's people in there, lots of people movin' around, not talkin'.

—Not talkin'? Shit, that must mean—

—They suspect a bug. And they suspect you. They're waiting for you, Dick.

—Oh, shit shit shit.

And he had stopped. He had not gone in. Follow your instincts, boy. Don't go in there. Another man might have shrugged it off and gone in. But not Dick.

And then they were off trying to get a warrant to bust the place when another call had

come from the wire man. They were leaving. Christ! They *had* left. Surveillance followed them to Teterboro Airport, to a flight plan filed for Guadeloupe, Honduras, Brazil. Shit.

And they got the warrant and entered the apartment. So it's empty, of course, completely empty except for the Goddamn note. A note on nice engraved stationery, just as nice as you please. "Sorry, Richard," says the note. "I know how much of an embarrassment this will be to you. You be careful now. Cordially, Andy."

The guys got a whoop out of that note. "Hey *Richard*, Andy's some cool sonofabitch! Hey, beautiful, what a shit-heel."

The other guys were almost happy that Dick hadn't made his collar. Robin Hood. Sam Bass. The beautiful crook. Although there was also the other thing. Every gold shield in the division lusted after Andy Jakes and now it was open season on him again. Now other guys could take a crack, now Neff had blown it.

"Dick, you know what was waiting for you in there," Captain Fogarty had said. Good old Fogarty, always looking on the bright side. "A Goddamn arsenal. Wires says six or seven people were in there creepin' around as silent as cats. Waiting for you, Dick. Blown you away. I doubt if we'd ever laid eyes on you again, old buddy."

Maybe that would have been better. Because another captain, Captain Lesser of the Internal Affairs Division, was closing in on Dick Neff. Another job blown. Somehow or other IAD had gotten wind of Dick's little deal with Mort Harper. What the hell was it anyway, a nice clean gambling establishment. The best clientele, even the fuckin' DA was there once. The fuckin' DA playing blackjack and lovin' it. Mort was protected! But he had put the finger on Neff, had built up his City Hall connections to the point that he didn't need Neff's silence anymore. "Hey, Mr. DA, y'know I got this monkey on my back, a little shit shakin' me down—"

"What the hell, this is a decent place." Movie stars. Politicians. Stockbrokers. Marble bar. Crushed-velvet carpets. Honest tables.

"Takin' out a grand a month, Mr. DA."

"Oh stop singin', Morty, I'll take care of it."

Oh, Morty was beautiful too. Smarter than Dick Neff. Everybody was smarter than Dick Neff. Even the shoofly Captain with his funny questions. "How many bank accounts you got? Your wife? Fine, could we see your income tax returns? Just routine. Somebody turned up a little dirt, Dick. Nothing really. Just routine. I got to go through the motions is all."

Go through the motions like hell! Dick Neff was due for a Board. Early retirement—hell, he'd be lucky to stay out of Attica! "You have a right to remain silent. You have a right to an attorney."

Silent, damn right. An attorney, damn right. He swallowed the last of the Bloody Mary and went to the sliding doors, looked out on the bright snow that covered the balcony.

And what he saw there made him gape. Pawprints as nice and clear as you please. He stared at them confused and disbelieving. Pawprints? And on the glass door a smear of another print. He squatted down and examined it. It could just be... a smeared pawprint... where something had tried the door. These prints must have been laid in the early morning after the snow had stopped. Shit, Becky wasn't imagining things after all. These damn prints were real. No way to deny it, and they didn't belong here.

He felt suddenly exposed in his nakedness and returned to the bedroom to dress. He shook his head, physically trying to shake out the welter of thoughts that clamored for attention. Dressing automatically, he fought for clarity. Those two crazies were right

then? That scabrous old shitkicker Wilson wasn't senile after all. It seemed impossible, a trivial detail suddenly expanded to fill his whole consciousness with its importance. If she was in danger! If she was in danger and he didn't help her he would kill himself. That was the size of it, he would take out his Goddamn .38 and put the barrel in his mouth and pull the Goddamn trigger. Let the department face that one.

He put on a conservative suit and brushed down his hair until he looked reasonably presentable. He had to get that Starlight camera out of Yablonski in the Photo Unit. He had to look the part. Would the good news about Dick Neff have traveled as far as Yablonski? Probably not. Just routine, gimme the camera. Orders? Shit, c'mon man, I got to use this thing tonight. Easy. Peaches.

He left the apartment, then returned. As soon as he had gotten into the hall he had felt the absence of his pistol. Like he wasn't wearing underpants or something. The gun. He dropped off his overcoat and his jacket and pulled the holster containing the .32 out of his bureau drawer. The larger .38 he left behind. This pistol fitted neatly into a holster nestled in the small of his back, easy to get to, hard to spot. You weren't too comfortable when you sat down in a hard chair but other than that the small of the back was a beautiful hiding place for a weapon.

Now he glanced at the pawprints again. They were ugly, frightening. He tested the door and then pulled the curtains closed. This time he left and did not return. Outside the wind hit him with the force of a powerful shove. It bit right through his coat and made his muscles grow taut with cold. He wanted another drink, better make a pit stop on the way down. What the hell, make it now. Across the street was O'Faolian's where he usually made a stop on his way to the apartment. He went there now.

"Hiya, Frenchie," he said as he slipped up to the bar, "gimme a Bloody." The bartender made it and set it in front of him. Instead of going about his business, though, he hovered there fooling with glasses.

"You want something?" Dick asked. Frenchie was not a friendly guy, not the type to make small talk.

"Nah. A guy's been in is all. A guy wantin' to know about you."

"So?"

"So I don't say nothin'."

"Good. What else is new?"

"You don't wanna know what he's askin' about?" Frenchie looked surprised, a little disappointed.

"I can pretty well guess," Dick said expansively. "He wanted to know if I had ever been seen in here with a little kike five-two, greasy black hair, wire-rimmed glasses, name of Mort Harper. And you said no."

"Hell I didn't say nothin'. Not yes or no." He looked pleadingly at Neff. "The guy, he flashed on me, see. What could I do? You don't get 'em flashin' unless it's serious business."

Dick chuckled. "Thanks, Frenchie," he said. He put a five on the bar and left. Damn decent of the little jerk to tell him that Captain Lesser had been in here confirming that this was where Dick met Mort Harper to take the pass. How long had it been going on? Dick couldn't remember exactly. God, though, it must be years. All that money right up to the Stranger Nursing Home. Right up there to keep the old man in cigars.

The old man. A pang of sentiment went through him, thinking of the old senile man who had once been so powerful, so determined. Drove a bus for the Red and Tan Line.

Retirement pay plus Social Security: \$177.90 a lousy month. Senile decay, Parkinson's disease, helplessness had turned to violence, periodic seizures, a thousand-dollar-a-month problem. You don't give your old man over to the tender care of the State, not when you've seen the inside of those places firsthand. "Gonna make you go naked for a day, you old fart, you don't stop that shakin'. Stop it, you gettin' on my nerves. OK, fuck you, gimme that gown!" That's the kind of thing that went on. A bunch of monsters making life hell for the old and helpless. "Come on, guinea, light my cigarette! Fuckin' old shit." Dick had seen what it was like in those State hospitals, a playground for sadistic perverts masquerading as attendants. No place for his old man.

All of a sudden he was shaking uncontrollably, standing there in the doorway of the bar. He grabbed at the door handle to steady himself, then reeled back into the bar. He dropped to a table. "Shit, Frenchie," he said, "get some food in me. I feel like shit."

Frenchie produced a hamburger and some stale fries and as soon as he bit into the food Dick found that he was ravenously hungry. He wolfed down the burger, ordered another. Now he leaned back, relaxed into the mild fog that the drinks had produced, that and the ease of the food.

What the fuck had he been doing? Oh yeah, going to get that damn camera for Becky, his kid bride. Kid, hell, she was only a year younger than him and he was no kid. She was still a damn good lay, though, especially the way she came. Like a Goddamn female freight train. She made you feel like you were worth something. None of the others ever really did that. They were all pretending, wanting to fuck a cop for reasons that had nothing to do with love. Pros that needed a friend, most of them. What the hell, they threw it at you. Becky didn't know and never would if Dick had anything to say about it. What they had together was something special, something no pro was going to take away from them.

Well, what the hell, what she didn't know wasn't going to hurt her.

"Frenchie! Bring me another Bloody."

Frenchie came over. "Nosir," he said, "can't do that."

"Why the fuck not! What is this, a Salvation Army Shelter?"

"You're on duty. I'm not gettin' you drunk in here. Shit, you came in here half looped. Now you go on about your business. I don't want no cops gettin' drunk in here. It's a bad rap with the department and you know it. Go somewhere else."

"I'm not on duty. I'm graveyard this week."

"You're carryin' a piece, Lieutenant Neff. I can't serve you any more booze."

"Jesus Christ, Mr. Hot Shit—OK, I'll take my trade elsewhere. But don't say I didn't warn you, Frenchie. You look out for your ass, hear. Just look out real careful, you never know what's gonna come up your back."

Frenchie walked away shaking his head. Dick left, wanting at once to say something to appease Frenchie, wishing he hadn't been so nasty, yet still feeling in himself the urge to be even nastier, to strike out at somebody. He hailed a cab to go to headquarters.

Yablonski's office was a clutter of photographic equipment, report forms, pictures tacked to walls, half-empty coffee cups. "Hey, Dick," the little man said when he looked up. "What brings you down here?"

"Your beautiful face. I need some night photography equipment."

"Yeah? You got infrared uptown. If you need a photographer forget it until next week, my guys are—"

"Hooked up. No, we don't need a photographer."

“You guys take up time. I can’t spare men to spend days and days sitting in cars doing what any moron—”

“Like me can do.”

“Yeah. So why don’t you just use your own infrared equipment and let me the fuck alone.”

“Because I don’t need infrared. I need high power and long range. You know infrared’s no good over fifty yards.”

“No, I didn’t know that. Hell, Dick, it’s my business, don’t take that tone with me.”

Neff closed his eyes. What made this little fart so Goddamn difficult to deal with? He always talked in arguments. “I need the Starlight camera.”

“Like hell.”

“For one night.”

“I repeat: like hell. That camera doesn’t leave this Bureau without a trained operator, meaning me. And I’m not takin’ it out without a signed letter from somebody I can’t turn down.”

“Come on now, don’t get crazy. I only need it for one night. Think if you don’t give it to me and I lose an important collar as a result. Think how that’ll look.”

“It won’t look like nothin’. Officially you don’t even know that camera exists.”

“Oh, cut the crap. We got an eyes only on it in 1975. That thing’s been goin’ in and out of Narcotics ever since.”

“Well, I didn’t know that.” Yablonski glowered, pugnacious, aware that Dick was somehow edging him into a corner.

“How’s the wife?”

“What’s she got to do with it? She the suspect?”

“Just trying to be friendly. Look, I’ll level with you. I got a big collar coming up but we need evidence. We got to have pictures.”

“Big deal. Use fast film. There’s plenty of light in the streets.”

Dick sighed, pretended to give up on something. “I guess I gotta tell you more than you need to know. We got a big pass comin’ up. We just can’t risk missin’ it. We gotta have that camera.”

Yablonski glared at him. He did not like to let his precious Starlight camera out of his personal control. On the other hand he had no intention of spending the night on some dangerous narcotics stakeout. He stood up, brought out his keys and went to a bank of lockers that covered one wall of the office.

“I’m gonna be a sucker,” he said, “let you take this thing out and get it smashed. You know how much this thing cost the City of New York?”

“Nothin’.”

“About a hundred grand. Hardly nothing.”

“It’s CIA surplus circa Vietnam. You know damn well we got it for nothing.”

“Well, I’m not sure we’d get another if we lost or busted this one.” He removed a metal case from the locker and placed it gently on his desk. “You used this before?”

“You know I have.”

“Well I’m gonna go through the drill anyway!” He opened the case and pulled out a boxy object made of gray, burnished metal. It was about the size and shape of a two-pound can of coffee with binocular eyepieces on one end and a large, gleaming fisheye of a lens on the other. The body of the thing was entirely featureless, except for a barely visible indentation obviously intended for a thumb.

“You open the control panel like this,” Yablonski said, pressing on the indentation. A three-inch square of surface metal slid back to reveal a panel containing two black knobs and a small slit. “You slide in the film.” He pushed a small black rectangle into the opening. “That gives you two hundred shots. That’s the bottom number in the readout you’ll see in the lower right quadrant of the frame when you look through the camera. Above that’s the ambient light reading. You set the top knob so that it reads the same value. Here—” He held the camera out. Dick took it, put it up to his eyes. The image was blurred but the three numbers were clear. “Read off from the bottom up.”

“The bottom number says two hundred. The middle one sixty-six, the top point-oh-six.”

“Meaning you’ve got two hundred shots left, the ambient light level is sixty-six and you are pointing the camera at an object point-oh-six meters away. Now gimme.” He took it back. “You set the top knob at sixty-six and the bottom one at point-oh-six. Now look.”

“What the hell is it?”

“The top corner of the locker, dummy. It’s magnified so much you can’t tell what you’re seeing that close. Point the camera out the window.” Dick swung the camera around. The top two readings flickered and changed as he moved it, then the limbs of a tree down near street level leaped into view. He could see where ice adhered to the twigs and where the sun had made it drop away. Yablonski guided his hand to the thumb indentation. “Pull back on it.” There was a click. The little door had closed on the side of the camera and a red light had gone on above the three green numbers of the readout. “You get a light?”

“Right.”

“Ready to shoot. Push forward.” The camera made five shots in quick succession. The film indicator now read 195.

“It always shoots in increments of five. Now press inward on the indentation.” The scene pulled back and revealed the sidewalk below. “You go down to fifty millimeters. Fifty to five hundred, that’s the lens. If you push forward and down at the same time the camera will take a series of shots while the lens is moving. No problem. Just remember to always close the control housing before you try to shoot.” Dick took the camera from his eyes. Yablonski was pointing at the control housing. “That activates the camera. And if you change position always check focus. In operation it doesn’t matter too much, but remember that the camera is at its sharpest focus when the object you are shooting is exactly as far away as that little indicator in there says. You want it to change, you’ve got to adjust it with the knob.”

“That’s all? I remembered everything.”

“Well, aren’t we wonderful. Just don’t bring it back to me in a shoebox, for Chrissake. And get the fucker back here before noon tomorrow or I’ll be on your ass.”

“Oh, yes sir, Mr. Commissioner, just like you say.”

“Come on, Dick, take it easy. How much film you want?”

“Another couple of boxes. That stuffs really compact. You sure there are two hundred shots?”

“Of course. You think the camera would lie?”

Dick put the machine back in its case and hefted it. He left Yablonski staring after him.

As soon as he was gone, Yablonski was on the phone. “Captain Lesser,” he said crisply, “you told me you wanted a call if Dick Neff came around here for anything. Well, he did. He checked out the Starlight camera.”

Chapter 8

The search teams kept coming back empty-handed. It looked as if the park wasn't going to yield any worthwhile clues. A bench covered with a slick of red ice— human blood. Some tattered remnants that might have been the victim's clothes. That was all. No body, no ID, no witnesses. And so far, no report of a missing person. The cops were waiting for orders to move them out. The precinct wasn't going to spend much more time on this, it was just another one of those mysteries that the city tossed up. Obviously somebody had died here, but in the absence of anything except blood there wasn't much that could be done to find the killer.

“Maybe it'll tell us something,” the Medical Examiner said as a patrolman handed him a clear plastic bag full of tattered cloth.

Becky Neff said nothing. More vague evidence. Even Wilson's experience last night was nothing but hearsay. Hell, maybe he got panicked by some dogs. The trouble was, you weren't going to get headquarters to take a chance on the theory. The man who sanctioned an investigation of werewolves in this city was headed for early retirement if that investigation didn't prove itself.

“Do you believe me?” Wilson said into the silence in the car.

“Yeah,” Becky replied, surprised at the question.

“Not you, dummy. The genius. I want to know if he believes me.”

“If it wasn't delirium tremens, I'd say you saw what you saw.”

“Thanks.” Since relating his story Wilson had fallen into a silence. Becky didn't know whether he was thinking something out or simply sinking into depression. If possible he seemed to be getting more morose.

When Wilson turned to stare again out of the car window, Evans raised his eyebrows. “Listen,” he said to Wilson's back, “if it makes any difference I really do believe you. I just wish to God I could do more for you than that.”

“Every little bit helps,” Becky said acidly.

“I'm sure. It must be hell.”

“Yeah,” Wilson said, “it's that.”

Suddenly there was a flurry of activity. A couple of park cops jumped on scooters; guys from the 20th Precinct piled into squad cars. Becky flipped on the radio to catch the activity. “—thirteen, repeat, thirteen to Bethesda Fountain.”

“Jesus—” Becky started the car and followed the others into the park. They slurried in

the new snow, heading for the emergency. A signal-13 was the most serious call a policeman could put out: it meant that an officer was in distress. It would cause immediate response from all nearby units—and often some from farther away. It was the call that cops hated most to hear and wanted most to answer.

The area around Bethesda Fountain was once elegant. Once, during summer, there was an open-air restaurant where you could drink wine and watch the fountain. Then the sixties had come, and drugs, and Bethesda Fountain had become an open-air drug bazaar. The restaurant had closed. The fountain had become choked with filth. Graffiti had appeared. Murders had taken place. Now the once-bustling spot was the same in summer as in winter: empty, abandoned, destroyed. And crumpled on the esplanade overlooking the fountain was a blue uniform, its occupant bent over almost with his forehead touching the snow. The scooter cops were the first to get to him. “Shot,” one of them shouted. An ambulance could already be heard screaming over from Roosevelt Hospital.

Becky pulled the Pontiac up behind the scooters and the three of them jumped out. “I’m a doctor,” Evans shouted pointlessly. There wasn’t a person in the NYPD who didn’t know that the Medical Examiner was a doctor. Evans reached the wounded man, followed closely by Becky. He was a middle-aged cop, one of the guys who had been out beating the bushes for evidence, one of the searchers. “Fuckin’ dog,” he said almost laughing, “fuckin’ dog bit a hole in my side.” The voice was anguished and confused. “Fuckin’ dog!”

“Holy shit,” Evans said.

“Is it bad, Doc?” the man said through gathering tears.

Evans looked away. “I’m not movin’ you till the stretcher gets here, buddy. You aren’t losing any blood out of it, however bad it is.”

“Oh, fuck, it hurts!” he shouted. Then his eyes rolled and his head slumped to his chest.

“Get some pressure on it, he’s passed out,” Evans said. Two of the man’s friends applied a pressure bandage to the gash in his overcoat. “Where’s that friggin’ meatwagon!” Evans rasped. “This man’s not gonna make it if they don’t hurry.”

Just then it pulled up and the medics piled out with their equipment. They cut the coat away and for the first time the wound was visible.

It was devastating. You could see the blue-black bulge of the man’s intestine pulsing in the blood. Becky started to sob, stifling it as it came. *They* had done this! Just now, just minutes ago. They were right around here! She put a trembling hand on the M. E.’s shoulder.

“Leave me alone.” He was examining the wound. “Move him out,” he murmured to the orderlies. He looked up at Becky. “He ain’t gonna live,” he said simply.

They got the man on the stretcher and took him to the ambulance, heading for the emergency room as fast as they could go. There was an M.D. on the wagon so Evans returned to Becky’s car.

The other cops were still standing in a little clump, staring at the blood-smeared thrash marks in the snow. For a moment nobody spoke. What could you say? A man had just had his intestines laid open— and he claimed it had been done by a dog. The Precinct Captain came up puffing hard. For some reason he hadn’t made it into a car. “What the fuck— what the fuck happened?”

“Baker got hit.”

“What by? Hit and run?”

“Something took about nine inches of hide off his gut. Laid him open.”

“What the fuck—”

“You said that, sir. He says it was a dog.” Becky felt Wilson’s hand grasp her shoulder. A sharp pang of fear ran through her. “Listen, kid,” he said in an unnaturally calm tone, “stroll real easy-like over to those two scooters.” He breathed it into her ear. “You can ride a scooter?”

“I suppose.”

“Good, because you gotta. Just go real easy.”

“What about our car?”

“Stay the hell away from our car! And when you get on that scooter, *move*.”

She didn’t ask questions even though she didn’t quite understand why he wanted to do this. You get to trust a good partner, and Becky trusted Wilson more than enough to just do what he said without asking why. He’d do the same for her. Hell, he had often enough.

As she walked she noticed that he was meandering in the same direction, getting closer and closer to the scooters without making it particularly obvious. “Now, Becky!”

They leaped, the scooters coughed to life, they skidded onto the snowy pavement, Becky swayed, righted herself and headed straight down the Mall, which stretched to Park East Drive and the safety of the streets. She heard a shout behind, an incredulous shout from one of the scooter cops who saw the two detectives suddenly hijack his transportation. Then something else was there, a gray shape moving like the wind, a furious pulsing mass of hair and muscle. And she knew what had happened. “Oh God God God,” she said softly as she rode. She turned the gas all the way up and the scooter darted through the snow, bouncing and shaking, threatening from instant to instant to go into a skid. Thirty. Forty. Fifty. Was the thing dropping back? She risked a glance. God, it was right there. Its teeth were bared, and its *face*, something unbelievable, twisted with hate and fury and effort—animal, man, *something*. She choked out a sob and just held on. The thing’s breathing was clearly audible for a moment, then it fell back, fell back making little sharp noises, sounds of pure anger! It was gone and the scooters bounded off the Mall, crashed through ripping naked shrubs, shot into the roadway and tore down toward the park entrance at Fifth Avenue. Ahead the Plaza Hotel and the General Motors Building. General Sherman with his permanent toupee of pigeon droppings. Horse-drawn carriages waiting in rows, the breath of the horses steaming. Then stopping, bringing the scooters to a halt at the bustling entrance to the hotel. “We’re at the Plaza,” Wilson was growling into the scooter’s radio, “come get us.”

A squad car appeared. “What’s the problem, Lieutenant?” the driver said. “You just got reported for stealing two scooters.”

“Fuck that. We were under orders. We thought we saw a suspect.”

“Yeah. So get in. We’ll drive you up to the Twentieth.”

They left the scooters for the men from the park precinct who were approaching in another car. Wilson and Neff were silent as they rode toward the precinct, Wilson because he had nothing to say, Becky because she couldn’t have talked if she had wanted to. It felt funny to her to be alive right now, like she had just broken through a wall into a time she was never intended to see. “I was supposed to die back there,” she thought. She looked at her partner. He had figured it out just in time—a trap. God, what a clever trap! And they had slipped out just as it had been sprung.

“You know what happened,” Wilson asked.

“Yeah.”

He nodded, silent for a few minutes. The squad car wheeled up Central Park West. Wilson touched the door lock; the windows were closed. “They’re very smart,” he said.

“We knew that”

“But that was a very neat trap. Wounding that guy... knowing that we would respond... setting an ambush. All very smart.”

“How did you figure it out? I’ve gotta confess I was completely taken in.”

“You oughta start thinking defensively. They wounded that guy, didn’t kill him. That’s what tipped me off. Why wound, when killing is easier? It had to be the same reason a hunter wounds. To lure. When I figured that out, I decided we ought to go for the scooters. Frankly I’m surprised we made it.”

The squad car pulled up to the precinct house. After a long look up and down the street the two detectives got out and hurried up the steps. The desk sergeant looked up. “Captain’s waiting for you,” he said.

“Must be antsy as hell,” Wilson muttered as they walked into the Captain’s office.

He was a trim, neatly turned out man with steel-gray hair and a deeply wrinkled face. But his movements, his posture, belonged to a younger man. He had just taken off his overcoat and sat down at his desk. Now he looked up, raising his eyebrows. “I’m Captain Walker,” he said. “What the hell’s going on?”

“We saw a suspect—”

“Can that bullshit. Everybody saw those dogs come out from under your car and chase you halfway to Grand Army Plaza. What the hell was that all about?”

“Dogs?” Wilson was no actor. The fact that he was hiding something was perfectly clear to Becky. But maybe she underestimated him.

“Yes, dogs. I saw them. We all did. And Baker said it was dogs that laid him open.”

Wilson shook his head. “Beats the hell out of me.”

“Look, I don’t know quite what’s going on here— I mean you two are some kind of special team, that’s OK by me—but I got a guy hurt bad down at Roosevelt and he says a dog did it. I saw you two light out like you were runnin’ from death itself. And you were chased by two dogs. Now I’d like to know what the fuck’s goin’ on.” His phone rang. A few muttered words, a curse, then he hung up. “And so would the *New York Post*. They got a photographer and a reporter waiting out front to see me right now. What do I tell them?”

Becky stepped in. Wilson had tucked his chin into his neck, squared his shoulders, and was about to blow it. “Tell them what’s probably true. Your man was wounded in an unknown manner. I mean if somebody’s colon is lying on the sidewalk they might get a little delirious. He passed out right after his statement, didn’t he? And as for dogs chasing us, it might have happened, but it was a complete coincidence.”

The man stared at them. “You’re bullshitting. I don’t know why but I’m not gonna push it. Just get one thing straight: I don’t owe you two a Goddamn thing. Now take off. Go wherever you go.”

“What about the reporter?” Becky asked. That was important. You couldn’t leak this to the press, not unless the problem could be solved.

“So I’ll tell the reporters what Baker said. And I’ll tell them that he was delirious. Is that sufficient?”

“What do you mean, sufficient? How should we know?”

“You’re the people keeping this thing under wraps, aren’t you? You’re the ones who go around and make sure no shaggy dog stories get into the paper, aren’t you?”

Wilson closed his eyes and shook his head. “Let’s get out of here,” he said. “We got better things to do.”

They left the precinct and hailed a cab. Obviously there was no point in asking the precinct for transportation back to Bethesda Fountain where their car was waiting. As they approached the car Wilson craned his neck out of the cab window to make sure nothing was under it. But he needn’t have bothered. The car wasn’t going anywhere.

The doors were open. The interior of the car was ripped to shreds. And it was full of bloody pulp. “Jesus,” the cabdriver blurted, “this your car?”

“Yeah. It was.”

“We gotta get a cop.” He gunned the motor. “Who’s in there? What a fuckin’ mess!”

“We *are* the police.” Becky held her shield against the bulletproof glass separating the passenger seat from the driver’s compartment. The driver nodded and headed for the Central Park precinct house on Seventy-ninth Street. A few moments later they pulled to a stop in front. Neff, Wilson and the driver got out and approached the desk sergeant through the worn double-doors of the building. “Yeah,” he said looking up. “You two. I hear you’re a couple of mean motherfuckers on a scooter.”

“Get your guys back over to the Fountain,” Wilson rasped. “The Chief Medical Examiner just got himself killed.”

Becky felt the blood drain out of her face. Of course, that must be who was in the car. It had to be. Poor Evans, he was a hell of a good man! “Goddamn it,” Becky said.

“We were stupid,” Wilson said softly. “We should have warned him in advance.” He laughed, a bitter little noise. “They missed out on the main event. So they went for the consolation prize. Let’s get Underwood on the phone.”

Wilson took on Underwood. Becky watched him, annoyed that her usual role was being usurped. “Look,” Wilson said into the phone, “you got problems. You got a cop on critical at Roosevelt with his guts laid open. Says dogs did it. You got that? Dogs. Plus you got a reporter from the *Post* on it, and more to follow. So listen, dummy. You got one Chief Medical Examiner just murdered out by Bethesda Fountain. And you’re gonna find it was done by claws and teeth. And if you want this one wrapped up real good—”

“Oh my God, what about Ferguson!”

“—just sit on your can and wait for it.” He slammed down the phone. “You’re right! Let’s go!” They headed for the motor pool.

“Get a car,” Becky snapped at the dispatcher.

“Well, you gotta—”

“Matter of life and death, Sergeant. What number?”

“Let’s see—two-two-nine. Green Chevy, you’ll see it against the wall out near the gas pumps.”

They headed for the car. To the south the sorrowful moan of sirens sounded their dirge for Evans. “Lot of fucking good they’ll do,” Wilson said quietly. “That guy was just goo.”

“You’re sure?”

“What?”

“It was him.”

“Just drive the car, Becky.”

God, he was a condescending bastard. Even if it was self-evident to Wilson, she could still hope. Evans was a great man, a civic institution in New York City for forty years. Probably the best practitioner of forensic medicine in the world. Plus he was a good friend. His loss left a damn big hole. And the manner of his death was going to stop the presses even over at the *Times*.

“This story’s gonna get out.”

“You don’t say. By the way, Ferguson’ll be at the museum.”

“Look, I don’t give a damn how bad things are, it’s no excuse to pretend I’m some kind of a dummy. I know where the hell he is.”

“Yeah, well—”

“Well nothing, just keep your jerkoff opinions about lady cops to yourself and do your Goddamn job.”

“Oh, come on, Becky, I didn’t mean that.”

“You did, but I don’t mind. I guess I’m just nervous.”

“That’s funny. Can’t imagine why.” They got to the museum, stopped the car right in front of the main entrance and ran in as quickly as possible. It was necessary to go through the drill of getting downstairs to see Ferguson. When they were finally on it the elevator seemed to take hours to reach the sub-basement.

The room was full of people working on the birds. There was a smell of glue and paint, and an air of quiet intensity. Ferguson’s office door was closed. Becky opened it and stuck her head in.

“You! I’ve been trying to call you all over town!” They went in, closing the door behind them. Wilson leaned against it. “I wish this cubicle had a ceiling,” Becky said, “it’d be more secure.”

“Secure?”

“We’d better fill you in. I’m afraid you’re in great danger, Doctor. Evans—the Medical Examiner—he’s just been mauled to death.”

Ferguson reacted as if he had been hit. His hands moved trembling to his face. Then he slowly lowered them, staring into them. “I’ve found out a lot about the werewolves this morning,” he said almost inaudibly. “I’ve been down to the public library.” He looked up, his face impassively concealing the determination he had formed to try to communicate with the creatures. “It’s all there, just like I thought it would be. The evidence that this species is intelligent is pretty strong. *Canis Lupus Sapiens*. The Wolfen. That’s what I want to call them.”

Wilson didn’t say anything; Becky didn’t want to. She stared at the scientist. Wolfen indeed. They were killers. Ferguson’s expression betrayed his innocent excitement at his discovery. It was obvious that he still didn’t understand the extremity of his danger. She felt sorry for him—sorry in a detached, professional way like she felt sorry for the people left behind after murders. Residue, Wilson called them, the red-eyed wives and numbed husbands who were usually found slobbering over their victim’s body. Most murder is a family affair. But far worse were the cases where you had to call some frantic soul who had been waiting hours for a loved one to come home—somebody who wasn’t on the way anymore. “Hello, Mr. X, we’re detectives. May we come in? Very sorry to tell you, Mrs. X was found murdered at blah blah,” the rest of it said into a fog of grief beyond

communication.

“Join the hunted,” Wilson said, “and welcome. Maybe we’ll form a co-op.”

The humor was strained but it seemed to get a positive reaction from Ferguson. “You know,” he said, “the damn thing of it is, these creatures are so *murderous*. That’s what makes them unusual. Canines are a notably friendly race. Take the timber wolf—all the legends, the Jack London stories, that’s mostly crap. I mean, you threaten a wolf and you know what’ll happen? That wolf will turn over on its back like a dog. They aren’t dangerous.” He laughed. “It’s ironic. Science just figured that out about the wolf in the past few years. Here we were so sure that the great canine predator was just a myth—and now this. But I think we have an extraordinary chance here—there must be some point of communication between us and them.”

“To a deer, Doctor Ferguson, the wolf is incredibly dangerous. No wolf is going to turn turtle if it’s threatened by a deer. The wolf isn’t dangerous to man because he doesn’t count us among his prey. But look at the deer—to them the wolf is a scourge from hell.”

Ferguson nodded slowly. “So these... things are to us as wolves are to deer. I agree. They are also an intelligent species and as such represent an extraordinary opportunity.”

Wilson laughed out loud. The sound sent a chill down Becky’s spine. It was not the laugh of a normal human being but that of somebody deeply frightened, bordering on hysteria. She wondered how much longer she would have his help. And his mind! He had saved them in the park by bare seconds. How many more times would he do it? Or could he? Would the traps just keep getting more and more subtle until finally the hunted were down? As far as Ferguson and his ideas about communication, she dismissed them. He hadn’t seen what these creatures did to people.

“Let’s plan out our next moves,” she said. “We’ve got to be very damn careful if what just happened is any example of what’s on the way.” Ferguson asked for the details of Evans’ death. Wilson related the story, very factually, very coldly, how the werewolves had wounded a patrolman out searching for evidence, how this had lured them into an ambush, the escape on scooters just at the moment Wilson pieced the thing together, the subsequent discovery of the M. E.’s body in the car.

“So they missed you and took him instead.” Wilson was silent for a long moment. “Yeah,” he said at last, “I wish to hell I had realized—but I didn’t I just never thought of him being in danger.”

“Why not?”

“In retrospect I suppose it’s obvious. But I didn’t think of it then. That’s the damn truth.” He breathed a ragged sigh. “The old s.o.b. was a good man. He was a hell of a pro.”

Coming from Wilson that was a soaring epitaph indeed. “Let’s plan our moves,” Becky said again. “Plan what! We haven’t got anything to plan!”

“Oh come on, Wilson, take it easy. We might as well try. I thought we were going to try to take pictures tonight. Let’s plan that.”

“How about planning how to survive until tonight? Wouldn’t that be a better thing to plan, since it looks kind of hard to do?”

She shook her head and said nothing. He was a petulant bastard. Up to now she had relied on him, had always assumed that he would pull them through. And he had. This morning was an example. But he was cracking now, getting closer and closer to the edge. Wilson had always been afraid of life, now he was afraid of death when it came close. And how did Becky herself feel? As if she didn’t intend to die. She was afraid and not sure that any of them would survive—least of all herself—but she wasn’t about to give in. Wilson

had taken charge of this case so far and he had done fine. But he was getting tired. It looked like her turn now.

“Wilson, I said we were going to plan our moves. Now listen. First, we’ve got to let Underwood know the score. We’ve got evidence that’s going to be Goddamn hard to ignore. I mean, Evans getting murdered is international news. They’ve got to say something about it. And you can be damn sure the TV stations and the papers are on the scene. How are they going to take it? Medical Examiner mutilated beyond recognition. It’s going to require a damn good explanation.”

“Don’t breathe a word of this to the papers,” Ferguson said, suddenly understanding the significance of Becky’s statements. “You’ll cause all kinds of trouble—panic, fear, it’ll be hell. And the Wolfen will be threatened in just the way we don’t want— grossly, by idiots with shotguns. Some might get hurt at first but they’ll adapt quickly, and when they do they’ll be that much harder to find. Our chance will be lost—maybe for generations to come.”

“How hard to find are they now?” Wilson asked bitterly.

“Well, obviously hard. I wasn’t saying that they were easy to deal with at all. But you might not realize it, Detective Wilson—if these creatures get it into their heads to completely disappear, they can do it.”

“You mean become invisible?” Wilson’s voice was rising. He seemed about to lunge at the scientist.

“For all practical purposes. Right now they’re being very careless. Witness the fact that you’ve seen them. That’s a sign of carelessness on their part. And there’s a reason. They know that it’s a risk to allow themselves to be seen by you, but it’s very limited because they also know that you will in all likelihood not live to describe them to others.”

“Maybe and maybe not.”

“They’re predators, Detective, and they have the arrogance of predators. Don’t expect them to fear man. Do we fear hogs and sheep? Do we respect them?”

“We damn well aren’t sheep, Doctor! We’re people, we have brains and souls!”

“Sheep have brains. As for souls, I have no way of measuring that. But we know every possible move a sheep might make. There is no way a sheep can fool a man. I suspect that the analogy holds true here too.”

“Wonderful. Then what am I doing alive? Wouldn’t they have killed me last night in the alley of Becky’s building? Wouldn’t that make sense? But they didn’t. They weren’t fast enough. I got my gun out before they made their move.”

Becky broke in. “I hope they *are* arrogant, frankly. It’s our only chance.”

Ferguson raised his eyebrows and smiled. “Yes,” he said, “unless they’re playing a little game with you.”

“A game,” Wilson said, “what do you mean a game?”

“Well, they’re intelligent, they’re hunters, creatures of action. Most of their hunting must be pretty damn easy. You’re different, though, you’re a challenge. They might be spreading it out for fun.”

Wilson looked as if he would like to throttle the scientist. “Fine,” he said, “if they’re playing games with us let ’em play. Maybe we’ll get the fuck out of the trap in the meantime.” He spat. “Who the hell knows?”

They ran, desperate for cover. Humanity was pouring into the park, policemen by the hundreds swarming down every path, passing over in helicopters, roaring along in cars and on scooters. The sharp scent of human flesh exposed to cold air mingled with the suffocating sweetness of exhaust fumes. And they came from every direction. All around the park the sirens shrieked, the tone causing sharp agony in the ears of the fleeing pack. Voices called back and forth over radios; men shouted to one another. And then there was a new smell, thick and putrid—a parody of their own scent. It was dogs. The pack stopped, cocked ears: three dogs by the sound of their claws clattering on ice; eager to be unleashed by the exciting rasp of their breathing. Three dogs, heavy, strong, excited. And they had the scent, the pack could practically feel them yearning on their tethers, choking themselves with eagerness to give chase.

Very well, let them come and die. Dogs could no more hunt the pack than chimpanzees could hunt men. Defense against these animals was based on established procedures because the pattern of the animals' attack never varied. The only trouble was that it meant more time wasted in this accursed park— more time for the swarm of policemen to get closer, more time for their luck to run out.

And the pack was divided now: on one side were the two old ones and the second-mated pair. On the other was the third-mated pair. This pair, the youngest, had run after the two humans who had escaped just an instant too soon, and given up the chase a few moments early. Another breath, another footstep and the quarry would have been down. The beautifully laid plan was wasted—or almost wasted; the old man in the car had been all they could kill. Very well. Certainly he had known of the pack. They had heard him in the car, his booming old voice muttering human words with the others... words like wolf... wolf... wolf...

Human language, so complex and rapidly spoken, was hard to follow, but they all knew certain words that had been handed down from generation to generation. Among these was “wolf.” Traveling between cities the pack sometimes encountered these gentle things of the forest. They had soft, beautiful faces and sweet eyes, and the blank expressions of animals. Yet one almost wanted to speak to them, to wave the tail or knock the paw, but they had not the brains to answer. They would trot along behind a pack for days, their empty smiling heads wagging from side to side— and cower away when the pack took a man for food. After that the wolves would slink out of sight, fascinated and terrified by the ways of the pack. But wolves were wild and never accompanied the packs into the cities. Among men only the packs were safe— and so safe! Such a huge quantity of food in the cities, all of it blankly oblivious, as easy to hunt as a tree would be.

The wolf looked not unlike the werewolf. And in the car they had been saying the word over and over —wolf... wolf. So the little old man was contaminated by the other two, the two who knew. He died instantly. They had crept up to the car the moment the other cars had left in search of the two on the scooters. They had crept closer and closer, and one of them had opened the door. The man's hands fluttered up before his face and his bowels let loose. That was all that happened. Then they were on him, pulling and tearing, ripping full of rage, spitting the bloody bits out, angry that the two important ones had been missed, angry that this one also dared to confront them with his evil knowledge. They had cracked open the head and plunged their claws into the brains, plunged and torn to utterly and completely destroy the filthy knowledge.

And in their anger they had also shredded the interior of the car, ripping at the seats for sheer hate, feeling the red pulse of their frustration well up inside them as they tasted the very salt of the two that were to be killed. They tore the interior of the car apart, and would have done more to it if they had known how. Somehow the humans made these things move, and they made other similar things fly in the air. Humans flew in these. And then one of them caused this thing to make a noise. They abandoned it at once, afraid that

it would begin to move with the pack still inside. Man was of two faces: naked and weak, clothed and powerful. The same man who had no defense on his own might be completely invulnerable in a car with a gun.

The pack had speed and hearing and eyesight and most of all smell to protect itself. Man had metal and weapons. They envied man his big flat paddles that could do so much more than their hands. The things looked clumsy but they were flexible. It was with his paddles or hands that man fashioned these mysterious objects that rolled and flew, and the guns that shot. And it was because of them that man had been able to inhabit the cities. No pack knew how these cities came about, but man inhabited them, keeping for himself the warmth they produced in winter, and the dryness that was not affected even by the most violent rain. While the sky poured water or snow man sat comfortably in the cities. How these things grew and why man possessed them nobody could say.

Just as well—it kept the herds of men closely gathered so that hunting was easy.

But hunting could also be fun, if, for example, you left the city and went into the forest during the season of dead leaves. Then you would find men armed with guns, men stalking deer and moose, men who could be dangerous if you let them. It was a good game—you made a little extra noise and let the man become aware of you. Then you hunted him, letting him see just enough so that he would try hard to escape. And they tried so hard! They swam into rivers, climbed trees, covered themselves with leaves. They tried all manner of stratagem, doubling back, leaping ravines, swinging through forests in the tree-tops. And all the time their scent followed them like a blaring noise. But the pack made conditions for itself during these hunts. If the man got to a certain point, he couldn't be chased again for a hundred heartbeats. If he got to another point, two hundred. So the better he was, the harder they made it for themselves. Finally, with the very good ones there was a last desperate chase before he reached his car, a chase that ended with him rolling up useless windows, fumbling with keys, and dying there, being eaten while the blood still pulsed through his exhausted heart.

But not many of them were fun to hunt. For the most part it was the same routine as it would be with these eager, stupid dogs. Certainly the humans were closing in, but it was very hard to believe that a man not encased in metal was a threat. Killing the three dogs would waste a little time, but in the end the pack would escape from these human beings. Only if the whole city was aware would humanity become dangerous. Everybody knew that this was possible, that the two enemies could contaminate all the men of this city with the dirty knowledge. Then the pack would be endangered, then the pack would flee. But it wasn't necessary just yet.

The dogs were released. Their voices pealed, communicating the crazed, heedless excitement that was characteristic of the creature. Their breath began to pulse, their feet to pad faster and faster as they ran madly toward the pack.

They had chosen their stand carefully. A tree overhung the path, which was itself choked by heavy underbrush. The only way to the pack was up a slope, through this brush. The second female went down to the base of the low hill. She sat on her haunches, waiting to trot into the trap as soon as the dogs saw her. They were stupid animals, and you had to make it very clear what they were supposed to do if you expected them to do it.

They swarmed up the path howling, saw the female, who growled and leaped to make sure, then ran into the underbrush. The dogs were hot behind her when the rest of the pack dropped out of the trees onto them. Their bodies writhed, the howls of excitement changed to shrieks of agony, and then nothing. The carcasses were hurled deep into the brush and the pack moved quickly on.

They went in the direction where the smell of man was the least, coming out onto a snowy roadway and moving to the stone wall that surrounded the park. A short trot down the wall was where they had made their kill the night before. Already it was afternoon and their minds were turning to food. But they would not kill anywhere near their last hunt—that might awaken man’s understanding. Best to spread the kills far apart, as far as possible.

As one the pack stopped. They raised their muzzles and inhaled deeply. Across the street was a large building with a statue in front of it. And in the air was the faintest whiff of... the two.

Had they passed by here recently or were they just possibly inside that building? It was hard to tell by the quality of the odor, it was too faint. Just the slightest trace, not enough to tell even whether the body was hot or cold, indoors or out.

They crossed the snowy street and went into the grounds around the building. Yes, that scent was now a little stronger. Caution! These creatures were not dumb and they knew that they were being hunted. Better be very slow and careful. They trotted around the building, three in one direction and three in the other, easily leaping the small balustrades that surrounded the place. In this way they identified by scent which doors were in use and which were not. Without even needing to converse they came together again, then spread out to watch the doors that might be used. They hid themselves wherever they could, crouching along fences, curling up in the small clumps of bushes, lying behind stone retainers. And the scent hung here, that distinctive sweet smell that went with the woman, the denser smell of the man. And there was another familiar odor, lighter and more salty: one they had smelled near the two before.

Each human’s distinctive odor separated him from all the others, and the pack separated these three from the great mass of odors around them. And they settled down to wait. Waiting was easy for them. It added the excitement of anticipation.

Sam Garner pulled his car to a stop in front of the Museum of Natural History. He got out, relying on his press ID in the window to ward off the tow-away patrol. He paused before the imposing building, looking up at the statue of Teddy Roosevelt. The Great White Hunter with a guilt complex. Sweet guy. Sam trotted up the stairs. Two detectives were in there whom he wanted to see. He didn’t know exactly why he wanted to do this. He didn’t especially like detectives, and it hadn’t been easy to track these two down. But here he was and here they were, and he wanted very much to find out how they would react when he gave them a certain piece of information.

He had it planned. He would say, “You understand that Medical Examiner Evans was mauled to death in the park this morning.” They would say yes to that. Then he would say, “The incident occurred in your car.” He was very interested in watching their reaction to that. Somewhere along through here there was some kind of a story, maybe big. And these two just might have some idea what it was.

Chapter 9

Carl Ferguson's phone rang. He picked it up, then handed it to Wilson. "For you. Underwood."

Wilson took the phone. "Jesus, Herb, how'd you know I was here?"

"Lucky guess. Actually I've made about six calls. This was a last resort."

"That's accurate. What's on your mind?"

"Evans. What killed him?"

"You know perfectly well, Herbie-boy."

"Wolves?"

"Werewolves. Same as killed the other six."

"Six?"

"Sure. The bloody bench we found this morning was all that remained of number six. O-negative blood. No ID as yet beyond that."

"Look, I gotta tell you there's a hell of a lot of press out pounding the pavements on this one. We're crawlin' with 'em down here, plus the park's full of 'em. Reporters from every damn where—Evans was a famous man. So far nobody's made the connection between his death and the other murders. I mean, obviously there're similarities. So don't, if you know what I mean."

"Oh, I won't. I haven't got enough proof so it might not embarrass you as much as it should. There's a cake, but I ain't got icing."

"Like what?"

"Like evidence that will convince even you. When I've got that, I'll go to the papers, but not before. That much you can count on."

"Goddamn you, George. If it weren't for Old One Forty-seven I'd sign your fuckin' walking papers."

"Well, Herbie, now what can you expect? You were a dumb kid and you're a dumb grown-up. You should have given in a long time ago, when you first knew I was right."

"Which was?"

"The first time you heard my story. It's dead right and you know it. You're just too damn stubborn to admit it, or too dumb. Probably both."

This was followed by a silence at the other end of the line that lengthened until Wilson thought that Underwood had hung up on him. Finally he spoke. "Detective Wilson," he said, "have you ever considered, if your story is true, what kind of public reaction it will cause?"

"Panic, mayhem, blood in the streets. Plus heads will roll. The heads of the people who didn't do anything about it when they could."

"My head. You'd sacrifice this city for *that*? Can you imagine the economic loss, the destruction? Thousands of people would pour the hell out of the city. Mass exodus. Looting. This is a great city, Detective Wilson, but I think that would break it"

"Yeah. And you along with it. People will come back when they realize that the werewolves aren't just a local attraction. But you won't come back, Herbie. You'll be completely retired."

Underwood's voice was bitter. "I must say, I hope to hell you're wrong. Right now I can't think of anything that'll give me more pleasure than kicking your ass off the force."

Now *that* would be a hell of a good feeling.” This time Wilson was sure that he had hung up because of the bang the phone made.

“Good God,” Becky said, “what in hell ever possessed you to talk to him like that!”

“He’s a jerk. He was always a fuckin’ jerk. Hell, he was a jerk when he was runnin’ around in a dirty bathing suit half the summer. A fuckin’ two-bit jerk.”

“That doesn’t give you the right... I mean, I know you grew up together and all that... but my God, you’ll destroy both of us!”

“What in the world are you two talking about?”

They turned, surprised at the strange voice. A small man in a cheap raincoat stood there smiling more than he should. “Name’s Garner. New York *Post*. You folks Detectives Neff and Wilson?”

“Come back later. We don’t want any right now.”

“Oh, come on, Wilson, let him—”

“We don’t want any now!”

“Just one question—how come Doctor Evans was murdered in your car? You have any comment on that?” His eyes watched them. Of course he didn’t expect a straight answer. It was how they looked that counted. One way, he would know there was a story. Another way, he would know zip.

“Get the hell out of here!! Whassamatter, you deaf! Move!”

He scurried away, down the hall and up the stairs, smiling from ear to ear. He loved it! There was going to be a damn *good* story! As soon as he got back to his car he called in for a photographer. A couple of pictures of them as they left the museum wouldn’t hurt. Nice pictures, come in handy later.

“Sometimes I think maybe we should tell them something,” Ferguson asked when the reporter was gone. “I think it’ll help us if we got more people involved.”

“You tell them.”

“Oh, I couldn’t possibly. I haven’t got enough—”

“Evidence. Neither have we, and that’s why we can’t tell them either. We’ve got to wait until we get that clincher. Once we have it, we can blow the story from here to Moscow for all I care, but I’m certainly not going to break it early. Can you imagine—detective alleges werewolf killed M. E.? Underwood would dearly love that.”

His own voice made Wilson suddenly very tired. The long night ahead was bearing down remorselessly; he felt a knot growing in his stomach. Already the light in the room had changed. This time of year the days were quick, the nights long. And tonight moonrise would be late. Despite the lights of the city there would be shadows everywhere in just a few hours. The world around him seemed to be frowning, looming down at him, revealing within its softness a savagery he had never suspected. You think that the world is one thing, it turns out to be another. What appeared to be a flower is actually a gaping wound. The fact that time was passing ate at him, drove him closer and closer to—the truth, and the truth was they were going to die. Soon he would feel it, he knew it. He would feel what Evans had felt, the sensation of those *things* pulling him apart with their teeth. And Becky too, that beautiful skin torn open—he could hardly tolerate the thought

He had always had a knack for prophecy—now he had a premonition. He was standing in the middle of Becky’s bedroom when one of them jumped out of the curtains and buried its head in his stomach. As the sheer pain killed, he saw its tail wagging.

Then something hit him.

“Come on! Good Christ, kid, what the hell’s got into you?” Becky? Becky was shaking him.

“Now, now calm down—here, sit him down. It’s a stress reaction, that’s all. Call his name, don’t let him get away.”

“Wilson!”

“Wha—”

“Call a doctor, you jerk! What the hell’s the matter, he acts like he’s made of rubber!”

“Stress did it, extreme stress. Keep calling him, he’s coming back.”

“Wilson, you motherfucker, wake up!” In response he pulled her down to the chair and clumsily embraced her, held her against him. A choked noise started in his chest. She felt his stubbly beard rub against her cheek, felt his dry lips come into contact with her neck, felt his body trembling, smelled his sour, rumpled jacket. After a moment she drew back, pushing at his shoulders, and was immediately released.

“God, I feel awful.”

Ferguson gave him some water in a little paper cup, which he spilled at once. “Hell, I—”

“Take it easy. Something happened to you.”

“It was a stress reaction,” Ferguson said. “It’s not uncommon. People in crashing planes, burning buildings, trapped people, experience it. If the situation isn’t terminal, the condition passes.” Ferguson was trying to smile but his face was too pale to make it seem very real. “I’ve read about it, but I’ve never seen it before,” he added lamely.

Wilson closed his eyes, bowed his head and put his fists to his temples. He looked like a man shielding himself from an explosion.

“Goddamn, I wish to hell we were out of this!” He had shouted it so loud that the faint hubbub beyond the tiny office came to a halt.

“Please,” Ferguson said, “you could cause me problems.”

“Sorry, Doctor, *excuse* me.”

“Well, you have to admit—”

“Yeah, yeah, save it. Becky, I’m sorry.”

“Yeah. I’m sorry too.” His eyes pleaded up at her, and she met them with what she hoped was a look of reassurance.

“Don’t think about death. You thought about death. Think about—our camera. Tonight we’ll get our pictures and then things’ll start to move. All the evidence, plus the pictures—nobody will be able to deny it.”

“And we’ll get some protection?”

“Damn right. Whatever the hell happens, it’ll be something. Better than this, God knows.”

For the first time Becky allowed herself to imagine it. What form would protection take? A cold stab of realization went through her—about the only thing that would help would be virtual imprisonment. At first it would mean a good night’s sleep, but then it would get stifling, finally unendurable, and she would give it up—and every moment outside would hold danger, every shadow the potential to kill. It was hard to turn her

mind away from this train of thought. And now death flashed into her own imagination—how does it feel to be ripped to pieces: will there be desperate agony or will some mechanism of the brain provide relief?

She couldn't think about that either. Think about the next moment, not the future. Think about the camera. Men in battle must do it that way, keeping their minds fixed on the next shell hole, shutting out the deadly whisper of bullets, the groans of the unlucky, until they themselves...

