

# Unified Security Solutions for City-Wide Surveillance

# Take a Collaborative Approach to Your City-Wide Surveillance

Thousands, if not millions of people rely on you to keep them safe. Protecting the public from crime, safeguarding buildings from vandalism, or just ensuring your city is running smoothly requires the collaboration of multiple agencies, consultation with the public as well as buy-in from private enterprises. By combining resources and standardizing on Security Center, the unified security platform from Genetec, cities can break down silos across agencies, cost-effectively enhance city-wide operations, expand surveillance coverage, and improve emergency preparedness and response times.

## Security Center Helps Your City Become Safer and Smarter

Genetec Security Center unifies Omnicast IP video surveillance, Synergis IP access control, and AutoVu automatic license plate recognition systems to offer greater situational awareness to security and law enforcement personnel. Security Center standardizes common security operations from multiple systems such as monitoring, reporting, alarm management and configuration, and makes all tasks easily accessible via a single intuitive application.

Security Center also lets your city implement a phased growth plan as budget cycles renew. You can start with upgrading video surveillance and unify other key systems over time.

## Unify Key Systems Over Time

Access control for enhanced security and centralized personnel management

License plate recognition systems and Hot List and Reads database systems

Video analytics for object left behind, trip wires, or people counting

Evidence management systems hosted in Azure for Government

Microsoft Aware Consoles (Threat, Investigation, Intelligence, Management)

## Zoom into Threats and Playback Video with Ease

Omnicast is the IP video management system that lets you spot threats and manage hundreds or thousands of high-definition, megapixel cameras around your city. Omnicast provides leading functionality that reduces bandwidth costs and keeps your system running at peak performance.

## Protect Access to all Critical Facilities

Synergis is the IP access control system that helps you extend greater security to your municipal and historical buildings, all while leveraging your existing network and hardware investments. Synergis provides efficient workflows and greater automation, allowing more time to be spent monitoring critical tasks.

## Track Vehicle Activity In and Around Your City

AutoVu is the automatic license plate recognition (ALPR) system that allows you to capture license plates of vehicles travelling in your city. Fixed or mobile ALPR cameras can be added to intersection lights, buildings or law enforcement vehicles to track stolen vehicles, wanted felons, or amber alerts.

## Get More from a Future-Proof Security Platform

**Enable Cost-Effective Growth through a Multi-Stakeholder Model** – Broaden coverage by accessing video streams from private entities in emergencies using the Federation feature. Bring privately and publicly-funded systems under one umbrella by centrally managing all independent systems as one while still preserving system autonomy.

**Enhance Operational Effectiveness and Response in Your City** – Improve situational awareness when addressing emergencies in education, public utility, or other municipal buildings with an enhanced Federation model. At the click of a button, allow public organizations to grant police departments full system control to view cameras or lockdown facilities and effectively respond to threats.

**Protect Privacy of Video and Ensure Responsible Evidence Management** – Minimize public concerns about privacy rights by implementing broad or granular system privileges and user access rights. Customize these privileges by user or event, block access to certain cameras or files, document incident handling, conduct audit trails and add a digital signature to video to ensure evidence authenticity for admission in court.

**Stay Connected in the Field for Better Emergency Preparedness** – Turn officer smartphones or wearable cameras into mobile monitoring stations and push video back to the central control center with mobile apps. Officers on the road can also tap into city systems from their vehicle laptops to proactively assess an emergency situation, improving response and keeping officers safe.

**Keep Valuable Investments and Evolve over Time** – Choose your hardware, capitalize on existing city networks, and upgrade analog technology over time with this open security platform. Grow your city-wide surveillance system up to thousands of devices with ease, reaching up to 300 cameras per server. Expand with Cloud Camera connections, eliminating the cost of on-site storage hardware and servers.

## 3 Security Center Features for Effective City-Wide Surveillance

**Work from a Detailed City View** – Plan Manager offers the possibility to work from interactive maps of your city to easily navigate streets and facilities and manage your devices.

**Ensure High Availability and System Uptime** – Health Monitoring automatically alerts you to the health and uptime of your system so you are notified of system performance in real-time.

**Track Suspects Through Streets** – Visual Tracking lets you easily track suspects through your city selecting the adjacent camera directly from video tile.

# Hear What Our Municipal Customers Are Saying

## Ville de Forbach

Located in France, the city of Forbach chose Security Center to protect over 100,000 citizens. Omnicast manages a mix of fixed and multi-lens IP cameras suited for different environmental conditions, while Synergis controls strict access to the city command center. The map-based interface has enabled easy searches and quick retrieval of video evidence, helping to justify system future growth.

“The ease of use and the speed at which we can retrieve information is extremely impressive. Today, I can say with full confidence that every national police officer leaves our department with video evidence, within minutes. Security Center has been an instrumental addition to our city’s security and we cannot be more pleased with our new unified platform.”

Mr. Michel Fersing  
Municipal Police Chief at City of Forbach  
Forbach, France

## Sanford Public Safety Complex

The City of Sanford chose Security Center in a major upgrade at their new state-of-the-art public safety complex. Omnicast manages over 80 cameras while Synergis secures over 78 access control points from parking gates to sally ports for detainees. With several municipal facilities with Genetec systems, Sanford used the Federation feature to centrally manage all systems as one from the complex.

“Security Center is a platform that can address all of Sanford’s needs, allowing us to create the federated system that we now have serving several types of facilities simultaneously. We never need to cross-reference information between discrete solutions across the city – it’s all tied in. It works well for us, and it suits the widely varied needs of a municipality.”

Nicholas McRay  
Senior Project Manager at City of Sanford  
Florida, USA