She turned her mind from it again and said in a tired voice, "Dick probably has the camera by now. It's nearly three. What say we get over there and plan the stakeout? It's gonna be a long night."

Ferguson smiled a little. "Frankly, I think it'll be exciting. Obviously there's danger. But my God, look at the magnitude of the discovery! All of history mankind has been living in a dream, and suddenly we're about to discover reality. It's an extraordinary moment."

Both the detectives stared at him in amazement. Their lives and habits of thought emphasized the danger of the quest, not its beauty. Ferguson's words made them realize that there was beauty there too. The presence of the werewolf, once proven, would completely change the life of man. Of course there would be panic and terror—but there would also be the new challenge. Man the hunted—and his hunter, so skilled, so perfectly equipped that he seemed almost supernatural. Man had always confronted nature by beating it down. This was going to require something new—the werewolf would have to be accepted. He wasn't likely to submit to a beating.

Becky felt her inner resolve strengthening. She knew the feeling. It often came when they were confronting a particularly rough case, the kind of case where you really *wanted* to find the killer. The ones where a drug pusher was knocked off or some other scum—those you didn't really care about. But when it was an innocent, a child, an old person—you got this feeling, like you were *going* to make that collar. Vengeance, that's what it was. And Ferguson's words had that effect. It damn well *was* an extraordinary moment. Mankind was already in this situation and didn't know it, and had a right to know. There might not be much that could be done about it, not at first, but the victims at least had the right to see the face of their attacker. "Let's call Dick, make sure he's ready. No point in moving through the streets until we have to." She picked up the phone.

"Make sure he's got walkie-talkies," Wilson rumbled. "Civilian models. I don't want them on the police band."

Dick answered on the first ring. He sounded grim. His voice was subdued as he answered Becky's questions. Unspoken was the fact that he also had heard of Evans's death and knew what had killed him. She concluded the brief conversation and put down the phone. "He's got the camera. The radios he'll pick up this afternoon. A couple of hand-held CB's." Becky had felt something new when she heard Dick's voice. There was a strong warmth in her, a sensation of closeness that she never remembered, not even when they were first married. If he had been here she would have embraced him just to feel the solid presence of his body. Too bad for Dick, he was a better human being than he was a cop. Too good to tough out life on the force, that was Dick. God knows it wouldn't make a damn bit of difference to the Board of Inquiry when it came along, but there was a hell of a lot of justice to shaking down organized crime to help an old man in an honest nursing home. His old man. It was going to be hard when he got his Board, Goddamn hard.

Wilson was now staring off into space, vacillating between competent involvement and numbness.

“Come on, George, snap out of it! You’re a million miles away. If we’re gonna organize a stakeout we’d better get it together. We need to take sightings with that camera, set up observation points that are damn well *covered*, all of that. We’d better go over there and do what’s gotta be done before it gets dark.”

Becky hadn’t allowed herself to think about all that had to be done because it meant leaving the momentary safety of the museum and facing the streets. But it looked like nobody was going to think about it if she didn’t. Wilson sure as hell better hold up his end later, when it was going to count.

“I hadn’t realized we were so close to leaving,” Ferguson said. “There are some things I want to know from you two. A couple of things I don’t quite understand. I’d like to get them cleared up before we move. It might be important.”

Becky raised her eyebrows. “So OK, shoot.”

“Well, I don’t quite understand the sequence of events this morning. How exactly did Evans get killed?”

Becky didn’t say so, but she would be glad to hear Wilson’s explanation as well. The werewolves were obviously superb hunters, but how exactly they had accomplished their feats this morning was still fuzzy in her mind.

Wilson replied, his voice a monotone. “It must have started when we were at Central Park West and Seventy-second investigating one of their homicides. Obviously, they had us under observation at that time.” A chill went through Becky, remembering the morning, the crowd of men and cars, the blood-soaked bench. All that had saved them was the presence of so many other cops. Wilson went on. “They knew that they couldn’t get to us easily unless we were in a more isolated situation. So they arranged a lure. It’s a technique human hunters have used for generations. And it worked beautifully in this instance. They went into the park, found an isolated patrolman beating the bushes for evidence and wounded him. The fact that he died later made no difference to them. In Africa hunters tether wildebeest to lure lions. The wildebeest might think it’s unfair, but they aren’t expected to survive. Neither was our lure. As soon as our car pulled up, the werewolves must have started creeping toward it. When we returned to it they would have been underneath, jumped out and—two dead detectives. I guess I got it figured just in time.” He fumbled in his pockets. Becky handed him a cigarette. Something seemed to be coming over him. For a long moment his face kept getting grayer and grayer, then he took a deep, ragged breath and continued. “I was lucky, but them leaving that guy half-killed just didn’t add up. Then I figured it. We were in their trap. That was when I told Becky to take off on the scooter.”

“And Evans—”

“The last I saw he was sitting in the car. You’d have thought he would have locked the doors. I guess he didn’t think of it in time.”

“They opened the doors?” Becky asked.

Wilson shrugged. “What’s surprising about that?”

He was right. It was just hard to accept, even with all she had seen. Somehow you just couldn’t see animals behaving like that. But then, they weren’t animals at all, were they? They had minds, that qualified them as... something. You couldn’t include them as part of humanity. They were fundamentally our enemy. It was in their blood, and in ours. Although they were intelligent they couldn’t be called human. Or could they? Did they have civil rights, duties, obligations? The very question was absurd. Despite their intelligent nature there would be no place for them in human society.

Except as hunter. There was a very definite place for the hyena in wildebeest society,

for the leopard in baboon society. Their presence was respected and accommodated because there was *no choice*. No matter how hard they tried, the wildebeest and the baboon were never going to defeat their predators. So the social order reflected their presence. Baboons protected the young, exposed the weak. They hated it but they did it. You would too, in time.

Ferguson was the first to speak after absorbing Wilson's explanation. "It fits," he said. "That's a very clever plan. They must have been amazed that you got away."

"Unless they're playing games."

"Not likely. You're too dangerous. Can you imagine how it must feel, knowing that your way of life is about to be destroyed by just two human beings? Hell, they probably knock off one or two people a day for food. Hunting you down must have seemed easy at first. No, I don't think they're playing games with you. You're damn hard to get, that's all. Like all predators, when they come up against competent members of the prey species they have a hard time. They aren't equipped to deal with determined resistance. Among animals, this nets out to a trial by strength. The young moose kicks hell out of the wolf. With us it's wits—ours against theirs."

Wilson nodded. Becky noticed that what Ferguson was saying was having a good effect on him. And her too, for that matter. It didn't change the fear, but it added some perspective. You began to get the feeling that the werewolves were almost omnipotent and you were like mice in a trap, just waiting there until they got tired of toying with you. But maybe Ferguson was right. After all they had thus far defeated the werewolves every time. They could go on defeating them. But then another thought came to her, an ugly one that had been hiding in the back of her mind untouched. "How long," she asked, "will they keep up the hunt?"

"A long time," Ferguson said. "Until they succeed—or get talked out of it."

Becky pushed hard at that thought, got rid of it. They couldn't afford an ambivalent attitude. "OK, kids, let's hit the road. We have work to do."

Herbert Underwood was troubled. He was sitting in the Commissioner's outer office. The last cigar of the day was in his pocket but he resisted the impulse to smoke it. Commissioner didn't like cigars. Again Herb went through his mind, touching each point of the case, weighing it, trying to see how it could be used to strengthen his position and weaken the Commissioner's. Word from Vince Merillo, the new mayor's first deputy-to-be, was that the Commissioner still had an inside track to reappointment. That would mean that Herbert Underwood would reach retirement before he reached the top job. And he wanted that job bad. Wanting the next job up the ladder was more than a habit with him. He deserved the promotion, he was an excellent cop. A good man too, good administrator. Hell, he was a better man than the Commissioner. All he needed was a nice, ugly embarrassment for the Commissioner and Merillo would start mentioning the Chief of Detectives as successor. He was sure of Merillo's support. The guy owed him. Merillo was into a bank in a very ugly way and the Chief of Detectives knew it. The DA didn't—and wouldn't as long as Merillo played on the right side of the net.

"Come in, Herb," the Commissioner said from the door of the inner office. Underwood got up and went inside. The Commissioner closed the door. "Nobody here but us rats," he said in his singsong voice. "I got two mayors screaming at me. I got reporters hiding in my file cabinet. I got TV crews in the bathroom. Not to mention the Public." He added in a more clipped tone, "Tell me what happened to Evans."

"Oh come on, Bob, you know I'm up against a brick wall."

“Yeah? I’m sorry to hear that, very sorry. Because it may mean I’ll have to replace you.”

Underwood wanted to laugh out loud. The Commissioner was crashing around like a wounded elephant. The pressure from upstairs must be hell. Bad for him, very bad. “You mean that? It’d be a relief.” He chuckled.

The Commissioner glared at him. “You know, our new mayor is a very smart man.”

“I know that.”

“And so is Vince Merillo, your good buddy.”

Underwood nodded.

“Well, here is what the Mayor and his first-deputy-in-waiting think about this case. Want to hear?”

“Sure.”

“They have got the Wilson theory on their brains. I mean, essentially the Wilson theory. The DiFalco mess, the Bronx mess, the bloody bench, the gutted patrolmen and Evans—”

“All the work of hybrid wolves. I know. I’ve talked to Merillo.”

“So what’s your position?”

“The theory is total bullshit. I’ve known Wilson since we were kids and I think he’s pulling a fast one on us, trying to get us to buy bullshit so we’ll look like fools. Especially me. You I don’t think he gives a damn about.”

“OK. So what else are you working on?”

“I just organized a special squad. They’re going to be under Commander Busciglio of the Fifth Homicide Zone. Goddamn good guy. Good cop, lot of smarts. They will be investigating the three incidents that happened today in Central Park. We’ll be working on the assumption that these incidents are entirely separate from the Bronx case and the Brooklyn case. I think that makes sense. It’s not out of the question that they’re all related, but it’s very farfetched. That enough to keep me from getting fired?”

“You know I’m not gonna fire you, Herb. Hell, you’re the guy slated to kill me off. If I fire you it’ll look like sour grapes to the Mayor.” He laughed. “Can’t let that happen.” He had been standing in front of Underwood, the two men in the middle of the office. Now he went over to a leather chair and sat down, motioning the Chief to follow. “Herb, you and I, we’ve been buddies a long time. I gotta tell you though, I’ve been hearing some things about you that’ve made me very sad. Like, you’re trying to get me dumped, to put it bluntly. Why are you doing that, Herb?”

The Chief smiled. He had to hand it to the Commissioner, the man didn’t play around. “No, sir, I’m not trying anything of the kind. In fact, like on this case, I’m doing everything I can to strengthen your position. I think we’ll get a good solution very quickly. It’ll help you and because of that it’ll help me. That’s as far as my ambition goes.”

Now it was the Commissioner’s turn to smile. He turned on a crinkly, jolly one, wore it for a few seconds, then nodded, seemingly satisfied. He spread his hands in a gesture of meekest assent. “OK,” he said, “just keep up the good work. Glad you’re still on the team.”

Underwood left after further protestations of loyalty, capped by a solemn handshake. The Commissioner watched him go. Hell, with technique like that the guy would make a damn fine commissioner if he won out. Good projection of sincerity. Handles himself well.

But he ain't gonna fuck me. He must think I'm some kind of schoolboy. He closed the door behind Underwood and stood there a long moment. Soon the Chief would be blown so high and wide he wouldn't have a political future of any kind. So the son of a bitch wanted to kill off Bob Righter. Fine, let him try! Now the Commissioner's face set. He leafed through a report on his desk. It was titled "Project Werewolf. Eyes Only." It had been seen only by Merillo, the new mayor, and the current mayor. It had been written by Bob Righter, in longhand.

This was the only copy.

He opened it, reading to review. He had written it three hours ago, had taken it to the Mayor and then to the Mayor-elect. There had been a meeting and it had been agreed that not one word of the report would be made public unless absolutely necessary. The Commissioner started to say his thoughts aloud, then stopped, the words unspoken in his throat. How often do I talk to myself, he wondered. Getting old. But not tired, dammit. Let Herb Underwood realize that once and for all. Not tired. Underwood was going off on a hell of a wild-goose chase. That stinking Wilson had been much closer from the start. Brilliant but a creep. A good cop after his fashion. A good cop with a good partner... Becky Neff... no matter how old you get, you'd still like to get into something like that. Hell, stay clear. Her husband was bent—maybe she was too for that matter...

He dismissed them from his mind and returned to the matter of the report. It was the first time in his career that he had written something so secret, and kept its contents so close to the top. In a position like his a man gets into the habit of using advisers, conferees, administrative assistants. He becomes not an individual but an office. He identifies himself as "we." Not in this case, though. There was too much here to entrust to staff members. It was not only a horrendous crime, it was also a priceless opportunity to completely outdistance Underwood, to crush him. "Herbie's gonna love me," he said, this time without realizing he had spoken aloud. Now that he had the endorsement of both his current and future bosses he would begin to draw together the team that would solve the *real* Werewolf case. He pulled out a yellow legal pad and put it down beside his report. He drew a box at the top, and put the letter *C* in the box. That's me, he thought. Then he drew a dotted line to the Chief of Detectives and put a *U* in that box. And that's as far as he goes. All alone in his box with his Goddamn *U*. Now another box, with a full line to the Commissioner. Call him Deputy Assistant for Internal Affairs. DAIA. OK, now give him a staff. Three more boxes under him, all Police Commanders. Now a team. Three squads under the three Commanders, All high power. Now assign a Tactical Patrol Force Group to the Deputy Assistant, the grunt-work department so all these officers don't have to get their hands dirty. Very nice. About two hundred men. The Mad Bomber had commanded a crew of two hundred and fifty. Son of Sam had tied up three hundred. The Werewolf Killers would be more economical with just two hundred.

Now he pulled a small cassette recorder out of his desk drawer. He rewound the cassette and played it again. Voices, confusion, then a whispered word, unintelligible. Then more. "Mama... hey look out (a sob)... there it is... (Voice: what is it, Jack?) Dog... somethin' weird... don't don't get it... hey... oh, wow that was—oh, hey it cut, cut my uniform... ouch... aaaAAHH! (Voice: Jack, you need more? The doc's gonna give you more painkiller.) Yeah... OK, there was a dog... big motherfucker... weird, like a human face... a couple of others standing nearby... face, not like a person... you'll never get it..." More whispers. (Second voice: the patient is expiring.) Tape ends.

The patrolman hadn't given them much to go on, but it was more than they had gotten before. Enough for a good start. M.O. was established. This added a rough description. He read the first sentence of his report: "The Werewolf Killers are a group of twisted individuals utilizing an extremely skillful disguise..." That was where Underwood was falling down: he didn't realize that there was a whole group, or that they were disguised.

Outside the museum tension was building. The sun had moved far down the sky. The first, faint smells of cooking were coming into the afternoon air. When the subways stopped beneath the street the sound of more and more feet were heard getting off. Man's afternoon ritual of moving back to his nest was under way. And this would also be occurring to the hated ones inside the building. There would be no need to take the risk of going inside after them. Soon they would want their food and their nests, and start their movement. Then the moment would come, not so long from now. Waiting like this made your heart soar, knowing that relief and success lay as the reward for patience. Soon they would come out, very soon.

Garner had returned to the scene of the Evans murder and picked up Rich Fields, the photographer the paper had sent to join him on the story. "We're gonna take some pictures of a couple of cops," he said to Fields.

"What for?"

"Nothin'. Don't even waste film. Just flashes. I want flashes."

"Great. Makes good sense. Keep convincin' me."

"Shut up, Fields, you're too dumb to understand."

They got into Garner's car and rattled out of the park, back up to the Museum of Natural History. Garner felt full of vitamins. There was a Goddamn good story in here and these two detectives were the exact center of the whole little cyclone. Ah, a beautiful story, had to be. Let the *Times* send fifty gentlemen downtown to worry the Police Commissioner, Sam Garner was going to stick right close to these two detectives until he got the story. He parked his car directly in front of the museum and settled back to wait. "Want me to start shootin'?"

"Shut up, Tonto. I'll tell you when. And make it fuckin' good if you don't mind. I mean, run up and flash at 'em. Make 'em mad."

"You payin' my hospital bills, honey?"

"The *Post* 'll take care of you, darlin'. Just do your thing."

He stared at the huge edifice. Sometime soon the two cops would appear in the doorway and start down. Fields would get after them with the camera. No words, no more questions. Those two cops were *scared* already. This would panic them. If they were hiding anything interesting the little picture-taking session would make them think the *Post* was on to it. So next time Sam Garner got to them maybe they'd start trying to save their own asses by doing a little singing.

It had happened before. Pressure breeds information. The first rule of investigative reporting. Make 'em think you know enough to hang 'em, then they'll give you what you need. Visions of delicious headlines went through his head. He didn't know exactly what they said, but they were there. The way it felt, he had a good week of dynamite on his hands. The boss would love it. It must be something really horrible. Whatever was going on, somebody had seen fit to tear the Medical Examiner apart. Not just kill him, but actually tear him apart. The skin had even been pulled down off the skull, the face nearly separated from the body. The throat was gone. The stomach was pulled open and the body severed so completely that the legs fell to the floor of the car when the orderlies tried to move the body. It had been a vicious murder, particularly so, unusually so. A monstrous murder. Hell of a bad thing. All of a sudden he felt kind of chilled, sick inside, like he was going to throw up. "Hurry up," he muttered under his breath. A drink lay just

the other side of this little assignment and he needed it very badly.

“I got some good stuff on Evans,” Fields said. “I mean—that was some mess.”

“I just been thinkin’ about it. Doesn’t make much sense, does it? Whoever did that must have hated the hell out of the guy. And right in broad daylight, right in the middle of the park. Strange as hell, weird as hell, you ask me.”

“Look close, boss. The doll and the old guy?”

“That’s them. Get moving.”

Fields opened the door of the car and walked forward to the base of the statue of Teddy Roosevelt that stood before the museum entrance. In this position he would be concealed from Neff and Wilson until they came down the steps and were beside him. They were moving quickly. Another man, hunched, tall, his hands folded before him, walked just behind them. There was something familiar in the way they moved. And then Fields realized why: in ’Nam, people under fire had moved like that.

As they came nearer he could hear their footsteps crunching on the snow. He stepped out from his position near the statue and started shooting. The flash popped in the gray afternoon light, and the three figures jumped away startled. Almost before he knew it there was a pistol in the hand of the old guy. The woman was also pointing a pistol at him. This all happened in the same strange slow motion that things had happened in the war, when an attack was going on. The closer you got to action, the more events separated into individual components. Then an end would come, usually violent, the roar of a claymore going up, the black arcing shapes against the sky, the screams and smoke... “Goddamn, they have guns and all I got is a camera.”

Something else moved and the old guy’s pistol roared. “Don’t shoot!” But it roared again, sending out sparks. The tall man shrieked. Now the woman’s pistol roared, kicking back in her hand, and roared again and again. But there, off in the snow, something black was skittering along—two things. That’s what they were firing at, not him. Then the three of them sprinted toward Sam’s car. “Come on,” the woman shouted over her shoulder, “move or you’re dead!”

Rich moved damn fast, diving into the back seat right across the lady cop’s knees. She pulled the door closed and extricated herself. “Step on it!” the old guy snarled at Sam, “step on it, Goddammit!”

But Sam wasn’t stepping on anything. He turned to face the old detective who was beside him in the front seat. “What the fuck,” he said in a high, silly-sounding voice.

The detective leveled his pistol on Sam. “Move this vehicle,” he said, “or I’ll blow your brains out.”

Sam pulled out into traffic very smartly. Neither he nor Rich had a mind to ask any more questions just now.

“We got one,” Becky said.

“Not dead,” Wilson replied.

Becky turned to Rich, who was sitting beside her, acutely aware of her salty, perfumey odor, of the warm pressure of her hip against his. “Thanks,” she said, “you saved our asses just then.”

“What the hell happened?” Sam managed to bleat.

“Nothin’,” Wilson replied. “Nothin’ happened. Your buddy with the camera got us riled.”

“Oh, come on, Wilson, tell them,” Ferguson said.

“Shut up, Doctor!” Becky said. “I’ll handle this. We don’t need press, we’ve talked about that.”

Wilson turned around in his seat, his face a twisted, mottled parody of itself. “If this gets out,” he said, “we might as well just kiss our asses good-bye right now! We haven’t got evidence, baby, and without it we’ll come across as a couple of kooks. Lemme tell you what’d happen. Shithead downtown would get us retired disabled. Mental. You know what’d happen then? Damn right you do! Those fuckers’d be on us so Goddamn fast!” He laughed, more of a snarl. Then he turned and faced forward. Ferguson glared at his back.

“Take us to One fifteen East Eighty-eighth Street,” Becky said, “and get the hell away from the park. Go down Columbus to Fifty-seventh and over that way.”

“And move the Goddamn thing,” Wilson said hoarsely. “You’re a Goddamn reporter, you can drive!” He chuckled now, a dry, spent noise. “What’re you gonna put in your gunfire report?” he asked her.

“Cleaning accident. Fired three shots while cleaning.”

Wilson nodded.

“Goddammit, I’ve got a right to know,” Sam said. “I have a right. I was the only reporter in the whole city smart enough to figure you two had the real story. The other fucks are down at Police Headquarters tryin’ to get a statement from the Commissioner. Just tell me what happened to Evans. Hell, what was going on just now I won’t even ask.”

Becky had leaned forward as he spoke, Wilson was in no shape to keep talking.

“Evans got killed. If we knew anything more we’d have a collar.”

“Oh. Then I suppose that shootumup was nothin’. I gotta tell you, you are two very funny cops. I ain’t never seen a cop pull out a piece and fire it like that just for a dog. Hell, that in itself is news.”

“I bet. Just keep your mouth shut and drive, please.”

“Is that any way to talk to a citizen?”

“You aren’t a citizen, you’re a reporter. There’s a difference.”

“What?”

Becky didn’t answer. Through the whole exchange Ferguson had sat motionless, leaning toward Becky Neff in the middle of the back seat, leaning away from the window. Sam noticed that Wilson was also sitting well away from the window, almost in the middle of the front seat. You could almost say that they were afraid something was going to come at them through the windows... except the windows were closed.

Chapter 10

This daylight was a curse. The leader of the pack, the one the others called Old Father, waited behind the fence that separated the front staircase of the museum from the surrounding lawn. He had stationed himself here because he knew that the two were

most likely to exit the museum by this door. It was going to be dangerous, difficult work, sad work. It was the luck of his race to prey on humanity, but at times like this, when he was forced to kill the young and strong, he wondered very much about his place in the world. His children thought of humanity merely in terms of food, but long years had taught him that man was also a thinking being, that he too enjoyed the beauties of the world. Man also had language, past, and hope. But knowing this did not change the need—call it compulsion—to kill and eat the prey. Every single human being he saw he evaluated at once out of habit. He enjoyed the way the flesh popped between his jaws and the hot blood poured down his throat. Living in human cities he gloried in the heady poetry of the scents. The pack was wealthy, for many humans lived in its territory. He loved his wealth, the wealth he had bought so dearly when the pack had migrated to this city. In his own youth their leader had preferred the isolation of rural life to the harder job of maintaining a city territory. Other packs would never try to take the sparse territory of that old coward. Its inhabitants starved in winter and skulked through summer, always wary, always risking discovery.

When he had grown to his full size he had taken his sister and set out south, toward the storied place where an uncountable human horde dwelled. Often they had been challenged by other packs, and each time they had bested the challengers. There had been fights, daylong, burning with ritual hate under which lay the love of the race. And each time these confrontations had ended with the rival pack leader giving way. Then there would be a celebration, a wonderful howl, and the two of them would be on their way. So it had continued until he and his sister had a beautiful space to themselves. They marked their boundaries and bore their first litter. There had been three, a girl and two boys. The weakest male they killed, feeding his soft flesh to the two strong ones. It was their bad luck not to have a perfect litter of four, but still two were better than none. Two years later they had increased their space again and birthed another litter. This time only one male and female, but both were healthy.

This spring the first pair would mate, as would he and his sister once again. With luck they would gain two pairs of pups. Greater luck would bring three pairs or even four. And next year the second pair would mate and still more would come. Not too many years from now he would lead a goodly pack in a large and wealthy territory. From his wretched beginning in the desolate hills he had come to this and was glad.

The only thing that was wrong was the two humans with their forbidden knowledge. If it became general among the humanity here the size of packs would have to be diminished, and even amid all this wealth they would be forced to scuttle like dumb animals... the hunter would be hunted... and it would be on his head and on the heads of his children. For ages hence all the race would remember their failure. His name would become a curse. And his line, the line he had created out of courage, would wither and die. Others would say of him, "Better he had stayed in the mountains."

He sighed, turning his attention back to the problem at hand. Bright daylight still and the scent of the hunted was rising. Yes, they were coming to this door. A few moments more and they would be on the stairs. He snapped his jaw, bringing the others to their stations at the main entrance. The second-mated pair crossed the street and hid under parked cars. That way, if the two got past him they would not get far. The youngest, the third-mated pair, came up and waited with him. His own sister, her coat gleaming with the fullness of her womanhood, her beautiful face shining with bravery and anticipation, her every move calm and royal, went into position on the opposite wall.

There would be no escape this time. At last, the hunt was over. And they would get a bonus thrown in—that tall man with whom the two spent so much of their time, he also would be destroyed.

Very well, but it was all an ugly and dirty business. You don't take life from young. Even the beasts of the forest never preyed on young. Practically speaking it was difficult, but there were also greater reasons. For the pack to live other life must be destroyed. And it was repugnant to do this to the young. When one of their own kind grew old the young gave him death, but before his time he felt a fierce desire to continue and have all of his life. So it must also be for the prey. The few times that he had been driven to kill young he had felt their frantic, struggles, the fierce beating of a life that was hard to still... and had hated himself afterward when his belly was full and his heart heavy.

They appeared at the door, their scent washing powerfully before them. The woman smelled bright and sharp, not like food. And the young man was the same. Only the older one's scent reminded of food; it had that pungency, that sweetness that was the smell of a weakening body. But still it surged and pulsed with life. Taken together their three scents sparkled. He sighed, glanced at the third-mated pair who were with him. Their faces expressed fear. He had made sure they would be with him for this very reason: from this experience they would learn never to kill the young, and also never to allow yourself to be seen. They saw the pain in their father's face, a sight they would never forget. He let them see and hear and smell the full depth of his emotions. And he noted with gratification that what had for them been up to now an exciting hunt became what it ought to be: an occasion of sorrow and defeat.

Now their bodies tensed. Instantly their scents changed. His own heart started beating faster when he smelled their anticipation. The three victims were coming down the steps, their movements and smells broadcasting wariness—yet they came on, oblivious to the trap they were in. Despite his familiarity with humanity the fact that men would *walk* right into the plain scent of danger always amazed him. They had little bumps on their faces for breathing, but these were just blind appendages, useless for anything but passing air in and out of the body.

The three reached the foot of the steps—and the third-mated pair leaped over the fence. Simultaneously a man who had been standing concealed jumped into the path of the three and made flashes. The old father cursed himself—he had known this man was there but had thought nothing of it! Of course, of course—and now his two young ones were stopping—no, go on!—too late, now they were turning away, confused, their faces reflecting a turmoil of questions—what do we do? And guns were rising, everybody running for the park, the crack of the weapons detonating through the air, the pack leaping the stone wall, and each rushing alone into the underbrush.

They regrouped not far away, much closer than was safe. They had all smelled it—somebody in the pack was bleeding.

The youngest male was missing. The father stood with his nose to the noses of his family. They gave him reassurance, all except the youngest female. Her eyes said to him, "Why did you send us?" And she meant, "We were the youngest, the least experienced, and we were so afraid!" In her anger she said that she would not be his daughter if her brother had to die.

Her anger was deep, he knew, and she would not melt to the entreaties of the rest of the pack. Now that such feelings had passed they could never be erased. Even as they trotted toward the place where the young wounded one had hidden himself the father kept shaking his head with grief. "Now look at you," his sister said with her eyes and ears, "you wag your head like a silly wolf! Are you father or child?"

He was humiliated by her scorn, but tried not to let it show. He kept the hair on his neck carefully smooth, fighting the impulse to let it rise. His anus remained closed with a conscious effort: he would not allow his instinct to spread the musk of danger in this place. His tail he let hang straight out, not as a jaunty flag of pride or tucked humbly between his

legs. No, straight out and no wags: this was dignified and neutral, indicating solemnity.

For all his effort his sister said, “Loose your musk, show your grief to your children. You have not even the courage for that!”

His musk burst out, he could not withhold it longer. The clinging smell filled the air. He cursed himself even as it spread, great splashes of it, betraying him, revealing the weakness he felt within.

“I am your father,” he said, now using his tail to its fullest, flashing it in a proud wag, making his ears rise and his eyes glisten. But the scent was that of fear. Its betrayal was complete. His first son stepped forward. “Let me find my brother,” he signaled with the snap of his jaw, and a disrespectful wag of his own tail. The four of them, sister, daughters and son went toward the wounded scent of the youngest male. As soon as they were out of sight their father submitted to an overwhelming impulse and rolled onto his back. He lay there kicking his back legs softly, feeling the warm wave of submission flow over him, relaxing into it, giving up his leadership. But his pack was not there to see, his own son not there to take his father’s throat in his mouth. No, he rolled alone to the unseeing sky. Even if his son replaced him, the boy would never see his father roll.

Now a soft howl arose. The sorrow in it made him tremble. His sister had sounded the note of death! Their youngest boy’s wounds were mortal. Wagging his head he battled himself for control. He trotted toward his next and terrible duty. Although his elder son or his sister would shortly become leader of the pack he was still the Old Father and still must be the one to do this. He stopped his running and lifted his head. Let the humans hear! He would sound his dirge. He did it fully and proudly. And at once he heard the fearful whimpering of his second son. Now he hurried on again, soon coming to the place near the wall where his family stood around a huddled gray shape. Their faces were torn with grief, their mouths dripping with saliva.

They ignored him, deferring to him only outwardly. As soon as this final duty was done his leadership would end. He went to his son, sniffed him. The boy was trembling, cold, his eyes even now rolling up into his head. The Old Father felt the boy’s pain in his very bones. Yet even in his sorrow he felt proud of this boy, who had dragged such painful wounds so far in order to conceal himself from humanity. The young male took a breath and stared a long moment at his father. Then he lifted his muzzle slightly off the ground and closed his eyes.

The Old Father did not hesitate; he killed his son with one fierce bite. The boy’s body kicked furiously in response, his mouth opened wide. By the time his father had swallowed the torn-out tissues of the son’s throat the boy was dead. Immediately the others surrounded him. At once he saw who would assume leadership; his sister.

Now it came down to confrontation: either he would roll or fight. If he fought they would all fight, four of them against him, and all full of rage. Looking at them, he knew that he would nevertheless win such a fight. But at what cost—this pack would become rotten with hate as they followed a father they despised. For the greater good of what he had built he therefore rolled to his sister. She disdained his overture, striding away with her tail held high. Instead his youngest daughter, still quaking with the grief of her loss, took the roll. When she grabbed his throat he closed his eyes, waiting for death. Sometimes those too young for this custom were overwhelmed by their feelings and killed the ones who gave them rolls. Eternity seemed to pass before she released him. Now the whole pack displayed their tails jauntily; his own he tucked between his legs. Leadership lost, his life would become one of risk and danger. The least gesture of superiority would bring them snapping at him. And until his sister, his daughter, and himself had new mates there would be an unsettled, nasty situation in the pack.

There was still a last task to perform before the reorganized pack continued on. They turned the body of their brother on his back and ate him, crushing even his bones in their jaws, consuming every bit of him except a few tufts of fur. He was eaten out of necessity and respect. They would always remember him now, his brave death and good life. Each of them committed the taste of his flesh to precious memory. Afterward they howled, this howl expressing the idea that the dead are dead, and life continues. Then they stood in a circle, touching noses, their joy at being together breaking through all the grief and upset, and finally they opened their mouths and breathed their heavy air together, their hearts transported by their intimacy and nearness.

Still, the old father and his sister were no longer a pair. She now needed a husband, a surrogate-brother who would be willing to accept her as leader. Most males running loose, those with some awful sin on their heads, something so serious that they had been driven from their pack, would welcome such a position. And the daughter who had lost her brother, she also must find a male soon. Already the two females were spreading their scent-of-desire, causing the two males' bodies to react, causing the old father to hunger woefully for his beautiful sister. But his days of mating would probably be over unless some female as wretched as himself were to happen along. Let some time pass, he thought, and then I will spread my own scent for a new mate. Let time pass... and heal.

His sister watched him as he stood confused, unable to decide what to do with himself now that leadership had been lost. Her heart demanded that she comfort him and share his sorrow, but she kept her tail flashing high and did not look at his face. They had made this pack together but their children could not accept leadership from a father who had planned so badly that one of his own children had been killed. It was just, and they all had to live with it. But she could not stand to see him like this! He cringed back, glancing fearfully from face to face. Gone was his beauty, his boundless pride in this little pack. They had been going to build it together, she could not stand the idea of doing it with another. She could not remember a time when she had not been in love with him. Their own parents had paired them in a litter of four and the pairing was from the first one of love.

Until this curse had come down upon the pack there had been nothing but happiness. They were getting richer and richer. The pack could afford to pass over many possible kills, picking only the best and easiest. They could afford to pass up ten for one! And their hunting was easy, always easy in this rich territory.

The day the catastrophe happened they had been preparing to hunt again. They had warm shelter and many potential victims. They even had a nice place to litter, the best they had ever found. All were looking forward to an easy winter and a fortunate spring.

Then had come the news. The first scent of it had arrived on a clear morning in autumn. This scent had been laid at the territorial boundary by their neighboring pack. And so Old Father had met with the father of that tribe and had learned of the dreadful mistake committed by two yearlings on their first hunt. They had taken young male humans, the most taboo of all the taboos, had taken them in a moment of heedless excitement. And the humans had noticed; many had come and investigated. Humanity had taken away the remains the very day after the mistake had been made. So man knew something, more than he should. Then had come the pack's terrible misfortune, the incident that had led them to the position they were now in. They had somehow sparked an investigation themselves. It was fantastic and impossible, but nevertheless humanity had come to the very lair itself and taken away the remains of some kills. How they had cursed themselves then for not consuming even the bones! But it was too late. They could only hope that man would be confused, but he was not. The two whom they hunted now had come up into the lair, had been sniffing about and had almost been killed then.

Those two were the bearers of knowledge, that was why they had come into the lair.

And since then this desperate hunt had continued. It had disrupted the life of the pack, forcing them to follow their quarry into the center of the city, a place of few abandoned buildings, few good lairs. Now it had destroyed their happiness too. She wanted to throw her head back and howl out pure grief but she would not. Could she lead them better than her brother? She doubted it! The alternative was to give it to her headstrong first son who certainly could not equal the exploits of his father.

This son she distrusted. She looked at him, so happily asserting his newfound status over his father. And her beloved brother cringed before the boy—he was that brave, to do even that to preserve the unity of the pack. But a boy demanding such an act needed a lesson. She went to him, sniffed him under the tail. Her hackles rose and she shoved against him. He was a big, strapping boy of three—his eyes glinted with humor as his mother disciplined him. Very well, let him laugh! She demanded that he roll. He did it willingly enough, too willingly. That was the final straw—she grabbed the loose flesh of his neck and bit it hard. He gasped in surprise—he must have thought that she was killing him. Very good, let him think that a mother would kill her son. Let him know just how far his insolent treatment of his father had driven her! She bade him rise and he scrambled up contrite. His eyes were wide, his face full of pain. Blood oozed down his neck. His sister came up beside him and stood staring at her mother. Very good, she's loyal. The mother turned and moved off a little way. The others understood that she wanted to be alone with her thoughts and did not follow. The hurts in her heart conflicted with one another for attention. Her youngest son was dead, her brother, humiliated. She herself was forced into leadership at a desperate moment. The order of the pack had been seriously strained.

It was hard for her to accept that her boy was really dead. He had been bright and eager, brimming over with life. And he had been so fast and strong, the fastest pup they had ever seen! The truth was, though, his mind was not so fast as his body. When the pack gathered together to share the beauties of the world there was a definite confusion in his eyes. And when they hunted, his father sometimes gave him leadership, but it always wound up with his sister. But he was a fine, good male and he loved his life!

There was a sound nearby. She turned to see, completely unafraid. If it was nearby it could not be dangerous or she would have sensed it long before. She saw staring from the brush her brother's eyes. Now why did he do this? It was just like him, flaunting all custom. How dare he stand there staring at her! She tried to raise the hairs on her neck. They would not move. She tried to growl warning but all that came out was a purr.

He came closer, never allowing his eyes to leave hers. Then he shook himself free of the brush and stood there with snow clinging to his fine brown coat. It hurt all the way through her to see him, to smell him so close, to hear the familiar sound of his breathing. Putting her ears back she went to him and rubbed muzzles. She longed to mourn but held herself back with a fierce effort. He sat on his haunches and regarded her. His eyes were full of love and a kind of quiet joyousness that it surprised her to see in so unfortunate a creature. "You take the pack," he said, "our troubles give it to you." And she felt afraid.

He sensed it at once and patted his tail on the ground briskly, a gesture that communicated the thought, "Have confidence." She was fascinated by the way his eyes seemed to sparkle; he didn't even appear sad. As if reading her thoughts, he lifted his eyes and made a low growl. This meant, "A heavy load has been lifted from me." Then he inclined his head toward her, closing his eyes as he did so. "You must take it." The three knocks of the tail and a tongue-lolling smile, replaced instantly by an expression of calm repose. "Have confidence in yourself— I do. I trust you."

These words moved her deeply. She knew that he was relinquishing his pride, his very

life, to prevent discord among the members of the pack. And he was communicating confidence to her not only because she needed it but out of real sincerity. His scent had changed subtly as he talked, indicating that behind his words were love and a certain hard-to-define excitement that revealed his real happiness at her accession to leadership.

She made a series of gestures with her right forepaw, clicking her toenails together. He gestured back, nodded. She punctuated her remarks with brief keening sounds of emphasis. She was telling him that the only reason she had accepted his roll was that their firstborn children would have left the pack if he did not step down. He agreed. Then they rubbed muzzles again for a long time, their eyes closed, their breath mingling, their tongues touching gently. There was nothing but this to express their feelings: long years of companionship, puppyhood together, youth, adulthood. This parting would be the first time that they had not shared life totally. And there was no way to know how long it might last. Although he might become her mate again in the future, it would never be as it was, with the sharing of pack leadership that had so increased their pleasure at being together. Abruptly she turned and trotted away. She could not stay longer with him or she would never turn away again. Full of sadness she returned to the three children. They were standing together in the shadows of the trees, nearly motionless, their dark shapes exuding the smell of fear. Now the truth had begun to insinuate itself into their minds: they dared not trust their father—they did not know if they could trust their mother.

She came up to them exuding an impression of affability and confidence that she did not feel. They rubbed muzzles and the three stood facing her. Just hours ago she had stood thus with them, facing her brother.

Using the language of movements, growls and gestures that communicated so much without the need for articulated words, she outlined the plan of the coming night. It was not an original plan, all it involved was returning to the woman's place and awaiting any chance that might befall. No better plan presented itself, however. The wonderfully canny ideas of her brother had resulted in the death of a member of the pack at no gain. Simple, straightforward plans would be more acceptable to the others now.

She knew that time was running very short for them. Soon they would have to leave the center of man's city, to return again to the outer areas where there were more shadows, more abandoned buildings. Not much more time. The truth was that they were about to lose this hunt. Man would learn about his hunter and the greatest of all taboos would be broken. What were the consequences? Endless trouble for all the race, suffering and hardship and death.

What a monstrous burden for the pack to carry! If only... but the past was the past. If it happened failure would have to be accepted. She thought that thought but her heart screamed no, they must not fail. *Must not.*

Sam Gamer watched the two detectives and their friends rush into the apartment building. They huddled past the doorman and disappeared. The afternoon had become unseasonably warm, and they had splashed through slush as they ran, not even bothering to step around the puddles.

"Unbelievable. Can you beat that?"

"Splashin' in the puddles?"

Garner closed his eyes. Fields was a nice guy but his was not one of the great intellects. "Let's have some ideas about what's going on with these folks."

"Well, they shot a dog over there at the museum."

"That was a dog out there in the snow? You sure?"

"Looked like a shepherd to me. And it ran like hell even though it musta taken at least

a couple of slugs.”

“I didn’t see it.”

“What can I tell you? It was very fast.” Garner pulled back into traffic. He would return to the museum, examine the snow-covered lawn. Surely there would be blood if something had actually been shot.

They drove back through the streets until they reached the area where the encounter had taken place. “Come on, and bring your camera.” The two men helped each other across the fence that separated the museum lawn from the sidewalk. There were marks there, perfectly plain to see. The melt had distorted their shape, but it was still clear that they had once been pawprints. And there was an area spotted with blood and little clots of meat. Farther on, toward the street, was another tiny drop of blood. Just over the fence more could be seen. With the photographer cursing, the two newspapermen crossed the fence again. Sam Garner loped across the street and trotted up and down before the stone wall that marked the boundary of Central Park. Then he saw what he was hoping to see, a long bloody scrape on top of the wall. “Over here,” he called to Fields, who was busy trying to stomp wet snow off his shoes. On the way across the street he had slipped into a slushy puddle.

“My feet’re gonna freeze,” he moaned.

“Come on! Help me across this friggin’ wall.”

He was only too glad to give Garner a leg up. Sam scrambled to his hands and knees atop the wall and then dropped over into the park.

At once everything changed. Central Park in winter is as quiet as a desert. This was true especially up here near the wall, away from the paths, an area choked by snow-covered bushes. Garner turned and looked back. Fields was not following. “Fine,” he thought, “I’ll get the Goddamn story myself. Better not be any pictures.” He pushed bushes aside. It was cold and wet in here and he wasn’t dressed for a stroll in the shrubbery. Then he saw it again, the little red trace lying on the snow. And there were more pawprints here, at least three sets. Whatever made them had gone tearing through here not too long ago. A pack of wild dogs running from two trigger-happy detectives? What the hell, this was getting interesting.

He followed the tracks a few more yards, then stopped. Before him was a great smear of blood, and leading away from it were heavy splashes, impossible to miss. This trail led up a low rise and into even deeper brush. Cursing, Garner followed it. Low branches overhung, dropping snow on him every time his bent back brushed against them. He clambered along from splash to splash, and came upon a place where branches had been broken, many paws had ground away the sodden snow, and everything was bloody. “Oh God,” he whispered. Bits of meat and fur were scattered all around, lying half-frozen on the ground, stuck in the bent twigs. It was a fearful sight and it made Garner feel suddenly alone and afraid. He peered into the bushes around him. Were shapes moving there beyond the edge of visibility? This place was awfully quiet. It had the sullen atmosphere of a crime scene, a place where violence had been done and gone, and it stank. All around there was a nasty, cloying animal smell. It was musty, reminding him... it was a female odor, mixed with the stench of the blood. “What in hell is this?” he said softly. His mind turned to the two detectives, to the strange events of half an hour ago. What in hell was going on here?

He backed away from the area slowly, carefully. Sweat was popping out all over him. He gritted his teeth, fighting an impulse to turn and run wildly through the trees. Instead he walked as softly as he could. Not far off he could hear the rumble of traffic on Central Park West. Yet it seemed an eternity away right now in this savage, inhuman place. That

was the word to describe it—inhuman. There was a powerful and monstrous presence about the spot, the blood, the bits of flesh, the horrible odor—it all combined to produce in Sam Garner an overwhelming dread that seemed to rise up out of his dark core and threaten to reduce him to blind, running panic. He moved faster but he did not run.

“Hey, Sam,” came a distant voice. “Sam!” Garner heard it but was afraid to answer, afraid to raise his own voice. Something was near him, he was sure of it, pacing him, keeping just out of sight beyond the bushes. He broke into a trot, then a loping run. Branches lashed at him, scratching his face, knocking off his old fur hat, cutting his hands as he struggled. Then the wall was before him, too high to scale from this side. “Rich,” he shouted, “*Rich!*”

The photographer looked down. His eyes opened wide, he let out a high bleat of a scream.

“Help me!” Garner shrieked. He raised his arms, grabbing frantically for the photographer’s outstretched hands. Slowly, painfully he clambered up the wall and with Fields’ help got over onto a bench.

“Good Christ, what the hell was that thing?” Fields babbled.

“Don’t know.”

“Come on—gotta get out of here!” Fields ran to the car, causing traffic along Central Park West to screech and skid as he hurried across the street. Weakly Sam Garner followed him. He was sick with fear. Something unspeakable had been going on in that park, and he had been paced by some kind of hellhound as he had left.

He jumped into the car, slammed and locked the door and leaned his badly scratched face against the steering wheel. “What was it?” he whispered. Then he looked up at Fields, blinking tears out of his eyes. “What was it!”

Fields was embarrassed and looked away. “Dunno. Lots bigger’n a dog.” Now he mumbled. “Had a sort of... face. Good Christ...”

“Describe it! I’ve got to know.”

“Can’t... only saw it for a second.” He shook his head slowly. “No wonder those two cops are trigger-happy. That thing came straight from hell, whatever it was.”

“Bullshit,” Garner replied. His chin was jutting out now, he was regaining himself. He took deep breaths. “Bullshit, whatever it was it was real. A flesh and blood something-or-other. Tasmanian devil, I dunno. But one thing is sure, it’s on the loose in New York City and it’s damn well gonna be big news.”

“So a wild animal escapes. Page two.”

“Ha! Think about it. Mutilation killing in the park. Cops scared to bejesus of something that looks like a dog. Then we get a closer look, and it ain’t no dog that’s spookin’ ’em.” He stopped, a powerful and withering image of that *thing* in the bushes near him overcoming his pugnacity. He hadn’t seen it clearly but he could imagine— “Rich, there was a fuckin’ bloodbath in there. I mean, I found a place where there was so damn much blood it looked like a slaughterhouse. Something got it bad there, man, not so long ago, and the *smell*, Holy Christ!”

“Smell?”

“It was obscene. All the bushes were covered with it, like something had been sprayed on them. You couldn’t see it but you could smell it. It was like—”

“What?”

“I don’t know. Never mind.” Out of the corner of his eye he thought he saw a fierce, inhuman face peering over the wall so he put the car in gear and moved out. He got away from there, going downtown into the heart of the city. Their press credentials made it easy to park, so they stopped at the Biltmore for a drink.

“The place is quiet,” Sam muttered, “and there ain’t any other newshounds hangin’ around. I just want to get myself together again.”

Fields didn’t protest, just followed “So whaddaya think?” he asked as soon as they had slipped onto a couple of stools at the luxurious mahogany bar.

Sam didn’t answer. “Perfect Manhattan, up,” he said to the bartender. “They know how to make a Manhattan here,” he growled. “That’s my definition of a good bar.”

“What’s going on, Sam?” Fields was insistent now. He wanted to know. This was a good story and there were going to be great pictures. He certainly wasn’t going to tell Sam Garner, but he had gotten a good look at the thing that had been following the reporter. It had come out of the brush just as Sam reached the wall and had sat and watched him go. Then its ears had snapped toward Rich Fields and it had simply disappeared. There it was one second, then a flash of gray and it was gone.

There had been a perfect picture there for a second before the thing had taken off. But Rich Fields hadn’t taken a picture. For that second he had been frozen, staring at the most horrible living thing that he had ever seen. But it had all happened so fast. You couldn’t be sure about moments like that, maybe it was a trick of light on a dog’s face. He eyed Garner. “What was it?” he asked.

“How the hell do I know! Quit ridin’ me, you ain’t an editor. It was somethin’ weird. Out of the ordinary.”

“Well, that’s obvious. Did it kill Evans?”

Garner raised his eyebrows, looked at the photographer. “Sure. And it was responsible for the bloody bench the cops found this a.m. too. It’s a monster livin’ in the park.” He stared a moment at the drink before him. “Monster Stalks Park. It’s more a *National Herald* story, ain’t it? There’s no proof, except what we *might* have seen. That won’t work in the *Post*.”

Fields nodded his head slowly. He sipped his Martini. Garner was right about this place; you spent half your life around fifth-rate bars, you forgot how great a skillfully made Beefeater Martini could be. Right now it really hit the spot. “We gonna file?”

“Not yet. There’s too many loose ends. I think we might get lucky, wrap it up nice and pretty. Those two detectives, they’re scared shitless about this. You know what they did, they shot one of those things on the museum lawn. They were scared of being attacked. I’ll tell you what’s goin’ on. We got some kind of a holy terror loose in this town and the police are scared to make that fact public.”

Fields smiled. “That’s gonna be a very beautiful story, Sam. If we can get it together, that is. It’s gonna be very hard to get together. We sure ain’t gonna trap one of the beasts. And I can’t see us workin’ it out of those two cops. I think we got a toughie on our hands.”

“Brilliant insight, Dr. Freud. It’s a very tough story, but we’ll break it—if we live through it.”

Fields laughed but not very hard.

The human had come snooping along, following the blood trail of the dead child. As

soon as he dropped down from the wall the old father was aware of the human interloper. He was a small man with quick, light movements. His face was tense with curiosity. His movements were halting and confused though, as if the trail was hard to follow. And evidently it was; the human was tracking by eye from blood droplet to blood droplet. Three times the old father thought that the man would lose the trail but each time he had regained it once again. And he kept hurrying along between the branches, oblivious of the fact that the old father was never more than six feet away.

The rest of the pack had moved off, getting away from the scene of this afternoon's disaster. Only the old father had lingered behind, drawn by his sorrow to stay near the place where his son had died. He himself had been about to go, to fall into his new place at the bottom of the pack, when he had heard the scrape and thud of the human dropping over the wall. He had scented the man almost immediately; it was a fresh smell, mostly of the cloth in which the man was wrapped. But even so the flesh beneath the wrapping had a definite odor—a healthy man, one who smoked heavily but did not breathe poorly. He came along, crunching and clattering, his lungs loudly passing air in and out. As he got closer to the spot where the boy had died the old father stifled an intense urge to kill him. Here was another human meddling in the affairs of the pack, further evidence that knowledge of the clan was spreading.

The man clambered up the slope that led to the very spot that was still covered by the young male's blood. And he entered the bush under which the death had taken place. A stifled sound came from the man. The old father rushed up to the bush, then stood very still as the man came out.

The human did not see him but seemed to sense his presence anyway. Fear had come into the man; here was something unknown, and it made the man want to return to his own kind. The man ran along with the old father just behind. He was in a fever to kill this human, so much so that his mouth hung open. It took every ounce of strength for him to let the creature escape. All his instincts screamed at him, kill it, kill it *now!* But he knew in his mind that this would be a mistake. They could not risk so much killing and after all the man had seen only blood. The snowmelt would wash most of it away before more humans could be brought to this place. Also, the pack was not here to help him dispose of a body. It would have to be left here until he could get them back. They were not likely to respond to his signal although his voice carried for miles. He was no longer pack leader, he would have to run and get them if he wanted them. And while he was gone, other humans might discover the carcass of this one, making the problem faced by the pack that much worse.

Nevertheless his mind was not his whole being. Underneath it were the powerful emotional currents of his race, currents that now tore at him and demanded that he kill the intruder, tear the creature apart, end the threat.

Then the man was at the wall, screaming for help. A pale face appeared above the wall. For an instant the old father met the eyes of this human; looking into human eyes was a little like looking into the eyes of an old enemy, or even a beloved sister.

He should not be here—run! And he ran, moving back into the brush in the wink of an eye. Then he sniffed the air, located the pack and started off after them. His mind was spinning with the terrible knowledge that another intruder had come, and he was alternately relieved and guilty that he had not killed the thing. This conflict made him feel angry, and his anger fed his desperation. Wild, mad thoughts began to roll in his brain. He wanted the danger to be over. The pack had to prosper. Soon they must win this battle against humanity. With the appearance of this new factor—the stranger who sought the lair of the pack—came proof that the forbidden knowledge was spreading. It had to be stifled at the source, and soon. “Tonight,” he thought as he trotted, “or it will be too late.”

Chapter 11

With the coming of night the wind rose. It swept down out of the north, freezing and wild, transforming the afternoon melt into a cutting mantle of ice. The warmer air that had lingered over the city became clouds and blew away to the south, and remaining in the sky were the few stars that defied the electric flood below, and a crescent moon rising over the towers. The bitter wind flooded along the avenues of Manhattan, carrying with it an ancient wildness that seldom reached the inner sanctum of the city; it was as if the very soul of the frowning north had swept from its moorings and now ran free in the streets.

Buses crunched along the ice-slick pavements, their tire-chains clattering and their engines wheezing. From steaming grates came the rumble of subways. Here and there a taxicab prowled in search of the few people willing to venture into the cold. Doormen huddled close to the glittering entryways of luxurious apartment buildings or stood in lobbies staring out at the wind. Inside these buildings normally docile radiators hissed and popped as overstrained heating systems fought to maintain comfort against the freeze.

The last light had disappeared from the sky when Becky opened her eyes. Beyond the bedroom door she heard the drone of the evening news. Dick, Wilson, and Ferguson were there watching. She rolled over onto her back and stared out the window at the sky. In her field of vision there were no stars, only the bottom point of the moon slicing the darkness, cut off by the top of the window. She sighed and went into the bathroom. Seven-thirty p.m. She had slept for two hours. Disconnected images from her dreams seemed to rush at her from the air; she splashed water on her face, ran a brush through her hair. She shook her head. Had they been nightmares, or mere dreams? She couldn't quite remember. Her face looked waxy in the mirror; she took out her lipstick and applied a little. She washed her hands. Then she returned to the bedroom and pulled on her thermal underwear, then threw on jeans, a flannel shirt, and added a heavy sweater. The wind moaned around the corner of the building, making the window bulge and strain. Long fingers of frost were appearing on the glass, twinkling softly as they grew.

Becky walked into the living room. "Welcome to the real world," her husband said. "You missed the show."

"Show?"

"The Commissioner announced that Evans was killed by a gang of nuts. Cult murder."

Wordlessly Wilson waved a copy of the *News*.

Becky shook her head, didn't bother to comment, "Werewolf Killers Stalk Park—Two Dead." So ridiculously confused, so mindless. The Commissioner just couldn't grasp the truth, none of them could. She found her cigarettes and lit one, then flopped down on the couch between her husband and Wilson. Ferguson, slumped in their reclining chair, had not spoken. His face was drawn, the skin seeming to have stretched back over the bones, giving him a cadaverous appearance. His mouth was set, his eyes staring blindly in the general direction of the television set. The only movement he made was to rub his hands slowly along the arms of the chair.

Becky wanted to draw him out of it. “Doctor Ferguson,” she said, “what’s your opinion of all this?”

He smiled a little and shook his head. “I think we’d better get our proof.” He felt his pocket for the rustle of paper. His notes on Beauvoy’s hand signals were there, ready for reference in case his memory slipped.

“He means we’ve run out of time,” Wilson said.

“So what else is new. Any of you guys hungry?”

Everybody was very hungry. They wound up ordering two pizzas from a place down the street Beer and Cokes they had in the refrigerator. Becky was just as glad, she didn’t particularly care to cook for four people. She leaned back on the couch crossing her legs, feeling the weight of the two men beside her. “We got everything?” she asked.

“Two radios and the camera. What else is there to get?”

“Nothing I guess. Anybody been upstairs?”

Their plan was to stake out the roof and man it in relays. One would stay there with the camera while the other three waited below. The reason that they didn’t go up in pairs was that they hoped it would help to keep the chance of being scented to a minimum. The three in the apartment would keep in touch with the one on the roof via the handheld radios they had bought. Dick had purchased them at an electronics store, two CB walkie-talkies. They could have checked out a couple of police-issue models but they didn’t want their traffic overheard on the police band. No sense in attracting attention. By tomorrow morning it wouldn’t matter; they would have the pictures they needed. Becky’s eyes went to the camera, its black bulk resting on the dining room table. It looked more like a flat-ended football than a camera. Only the shielded lens, reposing like a great animal eye deep in its hood, revealed the thing’s function. They had all handled it earlier, getting used to the awkward shape and the overly sensitive controls. You could take pictures almost without realizing you had started the camera, and the focusing mechanism could be very frustrating to work if your depth of field was changing rapidly. How soldiers had ever used it in battle was beyond understanding. And it was terribly delicate, threatening to break at the least jostle or to lose its onboard computer if the batteries weakened too much.

But it worked miraculously well when it worked. “Anybody tried it out yet?” Becky asked. “You’re going to be the first.” She nodded. By mutual agreement she would stand the first watch on the roof, eight to ten-thirty. They had divided the hours of darkness into four two-and-a-half-hour segments and allocated the watches. Becky took the first, Ferguson the second. He had argued that he wanted to take his watch in the alley where he could confront the Wolfen, as he called them, personally. But he had been overruled. The third watch, from one until three-thirty, was to be Dick’s. This was the most likely time for the night’s attempt. Always when they had come before, it had been during this period. Dick had insisted on this watch, saying that he was the best choice, the strongest and the most fit. Becky couldn’t deny it. She and Wilson were exhausted, God knew, and Ferguson was showing signs of cracking. Dick was the strongest, it was right that he go at the most dangerous time.

Still, she did not want him to go. She found herself drawn to him in a strange, dispassionate way that she did not associate with their married love. There was something about his vulnerability that made her want to protect him. Physically there was no real attraction, but there was a quality of spirit that attracted her strongly—he had been willing, after all, to put his whole career on the line to keep his father out of a welfare nursing home. He had always been good and kind to her—but there was something inside him that was growing, a kind of wall that shut her out of his heart, kept

her away from his secret thoughts. She wanted to be there but he refused her entry, and maybe not only her but himself as well. He brought tenderness and physical intimacy to the relationship but he did not bring himself. The real Dick Neff was as alien to her now as he had been when they first met. And her spirit, after hungering and trying for his love these many years, had simply given up. She knew now what was missing in their relationship and she had begun to try to do what she could to repair the damage. Mostly, it was going to be up to Dick. She longed for him to open himself to her, to give her more than a thin veneer of himself to go with his urgent sexuality, but she felt that in the end he would fail. Exactly why she felt this way she could not say, but she did feel it. Perhaps it came from the coldness she saw in his eyes, and the lust that filled them when she so desperately wanted to see love. Dick had been scarred in a way that many cops are scarred. He had seen too much of life's miseries to open himself to any other human being, even his wife. When they were first married Dick would come home hollow-eyed with sorrow, unable to articulate his feelings about the horrors he had seen. He would describe them woodenly, all emotion absent from his voice.

There had been a child suicide, a little girl of twelve who had died in his arms of self-inflicted burns. She had pressed herself against a gas stove, then lurched, in flames, through a window into the street.

There had been a mother, pregnant, beheaded by a gang of teenage junkies. He had been first on the scene, witness to the spontaneous abortion and miscarriage delivery of the seven-month fetus.

There had been many others in his years on the street, most of them connected one way or another with drugs. These experiences plus his time in Narcotics had made of him an obsessive, consumed man with only one goal, to destroy the dealers who destroyed the people.

The obsession had to be compromised in so many ways that his hatred of crime had turned into self-loathing, a mockery of his personal worth. Problems, to a man like Dick, caused a slow closing of his heart, a shutting out of life, until there was nothing left but anger and animal lust and a vague, overshadowing sorrow that he could not voice.

Becky knew these things about her husband, and longed to tell him about them. But it was hopeless, and this hopelessness was now driving her away from him. She was rapidly reaching the point where if she could not help him, she would have to leave him.

And there was Wilson. George Wilson, a grumpy, unappealing creature with an open soul. He might grumble and threaten, but you could open Wilson up and get inside. And he loved her with boyish desperation. When his overtures were accepted he was amazed and gratified. He wanted her in a raw, urgent manner that possessed him right down to his core. She knew that he dreamed about her at night, that he held an image of her in his mind's eye during his waking hours. And they fit one another in strange and satisfying ways.

Such thoughts were dangerous. How could anyone in her right mind want to trade the young, vital Dick Neff for a busted-up old man like Wilson? Well, she was thinking about it more and more lately.

The doorbell rang, and in a few moments they were eating pizza. "You still sulky, Doc?" Becky asked Ferguson. He was brooding more than he should; she was trying to draw him out.

"I'm not sulky. Just contemplative."

"Like a soldier before a big battle," Wilson said. "Like me this afternoon."

"I wouldn't know, I've never been in a battle. But let's just say that sitting up there on

that roof half the night isn't my idea of my proper role."

"Your idea is to go down to the alley and get yourself killed."

"We don't know their capacities, but I think I have the means to communicate with them. On the roof, you'll be in danger as soon as they become aware you're there. You'll be hidden, they'll see it as a threat."

"And climb all thirty stories after us, I suppose."

Ferguson stared at her. "Obviously."

"Carl, we'll have the Ingram up there. Have you ever seen what an Ingram M-11 can do?"

"No, and I don't want to. I'm sure it's very lethal. Naturally all you can think of is kill or be killed. And what about all the other buildings? A sea of windows. Will you really start spraying high velocity bullets around? I doubt it." He settled glumly into his chair. He was right, too. Not one of them would feel free to use that gun on a rooftop in the middle of Manhattan. Hell, you wouldn't want to use any gun in such circumstances, surrounded by so many innocent lives. But the gun was the only real protection they had. Its value lay in the fact that it would provide accurate coverage over a wide area and do it fast. A shotgun could do that too, but they were afraid that buckshot would lack stopping power. One slug from an Ingram would knock a heavy man ten feet. They wanted that kind of punch if they were going to come up against the werewolves.

"How likely are they to spot us?" Wilson asked suddenly. He had been gobbling pizza; it had not seemed as if he was following the conversation at all. Ferguson considered. "The more senses they can bring to bear, the more likely. If scent was all they had, we'd have a chance. Unfortunately they have hearing and sight too."

"We can be quiet."

"How? Stop breathing? That's more than enough sound to give you away."

"Then we've gotta hope we see them first, don't we? You spot 'em, you take a few pictures, you get the hell inside."

Ferguson nodded. "Assuming we see them first— or at all."

"Look, we've been through that. They aren't going to come up through the building and they aren't going to climb the balconies that overlook Eighty-sixth Street. That leaves these balconies, the ones that overlook the alley, as their only route of attack. So if each person just keeps that camera focused on that alley, we're gonna see them if they come. That's damn well where they'll be."

The disconsolate look on Ferguson's face didn't change. He wasn't buying Wilson's theory, at least not enough to improve his disposition. "Have you imagined what it'll be like up there fooling around with that damn camera while they are swarming up the balconies? I have, and believe me it isn't a very comforting thought."

"You'd have a good thirty seconds before they reached the roof," Becky said.

Ferguson leaned forward in the chair, stared at them with contemptuous eyes. "Assuming you even see them coming."

"That's the whole purpose of the camera, for Chrissakes! It makes it like daylight. We damn well will see them."

"Human senses against Wolfen senses," he replied bitterly. "Technology or no technology, there is absolutely no comparison. Let me tell you something. Whichever one of us is unlucky enough to be up there when they come is going to be in very great

danger. Let me repeat, *very great danger*. Unless we all realize that all the time, every second, it is very likely that one or more of us will be killed.”

“Jesus Christ, we don’t need that!” Dick blurted. “I mean, what a fucking—”

“Dick, he doesn’t understand. He’s not a cop.” You don’t look at things that way when you’re on the force. Maybe it’s true, but brooding on it isn’t the kind of thing that increases a man’s effectiveness.

“He’s doing a cop’s job. Oh, no, wait a minute. No cop ever had an assignment like this before. But at least we’re prepared for it—this guy obviously isn’t”

“I don’t have to be here at all, may I remind you. In fact, I ought to be in that alley.”

Dick started to speak. Becky knew him well enough to know that he was about to get angry, to lash out—and they needed everybody, even Ferguson.

“Dick’s right,” she said quickly, “let’s not talk about it. I’m due to go up in ten minutes anyway, so enough said.”

“OK,” Dick said after a long moment. Ferguson glanced nervously at his watch and was silent.

She went into the bedroom and put a cardigan on over her heavy sweater, then wound a thick cashmere scarf around her neck and put on her pea jacket. She drew fur-lined gloves on her hands and dropped an electric pocket warmer into the jacket. She already had on three pair of socks and snow boots. She pulled a knit hat down over her ears and added a fur cap.

“Jesus,” Wilson said, “you look like a mountain climber in that outfit.”

“I’ve got two and a half hours in that wind.”

“I know, I’m not arguing. Let’s test radios.”

The concern in his eyes touched her deeply. He turned on one handset, then the other, and when they were both running they squealed. “Good enough,” he said. “I’ll be over here near the terrace. We oughta get a good signal as long as I don’t move too far back in the apartment and you stay near the edge of the roof. You got the signals straight?”

“One dot every five minutes. Two if I want to go to voice. Three if I need help.” Instead of talking they planned to signal as much as possible by pressing the mike button. It would keep the noise down.

“Right. But give us a vocal as soon as you get up there and another just before you’re ready to come down.” He glanced over her shoulder. Dick was adjusting the camera, Ferguson was facing the TV set “Come closer,” Wilson said in an undertone. She stood face to face with him and he kissed her a long moment on the mouth. “I love the hell out of you,” he said. She smiled at him, put her finger to her lips, then turned and went into the dining room. She was glad—he seemed to be recovering some of his customary strength.

“Camera’s good,” Dick said. “Just for God’s sake don’t drop it over the ledge. They’ll have my head six ways from Sunday if I don’t bring this thing back intact.”

She took it from him, carrying it in both hands. Her thermos of hot coffee was under her arm.

“Wait a minute, kid,” he said. “Isn’t something missing?”

“If you mean the Ingram, I’m not taking it.”

“You damn well are.” He went into the living room and lifted it out of the box Wilson had brought it in. “It’ll fit right up under your pea jacket, very nice and snug. Take it.”

“I’ve got my thirty-eight. I don’t want the Ingram.”

“Take the fucking thing, Becky!” She took it from him. His mouth trembled as he gave it to her. They said nothing; there was nothing more to be said.

The three men accompanied her to the elevator. It seemed unlikely that anybody would be encountered on the way up, but if they were, the presence of four people in the car would draw attention away from Becky’s strange outfit and equipment.

The elevator rose smoothly to the thirtieth floor. All four of them got out. They went into the stairwell through the gray-painted exit door. The wind could be heard above, booming against the door that led to the roof. Becky ascended the single flight of stairs, followed by Wilson and Dick. Ferguson remained below.

“OK, kid,” Wilson said, opening the door. It faced north, and as soon as he opened it a brutal gust of ice-cold wind poured in on them. Becky barely felt it under her layers of clothing. She tromped out onto the roof—and nearly fell flat. The snow had melted up here and now the melt was a layer of ice. She stood bracing herself against the jamb of the open door, staring down at the two men huddled on the steps behind her. “Icy as hell,” she shouted over the wind.

“Can you make it?” Wilson hollered back.

“On all fours.”

“What’s that?”

“*On all fours.*” And she pushed the door closed. At once she was plunged into a dark and alien world. The wind boomed and every move caused her to lose purchase on the ice. The roof was flat, its expanse broken only by this door and by a shed about ten feet away that housed the elevator motors. The building was large and the roof area was wide, perhaps a hundred feet on a side. This area, roughly square, was covered in gravel which made the layer of ice bumpy and even more difficult to walk across. If she stood still the wind moved her of its own accord, causing her to lean into it and stumble until she was down on all fours. Her eyes were tearing and the tears were freezing on her cheeks. Lights whirled past. She huddled against the door, her back to the wind. She pulled out the pocket warmer and cradled its fitful heat near her face. The Ingram’s butt jutted into her left breast, the coffee thermos threatened to roll out from under her arm, the walkie-talkie and camera further impeded her movements. She looked around. Lights glowed up from three sides of the building. Those were the street sides. The fourth side, which disappeared into a maw of blackness, overlooked the alley.

Putting the pocket warmer away, she braced herself and crawled toward the dark edge of the roof. For safety she finally went down on her stomach and slithered as best she could with all the equipment. The edge loomed closer, the wind rocked her prone body. Cold ripped into her, cutting under the pea jacket, so bitter that it felt like fire against her skin. She kept telling herself that she was crazy, she had to turn back, there was no way to endure this for more than a few minutes.

But she went on, dragging herself closer and closer to the edge of the roof. At least the alley was on the south side of the building and her back would be to the wind.

She reached the edge, touched the concrete lip of the roof with her gloved fingers and paused. The lip was about three inches high, a bare handhold. Methodically she inventoried: thermos, radio, camera, weapon. OK, now pull into position. She dragged herself closer to the edge, pulling with her cold-stiffened fingers until her face was just at the lip of the roof. Before her was an empty expanse that plunged into dark. South of the building was a sea of brownstones and older, lower apartments. Beyond them she could see all of midtown Manhattan, the lights glimmering in the wind, the moon now risen high

above the city. In the sky the anti-collision strobes of passing planes stuttered. Far to the west a fitful carmine glow marked the very end of day. But here the night was total, and the alleyway below was unlit except by the faint glow from the windows of apartments low down in the building.

Clumsily she maneuvered the camera before her face, felt for the button, and turned it on. Immediately the readout jumped into the viewfinder and she pressed the focusing lever. The alleyway swam into view, uncannily bright and detailed. She could see trashcans, see the frozen snow covering their tops. The brownstone houses across the alley all had gardens, and she could look into their shadows and see the frozen remains of summer flowers, the hard limbs of naked trees. The windows of the brownstones were almost too bright to look at, but when her eye adjusted she could see people inside, most of them sitting like statues before television sets. One young family was eating dinner at a table behind a glass door. There were four of them, two adults and two children. She could make out the faces clearly.

Now she pulled the camera back, cradling it against her chest, and drew the walkie-talkie around to her face. It had been hanging from its strap along her back. Clumsily she turned it on, held it to her ear so that the mouthpiece fit under her lips. This would be the only voice transmission and she didn't want it to last any longer than it had to. For all she knew they were out there somewhere right now watching and waiting. "You there?" she asked quietly.

At once there was a reply, Wilson: "Hear you." She reported briefly. "I'm in position, camera operating, cold as hell."

"Hell's hot."

"Right. Let's test signals."

She released the mike button, then pressed it once, holding it down for about three seconds. Downstairs

Wilson followed suit. The result was a detectable change in the hiss that came from the speaker. She replied with two presses of her mike button. Wilson responded immediately with the same. The emergency signal, three presses, was not tried. It was reserved only for trouble. If one and two worked, three would also. "OK by me," she said. "OK," came the reply. "You'll get your first signal five minutes from now."

Then there was silence. In five minutes Wilson would press his mike button once and she would reply with the same. So it would go for the next two and a half hours. Every five minutes they would renew contact, thus insuring that the cold would not lull her into sleep. If she ever failed to reply they would be on the roof in a matter of minutes. She thought of them down there together in that apartment and hoped they kept away from each other. Wilson and Dick were not friendly, to say the least And Ferguson was so nervous the least bit of tension might send him into a panic. The wind rocked her body again, making her cling to the edge of the roof with her free hand. Leaving the walkie-talkie against her ear, she withdrew the pocket warmer and put it on the roof just beneath her chest, making a tiny area of relative warmth that would keep her neck from freezing as the tendrils of Arctic wind curled around her body.

She repositioned the camera and made a sweep of the alley peering through the viewer. Nothing. Closing her eyes she turned her face into the pocket of warmth under her chin. The wind kept pulling at her, kept her body tense, her mind on the ragged edge. It was going to be a long and brutal watch. The first signal came through and she replied, then made another sweep and again bowed her head.

This continued through the first hour. At the end of that time she pushed back from the edge of the roof, put her equipment down, and stood up. Methodically she stomped

until she was sure her feet were unfrozen, then jogged in place for a few moments. She blew into her gloves, grateful for the warmth that this produced. She drank a few swallows of coffee. Overall she was in good condition. She struggled across the roof and peered down the three street sides. Each one revealed the same scene: an empty street with the ice glaring yellow-white under the sodium-arc streetlights. Aside from a few parked cars there were no signs of humanity.

Then she noticed one of the cars. It was double-parked and it looked a lot like an NYPD unmarked car. Why the hell would it be here? It could only be a stakeout. But from this height who could be sure? Then the wind hit her and she had to go back to hands and knees, crawling precariously across the roof once more. Let them stake the place out, maybe they would come in handy one way or another. Goddamn them, they were watching Dick. Those were Internal Affairs Division investigators for sure. When you thought about it, it was almost funny. She huddled down and made another sweep.

“You’re through, kid,” came Wilson’s voice. She buzzed back, saying nothing, and immediately retreated to the doorway. It seemed like an eternity had passed up here. Her whole body ached except for her feet, which were ominously numb.

They were waiting for her in the stairwell. Ferguson was bundled up now. She passed the equipment to him and told him about her experience with the wind. He nodded, his face sunken and silent. Dick replaced all batteries—pocket warmer, camera, walkie-talkie and then tucked a hot thermos under Ferguson’s arm. The scientist slammed through the door with a bang and a gust of frigid wind.

The brutal conditions hit him harder than he had expected. He struggled to keep his balance, slipped and collapsed against the door. This whole thing was such a farce. Instead of hiding up here they should be down in the alley under spotlights making the open-handed gesture of friendship from Beauvoy’s diagrams. The wind cut into him, making his muscles convulse. How could those cops possibly take this punishment? He tried to move out, fell back again. His eyes were tearing now, the tears freezing and obscuring his vision. He got to his feet, took a few staggering steps forward. His legs shot out from under him and he landed painfully on his side, smashing the absurd, unwieldy gun into the ice beneath him. He struggled to his stomach and got out the radio, began calling them. This roof was beyond his capabilities; despite the others he was going to have to take his chances with communication—in the alley.

Back in the apartment Becky went to the bedroom and peeled off her clothes. She checked her feet, found no signs of frostbite. Still shaking, she went into the bathroom, closed the door, and turned on the shower. When the warm billows of steam hit her naked body she actually laughed with delight. Warmth, delicious warmth was all she could think of as the water sluiced over her body. It had been a brutal, killing two and a half hours and she was bitterly tired. After a thorough shower she toweled and powdered herself, then once again put on long johns, jeans, and a heavy sweater. Anything could happen tonight and she wasn’t about to assume that she wouldn’t be going outside again, maybe in a hurry.

When she went into the living room, Wilson was hunched over the radio and Dick was suiting up. He was doing it slowly but he was doing it. For a moment she was confused—how long had she been in the shower—but then she realized what was happening. “Just hang on, buddy,” Wilson was saying, “Neff’s gonna be up in a minute and you can come down.”

The reply was garbled.

Becky flared with anger. “That little creep! Leave him where he is.”

“I ain’t hurryin’, honey,” Dick said mildly. “He’s been whinin’ ever since he got up there.”

“He’s by the door,” Wilson called from his station at the living room window.

“The hell!” Becky said. “We need that little bastard. The three of us can’t take his time.”

“We got to. Dick’s gonna take an hour, I’ll take an hour, then you take a half hour. Then Dick does his full shift and I do mine. That’s what we have to do.” He said it laconically but his voice was tired. They all knew what hell it was up there.

“It’s no surprise. You can’t expect an untrained man to withstand that kind of punishment But I still ain’t hurryin’.”

“As if we were in any better shape ourselves. Hell, none of us are street cops.”

“Speak for yourself, dear. I’m in good shape. You and Wilson’re a mess, but—”

“OK, so how’s about you take his shift and yours too. Five hours. Sound good?”

“That’d be convenient, wouldn’t it, honey?” He spoke in a quiet, level tone. What in the name of God did he mean? He couldn’t possibly suspect that there was anything between her and Wilson. There wasn’t— at least very little!

She decided not to pick up on it.

Again the three of them took the elevator to the roof, and there was Ferguson sitting in the stairwell looking bleak. Nobody spoke to him, just took the equipment and got Dick checked out. The door to hell opened and closed again and Dick was gone.

The ride down was strained and silent. Once in the apartment Ferguson began silently picking up his things, a book, his wallet and keys which he hadn’t wanted to take to the roof. “That roof was too much for me,” he muttered. “But I’ll make it up to you, I’ll do exactly what I should have done in the first place.” He slipped out, the door clicking behind him. A last glance revealed a face set with fear and determination, the eyes wide and glazed.

“Don’t let him,” Wilson murmured.

“Yeah, don’t let him.”

But neither of them moved. Maybe he was going to die out on the street and maybe he wasn’t. It was his risk, he had chosen it. “We should have stopped him.”

“How? He’s a determined man. Brave, too, even if he couldn’t handle the roof. Signal Dick, let’s get started.” They went to the radio.

“White male about thirty-five exiting building,” said one of two plainclothesmen who were sitting in a car in front of the building. “Nah, it ain’t Neff.” The other plainclothesman hadn’t even opened his eyes. Inside the car it was warm and quiet, the two cops barely moving through the long hours of the shift. Another four hours and they would be relieved. Hell, you could get a worse gig on a night like this. Likely Captain Neff wasn’t going anywhere anyway until tomorrow. Still, he had that fancy camera, he must be planning to do something with it.

The two plainclothesmen didn’t watch Ferguson as he rushed past the front of the building and turned the corner. If they had they would have noticed the furtiveness of his movements, the desperate way his eyes darted around. But they would not have seen what happened when he turned that corner.

They were waiting there under cars. They had placed themselves just inside the alley. This way they could hear both front door and back and at the same time watch the

apartment. When they heard familiar footsteps crunching on the snow they were filled with eagerness. The pack was damaged and angry, hungry to kill.

When they came out from under the cars, Ferguson stopped. They could smell fear thickly about him, it would be an easy kill. He spread his hands in the palms-up gesture he had seen in the ancient book. They took their time getting positioned. He looked into their faces. Despite his fear he was fascinated by them—cruel, enigmatic, strangely beautiful. They stepped toward him, stopped again. “I can help you,” he said softly.

Three of them executed the attack while the fourth kept watch. He was dead, his body rolled under a car within five seconds. One jumped into his chest to wind him; another collapsed his legs from behind, and a third tore his throat out the moment he hit the ground.

Their race had long ago forgotten its ancient relationship with man. His hand-signals had meant nothing to them, nothing at all. The four of them literally tore him apart in their fury, ripped at him in a kind of frenzy of rage. They were the mother, the second-mated pair and the female of the third. Old Father had disappeared, they weren't sure why. Perhaps he was too ashamed or too hurt to take his new place behind the youngest in the pack.

But he was nearby. Older, cannier and more sensitive than the others, he knew better than they how desperate the situation had become. He was determined to right the wrong he had done his pack— even at the cost of his life. Although he was unable to see them, he heard their attack. “They act from fear,” he thought. “They need strength and courage.” And he resolved to help them. He had been aware for some moments of a human presence on the roof of the building and took care to stay close to the wall, out of the line of sight from above.

He went quickly to the front of the building, slid under a car and waited. A few minutes later a pedestrian came along, opened the door to the lobby. He ran in past her.

“Hey!”

“A dog—damn it, Charlie, I let in a dog!”

“I'll get it—Jesus, it's *moving!*”

He raced for the stairs and went up. He knew exactly where he was going and why. He trusted to luck that these were the right stairs. The shouts of the humans faded below him. Maybe they would rationalize his presence, maybe not. He recognized the danger of what he was doing and he knew how it would probably end.

But he owed this to the pack he loved.

Dick Neff cursed out loud when he felt the cold and was tugged by the wind. Becky was one hell of a girl to have endured this for two Goddamn hours! He was proud of her, there hadn't been a single peep of complaint. A person like that humbled you, hell, awed you. She was a total pro, no question about it.

He was heavier than his wife and the wind didn't force him to slither on his stomach. But he crawled. He crawled slowly and carefully, not liking the way those gusts hit him from behind and made him slide. Thirty stories was a long Goddamn drop. You went over, you'd have time to think about it on the way down. Plenty of time. He hated heights like this. The view from his apartment was beautiful but he hated this. In his nightmares he always fell, and lately he had been falling a lot. His subconscious reached out to him, imparting a strange *déjà vu*. It was as if he had been here before, crawling toward this precipice, shoved and jostled by this same wind. This was going to be a test of every particle of endurance and courage that he had. No wonder Ferguson had caved in so fast, this was a direct confrontation with the wild power of nature—and beyond that there was

the even greater danger of what they faced.

He could tell where Becky had been lying by the indentation in the snow. He went to approximately the same place. First the equipment check, then the camera sweep.

Nothing there.

Now the voice check. Wilson came in clear. They punched off with the mike signal and Dick settled in as best he could. He was just making another sweep when he heard a muffled bang behind him. The door? He turned. It stood ten feet away. It was breathing hard, as if it had just run up the stairs.

He jumped to his feet, snapping away with the camera. Then it moved and he hurled the camera at it. The machine bounced against its flank and rolled away. It wasn't attacking, probably because he was so close to the edge that a direct assault would send them both over. It moved quickly, trotting to the edge itself, now parallel with him. He was going for the Ingram when it jumped him. He lurched sideways, slipped on the ice and found himself half over the edge. But so was the werewolf, just a few feet away, so close he could see its face.

They hung there, it with its forepaws dug into the icy edge, he hanging by his arms. Its eyes bored into his with a look of hatred more terrible than he had ever seen before. The eyes darted around, calculating, seeking the crucial advantage that would kill Dick Neff, leaving the werewolf alive.

Carefully, not looking at the emptiness beneath his feet, Dick brought an arm down toward the .38 he had in a pocket. This was his one chance, his only chance. He wanted so desperately to live, not to fall! The inches-high concrete lip was the only thing that held him here, and it held him now by only one arm. The creature tried to pull itself up, failed, and hung still. It bared its teeth and made a low, horrible noise. Its eyes followed his movements, its face suddenly registered understanding. Now it began to slide along the ledge toward him, inch by inch closing the gap between them. With only one arm hanging on Dick could do no more than stay where he was. And he was having a hard time doing that. He sobbed aloud. Waves of fatigue poured through the arm on which his life was hanging.

Now the thing was so close he could smell its fetid animal odor, see its savage teeth working in its jaw. He grasped the .38, pulled the gun up, fired, felt an agony in his arm, tried to pull the trigger again. But there was nothing to pull. He looked at the arm— his hand was not there. Blood was pouring out and steaming in the cold. And with horror-struck eyes he saw his hand, still clutching the .38, dangling in the creature's mouth. Then his death began.

As his fall started he felt fear, then something else, a vast and overwhelming sadness so great that it was a kind of exaltation. His body bounced on the hard ice off the alley and he died instantly. A few moments later his hand slammed into the ground beside him.

Far above the old father was in a death-struggle of his own. He had barely, barely cut the hand off as the gun fired. There was a searing pain in his head, an eye closed. The bullet had passed there, grazing his eye and forehead. His own forelegs were tiring and he could not lift himself back over the ledge without risking a fall. But he didn't want to lift himself. He had seen the highest of the balconies not far away; he could work his way over there and drop down to it. When he landed he stood dazed, shaking his head. The eye was not going to work, it seemed. Very well, he would complete this task with only one eye. He was going to save his family and save the secret of his race. He knew it now, he was going to win.

He climbed down the balconies carefully and painfully, wounded more seriously than he could know, until he had gotten to the one balcony that mattered. He crouched there

inhaling the filthy smell of the two that were left alive, just the other side of the glass.

Chapter 12

“Hey, Becky, I got a problem.” She came over to him. “He’s not picking up on the signal.”

“Interference?”

“Don’t think so.” He pressed the mike button twice. No answer. He went over to voice. “Wake up, Dick. You gotta signal back or I can’t tell if you’re still there.”

Only the whisper of static answered.

“Maybe there is some interference,” he said. “I’ll go out on the balcony, get a better line.”

“We’d better go to the roof. It won’t take a minute.”

“Look, I’ll just go outside and—”

“We’re going up right now. Get your coat on.”

He complied. Now that she was making their command decisions, he seemed to be returning to a more normal equilibrium. This was fine by her; she’d trade her stripes for his bars any time.

Both of them had moved their pistols to their jacket pockets by the time they reached the roof door. Becky felt ice-cold inside, as cold as the night on the other side of the door. “You cover my back,” she said. “Draw your gun. We take no chances.” She pushed the door open and stepped out, her eyes going at once to where Dick should be. But wasn’t.

A pang of fear made her heart start to pound. She suppressed it, took a deep breath, called him.

Nothing answered but the wind. Then she saw an object not far away, a dark bulge on the icy roof. “Christ, here’s the camera!” Slipping and falling she went and retrieved it.

Part of the housing was knocked off. The lens was cracked. She backed into the stairwell, closed the door against the wind. In the quiet she heard her own ragged breathing. Her insides were churning, she wanted to be sick. “Something’s happened to him,” she said. “Let’s get downstairs.”

“To the alley?”

“Hell, no! If they got him that’s where he’ll be— and they’ll be there too, waiting for us to come to him. Remember this morning—the lure? They only get to play that particular trick once a day.” She spoke from reason, but her heart screamed at her to go to the alley, to save her husband. If he was there, though, he was most certainly beyond saving. She wanted to weep, but instead she pressed on. “We’ll go back to the apartment and look out over the balcony. Maybe this damn camera will work enough to let us see what’s on the ground down there.”

They returned to an apartment that was already changing for Becky, ceasing to be a home. Everything was the same except Dick was... gone. If he had fallen, his body must have sailed right past these windows while they were trying to get him on the CB. She put

the camera down on the dining room table, wiped tears angrily from her eyes and examined the damage. All you could see through the viewer was a pearl-white blur. "It's totaled," she said. "At least the film's intact." She tossed Wilson the cassette.

"Six shots. He took six shots."

Talking made her throat constrict. She stood silent, unable to answer, her mind searching for some way to believe that Dick was still alive. She wished that the camera hadn't broken. Then they could use it to look out over the balcony into the alley, and at least confirm the worst. She went over the possibilities: he had been attacked by a werewolf on the roof and had fallen—that was number one. A distant number two was that he had somehow escaped this attack by jumping onto the topmost balcony. Highly unlikely. If he had been able to jump down there, so could the werewolf.

Wilson came to her, put his hand on her arm. "He's had it, baby," he said gruffly. His eyes were wet. He looked furious.

"I wish I knew for sure."

"You know."

"Oh, God, maybe he's down in that alley bleeding to death!" She knew it was irrational, a man surviving a fall like that, but stranger things had happened.

"I'll go look, Becky, but it isn't going to tell us anything we don't know." He went toward the balcony, paused at the door. He pushed the curtains aside. "Just reconnoitering," he said. He failed to notice the shape huddled against the glass almost at his feet. He rolled back the sliding door.

It leaped at him through the curtains, its snarling mouth ripping the cloth. He fell back into the living room, rolled, and headed for the bedroom door. Becky was in motion behind him as the thing pulled the curtains down around itself, shook free, and came on into the apartment.

Becky and Wilson reached the bedroom, and she slammed and locked the door behind them. There was a moment of silence, then the sound of a body pressing against the door. The plywood creaked and popped, but the door held. Suddenly the handle began rattling furiously, almost as if it would be torn out at its roots. Becky put her fist to her mouth. "Did you see?" she whispered as she fought the panic. "It's brains are all out. It's been horribly hurt."

"That must be Dick's doing."

The door groaned. Now the beast began throwing itself against it. The hinges quaked, the damaged doorknob rattled loosely with each impact "Shoot it. Shoot through the door."

"My gun is in my coat." And his coat was in the kitchen.

She found her own .38 and aimed it about where she estimated the creature's chest would be, flicked off the safety, and pulled the trigger.

There was a deafening blast, and a smoking hole splintered the door. "That's done," she said in a shaky voice. She started toward the door, but Wilson's hand grabbed her arm. "You missed," he said.

"How could I miss—it was right there."

"Look."

Through the two-inch hole in the door she could see something gray—fur. And she could hear a low, deep sound of breathing.

“I didn’t even wound it” She raised the gun again. At once there was light shining through the hole. The creature had retreated.

“They’re damn smart. It must have heard and moved to avoid the shot. There’s no use trying again, it won’t be there. And we aren’t doing the door much good.”

Outside the door the Old Father moved cautiously. He had jumped to avoid the shot just in time and could still feel a hot sensation where it had passed his face. His head throbbed terribly, it was all he could do to keep the pain from making him scream in agony. He fought for control, found it somewhere within him, and forced himself to think about the situation. The most important thing was that he was in. He had heard the man walking over to the balcony door and had hidden just in time. The man had opened the door and—at last.

The next thing was to get the rest of the pack up here. He wasn’t sure that they would come if he called them, but he knew that the sounds of a fight would certainly get them climbing up the precarious balconies. Very well—he would create such sounds. He leaped into the living room, letting his hatred for his tormentors be vented in destruction. He pulled down lamps, smashed furniture, did everything he could to create a din. But only for a few moments, not enough to alert the humans in nearby apartments. Then he stopped, stood with his ears cocked. And there it was! The clatter of toes, the grunts of struggle. They were on their way up.

How he loved them! He thought of their future and his own past, and felt hope not only for them but for his whole race. The last of the enemy cowered behind a flimsy door ready for the slaughter. Soon all packs everywhere would again be safe from human interference. They, not he—for their safety he was going to trade his life.

They came rushing in, their faces full of the lust of victory.

When they saw him they stopped. Very well, let them be shocked. He knew a mortal wound when he felt it; their expressions of horror did not surprise him. He was glad to give his life for them; now they knew it.

A curtain of grief descended over them. Very well, that was to be expected. He refused to allow himself to share their grief. Memories clattered at the edge of his mind, but now was not the moment for them. There was much work and little time.

Using their language of movements, tail-wags and sounds, he quickly communicated to his family that the two behind the door had a gun and that the door must be burst. They all knew without its being said that he planned to jump first into the room, to take the impact of the gun.

His mate looked pleadingly at him.

He reminded her that he was already as good as dead. This last act—of jumping into the gunfire— would be useful to the pack. Her sorrow, or his own, must not be allowed to intervene.

Inside the bedroom Becky and Wilson listened closely. They heard a rapid series of growls of varying pitch, then the rattle of claws against the floor.

“Now they’re all out there,” Wilson whispered. “The rest of them must have come up from the alley. How many shots you have left?”

“Five.”

“They better count.” His voice was choked. It was obvious to them both that five shots would not be enough.

“The phone!” Becky grabbed it, dialed 911. Nothing. “The receiver in the living room

must have been knocked off the hook.”

“We won’t make it,” he said softly.

She whirled and faced him. “We’ll make it, you bastard. If we don’t give up hope, that is.”

“I’m just being realistic, Becky.”

“Speak for yourself.” She held her gun in both hands, pointed straight at the door. Not even the fact that Wilson was trying to kiss her cheek caused her to move.

“Your timing stinks,” she said.

“It’s probably my last chance.”

“Shut up and watch the door.”

The Old Father had gathered the pack well clear of the door but in sight of it. He told them what they would do, assuming his accustomed role. Nobody questioned him, nobody dared. He had gotten them this far, they could not but listen to him.

They would go in low, burst the door. Then he would make his rush. He would do it alone, hoping that the gun would be emptied into him. Then the others could destroy them, consume his body, and leave without a trace of themselves remaining. Man would not understand how these tragedies had occurred, and the secret of the packs would be safe once more.

He snapped his jaw, a sound that brought them all to immediate attention. Now they prepared themselves.

They all quivered with the desire to speak but said nothing. There were no words for what the pack now had to face, for the sorrow that they all felt. Despite his loss of the right to lead, he had nonetheless founded this pack, had built it through his strength and effort. Now in death he received its respect.

“You hear anything?” Becky asked. Wilson was standing near the door.

“They’re in the living room. Maybe we could make a break.”

“We wouldn’t get three feet. Just stay put and think.”

The phone lay on the floor, a tiny voice telling them again and again that a receiver had been left off the hook on the line. Becky felt like ripping the damn thing out of the wall and tossing it through the window. “Hey, wait a minute—” She went over to the window and peered down. “Listen, why don’t we toss the Goddamn bed out the window. That’ll bring somebody up to investigate.”

“So the poor soul opens the door and gets torn apart. Meanwhile, we’re already dead.”

“You got a pen?”

“Yeah, but what—”

“So we write on the sheet. Gimme—” She took the pen, threw the covers off the bed and started scratching big letters on the fitted bottom sheet. In a few moments there was a rough message, “SEND ARMED COPS 16G. MURDER. GREAT DANGER. BREAK IN. CAREFUL OF AMBUSH!”

They pulled open the window, finding that it was not big enough to accommodate the mattress. Becky stationed Wilson at the door with the .38 and wrapped the quilt around her right arm. She looked down to make sure the street below was empty, then smashed the window with her fist. “OK, give me a hand again, let’s get this thing out.” Together they pushed and struggled until the mattress fell from the window. It tumbled end over

end and hit squarely on the sidewalk. It must have made a noise, but the sound was lost in the wind.

Then there came scratching at the door. “They’re onto the lock again,” Wilson said. His voice was strained. He looked desperately at Becky.

“Get the dresser over there—move it!” He obediently shoved it against the door while she held the pistol. A moment later there was a tremendous bang, and the door sprung on its hinges. A crack appeared down the center. “Lean against that dresser,” Becky said to Wilson, who had cringed away toward the bathroom. Now he came forward again, pressing his back against the dresser. The door shook with the onslaught of the strength behind it.

Across the street the two plainclothesmen had heard the thud when the mattress hit the sidewalk. Both of them peered out the closed windows of their car, toward the sound.

“Somethin’ hit the sidewalk.”

“Yeah.”

Silence for a moment. “You wanna take a look?”

“Nah. You go if you’re curious.”

“I’m not curious.”

They settled back to wait out the end of the shift. Another hour and they would be able to hand off to the next crew and get a hot shower. Despite the car heater the cold got to you on these long gigs.

“What do you suppose Neff is doin’?” one of them said to break the monotony.

“Sleeping in his bed like all smart people this time of night.”

They said nothing further.

The door smashed into three pieces, which came flying in over the dresser. One of the creatures was there, pulling itself in through the space above the dresser. Becky shot as it leaped at her. The bullet smashed into its head, and it dropped to the floor. Wilson had been thrown aside by the assault on the door and now scrambled to his feet. Despite its head-wound and the blood bubbling out of a new two-inch hole in its chest, the thing jumped on him, clawing into him with its vicious paws. He gasped, his eyes widening, and screamed in agony. She shot again. It had to be dead now, but still the claws worked, the jaws cut into Wilson’s neck and his screams peeled out.

Then the thing slumped away from Wilson. The only sound in the room was its ragged breathing. Wilson started to stagger away, his whole front ripped and streaming with blood. She stumbled to help him—and a paw grabbed her ankle. Agony pierced her leg as the sharply pointed claws penetrated. She put her hands to her head and shrieked, kicking frantically with her free foot. The blows landed again and again, but the grip would not release.

Becky’s whole being wanted to shoot it again, to shoot it and shoot it, but she did not. The bullets must be saved.

Then the grip faded.

She slumped back to a sitting position on the bedframe and pointed her pistol at the broken door, at the apparitions that were gathering there. There were four of them, obviously very unsure about her weapon. She had two shots left. Wilson, now huddled moaning on the floor beside the body of the werewolf, was beyond helping her. She was alone and in agony, fighting unconsciousness.

Downstairs the doorman was staring at a patrol car that had pulled up in front of the building. Two cops, the collars of their heavy winter coats turned up against the wind, got out and entered the lobby. “Help you?”

“Yeah. We gotta check out a disturbance. You ’got a disturbance?”

“Nah. It’s quiet.”

“Sixteenth floor. People been callin’ the precinct. Screams, furniture breakin’. You got any complaints?”

“This is a quiet building. You sure you got the right place?”

They nodded, heading for the elevator. This looked like a standard family disturbance situation— no arrests, just a lot of argument and maybe a little fight to break up. You spent half your time on family disturbances, the other half on paperwork. Real crime, forget it.

“Lessee, sixteen.” One of the patrolmen punched the button, and the elevator began to ascend. After a few moments the door slid open revealing a long, dimly lit hallway. The two cops looked up and down. Nobody was visible. Aside from the sound of a couple of TVs it was quiet. They proceeded into the hall. Apartment 16-G had been the source of the disturbance. They would ring the bell.

The creatures were watching Becky by lifting their heads briefly above the edge of the dresser that stood in the doorway. Though she kept the gun aimed she wasn’t fast enough to get a shot off at one of those darting heads.

Then they became quiet. They could jump right over the dresser and get at her throat, she was sure of that. She hobbled to the window, wishing that she could somehow protect Wilson, who had lapsed into unconsciousness. But she couldn’t. If the creatures came at her she planned to jump. Death by falling was to be preferred a thousand times to disembowelment by those monstrosities.

A head appeared above the dresser, paused for a long moment, then was gone. That pause had been longer than the rest. Becky braced herself. Still nothing happened. They were being very careful. They knew what a gun could do. The doorbell rang.

One of the creatures sailed across the dresser, its teeth bared, its claws extended toward her throat.

It took Becky’s last two slugs in the muzzle and dropped at her feet. The claws went to the face and the body hunched, its muscles standing out like twisted ropes. Then it collapsed into a widening pool of blood Becky watched it with a mixture of horror and sadness. Her ankle was almost useless; she could barely support herself on the windowsill with her hands. The wind was whipping her hair around her face, biting into her back. She looked across the carnage in the room. There were three hideous faces staring at her over the dresser that still blocked the doorway. With trembling hands she lifted her .38 in their direction. Without her hands on the windowsill, balance was precarious. The wind buffeted her, threatening at any moment to make her fall. But the creatures hesitated before the gun. Then one of them made a low, strange sound... almost of grief. It closed its eyes, tensed its muscles—and suddenly turned away from the bedroom. Now all three of them disappeared below the edge of the dresser.

Then there came a knock on the door. “Police,” said a young voice.

“No! Don’t open that door!”

The knock came again, louder. “Police! Open up!”

“Stay out! *Stay—*”

With a crash the door flew open. The two cops who were standing there didn't even have a chance to scream. All Becky heard was a series of thuds.

Then there was a silence.

Becky was crying now. Still with the gun held in both hands she moved forward. But she could not go on. She sank to the bed. Her pistol fell to the floor. Any moment now the werewolves would be back to kill her.

"Hey, what's goin' on in here?"

She looked up through a haze of tears. Two patrolmen were standing on the other side of the dresser with guns drawn. She sat stunned, hardly believing what she saw. "I—I've got a wounded man in here," she heard herself whisper.

The patrolmen pushed the dresser aside. Ignoring the two werewolves, one of them went to Wilson. "Breathin'," he said even as the other was calling for assistance on his radio.

"What's the story, lady?"

"I'm Neff, Detective Sergeant Neff. That's Detective Wilson."

"Yeah, good. But what the hell are those?"

"Werewolves." Becky heard herself say the word from far, far away. Strong arms eased around her, laid her back on the bed. But still she fought unconsciousness. There was more to do, no time to sleep.

In the distance there were sirens, then a few minutes later voices in the hall. Then light, flashbulbs popping as police photographers recorded the scene. She raised her head far enough to see Wilson being carried out on a stretcher. "O-positive blood," she called weakly.

Then somebody was beside her, looking at her, a half smile on his tired face. "Hello, Mrs. Neff." He moved aside as medical orderlies slid her onto a stretcher. "Mrs. Neff, do you want to make a statement to the press?"

"You're the man from the *Post*, aren't you?"

"I'm Garner, ma'am."

She smiled, closed her eyes. They were moving her now, the lights of the hallway passing above her face. Sam Garner hurried along beside her, trying to hold a tape recorder microphone in her face.

"It's a big story, isn't it?" he said breathlessly.

"A big story," she said. Sam Garner smiled again, elbowed his way into the elevator already crowded with medical orderlies and her stretcher. Her leg throbbed with agony, she felt exhausted, she wanted to close her eyes, to forget. But she gave Garner his story.

Epilogue

Their mother jumped as soon as the gun had been emptied into their father. She would

make the kill, then the four of them would destroy their father's body.

Then the incredible happened. The gun crashed again and their mother was also killed.

They stood staring at her lifeless form, too stunned to move. All three of them felt aware of grief—and almost overwhelming anger at the monster who had killed their parents.

It sat waving its gun, and the gun smelled hot and deadly.

They watched, not quite sure what to do. Then there was a sound outside the door—more humans approaching, their breath rising and falling, their feet crunching against the carpet in the hallway. And the sharp, nasty scent of guns was upon them also. The three young Wolfen turned to face this new threat. The door burst open amid shouting human voices, and they prepared to kill whatever appeared there.

But it was two young males, dressed as those in the Dump had been dressed. All of this agony had begun when two such had been killed; they would not repeat the mistake. They ran past the two policemen into the hallway. Now the bodies of their parents would be left behind for men to see—but this could not be helped. They bolted down the hall, pushed through the heavy door there, and began to run down the stairs.

They raced across the lobby of the building, smashing the glass front door with their bodies, and running on, indifferent to the shouts and crashing glass behind them and to the cuts they had received.

They ran through the empty predawn city, moving north past the rows of luxury buildings, through the ruined streets even farther north, past crowds of homeless men huddled around open fires, not stopping until they reached the dark and rat-infested banks of the Harlem river.

The eastern sky was glowing fitfully, the light casting into black relief the girders of the bridges above the river. The three of them stopped. They had come to a well-hidden place, marked safe by the scent of the pack that roamed this area. All felt a terrible sense of loss. Their parents were dead, the pack they knew was ended. Worse was the fact that Wolfen bodies had been left behind in the hands of man.

They felt loss but not defeat. What burned in their hearts was not fear but defiance; hard, determined, unquenchable.

They howled. The sound echoed up and down the banks of the river, crossed the icy muttering waters, echoed again off the distant buildings.

High above them on the Third Avenue Bridge a repair crew was deploying its equipment. When they heard the sound the men stared wordlessly at one another. One of them went to the railing but could see nothing in the darkness below.

Then the howl was answered, keening on the wind as pack after pack looked up from their haunts in the City's depths and responded to the powerful sense of destiny that the sound awakened in them all.

“This book is contact.”

First Edition

This book is dedicated to the children, to whom this world belongs.

“The great enemy of truth is very often not the lie—deliberate, contrived and dishonest—but the myth—persistent, persuasive and unrealistic. Too often we hold fast to the clichés of our forebears. We subject all facts to a prefabricated set of interpretations. We enjoy the comfort of opinion without the discomfort of thought.”

---John F. Kennedy,
Yale University Commencement Address, 1962

“Mythology exists at a level of our social reality over which normal political and intellectual action has no power.”

---Dr. Jacques Vallee

“We are part of a symbiosis with something that disguises itself as an alien invasion so as not to alarm us.”

---Terrence McKenna

ACKNOWLEDGMENTS

I would like to acknowledge the help and support of Lorie Barnes, Josh Boone, Raven Dana, Dr. Jeffrey J. Kripal, Leigh J. McCloskey, Anndrea Taylor, Prince Stash Klossowski de Rola, and too many others to name. Their help has been of inestimable value, and I can only hope that I have met their expectations. I would especially like to thank Dr. Kripal, Anndrea Taylor and Stash de Rola for their extensive and patient editorial help, and Josh Boone for reading all seven drafts with such care and insight.

I wish also to honor all the witnesses and researchers who have struggled with the close encounter experience and the effort to understand it for so many years.

I would especially like to thank Jeffrey J. Kripal and Rice University for creating the Anne and Whitley Strieber Archive, which preserves thousands of the letters that we received after the publication of *Communion*, and were collected and cataloged by Anne Strieber.

When Col. Philip Corso asked one of our visitors what was on offer for us if we let them into our lives, the answer was “A new world, if you can take it.”

In Memory

Not a page of this book is absent the influence of my beloved wife, Anne Strieber. Meeting this brilliant human being blessed and defined my life. She brought crystalline insight into the ambiguous and yet real events that we experienced. The byword of her life was “have joy,” and it is in that spirit that I have written *A New World*.

A NOTE FROM THE AUTHOR

Most of what you read in these pages is going to be strange beyond belief. This is because it is about events that are supposed to be impossible, a level of reality that isn't supposed to exist and relationships that are entirely new. Knowing this, I have made every effort to tell my story accurately. I have never left anything out, changed anything or edited anything because it seemed too unbelievable. It bears essentially no relationship to any of the popular narratives about alien contact, even less those of ordinary life. And yet it is, word by word, based on observation and experience.

Unlike many stories that deal with strange experiences, I have attempted whenever possible to add the texture of witness to my narrative. Given what I am asking here, readers deserve to know the degree to which every experience I relate was shared by others.

It is also important to add that the close encounter experience only begins with what we now know as the physical. As you develop your relationship with the visitors, you discover that what we call the physical is only part of a huge tapestry of reality. The vision of those who do not strive to gain from their encounters remains bound to the familiar world, though.

Presently, their physical appearance, although only a small part of what they are, is all most of us know about the visitors. For example, it is my belief that most people operating behind the curtain of secrecy have rarely experienced them except physically, and therefore have a very limited vision of them. But for anybody willing to see and accept the mystery that they actually present, there is so much more. It is this group that has the potential to lead the world to real change.

Engaging with the visitors more deeply is extraordinary and rewarding. It is also completely different from living life as we have come to know it. The laws of reality change. Above all, the very nature of communication changes. The rules are much different and, by our standards, very strange.

I could have edited my story to make it easier to believe—left some things out, changed others to make them seem closer to the familiar than they are. Like the visitors who are part of my life, I hate deception and will have no part in it. To make my story more believable, I would have had to turn it into a lie.

PREFACE

This Book Is Contact
by Jeffrey J. Kripal, PhD

This is a book about a new super natural world in which communication between the visitors and us, between the “dead” and the “living,” enters a new level of intensity, where physicality is extended into some other new materialist or superphysical dimension, where time, and so evolution, do not work like we think they work, where astonishing sensing capacities or parapsychological abilities run in genetic lines (otherwise called families), and where the UFO is as much a vehicle of soul as it is a source of metamaterials or the invisible object of new radar returns or classified military attention. There is also a model of embodiment shining between these remarkable lines, constituting a paradoxical vision in which we *use* the physical body as a kind of temporary portal into these physical and temporal dimensions, even as we also remain outside the body and its particular sensory-generated reality. This is a new world not because it is really new (I assure you that all of these themes are very old convictions in other cultural codes), but because it depends on us right *here* and right *now* to take shape and appear.

The deepest message of this little book, then, is an intimate one: that the actualization and appearance, or continued distortion and camouflaging, of this new world *depends on us* and, more particularly, on how we choose to interact with the invisible presences of our cosmic environment. These choices include whether and how we read this very book, which, in the

intentions and understanding of the author, is itself an urgent communication from the visitors. The intended implications are clear enough: to the extent that you really and truly interact with and so actualize this book, you really and truly interact with and so actualize the visitors. This book is contact, but this contact depends *on you*.

Allow me to be nerdy for a moment, as this new world and our uncanny reading role in bringing it into focus intersects directly with my daily life and work.

I live and work in an elite academic world, in a school of humanities at a major research university with some of the smartest people on the planet. (I am not sure how I got here, but that is another story.) These remarkable intellectuals see through things, like so many X-ray machines in a doctor's office. They see into the bones, organs, and mostly unconscious structures of whole societies, nation-states, empires, value systems, and religions. Nothing is sacred here.

The fact is that everything human has been invented by humans, so everything can be questioned. The central argument of my own life-work is that there is a secret human potential hidden in such a deep questioning. To understand who we are, we must first understand who we are not. We must understand that the Human is Two. Yes, we are the hairless, dying primate with this or that social identity, but we are also something Other and More that we cannot name with any words or measure with any instrument.

Of course, looking at ourselves in this way can be frightening. This is because everything we think of as "me" or "us" ends up being called into question, seen through, and, in the end, simply set aside. We are left with a mystery, and that mystery is us. But there is also real hope, since we are Other or More than any of the identities we have invented for ourselves.

This is why I so appreciate the ferocious insights of my colleagues. I so admire their unflinching search for deeper and deeper structures of truth and, by implication, for justice (since every structure they uncover and see through privileges and includes some people and marginalizes and excludes other people). I have called this broad-based intellectual sensibility of seeing through societies, nation-states, and religions "prophetic," not in the sense of predicting the future, but in the sense of giving witness to difficult truths that a particular society, authority, or individual does not want to hear. These truths might be about gender or sexuality, about race, about class, about colonialism or empire, about power, about God or the gods, well, about pretty

much anything humans think, make, do, or identify with.

But none of this makes academics infallible or all-seeing, and social justice and the endless sufferings of different identities are by no means the only kinds of truth to seek and to know. It turns out that there are sacred cows in the academy, too (and even the Hindu cow, by the way, was once not so sacred in India, not at least as it is today—it was once raised, herded, prized, and, yes, eaten). Our present-day sacred cows, which we will no doubt someday “eat,” involve an unquestioning commitment to naturalism, materialism, and scientism, that is, the largely unconscious assumptions that what we think of today as “natural” is all there is; that everything is finally “physical” in the ways that physics understands matter (not very well, it turns out); and that the objectifying methods of science are the only way to know reality, with the often unstated assumption that anything science does not know or cannot know with these same methods must not be real.

Believe it or not, virtually every aspect of modern intellectual life is committed to this triple set of assumptions around naturalism, materialism, and scientism. Take the study of religion, my own area of research and writing. I have spent the last four decades studying religion. For the first three of those decades, I was schooled in a way of thinking that argued, with some very good reasons, that every religious prodigy—every shaman, mystic, seer, saint, medium, or spiritual teacher--is just a biomedical body locked down in space-time, that *everything* he or she claims to know came through a material text, a social institution, or a social interaction. In other words, I was taught to believe that everything human is finally and completely “historical” and “social,” which is to say: conditioned, relative, local, and material. Nothing super here.

This is often the case, of course. Hence the prophetic function of the humanities: *all* claims that a religion or nation-state makes to include some and exclude others can be deconstructed, taken apart, shown to be false in any universal or absolute way. That’s because they are.

But that is not all there is.

I once thought that all talk of sky-gods inserting special “crystals” or sacred “stones” in the bodies of shamans to signal the calling and authorize the teachings of a new spiritual prodigy was nothing but the stuff of myth and folklore. Then I encountered Whitley Strieber and the implant in his left ear, which, as he explains in his books, was central to his own calling and now inspires him to write his books, sometimes with very specific information.

Turns out that the mythologies and folklore were true.

I once thought that scriptural scenes like that described in the first few chapters of Ezekiel could be explained as literary inventions, that every detail of them could be traced back to some other text, social institution, or previous belief. Then I encountered the modern abduction literature, many scenes of which feature apparent craft and seeming technology that look, well, pretty much exactly like Ezekiel's famous "chariot" vision, which is obviously no chariot at all. Turns out that the Bible, or any other religious scripture for that matter, is sometimes describing actual human experiences and not just making stuff up.

I once thought all that talk of "ghosts" and "spirits," of invisible spectral beings, was some kind of psychological projection, social construction, or mistaken dream. Then I met Whitley Strieber, who interacts with invisible "visitors" on an almost nightly basis, most recently to write this book. Turns out that ghosts and spirits are real, "real" in ways that we still cannot grasp or define with our prescribed evolved senses and adaptive cognitive capacities.

I have interacted with Whitley for about a decade now, often on a daily basis. I believe that I have also interacted with his departed wife, Anne, through a most remarkable drawing channeled by a Canadian medium (more on that some day). Perhaps most dramatically, I have slept in the same room with Whitley at a symposium (a risky enterprise, I assure you) and experienced my own psyche "split" in two in his sleeping presence. Some other part of me, completely separate from the conscious self, watched something astonishing take place in that dark room. As this all transpired, this Jeff-self heard very distinctly in his mind the following words uttered by some other part of me: "Oh . . . my . . . *God!*" The tone was one of ontological shock, as John Mack once put it so well: not quite fear, but something that included the intellectual emotions of amazement, astonishment, and a kind of pure or total cognitive dissonance. Indeed, I was seeing something so shocking and so dissonant that I could not see it. I literally could not process it as myself. And so I split myself in two, so as to process it and not process it, so as to see it and not see it.

Most recently, just a few days ago actually, Whitley shared with me a recording of a similar night scene. The audio recording features the other Whitley (he is Two, too) speaking lovingly to a visitor in the room whom he calls by name: "Teach me, Mature." The recording ends with a female presence sighing deeply as she sensually and intellectually interacts with

Whitley. As I listened to the audio, I was reminded of the feeling tone of that night that I split in two in our shared room. Like Whitley, I suspect that this female visitor was in some way “Anne,” whatever that social convention we call a name means to that being now.

Clearly, I am not the same person (or persons) I was in graduate school, or even a decade ago. I “have” a social name and a physical form, as Anne once did, but I don’t really believe either. And I live toward what Whitley calls here “a new world.” Alas, I cannot say that I have entered it, or that I have shaken off identification with my social ego or bionome, but I can say that I have seen and heard entirely too much to believe the old world that I have tried my best to leave behind and in which I no longer believe. Words like “religion,” “myth,” “folklore,” “shaman,” “mystic,” “possession,” “god,” “demon,” “spirit,” “animism,” even “body,” “mind,” “individual,” “history,” “time,” “identity,” and “human being” all mean entirely different things to me today than they did a decade ago. That old world is gone, even if this new world has not yet taken shape.

“What?” some of my colleagues might say, “You expect us to believe that invisible beings interact with humans, that the human is also superhuman, and that *this* is what the history of religions really points toward, some kind of post-contact social formation?”

“Yeah, that’s pretty much it.”

I would assure my colleagues that we do not know what or who these invisible presences are; that I suspect they are in fact us (whatever “us” really means); that I understand the supernatural as super natural; and that I do not believe any of the traditional religious, sci-fi, or military mythologies that get wrapped around these mind-blowing moments of real contact and spiritual transmission. Whatever this new world is, I strongly suspect that knowledge practices like “religion,” “science,” and “technology” are fundamentally inadequate, and that we will finally have to *be* this new world to know it. All the beliefs, science, and weapons of the world will not get us one inch closer to this new world. Indeed, they will only take us further and further away.

But I doubt that any of these qualifications would help these particular colleagues very much. They are still living in the old world. I choose to live toward and for the new one.

Which world do *you* choose?

Jeffrey J. Kripal

J. Newton Rayzor Professor of Religion
Rice University
Houston, Texas

THE MYSTERY BEGINS

I am the author of many books, both novels and nonfiction, most notably the novels *The Hunger*, *Warday* and *Superstorm*, which was the basis of the movie *The Day After Tomorrow*. But my best-known work is a nonfiction book called *Communion*, about a close encounter of the third kind that befell me on December 26, 1985. Since then, my relationship with the strange people I encountered on that night, whom I have come to call “the visitors,” has continued. Starting in the fall of 2015, contact with them has exploded in richness and wonder.

In part this is because I have gradually learned something of how they can communicate with us—which is so different from anything one might expect that it took me many years just to understand that it was happening. My hope is that by describing my experiences with this, I can help others to understand the messages that they may already have received and also learn how to engage in give-and-take. If more of us can gain an idea of how it works, I think that our visitors may abandon their long-held stance of secrecy and become a more open part of our world.

My first encounter with them did not go well. Not at all.

On that snowy December night, I woke up in a little room filled with what appeared to be darting, big-eyed insects and the stocky, dark-blue trolls I later came to call *kobolds*. They were originally given this name by miners in Bavaria in the middle ages, who would glimpse their iridescent, dark blue forms as they rushed through the shadowy tunnels. To this day, there are narrow tunnels under parts of Bavaria, the origin and use of which are unexplained.

The next day, a vague memory of the big eyes caused me to imagine that an owl had come into our house, but as there was no entry point, this could not have been the answer. I was injured in the side of my head. My rectum was torn so badly that I bear the scar to this day. To say the least, I was severely shaken up. As the weeks passed and I discounted one ordinary explanation after another, I was finally left with only one alternative: as incredible, as impossible as it seemed, the event had in some way been real. The creatures I had seen were actual, living beings of some kind.

I agonized over telling my wife. What in the world would Anne think? Things were rocky between us because, during the six weeks or so after the event that it had taken me to understand that I wasn't going insane, I'd tried to drive her off. If I ended up in a psychiatric institution, I knew her well enough to know that she would never abandon me, and what would she and our son do for money? They needed and deserved to have a healthy husband and father, not be saddled with a person so deeply psychotic that he was completely misperceiving reality.

I took neurological tests for brain abnormalities and temporal lobe epilepsy, which can produce hallucinations. All were normal. The epilepsy test even showed that not only was I not prone to hallucinations, I had an unusually stable brain. I took an extensive battery of psychological tests, which revealed me to be normal but also suffering a high level of stress.

I still had no idea what to say to Anne. What could I say, that I'd been taken aboard a flying saucer by little men? Because I was now pretty convinced that this was what had happened. Finally, I told an old friend, photographer and documentary filmmaker Timothy Greenfield-Sanders. Incredibly, he responded that his wife's parents, who lived down the road from us in upstate New York, had seen some strange creatures similar to the ones I had described to him. They had observed them from a window, moving about in their back garden.

This put things in a new light. I could now say that there were other witnesses. Obviously, Anne was going to ask that question. Timothy advised me to go ahead and tell her. He was sure she'd find it all as fascinating as he did.

One evening after dinner, when our little boy was safely asleep, I asked her to sit down for a talk. She said later that she was afraid that I was going to tell her I wanted a divorce. But I was past trying to drive her away from the crazy man. My main concern now was whether or not *she* would be the one

to want a divorce.

I said the words I had been so afraid to utter: “Honey, I think I was taken aboard a flying saucer by little men.”

She stared at me. Her mouth dropped open. Then a twinkle of what I can only describe as her sparkling wit flashed in her eyes. She blurted out, “Oh, thank God! I was afraid you were going crazy!”

There was a silence. Her eyes searched me for some sign that I was joking. I looked gravely back at her. Then we both burst into laughter anyway. We threw ourselves into one another’s arms. She said, “I wanted an interesting life, but I had no idea what I was getting into when I met you.”

In that moment, our marriage entered a new chapter. On that evening in our little apartment in New York, we began what became a journey of discovery that completely revised our understanding of world, life and reality and continues to do so every single day.

From the beginning, she seemed to know things that she perhaps could not put into words, about how this incredible experience belongs first to us— to human beings—not to the mysterious figures in the night who trigger it.

At first, I was appalled. I resolved to sell the little cabin where it had happened and never spend another night outside of the depths of a city. But I just couldn’t get over the idea that they were real. *Real*.

Anne didn’t want to sell up. She wanted to go back and see what might happen.

I also found that my curiosity was stronger than my fear, and in April of 1986, we resumed our weekends at the cabin. I started going out into the woods at night to serve notice to whatever they were that I wanted to meet them again—hopefully without a repeat of the violence that had taken place previously and the injury that my flailing panic had caused me.

Given what I had been through, this might seem pretty foolhardy, and it certainly was that. But I was simply too curious. We both were. The fact that the event had happened at all had been completely remarkable. Although I had been left with injuries, I had also had my mind opened in the most profound way I could imagine. Whatever they were, they were not human by any definition I knew. And yet they were here.

Anne agreed that I should go out and see what happened, but she was not a believer by nature. She was a questioner, and I followed her lead in this. She would often say, “The human species is too young to have beliefs. What we need are good questions.”

We humans have a nasty habit of deciding to believe that things we don't actually understand are explained in some way that we make up. And the next thing we know, we're killing each other over these imaginings.

So this is not going to be a book of advocacy. I am not asserting beliefs. Instead, it is going to be a description of events, as I have witnessed them, and an inquiry into ways of communicating with a richly alive, enigmatic and absolutely remarkable presence that seems to have been with us, at least in part, throughout our recorded history, and probably a lot longer than that. But it is also true that it seems to have entirely changed its approach to us in the years since World War II ended. It is now an enormous part of our world. It seeks to become even more central to human experience. We're dying here, and it doesn't want that. It wants to communicate with us, but it is deeply, profoundly different from us, and so far communication has been essentially impossible. Learning to do it effectively is what my life has been about, and what I hope to convey here.

The visitors have been very clear to me: Unless we can communicate with them in a rational, practical and effective way, they cannot help us.

I wish I could provide a simple how-to, a neat list of dos and don'ts.

I can't do it, and nobody can. The gap between us is simply too great for a simple list to work.

Our visitors stand ready to help us face the jeopardy we are in, and even aid us in solving the problems that we are facing. The degree of their involvement depends on the degree to which we are able to face them and understand what they have to offer us. For reasons that are going to become clear over the course of my story, this is not going to be easy. Far from it, making sense of the relationship will be the greatest intellectual, emotional and spiritual challenge that mankind has ever faced. If we are able to succeed, though, we are going to experience a vast increase in the range of human understanding—truly, we are going to enter a new world.

Right now, things are predictably chaotic. Different religious groups have long ago integrated the phenomenon into their belief systems. Christians think of the visitors as demons, sometimes as angels. To Muslims, they are *djinn*. Other religions call them many other things. Outside of the Christian community in the west, the fairy faith of Northern Europe has evolved into the UFO and alien folklore and has spread around the world. But that is only part of what has happened. What used to be a minor folklore is now a vast, living experience, by far the most complex cultural and social influence, and

personal challenge for the close encounter witnesses, that humanity has ever faced. Millions of individual lives have been touched by it. Governmental response has mostly been concealed behind a veil of secrecy that hides disquiet, confusion and fear.

In point of fact, the entire human species has been thrown off balance by whatever this really is. Despite over seventy years of effort, it has not just remained a mystery, it has become steadily more mysterious—and at the same time, more and more provocative.

Somebody is here, all right. At this point, denial of that fact is an emotional response not a rational one.

It is not a simple matter of aliens having arrived. This sublime, challenging, sinister and yet oddly welcoming presence is far more complex than that. It is so varied, so contradictory, and yet so pervasive on so many different levels that for us even to achieve a useful description of it is going to be a tremendous intellectual challenge.

Behind the scenes, a small group of scientists, who have access to certain materials and biological remains, has made significant progress in areas as diverse as metallurgy and communications. But most scientists and intellectuals, left out of this exclusive group for reasons that will become clear over the course of this book, remain in a state of enforced ignorance that emerges into the broader culture as a mix of denial and indifference. Meanwhile, people who have been touched—often, as I was, fiercely—by the presence are left to fend for themselves when it comes to understanding what has happened to them.

The result of this is that the rich potential of contact is being buried beneath a great mound of confused theories that amount to little more than an elaborate extension of the folklore of unknown presences that has been with us from the beginning of our history.

Make no mistake, though: it is not up to the people concealing their knowledge behind the wall of classification to disclose the secrets. From the beginning, the visitors themselves have been in control of the secrecy, and it is they who will be responsible for revealing themselves—or, to be more accurate, integrating themselves into our lives more openly than they already have.

They are extremely subtle, very thoughtful and very careful. The ones I have come to know want contact to work, but if they were to step out into the open right now, that is very definitely not what would happen. Instead, we

would try to integrate them into our worldview through the medium of assumptions about aliens that simply are not adequate to the task and do not hold up under scrutiny.

They are also determined, hard and can be, frankly, terrifying. They are powerful beyond conception and are not going to be defeated by military opposition. That whole approach is meaningless. This isn't a war at all, it is a process of contact that is intended to lead to the deep inner sharing that is communion. There are things that they want from us and things that they can give us in return. But it is a trade of a kind we have never engaged in before and it is going to take a leap of understanding for us to make a success of it.

It is not, however, something that we don't do. We have been doing it, I would think, through all the time we have been. We have been passive to it, however. The result of this is that both sides gain less from it than they could. They do not share as fully as they might. We do not realize what we actually are, and so devalue ourselves. Only when we become aware of the sharing can there be communion between us. As we are now, we're passive to it. We need to engage with it and so with them, thus becoming participants in an enormous part of our lives that we have not so far known existed.

This is what it is to increase in consciousness. It means knowing and seeing more of where and what you truly are. As I have said before, the coming of the visitors is what it looks like when evolution comes to a conscious mind.

There are some previous moments of contact in human history that are instructive here. The first two involve how pre-Columbian civilizations responded to the unexpected appearance of the Spaniards, who arrived in the Americas in possession of things like horses, metal armor and gunpowder, none of which were known to the indigenous population. However, they also brought with them a culture debased by superstition, fanaticism and jingoistic brutality. This devastating combination was used to destroy not just the Indian societies in Mexico and South America, but later to subjugate and enslave populations all across the western half of North America. Further waves of Europeans later overwhelmed these ancient Earth-centric cultures over the entire continent. Only recently have any of them begun to show even a few sparks of recovery, and most probably never will.

Later in this book, I will discuss an eloquent message left by the visitors, warning that we could face similar cultural dislocation, although hopefully without the exploitative brutality. This warning has been placed at a site

where advanced artifacts were left behind and from which scientists have been recovering valuable materials for years. The reason that this particular site was chosen by the visitors has not been understood so far, but it can be, and its warning should be, heeded carefully at every level of our society as the visitors emerge.

The Aztecs attempted to fit the bizarre apparition of the Spaniards into their existing mythology and decided that Hernando Cortez must be their god Quetzalcóatl, come back to retake the throne of the Aztec empire. Although they were momentarily nonplussed by the fact that he couldn't speak their language of Nahuatl, they decided to ignore this anomaly and more or less allowed a few hundred Spaniards to conquer their extensive empire. The result was that, within 50 years, 90% of the indigenous Mexican population was dead and the surviving 10% were enslaved.

Another instructive case is that of the Inca civilization, which was overtaken by Francisco Pizarro. Essentially, a highly organized nation with an army of 50,000 men was defeated and subjugated by about 500 Spaniards. The critical battle of Cajamarca in 1532 was won by 200 Spaniards, who defeated an Incan field army 6,000 strong. When Pizarro subsequently entered the Inca capital of Cuzco, he was met by what amounted to a confused silence. He and his Spaniards made no sense to the Inca. The result was that this ancient civilization, with probably the most mysterious origins of any on Earth, also disappeared into history, taking with it all that it had learned and achieved, leaving behind only the ghostly remnant that persists to this day among indigenous Peruvians.

In attempting to integrate the Spaniards into their belief system, the Aztecs did what religious and UFO believers are doing now. They looked to their own preexisting beliefs to explain the inexplicable and were rendered helpless as a result. Our scientific and intellectual communities are reacting much as the Inca did, with confusion, denial and, finally, silence.

What happened when technologically advanced European civilizations expanded across the world should also be carefully considered. Even when they were not brutal and exploitative, the technological superiority of the Europeans again and again made indigenous peoples feel inferior, caused them to abandon their own cultures and beliefs and, all too often, descend into the debased remnants of their once vital societies that we see to this day in too many places in the world.

The visitors are not just technologically more advanced than us. They

have a completely different way of seeing reality, and when we first confront it, we are going to see them as being in possession of godlike powers, breathtaking insight and seemingly unlimited scientific knowledge. They will appear this way not because they are more intelligent but rather because of the different way their minds work. They are not more intelligent than we are, not at all. They are more experienced, and their experience is fundamentally different from ours. We must not elevate them above what they are but seek to meet their strengths with our own in the most meaningful and mutually enriching ways that we can find.

Their abilities are going to disempower our scientists and intellectuals, which will be made worse by their inability to address them directly. In this regard, I am hoping that this book will accomplish three things: first, that it will enable people to see that there are ways to communicate with them; second, that we have things that they value greatly and need badly and that a great trade is on offer; third, that they do not want to invade us, enslave us or otherwise destroy our freedom or take from us our own sense of self-worth.

They think highly of us and consider that what we have to offer is valuable. Otherwise, they would not have any interest in us.

Anne named our book *Communion* because contact is about deep sharing not exploitation. She understood this very clearly from the beginning. As the great European empires of the 19th and 20th centuries found out to their cost, colonization and exploitation is a costly and unrewarding business. If this was a direction the visitors intended to take, they would have done so long ago.

By the early nineties, even though I had been more or less driven from the public stage, our relationship with the visitors did not stop. It never stopped. In fact, it has grown from the violent, confused mess that it was originally to the richly rewarding companionship that it has become.

It has been a long, hard road, though. On the evening of August 11, 2015, I lost Anne, whose brilliance and insight had guided us. Lost her, but only in a way, for when you are as deeply involved with the visitors as we are, death does not bring with it the same finality that it normally does in human experience. As I have said, they don't function in reality in the same way that we do, and when you get close to them, neither do you. Anne and I wrote a book about this called *The Afterlife Revolution*, which I will refer to frequently in these pages. We wrote it—together—after she had died. Because of the state we are now in, which I believe to be new to human

experience, I wear both of our wedding rings. This is to symbolize that fact that we are still together, only now possess only one outpost in the physical world, which is this old body of mine. I know that this is deeply heretical to our scientific and intellectual communities. This is because the intensity and complexity of material culture has blinded us to the existence of that subtle and many-faceted enigma we call by the single, starved word “soul.” But this mysterious and denied presence is quite real. It is not supernatural in any way, but rather part of nature. It is also where our visitors live, penetrating only occasionally into this physical level. As they come closer to us, it is going to become more and more clear that the reality of the soul is much bigger than that of the physical, but also that it is nothing like we have imagined. It is going to become inescapable that not only is consciousness in us, we are in consciousness.

As our relationship with the visitors deepened, it became inescapable to both Anne and me that the physical world is embedded in a much larger, older and richer reality. However, we cannot yet detect it with any instrument we possess. The result of this is that we deny it altogether, in part because we cannot apply any known method of discovery to it, and in part because we in the west fear that our secular freedoms, acquired at great cost from a religious dictatorship that lasted a thousand years, will be lost to that dictatorship once again if we so much as whisper the possibility that the soul may exist.

It is not the soul of religion, though, but something very different, much more real and, in the end, much more obviously part of nature. Nor is it really separate from the body. A living being is, rather, a continuity. The borders of a human being are not found along the edges of the flesh but rather within us, where there are depths that we have forgotten but can regain and, if we are to survive much longer as a species, must regain.

The visitors stand ready to help us refocus ourselves in this new way and, in so doing, make for ourselves a new world, one that will involve permanent physical survival and conscious extension into the larger reality that has hitherto been addressed only with confused belief and, more recently, denial. Doing that is what this book is about, and why it has the title that it does. Truly, a new world awaits us. All we need to do is respond coherently to them to begin what I am certain can be a journey of incredible value to us and all who follow in generations to come, of which I hope with all my mind, heart and soul there will be many.

AN URGENT CALL

Over the thirty years that I have had a relationship with the visitors, I have gotten some idea of what they want from us and have also formulated some thoughts about what they have to give in return.

The most important thing on offer is knowledge, and they are already bringing it, but mostly in very concealed ways. We need more of what they have to share.

One example of a scientist who has gained knowledge from them is the distinguished mathematician Dr. Edward Belbruno, the winner of the 2018 Humboldt Prize in Mathematics. Belbruno's books include *Fly Me to the Moon* and *Capture Dynamics and Chaotic Motions in Celestial Mechanics*. He is a consultant with NASA and also a prominent artist.

I met Dr. Belbruno in 2009 and interviewed him on my podcast Dreamland. At the time, he had never made a public statement, so he appeared anonymously. This distinguished man has since gone public with his story.

On October 2, 1991, Dr. Belbruno was driving along an isolated road in Wyoming when he found it blocked by a large object. A short time later, it rose into the air and was gone. He feels that his space trajectory research was affected on that night, and the calculations that came into his mind have been extremely useful in his work.

Unfortunately, I cannot name some other scientists I know who have gained knowledge from the visitors in similar ways, largely because their work is classified, an issue that must be considered now with the utmost seriousness. In view of the urgent need to accelerate scientific, technological

and cultural progress, there needs to be an internal review at the highest levels to determine what, if anything, should remain classified at this time. Contrary to many conspiracy theories, Executive Order 13526 establishes three levels of classification, the highest of which is Top Secret. “Top Secret shall be applied to information, the unauthorized disclosure of which reasonably could be expected to cause ‘exceptionally grave damage’ to the national security that the original classification authority is able to identify or describe.”

The first National Security Act, passed in 1947, mandated that conditions that might be threatening be classified until their status could be determined. It was on this basis that the first UFO debris, which was found near the Roswell Army Air Force base in July of 1947, was classified. Initially, this had nothing to do with aliens. The 509th Bomb Wing, stationed at the Roswell base, was the only atomic bomber wing in the world. It was also the only thing preventing Stalin from invading western Europe, which would have resulted in an allied defeat within six weeks. So the appearance of some sort of unknown flying vehicle near the base was deemed a threat, and it was classified as soon as Army Air Force authorities became aware of it.

General Arthur Exon, who was a friend of my uncle Col. Edward Strieber, told me in 1988, “Everyone from Truman on down knew that what we had found was not of this world within twenty-four hours of our finding it.” Both were at the Air Materiel Command at Wright Field in Dayton, Ohio, where the debris and biological remains were brought for study. My uncle said that the debris he had observed had properties identical to those described by Col. Jesse Marcel in a video he made in his later years stating that some of the metal they found “wasn’t any thicker than the foil out of a pack of cigarettes, but you couldn’t bend it, even a sledgehammer would bounce off of it.” My uncle told me that it was subjected to bullet tests, and bullets could not penetrate it.

Both my uncle and General Exon told me that they had been lawfully requested to give me the information that they did. They were not in violation of the law when they spoke to me. I do not know who might have made this request of them, nor would they tell me.

Since 1947, the amount of information held secret about this and many other events related to UFOs has grown and grown. The reason is, basically, that the law needs to be changed. Right now, unknowns such as the Roswell materials and biological remains can be held secret until they are not deemed

a threat. The language should be that such things may only be held secret *if* they can be deemed a specific threat. While this change will not lead to the release of everything held secret regarding this subject, it will require the release of information about materials such as those found at Roswell, as well as biological remains.

The military keeps the broader matter secret for three reasons. The first is that the visitors cannot be controlled in any way. We are militarily helpless. During the period 1965–2000, when abductions were frequent events, the fact that they could neither be understood nor stopped caused an increase in the intensity of the secrecy. The fading of the abduction phenomenon has not changed this. The second is that many processes we have already learned from the materials we have obtained can potentially be weaponized, and in fact, there is a race on between Russia, China and the United States to do just this. Central to this hidden competition is discovering the secret of gravity, the mastery of which is displayed by the UFOs. Therefore, research into their motive power is held deeply secret. However, it is also true that none of the players have won this game, and perhaps it is time the broader scientific culture gets its chance to address the mystery. A good start would be for more materials and UFO footage to be released and for the National Academy of Sciences to change its opposition to granting in this field.

The third is that the visitors themselves compel a degree of secrecy because, as matters stand right now, we do not have the intellectual tools we need to communicate coherently with them. They do not do this via some sort of hidden conclave. They do it by cultural and social manipulation, and they are really very good at this.

What happened at Roswell is a good example. The crash, which, like the others, was probably more a donation than an accident, took place within thirty miles of the most secret military facility the United States possessed, at a time when it was the primary key to the preservation of freedom in much of the world. Of course the Army Air Force jumped to keep it secret. Then, when they realized what they had, complete confusion descended. Over the next few years, as the military came to understand that it was helpless before this apparent threat, the whole matter remained classified. Meanwhile, efforts to understand and make use of the secrets of the remarkable debris went into overdrive, as did our weapons research.

In other words, we did exactly what the visitors wanted us to do, which was to keep their presence secret while we caught up to them technologically.

They are not interested in supplicants, let alone slaves. They want us to be independent, self-sufficient companions. Otherwise, we are more or less useless to them. Over the course of this text, I will explain as clearly as I can why I am sure that this is so. To conclude now, though, I can only say that, with the capabilities that they display, they could have invaded us and subjected us to their control years ago. I doubt that the subjugation of the whole planet would have taken them more than a week. I can easily believe that it could have happened in a matter of seconds. But it didn't happen, and because it hasn't, I think that it's safe to say that they have another motive.

I don't think that they would have spent thirty years teaching me or anybody else the rudiments of communicating with them unless they were here to do just that. I think that their motives are to contact us, communicate, and finally enter into the deep sharing of communion.

Communicating with them is not like communicating with each other. Not at all. But I think that it is essential that we turn toward them and try to engage in a meaningful way. We have never so far done this, not in all the thousands of years of history that, to one degree or another, they have been present here.

Because of the way nature designed us, we've overpopulated Earth, with the result that the environment is breaking down. A worldwide failure of political leadership and social will has caused us to ignore the problem for too long. It is my belief that our visitors do not want us to sink into the chaos that now threatens, let alone go extinct, which also seems like a possibility. This is not entirely altruistic. They also want something from us. If my life with them is a true example of what relationship in general will be like, then I know what it is. There will be great challenges for each one of us with whom they engage, and extraordinary rewards for all mankind if our relationship with them flourishes.

In a sense, my 1985 experience was initiatory, introducing me, as it did, to an entirely new reality that had heretofore been hidden from me. It overturned my understanding of the world entirely.

The relationship continued, and I wrote two more books about it, *Transformation* and *Breakthrough*.

In September, just a month after my wife's passing, the visitors burst dramatically back into my life. I can't prove it, but I sense very strongly that this was a result of something she was doing—after death.

Sometime in the early nineties, she said what I believe to be the single

most important thing about the experience that has ever been said. One afternoon she walked out of her office after reading letters for two or three hours and stated rather quizzically, "I think this has something to do with what we call death." She said this because we were receiving a steady stream of letters involving the dead appearing along with the supposed aliens. On the occasions at our cabin when the visitors came, the human dead were generally also with them.

Within two hours of Anne's passing, she began making it clear that she still existed and was aware of this world. She did it not by contacting me, but by asking friends to call me. The first of these, Belle Fuller, had no idea that Anne was dead when, at about 9:30 in the evening, she heard Anne's voice in her ear say, "Tell Whitley I'm all right." When Belle's call came, I was sitting in the living room absolutely bereft, helplessly asking her for some sign that she still existed.

She continued to make contact with me through other friends and acquaintances, never directly. By the end of the month, it was undeniable to me that she not only still existed, but that she stood ready to continue our relationship.

I think these events foretell a fundamental change in the experience of being human. Right now, we cannot reliably engage with our dead. Our whole religious journey is, at its core, an effort to ensure that the death of the body does not mean annihilation. One of the most basic changes that relationship with the visitors suggests is that the barrier between us and our own dead is going to fall. Empirical evidence will emerge that enables us to escape the trap of believing that physical life is the only life. On the other side of the wall of death, there lies a new freedom and a new life, and along with them opportunities for enrichment that are presently almost beyond imagination.

My observation of the visitors suggests to me that they exist primarily in a nonphysical state. Not that they don't have physical bodies, they do, but they are not bound to them in the same way we are. This is why something like the Roswell donation could include bodies. They were not people but containers that people used.

It isn't that the soul level is not also material, though. It is, but in a way we cannot yet detect and measure. Like everything, it is part of reality, by which I mean everything that is material or energetic. Secular culture is correct to believe that there is no supernatural. However, it is mistaken in

dropping the parts of the natural world that it cannot yet detect into that basket simply because they have so far evaded measurement.

If you find the idea that we continue after death hard to believe—or perhaps to face—I urge you to explore the enormous literature that exists on this subject. There is an energy that we have not yet detected, upon which relationship with everything in this other reality, including our visitors and our own dead, depends.

As has been true throughout the history of science, the existence of any aspect of reality that is not currently measurable is always hotly denied. There are two reasons for this. The first is that the brain is constructed to see what it can use, not what may be behind it, which could be a very different matter. So we have to feel our way toward the truth using instruments of detection. Without the right instrument, we can't detect something that might be quite real, and all too often we fall into the trap of denying that it is there, even when there is evidence to call this assumption into question. The second is that science has had tremendous success with the strategy it is using now, which has reinforced our tendency to reject what we cannot detect as nonexistent. Why look for things that probably aren't there when we are learning so much by studying the things that are?

From observing the way the visitors communicate with me, I have gained the impression that they do not see the world as we do, and in the most fundamental possible way. We use what I call an output strategy. Our senses provide us with a richly detailed view of the world around us. That is to say, we see what's on the surface, but the surface is not where reality begins. We must use instruments to detect what's beneath it. We see an apple but must use an electron microscope to observe its molecular structure, and even more sensitive instruments to detect the atoms that make up those molecules. We can extrapolate the math that organizes them, but we cannot see it. By contrast, I think that there is evidence that the visitors see the principles first, the apple only later. They use an input strategy in order to organize reality in their minds. In other words, they think the same way a machine does. That they may, therefore, be machines doesn't seem to me impossible, either, nor does the idea that a machine might be conscious.

I believe that we are well on our way to creating conscious machines ourselves. I see consciousness as what happens when a mind regards itself, as every mind must. In other words, there is a sort of reflection of us within ourselves, and that reflection is what makes us feel a sense of self. If true,

then we can certainly develop a machine that does that, and I wouldn't be at all surprised if others in this universe have not already done so.

Understand, I don't equate soul with consciousness. I have not only been out of my body, I have been seen by others and in one case communicated with the person observing me, so I cannot think that I am entirely confined to my body. When in that state, though, my consciousness isn't the same as it is now. It is less informed about who I am, is the best way I can think of to express the difference I have observed.

I can never forget the moment in February of 1986 when I turned away from a group of visitors who were waiting for me in a clearing near our house. The moment my hand touched the doorknob to go back in the house, there came from above the woods three cries, which I have described as the most perfect and yet most emotionally complex sounds I have ever heard. If a machine had emotions, this is what it would sound like.

On other occasions as well, I have noticed a strange sense of perfection attaching to sounds and movements made by the visitors. It is really uncanny, and every time I see it, the idea that I am dealing with a conscious machine comes to mind.

One of them once made a very telling comment to a close encounter witness. It told her, "We rearrange atoms."

This is the holy grail of technology. If we could do that, we could make anything into anything. We could create completely novel materials. We could, in effect, do anything. I think that they may be able to do this naturally, because of the way their mental processes work. If they are seeing the world, as it were, from within, it's not too hard to believe that they might also be able to change it from within as easily as we rearrange flowers in a vase.

Another suggestion that this may be true comes from that much maligned phenomenon, the crop circles. Of course some of them are manmade. There's no secret about that. But many are not—which, because of how unlikely an unknown origin seems, is a matter for debate. Some of the earlier formations, such as the Julia Set laid down beside Stonehenge one afternoon in 1996, followed shortly after by the Triple Julia at Windmill Hill the same year, were intricately devised fractals. Many formations reflect geometric principles and mathematical formulae, but these early ones, astonishingly intricate, are hard to disprove as anomalies. Like almost the entire body of such formations, they illustrate math and geometry. Only a very few are

images.

Is this because they are being made by somebody who thinks first in math and, therefore, is attempting communication with it, but in ways that we can see with our output-related brains and, hopefully, interpret? It seems possible to me. Perhaps it also explains why the first scientist not hidden behind the wall of secrecy who has received information from them is one of the world's leading mathematicians and received his information in the form of a mathematical formula.

One approach is not better or worse than the other, but they are going to result in radically different ways of understanding the world. If I am right, then this difference is fundamental to the communications gap that exists between us and is likely to be the primary reason that they are not more present in our lives. They cannot communicate coherently with us until we—and by this, I mean both sides—have a clear idea of what the differences are between the ways we see and understand the world.

The reason we use an output strategy is that our dense, complex bodies need to see the world in a practical, useful way. If we utilized an input strategy, we might have a more accurate view of reality, but we are not going to be able to find food very easily at all. Perhaps our visitors, less dense, don't have many physical needs, maybe none. They thus have had no reason to evolve an output-first strategy. Based on my observation of them, of how they react to me and how they reacted to so many people who wrote us letters about contact with them, I think it's possible that that they really do see the underlying truth first, then—and only if necessary for some functional reason—the outcome. This would mean that they would see first the forces and math that lies behind the apple, and only if necessary the actual form.

I have no way of proving this, but when I see the differences between how I and they react to the world around us, I think that it could be the fundamental reason that we are so different.

I know of one case of a human being who has ended up using an input strategy, so I know that this is possible. This is the case of Jason Dwain Padgett. After a severe beating in December of 2002 he woke up in the hospital seeing the world as math. In other words, the beating caused him to experience what is known as “acquired savant syndrome.” Instead of seeing an apple, he found himself seeing the math behind it in fractal form. He had acquired mathematical synesthesia. In his 2014 book *Struck by Genius: How a Brain Injury Made Me a Mathematical Marvel*, he describes his new

perceptual perspective. Linda Moulton Howe has interviewed him, and some of his remarkable fractal drawings that appear on her website Earthfiles.com offer, I would think, an idea of how the visitors see reality. If so, then the gap between us is profound.

To attempt to bridge it, they also transmit information through images and by making reference to natural processes, using them as examples of what they mean to convey. In other words, they communicate in a very ancient way, which is similar to ancient Egyptian hieroglyphics. It is as if they must find things in the world around them that fit the concepts they are trying to communicate, and I don't think that they would need to do that unless they were translating a vision that is founded in the underlying structures of reality into one that has meaning at the level of outcome.

If this is true, then it is this fundamental difference in the way our minds work that is generating the massive communications gap that we actually see. As will be seen later, they have come up with some clever strategies that do allow reliable and even rich communications, but they don't involve sitting down across a table and conversing as we might among ourselves.

As this book is about beings and things that cannot now be detected and measured, it is about rejected knowledge. That doesn't mean that it isn't true, though. Voltaire dismissed fossils as fish bones tossed aside by travelers. The possibility of heavier than air travel was definitively denied by Lord Kelvin in 1895. Similarly now, the existence of the unknown that defines my own life and the lives of many others is denied.

It's too easy to attribute this simply to the nature of intellectual culture. It goes deeper than that, all the way back to the issue of our use of output strategies.

In my experience and that of so many people, the visitors are real. The dead are conscious entities. Communicating with both is neither a mystery nor a miracle. But because there is nothing here to measure, at least not yet, it's impossible to prove these things using established scientific method. Therefore, they cannot be entered into the canon of events that are considered "real." My intent here isn't to offer that proof. It will come in its own time and in its own way. What I can do is describe how I have learned to use it and how this has enabled me to open access for myself to aspects of the greater world of which we are a part.

Looking back on what I was before I found the visitors in my life in comparison with what I am now, it is hard to recognize the plodding,

frightened, wary man of those days. Their coming devastated me but also freed me. Had I not decided to challenge the fear that the 1985 incident left me with, I would never have been able to move on. I had been violated, and I was angry. But walking out of Dr. Donald Klein's office after the session with him that brought it all together, I thought to myself that I wanted to continue the adventure. I just wanted to.

When I published *Communion*, it was easy for the close encounter experience to be scorned. While it can still be dismissed, it is now much harder to do what was done then and claim that the witnesses are simply delusional. The letters that Anne collected tell a story not of mental illness but of normal people having a tremendous variety of unusual experiences, which all center around one basic event: the approach and presence of small people with large, staring eyes and outsized heads, often accompanied by those dark blue trolls. As often as not, as happened in my case, dead people who appear to be alive are present as well.

The descriptions people have left of what happens to them next forms one of the most complex narratives of human experience ever recorded.

But is there any hard evidence? Any at all?

Aside from the many cases of multiple-witness experience, including some stellar ones at the cabin where I had my experiences, I cannot point to anything so telling as a video of aliens carting somebody off. On a personal basis, I have tried for years and in many different ways to obtain video or photographic evidence. I have studied many videos and had some particularly promising ones professionally analyzed. There are three that are compelling, two of which are almost certainly authentic. Neither of them portrays the sort of entities that are described in the literature, and that so many of us have seen. Instead, they show extremely strange looking stick-figures walking carefully along. The videos can be found by going to Unknowncountry.com, opening the search engine, going to the Out There section and searching on the term "stick figure."

While genuine footage of otherworldly entities would appear to be quite rare, this isn't to say that there exists no hard evidence of anomalous objects or materials that could be related to the close encounter narrative in some way. There is a great deal of UFO video, including video of similar objects taken at different places and times around the world. Moreover, releases of US Navy video over 2017 and 2018 has affirmed that UFOs are a genuine unknown phenomenon. In September of 2019, the Navy stated that these are

indeed unknown objects. But are they spacecraft belonging to aliens? Possibly. They may also be intrusions from another reality, which is an important possibility to explore. Or they may be something so unknown to us that we simply cannot identify it in any meaningful way at present. I don't see much evidence that they belong to an earthly foreign power. The reason is that there is so much good video going back years. If any country had devices of such incredible power, our world would not be as it is now.

In support of the idea that another reality might be involved—a parallel universe—there exist in the public record some high level analyses of metal from a UFO that has proved to have isotopic ratios that not only are not of Earth, but that cannot be generated in this universe at all, not unless there are areas of it operating under such different laws of physics from this one that they might as well be another universe.

What we are encountering might be aliens from this universe, sure. Having laid in their arms and gazed into their very strange faces, I could believe that. However, after all these years of experience with them, while physical aliens may be a component of the experience, I see it as being primarily something that has a different relationship to reality than we do. In order to avoid identifying them with a label that may not be accurate, I have always called them, simply, visitors. Throughout this book I will continue with that convention. I think, though, that there is also a greater presence behind them, or perhaps something entirely different, that has played an even larger role in our development than they have. This I will call “the presence.”

Engagement with the visitors amounts to a new kind of experience. There is a gap between us and them, which, I think, has to do with the difference in the way each side is part of reality. If they have evolved on another planet in this universe, they can certainly be expected to look, act and think differently from us. Add to that capabilities such as the ability to become invisible that seem like magic to us, and the issue of how to understand them becomes very large. Are they aliens with skills such as the ability to become invisible, or are they not from this universe at all and using some natural means or technological skill to penetrate into it?

Those are the sort of questions that we cannot really address without more data, but until the wall of secrecy that surrounds what we do know is breached, at least to some degree, we are not going to be able to address them meaningfully.

On rare but important occasions in our history, the larger presence that

seems to be behind all this has made an appearance that has changed the world. All of these instances have had to do with religion and have involved the establishment of the idea that there is a single god. Because they have involved flashes of light, strange fires or shining beings, I call them “incidents of light.”

The journey began when the Egyptian Pharaoh Akhenaten came to believe that the sun itself was god and was the only god. This was followed by a number of more direct interventions.

Sometime around 1500 BC, a Persian, Zarathustra Spitama, who was wandering in the countryside seeking enlightenment, came upon a shining figure that called himself Vohu Mana, who proceeded to teach him that god, while a single entity, was divided into two forms, order and chaos. Zarathustra spent the rest of his life trying to get people to worship order. Somewhat later, Moses encountered the burning bush, which directed him to lead the people of Israel into the land of Canaan. Then Paul the Apostle, shortly after the death of Jesus, encountered a glowing orb on the road to Damascus and became the first gentile advocate for Christianity. Later still, Mohammed found himself being taught by a glowing angel in a cave, and Islam was born.

While I wouldn't advocate that any of these incidents of light happened as described in the ancient sources, they represent the importance of light to the human mind and, I believe, reflect some sort of deep intention that seeks to bring to mankind an ever more coherent vision of the sacred, and a more and more useful understanding of morality.

Unless the incident at Fatima in 1917 when the sun danced before 50,000 people qualifies as an incident of light, for the most part we see individual creatures, generally small and surpassingly strange. Our visitors can and do take us into their own eerie realm and have been doing this occasionally for eons, as the many stories of such abductions in the literature of the fairy-faith will attest. Something changed dramatically in the mid-20th century, though, as now we have not a few stories of enigmatic abductions but thousands and thousands of them being recorded by people all over the world. This is not a continuation of the fairy-faith. It is similar, but the scale is much larger. It's huge.

This is the reality we are now facing. It leads to the question that forms the heart of this book: How are we to understand this? What is contact, and what sort of change is it bringing to us and our world? For it is bringing

change, most certainly. Great change, even staggering change.

WHY CERTAIN PEOPLE?

Is it that only certain people notice the presence of the visitors, or that only certain people are approached by them? One thing that became clear to Anne and me when we were getting letters was that contact is a family affair. Often, the experience runs in families. Surprisingly, there were some reports of witnesses being told during experiences that they were members of the visitors' family, or they felt that this was the case.

Sometimes, though, the experience simply comes out of nowhere. An example came from a witness in Australia, who wrote, "In 1976 I was vacuuming my living room floor at about noon. I felt quite ill and thought I was going to vomit, so I sat down on the couch to see if the sick feeling would subside. I then saw that I was not alone; there were three strange little people standing alongside the couch, just looking at me. Two of them were short and fat, about four to four and a half feet tall, with broad faces and enormous black eyes, but with only a hint of where a nose or mouth might have been." She goes on to say that they were wearing brown clothing and seemed to her to be workers. There was another one there who was about five feet tall and "wore a black shroud and had black wispy hair at the back of her head. Her face was very elongated with huge, dark, piercing eyes..." They demanded that she go with them. When she resisted, there followed a sort of mental tug of war, which finally ended when she thought her husband had come home and saved her. But when he really did return, four hours had inexplicably passed. She concludes with a statement that is also a cry from the heart of every close encounter witness I have ever known, "I wonder, where did that time go?"

Nothing ever recovered it for her, no discussion, no regressive hypnosis, nothing. She died some years later with the mystery still unsolved.

A third type of encounter that happens from time to time is one that is intentionally induced by the witness. I first heard of this from Marie “Bootsie” Galbraith, who had prepared a selection of cases that was distributed as *The UFO Briefing Document: The Best Available Evidence*, financed by Laurence Rockefeller and republished in my Dell Books *Hidden Agendas* series. Bootsie told of some successful efforts to “call in” UFOs using laser pointers, but these did not lead to close encounters.

Sometimes they do, and if communication becomes more orderly, I think that this might work more often. However, it comes with a warning. In her book *Extraterrestrial Contact*, Mutual UFO Network Director of Experienter Research Kathleen Marden reports the case of “Matt,” who became curious about UFOs after seeing one on the runway of the small airport he owned. He first signaled his interest by flashing an old navy signal light then by making an X with red rope lights on his runway. This worked to an extent, but he got the strongest reaction by aiming a laser pointer into the sky and clicking it on and off. He was soon seeing craft on his runway, but when he pointed the laser light at them, they would drop slightly then rush at him, flashing multicolored lights. His final experiment with this caused hemorrhages to pour from his nose and ears and ended his willingness to try this approach.

However, the visitors remained interested in him, and he found himself confronting the entities themselves, creatures similar in appearance to what the Australian witness saw. He could not stop the visitations, which became increasingly menacing. He began sleeping with a pistol in his hand. One night, he woke up to see a six-foot-tall entity standing at the foot of his bed. He fired the pistol at it, causing it to disappear in a flash of light, leaving behind a yellow substance spattered on the floor. Unfortunately, he was too distraught to collect it for analysis. There followed a shift into a sinister haunting, elements of which, like some of the events on his runway, were witnessed by other people.

After his family staged an intervention to force him into psychiatric treatment, his mother witnessed, with him, a different version of the world at the end of his runway, a savannah where woolly mammoths were grazing. A year of bizarre events and visitations made him feel as if he were living in a sort of hell. He began to see horrific entities and suffered a profound decline in his health. Just as Kathleen Marden was attempting to organize support

from a sympathetic minister, he was hospitalized and died.

The lesson here could not be more clear: If you get curious about this and seek to bring the entities into your life, know that they are not like us and do not have the same connection to reality that we do. Reacting toward them violently without understanding anything about them, even what they are, is foolhardy.

Unlike us, when they are killed, they don't lose contact with the physical world. They can keep acting in it from the nonphysical level. Matt took the body of one of them, but not his access to the physical world. What happened as a result was essentially an act of anger. This individual had lost what they view as a gateway—a body—much more than they see it as a “self.” We live by the illusion that we are our bodies. They do not. We assume that the death of the body ends an individual's access to physical life. It doesn't, and if they are attacked and hurt and angered, they are likely to continue to act in the physical world against their attackers, and this is going to look to the attacker like the sort of bizarre haunting that Matt experienced.

This has also happened to thousands of military people over the years, individuals who have acted aggressively toward the visitors. They carry out their aggression under orders that are given by authorities who have little understanding of what they are doing and the consequences of their actions. These military people are being asked to “defend” against them, which is not possible if you have no access to the nonphysical. They are not told that they and their families may experience things similar to what happened to Matt, and certainly not told that their souls will also have to confront those they have attacked after they die, because this is not understood on an official level at all.

Billionaire Robert Bigelow, who has worked with elements of the US government who present a hostile face to the visitors, commented on 60 Minutes on May 28, 2017 that he had experienced a face-to-face confrontation with them. It was not a pleasant experience for him. Similarly, two members of the board of directors of the To The Stars Academy, an organization devoted in substantial part to aggression against the visitors, have had terrifying direct experiences in their lives. One of these led to a family tragedy. The other, fortunately, was only frightening. This organization, which has a rock-and-roll personality as its public facing presence in order to gain easy access to the media, is dedicated to moving the struggle to create weapons that might be effective against the visitors into a

more open context in the scientific community, in the hope that some sort of breakthrough can be achieved. Over all the generations of effort that have been expended behind the wall of classification, this has not been a successful effort.

It has failed because defense on a physical level is as meaningless, quite frankly, as it is for a dog to bite the boot of the man who is kicking it. Early on in my adult relationship with the visitors, I had a conversation with one of the blond people who are not of this world and who have also advised our official level. He explained to me that “if you start a war with the grays, they will never let you stop fighting and they will never let you win.” This is what is happening on our hidden official level, but it is certainly not what our leaders are told in a briefing that they receive if they ask intelligence and military officials what is being held secret about this subject. They are told stories of what has happened to our military personnel, but not that we ourselves instigated the conflict. Some of these stories are truly horrific. It is then explained that, while we are working on weapons, we have not yet achieved control and the whole thing must be kept secret until we do. It never occurs to anybody given the briefing to ask why it is that the visitors keep matters secret, too.

From where I sit, the official reaction, as inept as it is, is entirely understandable. The visitors are fantastically frightening. There simply isn't any other way to put it. During the summer and fall of 1985, when I knew, but not consciously, that they were there, I also armed myself and might well have done the same thing that Matt did and the military does, had one of them appeared in my gunsights. I would assume that the results would have been similar. Fortunately for me, I was never face to face with them while carrying a weapon, and before I began to understand why they were here and what they want.

Once I realized that they were real, my curiosity overcame my fear, and the guns were no longer a factor. After the initial period of friction, we found common ground in spiritual search. They reacted to my nightly meditations and shared in them. Over time, this has created a fruitful relationship that has enriched my life, and I hope also offered them the reward they seek.

At this point, my relationship with them is as coherent and organized as it would be with anybody I might get to know in the normal course of my life. There are differences, though, chief among them the fact that companionship and communication are so different from what they are among us. They are

frightening to me and to some extent always will be. This is because they can control souls, and my soul knows this and in the face of such awesome power, feels the fear of the helpless and the vulnerable in the presence of the aggressive.

I am in my relationship with them to learn and report what I have learned. They are in it to teach. Their aim is very clear: They want the relationship to work, and not just for me. They want it to work, period. They also know how hard it is going to be for us—and for them—to achieve this goal. We are like two brilliant animals of different genius species confronting each other. They are large, we are small. Both are fierce, both are wary.

So what's next? Do we continue circling one another or do we find common ground? Given that we humans are helplessly using up our planet's resources, we are essentially back against the wall. Either we succeed in this or we go where nature and the failure of our environment are liable to take us, which will be into a state where our planet is largely uninhabitable and we no longer have access to physical bodies and all the opportunity that they offer evolving souls.

I believe that my own relationship is in part related to the fact that older members of my family were involved in military operations connected with the visitors. While I don't have any statistical evidence to point to, I do have reason to believe that this can be a factor. Once one member of a family becomes involved with them in some military context, whether confrontational or not, they seem to have a tendency to follow that family line.

My uncle was involved in the Roswell Incident and my father may have had something to do with the presence of Col. Guy Hicks living a block away from us. Col. Hicks was the commanding officer at Goodman Field in Kansas when Capt. Thomas Mantell, stationed there, crashed in his plane in 1947 while pursuing a UFO. This was all debunked, but I think that my father and an FBI agent who lived down the block from us were watching Col. Hicks and some other men on the same street. I cannot say that my father was in the intelligence community, but I have always sensed that he was somehow involved. He was, if anything, even more secretive than my uncle.

Another reason for involvement is childhood trauma. As Dr. Kenneth Ring showed in a study of close encounter witnesses published in his book *The Omega Project*, psychologically stressful experiences in childhood, such as child abuse, also increase the chances of close encounters happening. I

think that this is because the abuse shatters the child's expectations, increasing the chance that things that are not supposed to be there, but are, will be seen.

Between August and October of 1952, I was involved in a special education project at Randolph Air Force Base that utilized something called a Skinner Box in enhanced learning experiments. This device, developed by psychologist B.F. Skinner, was intended to isolate subjects and induce rapid and enhanced learning.

The process was extremely stressful to me, as a result of which I also began having trouble in my regular school, becoming terrified of my teacher for reasons that I could not explain. I began to experience one bout of sickness after another. My pediatrician discovered that I had almost no white blood cells, and my sister and I were removed from the program in October. I was isolated at Brooke General Hospital and given injections of gamma globulin, then kept at home until January of 1953, when I returned to second grade.

My direct memories of this experience are quite confused, and my sister in her lifetime did not remember it at all, but a close friend does remember the Air Force couple who did the recruiting visiting their house. In fact, his parents socialized with them a good bit but refused to allow him to enter the program on the basis that it involved the use of a Skinner Box.

I remember dreadful close confinement, darkness and awful screaming that went on and on. In fact, if my friend didn't recall the recruitment pitch he listened to with his parents, I might think that it had all been a nightmare and that my whole problem was my fear of the nun.

So I had two factors that can lead to abduction: unusual stress in childhood and being part of a family that includes older members who have been involved in some way.

As I described in my book about my childhood, *The Secret School*, it appears to me that the visitors showed up in my life sometime after I was removed from the program at Randolph and remained until I reached puberty, when they withdrew, or I stopped being aware of their presence. By the time I met them in late 1985, I had no memory at all of my childhood encounters.

It is my belief that the depth and extent of my relationship has been enabled not only by my serving notice in those night woods that I was interested in taking matters further but also by something that I have been doing since 1969–1970 called the sensing exercise.

In the fall of 1969, I began working as a Director's Guild Trainee on a movie that was being shot in New York. One of the other production assistants was something new to me, a spiritual seeker. He introduced me to P.D. Ouspensky's book about G.I. Gurdjieff and the Gurdjieff Work called *In Search of the Miraculous*. Anne and I both bought copies and read it with growing interest, and then hungrily. It made the argument that the human attention is mostly drawn automatically to experiences and sensations, but that it can actually be controlled by the individual, who can intentionally split it between what is coming in from the outside and his inner being. This is called the double arrow, looking out and in at the same time. When we experimented with this, we discovered that it did indeed cause a definite expansion, not exactly of consciousness but of what I would call sensitivity. Those early experiments were the first small notes of what has since become a resounding chorus in our lives that crosses the bridge between the worlds and opens the mind to mysterious new levels of reality.

Early on, we found one immediate change that was really very engaging to us. We began to see the world and our place in it in a new way, as both participants and observers. Life became more vivid and poignant. The experience of noticing in this new way transformed ordinary life into an extraordinary art form, and being alive came to appear as a continually unfolding miracle enclosed in the familiar world of our ordinary reality.

We joined the Gurdjieff Foundation's New York City branch. It was in group meetings there that we began doing the sensing exercise regularly. It seeks to split the attention by anchoring part of it in physical sensation while letting part of it take in outer impressions.

Now, fifty years later, I am still doing it, and it is the center of my relationship with the visitors. I am no longer actively attending group meetings in the Foundation, and I don't hold group meetings myself. The Gurdjieff Foundation is the inheritor of the teaching, and I regard work within it as essential to gaining useful understanding and establishing a strong personal practice. I must add, though, that the Foundation doesn't have anything to do with contact or facilitating contact. In fact, the members I've kept up with regard my stories as pretty quixotic. It is a resource designed to awaken us to reality in a new way. The fact that the sensing exercise facilitates contact is entirely coincidental to the Foundation's aim.

On the surface, the sensing exercise is quite simple. It is, however, a uniquely powerful form of meditation, as I now understand. To do it, one sits

and places the attention on physical sensation. I follow the method I learned in the Foundation, which involves being attentive to first one foot, then the lower leg, then the whole leg, then working up the other leg, the arms and torso, opening my attention to the sensation of each part of my body until I finally spread it over the whole body.

When Anne was alive, we often did it together. It can also be a powerful experience in a group setting, which the Foundation excels in providing.

When our son was born, I stopped doing it for a time. I was too busy and tired, being the father of a baby. But as he grew up, I returned to the practice, doing it nightly at eleven. I now do it at eleven and three, and there is an interesting story behind the addition of the wee-hours session.

Little did we know in the early days that we were not alone—that doing the exercise made me and Anne visible to very different eyes. I have recounted in other books (*Super Natural*, *The Afterlife Revolution*) how strange things began to happen to us as soon as we came together, long before we had any inkling that such a thing as a close encounter of the third kind was even possible. I will mention here that the first of those events probably took place about six months after we started with the exercise. They involved ghostly events in our apartment in Manhattan and a notable experience of seeing *kobolds* apparently kidnap a man who had gone into a disused storefront where prostitutes sometimes sat. We called the place the “whore store” and used to laugh about it. We were astonished by the sight of what looked to us like blue dwarfs pulling a wildly struggling man behind a curtain. It was terrifying, and we ran home. We didn’t call the police because we couldn’t figure out what to say. We never passed that storefront again.

Another event from those early days that was important seemed at the time like a dream. This involved being in another world. I was with *kobolds*. We walked along a path under a great arch. Ahead on a ridge, I could see tall trees that looked like cedars of Lebanon. To my left, the land fell off into a vast view of a trackless desert. Perched on the bluff overlooking this desert was a round, dark blue building that was very tumbledown. I was told that it was a university but in bad repair because “the scholars are no good at maintenance.” I went toward it at once, eager to matriculate. I wanted to study at a million-year-old university, for sure!

As I approached, I was stopped by peculiar creatures with large black eyes, whom I would later understand as grays, and who I would meet again in December of 1985. I was terribly disappointed when they denied me entry. I

have later come to understand that this was actually my matriculation, and that the disappointment I experienced was meant to test me, either spurring me on or causing me to give up.

Creating this type of friction is central to the way the visitors teach, and as a matter of fact, its use is also important in the Gurdjieff Work. Mr. Gurdjieff would create situations that would challenge his students' egos and force them to face themselves, either driving them away or spurring them on. Gurdjieff called it puncturing the "hot air pie" of ego. My hot air pie has been leaped up and down on for many years by rude little men, and I am much the better for it. As I will discuss later when explaining how building a strong soul enables one to render moot the fear of them, the first lesson they ever gave me was about the danger of arrogance and the importance of humility.

I think that I've been in their school ever since that dream. When it happened, the two forms involved were nowhere in the news and not in my life. But there they were, kicking me out of the university that I have been studying in ever since!

Just as maintaining the double arrow enriches one's life experience, doing the sensing exercise enables the sharing of self. While you are doing it, they can enter the silence of your mind and join you in your life experience. For them, this is more than a pleasure. I suspect that, when they are in their normal state, it is an utter delight for them, and I would think that they want to experience it with as many of us as possible. I suspect that Anne intuited this early on, which is why she insisted that our book be called *Communion*. Contact is not just about our learning new science and making new social and cultural discoveries. It is, more importantly, about this sharing of self. And incidentally, this has nothing to do with what is called possession. That's exactly what the visitors don't want to do.

For them, I don't think that anything is ever new. For us, everything is always new. They may know reality outside of time. We don't really know what the next second will bring. They hunger to share our sense of newness.

I think that the reason for this is explained by an insight that was published in the April 1977 issue of the magazine *Science*. D.B.H. Kuiper and Mark Morris made the observation that any intelligent entity appearing here from another world would have essentially nothing to gain from us except the results of our own independent thought. They would be after newness, and they would therefore be concerned about our state of preparedness to engage with them. As Kuiper and Morris speculate, "We

believe that there is a critical phase in this. Before a certain threshold is reached, complete contact with a superior civilization (in which their store of knowledge is made available to us) would abort further development through a ‘culture shock’ effect. If we were contacted before we reached this threshold, instead of enriching the galactic store of knowledge we would merely absorb it.” They continue, “By intervening in our natural progress now, members of an extraterrestrial society could easily extinguish the only resource on this planet that could be of any value to them.”

Having been involved with them now for so many years—for much of my life, really—I feel that this is indeed the reason for their secrecy. But they now find themselves in a quandary: Our planet is failing so rapidly that if they continue to hide and wait for us to catch up, we might go extinct first, or enter into a period of chaos that will destroy what progress we have made, causing them even further delay.

Fortunately, it’s not clear that our making more scientific progress is the only thing that holds them back. I think that what I might call psychospiritual progress is at least as important, and probably more so.

This would be why they have lavished so much more attention on this non-scientist spiritual seeker than they have on any scientist I am aware of. I learned, first through my Gurdjieff work and then by working directly with them, a grammar of communication that is both efficient, in the sense that progress is steady, and fruitful, in that the richness of communication is rapidly increasing.

The sensing exercise not only opens us to them and enables communication, it sends out a signal that communicates a good deal more than a laser pointer. When we place our attention on the nervous system, it glows in their level of reality like a little ember. Our dead can see this, too.

I came to understand this while I was at a conference hosted by William and Clare Henry in Nashville in September of 2015, just after Anne died. During a break in the conference, a woman came up to me, wanting to speak. She told me that she’d heard Anne say in her ear: “Tell Whitley that I can see him when he’s sitting in the chair.”

I understood at once what she meant. She had to be referring to the chair I sit in when I do the sensing exercise. My mind flashed back to something the visitors said back in about 1987 or 1988, when I asked them why they’d come: “We saw a glow.” At the time, I thought that this meant the glow of cities, but in this moment, I understood that they’d been talking about the

light emitted by the nervous system—light that I’ve known for a long time that they can see. And not only them. In the past, we could see it, too, as will become clear in Chapter Ten, when we discuss the oldest religious document in the world, the Pyramid Text in the Pyramid of Unas in Egypt, and what its extraordinary contents have to do with the modern experience of contact.

When I got home, I sat down and started doing it at once. A few days of this and my teachers soon arrived to assist, and soon I was in an almost miraculous relationship with Anne. It wasn’t what’s called channeling but rather a communication based on preparation that, unbeknownst to me, Anne had been making since she had a stroke in January of 2015.

It was at that point that she began insisting that I memorize W.B. Yeats’ poem “Song of the Wandering Aengus.” In that poem occurs the line, “When white moths were on the wing, and the moth-like stars were flickering out...” This proved to be the axis of all my future communication with her. I also remembered, after her death, that her favorite of my short stories is called “The White Moths,” which is about a woman discovering that she has died.

What started to happen was that, when I was away from home and the surveillance system was running, when I talked about Anne, it would send me a text and I would see a white moth pass in front of the living room camera. This happened again and again, sometimes when I was lecturing about her at conferences, other times when I was talking about her. Each time, the moth passed in front of the camera and disappeared. No moth was ever found in the house, and no such moth ever appeared while I was there. It even appeared while I was at a banquet at the end of a conference about the afterlife and landed on one of the conferees’ heads! It then flew off, and before the eyes of a room full of people who were watching it in amazement, simply disappeared into thin air.

It must be understood that contact with the visitors in all their strangeness and power is also contact with the part of humanity that is in a nonphysical form—that is to say, the dead. But this isn’t only about a psychospiritual level of relationship. As we shall see, physical materials are involved and are being studied with astonishing results.

The deeper you penetrate into the experience, the harder to understand it becomes. It involves human and nonhuman beings in both physical and nonphysical states. It exists both inside and outside of time and space as we understand them and is larger than physical space and deeper than time. It is highly energetic and energizing. It is also challenging, difficult and can be

dangerous.

It is hard. For example, when I talk about the sensing exercise, people usually want to know how long it takes to get some response. I can only relate what happened to me, which is that I started the exercise in 1970 and was initiated by the *Communion* experience fifteen years later, in 1985.

Because we are so focused on the material world and hardwired to see only what we understand of it, they have to fight their way into our lives. I think that they started trying to make me aware of their presence as soon as we moved into the cabin and they could see me doing my meditation in an isolated area, but one that was also near where they were engaged in some sort of enormous operation that was giving rise to hundreds of UFO sightings along the Hudson River. I had no idea that this was happening not thirty miles from the cabin, where I was spending inexplicably uneasy nights. The story has been ably covered by Dr. J. Allen Hynek, Philip Imbrogno and Bob Pratt in their book *Night Siege: The Hudson Valley UFO Sightings*.

From the time we bought the cabin, I was terrified that there was somebody lurking around outside at night. I installed alarm systems, bought guns and so forth—all of which is documented in *Communion* and other books. What is not documented is that in the summer of 1985, I began having terrible headaches, I think now because I was suppressing my awareness of the visitors. I say this not so much because of any specific scientific evidence that suppression like this causes headache but rather because I observed it happen at the cabin. Dr. John Gliedman, a dear friend and scientist who was there, along with a number of other witnesses, saw a very dramatic shaft of golden light come down from above. Alone among the ten people present, he could not make it out, even though it was right in front of him. Seeing it would have destroyed his world view, which he could not face. The result was that he soon found himself incapacitated with a migraine. Mine the previous summer had been so bad that I'd sought medical help.

By October, I think that the visitors were being compelled by my reticence to become more aggressive. If our relationship was going to grow, my refusal to admit to myself that they even existed had to be overcome. On the night of October 4th, we had our friends Annie Gottlieb and Jacques Sandulescu up for a visit. We dined at a restaurant and then returned to the cabin. We all went to bed almost immediately. Then, as I reported in *Communion*, "I was startled awake and saw, to my horror, that there was a distinct blue light being cast on the living room ceiling." (Our bedroom

overlooked the living room, which had a cathedral ceiling.) I watched the light seem to creep down from above, then decided that the chimney of our wood stove must be on fire. “Then,” I continued, “I fell into a deep sleep!” They didn’t cause me to fall asleep. I did. I had to, or I would have had to face them. They must have waited for some time to see if I would rouse myself. When I didn’t, they woke me up with a loud crack like a firecracker going off in my face. When I opened my eyes, I was “stunned to see that the entire house was surrounded by a glow that extended into the fog.” (It was a very foggy night.)

The explosion caused Anne to cry out and our son, aged six at that time, to shout from his bedroom downstairs. Annie Gottlieb later reported that she heard feet “scurrying” across the floor of our bedroom upstairs, and Jacques observed light around the house so bright that he thought he’d overslept and that it was full morning.

I was then heard outside their door telling them that it was nothing, just go back to sleep. What had happened was that the light had gone out, meaning to me that there was no fire. At the time, I thought I was reassuring everybody that all was well, but what I was really doing was suppressing what I knew perfectly well: that the visitors had come down from above and I had woken up to find the room full of them. When I leaped out of bed, probably right at them, they ran away. This had caused the scurrying that Annie Gottlieb heard.

In retrospect, I think that it was my noticing them even slightly that night which encouraged them to keep on trying to rouse me from the fixation the body causes on life in the time stream. Facing them means rising out of it, which forces the ego to face its mortality, which it is designed by nature to avoid at all costs.

On December 26th, my resistance was finally broken.

They are not our enemies. They are not our friends. I am all but sure that their purpose here is to become our teachers and in return to be rewarded with the sharing that they seek.

I find them challenging and demanding, but also exquisitely responsive to my needs as their student. They know the paths I need to travel but will never simply put me on them. Their skill as teachers comes in their ability to enable me to find my own way rather than show me what they think I should do. I know that I frustrate them. I’ve felt it and seen it. But no matter how poorly I do, I am rather sure that they will not give up on me unless I give up on

myself. More than once in my life, I have rejected them and steered clear of them. But when I wanted to come back, they have always been there.

Each night during the first meditation, I bring to mind the children of the world. I live in a young neighborhood and see children every day. I see the wonder in their eyes, the joy, the hope. During the three o'clock meditation, I open myself to the visitors and in return receive knowledge and am exposed to their teaching. I think that I can feel, sometimes, that they are glad that this is happening between us. I know that they've staked a lot on it, because this is the only testament of its kind ever written down.

Communion is not just about contact between us and the visitors. It is also about the veil between the worlds falling, and we who are in bodies coming into real relationship with mankind unbound, that great, soaring wonder that we call "the dead."

When that happens, our understanding of life is going to refocus on how to live in such a way that we die with strong souls, which means without regret and not burdened by the memory of deeds that hurt others.

I didn't know it at the time, but as 1989 rolled around, I was about to enter a new stage of relationship with the visitors, which would open for me a door into the most enigmatic imaginable experiences and a whole new way of experiencing both life and afterlife.

In May of 1989, I was given a gift that at the time seemed like the most awful invasion of my body, my soul and my life that I could imagine. I was given my implant.

THE IMPLANT MYSTERY

The spiritual experience of communicating with the visitors has such a powerful and pervasive physical component that I could as easily say that it is a physical experience that has a powerful spiritual component. The physical side of it—the technology—has left me with the most wonderful spiritual gift I can imagine possessing. While the implant in my left ear was put there in 1989, not until September of 2015 did I begin to learn how to use it.

What it does not do: It does not provide voice communication.

What it does: A slit opens up in my right eye's field of vision where I see words racing past. Also, it enhances research in a very unusual way.

On a warm May night in 1989, a man and a woman entered our cabin, bypassing the armed alarm system. They overpowered me and put a small disk-shaped object in the pinna, or upper part, of my left ear. I have described this experience in detail in *Confirmation*. After inserting the object, they left. A moment later, a flash of light filled the room, visible behind my closed eyes. There was crashing in the woods behind the house. The pressure released, and I immediately leapt up. I ran off in search of the intruders but found nobody and no sign of forced entry. As the alarm system had remained armed throughout, I decided that it must have been a vivid nightmare.

However, the next morning it became clear that the system had been tampered with, and later that day, my ear began to hurt, and we noticed that a lump had appeared in it. (In *Confirmation*, this event is dated as 1994. May of 1989 is the correct date.)

At some point over the next few days, the thing turned on, making a

growling-whining noise in my head and causing the ear to turn bright red. I was absolutely terrified. Frantic. I wanted to cut my ear off. Anne tried to calm me down. She thought it was a gift. I felt like I was being tracked. She said, “The visitors don’t care if you go down to the store to get some beans.” I had to admit that she had a point. I treasure my privacy, but I don’t do or think anything that I fear being known by others. Still, I wanted the thing out.

The close encounter experience is full of tales of implants, and my interest in them was obviously intense. In the early 1990s, I met Dr. Roger Leir, who was organizing implant removals in California. Anne absolutely forbade me to let him remove mine. Hoping to soften her attitude, I made sure she attended one of his very professionally conducted removal surgeries with me. It was an awesome and moving experience to see the object come out of a woman’s calf muscle. It wasn’t much larger than a pumpkin seed and gleamed because, as I later learned, it was encased in epidermis. I have discussed the early implant work extensively in *Confirmation*, published in 1999, but it was not until 2015—almost immediately after Anne died—that I began to be able to understand how to use mine. Just recently, in September of 2019, I have had a CAT scan done of it and have had a visit from two people who explained more about it to me, as I will relate shortly.

But don’t expect anything straightforward.

Dr. Leir offered to arrange an extraction, but Anne felt strongly that I should try to understand it first. So I delayed. By that time, I had learned to have the greatest respect for the extraordinary role she was playing in our relationship with the visitors. The implant really troubled me, though. I felt watched. There was a distressing sense of being trapped in my own body with the thing. It was claustrophobic.

When we moved to San Antonio in the mid-nineties, Catherine Cooke, then president of the Mind-Science Foundation, introduced me to the head of materials science at Southwest Research Institute in San Antonio, Dr. William Mallow. When I told him about what Dr. Leir was doing, he was eager to learn more about the objects. I called Dr. Leir and arranged to obtain a group of samples, which he brought personally from Los Angeles.

While we were not allowed to conduct any work with the official blessing of the institute, we had free use of its equipment. Under the scanning electron microscope, we found the objects to almost all be meteoric nickel-iron and, except in one case, to be unremarkable except for the fact that, when *in situ*, they were usually encased in a capsule made from the host’s epidermis. As

the body does not have the genetic encoding to generate epidermis inside muscle, the encapsulations had to have been created artificially. In many cases, a small scoop-mark scar could be found on the body of the host individual. This scar would have removed a bit of epidermis from beneath the layer of tissue on the surface, the stratum corneum.

One of the objects we received was quite unusual. It had been emitting a low-level FM signal when it was still sited in the host. Under the scanning electron microscope, it appeared to be another fragment of nickel-iron. As it had been broadcasting, we decided to see if we could detect any crystalline structures using an X-ray diffraction machine that was available at the nearby University of Texas at San Antonio campus. The first pass returned a typical response for nickel-iron, but subsequent passes showed no return at all. A check back on the SEM indicated that the fragment's composition was still the same: nickel-iron. We returned it to X-ray diffraction, only to find that it never again returned a signal. Upon first being touched by X-rays, it had become X-ray invisible.

So obviously, at least in that one case, we were looking at something with unknown characteristics.

Working on the implants, I was constantly aware of the one in my ear. Bill knew about it, of course. He was itching to get his hands on it, and I was just as eager to get rid of it. And yet, some of the people who'd had theirs removed in Dr. Leir's program told me that they felt a real sense of loss afterward, almost as if a friend had died. Others were glad to get rid of them. And I had Anne advocating for it, of course.

Then we met Dr. John Lerma through mutual friends. As he wasn't involved in the UFO world, Anne was more comfortable having him at least take a look at it, so I made an appointment. As he examined it, he said that it looked like a small cyst and that he could easily remove it. All that would be involved would be a brief office procedure.

I was excited, frankly. Anne was not. In fact, she insisted that I promise to try only the one time, and if it didn't work, to leave it in. I could see in her eyes something rather fierce. I knew how intense my brilliant wife could be when she thought I was making a mistake. I offered to cancel the surgery, but she said, "No, you have to do it. It's been bothering you for years."

So, on October 9, 1997, we appeared at Dr. Lerma's office, camera in hand. I wanted to videotape the whole procedure, and I'm glad we did. Anne was extremely nervous and laughing all the way through, very typical of her

when she was uneasy about something.

Dr. Lerma anesthetized the ear and, as Anne taped, made his incision. He said, "It's a white disk." Then he touched it with his scalpel...and it moved away. He was shocked, because it had been fixed tightly under the skin. And yet it had now moved. All he had were two small fragments on the edge of his scalpel, which he deposited in a specimen container. He then withdrew. I took the fragments to Dr. Mallow, who examined them under the scanning electron microscope. One of the samples was just cartilage, but the other one contained crystals of either calcium carbonate or calcium phosphate.

A lab technician, who had part of the fragment that Dr. Lerma had removed, called him and asked if it was a practical joke. Under the microscope, he was seeing proteinaceous material that was adhered to a metallic base. He told Dr. Lerma that, as far as he was concerned, it was a piece of technology. Dr. Mallow then called me and confirmed that this was also his thought.

Two days after the surgery attempt, the object moved back up into the top of my ear, where it remained until three weeks ago, at which time it moved about half an inch down along the pinna. I described the situation to a neurologist who is associated with a nongovernmental but related program that studies these objects and the people who host them, and he recommended a CT scan, which I got on September 23, 2019. What happened was surprising. The object no longer appears to be there. And yet, it still works. In fact, by the time it *started* working in 2015, it might well have already been gone, at least when it comes to metallic parts. I can still palpate it, but what I am feeling is just the calcium that my body surrounded it with, not the object itself. I suppose it's possible that it is X-ray invisible, but a 3D scan failed to turn up any gaps or hollows, so that seems unlikely.

Gone or not, it still works, and I consider it the most valuable thing in my possession.

The reason has nothing to do with visitors, though.

Between the mid-nineties and 2015, it was mostly just there. Once in a while, it would turn on, causing my ear to become red and hot. This would happen most consistently when I was with other people who'd had the close encounter experience. It happened once at Southwest Research, and a signal was detected in their signals lab, but I was told that I could not be given the details. The most dramatic event came in April of 2016 when I was rehearsing the first conference speech I had given in many years before a

relative who has also had contact experiences. She said, “Your ear’s turned bright red.” I laughed and explained that I probably had a larger audience than one.

It was in September of 2015 that I had noticed a dramatic change that seemed related to it. I happened to be in a room with a white wall that the sun was shining on, when I realized that I could see a neat oblong slit in my right eye. It was filled with movement. When I concentrated, I could see words racing past, but too fast to read more than the fact that they appeared to be typing. It was perhaps the most familiar of all fonts: Courier.

I peered at the speeding words in disbelief, then awe. This was clearly not a hallucination—or if it was one, it was, to say the least, unique. It appeared to me to be that technology was being applied. When I did manage to read an occasional word, they seemed random. Over time, though, I realized that this was not the case. The words were related to what I was writing, but not directly. For example, I started writing a historical novel, *In Hitler’s House*. When publishers saw that it was written by Whitley Strieber, nobody would buy it. This isn’t only because of prejudice, of which there is undoubtedly some, but due primarily to the fact that my sales have been weak for years. I published it myself under the pseudonym of Jonathan White Lane.

What I found, as I worked on the book, was that the words flashing past would increase the richness of my associative process. If I thought, for example, about the way a certain character might react to an insult and came up with the word “arrogance,” words like “ignorant,” “fire,” “loneliness,” “childhood” would be speeding past. The way that they were and are indirectly related to my thoughts enriches the associative process and adds depth to my writing. But it does more than provide enhanced association like this. It is also a marvelous research tool.

The novel is a faux memoir by a young German American who innocently falls in with Hitler in 1931, becomes an allied spy in 1935, and stays close to Hitler until the end of the war. To write it, I needed to know details about life in the 1930s and life with Hitler that were so true-to-life that they would seem to have been written by somebody who was actually there. I found that the implant would respond to direct questions but in quite a unique way. For example, I asked it, “What kind of toothpaste did Hitler use?” A day later, even though I was looking in Google English, it turned to German, where I found a reference to a book written by one of Hitler’s valets. I bought the book, which was in German. As it happened, the next night I was with

somebody who spoke fluent German and was willing to translate it for me.

If this had happened only once, I would think that it was a coincidence. But, like the associative enrichment, it happens with such consistency that I feel it is part of the way the implant works. It has also provided me with unique insights, such as the material on the social consequences of overpopulation, the relevance of the mystery of the fine-structure constant to understanding the nature of reality that will figure later in this book and many, many other things. In fact, I can say that this book has two authors: me and my implant. As to who might be doing all that work, I once asked it, "Who are you?" The reply came back at once, and slowly enough to read clearly: "It's me, Anne."

I remembered Anne's gentle but persistent opposition to my having it removed, and I have to say, at that moment, I thanked her from the depths of my soul that she had convinced me not to do it. As to whether or not she was conscious at the time of what it would eventually be used for and who would use it, I cannot be sure. But one thing is not in question: whatever condition it is in, it is an extremely useful tool. I have also recently learned, under some truly wonderful circumstances, much more about its origin, functionality and who installed it.

As things stand now, I would never allow it to be removed. I use it all the time. It is constantly leading me in new directions in my work, answering unanswerable questions and enriching my creative process.

Just recently, for example, I tested it by asking to be told something that would be important to this book, but which I knew nothing whatsoever about. Within hours, I found myself looking on Google at material about something called the fine-structure constant. I was looking for something else, and I cannot say quite why that particular phrase came up. I'm sure it's explainable, but it was not an expected result in the search I was doing, which was about the psychiatrist Carl Jung, and was for information I needed for a reading group I attend where we had been studying his *Red Book*.

I can't even be certain that the implant was at work here, but it seems as if it was, because what I have learned about the fine-structure constant, which turns out to be one of the great mysteries of physics, is directly relevant to the new vision of reality that is central to this book.

The fragment of the implant that was captured by Dr. Lerma consisted of a metallic base with cilia attached to it. They were motile, that is to say, as the lab technician told the doctor, "alive." It thus appeared to be a piece of

biotechnology. Like many of the implants that Dr. Leir extracted, it had the ability to move away from the scalpel. Dr. Lerma was not expecting this, and his surprise is evident on the videotape. I very well remember how my ear burned when it returned from the earlobe to the pinna.

At about 4 in the morning on Wednesday, September 18, 2019, a stunning event took place that explained a great deal more about the implant. Since I experienced the movement of the implant I'd been feeling a paresthesia in the area, I had become more and more nervous about it. During my meditations in the nights leading up to the 18th, I was complaining and saying that I was going to get it removed if the sensations didn't stop. (They were later diagnosed as a pinched nerve in my neck.)

On the 17th, I did my usual 11 PM meditation, then at 3, the second one. I was in bed, just getting to sleep when I heard a soft knock on the door. I looked at the clock. It was 3:44. I got up and went to the door. I have heard these knocks many times and generally peer out the peephole before opening the door, always to find nobody there.

This time, I swung the door open and there stood two men. Before I could so much as gasp in surprise, I felt a change come over me that was akin to the twilight sleep one might be given during a minor surgery. It was not so powerful that I couldn't walk or move or talk, but I was definitely no longer in a normal state.

Incredibly, I recognized one of the two young men. I had last seen him when he was about twelve. He had been with his two sisters and an individual who may have been from the Department of Defense. They were special children with capabilities that most of us do not possess, primarily an ability to read minds. When I saw him when he looked about twelve, it was 1996, so he was now in his mid-thirties.

I wish I could say more about the circumstances under which I saw him then, but there is very little more to say. The children were introduced to me in a public space and immediately began talking to me in my mind while the adult they were with watched me with twinkling eyes and we all laughed with delight. Because it was delightful. They were delightful. I was just thrilled to see that there were human kids with this capability. I don't know how many there are, but I hope many, and that many more are being born. I have no idea how it works, or even theoretically how it might, but it is a wonderful thing and a real advance in human evolution. May these kids thrive and may their tribe increase!

Anyway, I recognized him at once, and I was absolutely amazed to see him. He gave no indication that he recognized me, and by that point, I wasn't capable of speaking or even moving very much. They were being very careful with me, and with good reason. I would damn well take a picture, steal an artifact—anything I could manage—and anybody from that side who works with me must know that perfectly well. They sure did.

In any case, they had a small portable typewriter with them. It looked like something that was commonplace before computers. I was told that it was what was used to generate the words that race past in the slit in my eye. I looked down at it. He put it in my hands. I said that I didn't see any sort of radio or anything. It was just an old typewriter. Very trim and surprisingly light.

He then explained that the words I see aren't generated outside of my mind but are drawn up from deep in my unconscious. When they are typed, they appear in the slit. Thus, they are drawn from a level of my mind that I cannot reach to the edge of consciousness where I can make use of them.

I asked how in the world that might work without any communications device. He explained to me that it was in the typewriter's platen. So I asked again how it worked. He said that he didn't know but that it had been developed by a Dr. Raudive.

This name was vaguely familiar to me. When I Googled it the next day, I found that this was a Dr. Konstantin Raudive, who had been a colleague of Carl Jung and who had worked for years on what is known as EVP, or electronic voice phenomena. This involves the design of devices that enable people on the other side of the barrier between the living and the dead to communicate. After his own death, individuals using EVP found that they could communicate sporadically with him. He was continuing to work on the creation of this technology from the other side.

In fact, the only other person I know who has the slit open up in his visual field that has the words racing through it is a man who has studied EVP for most of his adult life and is an expert on the work of Dr. Konstantin Raudive. He reports that an object appeared under the skin of his right forefinger sometime in 2018, but is not sure if he could see the slit before that or not. (Of course, I discovered that he could also see the slit the day after I learned about Dr. Raudive, another of the strange coincidences that fall like rain on a clear day when the implant is involved.)

The two men explained that it had been repositioned because it was

stressing my right eye. The intraocular lens in this eye, the membrane behind it, and the retina have all been affected by calcium deposits over the past few years when I have been using the implant almost constantly. (An intraocular lens is a replacement lens that is used to correct cataracts.)

They then asked me if I still intended to have the implant taken out. As the IOC can be replaced and the membrane removed and the retina is not symptomatic, I said that I would not. They then left. I stood there staring at the door. My mind was racing. I was still in twilight sleep and had to move very carefully until it wore off a bit. I tried to go to my couch and get back into the sensing exercise, but I could not manage it. I was exhausted and instead fell into bed and into a deep sleep.

A few days later, the study of the CT scan came back: The implant they didn't want me to take out isn't there.

Or is it? I wonder what would happen if I had the calcium deposit that remains removed. Or would it race off to some other part of my ear like the metallic object did in 1997?

One thing is sure: If you don't like mysteries, especially unsolvable ones, stay away from the close encounter experience.

I no longer think that the implant has anything much to do with nonhumans. The fact that I didn't learn to use it until after Anne passed away, and that it continues what she did when she was alive, which was to be a fabulously brilliant muse to this struggling scribbler, and what I learned on the morning of the 18th has convinced me that it is a communicator between the living and the dead.

I hope, of course, that more people will gain access to such devices. However, I also think that there are liable to be abuses, and I wish to say that my implant has never provided channeled information. As I said at the beginning of the chapter, there are no voices involved. Rather, it does just two things: send the words flying past in my visual field and create synchronicities that support my research.

I reach up and feel it. There it is, quietly doing what it does. A strange event that lives with me twenty-four hours a day. I turn a lamp against the wall, then sit watching the slit. As usual, words race past.

Finally, I catch one. It is "harmony."

THE FIELDS OF ASPHODEL

During the weekend of July 19–22, 2019, I went to a place of great human suffering and incredible power. While there, I had extended, days-long access to another world, an experience that went far beyond anything else that has happened in this lifetime of strange and extraordinary experiences. I think that what happened offers a major clue about the origin of the visitors, and possibly also of their enigmatic human allies.

I had been invited to a small conference at the All Nations Gathering Center on the Lakota Sioux Pine Ridge Reservation in South Dakota, where I was to give a talk about *The Afterlife Revolution*. It was hosted by Dallas Chief Eagle and his wife Becky and organized by Mia Feroletto, publisher of *New Observations Magazine*.

Before going, I had learned some of the reservation's history, but it had offered no clue about what was actually going to happen to me there. Like most people outside of American Indian culture, my awareness of the spiritual power of their religions was very limited. Being a Texas German, I was aware that my ancestors had a high opinion of their religion and spiritual development. Why, I did not know. I do now.

I also knew that Pine Ridge was the site of the 1890 Wounded Knee Massacre and the Wounded Knee occupation of 1973. On December 29, 1890, the US Army had opened fire on a group of 300 Lakota Sioux, killing 90 men and 200 women and children. In 1973, Wounded Knee was occupied by 200 Oglala Lakota and members of the American Indian Movement in protest over corruption in the tribe's government. This led to a siege that lasted two months that left two Lakota killed and fourteen wounded, and two

FBI agents killed and a US Marshal paralyzed. Such is the intensity of the feeling about the incident that Peter Mattheissen's book about it, *In the Spirit of Crazy Horse*, was the object of libel suits prior to its 1983 publication. It is generally now considered an accurate narrative of the uprising.

I also learned that Oglala Lakota County was the poorest county in the United States, with an average annual income per person of just over \$8,000. Officially, the average life expectancy on the Pine Ridge reservation is 66.81 years, but statistics attributed to the Pine Ridge hospital cite a life expectancy among women of 55 years and men 47 years. Suicide rates are high, especially among teens, driven by the sense of hopelessness that infects their lives like a virus. During the winter of 2015–2016, one 12-year-old girl killed herself because her family could not afford heat, and she could no longer bear the cold. Alcoholism affects 85% of the population. Drug abuse and crime are rampant, and living conditions are dreadful beyond anything I have ever seen in my life.

None of this is an accident or due to laziness or any such issue. It is because of the location. During the 19th century American Indian wars, the Lakota Sioux were intentionally confined to this place because it is so lacking in resources. Distances are long, so work off the reservation isn't economical for most residents. Because of its isolation, lack of good farmland and general scarcity of exploitable resources, there are few jobs on it, contributing to a chronically high unemployment rate.

While I found an oppressed people there, I also found that it was a place of great human spiritual power, in fact, power beyond anything I have ever known anywhere. I have some idea of what this power is, which I will discuss in depth in a later chapter. I had not been on the reservation for more than a few hours before I began to feel it. And when I say feel, I am not talking about something vague—some sense of unusual energies. Far from it.

On my first morning there, when I happened to close my eyes during a drive of half an hour or so, I saw movement behind my closed lids—what looked like shadowy trees and rolling hills, but not the ones we were passing. Surprised, I opened them immediately. I couldn't understand why I'd been seeing anything at all. When I closed them again, what I saw simply took my breath away. I sat there watching an entire second landscape flow past the car. Although it seemed to be twilight rather than sunny, the effect was so vivid it was like wearing a virtual reality headset.

I was flooded with strong, poignant and yet contradictory emotions.

There was at once a sense of homecoming and homesickness. It wasn't as if I was in two places at once, but rather looking out the windows of my heart into two worlds that have been locked forever in a secret embrace and seeing that wonderful, sweet thing for the first time.

As we drove along, I sang out the different features I was seeing. "There's a creek over there, we're passing under an arbor of trees, there are long hills on the horizon. Oops, the road's gone off down the hill." Among those in the car who heard me doing this was our very kind driver, Kevin Briggs, who unfortunately could not close his eyes and look as the others did. Conferees Alan Steinfeld, Ananda Bosman, Annie Wegner-Nabigon and others did close their eyes. Some saw it vaguely, others not at all. Ananda, Annie and I saw it most clearly. Ananda saw it while we were in the Badlands, Annie saw it on one of our rides.

Even though the image was shadowy, it was extremely detailed. I could pick out individual trees, fields, even a narrower version of the road we were on. After a few moments, I realized that I was watching not another world altogether, but another version of the landscape we were passing through. It was a bit more rough, with occasional gorges and generally wider streams. The other road was not only narrower, it wasn't graded. The result of this was that it sometimes wound off down a hill while we continued along the graded version in our world. This would leave me with the uncanny sensation that the car had taken flight.

The vision didn't go on for just a few minutes, but for the entire time I was on the reservation. It continued whether I was riding in a car, walking, sitting or standing. For those three days, I was living in two landscapes at once. After I closed my eyes, it would take about thirty seconds for the other world to appear, but it did so reliably. When I was standing somewhere, I could look down and see grass and gravel that was not present in this world. I could bend down and look closely, even to the point of being able to count the number of petals on flowers and observe the details of grasses and the discolorations on stones. I could touch and smell nothing of the other world. In this sense, it was very much like out of body travel, which detaches you from those senses. I was not physical in that world, and I have to wonder if that might not be how our visitors experience this one. I tried using the sensing exercise as a tool for physically moving into the other world, but it didn't work. Nevertheless, it is my strong sense that what we think of as technology is not what enables things like this to happen. I think that it's

something to do with attention, concentration and the brain, and possibly also requires the cooperation of an outside energy that is itself conscious. My thought is that my lifetime of doing the sensing exercise and the changes in my brain that have resulted have made me more able to see this other universe and, to a limited extent (so far), interact with it.

The changes I am referring to involve a brain area called the dorsal striatum. It contains two regions, the caudate and the putamen, which are connected by an area of white matter called the internal capsule. There is a study under way that suggests that the density of the white matter region may govern the degree to which an individual possesses intuitive sensitivities.

I have thought that meditation might somehow increase this density. The authors of the as-yet unpublished study don't see any indication of this so far, but another study, published in *Psychiatry Research* in January of 2011 and entitled "Mindfulness practice leads to increases in regional gray matter density" states, "Analyses in *a priori* regions of interest confirmed increases in gray matter concentration within the left hippocampus. Whole brain analyses identified increases in the posterior cingulate cortex, the temporo-parietal junction, and the cerebellum in the study group compared with the controls."

If the dorsal striatum is also affected by meditation, it might explain why, over years of doing it, people seem to become so much more intuitive, as has happened in my case. My own brain has been observed to have a very dense internal capsule between the caudate and the putamen, but there is no premeditation MRI to compare with the one that is available. I do feel that fifty years of meditation has made changes that involve opening my mind to new areas of vision and new ways of seeing.

However, I would not ignore the power of the heart, either. While we now attribute thought and feeling exclusively to the brain, I think that the older vision of the body, with the heart as the emotional center, should not be dismissed. I say this because the whole experience was so emotionally powerful, and like we do so many emotions, I felt it in my heart, and it is in both head and heart that I carry it now.

There is energy involved, which I think is conscious and capable of deciding exactly what it wants and does not want to do. A big part of coming into communion with the visitors, I feel, is opening ourselves to the wishes of this energy and attempting to understand what it might need from us and that will help it fulfill its great aims for the unfolding of space-time.

The mindfulness practice researchers found that the changes they detected came about rather quickly, after only eight weeks of meditation, so perhaps building a brain that is receptive to contact is not all that lengthy a process. The longer time, I think, would involve waiting for one's little glow to be noticed. My experience of this is that determination counts. You have to want it a lot and work hard for it before anyone will show up to work with you. To get darker, more exploitative aspects to appear, such as happened to Matt, all that is needed, it seems to me, is curiosity. Lack of preparation, though, is clearly not a good idea.

That preparation should include reading material about what it is like to live with the visitors. Authors such as John Mack and Kathleen Marden offer carefully researched texts, and Anne Strieber's *Communion Letters* is a treasury of personal accounts. I would avoid channeled material, as there is never any way to know where it actually comes from, an outside source or the author's imagination.

Beyond that, later in this book, I will explore the importance of coming to this with a strong, healthy soul. This conscious energy, as I have experienced it, is very reflective. If you feel fear, it will be fearful. If you conceal guilts, it will look right into you and at them. Having been face to face with the grays when I was still an unregarded soul, I can assure you that this is an incredible shock. Those glittering pop eyes burned into me. It was like facing goblins, and I felt like some deep part of me was about to be devoured. The ancient Greek aphorism "know thyself" is of critical and foundational importance to establishing a relationship with the visitors and all that comes with them. Later, I will go into some detail about how one uses it to build the sort of strong soul that will have no reason to find those penetrating eyes frightening.

I am purposely being a little vague here about who I mean—is it the strangely formed visitors I'm talking about, our own dead, or a sort of field of disembodied consciousness?

I don't think that it's useful to make such differentiations. Whatever aspect of it comes into contact with you, so does it all. Best to think of it as a vast field where different sorts of flowers grow, some of them appearing one way, others another way. No matter which way you go, you remain in the field.

A specific event that causes me to suspect that we are dealing not only with specific entities but a conscious field took place at the Contact in the Desert Conference on June 2, 2019. As I was heading to a lecture by Dr.

Jacques Vallee, I noticed an odd change in the atmosphere. It was as if the air pressure had dropped. My ears popped. Sound faded. I said something to the person beside me, who acted rather strangely. He seemed to be pretending that I wasn't there. I thought perhaps he disapproved of me in some way. I went on to the lecture, and by the time I arrived, the sensation had faded.

Some weeks later, an attendee at the conference wrote me, "I was on my way to Jacques Vallee's lecture when I saw Whitley coming down a side path in my direction, looking deep in thought. Our paths were totally going to cross. Just before we were about to intersect, I glanced down to check that I had my phone in my bag. A bright flash from Whitley's direction caught the corner of my eye. Oddly, I thought, 'That's him flashing to another dimension.' In the same instant, I looked up—sure enough, no Whitley. He was there, and then he wasn't. It's hard to describe how confusing and odd it felt. The atmosphere suddenly felt heightened, and the sound seemed to drop away. At the same time, a sense of immense great benevolence came over me, as if someone with kind good humor was reassuring me that everything was ok. It felt like a gift, meant for me. It felt like magic." She then spent some time looking for me without success and moved on to the lecture. She and a friend were taking seats "when the next person entered. It was Whitley Strieber!" For my part, I only felt the change in atmospheric pressure that also affected her. I had no sense of moving through another universe, but perhaps when this happens, we leave any memories we have gathered there behind when we return. This would be one explanation for the ubiquitous experience known as missing time that is reported by close encounter witnesses. We are not being taken aboard spaceships at all but moved into the companion universe, and our memories of events there return with us only in fragmented or suppressed form, or not at all.

It is important, I feel, to note her comment that "a sense of immense great benevolence came over me, as if someone with kind good humor was reassuring me that everything was ok." I think that this may have been a moment of direct communication with the conscious field itself, rather than specific entities that are part of it. When I am in touch with it, there is always a sense of joy, even hilarity. Those moments never fail to remind me of Anne's love of the 14th century mystic Meister Eckhart and his statement that "God laughs and plays," and of her own central teaching: "Have joy." She adopted this because it was one of the very, very few things that the visitors have ever said to me in ordinary language. She felt that it was what lay

beyond our suspicion and fear, just out of reach.

I think that my vision was opened to this other world at Pine Ridge by the action of conscious energy, not specific entities. I will say this: I have never had more fun in my life than I did while my mind was open to this vision. It was so fascinating, so tantalizing, so extremely interesting. It has absolutely inspired my curiosity and made me want to somehow walk in those fields. Maybe I'd be unwelcome to the inhabitants or even devoured by something, but maybe also by passing through the wall between our worlds, I might make a door that others could enter. I have been asking the energy for a chance to give it a try.

Having asked many times in my life for impossible things to happen and seeing them proceed to unfold (always to my great astonishment), I don't think that this entirely unreasonable and absurd request is at all impossible to fulfill. We shall see.

The other world was just as complex as this one, with streams, trees, fields, gorges, grasses and flowers and a sky complex with flowing clouds. In general, though, I didn't see many structures, and no people. From time to time, I'd see a house or cabin. Sometimes a white square would flash on the distance then quickly blink out. Was that a person, perhaps distorted by some quirk of consciousness that we don't yet understand?

When I looked up with my eyes closed in the car, I saw the sky and passing clouds. When I opened them, there was the ceiling. The weather in the other reality was similar but not the same. It seemed more unsettled. There were storm clouds there that were not present here. The moon was waning and gibbous in both realities, but in the other seemed to me to be a bit less gibbous, as if it had been full starting on about the 13th rather than the 16th, which was true here. Over the weekend that I was on the reservation, it was rising late at night, but when I closed my eyes, it was well risen in the other reality by about half past nine. Even stranger, when I opened them, for a few moments there was a sort of hazy glow where the moon had been in the other world. This would slowly fade into the normal night sky. I wondered, then, how close I was to slipping into the other reality.

On my second day on the reservation, I had the privilege and honor of being allowed to witness an hour of a private family ritual that I found to be among the most sacred things I have ever experienced. It involves chanting and drumming and dancing. It was deeply moving to me.

The dancers fast and dance over a period of days. In the hour I was

allowed to be there, I danced as well, entering the ceremony as best I could. The chanting stirred my heart and my soul, the drums shook my blood. When I closed my eyes, the area where the ritual I was watching was taking place became an empty meadow. I could still hear the drumming, but it seemed to now be coming from the right, not the left. When I looked to my right, where the new source seemed to be coming from, I could see the edge of a low hill. The sound seemed to be below it. When I opened my eyes, the hill was no longer there, the meadow was again filled with dancers and the only drumming was coming from the left.

At one point, I noticed people looking up and pointing. But what could it mean? How could they not pay attention to such an event as this? Still, I was curious. I looked up, too, and there at the top of the clear blue sky was a small object. It was light tan in color and seemed quite high. Was it a balloon? I watched it for a few minutes, but it didn't go anywhere or do anything—just hung there, motionless and silent.

I kept my feelings inside, but I did think that this was the visitors. I can't say that I felt their presence, which has sometimes happened in the past when I have seen their devices, but my initial reaction was that they were there to honor the ritual. They would have known that I would write about it.

I asked around about the object. Some of the people thought it might be an FBI drone, but others said that they were seeing beams and little balls of light coming out of it. However, the FBI keeps a close watch on these people. The Wounded Knee Occupation of 1973 was viewed as an insurrection against the United States. So maybe the FBI was watching and maybe they would have used a drone. As for me, I watched the object off and on for a total of about fifteen minutes but did not see any unusual phenomena associated with it, except for the fact that it was motionless to the point of being uncanny. The eye expects things in the sky to move, however slightly. This did not. I was reminded of the UFO footage taken by fighters from the carrier Nimitz in 2004 and released in 2017. The objects on those videos are not aerodynamic but held aloft in some other way. This object looked exactly like that. Others saw similar objects at various other times during the conference, so my thought here was that this was indeed the visitors. In September of 2019, the US Navy admitted that the objects recorded by the Nimitz fighters were indeed unknowns.

The one remained motionless for too long to be a balloon. Even if it was motionless only for the time I observed it, that would be too long for one.

There were balloons being released as part of an experiment in Sioux Falls, but that city is to the east of Pine Ridge, and the winds that day were out of the west.

When I left, it was still there, still motionless. Individuals who left after I did confirmed that it was still in the sky at that time. When it did finally depart, it moved away slowly and was seen again over other parts of the reservation.

That is also quite a long time for a drone to be hovering without being returned for a recharge. When they hover, they aren't absolutely still. Neither are they completely silent. I have been unable to find any commercially available drones that can remain aloft more than two hours. This was the limit, as of the summer of 2019, of the longest duration drone, the HYBRiX.20.

Still, although I do believe that the object was an unknown, I can't rule out the possibility that the FBI has silent, long duration drones that can hover for hours. I don't believe it, but I can't rule it out.

This was all pretty strange, even for me. Strange and wonderful. What happened next, though, was even stranger. Led by a member of the American Indian Movement, who was also one of the last direct descendants of somebody who had survived the 1898 massacre, a group of us went to the Wounded Knee memorial on the reservation. As I stood looking down at some of the graves, another member of the conference stood beside me, also looking down at them. I was vaguely aware that he had moved away then returned. I thought nothing of it until later when he came up to me and explained that, when he stood beside me, he could see down into the graves and could see the broken skeletons that were lying there in the earth.

As he explained this to me, I could see the puzzlement on his face. I don't blame him, as I have never heard of anything like this, not in all the literature of high strangeness that I have read in my life. There are a few cases where people were said to be able to see through objects. In Greek myth, Lynceus of the Argonauts was supposedly able to see through walls and into the ground. But nowhere is there a story of somebody who could somehow confer this power on another person while not possessing it themselves. The visitors can pass through walls. When out of the body, so can we. But X-ray vision, especially X-ray vision by proxy—no, I believe that this may be the only such story that has ever been told. I think that all three stories, though—seeing into the other world, apparently popping into another dimension and

conferring this power on the person standing beside me—all have to do with the presence of the same energy. I have to say, though, even as I write this, I can see those broken skeletons in my mind's eye and feel the cruelty and shame of the massacre.

When we went to the nearby Badlands one evening, I found myself still able to see the other world there, too. I immediately noticed that hills were not as dramatic. This would mean that there has not been as much erosion there as here. When I looked down at the ground, I could see more grasses there than here, also. So the geologic history of the other world might be less violent, but at the same time, it also appears to be less populated. I say this because the roads on the reservation in this world are graded and in the other world they are not. I kept hoping that I would see a vehicle, but I never did. Had I done so, I wouldn't be surprised to find that it was horse drawn. This is because the roads in the other world were sometimes unpaved, and the tracks in them were narrow, suggesting wagon wheels. The paved areas were black like macadam.

As I left the reservation on Monday, I also left the other world behind. By the time we were twenty miles from Rapid City, I could no longer see it. On the plane back to Los Angeles, I gazed out the window at the gentle landscape far below and thought long thoughts about my strange life and the strangeness of life in general, as it was being lived in the cities and towns we were passing over. I had left the greatest mystery of my life behind. I'd be a fool, though, if I didn't live a "never say never" life, so for all I know, it's going to return to visibility sometime. I regretted not being able to enter it. To do that, however, I knew that I was going to need to find out more.

There are many instances in literature of people encountering other realities. Matt and his mother saw a field from the Pleistocene at the end of his runway. In his book, *Hunt for the Skinwalker*, Dr. Colm Kelleher describes an event that took place on a mysterious ranch that had been bought for study because of all the paranormal activity taking place there. The purchase, made by the government, was managed through Robert Bigelow's foundation. On the afternoon that the scientists who were to take it over arrived, a remarkable event took place. Just before they arrived, a huge wolf came up out of a marsh and attacked some goats in a corral. The ranchers drove it off by shooting it, although the bullets did not seem to penetrate or draw blood. It leaped out of the corral and ran back into the marsh.

When the scientists arrived, they found its footprints, which led to the

center of the marsh and then disappeared. Casts taken enabled them to estimate the weight of this ghost animal at 300 pounds. When I read this, I immediately realized that this was probably a dire wolf, another Pleistocene creature.

So is the other world in the past? I have no way of knowing that, but I do suspect from all I saw and all I have learned about it that it does not have the level of population or development that our world does, meaning that, in it, those creatures might not have gone extinct.

On the night I got home, I sat as I always do at 11 and took my attention to my physical sensation, letting my mind wander free. I asked to understand the place I had seen. I asked if it had a name. I never do more questioning than that. My experience is that I don't need to beg, pray, do rituals or anything like that. What is important is to be prepared for a response that might happen very quickly and—above all—in some way that is liable to be quite asymmetric.

Nothing happened for a few days, and then on August 3rd, I had three dreams. They were what are known as lucid dreams. I've had a few of these in my life, but I don't recall any that were as vivid as these.

In the first one, I was standing outside the All Nations Center at Pine Ridge with my eyes closed, looking at a beautifully curved wooden fence that had been one of the most striking features I'd seen during my time observing the other world. Three Indians came up to this fence. I could tell from their clothing that they were probably from the ritual I'd heard taking place in the other world. They looked human but had differently shaped faces than we do, and their eyes were somehow different. Was this because they were structurally mirror images? I don't know how to assess that. All I can do is report what I saw.

They told me that, because this writing is going to help Pine Ridge in some way, I had been given my vision as a gift—which is all well and good, but I'd like to know who gave the gift and what had to be done to deliver it. And above all, what can we do to initiate contact from this direction?

The next thing I knew, I had two more dreams in rapid succession. They involved two of the few people left alive who were indirect witnesses to the Roswell event and know details of the bodies.

One of them said “Strieber-Greek” and warned me to be careful.

When I woke up, I wondered what in the world that might mean. I have nothing to do with Greece. Greeks play no role in my books. I am not Greek,

speak no Greek and only know one or two Greeks, and them not very well. So I Googled the phrase—and got quite a surprise. There was a “Professor Strieber” mentioned in a science fiction novel called *Uncle Ovid’s Exercise Book* by Don Webb that was published in 1988. The passage in which my name appears contains the sentence, “The Greeks placed the coins in the mouths of their dead that they might pay Charon to ferry them over the Styx into the gray fields of Asphodel in the interior of the Earth.”

Asphodel in Homer’s *Odyssey* is the abode of the dead, twilit and leached of color. This is why the familiar little gray meadow flower one sees in some parts of Europe is called the asphodel. At first, I thought, “Oh, dear, perhaps I was being warned that I’m destined for some dreary land of the dead.” Then I was glad that the sensing exercise hadn’t worked to get passage!

However, Homer doesn’t only condemn Asphodel as the land of the unwanted dead. A less known passage in the *Iliad* describes it as a place fragrant with lovely flowers.

And indeed, in my third dream on that night, I saw the most gorgeous field of blue flowers I have ever beheld. In fact, it was the most enchanting shade of blue I can imagine—and, given that it was my dream, I mean that literally!

I made the decision to go with the Asphodel of the *Iliad*. I cannot imagine that those three marvelous men would be anywhere except in some sort of heaven. As for the two Roswell witnesses, they are lovely people, in my estimation sacred people. (Although they would laugh at that designation!)

I don’t have the impression that the other world is imaginary. Nobody’s imagination can function like that for days, not producing an endless supply of detail that rich. Not to mention the fact that, when I examined something along the roadside—a flower, a tumble of stones—it was still there the next day, exactly as I remembered it. No, I think that I really was seeing into another reality, and I would suppose that others have, too, and its twilit appearance is what probably led them to conclude that it was inside Earth. But just as we have left the gods, sylphs, ghosts, fairy folk and our other interpretations of the visitors behind, perhaps it’s time to rethink other folklores and legends and consider instead that some of them at least might be attempts to explain phenomena that were really observed but could not be understood. I saw another version of the world. It was oddly like this one but not quite. The observation was protracted, lasting days. There isn’t anything in the literature of hallucination to explain it. So I have to classify it as an

observation of an unknown phenomenon that appeared to be another reality similar to this one and apparently occupying the same space.

I have suspected for years that just such a place might be involved in the close encounter and UFO experiences—not just a distant star or galaxy in our universe but another actual, physical universe that is part of the same creation as ours is and might, thus, be connected with it. It seems possible that, if this other universe exists, that both should be thought of as a single unit, with the two halves functioning together, but in ways that we have not yet detected—or rather, only just begun to detect.

But a companion universe? Really? This would not be part of what is known as the multiverse, which is conceived of as an endlessness of universes outside of our own but not sharing the same space. There have even been a few indications that such universes may exist. In December of 2015, cosmologist Ranga Ram Chary published a paper concerning anomalies in the cosmic background radiation in which he says, “A plausible explanation is the collision of our Universe with an alternate universe.” He also states, however, that “deeper observations are necessary to confirm this unusual hypothesis.”

But could there be another universe immediately present, right here, sharing the same space as ours?

There is some very interesting evidence that such a thing might be real and, not only that, a method of testing for its presence has been devised.

If another universe is entwined with ours and it is possible to cross back and forth, it would not only explain a lot about the behavior of some of our visitors and the craft they seem to be using but also reconcile some serious anomalies of physics.

Physics calls such a universe a mirror universe. And even the idea that everything in it would be the opposite of what is present here might be the case, at least to some degree. The landscape didn't look to me like the exact opposite of this one, but I cannot be sure of that. It was very similar, but I am not so sure that I would have been able to perceive it as a mirror image, even if it is one. Having no experience of such a thing, I also have no idea what it would look like.

When the two universes were created, physics tells us that the mirror must have been cooler than ours, otherwise some of its matter would have leaked across the barrier between the two, and gravity in our universe would be stronger than it is. The greater coolness of the companion universe would

mean that it would have lower luminosity—just as did Homer’s Asphodel, and just as I observed at Pine Ridge.

A charming hint that it may at times be possible to cross between them comes from an obscure 12th century source. It is the story of the Green Children of Woolpit. One day around the year 1130, the villagers of Woolpit discovered two children, a brother and a sister, standing beside one of the wolf pits. (These were intended to trap wolves, who abounded in Britain at the time.) The children were green in color, wore strange clothing and spoke an unknown language. They gradually adapted, lost their green color and learned English. The boy died but the girl survived and said that they came from a land where there was no sunshine and the light was like twilight. The girl was given the name Agnes and married a royal official called Richard Barre.

I’ve been vaguely aware of this story for years, but now the perpetual twilight described in it brought it very much to mind. Did these children come from our companion universe? If so, how? There is no record of them explaining why they happened to end up in the English countryside.

They also said that the sun never shone in their world and thought of it as being underground. But they presumably knew nothing about what might actually be causing the difference in luminosity.

This may just be an old story, completely unrelated, but there are a number of quite compelling reasons, even beyond the lower luminosity observed by me and Homer and reported by Agnes and her brother, that a companion universe might be real.

First, the Big Bang should have left more of the isotope lithium-7 in our universe. According to Alain Coc of the Centre for Nuclear Science and the Science of Matter in France, mirror neutrons coming into our universe from the other would destabilize beryllium-7, the isotope whose decay leads to lithium-7. If this is happening, it would explain why there is less lithium-7 in our universe than there should be. Additionally, we frequently measure ultra-high-energy cosmic rays coming from outside our galaxy, but they carry more energy than should be possible given the distance they are traveling. Zurab Berezhiani of the University of L’Aquila in Italy has shown that, because of the lower temperature of the mirror universe, they can travel farther without expending as much energy as they would if they remained in our universe across their whole journey. If they do oscillate between universes, that would explain their anomalous energy. In addition, and

perhaps most tellingly, the most developed mirror models indicate that there must be five mirror particles for every particle in our universe. This is precisely the same ratio given by our measurements of how much dark matter must exist. It would seem possible, then, that dark matter, which we know must exist but cannot seem to find despite years of trying, might actually be this mirror universe.

So do the visitors come, then, from it? If so, then they seem to have somehow devised or evolved a means of crossing the bar, as it were, between the two.

I am reminded of Robert Louis Stevenson's poem "Land of Counterpane," where as a boy he "Watched my leaden soldiers go/ With different uniforms and drills/ Among the bedclothes and through the hills..." But I do not think that this real land of counterpane is necessarily so pleasant as he imagines. I think that our visitors are much more like the fairies in William Allingham's poem "The Fairies" for "Up the airy mountain or down the rushy glen/ We dare not go a-hunting/ For fear of little men;/ Wee folk, good folk/ Trooping all together/ Green jacket, red cap/ And white owl's feather!"

We don't see them any more in the rushy glen, not now that it's lined with condos. Indeed not, but they do come right into the condos and take us on the same sort of journeys that they always have, leaving us disoriented, confused, and as often as not with a badly deranged sense of time and space. We probably see them also in the night, slipping past overhead in their great, black triangular craft marked by lights at the three angles, generally green, red and white.

Perhaps across all our history, they have been moving between the two universes and, for all I know, coming at the same time out of the distances between the stars in the mirror universe. In that sense, they might be doubly alien, and to make matters even more complex, if creatures with the same morphology exist in our universe and have also mastered interstellar travel, then we might be dealing with alien entities from both universes at the same time, in addition to human beings from the companion universe like the men I encountered in my dream or the people who came out of the night and slipped an implant into my ear without leaving a scar, or the two whom I recently met in my living room.

Interestingly, if a so-called warp drive that opened a door between interwoven parallel universes could be created, it would involve the use of a

high-energy electrical field. Just such a field was present in my garage on the morning after my implant was inserted and is a characteristic of the military implant operations as documented by Helmut and Marion Lammer in their book, *MILABS: Military Mind Control and Alien Abductions*.

And then there is the matter of metal believed to be from UFO crashes that has been found to have isotopic ratios that cannot be from this universe. Analysis of such materials was presented by Dr. Jacques Vallee and Dr. Garry Nolan in Paris in June of 2017. Their data showed that some samples taken from material gathered after a UFO apparently exploded over Ubatuba, Brazil on September 13, 1957, displayed isotopic ratios that indicated that it could not have been formed in this universe and only created artificially by the expenditure of unimaginable amounts of energy. The Ubatuba story has been called a hoax, but so have many UFO cases, and now this finding that some of the material is indeed unusual suggests that the case was real. But as Drs. Vallee and Nolan pointed out in their presentation, and Dr. Vallee reiterated in a subsequent presentation held in California in June of 2018, unusual isotopic ratios do not mean that the materials were manufactured by aliens. They only mean what they mean: at present, they are unexplained.

I think that this collection of observations, physics that demands a mirror universe and empirical evidence of material that could have come from it all add up to serious reason to consider that it might actually exist and that at least some of our visitors, and humans with strangely advanced skills, come from it.

What I can offer in conclusion is that I had a lovely and mysterious experience at Pine Ridge, and if the existence of the mirror universe is ever confirmed, then I think that I might have identified at least one origination point for our visitors.

This new phase of my life, which I would describe as a period of intensified seeing, began long before I went to Pine Ridge. I did not know it at the time, but it was on December 7, 2007, at 4:53 in the morning that I began to become aware that life can be lived in an entirely new way, and that there is, emerging from where it has long been hidden along the byways of human experience, a new vision and a new world.

THE NIGHT DOGS

It was windy and rainy during the early morning hours of December 7, 2007. Little did I know, not until long after the event that was about to take place, the change of life that it represented. But communication with the visitors is a multilayered and subtle business, and I have found that it is common for years to pass before all the pieces fall into place. Therefore, in my blog entry, “A Most Complex Encounter” posted on Unknowncountry.com on December 11th of that year, I had no idea that the events from the 7th that I described had likely taken place because of the contents of the previous blog entry, posted on November 27th, “A Second Universe is Discovered” or that they represented a fundamental change in my entire relationship with the whole visitor phenomenon.

The first time that astronomers announced that they had discovered a “tear” in the fabric of the universe was in 2007. Laura Mersini-Houghton of the University of North Carolina offered the opinion that it was the “unmistakable imprint of another universe beyond the edge of our own.” A controversial idea in 2007, and still in 2015 when Ranga Ram Chary discussed it. In my 2007 blog, I wrote, “This morning I opened the *New Scientist* and found myself reading that a second universe is apparently out there beyond our own. I have to admit that I was, quite simply, knocked speechless. This is because, when I was talking to the Master of the Key in a hotel in Toronto in 1998, he said that there were universes beyond our own. However, at the time, I rejected his statement as obviously incorrect and changed the subject. There was, in 1998, not the slightest indication anywhere in physics or cosmology that there could be other physical

universes. So when he said, ‘There are more galaxies in your universe than there are stars in your galaxy, and more universes in the firmament than there are galaxies in your universe,’ I listened politely and changed the subject.

Ten days after posting that blog, my world was turned upside down. It began on the evening of the 6th with what I described in my blog on December 7th as “one of the most interesting perceptual experiences I have ever had.” In those days, I was still waking up in a state of fear most nights between 3 and 4, as I had been since being abducted during those hours in 1985. Now, of course, all that has changed. The fearful awakenings have been completely transformed into my beloved 3 AM meditation, which has enriched my life immeasurably. In the next chapter, I’ll detail how the change came about.

On the night of the 6th, we went to bed about 11:30. While I meditate now at 11 and 3, at that time I generally did it earlier, often in the afternoon, and never in the wee hours. On that night, though, I was up again shortly after going to bed, “struck with a powerful need to meditate.” I could not hear the call then, not clearly, but I was responding to it. I did the sensing exercise for about fifteen minutes then returned to bed. I then report that “at 2:17 I was writing business emails.” After that, in my blog I write that I “slept fitfully.” The reason was that I sensed that somebody was in the apartment. Now, when I sense this, a thrill of anticipation goes through me, and I rush to sit in meditation and get into the inner stance that opens me to communication. Then, I went prowling through the rooms, halfway ready to grab my pistol.

When I did the sensing exercise on that night, “the sensation was remarkably powerful. I felt as if I could sense much more than my physical body, as if my nerves didn’t end in my skin but extended around me like a living electrical field.” Well, second body does, and not only that, a surrendered inner stance can enable it to enter what in Sanskrit is called *maha-mudra*, “the clear light of the void.” This is a state outside of place, an absence of being anywhere that is also being everywhere. In physics, this is called superposition, wherein a particle is in all possible states at the same time. Without knowing it, I had entered this state. Since then, I’ve come to it a few times and have learned more about it. When in it, reality makes a new kind of sense. All of the concerns that so weigh you down in ordinary life fall away. You come to understand what Anne means when she says, “Enlightenment is what happens when there is nothing left of us but love.” I wish I could say that I was there all the time, but at least I can taste it.

I did not imagine that the state I was in had attracted any attention from the visitors, let alone that it had been induced by them as part of a lesson that I didn't even know that I was receiving.

It was surpassingly poignant, as if every sweet memory that had ever touched my mind, from a scent of autumn leaves under a boyhood tree to the day I saw my parents' car crest the hill near our house, bringing my little brother home for the first time, to the moment I looked down at a girl in an office in Manhattan and heard her say, "I'm Anne," to hundreds and hundreds of other joys, from the tiny to the great, that fill our lives, but which we too often overlook.

Then I got sleepy. Very sleepy. It was just too much, as if I'd barged into heaven before being called. I went to bed.

As soon as my head hit the pillow, a completely new gang of visitors came rollicking into my life. I wrote, "The moment I fell asleep, I had a dream that Anne had inexplicably, but out of the kindness of her heart, let a pack of feral dogs into the house..." To this day, I remember how surprised I was when what I interpreted as a pack of small, fast moving black dogs entered the bedroom and went swarming under the bed.

I leaped up and looked under it. There was nothing there. I now felt that the house was full of people. Instead of grabbing a gun, as I would have done in 1985, and did do in 1989 when I went chasing after the people who'd implanted me, I went quietly and even fairly calmly into the living room to investigate.

I was "confronted with what was just about the surprise of my life." The first things I saw as I entered the living room were three large square planters with miniature trees in them. We had nothing like that in our living room. I thought, "Holy God, I'm outside" and immediately turned around to go back into the bedroom—and found myself facing a wall. There was no bedroom anymore. Now I was scared. I feared that I'd gotten lost in some very strange way. Now that I have seen with my own eyes that there is another universe here, I'm not too surprised that I saw that wall. I was in the other version of reality, maybe even the same one that I saw at Pine Ridge. If I was really in a mirror universe, perhaps the door was now behind me.

Before I go on, I'd like to reflect that our history since the 15th century has been one of steadily discovering that the physical universe is larger and larger and larger, causing our place in it to feel ever smaller. Before that, we had many different ideas about where we were, but they were all basically

Earth-centric. The moon, the sun, the stars all revolved around Earth, and we were her masters. Now we know that there are trillions of stars in trillions of galaxies, and that this is probably only one of an effective infinity of universes...which all probably have an infinity of mirror universes breathing neutrons back and forth between their realities like great, enigmatic hearts. And then there is this little band here on this tiny speck of dust, touched with intelligence and struggling to find our magic as we sail through infinity on the coattails of a wandering star.

Perhaps the next step is to discover for certain that informed speculations like the mirror universe and the multiverse both actually exist, and that reality is, in fact, infinite. If we are therefore eternal, as we must be if each of us is an infinity of selves in an ever expanding mass of universes, then that might explain why, when I asked one of the visitors back in the late eighties what the universe meant to them, I received such a startling answer.

When I used to walk in the woods at night in search of meetings with them, I had only very little success. I don't recall anything like a face-to-face sit-down, although every so often it seemed to me that there was somebody there. One night, during such a moment, I asked aloud, "What does the universe mean to you?" At once, my mind's eye was filled with the vivid, clear and deeply shocking image of a coffin.

I realized that if you knew that you were lost in infinity and could never reach either the end of reality or the end of yourself, you might well feel paradoxically claustrophobic. Something you can never leave is a trap, no matter how big it is. But, of course, we don't feel this way. We don't know that we're lost in the stars. Where they see a coffin, we see *Star Trek*. Maybe it's not as realistic a state to live in, but I much prefer it, and if they could, I think they would return to it. But when you have opened a door of knowledge in yourself, there is never any turning back.

The next thing I knew, I was lying in bed again, but not in any sort of comfortable state. Instead, I was dreaming that I was living five different lives at once. Later, I assumed that, if this had been a real event—whatever that means—they were unfolding in parallel lives, if not in parallel universes. One of them was this life, as I was living it then. I continued, "The five of them were distinct, and I was inside five different selves at once. There was no confusion, and I wasn't on the outside looking in. I was living these lives all at the same time." My most vivid recollection, looking back, is how normal this fantastic state seemed while it was unfolding.

I wrote, “In four of these lives, Anne was also present, but not in the fifth, and that was a life I very much wanted to leave. In it, I was walking down a path with a small boy, toward a quay where there were a number of men.” I went on, “In this universe, Anne had died of her stroke, and I was walking with my grandson, who was about three.”

At the time, I didn’t have a three-year old grandson, and when my oldest grandson was three in 2010, Anne was still fine. When my youngest one will be three in 2021, she will have been on the other side for seven years. So that wasn’t exactly prophetic.

In the next life, I was still living in my childhood home in San Antonio, which was now worn out and run down. Anne was bravely trying to scrub the kitchen floor. The house has long since been torn down and replaced by another house. It had been in 2007, too. In a third reality, we were living together in an apartment, and the dogs were under the bed. Fingers had grasped my hand and were tugging at it.

I now know that both the presence of dogs and the tugging on my hand had to do with things that would happen in the future, so I assume that, if these were actual parallel universes and not simply possible alternate lives, that this has to have been the one I’m actually living in. As we shall see.

The fourth reality was the one where the trees were in the living room. In this one, TV transmissions from another planet were being regularly picked up and rebroadcast by SETI, and this was a decorative motif from the other world, and I have to say that I hope that this actually happens in this universe at some point, but I hasten to add that I am not going to be buying into the idea of having trees in my living room.

At 4:53 the yanking on my hand grew strong enough to wake me up. Pulling it away, I turned over, saw that there was actually nothing there, and decided—absurdly—to try to get some sleep. The blinds were slightly open, and as I turned over, I saw lights outside the window. The wind was blowing in from the sea and the clouds were racing, but these lights were dead still in the sky and close by. I immediately woke Anne up, and we soon discovered that we could both see the lights, but only when we were in a certain position in the bed. From any other angle, they were invisible.

At the time, there was a big sensation about what longtime anomaly researcher Linda Moulton Howe was calling dragonfly drones, which were huge, complicated machines that had either been photographed over isolated areas in northern California or were elaborate hoaxes. So I thought maybe

that this thing was a dragonfly drone. After a short time, the lights glided majestically off toward the ocean, moving easily against the wind and not bouncing or struggling in the slightest. Like the objects that had been filmed off the Nimitz in 2004, whatever was holding this object or objects up in the air was not a wing or, say, a balloon. It was not aerodynamic.

I felt as if I had been, as I put it in the blog, “moving seamlessly” between various universes. I cannot say now that I know what was happening, but there are obviously quite a few other possibilities. I could have been experiencing some sort of mind control or hypnosis, or been drugged, including with substances unknown to us. Some very strange critters were in the apartment. As I have gotten to know them, I have come to understand that they have a stunning mastery of mind and space. Since that day, I don’t think that I have spent much, if any, time with any other sort of entity, not until very recently.

I don’t know what they are. As far as describing them is concerned, I have only glimpsed them. I can say that they are very small, about the size of a miniature terrier. They are not dogs, but they run in packs and race around at breakneck speed. When they are near you, they are able to plunge you into all sorts of different versions of reality. But what that means—let alone how real the realities are—I have basically no idea.

As I have gotten to know these entities, I have come to feel the deepest gratitude to them. I have had three different forms as teachers: the grays, the *kobolds* and now these nameless unknowns. I am not aware of anybody else who has described a striking detail about them that I have observed, so I’m going to leave it out of this text. If anybody else has encountered them, they will know this unmissable detail. In any case, their ability to affect the mind is breathtaking. They created, or induced, my awareness of the different universes with impressive skill. They are also extremely fast. Unlike the others, they run in groups, from as few as two to many. I have never seen one of them alone.

I think that they are the ones I do the sensing exercise with now. Their intensity, full of desperation, drives me to work harder than ever before, striving to extract the sense from a life that has become so unusual that it is all but impossible to describe in the kind of practical way that seems essential to success.

Their response has been to provide me with a series of increasingly spectacular and insightful experiences, such as the Contact in the Desert and

Pine Ridge experiences that now form such an important part of this book. Like this experience, they concern other universes, meaning that at this point over a period of twelve years, this has been a consistent message.

There is still another experience, described in *Breakthrough*, of driving into another world in a Jeep Cherokee with another family's little boy in the car with me. I was taking him from our country place near Woodstock to a diner on Route 17 in Paramus, New Jersey, to be picked up by his father. I took a familiar turn off the divided highway to loop back to the diner where the father was sitting in his pickup waiting for us. To my shock, I found myself on an entirely unfamiliar road. We then spent some minutes driving around in what appeared to be another world. The streets were wide and overspread by lush trees. Set back in lawns were low sandstone colored structures with deep reliefs of serpents on them. Each one had a low arched doorway blocked by a wooden door.

The boy panicked and tried to jump out of the car. He kept pushing up the automatic lock and I kept pushing it down as I drove through the broad, silent streets looking for a way back. I finally found myself driving across a sort of wasteland and ending up on Route 80 about twenty miles from where we'd left Route 17. By the time we got back to the diner, the father, who had seen us pass by, was standing in the bed of his pickup looking for us.

The boy, who I was hoping wouldn't say anything to his very skeptical dad, ran across the parking lot yelling, "Daddy, Daddy, Whitley took me on a ride through the Twilight Zone!" To make it all even stranger, if that is possible, Twilight Zone creator Rod Serling's home was just a few miles away.

We never found that eerie neighborhood again.

I wonder if it is in the same otherworld that I saw in Pine Ridge in 2019 and perhaps wandered through on that wonderfully weird night in 2007.

Looking back, though, it would seem that movement into other universes has been a consistent feature of my experience. Perhaps somebody has all along been trying to tell me something. Not only, this message goes, are you not alone, you cannot be sure where you are or even, truthfully, what you are, or what powers lie latent in that mysterious human mind of yours.

Ah, but somebody knows, and they seek to communicate that knowledge to us—not only about who and where we are, but also about who and where they are, and what it will mean for us to finally meet in what that gentle genius I was and am married to called "communion."

THE RETURN OF THE VISITORS

Deep one night in October of 2015, pain—severe—radiated through my left second toe. Anne had passed away just a few months before, and as I had every night since, I had spent my meditation session at 11 calling to her, “Annie, Annie, if you hear me at all, please come, please come to me.”

I leaped out of bed. I did not connect this with my hand being held back in 2007. In fact, it would take four more years and at least five drafts of this book for me to see the connection.

I stood gasping, then fumbled to turn on the lamp. But what was it, what just happened? There are no electrical outlets near the bed, no wiring or circuitry at all. I grabbed my phone and looked up symptoms of gout. Not a fit. I sat on the bedside, reached down and rubbed my toes.

Everything in the apartment seemed normal. I looked at the clock: 3:25. Great, now my night’s sleep was ruined. Next, I looked under the bed, but there was nothing there that could have shocked me. I lifted the foot of the mattress. Nothing there either. Finally, I turned out the light and lay back down. All was quiet, the bed was warm. I drifted into a sort of half-sleep.

During the day, I thought little about the mystery. I had no idea what happened. But somebody did. They were here in 2007, and now that my situation had changed, they had returned to start a new lesson in the course of study that is my life. Without any idea that this happened, I have crossed a threshold—or rather been zapped across it.

The next night I felt strong fingers grab my right nipple, pinch it painfully and shake it. This time, I came roaring out of the bed. Once again, I fumbled for the light. I stalked through the small apartment. There was nobody here

but me. All the doors and windows were locked. But that was a hand, those were fingers touching me.

You have every right to wonder, “Why is he being so dense?” The answer is that relationship with the visitors is both so improbable and so hard to grasp. They always seem to show up unexpectedly. But there’s more to it than that. We may say we want to see them. We may even beg them to come. But actual contact is apocalyptic. It means tremendous, overturning change, and that is very threatening to the ego, and it is going to defend itself against what it sees as an unknown threat. This is why so many people can’t take the close encounter experience. It is why we have been fighting the visitors for nearly a century on so many different levels. It’s ego, defending its very existence—and all for nothing. There is no destruction of ego involved, and when you come to see that what you imagined was your “self”—the beginning and end of you—is actually just a social tool with a name attached to it, you realize that you’re not really under any threat at all.

I sat down in the living room and tried to calm myself. I had finally realized that something extremely strange and yet very familiar was happening to me. There was no question in my mind but that somebody grabbed my nipple. Given the life I have lived, there could be only one explanation: the visitors were back. They had been pretty much in the background ever since Anne’s fatal illness began in 2013. She had been dead now for six weeks, and I was in a state of blackest grief.

I sensed that this wasn’t just an anonymous “them,” though, and here began a new level of my experience. I cannot say exactly why, but I knew that Anne was involved. Since her passing, I have learned more about how deeply true her insight about the relationship between the dead and our visitors was. We are not just having a close encounter with what appear to be nonhuman beings but also with ourselves.

If the mirror universe is where what appear to be aliens come from, then maybe it is, just as Homer thought, also where our dead go. After her near-death experience in 2004, Anne felt that there was a sort of breathing between this and another universe, and that when we died here, our consciousness was transferred to another version of ourselves there.

I sat on my bedside. The feeling that Anne was there was now very strong. It was as if I could almost touch her, and how I longed to! But there’s more. A dissonant note, at least, dissonant to a man enveloped in deepest grief. I sensed that she was laughing at me. In life, she always saw me as

entirely too serious.

I didn't sit on the bedside for long. My mind went back to the last time I was woken up by being jostled or otherwise disturbed in the wee hours. This happened back in the 1990s when seven people who indicated that they were from between lives kept trying to get me to meditate with them at this hour. I did it for a few weeks or months, I forget how long. Then we lost the cabin and moved to Texas, and I saw no more of them.

I recalled the weeks I spent mediating with them as being one of the best periods of contact of my life, a rich learning experience. (I've discussed it in more detail in both *Solving the Communion Enigma* and *The Super Natural*.) After I entered the meditation room the first time, they called me, they came pounding down onto the roof, making seven loud thuds. Then they fell silent. A few seconds later, I had the impression that somebody was standing right in front of me. I explained that I couldn't meditate with invisible people present. I had to see them. When nobody materialized, I left the room and went to bed.

A few hours later, one of them, a man, human appearing, became visible for a few unforgettable moments while sitting on the foot of the bed.

Their ability to control their density might involve a natural process or technology, I cannot say. If they are coming and going from the mirror universe, then maybe they don't disappear at all but simply pass back into the other reality, perhaps using some form of mental process or, of course, technology. (How, I wish I knew!)

There is one thing that, if we could do it, we could control our own density. This would involve increasing and decreasing the space between atoms—in other words, controlling the gluons that mediate that space.

The physical world is a near-vacuum. For example, the atoms that make up most of the mass of a piece of steel are actually just 0.00000000000001% of its volume. Statistically, physical matter can hardly be said to exist. It is maintained by what is known as the strong nuclear force, which is the only reason that the world we live in is here.

Their ability to rearrange atoms has to mean that they can control the strong force and, thus, may be in possession of technology that can alter density. Of course, there are other possible reasons, too. This gets back to the mirror universe, which would necessarily occupy reality in a way that mirrors our own place in it. If this is true, the math of wormholes tells us that passing back and forth might be easier than would be using a wormhole to go to

another part of our own universe. The amount of energy needed to bend space-time in order to bring two points in the same universe together is far greater than the amount needed to briefly open a hole in the membrane between mirror universes.

When the man materialized before my eyes, I took his hand. It was small and light, very light. But it had definite heft. It felt solid. But I wondered if he was actually, physically present. How could he be? No matter how real it appeared, it had to be in my mind.

So I held it to my nose and smelled the back of it. Once again, I was surprised. His skin was pungent. There was a sharpness to the odor that I associate with people who don't bathe. Frankly, the guy was ripe. There's no other way to put it.

I was so surprised that I dropped it—whereupon he winked out of existence. I sat there completely flabbergasted. Now, looking back to that event of more than twenty years ago, I would think that controlling the strong nuclear force may even be a natural ability, perhaps even one that can be found, with disciplined concentration, within ourselves. If so, then it must have something to do with control of attention. It really did seem, in that moment, that my dropping his hand had broken his concentration, which is what caused him to disappear.

Fast forward to 2015 and to the third night that I was called. The first night, I experienced a shock that was inexplicable to me. On the second night came a pinch that made me realize that I was once again in contact. And now came the third night and another awakening at 3. No question now. I got up, went into the living room, took my seat and began to move my attention from mind to body.

Since then, the early morning meditation has become part of my life, and with some of this unfolding so very close to physical reality. From October of 2015 until April of 2019, they woke me up every night by blowing on my face or the back of my hand, sometimes by kissing me.

It's easy to say, "He's just hallucinating," and ignore me. Many people don't even want to think about a life like mine, let alone entertain the idea of living with demanding invisible beings who refuse to allow you a full night's rest and who involve themselves in your inner life in ways that are often extremely challenging. But there's another, more fundamental reason they prefer to doubt me. It is that whoever or whatever is here doing this is obviously in possession of extraordinary capabilities, and that feels like a

threat.

During the October–December period in 1985 in upstate New York when they were taking me physically, I felt captured, which was why I reacted like a wild animal that had been snared. And in fact, this is what I was. We are a social species, but that doesn't mean that we're not wild. We don't normally feel that wildness, but when one is face to face with an unknown being who is obviously in control of the situation and whose motives one cannot even guess at, it will come out.

This response is instinctual and is probably the underlying reason that we so generally reject this whole experience. The only way to overcome it is for both sides to keep trying to get used to one another.

There is a taming process necessary, and it isn't easy, not even when you know what is happening. I've been trying to get used to them for thirty years and have only just recently begun to think of my fear of them as something that has passed. Frankly, my wife's participation in the process from the other side has more than anything else been what has enabled me to make progress, and, to me, this is an indication that contact isn't going to succeed if we continue to deny the existence of our souls and thus also our dead, and they are not involved. We need to finally stop pretending to ourselves that they don't exist and get down to the business of enlisting their support as we go deeper into this new life.

Here are two examples of just how deep and powerful our fear of doing this is. In February of 2017, I was at the Esalen Institute in Northern California at a conference with Jeff Kripal. We were sleeping in the same room, one in which I had briefly encountered the visitors on a previous visit. It's in a building called the Murphy House and is called the Sea View Room because it has a deck that overlooks the Pacific Ocean. When they are going to drop into a physical density, the visitors do tend to prefer spaces that offer a quick exit to an open area such as a large forest or the sea.

At 3 on the last morning of the conference, an invisible presence blew on the back of my left hand. I was lying with my head turned to the right, which meant that I was facing toward the window that overlooks the sea. As the burst of air on my left hand caused me to open my eyes and turn toward the hand, I glimpsed a dark figure at the bedside on my right. I saw no detail except that it was short, and I assume that the fact that the left hand was involved was intended to cause me to turn away from it as I awoke. Even as recently as 2017, I would have reacted to face-to-face contact with a burst of

fear.

The next moment, I recovered myself. I got up and, as usual, opened my inner self with the sensing exercise. Nothing further happened to me, and I completed the exercise, as I normally did in those days, after about fifteen minutes of inner work.

The next morning, Jeff remembered hearing a tremendous crashing sound and feeling an uncanny sense of dislocation. My experience had come around 3, and his about an hour later. He heard an inner voice that was at the same time his own say, “Oh my God.” He told me later that he felt a sense of devastation, as if his entire world was collapsing.

This is because contact involves the breakdown of the barrier between the living and the dead and at least a partial drawing of the ego out of the time stream—a sort of death before dying. This threatens a fate that is horrifying in the extreme to the inner person, which is being plunged into the nonmeaning that accompanies knowledge of future and past.

The natural reaction is to think, “Oh, I’d love to know my future.”

But what would that actually be like? In fact, you’d feel like you were riding on rails, or a marionette being manipulated by an unseen puppeteer. Your spontaneity would be lost. Life would entirely lose its meaning.

I think that this is why Jeff was so devastated in his moment of contact and why I and so many others have struggled with the ferocious, nameless fear that comes to us when the visitors approach.

The fear can be much worse than what Jeff experienced. It can be life threatening.

The previous summer, I had been at a country house where I’ve been encountering the visitors since boyhood. It has a sleeping porch upstairs, which a number of the bedrooms open onto. An individual who was in one of these rooms heard scraping footsteps outside her window and then a low, husky voice growl, “Why aren’t you asleep?”

She called out and asked if it was me. I was in the living room and called back that I was downstairs reading. I had also heard those footsteps, though. When I was a boy, I heard them on that same porch many times.

In the morning, I asked her if she had been upset. She said no, but I knew from experience that an encounter like that, even one so small, can have powerful effects.

Sure enough, that afternoon she began to experience symptoms of what I suspected could be a silent heart attack. We called a doctor friend who lives

nearby. He came over immediately, confirmed that a heart attack was in progress, called EMS and got her to the hospital. She ended up with a pacemaker.

These are typical examples of the kind of stress close encounter produces. I was allowed on the night at Esalen only a glimpse of what was there. Any more than that, and my ego would have felt itself being drawn out of time, and the terror would have come.

Understand that this doesn't just happen when we have contact with nonhuman intelligences. The literature of ghostly encounters with dead human beings is a literature of fear. But although both types of event are among the most challenging experiences a person can have, both can also be not only endurable, but also productive.

We can see a version of our own fear in the fear that wild animals have of us. In the distant past, I would think that they were no more wary of us than of other predators, and larger predators weren't afraid of us at all. That was, however, before we came to understand the inevitability of death. Because we know this, we are now different from all the other creatures on the earth, and they know it because they can see it as a darkness in our eyes, exactly as we see in their terrible glances the visitors' knowledge of the future, not just that death is inevitable but the day and the hour.

The visitor who caused me to turn away from him did so out of kindness. If I had woken up while I was turned toward him, I would be looking right into his face. A moment or so of that, and all spontaneity would be leached from my life, for knowledge of the hour of death must shed a cruel light along the path of future life as well.

I knew a man who had something close to this happen. After looking into the eyes of a visitor, he spent the rest of his life in a state of permanent *déjà vu*.

Once you know the moment of your death, you also know everything that transpires between. We are not here to move through life on the grim rails of future knowledge but to experience events spontaneously. Even if they are preplanned, which for all I know they may be, our purpose here is to be surprised and to gain self-knowledge by observing the way we react to what life presents to us.

If the visitors, not to mention our own dead, are going to commune with us, they are going to have to hide very carefully, because if they slip up and cause us to lose the chance to react spontaneously, then they also lose what

they are here to experience.

This is the primary, but deeply hidden, reason for all the secrecy that surrounds the contact experience. Contact—communion—involves not only a new kind of intimacy but also a new kind of mutual discipline. We have to open ourselves to them without seeking to know them, and they have to enter us without revealing their knowledge of our futures to us.

Without us having confidence that this won't happen, communion can only go so far, and it's not going to be far enough for either side.

The question remains, "If it's all predestined, why bother to do anything?" The answer has to do with the reason that history itself exists. Over the six or seven thousand years of the current cycle, in each generation, more complex lives have become possible. The number of alternative histories on offer to each soul has become larger and larger. Even though the end is always the same and the game remains the game, there are more possible moves in every generation, more twists and turns. Although the end is always the same, the paths of life become more and more forked, and the journey richer in discoveries.

Knowing all that, though, what practical means do we have to work with the fear?

Just as tame animals don't fear us, we can learn not to fear the visitors. That's a great part of what this book is about. In February of 2017 at Esalen, I dared not look into their eyes. Now, in Santa Monica in August of 2019, I understand why I shouldn't and, therefore, have no fear of this. I'm not going to ruin the spontaneity of my life when I'm with them because I know how to avoid doing it.

I get knowledge from them. My life becomes richer. They get relief from me. Yes, it's a game, and just as Shakespeare said, this is a theater and we are the players. He didn't think about the audience, though. They are the audience, and when they have a seat in the theater of our lives, they enjoy the great pleasure of being alive again.

It's an illusion, of course, but it must be a satisfying one because they do come back to me for it very often indeed, and they are clamoring for more opportunities with more people. If we can do a good job for them on the little stage that is this earth, they are going to help us keep the theater open—that is, help us rebalance nature.

It's going to be hard to make the relationship work, though. Probably a goodly number of my readers are recoiling in horror right now, thinking to

themselves, “My god, he lets himself be possessed!”

No, shared. If they controlled me, they would bring the knowledge they want to leave behind with them. A lot of close encounter witnesses intuit this. It’s why they are so often called “The Watchers.”

Communion is a new state for us. From experience, once one relaxes into it, the idea of living in the old way becomes the real terror. This is especially true because of the alternative, which is upheaval, incredible human suffering on an unimaginable scale, and possibly even extinction.

THE MAN FROM PARADISE

Until recently, I did not understand the multiple witness encounters that took place at our cabin in the late 1980s for what they were. It is only as I have gotten into deeper contact with the visitors that I have been able to understand that they were messages and decode them.

As I've done this, a whole new picture of who the visitors are and what they want has emerged.

The first of the big cabin events involved the *kobolds*, the second the grays. On the first weekend, there were ten adults present and one child. Anne, Dora Ruffner and Peter Frohe have since passed away. Ed Conroy, who was then writing *Report on Communion*, Lorie Barnes and Raven Dana have agreed that I may use their names in this book.

Raven has been kind enough to send me an email detailing her memories of what happened on that night in the living room where she, Dora, Peter and another man were sleeping. I will call him "B."

Lorie was in a guest room along the hall, our son in his bedroom, and Ed and his companion in the basement. Anne and I were upstairs in our room.

Raven writes, "Dora and B. were maybe five feet apart, sleeping parallel to each other. I was sleeping with my back to them. I woke up because I had become hot and uncomfortable. When I tried to roll over, I found that I couldn't move. I was wide awake though and thought, 'sonofabitch!' I tried to relax. Then I heard Dora and B talking but I couldn't make out what was being said over the driving rain." (A sound like rain would often fill the house as the visitors approached from above.) "Then I heard some thumping, bumping sounds. The rain let up and I heard birds."

“This all happened over a period of just a few minutes. Heat. Heavy rain. Could not move. Muted voices. Thumping. Then silence and I could move. My eyes were open the whole time. I rolled over and said, “What the heck is going on?”

“Dora and B. both started talking at the same time...talking over each other...me, too. I asked, “Did you hear that rain? What was all that noise? What time is it?”

“B. said that the visitors were just there, and had been doing ‘acrobatics; around the beds. Dora said it was 2:40 and that she didn’t think what we heard was rain. We all went to the door and...nope...there had been no rain. Everything was dry and we could no longer hear birds.”

“Apparently when I could not turn over, several small blue beings were jumping on or around B.’s bed. That is the noise I heard.”

While this was taking place in the living room, in the basement, Ed and his friend were astonished to see a young woman walk down the stairs holding a badly torn up sweater. It was a close friend of theirs, who had died in the 1983 Mexico City earthquake. She had been so terribly crushed that all that was recovered of her had been the sweater. Here she was, though, seemingly perfectly healthy, carrying it! (This is very typical of contacts with those in the afterlife, by the way. Most of us cannot hear them, so they will come carrying objects that identify them.) After conveying the information that she was all right, she disappeared. Upstairs, the fun went on for about fifteen minutes more, then the dark blue acrobats were gone.

Pretty much everybody in the house stayed up talking all night except me and Anne and our son. We were in our bedrooms and slept through the whole thing.

As I now understand, it was a communication on two levels.

It was the first time people other than ourselves and some of our son’s playmates had witnessed the visitors at the cabin. It was also another indication of a connection between these entities and the human dead. I say “another” because, during the *Communion* experience, as I said in *Super Natural* and elsewhere, a dead friend was present during the initial phase of my abduction. I didn’t put it in the book because I didn’t realize its significance. I still didn’t, and that would not change until Anne pointed it out.

About a year later, filmmaker Drew Cummings was there making a documentary about the *Communion* movie. Raven Dana and Lorie Barnes

were once again present. A third woman was also in the group that night, as were Ed Conroy and Dora Ruffner. Drew had brought a low-light video camera and planned to set it up in the house, so we were very hopeful that an event would take place.

Late in the afternoon, Lorie came in from a walk looking bemused. She said that she had just encountered her brother on the road. What made this so amazing to her was that he had been missing for twenty years and declared dead by the FBI. He had appeared in a brown robe and hood, much like some of the visitors do, standing in the woods just beside the road. Lorie asked him to come down to the cabin to meet her friends, but he said only that she was in the right place, then drifted back among the trees and was gone.

Knowing by this time that the appearance of the dead was often associated with the coming of the visitors, Anne and I began to think that the visitors might show up later that night. We said nothing to the others about this, of course.

We knew by then that dancing and chanting would sometimes bring them, so we went out to a cave where I often meditated in those days. It was about a mile from the cabin, in a cliff above a little stream. It was a challenge to get to it, and once you were inside, you could not be heard if you cried out and you could not easily leave.

Except for Cummings and his crew, we all went to the cave, where we chanted in a way that I had been using for some years. This is called overtone chanting and requires a powerful use of attention, concentrating and letting go at the same time, in such a way that the vocal chords vibrate differently and the voice can produce harmonics. It's a Tibetan Buddhist discipline and I had found that concentration like this could sometimes get the attention of the visitors.

When we got back, we talked for a while, then Anne went upstairs. Lorie and the other woman went into one downstairs bedroom and Raven into the other. The Cummingses bedded down on the convertible couch in the living room so that he could attend to the camera, which was to be left running all night. I camped out in the woods with our son because Lorie had his room. Ed and Dora did the same.

Sometime later, Raven was awakened by movement. The first thing she saw was an Eye of Horus on the wall. It was not a hanging. It had not been there earlier. Then she noticed that what she at first took to be a raccoon had come in the window. An instant later, she remembered that the window

screens were all screwed closed, so it couldn't be anything normal. She realized that it was one of the visitors. When she did, it reached out its hand, and they touched. This was a rare incident of physical contact with a person in normal consciousness, and it sent delicious yet powerful energy pulsing through her. She heard it ask, in her head, what it could do for her. She replied, "You could go down that hall." (Where the low light camera was now in operation.) It then disappeared.

A moment later, Lorie was woken up by being punched on the shoulder. She saw the entity staring down at her, but a moment later it was gone.

In the living room, Drew then woke up to find a small man with a large head peering down at him from beside the bed. He was startled, of course, and when he reacted with surprise and fear, the man's head turned into that of a falcon. Then it disappeared.

Superficially, this would seem to have been nothing more than another bizarre event in a cabin that was at that time really a sort of haunted funhouse.

Let's look a little deeper.

The first sentence had been uttered about a year before this when a carpenter who was working on a house up the road from our place decided to spend the night there because the house wasn't yet sealed and all of his tools were inside. In the middle of the night, he woke up to movement and was appalled to see a strange little man, dark in color from head to foot, standing across the room staring at him. As he jumped up, the man changed into a bird of paradise and then disappeared before his eyes.

In the next chapter we are going to dip into ancient texts, specifically into the Pyramid Text in the Pyramid of Unas, to learn more about visitor communications, like this one, that are pictographic and representational. Because we no longer use pictographic languages, it's particularly difficult for us to pick up on this aspect of the way our visitors express themselves.

Before seeking to uncover the meaning here, let me offer a thought about why hieroglyphs would be used at all. In this situation, the hoary old adage "a picture is worth a thousand words" could not be more appropriate. Looked at as imagistic communication, these few brief appearances, each one lasting only a few seconds, left behind a treasure-trove of information. This quality of compression is a consistent characteristic of visitor communications. Even when words are used, multiple meanings are conveyed. For example, when the words "A new world, if you can take it," were said to Col. Philip Corso,

both meanings were important—if we can wrest it out of their hands and if we can bear what we find.

First, we're shown a bird of paradise, then the falcon god Horus. The connective tissue is that both visitors had the same general appearance and both transformations involved birds. The first sentence, the transformation into a bird of paradise, is straightforward: "I can fly like a bird, and I belong to paradise." The next one, Horus, is more complex. First, the term in Egyptian mythology represents a number of avian deities, primarily Horus the Elder and Horus the Younger, two different gods with different attributes. But there were also many more granular manifestations of the deity. This suggests that we should think of the entity as being part of a larger group, perhaps an entire civilization, a whole species, a world. The pharaoh, during his lifetime, was identified with Horus, meaning that the entity belongs to life and to what we might think of as kingship or leadership, and a noble tradition. The falcon hieroglyph refers to the star Sirius. As well, the falcon is the fastest animal on Earth. It also ascends the sky in circles, just as energy does when it rises up the spine. The falcon is also the ascending soul.

So we have in these two brief images what amounts to a self-portrait. A remarkable being is telling us about himself in a language of transformations and images from our own ancient memory and from nature. His first sentence, spoken to the carpenter, told us where he was from and how he could navigate. His second is "I am a king and also very fast." Then, "I am from Sirius, and I am returning." Then, "I am a living soul." All of that said without a word spoken or written down, but eloquently clear if one accepts that there could be a language based on signs and imagery that work like hieroglyphics and that somebody could make the words not by writing but by changing their own appearance.

This is another example of why, in exploring life with the visitors, it is so important to step out of our accustomed ways. Maybe we will talk to them one day on our own terms. But we can never have a conversation with them—or, for that matter, among ourselves—like the one described here because linear language simply isn't rich enough to communicate on that level. If we are attentive to this method of conveying information, we can learn a great deal from even brief exchanges.

But who was he, really, and is this paradise actually in another star system? Could it be that simple?

Actually, it might be even simpler. He was announcing himself as part of

enlightenment, a universal possibility that is shared by every one of us. In this sense, he was expressing continuity with us, because we are on parallel journeys. We both seek paradise but not on a distant star. We seek it here and now where the kingdom of heaven, or enlightenment, lies, as some religious texts assert, within us.

Looking at the world around us, full of hatreds and violence and in the process of failing in fundamental ways, it seems impossible that such a path could even exist, let alone that we could travel on it, let alone that we could ever find the kingdom, the paradise within to which his example may seek to guide us.

But if it isn't possible, why demonstrate it? I doubt that he would even be here if it wasn't. What would be the point? This is why I consider these rough, frightening beings to be midwives to a new birth of mankind and a new world. On the way down the birth canal, both mother and baby struggle mightily. Baby experiences terror and pain. Then he is laid on mother's breast and begins to feed in a new way. Everything that has previously been received through the umbilical cord must now be taken in through the mouth, and all of life follows. "A new world, if you can take it." Baby experiences for the first time the flavors, sensations and comfort of the ordinary world, and mother and child bond in a new way. Mother is no longer an abstraction but a person with a voice that baby loves to hear and a face that amazes, and baby begins to grow up and does grow up, and mother grows also into the fullness of her womanhood and then fades, as baby will, too, in the great river of time and the flow of life.

So it is with mother and child, and so it will be with us and Earth, whom our midwives are trying to help us discover in a new way. It is when we are born and she is exhausted from her effort that our true relationship will begin...unless, of course, we are born dead.

That is why they are here to make sure that doesn't happen. As part of that effort, this book is being written. But one little book is only a small part of such a large task.

Once they are finished with their work, we will all say, just as do the subjects of the best emperor in the eighth verse of the Tao Te Ching, "It happened to us naturally." We also, free at last from the helplessness of life in the womb, will have gained the right to climb to the star of the man from paradise, and our own truth.

But does that mean he's from Sirius? Literally?

We have explored the probability that our planet has a companion in a mirror universe, but how likely is it that there might also be aliens here from other planets in this universe?

The arguments against this have been many. The first is that nobody is likely to be able to cross the unimaginable distances between stars. The second is that, even if they have that theoretical capability, the practical benefits would be so small that nobody would go to the expense. The first I call the “lack of vision” argument, the second the “lack of imagination.”

The evidence that the visitors are from other planets is not as strong as the evidence that they have some more enigmatic origin. Given all the testimony about them walking through walls, appearing and disappearing, levitating and so forth, at least some of them are functional on many different levels of reality and enter and leave the world as easily as we might a swimming pool. Maybe this is all just technological legerdemain, but it could also be that they are passing back and forth between this and the other universe.

In the predawn after the experiences of Raven, Lorie and the Cummingses, I was walking up to the cabin with my son when we saw a translucent, hooded figure come out the front door, race down the deck, across the back yard and into the woods. As it disappeared, it flashed back and forth among the trees, carefully avoiding them. At the same time, the Cummingses experienced a burst of heat so intense that, when we entered the house, they were both on their feet. They thought that the bed had caught fire. Whatever happened, these things must be true: The being had solidity in this world or would not have needed to dodge the trees. It must also have been doing something to bend light around itself while in the house, thus, rendering it invisible. We know this because of the release of heat, which would have been retained while gravity was being controlled in its immediate area, which would have been necessary to bend the light. We also know, from observing the behavior of the devices recorded by the Nimitz pilots, that devices that can control gravity are in use by somebody.

Is this somebody from Earth, from the mirror universe, or from another world...or, once again, is it a combination of these?

The main argument against the alien hypothesis has always been the distance issue, but that has recently been called into question. A paper submitted by Jonathan Carroll-Nellenback and colleagues to the *Astrophysical Journal* in February of 2019 suggests that “the Milky Way can readily be ‘filled-in’ with settled stellar systems under conservative

assumptions about interstellar spacecraft velocities and launch rates.” While they assume that there are no interstellar visitors on Earth at the present time, they show how adding the effect of stellar motion to speed calculations would enable the spread of life possible on time scales much shorter than previously assumed. In the past, when things like the Drake Equation, which measures the likelihood of somebody from another planet finding us, were conceived, the fact that stars move was not taken into consideration. The Nellenback paper corrects that misapprehension, and shows that crossing interstellar distances, while still very slow by human standards, is probably far from impossible.

Given all this, it is time to stop being so certain that somebody from this universe cannot be here—and, in fact, both from this and the mirror universe, given that there is evidence for that, also, as a point of origin.

This gets me back to Sirius. According to Susan Brind Morrow in her book on hieroglyphics, *The Dawning Moon of the Mind*, the falcon glyph is associated with both Horus and Sirius. As the brightest star in the sky, Sirius is also among the most frequently mentioned in mythology. Among the Greeks, it was known as the Dog Star because of its position in the constellation Canis Major, the Great Dog. This same designation is repeated in many cultures around the world that have no obvious connection to Greece. In Chinese and Japanese myth, it’s known as the Wolf Star, and among many different Native American tribes, it is designated also as the Dog Star.

Among the Dogon people of Mali, who are believed to have had some connection to ancient Egypt, there is a story that entities called Nommos that lived in water came to Earth from Sirius, bringing knowledge, and Horus, while the opposite of a water deity, is also thought of as a bringer of knowledge. Additionally, one of the forms of the Apkallus, mythological knowledge-bringers of the Sumerians and other related cultures, is that of a man wearing a cloak made of the skin of a fish.

In my own recent experience, the dog has played a powerful symbolic role. I perceived the entities who appeared in the apartment in 2007 as dogs. In September of 2019, I had a long interaction with one that appeared as a black dog. This was not a physical experience, but it was powerful. I felt as if I was being watched by a careful and penetrating mind—hardly that of what we would call a dog. I was being supervised.

I have already been warned that time is short, and the book must be

gotten out so quickly that I can't seek a publisher. There is no time. I must self-publish instead and as soon as I can. The warnings have been truly fierce, but not threatening. Urgent.

So the man from paradise, it would seem, opened a door with his brief visit to a vast amount of myth and one of the great mysteries of the past, as well as, in the end, to my own experience. Sirius is so important in so many cultures and so often associated with the bringing of knowledge and ascension to the stars, and of all the visitors I have met, the ones who use the symbol of the dog to address me have brought the most knowledge.

I know that this all sounds very strange, but in communicating with the visitors, it is essential to be prepared for asymmetric methods, especially the use of imagery in ways that are not common among us. This also goes for sound.

Another example of this is the incident of the nine knocks that I describe in *Transformation*. I was sitting in the living room at our cabin when there came, in three groups of three, nine distinct knocks on the roof. These sounds were, like the three cries that I would hear above the woods, absolutely startling in their perfection. In fact, until you have heard something like that, I don't think it's possible to fully understand what it's like. This is because it's not something we ever hear. When you do hear it, though, you know immediately that you are having a new experience. My cats certainly did. Their fur puffed up, and they began creeping along the back of the couch yowling.

I cannot know if this was intended, but the knocks reflected a tradition in Masonry, where when someone is elevated to the 33rd Degree, they knock in this way on the door of the hall before being admitted. Gurdjieff's law of three and the riddle of the Sphinx are also referred to, as is the alchemical notion of salt and sulfur being balanced by mercury. The principle is expressed in the riddle of the Sphinx as courage (the lion) and strength (the bull) being brought into balance by the mind (the human head).

When the three are in harmony, then the Sphinx, as did the man from paradise, spreads its wings and soars aloft, looking down on the cares of the world with balanced and objective vision.

Close encounter witnesses, when they look, are likely to find similar communications in their own lives—richly visual, referential to the life of the soul and the increase of consciousness, suggesting that travel along our ancient spiritual paths remains a journey worth taking.

SHARED LIVES

Throughout this book, I have been talking about a number of different forms of nonhuman and/or nonphysical beings. There are visitors who appear at times physically and at times nonphysically and which do not resemble us when they are in a physical form. There are the human dead, one of whom in my experience once briefly generated a physical version of himself. Then there is the conscious field, which I have also called the “presence” and which seems to me to be the great ground of reality, which Anne once described as the “yearning” that underlies all that is. It is this presence that generated the incidents of light that I sought in the past to identify as God and that I now see as a sort of field of conscious energy that is at the basis of all that is.

This and the next chapter are, very specifically, about our nonhuman visitors. The two chapters concern what they want and what they have to give, and what they will take if we abandon it.

Their needs are going to seem as strange to us as our lives do to them. Because of the way they are structured, as I have discussed, they cannot experience surprise. Their lives, trapped in what amounts to an eternal present, are absent all the excitement, wonder and beauty, all the pain and terror, all of the *living* that defines the human experience.

They are here for surprise, for beauty, for excitement. They, living and yet dead, are here for life. Our blindness to the future, which to them is our most precious asset, is what enables us to have novel experiences and learn from it. It is what enables us to journey toward ascension and ecstasy.

They have all the knowledge there is, but they cannot make this journey.

This is why they are so desperate that we survive, for we are their main chance to participate in the wonder of life and touch its joy. They want us to join together, to cooperate with one another. We will provide the excitement of the journey, they the knowledge that keeps it from going off the rails—which, right now, it is in the process of doing.

I don't know why they are as they are or have the needs that they do. I think it's damned lucky for us, though, because without their help, I don't think that we're likely to survive. With it, we are going to become a huge, extraordinary engine of experience, travelers in every place that the new is to be found. We will cross the reaches between the stars and find new paths in the mirror universe and other universes, carrying with us our brilliant companions, who will be providing all the knowledge we need to make the human journey grand and to make it last, and to give them what they so desperately need, which is a share in our wonder.

Perhaps it's because they have learned so much that they are ranging the firmament in search of a new experience, as Kuiper and Morris speculated. Perhaps it's because they are conscious machines and cannot make the journey through heaven's gate except hand in hand with us natural beings.

However they have ended up as they are, I am rather sure that I am talking here about the core reason they want contact, and the deepest meaning of communion. Their chance to join the expanding wave front of ecstasy that is the true goal of life depends on gaining some sort of partnership with us, who cannot help but be on that journey.

As I have come to know them, I have come to feel compassion for their need. I have also found that we have common ground, and I have used that to find also a basis for relationship.

Frankly, I'm excited about the partnership. To many, it will at first be frightening. They will fear that it is possession. Of course, that's exactly what it mustn't be. They must be silent sharers, or they will not get what they want. Not only will there be no possession, they will do everything in their power *not* to expose us to the totality of their knowledge. That would ruin communion for them. Their adventure, and their joy, depends on our not knowing everything. In this sense, we're a perfect match for each other: we need their knowledge; they need our innocence.

We have the potential to share because, deep down, we are woven from the same fabric. We are both among nature's predators. As I will explain in the next chapter, I also have reason to believe that, while their involvement

with us can be made to benefit both sides, there are situations where their predatory instincts prevail, and I know why.

Normally, they live among us as they do with me, in a symbiosis that is, for the most part, secret and therefore limited in ways that are very frustrating for them. Without openly sharing the journey, they must ride in silence, never taking the rudder of life, not even when it would be in our best interest that they do this.

Right now is a good example of such a time. If they were sharing their knowledge more directly, we wouldn't be on the point of extinction.

Normally, in my experience, they share, they do not take—by which I mean, take the richness of experience that we gather into ourselves as we journey through life. From what I have seen and learned, they will remove from our souls only what we have abandoned of ourselves. This is why being awake to our lives in a richer way—the sort of acute consciousness taught by G.I. Gurdjieff and others—is so important. If you at once live your life and see yourself living it, they must share your experience. They cannot take even the smallest bit of life that enters you. But there is evidence that they feel free to take what of ourselves we abandon, and that, if we abandon ourselves entirely, they feel that they may take everything.

When you are physically face to face with them—which I have been on a few rare occasions—you feel not only the devastating power of their reflective eye, but also the sense of the predator. They're wary, too, I suspect because they sense our predatory nature as well. The difference is that they hunger for our souls while we think in terms of lashing out at their bodies.

When I first started trying to engage with them, I was just amazed at the level of fear I was experiencing. When I saw how my cats reacted on the night of the nine knocks, I was shocked. Those animals were more frightened than I thought they could be. Cats' tails puff up when they're scared, but when they're *really* scared, as they were that night, they apparently become head to tail fuzzballs. Their yowling was just unearthly. I think that they were like this because they have souls, too, and their souls were under threat and they knew it, and that is much more terrible than the threat of death.

While I do not think that we necessarily need to fear them, we do need to be aware of the nature of the threat that is present. The reason that I don't think that fear is necessarily an appropriate response comes from my own life experience: I have had them in my life for thirty years and I'm still here, still free, and living a richly satisfying life.

Another is how our relationship has evolved. In the early days, I would walk out into those woods at night almost unable to put one foot in front of the other. During the ten years I did this, I was afraid the entire time. In other words, proximity didn't help. This is because this is not about somehow getting used to them. It is about understanding yourself as well as they understand you, so that when their gaze penetrates to your darkest, most hidden places, you will not be shocked by what you see there, and therefore you will not be terrified. If my experience is any example, what you will be, once you really get to know yourself, is understanding. Your shame, your dread of your failures, your imperfections—all of that stuff that you don't want to face—will gather together in a great flood of acceptance, and you will be free. Still the same but free. And then, deep in your life and deep in yourself, you will start trying to repair what you can of any hurt you have brought into the world.

It's called being a seeker, and when you join that motley crew, you will find that the visitors, awful though they sometimes seem, are your companions.

In February of 2019, I spent the night alone in a house with them that was miles from any help and from which there was no quick escape. We had a meeting, and it wasn't pleasant. They were angry because this book was going too slowly. The meeting was not a sit-down discussion. Hardly that. But it was certainly a meeting. What happened was that I proposed to work on this book during the day and on a novel I've been aching to write at night. The answer was a decisive "no."

Twenty years ago, I would have run out of that house, gotten in my car, and driven straight into the depths of the nearest city. On that night, once our business together was concluded, I went upstairs and went to bed. I had a good night's sleep, interrupted as usual by the 3 AM meditation, during which they were so close to me that it was like being stared at by a hungry tiger from three feet away. But there was love, too. Lots of it. Yes, I was face to face with a tiger, but I am not the tiger's prey and my soul knows it.

So how did I manage this little act of legerdemain? I'm still full of imperfections. The difference is that now I'm not in denial about them. I know them and accept them, so when the visitors see them so do I, and I'm neither repelled nor surprised. I have accepted myself, warts and all.

The result is that I am comfortable sharing myself with them.

Nevertheless, it feels incredibly dangerous to let them in. I know this for

certain because I have been doing it, and struggling with the fear involved, for years.

What I have come to is that I don't think they're dangerous to me, and I don't think they will be after I die, either. Anne wasn't perfect, and she ascended. I saw her do it. In fact, the great majority of us die into a higher state, all of the richness and complexity and beauty of the lives we've lived adding to the ecstasy that is the greater aim of all life.

Ecstasy, though, does not involve only pleasant experiences. It is the process of accepting all experience. Ecstasy is everything, reconciled.

It's said for good reason that the devil is a tempter, and I have had them draw me toward all sorts of angers, lusts, and so forth, simply because it was exciting. In the real world, though, that same entity, who as a demon, tempted me in ways that would have left me with regrets that would impede my eventual ascension, would also glow with excitement when I was feeling love.

They have taught me over all these years, with endless determination and patience, how to be the best man I can be, so that I can be their partner instead of their victim. It is my impression that I've lost the deep fear of them because my instincts are now telling me that I'm not going to be preyed upon. I'm no longer a potential food source but a partner in the journey. I share my life and they share their knowledge.

It is this trade, incidentally, that I think has the potential to save us. What if there were ten thousand scientists like Ed Belbruno, all receiving knowledge like he did? We're looking at another enormous increase in human knowledge, which will bring with it also the collapse of the barrier between the physical and nonphysical sides of our species, and a subsequent new vision of what death means and how to live a moral life.

Just as they are predators in the realm of the nonphysical, we are in the physical world. We won't prey on another creature if we live in symbiosis with it. Dogs and cats are not eaten because they work for us. The cats came into the granaries of the Egyptians and ate the mice and rats. The Egyptians were so pleased that they didn't just treat them with respect, they considered them gods. Dogs hunted with us, of course. With horses, it's the same. For ten thousand years, they carried our burdens. Other things that we keep, like monkeys, birds and so forth are safe from our larders because we enjoy their presence in our lives.

Nature is full of symbiotic relationships, and there is every indication that

this is exactly what is trying to happen between us and the visitors. There is a difference between this symbiosis, though, and, say, ours with the dogs. It is that we, also, are highly intelligent. For this reason, there is potential here for a truly electrifying partnership, with both sides gaining tremendously from it.

For us, it means empowerment in the face of looming catastrophe. For them, it means freedom from the death in life that is always knowing for certain what your next step is going to be.

The question then becomes, “How can I become a symbiote instead of supper?”

The answer could not be more simple: become a strong soul, and it doesn't matter whether you believe in the soul or not, you can still do this.

The world is filled with texts about how the soul works, why it is there and what its fate may be. All of these texts address the matter in the context of one set of religious beliefs or another. The modern secular script, which I followed for most of my adult life, says that there is no soul. For visitors who are just looking for a nice dip into the thrill of life, that's a lovely turn of events because it leaves the victim of that belief so vulnerable.

As we explore the reality of soul life and soul vulnerability more objectively, the question arises as to whether or not there is any way to build a strong soul outside of the religious context. Is it possible to be a modern, secular person and still be attentive to one's soul?

Indeed it is, and you needn't even address the question of whether or not you have one. Living a good life as insurance will work just as well as living it with the belief that the soul is real. On the other hand, if religion is your preferred way, it does offer paths to build a strong soul that are effective. It also offers pitfalls, of course, the chief one being that the faithful should kill off everybody who doesn't believe as they do. As Anne says, “The human species is too young to have beliefs. What we need are good questions.” This is particularly true when it comes to religion. We don't yet have a ground of certainty to support any religious belief that exists now or ever has.

This doesn't mean that they're wrong, and certainly not that they're useless. The most sublime text on meditation ever written, the ancient Chinese *Secret of the Golden Flower* is a Taoist religious text. It is also a brilliantly insightful exploration of how to use soul energy and increase soul strength.

When the visitors first started showing me that the soul could be understood outside of a religious context, I began looking for some way of

doing this. Could there be an objective science of the soul? Was there one somewhere, or had there ever been?

I think that there is a very old text that is not entirely religious but rather addresses the life of the soul through an objective lens, which I am calling soul science. This is because it is about the life of the soul, the health and feeding of the soul and the journey of ascension, but with few religious references. It is, in other words, a sort of craft book of the soul based on what I think of as a lost, objective science of the soul.

I suspect that there was a time when we could perceive our souls more directly and had not caused them to disappear into the illusion called the supernatural. By science here, I mean the systematic study through observation and experiment, in this case of the soul, carried out just as if it was part of the physical world like any other natural phenomenon—which I believe that it is.

The text I am referring to is the 3,200-year-old Pyramid Text found in the Pyramid of Unas, which I mentioned in the last chapter. Before I begin describing how, exactly, it describes the soul and its connection to the body, I would like to discuss the energy that is involved here.

We now commonly call it things like *prana*, *chi*, and *kundalini*. From the fact that it can be demonstrated to work in acupuncture, some western scientists now believe that it exists, but it has never been successfully detected. I think that it goes undetected for the same reason that the visitors do: it is not going to submit to detection by anybody who does not understand that it is conscious. There is little written about it as such, but the enigmatic Master of the Key spoke extensively about it during our 1998 meeting. He said, “Conscious energy is not like unconscious energy, the servant of those who understand its laws. To gain access to the powers of conscious energy, you must evolve a relationship with it. Learn its needs, learn to fulfill them.” I then asked how to do this. He replied, “By first realizing that you are not cut off. There is no supernatural. There is only the natural world, and you have access to all of it. Souls are part of nature.” He also said that it was part of the electromagnetic spectrum and detectable as such, but also that it isn’t passive and will decide whether or not it is to be detected, and the degree.

The visitors are full of this conscious energy. When one of them touches you, you feel waves of it coursing through your body. This can be pleasant, as it was for Raven Dana. It can be so powerful that it is incapacitating. I’ve experienced this. It can be painful, which is what happened when it shocked

me awake in September of 2015. Coming into contact with it as it flows through the body can be healthful, which is why acupuncture works and why doing the sensing exercise is so healthy.

If my reading of the Pyramid Text is correct, at this early time in their history, the Egyptians still had an objective understanding of this energy. Where it came from, I don't know, but it would seem that a good bit of our past is lost. (There's really no mystery about this. When the last ice age ended, the oceans inundated coastlines around the world to a depth of thirty feet and more. Underwater archaeology is costly and very difficult, with the result that we know little of what once lay along those shores.)

They saw the energy in the spine as the link between the physical body and what I see as the energetic body. They believed that there are basically three spiritual bodies, the *ka*, or nonphysical double of the person, the *ba* which was able to travel between the world of the living and that of the dead, and the *akh*, which is the part that survived death. They believed that the evil don't grow the *akh*, and just disappear after death, just as Anne observed happening after she died.

The Pyramid Text describes the spine as a serpent of energy that is linked to the body by seven smaller serpents that surround it, the *ta-ntr*. I think that those seven serpents became the *chakras*, or circles of energy that we know today from Indian mysticism, and that *ta-ntr* may have evolved into tantra, although there's no scholarly evidence for this.

What matters, though, is understanding that linkage. I have been out of body a number of times. On three such occasions, I was visible to other people, so I am quite sure that the belief that this is actually an internal state is wrong. One was Linda Moulton Howe who will attest to it, another was broadcaster Roy Leonard, who has passed away, and the third is a scientist I can't name.

I have tried many times to do it on my own but with little success. Twice when I have been taken out, and I feel that this is important, I have experienced either a sensation of something being unlocked along my spine or a shock going down it. Then I have been able to roll out and move through the world around me, remaining conscious and aware. When I was seen by the scientist, I was able to have a conversation with him. I was not able to control what we talked about, however. I was there as a messenger, saying to him that he needed to face the reality of his soul and to do whatever he needed to help him strengthen it by coming to terms with himself. He chose

to go in the direction of religion. This is fine. As I've said, religions offer useful paths.

When I go out, my consciousness, or the part of it I identify as me, is what emerges. My name does not come but rather something deeper. I think that this is second body. It is not formless but bordered. I feel like a sort of orb. In other words, it is a body but without a familiar shape until I become visible, whereupon it turns into a form recognizable as me, generally in clothes I was wearing either at the time of separation or shortly before.

I would like to mention again at this point that I cannot control this. The two clearest separations have begun with that sensation of being unlocked along the spine. When I have been seen, I have in no way chosen this, nor have I been able to control the process directly, although I suspect that it has something to do with the ease of self-sensing that I have built up over years of my meditation practice.

The Pyramid Text says that that the spinal cord contains light. We can detect a concentration of electrical energy in this dense nerve bundle. Is that electricity somehow different from the light that they perceived? I suspect that the answer is both yes and no, in that the life force generates the electrical energy in the spine but is not that energy. We can detect the electricity. They could see the life force. They also believed that it can leave the body and remain coherent, and that it does so at death. So the energy involved is not like that of the physical part of the nervous system, which will wink out shortly after the heart stops pumping. This energy will instead rise out of the body as what must be a sort of plasma and begin to experience life in a new way.

I think that it is this that some of the predators want, essentially an entire life that may be tasted in exquisite detail, filled with all the energy of surprise and wonder that went into it. What I have experienced when my teachers have taken me out of my body tells me that separation can be caused by applying some sort of energy to the spine. The result is the ineffable blessing of out-of-body movement.

It might be, though, that somebody who cannot taste of the wonder of life on their own, they might want to steal it. They might do that by ripping the spine right out of the body, thus detaching the energetic body and enabling them to capture it.

We might think of this as unspeakably evil. And it is certainly terrible for the poor person who loses this most precious of all possessions. All the effort

that has gone into the life is taken, and the soul ends up empty handed. But is this evil? When a shark devours an innocent swimmer, it is terrible, but it isn't evil. It's just nature being nature. The same thing holds true when a person is attacked in the night, their spine extracted and their energetic body captured. It's just nature being nature—which is all well and good, but the immediate question that any swimmer in the ocean of life must have is, how do I continue to benefit from my swim until I am ready to return to shore without getting eaten by some soul shark?

This may seem like a very theoretical question now, and probably to many people a crazy one. But it is not theoretical, it is essential, and it is not crazy at all, but exactly as logical as how to protect oneself from a physical shark.

As they become more evident, there is going to be a lot of fear. The media will rush to tell horror stories. Believers will be trumpeting danger, claiming that these are the proverbial demons of darkest legend. Close encounter witnesses will be tearfully recounting their horror stories, many of them entirely real.

I am convinced that the main thing that has caused me to lose my fear of them is my work toward a strong soul, and I think that this is how we will defeat the fear. How ironic that, to save ourselves from the predatory side of the visitors, all we need do is to become good human beings.

Living a life of love, compassion and humility is all that it really takes. It isn't necessary to engage in religious rituals, hexes or anything like that. It isn't even necessary to believe that the visitors are real or that the soul exists. All that *is* necessary is to understand how to live this way and to do it with all the determination that one can bring to the effort.

Knowledge of why living a good life is important goes all the way back to our very oldest moral codes, to the Egyptian law of *ma'at* and the Ten Commandments that are a distillation of its many admonitions.

In my experience with the visitors, the first formal lesson I was given was one in humility. It was 1988, *Communion* had just been published and I was the king of the hill. My brother, eleven years my junior, came up to the cabin to see where it had all happened.

As I proudly took him down to the clearing from which I had originally been taken up into the UFO, I heard a low, tough voice say in my head, "Arrogance. I can do anything I want to you." I hoped that it was just my imagination admonishing me and decided to tone down the bragging a bit.

But when we got to the clearing, a huge UFO appeared. It was early evening, and there was no question what that big oval disk in the sky was. We both stood there looking right up at it. Then I saw three figures in a nearby clearing. He didn't, but that didn't matter to me. I knew now that the voice had been real, and to my astonishment, I realized that I was being called out for my lack of humility. But what would happen? "I can do anything I want to you."

The next morning, my bank called. I was told that I had no account with them, and there were checks needing to be paid. But what could they be talking about? Of course I had an account! All the money I had in the world was in it, except for about fifty dollars in my wallet. The banker suggested that maybe I'd moved to another bank. I told him that they'd lost my account. He was disbelieving but agreed to search in their records for it. He also said that if the problem wasn't resolved by the close of business, they'd have to bounce my checks. I had a hell of a day waiting. He called at about ten minutes of five and told me that they still hadn't found my account. After a bit of wrangling, he agreed to hold the checks over for another day and get a search done in the bank's backup records.

During the sleepless night that followed, I reflected deeply on humility, thought long and hard about how I lived in my ego, and considered that "Whitley," after all, was just a name, and that back somewhere behind the edifice of the famous writer was a soul trying to accomplish a life task that was only impeded by his inflated self-importance. I resolved to reimagine "Whitley" as a social tool rather than as all that I am.

The next morning, the banker called. My account had been found in the backup records they kept in case of a general electronic emergency.

Humility is a task I still work on every day of my life.

Another excellent lesson I received, that is in my mind connected with them, or related to their presence in my life, once again involved the Master of the Key.

I had never understood exactly what sin was. When I was a boy, I lived in a maze of Catholic sins, all designed to make certain that the church, with its ability to manage forgiveness, remained central to our lives. We used to get little cards that showed how many years in purgatory each sin would lead to. Sass your mother, expect to burn for a thousand years. Do it to a nun, expect a hundred thousand. Eat meat on Friday, burn in hell forever.

I couldn't figure it out. And why was fish ok? It was meat, too, wasn't it?

And what about chicken? Did it mean hell or just purgatory?

I could understand things like murder and robbery and such as sins, but most of us never do anything that bad. In fact, as I know now, great sin is rare. It takes work to do real evil. But doing things that we will later regret in our lives is commonplace, and it is our fear of our regrets that causes our fear of the visitors.

During the meeting with the Master of The Key, as I sat listening to one wise statement after another, I decided to ask him about the mystery of sin. He replied at once: "Sin is the denial of the right to thrive."

Since the moment I heard those words, I have been examining my life through them as best I can and also understand enough about the way others are living to be able to be compassionate, which proves to be an extraordinary challenge.

I don't think of myself as being qualified to tell anybody else how to live a moral life, let alone what compassion means and how to enact it. I can, however, say what it means to me. It is always thought of as being endlessly forgiving and kind, but it is not that. It begins with looking deeply into people, oneself included, without judgement or preconceptions, and finding what needs you can fulfill. This includes everybody, not just the people around us but also every creature, be it physical or otherwise, from the grass under our feet to the angel soaring.

One of the loveliest and, I feel, most useful things Anne said after she died was, "We are, each of us, all we have." If we really take that to heart and make it part of mind blood and bone, if we live it and breathe it every moment, there is really nothing else that needs to be known about compassion. If we put ourselves behind the eyes of any creature, no matter how humble or how great, we will see immediately that we all share the same struggle and are, each of us, deeply alone and in need.

When I was a boy, I asked one of the nuns at my school why she was a sister. She said, "Because here I am always needed."

That is true of every one of us. Know it, and compassion becomes your path.

We must understand ourselves if we are to understand others. This cannot be done with ego. It takes humility. Once we do it, then love comes forth, and we are the stronger for it. We will see what others need through the medium of seeing what we truly need. And, into the bargain, we cease to have anything about ourselves that we would prefer to hide. So when the visitors

look at us, their vision penetrating to our truth, our truth can look right back, unafraid.

So love flows out of compassion, which rests in humility. As Anne communicated with me from beyond the grave with eloquence and ease, I realized that she, who was in her essence a teacher and a wonderful one in this life, had achieved mastery in the next level. I asked her to help me find an aim that would give direction to the rest of my life. This is when she said, “Enlightenment is what happens when there is nothing left of us but love.”

Live that, and the visitors will cease to be demons in your view and become angels. As is said in the film *Jacob's Ladder*, “The only thing that burns in hell is the part of you that won't let go of your life: your memories, your attachments. They burn them all away, but they're not punishing you, they're freeing your soul. If you're frightened of dying and you're holding on, you'll see devils tearing your life away. If you've made your peace, then the devils are really angels freeing you from the earth.”

Life with the visitors begins when we have made our peace with ourselves.

DARK TRUTHS AND LIGHT

Close encounter is not only among the most mysterious and complex of human experiences, and certainly among the most fulfilling, it can also be dangerous. But for most people, it is not that. It is far from that.

Still, if there's any danger, we need to understand very clearly what it involves and how we can cope with it.

Some of the early researchers saw only the dark side of it, but at the time the modern experience was just beginning and there was little else to see. The forced abductions started in the 1960, so when people like Budd Hopkins became aware of them, there were no witnesses who had as yet developed relationships with the visitors, and pretty much everybody was terrified.

When I first met Budd, he was careful to avoid sharing his thoughts and opinions about the story I told him. For my part, I had nothing to say about it other than to describe it as it had emerged into memory. At that point, only Timothy and Anne had heard it and I was keeping my injuries very much to myself.

Budd suggested hypnosis, and referred me to Dr. Donald Klein, who performed the two hypnosis sessions which led to the writing of *Communion* and are archived on my website. From the horror of those experiences to the life I live now has been a long road, but I have not traveled it alone, for it is now seen to be the path of many, if not most, close encounter witnesses.

The experiences often start violently. Great terror can be involved—and why not, who could fail to be terrified by the apparitions that we see? Some of us, most particularly those who have only a few experiences, never get beyond that point. Others report being continually hounded by bizarre

entities. But for most of us, there is an arc that starts in fear and ends in a life of deep inner search, and psychological, intellectual and spiritual exploration.

During my first hypnosis with Dr. Klein, I remembered seeing one of the *kobolds* standing across our bedroom. This result was entirely unexpected. In an instant, my vision of the world we live in was upended. The thing didn't look all that menacing, but it was *there*. I erupted into a torrent of screaming so intense that it nearly brought the police. I'd never known that such an intense feeling of fear, fiery, raw and desperate. And yet it had been hiding inside me all along, certainly at least from the previous summer. My interior underworld had risen to the surface.

Reading the literature of close encounter, including the letters that Anne saved and the dozens of books by researchers like Hopkins, David Jacobs and Dr. John Mack, one sees a picture emerging that is quite like my own experience: a frightening, world-shaking initial encounter, followed, if the experiences continue, by a long struggle to come to terms with the situation.

The FREE organization, founded by Rey Hernandez and sanctioned by Dr. Edgar Mitchell, is embarked on a study of close encounter witnesses designed to explore how their relationship with the visitors evolves over time, where it leads, and how the witnesses' perceptions change because of what they are experiencing. (FREE is an acronym for Foundation for Research into Extraterrestrial and Extraordinary Experiences.) Rey, an attorney, was inspired to start the organization by his own close encounter with a UFO, which unfolded in the presence of his wife and daughter. Like me, like Budd Hopkins and so many others, he had been called to action by the phenomenon itself.

Despite the usual paucity of funding, FREE has managed to accomplish a substantial amount of statistical research, the results of which are compiled into a book called *Beyond UFOs: the Science of Consciousness and Contact with Nonhuman Intelligence.*"

By creating a website designed to attract the interest of close encounter witnesses and providing extensive professionally designed questionnaires, they have developed the beginnings of a profile of what people actually think about what's happening to them. Of course, what they have done so far suffers from being a self-selected sample, but nobody in this field presently has the financial resources to do random sampling. Even so, with over 5,000 respondents at this point and a high level of consistency, there is reason to believe that FREE has developed a reasonably accurate picture of the human

experience.

What is found essentially agrees with the work of Dr. Jeffrey Kripal, who sees the first contact as initiatory in nature. In our book *Super Natural*, he says, “The calling of the shaman is often signaled by what Mircea Eliade, in his classic study *Shamanism: Archaic Techniques of Ecstasy* (1964), called an “initiatory illness,” a severe psychological trial or physical illness that effects a transformation of the future shaman’s being, that spiritually mutates him, if you will. Other common tropes include the presence of “power animals” or totems, the ability to leave one’s body and travel in the interworld, a proclivity for trance states and robust visionary experience, erotic contact or marriage between the shaman and a particular deity, spirit or discarnate being, and the use of psychoactive sacred plants to catalyze and supercharge these various magical powers.”

This could be a description of the opening phase of a life in close encounter. As such, I see it as one part of a vast process of re-enchantment of the world. In *The Afterlife Revolution*, Anne and I make the point that the near death experience is, like the close encounter experience, upending of one’s understanding of reality and thus also initiatory in nature. In addition, medical advances which are increasingly able to return people from the edge of death, are causing a distinct increase in such experiences. In *Changed in a Flash*, for example, Elizabeth Krohn describes actually being asked to decide, while her body lay effectively dead, whether or not to come back. She did, and was able to because modern medical science could save her.

What we would appear to be looking at, then, in both the close encounter and near death experiences, is a massive increase in initiation. So this is not so much about the arrival of aliens as it is about a change in awareness—essentially, a deepening of the human experience of reality. These experiences challenge the way the mind sees the world, and even change, along with meditative practices, how the brain works.

While there is an expansion of consciousness in process on a massive scale, I personally cannot ignore the findings of Hopkins and Jacobs. This is because the horrors they describe in their books happened to me and Anne. During my abduction, a device was inserted into my rectum that caused an erection. This wasn’t anything exotic. It was an electrostimulator, used in those days in cases of sexual dysfunction and still common in animal husbandry. My frantic effort to push it out was what caused the rectal tear that left me in pain for years thereafter.

In my second hypnosis session, you can hear me reliving the experience and commenting with confusion in my voice that I have an erection. Semen was then extracted from me. Sometime in the next year, Anne and I had the experience of being shown a baby, exactly as Hopkins and Jacobs report.

So, as always, this experience has more than one level of complexity. On the one hand, it is certainly leading toward some sort of awakening of the human species. On the other, there are indeed ominous, dangerous and bizarre elements that should not be ignored.

Neither, however, should they be dwelt upon to the exclusion of the equally important fact that there are benefits being gained from close encounter.

I know that what I am about to describe will be seized on by sinister forces who want to assert power over others through the use of fear. Because of this, and because fear sells, the media will also rush to it, as will all the conspiracy theorists and paranoids who make so much noise in relation to this matter. But if I don't include it and the story comes out another way, then my whole effort to build a basis for communication between us and the visitors could go to waste.

The story I am about to tell is a true one. Of that I'm reasonably sure. But is it about the visitors? Of that I am not at all sure.

I am not an advocate either for the idea that they are benevolent or exploitative, good or evil. My experience of them suggests that they are more complicated even than we are, and the moral range in human society is very broad. At any given time, our species contains madmen, criminals, saints, and, for the most part, a broad cross section of average people with all their ordinariness and imperfections—and their excellence.

I cannot imagine that the visitors, who may not even be entirely of this world or all stem from a single evolutionary background, could present any less ambiguous a face toward us than we do toward ourselves, and, for that matter, toward them. In fact, if we went to another world, its inhabitants would see us as a complex, contradictory presence. Religious groups might go, scientists, tourists, all sorts of people, including the insane and the criminal. If you add to that something that we will soon see among us, which is intelligent, even conscious, machines, then the diversity and contradictory nature of what the innocent locals would experience would probably be very similar to what we experience now.

Missionaries would have one agenda, anthropologists another. Biologists

might abduct the locals in the same way that we do wild animals and the visitors do us, in order to extract their DNA and sexual materials so that we could understand them better. As we also do in the animal world, they might breed examples of us, in part to preserve us and in part to study us. If there was something about us of value that could be harvested, that might be done, too. If it was illegal to do this, it might be done anyway, although by criminals and thus on a smaller scale than, say, officially sanctioned abductions.

In other words, our relationship with innocents in another world might look very much like the visitors' relationship with us.

Just as a session with the vet is terrifying to a housecat, a session with the visitors is terrifying to us. We are not house cats, however, and we can learn more and come to understand their motives, methods and aims. I believe that we can also cause them to recognize the dignity of our being, and perhaps this has been happening over the past forty or so years, which would explain the steady decline in horrifying abductions and the increasing sense of relationship with the visitors that is growing among close encounter witnesses.

By communicating coherently and forming relationships, I feel from personal experience and from the experiences being reported by so many others, that we can individually and, I would think, probably also collectively, improve our standing with them.

Animals may be killed by human beings without much, if any, constraint. When they are sick or abandoned, we euthanize them or simply let them die. They have rights in only a few human societies, and those are limited. We carry out research on them that causes them suffering and can kill them. We can take them from their families and not return them. We can keep them in cages for our amusement until they die.

So when we see what the visitors do to animals, such as the infamous cattle mutilations, we are not seeing anything that we don't do to them ourselves. Their methods are just different, which is why we find them disturbing.

Since at least the beginning of the 20th century, farm animals have been the victims of a bizarre form of mutilation that involves things like the removal of eyes, the cutting out of tongues, the shearing away of lips, the coring of rectums and the draining of blood. They are also often found with their spines drawn out of the vertebra, which would seem to be impossible

without splitting the bones. Most recently, a number of these events were reported in Oregon in July of 2019 when 5 prize bulls were found showing signs of this mysterious sort of attack.

The media, when they report these events, generally take the word of local sheriffs that it is predator related, although National Public Radio reported the July 2019 mutilations as more of a mystery.

There is a distinct possibility that what happens in the dark of night on isolated ranches is not normal predator action. Among other things, the spinal cord cannot be removed by a coyote or a mountain lion, not without smashing the spine itself, vertebra by vertebra. The carcasses are usually found with all the blood gone. A coyote isn't going to drink every drop of blood, leaving the carcass and the ground both dry.

To anybody who is aware of the significance of the spinal cord as the connection between the physical and energetic bodies, this would be an especially worrying aspect of the phenomenon. We don't like to think of animals as being conscious or having souls, but, as my cats revealed so eloquently with their fear during the night of the nine knocks, soul is everywhere and it can be made to feel vulnerable, at least among the higher animals.

Could it be, therefore, that the spines are pulled out in order to enable the energetic body to come free and be captured? In my life, the unlocking along the spine isn't threatening. On the contrary, when it happens, my reaction is excitement.

I am not so sure that it is always like that.

Not only sheep and cattle, but pet cats are also the victims of mutilation. It makes me wonder if my cats didn't somehow intuit that, which would explain their terror that night. In July of 2015, Linda Moulton Howe, who is the world's leading expert on this bizarre phenomenon, reported on Dreamland that the cats are found with "very precise cuts. Some cats are just cut in half, like with a band saw or very sharp knife or something like that, but no blood. Just cut in half and either the front half or the back half is left to be found. Other animals have only flesh removed from the abdomen area, or a few organs removed, or all organs removed. A few have had just the spine removed in a very precise way. Usually there is no blood." Some of the cat mutilations have come in waves, moving from city to city around the world, as if somebody very unpleasant was slowly circling the planet committing these murders in an organized and methodical way. As recently as August of

2019, cat mutilations were reported in Everett, Washington. On August 10, 2019, a representative of the Everett Police Department said on KING TV, “These are very unique injuries that do not appear to be caused by another animal.” As always, no perpetrator has been found even though, in this case, all five mutilations took place in a single neighborhood. All that remained were legs, uniformly bloodless.

This is only the latest of many such cases worldwide, most of them involving cats cut in half and their bloodless remains left where they had originally been picked up. Like the mutilations of farm animals, despite extensive investigations in city after city, no perpetrators have ever been found.

Why aren’t they, though? Could it be because the perpetrators can read and control minds and, therefore, are impossible for us to catch? If I had not observed such abilities in action, I would never believe that such a thing could be possible. But I have seen this. When Anne and I were living in our small condo in San Antonio and the bizarre man who had been living in the woods behind our cabin in New York showed up with two companions, bizarre events immediately followed, most particularly clear examples of their ability to control minds. He was short and appeared to be a feral child. He smoked constantly, which is why I originally noticed him in our woods. I was concerned about all the smoking in a dry August and approached him to caution him. As I did so, it became obvious that this was no ordinary child, if a child at all. I left the area.

After we lost the cabin, we moved to a small, ground-floor condo in San Antonio which had a screened in porch that opened onto a garden and a cul-de-sac beside it that created a shadowy space just outside the bedroom. No sooner had we settled in than I realized that he was standing in that cul-de-sac at night, smoking constantly. I found that I could feel him inside my mind, literally sense another presence in me. This was nothing like communing with the visitors. There was nothing gentle or supportive about it. In fact, it seemed somehow sexual, and in an ugly, invasive way. It was nonphysical rape, to be frank, and made me extremely uncomfortable. I felt explored in some very private parts of my mind. Looking back on it, I can still feel the curiously thrilling and yet ugly sense of it. Looking back, it reminds me of the sense of domination I felt after the communion experience, that led me to write the short-story “Pain.”

This is what, in so much human mystical tradition, contact with the dark

side entails. It takes you into places in yourself that you otherwise would never go, but, once you are there, you find your own darkness, and its mystery and the thrill of it. In my case, when he entered me the way he did, I experienced homoerotic pleasure. I was afraid of him—and of the part of me he could connect with—and I drove him off. But that is in me, too, just as is the erotic masochism that I explored in “Pain.” When Anne read that story, she said, “This sounds like you want to be whipped. Great, let’s get started right now.” She would have done it, too, but I did not dare to take the experiment farther. Perhaps I should have, and perhaps I should have let that dreadful being enter me more completely, but I did not dare to do it. When we invite our own darkness into our outer lives, there is no guarantee that it will stop when we want it to.

As the nights passed and he lingered just outside our bedroom, just a few feet from me, Anne and I became aware of two very strange men living in the flat immediately behind ours. He was living with them. One day, I was in the local drugstore when I saw one of the men loading shopping bags with smoking materials of every kind, which were in those days still sold on open shelves. Anyone in the store could have seen him doing it. He walked out in full view of the clerks with two bags full of cigarettes, pipe tobacco, cigars, you name it. Every clerk in the store stood silent, staring straight ahead. Except for me, the customers were all in the same condition. As he passed me, he gave me a look that was at once knowing and venomous, and from that moment to this, I have known that there are people who can do as they please in this world, because if you can control the minds of the people around you, you can control your world.

I soon discovered that the three of them were squatting in the condo complex. I told this to the owner of the condo they were crashing in, who had them evicted. The last I saw of them, the two men were canvassing the complex trying to sell the rest of us the owner’s furniture. Of course, as everybody knew they were squatters, nobody bought it. One morning a couple of days later, the “boy” strode out of the space between our condo and theirs while I was working in our garden. He went marching off down the street.

And this is why I know there are people who can control the minds of others. One would think that this would confer on them almost unlimited power, but one glance at the seething, desperate world of the human elite, and it is obvious that, whoever they are, they do not rise to the top of our

societies. Judging from the way these men were, so very weird and, in the case of the small one, apparently schizophrenic, one can see why. Nevertheless, this part of my experience has been richly productive in terms of personal insight. Because of the erotic domination involved, I discovered aspects of myself that needed to be brought into the light and accepted as part of me. In this sense, what happened to me can be looked upon as therapeutic. And this is the way of the dark side: it is in darkness that we discover what needs to be brought out into the light.

I can see where beings such as those three might visit their attentions on housecats. If the ones we encountered are at all exemplar, they are seething with vindictive menace and so might destroy the cats simply because they are loved.

In the year 2000, I came across some cases where human beings appear to have undergone the same fearful mutilations that have been visited on animals. Until recently, I didn't have much to support this other than one equivocal case from Pennsylvania and a second-hand report from New York of a number of exceptionally brutal unsolved murders, all of homeless people. Recently, though, I obtained a transcript that suggests that the cases should be taken seriously.

What I initially heard were two stories. The first, in 2000, was that a total of seventeen street people, all without known relatives or anybody who would really care about them, had been taken from Brooklyn, and possibly other cities in New Jersey and New York. I was told that they had been mutilated by having their eyes, tongues and genitals cut out while they were still alive, drowned in the ocean then left on roofs near the places where they had originally been kidnapped. At some point, a three-centimeter incision had been made just below vertebra C1 in the spinal column and the spine somehow pulled out through it.

There was also a case in Pennsylvania in August of 2002 that I was briefly involved in at its outset. I first heard from Peter Davenport of the National UFO Reporting Center that an unidentified person had reported seeing an individual being lifted into the air from a woods above his farm and that the man had disappeared into what looked like a flying saucer. I told Peter that, if this was true, there would soon be a missing persons report—as, indeed, there was. A search was mounted for a man called Todd Sees, who had last been seen riding a four-wheel drive vehicle in the woods in question.

I also heard from Linda Moulton Howe that she was researching the

matter. She found that there were some disturbing facts about the case that suggested foul play, but to my knowledge there has been no conventional investigatory follow-up.

About twenty-four hours after he was reported missing, according to news reports, Mr. Sees' body was found "emaciated" in a wetland a few yards from his home. There was no definite cause of death ever reported. As far as I know, no member of the family saw it. I have been unable to determine the fate of the autopsy report, so that is where this tragic case stands.

I have now obtained the transcript of an interview with one of the coroners involved in the New York cases that does show one important similarity with the cattle mutilations, which is that the spine was also observed to have been removed, although—and I think that this may be important—not with anything like the precision of the cattle mutilations.

This transcript was generated by a nurse who was talking to a coroner who was involved in the autopsies. I do not know how many of them this particular coroner participated in, and this conversation covers just one of them. Aside from the overall finding of mutilation, there were three strange things noted. The strangest was probably that some tissue from the corpse could not be identified at all. It was neither human nor animal, and yet the corpse appeared to be human both externally and internally. There were small metal balls found in the abdominal area. At the suggestion of the nurse, who was aware of research being done by Dr. Roger Leir in California at the time, where strange fluorescence was being observed on the bodies of people claiming to have been touched by the visitors, the coroners applied ultraviolet light to the remains and found that they fluoresced. The fluorescing material that was gathered off the skin was also tested in a forensics lab. The test returned as a nonorganic substance, unidentified.

At first the transcript seems to say that a small incision had been used to cut the superior transverse scapular. It develops that the conversation was actually about the transverse process, which is a small projection on each side of the vertebrae that enclose the spine.

After that discussion, the transcript continues as follows:

Coroner: We found severe damage to the muscles.

Nurse: Did it look like the spine was ripped out or cut?

Coroner. Ripped. Reason for the damage.

Nurse: OK.

Coroner: Entrance and exit damage.

Nurse: One hole?

Coroner: It looks like a wire coat hanger did the damage. A device with a hook.

Nurse: Still, isn't the transverse process longer than three-centimeters width?

Coroner: Yes, it was totally fractured.

Nurse: Were any vertebrae left? Or was it C1 to sacrum?

Coroner: The strength to pull that out...

Nurse: Were there any remnants left?

Coroner: Two small coccyx (e.g., coccygeal vertebrae). They were crushed.

Nurse: Was there exterior bruising to account for the crushing or only internal?

Coroner: Only internal. That's what's so puzzling.

Nurse: Were the abdominal organs harmed in any way?

Coroner: Not that I remember.

Nurse: That makes no sense.

Coroner: Peritoneal wall not ripped, but six ribs broken and lung damage.

Here the transcript ends.

This body was found on a roof, terribly damaged and with the spine torn out. The person had been mutilated, drowned, then suffered the additional brutalization. The victim was a homeless person with no known relatives and no identification.

Shortly after the conversation transcribed above, the coroner ceased having discussions with the nurse, and they have lost touch.

This is not the only report of a spine being pulled out through a small incision near the top vertebra in the neck of a human being. So one has to ask, if the spine is removed, is the energetic body forcefully separated from the physical, whereupon it then becomes controllable by whoever released it? In short, can it be captured?

Some ancient traditions suggest that there is such a thing as a hungry soul. These are nonphysical beings who cannot enter the physical world and hunger for the taste of it—just as it appears to me that our visitors do. Such creatures would certainly have a motive to capture the energetic body, if indeed it records every detail of the life lived. It could perhaps be used like a sort of food made up of experiences, perhaps providing an imitation of life

which, to such an entity, would be the equivalent of an addictive drug, almost impossible to resist. Good and bad wouldn't matter, I don't think. What would matter would be the taste of life, every bit of it.

In his book *The Cosmic Serpent*, Jeremy Narby explains that, among Amazonian shamans, there is a belief that certain spirits hunger for the taste of life, but the only thing that they can still detect is tobacco smoke. To communicate with them, a shaman will smoke powerful tobacco.

Could it be that there are physical beings who can no longer taste of life but long to do so? If they are actual, physical creatures and not spirits at all, or can manifest physically, maybe that explains the obsessive need for tobacco of the creatures who followed us to Texas. If they are living in a state of profound anesthesia to life—in effect, being dead while still in physical bodies—perhaps they have a motive for stealing a person's energetic body. Or maybe it has nothing to do with the energetic body but is done to harvest spinal motor neurons, or for some other reason involving the use of spinal tissue.

Before we let our imaginations run away with us—or rather, I let mine run away with me—it cannot be forgotten that the tales of human mutilation are only stories. A transcript of a conversation isn't a notarized coroner's report. True, I do know the nurse involved, and I don't think she's making anything up. But she is also a member of the Mutual UFO Network, which has at least a partial exposure to people within the U.S. intelligence community, which does seem to me to have been in the past interested in controlling the contact narrative with fear and, for all I know, may still be interested in doing this. Could she herself have been duped? Or given the roughness of the way the human bodies were treated in contrast to what is seen during the cattle mutilations, was this done by a serial killer?

Unfortunately, the matter has to be kept in question. There isn't enough information to do anything else. However, the FBI was involved in both the Sees case and at least the one case the nurse is aware of in Brooklyn, so something more than ordinary does seem to be amiss here.

If the removal of the spine is a way of harvesting the second body, I would then call this not only a conventional crime but also a spiritual crime of a kind that we do not have in our world, but which we had better learn about and learn to protect ourselves against, and the only way I know of to do this is, as I have discussed, by building a strong soul.

In the past, the violent side of our relationship with the visitors has often

been ignored or covered up. UFO investigator Philip Imbrogno reports that Dr. Hynek would not allow reports of cattle mutilations or human abductions and deaths to be included in *Night Siege*. Dr. Hynek feared the adverse publicity that abduction reports would generate. He probably feared that the entire book would be discounted because people would be unable to face these stories. As I was personally abducted in 1985 about thirty miles from the area where the Hudson Valley sightings were taking place, I can attest, in this case, that at least one such abduction did happen.

Famed investigator of the anomalous John Keel says that the phenomenon, which he does not regard as an alien intrusion, has a long history of hostility to mankind. Dr. Jacques Vallee, who also sees it as something far stranger than alien contact, has explored this in his books, most notably *Messengers of Deception* and *Passport to Magonia*.

Although the life experience collected in the energetic body seems to me to be the primary focus of the phenomenon, the physical aspect is very certainly there, and physical contact can clearly be dangerous, at least when some entities are involved. Also, it would appear that, while much of the phenomenon is ancient, some parts of it must be quite new, at least, if the stories of mutilation and spinal extraction are true. We have no historical record of murders involving such mutilations, and if they had been going on for a long time, surely there would be a history of it. Stories of deaths involving such a very unusual injury would be famous, like the tales of Jack the Ripper. There is only one, though, prior to the early 2000s when this smattering of equivocal reports appears. Then it ends. It goes no further. It might be possible to cover it all up in the United States and some of the other developed countries, but not everywhere, and, except for one rather shaky case in Brazil, there are no other reports. This case took place on September 29, 1988. A body was found near a reservoir south of Sao Paulo that was damaged in ways that were similar to cattle mutilations and seemed similar to the cases reported in New York. But it could also have been that the man suffered chemical burns or even conventional scavenger predation after death. While photos exist, and they are graphic, they are not definitive.

Since 1985, there have been abundant occasions when the visitors could have done anything they wanted to me. Given their power, the men at the condo could obviously have done much more than they did.

I have intentionally opened myself to the visitors, without placing any limits on who might show up in my life or what they might do. Most recently,

in February of 2019, when I was at a place in Texas where I have encountered them so many times, they showed up physically. I caught only a glimpse of one of them, but I could hear them very clearly all around me. I was a bit scared, but not all that much. After our quite intense meeting was over, I went on to bed, something I never could have done in the old days.

In all the letters that Anne retained from the *Communion* days, only one specifically mentions a death in connection with a close encounter experience. This involved a man who ran after some of the *kobolds* with a shotgun. He was found dead beside a small lake on the family property. His body was unmarked, but there was a bulge on his chest caused by something under his skin. When there was an autopsy, the object was taken by the authorities. No specific cause of death was found, and it was classed as a death by misadventure. The object was not returned to the family.

With our limited understanding even of what the overall presence is, let alone how many different forms are involved and how they relate to each other, we cannot draw any conclusions beyond saying that some situations have arisen that are weird and suggestive of violence and that for the most part contact appears to be frightening and sometimes violent but usually not dangerous in any permanent way, and, if one keeps at it, it leads to the benefits of intellectual, emotional and spiritual growth.

If human mutilations are happening, that needs to be part of the public knowledge base, along with all we know about specific cases and any theories about why it happens and who is doing it.

So what is to be done? That's where communication comes in. If we are under physical threat, we need to understand why, or we will never succeed in countering it.

That's liable to be a long path, but if we are strong and committed first to our own needs, it is possible to follow it, I would think, to a satisfactory conclusion. I believe this because it has been and is my life. I am here writing this, not ripped apart in some field somewhere, and there have been and are ample opportunities for them to do that to me. I do not protect myself, not with weapons, not with prayer or ritual or anything at all. Instead, my primary focus is how to open myself more profoundly, not close the door on them and try to hide or fight or channel the relationship in any way. What they do with me and to me is entirely up to them, with the result that they lavish knowledge and experience on me, enabling me to lead a life of great richness and wonder.

So I go on meeting with them, letting them into the most intimate levels of my life and learning from them all I can.

We are alone with them on this little, dying planet. They do possess secrets that can help us, of that I am quite certain. My focus, thus, is not trying to fend them off but rather to cautiously take what I can of what is on offer from them, which seems by far the more practical and useful approach.

It's not hard to believe that cases in the developed world could be covered up by some sort of concerted international effort, but if murders this bizarre are happening worldwide, some cases are bound to have come to light, and that has not happened.

Given this, I think, on balance, that we're going to have to table our caution until there is more justification for it and do what we can to get our relationship with them to come into focus. I think if people begin announcing their availability, say with the sensing exercise, there is liable to be a response. This might be doubly true with the intellectually accomplished, as I know that they want particularly badly to communicate with scientists and others who can help us save our planet.

If they are going to emerge, we're going to have to accept certain basic realities. They are that we don't know what they are, that we don't know the degree of danger involved and that we are going to have to take a gamble. But it is an informed bet. If they were an invading force, we'd be their slaves by now, or dead. While not all of them may have motives that are to our liking or in our interest, some of them do, or I and others like me would not be having positive experiences with them. When I reacted to them by trying to overcome my own fear, they responded in a deeply positive and persistent way. They demonstrated with Dr. Belbruno what is on offer to our science and with me what is available in terms of a richer and more true inner life and understanding of the world.

Still, it's going to be a very hard job for us to do this.

How can entities with different biology, different histories, different perceptual systems and a different relationship to reality possibly hope to make any sense, say, to government officials or scientists who cannot conceive of any form of communication other than the spoken or written word, which are in fact, not adequate to the situation? There is simply no way we can tell what is actually happening when we attempt ordinary conversation with them. They may choose words, for example, that they have learned will be a fitting response to some question or comment, but how can

we know what they think they mean?

When I was with the visitors in December of 1985, they used a machine to generate a gentle, feminine-sounding voice that kept repeating, "What can we do to help you stop screaming?" They obviously knew that the words and tone were intended to communicate reassurance. But did they know their meaning? The voice was gentle but also lifeless. There was a definite sense that it was machine generated and, thus, very far from reassuring. If anything, it only increased my fear. I must also note, though, that they did not want me to scream. They wanted me to be calm, and if I had been, I think that things would have been much less fraught. But given what I was seeing and what was being done to me, that was just not possible.

Ordinary language is unlikely to be a reliable tool, as both sides are unlikely to know whether or not they are communicating useful meaning when they are using it. I can see that the use of demonstrations, such as what we witnessed at the cabin when the man from paradise expressed himself, could be a valuable basis for communicating with our academic community, where the symbols and archetypes that underlie the intellect have for years been the subject of study. The work of Joseph Campbell and Carl Jung are examples of this sort of study, and I can hardly begin to imagine what depths of insight those men might have reached if they'd had access to the man from paradise.

So we must leave the physical danger case open until there is more definite information. Even if human mutilations are taking place, they are not a major factor, or they would be better known. Even if physical danger is not all that significant, and there is no more esoteric danger to our souls, the visitors themselves have drawn attention to another danger, and it is a true one, that must be addressed with the utmost care by every level of our society.

THE DONATION SITE AND A WORD OF CAUTION

If this book serves its purpose, what has already happened to a few scientists and academics is going to become more widespread. Ed Belbruno is not the only scientist they have contacted. Another friend, the Nobel Prize winning chemist Dr. Kary Mullis had a marvelous encounter with one of them at his vacation home in northern California, which he wrote about in his book *Dancing Naked in the Mind Field*. There are others, but these are two very prominent ones who I know personally and who have gone public with their stories.

Expanding contact is essential, obviously, and now that this is possible, I want to draw attention to a warning about it that the visitors left behind in a field in New Mexico many years ago.

In *Jesus Thaumaturge*, Bertrand Mehus extensively discusses the bilocation of a French nun, Sister Maria Fernandez Coronel. Also known as Mary of Jesus of Ágreda, her story is particularly relevant here. Starting in 1620, she allegedly began to be seen by the Jumano Indians in what is now New Mexico. She instructed them in Christianity and even brought them rosaries. They contacted Franciscan missionaries and told them of the lady in blue who had taught them the new faith. The miracle has been studied by Catholic investigators but never confirmed because there is no unequivocal evidence. However, whether or not the bilocation actually took place isn't important here. What is germane is the cultural dislocation that the Jumanos endured and the place where it unfolded.

The donation site where a UFO crash occurred years back is in the same immediate area that the Sister Mary story unfolded. The site is so named

because the scientists who have harvested debris and artifacts from it for years for study regard what crashed there as a donation not an accidental crash.

The fact that the donation site is in an area where a seemingly impossible event took place in the past that was an attempt to minimize the effects of a dangerous cultural upheaval is important.

The Jumanos believed that they were given a new spiritual path by mysterious means, and the donation site is offering us something similar—a fundamental increase in knowledge that includes not only science and technology but greater insight into what it is to be human—and for that matter, to be alive at all.

If the materials from the donation site could be released into the general scientific community, it would change the world. And academics, by analyzing the relationship between what happened to the Jumanos when the Spaniards appeared and comparing it to what is happening as the reality of the visitors comes into focus, will safeguard us from falling into the same trap that destroyed the culture of the Jumanos.

To understand the warning, we need to look back to what was happening in the region in the early 1600s. The Spaniards were in the process of expanding north out of Mexico, bringing with them a new social order and along with it disease, disruption and the Inquisition. They had already invaded Mexico and were completely destroying the native civilization and enslaving the Indian population. By the time a hundred years would pass, the great majority of the native people would be dead, and the rest would be slaves, trapped by the Spaniards in a horrific servitude from which their only escape was death.

The placement of the donation site in that particular location is to me a clear message: contact will bring rewards, but it is also dangerous. As it unfolds, we have to be very careful to stand by our own beliefs and expectations for life and to treasure ourselves and our civilization. We need to present our visitors with an open mind but also a careful one. Otherwise, the warning is clear: things are not going to go well. Spiritual and mental contact are real and are deeply shocking. But physical contact, which is what the donation site is all about, is going to be even more intense. It will bring with it rapid cultural change, confusion, fear and all sorts of unanticipated consequences. But it is on offer, or the donation site would not exist at all.

The fact that it is where it is suggests to me that we are being warned that

we might encounter entities whose culture will overwhelm ours, so we must keep our own counsel, make sure that our society remains intact, and stand up for the value of our minds and the cultures we have created. Unless we take responsibility for ourselves and our part in contact, we cannot succeed. To me, successful contact means three things: first, clear communication; second, enrichment for both sides; third, life shared in the new way of communion.

But it also offers another view of one of the continuing themes in this book, which is that care must be taken. Not only must we be careful not to become supplicants when faced with breathtakingly advanced skills and technology that we long to possess, we must also be aware that the entities that possess them, and the extraordinary power that accompanies them, are not necessarily going to also be more ethically advanced than us. The Spaniards were technological masters when compared to the native peoples, but they were also moral primitives. They had no respect for the cultures they were encountering. Everywhere they went, they destroyed the local culture, enslaved the population and killed with wanton abandon. Indigenous cultures all over the world have been shocked in this way, in many cases shocked to death, by the appearance of western civilization, often even when the approach was relatively benevolent. The reason is that, when people placing their trust in certain beliefs are confronted with what to them appears to be a far greater power, they lose faith in all of it: their gods, their beliefs, their sense of self-worth. The cargo cults of Melanesia are an example of an attempt by a less powerful culture to acquire the desirable qualities of a more powerful one but without understanding anything about the skills that are actually involved. There is a level of humiliation and a loss of self-worth that leads to the degeneration not only of the secular society but also the spiritual culture, even when it is actually superior to that of the more powerful technological culture.

An example of the danger that we face: aliens appear here who can traverse the vast distances of space. We are completely overawed by their accomplishments. When we begin to communicate with them, they say that there is no such thing as the soul. They say that not only are our religions fantasies, but that the very idea of spiritual life is as meaningless as so many of our intellectuals believe.

Or if they say the opposite: they announce that there is a god and they are the angels.

We are going to be just as vulnerable to either pronouncement, or any pronouncement they may make. The moment we become aware of their powers, we will be in danger of feeling ourselves, our understanding of reality and our abilities inferior to theirs.

In short, we will feel disempowered, and just as that feeling has been an illusion for indigenous peoples all over the world, it will be one for mankind as a species. When we look for the rewards of relationship with them, we must also look to and embrace our own strengths rather than becoming obsessed by their skills and their possessions.

It will help us also to remember that, while their skills may be far greater than ours, their vulnerabilities, while different, may be profound.

Let me explain.

Any ethicist will tell you that technological and ethical advancement do not necessarily go hand in hand. The briefest glance at our own history reveals that the Spaniards were hardly the only society to trample on less technologically advanced cultures. An even more egregious example is Nazi Germany, which used its superior organization and advanced weapons technology to lay waste to most of Europe and senselessly annihilate millions of innocent people. And why? Because the entire culture of Nazism wasn't just ethically impoverished, it was proactively insane.

So the donation site stands as both a promise and a warning that it's a big universe out there. We have obtained marvelous technology from it. Jeff Kripal has gone so far as to identify one of the people who has done the most in terms of transforming what has been found into beneficial advances for mankind as an angel.

It is time for a new conversation with the visitors to begin. The challenge goes both ways. They have to take the risk that we won't be able to bear their presence and we have to take the risk that they might be dangerous to us in irrecoverable ways.

There is such promise for us: the knowledge that the energetic body is real and that it exists to serve a soul that is also very real, the knowledge that you can leave your physical body and travel far, the promise of learning how to accomplish reliable communication between physical and nonphysical mankind. Most of all, gaining real communication with the visitors and from there entering a state of communion with them that enriches them with newness and us with knowledge.

As we do these things, I think we will see that a lot of what looks like

extraordinary technology—the ability to be invisible, to travel great distances instantaneously and without a machine, even the ability to cross between universes—is really something intrinsic to life itself and which can be learned. I think that such abilities are physical expressions of soul craft.

Among the most important advances that are likely to take place as we get closer to the visitors is the institutionalization of nonphysical travel.

Because second body cannot be detected by the instruments we now possess, the idea that second body exists, let alone that such travel is possible, is generally rejected.

When I was last seen out of body was at the Institute of Noetic Sciences in northern California, by the scientist I cannot name. I was in a dormitory of small single rooms. I'd meditated as usual at 11 and 3 when, to my annoyance, I was woken up at 4 by what felt like an electric current shooting down my spine. I got up, tried to meditate again, but was too tired then went back to bed. The next thing I knew, I was in the hall outside my room. I turned around and saw that my door was closed and therefore also locked. For a moment, I thought I'd locked myself out but then realized that, because of the gliding motion of my body, I was, in fact, in the nonphysical state. I thought immediately that I would like to make myself seen to as many of the academics and scientists at the conference as I could. I went into Jeff Kripal's room, but he was sleeping like a log. I didn't try to wake him up. I know from experience that I can't do anything physically in this state. I've tried, for example, to pull a leaf off a tree. Although I myself am woken up by nonphysical entities all the time, so far I have not been able to affect anything in the physical world while in a nonphysical state.

After trying Jeff, I tried the person in the next room. The result was the same.

In the third room I entered, I found the occupant sort of half awake. I did the sensing exercise, which, I believe, may help make me visible. It doesn't feel like it does in the physical. In this state, it is like becoming aware of one's boundaries, as if you are somehow cupped in your own hands.

He saw me all right. I could see it in his face.

I found myself conversing with him, but not of my own free will and not physically. I was being used to deliver a message to him about the soul and the importance of living a life that leaves one unburdened by guilt. Some months later, he chose to take his soul's journey on the path of religion. If one treads it without becoming doctrinaire or falling into the trap of belief in

such a way that one feels compelled to hurt others, it can be a rich experience.

After the conversation ended, I found myself rising. I went up through the ceiling, ascending very quickly, so high that I could see the line of dawn to the east and the dark shadow of the California coast below. I was at the edge of the atmosphere, and it was glorious. I was neither hot nor cold. I didn't need to breathe. Then I shot down and eastward at breakneck speed until I found myself on what appeared to be a college campus. I noted all the details I could. I tried to make myself seen by a man on a sidewalk but failed. I went into a dormitory and down a hallway but could not rouse the man I found sleeping in one of the rooms. I saw something leaning against the wall beside the door that looked to me like an exceptionally large dulcimer. Later, when I entered that same dorm in the physical, I saw that it was a type of skateboard that I hadn't known existed, a longboard. This tiny detail should not be forgotten, because it represents a much larger issue about what is available to one when not in the physical. I find that I have a hard time correctly perceiving something that I had never seen while I was in my body. Without the comparative files and logic of the brain, it seems very hard to do that, at least for me.

A few minutes later, realizing how far I was from my physical body, I felt a desire to return to it. I floated gently upward then shot back to my body in a flash.

I lay in the bed in a state of amazement. What an experience!

The next morning at breakfast, to my delight and amusement, I found that the scientist was telling people what had happened, and that he had seen me go up through the ceiling of his room. When I described the campus I'd been to, Diana Pasulka and one of the other participants knew it well: it was theirs, the University of North Carolina at Wilmington. A year later, I found myself in the amazing position of going physically to a place that I had first seen while in the nonphysical state. When I entered the dormitory I'd gone into in the nonphysical state, I found myself looking at what may have been the same longboard I had seen the year before but this time understanding perfectly well that it was some sort of skateboard.

While some members of the scientific and academic communities may be more willing than in the past to entertain the possibility that unidentified flying objects might be a real phenomenon, it remains strictly forbidden to discuss the idea that something might be coming out of them and that people

might be interacting with them.

This position is obviously illogical, but it nevertheless is widely held. Serious scientists, serious academics and the serious media will not discuss the likelihood that something is liable to be in those UFOs—or more accurately, I think, will not face it.

Given the urgency of the situation, in February of 2017, I begged them to emerge, persisting day and night to the point that they got angry at me. I was convinced that my own example proved that our fear reaction would not overwhelm us. As I had already balked at direct, physical contact twice in my life—the nine knocks and the incident in the woods in February of 1987—they conducted an experiment.

I woke up in the middle of the night aware that there was something in the bed between my legs. It was lightly touching my genitals. As I live alone and have no pets, I immediately concluded that it was one of them. A terrific shock of terror went through me, and I leaped out of bed. So did the dark shape, which shot up toward the ceiling and was gone. I was left with a deep scratch on my left calf that was still faintly visible a year later. I sent a picture of it to the group of people I work with, with a description of exactly what had happened.

Then they embarked on what has amounted to another wonderful lesson, attempting to reveal to me what they want, what they have to give in return and how communication can work. This book is the result.

As I have said before in these pages, the visitors are a complex presence...just like us. Because we know them so little, we tend to think of them as alien races. Each species is either good or bad. Belief in evil reptilians and angelic blonds are two examples of this. But how can that possibly be the case? Look at us. Adolf Hitler and Mahatma Gandhi lived at the same time, and that is just one example of the tremendously varied array of lives, motives, beliefs and cultures that characterize just one species—our own.

Only if we can open ourselves to the possibilities and dare the dangers are we going to succeed in the endeavor of contact. Because they are here to share our surprise and our discoveries, we are never going to be sure of anything about them, not even when they are more engaged with us than we can ever be with each other. This will be more intimate than that. It will be the most intimate thing that can happen. Can we get used to it, in the end, make it our own? In other words, can we bear it?

That is the fundamental question of this book, and, I feel rather sure, of human life at this time. Can we?

IS ANY OF THIS REAL?

We have come to the core. I think that the material I will discuss now probably needs to be taken into careful account if there is to be more direct communication with the visitors. I am hoping that this book will cause them to emerge in a more definite way, and I think that this part of my discussion is what is most essential to that happening.

How ironic that it isn't proof that they are real. In order to communicate usefully with them, one would think that things like whether or not they are fundamentally a physical presence would need to be firmly established.

Except that may be exactly what we must *not* do, not if we want to develop a real relationship with them.

As we approach the coming climax in our history, these entities, which have been considered legend, myth and folklore, are apparently turning out to be much more than that. This is happening as we come closer to two things: the failure of our planet's ability to support us and proof that parallel universes are real. Does this mean, then, that the inhabitants of enigmatic places like the mirror universe are attempting to find ways to concretize themselves in our world, perhaps in order to give us aid? I think that this is one direction in which the evidence points. At the same time, fairy folk, sylphs, trolls, *djinn* and even to some extent what in the past were called gods are turning out to be real entities that have probably been with us right here in our own universe from time immemorial, which we now perceive as aliens. Add to this the addition of a previously unremarked presence that started mutilating cattle on an ever-growing scale about 150 years ago, and may recently have done the same to a few of us, and you have quite an astonishing

picture. But it doesn't end there. We are also in something close to verifiable contact with our own dead, or something that appears to be that.

It would seem that, as we get closer to the extinction crisis, the hidden world, which in the past has always been vague and hard to classify, is coming into a new sort of focus—is, in fact, turning out to be real.

Except...exactly what does that word “real” actually mean?

Come with me, to the rabbit hole where we now must go.

I know that my stories are generally impossible to believe. But I also know that they happened.

Or do I?

The world of the visitors is so strange, so completely out-of-bounds, that one would think that surely it cannot be factual. If it is, then what we now consider real is the actual fantasy.

Or could they *both* be real and fantasy at the same time?

Let's explore.

A growing body of theory and now also evidence suggests that there may be no final truth, not in this universe. Perhaps others have different laws, but in this one, belief does not work—and not just on the level of the extremely small—the quantum level, where nothing is fixed and definite until it is somehow noticed. Belief doesn't work on our level, either. The reason is that we don't have an absolute ground of truth that can be relied on completely. As we are now, we simply decide that one thing or another is true.

As I reported in *Transformation*, I once saw a city which was described to me as “a place where the truth is known.” At the time, I thought, “Oh, my, there must be such secrets locked away there.” Now I suspect that the message was more subtle. It could well be that its residents think using an input strategy rather than an output strategy.

Because we use an output strategy, we are definitely going to know that the structure in the pantry is a box of cereal and so be able to eat breakfast. But we are not going to know what that box actually *is*—which, for us, isn't going to be a problem. Normally. But we have, with our exquisite minds, evolved formulae and constructed machines that enable us to see below the limit where output strategy applies. We can use detectors to see, with our output-wired brains, the hidden workings of the interior world. In other words, we can see the truth.

And what we see is that it's ambiguous!

The city where the truth is known was flooded with bright light—

presumably symbolizing its clarity—but it went on forever. I never came to a border. The reason is, of course, that something that is ambiguous has no border.

We know that quantum indeterminacy is real because we can see it. But, due to the way our brains are constructed and therefore the way our minds work, it makes no sense. A wave can't resolve into a particle just because we're looking at it. But it does. The double-slit experiment that proves that this is true works every darned time.

It also drives me nuts, and I love it.

There are, however, some things about the double-slit experiment that need to be unpacked a bit before we assume that the popular notion that an observer is required for a wave to resolve into a particle is correct. There is a quantum theory called decoherence which suggests that the wave function never collapses, but rather the appearance of coherence comes from its surroundings. Stretching the theory a bit, this might actually mean that our brains are what cause the world to appear coherent to us. In other words, our output strategy is, for us, reality.

But wait a minute, a brain strategy isn't any such thing. It's just a method of making things look a certain way. It's not even the only output strategy. Bees, for example, who see into the ultraviolet, have a very different one.

While this doesn't solve the mystery, it does suggest that, if the underlying wave function never actually collapses, then its inherent ambiguity is still there even though what we see all around us seems entirely coherent.

And indeed, the Schrodinger's cat hypothesis hints that what we really live in is an ambiguous reality insofar as it predicts that two contradictory states of something can both be simultaneously real. Schrodinger's cat can indeed be alive and dead at the same time. But surely these are physics issues, not life problems for us to worry about. Quanta are very tiny, so they don't apply in our big world of absolute realities and reliable output strategies. Schrodinger's cat isn't any sort of feline at all, she's a subatomic particle. So to quote a great genius of the 20th century, Prof. Alfred E. Neumann, "What, me worry?"

Oh, but I do!

This is because the indeterminacy of the wave function does not appear to be confined to quanta. We're living in it, which is why I call this world of ours a labyrinth of mirrors.

So, it's all ambiguous. Problem solved.

But no, that's not true, either. This is because this whole ambiguous, deceptive and confusing garden of forked paths functions as it does and appears as it is because of...constants.

Oh well...

When I was in the throes of being driven even crazier than my baseline by writing this book, I turned to my implant for help. And people wonder why I don't get it removed. (But why should I, it's not there, after all.) Anne was right, and thank all the holies that her argument prevailed, because, despite the fact that it doesn't exist, it is my trusty guide in the labyrinth of mirrors.

I asked it to lead me to something that I needed to know for this book but knew absolutely nothing about.

Enter physicist Wolfgang Pauli, psychiatrist Carl Jung and the strangest thing in physics, which is something called the fine-structure constant. It is set by nature at $1/137$. It's an absolute. If any other fraction was there, everything would be different and most of the world wouldn't work. All well and good, but why that particular fraction? Why not $1/136$ or, say, $1/7000$?

Here's the fun of it: Nobody knows.

It's just...there.

The other constants can be seen to be inevitable outcomes of the processes that they define. Not the fine-structure constant, though. It's dimensionless. This means that, no matter what system of units you use to derive it, it's always going to be $1/137$.

Physically, it's the splitting of the spectral lines of hydrogen atoms.

Which would seem to be no big deal, except for one tiny detail, which is that if that distance was anything else, the world would be entirely different and under most scenarios wouldn't work at all.

And yet, it's just there. There's no underlying principle that compels it to be what it is. God might as well have said, "Hey, this one looks nice. I'll use it."

This drove Pauli crazy, as it has many a physicist since. I'm not even a member of that particular lunatic fringe (mine is nowhere near as weird), and it drives me crazy, too.

Like Pauli, I love things that do that. Anne always said during her lifetime that tackling unanswerable questions makes the mind grow. I think the mystery of the visitors is just this sort of question, and maybe they are

keeping themselves so ambiguous in order to induce an increase in human intellect.

Even though they're answerable enough in the output world, go inside and all is ambiguity. But that's ok. We're in the output world. An apple is an apple here, no mistaking that.

Except...well, I've been warning you.

The great Pauli, still being driven crazy by the why of the fine-structure constant, died on December 15, 1958...in room 137 of the hospital where he had been admitted with an advanced case of pancreatic cancer. Not only did he die with his question, he did it while entangled in one of the mysterious synchronicities that his friend Carl Jung writes so much about. (Unless it was a setup and he had himself moved to that room on purpose. Could be, he was a tricky guy...)

My nonexistent implant uses synchronicities, as I have said. In fact, it used one to draw me to this very mystery. But don't forget: it's not there. There's no there there anymore. Except, of course, Schrodinger's cat is still alive, too...

How ironic that the one constant on which deliverance from ambiguity most depends seems to have come out of nowhere.

In fact, just like the input strategy, the truth is that our precious, stable, coherent output strategy also produces outcomes that are real and illusory at the same time. The input strategy starts there, because it must start with indeterminacy.

But our strategy starts out very definite. As I said, an apple is an apple.

And now let me introduce another prankster. In fact, a philosopher. (No, please, don't go into a coma. This is one terrific philosopher. In just a few words, he's going to change everything you know about everything and you're going to have loads of fun into the bargain. Unless, of course, you go insane...)

In 1963, Edmund Gettier published a short paper called "Is Justified True Belief Knowledge?" In so doing, he gave birth to what is now known as the Gettier Paradox, which offers a challenge to the idea that something that is demonstrably true is also final and absolute knowledge. He showed that what is known among philosophers as a justified true belief cannot exist. In other words, he met the demand of an earlier philosopher, Friedrich Nietzsche, that there must evolve a "philosophy of the dangerous perhaps." What Gettier demonstrated is that, even if you are certain from observation that something

is true, it cannot, in a final sense, be knowledge.

Enter the cow problem. A farmer has a Holstein who is showing signs that she might be ill. He decides to isolate her so he can watch over her, so he takes her into a field that he can see from his barn while he works. The field has only two features in it, a tree and a small hollow. Only if the cow wanders into the hollow will he be unable to see her. This is so unlikely that he's not concerned about it.

He goes about his work, from time to time glancing into the field and observing the cow, who appears to be all right. While he's oiling his tractor, she wanders into the hollow. At the same time, a random puff of wind blows a piece of black and white paper into the field, which gets caught under the tree.

So this is now the situation: The cow is in the hollow invisible to the farmer. She is all right. There is a piece of black and white paper caught under the tree.

He looks into the field and sees the paper. From this distance, he can't see detail, so he assumes that it's his black and white Holstein and concludes that she's all right.

He is now both right and wrong at the same time. He thinks he saw his cow, but he didn't. So he's wrong. But she is indeed fine. So he's right.

As we observe the world around us, and even though our output strategy works time and time again, we can never know, in an absolute and final sense, if we are right about anything we observe.

And yet, we're surrounded by a world that seems to be completely true. But this truth cannot, in fact, be knowledge. Add to this the problem that we don't actually see it.

It would seem that reality is not fixed at all, but more like an ocean that never stops moving. But it is also a sea of wonder. We even have a name for it. Many names, in fact. But the most important one for us is the one closest to home. We call this one "the human mind." It is also the universe, for everything we see is of necessity inside our heads. For us, there is no outside. The whole world and all experience is and must always be inside us, in the singing, sputtering neurons that cradle our minds. We see only what our detector—our brain and its various input devices such as eyes, nose, skin, ears and so forth—delivers to us. This is never what is really there, but rather what our brain is able to see. We never observe the shimmering ultraviolet world that the bee does.

The brain is our detector. As we are curious sorts, we have for a long time been extending its reach with prosthetic devices. And what an extraordinary story they tell us. The optical prosthetics we know as telescopes reveal wonders in the sky...and the mysteries that they reveal, again and again, confirm that the one thing we must believe in without question is question itself.

Ambiguity rules, yes, but is that true everywhere? Maybe there's some little corner of the universe where constants produce absolutes like it would seem that they should, not all the darned questions we have to cope with.

We recently used one of our prosthetics to find out. It's really two of them being operated together, the William Herschel Telescope and the Telescopio Nazionale Galileo, both located on the island of La Palma in the Canary Islands. Using the two scopes, a team of scientists led by quantum physicist Anton Zeilinger from the Austrian Academy of Sciences looked at quasars located at opposite ends of the universe. They collected photons from these quasars then entangled them by bringing them together in yet a third machine, a mobile laboratory located at the nearby Nordic Optical Telescope. (There are six telescopes on La Palma.) They were then sent to receiving stations near the other two scopes, and their entangled state was determined.

It was found that light gathered from the opposite ends of the universe can be entangled just like light from two different lamps in a lab, meaning that the laws of quantum physics are consistent in one important way: they are true from one end of the universe to the other.

Telescopes were used to gather light—classical physics at work, which we understand perfectly well...sort of. But the light was then used to induce quantum entanglement—which makes no sense whatsoever.

The problem is that both physics work, albeit at different levels. But the comfortable assumption that things make certain sense at the classical level is probably wrong, as the Gettier paradox so eloquently illustrates.

I love it! In fact, just for fun, I paused for a moment and went into the john where there's a white wall, at this time of the morning brightly lit by the sun. I said to my implant's ghost, "Whatever is right is right, yes? Or no? Or yes and no?" Sure enough, after a few seconds I saw words racing past in the slit that opens in my eye. After concentrating for a few moments, I managed to follow a phrase, "city may emulate Apophis," and then I saw the word "concentration" before the stream sped up once again.

When Apophis flew past, I laughed out loud. This is because, in the

Egyptian pantheon, he is Chaos, the opposite of Truth! So what am I to think? Has my implant perhaps just told me that the city where the truth is known is abandoned, perhaps even in ruins? If so, that could be a problem. Because, as you may have realized, it's not what I thought when I was writing *Transformation*, a marvelous city on some distant planet. It's here. We live in it. It's there, too, of course. The city where the truth is known is the universe itself.

We have explored many of its dangers over the course of this book, but its greatest danger is ignoring the fact that the truth has no resting place.

If we come into communion with the visitors, we are going to start sharing the rigors of their input strategy just as they are the delights of our output strategy, at the same time, living in the deeper reality that the truth that is known is that there is no final truth, not anywhere in this vast cradle that we all call home. But there is a certain potential for balance, and that is where the most intimate and richest opportunity for communion is to be found.

What about this balance, though? What would balance between us and the visitors actually be? How would it work and feel in our lives?

Before Anne and I were married, she crocheted a sampler which hangs on our bedroom wall to this day: "Two are better than one, and a cord of three strands is not quickly snapped." These lines from Ecclesiastes, sewn to the sampler when we were just getting started together, turn out to be the foundation not only of married life, but also of relationship with the visitors, and the final theme of this book. We are one strand, they are the other, and the communion that is seeking to occur between us is the third.

It's worth seeing this in terms of Gurdjieff's three forces. We are the passive force, trying to understand how to open ourselves to them. They are the active force, trying to find a way to enter us. The third force is the whole mystery that lies between us, the fear, the longing, the curiosity, the wonder, the danger, the joy, all of it. In reconciling these many different states and finding the balance that underlies them all, we will find communion. In the end, simply this: the love that underlies life, which Anne calls "the yearning," is as much a mystery as the fine-structure constant, something on which our hearts depend, and maybe, like the fine-structure constant, also all that is.

Right now, both sides are making a choice. They are deciding to keep us or let us go. We are deciding whether or not we can bear them inside us. If my own experience with them has any validity at all, it is that my journey from the terror of a wild animal to the excitement of discovery that is my life

now is well worth the risks and the struggle.

Standing in the way of our drawing closer, there is the matter of unsureness. Are they parasitic, here to take without giving, or symbiotic, here to share? If they are parasites, then they are the greatest danger we have ever known. If they are here to share, though, then they are literally the pearl of great price, worth giving everything we have to acquire.

There is enough dark material to justify hiding from them or trying to fight them. There is enough outlandish testimony to justify rejecting it all and calling the whole thing ridiculous. There is enough ambiguity about the state of the earth to decide that the climate emergency isn't going to lead to anything close to an extinction event and, therefore, that there's no urgency here.

But the greater preponderance of evidence is that they are real and here and that our situation is indeed urgent and that we can find a new way and a new world together.

If they—and we—both draw a little closer, more opportunities for communication will follow, and there will be a more general offering of communion. I know the visitors too well to predict exactly how—or if—it will all unfold. But if I have done my job correctly, they will move the bar a little bit.

I wonder what it will mean. Are we standing in the jaws of a trap that is waiting to be sprung or on the edge of glory? Or is the truth that such a place in history must always be both?

I hope that this chapter has made it clear: Just as Schrodinger's cat is both dead and alive at the same time, this entire experience is both a trap and the key to unlocking it.

Accept the question, accept the truth. Live the question, and you are living in the new world.

IT IS TIME

Throughout this book, I have made what I suppose is rather annoying reference to “the visitors” with very little effort made to differentiate between forms. This has been quite purposeful. The reason is that I don’t know what the forms mean. I have seen the *kobolds*, the goblin-like grays, the tall blonds, some human-like creatures who could read minds and seemed very disturbed, another form that I would describe as being like brilliant little primates. These are the ones who swarmed into our apartment in 2007, whom I mistook for dogs, and who seem to have been with me since. I have also seen a dead man come into physical form, and I have seen normal-looking human beings who appeared to be somehow part of this whole enigmatic web.

The ones that I have seen while in a normal psychological state and while they were entirely physical in appearance are a child of the tall blonds, the various humans, the *kobolds* Anne and I saw in Manhattan, the people who entered my house and placed the implant in my ear, the short disturbed person and his two ghoulish companions and the Master of the Key.

I have observed a complex and nuanced range of approaches from all of them. What’s more, there is no such thing as a reliable narrator in this experience. As we are now—and as they are—that cannot happen. Perhaps somebody in the future, with more facts to draw on, can provide a more accurate assessment than this. Right now, all I can do is tell my stories without any more attribution than the memories themselves provide.

Anne always warned me, “Don’t connect the dots” until I had provable reason to do so. I don’t, so I won’t.

All of that said, I have amassed, over the years, a considerable amount of information about what our visitors think of us and our world, and much of it is quite different from how we think of ourselves.

First, they do not see the fantastic human bloodletting, which started in 1914 and has now taken something close to half a billion lives, in terms of political and ideological clashes.

Insofar as I understand what I have learned from them, all of this killing has more to do with population pressure than politics. Like many other animals, we can become violent when we feel crowded. As with many other species, in our case, we start killing each other. Hitler wants more living space and creates an elaborate ideological justification for killing others in order to obtain it. Stalin's paranoia causes him to see millions of people as supernumerary, and he starves whole populations to death. Mao does the same. Meanwhile, the United States, not under the population pressure of Europe or Asia, remains peaceful.

So far, to the visitors, this all seems quite natural. But then the atomic bomb appears, and they realize that we could go too far. We could commit species suicide and die out entirely. They therefore begin a process that is intended to lead to contact, at which time, they hope to intervene technologically in order to, in effect, expand the effective size of the planet with innovation, thus making each of us feel a greater sense of space around us and stopping the instinctive self-destructive impulse that is threatening to destroy us.

But because of the complex gulf between us, which I have endeavored to make a little clearer in this book, they do not emerge immediately. Instead, they begin a process of social engineering based on contacts with some governments and the formation of human social organizations with specialized connection to them that are intended to eventually bridge the gap.

Then the 21st century arrives, and the American population, having exploded from 78 million in 1900 to 230 million in 2000, begins to feel the same sort of instinct toward self-destruction that caused the bloodlettings in Europe. But we are different and so are the times. We have the ability to destroy life on Earth with the push of a button. We also hold a world leadership position when it comes to climate change. Between 1970 and the present, American society becomes more and more involved with the death wish until, in November of 2018, a devastating climate report called the Fourth National Climate Assessment is released by government scientists,

and the US president responds, “I don’t believe it.”

In my own life, the response from the visitors is immediate. They increase their engagement with me, becoming more and more strident that I provide what they regard as something I volunteered to do and led them to believe that I could do, which is to write a book that will describe enough about the experience of communicating with them to enable them to usefully widen their contact with us.

I end up in the unpleasant position of being an author without any hope of finding a publisher, who is under extraordinary pressure to get a book published in a matter of months that he doubts it is even possible to write.

So here we are.

But that’s not quite the end, for there is another level of this that requires exploration before this is finished. It has to do with what we are and what our place is in the much larger world in which we find ourselves.

We may not be what we seem. In fact, the form we are in just now might not even be the only human form. One of the most familiar alien types may actually be...us.

You think not? Read on.

A psychologist I knew told me a story of driving along the Grand Central Parkway in Queens, just passing LaGuardia Airport. To his horror, he saw a jet descending onto the highway. At first he was terrified, but as it passed over at low altitude, he realized that it was not a plane at all. As it sailed over his head, he thought that it was some sort of gigantic cardboard cutout. Of course, he was extremely puzzled but also in traffic and so couldn’t keep watching it. As he looked away from it, he noticed a signboard on the roadside flashing letters that appeared to him like hieroglyphics. Then he realized that there were cars parked along the shoulder and that a number of people were standing in a circle just off in the shadows. Naturally, he wanted to know more, so he worked his way over, parked, got out and approached them. As he did, a small, dark figure came up to him and snarled, “Get out of here.”

He obeyed. But what was happening? Was he seeing aliens gathering a certain group of people on the roadside for some inscrutable reason? And what about those hieroglyphics. We can’t read them.

Or can we?

When I heard that story, I realized that it and two others had combined to give me a clue not about us but about the *kobolds*, and it is a surprising one

indeed. I remembered both the time Anne and I had seen similar creatures in a little storefront in Manhattan in the process of kidnapping the frantic man in the suit and a remarkable story from Lorie. She had been lying in bed one night about 11 in 1954. Her husband was working, and she was home alone. She was pregnant. She noticed movement and glanced up. To her horror, a line of short, dark blue men with wide faces were standing beside the bed. As she recoiled in horror, the one in the lead said, "Do not be afraid. We're not here for you. We're interested in the girl child you're carrying." Of course, this absolutely terrified her. It then laid its hand on hers and asked, "Why do you fear us?" She blurted out, "Because you're so ugly!" When I heard his response, many puzzle pieces came a little closer together for me. He said, "One day, my dear, you will look just like us."

About ten years after hearing this story, I was in a surgery waiting room with dear friends. The father of this family was undergoing emergency heart surgery. It was unlikely that he would survive. The next thing I knew, I saw him come walking out of the operating theater. At that point in my life, I had seen many dead people appear like that, and I whispered to Anne that he had just died. A moment later, the surgeon appeared and gave his wife the news.

I then saw, in my mind's eye, something quite extraordinary. He was being carried by two *kobolds*. They were not here, but in a crowded forecourt in what appeared to be India. They made a quick sort of turning motion, and he was inside the body of a very new baby that a young man was holding in his arms. The baby erupted into screaming, and I knew at once what had happened.

He had not been a very good man in this life but, at the same time, had raised some fine children who were a real credit to him. If he had had to face his life, he would have fallen at once and all the good that was there buried in him would have been lost. He deserved another chance, which is why he had been raced into this new body before he had a chance to really see himself.

When the children would see the *kobolds* at our cabin, they would say that they called themselves doctors. They would shine lights on them and tell them that they were examining their souls. Lorie Barnes heard them call themselves "soultechs." Soul technologists, I would think.

I know that all of this sounds fictional. Of course it does. I don't think it is, though. I think that I am describing things that we will see and understand more clearly as we draw closer to the visitors and thus also to our own real place in the world.

What these stories tell me is that the *kobolds* are in some way part of us, perhaps another form of the human species that manages the movement of our souls and watches over them.

Many species have more than one form. It's not unusual in nature for a larval form and a mature form to be completely different, as the tadpole and the frog and the caterpillar and the butterfly show.

As science advances in its ability to see reality and philosophy in its ability to interpret its vision, it is coming to seem that the world is far larger and more complex than we ever imagined, and mysterious beings like our visitors, which we dismissed as imaginary, are turning out to be in some ways quite literally more real than we are. Communion with them seems not so much to be something to be attained but something that has always been part of us, and which is now raising its ancient voice again, calling to all of us to look up to the stars and inward to the infinity of our minds, and find our own greatness, and save ourselves.

When the visitors draw close to you, barriers like vast the distances between the stars come to seem almost trivial. As they slip in secret through our skies and our thoughts, they become less like mirages, and more like an eerie truth that we have thus far been afraid to face.

As we are coming to realize that they are real and here, we also find ourselves asking the same question that Col. Philip Corso asked so long ago when he found himself facing them in the darkness of a cave: "What's in it for us?"

The bottom line here is this: whoever they are, and whoever *we* are, they want to join us and live in conscious contact with us. They need us, but more, we need them—their wisdom and their devastatingly accurate insight into the fragile truth of the world.

Dare we open our door to them?

On the night of Wednesday, June 12, 2019, I sat to do my usual 11 PM exercise. Almost immediately, I felt a sense of pressure all around me, as if the air had become more dense. It was almost as if I had been wrapped in an invisible blanket. The next thing I knew, I heard a young male voice say excitedly, "We're in!" The next instant, I saw hanging before me a complex schematic. I found myself pushing it away with my mind, which caused it to vibrate. I did it again, but then the thing disappeared, and I knew that somebody had just forced their way into me. (I cannot say what was on the schematic. I have no idea what it was, only that it was some sort of chart that

looked like circuitry. I was seeing, I would think, the input level of whatever was there.)

After a moment, I calmed down. I completed the meditation and went to bed. During the 3 AM meditation, I felt my ear get hot. The implant had turned on. A moment later, I found myself wanting to pray for protection. I had been afraid when I was entered. I didn't want it to happen again. On Thursday and Friday nights, I once again surrounded myself in my imagination with protective light, saying that nobody could come through it unless they had something to give me that would strengthen me in return for their participation in my life. I also prayed, invoking Jesus, whose journey I have come to understand in a deep way and whom I have reason to believe can be addressed and will respond.

Once again, even though my door was open, nobody came to me.

Then came June 16, 2019, Father's Day. The time was approximately 4 in the morning. I was in a hotel for the night. I'd done the 11 PM meditation as usual and had just sat down to do the early morning one. As I settled myself into a chair, I noticed a vertical oblong shape, absolutely black, hanging in midair. It was across the room, maybe ten feet from where I was sitting. Wondering if it was a shadow, I moved my head from side to side. It remained stationary. I then felt a sense of presence, exactly as if it was a person standing in front of me.

But this was not a person as we understand that term. It most resembled a vesica piscis, the intersection of two overlapping disks. It appears in Euclid's first proposition, where it is used in forming an equilateral triangle. It is also both a Christian and a Masonic symbol. In Medieval art, it was used to enclose figures of saints and of Christ. The lid of the Chalice Well in Glastonbury, England, contains a vesica piscis. In ancient times, the area enclosed by the vesica was more than just empty space. It was a sacred entity. This is why sacred figures were placed within it. The reason that it was considered sacred was that, before the development of sophisticated mathematics, geometry was used in the planning of structures. It was the foundation of human endeavor, and the vesica was the fundamental geometric form where all measurement began. Man built using geometry, and the vesica contained the basis of measurement. This is also why it is an important form in Masonry.

In my hotel room that night, then, was a living representation of this fundamental and deeply sacred form. It was linked to me through the Chalice

Well, where I have experienced some of the deepest and most joyous times of meditation in my life.

I wish that I'd had the presence of mind to understand all this in the moment, but I was excited and pretty amazed, so I really spent my time with the form watching it as it moved toward me. The next thing I knew, it had dropped to the floor and was lying across my feet. I felt something light but solid there. It seemed like a living thing, although I don't think that it was a biological entity as we understand such things. It was more of a living symbol, in some way guided by intelligence. Or maybe it was actually a body that I was seeing through an input strategy and therefore observing what it is before it focuses into a physical form. Had I seen it through an output strategy, maybe it would have appeared as a creature.

I looked down, and the vertical oval now covered my feet with blackness. I thought at once, "If I don't move, it will enter me."

Another moment had arrived like the nine knocks, the confrontation in the woods in 1987 and the time the entity got between my legs in 2017. All three of those times had caused a fear response and a refusal of the call.

This time there was a very different feeling. It felt as if the entity lying across my feet was beseeching me for entry into my body. What would that mean, though? I thought perhaps it would be too much to give up to let it into me so frankly and directly. It is one thing to commune during meditation, another to allow the actual, physical penetration of another consciousness. Much more of a challenge, to say the least. I had the sense that it wanted badly to do this, but also that it was begging that it would not force itself on me.

I moved my feet back slightly, and it at once disappeared. For a time, I continued with the sensing exercise. The next thing I knew, I was in a sort of waking dream. There was a man pointing a big silver gun at my face. However, it wasn't real. I could see clearly that the barrel was plugged. In fact, it looked like the sort of toy gun I used to play with as a child.

The event then ended. It was once again just me, the shadowy hotel room and the distant hiss of night traffic on the highway outside. I continued the meditation for a short time then returned to bed. I slept the limitless sleep of a child.

To me, this communication, coming just as I was finishing this book, meant that they want deeper communion—in fact, that there is a demand there, although a gentle one.

They are not going to force anything, and there is also an element of play involved. Thus, the use of a child's toy that represents a lethal weapon.

Back at home the next night, I felt regret for the conditions I had placed on the entity. Again, I asked for guidance.

The next night, things returned to normal. Before the early morning meditation, there sometimes appears hanging in a line on the window beside my bed a series of hieroglyphics. They are not Egyptian and are generally only there for a moment. I do not understand them, and so far I cannot say that I have seen the same sequence twice. This happens only a few times in a year, and it happened that night. What it signifies, I don't know, but as soon as I saw it, I went to do the meditation, which became so deep that it was as if I was sitting in another world and in this one at the same time.

I let my body be open to the need I sense is there.

If I had continued to refuse, would the plea have become more forceful? Would the gun have become some sort of genuine threat? It's a question I cannot answer. I can only forge on, trusting myself and the visitors as best I can, never forgetting that communion is not about doing something new, but accepting something that has always been part of human life by bringing it into conscious awareness. When we do this, there is an exponential leap in richness for both sides. I know this because, on October 16, 2019, I finally allowed entry while I was in full consciousness. Not only that, I managed, quite by accident, to record the moment in audio.

As I've said, despite years of trying, I've had very little luck with video. On the afternoon of the 15th, I happened to see that there was such a thing as a "sleep recorder" app that records sounds made while you sleep. I thought that maybe I could experiment with this. When the evening of the 15th arrived, I sensed that the visitors might make a close appearance—not necessarily physical, but very close. After an extremely deep 11 PM sensing meditation that lasted the better part of an hour, I went to sleep. After the 3 AM meditation, as I was falling back to sleep, I felt weight come down onto my legs. Unlike what happened with the vesica piscis, I felt within me a calm sense of welcoming. I was open. Then I fell asleep.

In the morning, I listened to what the sleep recorder had picked up. To my astonishment, amid the predictable grunts and snores, there were some words. Just after 4, I say in a sleep-dense voice, "What is that?" Then, a second or so later, still coming up from sleep, "Oh, Mature." Another few seconds pass and I say in an entirely different voice, rich with pleasure and

anticipation, full of sensual joy, “Teach me, Mature.” A short time later, there is a little sigh that does not sound like me. It sounds feminine. A sound expert has analyzed it, although not too deeply, and also feels that it is feminine. But there was no woman there.

Or was there? After about fifteen minutes of silence, I am heard grieving for Anne.

Let me explain what I understand of what happened. First, the use of the word “Mature” as a name. I think that it is used in place of “Master” because that word is too ego-charged. My sense is that the visitors prefer a word like Mature, which indicates somebody who has no need to drop into the physical world again. In other words, what we would call an ascended master.

Except for the sigh, the entity never makes a physical sound. In my experience, there have been almost no physical words. “Have joy” and perhaps a few others. What I remember is a sense of intense intellectual contact causing pleasure that was almost sexual in nature. If you can imagine an exploration of ideas so beautiful and intense that it was like a form of spiritual sex, that might be in the direction of what I felt.

I think that this whole book might have been examined in those few moments. I think that, unlike *Communion*, which they more-or-less laughed at, it was accepted as a useful effort. (You will find the story of their reaction to *Communion* in *Transformation* and *Super Natural*. Suffice to say that they let an editor at William Morrow & Company know that I’d gotten a lot wrong, and found the book nothing more than amusing...but, of course, at the same time they honored my effort by appearing in front of the editor right in the middle of a bookstore, no less.)

I must not get this wrong, not this time. We urgently need to rise to a new level of coherence, which we cannot do except in deepest communion. And by “we” I mean all levels of entity, physical and other, human and other.

On the morning of October 27th, 2019, I had an encounter that felt physical and also ambiguous—in other words, an encounter with what life in communion will be like.

You will recall the short man who lurked in the woods in upstate New York and then outside our condo in Texas. I saw him again, but this time in a very much better state. He looked clean and calm and happy. His eyes were shining. He was not smoking, and opened his mouth and showed me the pink tongue of a child. Then I saw a woman with a lovely, sweet face. I couldn’t tell if they were physical or not. I did not seem to be dreaming, but they were

also not plainly standing beside the bed. They were in a place that will, I suspect, become more familiar as we go deeper into communion, which is the quintessential “dangerous perhaps,” the uneasy edge between our ordinary world and the greater mystery in which it is embedded. The woman seemed at once a stranger and yet also very familiar to me, and seeing her inspired a poignant sense of memory. I asked her, “How long have you known me?” She replied, “Since you were born.”

And then it ended. I slipped into sleep and they into the ocean that tosses beneath the lives of us all. He is transformed, that poor boy who followed me in the mysteries of the night, a very real person in possession of tools of mind that enabled him to enter into places in me where he did not belong. Now, as I have found peace, his pain has also released its grip on him and he has become a tender child.

It’s impossible, of course. He would be thirty now, or more. Nobody like that could live very long. Somewhere in some shadowy place, I am sure his bones lie, maybe buried, maybe not. And her, what of her? All in white, she stood, a girl like a drop of sunlight, a young mother I thought, and I felt her as a mother. But she cannot be mine.

In those few minutes, I was under the water of life, in a place that communion must inevitably take us, where our demons and angels dance together, sweetly singing and beckoning us to walk the cliffs of knowledge, ever closer to the edge.

There it ended, and I think that this lovely, gentle experience perfectly illustrates what I have been suggesting throughout this book, which is that, if we are to proceed beyond contact and into communion, we are going to have to embrace the fundamental ambiguity of consciousness itself, and accept the mystery that is all around us as the “immense great benevolence” that the attendee who saw me briefly disappear at the conference perceived during her experience.

It is morning now. There is bright sun. I can smell smoke from distant fires. Later, I will begin another night’s journey, open now to embrace and no longer afraid. Night before last, as happens often now, a presence settled down on my body. This time, though, it had more weight and substance than ever before. I opened my eyes but could see nothing. I could only feel it there. The weight was solid and very real. I was open and ready. But it gently lifted away.

In just these few months since the encounter with the vesica piscis, I feel

that I have finally gone beyond fear. I see how the boundaries with which we define ourselves are its real source, for they don't actually exist and we know it, and facing our borderless, wandering reality feels very close to ceasing to exist. Communion, in this sense, feels like death, which is why Jeff Kripal was so devastated by even a brief second of it on that night at Esalen. But we have no boundaries. There is only one of us—alien, human, living, dead, whatever. What we are is a wave-front of consciousness, speeding into the unknown.

When you embrace this ambiguity as yourself, you discover the abiding peace the Hindus call *shanti*. It makes no sense. It reconciles nothing. And yet everything within you, all the fears, the angers, the hatreds, the lusts, the disappointments, the ambitions, all that lies within the scope of your life, comes to rest, and you know that you have found your heart.

It is what Anne meant when she said, "Enlightenment is what happens when there is nothing left of us but love." When all that you have been fighting against and for is stripped away, your nakedness that has so frightened you for so long, is soothed by the gauze of angels.

It's not easy, though. The first step out of oneself and into communion is a very hard one to take. Open, innocent surrender to the enormous presence that underlies reality is never going to be easy, and it is never going to be certain. But it is also a priceless resource, offering a path into greater knowledge, a new science that is more true because it includes more of what is real, philosophical understanding that feeds the mind with the stuff of truth, and limitless expansion of the scope of mankind.

This series of interactions I have just described is a perfect example of how communication with the visitors unfolds. I asked a question and was answered with a series of demonstrations. The first manifestation forced its way into me. The second beseeched, then suggested that a threat was possible if I continued to refuse it entry. I felt an acute sense of failure and sought to open myself. When it came back this time, I did not resist.

And now here I am face to face with what seems to me to be something of great beauty, at once real and unreal, a challenge, as it were, from Stevenson's land of counterpane, the sweet winds of Asphodel singing to my heart.

Still, practical, crucial questions remain. Will the visitors come closer? Can they ever be physically real enough to matter as more than hypothesis? In other words, will the conjuring that is this book work? If so, will they turn

out to be impossible for us to bear, or will they become in general life something like the engine of joy that is beginning to seek toward me?

If these questions are to be addressed usefully, the visitors cannot just come to me, sly in the whispering night, not anymore. The visitors must open the doors of their school wide, to us all. We have a planet to lose and our lives along with it, or we have a journey to take.

Which shall it be? The decision belongs to all of us and each of us, and to them. Shall we join in what is essentially a new world and a new way of life, or do they disappear into the dark and we into the storm?

We must decide, and now, and so must they. It is time.

The End
